public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedCommentSortOrder commentSort)

Parameters

communityId
Type: String
Use either the ID for a community, internal or null.
feedElementId
Type: String
ID of the feed element.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

commentSort
Type: ConnectApi.FeedCommentSortOrder
Order of comments.
- CreatedDateLatestAsc—Sorts by most recently created comments in ascending order.
- CreatedDateOldestAsc—Sorts by oldest comments in ascending order.
- Relevance—Sorts by most relevant content.
The default value is CreatedDateLatestAsc.

Return Value
Type: ConnectApi.FeedElement

getFeedElementBatch(communityId, feedElementIds)
Get a list of feed elements.

API Version
31.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.BatchResult[] getFeedElementBatch(String communityId, List<String> feedElementIds)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

**feedElementIds**
Type: `List<String>`
A list of up to 500 feed element IDs.

Return Value
Type: `ConnectApi.BatchResult[]`
The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.FeedElement` object and errors for feed elements that didn’t load.

**getFeedElementPoll(communityId, feedElementId)**
Get the poll associated with a feed element.

API Version
32.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.PollCapability getFeedElementPoll(String communityId, String feedElementId)
```

Parameters
**communityId**
Type: `String`
Use either the ID for a community, internal, or null.

**feedElementId**
Type: `String`
ID of the feed element.

Return Value
Type: `ConnectApi.PollCapability`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

**Note:** Triggers on FeedItem objects run before their attachment and capabilities information is saved, which means that `ConnectApi.FeedItem.attachment` information and `ConnectApi.FeedElement.capabilities` information may not be available in the trigger.
getFeedElementsFromBundle(communityId, feedElementId)
Get feed elements from a bundle.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromBundle(String communityId, String feedElementId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

Return Value
Type: ConnectApi.FeedElementPage

getFeedElementsFromBundle(communityId, feedElementId, pageParam, pageSize, elementsPerBundle, recentCommentCount)
Get a page of feed elements from a bundle. Specify the number of elements per bundle and include no more than the specified number of comments per feed element.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromBundle(String communityId, String feedElementId, String pageParam, Integer pageSize, Integer elementsPerBundle, Integer recentCommentCount)
Parameters

**communityId**
- Type: String
  - Use either the ID for a community, internal, or **null**.

**feedElementId**
- Type: String
  - ID of the feed element.

**pageParam**
- Type: String
  - Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in **null**, the first page is returned.

**pageSize**
- Type: Integer
  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in **null**, the default size is 25.

**elementsPerBundle**
- Type: Integer
  - Maximum number of feed elements per bundle. The default and maximum value is 10.

**recentCommentCount**
- Type: Integer
  - Maximum number of comments to return with each feed element. The default value is 3.

Return Value
- Type: **ConnectApi.FeedElementPage**

**getFeedElementsFromFeed(communityId, feedType)**

API Version
- 31.0

Available to Guest Users
- 31.0

Requires Chatter
- Yes

Signature
- **public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType)**
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
Parameters

**communityId**
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**feedType**
Type: `ConnectApi.FeedType`
The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.
If **feedType** is `DirectMessages`, **sortParam** must be `LastModifiedDateDesc`.

Return Value

**Type:** `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

`setTestGetFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)`

Testing ConnectApi Code
getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)

Get a page of sorted feed elements from the Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview feeds. Each feed element contains no more than the specified number of comments.

API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.
If feedType is DirectMessages, sortParam must be LastModifiedDateDesc.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

  Testing ConnectApi Code

**getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter)**
Get a page of sorted and filtered feed elements from the Home feed. Each feed element contains no more than the specified number of comments.

API Version
32.0

Available to Guest Users
32.0

Requires Chatter
Yes
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. The only valid value is Home.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

When the sortParam is MostViewed, you must pass in null for the pageParam.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

When the sortParam is MostViewed, the pageSize must be a value from 1 to 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. If you pass in **null**, the default value `CreatedDateDesc` is used.

```java
filter
Type: ConnectApi.FeedFilter
```

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

```java
setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, result)
```

**Testing ConnectApi Code**

```java
getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed)
```

Get a page of filtered and sorted feed elements with comments in a threaded style from the **Home** feed. Each feed element contains no more than the specified number of comments.

public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId,
ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density,
String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam,
ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. The only valid value is Home.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

When the sortParam is MostViewed, you must pass in null for the pageParam.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
When the `sortParam` is `MostViewed`, the `pageSize` must be a value from 1 to 25.

`sortParam`

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

`filter`

Type: `ConnectApi.FeedFilter`

Specifies the feed filters.

- `AllQuestions`—Feed elements that are questions.
- `AuthoredBy`—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- `CommunityScoped`—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- `QuestionsWithCandidateAnswers`—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- `QuestionsWithCandidateAnswersReviewedPublished`—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- `Read`—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- `SolvedQuestions`—Feed elements that are questions and that have a best answer.
- `UnansweredQuestions`—Feed elements that are questions and that don’t have any answers.
- `UnansweredQuestionsWithCandidateAnswers`—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- `Unread`—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the `Record` feed of a group.
- `UnsolvedQuestions`—Feed elements that are questions and that don’t have a best answer.

`threadedCommentsCollapsed`

Type: `Boolean`

Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

Return Value

Type: `ConnectApi.FeedElementPage`
Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Signature
```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId,
                     ConnectApi.FeedType feedType, String subjectId)
```

Parameters
- **communityId**
  Type: `String`
  Use either the ID for a community, internal, or `null`.
- **feedType**
  Type: `ConnectApi.FeedType`
  The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.
- **subjectId**
  Type: `String`
  If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.  

967
Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example for Getting the Context User’s News Feed

```java
ConnectApi.FeedElementPage fep =
ConnectApi.ChatterFeeds.getFeedElementsFromFeed(Network.getNetworkId(),
ConnectApi.FeedType.News, 'me');
```

Example for Getting Another User’s Profile Feed

```java
ConnectApi.FeedElementPage fep =
ConnectApi.ChatterFeeds.getFeedElementsFromFeed(Network.getNetworkId(),
ConnectApi.FeedType.UserProfile, '005R0000000HwMA');
```

Example for Getting Another User’s Record Feed

```java
ConnectApi.FeedElementPage fep =
ConnectApi.ChatterFeeds.getFeedElementsFromFeed(Network.getNetworkId(),
ConnectApi.FeedType.Record, '005R0000000HwMA');
```

SEE ALSO:

- `setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, result)`

Testing ConnectApi Code

```java
getFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam)
```

Get a page of sorted feed elements from any feed other than Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

Yes
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
  Type: String
  If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  The number of feed elements per page.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  - CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  - CreatedDateDesc—Sorts by most recent creation date.
  - LastModifiedDateDesc—Sorts by most recent activity.
  - MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  - Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  If you pass in null, the default value CreatedDateDesc is used.

Return Value

public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `feedType`
  Type: `ConnectApi.FeedType`
  The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.
- `subjectId`
  Type: `String`
If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

`recentCommentCount`
Type: `Integer`

Maximum number of comments to return with each feed element. The default value is 3.

`density`
Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`

Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

Return Value
Type: `ConnectApi.FeedElementPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `feedType`
  Type: `ConnectApi.FeedType`
  Value must be `ConnectApi.FeedType.Record`.

- `subjectId`
  Type: `String`
  Any record ID, including a group ID.
**recentCommentCount**
Type: **Integer**
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: **ConnectApi.FeedDensity**
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: **String**
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: **Integer**
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: **ConnectApi.FeedSortOrder**
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

**showInternalOnly**
Type: **Boolean**
Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

Return Value
Type: **ConnectApi.FeedElementPage**
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- Get Feed Elements From Another User’s Feed
  `setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly, result)`
- Testing ConnectApi Code

`getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter)`

Get a page of sorted and filtered feed elements from the `UserProfile` feed.

API Version

Available to Guest Users

35.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedType`
  - Type: `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.UserProfile`.

- `subjectId`
  - Type: `String`
  - The ID of any user. To specify the context user, use the user ID or the alias `me`.
recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

filter
Type: ConnectApi.FeedFilter
Value must be ConnectApi.FeedFilter.CommunityScoped or ConnectApi.FeedFilter.AuthoredBy.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.
Example

This example gets only community-specific feed elements.

```java
ConnectApi.FeedElementPage fep =
ConnectApi.ChatterFeeds.getFeedElementsFromFeed(Network.getNetworkId(),
ConnectApi.FeedType.UserProfile, 'me', 3, ConnectApi.FeedDensity.FewerUpdates, null, null,
ConnectApi.FeedSortOrder.LastModifiedDateDesc, ConnectApi.FeedFilter.CommunityScoped);
```

SEE ALSO:

- `setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, result)`
- `Testing ConnectApi Code`

`getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed)`

Get a page of feed elements with comments in a threaded style from the UserProfile feed.

API Version

44.0

Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, Boolean
threadedCommentsCollapsed)
```

Parameters

- `communityId`
  Type: String
  Use either the ID for a community, internal, or null.

- `feedType`
  Type: `ConnectApi.FeedType`
  Value must be `ConnectApi.FeedType.UserProfile`.

- `subjectId`
  Type: String
The ID of any user. To specify the context user, use the user ID or the alias me.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
  - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
  - CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  - CreatedDateDesc—Sorts by most recent creation date.
  - LastModifiedDateDesc—Sorts by most recent activity.
  - MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  - Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

filter
Type: ConnectApi.FeedFilter
Value must be ConnectApi.FeedFilter.CommunityScoped or ConnectApi.FeedFilter.AuthoredBy.

threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value
Type: ConnectApi.FeedElementPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String customFilter)

Parameters

communityId

Type: String

Use either the ID for a community, internal, or null.

feedType

Type: ConnectApi.FeedType

Value must be ConnectApi.FeedType.Record.

subjectId

Type: String

The ID of a case.

recentCommentCount

Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`

Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**customFilter**
Type: `String`

Custom filter that applies only to the case feed. See `customFeedFilter` in the Metadata API Developer Guide for supported values.

**Return Value**
Type: `ConnectApi.FeedElementPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer
elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  Any record ID, including a group ID.

recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
• **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

• **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

  Values are:
  • **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
  • **CreatedDateDesc**—Sorts by most recent creation date.
  • **LastModifiedDateDesc**—Sorts by most recent activity.
  • **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
  • **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
  If you pass in `null`, the default value `CreatedDateDesc` is used.

**showInternalOnly**
  Type: Boolean
  Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

**filter**
  Type: `ConnectApi.FeedFilter`
  Specifies the feed filters.
  • **AllQuestions**—Feed elements that are questions.
  • **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
  • **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
  • **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
  • **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
  • **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
  • **SolvedQuestions**—Feed elements that are questions and that have a best answer.
• **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.

• **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.

• **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

```

984
ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed)

Parameters

communityId
    Type: String
    Use either the ID for a community, internal, or null.

feedType
    Type: ConnectApi.FeedType
    Value must be ConnectApi.FeedType.Record.

subjectId
    Type: String
    Any record ID, including a group ID.

recentCommentCount
    Type: Integer
    The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
    Type: Integer
    Maximum number of feed elements per bundle. The default and maximum value is 10.

density
    Type: ConnectApi.FeedDensity
    Specify the amount of content in a feed.
    • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
    Type: String
    The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
    Type: Integer
    Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
    Type: ConnectApi.FeedSortOrder
    Values are:
    • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
    • CreatedDateDesc—Sorts by most recent creation date.
    • LastModifiedDateDesc—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**showInternalOnly**
Type: `Boolean`  
Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

**filter**
Type: `ConnectApi.FeedFilter`  
Specifies the feed filters.
- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don't have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the `Record` feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don't have a best answer.

**threadedCommentsCollapsed**
Type: `Boolean`  
Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

**Return Value**
Type: `ConnectApi.FeedElementPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, String customFilter)
```

Parameters

`communityId`

Type: `String`  
Use either the ID for a community, `internal`, or `null`.

`feedType`

Type: `ConnectApi.FeedType`  
Value must be `ConnectApi.FeedType.Record`.

`subjectId`

Type: `String`  
The ID of a case.

`recentCommentCount`

Type: `Integer`
The maximum number of comments to return with each feed item. The default value is 3.

`elementsPerBundle`
Type: `Integer`
Maximum number of feed elements per bundle. The default and maximum value is 10.

`density`
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

`showInternalOnly`
Type: `Boolean`
Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

`customFilter`
Type: `String`
Custom filter that applies only to the case feed. See `customFeedFilter` in the `Metadata API Developer Guide` for supported values.

Return Value
Type: `ConnectApi.FeedElementPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.Record`.

- **subjectId**
  - Type: `String`
  - The ID of a case.
recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  
  • CreatedDateDesc—Sorts by most recent creation date.
  
  • LastModifedDateDesc—Sorts by most recent activity.
  
  • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  
  • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  
  If you pass in null, the default value CreatedDateDesc is used.

showInternalOnly
  Type: Boolean
  Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

customFilter
  Type: String
  Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

threadedCommentsCollapsed
  Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, customFilter, threadedCommentsCollapsed, result)
Testing ConnectApi Code

getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix)
Get feed elements from a feed filtered by a key prefix for a user.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromFilterFeed(String communityId, String subjectId, String keyPrefix)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.
Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, result)`
- Testing ConnectApi Code

```java
getFeedElementsFromFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Get a page of sorted feed elements from a feed filtered by a key prefix for a user.

API Version

31.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `subjectId`
  Type: `String`
  The ID of the context user or the alias `me`.

- `keyPrefix`
  Type: `String`
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of `005` and Group objects have a prefix of `0F9`.

- `pageParam`
  Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

```java
pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
```

```java
sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
  • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  If you pass in null, the default value CreatedDateDesc is used.
```

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  ```java
  setTestGetFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, result)
  ```

Testing ConnectApi Code

```java
getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam)
```

Get a page of sorted feed elements from a feed filtered by a key prefix for a user. Each feed element contains no more than the specified number of comments.

API Version
31.0

Requires Chatter
Yes
public static ConnectApi.FeedElementPage getFeedElementsFromFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, 
  Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the 
  ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

Return Value

Type: ConnectApi.FeedElementPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method 
with the same parameters or the code throws an exception.

SEE ALSO:

  pageParam, pageSize, sortParam, result)
  Testing ConnectApi Code

getFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, 
recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince)

Get a page of feed elements from a feed filtered by a key prefix for a user. Include only feed elements that have been updated since the 
time specified in the updatedSince parameter.

API Version

31.0

Requires Chatter

Yes

Signature

public static ConnectApi.FeedElementPage getFeedElementsFromFilterFeedUpdatedSince(String 
communityId, String subjectId, String keyPrefix, Integer recentCommentCount, Integer 
elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, 
String updatedSince)

Parameters

communityId
  Type: String
Use either the ID for a community, internal, or null.

**subjectId**
Type: String
The ID of the context user or the alias me.

**keyPrefix**
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 00S and Group objects have a prefix of 0F9.

**recentCommentCount**
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

**elementsPerBundle**
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**updatedSince**
Type: String
An opaque token defining the modification time stamp of the feed and the sort order.
The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

**Return Value**
Type: `ConnectApi.FeedElementPage`
Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, result)
Testing ConnectApi Code

getFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)
Get a page of feed elements from the Company, DirectMessageModeration, Home, and Moderation feeds. Include only feed elements that have been updated since the time specified in the updatedSince parameter. Each feed element contains no more than the specified number of comments.

API Version
31.0

31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, Home, and Moderation.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- ** FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: **String**

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: **Integer**

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
Type: **String**

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

**Return Value**
Type: **ConnectApi.FeedElementPage**

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
- `setTestGetFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, result)`
- **Testing ConnectApi Code**

**getFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, filter)**

Get a page of filtered feed elements from the **Home** feed. Include only feed elements that have been updated since the time specified in the `updatedSince` parameter. Each feed element contains no more than the specified number of comments.

Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density,
String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedFilter filter)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `feedType`
  Type: `ConnectApi.FeedType`
  The type of feed. The only valid value is `Home`.

- `recentCommentCount`
  Type: `Integer`
  Maximum number of comments to return with each feed element. The default value is 3.

- `density`
  Type: `ConnectApi.FeedDensity`
  Specify the amount of content in a feed.
  - `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- `pageParam`
  Type: `String`
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- `pageSize`
  Type: `Integer`
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- `updatedSince`
  Type: `String`
  An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.
  The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

- `filter`
  Type: `ConnectApi.FeedFilter`
  Specifies the feed filters.
- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**Return Value**

Type: `ConnectApi.FeedElementPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

Signature
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
One of these values:
- Files
- Groups
- News
- People
- Record

subjectId
Type: String
If feedType is ConnectApi.Record, subjectId can be any record ID, including a group ID. Otherwise, it must be the
current user or the alias me.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specifying the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays
custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also
displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**

Type: Integer

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**updatedSince**

Type: String

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

The updatedSince parameter doesn't return feed elements that are created in the same second as the call.

**Return Value**

Type: ConnectApi.FeedElementPage

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

```java
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
```
ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.
Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Integer pageSize, String updatedSince, ConnectApi.FeedFilter filter)
```

Get a page of filtered feed elements from a `UserProfile` feed. Include only feed elements that have been updated since the time specified in the `updatedSince` parameter.

API Version
35.0

Available to Guest Users
35.0

Requires Chatter
Yes

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, internal, or null.
- `feedType`
  Type: `ConnectApi.FeedType`
  Value must be `ConnectApi.FeedType.UserProfile`.
- `subjectId`
  Type: `String`
The ID of any user. To specify the context user, use the user ID or the alias `me`.

**recentCommentCount**
Type: `Integer`
Maximum number of comments to return with each feed element. The default value is 3.

**elementsPerBundle**
Type: `Integer`
Maximum number of feed elements per bundle. The default and maximum value is 10.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
Type: `String`
An opaque token defining the modification time stamp of the feed and the sort order.

The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

**filter**
Type: `ConnectApi.FeedFilter`
Value must be `ConnectApi.FeedFilter.CommunityScoped`. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out.

**Return Value**
Type: `ConnectApi.FeedElementPage`

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, String customFilter)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
The ID of a case.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
• **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

• **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**

Type: **String**

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**

Type: **Integer**

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**

Type: **String**

An opaque token defining the modification time stamp of the feed and the sort order.

The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

**customFilter**

Type: **String**

Custom filter that applies only to the case feed. See `customFeedFilter` in the Metadata API Developer Guide for supported values.

**Return Value**

Type: `ConnectApi.FeedElementPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**

Type: `String`

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn't return feed elements that are created in the same second as the call.

**showInternalOnly**

Type: `Boolean`

Specifies whether to show only feed elements from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, result)`
- `Testing ConnectApi Code`

**getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, filter)**

Get a page of filtered feed elements from a record feed. Include only feed elements that have been updated since the time specified in the `updatedSince` parameter. Specify the maximum number of feed elements in a bundle and whether to return feed elements posted by internal (non-community) users only.

API Version

32.0

Available to Guest Users

32.0

Requires Chatter

Yes
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly, ConnectApi.FeedFilter filter)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.
showInternalOnly
  Type: Boolean
  Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

filter
  Type: ConnectApi.FeedFilter
  Specifies the feed filters.
  - AllQuestions—Feed elements that are questions.
  - AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
  - CommunityScoped—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.
  - QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
  - QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
  - Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
  - SolvedQuestions—Feed elements that are questions and that have a best answer.
  - UnansweredQuestions—Feed elements that are questions and that don’t have any answers.
  - UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
  - Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
  - UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

Return Value
  Type: ConnectApi.FeedElementPage

Usage
  To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, filter, result)
  Testing ConnectApi Code
getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, customFilter)

Get a page of filtered feed elements from a case feed. Include only feed elements that have been updated since the time specified in the `updatedSince` parameter.

API Version
40.0

Available to Guest Users
40.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer
elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
String updatedSince, Boolean showInternalOnly, String customFilter)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedType`
  - Type: `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.Record`.

- `subjectId`
  - Type: `String`
  - The ID of a case.

- `recentCommentCount`
  - Type: `Integer`
  - Maximum number of comments to return with each feed element. The default value is 3.

- `elementsPerBundle`
  - Type: `Integer`
  - Maximum number of feed elements per bundle. The default and maximum value is 10.

- `density`
  - Type: `ConnectApi.FeedDensity`
  - Specify the amount of content in a feed.
• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

```
pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
```

```
pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
```

```
updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.
The updatedSince parameter doesn't return feed elements that are created in the same second as the call.
```

```
showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.
```

```
customFilter
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.
```

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

```
Testing ConnectApi Code
```

```
getFeedItem(communityId, feedItemId)
Get a feed item.
```

API Version
28.0–31.0
Important: In version 32.0 and later, use `getFeedElement(communityId, feedElementId)`.

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedItem getFeedItem(String communityId, String feedItemId)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedItemId**
  - Type: `String`
  - The ID for a feed item.

Return Value

Type: `ConnectApi.FeedItem`

Note: Triggers on FeedItem objects run before their attachment and capabilities information is saved, which means that `ConnectApi.FeedItem.attachment` information and `ConnectApi.FeedElement.capabilities` information may not be available in the trigger.

`getFeedItemBatch(communityId, feedItemIds)`

Get a list of feed items.

API Version
31.0–31.0

Important: In version 32.0 and later, use `getFeedElementBatch(communityId, feedElementIds)`.

Requires Chatter
Yes

Signature

```java
public static ConnectApi.BatchResult[] getFeedItemBatch(String communityId, List<String> feedItemIds)
```
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedItemIds**
Type: List<String>
A list of up to 500 feed item IDs.

Return Value

Type: `ConnectApi.BatchResult[]`

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.FeedItem` object and errors for feed items that didn't load.

Example

```java
// Create a list of feed items.
ConnectApi.FeedItemPage feedItemPage = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(null, ConnectApi.FeedType.Company);
System.debug(feedItemPage);

// Create a list of feed item IDs.
List<String> feedItemIds = new List<String>();
for (ConnectApi.FeedItem aFeedItem : feedItemPage.items){
    feedItemIds.add(aFeedItem.id);
}

// Get info about the feed items in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterFeeds.getFeedItemBatch(null, feedItemIds);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the header for each feed item.
        ConnectApi.FeedItem aFeedItem;
        if(batchResult.getResult() instanceof ConnectApi.FeedItem) {
            aFeedItem = (ConnectApi.FeedItem) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(aFeedItem.header.text);
    } else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
```
getFeedItemsFromFeed(communityId, feedType)
Get feed items from the Company, Home, and Moderation feeds.

API Version
28.0–31.0

⚠️ Important: In version 32.0 and later, use getFeedElementsFromFeed(communityId, feedType).

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

setTestGetFeedItemsFromFeed(communityId, feedType, result)
Testing ConnectApi Code

getFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)
Get a page of sorted feed items from the Company, Home, and Moderation feeds.
**API Version**
28.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)`.

**Available to Guest Users**
31.0 only

**Requires Chatter**
Yes

**Signature**

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId,
ConnectApi.FeedType feedType, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

- **pageParam**
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **sortParam**
  - Type: `ConnectApi.FeedSortOrder`
  - Values are:
    - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
    - `CreatedDateDesc`—Sorts by most recent creation date.
    - `LastModifiedDateDesc`—Sorts by most recent activity.
    - `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
    - `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)
Testing ConnectApi Code

getFeedItemsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)
Get a page of sorted feed items from the Company, Home, and Moderation feeds. Each feed item contains no more than the specified number of comments.

API Version
29.0–31.0

Important: In version 32.0 and later, use getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam).

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.
FeedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedItemPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Parameters

communityId

Type: String

Use either the ID for a community, internal, or null.

feedType

Type: ConnectApi.FeedType

The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId

Type: String

If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.
Return Value

Type: `ConnectApi.FeedItemPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

                      ConnectApi.FeedSortOrder sortParam)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedType`
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`. 

1021
subjectId  
Type: String

If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

pageParam  
Type: String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

pageSize  
Type: Integer

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

sortParam  
Type: `ConnectApi.FeedSortOrder`

Values are:

- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

Return Value  
Type: `ConnectApi.FeedItemPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Signature
```
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam)
```

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedType**
Type: `ConnectApi.FeedType`
The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

**subjectId**
Type: String
If *feedType* is Record, *subjectId* can be any record ID, including a group ID. If *feedType* is Streams, *subjectId* must be a stream ID. If *feedType* is Topics, *subjectId* must be a topic ID. If *feedType* is UserProfile, *subjectId* can be any user ID. If the *feedType* is any other value, *subjectId* must be the ID of the context user or the alias me.

**recentCommentCount**
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.
**pageParam**
Type: **String**
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: **Integer**
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: **ConnectApi.FeedSortOrder**
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

Return Value
Type: **ConnectApi.FeedItemPage**

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

getFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)
Get a page of sorted feed items from a record feed for a user or record. Each feed item includes no more than the specified number of comments. Specify whether to return feed items posted by internal (non-community) users only.

API Version
30.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)`. 
Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.Record`.

- **subjectId**
  - Type: `String`
  - Any record ID, including a group ID.

- **recentCommentCount**
  - Type: `Integer`
  - The maximum number of comments to return with each feed item. The default value is 3.

- **density**
  - Type: `ConnectApi.FeedDensity`
  - Specify the amount of content in a feed.
    - `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    - `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- **pageParam**
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **sortParam**
  - Type: `ConnectApi.FeedSortOrder`
Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

`showInternalOnly`

Type: Boolean

Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

Return Value

Type: ConnectApi.FeedItemPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly, result)`
- Testing ConnectApi Code

**getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix)**

Get feed items from a feed filtered by a key prefix for a user.

API Version

28.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix)`.

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix)
```
Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

subjectId
  Type: String
  The ID of the context user or the alias me.

keyPrefix
  Type: String
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

Return Value

Type: ConnectApi.FeedItemPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  - setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, result)
  - Testing ConnectApi Code

getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam)

Get a page of sorted feed items from a feed filtered by a key prefix for a user.

API Version

28.0–31.0

Important: In version 32.0 and later, use getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam).

Requires Chatter

Yes

Signature

public static ConnectApi.FeedItemPage getFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
Parameters

**communityId**
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**subjectId**
Type: `String`
The ID of the context user or the alias `me`.

**keyPrefix**
Type: `String`
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

Return Value

Type: `ConnectApi.FeedItemPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, result)`
- Testing `ConnectApi` Code
getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam)

Get a page of sorted feed items from a feed filtered by a key prefix for a user. Each feed item contains no more than the specified number of comments.

API Version
29.0–31.0

⚠️ Important: In version 32.0 and later, use getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam).

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage getFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
- Type: `Integer`
- Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
- Type: `ConnectApi.FeedSortOrder`
- Values are:
  - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
  - `CreatedDateDesc`—Sorts by most recent creation date.
  - `LastModifiedDateDesc`—Sorts by most recent activity.
  - `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
  - `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
- Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**Return Value**
- Type: `ConnectApi.FeedItemPage`

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
- `setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, result)`
- Testing ConnectApi Code

```java
getFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, updatedSince)
```

Get a page of feed items from a feed filtered by a key prefix for a user. Include only feed items that have been updated since the time specified in the `updatedSince` parameter.

**API Version**
30.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince)`. 
Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFilterFeedUpdatedSince(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)
```

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **subjectId**
  Type: String
  The ID of the context user or the alias me.

- **keyPrefix**
  Type: String
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

- **recentCommentCount**
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

- **density**
  Type: `ConnectApi.FeedDensity`
  Specify the amount of content in a feed.
  - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- **pageParam**
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

- **pageSize**
  Type: Integer
  Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

- **updatedSince**
  Type: String
  An opaque token containing information about the last modified date of the feed. Do not construct this token. To retrieve this token, call getFeedItemsFromFilterFeed and take the value from the updatesToken property of the `ConnectApi.FeedItemPage` response body.
Return Value
Type: `ConnectApi.FeedItemPage`

Usage
This method returns only feed items that have been updated since the time specified in the `updatedSince` argument. A feed item is considered to be updated if it was created since the last feed request, or if `sort=LastModifiedDateDesc` and a comment was added to the feed item since the last feed request. Adding likes and topics doesn’t update a feed item.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, updatedSince, result)`

Testing ConnectApi Code

```java
getFeedItemsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)
```

Get a page of feed items from the Company, Home, and Moderation feeds. Include only feed items that have been updated since the time specified in the `updatedSince` parameter. Each feed item contains no more than the specified number of comments.

API Version
30.0–31.0

⚠️ Important: In version 32.0 and later, use `getFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)`. 

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedItemPage getFeedItemsUpdatedSince(String communityId,
                    ConnectApi.FeedType feedType,
                    Integer recentCommentCount,
                    ConnectApi.FeedDensity density,
                    String pageParam,
                    Integer pageSize,
                    String updatedSince)
```

Parameters

`communityId`
Type: `String`

Use either the ID for a community, `internal`, or `null`. 

1032
**feedType**
Type: `ConnectApi.FeedType`
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

**recentCommentCount**
Type: `Integer`
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
Type: `String`
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

Return Value
Type: `ConnectApi.FeedItemPage`

Usage
This method returns only feed items that have been updated since the time specified in the `updatedSince` argument. A feed item is considered to be updated if it was created since the last feed request, or if `sort=LastModifiedDateDesc` and a comment was added to the feed item since the last feed request. Adding likes and topics doesn’t update a feed item.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.
Example

This example gets the feed items in the company feed and grabs the `updatesToken` property from the returned object. It then passes the value of `updatesToken` to the `getFeedItemsUpdatedSince` method to get the feed items updated since the first call:

```java
// Get the feed items in the company feed and return the updatesToken
String communityId = null;

// Get the feed and extract the update token
ConnectApi.FeedItemPage page = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(communityId, ConnectApi.FeedType.Company);

// page.updatesToken is opaque and has a value like '2:1384549034000'

// Get the feed items that changed since the provided updatesToken
ConnectApi.FeedItemPage feedItems = ConnectApi.ChatterFeeds.getFeedItemsUpdatedSince(communityId, ConnectApi.FeedType.Company, 1, ConnectApi.FeedDensity.AllUpdates, null, 1, page.updatesToken);
```

SEE ALSO:

- `setTestGetFeedItemsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, ConnectApi.FeedItemPage, results)`
- Testing ConnectApi Code

`getFeedItemsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)`

Get a page of feed items from the Files, Groups, News, People, and Record feeds. Include only feed items that have been updated since the time specified in the `updatedSince` parameter. Each feed item contains no more than the specified number of comments.

**API Version**

30.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince).`

**Available to Guest Users**

31.0 only

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.FeedItemPage getFeedItemsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)
```
Parameters

**communityId**
- Type: `String`
- Use either the ID for a community, `internal`, or `null`.

**feedType**
- Type: `ConnectApi.FeedType`
- One of these values:
  - Files
  - Groups
  - News
  - People
  - Record

**subjectId**
- Type: `String`
- If `feedType` is `ConnectApi.Record`, `subjectId` can be any record ID, including a group ID. Otherwise, it must be the context user or the alias `me`.

**recentCommentCount**
- Type: `Integer`
- The maximum number of comments to return with each feed item. The default value is 3.

**density**
- Type: `ConnectApi.FeedDensity`
- Specify the amount of content in a feed.
  - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
- Type: `String`
- The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
- Type: `Integer`
- Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
- Type: `String`
- An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

Return Value
- Type: `ConnectApi.FeedItemPage`
Usage

This method returns only feed items that have been updated since the time specified in the `updatedSince` argument. A feed item is considered to be updated if it was created since the last feed request, or if `sort=LastModifiedDateDesc` and a comment was added to the feed item since the last feed request. Adding likes and topics doesn’t update a feed item.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example gets the feed items in the news feed and grabs the `updatesToken` property from the returned object. It then passes the value of `updatesToken` to the `getFeedItemsUpdatedSince` method to get the feed items updated since the first call:

```java
// Get the feed items in the news feed and return the updatesToken
String communityId = null;
String subjectId = 'me';

// Get the feed and extract the update token
ConnectApi.FeedItemPage page = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(communityId, ConnectApi.FeedType.News, subjectId);

// page.updatesToken is opaque and has a value like '2:1384549034000'

// Get the feed items that changed since the provided updatesToken
ConnectApi.FeedItemPage feedItems= ConnectApi.ChatterFeeds.getFeedItemsUpdatedSince(communityId, ConnectApi.FeedType.News, subjectId, 1, ConnectApi.FeedDensity.AllUpdates, null, 1, page.updatesToken);
```

SEE ALSO:

- `setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, result)`
- Testing ConnectApi Code

**getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly)**

Get a page of feed items from a record feed. Include only feed items that have been updated since the time specified in the `updatedSince` parameter. Specify whether to return feed items posted by internal (non-community) users only.

API Version

30.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly)`.

Available to Guest Users

31.0 only
Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage getFeedItemsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince,
Boolean showInternalOnly)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
  - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedItemPage response body.
**showInternalOnly**

Type: **Boolean**

Specifies whether to show only feed items from internal (non-community) users (**true**), or not (**false**). The default value is **false**.

**Return Value**

Type: **ConnectApi.FeedItemPage**

**Usage**

This method returns only feed items that have been updated since the time specified in the **updatedSince** argument. A feed item is considered to be updated if it was created since the last feed request, or if **sort=LastModifiedDateDesc** and a comment was added to the feed item since the last feed request. Adding likes and topics doesn’t update a feed item.

If **showInternalOnly** is **true** and Salesforce Communities is enabled, feed items from communities are included. Otherwise, only feed items from the internal community are included.

To test code that uses this method, use the matching set test method (prefix the method name with **setTest**). Use the set test method with the same parameters or the code throws an exception.

**Example**

This example gets the feed items in the news feed and grabs the **updatesToken** property from the returned object. It then passes the value of **updatesToken** to the **getFeedItemsUpdatedSince** method to get the feed items updated since the first call:

```java
// Get the feed items in the news feed and return the updatesToken
String communityId = null;
String subjectId = 'me';

// Get the feed and extract the update token
ConnectApi.FeedItemPage page = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(communityId,
ConnectApi.FeedType.News, subjectId);

// page.updatesToken is opaque and has a value like '2:1384549034000'

// Get the feed items that changed since the provided updatesToken
ConnectApi.FeedItemPage feedItems= ConnectApi.ChatterFeeds.getFeedItemsUpdatedSince
(communityId, ConnectApi.FeedType.News, subjectId, 1, ConnectApi.FeedDensity.AllUpdates,
null, 1, page.updatesToken, true);
```

**SEE ALSO:**

- **setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize,
updatedSince, showInternalOnly, result)**
- **Testing ConnectApi Code**

**getFeedPoll(communityId, feedItemId)**

Get the poll associated with a feed item.
**getFeedElementPoll(communityId, feedElementId)**

*Important:* In version 32.0 and later, use `getFeedElementPoll(communityId, feedElementId)`. Requires Chatter

**Signature**

```java
public static ConnectApi.FeedPoll getFeedPoll(String communityId, String feedItemId)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedItemId**
  - Type: `String`
  - The ID for a feed item.

**Return Value**

Type: `ConnectApi.FeedPoll`

*Note:* Triggers on FeedItem objects run before their attachment and capabilities information is saved, which means that `ConnectApi.FeedItem.attachment` information and `ConnectApi.FeedElement.capabilities` information may not be available in the trigger.

**getFeedWithFeedElements(communityId, feedType, pageSize)**

Get information about a feed and a page of feed elements from the feed.

**Signature**

```java
public static ConnectApi.Feed getFeedWithFeedElements(String communityId, ConnectApi.FeedType feedType, Integer pageSize)
```
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Landing, Moderation, and PendingReview. Landing is valid only when communityId is internal.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in 0, feed elements aren’t returned with the feed.

Return Value
Type: ConnectApi.Feed

getFeedWithFeedElements(communityId, feedType, pageSize, recentCommentCount)
Get a page of information about the feed and the feed elements with the specified number of comments per feed element from the feed.

API Version
40.0

Available to Guest Users
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.Feed getFeedWithFeedElements(String communityId, ConnectApi.FeedType feedType, Integer pageSize, Integer recentCommentCount)
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Landing, Moderation, and PendingReview. Landing is valid only when communityId is internal.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in 0, feed elements aren’t returned with the feed.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

Return Value
Type: ConnectApi.Feed

getFilterFeed(communityId, subjectId, keyPrefix)
Get a feed filtered by a key prefix for a user.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.Feed getFilterFeed(String communityId, String subjectId, String keyPrefix)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix is the first three characters of a record ID, which specifies the entity type.

Return Value
Type: ConnectApi.Feed
getFilterFeed(communityId, subjectId, keyPrefix, sortParam)

Get a sorted feed filtered by a key prefix for a user.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.Feed getFilterFeed(String communityId, String subjectId, String keyPrefix, ConnectApi.FeedType sortParam)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

subjectId
  Type: String
  The ID of the context user or the alias me.

keyPrefix
  Type: String
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

sortParam
  Type: ConnectApi.FeedType
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
  • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

Return Value

Type: ConnectApi.Feed
getFilterFeedDirectory(communityId, subjectId)

Get a feed directory of filter feeds available to the context user.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedDirectory getFilterFeedDirectory(String communityId, String subjectId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

Return Value
Type: ConnectApi.FeedDirectory
This feed directory contains a list of filter feeds, which are the news feed filtered to include feed items whose parent is a specific entity type.

Usage
Call this method to return a directory containing a list of ConnectApi.FeedDirectoryItem objects. Each object contains a key prefix associated with an entity type the context user is following. A key prefix is the first three characters of a record ID, which specifies the entity type.

Use key prefixes to filter the news feed so that it contains only feed items whose parent is the entity type associated with the key prefix. For example, get all the feed items whose parent is an Account. To get the feed items, pass a key prefix to the ConnectApi.getFeedItemsFromFilterFeed method.

The information about filter feeds never contains the key prefixes for users (005) or groups (0F9), but all users can use those key prefixes as filters.

The ConnectApi.FeedDirectory.favorites property is always empty when returned by a call to getFilterFeedDirectory because you can’t filter a news feed by favorites.
Example
This example calls `getFilterFeedDirectory` and loops through the returned `FeedDirectoryItem` objects to find the key prefixes the context user can use to filter their news feed. It then copies each `keyPrefix` value to a list. Finally, it passes one of the key prefixes from the list to the `getFeedItemsFromFilterFeed` method. The returned feed items include every feed item from the news feed whose parent is the entity type specified by the passed key prefix.

```
String communityId = null;
String subjectId = 'me';

// Create a list to populate with key prefixes.
List<String> keyPrefixList = new List<String>();

// Prepopulate with User and Group record types
// which are available to all users.
keyPrefixList.add('005');
keyPrefixList.add('0F9');

System.debug(keyPrefixList);

// Get the key prefixes available to the context user.
ConnectApi.FeedDirectory myFeedDirectory =
    ConnectApi.ChatterFeeds.getFilterFeedDirectory(null, 'me');

// Loop through the returned feeds list.
for (ConnectApi.FeedDirectoryItem i : myFeedDirectory.feeds) {
    // Grab each key prefix and add it to the list.
    keyPrefixList.add(i.keyPrefix);
}
System.debug(keyPrefixList);

// Use a key prefix from the list to filter the feed items in the news feed.
ConnectApi.FeedItemPage myFeedItemPage =
    ConnectApi.ChatterFeeds.getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefixList[0]);
System.debug(myFeedItemPage);
```

`getLike(communityId, likeId)`
Get a like on a post or comment.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.ChatterLike getLike(String communityId, String likeId)
```

Parameters

- `communityId`
  
  **Type:** String

  Use either the ID for a community, internal, or `null`.

- `likeId`
  
  **Type:** String

  The ID for a like.

Return Value

**Type:** `ConnectApi.ChatterLike`

```java
getLikesForComment(communityId, commentId)
```

Get likes for a comment.

API Version

28.0

Available to Guest Users

31.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ChatterLikePage getLikesForComment(String communityId, String commentId)
```

Parameters

- `communityId`
  
  **Type:** String

  Use either the ID for a community, internal, or `null`.

- `commentId`
  
  **Type:** String

  The ID for a comment.
getLikesForComment(communityId, commentId, pageParam, pageSize)
Get a page of likes for a comment.

API Version
28.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterLikePage getLikesForComment(String communityId, String commentId, Integer pageParam, Integer pageSize)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
The ID for a comment.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ChatterLikePage

getLikesForFeedElement(communityId, feedElementId)
Get likes for a feed element.
API Version
32.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterLikePage getLikesForFeedElement(String communityId, String feedElementId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

Return Value
Type: ConnectApi.ChatterLikePage Class
If the feed element doesn't support the ChatterLikes capability, the return value is ConnectApi.NotFoundException.

getLikesForFeedElement(communityId, feedElementId, pageParam, pageSize)
Get a page of likes for a feed element.

API Version
32.0

Available to Guest Users
32.0

Requires Chatter
Yes
**Signature**

```java
public static ConnectApi.ChatterLikePage getLikesForFeedElement(String communityId,
String feedElementId, Integer pageParam, Integer pageSize)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedElementId**
  - Type: `String`
  - ID of the feed element.

- **pageParam**
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**Return Value**

- Type: `ConnectApi.ChatterLikePage` Class

If the feed element doesn’t support the ChatterLikes capability, the return value is `ConnectApi.NotFoundException`.

---

**getLikesForFeedItem(communityId, feedItemId)**

Get likes for a feed item.

**API Version**

28.0–31.0

**Important:** In version 32.0 and later, use `getLikesForFeedElement(communityId, feedElementId)`.

**Available to Guest Users**

31.0 only

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.ChatterLikePage getLikesForFeedItem(String communityId, String
feedItemId)
```
Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`feedItemId`
Type: `String`
The ID for a feed item.

Return Value
Type: `ConnectApi.ChatterLikePage`

`getLikesForFeedItem(communityId, feedItemId, pageParam, pageSize)`
Get a page of likes for a feed item.

API Version
28.0–31.0

⚠️ **Important:** In version 32.0 and later, use `getLikesForFeedElement(communityId, feedElementId, pageParam, pageSize)`.

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterLikePage getLikesForFeedItem(String communityId, String feedItemId, Integer pageParam, Integer pageSize)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`feedItemId`
Type: `String`
The ID for a feed item.

`pageParam`
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.
pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ChatterLikePage

getLinkMetadata(communityId, urls)
Get link metadata for URLs.

API Version
42.0

Available to Guest Users
42.0

Requires Chatter
No

Signature
public static ConnectApi.LinkMetadataCollection getLinkMetadata(String communityId, String urls)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

urls
Type: String
Comma-separated list of URL-encoded URLs.

Return Value
Type: ConnectApi.LinkMetadataCollection

getPinnedFeedElementsFromFeed(communityId, feedType, subjectId)
Get pinned feed elements from a group or topic feed.

API Version
41.0
Available to Guest Users
41.0

Requires Chatter
Yes

Signature
public static ConnectApi.PinnedFeedElements getPinnedFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  The type of feed. Valid values are Record and Topics.

subjectId
  Type: String
  If feedType is Record, subjectId must be a group ID. If feedType is Topics, subjectId must be a topic ID.

Return Value

Type: ConnectApi.PinnedFeedElements
If the feed doesn’t support this capability, the return value is ConnectApi.NotFoundException.

getReadByForFeedElement(communityId, feedElementId)
Get information about who read a feed element and when.

API Version
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.ReadByPage getReadByForFeedElement(String communityId, String feedElementId)
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

Return Value
Type: ConnectApi.ReadByPage
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

getReadByForFeedElement(communityId, feedElementId, pageParam, pageSize)
Get a page of information about who read a feed element and when.

API Version
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.ReadByPage getReadByForFeedElement(String communityId, String feedElementId, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
Return Value

Type: ConnectApi.ReadByPage

If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

```java
public static ConnectApi.RelatedFeedPosts getRelatedPosts(String communityId, String feedElementId, ConnectApi.RelatedFeedPostType filter, Integer maxResults)
```

Get posts related to the context feed element.

API Version

37.0

Available to Guest Users

37.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.RelatedFeedPosts getRelatedPosts(String communityId, String feedElementId, ConnectApi.RelatedFeedPostType filter, Integer maxResults)
```

Parameters

`communityId`

Type: String

Use either the ID for a community, internal, or null.

`feedElementId`

Type: String

ID of the feed element. The feed element must be a question.

`filter`

Type: ConnectApi.RelatedFeedPostType

Specifies the type of related post. Values are:

- Answered—Related questions that have at least one answer.
- BestAnswer—Related questions that have a best answer.
- Generic—All types of related questions, including answered, with a best answer, and unanswered.
- Unanswered—Related questions that don’t have answers.

Generic is the default value.

`maxResults`

Type: Integer

The maximum number of results to return. You can return up to 25 results; 5 is the default.
Return Value
Type: `ConnectApi.RelatedFeedPosts`
In version 37.0 and later, related feed posts are questions.
Each related feed post has a score indicating how closely it’s related to the context feed post. We return related feed posts sorted by score, with the highest score first.

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

`getStream(communityId, streamId)`
Get information about a Chatter feed stream.

API Version
39.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterStream getStream(String communityId, String streamId)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `streamId`
  Type: `String`
  ID of the Chatter feed stream.

Return Value
Type: `ConnectApi.ChatterStream`

`getStream(communityId, streamId, globalScope)`
Get information about a Chatter feed stream, regardless of community.

API Version
41.0
Requires Chatter
Yes

Signature
`public static ConnectApi.ChatterStream getStream(String communityId, String streamId, Boolean globalScope)`

Parameters
- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.
- `streamId`
  - Type: `String`
  - ID of the Chatter feed stream.
- `globalScope`
  - Type: `Boolean`
  - Specifies whether to get streams from all the context user's communities, regardless of the `communityId` value.

Tip: If you know the community ID for the stream, we recommend setting `globalScope` to `false`.

Return Value
Type: `ConnectApi.ChatterStream`

`getStreams(communityId)`
Get the Chatter feed streams for the context user.

API Version
39.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ChatterStreamPage getStreams(String communityId)`

Parameters
- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`. 
Return Value
Type: `ConnectApi.ChatterStreamPage`

**getStreams(communityId, sortParam)**
Get and sort the Chatter feed streams for the context user.

API Version
40.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterStreamPage getStreams(String communityId, ConnectApi.SortOrder sortParam)
```

Parameters
- **communityId**
  Type: `String`
  Use either the ID for a community, internal, or `null`.
- **sortParam**
  Type: `ConnectApi.SortOrder`
  Specifies the sort order. Values are:
  - **Ascending**—Items are in ascending alphabetical order (A-Z).
  - **Descending**—Items are in descending alphabetical order (Z-A).
  - **MostRecentlyViewed**—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.
  If not specified, default value is **Ascending**.

Return Value
Type: `ConnectApi.ChatterStreamPage`

**getStreams(communityId, pageParam, pageSize)**
Get a page of Chatter feed streams for the context user.

API Version
39.0
Requires Chatter
Yes

Signature

`public static ConnectApi.ChatterStreamPage getStreams(String communityId, Integer pageParam, Integer pageSize)`

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `pageParam`
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

Return Value

Type: `ConnectApi.ChatterStreamPage`

`getStreams(communityId, pageParam, pageSize)`

Get a sorted page of Chatter feed streams for the context user.

API Version

40.0

Requires Chatter
Yes

Signature

`public static ConnectApi.ChatterStreamPage getStreams(String communityId, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam)`

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `pageParam`
  Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

`pageSize`

Type: `Integer`

Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

`sortParam`

Type: `ConnectApi.SortOrder`

Specifies the sort order. Values are:

- **Ascending**—Items are in ascending alphabetical order (A-Z).
- **Descending**—Items are in descending alphabetical order (Z-A).
- **MostRecentlyViewed**—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is Ascending.

Return Value

Type: `ConnectApi.ChatterStreamPage`

`getStreams(communityId, pageParam, pageSize, sortParam, globalScope)`

Get a sorted page of Chatter feed streams from all communities for the context user.

API Version

41.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ChatterStreamPage getStreams(String communityId, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam, Boolean globalScope)
```

Parameters

- **communityId**
  
  Type: `String`
  
  Use either the ID for a community, internal, or null.

- **pageParam**
  
  Type: `Integer`
  
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

- **pageSize**
  
  Type: `Integer`
  
  Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.
**sortParam**

Type: `ConnectApi.SortOrder`

Specifies the sort order. Values are:

- **Ascending**—Items are in ascending alphabetical order (A-Z).
- **Descending**—Items are in descending alphabetical order (Z-A).
- **MostRecentlyViewed**—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is **Ascending**.

**globalScope**

Type: `Boolean`

Specifies whether to get streams from all the context user's communities, regardless of the `communityId` value.

Tip: If you know the community ID for the streams, we recommend setting `globalScope` to `false`.

**Return Value**

Type: `ConnectApi.ChatterStreamPage`

---

**getSupportedEmojis()**

Get supported emojis for the org.

**API Version**

39.0

**Requires Chatter**

Yes

**Signature**

`public static ConnectApi.SupportedEmojis getSupportedEmojis()`

**Return Value**

Type: `ConnectApi.SupportedEmojis`

**Usage**

To get the list, emojis must be enabled in your org.

**getThreadsForFeedComment(communityId, commentId)**

Get threaded comments for a comment.
getThreadsForFeedComment(String communityId, String commentId)

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **commentId**
  - Type: String
  - ID of the comment.

Return Value

Type: ConnectApi.CommentPage

If the comment doesn’t support the comments capability, the return value is ConnectApi.NotFoundException.

getThreadsForFeedComment(String communityId, String commentId, int pageParam, int pageSize)

Get a page of threaded comments for a comment.
public static ConnectApi.CommentPage getThreadsForFeedComment(String communityId, String commentId, String pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
ID of the comment.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.CommentPage
If the comment doesn’t support the comments capability, the return value is ConnectApi.NotFoundException.

getThreadsForFeedComment(communityId, commentId, threadedCommentsCollapsed)
Access the comments capability for a comment.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.CommentsCapability getThreadsForFeedComment(String communityId, String commentId, Boolean threadedCommentsCollapsed)
Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **commentId**
  - Type: String
  - ID of the comment.

- **threadedCommentsCollapsed**
  - Type: Boolean
  - Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value

- Type: ConnectApi.CommentsCapability
  - If the comment doesn’t support the comments capability, the return value is ConnectApi.NotFoundException.

`getTopUnansweredQuestions(communityId)` (Pilot)

Get top unanswered questions for the context user in a community.

- **Note:** We provide top-five unanswered questions to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can’t guarantee acceptance. Top five unanswered questions isn’t generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can’t guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features.

API Version

42.0

Requires Chatter

Yes

Signature

`public static ConnectApi.FeedElementPage getTopUnansweredQuestions(String communityId)`

Parameters

- **communityId**
  - Type: String
  - ID of the community.
Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
`setTestGetTopUnansweredQuestions(communityId, result)` (Pilot)

Testing ConnectApi Code

`getTopUnansweredQuestions(communityId, filter)` (Pilot)
Get filtered top unanswered questions for the context user in a community.

⚠️ **Note:** We provide top-five unanswered questions to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can’t guarantee acceptance. Top five unanswered questions isn’t generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can’t guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features.

API Version
42.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedElementPage getTopUnansweredQuestions(String communityId,
ConnectApi.TopUnansweredQuestionsFilterType filter)
```

Parameters
- `communityId`
  Type: `String`
  ID of the community.
- `filter`
  Type: `ConnectApi.FeedFilter`
  Specifies the filter for the feed. `UnansweredQuestionsWithCandidateAnswers` is the only valid value.

Return Value
Type: `ConnectApi.FeedElementPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

`getVotesForComment(communityId, commentId, vote)`

Get the first page of users who upvoted or downvoted a comment.

API Version

42.0

Available to Guest Users

42.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.VotePage getVotesForComment(String communityId, String commentId, ConnectApi.UpDownVoteValue vote)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.
- `commentId`
  - Type: `String`
  - ID of the comment.
- `vote`
  - Type: `ConnectApi.UpDownVoteValue`
  - Specifies the value of the vote for the feed element. Values are:
    - `Down`
    - `Up`
  - You can’t specify `None`. 
Return Value
Type: `ConnectApi.VotePage`
If the comment doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

`getVotesForComment(communityId, commentId, vote, pageParam, pageSize)`
Get a page of users who upvoted or downvoted a comment.

API Version
42.0

Available to Guest Users
42.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.VotePage getVotesForComment(String communityId, String commentId, ConnectApi.UpDownVoteValue vote, Integer pageParam, Integer pageSize)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `commentId`
  Type: `String`
  ID of the comment.
- `vote`
  Type: `ConnectApi.UpDownVoteValue`
  Specifies the value of the vote for the feed element. Values are:
  - `Down`
  - `Up`
  You can’t specify `None`.
- `pageParam`
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.
- `pageSize`
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
Return Value
Type: `ConnectApi.VotePage`
If the comment doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

```java
public static ConnectApi.VotePage getVotesForFeedElement(String communityId, String feedElementId, ConnectApi.UpDownVoteValue vote)
```

getVotesForFeedElement(communityId, feedElementId, vote)
Get the first page of users who upvoted or downvoted a feed element.

API Version
42.0

Available to Guest Users
42.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.VotePage getVotesForFeedElement(String communityId, String feedElementId, ConnectApi.UpDownVoteValue vote)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`feedElementId`
Type: `String`
ID of the feed element.

`vote`
Type: `ConnectApi.UpDownVoteValue`
Specifies the value of the vote for the feed element. Values are:
- Down
- Up
You can’t specify None.

Return Value
Type: `ConnectApi.VotePage`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

1068
getVotesForFeedElement(communityId, feedElementId, vote, pageParam, pageSize)

Get a page of users who upvoted or downvoted a feed element.

API Version
42.0

Available to Guest Users
42.0

Requires Chatter
Yes

Signature
public static ConnectApi.VotePage getVotesForFeedElement(String communityId, String feedElementId, ConnectApi.UpDownVoteValue vote, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

vote
Type: ConnectApi.UpDownVoteValue
Specifies the value of the vote for the feed element. Values are:
- Down
- Up

You can’t specify None.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.VotePage
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.
**isCommentEditableByMe(communityId, commentId)**

Discover whether the context user can edit a comment.

API Version

34.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedEntityIsEditable isCommentEditableByMe(String communityId, String commentId)
```

Parameters

- `communityId`
  - Type: String
  - Use either the ID for a community, internal, or null.
- `commentId`
  - Type: String
  - ID of the comment.

Return Value

Type: `ConnectApi.FeedEntityIsEditable`

If the comment doesn’t support the edit capability, the return value is `ConnectApi.NotFoundException`.

SEE ALSO:

- [Edit a Comment](#)

**isFeedElementEditableByMe(communityId, feedElementId)**

Discover whether the context user can edit a feed element.

API Version

34.0

Requires Chatter

Yes
Signature

```java
public static ConnectApi.FeedEntityIsEditable isFeedElementEditableByMe(String communityId, String feedElementId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedElementId`
  - Type: `String`
  - ID of the feed element. Feed items are the only type of feed element that can be edited.

Return Value

Type: `ConnectApi.FeedEntityIsEditable`

If the feed element doesn’t support the edit capability, the return value is `ConnectApi.NotFoundException`.

SEE ALSO:
- Edit a Feed Element
- Edit a Question Title and Post

---

`isModified(communityId, feedType, subjectId, since)`

Discover whether a news feed has been updated or changed. Use this method to poll a news feed for updates.

**Important:** This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.

API Version

28.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedModifiedInfo isModified(String communityId, ConnectApi.FeedType feedType, String subjectId, String since)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.
**feedType**
Type: **ConnectApi.FeedType**
Specifies the type of feed. The only supported type is **News**

**subjectId**
Type: **String**
The ID of the context user or the alias `me`.

**since**
Type: **String**
An opaque token containing information about the last modified date of the feed. Retrieve this token from the `FeedElementPage.isModifiedToken` property.

Return Value
Type: **ConnectApi.FeedModifiedInfo**

**likeComment(communityId, commentId)**
Like a comment for the context user.

**API Version**
28.0

**Requires Chatter**
Yes

**Signature**

```java
public static ConnectApi.ChatterLike likeComment(String communityId, String commentId)
```

**Parameters**

**communityId**
Type: **String**
Use either the ID for a community, internal, or **null**.

**commentId**
Type: **String**
The ID for a comment.

Return Value
Type: **ConnectApi.ChatterLike**
If the context user has already liked the comment, this method is a non-operation and returns the existing like.
likeFeedElement(communityId, feedElementId)
Like a feed element.

API Version
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterLike likeFeedElement(String communityId, String feedElementId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

Return Value
Type: ConnectApi.ChatterLike
If the feed element doesn’t support the ChatterLikes capability, the return value is ConnectApi.NotFoundException.

Example
ConnectApi.ChatterLike chatterLike = ConnectApi.ChatterFeeds.likeFeedElement(null, '0D5D0000000KuGh');

likeFeedItem(communityId, feedItemld)
Like a feed item for the context user.

API Version
28.0–31.0

Important: In version 32.0 and later, use likeFeedElement(communityId, feedElementId).

Requires Chatter
Yes
Signature

```java
public static ConnectApi.ChatterLike likeFeedItem(String communityId, String feedItemId)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedItemId**
  - Type: `String`
  - The ID for a feed item.

Return Value

Type: `ConnectApi.ChatterLike`

If the context user already liked the feed item, this method is a non-operation and returns the existing like.

---

**postComment(communityId, feedItemId, text)**

Post a plain-text comment to a feed item.

API Version

28.0–31.0

⚠️ **Important:** In version 32.0 and later, use `postCommentToFeedElement(communityId, feedElementId, text)`.

Requires Chatter

Yes

Signature

```java
public static ConnectApi.Comment postComment(String communityId, String feedItemId, String text)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedItemId**
  - Type: `String`
  - The ID for a feed item.

- **text**
  - Type: `String`
The text of the comment. Mentions are downgraded to plain text. To include a mention that links to a user, call `postComment(communityId, feedItemId, comment, feedItemFileUpload)` and pass the mention in a `ConnectApi.CommentInput` object.

Return Value
Type: `ConnectApi.Comment`

Usage
If hashtags or links are detected in `text`, they are included in the comment as hashtag and link segments. Mentions are not detected in `text` and are not separated out of the text.

Feed items and comments can contain up to 10,000 characters.

`postComment(communityId, feedItemId, comment, feedItemFileUpload)`
Post a rich-text comment to a feed item. Use this method to include mentions and to attach a file to a comment.

API Version
28.0–31.0

Important: In version 32.0 and later, use `postCommentToFeedElement(communityId, feedElementId, comment, feedElementFileUpload)`.

Requires Chatter
Yes

Signature
```
public static ConnectApi.Comment postComment(String communityId, String feedItemId, ConnectApi.CommentInput comment, ConnectApi.BinaryInput feedItemFileUpload)
```

Parameters
```
communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedItemId
  Type: String
  The ID for a feed item.

comment
  Type: ConnectApi.CommentInput
  In the CommentInput object, specify rich text, including @mentions. Optionally, in the CommentInput.attachment property, specify an existing file or a new file

feedItemFileUpload
  Type: ConnectApi.BinaryInput
```
If you specify a `NewFileAttachmentInput` object in the `CommentInput.attachment` property, specify the new binary file to attach in this argument. Otherwise, do not specify a value.

**Return Value**

Type: `ConnectApi.Comment`

**Usage**

Feed items and comments can contain up to 10,000 characters.

**Sample: Posting a Comment with a New File Attachment**

To post a comment and upload and attach a new file to the comment, create a `ConnectApi.CommentInput` object and a `ConnectApi.BinaryInput` object to pass to the `ConnectApi.ChatterFeeds.postComment` method.

```java
String communityId = null;
String feedItemId = '0D5D0000000Kcd1';

ConnectApi.CommentInput input = new ConnectApi.CommentInput();
ConnectApi.TextSegmentInput textSegment;

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'Comment Text Body';

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageInput.messageSegments.add(textSegment);

input.body = messageInput;

ConnectApi.NewFileAttachmentInput attachmentInput = new ConnectApi.NewFileAttachmentInput();
attachmentInput.description = 'The description of the file';
attachmentInput.title = 'contentFile.txt';
input.attachment = attachmentInput;

String fileContents = 'This is the content of the file.';
Blob fileBlob = Blob.valueOf(fileContents);

ConnectApi.Comment commentRep = ConnectApi.ChatterFeeds.postComment(communityId, feedItemId, input, binaryInput);
```

**postCommentToFeedElement(communityId, feedElementId, text)**

Post a plain-text comment to a feed element.

**API Version**

32.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.Comment postCommentToFeedElement(String communityId, String feedElementId, String text)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedElementId`
  - Type: `String`
  - ID of the feed element.

- `text`
  - Type: `String`
  - Text of the comment. A comment can contain up to 10,000 characters.

Return Value

Type: `ConnectApi.Comment`

If the feed element doesn’t support the `Comments` capability, the return value is `ConnectApi.NotFoundException`.

Example

```java
ConnectApi.Comment comment = ConnectApi.ChatterFeeds.postCommentToFeedElement(null, '0D5D0000000KuGh', 'I agree with the proposal.' );
```

### postCommentToFeedElement(communityId, feedElementId, comment, feedElementFileUpload)

Post a rich-text comment to a feed element. Use this method to include mentions and to attach a file.

API Version

32.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.Comment postCommentToFeedElement(String communityId, String feedElementId, ConnectApi.CommentInput comment, ConnectApi.BinaryInput feedElementFileUpload)
```
Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>communityId</td>
<td>String</td>
<td>Use either the ID for a community, internal, or null.</td>
</tr>
<tr>
<td>feedElementId</td>
<td>String</td>
<td>ID of the feed element.</td>
</tr>
<tr>
<td>comment</td>
<td>ConnectApi.CommentInput</td>
<td>The comment body, including text and mentions, and capabilities, such as information about an attached file. A comment can contain up to 10,000 characters.</td>
</tr>
<tr>
<td>feedElementFileUpload</td>
<td>ConnectApi.BinaryInput</td>
<td>A new binary file to attach to the comment, or null. If you specify a binary file, specify the title and description of the file in the comment parameter.</td>
</tr>
</tbody>
</table>

Return Value

Type: ConnectApi.Comment

If the feed element doesn’t support the Comments capability, the return value is ConnectApi.NotFoundException.

Example for Posting a Comment with Mentions

You can post comments with mentions two ways. Use the ConnectApiHelper repository on GitHub to write a single line of code, or use this method example.

```java
String communityId = null;
String feedElementId = '0D5D0000000KtW3';

ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput();
ConnectApi.MentionSegmentInput mentionSegmentInput = new ConnectApi.MentionSegmentInput();
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
textSegmentInput.text = 'Does anyone in this group have an idea? ';
messageBodyInput.messageSegments.add(textSegmentInput);

mentionSegmentInput.id = '005D0000000oOT';
messageBodyInput.messageSegments.add(mentionSegmentInput);

commentInput.body = messageBodyInput;

ConnectApi.Comment commentRep = ConnectApi.ChatterFeeds.postCommentToFeedElement(communityId, feedElementId, commentInput, null);
```
Example for Posting a Comment with an Existing File

```java
String feedElementId = '0D5D0000000KtW3';

ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput();

ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

textSegmentInput.text = 'I attached this file from Salesforce Files.';

messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);

commentInput.body = messageBodyInput;

ConnectApi.CommentCapabilitiesInput commentCapabilitiesInput = new
ConnectApi.CommentCapabilitiesInput();
ConnectApi.ContentCapabilityInput contentCapabilityInput = new
ConnectApi.ContentCapabilityInput();

commentCapabilitiesInput.content = contentCapabilityInput;
contentCapabilityInput.contentDocumentId = '069D00000001rNJ';

commentInput.capabilities = commentCapabilitiesInput;

ConnectApi.Comment commentRep =
ConnectApi.ChatterFeeds.postCommentToFeedElement(Network.getNetworkId(), feedElementId,
commentInput, null);
```

Example for Posting a Comment with a New File

```java
String feedElementId = '0D5D0000000KtW3';

ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput();

ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

textSegmentInput.text = 'Enjoy this new file.';

messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);

commentInput.body = messageBodyInput;

ConnectApi.CommentCapabilitiesInput commentCapabilitiesInput = new
ConnectApi.CommentCapabilitiesInput();
ConnectApi.ContentCapabilityInput contentCapabilityInput = new
ConnectApi.ContentCapabilityInput();

commentCapabilitiesInput.content = contentCapabilityInput;
contentCapabilityInput.title = 'Title';

commentInput.capabilities = commentCapabilitiesInput;
```
String text = 'These are the contents of the new file.';
Blob myBlob = Blob.valueOf(text);
ConnectApi.BinaryInput binInput = new ConnectApi.BinaryInput(myBlob, 'text/plain', 'fileName');

ConnectApi.Comment commentRep =
    ConnectApi.ChatterFeeds.postCommentToFeedElement(Network.getNetworkId(), feedElementId, commentInput, binInput);

Example for Posting a Rich-Text Comment with an Inline Image

You can post rich-text comments with inline images and mentions two ways. Use the ConnectApiHelper repository on GitHub to write a single line of code, or use this method example. In this example, the image file is existing content that has already been uploaded to Salesforce.

String communityId = null;
String feedElementId = '0D5R0000000SBEr';
String imageId = '069R00000000IgQ';
String mentionedUserId = '005R0000000DiMz';

ConnectApi.CommentInput input = new ConnectApi.CommentInput();
ConnectApi.TextSegmentInput textSegment;
ConnectApi.MentionSegmentInput mentionSegment;
ConnectApi.MarkupBeginSegmentInput markupBeginSegment;
ConnectApi.MarkupEndSegmentInput markupEndSegment;
ConnectApi.InlineImageSegmentInput inlineImageSegment;

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

markupBeginSegment = new ConnectApi.MarkupBeginSegmentInput();
markupBeginSegment.markupType = ConnectApi.MarkupType.Bold;
messageInput.messageSegments.add(markupBeginSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'Hello ';
messageInput.messageSegments.add(textSegment);

mentionSegment = new ConnectApi.MentionSegmentInput();
mentionSegment.id = mentionedUserId;
messageInput.messageSegments.add(mentionSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = '!';
messageInput.messageSegments.add(textSegment);

markupEndSegment = new ConnectApi.MarkupEndSegmentInput();
markupEndSegment.markupType = ConnectApi.MarkupType.Bold;
messageInput.messageSegments.add(markupEndSegment);

inlineImageSegment = new ConnectApi.InlineImageSegmentInput();
inlineImageSegment.altText = 'image one';
Example for Posting a Rich-Text Comment with a Code Block

String communityId = null;
String feedElementId = '0DSR0000000SBEr';
String codeSnippet = '<html>
  <body>
    Hello, world!
  </body>
</html>';

ConnectApi.CommentInput input = new ConnectApi.CommentInput();
ConnectApi.TextSegmentInput textSegment;
ConnectApi.MarkupBeginSegmentInput markupBeginSegment;
ConnectApi.MarkupEndSegmentInput markupEndSegment;

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

markupBeginSegment = new ConnectApi.MarkupBeginSegmentInput();
markupBeginSegment.markupType = ConnectApi.MarkupType.Code;
messageInput.messageSegments.add(markupBeginSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = codeSnippet;
messageInput.messageSegments.add(textSegment);

markupEndSegment = new ConnectApi.MarkupEndSegmentInput();
markupEndSegment.markupType = ConnectApi.MarkupType.Code;
messageInput.messageSegments.add(markupEndSegment);

input.body = messageInput;
ConnectApi.ChatterFeeds.postCommentToFeedElement(communityId, feedElementId, input, null);

postFeedElement(communityId, subjectId, feedElementType, text)
Post a plain-text feed element.

API Version
31.0

Requires Chatter
Yes
public static ConnectApi.FeedElement postFeedElement(String communityId, String subjectId, ConnectApi.FeedElementType feedElementType, String text)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

subjectId
  Type: String
  The ID of the parent this feed element is being posted to. This value can be the ID of a user, group, or record, or the string me to indicate the context user.

feedElementType
  Type: ConnectApi.FeedElementType
  The only possible value is FeedItem.

text
  Type: String
  The text of the feed element. A feed element can contain up to 10,000 characters.

Return Value

Type: ConnectApi.FeedElement

Example

ConnectApi.FeedElement feedElement =
  ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), '0F9d0000000TreH',
  ConnectApi.FeedElementType.FeedItem, 'On vacation this week.');

postFeedElement(communityId, feedElement, feedElementFileUpload)

Post a rich-text feed element. Include mentions and hashtag topics, attach a file to a feed element, and associate action link groups with a feed element. You can also use this method to share a feed element and add a comment.

API Version

31.0–35.0

Important: In version 36.0 and later, this method is no longer available because you can’t create a feed post and upload a binary file in the same call. Upload files to Salesforce first, and then use postFeedElement(communityId, feedElement) to create the feed post and attach the files.

Requires Chatter

Yes
public static ConnectApi.FeedElement postFeedElement(String communityId, ConnectApi.FeedElementInput feedElement, ConnectApi.BinaryInput feedElementFileUpload)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedElement
  Type: ConnectApi.FeedElementInput
  Specify rich text, including mentions. Optionally, specify a link, a poll, an existing file, or a new file.

feedElementFileUpload
  Type: ConnectApi.BinaryInput
  Specify the new binary file to attach to the post only if you also specify a NewFileAttachmentInput object in the feedElement parameter. Otherwise, pass null.

Return Value

Type: ConnectApi.FeedElement

Example for Posting a Feed Element with a New (Binary) File

ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
input.subjectId = 'me';

ConnectApi.ContentCapabilityInput contentInput = new ConnectApi.ContentCapabilityInput();
contentInput.title = 'Title';

ConnectApi.FeedElementCapabilitiesInput capabilities = new
ConnectApi.FeedElementCapabilitiesInput();
capabilities.content = contentInput;
input.capabilities = capabilities;

String text = 'These are the contents of the new file.';
Blob myBlob = Blob.valueOf(text);
ConnectApi.BinaryInput binInput = new ConnectApi.BinaryInput(myBlob, 'text/plain', 'fileName');

ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), input, binInput);

postFeedElement(communityId, feedElement)

Post a rich-text feed element. Include mentions and hashtag topics, attach already uploaded files to a feed element, and associate action link groups with a feed element. You can also use this method to share a feed element and add a comment.
API Version
36.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElement postFeedElement(String communityId,
ConnectApi.FeedElementInput feedElement)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElement
Type: ConnectApi.FeedElementInput
Specify rich text, including mentions. Optionally, specify a link, a poll, or up to 10 existing files.

Return Value
Type: ConnectApi.FeedElement

Example for Posting a Feed Element with a Mention
You can post feed elements with mentions two ways. Use the ConnectApiHelper repository on GitHub to write a single line of code, or use this method example.

```java
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
ConnectApi.MentionSegmentInput mentionSegmentInput = new ConnectApi.MentionSegmentInput();
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
mentionSegmentInput.id = '005RR000000Dme9';
messageBodyInput.messageSegments.add(mentionSegmentInput);
textSegmentInput.text = 'Could you take a look?';
messageBodyInput.messageSegments.add(textSegmentInput);

feedItemInput.body = messageBodyInput;
feedItemInput.feedElementType = ConnectApi.FeedElementType.FeedItem;
feedItemInput.subjectId = '0F9RR0000004CPw';

ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput, null);
```
Example for Posting a Feed Element with Existing Content

```java
// Define the FeedItemInput object to pass to postFeedElement
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
feedItemInput.subjectId = 'me';

ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
textSegmentInput.text = 'Would you please review these docs?';

// The MessageBodyInput object holds the text in the post
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);
feedItemInput.body = messageBodyInput;

// The FeedElementCapabilitiesInput object holds the capabilities of the feed item.
// For this feed item, we define a files capability to hold the file(s).
List<String> fileIds = new List<String>();
fileIds.add('069xx00000000QO');
fileIds.add('069xx00000000QT');
fileIds.add('069xx00000000Qn');
fileIds.add('069xx00000000Qi');
fileIds.add('069xx00000000Qd');

ConnectApi.FilesCapabilityInput filesInput = new ConnectApi.FilesCapabilityInput();
filesInput.items = new List<ConnectApi.FileIdInput>();
for (String fileId : fileIds) {
    ConnectApi.FileIdInput idInput = new ConnectApi.FileIdInput();
    idInput.id = fileId;
    filesInput.items.add(idInput);
}

ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new
ConnectApi.FeedElementCapabilitiesInput();
feedElementCapabilitiesInput.files = filesInput;

feedItemInput.capabilities = feedElementCapabilitiesInput;

// Post the feed item.
ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);
```

Example for Posting a Rich-Text Feed Element with an Inline Image

You can post rich-text feed elements with inline images and mentions two ways. Use the ConnectApiHelper repository on GitHub to write a single line of code, or use this method example. In this example, the image file is existing content that has already been uploaded to Salesforce. The post also includes text and a mention.

```java
String communityId = null;
String imageId = '069D00000001INA';
String mentionedUserId = '005D0000001QNpr';
String targetUserOrGroupOrRecordId = '005D0000001Gif0';
```
ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
input.subjectId = targetUserOrGroupOrRecordId;
input.feedElementType = ConnectApi.FeedElementType.FeedItem;

ConnectApi.TextSegmentInput textSegment;
ConnectApi.MentionSegmentInput mentionSegment;
ConnectApi.MarkupBeginSegmentInput markupBeginSegment;
ConnectApi.MarkupEndSegmentInput markupEndSegment;
ConnectApi.InlineImageSegmentInput inlineImageSegment;

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
markupBeginSegment = new ConnectApi.MarkupBeginSegmentInput();
markupBeginSegment.markupType = ConnectApi.MarkupType.Bold;
messageInput.messageSegments.add(markupBeginSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'Hello ';
messageInput.messageSegments.add(textSegment);

mentionSegment = new ConnectApi.MentionSegmentInput();
mentionSegment.id = mentionedUserId;
messageInput.messageSegments.add(mentionSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = '!' ;
messageInput.messageSegments.add(textSegment);

markupEndSegment = new ConnectApi.MarkupEndSegmentInput();
markupEndSegment.markupType = ConnectApi.MarkupType.Bold;
messageInput.messageSegments.add(markupEndSegment);

inlineImageSegment = new ConnectApi.InlineImageSegmentInput();
inlineImageSegment.altText = 'image one';
inlineImageSegment.fileId = imageId;
messageInput.messageSegments.add(inlineImageSegment);

input.body = messageInput;
ConnectApi.ChatterFeeds.postFeedElement(communityId, input, null);

Example for Posting a Rich-Text Feed Element with a Code Block

String communityId = null;
String targetUserOrGroupOrRecordId = 'me';
String codeSnippet = '<html>
	<body>
		Hello, world!
	</body>
</html>';
ConnectApi.MarkupEndSegmentInput markupEndSegment;

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

markupBeginSegment = new ConnectApi.MarkupBeginSegmentInput();
markupBeginSegment.markupType = ConnectApi.MarkupType.Code;
messageInput.messageSegments.add(markupBeginSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = codeSnippet;
messageInput.messageSegments.add(textSegment);

markupEndSegment = new ConnectApi.MarkupEndSegmentInput();
markupEndSegment.markupType = ConnectApi.MarkupType.Code;
messageInput.messageSegments.add(markupEndSegment);

input.body = messageInput;

ConnectApi.ChatterFeeds.postFeedElement(communityId, input);

Example for Sharing a Feed Element (in Version 39.0 and Later)

// Define the FeedItemInput object to pass to postFeedElement
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
feedItemInput.subjectId = 'me';
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
textSegmentInput.text = 'Look at this post I'm sharing.';
// The MessageBodyInput object holds the text in the post
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);

feedItemInput.body = messageBodyInput;

ConnectApi.FeedEntityShareCapabilityInput shareInput = new
ConnectApi.FeedEntityShareCapabilityInput();
shareInput.feedEntityId = '0D5R0000000SEbc';
ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new
ConnectApi.FeedElementCapabilitiesInput();
feedElementCapabilitiesInput.feedEntityShare = shareInput;
feedItemInput.capabilities = feedElementCapabilitiesInput;
// Post the feed item.
ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);

Example for Sending a Direct Message

// Define the FeedItemInput object to pass to postFeedElement
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();

ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
textSegmentInput.text = 'Thanks for attending my presentation test run this morning. Send me any feedback.';
// The MessageBodyInput object holds the text in the post
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);
feedItemInput.body = messageBodyInput;

// The FeedElementCapabilitiesInput object holds the capabilities of the feed item.
// For this feed item, we define a direct message capability to hold the member(s) and the subject.

List<String> memberIds = new List<String>();
memberIds.add('005B00000016OUQ');
memberIds.add('005B0000001rIN6');

ConnectApi.DirectMessageCapabilityInput dmInput = new ConnectApi.DirectMessageCapabilityInput();
dmInput.subject = 'Thank you!';
dmInput.membersToAdd = memberIds;

ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new ConnectApi.FeedElementCapabilitiesInput();
feedElementCapabilitiesInput.directMessage = dmInput;

feedItemInput.capabilities = feedElementCapabilitiesInput;

// Post the feed item.
ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);

SEE ALSO:
  Define an Action Link and Post with a Feed Element
  Define an Action Link in a Template and Post with a Feed Element

postFeedElementBatch(communityId, feedElements)
Post a list of feed elements.

API Version
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.BatchResult[] postFeedElementBatch(String communityId,
List<ConnectApi.BatchInput> feedElements)
Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedElements**
  - Type: `List<ConnectApi.BatchInput Class>`
  - The list can contain up to 500 `ConnectApi.BatchInput` objects. In the `ConnectApi.BatchInput` constructor, the input object must be a concrete instance of the abstract `ConnectApi.FeedElementInput` class.

Return Value

- Type: `ConnectApi.BatchResult[]`
  - The returned objects correspond to each of the input objects and are returned in the same order as the input objects.
  - The method call fails only if an error occurs that affects the entire operation (such as a parsing failure). If an individual object causes an error, the error is embedded within the `ConnectApi.BatchResult` list.

Usage

- Use this method to post a list of feed elements efficiently. Create a list containing up to 500 objects and insert them all for the cost of one DML statement.
  - The `ConnectApi.BatchInput Class` has three constructors, but the `postFeedElementBatch` method only supports the two listed here. It doesn’t support multiple binary inputs.
  - In each constructor, the input object must be an instance of `ConnectApi.FeedElementInput`. Pick a constructor based on whether you want to pass a binary input.
    - `ConnectApi.BatchInput(Object input)` — No binary input
    - `ConnectApi.BatchInput(Object input, ConnectApi.BinaryInput binary)` — One binary input

Example

- This trigger bulk posts to the feeds of newly inserted accounts.

```plaintext
trigger postFeedItemToAccount on Account (after insert) {
    Account[] accounts = Trigger.new;

    // Bulk post to the account feeds.
    List<ConnectApi.BatchInput> batchInputs = new List<ConnectApi.BatchInput>();

    for (Account a : accounts) {
        ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
        input.subjectId = a.id;

        body.messageSegments = new List<ConnectApi.MessageSegmentInput>();

        ConnectApi.TextSegmentInput textSegment = new ConnectApi.TextSegmentInput();
```
textSegment.text = 'Let's win the ' + a.name + ' account.';

body.messageSegments.add(textSegment);
input.body = body;

ConnectApi.BatchInput batchInput = new ConnectApi.BatchInput(input);
batchInputs.add(batchInput);
}

ConnectApi.ChatterFeeds.postFeedElementBatch(Network.getNetworkId(), batchInputs);

postFeedItem(communityId, feedType, subjectId, text)

Post a plain-text feed item.

API Version
28.0–31.0

⚠️ Important: In version 32.0 and later, use postFeedElement(communityId, subjectId, feedElementType, text).

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItem postFeedItem(String communityId, ConnectApi.FeedType feedType, String subjectId, String text)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
One of the following:
- News
- Record
- UserProfile
Use Record to post to a group.

subjectId
Type: String
The value depends on the feedType:
- News—ID of the context user or the keyword me.
• Record—ID of any record with a feed, including groups.
• UserProfile—ID of any user.

**text**

Type: **String**

Text of the feed item. Mentions are downgraded to plain text. To include a mention that links to the user, call the `postFeedItem(communityId, feedType, subjectId, feedItemInput, feedItemFileUpload)` method and pass the mention in a `ConnectApi.FeedItemInput` object.

**Return Value**

Type: `ConnectApi.FeedItem`

**Note:** Triggers on FeedItem objects run before their attachment and capabilities information is saved, which means that `ConnectApi.FeedItem.attachment` information and `ConnectApi.FeedElement.capabilities` information may not be available in the trigger.

**Usage**

Feed items and comments can contain up to 10,000 characters.

Posts to `ConnectApi.FeedType.UserProfile` in API versions 23.0 and 24.0 created user status updates, not feed items. For posts to the User Profile Feed in those API versions, the character limit is 1,000 characters.

**postFeedItem(communityId, feedType, subjectId, feedItemInput, feedItemFileUpload)**

Post a rich-text feed item to a feed. Use this method to include mentions and hashtag topics and to attach a file to a feed item. You can also use this method to share a feed item and add a comment.

**API Version**

28.0–31.0

**Important:** In version 32.0 and later, use `postFeedElement(communityId, feedElement, feedElementFileUpload)`.

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.FeedItem postFeedItem(String communityId, ConnectApi.FeedType feedType, String subjectId, ConnectApi.FeedItemInput feedItemInput,
ConnectApi.BinaryInput feedItemFileUpload)
```

**Parameters**

**communityId**

Type: **String**

Use either the ID for a community, `internal`, or `null`. 
**feedType**

Type: `ConnectApi.FeedType`

One of the following:

- News
- Record
- UserProfile

To post a feed item to a group, use `Record` and use a group ID as the `subjectId`.

**subjectId**

Type: `String`

If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

**feedItemInput**

Type: `ConnectApi.FeedItemInput`

In the `FeedItemInput` object, specify rich text. Optionally, in the `FeedItemInput.attachment` property, specify a link, a poll, an existing file, or a new file.

**feedItemFileUpload**

Type: `ConnectApi.BinaryInput`

If you specify a `NewFileAttachmentInput` object in the `FeedItemInput.attachment` property, specify the new binary file to attach in this argument. Otherwise, do not specify a value.

**Return Value**

Type: `ConnectApi.FeedItem`

**Note:** Triggers on FeedItem objects run before their attachment and capabilities information is saved, which means that `ConnectApi.FeedItem.attachment` information and `ConnectApi.FeedElement.capabilities` information may not be available in the trigger.

**Usage**

Feed items and comments can contain up to 10,000 characters. Posts to `ConnectApi.FeedType.UserProfile` in API versions 23.0 and 24.0 created user status updates, not feed items. For posts to the User Profile Feed in those API versions, the character limit is 1,000 characters.

**Example for Sharing a Feed Item and Adding a Comment**

To share a feed item and add a comment, create a `ConnectApi.FeedItemInput` object containing the comment and the feed item to share. Then pass the object to `ConnectApi.ChatterFeeds.postFeedItem` in the `feedItemInput` argument. The message segments in the message body input are used as the comment.

```java
ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
input.originalFeedItemId = '0D5D0000000JuAG';

List<ConnectApi.MessageSegmentInput> segmentList = new List<ConnectApi.MessageSegmentInput>();
```
Example for Posting a Mention to a User Profile Feed

To post to a user profile feed and include an @mention, call the `ConnectApi.ChatterFeeds.postFeedItem` method.

```java
String communityId = null;
ConnectApi.FeedType feedType = ConnectApi.FeedType.UserProfile;

ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
ConnectApi.TextSegmentInput textSegment;
ConnectApi.MentionSegmentInput mentionSegment = new ConnectApi.MentionSegmentInput();

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'Hey there ';
messageInput.messageSegments.add(textSegment);

mentionSegment.id = '005D0000001LLO1';
messageInput.messageSegments.add(mentionSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = '. How are you?';
messageInput.messageSegments.add(textSegment);

input.body = messageInput;

ConnectApi.FeedItem feedItemRep = ConnectApi.ChatterFeeds.postFeedItem(communityId, feedType, 'me', input, null);
```

**publishDraftFeedElement(communityId, feedElementId, feedElement)**

Publish a draft feed element.

**API Version**

44.0

**Requires Chatter**

Yes
Signature

```java
public static ConnectApi.FeedElement publishDraftFeedElement(String communityId, String feedElementId, ConnectApi.FeedElementInput feedElement)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.

- `feedElementId`
  - Type: `String`
  - ID of the feed element to publish.

- `feedElement`
  - Type: `ConnectApi.FeedElementInput`
  - Use this optional parameter to edit your draft before publishing.

Return Value

- Type: `ConnectApi.FeedElement`
  - The published feed element has a new ID.

**searchFeedElements(communityId, q)**

Get the first page of feed elements that match the search criteria.

API Version

- 31.0

Available to Guest Users

- 31.0

Requires Chatter

- Yes

Signature

```java
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.

- `q`
  - Type: `String`
q
Type: String

Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with set:Test). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- setTestSearchFeedElements(communityId, q, result)
- Testing ConnectApi Code

searchFeedElements(communityId, q, sortParam)
Get the first page of sorted feed elements that match the search criteria.

API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, ConnectApi.FeedSortOrder sortParam)

Parameters
communityId
Type: String

Use either the ID for a community, internal, or null.

q
Type: String

Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchFeedElements(communityId, q, sortParam, result)
Testing ConnectApi Code

searchFeedElements(communityId, q, threadedCommentsCollapsed)
Get the feed elements and comments that match the search criteria.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, Boolean threadedCommentsCollapsed)
Parameters

**communityId**
Type: *String*
Use either the ID for a community, *internal*, or *null*.

**q**
Type: *String*
Required and cannot be *null*. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See *Wildcards*.

**threadedCommentsCollapsed**
Type: *Boolean*
Specifies whether to return threaded comments in a collapsed style (**true**) or not (**false**). If you pass in *null*, the default is **false**.

Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestSearchFeedElements(communityId, q, threadedCommentsCollapsed, result)`
- Testing `ConnectApi Code`

**searchFeedElements(communityId, q, pageParam, pageSize)**
Get a page of feed elements that match the search criteria.

API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, String pageParam, Integer pageSize)
```
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchFeedElements(communityId, q, pageParam, pageSize, result)

Available to Guest Users
31.0

Requires Chatter
Yes
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

q
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
  • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  If you pass in null, the default value CreatedDateDesc is used.

Return Value
  Type: ConnectApi.FeedElementPage

Usage
  To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

searchFeedElements(communityId, q, pageParam, pageSize, threadedCommentsCollapsed)

Get a page of feed elements with comments in a threaded style that match the search criteria.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature

public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, String pageParam, Integer pageSize, Boolean threadedCommentsCollapsed)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value
Type: ConnectApi.FeedElementPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with \texttt{setTest}). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Available to Guest Users

31.0

Requires Chatter

Yes

Signature

\texttt{public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, Integer recentCommentCount, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)}

Parameters

\textit{communityId}

Type: \texttt{String}

Use either the ID for a community, \texttt{internal}, or \texttt{null}.

\textit{q}

Type: \texttt{String}

Required and cannot be \texttt{null}. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

\textit{recentCommentCount}

Type: \texttt{Integer}

Maximum number of comments to return with each feed element. The default value is 3.

\textit{pageParam}

Type: \texttt{String}
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Yes
Signature

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedType`
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values are `Company`, `DirectMessageModeration`, `Home`, `Moderation`, and `PendingReview`.

- `pageParam`
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- `pageSize`
  - Type: `Integer`
  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- `sortParam`
  - Type: `ConnectApi.FeedSortOrder`
  - Values are:
    - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
    - `CreatedDateDesc`—Sorts by most recent creation date.
    - `LastModifiedDesc`—Sorts by most recent activity.
    - `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
    - `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
  - If you pass in `null`, the default value `CreatedDateDesc` is used.

- `q`
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

- Type: `ConnectApi.FeedElementPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with set:Test). Use the set test method with the same parameters or the code throws an exception.

searchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q)

Get a page of sorted feed elements from the Company, DirectMessageModeration, Home, Moderation, and PendingReview feeds that match the search criteria. Each feed element includes no more than the specified number of comments.

API Version

31.0

Available to Guest Users

31.0

Requires Chatter

Yes

Signature

public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, Home, Moderation, and PendingReview.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
• **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

• **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`

Values are:
• **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
• **CreatedDateDesc**—Sorts by most recent creation date.
• **LastModifiedDateDesc**—Sorts by most recent activity.
• **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
• **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**
Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See **Wildcards**.

Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)`
- Testing `ConnectApi Code`
searchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter)

Get a page of sorted and filtered feed elements from the Home feed that match the search criteria. Each feed element includes no more than the specified number of comments.

API Version
32.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedFilter filter)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. The only valid value is Home.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
When the `sortParam` is `MostViewed`, you must pass in `null` for the `pageParam`.

**pageSize**
Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

When the `sortParam` is `MostViewed`, the `pageSize` must be a value from 1 to 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`

Values are:
- `CreateDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreateDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreateDateDesc` is used.

**q**
Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

**filter**
Type: `ConnectApi.FeedFilter`

Specifies the feed filters.
- `AllQuestions`—Feed elements that are questions.
- `AuthoredBy`—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- `CommunityScoped`—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- `QuestionsWithCandidateAnswers`—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- `QuestionsWithCandidateAnswersReviewedPublished`—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- `Read`—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- `SolvedQuestions`—Feed elements that are questions and that have a best answer.
- `UnansweredQuestions`—Feed elements that are questions and that don’t have any answers.
- `UnansweredQuestionsWithCandidateAnswers`—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- `Unread`—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the `Record` feed of a group.
• **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

`setTestSearchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter, result)`

Testing ConnectApi Code

**searchFeedElementsInFeed(communityId, feedType, subjectId, q)**

Get the feed elements from a feed that match the search criteria.

Yes

Signature

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String q)
```

Parameters

**communityId**

Type: `String`

Use either the ID for a community, internal, or `null`.

**feedType**

Type: `ConnectApi.FeedType`

The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessages, Filter, Landing, and Streams.

**subjectId**

Type: `String`
If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

**q**

- **Type:** String
- Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

**Return Value**

- **Type:** `ConnectApi.FeedElementPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

- `setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, q, result)`
- [Testing ConnectApi Code](#)

**searchFeedElementsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q)**

Get a page of sorted feed elements from a feed for a record or user that match the search criteria.

**API Version**

31.0

**Available to Guest Users**

31.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
```

**Parameters**

- **communityId**
  - **Type:** String
  - Use either the ID for a community, `internal`, or `null`. 
feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

gPageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Order of feed items in the feed.
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Search term. Searches keywords in the user or group name. A minimum of one character is required. This parameter does not support wildcards. This parameter is required.

Return Value
Type: ConnectApi.FeedElementPage
**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

- `setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q, result)`

**Testing ConnectApi Code**

```
searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q)
```

Get a page of sorted feed elements from a feed that match the search criteria. Each feed element includes no more than the specified number of comments.

**API Version**

31.0

**Available to Guest Users**

31.0

**Requires Chatter**

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q)
```

**Parameters**

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessages, Filter, Landing, and Streams.

- **subjectId**
  - Type: String
  - If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.
recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedElementPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Available to Guest Users

35.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId,
                      ConnectApi.FeedType feedType,
                      String subjectId, Integer recentCommentCount,
                      ConnectApi.FeedDensity density,
                      String pageParam, Integer pageSize,
                      ConnectApi.FeedSortOrder sortParam, String q,
                      ConnectApi.FeedFilter filter)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.UserProfile`.

- **subjectId**
  - Type: `String`
  - The ID of any user. To specify the context user, use the user ID or the alias `me`.

- **recentCommentCount**
  - Type: `Integer`
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in `null`, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in `null`, the default value CreatedDateDesc is used.

q
Type: String
One or more keywords to search for in the feed elements visible to the context user. The search string can contain wildcards and must contain at least two characters that aren’t wildcards. See Wildcards.

filter
Type: ConnectApi.FeedFilter
Value must be ConnectApi.FeedFilter.CommunityScoped. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out.

Return Value
Type: ConnectApi.FeedElementPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Parameters

communityId

Type: String

Use either the ID for a community, internal, or null.

feedType

Type: ConnectApi.FeedType

Value must be ConnectApi.FeedType.Record.

subjectId

Type: String

The ID of a case.

recentCommentCount

Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
One or more keywords to search for in the feed elements visible to the context user. The search string can contain wildcards and must contain at least two characters that aren’t wildcards. See Wildcards.

customFilter
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

Return Value
Type: ConnectApi.FeedElementPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  Any record ID, including a group ID.

recentCommentCount
  Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

`density`
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

`q`
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`showInternalOnly`
Type: `Boolean`
Specifies whether to show only feed elements from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

Return Value
Type: `ConnectApi.FeedElementPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly,
ConnectApi.FeedFilter filter)
```

Parameters

- `communityId`
  - Type: String
  - Use either the ID for a community, internal, or null.

- `feedType`
  - Type: `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.Record`.

- `subjectId`
  - Type: String
  - Any record ID, including a group ID.
recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

filter
Type: ConnectApi.FeedFilter
Specifies the feed filters.
• AllQuestions—Feed elements that are questions.
• AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
• CommunityScoped—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.

• QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.

• Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.

• SolvedQuestions—Feed elements that are questions and that have a best answer.

• UnansweredQuestions—Feed elements that are questions and that don’t have any answers.

• UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.

• UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, String
customFilter)
```

Parameters

```
communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  The ID of a case.

recentCommentCount
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
```
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

**q**

Type: String

Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**showInternalOnly**

Type: Boolean

Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

**filter**

Type: String

Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

Return Value

Type: ConnectApi.FeedElementPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q)

Get the feed elements from a feed filtered by a key prefix that match the search criteria.

API Version

31.0

Requires Chatter

Yes
Signature

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, String q)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `subjectId`
  - Type: `String`
  - The ID of the context user or the alias `me`.

- `keyPrefix`
  - Type: `String`
  - A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of `005` and Group objects have a prefix of `0F9`.

- `q`
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

- Testing ConnectApi Code

```
searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q)
```

Get a page of sorted feed elements from a feed filtered by a key prefix that match the search criteria.

API Version

31.0

Requires Chatter

Yes
public static ConnectApi.FeedElementPage searchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedElementPage
Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q, result)`
- `Testing ConnectApi Code`

`searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)`

Get a page of sorted feed elements from a feed filtered by a key prefix that match the search criteria. Each feed element includes no more than the specified number of comments.

API Version
31.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.FeedElementPage searchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters
- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- **subjectId**
  Type: `String`
  The ID of the context user or the alias `me`.
- **keyPrefix**
  Type: `String`
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of `005` and Group objects have a prefix of `0F9`.
- **recentCommentCount**
  Type: `Integer`
  Maximum number of comments to return with each feed element. The default value is 3.
- **density**
  Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**

Type: **String**

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**

Type: **Integer**

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**

Type: **ConnectApi.FeedSortOrder**

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**

Type: **String**

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

Return Value

Type: **ConnectApi.FeedElementPage**

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

API Version
28.0–31.0

Important: In version 32.0 and later, use `searchFeedElements(communityId, q, sortParam)`.

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedItemPage searchFeedItems(String communityId, String q,
ConnectApi.FeedSortOrder sortParam)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`q`
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

Return Value
Type: `ConnectApi.FeedItemPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

### searchFeedItemsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q)

Get a page of sorted feed items from a feed for a user or record that match the search criteria.

API Version

28.0–31.0

**Important:** In version 32.0 and later, use `searchFeedElementsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q).`
Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature

public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Order of feed items in the feed.
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
sortParam

q

Type: String

Search term. Searches keywords in the user or group name. A minimum of one character is required. This parameter does not support wildcards. This parameter is required.

Return Value

Type: ConnectApi.FeedItemPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q, result)

Testing ConnectApi Code

searchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q)

Get a page of sorted feed items from a feed that match the search criteria. Each feed item includes no more than the specified number of comments.

API Version

29.0–31.0

Important: In version 32.0 and later, use searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q).

Available to Guest Users

Signature

public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedType**
Type: `ConnectApi.FeedType`
The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessages, Filter, Landing, and Streams.

**subjectId**
Type: String
If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

**recentCommentCount**
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

$q$
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

Return Value
Type: `ConnectApi.FeedItemPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)`
- `Testing ConnectApi Code`

`searchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly)`
Get a page of sorted feed items from a feed for a user or record that match the search criteria. Each feed item includes no more than the specified number of comments. Specify whether to return feed items posted by internal (non-community) users only.

API Version
30.0–31.0

⚠️ **Important**: In version 32.0 and later, use `searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly)`.

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly)
```
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedType**
Type: `ConnectApi.FeedType`
Value must be `ConnectApi.FeedType.Record`.

**subjectId**
Type: String
Any record ID, including a group ID.

**recentCommentCount**
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**q**
Type: String
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**showInternalOnly**
- **Type**: Boolean
- Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

**Return Value**
- **Type**: `ConnectApi.FeedItemPage`

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO**:
- `setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, result)`
- Testing ConnectApi Code

### `searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q)`
Get the feed items that match the search criteria from a feed filtered by a key prefix for a user.

**API Version**
- 28.0–31.0

**Important**: In version 32.0 and later, use `searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q)`.

**Requires Chatter**
- Yes

**Signature**

```java
public static ConnectApi.FeedItemPage searchFeedItemsInFilterFeed(String communityId, String subjectId, String keyPrefix, String q)
```

**Parameters**

- **communityId**
  - **Type**: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **subjectId**
  - **Type**: `String`
  - The ID of the context user or the alias `me`. 
keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q, result)
Testing ConnectApi Code

searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items that match the search criteria from a feed filtered by a key prefix for a user.

API Version
28.0–31.0

Important: In version 32.0 and later, use searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q).

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage searchFeedItemsInFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

**subjectId**  
Type: String  
The ID of the context user or the alias me.

**keyPrefix**  
Type: String  
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 00S and Group objects have a prefix of 0F9.

**pageParam**  
Type: String  
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**  
Type: Integer  
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**  
Type: ConnectApi.FeedSortOrder  
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**q**  
Type: String  
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**Return Value**  
Type: ConnectApi.FeedItemPage
Usage
To test code that uses this method, use the matching set test method (prefix the method name with \texttt{setTest}). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

\texttt{setTestSearchFeedItemsInFilterFeed(communityId, feedType, subjectId, keyPrefix, pageParam, pageSize, sortParam, q, result)}

Testing ConnectApi Code

\texttt{searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)}

Get a page of sorted feed items that match the search criteria from a feed filtered by a key prefix for a user. Each feed item includes no more than the specified number of comments.

API Version
29.0–31.0

\textbf{Important:} In version 32.0 and later, use \texttt{searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)}.

Requires Chatter
Yes

Signature

\texttt{public static ConnectApi.FeedItemPage searchFeedItemsInFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)}

Parameters

\textit{communityId}

Type: \texttt{String}

Use either the ID for a community, \texttt{internal}, or \texttt{null}.

\textit{subjectId}

Type: \texttt{String}

The ID of the context user or the alias \texttt{me}.

\textit{keyPrefix}

Type: \texttt{String}

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

\textit{recentCommentCount}

Type: \texttt{Integer}

The maximum number of comments to return with each feed item. The default value is 3.
density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedItemPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchFeedItemsInFilterFeed(communityId, feedType, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)`
- `Testing ConnectApi Code`

**searchStreams(communityId, q)**

Search the Chatter feed streams for the context user.

API Version

40.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `q`
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

Return Value

Type: `ConnectApi.ChatterStreamPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchStreams(communityId, q, result)`
- `Testing ConnectApi Code`
**searchStreams(communityId, q, sortParam)**

Search and sort the Chatter feed streams for the context user.

**API Version**

40.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q, ConnectApi.SortOrder sortParam)
```

**Parameters**

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **q**
  - Type: String
  - Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **sortParam**
  - Type: ConnectApi.SortOrder
  - Specifies the sort order. Values are:
    - Ascending—Items are in ascending alphabetical order (A-Z).
    - Descending—Items are in descending alphabetical order (Z-A).
    - MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

  If not specified, default value is Ascending.

**Return Value**

Type: ConnectApi.ChatterStreamPage

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

- `setTestSearchStreams(communityId, q, sortParam, result)`
- Testing ConnectApi Code
**searchStreams(communityId, q, pageParam, pageSize)**

Search the Chatter feed streams for the context user and return a page of results.

**API Version**

40.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q, Integer pageParam, Integer pageSize)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.

- **q**
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See *Wildcards*.

- **pageParam**
  - Type: `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

**Return Value**

Type: `ConnectApi.ChatterStreamPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

- `setTestSearchStreams(communityId, q, pageParam, pageSize, result)`
- Testing ConnectApi Code
searchStreams(communityId, q, pageParam, pageSize, sortParam)

Search the Chatter feed streams for the context user and return a sorted page of results.

API Version
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

sortParam
Type: ConnectApi.SortOrder
Specifies the sort order. Values are:
• Ascending—Items are in ascending alphabetical order (A-Z).
• Descending—Items are in descending alphabetical order (Z-A).
• MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.
If not specified, default value is Ascending.

Return Value
Type: ConnectApi.ChatterStreamPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

setTestSearchStreams(communityId, q, pageParam, pageSize, sortParam, result)

Testing ConnectApi Code

searchStreams(communityId, q, pageParam, pageSize, sortParam, globalScope)

Search the Chatter feed streams from all communities for the context user and return a sorted page of results.

API Version

41.0

Requires Chatter

Yes

Signature

public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam, Boolean globalScope)

Parameters

communityId

Type: String

Use either the ID for a community, internal, or null.

q

Type: String

Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam

Type: Integer

Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize

Type: Integer

Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

sortParam

Type: ConnectApi.SortOrder

Specifies the sort order. Values are:

- Ascending—Items are in ascending alphabetical order (A-Z).
- Descending—Items are in descending alphabetical order (Z-A).
MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is Ascending.

globalScope
Type: Boolean

Specifies whether to get streams from all the context user’s communities, regardless of the communityId value.

Tip: If you know the community ID for the streams, we recommend setting globalScope to false.

Return Value
Type: ConnectApi.ChatterStreamPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

setCommentIsVerified(communityId, commentId, isVerified)
Mark a comment as verified or unverified.

API Version
41.0

Requires Chatter
Yes

Signature
public static ConnectApi.VerifiedCapability setCommentIsVerified(String communityId, String commentId, Boolean isVerified)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
ID of the comment on a question post. Only one comment on a question post can be marked as verified.

isVerified
Type: Boolean
Specifies whether to mark the comment as verified (true) or unverified (false).

Only verified comments can be marked as unverified, and only unverified comments can be marked as verified.
Return Value

Type: `ConnectApi.VerifiedCapability`

If the comment doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

`setCommentIsVerifiedByAnonymized(communityId, commentId, isVerified, isVerifiedByAnonymized)`  
Mark a comment as verified by an anonymous user.

API Version

43.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.VerifiedCapability setCommentIsVerifiedByAnonymized(String communityId, String commentId, Boolean isVerified, Boolean isVerifiedByAnonymized)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`commentId`
Type: `String`
ID of the comment on a question post. Only one comment on a question post can be marked as verified.

`isVerified`
Type: `Boolean`
Specifies whether to mark the comment as verified (`true`) or unverified (`false`).
Only verified comments can be marked as unverified, and only unverified comments can be marked as verified.

`isVerifiedByAnonymized`
Type: `Boolean`
Specifies whether to mark the comment as verified by an anonymous user (`true`).
If a user previously verified a comment and then requested the activity to be deleted, use `isVerifiedByAnonymized` to maintain the verification and anonymize the value of `lastVerifiedByUser`.
You can’t set `isVerified` and `isVerifiedByAnonymized` to `true` at the same time. `isVerifiedByAnonymized` can be set to `true` only if `isVerified` is already set to `true`.
You can’t set `isVerifiedByAnonymized` to `false`. After `isVerifiedByAnonymized` is set to `true`, it can be undone only when another user marks the comment as unverified and then re-verifies the comment.
Return Value
 Type: `ConnectApi.VerifiedCapability`
 If the comment doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

`setCommentVote(communityId, commentId, upDownVote)`
Upvote or downvote a comment.

API Version
41.0

Requires Chatter
Yes

Signature
`public static ConnectApi.UpDownVoteCapability setCommentVote(String communityId, String commentId, ConnectApi.UpDownVoteCapabilityInput upDownVote)`

Parameters
`communityId`
Type: `String`
Use either the ID for a community, internal, or `null`.

`commentId`
Type: `String`
ID of the comment.

`upDownVote`
Type: `ConnectApi.UpDownVoteCapabilityInput`
A `ConnectApi.UpDownVoteCapabilityInput` object that includes your vote.

Return Value
Type: `ConnectApi.UpDownVoteCapability`
If the comment doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

`setFeedCommentStatus(communityId, commentId, status)`
Set the status of a comment.

API Version
38.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.StatusCapability setFeedCommentStatus(String communityId,
String commentId, ConnectApi.StatusCapabilityInput status)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, internal, or null.
- `commentId`
  - Type: `String`
  - ID of the comment.
- `status`
  - Type: `ConnectApi.StatusCapabilityInput`
  - A `ConnectApi.StatusCapabilityInput` object that includes the status you want to set.

Return Value

Type: `ConnectApi.StatusCapability`

If the comment doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

Usage

Only users with the Can Approve Feed Post and Comment permission can set the status of a feed post or comment.

```java
setFeedElementIsClosed(communityId, feedElementId, isClosed)
```

Set a feed element to closed.

Users can’t edit (specifically the feed item body or title), comment on, or delete a closed feed element. If the closed feed element is a poll, users can’t vote on it. Users can’t edit (specifically the comment body) or delete a comment on a closed feed element or select or remove it as best answer.

Admins and moderators can edit and delete closed feed elements and comments on closed feed elements. Admins and moderators can select or remove the best answer status on comments on closed feed elements.

API Version

43.0

Requires Chatter

Yes
**setFeedElementIsClosed(String communityId, String feedElementId, Boolean isClosed)**

**Parameters**

- **communityId**
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- **feedElementId**
  - Type: String
  - ID of the feed element.

- **isClosed**
  - Type: Boolean
  - Specifies whether to set the feed element to closed (`true`) or not (`false`).

**Return Value**

Type: `ConnectApi.CloseCapability`

If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

**setFeedElementVote(String communityId, String feedElementId, ConnectApi.UpDownVoteCapabilityInput upDownVote)**

Upvote or downvote a feed element.

**API Version**

41.0

**Requires Chatter**

Yes
upDownVote
Type: ConnectApi.UpDownVoteCapabilityInput
A ConnectApi.UpDownVoteCapabilityInput object that includes your vote.

Return Value
Type: ConnectApi.UpDownVoteCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

setFeedEntityStatus(communityId, feedElementId, status)
Set the status of a feed post.

API Version
37.0

Requires Chatter
Yes

Signature
public static ConnectApi.StatusCapability setFeedEntityStatus(String communityId, String feedElementId, ConnectApi.StatusCapabilityInput status)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

status
Type: ConnectApi.StatusCapabilityInput
A ConnectApi.StatusCapabilityInput object that includes the status you want to set.

Return Value
Type: ConnectApi.StatusCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

Usage
Only users with the Can Approve Feed Post and Comment permission can set the status of a feed post or comment.
setIsMutedByMe(communityId, feedElementId, isMutedByMe)

Mute or unmute a feed element.

API Version
35.0

Requires Chatter
Yes

Signature
public static ConnectApi.MuteCapability setIsMutedByMe(String communityId, String feedElementId, Boolean isMutedByMe)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

isMutedByMe
Type: Boolean
Indicates whether the feed element is muted for the context user. Default value is false.

Return Value
Type: ConnectApi.MuteCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

setIsReadByMe(communityId, feedElementId, readBy)

Mark a feed element as read for the context user using an input class.

API Version
40.0

Requires Chatter
Yes
**Signature**

```java
public static ConnectApi.ReadByCapability setIsReadByMe(String communityId, String feedElementId, ConnectApi.ReadByCapabilityInput readBy)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedElementId**
  - Type: `String`
  - ID of the feed element to mark as read.

- **readBy**
  - Type: `ConnectApi.ReadByCapabilityInput`
  - A `ConnectApi.ReadByCapabilityInput` body indicating to mark the feed elements as read.

**Return Value**

- Type: `ConnectApi.ReadByCapability`

If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

**setIsReadByMe(communityId, feedElementId, isReadByMe)**

Mark a feed element as read for the context user.

**API Version**

40.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.ReadByCapability setIsReadByMe(String communityId, String feedElementId, Boolean isReadByMe)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedElementId**
  - Type: `String`
  - ID of the feed element to mark as read.
**isReadByMe**
Type: Boolean

Specifies to mark the feed element as read (true) for the context user.

**Return Value**
Type: ConnectApi.ReadByCapability

If the feed element doesn't support this capability, the return value is ConnectApi.NotFoundException.

**shareFeedElement(communityId, subjectId, feedElementType, originalFeedElementId)**
Share the originalFeedElementId as the context user.

**API Version**
31.0–38.0

**Important:** In version 39.0 and later, use postFeedElement(communityId, feedElement) or updateFeedElement(communityId, feedElementId, feedElement) with the ConnectApi.FeedEntityShareCapabilityInput to share a feed entity with a feed element.

**Requires Chatter**
Yes

**Signature**

```java
public static ConnectApi.FeedElement shareFeedElement(String communityId, String subjectId, ConnectApi.FeedElementType feedElementType, String originalFeedElementId)
```

**Parameters**

- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **subjectId**
  Type: String
  The ID of the user or group with whom to share the feed element.

- **feedElementType**
  Type: ConnectApi.FeedElementType
  Values are:
  - **Bundle**—A container of feed elements. A bundle also has a body made up of message segments that can always be gracefully degraded to text-only values.
  - **FeedItem**—A feed item has a single parent and is scoped to one community or across all communities. A feed item can have capabilities such as bookmarks, canvas, content, comment, link, poll. Feed items have a body made up of message segments that can always be gracefully degraded to text-only values.
Recommendation

A recommendation is a feed element with a recommendations capability. A recommendation suggests records to follow, groups to join, or applications that are helpful to the context user.

originalFeedElementId

Type: String

The ID of the feed element to share.

Example

```java
ConnectApi.ChatterFeeds.shareFeedElement(null, '0F9RR0000004CPw',
ConnectApi.FeedElementType.FeedItem, '0D5RR0000004Gxc');
```

**shareFeedItem(communityId, feedType, subjectId, originalFeedItemId)**

Share the originalFeedItemId to the feed specified by the feedType.

API Version

28.0–31.0

⚠️ Important:

- In version 32.0–38.0, use `shareFeedElement(communityId, subjectId, feedElementType, originalFeedElementId)`.
- In version 39.0 and later, use `postFeedElement(communityId, feedElement)` or `updateFeedElement(communityId, feedElementId, feedElement)` with the `ConnectApi.FeedEntityShareCapabilityInput`.

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedItem shareFeedItem(String communityId, ConnectApi.FeedType feedType, String subjectId, String originalFeedItemId)
```

Parameters

**communityId**

Type: String

Use either the ID for a community, internal, or null.

**feedType**

Type: `ConnectApi.FeedType`

One of the following:
To share a feed item with a group, use `Record` and use a group ID as the `subjectId`.

**subjectId**
Type: `String`
The value depends on the value of `feedType`:
- **News**—`subjectId` must be the ID of the context user or the keyword `me`.
- **Record**—`subjectId` can be a group ID or the ID of the context user (or `me`).
- **UserProfile**—`subjectId` can be any user ID.

**originalFeedItemId**
Type: `String`
The ID of the feed item to share.

Return Value
Type: `ConnectApi.FeedItem`

Example
To share a feed item with a group, pass in the community ID (or `null`), the feed type `Record`, the group ID, and the ID of the feed item to share.

```
ConnectApi.ChatterFeeds.shareFeedItem(null, ConnectApi.FeedType.Record, '0F9D00000000izf', '0D5D0000000JuAG');
```

**updateBookmark(communityId, feedItemId, isBookmarkedByCurrentUser)**
Bookmark a feed item or remove a bookmark from a feed item.

API Version
28.0–31.0

**Important:** In version 32.0 and later, use `updateFeedElementBookmarks(communityId, feedElementId, bookmarks)` or `updateFeedElementBookmarks(communityId, feedElementId, isBookmarkedByCurrentUser)`.

Requires Chatter
Yes

Signature
```
public static ConnectApi.FeedItem updateBookmark(String communityId, String feedItemId, Boolean isBookmarkedByCurrentUser)
```
Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`feedItemId`
Type: `String`
The ID for a feed item.

`isBookmarkedByCurrentUser`
Type: `Boolean`
—Specifying `true` adds the feed item to the list of bookmarks for the context user. Specify `false` to remove a bookmark.

Return Value
Type: `ConnectApi.FeedItem`

`updateComment(communityId, commentId, comment)`
Edit a comment.

API Version
34.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.Comment updateComment(String communityId, String commentId, ConnectApi.CommentInput comment)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`commentId`
Type: `String`
ID of the comment to be edited.

`comment`
Type: `ConnectApi.CommentInput`
Information about the comment to be edited.
Return Value

Type: `ConnectApi.Comment`

If the comment doesn’t support the edit capability, the return value is `ConnectApi.NotFoundException`.

Example

```java
String commentId;
String communityId = Network.getNetworkId();

// Get the last feed item created by the context user.
List<FeedItem> feedItems = [SELECT Id FROM FeedItem WHERE CreatedById = :UserInfo.getUserId()
ORDER BY CreatedDate DESC];
if (feedItems.isEmpty()) {
    // Return null within anonymous apex.
    return null;
}
String feedElementId = feedItems[0].id;

ConnectApi.CommentPage commentPage =
    ConnectApi.ChatterFeeds.getCommentsForFeedElement(communityId, feedElementId);
if (commentPage.items.isEmpty()) {
    // Return null within anonymous apex.
    return null;
}
commentId = commentPage.items[0].id;

ConnectApi.FeedEntityIsEditable isEditable =
    ConnectApi.ChatterFeeds.isCommentEditableByMe(communityId, commentId);

if (isEditable.isEditableByMe == true){
    ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput();
    ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

    messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
    textSegmentInput.text = 'This is my edited comment.';
    messageBodyInput.messageSegments.add(textSegmentInput);
    commentInput.body = messageBodyInput;

    ConnectApi.Comment editedComment = ConnectApi.ChatterFeeds.updateComment(communityId, commentId, commentInput);
}
```

`updateDirectMessage(communityId, feedElementId, directMessage)`

Update the members of a direct message.

API Version

40.0
public static ConnectApi.DirectMessageCapability updateDirectMessage(String communityId, String feedElementId, ConnectApi.DirectMessageCapabilityInput directMessage)

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedElementId**
Type: String
ID of the feed element.

**directMessage**
Type: ConnectApi.DirectMessageCapabilityInput
A ConnectApi.DirectMessageCapabilityInput body that includes the members to add and remove.

Return Value

Type: ConnectApi.DirectMessageCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

public static ConnectApi.FeedElement updateFeedElement(String communityId, String feedElementId, ConnectApi.FeedElementInput feedElement)

Edit a feed element.

API Version
34.0

Requires Chatter
Yes

public static ConnectApi.FeedElement updateFeedElement(String communityId, String feedElementId, ConnectApi.FeedElementInput feedElement)

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.
**feedElementId**
- **Type:** `String`
  - ID of the feed element to be edited. Feed items are the only type of feed element that can be edited.

**feedElement**
- **Type:** `ConnectApi.FeedElementInput`
  - Information about the feed item to be edited.

**Return Value**
- **Type:** `ConnectApi.FeedElement`
  - If the feed element doesn’t support the edit capability, the return value is `ConnectApi.NotFoundException`.

**Example for Editing a Feed Post**

```java
String communityId = Network.getNetworkId();

// Get the last feed item created by the context user.
List<FeedItem> feedItems = [SELECT Id FROM FeedItem WHERE CreatedById = :UserInfo.getUserId() ORDER BY CreatedDate DESC];
if (feedItems.isEmpty()) {
    // Return null within anonymous apex.
    return null;
}
String feedElementId = feedItems[0].id;
ConnectApi.FeedEntityIsEditable isEditable = ConnectApi.ChatterFeeds.isFeedElementEditableByMe(communityId, feedElementId);
if (isEditable.isEditableByMe == true){
    ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
    ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

    messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
    textSegmentInput.text = 'This is my edited post.';
    messageBodyInput.messageSegments.add(textSegmentInput);

    feedItemInput.body = messageBodyInput;

    ConnectApi.FeedElement editedFeedElement = ConnectApi.ChatterFeeds.updateFeedElement(communityId, feedElementId, feedItemInput);
}
```

**Example for Editing a Question Title and Post**

```java
String communityId = Network.getNetworkId();

// Get the last feed item created by the context user.
List<FeedItem> feedItems = [SELECT Id FROM FeedItem WHERE CreatedById = :UserInfo.getUserId()
ORDER BY CreatedDate DESC;
if (feedItems.isEmpty()) {
  // Return null within anonymous apex.
  return null;
}
String feedElementId = feedItems[0].id;

ConnectApi.FeedEntityIsEditable isEditable =
ConnectApi.ChatterFeeds.isFeedElementEditableByMe(communityId, feedElementId);
if (isEditable.isEditableByMe == true){

  ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
  ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new
  ConnectApi.FeedElementCapabilitiesInput();
  ConnectApi.QuestionAndAnswersCapabilityInput questionAndAnswersCapabilityInput = new
  ConnectApi.QuestionAndAnswersCapabilityInput();
  ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

  messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
  textSegmentInput.text = 'This is my edited question.';
  messageBodyInput.messageSegments.add(textSegmentInput);
  feedItemInput.body = messageBodyInput;
  feedItemInput.capabilities = feedElementCapabilitiesInput;

  feedElementCapabilitiesInput.questionAndAnswers = questionAndAnswersCapabilityInput;
  questionAndAnswersCapabilityInput.questionTitle = 'Where is my edited question?';

  ConnectApi.FeedElement editedFeedElement =
  ConnectApi.ChatterFeeds.updateFeedElement(communityId, feedElementId, feedItemInput);
}

updateFeedElementBookmarks(communityId, feedElementId, bookmarks)
Bookmark a feed element or remove a bookmark from a feed element using an input class.

API Version
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.BookmarksCapability updateFeedElementBookmarks(String
communityId, String feedElementId, ConnectApi.BookmarksCapabilityInput bookmarks)
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedElementId**
Type: String
ID of the feed element.

**bookmarks**
Type: ConnectApi.BookmarksCapabilityInput
Information about a bookmark.

Return Value
Type: ConnectApi.BookmarksCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

`updateFeedElementBookmarks(communityId, feedElementId, isBookmarkedByCurrentUser)`
Bookmark a feed element or remove a bookmark from a feed element.

API Version
32.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.BookmarksCapability updateFeedElementBookmarks(String communityId, String feedElementId, Boolean isBookmarkedByCurrentUser)
```

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedElementId**
Type: String
ID of the feed element.

**isBookmarkedByCurrentUser**
Type: Boolean
Specify whether to bookmark the feed element (true) or not (false).
Return Value
Type: `ConnectApi.BookmarksCapability`
If the feed element doesn't support this capability, the return value is `ConnectApi.NotFoundException`.

Example
```
ConnectApi.BookmarksCapability bookmark =
ConnectApi.ChatterFeeds.updateFeedElementBookmarks(null, '0D5D0000000KuGh', true);
```

`updateFeedElementReadByCapabilityBatch(communityId, feedElementIds, readBy)`
Mark multiple feed elements as read by the context user at the same time using an input class.

API Version
40.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.BatchResult[] updateFeedElementReadByCapabilityBatch(String
communityId, List<String> feedElementIds, ConnectApi.ReadByCapabilityInput readBy)
```

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`feedElementIds`
Type: `List<String>`
Up to 500 feed element IDs to mark as read.

`readBy`
Type: `ConnectApi.ReadByCapabilityInput`
A `ConnectApi.ReadByCapabilityInput` body indicating to mark the feed elements as read.

Return Value
Type: `ConnectApi.BatchResult[]`
If the feed element doesn't support this capability, the return value is `ConnectApi.NotFoundException`.
The returned objects correspond to each of the input objects and are returned in the same order as the input objects.
The method call fails only if an error occurs that affects the entire operation (such as a parsing failure). If an individual object causes an error, the error is embedded within the `ConnectApi.BatchResult` list.
**updateFeedElementReadByCapabilityBatch(communityId, feedElementIds, isReadByMe)**

Mark multiple feed elements as read by the context user at the same time.

---

**API Version**

40.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.BatchResult[] updateFeedElementReadByCapabilityBatch(String communityId, List<String> feedElementIds, Boolean isReadByMe)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedElementIds**
  - Type: `List<String>`
  - Up to 500 feed element IDs to mark as read.

- **isReadByMe**
  - Type: `Boolean`
  - Specifies to mark the feed element as read (true) for the context user.

**Return Value**

- Type: `ConnectApi.BatchResult[]`

If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

---

**updateLikeForComment(communityId, commentId, isLikedByCurrentUser)**

Like or unlike a comment.

---

**API Version**

39.0

**Requires Chatter**

Yes
Signature

```
public static ConnectApi.ChatterLikePage updateLikeForComment(String communityId, String commentId, Boolean isLikedByCurrentUser)
```

Parameters

- `communityId`
  
  Type: `String`
  
  Use either the ID for a community, `internal`, or `null`.

- `commentId`
  
  Type: `String`
  
  ID of the comment.

- `isLikedByCurrentUser`
  
  Type: `Boolean`
  
  Specifies if the context user likes (`true`) or unlikes (`false`) the comment.

Return Value

Type: `ConnectApi.ChatterLikePage`

```
updateLikeForFeedElement(communityId, feedElementId, isLikedByCurrentUser)
```

Like or unlike a feed element.

API Version

39.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterLikePage updateLikeForFeedElement(String communityId, String feedElementId, Boolean isLikedByCurrentUser)
```

Parameters

- `communityId`
  
  Type: `String`
  
  Use either the ID for a community, `internal`, or `null`.

- `feedElementId`
  
  Type: `String`
  
  ID of the feed element.

- `isLikedByCurrentUser`
  
  Type: `Boolean`
Specifies if the context user likes (true) or unlikes (false) the feed element.

Return Value
Type: `ConnectApi.ChatterLikePage`

If the feed element doesn't support the ChatterLikes capability, the return value is `ConnectApi.NotFoundException`.

`updatePinnedFeedElements(communityId, feedType, subjectId, pin)`
Pin or unpin feed elements to a group or topic feed.

API Version
41.0

Available to Guest Users
41.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.PinCapability updatePinnedFeedElements(String communityId, 
ConnectApi.FeedType feedType, String subjectId, ConnectApi.PinCapabilityInput pin)
```

Parameters
```
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Record and Topics.

subjectId
Type: String
If feedType is Record, subjectId must be a group ID. If feedType is Topics, subjectId must be a topic ID.

pin
Type: ConnectApi.PinCapabilityInput
A ConnectApi.PinCapabilityInput object indicating the feed element to pin or unpin.
```

Return Value
Type: `ConnectApi.PinCapability`

If the feed doesn't support this capability, the return value is `ConnectApi.NotFoundException`.
updateStream(communityId, streamId, streamInput)
Update a Chatter feed stream.

API Version
39.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterStream updateStream(String communityId, String streamId,
ConnectApi.ChatterStreamInput streamInput)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

streamId
  Type: String
  ID of the Chatter feed stream.

streamInput
  Type: ConnectApi.ChatterStreamInput

Return Value
Type: ConnectApi.ChatterStream

voteOnFeedElementPoll(communityId, feedElementId, myChoiceId)
Vote on a poll or change your vote on a poll.

API Version
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.PollCapability voteOnFeedElementPoll(String communityId, String
feedElementId, String myChoiceId)
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedElementId**
Type: String
ID of the feed element.

**myChoiceId**
Type: String
ID of the poll item you’re voting for. The key prefix for poll items is 09A.

Return Value
Type: ConnectApi.PollCapability Class
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

Example

```java
ConnectApi.PollCapability poll = ConnectApi.ChatterFeeds.voteOnFeedElementPoll(null, '0D5D0000000XZaUKAW', '09AD000000000TKMAY');
```

---

**voteOnFeedPoll(communityId, feedItemId, myChoiceId)**
Vote or change your vote on a feed poll.

API Version
28.0–31.0

**Important:** In version 32.0 and later, use voteOnFeedElementPoll(communityId, feedElementId, myChoiceId).

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedPoll voteOnFeedPoll(String communityId, String feedItemId, String myChoiceId)
```

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedItemId**
Type: String

ID of the feed item that is associated with the poll.

myChoiceId
Type: String
ID of the item in the poll you’re voting for.

Return Value
Type: ConnectApi.FeedPoll

ChatterFeeds Test Methods
The following are the test methods for ChatterFeeds. All methods are static.
For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

setTestGetFeedElementsFromFeed(communityId, feedType, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

result
Type: ConnectApi.FeedElementPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getFeedElementsFromFeed(communityId, feedType)
Testing ConnectApi Code

setTestGetFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The only valid value for this parameter is Company.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

`result`  
Type: `ConnectApi.FeedElementPage`  
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)`
- `Testing ConnectApi Code`

```java
setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, result)
```

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
```java
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, internal, or null.
- `feedType`
  Type: `ConnectApi.FeedType`
  The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.
- `recentCommentCount`
  Type: `Integer`
  Maximum number of comments to return with each feed element. The default value is 3.
density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)
  Testing ConnectApi Code

setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.
API Version
32.0

Signature

```
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)
```

Parameters

**communityId**
- **Type:** String
  - Use either the ID for a community, internal, or null.

**feedType**
- **Type:** ConnectApi.FeedType
  - The type of feed. The only valid value is Home.

**recentCommentCount**
- **Type:** Integer
  - Maximum number of comments to return with each feed element. The default value is 3.

**density**
- **Type:** ConnectApi.FeedDensity
  - Specify the amount of content in a feed.
    - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
- **Type:** String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
- **Type:** Integer
  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
- **Type:** ConnectApi.FeedSortOrder
  - Values are:
    - **CreateDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
    - **CreateDateDesc**—Sorts by most recent creation date.
    - **LastModifiedDateDesc**—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. If you pass in null, the default value CreatedDateDesc is used.

**filter**
Type: ConnectApi.FeedFilter
Specifies the feed filters.
• AllQuestions—Feed elements that are questions.
• AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
• CommunityScoped—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.
• QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
• QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
• Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
• SolvedQuestions—Feed elements that are questions and that have a best answer.
• UnansweredQuestions—Feed elements that are questions and that don’t have any answers.
• UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
• Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
• UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

**result**
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter)
Testing ConnectApi Code
setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.getFeedElementsFromFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
44.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. The only valid value is Home.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value CreatedDateDesc is used.

**filter**

Type: `ConnectApi.FeedFilter`

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**threadedCommentsCollapsed**

Type: `Boolean`

Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in `null`, the default is false.

**result**

Type: `ConnectApi.FeedElementPage`

The object containing test data.
Return Value
Type: Void

SEE ALSO:
Testing ConnectApi Code
getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed)

**setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, result)**

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature

```java
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, ConnectApi.FeedElementPage result)
```

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, `internal`, or `null`.

- **feedType**
  Type: `ConnectApi.FeedType`
  The feed type.

- **subjectId**
  Type: String
  The ID of the context user or the alias `me`.

- **result**
  Type: `ConnectApi.FeedElementPage`
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedElementsFromFeed(communityId, feedType, subjectId)
Testing ConnectApi Code
setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDescending—Sorts by most recent activity.
MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.

Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

getFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam)

Testing ConnectApi Code

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

`recentCommentCount`
Type: `Integer`
Maximum number of comments to return with each feed element. The default value is 3.

`density`
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

`result`
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam)`
- Testing `ConnectApi Code`
Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version

31.0

Signature

```java
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedElementPage result)
```

Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **feedType**
  Type: `ConnectApi.FeedType`
  Value must be `ConnectApi.FeedType.Record`.

- **subjectId**
  Type: `String`
  Any record ID, including a group ID.

- **recentCommentCount**
  Type: `Integer`
  The maximum number of comments to return with each feed item. The default value is 3.

- **density**
  Type: `ConnectApi.FeedDensity`
  Specify the amount of content in a feed.
  - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- **pageParam**
  Type: `String`
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  Type: `Integer`
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

**showInternalOnly**
Type: `Boolean`
Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

**result**
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)`
- Testing ConnectApi Code

**setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, result)**
Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
35.0

Signature
```
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)
```
Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.UserProfile.

subjectId
  Type: String
  The ID of any user. To specify the context user, use the user ID or the alias me.

recentCommentCount
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
  • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  If you pass in null, the default value CreatedDateDesc is used.

filter
  Type: ConnectApi.FeedFilter
Value must be `ConnectApi.FeedFilter.CommunityScoped`. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out. Currently, feed elements scoped to communities have a User or a Group parent record. However, other parent record types could be scoped to communities in the future.

**result**

Type: `ConnectApi.FeedElementPage`

The object containing test data.

Return Value

Type: Void

SEE ALSO:

- `getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter)`
- Testing ConnectApi Code

**setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed, result)**

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.getFeedElementsFromFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

44.0

**Signature**

```java
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)
```

**Parameters**

- **communityId**
  
  Type: `String`
  
  Use either the ID for a community, `internal`, or `null`.

- **feedType**
  
  Type: `ConnectApi.FeedType`
  
  Value must be `ConnectApi.FeedType.UserProfile`.

- **subjectId**
  
  Type: `String`
  
  The ID of any user. To specify the context user, use the user ID or the alias `me`.
recentCommentCount
   Type: Integer
   Maximum number of comments to return with each feed element. The default value is 3.

density
   Type: ConnectApi.FeedDensity
   Specify the amount of content in a feed.
      • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
      • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
   Type: String
   The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
   Type: Integer
   Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
   Type: ConnectApi.FeedSortOrder
   Values are:
      • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
      • CreatedDateDesc—Sorts by most recent creation date.
      • LastModifiedDateDesc—Sorts by most recent activity.
      • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
      • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
   If you pass in null, the default value CreatedDateDesc is used.

filter
   Type: ConnectApi.FeedFilter
   Value must be ConnectApi.FeedFilter.CommunityScoped. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out. Currently, feed elements scoped to communities have a User or a Group parent record. However, other parent record types could be scoped to communities in the future.

threadedCommentsCollapsed
   Type: Boolean
   Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

result
   Type: ConnectApi.FeedElementPage
   The object containing test data.
Return Value
Type: Void

SEE ALSO:
  Testing ConnectApi Code
  getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed)

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, customFilter, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
40.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String customFilter, ConnectApi.FeedElementPage result)

Parameters

  communityId
  Type: String
  Use either the ID for a community, internal, or null.

  feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

  subjectId
  Type: String
  The ID of a case.

  recentCommentCount
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

  density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

customFilter
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, customFilter)

Testing ConnectApi Code

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.
API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrdersortParam, Boolean showInternalOnly, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
**sortParam**

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**showInternalOnly**

Type: `Boolean`

Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

**result**

Type: `ConnectApi.FeedElementPage`

The object containing test data.

**Return Value**

Type: `Void`

**SEE ALSO:**

`getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly)`

Testing ConnectApi Code

```java
setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, filter, result)
```

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

**API Version**

32.0

**Signature**

```java
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
```
ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.

• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

showInternalOnly
Type: Boolean
Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

filter
Type: ConnectApi.FeedFilter
Specifies the feed filters.

• AllQuestions—Feed elements that are questions.

• AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.

• CommunityScoped—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.

• QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.

• Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.

• SolvedQuestions—Feed elements that are questions and that have a best answer.

• UnansweredQuestions—Feed elements that are questions and that don’t have any answers.

• UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.

• UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

Testing ConnectApi Code
setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, filter, threadedCommentsCollapsed, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
44.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  Any record ID, including a group ID.

recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. If you pass in null, the default value CreatedDateDesc is used.

**showInternalOnly**
Type: Boolean
Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

**filter**
Type: ConnectApi.FeedFilter
Specifies the feed filters.
- AllQuestions—Feed elements that are questions.
- AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- CommunityScoped—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.
- QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- SolvedQuestions—Feed elements that are questions and that have a best answer.
- UnansweredQuestions—Feed elements that are questions and that don’t have any answers.
- UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
• UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

threadedCommentsCollapsed
  Type: Boolean
  Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

result
  Type: ConnectApi.FeedElementPage
  The object containing test data.

Return Value
Type: Void

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
40.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, String customFilter, ConnectApi.FeedElementPage result)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.
subjectId
  Type: String
  The ID of a case.
recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.
elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.
density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.
pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
  • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  If you pass in null, the default value CreatedDateDesc is used.
showInternalOnly
  Type: Boolean
  Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.
customFilter
  Type: String
  Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.
result

Type: ConnectApi.FeedElementPage

The object containing test data.

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.getFeedElementsFromFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
44.0

Signature

public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, String customFilter, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String

Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType

Value must be ConnectApi.FeedType.Record.

subjectId
Type: String

The ID of a case.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

showInternalOnly
Type: Boolean
Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

customFilter
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.
result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

setTestGetFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, result)
Register a ConnectApi.FeedElementPage object to be returned when the getFeedElementsFromFilterFeedUpdatedSince method is called in a test context.

API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFilterFeedUpdatedSince(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedElementPage result)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

subjectId
  Type: String
  The ID of the context user or the alias me.

keyPrefix
  Type: String
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.
density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token defining the modification time stamp of the feed and the sort order.
The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

setTestGetFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.
Signature

```java
public static Void setTestGetFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density,
String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedElementPage
result)
```

Parameters

**communityId**
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**feedType**
Type: `ConnectApi.FeedType`
The type of feed. Valid values are `Company`, `DirectMessageModeration`, `Home`, `Moderation`, and `PendingReview`.

**recentCommentCount**
Type: `Integer`
 Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
 Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
Type: `String`
 An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

**result**
Type: `ConnectApi.FeedElementPage`
The object containing test data.
Return Value
Type: Void

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
32.0

Signature
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

`pageSize`
Type: Integer

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

`updatedSince`
Type: String

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

`filter`
Type: `ConnectApi.FeedFilter`

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the `Record` feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

`result`
Type: `ConnectApi.FeedElementPage`

The object containing test data.
Return Value
Type: Void

API Version
31.0

Signature
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
One of these values:
• Files
• Groups
• News
• People
• Record

subjectId
Type: String
If feedType is ConnectApi.Record, subjectId can be any record ID, including a group ID. Otherwise, it must be the context user or the alias me.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.
density
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

pageSize
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

updatedSince
Type: `String`
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.
The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

result
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: `Void`

**setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly, result)**
Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
31.0
Signature

```java
public static Void setTestGetFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince,
Boolean showInternalOnly, ConnectApi.FeedElementPage result)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.Record`.

- **subjectId**
  - Type: String
  - Any record ID, including a group ID.

- **recentCommentCount**
  - Type: Integer
  - Maximum number of comments to return with each feed element. The default value is 3.

- **density**
  - Type: `ConnectApi.FeedDensity`
  - Specify the amount of content in a feed.
    - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- **pageParam**
  - Type: String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **updatedSince**
  - Type: String
  - An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.
  - The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

- **showInternalOnly**
  - Type: Boolean
Specifies whether to show only feed elements from internal (non-community) users \((true)\), or not \((false)\). The default value is \(false\).

result
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly)`
- Testing ConnectApi Code

```java
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)
```

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
35.0

Signature

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `feedType`
  Type: `ConnectApi.FeedType`
  Value must be `ConnectApi.FeedType.UserProfile`.
- `subjectId`
  Type: `String`
  The ID of any user. To specify the context user, use the user ID or the alias `me`.
- `recentCommentCount`
  Type: `Integer`

1220
Maximum number of comments to return with each feed element. The default value is 3.

**elementsPerBundle**
Type: `Integer`

Maximum number of feed elements per bundle. The default and maximum value is 10.

**density**
Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
Type: `String`

An opaque token defining the modification time stamp of the feed and the sort order.

The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

**filter**
Type: `ConnectApi.FeedFilter`

Value must be `ConnectApi.FeedFilter.CommunityScoped`. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out. Currently, feed elements scoped to communities have a User or a Group parent record. However, other parent record types could be scoped to communities in the future.

**result**
Type: `ConnectApi.FeedElementPage`

The object containing test data.

Return Value
Type: `Void`

SEE ALSO:

- `getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, filter)`
- Testing `ConnectApi` Code
setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, customFilter, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
40.0

Signature
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, String customFilter, ConnectApi.FeedElementPage result)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  The ID of a case.

recentCommentCount
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
    • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**updatedSince**
Type: String
An opaque token defining the modification time stamp of the feed and the sort order.
The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

**customFilter**
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

**result**
Type: ConnectApi.FeedElementPage
The object containing test data.

**Return Value**
Type: Void

SEE ALSO:
- getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, customFilter)

Testing ConnectApi Code

```java
def setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly, ConnectApi.FeedElementPage result)
```

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**
31.0

**Signature**
```java
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly, ConnectApi.FeedElementPage result)
```
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly)

Testing ConnectApi Code

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, filter, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
32.0

Signature
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters

**communityId**
Type: String
Use either the ID for a community, _internal_, or _null_.

**feedType**
Type: **ConnectApi.FeedType**
Value must be ConnectApi.FeedType.Record.

**subjectId**
Type: String
Any record ID, including a group ID.

**recentCommentCount**
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

**elementsPerBundle**
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body. The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

filter
Type: ConnectApi.FeedFilter
Specifies the feed filters.

- AllQuestions—Feed elements that are questions.
- AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- CommunityScoped—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.
- QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- SolvedQuestions—Feed elements that are questions and that have a best answer.
- UnansweredQuestions—Feed elements that are questions and that don’t have any answers.
• UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.

• UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.
subjectId
Type: String
The ID of a case.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

customFilter
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

  Testing ConnectApi Code
setTestGetFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
28.0–31.0

Signature
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.
result
  Type: ConnectApi.FeedItemPage
  The object containing test data.

Return Value

setTestGetFeedItemsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
29.0–31.0

Signature
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters
  communityId
    Type: String
    Use either the ID for a community, internal, or null.

  feedType
    Type: ConnectApi.FeedType
    The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

  recentCommentCount
    Type: Integer
    The maximum number of comments to return with each feed item. The default value is 3.

  density
    Type: ConnectApi.FeedDensity
    Specify the amount of content in a feed.
    • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
- **Type:** String
- The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
- **Type:** Integer
- Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
- **Type:** ConnectApi.FeedSortOrder
- Values are:
  - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
  - `CreatedDateDesc`—Sorts by most recent creation date.
  - `LastModifiedDateDesc`—Sorts by most recent activity.
  - `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
  - `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**result**
- **Type:** ConnectApi.FeedItemPage
- The object containing test data.

**API Version**
- 28.0–31.0
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, ConnectApi.FeedItemPage result)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
  Type: String
  If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

result
  Type: ConnectApi.FeedItemPage

API Version
28.0–31.0

Signature

public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or null.

`feedType`
Type: `ConnectApi.FeedType`
The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

`subjectId`
Type: String
If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

`pageParam`
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in null, the first page is returned.

`pageSize`
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.

- Testing ConnectApi Code

**setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, result)**

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
29.0–31.0

Signature
```java
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

Parameters
- `communityId`  
  Type: `String`  
  Use either the ID for a community, internal, or `null`.
- `feedType`  
  Type: `ConnectApi.FeedType`  
  The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.
- `subjectId`  
  Type: `String`  
  If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.
- `recentCommentCount`  
  Type: `Integer`  
  The maximum number of comments to return with each feed item. The default value is 3.
- `density`  
  Type: `ConnectApi.FeedDensity`  
  Specify the amount of content in a feed.
• **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

• **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**result**
Type: `ConnectApi.FeedItemPage`
The object containing test data.

Return Value
Type: Void

```java
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedItemPage result)
```

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedType**
Type: `ConnectApi.FeedType`
The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

**subjectId**
Type: String
If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

**recentCommentCount**
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

showInternalOnly
Type: Boolean
Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- getFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)
- Testing ConnectApi Code

setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching getFeedItemsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

API Version
28.0–31.0

Signature
public static Void setTestGetFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.
keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching getFeedItemsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

API Version
28.0–31.0

Signature
public static Void setTestGetFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder

Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**result**
Type: ConnectApi.FeedItemPage

The object containing test data.

Return Value
Type: Void

SEE ALSO:

getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam)

Testing ConnectApi Code

**setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, result)**

Register a ConnectApi.FeedItemPage object to be returned when the matching getFeedItemsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

API Version
29.0–31.0

Signature

```java
public static Void setTestGetFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.
result
Type: `ConnectApi.FeedItemPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam)`
- Testing ConnectApi Code

```java
public static Void setTestGetFeedItemsFromFilterFeedUpdatedSince(String communityId,
    String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density,
    String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String updatedSince,
    ConnectApi.FeedItemPage result)
```

Register a `ConnectApi.FeedItemPage` object to be returned when the `getFeedItemsFromFilterFeedUpdatedSince` method is called in a test context.

API Version
30.0–31.0

Signature
```
public static Void setTestGetFeedItemsFromFilterFeedUpdatedSince(String communityId,
    String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density,
    String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String updatedSince,
    ConnectApi.FeedItemPage result)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, internal, or null.

`subjectId`
Type: `String`
The ID of the context user or the alias me.

`keyPrefix`
Type: `String`
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

`recentCommentCount`
Type: `Integer`
The maximum number of comments to return with each feed item. The default value is 3.

`density`
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**

Type: String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**

Type: Integer

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**

Type: ConnectApi.FeedSortOrder

Values are:

- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**updatedSince**

Type: String

An opaque token containing information about the last modified date of the feed. Do not construct this token. To retrieve this token, call getFeedItemsFromFilterFeed and take the value from the updatesToken property of the ConnectApi.FeedItemPage response body.

**result**

Type: ConnectApi.FeedItemPage

The object containing test data.

Return Value

Type: Void

SEE ALSO:

getFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, updatedSince)

Testing ConnectApi Code
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
30.0–31.0

Signature

public static Void setTestGetFeedItemsUpdatedSince(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedItemPage results)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedItemPage response body.

**result**

Type: `ConnectApi.FeedItemPage`

The object containing test data.

Return Value

Type: Void

SEE ALSO:

- `getFeedItemsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)`

Testing ConnectApi Code

```java
setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, result)
```

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

30.0–31.0

Signature

```java
public static Void setTestGetFeedItemsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedItemPage result)
```

Parameters

- `communityId`
  
  Type: `String`
  
  Use either the ID for a community, `internal`, or `null`.

- `feedType`
  
  Type: `ConnectApi.FeedType`
  
  One of these values:
  
  - Files
  - Groups
  - News
  - People
  - Record

- `subjectId`
  
  Type: `String`
If `feedType` is `ConnectApi.Record`, `subjectId` can be any record ID, including a group ID. Otherwise, it must be the context user or the alias `me`.

**recentCommentCount**
Type: `Integer`

The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
Type: `String`

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

**result**
Type: `ConnectApi.FeedItemPage`

The object containing test data.

Return Value
Type: `Void`

SEE ALSO:

- `getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince)`
- `Testing ConnectApi Code`
- `setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly, result)`

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

30.0–31.0
Signature

```java
public static Void setTestGetFeedItemsUpdatedSince(String communityId,
    ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
    ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince,
    Boolean showInternalOnly, ConnectApi.FeedItemPage result)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - One of these values:
    - Files
    - Groups
    - News
    - People
    - Record

- **subjectId**
  - Type: `String`
  - If `feedType` is `ConnectApi.Record`, `subjectId` can be any record ID, including a group ID. Otherwise, it must be the context user or the alias `me`.

- **recentCommentCount**
  - Type: `Integer`
  - The maximum number of comments to return with each feed item. The default value is 3.

- **density**
  - Type: `ConnectApi.FeedDensity`
  - Specify the amount of content in a feed.
    - AllUpdates — Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    - FewerUpdates — Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- **pageParam**
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **updatedSince**
  - Type: `String`
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

**showInternalOnly**
- **Type:** Boolean
- Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

**result**
- **Type:** `ConnectApi.FeedItemPage`
- The object containing test data.

Return Value
- **Type:** Void

SEE ALSO:
- `getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly)`
- Testing ConnectApi Code

### setTestGetRelatedPosts(communityId, feedElementId, filter, maxResults, result)

Register a `ConnectApi.RelatedFeedPosts` object to be returned when the matching `ConnectApi.getRelatedPosts(communityId, feedElementId, filter, maxResults)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**
- 37.0

**Signature**

```java
public static Void setTestGetRelatedPosts(String communityId, String feedElementId, ConnectApi.RelatedFeedPostType filter, Integer maxResults, ConnectApi.RelatedFeedPosts result)
```

**Parameters**

- **communityId**
  - **Type:** String
  - Use either the ID for a community, `internal`, or `null`.

- **feedElementId**
  - **Type:** String
  - ID of the feed element. The feed element must be a question.

- **filter**
  - **Type:** `ConnectApi.RelatedFeedPostType`
  - Specifies the type of related feed post. Values are:
• Answered—Related questions that have at least one answer.
• BestAnswer—Related questions that have a best answer.
• Generic—All types of related questions, including answered, with a best answer, and unanswered.
• Unanswered—Related questions that don’t have answers.

Generic is the default value.

maxResults
Type: Integer
The maximum number of results to return. You can return up to 25 results; 5 is the default.

result
Type: ConnectApi.RelatedFeedPosts
The object containing test data.
In version 37.0 and later, related feed posts are questions.

Return Value
Type: Void

**setTestGetTopUnansweredQuestions**(communityId, result) (Pilot)

Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.getTopUnansweredQuestions method is called in a test context. Use the method with the same parameters
or you receive an exception.

⚠️ **Note:** We provide top-five unanswered questions to selected customers through a pilot program that requires agreement to
specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to
change, and we can’t guarantee acceptance. Top five unanswered questions isn’t generally available unless or until Salesforce
announces its general availability in documentation or in press releases or public statements. We can’t guarantee general availability
within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and
features.

API Version
42.0

Signature

```java
public static Void setTestGetTopUnansweredQuestions(String communityId, ConnectApi.FeedElementPage result)
```

Parameters

**communityId**
Type: String
ID of the community.

**result**
Type: ConnectApi.FeedElementPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getTopUnansweredQuestions(communityId) (Pilot)
Testing ConnectApi Code

setTestGetTopUnansweredQuestions(communityId, filter, result) (Pilot)

Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.getTopUnansweredQuestions method is called in a test context. Use the method with the same parameters
or you receive an exception.

Note: We provide top-five unanswered questions to selected customers through a pilot program that requires agreement to
specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to
change, and we can’t guarantee acceptance. Top five unanswered questions isn’t generally available unless or until Salesforce

API Version
42.0

Signature
```java
public static Void setTestGetTopUnansweredQuestions(String communityId,
        ConnectApi.FeedFilter filter, Integer pageSize, ConnectApi.FeedElementPage result)
```

Parameters
- `communityId`
  Type: `String`
  ID of the community.
- `filter`
  Type: `ConnectApi.FeedFilter`
  Specifies the filter for the feed. `UnansweredQuestionsWithCandidateAnswers` is the only valid value.
- `pageSize`
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 0 through 10. If you pass in `null`, the default size is 5.
- `result`
  Type: `ConnectApi.FeedElementPage`
  The object containing test data.
setTestSearchFeedElements(communityId, q, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature
public static Void setTestSearchFeedElements(String communityId, String q, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

searchFeedElements(communityId, q)
Testing ConnectApi Code
setTestSearchFeedElements(communityId, q, sortParam, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature
public static Void setTestSearchFeedElements(String communityId, String q, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedElementPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
searchFeedElements(communityId, q, sortParam)
Testing ConnectApi Code

setTestSearchFeedElements(communityId, q, threadedCommentsCollapsed, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
44.0

Signature
public static Void setTestSearchFeedElements(String communityId, String q, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

threadedCommentsCollapsed
Type: Boolean
 Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

result
Type: ConnectApi.FeedElementPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
searchFeedElements(communityId, q, threadedCommentsCollapsed)
Testing ConnectApi Code

setTestSearchFeedElements(communityId, q, pageParam, pageSize, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you
receive an exception.

API Version
31.0

Signature
public static Void setTestSearchFeedElements(String communityId, String q, String
pageParam, Integer pageSize, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.D

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including
wildcards. See Wildcards.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken
or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

result
Type: ConnectApi.FeedElementPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
  searchFeedElements(communityId, q, pageParam, pageSize)
  Testing ConnectApi Code

**setTestSearchFeedElements(communityId, q, pageParam, pageSize, sortParam, result)**

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElements` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature
```
public static Void setTestSearchFeedElements(String communityId, String q, String
pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam,
ConnectApi.FeedElementPage result)
```

Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **q**
  Type: `String`
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **pageParam**
  Type: `String`
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  Type: `Integer`
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **sortParam**
  Type: `ConnectApi.FeedSortOrder`
  Values are:
  - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  - `CreatedDateDesc`—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the
  ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

result
  Type: ConnectApi.FeedElementPage
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
  searchFeedElements(communityId, q, pageParam, pageSize, sortParam)

Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you
receive an exception.

API Version
44.0

Signature
public static Void setTestSearchFeedElements(String communityId, String q, String
pageParam, Integer pageSize, Boolean threadedCommentsCollapsed,
ConnectApi.FeedElementPage result)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.
q
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including
  wildcards. See Wildcards.
pageParam
  Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
- Type: Integer
  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**threadedCommentsCollapsed**
- Type: Boolean
  - Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

### setTestSearchFeedElements(communityId, q, recentCommentCount, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you receive an exception.

#### API Version
- 31.0

#### Signature
```java
public static Void setTestSearchFeedElements(String communityId, String q, Integer recentCommentCount, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)
```

#### Parameters

- **communityId**
  - Type: String
    - Use either the ID for a community, internal, or null.

- **q**
  - Type: String
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`recentCommentCount`
Type: `Integer`
Maximum number of comments to return with each feed element. The default value is 3.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

`result`
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `searchFeedElements(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)`
- Testing ConnectApi Code

`setTestSearchFeedElementsInFeed(communityId, feedType, q, result)`
Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0
Signature

```java
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String q, ConnectApi.FeedElementPage result)
```

Parameters

`communityId`

Type: `String`

Use either the ID for a community, `internal`, or `null`.

`feedType`

Type: `ConnectApi.FeedType`

The type of feed. Valid values are `Company`, `DirectMessageModeration`, `Home`, `Moderation`, and `PendingReview`.

`q`

Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`result`

Type: `ConnectApi.FeedElementPage`

The object containing test data.

Return Value

Type: `Void`

SEE ALSO:

- `searchFeedElementsInFeed(communityId, feedType, q)`
- Testing ConnectApi Code

```java
setTestSearchFeedElementsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q, result)
```

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

31.0

Signature

```java
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)
```
Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`feedType`
Type: `ConnectApi.FeedType`
The type of feed. Valid values are `Company`, `DirectMessageModeration`, `Home`, `Moderation`, and `PendingReview`.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

`q`
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

`result`
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `searchFeedElementsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)`
- Testing ConnectApi Code
setTestSearchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.

API Version
31.0

Signature
public static Void setTestSearchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density,
String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q,
ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, Home, Moderation, and PendingReview.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays
custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also
displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken
or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value CreatedDateDesc is used.

- **q**
  
  **Type:** String
  
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **result**
  
  **Type:** `ConnectApi.FeedElementPage`
  
  The object containing test data.

Return Value

**Type:** Void

SEE ALSO:

- `searchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q)`
- Testing ConnectApi Code

```java
setTestSearchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter, result)
```

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

32.0

Signature

```java
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)
```
Parameters

**communityId**
- **Type:** String
- Use either the ID for a community, `internal`, or `null`.

**feedType**
- **Type:** `ConnectApi.FeedType`
- The type of feed. The only valid value is `Home`.

**recentCommentCount**
- **Type:** Integer
- Maximum number of comments to return with each feed element. The default value is 3.

**density**
- **Type:** `ConnectApi.FeedDensity`
- Specify the amount of content in a feed.
  - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageNumber**
- **Type:** String
- The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
- **Type:** Integer
- Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
- **Type:** `ConnectApi.FeedSortOrder`
- Values are:
  - **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
  - **CreatedDateDesc**—Sorts by most recent creation date.
  - **LastModifiedDateDesc**—Sorts by most recent activity.
  - **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
  - **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
- If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**
- **Type:** String
- Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

**filter**
- **Type:** `ConnectApi.FeedFilter`
Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

result

Type: `ConnectApi.FeedElementPage`

The object containing test data.

Return Value

Type: Void

Testing ConnectApi Code

```
setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, q, result)
```

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

31.0
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String q, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is UserProfile, subjectId can be any user ID. If feedType is any other value, subjectId must be the ID of the context user or the alias me.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

Testing ConnectApi Code

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Order of feed items in the feed.
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Search term. Searches keywords in the user or group name. A minimum of one character is required. This parameter does not support wildcards. This parameter is required.
result
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:

Testing ConnectApi Code

```java
setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)
```

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature
```java
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`feedType`
Type: `ConnectApi.FeedType`
The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessages, Filter, Landing, and Streams.

`subjectId`
Type: `String`
If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

`recentCommentCount`
Type: `Integer`
Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`

Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**
Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

**result**
Type: `ConnectApi.FeedElementPage`

The object containing test data.

**Return Value**
Type: `Void`

SEE ALSO:
- `searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q)`

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter, result)

Register a ConnectApi.FeedElementPage object to be returned when searchFeedElementsInFeed is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
35.0

Signature
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.UserProfile.

subjectId
Type: String
The ID of any user. To specify the context user, use the user ID or the alias me.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
The amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in null, the default value `CreatedDateDesc` is used.

**q**
Type: `String`
One or more keywords to search for in the feed elements visible to the context user. The search string can contain wildcards and must contain at least two characters that aren’t wildcards. See Wildcards.

**filter**
Type: `ConnectApi.FeedFilter`

Value must be `ConnectApi.FeedFilter.CommunityScoped`. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out. Currently, feed elements scoped to communities have a User or a Group parent record. However, other parent record types could be scoped to communities in the future.

**result**
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: Void

`public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, String customFilter, ConnectApi.FeedElementPage result)`

Parameters

`communityId`
Type: String
Use either the ID for a community, `internal`, or `null`.

`feedType`
Type: `ConnectApi.FeedType`
Value must be `ConnectApi.FeedType.Record`.

`subjectId`
Type: String
The ID of a case.

`recentCommentCount`
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

`density`
Type: `ConnectApi.FeedDensity`
The amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
• **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.

• **CreatedDateDesc**—Sorts by most recent creation date.

• **LastModifiedDateDesc**—Sorts by most recent activity.

• **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.

• **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value CreatedDateDesc is used.

`q`

**Type:** String

One or more keywords to search for in the feed elements visible to the context user. The search string can contain wildcards and must contain at least two characters that aren’t wildcards. See Wildcards.

`customFilter`

**Type:** String

Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

`result`

**Type:** ConnectApi.FeedElementPage

The object containing test data.

**Return Value**

**Type:** Void

**SEE ALSO:**

searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, customFilter)

Testing ConnectApi Code

```java
setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, result)
```

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.
ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.
q

  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

showInternalOnly

  Type: Boolean
  Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

result

  Type: ConnectApi.FeedElementPage
  The object containing test data.

Return Value

  Type: Void

SEE ALSO:

  searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly)
  Testing ConnectApi Code

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, filter, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

  32.0

Signature

  public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters

  communityId
    Type: String
    Use either the ID for a community, internal, or null.
feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.

• CreatedDateDesc—Sorts by most recent creation date.

• LastModifiedDateDesc—Sorts by most recent activity.

• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.

• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

**filter**
Type: `ConnectApi.FeedFilter`

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the `Record` feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**result**
Type: `ConnectApi.FeedElementPage`

The object containing test data.

**Return Value**
Type: Void

**SEE ALSO:**
- `searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, filter)`
- **Testing ConnectApi Code**

```java
setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, customFilter, result)
```

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
40.0

Signature
`public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, String customFilter, ConnectApi.FeedElementPage result)`

Parameters

`communityId`
- Type: `String`
- Use either the ID for a community, `internal`, or `null`.

`feedType`
- Type: `ConnectApi.FeedType`
- Value must be `ConnectApi.FeedType.Record`.

`subjectId`
- Type: `String`
- The ID of a case.

`recentCommentCount`
- Type: `Integer`
- Maximum number of comments to return with each feed element. The default value is 3.

`density`
- Type: `ConnectApi.FeedDensity`
- Specify the amount of content in a feed.
- • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
- Type: `String`
- The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
- Type: `Integer`
- Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
- Type: `ConnectApi.FeedSortOrder`
- Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

q
- Type: String
- Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

showInternalOnly
- Type: Boolean
- Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

customFilter
- Type: String
- Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

result
- Type: ConnectApi.FeedElementPage
- The object containing test data.

Return Value
- Type: Void

setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
- 31.0
Signature

```java
public static Void setTestSearchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, String q, ConnectApi.FeedElementPage result)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.

- `subjectId`
  - Type: `String`
  - The ID of the context user or the alias `me`.

- `keyPrefix`
  - Type: `String`
  - A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

- `q`
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- `result`
  - Type: `ConnectApi.FeedElementPage`
  - The object containing test data.

Return Value

- Type: `Void`

SEE ALSO:

Testing ConnectApi Code

setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature
public static Void setTestSearchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**result**
The object containing test data.

Return Value
Type: Void

SEE ALSO:
searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Testing ConnectApi Code

**setTestSearchFeedItems(communityId, q, result)**
Register a test feed item page to be returned when searchFeedItems(communityId, q) is called during a test.

API Version
28.0–31.0
### searchFeedItems

**Signature**

```java
class ConnectApi
{
    public static Void searchFeedItems(String communityId, String q, ConnectApi.FeedItemPage result)
}
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **q**
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

- **result**
  - Type: `ConnectApi.FeedItemPage`
  - The object containing test data.

**Return Value**

- Type: `Void`

### setTestSearchFeedItems

Register a test feed item page to be returned when `searchFeedItems(String, String, ConnectApi.FeedSortOrder)` is called during a test.

**Signature**

```java
class ConnectApi
{
    public static Void setTestSearchFeedItems(String communityId, String q,
        ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
}
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **q**
  - Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

**sortParam**

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**result**

Type: `ConnectApi.FeedItemPage`

The feed item test page.

**Return Value**

Type: Void

**SEE ALSO:**

- `searchFeedItems(communityId, q, sortParam)`
- `Testing ConnectApi Code`

**setTestSearchFeedItems(communityId, q, pageParam, pageSize, result)**

Register a test feed item page to be returned when `searchFeedItems(String, String, String, Integer)` is called during a test.

**API Version**

28.0–31.0

**Signature**

```java
public static Void setTestSearchFeedItems(String communityId, String q, String pageParam, Integer pageSize, ConnectApi.FeedItemPage result)
```

**Parameters**

**communityId**

Type: `String`

Use either the ID for a community, `internal`, or `null`.

1286
q  
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam  
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize  
  Type: Integer
  Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

result  
  Type: ConnectApi.FeedItemPage
  The test feed item page.

Return Value  
Type: Void

SEE ALSO:  
  searchFeedItems(communityId, q, pageParam, pageSize)
  Testing ConnectApi Code

setTestSearchFeedItems(communityId, q, pageParam, pageSize, sortParam, result)  
Register a test feed item page to be returned when searchFeedItems(String, String, String, Integer, ConnectApi.FeedSortOrder) is called during a test.

API Version  
28.0–31.0

Signature  
public static Void setTestSearchFeedItems(String communityId, String q, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters  
communityId  
  Type: String
  Use either the ID for a community, internal, or null.

q  
  Type: String
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**pageParam**  
Type: `String`  
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**  
Type: `Integer`  
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**  
Type: `ConnectApi.FeedSortOrder`  
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreateDateDesc` is used.

**result**  
Type: `ConnectApi.FeedItemPage`  
The test feed item page.

**Return Value**  
Type: `Void`

SEE ALSO:  
- `searchFeedItems(communityId, q, pageParam, pageSize, sortParam)`  
- Testing ConnectApi Code

**setTestSearchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam, result)**  
Register a test feed item page to be returned when `searchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)` is called during a test.

**API Version**  
29.0–31.0
Signature

```java
public static Void setTestSearchFeedItems(String communityId, String q, Integer recentCommentCount, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **q**
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **recentCommentCount**
  - Type: `Integer`
  - The maximum number of comments to return with each feed item. The default value is 3.

- **pageParam**
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **sortParam**
  - Type: `ConnectApi.FeedSortOrder`
  - Values are:
    - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
    - `CreatedDateDesc`—Sorts by most recent creation date.
    - `LastModifiedDateDesc`—Sorts by most recent activity.
    - `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
    - `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

- **result**
  - Type: `ConnectApi.FeedItemPage`
  - The test feed item page.
Return Value
Type: Void

SEE ALSO:
- `searchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)`

Testing ConnectApi Code

```
setTestSearchFeedItemsInFeed(communityId, feedType, q, result)
```

Register a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0–31.0

Signature
```
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String q, ConnectApi.FeedItemPage result)
```

Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **feedType**
  Type: `ConnectApi.FeedType`
  The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

- **q**
  Type: `String`
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **result**
  Type: `ConnectApi.FeedItemPage`
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
searchFeedItemsInFeed(communityId, feedType, q)
Testing ConnectApi Code

setTestSearchFeedItemsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0–31.0

Signature
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
• searchFeedItemsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)
• Testing ConnectApi Code

setTestSearchFeedItemsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0–31.0

Signature
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.
**feedType**
Type: `ConnectApi.FeedType`
The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

**recentCommentCount**
Type: `Integer`
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**result**
Type: `ConnectApi.FeedItemPage`
The object containing test data.
Return Value
Type: Void

SEE ALSO:
- searchFeedItemsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q)
- Testing ConnectApi Code

**setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, q, result)**

Register a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0–31.0

Signature
```java
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String q, ConnectApi.FeedItemPage result)
```

Parameters
- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- **feedType**
  Type: `ConnectApi.FeedType`
  The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessages`, `Filter`, `Landing`, and `Streams`.
- **subjectId**
  Type: `String`
  If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.
- **q**
  Type: `String`
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
- **result**
  Type: `ConnectApi.FeedItemPage`
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
searchFeedItemsInFeed(communityId, feedType, subjectId, q)
Testing ConnectApi Code

setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedItemPage object to be returned when the matching
ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you
receive an exception.

API Version
28.0–31.0

Signature
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
sortParam
  
  Type: `ConnectApi.FeedSortOrder`
  
  Values are:
  - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
  - `CreatedDateDesc`—Sorts by most recent creation date.
  - `LastModifiedDateDesc`—Sorts by most recent activity.
  - `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
  - `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

  Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

q
  
  Type: `String`
  
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
  
  Type: `ConnectApi.FeedItemPage`
  
  The object containing test data.

Return Value
  
  Type: Void

SEE ALSO:

```java
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)
```

Register a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

29.0–31.0

Signature

```java
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)
```
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedType**
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

**subjectId**
Type: String
If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

**recentCommentCount**
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

`q`
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

`result`
Type: `ConnectApi.FeedItemPage`
The object containing test data.

Return Value
Type: `Void`

SEE ALSO:

```

Register a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0–31.0

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`feedType`
Type: `ConnectApi.FeedType`
The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessages`, `Filter`, `Landing`, and `Streams`.
subjectId
  Type: String
  If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
  • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

q
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

showInternalOnly
  Type: Boolean
Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

Testing ConnectApi Code

setTestSearchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0–31.0

Signature
public static Void setTestSearchFeedItemsInFilterFeed(String communityId, String subjectId, String keyPrefix, String q, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
result
   Type: ConnectApi.FeedItemPage
   Specify the test feed item page.

Return Value
Type: Void

SEE ALSO:
   searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q)
   Testing ConnectApi Code

setTestSearchFeedItemsInFilterFeed(communityId, feedType, subjectId, keyPrefix, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0–31.0

Signature
public static Void setTestSearchFeedItemsInFilterFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)

Parameters

   communityId
   Type: String
   Use either the ID for a community, internal, or null.

   feedType
   Type: ConnectApi.FeedType
   The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

   subjectId
   Type: String
   The ID of the context user or the alias me.

   keyPrefix
   Type: String
   A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.
**pageParam**
Type: **String**
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in **null**, the first page is returned.

**pageSize**
Type: **Integer**
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in **null**, the default size is 25.

**sortParam**
Type: **ConnectApi.FeedSortOrder**
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in **null**, the default value **CreatedDateDesc** is used.

**q**
Type: **String**
Required and cannot be **null**. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See **Wildcards**.

**result**
Type: **ConnectApi.FeedItemPage**
Specify the test feed item page.

Return Value
Type: **Void**

recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)
```

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
  • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

q
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
  Type: ConnectApi.FeedItemPage
  Specify the test feed item page.

Return Value
  Type: Void

SEE ALSO:

  Testing ConnectApi Code

setTestSearchStreams(communityId, q, result)
  Register a ConnectApi.ChatterStreamPage object to be returned when the matching ConnectApi.searchStream(communityId,q) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
  40.0

Signature
  public static Void setTestSearchStreams(String communityId, String q, ConnectApi.ChatterStreamPage result)
Parameters

`communityId`
- Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

`q`
- Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`result`
- Type: `ConnectApi.ChatterStreamPage`
  - The object containing test data.

Return Value

Type: `Void`

SEE ALSO:
- `searchStreams(communityId, q)`
- Testing ConnectApi Code

`setTestSearchStreams(communityId, q, sortParam, result)`

Register a `ConnectApi.ChatterStreamPage` object to be returned when the matching `ConnectApi.searchStream(communityId, q, sortParam)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

`public static Void setTestSearchStreams(String communityId, String q, ConnectApi.SortOrder sortParam, ConnectApi.ChatterStreamPage result)`

Parameters

`communityId`
- Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

`q`
- Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`sortParam`
- Type: `ConnectApi.SortOrder`
Specifies the sort order. Values are:

- **Ascending**—Items are in ascending alphabetical order (A-Z).
- **Descending**—Items are in descending alphabetical order (Z-A).
- **MostRecentlyViewed**—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is **Ascending**.

**result**

Type: `ConnectApi.ChatterStreamPage`

The object containing test data.

Return Value

Type: Void

SEE ALSO:

- `searchStreams(communityId, q, sortParam)`
- Testing ConnectApi Code

### `setTestSearchStreams(communityId, q, pageParam, pageSize, result)`

Register a `ConnectApi.ChatterStreamPage` object to be returned when the matching `ConnectApi.searchStreams(communityId, q, pageParam, pageSize)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestSearchStreams(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.ChatterStreamPage result)
```

**Parameters**

- **communityId**
  
  Type: `String`
  
  Use either the ID for a community, `internal`, or `null`.

- **q**
  
  Type: `String`
  
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **pageParam**
  
  Type: `Integer`
  
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.
**pageSize**
   Type: `Integer`
   Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

**result**
   Type: `ConnectApi.ChatterStreamPage`
   The object containing test data.

Return Value
   Type: Void

SEE ALSO:
   - `searchStreams(communityId, q, pageParam, pageSize)`
   - Testing ConnectApi Code

**setTestSearchStreams(communityId, q, pageParam, pageSize, sortParam, result)**

Register a `ConnectApi.ChatterStreamPage` object to be returned when the matching `ConnectApi.searchStreams(communityId, q, pageParam, pageSize, sortParam)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
   40.0

Signature
   ```java
   public static Void setTestSearchStreams(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam, ConnectApi.ChatterStreamPage result)
   ```

Parameters

**communityId**
   Type: `String`
   Use either the ID for a community, `internal`, or `null`.

**q**
   Type: `String`
   Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**pageParam**
   Type: `Integer`
   Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**
   Type: `Integer`
   Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.
sortParam
Type: ConnectApi.SortOrder
Specifies the sort order. Values are:
- Ascending—Items are in ascending alphabetical order (A-Z).
- Descending—Items are in descending alphabetical order (Z-A).
- MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is Ascending.

result
Type: ConnectApi.ChatterStreamPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
searchStreams(communityId, q, pageParam, pageSize, sortParam)
Testing ConnectApi Code

setTestSearchStreams(communityId, q, pageParam, pageSize, sortParam, globalScope, result)
Register a ConnectApi.ChatterStreamPage object to be returned when the matching ConnectApi.searchStreams(communityId, q, pageParam, pageSize, sortParam, globalScope) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
41.0

Signature
public static Void setTestSearchStreams(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam, Boolean globalScope, ConnectApi.ChatterStreamPage result)

Parameters
communityId  
Type: String  
Use either the ID for a community, internal, or null.
q  
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**pageParam**
- Type: Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**
- Type: Integer
  - Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

**sortParam**
- Type: ConnectApi.SortOrder
  - Specifies the sort order. Values are:
    - Ascending—Items are in ascending alphabetical order (A-Z).
    - Descending—Items are in descending alphabetical order (Z-A).
    - MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

  If not specified, default value is Ascending.

**globalScope**
- Type: Boolean
  - Specifies whether to get streams from all the context user's communities, regardless of the communityId value.

**result**
- Type: ConnectApi.ChatterStreamPage
  - The object containing test data.

**Return Value**
- Type: Void

### ChatterGroups Class

Information about groups, such as the group’s members, photo, and the groups the specified user is a member of. Add members to a group, remove members, and change the group photo.

### Namespace
- ConnectApi

### ChatterGroups Methods

The following are methods for ChatterGroups. All methods are static.

IN THIS SECTION:
- `addMember(communityId, groupId, userId)`
  - Add a user to a group as a standard member.
addMemberWithRole(communityId, groupId, userId, role)
Add a user with a role to a group.

addRecord(communityId, groupId, recordId)
Associate a record with a group.

createGroup(communityId, groupInput)
Create a group.

deleteBannerPhoto(communityId, groupId)
Delete the group banner photo.

deleteGroup(communityId, groupId)
Delete a group.

deleteMember(communityId, membershipId)
Remove a member from a group.

deletePhoto(communityId, groupId)
Delete the group photo.

getAnnouncements(communityId, groupId)
Get the first page of announcements in a group.

getAnnouncements(communityId, groupId, pageParam, pageSize)
Get a page of announcements in a group.

getBannerPhoto(communityId, groupId)
Get the group banner photo.

getGroup(communityId, groupId)
Get information about a group.

getGroupBatch(communityId, groupIds)
Get information about a list of groups.

getGroupMembershipRequest(communityId, requestId)
Get information about a request to join a private group.

getGroupMembershipRequests(communityId, groupId)
Get information about every request to join a private group.

getGroupMembershipRequests(communityId, groupId, status)
Get information about every request to join a private group that has a specified status.

getGroups(communityId)
Get the first page of groups.

getGroups(communityId, pageParam, pageSize)
Get a page of groups.

getGroups(communityId, pageParam, pageSize, archiveStatus)
Get a page of groups with an archive status.

getMember(communityId, membershipId)
Get information about a group member.

getMembers(communityId, groupId)
Get the first page of information about the members of a group.
getMembers(communityId, groupId, pageParam, pageSize)
Get a page of information about the members of a group.

getMembershipBatch(communityId, membershipIds)
Get information about a list of group memberships.

getMyChatterSettings(communityId, groupId)
Get the context user’s Chatter settings for a group.

getPhoto(communityId, groupId)
Get the photo for a group.

getRecord(communityId, groupRecordId)
Get a record associated with a group.

getRecords(communityId, groupId)
Get the first page of records associated with a group.

getRecords(communityId, groupId, pageParam, pageSize)
Get a page of records associated with a group.

inviteUsers(groupId, invite)
Invite internal and external users to join a group.

postAnnouncement(communityId, groupId, announcement)
Post an announcement to a group.

removeRecord(communityId, groupRecordId)
Remove the association of a record with a group.

requestGroupMembership(communityId, groupId)
Request membership in a private group.

searchGroups(communityId, q)
Get the first page of groups that match the search criteria.

searchGroups(communityId, q, pageParam, pageSize)
Get a page of groups that match the search criteria.

searchGroups(communityId, q, archiveStatus, pageParam, pageSize)
Get a page of groups with the archive status that match the search criteria.

setBannerPhoto(communityId, groupId, fileId, versionNumber)
Set an uploaded file as the group banner photo.

setBannerPhoto(communityId, groupId, fileUpload)
Set a file that hasn’t been uploaded as the group banner photo.

setBannerPhotoWithAttributes(communityId, groupId, bannerPhoto)
Set and crop an uploaded file as the group banner photo.

setBannerPhotoWithAttributes(communityId, groupId, bannerPhoto, fileUpload)
Set and crop a file that hasn’t been uploaded as the group banner photo.

setPhoto(communityId, groupId, fileId, versionNumber)
Set an uploaded file as the group photo.

setPhoto(communityId, groupId, fileUpload)
Set a file that hasn’t been uploaded as the group photo.
setPhotoWithAttributes(communityId, groupId, photo)
Set and crop an uploaded file as the group photo.
setPhotoWithAttributes(communityId, groupId, photo, fileUpload)
Set and crop a file that hasn’t been uploaded as the group photo.
updateGroup(communityId, groupId, groupInput)
Update the settings of a group.
updateGroupMember(communityId, membershipId, role)
Update the role of a group member.
updateMyChatterSettings(communityId, groupId, emailFrequency)
Update the context user’s email frequency for a group.
updateRequestStatus(communityId, requestId, status)
Update a request to join a private group.
updateRequestStatus(communityId, requestId, status, responseMessage)
Update a request to join a private group and optionally provide a message when the request is denied.

addMember(communityId, groupId, userId)
Add a user to a group as a standard member.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.GroupMember addMember(String communityId, String groupId, String userId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

userId
Type: String
The ID for a user.
Return Value
Type: `ConnectApi.GroupMember`

Usage
To execute this method, the context user must be the group owner or moderator.

```java
addMemberWithRole(communityId, groupId, userId, role)
```
Add a user with a role to a group.

API Version
29.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.GroupMember addMemberWithRole(String communityId, String groupId, String userId, ConnectApi.GroupMembershipType role)
```

Parameters
- `communityId`  
  Type: `String`  
  Use either the ID for a community, `internal`, or `null`.

- `groupId`  
  Type: `String`  
  The ID for a group.

- `userId`  
  Type: `String`  
  The ID for a user.

- `role`  
  Type: `ConnectApi.GroupMembershipType`  
  The group membership type. One of these values:
  - `GroupManager`
  - `StandardMember`

Return Value
Type: `ConnectApi.GroupMember`
Usage
To execute this method, the context user must be the group owner or moderator.

addRecord(communityId, groupId, recordId)
Associate a record with a group.

API Version
34.0

Requires Chatter
Yes

Signature
public static ConnectApi.GroupRecord addRecord(String communityId, String groupId, String recordId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
ID of the group with which to associate the record.

recordId
Type: String
ID of the record to associate with the group.

Return Value
Type: ConnectApi.GroupRecord

createGroup(communityId, groupInput)
Create a group.

API Version
29.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.ChatterGroupDetail createGroup(String communityId, ConnectApi.ChatterGroupInput groupInput)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `groupInput`
  - Type: `ConnectApi.ChatterGroupInput`
  - The properties of the group.

Return Value

Type: `ConnectApi.ChatterGroupDetail`

---

`deleteBannerPhoto(communityId, groupId)`

Delete the group banner photo.

API Version

36.0

Requires Chatter

Yes

Signature

```java
public static Void deleteBannerPhoto(String communityId, String groupId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `groupId`
  - Type: `String`
  - ID of the group.

Return Value

Type: `Void`
Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

**deleteGroup(communityId, groupId)**
Delete a group.

API Version
29.0

Requires Chatter
Yes

Signature
```java
public static Void deleteGroup(String communityId, String groupId)
```

Parameters
- **communityId**
  Type: String
  Use either the ID for a community, `internal`, or `null`.
- **groupId**
  Type: String
  The ID for a group.

Return Value
Type: Void

**deleteMember(communityId, membershipId)**
Remove a member from a group.

API Version
28.0

Requires Chatter
Yes

Signature
```java
public static Void deleteMember(String communityId, String membershipId)
```
Parameters

`communityId`
Type: String
Use either the ID for a community, `internal`, or `null`.

`membershipId`
Type: String
The ID for a membership.

Return Value
Type: Void

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

`deletePhoto(communityId, groupId)`
Delete the group photo.

API Version
28.0

Requires Chatter
Yes

Signature
```
public static Void deletePhoto(String communityId, String groupId)
```

Parameters

`communityId`
Type: String
Use either the ID for a community, `internal`, or `null`.

`groupId`
Type: String
The ID for a group.

Return Value
Type: Void

Usage
This method is only successful when the context user is the group manager or owner, or has Modify All Data permission.
getAnnouncements(communityId, groupId)
Get the first page of announcements in a group.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.AnnouncementPage getAnnouncements(String communityId, String groupId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

Return Value
Type: ConnectApi.AnnouncementPage

Usage
To post an announcement, get information about an announcement, update the expiration date of an announcement, or delete an announcement, use the methods of the ConnectApi.Announcements class.

getAnnouncements(communityId, groupId, pageParam, pageSize)
Get a page of announcements in a group.

API Version
31.0

Requires Chatter
Yes
public static ConnectApi.AnnouncementPage getAnnouncements(String communityId, String groupId, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.AnnouncementPage

Usage
To post an announcement, get information about an announcement, update the expiration date of an announcement, or delete an announcement, use the methods of the ConnectApi.Announcements class.

getBannerPhoto(communityId, groupId)
Get the group banner photo.

API Version
36.0

Requires Chatter
Yes

Signature
public static ConnectApi.BannerPhoto getBannerPhoto(String communityId, String groupId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

**groupId**  
*Type: String*  
The ID of the group.

**Return Value**  
*Type: ConnectApi.BannerPhoto*

**getGroup(communityId, groupId)**  
Get information about a group.

**API Version**  
28.0

**Available to Guest Users**  
31.0

**Requires Chatter**  
Yes

**Signature**  
`public static ConnectApi.ChatterGroupDetail getGroup(String communityId, String groupId)`

**Parameters**  
communityId  
*Type: String*  
Use either the ID for a community, internal, or null.

groupId  
*Type: String*  
The ID for a group.

**Return Value**  
*Type: ConnectApi.ChatterGroupDetail*

**getGroupBatch(communityId, groupIds)**  
Get information about a list of groups.

**API Version**  
31.0
Requires Chatter
Yes

Signature

```
public static ConnectApi.BatchResult[] getGroupBatch(String communityId, List<String> groupIds)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **groupId**
  - Type: List<String>
  - A list of up to 500 group IDs.

Return Value

- Type: **ConnectApi.BatchResult[]**

  The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.ChatterGroup` object and errors embedded in the results for groups that didn’t load.

Example

```
// Create a list of groups.
ConnectApi.ChatterGroupPage groupPage = ConnectApi.ChatterGroups.getGroups(null);

// Create a list of group IDs.
List<String> groupIds = new List<String>();
for (ConnectApi.ChatterGroup aGroup : groupPage.groups) {
    groupIds.add(aGroup.id);
}

// Get info about all the groups in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterGroups.getGroupBatch(null, groupIds);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the number of members in each group.
        ConnectApi.ChatterGroup aGroup;
        if (batchResult.getResult() instanceof ConnectApi.ChatterGroup) {
            aGroup = (ConnectApi.ChatterGroup) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(aGroup.memberCount);
    }
    else {
```

Operation failed. Print errors.
System.debug('FAILURE');
System.debug(batchResult.getErrorMessage());
}
}

SEE ALSO:
  getMembershipBatch(communityId, membershipIds)

getGroupMembershipRequest(communityId, requestId)
Get information about a request to join a private group.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.GroupMembershipRequest getGroupMembershipRequest(String communityId, String requestId)

Parameters
  communityId
    Type: String
    Use either the ID for a community, internal, or null.
  requestId
    Type: String
    The ID of a request to join a private group.

Return Value
Type: ConnectApi.GroupMembershipRequest

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

getGroupMembershipRequests(communityId, groupId)
Get information about every request to join a private group.
API Version
28.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.GroupMembershipRequests getGroupMembershipRequests(String
communityId, String groupId)
```

Parameters
```
communityId
  Type: String
  Use either the ID for a community, internal, or null.

groupId
  Type: String
  The ID for a group.
```

Return Value
Type: ConnectApi.GroupMembershipRequests

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

```
getGroupMembershipRequests(communityId, groupId, status)
```
Get information about every request to join a private group that has a specified status.

API Version
28.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.GroupMembershipRequests getGroupMembershipRequests(String
communityId, String groupId, ConnectApi.GroupMembershipRequestStatus status)
```
Parameters

`communityId`
Type: `String`
Use either the ID for a community, internal, or null.

`groupId`
Type: `String`
The ID for a group.

`status`
Type: `ConnectApi.GroupMembershipRequestStatus`
`status`—Status of a request to join a private group.

- Accepted
- Declined
- Pending

Return Value
Type: `ConnectApi.GroupMembershipRequests`

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

`getGroups(communityId)`
Get the first page of groups.

API Version
28.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ChatterGroupPage getGroups(String communityId)`

Parameters

`communityId`
Type: `String`
Use either the ID for a community, internal, or null.
Return Value
Type: `ConnectApi.ChatterGroupPage`

`getGroups(communityId, pageParam, pageSize)`
Get a page of groups.

API Version
28.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterGroupPage getGroups(String communityId, Integer pageParam, Integer pageSize)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `pageParam`
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.ChatterGroupPage`

`getGroups(communityId, pageParam, pageSize, archiveStatus)`
Get a page of groups with an archive status.

API Version
29.0
Available to Guest Users
31.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterGroupPage getGroups(String communityId, Integer pageParam, Integer pageSize, ConnectApi.GroupArchiveStatus archiveStatus)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **pageParam**
  - Type: Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

- **archiveStatus**
  - Type: ConnectApi.GroupArchiveStatus
  - Archive status of groups.
    - All—All groups, including groups that are archived and groups that aren’t archived.
    - Archived—Groups that are archived.
    - NotArchived—Groups that aren’t archived.
  - If you pass in null, the default value is All.

Return Value

Type: ConnectApi.ChatterGroupPage

```java
getMember(communityId, membershipId)
```

Get information about a group member.

API Version
28.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.GroupMember getMember(String communityId, String membershipId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `membershipId`
  - Type: `String`
  - The ID for a membership.

Return Value

Type: `ConnectApi.GroupMember`

**getMembers(communityId, groupId)**

Get the first page of information about the members of a group.

API Version

28.0

Available to Guest Users

36.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.GroupMemberPage getMembers(String communityId, String groupId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `groupId`
  - Type: `String`
  - The ID for a group.

Return Value

Type: `ConnectApi.GroupMemberPage`
**getMembers(communityId, groupId, pageParam, pageSize)**

Get a page of information about the members of a group.

API Version
28.0

Available to Guest Users
36.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.GroupMemberPage getMembers(String communityId, String groupId, Integer pageParam, Integer pageSize)
```

Parameters
- **communityId**
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- **groupId**
  - Type: String
  - The ID for a group.

- **pageParam**
  - Type: Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
- Type: `ConnectApi.GroupMemberPage`

**getMembershipBatch(communityId, membershipIds)**

Get information about a list of group memberships.

API Version
31.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.BatchResult[] getMembershipBatch(String communityId,
List<String> membershipIds)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, internal, or `null`.

`membershipIds`
Type: `List<String>`
A list of up to 500 group membership IDs.

Return Value

Type: `ConnectApi.BatchResult[]`

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.GroupMember` object and errors embedded in the results for group memberships that didn’t load.

Example

```java
// Get members of a group.
ConnectApi.GroupMemberPage membersPage = ConnectApi.ChatterGroups.getMembers(null,
'0F9D00000000oOT');

// Create a list of membership IDs.
List<String> membersList = new List<String>();
for (ConnectApi.GroupMember groupMember : membersPage.members){
    membersList.add(groupMember.id);
}

// Get info about all group memberships in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterGroups.getMembershipBatch(null,
membersList);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the first name of each member.
        ConnectApi.GroupMember groupMember;
        if(batchResult.getResult() instanceof ConnectApi.GroupMember) {
            groupMember = (ConnectApi.GroupMember) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(groupMember.user.firstName);
    }
}
```
else {
    // Operation failed. Print errors.
    System.debug('FAILURE');
    System.debug(batchResult.getErrorMessage());
}

SEE ALSO:
    getGroupBatch(communityId, groupIds)

getMyChatterSettings(communityId, groupId)
Get the context user’s Chatter settings for a group.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.GroupChatterSettings getMyChatterSettings(String communityId,
String groupId)

Parameters
communityId
    Type: String
    Use either the ID for a community, internal, or null.

groupId
    Type: String
    The ID for a group.

Return Value
Type: ConnectApi.GroupChatterSettings

getPhoto(communityId, groupId)
Get the photo for a group.

API Version
28.0
Requires Chatter
Yes

Signature
public static ConnectApi.Photo getPhoto(String communityId, String groupId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

Return Value
Type: ConnectApi.Photo

getRecord(communityId, groupRecordId)
Get a record associated with a group.

API Version
34.0

Requires Chatter
Yes

Signature
public static ConnectApi.GroupRecord getRecord(String communityId, String groupRecordId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

groupRecordId
Type: String
ID of the group record.

Return Value
Type: ConnectApi.GroupRecord
**getRecords(communityId, groupId)**

Get the first page of records associated with a group.

**API Version**
33.0

**Requires Chatter**
Yes

**Signature**

```java
public static ConnectApi.GroupRecordPage getRecords(String communityId, String groupId)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.

- **groupId**
  - Type: `String`
  - The ID for a group.

**Return Value**

Type: `ConnectApi.GroupRecordPage`

---

**getRecords(communityId, groupId, pageParam, pageSize)**

Get a page of records associated with a group.

**API Version**
33.0

**Requires Chatter**
Yes

**Signature**

```java
public static ConnectApi.GroupRecordPage getRecords(String communityId, String groupId, Integer pageParam, Integer pageSize)
```

**Parameters**

- **communityId**
  - Type: `String`
Use either the ID for a community, **internal**, or **null**.

**groupId**
Type: **String**
The ID for a group.

**pageParam**
Type: **Integer**
Specifies the number of the page you want returned. Starts at 0. If you pass in **null** or 0, the first page is returned.

**pageSize**
Type: **Integer**
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in **null**, the default size is 25.

Return Value
Type: **ConnectApi.GroupRecordPage**

**inviteUsers(groupId, invite)**
Invite internal and external users to join a group.

API Version
39.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.Invitations inviteUsers(String groupId, ConnectApi.InviteInput invite)
```

Parameters
**groupId**
Type: **String**
ID of the group.

**invite**
Type: **ConnectApi.InviteInput**
A **ConnectApi.InviteInput** body.

Return Value
Type: **ConnectApi.Invitations**
postAnnouncement(communityId, groupId, announcement)

Post an announcement to a group.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.Announcement postAnnouncement(String communityId, String groupId, ConnectApi.AnnouncementInput announcement)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

announcement
Type: ConnectApi.AnnouncementInput
A ConnectApi.AnnouncementInput object.

Return Value
Type: ConnectApi.Announcement

Usage
Use an announcement to highlight information. Users can discuss, like, and post comments on announcements. Deleting the feed post deletes the announcement.
To post an announcement, get information about an announcement, update the expiration date of an announcement, or delete an announcement, use the methods of the ConnectApi.Announcements class.

removeRecord(communityId, groupRecordId)

Remove the association of a record with a group.

API Version
34.0
Requires Chatter
Yes

Signature

```java
public static Void removeRecord(String communityId, String groupRecordId)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.

- **groupRecordId**
  - Type: `String`
  - ID of the group record.

Return Value

Type: `Void`

**requestGroupMembership(communityId, groupId)**

Request membership in a private group.

API Version

28.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.GroupMembershipRequest requestGroupMembership(String communityId, String groupId)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.

- **groupId**
  - Type: `String`
  - The ID for a group.
Return Value
Type: `ConnectApi.GroupMembershipRequest`

Sample: Requesting to Join a Private Group
This sample code calls `ConnectApi.ChatterGroups.requestGroupMembership` to request to join a private group.

```java
String communityId = null;
ID groupId = '0F9x00000000hAZ';

ConnectApi.GroupMembershipRequest membershipRequest =
ConnectApi.ChatterGroups.requestGroupMembership(communityId, groupId);
```

`searchGroups(communityId, q)`
Get the first page of groups that match the search criteria.

API Version
28.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ChatterGroupPage searchGroups(String communityId, String q)`

Parameters
`communityId`  
Type: `String`  
Use either the ID for a community, `internal`, or `null`.

`q`  
Type: `String`  
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`. Can be specified as `null`.

Return Value
Type: `ConnectApi.ChatterGroupPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchGroups(communityId, q, result)`
- Testing ConnectApi Code

### searchGroups(communityId, q, pageParam, pageSize)

Get a page of groups that match the search criteria.

API Version

28.0

Available to Guest Users

31.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ChatterGroupPage searchGroups(String communityId, String q,
        Integer pageParam, Integer pageSize)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `q`
  - Type: `String`
  - Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as `null`.

- `pageParam`
  - Type: `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
Return Value
Type: ConnectApi.ChatterGroupPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with set:Test). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchGroups(communityId, q, pageParam, pageSize, result)

Testing ConnectApi Code

searchGroups(communityId, q, archiveStatus, pageParam, pageSize)
Get a page of groups with the archive status that match the search criteria.

API Version
29.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterGroupPage searchGroups(String communityId, String q,
ConnectApi.GroupArchiveStatus archiveStatus, Integer pageParam, Integer pageSize)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as null.

archiveStatus
Type: ConnectApi.GroupArchiveStatus
Archive status of groups.
• All—All groups, including groups that are archived and groups that aren’t archived.
• Archived—Groups that are archived.
ConnectApi Namespace

- **NotArchived**—Groups that aren't archived.

**pageParam**

Type: `Integer`

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**

Type: `Integer`

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: `ConnectApi.ChatterGroupPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchGroups(communityId, q, archiveStatus, pageParam, pageSize, result)`
- Testing ConnectApi Code

**setBannerPhoto(communityId, groupId, fileId, versionNumber)**

Set an uploaded file as the group banner photo.

API Version

36.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String groupId, String fileId, Integer versionNumber)
```

Parameters

- **communityId**
  
  Type: `String`
  
  Use either the ID for a community, `internal`, or `null`.

- **groupId**
  
  Type: `String`
  
  The ID of the group.
### fileId
- **Type:** String
- The ID of the already uploaded file. The key prefix must be 069, and the image must be smaller than 8 MB.

### versionNumber
- **Type:** Integer
- Version number of the existing file. Specify either an existing version number or, to get the latest version, specify `null`.

**Return Value**
- **Type:** `ConnectApi.BannerPhoto`

**Usage**
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.
Photos are processed asynchronously and may not be visible right away.

**setBannerPhoto(communityId, groupId, fileUpload)**
Set a file that hasn’t been uploaded as the group banner photo.

**API Version**
36.0

**Requires Chatter**
Yes

**Signature**
```java
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String groupId, ConnectApi.BinaryInput fileUpload)
```

**Parameters**
- **communityId**
  - **Type:** String
  - Use either the ID for a community, `internal`, or `null`.

- **groupId**
  - **Type:** String
  - The ID of the group.

- **fileUpload**
  - **Type:** `ConnectApi.BinaryInput`
  - A file to use as the photo. The content type must be usable as an image.
Return Value
Type: `ConnectApi.BannerPhoto`

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.
Photos are processed asynchronously and may not be visible right away.

`setBannerPhotoWithAttributes(communityId, groupId, bannerPhoto)`
Set and crop an uploaded file as the group banner photo.

API Version
36.0

Requires Chatter
Yes

Signature
`public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId, String groupId, ConnectApi.BannerPhotoInput bannerPhoto)`

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`groupId`
Type: `String`
The ID of the group.

`bannerPhoto`
Type: `ConnectApi.BannerPhotoInput`
A `ConnectApi.BannerPhotoInput` object that specifies the ID and version of the file, and how to crop the file.

Return Value
Type: `ConnectApi.BannerPhoto`

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.
Photos are processed asynchronously and may not be visible right away.
setBannerPhotoWithAttributes(communityId, groupId, bannerPhoto, fileUpload)

Set and crop a file that hasn’t been uploaded as the group banner photo.

API Version
36.0

Requires Chatter
Yes

Signature
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId, String groupId, ConnectApi.BannerPhotoInput bannerPhoto, ConnectApi.BinaryInput fileUpload)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID of the group.

bannerPhoto
Type: ConnectApi.BannerPhotoInput
A ConnectApi.BannerPhotoInput object specifying the cropping parameters.

fileUpload
Type: ConnectApi.BinaryInput
A file to use as the photo. The content type must be usable as an image.

Return Value
Type: ConnectApi.BannerPhoto

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

setPhoto(communityId, groupId, fileId, versionNumber)

Set an uploaded file as the group photo.
API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.Photo setPhoto(String communityId, String groupId, String fileId, Integer versionNumber)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

fileId
Type: String
ID of a file already uploaded. The key prefix must be 069, and the file must be an image that is smaller than 2 GB.

versionNumber
Type: Integer
Version number of the existing file. Specify either an existing version number or, to get the latest version, specify null.

Return Value
Type: ConnectApi.Photo

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.
Photos are processed asynchronously and may not be visible right away.

Sample: Updating a Group Photo with an Existing File
When a group is created, it doesn't have a group photo. You can set an existing photo that has already been uploaded to Salesforce as the group photo. The key prefix must be 069 and the file size must be less than 2 GB.

```java
String communityId = null;
ID groupId = '0F9x00000000hAK';
ID fileId = '069x00000001Ion';

// Set photo
ConnectApi.Photo photo = ConnectApi.ChatterGroups.setPhoto(communityId, groupId, fileId, null);
```
`setPhoto(communityId,(groupId, fileUpload)`

Set a file that hasn’t been uploaded as the group photo.

**API Version**

28.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.Photo setPhoto(String communityId, String groupId,
ConnectApi.BinaryInput fileUpload)
```

**Parameters**

- `communityId`
  
  Type: `String`
  
  Use either the ID for a community, `internal`, or `null`.

- `groupId`
  
  Type: `String`
  
  The ID for a group.

- `fileUpload`
  
  Type: `ConnectApi.BinaryInput`
  
  A file to use as the photo. The content type must be usable as an image.

**Return Value**

Type: `ConnectApi.Photo`

**Usage**

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

Photos are processed asynchronously and may not be visible right away.

**Sample: Uploading a New File and Using It as a Group Photo**

When a group is created, it doesn’t have a group photo. You can upload a photo and set it as the group photo.

```java
String communityId = null;
ID groupId = '0F9x00000000hAP';
ID photoId = '069x00000001Ioo';

// Set photo
List<ContentVersion> groupPhoto = [Select c.VersionData From ContentVersion c where ContentDocumentId=:photoId];
ConnectApi.BinaryInput binary = new ConnectApi.BinaryInput(groupPhoto.get(0).VersionData,
```
setPhotoWithAttributes(communityId, groupId, photo)
Set and crop an uploaded file as the group photo.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.Photo setPhotoWithAttributes(String communityId, String groupId, ConnectApi.PhotoInput photo)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

photo
Type: ConnectApi.PhotoInput
A ConnectApi.PhotoInput object that specifies the ID and version of the file, and how to crop the file.

Return Value
Type: ConnectApi.Photo

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

setPhotoWithAttributes(communityId, groupId, photo, fileUpload)
Set and crop a file that hasn't been uploaded as the group photo.
API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.PhotosetPhotoWithAttributes(String communityId, String groupId,
ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

photo
Type: ConnectApi.PhotoInput
A ConnectApi.PhotoInput object that specifies how to crop the file specified in fileUpload

fileUpload
Type: ConnectApi.BinaryInput
A file to use as the photo. The content type must be usable as an image.

Return Value
Type: ConnectApi.Photo

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

updateGroup(communityId, groupId, groupInput)
Update the settings of a group.

API Version
28.0

Requires Chatter
Yes
Signature

public static ConnectApi.ChatterGroup updateGroup(String communityId, String groupId, ConnectApi.ChatterGroupInput groupInput)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

groupInput
Type: ConnectApi.ChatterGroupInput
A ConnectApi.ChatterGroupInput object.

Return Value
Type: ConnectApi.ChatterGroup

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Use this method to update any settings in the ConnectApi.ChatterGroupInput class. These settings include the group title and text in the "Information" section, whether the group is public or private, and whether the group is archived.

Example
This example archives a group.

```java
String groupId = '0F9D00000000qSz';
String communityId = null;

ConnectApi.ChatterGroupInput groupInput = new ConnectApi.ChatterGroupInput();
groupInput.isArchived = true;

ConnectApi.ChatterGroups.updateGroup(communityId, groupId, groupInput);
```

updateGroupMember(communityId, membershipId, role)
Update the role of a group member.

API Version
29.0

Requires Chatter
Yes
Signature

```
public static ConnectApi.ChatterGroup updateGroupMember(String communityId, String membershipId, ConnectApi.GroupMembershipType role)
```

Parameters

- `communityId`
  Type: String
  Use either the ID for a community, internal, or null.

- `membershipId`
  Type: String
  The ID for a membership.

- `role`
  Type: ConnectApi.GroupMembershipType
  The group membership type. One of these values:
  - GroupManager
  - StandardMember

Return Value

Type: `ConnectApi.ChatterGroup`

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

```
updateMyChatterSettings(communityId, groupId, emailFrequency)
```

Update the context user’s email frequency for a group.

API Version

28.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.GroupChatterSettings updateMyChatterSettings(String communityId, String groupId, ConnectApi.GroupEmailFrequency emailFrequency)
```

Parameters

- `communityId`
  Type: String
groupId
Type: String
The ID for a group.

emailFrequency
Type: ConnectApi.GroupEmailFrequency
Frequency with which a user receives email.
- EachPost
- DailyDigest
- WeeklyDigest
- Never
- UseDefault
The value UseDefault uses the value set in a call to updateChatterSettings(communityId, userId, defaultGroupEmailFrequency).

Return Value
Type: ConnectApi.GroupChatterSettings

updateRequestStatus(communityId, requestId, status)
Update a request to join a private group.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.GroupMembershipRequest updateRequestStatus(String communityId, String requestId, ConnectApi.GroupMembershipRequestStatus status)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

requestId
Type: String
ID for a request to join a private group.

status
Type: ConnectApi.GroupMembershipRequestStatus
Status of the request:
- Accepted
- Declined

The Pending value of the enum is not valid in this method.

Return Value
Type: `ConnectApi.GroupMembershipRequest`

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

Sample: Accepting or Declining a Request to Join a Private Group
This sample code calls `ConnectApi.ChatterGroups.updateRequestStatus` and passes it the membership request ID and an `ConnectApi.GroupMembershipRequestStatus.Accepted` status. You can also pass `ConnectApi.GroupMembershipRequestStatus.Declined`.

```java
String communityId = null;
ID groupId = '0F9x00000000hAZ';
String requestId = '0I5x000000001snCAA';

ConnectApi.GroupMembershipRequest membershipRequestRep = 
ConnectApi.ChatterGroups.updateRequestStatus(communityId, requestId, 
ConnectApi.GroupMembershipRequestStatus.Accepted);
```

`updateRequestStatus(communityId, requestId, status, responseMessage)`
Update a request to join a private group and optionally provide a message when the request is denied.

API Version
35.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.GroupMembershipRequest updateRequestStatus(String communityId, 
String requestId, ConnectApi.GroupMembershipRequestStatus status, String responseMessage)
```

Parameters
`communityId`
Type: `String`
Use either the ID for a community, internal, or `null`.
requestId
   Type: String
   ID for a request to join a private group.

status
   Type: ConnectApi.GroupMembershipRequestStatus
   Status of the request:
   • Accepted
   • Declined
   The Pending value of the enum is not valid in this method.

responseMessage
   Type: String
   Provide a message to the user if their membership request is declined. The value of this property is used only when the value of the status property is Declined.
   The maximum length is 756 characters.

Return Value
   Type: ConnectApi.GroupMembershipRequest

Usage
   This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

ChatterGroups Test Methods
   The following are the test methods for ChatterGroups. All methods are static.
   For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

setTestSearchGroups(communityId, q, result)
   Register a ConnectApi.ChatterGroupPage object to be returned when the matching ConnectApi.searchGroups method is called in a test context. Use the test method with the same parameters or you receive an exception.

API Version
   29.0

Signature
   public static Void setTestSearchGroups(String communityId, String q, ConnectApi.ChatterGroupPage result)

Parameters
   communityId
      Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as null.

result
Type: ConnectApi.ChatterGroupPage
The test ConnectApi.ChatterGroupPage object.

Return Value
Type: Void

SEE ALSO:
searchGroups(communityId, q)
Testing ConnectApi Code

setTestSearchGroups(communityId, q, pageParam, pageSize, result)
Register a ConnectApi.ChatterGroupPage object to be returned when the matching ConnectApi.searchGroups method is called in a test context. Use the test method with the same parameters or you receive an exception.

API Version
28.0

Signature
public static Void setTestSearchGroups(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.ChatterGroupPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**Result**
- Type: `ConnectApi.ChatterGroupPage`
- The test `ConnectApi.ChatterGroupPage` object.

**Return Value**
- Type: `Void`

**SEE ALSO:**
- `searchGroups(communityId, q, pageParam, pageSize)`
- `Testing ConnectApi Code`

### `setTestSearchGroups(communityId, q, archiveStatus, pageParam, pageSize, result)`

Register a `ConnectApi.ChatterGroupPage` object to be returned when the matching `ConnectApi.searchGroups` method is called in a test context. Use the test method with the same parameters or you receive an exception.

**API Version**
- 29.0

**Signature**
```java
public static Void setTestSearchGroups(String communityId, String q,
ConnectApi.GroupArchiveStatus, archiveStatus, Integer pageParam, Integer pageSize,
ConnectApi.ChatterGroupPage result)
```

**Parameters**
- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `q`
  - Type: `String`
  - Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as `null`.

- `archiveStatus`
  - Type: `ConnectApi.GroupArchiveStatus`
  - Archive status of groups.
    - All—All groups, including groups that are archived and groups that aren’t archived.
    - Archived—Groups that are archived.
    - NotArchived—Groups that aren’t archived.

- `pageParam`
  - Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**result**
Type: `ConnectApi.ChatterGroupPage`
The test `ConnectApi.ChatterGroupPage` object.

Return Value
Type: Void

SEE ALSO:
- `searchGroups(communityId, q, archiveStatus, pageParam, pageSize)`
- Testing ConnectApi Code

**ChatterMessages Class**
Access and modify message and conversation data.

**Namespace**
`ConnectApi`

**Usage**
Use Chatter in Apex to get, send, search, and reply to messages. You can also get and search conversations, mark conversations as read, and get a count of unread messages.

**ChatterMessages Methods**
The following are methods for `ChatterMessages`. All methods are static.

IN THIS SECTION:
- `getConversation(conversationId)`
  Get a conversation.
- `getConversation(conversationId, pageParam, pageSize)`
  Get a page of a conversation.
- `getConversation(communityId, conversationId)`
  Get a conversation from a community.
- `getConversation(communityId, conversationId, pageParam, pageSize)`
  Get a page of a conversation from a community.
- `getConversations()`
  Get the most recent conversations.
getConversations(pageParam, pageSize)
Get a page of conversations.

getConversations(communityId)
Get the most recent conversations from a community.

getConversations(communityId, pageParam, pageSize)
Get a page of conversations from a community.

getMessage(messageId)
Get a message.

getMessage(communityId, messageId)
Get a message from a community.

getMessages()
Get the most recent messages.

getMessages(pageParam, pageSize)
Get a page of messages.

getMessages(communityId)
Get the most recent messages from a community.

getMessages(communityId, pageParam, pageSize)
Get a page of messages from a community.

getUnreadCount()
Get the number of conversations that are marked unread.

getUnreadCount(communityId)
Get the number of conversations that are marked unread in a community.

markConversationRead(conversationId, read)
Mark a conversation as read or unread.

markConversationRead(communityId, conversationID, read)
Mark a conversation as read or unread in a community.

replyToMessage(text, inReplyTo)
Reply to a message.

replyToMessage(communityId, text, inReplyTo)
Reply to a message in a community.

searchConversation(conversationId, q)
Get a conversation that matches the search criteria.

searchConversation(conversationId, pageParam, pageSize, q)
Get a conversation with a page of messages that match the search criteria.

searchConversation(communityId, conversationId, q)
Get a conversation with messages that match the search criteria in a community.

searchConversation(communityId, conversationId, pageParam, pageSize, q)
Get a conversation with a page of messages that match the search criteria in a community.

searchConversations(q)
Get conversations in which member names and messages match the search criteria.
searchConversations(pageParam, pageSize, q)
Get a page of conversations in which member names and messages match the search criteria.

searchConversations(communityId, q)
Get conversations in which member names and messages match the search criteria in a community.

searchConversations(communityId, pageParam, pageSize, q)
Get a page of conversations in which member names and messages match the search criteria in a community.

searchMessages(q)
Get messages that match the search criteria.

searchMessages(pageParam, pageSize, q)
Get a page of messages that match the search criteria.

searchMessages(communityId, q)
Get messages that match the search criteria in a community.

searchMessages(communityId, pageParam, pageSize, q)
Get a page of messages that match the search criteria in a community.

sendMessage(text, recipients)
Send a message to a list of recipients.

sendMessage(communityId, text, recipients)
Send a message to a list of recipients in a community.

getConversation(conversationId)
Get a conversation.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversation getConversation(String conversationId)

Parameters
conversationId
Type: String
Specify the ID for the conversation.

Return Value
Type: ConnectApi.ChatterConversation
**getConversation(conversationId, pageParam, pageSize)**

Get a page of a conversation.

API Version

29.0

Requires Chatter

Yes

**Signature**

```java
public static ConnectApi.ChatterConversation getConversation(String conversationId,
String pageParam, Integer pageSize)
```

**Parameters**

- **conversationId**
  - Type: `String`
  - Specify the ID for the conversation.

- **pageParam**
  - Type: `String`
  - Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**Return Value**

Type: `ConnectApi.ChatterConversation`

---

**getConversation(communityId, conversationId)**

Get a conversation from a community.

API Version

30.0

Requires Chatter

Yes

**Signature**

```java
public static ConnectApi.ChatterConversation getConversation(String communityId, String conversationId)
```
Parameters

`communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

`conversationId`
  Type: `String`
  Specify the ID for the conversation.

Return Value

Type: `ConnectApi.ChatterConversation`

`getConversation(communityId, conversationId, pageParam, pageSize)`
Get a page of a conversation from a community.

API Version

30.0

Requires Chatter

Yes

Signature

`public static ConnectApi.ChatterConversation getConversation(String communityId, String conversationId, String pageParam, String pageSize)`

Parameters

`communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

`conversationId`
  Type: `String`
  Specify the ID for the conversation.

`pageParam`
  Type: `String`
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
Return Value
Type: `ConnectApi.ChatterConversation`

`getConversations()`
Get the most recent conversations.

API Version
29.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterConversationPage getConversations()
```

Return Value
Type: `ConnectApi.ChatterConversationPage`

`getConversations(pageParam, pageSize)`
Get a page of conversations.

API Version
29.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterConversationPage getConversations(String pageParam, Integer pageSize)
```

Parameters
`pageParam`
Type: `String`
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
Return Value
Type: `ConnectApi.ChatterConversationPage`

`getConversations(communityId)`
Get the most recent conversations from a community.

API Version
30.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterConversationPage getConversations(String communityId)
```

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

Return Value
Type: `ConnectApi.ChatterConversationPage`

`getConversations(communityId, pageParam, pageSize)`
Get a page of conversations from a community.

API Version
30.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterConversationPage getConversations(String communityId, 
String pageParam, Integer pageSize)
```

Parameters
`communityId`
Type: `String`
Use either the ID for a community, internal, or null.

**pageParam**
Type: `String`

Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**Return Value**
Type: `ConnectApi.ChatterConversationPage`

**getMessage(messageId)**
Get a message.

**API Version**
29.0

**Requires Chatter**
Yes

**Signature**
```java
public static ConnectApi.ChatterMessage getMessage(String messageId)
```

**Parameters**
- `messageId`
  Type: `String`
  ID for the message.

**Return Value**
Type: `ConnectApi.ChatterMessage`

**getMessage(communityId, messageId)**
Get a message from a community.

**API Version**
30.0
Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterMessage getMessage(String communityId, String messageId)
```

Parameters
- **communityId**
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.
- **messageId**
  - Type: String
  - ID for the message.

Return Value
Type: `ConnectApi.ChatterMessage`

**getMessages()**
Get the most recent messages.

API Version
29.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterMessagePage getMessages()
```

Return Value
Type: `ConnectApi.ChatterMessagePage`

**getMessages(pageParam, pageSize)**
Get a page of messages.

API Version
29.0
Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterMessagePage getMessages(String pageParam, Integer pageSize)
```

Parameters
```
pageParam
  Type: String  
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
```

Return Value
```
Type: ConnectApi.ChatterMessagePage
```

getMessages(communityId)
Get the most recent messages from a community.

API Version
30.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterMessagePage getMessages(String communityId)
```

Parameters
```
communityId
  Type: String
  Use either the ID for a community, internal, or null.
```

Return Value
```
Type: ConnectApi.ChatterMessagePage
```
getMessages(communityId, pageParam, pageSize)
Get a page of messages from a community.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessagePage getMessages(String communityId, String pageParam, Integer pageSize)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

pageParam
  Type: String
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ChatterMessagePage

getUnreadCount()
Get the number of conversations that are marked unread.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.UnreadConversationCount getUnreadCount()
Return Value

Type: `ConnectApi.UnreadConversationCount`

If there are fewer than 50 unread conversations, `ConnectApi.UnreadConversationCount` returns the exact number of unread conversations and the `hasMore` property is `false`. If there are more than 50 unread conversations, `ConnectApi.UnreadConversationCount` returns 50 unread conversations and the `hasMore` property is `true`.

Example

```java
ConnectApi.UnreadConversationCount unread = ConnectApi.ChatterMessages.getUnreadCount();
```

**getUnreadCount(communityId)**

Get the number of conversations that are marked unread in a community.

API Version

30.0

Requires Chatter

Yes

Signature

`public static ConnectApi.UnreadConversationCount getUnreadCount(String communityId)`

Parameters

`communityId`

Type: `String`

Use either the ID for a community, `internal`, or `null`.

Return Value

Type: `ConnectApi.UnreadConversationCount`

If there are fewer than 50 unread conversations, `ConnectApi.UnreadConversationCount` returns the exact number of unread conversations and the `hasMore` property is `false`. If there are more than 50 unread conversations, `ConnectApi.UnreadConversationCount` returns 50 unread conversations and the `hasMore` property is `true`.

**markConversationRead(conversationId, read)**

Mark a conversation as read or unread.

API Version

29.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterConversationSummary markConversationRead(String conversationId, Boolean read)
```

Parameters

collectionId
Type: String
Specify the ID for the conversation.

collection
Type: Boolean
Specify whether the conversation is read (true) or not (false).

Return Value
Type: ConnectApi.ChatterConversationSummary

**markConversationRead(communityId, conversationID, read)**
Mark a conversation as read or unread in a community.

API Version
30.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterConversationSummary markConversationRead(String communityId, String conversationID, Boolean read)
```

Parameters

collectionId
Type: String
Use either the ID for a community, internal, or null.

collectionId
Type: String
Specify the ID for the conversation.

collection
Type: Boolean
Specify whether the conversation is read (true) or not (false).

Return Value
Type: ConnectApi.ChatterConversationSummary

replyToMessage(text, inReplyTo)
Reply to a message.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessage replyToMessage(String text, String inReplyTo)

Parameters
text
  Type: String
  The text of the message. Cannot be empty or over 10,000 characters.
inReplyTo
  Type: String
  ID of the message that is being responded to.

Return Value
Type: ConnectApi.ChatterMessage

replyToMessage(communityId, text, inReplyTo)
Reply to a message in a community.

API Version
30.0

Requires Chatter
Yes
public static ConnectApi.ChatterMessage replyToMessage(String communityId, String text, String inReplyTo)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

text
  Type: String
  The text of the message. Cannot be empty or over 10,000 characters.

inReplyTo
  Type: String
  ID of the message that is being responded to.

Return Value
Type: ConnectApi.ChatterMessage

searchConversation(conversationId, q)
Get a conversation that matches the search criteria.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversation searchConversation(String conversationId, String q)

Parameters

conversationId
  Type: String
  Specify the ID for the conversation.

q
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
Return Value
Type: `ConnectApi.ChatterConversation`

```
searchConversation(conversationId, pageParam, pageSize, q)
```
Get a conversation with a page of messages that match the search criteria.

API Version
29.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterConversation searchConversation(String conversationId,
                                                               String pageParam,
                                                               Integer pageSize,
                                                               String q)
```

Parameters
`conversationId`
Type: `String`
Specify the ID for the conversation.

`pageParam`
Type: `String`
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`q`
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: `ConnectApi.ChatterConversation`

```
searchConversation(communityId, conversationId, q)
```
Get a conversation with messages that match the search criteria in a community.

API Version
30.0
Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversation searchConversation(String communityId, String conversationId, String q)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

conversationId
Type: String
Specify the ID for the conversation.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterConversation

searchConversation(communityId, conversationId, pageParam, pageSize, q)
Get a conversation with a page of messages that match the search criteria in a community.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversation searchConversation(String communityId, String conversationId, String pageParam, Integer pageSize, String q)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.
**conversationId***
  Type: *String*
  Specify the ID for the conversation.

**pageParam***
  Type: *String*
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize***
  Type: *Integer*
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**q***
  Type: *String*
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
  Type: *ConnectApi.ChatterConversation*

**searchConversations(q)**
Get conversations in which member names and messages match the search criteria.

API Version
  29.0

Requires Chatter
  Yes

Signature
  public static ConnectApi.ChatterConversationPage searchConversations(String q)

Parameters
  q
  Type: *String*
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
  Type: *ConnectApi.ChatterConversationPage*
**searchConversations(pageParam, pageSize, q)**
Get a page of conversations in which member names and messages match the search criteria.

API Version
29.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterConversationPage searchConversations(String pageParam, Integer pageSize, String q)
```

Parameters

- **pageParam**
  Type: String
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **q**
  Type: String
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: `ConnectApi.ChatterConversationPage`

**searchConversations(communityId, q)**
Get conversations in which member names and messages match the search criteria in a community.

API Version
30.0

Requires Chatter
Yes
public static ConnectApi.ChatterConversationPage searchConversations(String communityId, String q)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

Type: ConnectApi.ChatterConversationPage

searchConversations(communityId, pageParam, pageSize, q)
Get a page of conversations in which member names and messages match the search criteria in a community.

API Version

30.0

Requires Chatter

Yes

Signature

public static ConnectApi.ChatterConversationPage searchConversations(String communityId, String pageParam, Integer pageSize, String q)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
`q`
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterConversationPage

`searchMessages(q)`
Get messages that match the search criteria.

API Version
29.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ChatterMessagePage searchMessages(String q)`

Parameters
`q`
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterMessagePage

`searchMessages(pageParam, pageSize, q)`
Get a page of messages that match the search criteria.

API Version
29.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.ChatterMessagePage searchMessages(String pageParam, Integer pageSize, String q)
```

Parameters

`pageParam`

Type: `String`

Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`

Type: `Integer`

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`q`

Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

Return Value

Type: `ConnectApi.ChatterMessagePage`

```java
searchMessages(communityId, q)
```

Get messages that match the search criteria in a community.

API Version

30.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ChatterMessagePage searchMessages(String communityId, String q)
```

Parameters

`communityId`

Type: `String`

Use either the ID for a community, `internal`, or `null`.

`q`

Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: `ConnectApi.ChatterMessagePage`

`searchMessages(communityId, pageParam, pageSize, q)`
Get a page of messages that match the search criteria in a community.

API Version
30.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterMessagePage searchMessages(String communityId, String pageParam, Integer pageSize, String q)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`pageParam`
Type: `String`
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`q`
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: `ConnectApi.ChatterMessagePage`

`sendMessage(text, recipients)`
Send a message to a list of recipients.
API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessage sendMessage(String text, String recipients)

Parameters
text
Type: String
The text of the message. Cannot be empty or over 10,000 characters.
recipients
Type: String
Up to nine comma-separated IDs of the users receiving the message.

Return Value
Type: ConnectApi.ChatterMessage

sendMessage(communityId, text, recipients)
Send a message to a list of recipients in a community.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessage sendMessage(String communityId, String text, String recipients)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.
text
Type: String
The text of the message. Cannot be empty or over 10,000 characters.

**recipients**

Type: **String**

Up to nine comma-separated IDs of users to receive the message.

**Return Value**

Type: **ConnectApi.ChatterMessage**

**ChatterUsers Class**

Access information about users, such as activity, followers, subscriptions, files, and groups.

**Namespace**

**ConnectApi**

**ChatterUsers Methods**

The following are methods for **ChatterUsers**. All methods are static.

**IN THIS SECTION:**

- **deletePhoto(communityId, userId)**
  
  Delete a user’s photo.

- **exportUserActivities(communityId, userId)**
  
  Export Chatter-related user activity, such as bookmarks, topic endorsements, and votes.

- **follow(communityId, userId, subjectId)**
  
  Follow a user or record.

- **getChatterSettings(communityId, userId)**
  
  Get the default Chatter settings for a user.

- **getFollowers(communityId, userId)**
  
  Get the first page of followers for a user.

- **getFollowers(communityId, userId, pageParam, pageSize)**
  
  Get a page of followers for a user.

- **getFollowings(communityId, userId)**
  
  Get the first page of users and records that a user follows.

- **getFollowings(communityId, userId, pageParam)**
  
  Get a page of users and records that a user follows.

- **getFollowings(communityId, userId, pageParam, pageSize)**
  
  Get a page with the specified number of users and records that a user follows.

- **getFollowings(communityId, userId, filterType)**
  
  Get the first page of records, filtered by key prefix, that a user follows.
getFollowings(communityId, userId, filterType, pageParam)
Get a page of records, filtered by key prefix, that a user follows.

getFollowings(communityId, userId, filterType, pageParam, pageSize)
Get a page with the specified number of records, filtered by key prefix, that a user follows.

getGroups(communityId, userId)
Get the groups that a user is a member of.

groups(communityId, userId, pageParam, pageSize)
Get a page of groups that a user is a member of.

getPhoto(communityId, userId)
Get a user’s photo.

getReputation(communityId, userId)
Get a user’s reputation.

getUser(communityId, userId)
Get information about a user.

getUserBatch(communityId, userIds)
Get information about a list of users.

getUserGroups(communityId, userId)
Get a user’s groups.

getUserGroups(communityId, userId, pageParam, pageSize)
Get a page of a user’s groups.

getUsers(communityId)
Get the first page of users.

getUsers(communityId, pageParam, pageSize)
Get a page of users.

getUsers(communityId, pageParam, pageSize)
Get a page of users.

groups(communityId, userId, pageParam, pageSize)
Start a job to purge Chatter-related user activity, such as bookmarks, topic endorsements, and votes.

searchUserGroupDetails(communityId, userId, q)
Get the user’s groups that match the search criteria.

searchUserGroupDetails(communityId, userId, q, pageParam, pageSize)
Get a page of a user’s groups that match the search criteria.

searchUserGroups(communityId, userId, q)
Get the user’s groups that match the search criteria.

searchUserGroups(communityId, userId, q, pageParam, pageSize)
Get a page of a user’s groups that match the search criteria.

searchUsers(communityId, q)
Get the first page of users that match the search criteria.

searchUsers(communityId, q, pageParam, pageSize)
Get a page of users that match the search criteria.

searchUsers(communityId, q, searchContextId, pageParam, pageSize)
Get a page of users that match the search criteria.
setPhoto(communityId, userId, fileId, versionNumber)
Set an uploaded file as a user’s photo.

setPhoto(communityId, userId, fileUpload)
Set a file that hasn’t been uploaded as the user’s photo.

setPhotoWithAttributes(communityId, userId, photo)
Set and crop an uploaded file as a user’s photo.

setPhotoWithAttributes(communityId, userId, photo, fileUpload)
Set and crop a file that hasn’t been uploaded as a user’s photo.

updateChatterSettings(communityId, userId, defaultGroupEmailFrequency)
Update the default Chatter settings for a user.

updateUser(communityId, userId, userInput)
Update the About Me section for a user.

deletePhoto(communityId, userId)
Delete a user’s photo.

API Version
28.0–34.0

⚠️ Important: In version 35.0 and later, use ConnectApi.UserProfiles.deletePhoto(communityId, userId)

Signature
public static Void deletePhoto(String communityId, String userId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

Return Value
Type: Void

exportUserActivities(communityId, userId)
Export Chatter-related user activity, such as bookmarks, topic endorsements, and votes.

API Version
42.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.UserActivitiesJob exportUserActivities(String communityId,
String userId)
```

Parameters

- **communityId**
  - Type: **String**
  - Use either the ID for a community, internal, or null.

- **userId**
  - Type: **String**
  - ID of the user.

Return Value

Type: `ConnectApi.UserActivitiesJob`

Usage

The following activities can be exported.

- **Bookmark**—User bookmarked a post.
- **ChatterActivity**—Total counts of posts and comments made and likes and comments received for a user.
- **ChatterLike**—User liked a post or comment.
- **Comment**—User commented on a post.
- **CompanyVerify**—User verified comment.
- **DownVote**—User downvoted a post or comment.
- **FeedEntityRead**—User read a post.
- **FeedRead**—User read a feed.
- **Mute**—User muted a post.
- **Post**—User made a post.
- **TopicEndorsement**—User endorsed another user on a topic or received endorsement on a topic.
- **UpVote**—User upvoted a post or comment.

```java
follow(communityId, userId, subjectId)
```

Follow a user or record.

API Version

28.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.Subscription follow(String communityId, String userId, String subjectId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `userId`
  - Type: `String`
  - The ID for the context user or the keyword `me`.

- `subjectId`
  - Type: `String`
  - ID of the user or record to follow.

Return Value

Type: `ConnectApi.Subscription`

Example

```java
ChatterUsers.ConnectApi.Subscription subscriptionToRecord =
ConnectApi.ChatterUsers.follow(null, "me", "001RR000002G4Y0");
```

SEE ALSO:

- [Unfollow a Record](#)

**getChatterSettings(communityId, userId)**

Get the default Chatter settings for a user.

API Version

28.0

Requires Chatter
Yes
public static ConnectApi.UserChatterSettings getChatterSettings(String communityId, String userId)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

userId
  Type: String
  The ID for the context user or the keyword me.

Return Value
Type: ConnectApi.UserChatterSettings

defollowers(communityId, userId)
Get the first page of followers for a user.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.FollowerPage getFollowers(String communityId, String userId)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

userId
  Type: String
  The ID for a user.
Return Value
Type: ConnectApi.FollowerPage

getFollowers(communityId, userId, pageParam, pageSize)
Get a page of followers for a user.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.FollowerPage getFollowers(String communityId, String userId, Integer pageParam, Integer pageSize)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for a user.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.FollowerPage

getFollowings(communityId, userId)
Get the first page of users and records that a user follows.
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

userId
  Type: String
  The ID for a user.

Return Value

Type: ConnectApi.FollowingPage

getFollowings(communityId, userId, pageParam)
Get a page of users and records that a user follows.

public static ConnectApi.FollowingPage getFollowings(String communityId, String userId, Integer pageParam)
Parameters

**communityId**
Type: **String**
Use either the ID for a community, internal, or **null**.

**userId**
Type: **String**
The ID for a user.

**pageParam**
Type: **Integer**
Specifies the number of the page you want returned. Starts at 0. If you pass in **null** or 0, the first page is returned.

Return Value
Type: **ConnectApi.FollowingPage**

**getFollowings(communityId, userId, pageParam, pageSize)**
Get a page with the specified number of users and records that a user follows.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId, Integer pageParam, Integer pageSize)
```

Parameters

**communityId**
Type: **String**
Use either the ID for a community, internal, or **null**.

**userId**
Type: **String**
The ID for a user.

**pageParam**
Type: **Integer**
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**
Type: `Integer`

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.FollowingPage`

**getFollowings(communityId, userId, filterType)**
Get the first page of records, filtered by key prefix, that a user follows.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId, String filterType)
```

Parameters

**communityId**
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**userId**
Type: `String`
The ID for a user.

**filterType**
Type: `String`
Specifies the key prefix to filter the type of objects returned. A key prefix is the first three characters of the object ID, which specifies the object type. For example, User objects have a prefix of `005` and Group objects have a prefix of `0F9`.

Return Value
Type: `ConnectApi.FollowingPage`
**getFollowings(communityId, userId, filterType, pageParam)**
Get a page of records, filtered by key prefix, that a user follows.

---

**API Version**
28.0

**Available to Guest Users**
32.0

**Requires Chatter**
Yes

**Signature**
```java
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId, String filterType, Integer pageParam)
```

**Parameters**
- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- **userId**
  Type: `String`
  The ID for a user.
- **filterType**
  Type: `String`
  Specifies the key prefix to filter the type of objects returned. A key prefix is the first three characters of the object ID, which specifies the object type. For example, User objects have a prefix of `005` and Group objects have a prefix of `0F9`.
- **pageParam**
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**Return Value**
Type: `ConnectApi.FollowingPage`

---

**getFollowings(communityId, userId, filterType, pageParam, pageSize)**
Get a page with the specified number of records, filtered by key prefix, that a user follows.

---

**API Version**
28.0
Available to Guest Users
32.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId, String filterType, Integer pageParam, Integer pageSize)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal or null.
- **userId**
  - Type: String
  - The ID for a user.
- **filterType**
  - Type: String
  - Specifies the key prefix to filter the type of objects returned. A key prefix is the first three characters of the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.
- **pageParam**
  - Type: Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.
- **pageSize**
  - Type: Integer
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value

Type: `ConnectApi.FollowingPage`

```java
getGroups(communityId, userId)
```

Get the groups that a user is a member of.

API Version

28.0–44.0

⚠️ Important: In version 45.0 and later, use `getUserGroups(communityId, userId)`. 
Available to Guest Users
32.0–44.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserGroupPage getGroups(String communityId, String userId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for a user.

Return Value
Type: ConnectApi.UserGroupPage

getGroups(communityId, userId, pageParam, pageSize)
Get a page of groups that a user is a member of.

API Version
28.0–44.0

Important: In version 45.0 and later, use getUserGroups(communityId, userId, pageParam, pageSize).

Available to Guest Users
32.0–44.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserGroupPage getGroups(String communityId, String userId,
Integer pageParam, Integer pageSize)
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**userId**
Type: String
The ID for a user.

**pageParam**
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.UserGroupPage

---

**getPhoto(communityId, userId)**
Get a user’s photo.

API Version
28.0–34.0

⚠️ Important: In version 35.0 and later, use `ConnectApi.UserProfiles.getPhoto(communityId, userId)`.

Available to Guest Users
32.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.Photo getPhoto(String communityId, String userId)
```

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**userId**
Type: String
The ID for a user.

Return Value
Type: ConnectApi.Photo

getReputation(communityId, userId)
Get a user's reputation.

API Version
32.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.Reputation getReputation(String communityId, String userId)

Parameters
communityId
   Type: String
   Use either the ID for a community, internal, or null.

userId
   Type: String
   ID of the user.

Return Value
Type: ConnectApi.Reputation

getUser(communityId, userId)
Get information about a user.

API Version
28.0

Available to Guest Users
32.0
Requires Chatter
Yes

Signature
```
public static ConnectApi.UserSummary getUser(String communityId, String userId)
```

Parameters

**communityId**
- Type: String
- Use either the ID for a community, internal, or null.

**userId**
- Type: String
- The ID for a user.

Return Value
- Type: ConnectApi.UserDetail

Usage
If the user is external, the properties that the ConnectApi.UserDetail output class shares with the ConnectApi.UserSummary output class can have non-null values. Other properties are always null.

**getUserBatch(communityId, userIds)**
Get information about a list of users.

API Version
- 31.0

Available to Guest Users
- 32.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.BatchResult[] getUserBatch(String communityId, List<String> userIds)
```
Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`userIds`
Type: `List<String>`
A list of up to 500 user IDs.

Return Value

Type: `ConnectApi.BatchResult[]`

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.User` object and errors for users that didn’t load.

Example

```java
// Get users in an organization.
ConnectApi.UserPage userPage = ConnectApi.ChatterUsers.getUsers(null);

// Create a list of user IDs.
List<String> userList = new List<String>();
for (ConnectApi.User user : userPage.users) {
    userList.add(user.id);
}

// Get info about all users in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterUsers.getUserBatch(null, userList);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print each user’s username.
        ConnectApi.UserDetail user;
        if(batchResult.getResult() instanceof ConnectApi.UserDetail) {
            user = (ConnectApi.UserDetail) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(user.username);
    } else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
```

`getUserGroups(communityId, userId)`

Get a user’s groups.
public static ConnectApi.UserGroupDetailPage getUserGroups(String communityId, String userId)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

userId
  Type: String
  The ID for a user.

Return Value

Type: ConnectApi.UserGroupDetailPage

getUserGroups(communityId, userId, pageParam, pageSize)
Get a page of a user's groups.
Parameters

**communityId**
- Type: String
- Use either the ID for a community, internal, or null.

**userId**
- Type: String
- The ID for a user.

**pageParam**
- Type: Integer
- Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**
- Type: Integer
- Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value

Type: **ConnectApi.UserGroupDetailPage**

**getUsers(communityId)**

Get the first page of users.

API Version

28.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.UserPage getUsers(String communityId)
```

Parameters

**communityId**
- Type: String
- Use either the ID for a community, internal, or null.

Return Value

Type: **ConnectApi.UserPage**
**getUsers(communityId, pageParam, pageSize)**

Get a page of users.

**API Version**

28.0

**Available to Guest Users**

32.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.UserPage getUsers(String communityId, Integer pageParam, Integer pageSize)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **pageParam**
  - Type: `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**Return Value**

Type: `ConnectApi.UserPage`

**purgeUserActivities(communityId, userId)**

Start a job to purge Chatter-related user activity, such as bookmarks, topic endorsements, and votes.

**API Version**

42.0

**Requires Chatter**

Yes
public static ConnectApi.UserActivitiesJob purgeUserActivities(String communityId, String userId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
ID of the user.

Return Value
Type: ConnectApi.UserActivitiesJob

Usage
The following activities can be purged with this method.

• Bookmark—User bookmarked a post.
• ChatterActivity—Total counts of posts and comments made and likes and comments received for a user.
• ChatterLike—User liked a post or comment.
• CompanyVerify—User verified comment.
• DownVote—User downvoted a post or comment.
• FeedEntityRead—User read a post.
• FeedRead—User read a feed.
• Mute—User muted a post.
• TopicEndorsement—User endorsed another user on a topic or received endorsement on a topic.
• UpVote—User upvoted a post or comment.

To delete a user's posts and comments, use these methods, respectively.

• deleteFeedElement(communityId, feedElementId)
• deleteComment(communityId, commentId)

searchUserGroupDetails(communityId, userId, q)
Get the user's groups that match the search criteria.
Requires Chatter
Yes

Signature
```java
public static ConnectApi.UserGroupDetailPage searchUserGroupDetails(String communityId,
String userId, String q)
```

Parameters
- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.
- `userId`
  - Type: `String`
  - The ID for a user.
- `q`
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

Return Value
Type: `ConnectApi.UserGroupDetailPage`

```java
searchUserGroupDetails(communityId, userId, q, pageParam, pageSize)
```

Get a page of a user’s groups that match the search criteria.

API Version
45.0

Available to Guest Users
45.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.UserGroupDetailPage searchUserGroupDetails(String communityId,
String userId, String q, Integer pageParam, Integer pageSize)
```
Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or null.

`userId`
Type: String
The ID for a user.

`q`
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`pageParam`
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

`pageSize`
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.UserGroupDetailPage

`searchUserGroups(communityId, userId, q)`
Get the user’s groups that match the search criteria.

API Version
30.0–44.0

**Important:** In version 45.0 and later, use `searchUserGroupDetails(communityId, userId, q)`.

Available to Guest Users
32.0–44.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.UserGroupPage searchUserGroups(String communityId, String userId, String q)
```
Parameters

`communityId`
- **Type:** String
- Use either the ID for a community, *internal*, or *null*.

`userId`
- **Type:** String
- The ID for a user.

`q`
- **Type:** String
- Required and cannot be *null*. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

Return Value

**Type:** [ConnectApi.UserGroupPage](#)

### searchUserGroups(communityId, userId, q, pageParam, pageSize)

Get a page of a user’s groups that match the search criteria.

**API Version**

30.0–44.0

**Important:** In version 45.0 and later, use `searchUserGroupDetails(communityId, userId, q, pageParam, pageSize)`.

**Available to Guest Users**

32.0–44.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.UserGroupPage searchUserGroups(String communityId, String userId, String q, Integer pageParam, Integer pageSize)
```

Parameters

`communityId`
- **Type:** String
- Use either the ID for a community, *internal*, or *null*.

`userId`
- **Type:** String
- The ID for a user.
searchUsers(communityId, q)
Get the first page of users that match the search criteria.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserPage searchUsers(String communityId, String q)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
Return Value
Type: `ConnectApi.UserPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestSearchUsers(communityId, q, result)`
- Testing ConnectApi Code

`searchUsers(communityId, q, pageParam, pageSize)`
Get a page of users that match the search criteria.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.UserPage searchUsers(String communityId, String q, Integer pageParam, Integer pageSize)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `q`
  Type: `String`
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- `pageParam`
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.UserPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchUsers(communityId, q, pageParam, pageSize, result)
Testing ConnectApi Code

searchUsers(communityId, q, searchContextId, pageParam, pageSize)
Get a page of users that match the search criteria.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserPage searchUsers(String communityId, String q, String searchContextId, Integer pageParam, Integer pageSize)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

searchContextId
Type: String
A feed item ID that filters search results for feed @mentions. More useful results are listed first. When you specify this argument, you cannot query more than 500 results and you cannot use wildcards in the search term.

**pageParam**
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.UserPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestSearchUsers(communityId, q, searchContextId, pageParam, pageSize, result)`
- Testing ConnectApi Code

**setPhoto(communityId, userId, fileId, versionNumber)**
Set an uploaded file as a user’s photo.

API Version
28.0–34.0

**Important:** In version 35.0 and later, use `ConnectApi.UserProfiles.setPhoto(communityId, userId, fileId, versionNumber)`

Requires Chatter
Yes

Signature
```
public static ConnectApi.Photo setPhoto(String communityId, String userId, String fileId, Integer versionNumber)
```

Parameters

**communityId**
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**userId**
Type: String
The ID for the context user or the keyword *me*.

**fileId**
Type: String
ID of a file already uploaded. The file must be an image, and be smaller than 2 GB.

**versionNumber**
Type: Integer
Version number of the existing file. Specify either an existing version number, or *null* to get the latest version.

Return Value
Type: **ConnectApi.Photo**

Usage
Photos are processed asynchronously and may not be visible right away.

**setPhoto(communityId, userId, fileUpload)**
Set a file that hasn’t been uploaded as the user’s photo.

API Version
28.0–34.0

**Important:** In version 35.0 and later, use `ConnectApi.UserProfiles.setPhoto(communityId, userId, fileUpload)`

Requires Chatter
Yes

Signature

```java
public static ConnectApi.Photo setPhoto(String communityId, String userId, ConnectApi.BinaryInput fileUpload)
```

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, *internal*, or *null*.

- **userId**
  Type: String
  The ID for the context user or the keyword *me*. 
fileUpload

Type: ConnectApi.BinaryInput

A file to use as the photo. The content type must be usable as an image.

Return Value

Type: ConnectApi.Photo

Usage

Photos are processed asynchronously and may not be visible right away.

setPhotoWithAttributes(communityId, userId, photo)

Set and crop an uploaded file as a user’s photo.

API Version

29.0–34.0

⚠️ Important: In version 35.0 and later, use

ConnectApi.UserProfiles.setPhotoWithAttributes(communityId, userId, photo)

Requires Chatter

Yes

Signature

public static ConnectApi.Photo setPhotoWithAttributes(String communityId, String userId, ConnectApi.PhotoInput photo)

Parameters

communityId

Type: String

Use either the ID for a community, internal, or null.

userId

Type: String

The ID for the context user or the keyword me.

photo

Type: ConnectApi.PhotoInput

A ConnectApi.PhotoInput object specifying the file ID, version number, and cropping parameters.

Return Value

Type: ConnectApi.Photo
Usage

Photos are processed asynchronously and may not be visible right away.

```java
setPhotoWithAttributes(communityId, userId, photo, fileUpload)
```

Set and crop a file that hasn't been uploaded as a user's photo.

API Version

29.0–34.0

**Important:** In version 35.0 and later, use

```java
ConnectApi.UserProfiles.setPhotoWithAttributes(communityId, userId, photo, fileUpload)
```

Requires Chatter

Yes

Signature

```java
public static ConnectApi.PhotosetPhotoWithAttributes(String communityId, String userId,
ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, internal, or null.

- `userId`
  - Type: `String`
  - The ID for the context user or the keyword me.

- `photo`
  - Type: `ConnectApi.PhotoInput`
  - A ConnectApi.PhotoInput object specifying the cropping parameters.

- `fileUpload`
  - Type: `ConnectApi.BinaryInput`
  - A file to use as the photo. The content type must be usable as an image.

Return Value

- Type: `ConnectApi.Photo`

Usage

Photos are processed asynchronously and may not be visible right away.
updateChatterSettings(communityId, userId, defaultGroupEmailFrequency)

Update the default Chatter settings for a user.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserChatterSettings updateChatterSettings(String communityId, String userId, ConnectApi.GroupEmailFrequency defaultGroupEmailFrequency)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

defaultGroupEmailFrequency
Type: ConnectApi.GroupEmailFrequency
Frequency with which a user receives email. Values are:

- EachPost
- DailyDigest
- WeeklyDigest
- Never
- UseDefault

Don’t pass the value UseDefault for the defaultGroupEmailFrequency parameter because calling updateChatterSettings sets the default value.

Return Value
Type: ConnectApi.UserChatterSettings

updateUser(communityId, userId, userInput)

Update the About Me section for a user.

API Version
29.0
Requires Chatter

Yes

Signature

```java
public static ConnectApi.UserDetail updateUser(String communityId, String userId, 
ConnectApi.UserInput userInput)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.

- `userId`
  - Type: `String`
  - The ID for the context user or the keyword `me`.

- `userInput`
  - Type: `ConnectApi.UserInput`
  - Specifies the updated information.

Return Value

Type: `ConnectApi.UserDetail`

**ChatterUsers Test Methods**

The following are the test methods for ChatterUsers. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

`setTestSearchUsers(communityId, q, result)`

Register a `ConnectApi.UserPage` object to be returned when the matching `ConnectApi.searchUsers` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

28.0

Signature

```java
public static Void setTestSearchUsers(String communityId, String q, ConnectApi.UserPage result)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.

- `q`
  - Type: `String`

- `result`
  - Type: `ConnectApi.UserPage`
q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
Type: ConnectApi.UserPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
    searchUsers(communityId, q)
    Testing ConnectApi Code

setTestSearchUsers(communityId, q, pageParam, pageSize, result)
Register a ConnectApi.UserPage object to be returned when the matching ConnectApi.searchUsers method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0

Signature
public static Void setTestSearchUsers(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.UserPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
result
Type: `ConnectApi.UserPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `searchUsers(communityId, q, pageParam, pageSize)`
- Testing ConnectApi Code

`setTestSearchUsers(communityId, q, searchContextId, pageParam, pageSize, result)`
Register a `ConnectApi.UserPage` object to be returned when the matching `ConnectApi.searchUsers` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0

Signature
```java
public static Void setTestSearchUsers(String communityId, String q, String searchContextId, Integer pageParam, Integer pageSize, ConnectApi.UserPage result)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `q`
  Type: `String`
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
- `searchContextId`
  Type: `String`
  A feed item ID that filters search results for feed @mentions. More useful results are listed first. When you specify this argument, you cannot query more than 500 results and you cannot use wildcards in the search term.
- `pageParam`
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.
- `pageSize`
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
Type: ConnectApi.UserPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
searchUsers(communityId, q, searchContextId, pageParam, pageSize)
Testing ConnectApi Code

Communities Class
Access general information about communities in your organization.

Namespace
ConnectApi

Communities Methods
The following are methods for Communities. All methods are static.

IN THIS SECTION:
getCommunities()
Get a list of communities that the context user has access to.
getCommunities(communityStatus)
Get a list of communities with the specified status that the context user has access to.
getCommunity(communityId)
Get information about a community.

getCommunities()
Get a list of communities that the context user has access to.

API Version
28.0

Requires Chatter
No

Signature
public static ConnectApi.CommunityPage getCommunities()
Return Value
Type: `ConnectApi.CommunityPage`

**getCommunities(communityStatus)**
Get a list of communities with the specified status that the context user has access to.

API Version
28.0

Requires Chatter
No

Signature
```java
public static ConnectApi.CommunityPage getCommunities(ConnectApi.CommunityStatus communityStatus)
```

Parameters

`communityStatus`
Type: `ConnectApi.CommunityStatus`
`communityStatus`—Status of the community. Values are:
- Live
- Inactive
- UnderConstruction

Return Value
Type: `ConnectApi.CommunityPage`

**getCommunity(communityId)**
Get information about a community.

API Version
28.0

Available to Guest Users
35.0

Requires Chatter
No
Signature

public static ConnectApi.Community getCommunity(String communityId)

Parameters

communityId
  Type: String
  ID of a community. You can’t specify null or internal.

Return Value

Type: ConnectApi.Community

CommunityModeration Class

Access information about flagged feed items and comments in a community. Add and remove flags from comments and feed items.

Namespace

ConnectApi

CommunityModeration Methods

The following are methods for CommunityModeration. All methods are static.

IN THIS SECTION:

  addFlagToComment(communityId, commentId)
  Add a moderation flag to a comment.

  addFlagToComment(communityId, commentId, visibility)
  Add a moderation flag of the specified visibility to a comment.

  addFlagToComment(communityId, commentId, type)
  Add a moderation flag of the specified type to a comment.

  addFlagToComment(communityId, commentId, note)
  Add a moderation flag with a note to a comment.

  addFlagToComment(communityId, commentId, type, note)
  Add a moderation flag of the specified type with a note to a comment.

  addFlagToComment(communityId, commentId, type, visibility)
  Add a moderation flag of the specified type and visibility to a comment.

  addFlagToComment(communityId, commentId, visibility, note)
  Add a moderation flag of the specified visibility with a note to a comment.

  addFlagToComment(communityId, commentId, type, visibility, note)
  Add a moderation flag of the specified type and visibility with a note to a comment.

  addFlagToFeedElement(communityId, feedElementId)
  Add a moderation flag to a feed element.
addFlagToFeedElement(communityId, feedElementId, visibility)
Add a moderation flag of the specified visibility to a feed element.

addFlagToFeedElement(communityId, feedElementId, type)
Add a moderation flag of the specified type to a feed element.

addFlagToFeedElement(communityId, feedElementId, note)
Add a moderation flag with a note to a feed element.

addFlagToFeedElement(communityId, feedElementId, type, note)
Add a moderation flag of the specified type with a note to a feed element.

addFlagToFeedElement(communityId, feedElementId, type, visibility)
Add a moderation flag of the specified type and visibility to a feed element.

addFlagToFeedElement(communityId, feedElementId, visibility, note)
Add a moderation flag of the specified visibility with a note to a feed element.

addFlagToFeedElement(communityId, feedElementId, type, visibility, note)
Add a moderation flag of the specified type and visibility with a note to a feed element.

addFlagToFeedItem(communityId, feedItemId)
Add a moderation flag to a feed item.

addFlagToFeedItem(communityId, feedItemId, visibility)
Add a moderation flag with specified visibility to a feed item.

getFlagsOnComment(communityId, commentId)
Get the moderation flags on a comment.

getFlagsOnComment(communityId, commentId, visibility)
Get the moderation flags with specified visibility on a comment.

getFlagsOnComment(communityId, commentId, pageSize, pageParam)
Get a page of moderation flags on a comment.

getFlagsOnComment(communityId, commentId, visibility, pageSize, pageParam)
Get a page of moderation flags with specified visibility on a comment.

getFlagsOnFeedElement(communityId, feedElementId)
Get the moderation flags on a feed element.

getFlagsOnFeedElement(communityId, feedElementId, visibility)
Get the moderation flags with specified visibility on a feed element.

getFlagsOnFeedElement(communityId, feedElementId, pageParam, pageSize)
Get a page of moderation flags on a feed element.

getFlagsOnFeedElement(communityId, feedElementId, visibility, pageParam, pageSize)
Get a page of moderation flags with specified visibility on a feed element.

getFlagsOnFeedItem(communityId, feedItemId)
Get the moderation flags on a feed item.

getFlagsOnFeedItem(communityId, feedItemId, visibility)
Get the moderation flags with specified visibility on a feed item.

getFlagsOnFeedItem(communityId, feedItemId, visibility)
Get the moderation flags with specified visibility on a feed item.

getFlagsOnFeedItem(communityId, feedItemId, visibility)
Get the moderation flags with specified visibility on a feed item.

getFlagsOnFeedItem(communityId, feedItemId, visibility)
Get the moderation flags with specified visibility on a feed item.

getFlagsOnFeedItem(communityId, feedItemId, visibility)
Get the moderation flags with specified visibility on a feed item.

removeFlagFromComment(communityId, commentId, userId)
Remove a moderation flag from a comment.
removeFlagFromFeedElement(communityId, feedElementId, userId)
Remove a moderation flag from a feed element.

removeFlagsOnFeedItem(communityId, feedItemId, userId)
Remove a moderation flag from a feed item.

addFlagToComment(communityId, commentId)
Add a moderation flag to a comment.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
The ID for a comment.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To add a flag to a comment, Allow members to flag content must be selected for a community.

addFlagToComment(communityId, commentId, visibility)
Add a moderation flag of the specified visibility to a comment.

API Version
30.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagVisibility visibility)
```

Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, *internal*, or *null*.

- **commentId**
  Type: `String`
  The ID for a comment.

- **visibility**
  Type: `ConnectApi.CommunityFlagVisibility`
  Visibility behavior of a flag for various user types.
  - **ModeratorsOnly**—The flag is visible only to users with moderation permissions on the flagged element or item.
  - **SelfAndModerators**—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value

Type: `ConnectApi.ModerationFlags`

Usage

To add a flag to a comment, Allow members to flag content must be selected for a community.

```java
addFlagToComment(communityId, commentId, type)
```

Add a moderation flag of the specified type to a comment.

API Version

38.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagType type)
```
Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or null.

`commentId`
Type: String
The ID for a comment.

`type`
Type: `ConnectApi.CommunityFlagType`
Type of moderation flag.
- FlagAsInappropriate—Flag for inappropriate content.
- FlagAsSpam—Flag for spam.
If a type isn’t specified, it defaults to FlagAsInappropriate.

Return Value
Type: `ConnectApi.ModerationFlags`

Usage
To add a flag to a comment, Allow members to flag content must be selected for a community.

```
addFlagToComment(communityId, commentId, note)
```
Add a moderation flag with a note to a comment.

API Version
38.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, String note)
```

Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or null.

`commentId`
Type: String
The ID for a comment.

**note**

Type: *String*

A note of up to 4,000 characters about the flag.

Return Value

Type: `ConnectApi.ModerationFlags`

Usage

To add a flag to a comment, Allow members to flag content must be selected for a community.

```java
addFlagToComment(communityId, commentId, type, note)
```

Add a moderation flag of the specified type with a note to a comment.

API Version

38.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagType type, String note)
```

Parameters

**communityId**

Type: *String*

Use either the ID for a community, `internal`, or `null`.

**commentId**

Type: *String*

The ID for a comment.

**type**

Type: `ConnectApi.CommunityFlagType`

Type of moderation flag.

- *FlagAsInappropriate*—Flag for inappropriate content.
- *FlagAsSpam*—Flag for spam.

If a type isn’t specified, it defaults to *FlagAsInappropriate*.

**note**

Type: *String*
A note of up to 4,000 characters about the flag.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To add a flag to a comment, Allow members to flag content must be selected for a community.

`addFlagToComment(communityId, commentId, type, visibility)`
Add a moderation flag of the specified type and visibility to a comment.

API Version
38.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagType type, ConnectApi.CommunityFlagVisibility visibility)`

Parameters
`communityId`
Type: String
Use either the ID for a community, internal, or null.

`commentId`
Type: String
The ID for a comment.

`type`
Type: ConnectApi.CommunityFlagType
Type of moderation flag.
- `FlagAsInappropriate`—Flag for inappropriate content.
- `FlagAsSpam`—Flag for spam.
If a type isn’t specified, it defaults to `FlagAsInappropriate`.

`visibility`
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types.
- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- **SelfAndModerators**—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: `ConnectApi.ModerationFlags`

Usage
To add a flag to a comment, Allow members to flag content must be selected for a community.

`addFlagToComment(communityId, commentId, visibility, note)`
Add a moderation flag of the specified visibility with a note to a comment.

API Version
38.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagVisibility visibility, String note)
```

Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, internal, or `null`.

- **commentId**
  Type: `String`
  The ID for a comment.

- **visibility**
  Type: `ConnectApi.CommunityFlagVisibility`
  Visibility behavior of a flag for various user types.
  - `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
  - `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

- **note**
  Type: `String`
  A note of up to 4,000 characters about the flag.
Return Value
Type: `ConnectApi.ModerationFlags`

Usage
To add a flag to a comment, Allow members to flag content must be selected for a community.

`addFlagToComment(communityId, commentId, type, visibility, note)`
Add a moderation flag of the specified type and visibility with a note to a comment.

API Version
38.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagType type, ConnectApi.CommunityFlagVisibility visibility, String note)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, internal, or null.
- `commentId`
  Type: `String`
  The ID for a comment.
- `type`
  Type: `ConnectApi.CommunityFlagType`
  Type of moderation flag.
  - `FlagAsInappropriate`—Flag for inappropriate content.
  - `FlagAsSpam`—Flag for spam.
  If a type isn't specified, it defaults to `FlagAsInappropriate`.
- `visibility`
  Type: `ConnectApi.CommunityFlagVisibility`
  Visibility behavior of a flag for various user types.
  - `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
  - `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.
note
  Type: String
  A note of up to 4,000 characters about the flag.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To add a flag to a comment, Allow members to flag content must be selected for a community.

addFlagToFeedElement(communityId, feedElementId)
Add a moderation flag to a feed element.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedElementId
  Type: String
  ID of the feed element.

Return Value
Type: ConnectApi.ModerationCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

Usage
To add a flag to a feed element, Allow members to flag content must be selected for a community.
addFlagToFeedElement(communityId, feedElementId, visibility)

Add a moderation flag of the specified visibility to a feed element.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagVisibility visibility)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

visibility
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types. One of these values:

• ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
• SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: ConnectApi.ModerationCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

Usage
To add a flag to a feed element, Allow members to flag content must be selected for a community.

addFlagToFeedElement(communityId, feedElementId, type)

Add a moderation flag of the specified type to a feed element.

API Version
38.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId,
String feedElementId, ConnectApi.CommunityFlagType type)
```

Parameters

**communityId**
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**feedElementId**
Type: `String`
ID of the feed element.

**type**
Type: `ConnectApi.CommunityFlagType`
Type of moderation flag.
- `FlagAsInappropriate`—Flag for inappropriate content.
- `FlagAsSpam`—Flag for spam.
If a type isn't specified, it defaults to `FlagAsInappropriate`.

Return Value
Type: `ConnectApi.ModerationCapability`

Usage
To add a flag to a feed element, Allow members to flag content must be selected for a community.

```java
addFlagToFeedElement(communityId, feedElementId, note)
```
Add a moderation flag with a note to a feed element.

API Version
38.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId,
String feedElementId, String note)
```
Parameters

\texttt{communityId}
  Type: \texttt{String}
  Use either the ID for a community, \texttt{internal}, or \texttt{null}.

\texttt{feedElementId}
  Type: \texttt{String}
  ID of the feed element.

\texttt{note}
  Type: \texttt{String}
  A note of up to 4,000 characters about the flag.

Return Value

Type: \texttt{ConnectApi.ModerationCapability}

Usage

To add a flag to a feed element, Allow members to flag content must be selected for a community.

\texttt{addFlagToFeedElement(communityId, feedElementId, type, note)}

Add a moderation flag of the specified type with a note to a feed element.

API Version

38.0

Requires Chatter

Yes

Signature

\texttt{public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagType type, String note)}

Parameters

\texttt{communityId}
  Type: \texttt{String}
  Use either the ID for a community, \texttt{internal}, or \texttt{null}.

\texttt{feedElementId}
  Type: \texttt{String}
  ID of the feed element.

\texttt{type}
  Type: \texttt{ConnectApi.CommunityFlagType}
Type of moderation flag.

- FlagAsInappropriate—Flag for inappropriate content.
- FlagAsSpam—Flag for spam.

If a type isn’t specified, it defaults to FlagAsInappropriate.

**note**
Type: String
A note of up to 4,000 characters about the flag.

**Return Value**
Type: ConnectApi.ModerationCapability

**Usage**
To add a flag to a feed element, Allow members to flag content must be selected for a community.

**addFlagToFeedElement(communityId, feedElementId, type, visibility)**
Add a moderation flag of the specified type and visibility to a feed element.

**API Version**
38.0

**Requires Chatter**
Yes

**Signature**
```java
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagType type, ConnectApi.CommunityFlagVisibility visibility)
```

**Parameters**

- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **feedElementId**
  Type: String
  ID of the feed element.

- **type**
  Type: ConnectApi.CommunityFlagType
  Type of moderation flag.
  - FlagAsInappropriate—Flag for inappropriate content.
• FlagAsSpam—Flag for spam.
  If a type isn't specified, it defaults to FlagAsInappropriate.

visibility
  Type: ConnectApi.CommunityFlagVisibility
  Visibility behavior of a flag for various user types. One of these values:
  • ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
  • SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
  Type: ConnectApi.ModerationCapability

Usage
  To add a flag to a feed element, Allow members to flag content must be selected for a community.

  addFlagToFeedElement(communityId, feedElementId, visibility, note)
  Add a moderation flag of the specified visibility with a note to a feed element.

API Version
  38.0

Requires Chatter
  Yes

Signature
  public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagVisibility visibility, String note)

Parameters
  communityId
    Type: String
    Use either the ID for a community, internal, or null.

  feedElementId
    Type: String
    ID of the feed element.

  visibility
    Type: ConnectApi.CommunityFlagVisibility
    Visibility behavior of a flag for various user types. One of these values:
    • ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
• **SelfAndModerators**—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

**note**
- **Type: String**
  - A note of up to 4,000 characters about the flag.

Return Value
- **Type:** ConnectApi.ModerationCapability

Usage
- To add a flag to a feed element, Allow members to flag content must be selected for a community.

```java
addFlagToFeedElement(communityId, feedElementId, type, visibility, note)
```
Add a moderation flag of the specified type and visibility with a note to a feed element.

API Version
- 38.0

Requires Chatter
- Yes

Signature
- ```java
  public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId,
  String feedElementId, ConnectApi.CommunityFlagType type,
  ConnectApi.CommunityFlagVisibility visibility, String note)
  ```

Parameters
- **communityId**
  - **Type:** String
    - Use either the ID for a community, internal, or null.

- **feedElementId**
  - **Type:** String
    - ID of the feed element.

- **type**
  - **Type:** ConnectApi.CommunityFlagType
    - Type of moderation flag.
      - **FlagAsInappropriate**—Flag for inappropriate content.
      - **FlagAsSpam**—Flag for spam.
    - If a type isn't specified, it defaults to FlagAsInappropriate.
visibility
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types. One of these values:
• ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
• SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

note
Type: String
A note of up to 4,000 characters about the flag.

Return Value
Type: ConnectApi.ModerationCapability

Usage
To add a flag to a feed element, Allow members to flag content must be selected for a community.

addFlagToFeedItem(communityId, feedItemId)
Add a moderation flag to a feed item.

API Version
29.0–31.0

⚠️ Important: In version 32.0 and later, use addFlagToFeedElement(communityId, feedElementId).

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags addFlagToFeedItem(String communityId, String feedItemId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedItemId
Type: String
The ID for a feed item.
Return Value
Type: `ConnectApi.ModerationFlags`

Usage
To add a flag to a feed item, Allow members to flag content must be selected for a community.

```java
addFlagToFeedItem(communityId, feedItemId, visibility)
```
Add a moderation flag with specified visibility to a feed item.

API Version
30.0–31.0

⚠️ Important: In version 32.0 and later, use `addFlagToFeedElement(communityId, feedElementId, visibility)`.

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ModerationFlags addFlagToFeedItem(String communityId, String feedItemId, ConnectApi.CommunityFlagVisibility visibility)
```

Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **feedItemId**
  Type: `String`
  The ID for a feed item.

- **visibility**
  Type: `ConnectApi.CommunityFlagVisibility`
  Visibility behavior of a flag for various user types.
  - `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
  - `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: `ConnectApi.ModerationFlags`

Usage
To add a flag to a feed item, Allow members to flag content must be selected for a community.
getFlagsOnComment(communityId, commentId)
Get the moderation flags on a comment.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
The ID for a comment.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To get moderation flags, the context user must have the Moderate Communities Feeds permission.

getFlagsOnComment(communityId, commentId, visibility)
Get the moderation flags with specified visibility on a comment.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId, ConnectApi.CommunityFlagVisibility visibility)
Parameters

`communityId`
Type: String
Use either the ID for a community, `internal`, or `null`.

`commentId`
Type: String
The ID for a comment.

`visibility`
Type: `ConnectApi.CommunityFlagVisibility`
Visibility behavior of a flag for various user types.
- ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
- SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: `ConnectApi.ModerationFlags`

Usage
To get moderation flags, the context user must have the Moderate Communities Feeds permission.

```java
getFlagsOnComment(communityId, commentId, pageSize, pageParam)
```
Get a page of moderation flags on a comment.

API Version
40.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId, Integer pageSize, String pageParam)
```

Parameters

`communityId`
Type: String
Use either the ID for a community, `internal`, or `null`.

`commentId`
Type: String
The ID for a comment.
**pageSize**
Type: Integer

Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

**pageParam**
Type: String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**Return Value**
Type: `ConnectApi.ModerationFlags`

**Usage**
To get moderation flags, the context user must have the Moderate Communities Feeds permission.

**getFlagsOnComment(communityId, commentId, visibility, pageSize, pageParam)**
Get a page of moderation flags with specified visibility on a comment.

**API Version**
40.0

**Requires Chatter**
Yes

**Signature**
```java
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId, ConnectApi.CommunityFlagVisibility visibility, Integer pageSize, String pageParam)
```

**Parameters**

**communityId**
Type: String
Use either the ID for a community, `internal`, or `null`.

**commentId**
Type: String
The ID for a comment.

**visibility**
Type: `ConnectApi.CommunityFlagVisibility`
Visibility behavior of a flag for various user types.
- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
• SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

`pageSize`
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

`pageParam`
  Type: `String`
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

Return Value
  Type: `ConnectApi.ModerationFlags`

Usage
To get moderation flags, the context user must have the Moderate Communities Feeds permission.

**getFlagsOnFeedElement(communityId, feedElementId)**
Get the moderation flags on a feed element.

API Version
31.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId, String feedElementId)
```

Parameters
```
communityId
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

feedElementId
  Type: `String`
  ID of the feed element.
```

Return Value
  Type: `ConnectApi.ModerationCapability Class`
  If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`. 
Usage
To get moderation flags, the context user must have the Moderate Communities Feeds permission.

`getFlagsOnFeedElement(communityId, feedElementId, visibility)`
Get the moderation flags with specified visibility on a feed element.

API Version
31.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId,
String feedElementId, ConnectApi.CommunityFlagVisibility visibility)
```

Parameters
- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.
- **feedElementId**
  - Type: String
  - ID of the feed element.
- **visibility**
  - Type: ConnectApi.CommunityFlagVisibility
  - Visibility behavior of a flag for various user types. One of these values:
    - `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
    - `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
- Type: `ConnectApi.ModerationCapability Class`
  - If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

Usage
To get moderation flags, the context user must have the Moderate Communities Feeds permission.

`getFlagsOnFeedElement(communityId, feedElementId, pageParam, pageSize)`
Get a page of moderation flags on a feed element.
API Version
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId,
String feedElementId, String pageParam, Integer pageSize)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

Return Value
Type: ConnectApi.ModerationCapability Class
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

Usage
To get moderation flags, the context user must have the Moderate Communities Feeds permission.

getFlagsOnFeedElement(communityId, feedElementId, visibility, pageSize, pageParam)
Get a page of moderation flags with specified visibility on a feed element.

API Version
40.0
Requires Chatter

Yes

Signature

```java
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId,
String feedElementId, ConnectApi.CommunityFlagVisibility visibility, Integer pageSize,
String pageParam)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedElementId`
  - Type: `String`
  - ID of the feed element.

- `visibility`
  - Type: `ConnectApi.CommunityFlagVisibility`
  - Visibility behavior of a flag for various user types.
    - ModeratorsOnly — The flag is visible only to users with moderation permissions on the flagged element or item.
    - SelfAndModerators — The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

- `pageSize`
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

- `pageParam`
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

Return Value

Type: `ConnectApi.ModerationCapability Class`

If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

Usage

To get moderation flags, the context user must have the Moderate Communities Feeds permission.

```java
getFlagsOnFeedItem(communityId, feedItemId)
```

Get the moderation flags on a feed item.
API Version
29.0–31.0

⚠️ **Important:** In version 32.0 and later, use `getFlagsOnFeedElement(communityId, feedElementId)`.

Requires Chatter
Yes

Signature
```
public static ConnectApi.ModerationFlags getFlagsOnFeedItem(String communityId, String feedItemId)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedItemId**
  - Type: `String`
  - The ID for a feed item.

Return Value
Type: `ConnectApi.ModerationFlags`

Usage
To get moderation flags, the context user must have the Moderate Communities Feeds permission.

```
getFlagsOnFeedItem(communityId, feedItemId, visibility)
```
Get the moderation flags with specified visibility on a feed item.

API Version
30.0–31.0

⚠️ **Important:** In version 32.0 and later, use `getFlagsOnFeedElement(communityId, feedElementId, visibility)`.

Requires Chatter
Yes

Signature
```
public static ConnectApi.ModerationFlags getFlagsOnFeedItem(String communityId, String feedItemId, ConnectApi.CommunityFlagVisibility visibility)
```
Parameters

*communityId*
  
  Type: `String`

  Use either the ID for a community, `internal`, or `null`.

*feedItemId*

  Type: `String`

  The ID for a feed item.

*visibility*

  Type: `ConnectApi.CommunityFlagVisibility`

  Visibility behavior of a flag for various user types.

  - `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
  - `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value

Type: `ConnectApi.ModerationFlags`

Usage

To get moderation flags, the context user must have the Moderate Communities Feeds permission.

```java
removeFlagFromComment(communityId, commentId, userId)
```

Remove a moderation flag from a comment.

API Version

29.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ModerationFlags removeFlagFromComment(String communityId, String commentId, String userId)
```

Parameters

*communityId*

  Type: `String`

  Use either the ID for a community, `internal`, or `null`.

*commentId*

  Type: `String`

  The ID for a comment.
**userId**
Type: **String**
The ID for a user.

Return Value
Type: **Void**

Usage
To remove a moderation flag, the context user must have added the flag or must have the Moderate Communities Feeds permission.

```java
removeFlagFromFeedElement(communityId, feedElementId, userId)
```
Remove a moderation flag from a feed element.

API Version
31.0

Requires Chatter
Yes

Signature
```java
public static void removeFlagFromFeedElement(String communityId, String feedElementId, String userId)
```

Parameters
- **communityId**
  Type: **String**
  Use either the ID for a community, internal, or null.
- **feedElementId**
  Type: **String**
  ID of the feed element.
- **userId**
  Type: **String**
  The ID for a user.

Return Value
Type: **ConnectApi.ModerationCapability Class**
If the feed element doesn’t support this capability, the return value is **ConnectApi.NotFoundException**.
Usage
To remove a moderation flag, the context user must have added the flag or must have the Moderate Communities Feeds permission.

```java
removeFlagsOnFeedItem(communityId, feedItemId, userId)
```
Remove a moderation flag from a feed item.

API Version
29.0–31.0

⚠️ Important: In version 32.0 and later, use `removeFlagFromFeedElement(communityId, feedElementId, userId)`.

Requires Chatter
Yes

Signature
```
public static ConnectApi.ModerationFlags removeFlagsOnFeedItem(String communityId, String feedItemId, String userId)
```

Parameters
```java
communityId
Type: String
Use either the ID for a community, internal, or null.
```
```java
feedItemId
Type: String
The ID for a feed item.
```
```java
userId
Type: String
The ID for a user.
```

Return Value
Type: Void

Usage
To remove a moderation flag, the context user must have added the flag or must have the Moderate Communities Feeds permission.

**ContentHub Class**
Access Files Connect repositories and their files and folders.
Namespace

ConnectApi

ContentHub Methods
The following are methods for ContentHub. All methods are static.
Use ContentHub methods to work with Files Connect repositories.

IN THIS SECTION:

addRepositoryItem(repositoryId, repositoryFolderId, file)
Add a repository item.
addRepositoryItem(communityId, repositoryId, repositoryFolderId, file)
Add a repository item in a community.
addRepositoryItem(repositoryId, repositoryFolderId, file, fileData)
Add a repository item, including the binary file.
addRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData)
Add a repository item, including the binary file, in a community.

getAllowedItemTypes(repositoryId, repositoryFolderId)
Get the item types that the context user is allowed to create in the repository folder.
getAllowedItemTypes(repositoryId, repositoryFolderId, filter)
Get the item types, filtered by type, that the context user is allowed to create in the repository folder.
getAllowedItemTypes(communityId, repositoryId, repositoryFolderId)
Get the item types that the context user is allowed to create in the repository folder in a community.
getAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter)
Get the item types, filtered by type, that the context user is allowed to create in the repository folder in a community.

getFilePreview(repositoryId, repositoryFileId, formatType)
Get a repository file preview.
getFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)
Get a page or page range of a repository file preview.
getFilePreview(communityId, repositoryId, repositoryFileId, formatType)
Get a repository file preview in a community.
getFilePreview(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)
Get a page or page range of a repository file preview in a community.

getItemType(repositoryId, repositoryItemTypeId)
Get information about an item type associated with a repository.
getItemType(communityId, repositoryId, repositoryItemTypeId)
Get information about an item type associated with a repository in a community.

getPreviews(repositoryId, repositoryFileId)
Get information about a repository file's supported previews.
getPreviews(communityId, repositoryId, repositoryFileId)
Get information about a repository file's supported previews in a community.
getRepositories()
Get a list of repositories.

getRepositories(communityId)
Get a list of repositories in a community.

getRepositories(pageParam, pageSize)
Get a page of repositories.

getRepositories(communityId, pageParam, pageSize)
Get a page of repositories in a community.

getRepository(repositoryId)
Get a repository.

getRepository(communityId, repositoryId)
Get a repository in a community.

getRepositoryFile(repositoryId, repositoryFileId)
Get a repository file.

getRepositoryFile(communityId, repositoryId, repositoryFileId)
Get a repository file in a community.

getRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)
Get a repository file with or without permissions information.

getRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)
Get a repository file with or without permissions information in a community.

getRepositoryFolder(repositoryId, repositoryFolderId)
Get a repository folder.

getRepositoryFolder(communityId, repositoryId, repositoryFolderId)
Get a repository folder in a community.

getRepositoryFolderItems(repositoryId, repositoryFolderId)
Get repository folder items.

getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId)
Get repository folder items in a community.

getRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize)
Get a page of repository folder items.

getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize)
Get a page of repository folder items in a community.

updateRepositoryFile(repositoryId, repositoryFileId, file)
Update the metadata of a repository file.

updateRepositoryFile(repositoryId, repositoryFileId, file, fileData)
Update the content of a repository file.

updateRepositoryFile(communityId, repositoryId, repositoryFileId, file)
Update the metadata of a repository file in a community.

updateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData)
Update the content of a repository file in a community.
addRepositoryItem(repositoryId, repositoryFolderId, file)

Add a repository item.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file)

Parameters
repositoryId
  Type: String
  The ID of the repository.
repositoryFolderId
  Type: String
  The ID of the repository folder.
file
  Type: ConnectApi.ContentHubItemInput
  The item type ID and fields of the item type.

Return Value
Type: ConnectApi.RepositoryFolderItem

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example
This example creates a file without binary content (metadata only) in a repository folder. After the file is created, we show the file’s ID, name, description, external URL, and download URL.

```java
final String gDriveRepositoryId = '0XCxx000000000ODGAY', gDriveFolderId = 'folder:0B0lTys1KmM3sSVJ2bjIzTGFqSWs';

final ConnectApi.ContentHubItemInput newItem = new ConnectApi.ContentHubItemInput();
newItem.itemTypeId = 'document'; //see getAllowedTypes for any file item types available for creation/update
newItem.fields = new List<ConnectApi.ContentHubFieldValueInput>();
```
final ConnectApi.ContentHubFieldValueInput fieldValueInput = new ConnectApi.ContentHubFieldValueInput();
fieldValueInput.name = 'name';
fieldValueInput.value = 'new folder item name.txt';
newItem.fields.add(fieldValueInput);

final ConnectApi.ContentHubFieldValueInput fieldValueInputDesc = new ConnectApi.ContentHubFieldValueInput();
fieldValueInputDesc.name = 'description';
fieldValueInputDesc.value = 'It does describe it';
newItem.fields.add(fieldValueInputDesc);

final ConnectApi.RepositoryFolderItem newFolderItem = ConnectApi.ContentHub.addRepositoryItem(gDriveRepositoryId, gDriveFolderId, newItem);
final ConnectApi.RepositoryFileSummary newFile = newFolderItem.file;
System.debug(String.format('New file - id: \'{0}\', name: \'{1}\', description: \'{2}\', external URL: \'{3}\', download URL: \'{4}\', new String[]{newFile.id, newFile.name, newFile.description, newFile.externalDocumentUrl, newFile.downloadUrl})
);

SEE ALSO:
    setTestAddRepositoryItem(repositoryId, repositoryFolderId, file, result)
    Testing ConnectApi Code

addRepositoryItem(communityId, repositoryId, repositoryFolderId, file)

Add a repository item in a community.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file)

Parameters
communityId
    Type: String
    Use either the ID for a community, internal, or null.
repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.

Return Value
Type: ConnectApi.RepositoryFolderItem

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestAddRepositoryItem(communityId, repositoryId, repositoryFolderId, file, result)
Testing ConnectApi Code

addRepositoryItem(repositoryId, repositoryFolderId, file, fileData)
Add a repository item, including the binary file.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData)

Parameters
repositoryId
Type: String
The ID of the repository.
repositoryFolderId
Type: String
The ID of the repository folder.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.

fileData
Type: ConnectApi.BinaryInput
The binary file.

Return Value
Type: ConnectApi.RepositoryFolderItem

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example
This example creates a file with binary content and metadata in a repository folder. After the file is created, we show the file's ID, name, description, external URL, and download URL.

```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFolderId = 'folder:0B0lTys1KmM3sSVJ2bjIzTGFqSWs';

final ConnectApi.ContentHubItemInput newItem = new ConnectApi.ContentHubItemInput();
newItem.itemTypeId = 'document'; //see getAllowedTypes for any file item types available for creation/update
newItem.fields = new List<ConnectApi.ContentHubFieldValueInput>();

//Metadata: name field
final String newFileName = 'new folder item name.txt';
final ConnectApi.ContentHubFieldValueInput fieldValueInput = new ConnectApi.ContentHubFieldValueInput();
fieldValueInput.name = 'name';
fieldValueInput.value = newFileName;
newItem.fields.add(fieldValueInput);

//Metadata: description field
final ConnectApi.ContentHubFieldValueInput fieldValueInputDesc = new ConnectApi.ContentHubFieldValueInput();
fieldValueInputDesc.name = 'description';
fieldValueInputDesc.value = 'It does describe it';
newItem.fields.add(fieldValueInputDesc);

//Binary content
final Blob newFileBlob = Blob.valueOf('awesome content for brand new file');
final String newFileMimeType = 'text/plain';
final ConnectApi.BinaryInput fileBinaryInput = new ConnectApi.BinaryInput(newFileBlob,
```
newFileMimeType, newFileName);

final ConnectApi.RepositoryFolderItem newFolderItem =
ConnectApi.ContentHub.addRepositoryItem(gDriveRepositoryId, gDriveFolderId, newItem,
fileBinaryInput);
final ConnectApi.RepositoryFileSummary newFile = newFolderItem.file;
System.debug(String.format('New file - id: `{0}`, name: `{1}`, description:
`{2}`, external URL: `{3}`, download URL: `{4}`, new String[]{
newFile.id, newFile.name, newFile.description, newFile.externalDocumentUrl,
newFile.downloadUrl});

SEE ALSO:

setTestAddRepositoryItem(repositoryId, repositoryFolderId, file, fileData, result)

Testing ConnectApi Code

addRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData)
Add a repository item, including the binary file, in a community.

API Version
39.0

Requires Chatter
No

Signature

public static ConnectApi.RepositoryFolderItem addRepositoryItem(String communityId,
String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file,
ConnectApi.BinaryInput fileData)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.
fileData
   Type: ConnectApi.BinaryInput
   The binary file.

Return Value
Type: ConnectApi.RepositoryFolderItem

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
   setTestAddRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData, result)
   Testing ConnectApi Code

getAllowedItemTypes(repositoryId, repositoryFolderId)
Get the item types that the context user is allowed to create in the repository folder.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes(String repositoryId, String repositoryFolderId)

Parameters
repositoryId
   Type: String
   The ID of the repository.

repositoryFolderId
   Type: String
   The ID of the repository folder.

Return Value
Type: ConnectApi.ContentHubAllowedItemTypeCollection
Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetAllowedItemTypes(repositoryId, repositoryFolderId, result)`

Testing ConnectApi Code

`getAllowedItemTypes(repositoryId, repositoryFolderId, filter)`
Get the item types, filtered by type, that the context user is allowed to create in the repository folder.

API Version
39.0

Requires Chatter
No

Signature
```
public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes(String repositoryId, String repositoryFolderId, ConnectApi.ConnectContentHubItemType filter)
```

Parameters
- `repositoryId`
  - Type: `String`
  - The ID of the repository.
- `repositoryFolderId`
  - Type: `String`
  - The ID of the repository folder.
- `filter`
  - Type: `ConnectApi.ContentHubItemType`
  - Item types. Values are:
    - `Any`—Includes files and folders.
    - `FilesOnly`—Includes files only.
    - `FoldersOnly`—Includes folders only.

Return Value
- Type: `ConnectApi.ContentHubAllowedItemTypeCollection`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example

This example calls `getAllowedItemTypes(repositoryId, repositoryFolderId, ConnectApi.ContentHubItemType.FilesOnly)` to get the first `ConnectApi.ContentHubItemTypeSummary.id` of a file. The context user can create allowed files in a repository folder in the external system.

```java
final ConnectApi.ContentHubAllowedItemTypeCollection allowedItemTypesColl =
    ConnectApi.ContentHub.getAllowedItemTypes(repositoryId, repositoryFolderId,
    ConnectApi.ContentHubItemType.FilesOnly);
final List<ConnectApi.ContentHubItemTypeSummary> allowedItemTypes =
    allowedItemTypesColl.allowedItemTypes;
string allowedFileItemTypeId = null;
if(allowedItemTypes.size() > 0){
    ConnectApi.ContentHubItemTypeSummary allowedItemTypeSummary = allowedItemTypes.get(0);
    allowedFileItemTypeId = allowedItemTypeSummary.id;
}
```

SEE ALSO:

- `setTestGetAllowedItemTypes(repositoryId, repositoryFolderId, filter, result)`
- Testing ConnectApi Code

`getAllowedItemTypes(communityId, repositoryId, repositoryFolderId)`

Get the item types that the context user is allowed to create in the repository folder in a community.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes(String communityId, String repositoryId, String repositoryFolderId)
```

Parameters

`communityId`

- Type: String
  - Use either the ID for a community, internal, or null.
repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

Return Value
Type: ConnectApi.ContentHubAllowedItemTypeCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetAllowedItemTypes(communityId, repositoryId, repositoryFolderId, result)
Testing ConnectApi Code

getAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter)
Get the item types, filtered by type, that the context user is allowed to create in the repository folder in a community.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ConnectContentHubItemType filter)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.
repositoryId
Type: String
The ID of the repository.
repositoryFolderId
Type: String
The ID of the repository folder.

filter
Type: ConnectApi.ContentHubItemType
Item types. Values are:
• Any—Includes files and folders.
• FilesOnly—Includes files only.
• FoldersOnly—Includes folders only.

Return Value
Type: ConnectApi.ContentHubAllowedItemTypeCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter, result)
Testing ConnectApi Code

getFilePreview(repositoryId, repositoryFileId, formatType)
Get a repository file preview.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.FilePreview getFilePreview(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType)

Parameters
repositoryId
Type: String
The ID of the repository.
repositoryFileId
Type: String
The ID of the repository file.

**formatType**

*Type:* `ConnectApi.FilePreviewFormat`

Specifies the format of the file preview. Values are:

- **Jpg**—Preview format is JPG.
- **Pdf**—Preview format is PDF.
- **Svg**—Preview format is compressed SVG.
- **Thumbnail**—Preview format is 240 x 180 PNG.
- **ThumbnailBig**—Preview format is 720 x 480 PNG.
- **ThumbnailTiny**—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

If you're concerned that feature-rich SVG previews don't work in your org, choose alternative file previews. To use JPG file previews, enter `general` in the Quick Find box in Setup. Select General Settings, and then select **Display alternative file previews**.

**Return Value**

*Type:* `ConnectApi.FilePreview`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**Example**

This example calls `getFilePreview(repositoryId, repositoryFileId, ConnectApi.FilePreviewFormat.Thumbnail)` to get the thumbnail format preview along with its respective URL and number of thumbnail renditions. For each thumbnail format, we show every rendition URL available.

```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFileId = 'document:1-zcAlBaeoQbo2_yWFiHCcK6QJTmOke-kHFC4TYg3rk';final ConnectApi.FilePreview filePreview = ConnectApi.ContentHub.getFilePreview(gDriveRepositoryId, gDriveFileId, ConnectApi.FilePreviewFormat.Thumbnail);System.debug(String.format('Preview - URL: {0} -- format: {1} -- nbr of renditions for this format: {2}', new String[]{ filePreview.url, filePreview.format.name(),String.valueOf(filePreview.previewUrls.size())}));for (ConnectApi.FilePreviewUrl filePreviewUrl : filePreview.previewUrls) {
    System.debug('-----> Rendition URL: ' + filePreviewUrl.previewUrl);
}
```

SEE ALSO:

`setTestGetFilePreview(repositoryId, repositoryFileId, formatType, result)`

Testing ConnectApi Code
**getFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)**

Get a page or page range of a repository file preview.

**API Version**

39.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.FilePreview getFilePreview(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, Integer startPageNumber, Integer endPageNumber)
```

**Parameters**

- `repositoryId`
  - Type: String
  - The ID of the repository.

- `repositoryFileId`
  - Type: String
  - The ID of the repository file.

- `formatType`
  - Type: `ConnectApi.FilePreviewFormat`
  - Specifies the format of the file preview. Values are:
    - `Jpg`—Preview format is JPG.
    - `Pdf`—Preview format is PDF.
    - `Svg`—Preview format is compressed SVG.
    - `Thumbnail`—Preview format is 240 x 180 PNG.
    - `ThumbnailBig`—Preview format is 720 x 480 PNG.
    - `ThumbnailTiny`—Preview format is 120 x 90 PNG.

  PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

  If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter `general` in the Quick Find box in Setup. Select General Settings, and then select Display alternative file previews.

- `startPageNumber`
  - Type: Integer
  - The starting page number in the range of file preview URLs.

- `endPageNumber`
  - Type: Integer
  - The ending page number in the range of file preview URLs.
Return Value
Type: \texttt{ConnectApi.FilePreview}

Usage
To test code that uses this method, use the matching set test method (prefix the method name with \texttt{setTest}). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
\begin{itemize}
    \item \texttt{setTestGetFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber, result)}
\end{itemize}

\textbf{Testing ConnectApi Code}

\begin{itemize}

\textbf{Signature}
\begin{verbatim}
public static ConnectApi.FilePreview getFilePreview(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType)
\end{verbatim}

\textbf{Parameters}
\begin{itemize}
    \item \textit{communityId}
        Type: \texttt{String}
        Use either the ID for a community, \texttt{internal}, or \texttt{null}.
    \item \textit{repositoryId}
        Type: \texttt{String}
        The ID of the repository.
    \item \textit{repositoryFileId}
        Type: \texttt{String}
        The ID of the repository file.
    \item \textit{formatType}
        Type: \texttt{ConnectApi.FilePreviewFormat}
        Specifies the format of the file preview. Values are:
        \begin{itemize}
            \item \texttt{Jpg}—Preview format is JPG.
            \item \texttt{Pdf}—Preview format is PDF.
            \item \texttt{Svg}—Preview format is compressed SVG.
        \end{itemize}
\end{itemize}
PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter general in the Quick Find box in Setup. Select General Settings, and then select Display alternative file previews.

Return Value
Type: ConnectApi.FilePreview

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
   setTestGetFilePreview(communityId, repositoryId, repositoryFileId, formatType, result)

Testing ConnectApi Code

getFilePreview(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)

Get a page or page range of a repository file preview in a community.

API Version
39.0

Requires Chatter
No

Signature

public static ConnectApi.FilePreview getFilePreview(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, Integer startPageNumber, Integer endPageNumber)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.
repositoryFileId
Type: String
The ID of the repository file.

formatType
Type: ConnectApi.FilePreviewFormat
Specifies the format of the file preview. Values are:
- Jpg—Preview format is JPG.
- Pdf—Preview format is PDF.
- Svg—Preview format is compressed SVG.
- Thumbnail—Preview format is 240 x 180 PNG.
- ThumbnailBig—Preview format is 720 x 480 PNG.
- ThumbnailTiny—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

If you're concerned that feature-rich SVG previews don't work in your org, choose alternative file previews. To use JPG file previews, enter general in the Quick Find box in Setup. Select General Settings, and then select Display alternative file previews.

startPageNumber
Type: Integer
The starting page number in the range of file preview URLs.

delPageNumber
Type: Integer
The ending page number in the range of file preview URLs.

Return Value
Type: ConnectApi.FilePreview

Usage
To test code that uses this method, use the matching set test method (prefix the method name with set:Test). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetFilePreview(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber, result)

Testing ConnectApi Code

getItemType(repositoryId, repositoryItemTypeTypeId)
Get information about an item type associated with a repository.

API Version
39.0
Requires Chatter
No

Signature

```java
public static ConnectApi.ContentHubItemTypeDetail getItemType(String repositoryId,
String repositoryItemId)
```

Parameters

- **repositoryId**
  - Type: `String`
  - The ID of the repository.

- **repositoryItemId**
  - Type: `String`
  - The ID of the repository item type.

Return Value

Type: `ConnectApi.ContentHubItemTypeDetail`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetItemType(repositoryId, repositoryItemId, result)`
- Testing ConnectApi Code

**getItemType(communityId, repositoryId, repositoryItemId)**

Get information about an item type associated with a repository in a community.

API Version

39.0

Requires Chatter
No

Signature

```java
public static ConnectApi.ContentHubItemTypeDetail getItemType(String communityId, String
repositoryId, String repositoryItemId)
```
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryItemTypeid
Type: String
The ID of the repository item type.

Return Value
Type: ConnectApi.ContentHubItemTypeDetail

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetItemType(communityId, repositoryId, repositoryItemTypeid, result)
Testing ConnectApi Code

getPreviews(repositoryId, repositoryFileId)
Get information about a repository file’s supported previews.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.FilePreviewCollection getPreviews(String repositoryId, String repositoryFileId)

Parameters
repositoryId
Type: String
The ID of the repository.
repositoryFileId
Type: String
The ID of the repository file.

Return Value
Type: ConnectApi.FilePreviewCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example
This example gets all supported preview formats and their respective URLs and number of renditions. For each supported preview format, we show every rendition URL available.

```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFileId =
'document:1-zcA1BaeoQbo2_yNFiHCcK6QJTpmOke-kHFC4TYg3rk';
final ConnectApi.FilePreviewCollection previewsCollection =
ConnectApi.ContentHub.getPreviews(gDriveRepositoryId, gDriveFileId);
for(ConnectApi.FilePreview filePreview : previewsCollection.previews){
    System.debug(String.format('Preview - URL: "{0}", format: "{1}", nbr of
renditions for this format: {2}', new String[]{ filePreview.url,
filePreview.format.name(),String.valueOf(filePreview.previewUrls.size())}));
    for(ConnectApi.FilePreviewUrl filePreviewUrl : filePreview.previewUrls){
        System.debug('----- Rendition URL: ' + filePreviewUrl.previewUrl);
    }
}
```

SEE ALSO:
setTestGetPreviews(repositoryId, repositoryFileId, result)

Testing ConnectApi Code

**getPreviews(communityId, repositoryId, repositoryFileId)**
Get information about a repository file’s supported previews in a community.

API Version
39.0

Requires Chatter
No
public static ConnectApi.FilePreviewCollection getPreviews(String communityId, String repositoryId, String repositoryFileId)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

repositoryId
  Type: String
  The ID of the repository.

repositoryFileId
  Type: String
  The ID of the repository file.

Return Value

Type: ConnectApi.FilePreviewCollection

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestGetPreviews(communityId, repositoryId, repositoryFileId, result)
  Testing ConnectApi Code

getRepositories()

Get a list of repositories.

API Version

39.0

Requires Chatter

No

Signature

public static ConnectApi.ContentHubRepositoryCollection getRepositories()
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example gets all repositories and gets the first SharePoint online repository found.

```java
final string sharePointOnlineProviderType = 'ContentHubSharepointOffice365';
final ConnectApi.ContentHubRepositoryCollection repositoryCollection = ConnectApi.ContentHub.getRepositories();
ConnectApi.ContentHubRepository sharePointOnlineRepository = null;
for (ConnectApi.ContentHubRepository repository : repositoryCollection.repositories){
  if(sharePointOnlineProviderType.equalsIgnoreCase(repository.providerType.type)){
    sharePointOnlineRepository = repository;
    break;
  }
}
```

SEE ALSO:

- `setTestGetRepositories(result)`
- Testing ConnectApi Code

**getRepositories(communityId)**

Get a list of repositories in a community.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.ContentHubRepositoryCollection getRepositories(String communityId)
```

Parameters

- `communityId`:
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

Return Value

- Type: `ConnectApi.ContentHubRepositoryCollection`
Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- setTestGetRepositories(communityId, result)
  Testing ConnectApi Code

**getRepositories(pageParam, pageSize)**
Get a page of repositories.

API Version
39.0

Requires Chatter
No

Signature
```java
public static ConnectApi.ContentHubRepositoryCollection getRepositories(Integer pageParam, Integer pageSize)
```

Parameters
- **pageParam**
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.
- **pageSize**
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.

Return Value
Type: `ConnectApi.ContentHubRepositoryCollection`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- setTestGetRepositories(pageParam, pageSize, result)
  Testing ConnectApi Code
getRepositories(communityId, pageParam, pageSize)
Get a page of repositories in a community.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.ContentHubRepositoryCollection getRepositories(String communityId, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default page size is 25.

Return Value
Type: ConnectApi.ContentHubRepositoryCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRepositories(communityId, pageParam, pageSize, result)
Testing ConnectApi Code

getRepository(repositoryId)
Get a repository.

API Version
369.0
Requires Chatter
No

Signature

```java
public static ConnectApi.ContentHubRepository getRepository(String repositoryId)
```

Parameters

- `repositoryId`
  - Type: `String`
  - The ID of the repository.

Return Value

Type: `ConnectApi.ContentHubRepository`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

```java
final String repositoryId = '0XCxx000000123GAA';
final ConnectApi.ContentHubRepository repository = ConnectApi.ContentHub.getRepository(repositoryId);
```

SEE ALSO:

- `setTestGetRepository(repositoryId, result)`
- `Testing ConnectApi Code`

### `getRepository(communityId, repositoryId)`

Get a repository in a community.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.ContentHubRepository getRepository(String communityId, String repositoryId)
```
Parameters

*communityId*
  
  Type: String

  Use either the ID for a community, internal, or null.

*repositoryId*
  
  Type: String

  The ID of the repository.

Return Value

Type: `ConnectApi.ContentHubRepository`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetRepository(communityId, repositoryId, result)`
- Testing ConnectApi Code

getRepositoryFile(*repositoryId*, *repositoryFileId*)

Get a repository file.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.RepositoryFileDetail getRepositoryFile(String repositoryId, String repositoryFileId)
```

Parameters

*repositoryId*
  
  Type: String

  The ID of the repository.

*repositoryFileId*
  
  Type: String

  The ID of the repository file.
Return Value
Type: `ConnectApi.RepositoryFileDetail`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example
```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFileId = 'file:0B0lTys1KmM3sTmxKNjVJbjWZja00';
final ConnectApi.RepositoryFileDetail file = ConnectApi.ContentHub.getRepositoryFile(gDriveRepositoryId, gDriveFileId);
System.debug(String.format('File - name: "{0}", size: {1}, external URL: "{2}", download URL: "{3}"',
    file.name, String.valueOf(file.contentSize), file.externalDocumentUrl, file.downloadUrl));
```

SEE ALSO:
- `setTestGetRepositoryFile(repositoryId, repositoryFileId, result)`
- Testing ConnectApi Code

`getRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)`
Get a repository file with or without permissions information.

API Version
39.0

Requires Chatter
No

Signature
```java
public static ConnectApi.RepositoryFileDetail getRepositoryFile(String repositoryId,
    String repositoryFileId, Boolean includeExternalFilePermissionsInfo)
```

Parameters
- `repositoryId`
  Type: `String`
  The ID of the repository.
- `repositoryFileId`
  Type: `String`
  The ID of the repository file.
includeExternalFilePermissionsInfo
  Type: Boolean
  Specifies whether to include permission information, such as whether the file is shared and what are the available permission types.
  Managing external file permissions is supported for Google Drive, SharePoint Online, and OneDrive for Business.

Return Value
  Type: ConnectApi.RepositoryFileDetail

Usage
  To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example

```java
final String gDriveRepositoryId = '0XCxx00000000DGAy', gDriveFileId = 'file:0B01Tys1KmM3sTmxKNjVJbWZjaO0;

final ConnectApi.RepositoryFileDetail file = ConnectApi.ContentHub.getRepositoryFile(gDriveRepositoryId, gDriveFileId, true);
System.debug(String.format('File - name: \"{0}\", size: {1}, external URL: \"{2}\", download URL: \"{3}\", new String[]{ file.name, String.valueOf(file.contentSize), file.externalDocumentUrl, file.downloadUrl});)
final ConnectApi.ExternalFilePermissionInformation externalFilePermInfo = file.externalFilePermissionInformation;

//permission types
final List<ConnectApi.ContentHubPermissionType> permissionTypes = externalFilePermInfo.externalFilePermissionTypes;
for(ConnectApi.ContentHubPermissionType permissionType : permissionTypes){
  System.debug(String.format('Permission type - id: \"{0}\", label: \"{1}\", new String[]{ permissionType.id, permissionType.label});)
}

//permission groups
final List<ConnectApi.RepositoryGroupSummary> groups = externalFilePermInfo.repositoryPublicGroups;
for(ConnectApi.RepositoryGroupSummary ggroup : groups){
  System.debug(String.format('Group - id: \"{0}\", name: \"{1}\", type: \"{2}\", new String[]{ ggroup.id, ggroup.name, ggroup.type.name());
}
```

SEE ALSO:
  setTestGetRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo, result)
  Testing ConnectApi Code

getRepositoryFile(communityId, repositoryId, repositoryFileId)
  Get a repository file in a community.
API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFileDetail getRepositoryFile(String communityId, String repositoryId, String repositoryFileId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

Return Value
Type: ConnectApi.RepositoryFileDetail

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRepositoryFile(communityId, repositoryId, repositoryFileId, result)
Testing ConnectApi Code

getRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)
Get a repository file with or without permissions information in a community.

API Version
39.0
Requires Chatter
No

Signature
generic static ConnectApi.RepositoryFileDetail getRepositoryFile(String communityId, String repositoryId, String repositoryFileId, Boolean includeExternalFilePermissionsInfo)

Parameters
  communityId
    Type: String
    Use either the ID for a community, internal, or null.
  repositoryId
    Type: String
    The ID of the repository.
  repositoryFileId
    Type: String
    The ID of the repository file.
  includeExternalFilePermissionsInfo
    Type: Boolean
    Specifies whether to include permission information, such as whether the file is shared and what are the available permission types.
    Managing external file permissions is supported for Google Drive, SharePoint Online, and OneDrive for Business.

Return Value
Type: ConnectApi.RepositoryFileDetail

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestGetRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo, result)
  Testing ConnectApi Code

getRepositoryFolder(repositoryId, repositoryFolderId)
Get a repository folder.

API Version
39.0
Requires Chatter
No

Signature
```
public static ConnectApi.RepositoryFolderDetail getRepositoryFolder(String repositoryId, String repositoryFolderId)
```

Parameters

`repositoryId`
Type: `String`
The ID of the repository.

`repositoryFolderId`
Type: `String`
The ID of the repository folder.

Return Value
Type: `ConnectApi.RepositoryFolderDetail`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example
```
final String gDriveRepositoryId = '0XCxx0000000DGAY', gDriveFolderId = 'folder:0B01Tys1KmM3sSVJ2bj1zTGFqSWs';
final ConnectApi.RepositoryFolderDetail folder = ConnectApi.ContentHub.getRepositoryFolder(gDriveRepositoryId, gDriveFolderId);
System.debug(String.format('Folder - name: \'{0}\', description: \'{1}\', external URL: \'{2}\', folder items URL: \'{3}\',
    new String[]{ folder.name, folder.description, folder.externalFolderUrl,
    folder.folderItemsUrl]));
```

SEE ALSO:
- `setTestGetRepositoryFolder(repositoryId, repositoryFolderId, result)`
- `Testing ConnectApi Code`

`getRepositoryFolder(communityId, repositoryId, repositoryFolderId)`
Get a repository folder in a community.

API Version
39.0
Requires Chatter
No

Signature

```java
public static ConnectApi.RepositoryFolderDetail getRepositoryFolder(String communityId, String repositoryId, String repositoryFolderId)
```

Parameters

- `communityId`  
  Type: `String`  
  Use either the ID for a community, `internal`, or `null`.
- `repositoryId`  
  Type: `String`  
  The ID of the repository.
- `repositoryFolderId`  
  Type: `String`  
  The ID of the repository folder.

Return Value

Type: `ConnectApi.RepositoryFolderDetail`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetRepositoryFolder(communityId, repositoryId, repositoryFolderId, result)`
- Testing ConnectApi Code

```java
getRepositoryFolderItems(repositoryId, repositoryFolderId)
```

Get repository folder items.

API Version

39.0

Requires Chatter
No
Signature

```java
public static ConnectApi.RepositoryFolderItemsCollection getRepositoryFolderItems(String repositoryId, String repositoryFolderId)
```

Parameters

- `repositoryId`  
  Type: String  
  The ID of the repository.

- `repositoryFolderId`  
  Type: String  
  The ID of the repository folder.

Return Value

Type: `ConnectApi.RepositoryFolderItemsCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example gets the collection of items in a repository folder. For files, we show the file’s name, size, external URL, and download URL. For folders, we show the folder’s name, description, and external URL.

```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFolderId = 'folder:0B0lTys1KmM3sSVJ2bjIzTGFqSws';
final ConnectApi.RepositoryFolderItemsCollection folderItemsColl = ConnectApi.ContentHub.getRepositoryFolderItems(gDriveRepositoryId, gDriveFolderId);
final List<ConnectApi.RepositoryFolderItem> folderItems = folderItemsColl.items;
System.debug('Number of items in repository folder: ' + folderItems.size());
for(ConnectApi.RepositoryFolderItem item : folderItems){
  ConnectApi.RepositoryFileSummary fileSummary = item.file;
  if(fileSummary != null){
    System.debug(String.format('File item - name: `{0}`, size: `{1}`, external URL: `{2}`, download URL: `{3}`', new String[]{ fileSummary.name, String.valueOf(fileSummary.contentSize), fileSummary.externalDocumentUrl, fileSummary.downloadUrl}));
  }else{
    ConnectApi.RepositoryFolderSummary folderSummary = item.folder;
    System.debug(String.format('Folder item - name: `{0}`, description: `{1}`', new String[]{ folderSummary.name, folderSummary.description}));
  }
}
```

SEE ALSO:

- `setTestGetRepositoryFolderItems(repositoryId, repositoryFolderId, result)`

getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId)

Get repository folder items in a community.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFolderItemsCollection getRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

Return Value
Type: ConnectApi.RepositoryFolderItemsCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, result)
Testing ConnectApi Code

getRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize)

Get a page of repository folder items.

API Version
39.0
Requires Chatter
No

Signature
public static ConnectApi.RepositoryFolderItemsCollection getRepositoryFolderItems(String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize)

Parameters
repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default page size is 25.

Return Value
Type: ConnectApi.RepositoryFolderItemsCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize)
Get a page of repository folder items in a community.

API Version
39.0
Requires Chatter
No

Signature

```java
public static ConnectApi.RepositoryFolderItemsCollection getRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize)
```

Parameters

- `communityId`  
  Type: `String`  
  Use either the ID for a community, `internal`, or `null`.

- `repositoryId`  
  Type: `String`  
  The ID of the repository.

- `repositoryFolderId`  
  Type: `String`  
  The ID of the repository folder.

- `pageParam`  
  Type: `Integer`  
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`  
  Type: `Integer`  
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.

Return Value

Type: `ConnectApi.RepositoryFolderItemsCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize, result)`
  Testing ConnectApi Code

- `updateRepositoryFile(repositoryId, repositoryFileId, file)`

Update the metadata of a repository file.
API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file)

Parameters
repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.

Return Value
Type: ConnectApi.RepositoryFileDetail

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example
This example updates the metadata of a file in a repository. After the file is updated, we show the file’s ID, name, description, external URL, download URL.

```
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFolderId = 'folder:OB01Ty51KmM3sSVJ2b1jzTGFqSWs', gDriveFileId = 'document:1q9OatVpcyYBK-JWzp_PhR75ulQghwFP15zhkamKrRcQ';

final ConnectApi.ContentHubItemInput updatedItem = new ConnectApi.ContentHubItemInput();
updatedItem.itemTypeId = 'document'; //see getAllowedTypes for any file item types available for creation/update
updatedItem.fields = new List<ConnectApi.ContentHubFieldValueInput>();

//Metadata: name field
final ConnectApi.ContentHubFieldValueInput fieldValueInputName = new
```
ConnectApi.ContentHubFieldValueInput();
fieldValueInputName.name = 'name';
fieldValueInputName.value = 'updated file name.txt';
updatedItem.fields.add(fieldValueInputName);

//Metadata: description field
final ConnectApi.ContentHubFieldValueInput fieldValueInputNameDesc = new
ConnectApi.ContentHubFieldValueInput();
fieldValueInputNameDesc.name = 'description';
fieldValueInputNameDesc.value = 'that updates the former description';
updatedItem.fields.add(fieldValueInputNameDesc);

final ConnectApi.RepositoryFileDetail updatedFile =
ConnectApi.ContentHub.updateRepositoryFile(gDriveRepositoryId, gDriveFileId, updatedItem);
System.debug(String.format('Updated file - id: `{0}`, name: `{1}`, description: `{2}`,
external URL: `{3}`, download URL: `{4}`, new String[]{
updatedFile.id, updatedFile.name, updatedFile.description, updatedFile.externalDocumentUrl,
updatedFile.downloadUrl});

SEE ALSO:
setTestUpdateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData, result)
Testing ConnectApi Code

**updateRepositoryFile(repositoryId, repositoryFileId, file, fileData)**

Update the content of a repository file.

**API Version**
39.0

**Requires Chatter**
No

**Signature**
`public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData)`

**Parameters**

**repositoryId**
Type: `String`
The ID of the repository.

**repositoryFileId**
Type: `String`
The ID of the repository file.
file
  Type: ConnectApi.ContentHubItemInput
  The item type ID and fields of the item type.

fileData
  Type: ConnectApi.BinaryInput
  The binary file.

Return Value
  Type: ConnectApi.RepositoryFileDetail

Usage
  To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example
  This example updates the content and metadata of a file in a repository. After the file is updated, we show the file’s ID, name, description, external URL, and download URL.

```java
final String gDriveRepositoryId = '0XCxx000000000GDGAY', gDriveFolderId = 'folder:0B01Tys1KmM3sSVJ2bjiTGFqSWs', gDriveFileId = 'document:1q9OatVpcyYBK~JWzp_~PhR75ulQghwFP15zhkamKzRcQ';

final ConnectApi.ContentHubItemInput updatedItem = new ConnectApi.ContentHubItemInput();
updatedItem.itemTypeId = 'document'; //see getAllowedTypes for any file item types available for creation/update
updatedItem.fields = new List<ConnectApi.ContentHubFieldValueInput>();

  //Metadata: name field
final ConnectApi.ContentHubFieldInputValue fieldValueInputName = new ConnectApi.ContentHubFieldInputValue();
fieldValueInputName.name = 'name';
fieldValueInputName.value = 'updated file name.txt';
updatedItem.fields.add(fieldValueInputName);

  //Metadata: description field
final ConnectApi.ContentHubFieldInputValue fieldValueInputNameDesc = new ConnectApi.ContentHubFieldInputValue();
fieldValueInputNameDesc.name = 'description';
fieldValueInputNameDesc.value = 'that updates the former description';
updatedItem.fields.add(fieldValueInputNameDesc);

  //Binary content
final Blob updatedFileBlob = Blob.valueOf('even more awesome content for updated file');
final String updatedFileMimeType = 'text/plain';
final ConnectApi.BinaryInput fileBinaryInput = new ConnectApi.BinaryInput(updatedFileBlob, updatedFileMimeType, updatedFileName);
final ConnectApi.RepositoryFileDetail updatedFile = ConnectApi.ContentHub.updateRepositoryFile(gDriveRepositoryId, gDriveFileId, updatedItem);
```
updateRepositoryFile(communityId, repositoryId, repositoryFileId, file)

Update the metadata of a repository file in a community.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String communityId, String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.

Return Value
Type: ConnectApi.RepositoryFileDetail
Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestUpdateRepositoryFile(repositoryId, repositoryFileId, file, fileData, result)`
- `Testing ConnectApi Code`

**updateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData)**
Update the content of a repository file in a community.

API Version
39.0

Requires Chatter
No

Signature
```java
public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String communityId, String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `repositoryId`
  Type: `String`
  The ID of the repository.
- `repositoryFileId`
  Type: `String`
  The ID of the repository file.
- `file`
  Type: `ConnectApi.ContentHubItemInput`
  The item type ID and fields of the item type.
- `fileData`
  Type: `ConnectApi.BinaryInput`
  The binary file.
Return Value
Type: `ConnectApi.RepositoryFileDetail`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestUpdateRepositoryFile(communityId, repositoryId, repositoryFileId, file, result)`
  
  Testing ConnectApi Code

**ContentHub Test Methods**

The following are the test methods for `ContentHub`. All methods are static.

For information about using these methods to test your `ConnectApi` code, see Testing ConnectApi Code.

`setTestAddRepositoryItem(repositoryId, repositoryFolderId, file, result)`

Register a `ConnectApi.RepositoryFolderItem` object to be returned when the matching `addRepositoryItem(repositoryId, repositoryFolderId, file)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestAddRepositoryItem(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.RepositoryFolderItem result)
```

**Parameters**

- `repositoryId`
  Type: `String`
  The ID of the repository.

- `repositoryFolderId`
  Type: `String`
  The ID of the repository folder.

- `file`
  Type: `ConnectApi.ContentHubItemInput`
  The item type ID and fields of the item type.

- `result`
  Type: `ConnectApi.RepositoryFolderItem`
Return Value
Type: Void

SEE ALSO:
addRepositoryItem(repositoryId, repositoryFolderId, file)
Testing ConnectApi Code

setTestAddRepositoryItem(communityId, repositoryId, repositoryFolderId, file, result)

Register a ConnectApi.RepositoryFolderItem object to be returned when the matching addRepositoryItem(communityId, repositoryId, repositoryFolderId, file) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestAddRepositoryItem(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.RepositoryFolderItem result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.

result
Type: ConnectApi.RepositoryFolderItem
The object containing test data.
Return Value
Type: Void

SEE ALSO:

addRepositoryItem(communityId, repositoryId, repositoryFolderId, file)

Testing ConnectApi Code

**setTestAddRepositoryItem(repositoryId, repositoryFolderId, file, fileData, result)**

Register a ConnectApi.RepositoryFolderItem object to be returned when the matching addRepositoryItem(repositoryId, repositoryFolderId, file, fileData) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

```java
public static Void setTestAddRepositoryItem(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData, ConnectApi.RepositoryFolderItem result)
```

Parameters

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.

fileData
Type: ConnectApi.BinaryInput
The binary file.

result
Type: ConnectApi.RepositoryFolderItem
The object containing test data.
Return Value
Type: Void

SEE ALSO:
addRepositoryItem(repositoryId, repositoryFolderId, file, fileData)
Testing ConnectApi Code

**setTestAddRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData, result)**

Register a ConnectApi.RepositoryFolderItem object to be returned when the matching addRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
`public static Void setTestAddRepositoryItem(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData, ConnectApi.RepositoryFolderItem result)`

Parameters
- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.
- **repositoryId**
  Type: String
  The ID of the repository.
- **repositoryFolderId**
  Type: String
  The ID of the repository folder.
- **file**
  Type: `ConnectApi.ContentHubItemInput`
  The item type ID and fields of the item type.
- **fileData**
  Type: `ConnectApi.BinaryInput`
  The binary file.
- **result**
  Type: `ConnectApi.RepositoryFolderItem`
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
addRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData)
Testing ConnectApi Code

setTestGetAllowedItemTypes(repositoryId, repositoryFolderId, result)
Register a ConnectApi.ContentHubAllowedItemTypeCollection object to be returned when the matching
getAllowedItemTypes(repositoryId, repositoryFolderId) method is called in a test context. Use the method
with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetAllowedItemTypes(String repositoryId, String
repositoryFolderId, ConnectApi.ContentHubAllowedItemTypeCollection result)

Parameters
repositoryId
Type: String
The ID of the repository.
repositoryFolderId
Type: String
The ID of the repository folder.
result
Type: ConnectApi.ContentHubAllowedItemTypeCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getAllowedItemTypes(repositoryId, repositoryFolderId)
Testing ConnectApi Code
**setTestGetAllowedItemTypes(repositoryId, repositoryFolderId, filter, result)**

Register a `ConnectApi.ContentHubAllowedItemTypeCollection` object to be returned when the matching `getAllowedItemTypes(repositoryId, repositoryFolderId, filter)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestGetAllowedItemTypes(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemType filter, ConnectApi.ContentHubAllowedItemTypeCollection result)
```

**Parameters**

- **repositoryId**
  - Type: `String`
  - The ID of the repository.

- **repositoryFolderId**
  - Type: `String`
  - The ID of the repository folder.

- **filter**
  - Type: `ConnectApi.ContentHubItemType`
  - Item types. Values are:
    - `Any`—Includes files and folders.
    - `FilesOnly`—Includes files only.
    - `FoldersOnly`—Includes folders only.

- **result**
  - Type: `ConnectApi.ContentHubAllowedItemTypeCollection`
  - The object containing test data.

**Return Value**

- Type: `Void`

**SEE ALSO:**

- `getAllowedItemTypes(repositoryId, repositoryFolderId, filter)`

setTestGetAllowedItemTypes(communityId, repositoryId, repositoryFolderId, result)

Register a ConnectApi.ContentHubAllowedItemTypeCollection object to be returned when the matching getAllowedItemTypes(communityId, repositoryId, repositoryFolderId) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetAllowedItemTypes(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ContentHubAllowedItemTypeCollection result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

result
Type: ConnectApi.ContentHubAllowedItemTypeCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getAllowedItemTypes(communityId, repositoryId, repositoryFolderId)
Testing ConnectApi Code

setTestGetAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter, result)

Register a ConnectApi.ContentHubAllowedItemTypeCollection object to be returned when the matching getAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter) method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
40.0

Signature

```java
public static Void setTestGetAllowedItemTypes(String communityId, String repositoryId,
String repositoryFolderId, ConnectApi.ContentHubItemType filter,
ConnectApi.ContentHubAllowedItemTypeCollection result)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **repositoryId**
  - Type: String
  - The ID of the repository.

- **repositoryFolderId**
  - Type: String
  - The ID of the repository folder.

- **filter**
  - Type: `ConnectApi.ContentHubItemType`
  - Item types. Values are:
    - `Any`—Includes files and folders.
    - `FilesOnly`—Includes files only.
    - `FoldersOnly`—Includes folders only.

- **result**
  - Type: `ConnectApi.ContentHubAllowedItemTypeCollection`
  - The object containing test data.

Return Value

Type: Void

SEE ALSO:

- `getAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter)`
- Testing ConnectApi Code

```
setTestGetFilePreview(repositoryId, repositoryFileId, formatType, result)
```

Register a `ConnectApi.FilePreview` object to be returned when the matching `getFilePreview(repositoryId, repositoryFileId, formatType)` method is called in a test context. Use the method with the same parameters or you receive an exception.
public static Void setTestGetFilePreview(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, ConnectApi.FilePreview result)

Parameters

repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

formatType
Type: ConnectApi.FilePreviewFormat
Specifies the format of the file preview. Values are:
- Jpg—Preview format is JPG.
- Pdf—Preview format is PDF.
- Svg—Preview format is compressed SVG.
- Thumbnail—Preview format is 240 x 180 PNG.
- ThumbnailBig—Preview format is 720 x 480 PNG.
- ThumbnailTiny—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DO CX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand. If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter general in the Quick Find box in Setup. Select General Settings, and then select Display alternative file previews.

result
Type: ConnectApi.FilePreview
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- getFilePreview(repositoryId, repositoryFileId, formatType)
- Testing ConnectApi Code
Register a ConnectApi.FilePreview object to be returned when the matching `getFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)` method is called in a test context. If you use the method with the same parameters or you receive an exception.

**API Version**
40.0

**Signature**

```java
public static Void setTestGetFilePreview(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, Integer startPageNumber, Integer endPageNumber, ConnectApi.FilePreview result)
```

**Parameters**

- **repositoryId**
  Type: `String`  
The ID of the repository.

- **repositoryFileId**
  Type: `String`  
The ID of the repository file.

- **formatType**
  Type: `ConnectApi.FilePreviewFormat`  
  Specifies the format of the file preview. Values are:
  - `Jpg`—Preview format is JPG.
  - `Pdf`—Preview format is PDF.
  - `Svg`—Preview format is compressed SVG.
  - `Thumbnail`—Preview format is 240 x 180 PNG.
  - `ThumbnailBig`—Preview format is 720 x 480 PNG.
  - `ThumbnailTiny`—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand. If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter `general` in the Quick Find box in Setup. Select General Settings, and then select **Display alternative file previews**.

- **startPageNumber**
  Type: `Integer`  
The starting page number in the range of file preview URLs.

- **endPageNumber**
  Type: `Integer`  
The ending page number in the range of file preview URLs.
result
Type: ConnectApi.FilePreview
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)

  Testing ConnectApi Code

**setTestGetItemType(repositoryId, repositoryItemType, result)**  
Register a `ConnectApi.ContentHubItemTypeDetail` object to be returned when the matching `getItemType(repositoryId, repositoryItemType)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0
Signature

```java
public static Void setTestGetItemType(String repositoryId, String repositoryItemTypeIds, ConnectApi.ContentHubItemTypeDetail result)
```

Parameters

- `repositoryId`
  - Type: `String`
  - The ID of the repository.

- `repositoryItemTypeIds`
  - Type: `String`
  - The ID of the repository item type.

- `result`
  - Type: `ConnectApi.ContentHubItemTypeDetail`
  - The object containing test data.

Return Value

Type: `Void`

SEE ALSO:

- `getItemType(communityId, repositoryId, repositoryItemTypeIds)`

**setTestGetItemType(communityId, repositoryId, repositoryItemTypeIds, result)**

Register a `ConnectApi.ContentHubItemTypeDetail` object to be returned when the matching `getItemType(communityId, repositoryId, repositoryItemTypeIds)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```java
public static Void setTestGetItemType(String communityId, String repositoryId, String repositoryItemTypeIds, ConnectApi.ContentHubItemTypeDetail result)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `repositoryId`
  - Type: `String`
The ID of the repository.

`repositoryItemTypeTypeId`
- **Type:** `String`
- The ID of the repository item type.

`result`
- **Type:** `ConnectApi.ContentHubItemTypeDetail`
- The object containing test data.

Return Value

**Type:** `Void`

SEE ALSO:
- `getItemType(communityId, repositoryId, repositoryItemTypeId)`
- Testing ConnectApi Code

**`setTestGetPreviews(repositoryId, repositoryFileId, result)`**

Register a `ConnectApi.FilePreviewCollection` object to be returned when the matching `getPreviews(repositoryId, repositoryFileId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

`public static Void setTestGetPreviews(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewCollection result)`

**Parameters**

`repositoryId`
- **Type:** `String`
- The ID of the repository.

`repositoryFileId`
- **Type:** `String`
- The ID of the repository file.

`result`
- **Type:** `ConnectApi.FilePreviewCollection`
- The object containing test data.
Return Value
Type: Void

SEE ALSO:
- getPreviews(repositoryId, repositoryFileId)
- Testing ConnectApi Code

**setTestGetPreviews(communityId, repositoryId, repositoryFileId, result)**

Register a `ConnectApi.FilePreviewCollection` object to be returned when the matching `getPreviews(communityId, repositoryId, repositoryFileId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

```java
public static Void setTestGetPreviews(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewCollection result)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `repositoryId`
  Type: `String`
  The ID of the repository.

- `repositoryFileId`
  Type: `String`
  The ID of the repository file.

- `result`
  Type: `ConnectApi.FilePreviewCollection`
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
- getPreviews(communityId, repositoryId, repositoryFileId)
- Testing ConnectApi Code
**setTestGetRepositories(result)**

Register a `ConnectApi.ContentHubRepositoryCollection` object to be returned when the matching `getRepositories()` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```java
public static Void setTestGetRepositories(ConnectApi.ContentHubRepositoryCollection result)
```

Parameters

`result`

Type: `ConnectApi.ContentHubRepositoryCollection`

The object containing test data.

Return Value

Type: Void

SEE ALSO:

`getRepositories()`

Testing ConnectApi Code

**setTestGetRepositories(communityId, result)**

Register a `getRepositories(communityId)` object to be returned when the matching `ConnectApi.ContentHubRepositoryCollection` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```java
public static Void setTestGetRepositories(String communityId, ConnectApi.ContentHubRepositoryCollection result)
```

Parameters

`communityId`

Type: `String`

Use either the ID for a community, `internal`, or `null`.
result
Type: `ConnectApi.ContentHubRepositoryCollection`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
`getRepositories(communityId)`
`Testing ConnectApi Code`

`setTestGetRepositories(pageParam, pageSize, result)`
Register a `ConnectApi.ContentHubRepositoryCollection` object to be returned when the matching `getRepositories(pageParam, pageSize)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
```
public static Void setTestGetRepositories(Integer pageParam, Integer pageSize, ConnectApi.ContentHubRepositoryCollection result)
```

Parameters

`pageParam`
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.

`result`
Type: `ConnectApi.ContentHubRepositoryCollection`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
`getRepositories(pageParam, pageSize)`
`Testing ConnectApi Code`
**setTestGetRepositories(communityId, pageParam, pageSize, result)**

Register a `ConnectApi.ContentHubRepositoryCollection` object to be returned when the matching `getRepositories(communityId, pageParam, pageSize)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestGetRepositories(String communityId, Integer pageParam, Integer pageSize, ConnectApi.ContentHubRepositoryCollection result)
```

**Parameters**

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `pageParam`
  - Type: `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.

- `result`
  - Type: `ConnectApi.ContentHubRepositoryCollection`
  - The object containing test data.

**Return Value**

Type: `Void`

**SEE ALSO:**

- `getRepositories(communityId, pageParam, pageSize)`
- Testing `ConnectApi` Code

**setTestGetRepository(repositoryId, result)**

Register a `ConnectApi.ContentHubRepository` object to be returned when the matching `getRepository(repositoryId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0
setTestGetRepository(String repositoryId, ConnectApi.ContentHubRepository result)

Parameters

repositoryId
Type: String
The ID of the repository.

result
Type: ConnectApi.ContentHubRepository
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepository(repositoryId)
Testing ConnectApi Code

setTestGetRepository(String communityId, String repositoryId, ConnectApi.ContentHubRepository result)

Register a ConnectApi.ContentHubRepository object to be returned when the matching getRepository(communityId, repositoryId) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0
The object containing test data.

Return Value
Type: Void

SEE ALSO:

setTestGetRepositoryFile(repositoryId, repositoryFileId, result)

Register a ConnectApi.RepositoryFileDetail object to be returned when the matching
getRepositoryFile(repositoryId, repositoryFileId) method is called in a test context. Use the method with
the same parameters or you receive an exception.

API Version
40.0

Signature

public static Void setTestGetRepositoryFile(String repositoryId, String repositoryFileId,
ConnectApi.RepositoryFileDetail result)

Parameters
repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

result
Type: ConnectApi.RepositoryFileDetail
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepositoryFile(repositoryId, repositoryFileId)

Testing ConnectApi Code
**setTestGetRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo, result)**

Register a `ConnectApi.RepositoryFileDetail` object to be returned when the matching `getRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**
40.0

**Signature**

```java
public static Void setTestGetRepositoryFile(String repositoryId, String repositoryFileId, Boolean includeExternalFilePermissionsInfo, ConnectApi.RepositoryFileDetail result)
```

**Parameters**

- **repositoryId**
  - Type: `String`
  - The ID of the repository.

- **repositoryFileId**
  - Type: `String`
  - The ID of the repository file.

- **includeExternalFilePermissionsInfo**
  - Type: `Boolean`
  - Specifies whether to include permission information, such as whether the file is shared and what are the available permission types. Managing external file permissions is supported for Google Drive, SharePoint Online, and OneDrive for Business.

- **result**
  - Type: `ConnectApi.RepositoryFileDetail`
  - The object containing test data.

**Return Value**

Type: `Void`

**SEE ALSO:**
- `getRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)`
- Testing `ConnectApi Code`

**setTestGetRepositoryFile(communityId, repositoryId, repositoryFileId, result)**

Register a `ConnectApi.RepositoryFileDetail` object to be returned when the matching `getRepositoryFile(communityId, repositoryId, repositoryFileId)` method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
40.0

Signature
public static Void setTestGetRepositoryFile(String communityId, String repositoryId, String repositoryFileId, ConnectApi.RepositoryFileDetail result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

result
Type: ConnectApi.RepositoryFileDetail
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepositoryFile(communityId, repositoryId, repositoryFileId)
Testing ConnectApi Code

setTestGetRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo, result)

Register a ConnectApi.RepositoryFileDetail object to be returned when the matching
getRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0
Signature

```java
public static Void setTestGetRepositoryFile(String communityId, String repositoryId, String repositoryFileId, Boolean includeExternalFilePermissionsInfo, ConnectApi.RepositoryFileDetail result)
```

Parameters

- `communityId`  
  Type: `String`  
  Use either the ID for a community, `internal`, or `null`.

- `repositoryId`  
  Type: `String`  
  The ID of the repository.

- `repositoryFileId`  
  Type: `String`  
  The ID of the repository file.

- `includeExternalFilePermissionsInfo`  
  Type: `Boolean`  
  Specifies whether to include permission information, such as whether the file is shared and what are the available permission types. Managing external file permissions is supported for Google Drive, SharePoint Online, and OneDrive for Business.

- `result`  
  Type: `ConnectApi.RepositoryFileDetail`  
  The object containing test data.

Return Value

Type: `Void`

SEE ALSO:

- `getTestGetRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)`
- Testing ConnectApi Code

```java
setTestGetRepositoryFolder(repositoryId, repositoryFolderId, result)
```

Register a `ConnectApi.RepositoryFolderDetail` object to be returned when the matching `getTestGetRepositoryFolder(repositoryId, repositoryFolderId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0
Signature

```java
public static Void setTestGetRepositoryFolder(String repositoryId, String repositoryFolderId, ConnectApi.RepositoryFolderDetail result)
```

Parameters

- `repositoryId`
  
  Type: `String`
  
  The ID of the repository.

- `repositoryFolderId`
  
  Type: `String`
  
  The ID of the repository folder.

- `result`
  
  Type: `ConnectApi.RepositoryFolderDetail`
  
  The object containing test data.

Return Value

Type: Void

SEE ALSO:

- `getRepositoryFolder(communityId, repositoryId, repositoryFolderId)`
- Testing ConnectApi Code

### `setTestGetRepositoryFolder(communityId, repositoryId, repositoryFolderId, result)`

Register a `ConnectApi.RepositoryFolderDetail` object to be returned when the matching `getRepositoryFolder(communityId, repositoryId, repositoryFolderId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```java
public static Void setTestGetRepositoryFolder(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.RepositoryFolderDetail result)
```

Parameters

- `communityId`
  
  Type: `String`
  
  Use either the ID for a community, `internal`, or `null`.

- `repositoryId`
  
  Type: `String`
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

result
Type: ConnectApi.RepositoryFolderDetail
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepositoryFolder(communityId, repositoryId, repositoryFolderId)
Testing ConnectApi Code

setTestGetRepositoryFolderItems(repositoryId, repositoryFolderId, result)

Register a ConnectApi.RepositoryFolderItemsCollection object to be returned when the matching
getRepositoryFolderItems(repositoryId, repositoryFolderId) method is called in a test context. Use the
method with the same parameters or you receive an exception.

API Version
40.0

Signature

public static Void setTestGetRepositoryFolderItems(String repositoryId, String
repositoryFolderId, ConnectApi.RepositoryFolderItemsCollection result)

Parameters

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

result
Type: ConnectApi.RepositoryFolderItemsCollection
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getRepositoryFolderItems(repositoryId, repositoryFolderId)

Testing ConnectApi Code

```java
setTestGetRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, result)
```

Register a `ConnectApi.RepositoryFolderItemsCollection` object to be returned when the matching
`getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId)` method is called in a
test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
```java
public static Void setTestGetRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.RepositoryFolderItemsCollection result)
```

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, `internal`, or `null`.

- **repositoryId**
  Type: String
  The ID of the repository.

- **repositoryFolderId**
  Type: String
  The ID of the repository folder.

- **result**
  Type: `ConnectApi.RepositoryFolderItemsCollection`
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
- getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId)
- Testing ConnectApi Code

**setTestGetRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize, result)**

Register a `ConnectApi.RepositoryFolderItemsCollection` object to be returned when the matching `getRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
```java
public static Void setTestGetRepositoryFolderItems(String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize, ConnectApi.RepositoryFolderItemsCollection result)
```

Parameters
- **repositoryId**
  - Type: String
  - The ID of the repository.
- **repositoryFolderId**
  - Type: String
  - The ID of the repository folder.
- **pageParam**
  - Type: Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.
- **pageSize**
  - Type: Integer
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.
- **result**
  - Type: `ConnectApi.RepositoryFolderItemsCollection`
  - The object containing test data.
Return Value
Type: Void

SEE ALSO:
getRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize)
Testing ConnectApi Code

```java
public static Void setTestGetRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize, ConnectApi.RepositoryFolderItemsCollection result)
```

Register a ConnectApi.RepositoryFolderItemsCollection object to be returned when the matching getRepositoryFolderItems method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

```
public static Void setTestGetRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize, ConnectApi.RepositoryFolderItemsCollection result)
```

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **repositoryId**
  Type: String
  The ID of the repository.

- **repositoryFolderId**
  Type: String
  The ID of the repository folder.

- **pageParam**
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

- **pageSize**
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default page size is 25.

- **result**
  Type: ConnectApi.RepositoryFolderItemsCollection
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize)
Testing ConnectApi Code

```
setTestUpdateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData, result)
```

Register a ConnectApi.RepositoryFileDetail object to be returned when the matching
updateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData) method
is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
```
public static Void setTestUpdateRepositoryFile(String communityId, String repositoryId,
String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput
fileData, ConnectApi.RepositoryFileDetail result)
```

Parameters
```
communityId
  Type: String
  Use either the ID for a community, internal, or null.

repositoryId
  Type: String
  The ID of the repository.

repositoryFileId
  Type: String
  The ID of the repository file.

file
  Type: ConnectApi.ContentHubItemInput
  The item type ID and fields of the item type.

fileData
  Type: ConnectApi.BinaryInput
  The binary file.

result
  Type: ConnectApi.RepositoryFileDetail
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
  updateRepositoryFile(repositoryId, repositoryFileId, file)
  Testing ConnectApi Code

**setTestUpdateRepositoryFile(repositoryId, repositoryFileId, file, result)**

Register a `ConnectApi.RepositoryFileDetail` object to be returned when the matching `updateRepositoryFile(repositoryId, repositoryFileId, file)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

```java
public static Void setTestUpdateRepositoryFile(String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.RepositoryFileDetail result)
```

Parameters

- `repositoryId`  
  Type: `String`  
  The ID of the repository.
- `repositoryFileId`  
  Type: `String`  
  The ID of the repository file.
- `file`  
  Type: `ConnectApi.ContentHubItemInput`  
  The item type ID and fields of the item type.
- `result`  
  Type: `ConnectApi.RepositoryFileDetail`  
  The object containing test data.

Return Value
Type: Void

SEE ALSO:

setTestUpdateRepositoryFile(repositoryId, repositoryFileId, file, fileData, result)

Register a `ConnectApi.RepositoryFileDetail` object to be returned when the matching `updateRepositoryFile(repositoryId, repositoryFileId, file, fileData)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

```java
public static Void setTestUpdateRepositoryFile(String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData, ConnectApi.RepositoryFileDetail result)
```

Parameters

- `repositoryId`
  - Type: `String`
  - The ID of the repository.

- `repositoryFileId`
  - Type: `String`
  - The ID of the repository file.

- `file`
  - Type: `ConnectApi.ContentHubItemInput`
  - The item type ID and fields of the item type.

- `fileData`
  - Type: `ConnectApi.BinaryInput`
  - The binary file.

- `result`
  - Type: `ConnectApi.RepositoryFileDetail`
  - The object containing test data.

Return Value

Type: Void

SEE ALSO:

setTestUpdateRepositoryFile(communityId, repositoryId, repositoryFileId, file, result)

Register a ConnectApi.RepositoryFileDetail object to be returned when the matching updateRepositoryFile(communityId, repositoryId, repositoryFileId, file) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestUpdateRepositoryFile(String communityId, String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.RepositoryFileDetail result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.

result
Type: ConnectApi.RepositoryFileDetail
The object containing test data.

Return Value
Type: Void

Testing ConnectApi Code

Datacloud Class
Purchase Data.com contact or company records, and retrieve purchase information.
Namespace

ConnectApi

Note: Data.com Prospector and Data.com Clean licenses can no longer be renewed. These products are scheduled for retirement on July 31, 2020. Existing contracts will be honored. For more information, see Data.com Prospector and Clean Retirement.

IN THIS SECTION:
Datacloud Methods

Datacloud Methods

The following are methods for Datacloud. All methods are static.

IN THIS SECTION:

getCompaniesFromOrder(orderId, pageSize, page)
Get a list of purchased company records for an order.

getCompany(companyId)
Get a company record.

getContact(contactId)
Get a contact.

getContactsFromOrder(orderId, page, pageSize)
Get a list of purchased contacts for an order.

getOrder(orderId)
Get an order.

getUsage(userId)
Get purchase usage information for a user.

postOrder(orderInput)
Purchase records that are listed in an input file.

getCompaniesFromOrder(orderId, pageSize, page)
Get a list of purchased company records for an order.

API Version
32.0

Requires Chatter
No

Signature

public static ConnectApi.DatacloudCompanies getCompaniesFromOrder(String orderId, String pageSize, String page)
Parameters

**orderId**
Type: **String**
ID of an order.

**page**
Type: **Integer**
Number of the page that you want returned.

**pageSize**
Type: **Integer**
Number of companies to show on a page. The default `pageSize` is 25.

Return Value
Type: **ConnectApi.DatacloudCompanies**

**getCompany(companyId)**
Get a company record.

API Version
32.0

Requires Chatter
No

Signature

```java
public static ConnectApi.DatacloudCompany getCompany(String companyId)
```

Parameters

**companyId**
Type: **String**
ID of a company in the Data.com database.

Return Value
Type: **ConnectApi.DatacloudCompany**

**getContact(contactId)**
Get a contact.

API Version
32.0
Requires Chatter
No

Signature
public static ConnectApi.DatacloudContact getContact(String contactId)

Parameters
contactId
Type: String
ID of a contact in the Data.com database.

Return Value
Type: ConnectApi.DatacloudContact

getContactsFromOrder(orderId, page, pageSize)
Get a list of purchased contacts for an order.

API Version
32.0

Requires Chatter
No

Signature
public static ConnectApi.DatacloudContacts getContactsFromOrder(String orderId, String page, String pageSize)

Parameters
orderId
Type: String
ID of an order.

page
Type: Integer
Number of the page that you want returned.

pageSize
Type: Integer
Number of contacts to show on a page. The default pageSize is 25.
Return Value
Type: `ConnectApi.DatacloudContacts`

**getOrder(orderId)**

Get an order.

API Version
32.0

Requires Chatter
No

Signature
```
public static ConnectApi.DatacloudOrder getOrder(String orderId)
```

Parameters

`orderId`
Type: `String`
ID of an order.

Return Value
Type: `ConnectApi.DatacloudOrder`

**getUsage(userId)**

Get purchase usage information for a user.

API Version
32.0

Requires Chatter
No

Signature
```
public static ConnectApi.DatacloudPurchaseUsage getUsage(String userId)
```

Parameters

`userId`
Type: `String`
ID of a user.
Return Value
Type: `ConnectApi.DatacloudPurchaseUsage`

`postOrder(orderInput)`
Purchase records that are listed in an input file.

API Version
32.0

Requires Chatter
No

Signature
```
public static ConnectApi.DatacloudOrder postOrder(ConnectApi.DatacloudOrderInput orderInput)
```

Parameters
```
orderInput
  Type: ConnectApi.DatacloudOrderInput
  A list that contains IDs for the contacts or companies that you want to see.
```

Return Value
Type: `ConnectApi.DatacloudOrder`

Example
```
ConnectApi.DatacloudOrderInput inputOrder=new ConnectApi.DatacloudOrderInput();
List<String> ids=new List<String>();
ids.add('1234');
inputOrder.companyIds=ids;
ConnectApi.DatacloudOrder datacloudOrderRep = ConnectApi.Datacloud.postOrder(inputOrder);
```

**EmailMergeFieldService Class**

Extract a list of merge fields for an object. A merge field is a field you can put in an email template, mail merge template, custom link, or formula to incorporate values from a record.

**Namespace**

`ConnectApi`

**EmailMergeFieldService Methods**

The following are methods for `EmailMergeFieldService`. All methods are static.
getMergeFields(objectApiNames)

Extract the merge fields for a specific object.

API Version
39.0

Requires Chatter
No

Signature

public static ConnectApi.EmailMergeFieldInfo getMergeFields(List<String> objectApiNames)

Parameters

objectApiNames
Type: List<String>
The API names for the objects being referenced.

Return Value
Type: ConnectApi.EmailMergeFieldInfo

ExternalEmailServices Class

Access information about integration with external email services, such as sending email within Salesforce through an external email account.

Namespace
ConnectApi

External Email Services Methods

The following are methods for ExternalEmailService. All methods are static.

getUserOauthInfo(landingPage)
Get information about whether an external email service has been authorized to send email on behalf of a user.
getUserOauthInfo(landingPage)
Get information about whether an external email service has been authorized to send email on behalf of a user.

API Version
37.0

Requires Chatter
No

Signature
public static getUserOauthInfo(String landingPage)

Parameters
landingPage
  Type: String
  The landing page that the user starts on when they are finished with the OAuth authorization process.

Return Value
Type: ConnectApi.UserOauthInfo

SEE ALSO:
  Testing ConnectApi Code

Knowledge Class
Access information about trending articles in communities.

Namespace
ConnectApi

Knowledge Methods
The following are methods for Knowledge. All methods are static.

IN THIS SECTION:
  getTopViewedArticlesForTopic(communityId, topicId, maxResults)
  Get the top viewed articles for a topic.
  getTrendingArticles(communityId, maxResults)
  Get trending articles for a community.
  getTrendingArticlesForTopic(communityId, topicId, maxResults)
  Get the trending articles for a topic in a community.
**getTopViewedArticlesForTopic(communityId, topicId, maxResults)**

Get the top viewed articles for a topic.

API Version
41.0

Available to Guest Users
41.0

Requires Chatter
No

Signature
```
public static ConnectApi.KnowledgeArticleVersionCollection
getTopViewedArticlesForTopic(String communityId, String topicId, Integer maxResults)
```

Parameters
- **communityId**
  Type: *String*
  Use either the ID for a community, internal, or null.
- **topicId**
  Type: *String*
  ID of the topic.
- **maxResults**
  Type: *Integer*
  The maximum number of articles returned for each topic ID. Values can be from 1 to 25. The default value is 5.

Return Value
Type: *ConnectApi.KnowledgeArticleVersionCollection*

**getTrendingArticles(communityId, maxResults)**

Get trending articles for a community.

API Version
36.0

Available to Guest Users
36.0
Requires Chatter
No

Signature

```java
public static ConnectApi.KnowledgeArticleVersionCollection getTrendingArticles(String communityId, Integer maxResults)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `maxResults`
  - Type: `Integer`
  - The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

Return Value

Type: `ConnectApi.KnowledgeArticleVersionCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetTrendingArticles(communityId, maxResults, result)`
- Testing ConnectApi Code

### getTrendingArticlesForTopic(communityId, topicId, maxResults)

Get the trending articles for a topic in a community.

API Version

- 36.0

Available to Guest Users

- 36.0

Requires Chatter

No
Signature

```java
public static ConnectApi.KnowledgeArticleVersionCollection getTrendingArticlesForTopic(String communityId, String topicId, Integer maxResults)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- **topicId**
  - Type: String
  - ID of the topic.

- **maxResults**
  - Type: Integer
  - The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

Return Value

Type: `ConnectApi.KnowledgeArticleVersionCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetTrendingArticlesForTopic(communityId, topicId, maxResults, result)`
- Testing ConnectApi Code

**Knowledge Test Methods**

The following are the test methods for Knowledge. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

**setTestGetTrendingArticles(communityId, maxResults, result)**

Register a `ConnectApi.KnowledgeVersionArticleCollection` object to be returned when the matching `ConnectApi.getTrendingArticles` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

36.0
Signature

```java
public static Void setTestGetTrendingArticles(String communityId, Integer maxResults,
ConnectApi.KnowledgeArticleVersionCollection result)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `maxResults`
  - Type: `Integer`
  - The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

- `result`
  - Type: `ConnectApi.KnowledgeArticleVersionCollection`
  - The object containing test data.

Return Value

Type: Void

SEE ALSO:

- `getTrendingArticles(communityId, maxResults)`
- Testing ConnectApi Code

```java
setTestGetTrendingArticlesForTopic(communityId, topicId, maxResults, result)
```

Register a `ConnectApi.KnowledgeVersionArticleCollection` object to be returned when the matching `ConnectApi.getTrendingArticlesForTopic` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

36.0

Signature

```java
public static Void setTestGetTrendingArticlesForTopic(String communityId, String topicId,
Integer maxResults, ConnectApi.KnowledgeArticleVersionCollection result)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `topicId`
  - Type: `String`
ID of the topic.

**maxResults**

Type: Integer

The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

**result**

Type: `ConnectApi.KnowledgeArticleVersionCollection`

The object containing test data.

Return Value

Type: Void

SEE ALSO:

* `getTrendingArticlesForTopic(communityId, topicId, maxResults)`

Testing ConnectApi Code

**ManagedContent Class**

Get managed content versions.

**Namespace**

`ConnectApi`

**ManagedContent Methods**

The following are methods for `ManagedContent`. All methods are static.

IN THIS SECTION:

* `getAllManagedContent(communityId, pageParam, pageSize, language, managedContentType)`
  Get all managed content versions for a community.

* `getManagedContentByIds(communityId, managedContentIds, pageParam, pageSize, language, managedContentType)`
  Get managed content versions using a list of managed content IDs.

* `getManagedContentByTopics(communityId, topics, pageParam, pageSize, language, managedContentType)`
  Get managed content versions using a list of content topic names.

* `getManagedContentByTopicsAndIds(communityId, managedContentIds, topics, pageParam, pageSize, language, managedContentType)`
  Get managed content versions using a list of managed content IDs and content topic names.

```java
getAllManagedContent(communityId, pageParam, pageSize, language, managedContentType)
```

Get all managed content versions for a community.
API Version
47.0

Available to Guest Users
47.0

Requires Chatter
No

Signature

```java
public static ConnectApi.ManagedContentVersionCollection getAllManagedContent(String communityId, Integer pageParam, Integer pageSize, String language, String managedContentType)
```

Parameters

- **communityId**
  - Type: String
  - ID of the community.

- **pageParam**
  - Type: Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of items per page. Valid values are from 1 through 250. If you pass in `null`, the default size is 25.

- **language**
  - Type: String
  - Language locale for the managed content, for example, `en_US`. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

- **managedContentType**
  - Type: String
  - The developer name of the content version.

Return Value

- Type: `ConnectApi.ManagedContentVersionCollection`

```java
getManagedContentByIds(communityId, managedContentIds, pageParam, pageSize, language, managedContentType)
```

Get managed content versions using a list of managed content IDs.
API Version
47.0

Available to Guest Users
47.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedContentVersionCollection getManagedContentByIds(String communityId, List<String> managedContentIds, Integer pageParam, Integer pageSize, String language, String managedContentType)

Parameters
communityId
  Type: String
  ID of the community.

managedContentIds
  Type: List<String>
  Comma-separated list of up to 200 managed content IDs.

pageParam
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 250. If you pass in null, the default size is 25.

language
  Type: String
  Language locale for the managed content, for example, en_US. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

managedContentType
  Type: String
  The developer name of the content version.

Return Value
Type: ConnectApi.ManagedContentVersionCollection
getManagedContentByTopics(communityId, topics, pageParam, pageSize, language,
managedContentType)

Get managed content versions using a list of content topic names.

API Version
47.0

Available to Guest Users
47.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedContentVersionCollection getManagedContentByTopics(String
communityId, List<String> topics, Integer pageParam, Integer pageSize, String language,
String managedContentType)

Parameters
communityId
   Type: String
   ID of the community.

topics
   Type: List<String>
   Comma-separated list of up to 15 content topic names.

pageParam
   Type: Integer
   Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
   Type: Integer
   Specifies the number of items per page. Valid values are from 1 through 250. If you pass in null, the default size is 25.

language
   Type: String
   Language locale for the managed content, for example, en_US. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

managedContentType
   Type: String
   The developer name of the content version.
Return Value
Type: `ConnectApi.ManagedContentVersionCollection`

`getManagedContentByTopicsAndIds(communityId, managedContentIds, topics, pageParam, pageSize, language, managedContentType)`
Get managed content versions using a list of managed content IDs and content topic names.

API Version
47.0

Available to Guest Users
47.0

Requires Chatter
No

Signature
`public static ConnectApi.ManagedContentVersionCollection
getManagedContentByTopicsAndIds(String communityId, List<String> managedContentIds, List<String> topics, Integer pageParam, Integer pageSize, String language, String managedContentType)`

Parameters
`communityId`
Type: `String`
ID of the community.

`managedContentIds`
Type: `List<String>`
Comma-separated list of up to 200 managed content IDs.

`topics`
Type: `List<String>`
Comma-separated list of up to 15 content topic names.

`pageParam`
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 250. If you pass in `null`, the default size is 25.

`language`
Type: `String`
Language locale for the managed content, for example, en_US. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

managedContentType
Type: String
The developer name of the content version.

Return Value
Type: ConnectApi.ManagedContentVersionCollection

ManagedTopics Class
Access information about managed topics in a community. Create, delete, and reorder managed topics.

Namespace
ConnectApi

ManagedTopics Methods
The following are methods for ManagedTopics. All methods are static.

IN THIS SECTION:
createManagedTopic(communityId, recordId, managedTopicType)
Create a managed topic of a specific type for a community.
createManagedTopic(communityId, recordId, managedTopicType, parentld)
Create a child managed topic for a community.
createManagedTopicByName(communityId, name, managedTopicType)
Create a managed topic of a specific type by name for a community.
createManagedTopicByName(communityId, name, managedTopicType, parentld)
Create a child managed topic by name for a community.
deleteManagedTopic(communityId, managedTopicId)
Delete a managed topic from a community.
getManagedTopic(communityId, managedTopicId)
Get a managed topic in a community.
getManagedTopic(communityId, managedTopicId, depth)
Get a managed topic, including its parent and children managed topics, in a community.
getManagedTopics(communityId)
Get the featured and navigational managed topics for the community.
getManagedTopics(communityId, managedTopicType)
Get managed topics of the specified type for a community.
getManagedTopics(communityId, managedTopicType, depth)
Get managed topics of the specified type, including their parent and children managed topics, in a community.
getManagedTopics(communityId, managedTopicType, recordId, depth)
Get managed topics of the specified type, including their parent and children managed topics, that are associated with a given topic in a community.

getManagedTopics(communityId, managedTopicType, recordIds, depth)
Get managed topics of the specified type, including their parent and children managed topics, that are associated with topics in a community.

getManagedTopics(communityId, managedTopicType, pageParam, pageSize)
Get a page of managed topics.

reorderManagedTopics(communityId, managedTopicPositionCollection)
Reorder the relative positions of managed topics in a community.

createManagedTopic(communityId, recordId, managedTopicType)
Create a managed topic of a specific type for a community.

API Version
32.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedTopic createManagedTopic(String communityId, String recordId, ConnectApi.ManagedTopicType managedTopicType)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

recordId
Type: String
ID of the topic.

managedTopicType
Type: ConnectApi.ManagedTopicType
Specify the type of managed topic.
• Content—Topics that are associated with native content.
• Featured—Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
• Navigational—Topics that display in a navigational menu in the community.

A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.
You can create up to 25 Featured and 5,000 Content topics. You can create up to eight levels of Navigational managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 Navigational topics.

Return Value
Type: ConnectApi.ManagedTopic

Usage
Only community managers (users with the Create and Set Up Communities or Manage Communities permission) can create managed topics.

Create a child managed topic for a community.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedTopic createManagedTopic(String communityId, String recordId, ConnectApi.ManagedTopicType managedTopicType, String parentId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

recordId
Type: String
ID of the topic.

managedTopicType
Type: ConnectApi.ManagedTopicType
Specify Navigational for the type of managed topic to create a child managed topic.

You can create up to 25 Featured and 5,000 Content topics. You can create up to eight levels of Navigational managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 Navigational topics.

parentId
Type: String
ID of the parent managed topic.

You can create up to eight levels (parent, direct children, their children, etc.) of managed topics and up to 10 children managed topics per managed topic.
Return Value
Type: ConnectApi.ManagedTopic

Usage
Only community managers (users with the Create and Set Up Communities or Manage Communities permission) can create managed topics.

createManagedTopicByName(communityId, name, managedTopicType)
Create a managed topic of a specific type by name for a community.

API Version
32.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedTopic createManagedTopicByName(String communityId, String name, ConnectApi.ManagedTopicType managedTopicType)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

name
Type: String
Name of the topic.

managedTopicType
Type: ConnectApi.ManagedTopicType
Specify the type of managed topic.
- Content—Topics that are associated with native content.
- Featured—Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
- Navigational—Topics that display in a navigational menu in the community.

A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.
You can create up to 25 Featured and 5,000 Content topics. You can create up to eight levels of Navigational managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 Navigational topics.

Return Value
Type: ConnectApi.ManagedTopic
Usage

Only community managers (users with the Create and Set Up Communities or Manage Communities permission) can create managed topics.

`createManagedTopicByName(communityId, name, managedTopicType, parentId)`

Create a child managed topic by name for a community.

API Version

35.0

Requires Chatter

No

Signature

`public static ConnectApi.ManagedTopic createManagedTopicByName(String communityId, String name, ConnectApi.ManagedTopicType managedTopicType, String parentID)`

Parameters

`communityId`

Type: `String`

Use either the ID for a community, `internal`, or `null`.

`name`

Type: `String`

Name of the topic.

`managedTopicType`

Type: `ConnectApi.ManagedTopicType`

Specify `Navigational` for the type of managed topic to create a child managed topic.

You can create up to 25 `Featured` and 5,000 `Content` topics. You can create up to eight levels of `Navigational` managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 `Navigational` topics.

`parentID`

Type: `String`

ID of the parent managed topic.

You can create up to eight levels (parent, direct children, their children, etc.) of managed topics and up to 10 children managed topics per managed topic.

Return Value

Type: `ConnectApi.ManagedTopic`
Usage

Only community managers (users with the Create and Set Up Communities or Manage Communities permission) can create managed topics.

```java
deleteManagedTopic(communityId, managedTopicId)
```

Delete a managed topic from a community.

API Version

32.0

Requires Chatter

No

Signature

```java
public static deleteManagedTopic(String communityId, String managedTopicId)
```

Parameters

- `communityId`
  - Type: String
  - Use either the ID for a community, internal, or null.

- `managedTopicId`
  - Type: String
  - ID of managed topic.

Return Value

Type: Void

Usage

Only community managers (users with the Create and Set Up Communities or Manage Communities permission) can delete managed topics.

```java
getManagedTopic(communityId, managedTopicId)
```

Get a managed topic in a community.

API Version

32.0

Available to Guest Users

32.0
Requires Chatter
No

Signature

```java
public static ConnectApi.ManagedTopic getManagedTopic(String communityId, String managedTopicId)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **managedTopicId**
  - Type: String
  - ID of managed topic.

Return Value

Type: `ConnectApi.ManagedTopic`

**getManagedTopic(communityId, managedTopicId, depth)**

Get a managed topic, including its parent and children managed topics, in a community.

API Version

35.0

Available to Guest Users

35.0

Requires Chatter
No

Signature

```java
public static ConnectApi.ManagedTopic getManagedTopic(String communityId, String managedTopicId, Integer depth)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **managedTopicId**
  - Type: String

- **depth**
  - Type: Integer
ID of managed topic.

**depth**
Type: `Integer`

Specify an integer 1–8. If you specify 1, the `children` property of the `ConnectApi.ManagedTopic` output class is `null`. If you specify 2, the `children` property of the `ConnectApi.ManagedTopic` output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If depth isn’t specified, it defaults to 1.

Return Value
Type: `ConnectApi.ManagedTopic`

**getManagedTopics(communityId)**
Get the featured and navigational managed topics for the community.
To get the content topics for the community, use `getManagedTopics(communityId, managedTopicType)`.

API Version
32.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
```java
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId)
```

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

Return Value
Type: `ConnectApi.ManagedTopicCollection`

**getManagedTopics(communityId, managedTopicType)**
Get managed topics of the specified type for a community.

API Version
32.0
Available to Guest Users
32.0

Requires Chatter
No

Signature

```java
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId,
ConnectApi.ManagedTopicType managedTopicType)
```

Parameters

- `communityId`
  - Type: `String`  
  - Use either the ID for a community, `internal`, or `null`.

- `managedTopicType`
  - Type: `ConnectApi.ManagedTopicType`  
  - Type of managed topic.
    - `Content`—Topics that are associated with native content.
    - `Featured`—Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
    - `Navigational`—Topics that display in a navigational menu in the community.

A topic can be associated with all three managed topic types, so a topic can be a `Featured`, `Navigational`, and `Content` topic.

If you specify `Content`, up to 50 topics are returned. If you want more than 50 `Content` topics, use `getManagedTopics(communityId, managedTopicType, pageParam, pageSize)`.

Return Value

- Type: `ConnectApi.ManagedTopicCollection`

```java
getManagedTopics(communityId, managedTopicType, depth)
```

Get managed topics of the specified type, including their parent and children managed topics, in a community.

API Version
35.0

Available to Guest Users
35.0

Requires Chatter
No
Signature

```java
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId,
                    ConnectApi.ManagedTopicType managedTopicType, Integer depth)
```

Parameters

- **communityId**
  
  Type: `String`
  
  Use either the ID for a community, `internal`, or `null`.

- **managedTopicType**
  
  Type: `ConnectApi.ManagedTopicType`
  
  Type of managed topic.
  
  - Content — Topics that are associated with native content.
  
  - Featured — Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
  
  - Navigational — Topics that display in a navigational menu in the community.

  A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.

- **depth**
  
  Type: `Integer`
  
  Specify an integer 1–8. If you specify 1, the `children` property of the `ConnectApi.ManagedTopic` output class is `null`. If you specify 2, the children property of the `ConnectApi.ManagedTopic` output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If depth isn’t specified, it defaults to 1.

Return Value

Type: `ConnectApi.ManagedTopicCollection`

### getManagedTopics(communityId, managedTopicType, recordId, depth)

Get managed topics of the specified type, including their parent and children managed topics, that are associated with a given topic in a community.

**API Version**

35.0–37.0

**Important:** In version 38.0 and later, use `getManagedTopics(communityId, managedTopicType, recordIds, depth)`.

**Available to Guest Users**

35.0

**Requires Chatter**

No
Signature

```java
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId, ConnectApi.ManagedTopicType managedTopicType, String recordId, Integer depth)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`managedTopicType`
Type: `ConnectApi.ManagedTopicType`
Type of managed topic.
- **Content**—Topics that are associated with native content.
- **Featured**—Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
- **Navigational**—Topics that display in a navigational menu in the community.

A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.

`recordId`
Type: `String`
ID of the topic associated with the managed topics.

`depth`
Type: `Integer`
Specify an integer 1–8. If you specify 1, the `children` property of the `ConnectApi.ManagedTopic` output class is `null`. If you specify 2, the `children` property of the `ConnectApi.ManagedTopic` output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If depth isn’t specified, it defaults to 1.

Return Value

Type: `ConnectApi.ManagedTopicCollection`

```java
getManagedTopics(communityId, managedTopicType, recordIds, depth)
```

Get managed topics of the specified type, including their parent and children managed topics, that are associated with topics in a community.

API Version

38.0

Available to Guest Users

38.0
Requires Chatter

No

Signature

```java
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId,
ConnectApi.ManagedTopicType managedTopicType, List<String> recordIds, Integer depth)
```

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**managedTopicType**
Type: ConnectApi.ManagedTopicType
Type of managed topic.
- Content—Topics that are associated with native content.
- Featured—Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
- Navigational—Topics that display in a navigational menu in the community.

A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.

**recordIds**
Type: List<String>
A list of up to 100 topic IDs associated with the managed topics.
If you list more than 10 topic IDs, you can’t specify 2–8 for depth.

**depth**
Type: Integer
Specify an integer 1–8. If you specify 1, the children property of the ConnectApi.ManagedTopic output class is null.
If you specify 2, the children property of the ConnectApi.ManagedTopic output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If depth isn’t specified, it defaults to 1.

Return Value

Type: ConnectApi.ManagedTopicCollection

**getManagedTopics(communityId, managedTopicType, pageParam, pageSize)**
Get a page of managed topics.

API Version

44.0
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId, ConnectApi.ManagedTopicType managedTopicType, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

managedTopicType
Type: ConnectApi.ManagedTopicType
Type of managed topic.
- Content—Topics that are associated with native content.
- Featured—Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
- Navigational—Topics that display in a navigational menu in the community.
A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 50.

Return Value
Type: ConnectApi.ManagedTopicCollection

reorderManagedTopics(communityId, managedTopicPositionCollection)
Reorder the relative positions of managed topics in a community.

API Version
32.0
Requires Chatter
No

Signature

```java
public static ConnectApi.ManagedTopicCollection reorderManagedTopics(String communityId,
ConnectApi.ManagedTopicPositionCollectionInput managedTopicPositionCollection)
```

Parameters

- `communityId`  
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `managedTopicPositionCollection`  
  Type: `ConnectApi.ManagedTopicPositionCollectionInput`
  A collection of relative positions of managed topics. This collection can include only `Featured` and `Navigational` topics and doesn't have to include all managed topics.

Return Value

Type: `ConnectApi.ManagedTopicCollection`

Usage

Only community managers (users with the Create and Set Up Communities or Manage Communities permission) can reorder managed topics.

You can reorder parent managed topics or children managed topics with the same parent. If you don't include all managed topics in the `ConnectApi.ManagedTopicPositionCollectionInput`, the managed topics are reordered by respecting the positions indicated in the `ConnectApi.ManagedTopicPositionCollectionInput` and then by pushing down any managed topics that aren't included in the `ConnectApi.ManagedTopicPositionCollectionInput` to the next available position.

Example

If you have these managed topics:

<table>
<thead>
<tr>
<th>Managed Topic</th>
<th>Position</th>
</tr>
</thead>
<tbody>
<tr>
<td>ManagedTopicA</td>
<td>0</td>
</tr>
<tr>
<td>ManagedTopicB</td>
<td>1</td>
</tr>
<tr>
<td>ManagedTopicC</td>
<td>2</td>
</tr>
<tr>
<td>ManagedTopicD</td>
<td>3</td>
</tr>
<tr>
<td>ManagedTopicE</td>
<td>4</td>
</tr>
</tbody>
</table>

And you reorder managed topics by including this information in `ConnectApi.ManagedTopicPositionCollectionInput`: 

...
The result is:

<table>
<thead>
<tr>
<th>Managed Topic</th>
<th>Position</th>
</tr>
</thead>
<tbody>
<tr>
<td>ManagedTopicD</td>
<td>0</td>
</tr>
<tr>
<td>ManagedTopicA</td>
<td>1</td>
</tr>
<tr>
<td>ManagedTopicE</td>
<td>2</td>
</tr>
<tr>
<td>ManagedTopicB</td>
<td>3</td>
</tr>
<tr>
<td>ManagedTopicC</td>
<td>4</td>
</tr>
</tbody>
</table>

**Mentions Class**

Access information about mentions. A mention is an "@" character followed by a user or group name. When a user or group is mentioned, they receive a notification.

**Namespace**

ConnectApi

**Mentions Methods**

The following are methods for Mentions. All methods are static.

In this section:

- `getMentionCompletions(communityId, q, contextId)`: Get the first page of possible users and groups to mention in a feed item body or comment body.
- `getMentionCompletions(communityId, q, contextId, type, pageParam, pageSize)`: Get a page of possible mention proposals of the specified type.
- `getMentionValidations(communityId, parentId, recordIds, visibility)`: Get information about whether the mentions are valid for the context user.

**getMentionCompletions(communityId, q, contextId)**

Get the first page of possible users and groups to mention in a feed item body or comment body.

**API Version**

29.0
Requires Chatter
Yes

Signature

public static ConnectApi.MentionCompletionPage getMentionCompletions (String communityId, String q, String contextId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn’t require a minimum number of characters. This parameter does not support wildcards.

circuitId
Type: String
A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

Return Value

Type: ConnectApi.MentionCompletionPage

Usage

Call this method to generate a page of proposed mentions that a user can choose from when they enter characters after @ in a feed item body or a comment body.

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

setTestGetMentionCompletions(communityId, q, contextId, result)

Testing ConnectApi Code

getMentionCompletions(communityId, q, contextId, type, pageParam, pageSize)

Get a page of possible mention proposals of the specified type.

API Version
29.0
Requires Chatter
Yes

Signature
public static ConnectApi.Mentions getMentionCompletions (String communityId, String q, String contextId, ConnectApi.MentionCompletionType type, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn’t require a minimum number of characters. This parameter does not support wildcards.

casti
Type: String
A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

type
Type: ConnectApi.MentionCompletionType
Type of mention completion.

• All—All mention completions, regardless of the type of record to which the mention refers.
• Group—Mention completions for groups.
• User—Mention completions for users.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.MentionCompletionPage

Usage
Call this method to generate a page of proposed mentions that a user can choose from when they enter characters after @ in a feed item body or a comment body.
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetMentionCompletions(communityId, q, contextId, type, pageParam, pageSize, result)`
- Testing ConnectApi Code

**getMentionValidations(communityId, parentId, recordIds, visibility)**

Get information about whether the mentions are valid for the context user.

**API Version**

29.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.Mentions getMentionValidations(String communityId, String parentId, List<String> recordIds, ConnectApi.FeedItemVisibilityType visibility)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **parentId**
  - Type: `String`
  - The feed item parent ID.

- **recordIds**
  - Type: `List<String>`
  - A comma separated list of IDs to be mentioned. The maximum value is 25.

- **visibility**
  - Type: `ConnectApi.FeedItemVisibilityType`
  - Type of users who can see a feed item.
    - `AllUsers`—Visibility is not limited to internal users.
    - `InternalUsers`—Visibility is limited to internal users.

**Return Value**

- Type: `ConnectApi.MentionValidations`
Usage

Call this method to check whether the record IDs returned from a call to `ConnectApi.Mentions.getMentionCompletions` are valid for the context user. For example, the context users can’t mention private groups they don’t belong to. If such a group were included in the list of mention validations, the `ConnectApi.MentionValidations.hasErrors` property would be true and the group would have a `ConnectApi.MentionValidation.validationStatus` of Disallowed.

**Mentions Test Methods**

The following are the test methods for `Mentions`. All methods are static.

For information about using these methods to test your `ConnectApi` code, see [Testing ConnectApi Code](#).

**setTestGetMentionCompletions(communityId, q, contextId, result)**

Register a `ConnectApi.MentionCompletionPage` object to be returned when `getMentionCompletions(String, String, String)` is called in a test context.

**API Version**

29.0

**Signature**

```java
public static Void setTestGetMentionCompletions(String communityId, String q, String contextId, ConnectApi.MentionCompletionPage result)
```

**Parameters**

- `communityId`
  
  Type: `String`
  
  Use either the ID for a community, `internal` or `null`.

- `q`
  
  Type: `String`
  
  A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn’t require a minimum number of characters. This parameter does not support wildcards.

- `contextId`
  
  Type: `String`
  
  A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

- `result`
  
  Type: `ConnectApi.MentionCompletionPage`
  
  A `ConnectApi.MentionCompletionPage` object containing test data.
Return Value
Type: Void

SEE ALSO:
getMentionCompletions(communityId, q, contextId)
Testing ConnectApi Code

```
setTestGetMentionCompletions(communityId, q, contextId, type, pageParam, pageSize, result)
```

Register a ConnectApi.MentionCompletionPage object to be returned when getMentionCompletions(String, String, String, ConnectApi.MentionCompletionType, Integer, Integer) is called in a test context.

API Version
29.0

Signature
```
public static Void setTestGetMentionCompletions (String communityId, String q, String contextId, ConnectApi.MentionCompletionType type, Integer pageParam, Integer pageSize, ConnectApi.MentionCompletionPage result)
```

Parameters
```
communityId
  Type: String
  Use either the ID for a community, internal, or null.

q
  Type: String
  A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn’t require a minimum number of characters. This parameter does not support wildcards.

contextId
  Type: String
  A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

type
  Type: ConnectApi.MentionCompletionType
  Type of mention completion.
  • All—All mention completions, regardless of the type of record to which the mention refers.
  • Group—Mention completions for groups.
  • User—Mention completions for users.

pageParam
  Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**

Type: Integer

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**result**

Type: ConnectApi.MentionCompletionPage

A ConnectApi.MentionCompletionPage object containing test data.

Return Value

Type: Void

SEE ALSO:

getMentionCompletions(communityId, q, contextId, type, pageParam, pageSize)

Testing ConnectApi Code

**Missions Class**

Export and purge mission activity for users. Get a user’s mission progress. Update mission activity counts for users.

**Namespace**

ConnectApi

**Missions Methods**

The following are methods for Missions. All methods are static.

IN THIS SECTION:

exportUserMissionsActivities(communityId, userId)

Export mission activity for a user.

getUserMissionsProgress(communityId, userId)

Get mission activity progress for a user.

purgeUserMissionsActivities(communityId, userId)

Start a job to purge mission activity for a user.

updateUserMissionActivityCount(activityType, activityCount, communityId, userId)

Update the mission activity count for a user.

**exportUserMissionsActivities(communityId, userId)**

Export mission activity for a user.

API Version

45.0
Requires Chatter
No

Signature

```java
public static ConnectApi.UserMissionActivitiesJob exportUserMissionsActivities(String communityId, String userId)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **userId**
  - Type: `String`
  - ID of the user.

Return Value

Type: `ConnectApi.UserMissionActivitiesJob`

Usage

You can export these activities with this method.

- **FeedItemAnswerAQuestion**—User answered a question.
- **FeedItemLikeSomething**—User liked a post or comment.
- **FeedItemMarkAnswerAsBest**—User marked an answer as the best answer.
- **FeedItemPostQuestion**—User posted a question.
- **FeedItemReceiveAComment**—User received a comment on a post.
- **FeedItemReceiveALike**—User received a like on a post or comment.
- **FeedItemReceiveAnAnswer**—User received an answer to a question.
- **FeedItemWriteAComment**—User commented on a post.
- **FeedItemWriteAPost**—User made a post.
- **FeedItemYourAnswerMarkedBest**—User’s answer was marked as the best answer.

**getUserMissionsProgress(communityId, userId)**

Get mission activity progress for a user.

API Version

46.0

Requires Chatter
No
public static ConnectApi.UserMissionActivityCollection getUserMissionsProgress(String communityId, String userId)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

userId
  Type: String
  ID of the user.

Return Value

Type: ConnectApi.UserMissionActivityCollection

purgeUserMissionsActivities(communityId, userId)

Start a job to purge mission activity for a user.

API Version

45.0

Requires Chatter

No

Signature

public static ConnectApi.UserMissionActivitiesJob purgeUserMissionsActivities(String communityId, String userId)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

userId
  Type: String
  ID of the user.

Return Value

Type: ConnectApi.UserMissionActivitiesJob
Usage

You can purge these activities with this method.

- FeedItemAnswerAQuestion—User answered a question.
- FeedItemLikeSomething—User liked a post or comment.
- FeedItemMarkAnswerAsBest—User marked an answer as the best answer.
- FeedItemPostQuestion—User posted a question.
- FeedItemReceiveAComment—User received a comment on a post.
- FeedItemReceiveALike—User received a like on a post or comment.
- FeedItemReceiveAnAnswer—User received an answer to a question.
- FeedItemWriteAComment—User commented on a post.
- FeedItemWriteAPost—User made a post.
- FeedItemYourAnswerMarkedBest—User’s answer was marked as the best answer.

updateUserMissionActivityCount(activityType, activityCount, communityId, userId)

Update the mission activity count for a user.

API Version
45.0

Requires Chatter
No

Signature

public static ConnectApi.UserMissionActivityStatus updateUserMissionActivityCount(ConnectApi.UserMissionActivityType activityType, Integer activityCount, String communityId, String userId)

Parameters

activityType
Type: ConnectApi.UserMissionActivityType
Type of mission activity for a user. Values are:

- FeedItemAnswerAQuestion—User answered a question.
- FeedItemLikeSomething—User liked a post or comment.
- FeedItemMarkAnswerAsBest—User marked an answer as the best answer.
- FeedItemPostQuestion—User posted a question.
- FeedItemReceiveAComment—User received a comment on a post.
- FeedItemReceiveALike—User received a like on a post or comment.
- FeedItemReceiveAnAnswer—User received an answer to a question.
- FeedItemWriteAComment—User commented on a post.
• FeedItemWriteAPost—User made a post.
• FeedItemYourAnswerMarkedBest—User’s answer was marked as the best answer.

activityCount
  Type: Integer
  Number of mission activities of the specified type for the user.

communityId
  Type: String
  Use either the ID for a community, internal, or null.

userId
  Type: String
  ID of the user.

Return Value
  Type: ConnectApi.UserMissionActivityStatus

NextBestAction Class
Execute recommendation strategies, get recommendations, manage recommendation reactions.

Namespace
ConnectApi

NextBestAction Methods
The following are methods for NextBestAction. All methods are static.

IN THIS SECTION:
  - deleteRecommendationReaction(reactionId)
    Delete a recommendation reaction.
  - executeStrategy(strategyName, maxResults, contextRecordId)
    Execute a strategy.
  - executeStrategy(strategyName, maxResults, contextRecordId, debugTrace)
    Execute a strategy and request a trace.
  - executeStrategy(strategyName, strategyInput)
    Execute a strategy using an input class.
  - getRecommendation(recommendationId)
    Get a recommendation.
  - getRecommendationReaction(reactionId)
    Get a recommendation reaction.
  - getRecommendationReactions(onBehalfOfId, createdById, targetId, contextRecordId, pageParam, pageSize)
    Get recommendation reactions.
setRecommendationReaction(reaction)
Record user reactions to recommendations.

`deleteRecommendationReaction(reactionId)`
Delete a recommendation reaction.

API Version
45.0

Requires Chatter
No

Signature
`public static Void deleteRecommendationReaction(String reactionId)`

Parameters
`reactionId`  
Type: String  
ID of the recommendation reaction.

Return Value
Type: Void

Usage
Users with the Manage Next Best Action Recommendations or Modify All Data permission can delete recommendation reactions.

`executeStrategy(strategyName, maxResults, contextRecordId)`
Execute a strategy.

API Version
45.0

Available to Guest Users
45.0

Requires Chatter
No
Signature

```java
public static ConnectApi.NBARecommendations executeStrategy(String strategyName, Integer maxResults, String contextRecordId)
```

Parameters

- **strategyName**
  - Type: `String`
  - Name of the strategy.

- **maxResults**
  - Type: `Integer`
  - Maximum number of results. Valid values are from 1 to 25. The default is 3.

- **contextRecordId**
  - Type: `String`
  - ID of the context record. For example, if the next best action is on a case detail page, the ID of the case.

Return Value

Type: `ConnectApi.NBARecommendations`

```java
executeStrategy(strategyName, maxResults, contextRecordId, debugTrace)
```

Execute a strategy and request a trace.

API Version

```
45.0
```

Available to Guest Users

```
45.0
```

Requires Chatter

No

Signature

```java
public static ConnectApi.NBARecommendations executeStrategy(String strategyName, Integer maxResults, String contextRecordId, Boolean debugTrace)
```

Parameters

- **strategyName**
  - Type: `String`
  - Name of the strategy.

- **maxResults**
  - Type: `Integer`

- **contextRecordId**
  - Type: `String`

- **debugTrace**
  - Type: `Boolean`
Maximum number of results. Valid values are from 1 to 25. The default is 3.

contextRecordId
Type: String
ID of the context record. For example, if the next best action is on a case detail page, the ID of the case.

dbtrace
Type: Boolean
Specifies whether to return trace and debug information in the response (true) or not (false).

Return Value
Type: ConnectApi.NBARecommendations

executeStrategy(strategyName, strategyInput)
Execute a strategy using an input class.

API Version
45.0

Available to Guest Users
45.0

Requires Chatter
No

Signature
public static ConnectApi.NBARecommendations executeStrategy(String strategyName, ConnectApi.NBASTrategyInput strategyInput)

Parameters
strategyName
Type: String
Name of the strategy.

strategyInput
Type: ConnectApi.NBASTrategyInput
A ConnectApi.NBASTrategyInput.body.

Return Value
Type: ConnectApi.NBARecommendations
**getRecommendation(recommendationId)**

Get a recommendation.

API Version

45.0

Requires Chatter

No

Signature

```java
public static ConnectApi.Recommendation getRecommendation(String recommendationId)
```

Parameters

- `recommendationId`
  - Type: `String`
  - ID of the recommendation.

Return Value

Type: `ConnectApi.Recommendation`

**getRecommendationReaction(reactionId)**

Get a recommendation reaction.

API Version

45.0

Requires Chatter

No

Signature

```java
public static ConnectApi.RecommendationReaction getRecommendationReaction(String reactionId)
```

Parameters

- `reactionId`
  - Type: `String`
  - ID of the recommendation reaction.
Return Value
Type: `ConnectApi.RecommendationReaction`

Usage
Users with the Manage Next Best Action Recommendations or Modify All Data permission can get recommendation reactions.

```java
public static ConnectApi.RecommendationReactions getRecommendationReactions(String onBehalfOfId, String createdById, String targetId, String contextRecordId, Integer pageParam, Integer pageSize)
```
Get recommendation reactions.

API Version
45.0

Requires Chatter
No

Signature
```java
public static ConnectApi.RecommendationReactions getRecommendationReactions(String onBehalfOfId, String createdById, String targetId, String contextRecordId, Integer pageParam, Integer pageSize)
```

Parameters

- `onBehalfOfId`
  Type: `String`
  Use the ID of the user who is indirectly reacting to the recommendation to filter the results.

- `createdById`
  Type: `String`
  Use the ID of the user or record that created the recommendation reaction to filter the results.

- `targetId`
  Type: `String`
  Use the ID of the target to filter the results.

- `contextRecordId`
  Type: `String`
  Use the ID of a context record to filter the results.

- `pageParam`
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
Return Value
Type: `ConnectApi.RecommendationReactions`

Usage
Users with the Manage Next Best Action Recommendations or Modify All Data permission can get recommendation reactions.

```java
setRecommendationReaction(reaction)
```
Record user reactions to recommendations.

API Version
45.0

Requires Chatter
No

Signature
```java
public static ConnectApi.RecommendationReaction
setRecommendationReaction(ConnectApi.RecommendationReactionInput reaction)
```

Parameters
```
reaction
    Type: `ConnectApi.RecommendationReactionInput`
    A `ConnectApi.RecommendationReactionInput` object representing a reaction to a recommendation produced by a recommendation strategy.
```

Return Value
Type: `ConnectApi.RecommendationReaction`

Organization Class
Access information about an org.

Namespace
`ConnectApi`

Organization Methods
The following are methods for `Organization`. All methods are static.
IN THIS SECTION:

getSettings()
Get information about the context user and the org, including which features are enabled.

getSettings()
Get information about the context user and the org, including which features are enabled.

API Version
28.0

Requires Chatter
No

Signature
public static ConnectApi. OrganizationSettings getSettings()

Return Value
Type: ConnectApi.OrganizationSettings

QuestionAndAnswers Class
Access question and answers suggestions.

Namespace
ConnectApi

IN THIS SECTION:

QuestionAndAnswers Methods

QuestionAndAnswers Methods
The following are methods for QuestionAndAnswers. All methods are static.

IN THIS SECTION:

getSuggestions(communityId, q, subjectId, includeArticles, maxResults)
Get question and answers suggestions.

setTestGetSuggestions(communityId, q, subjectId, includeArticles, maxResults, result)
Register a ConnectApi.QuestionAndAnswersSuggestions object to be returned when getSuggestions is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

updateQuestionAndAnswers(communityId, feedElementId, questionAndAnswersCapability)
Choose or change the best answer for a question.
getSuggestions(communityId, q, subjectId, includeArticles, maxResults)
Get question and answers suggestions.

API Version
32.0

Requires Chatter
No

Signature
public static ConnectApi.QuestionAndAnswersSuggestions getSuggestions(String communityId, String q, String subjectId, Boolean includeArticles, Integer maxResults)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

subjectId
Type: String
Specify a subject ID to search only questions on that object. If the ID is a topic or a user, the ID is ignored.

includeArticles
Type: Boolean
Specify true to include knowledge articles in the search results. To return only questions, specify false.

maxResults
Type: Integer
The maximum number of results to return for each type of item. Possible values are 1–10. The default value is 5.

Return Value
Type: ConnectApi.QuestionAndAnswersSuggestions
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```
setTestGetSuggestions(communityId, q, subjectId, includeArticles, maxResults, result)
```

Testing ConnectApi Code

`setTestGetSuggestions(communityId, q, subjectId, includeArticles, maxResults, result)`

Register a `ConnectApi.QuestionAndAnswersSuggestions` object to be returned when `getSuggestions` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

32.0

Signature

```
public static Void setTestGetSuggestions(String communityId, String q, String subjectId, Boolean includeArticles, Integer maxResults, ConnectApi.QuestionAndAnswersSuggestions result)
```

Parameters

`communityId`

Type: `String`

Use either the ID for a community, `internal`, or `null`.

`q`

Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`subjectId`

Type: `String`

Specify a subject ID to search only questions on that object. If the ID is a topic or a user, the ID is ignored.

`includeArticles`

Type: `Boolean`

Specify `true` to include knowledge articles in the search results. To return only questions, specify `false`.

`maxResults`

Type: `Integer`

The maximum number of results to return for each type of item. Possible values are 1–10. The default value is 5.

`result`

Type: `ConnectApi.QuestionAndAnswersSuggestions`

The object containing test data.
Return Value
Type: Void

SEE ALSO:
getSuggestions(communityId, q, subjectId, includeArticles, maxResults)
Testing ConnectApi Code

updateQuestionAndAnswers(communityId, feedElementId, questionAndAnswersCapability)
Choose or change the best answer for a question.

API Version
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.QuestionAndAnswersCapability updateQuestionAndAnswers(String communityId, String feedElementId, ConnectApi.QuestionAndAnswersCapabilityInput questionAndAnswersCapability)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

questionAndAnswersCapability
Type: ConnectApi.QuestionAndAnswersCapabilityInput
Specify the best answer (comment ID) for the question.

Return Value
Type: ConnectApi.QuestionAndAnswersCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

Example
ConnectApi.QuestionAndAnswersCapabilityInput qaInput = new
ConnectApi.QuestionAndAnswersCapabilityInput();
qaInput.bestAnswerId = '0D7D00000000lMAKAY';
Recommendations Class

Get and reject Chatter, custom, and static recommendations. Create, get, update, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

For Next Best Action recommendations, see NextBestAction Class.

Namespace

ConnectApi

Recommendations Methods

The following are methods for Recommendations. All methods are static.

IN THIS SECTION:

- `createRecommendationAudience(communityId, recommendationAudience)`
  - Create an audience for a custom recommendation.

- `createRecommendationAudience(communityId, name)`
  - Create an audience for a custom recommendation.

- `createRecommendationDefinition(communityId, recommendationDefinition)`
  - Create a custom recommendation definition.

- `createRecommendationDefinition(communityId, name, title, actionUrl, actionUrlName, explanation)`
  - Create a custom recommendation definition with the specified parameters.

- `createScheduledRecommendation(communityId, scheduledRecommendation)`
  - Create a scheduled custom recommendation.

- `createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId)`
  - Create a scheduled custom recommendation with the specified parameters.

- `createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId, channel)`
  - Create a scheduled custom recommendation with the specified parameters.

- `deleteRecommendationAudience(communityId, recommendationAudienceId)`
  - Delete a custom recommendation audience.

- `deleteRecommendationDefinition(communityId, recommendationDefinitionId)`
  - Delete a custom recommendation definition.

- `deleteRecommendationDefinitionPhoto(communityId, recommendationDefinitionId)`
  - Delete a custom recommendation definition photo.

- `deleteScheduledRecommendation(communityId, scheduledRecommendationId, deleteDefinitionIfLast)`
  - Delete a scheduled custom recommendation.

- `getRecommendationAudience(communityId, recommendationAudienceId)`
  - Get information about a custom recommendation audience.
getRecommendationAudienceMembership(communityId, recommendationAudienceId)
Get the members of a custom recommendation audience.

getRecommendationAudienceMembership(communityId, recommendationAudienceId, pageParam, pageSize)
Get a page of custom recommendation audience members.

getRecommendationAudiences(communityId)
Get custom recommendation audiences.

getRecommendationAudiences(communityId, pageParam, pageSize)
Get a page of custom recommendation audiences.

getRecommendationDefinition(communityId, recommendationDefinitionId)
Get a custom recommendation definition.

getRecommendationDefinitionPhoto(communityId, recommendationDefinitionId)
Get a custom recommendation definition photo.

getRecommendationDefinitions(communityId)
Get custom recommendation definitions.

getRecommendationForUser(communityId, userId, action, objectId)
Get the Chatter, custom, or static recommendation for the context user for the specified action and object ID.

getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults)
Get the Chatter recommendations, such as user, group, file, and record recommendations for the context user. Get the custom and static recommendations for the context user.

getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults)
Get the Chatter recommendations, such as user, group, file, article, record, and topic recommendations for the context user. Get the custom and static recommendations for the context user.

getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults)
Get the Chatter, custom, and static recommendations for the context user for the specified action.

getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults)
Get the Chatter, custom, and static recommendations for the context user for the specified action and object category.

getScheduledRecommendation(communityId, scheduledRecommendationId)
Get a scheduled custom recommendation.

getScheduledRecommendations(communityId)
Get scheduled custom recommendations.

getScheduledRecommendations(communityId, channel)
Get scheduled custom recommendations.

rejectRecommendationForUser(communityId, userId, action, objectId)
Reject a Chatter, custom, or static recommendation for the context user for the specified action and object ID.

rejectRecommendationForUser(communityId, userId, action, objectEnum)
Reject a static recommendation for the context user.
createRecommendationAudience(communityId, recommendationAudience)
Create an audience for a custom recommendation.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationAudience createRecommendationAudience(String communityId, ConnectApi.RecommendationAudienceInput recommendationAudience)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

recommendationAudience
Type: ConnectApi.RecommendationAudienceInput
A ConnectApi.RecommendationAudienceInput object.
Return Value
Type: ConnectApi.RecommendationAudience

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

createRecommendationAudience(communityId, name)
Create an audience for a custom recommendation.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationAudience createRecommendationAudience(String communityId, String name)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

name
Type: String
Name of the audience.

Return Value
Type: ConnectApi.RecommendationAudience

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.
createRecommendationDefinition(communityId, recommendationDefinition)

Create a custom recommendation definition.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationDefinition createRecommendationDefinition(String communityId, ConnectApi.RecommendationDefinitionInput recommendationDefinition)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

recommendationDefinition
Type: ConnectApi.RecommendationDefinitionInput
A ConnectApi.RecommendationDefinitionInput object.

Return Value
Type: ConnectApi.RecommendationDefinition

Usage
Recommendation definitions allow you to create custom recommendations that appear in communities, encouraging users to watch videos, take training and more.

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

These recommendations appear by default on the Customer Service template. They appear on the community home and question detail pages and in the feed in communities in Salesforce mobile web. They also appear anywhere community managers add recommendations using Community Builder in communities using the Customer Service template.

createRecommendationDefinition(communityId, name, title, actionUrl, actionUrlName, explanation)

Create a custom recommendation definition with the specified parameters.
API Version
35.0

Requires Chatter
No

Signature
`public static ConnectApi.RecommendationDefinition createRecommendationDefinition(String communityId, String name, String title, String actionUrl, String actionUrlName, String explanation)`

Parameters
- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- **name**
  Type: `String`
  Name of the custom recommendation definition. The name is displayed in Setup.
- **title**
  Type: `String`
  Title of the custom recommendation definition.
- **actionUrl**
  Type: `String`
  URL for acting on the custom recommendation, for example, the URL to join a group.
- **actionUrlName**
  Type: `String`
  Text label for the action URL in the user interface, for example, “Launch.”
- **explanation**
  Type: `String`
  Explanation, or body, of the custom recommendation.

Return Value
Type: `ConnectApi.RecommendationDefinition`

Usage
Recommendation definitions allow you to create custom recommendations that appear in communities, encouraging users to watch videos, take training and more.

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can
also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

These recommendations appear by default on the Customer Service template. They appear on the community home and question detail pages and in the feed in communities in Salesforce mobile web. They also appear anywhere community managers add recommendations using Community Builder in communities using the Customer Service template.

**createScheduledRecommendation**(communityId, scheduledRecommendation)
Create a scheduled custom recommendation.

**API Version**
35.0

**Requires Chatter**
No

**Signature**
```
public static ConnectApi.ScheduledRecommendation createScheduledRecommendation(String communityId, ConnectApi.ScheduledRecommendationInput scheduledRecommendation)
```

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>communityId</strong></td>
<td><strong>String</strong></td>
<td>Use either the ID for a community, internal, or null.</td>
</tr>
<tr>
<td><strong>scheduledRecommendation</strong></td>
<td><strong>ConnectApi.ScheduledRecommendationInput</strong></td>
<td>A ConnectApi.ScheduledRecommendationInput object.</td>
</tr>
</tbody>
</table>

**Return Value**

Type: **ConnectApi.ScheduledRecommendation**

**Usage**

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**createScheduledRecommendation**(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId)
Create a scheduled custom recommendation with the specified parameters.
API Version
35.0 only

⚠️ Important: In version 36.0 and later, use `createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId, channel)`.

Requires Chatter
No

Signature

```java
public static ConnectApi.ScheduledRecommendation createScheduledRecommendation(String communityId, String recommendationDefinitionId, Integer rank, Boolean enabled, String recommendationAudienceId)
```

Parameters

`communityId`
Type: String
Use either the ID for a community, `internal`, or `null`.

`recommendationDefinitionId`
Type: String
ID of the custom recommendation definition.

`rank`
Type: Integer
Relative rank of the scheduled custom recommendation indicated by ascending whole numbers starting with 1.
Setting the rank is comparable to an insertion into an ordered list. The scheduled custom recommendation is inserted into the position specified by the `rank`. The `rank` of all the scheduled custom recommendations after it is pushed down. See Ranking scheduled custom recommendations example.
If the specified `rank` is larger than the size of the list, the scheduled custom recommendation is put at the end of the list. The `rank` of the scheduled custom recommendation is the size of the list, instead of the one specified.
If a `rank` is not specified, the scheduled custom recommendation is put at the end of the list.

`enabled`
Type: Boolean
Indicates whether scheduling is enabled. If `true`, the custom recommendation is enabled and appears in communities. If `false`, custom recommendations in feeds in Salesforce mobile web aren’t removed, but no new custom recommendations appear. In Customer Service and Partner Central communities, disabled custom recommendations no longer appear.

`recommendationAudienceId`
Type: String
ID of the custom recommendation definition that this scheduled recommendation schedules.

Return Value
Type: `ConnectApi.ScheduledRecommendation`
Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

Ranking scheduled custom recommendations example

If you have these scheduled custom recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendations</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>3</td>
</tr>
</tbody>
</table>

And you include this information in the Scheduled Custom Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>

createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId, channel)

Create a scheduled custom recommendation with the specified parameters.

API Version

36.0

Requires Chatter

No
public static ConnectApi.ScheduledRecommendation createScheduledRecommendation(String communityId, String recommendationDefinitionId, Integer rank, Boolean enabled, String recommendationAudienceId, ConnectApi.RecommendationChannel channel)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

recommendationDefinitionId
Type: String
ID of the custom recommendation definition.

rank
Type: Integer
Relative rank of the scheduled custom recommendation indicated by ascending whole numbers starting with 1.
Setting the rank is comparable to an insertion into an ordered list. The scheduled custom recommendation is inserted into the position specified by the rank. The rank of all the scheduled custom recommendations after it is pushed down. See Ranking scheduled custom recommendations example.
If the specified rank is larger than the size of the list, the scheduled custom recommendation is put at the end of the list. The rank of the scheduled custom recommendation is the size of the list, instead of the one specified.
If a rank is not specified, the scheduled custom recommendation is put at the end of the list.

enabled
Type: Boolean
Indicates whether scheduling is enabled. If true, the custom recommendation is enabled and appears in communities. If false, custom recommendations in feeds in Salesforce mobile web aren’t removed, but no new custom recommendations appear. In Customer Service and Partner Central communities, disabled custom recommendations no longer appear.

recommendationAudienceId
Type: String
ID of the custom recommendation definition that this scheduled recommendation schedules.

channel
Type: ConnectApi.RecommendationChannel
A way to tie custom recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:
• CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.
• CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• **CustomChannel**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.

• **DefaultChannel**—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Community Builder.

Use these channel values; you can’t rename or create other channels.

**Return Value**

**Type:** `ConnectApi.ScheduledRecommendation`

**Usage**

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**Ranking scheduled custom recommendations example**

If you have these scheduled custom recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>3</td>
</tr>
</tbody>
</table>

And you include this information in the Scheduled Custom Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>

**deleteRecommendationAudience(communityId, recommendationAudienceId)**

Delete a custom recommendation audience.
API Version
35.0

Requires Chatter
No

Signature
public static Void deleteRecommendationAudience(String communityId, String recommendationAudienceId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.
recommendationAudienceId
Type: String
ID of the custom recommendation audience.

Return Value
Type: Void

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

deleteRecommendationDefinition(communityId, recommendationDefinitionId)
Delete a custom recommendation definition.

API Version
35.0

Requires Chatter
No

Signature
public static Void deleteRecommendationDefinition(String communityId, String recommendationDefinitionId)
Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

recommendationDefinitionId
  Type: String
  ID of the custom recommendation definition.

Return Value
Type: Void

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

deleteRecommendationDefinitionPhoto(communityId, recommendationDefinitionId)
Delete a custom recommendation definition photo.

API Version
35.0

Requires Chatter
Yes

Signature
public static Void deleteRecommendationDefinitionPhoto(String communityId, String recommendationDefinitionId)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

recommendationDefinitionId
  Type: String
  ID of the custom recommendation definition.

Return Value
Type: Void
Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

deleteScheduledRecommendation(communityId, scheduledRecommendationId, deleteDefinitionIfLast)

Delete a scheduled custom recommendation.

API Version

35.0

Requires Chatter

No

Signature

public static Void deleteScheduledRecommendation(String communityId, String scheduledRecommendationId, Boolean deleteDefinitionIfLast)

Parameters

communityId

Type: String

Use either the ID for a community, internal, or null.
scheduledRecommendationId

Type: String

ID of the scheduled custom recommendation.
dele

Type: Boolean

If true and if this is the last scheduled custom recommendation of a custom recommendation definition, deletes the custom recommendation definition. Default is false.

Return Value

Type: Void

Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.
Deleting a scheduled custom recommendation is comparable to a deletion in an ordered list. All scheduled custom recommendations after the deleted scheduled custom recommendation receive a new, higher rank automatically.

getRecommendationAudience(communityId, recommendationAudienceId)

Get information about a custom recommendation audience.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationAudience getRecommendationAudience(String communityId, String recommendationAudienceId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

recommendationAudienceId
Type: String
ID of the custom recommendation audience.

Return Value
Type: ConnectApi.RecommendationAudience

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

getRecommendationAudienceMembership(communityId, recommendationAudienceId)

Get the members of a custom recommendation audience.

API Version
35.0
Requires Chatter
No

Signature

```java
public static ConnectApi.UserReferencePage getRecommendationAudienceMembership(String communityId, String recommendationAudienceId)
```

Parameters

**communityId**
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**recommendationAudienceId**
Type: `String`
ID of the custom recommendation audience.

Return Value

Type: `ConnectApi.UserReferencePage`

Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

```java
getRecommendationAudienceMembership(communityId, recommendationAudienceId, pageParam, pageSize)
```
Get a page of custom recommendation audience members.

API Version

35.0

Requires Chatter
No

Signature

```java
public static ConnectApi.UserReferencePage getRecommendationAudienceMembership(String communityId, String recommendationAudienceId, Integer pageParam, Integer pageSize)
```
Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`recommendationAudienceId`
Type: `String`
ID of the custom recommendation audience.

`pageParam`
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of members per page.

Return Value
Type: `ConnectApi.UserReferencePage`

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

`getRecommendationAudiences(communityId)`
Get custom recommendation audiences.

API Version
35.0

Requires Chatter
No

Signature
`public static ConnectApi.RecommendationAudiencePage getRecommendationAudiences(String communityId)`

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`. 

1585
Return Value
Type: ConnectApi.RecommendationAudiencePage

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

getRecommendationAudiences(communityId, pageParam, pageSize)
Get a page of custom recommendation audiences.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationAudiencePage getRecommendationAudiences(String communityId, Integer pageParam, Integer pageSize)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of audiences per page.

Return Value
Type: ConnectApi.RecommendationAudiencePage

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can
also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

getRecommendationDefinition(communityId, recommendationDefinitionId)
Get a custom recommendation definition.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationDefinition getRecommendationDefinition(String communityId, String recommendationDefinitionId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

recommendationDefinitionId
Type: String
ID of the custom recommendation definition.

Return Value
Type: ConnectApi.RecommendationDefinition

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

getRecommendationDefinitionPhoto(communityId, recommendationDefinitionId)
Get a custom recommendation definition photo.

API Version
35.0
requires chatter
yes

signature

public static ConnectApi.Photo getRecommendationDefinitionPhoto(String communityId, String recommendationDefinitionId)

parameters

communityId
    type: String
    use either the id for a community, internal, or null.

recommendationDefinitionId
    type: String
    id of the custom recommendation definition.

return value
    type: ConnectApi.Photo

usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

getRecommendationDefinitions(communityId)

Get custom recommendation definitions.

api version
35.0

requires chatter
no

signature

public static ConnectApi.RecommendationDefinitionPage getRecommendationDefinitions(String communityId)

parameters

communityId
    type: String
Use either the ID for a community, internal, or null.

Return Value
Type: ConnectApi.RecommendationDefinitionPage

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

getRecommendationForUser(communityId, userId, action, objectId)
Get the Chatter, custom, or static recommendation for the context user for the specified action and object ID.

API Version
33.0

Requires Chatter
Yes

Signature
public static ConnectApi.RecommendationCollection getRecommendationForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
• follow—Follow a file, record, topic, or user.
• join—Join a group.
• view—View a file, group, article, record, user, custom, or static recommendation.

objectId
Type: String
Specifies the object to act on.
If `action` is `follow`, `objectId` is a user ID, file ID, record ID, or topic ID (version 36.0 and later).

If `action` is `join`, `objectId` is a group ID.

If `action` is `view`, `objectId` is a user ID, file ID, group ID, record ID, custom recommendation ID (version 34.0 and later), the enum `Today` for static recommendations (version 35.0 and later), or an article ID (version 37.0 and later).

Return Value
Type: `ConnectApi.RecommendationCollection`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetRecommendationForUser(communityId, userId, action, objectId, result)`
- Testing ConnectApi Code

```
getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults)
```

Get the Chatter recommendations, such as user, group, file, and record recommendations for the context user. Get the custom and static recommendations for the context user.

API Version
33.0–35.0

⚠️ **Important:** In version 36.0 and later, use `getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults)`.

Requires Chatter
Yes

Signature
```
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **userId**
  - Type: `String`
The ID for the context user or the keyword *me*.

c**ontextAction**
  - *Type: ConnectApi.RecommendationActionType*
  - Action that the context user just performed. Supported values are:
    - follow
    - view
  - Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify *null*.

c**ontextObjectId**
  - *Type: String*
  - ID of the object that the context user just performed an action on.
    - If *contextAction* is follow, *contextObjectId* is a user ID, file ID, or record ID.
    - If *contextAction* is view, *contextObjectId* is a user ID, file ID, group ID, or record ID.
  - Use *contextAction* and *contextObjectId* together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify *null*.

m**axResults**
  - *Type: Integer*
  - Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

R**eturn Value**
  - *Type: ConnectApi.RecommendationCollection*

U**se**
  - If you want to get recommendations based on a recent action performed, such as following a user, use *contextAction* and *contextObjectId* together. For example, if you just followed Pam, you specify follow for *contextAction* and Pam’s user ID for *contextObjectId*.
  - This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```
setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults, result)
```

Testing ConnectApi Code

```
getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults)
```

Get the Chatter recommendations, such as user, group, file, article, record, and topic recommendations for the context user. Get the custom and static recommendations for the context user.

API Version

36.0

Available to Guest Users

38.0

Note: Only article and file recommendations are available to guest users.

Requires Chatter

Yes

Signature

```
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults)
```
Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or null.

`userId`
Type: String
The ID for the context user or the keyword `me`.

`contextAction`
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
- follow
- view

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

`contextObjectId`
Type: String
ID of the object that the context user just performed an action on.
- If `contextAction` is follow, `contextObjectId` is a user ID, file ID, record ID, or topic ID.
- If `contextAction` is view, `contextObjectId` is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

`channel`
Type: ConnectApi.RecommendationChannel
A way to tie custom recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:
- CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.
- CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.

`maxResults`
Type: Integer
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

Return Value
Type: `ConnectApi.RecommendationCollection`

Usage
If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam’s user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Testing ConnectApi Code

`getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults)`

Get the Chatter, custom, and static recommendations for the context user for the specified action.

API Version
33.0–35.0

**Important:** In version 36.0 and later, use `getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults)`. 
Requires Chatter
Yes

Signature
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
- follow—Follow a file, record, topic, or user.
- join—Join a group.
- view—View a file, group, article, record, user, custom, or static recommendation.

contextAction
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
- follow
- view

Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

contextObjectId
Type: String
ID of the object that the context user just performed an action on.
- If contextAction is follow, contextObjectId is a user ID, file ID, or record ID.
- If contextAction is view, contextObjectId is a user ID, file ID, group ID, or record ID.

Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

maxResults
Type: Integer
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.
Return Value

Type: `ConnectApi.RecommendationCollection`

Usage

If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam’s user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Testing ConnectApi Code

`getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults)`

Get the Chatter, custom, and static recommendations for the context user for the specified action.

API Version

36.0

Available to Guest Users

38.0

Note: Only article and file recommendations are available to guest users.
Requires Chatter
Yes

Signature

```java
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action,
ConnectApi.RecommendationActionType contextAction, String contextObjectId,
ConnectApi.RecommendationChannel channel, Integer maxResults)
```

Parameters

**communityId**
Type: `String`
Use either the ID for a community, internal, or null.

**userId**
Type: `String`
The ID for the context user or the keyword me.

**action**
Type: `ConnectApi.RecommendationActionType`
Specifies the action to take on a recommendation.
- follow—Follow a file, record, topic, or user.
- join—Join a group.
- view—View a file, group, article, record, user, custom, or static recommendation.

**contextAction**
Type: `ConnectApi.RecommendationActionType`
Action that the context user just performed. Supported values are:
- follow
- view
Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

**contextObjectId**
Type: `String`
ID of the object that the context user just performed an action on.
- If `contextAction` is follow, `contextObjectId` is a user ID, file ID, record ID, or topic ID.
- If `contextAction` is view, `contextObjectId` is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).
Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

**channel**
Type: `ConnectApi.RecommendationChannel`
A way to tie custom recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:

- **CustomChannel1**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.
- **CustomChannel2**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel3**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel4**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel5**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **DefaultChannel**—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Community Builder.

**maxResults**

Type: **Integer**

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

Return Value

Type: **ConnectApi.RecommendationCollection**

Usage

If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam’s user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults, result)`

Testing ConnectApi Code

```java
getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults)
```

Get the Chatter, custom, and static recommendations for the context user for the specified action and object category.

API Version

33.0–35.0

⚠️ Important: In version 36.0 and later, use `getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults)`.

Requires Chatter

Yes

Signature

```java
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectCategory, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults)
```

Parameters

**communityId**

Type: `String`

Use either the ID for a community, internal, or `null`.

**userId**

Type: `String`

The ID for the context user or the keyword `me`.

**action**

Type: `ConnectApi.RecommendationActionType`

Specifies the action to take on a recommendation.

- `follow`—Follow a file, record, topic, or user.
- `join`—Join a group.
- `view`—View a file, group, article, record, user, custom, or static recommendation.

**objectCategory**

Type: `String`
• If `action` is follow, `objectCategory` is users, files, or records.
• If `action` is join, `objectCategory` is groups.
• If `action` is view, `objectCategory` is users, files, groups, records, custom, or apps.
You can also specify a key prefix, the first three characters of the object ID, as the `objectCategory`. Valid values are:
• If `action` is follow, `objectCategory` is 005 (users), 069 (files), or 001 (accounts), for example.
• If `action` is join, `objectCategory` is 0F9 (groups).
• If `action` is view, `objectCategory` is 005 (users), 069 (files), 0F9 (groups), 0RD (custom recommendations), T (static recommendations), or 001 (accounts), for example.

**contextAction**
Type: `ConnectApi.RecommendationActionType`
Action that the context user just performed. Supported values are:
• follow
• view

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**contextObjectId**
Type: `String`
ID of the object that the context user just performed an action on.
• If `contextAction` is follow, `contextObjectId` is a user ID, file ID, or record ID.
• If `contextAction` is view, `contextObjectId` is a user ID, file ID, group ID, or record ID.

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**maxResults**
Type: `Integer`
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

**Return Value**
Type: `ConnectApi.RecommendationCollection`

**Usage**
If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify follow for `contextAction` and Pam’s user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```java
setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults, result)
```

Testing ConnectApi Code

```java
getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults)
```
Get the Chatter, custom, and static recommendations for the context user for the specified action and object category.

API Version
36.0

Available to Guest Users
38.0

Note: Only article and file recommendations are available to guest users.

Requires Chatter
Yes

Signature

```java
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectCategory, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults)
```
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
• follow—Follow a file, record, topic, or user.
• join—Join a group.
• view—View a file, group, article, record, user, custom, or static recommendation.

objectCategory
Type: String
• If action is follow, objectCategory is users, files, topics, or records.
• If action is join, objectCategory is groups.
• If action is view, objectCategory is users, files, groups, records, custom, apps, or articles (version 37.0 and later).

You can also specify a key prefix, the first three characters of the object ID, as the objectCategory. Valid values are:
• If action is follow, objectCategory is 005 (users), 069 (files), 0TO (topics), or 001 (accounts), for example.
• If action is join, objectCategory is 0F9 (groups).
• If action is view, objectCategory is 005 (users), 069 (files), 0F9 (groups), 0RD (custom recommendations), T (static recommendations), 001 (accounts), or kA0 (articles), for example, (version 370 and later).

contextAction
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
• follow
• view

Use contextAction and contextObjectId together to get new recommendations based on the action just performed.
If you don’t want recommendations based on a recent action, specify null.

contextObjectId
Type: String
ID of the object that the context user just performed an action on.
• If contextAction is follow, contextObjectId is a user ID, file ID, record ID, or topic ID.
• If contextAction is view, contextObjectId is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use contextAction and contextObjectId together to get new recommendations based on the action just performed.
If you don’t want recommendations based on a recent action, specify null.
channel
Type: ConnectApi.RecommendationChannel
A way to tie custom recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:

- CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.
- CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.

maxResults
Type: Integer
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

Return Value
Type: ConnectApi.RecommendationCollection

Usage
If you want to get recommendations based on a recent action performed, such as following a user, use contextAction and contextObjectId together. For example, if you just followed Pam, you specify follow for contextAction and Pam’s user ID for contextObjectId.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Testing ConnectApi Code

**getScheduledRecommendation(communityId, scheduledRecommendationId)**

Get a scheduled custom recommendation.

**API Version**

35.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.ScheduledRecommendation getScheduledRecommendation(String
    communityId, String scheduledRecommendationId)
```

**Parameters**

- **communityId**
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- **scheduledRecommendationId**
  - Type: String
ID of the scheduled custom recommendation.

Return Value
Type: `ConnectApi.ScheduledRecommendation`

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

```java
public static ConnectApi.ScheduledRecommendationPage getScheduledRecommendations(String communityId)
```

Get scheduled custom recommendations.

API Version
35.0 only

⚠️ **Important:** In version 36.0 and later, use `getScheduledRecommendations(communityId, channel)`.

Requires Chatter
No

Signature
```java
public static ConnectApi.ScheduledRecommendationPage getScheduledRecommendations(String communityId)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

Return Value
Type: `ConnectApi.ScheduledRecommendationPage`

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.
getScheduledRecommendations(communityId, channel)

Get scheduled custom recommendations.

API Version
36.0

Requires Chatter
No

Signature
public static ConnectApi.ScheduledRecommendationPage getScheduledRecommendations(String communityId, ConnectApi.RecommendationChannel channel)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

channel
Type: ConnectApi.RecommendationChannel
A way to tie custom recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:

- CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.
- CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.

Return Value
Type: ConnectApi.ScheduledRecommendationPage

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can
also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**rejectRecommendationForUser(communityId, userId, action, objectId)**
Reject a Chatter, custom, or static recommendation for the context user for the specified action and object ID.

**API Version**
33.0

**Requires Chatter**
Yes

**Signature**

```java
public static rejectRecommendationForUser(String communityId, String userId,
ConnectApi.RecommendationActionType action, String objectId)
```

**Parameters**

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **userId**
  - Type: String
  - The ID for the context user or the keyword `me`.

- **action**
  - Type: `ConnectApi.RecommendationActionType`
  - Specifies the action to take on a recommendation. Supported values are:
    - `follow`—Follow a file, record, topic, or user.
    - `join`—Join a group.
    - `view`—View a file, group, article, record, user, custom, or static recommendation.

- **objectId**
  - Type: String
  - Specifies the object to take action on.
    - If `action` is `follow`, `objectId` is a user ID, file ID, record ID, or topic ID (version 36.0 and later).
    - If `action` is `join`, `objectId` is a group ID.
    - If `action` is `view`, `objectId` is a custom recommendation ID, the enum `Today` for static recommendations, or an article ID (version 37.0 and later).

**Return Value**

- Type: Void
rejectRecommendationForUser(communityId, userId, action, objectEnum)
Reject a static recommendation for the context user.

API Version
34.0

Requires Chatter
Yes

Signature
public static rejectRecommendationForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, ConnectApi.RecommendedObjectType objectEnum)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation. Supported values are:
- view—View a static recommendation.

objectEnum
Type: ConnectApi.RecommendedObjectType
Specifies the object type to take action on.
- Today—Static recommendations that don’t have an ID, for example, the Today app recommendation.

Return Value
Type: Void

updateRecommendationAudience(communityId, recommendationAudienceId, recommendationAudience)
Update a custom recommendation audience.

API Version
35.0
Requires Chatter
No

Signature
`public static ConnectApi.RecommendationAudience updateRecommendationAudience(String communityId, String recommendationAudienceId, ConnectApi.RecommendationAudienceInput recommendationAudience)`

Parameters
- `communityId`  
  Type: `String`  
  Use either the ID for a community, `internal`, or `null`.
- `recommendationAudienceId`  
  Type: `String`  
  ID of the custom recommendation audience.
- `recommendationAudience`  
  Type: `ConnectApi.RecommendationAudienceInput`  
  A `ConnectApi.RecommendationAudienceInput` object.

Return Value
Type: `ConnectApi.RecommendationAudience`

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

`updateRecommendationDefinition(communityId, recommendationDefinitionId, name, title, actionUrl, actionUrlName, explanation)`

Update a custom recommendation definition with the specified parameters.

API Version
35.0

Requires Chatter
No
Signature

```java
public static ConnectApi.RecommendationDefinition updateRecommendationDefinition(String communityId, String recommendationDefinitionId, String name, String title, String actionUrl, String actionUrlName, String explanation)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, internal, or `null`.

- `recommendationDefinitionId`
  Type: `String`
  ID of the custom recommendation definition.

- `name`
  Type: `String`
  Name of the custom recommendation definition. The name is displayed in Setup.

- `title`
  Type: `String`
  Title of the custom recommendation definition.

- `actionUrl`
  Type: `String`
  URL for acting on the custom recommendation, for example, the URL to join a group.

- `actionUrlName`
  Type: `String`
  Text label for the action URL in the user interface, for example, “Launch.”

- `explanation`
  Type: `String`
  Explanation, or body, of the custom recommendation.

Return Value

Type: `ConnectApi.RecommendationDefinition`

Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

```java
updateRecommendationDefinition(communityId, recommendationDefinitionId, recommendationDefinition)
```

Update a custom recommendation definition.
API Version
35.0

Requires Chatter
No

Signature
```
public static ConnectApi.RecommendationDefinition updateRecommendationDefinition(String communityId, String recommendationDefinitionId, ConnectApi.RecommendationDefinitionInput recommendationDefinition)
```

Parameters
- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.
- **recommendationDefinitionId**
  - Type: String
  - ID of the custom recommendation definition.
- **recommendationDefinition**
  - Type: ConnectApi.RecommendationDefinitionInput
  - A ConnectApi.RecommendationDefinitionInput object containing the properties to update.

Return Value
- Type: ConnectApi.RecommendationDefinition

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

```
updateRecommendationDefinitionPhoto(communityId, recommendationDefinitionId, fileUpload)
```

Update a custom recommendation definition photo with a file that hasn’t been uploaded.

API Version
35.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.Photo updateRecommendationDefinitionPhoto(String communityId,
String recommendationDefinitionId, ConnectApi.BinaryInput fileUpload)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.

- **recommendationDefinitionId**
  - Type: `String`
  - ID of the custom recommendation definition.

- **fileUpload**
  - Type: `ConnectApi.BinaryInput`
  - A file to use as the photo. The content type must be usable as an image.

Return Value

Type: `ConnectApi.Photo`

Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

`updateRecommendationDefinitionPhoto(communityId, recommendationDefinitionId, fileId, versionNumber)`

Update a custom recommendation definition photo with an uploaded file.

API Version

35.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.Photo updateRecommendationDefinitionPhoto(String communityId,
String recommendationDefinitionId, String fileId, Integer versionNumber)
```
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

recommendationDefinitionId
Type: String
ID of the custom recommendation definition.

fileId
Type: String
ID of a file already uploaded. The file must be an image, and be smaller than 2 GB.

versionNumber
Type: Integer
Version number of the existing file. Specify either an existing version number, or null to get the latest version.

Return Value
Type: ConnectApi.Photo

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

updateRecommendationDefinitionPhotoWithAttributes(communityId, recommendationDefinitionId, photo)
Update a custom recommendation definition photo with an uploaded file that requires cropping.

API Version
35.0

Requires Chatter
Yes

Signature
public static ConnectApi.Photo updateRecommendationDefinitionPhotoWithAttributes(String communityId, String recommendationDefinitionId, ConnectApi.PhotoInput photo)

Parameters

communityId
Type: String
Use either the ID for a community, `internal`, or `null`.

`recommendationDefinitionId`
Type: `String`
ID of the custom recommendation definition.

`photo`
Type: `ConnectApi.PhotoInput`
A `ConnectApi.PhotoInput` object specifying the file ID, version number, and cropping parameters.

Return Value
Type: `ConnectApi.Photo`

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

`updateRecommendationDefinitionPhotoWithAttributes(communityId, recommendationDefinitionId, photo, fileUpload)`
Update a custom recommendation definition photo with a file that hasn’t been uploaded and requires cropping.

API Version
35.0

Requires Chatter
Yes

Signature
`public static ConnectApi.Photo updateRecommendationDefinitionPhotoWithAttributes(String communityId, String recommendationDefinitionId, ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)`

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`recommendationDefinitionId`
Type: `String`
ID of the custom recommendation definition.
photo
Type: ConnectApi.PhotoInput
A ConnectApi.PhotoInput object specifying the cropping parameters.

fileUpload
Type: ConnectApi.BinaryInput
A file to use as the photo. The content type must be usable as an image.

Return Value
Type: ConnectApi.Photo

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

updateScheduledRecommendation(communityId, scheduledRecommendationId, scheduledRecommendation)
Update a scheduled custom recommendation.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.ScheduledRecommendation updateScheduledRecommendation(String communityId, String scheduledRecommendationId, ConnectApi.ScheduledRecommendationInput scheduledRecommendation)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.
scheduledRecommendationId
Type: String
ID of the scheduled custom recommendation.
scheduledRecommendation
Type: ConnectApi.ScheduledRecommendationInput
A `ConnectApi.ScheduledRecommendationInput` object containing the properties to update.

Return Value
Type: `ConnectApi.ScheduledRecommendation`

Usage
Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**Ranking scheduled custom recommendations example**

If you have these scheduled custom recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendations</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>3</td>
</tr>
</tbody>
</table>

And you include this information in the Scheduled Custom Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>

`updateScheduledRecommendation(communityId, scheduledRecommendationId, rank, enabled, recommendationAudienceId)`

Update a scheduled custom recommendation with the specified parameters.

API Version
35.0
Requires Chatter
No

Signature

```java
public static ConnectApi.ScheduledRecommendation updateScheduledRecommendation(String communityId, String scheduledRecommendationId, Integer rank, Boolean enabled, String recommendationAudienceId)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **scheduledRecommendationId**
  - Type: String
  - ID of the scheduled custom recommendation.

- **rank**
  - Type: Integer
  - Relative rank of the scheduled custom recommendation indicated by ascending whole numbers starting with 1.
  - Setting the rank is comparable to an insertion into an ordered list. The scheduled custom recommendation is inserted into the position specified by the rank. The rank of all the scheduled custom recommendations after it is pushed down. See Ranking scheduled custom recommendations example.
  - If the specified rank is larger than the size of the list, the scheduled custom recommendation is put at the end of the list. The rank of the scheduled custom recommendation is the size of the list, instead of the one specified.
  - If a rank is not specified, the scheduled custom recommendation is put at the end of the list.

- **enabled**
  - Type: Boolean
  - Indicates whether scheduling is enabled. If true, the custom recommendation is enabled and appears in communities. If false, custom recommendations in feeds in Salesforce mobile web aren’t removed, but no new custom recommendations appear. In Customer Service and Partner Central communities, disabled custom recommendations no longer appear.

- **recommendationAudienceId**
  - Type: String
  - ID of the custom recommendation definition that this scheduled recommendation schedules.

Return Value

Type: `ConnectApi.ScheduledRecommendation`

Usage

Community managers (users with the Create and Set Up Communities or Manage Communities permission) can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.
Ranking scheduled custom recommendations example

If you have these scheduled custom recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendations</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>3</td>
</tr>
</tbody>
</table>

And you include this information in the Scheduled Custom Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>

Recommendations Test Methods

The following are the test methods for Recommendations. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

In this section:

1. `setTestGetRecommendationForUser(communityId, userId, action, objectId, result)`
   - Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

2. `setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults, result)`
   - Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

3. `setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults, result)`
   - Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

4. `setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults, result)`
   - Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.
setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults, result)
Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults, result)
Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults, result)
Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetRecommendationForUser(communityId, userId, action, objectId, result)
Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
33.0

Requires Chatter
Yes

Signature
public static Void setTestGetRecommendationForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectId, ConnectApi.RecommendationCollection result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
• follow—Follow a file, record, topic, or user.
• join—Join a group.
• view—View a file, group, article, record, user, custom, or static recommendation.
objectId
Type: String
Specifies the object to take action on.
- If action is follow, objectId is a user ID, file ID, record ID, or topic ID (version 36.0 and later).
- If action is join, objectId is a group ID.
- If action is view, objectId is a user ID, file ID, group ID, record ID, custom recommendation ID, the enum `Today` for static recommendations, or an article ID (version 37.0 and later).

result
Type: `ConnectApi.RecommendationCollection`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getRecommendationForUser(communityId, userId, action, objectId)`
- Testing ConnectApi Code

`setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults, result)`
Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
33.0–35.0

⚠️ Important: In version 36.0 and later, use `setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults, result)`.

Requires Chatter
Yes

Signature
`public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults, ConnectApi.RecommendationCollection result)`

Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or null.
userId
  Type: String
  The ID for the context user or the keyword me.

cTXcontextAction
  Type: ConnectApi.RecommendationActionType
  Action that the context user just performed. Supported values are:
  • follow
  • view
  Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

cTXcontextObjectId
  Type: String
  ID of the object that the context user just performed an action on.
  • If contextAction is follow, contextObjectId is a user ID, file ID, or record ID.
  • If contextAction is view, contextObjectId is a user ID, file ID, group ID, or record ID.
  Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

cTXmaxResults
  Type: Integer
  Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

cTXresult
  Type: ConnectApi.RecommendationCollection
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
  getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults)

Testing ConnectApi Code

setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults, result)

Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
36.0
public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults, ConnectApi.RecommendationCollection result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

contextAction
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
• follow
• view

Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

contextObjectId
Type: String
ID of the object that the context user just performed an action on.
• If contextAction is follow, contextObjectId is a user ID, file ID, record ID, or topic ID.
• If contextAction is view, contextObjectId is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

channel
Type: ConnectApi.RecommendationChannel
A way to tie custom recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:
• CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.
• CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• DefaultChannel—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Community Builder.

maxResults
Type: Integer
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

result
Type: ConnectApi.RecommendationCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults)
Testing ConnectApi Code

setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults, result)
Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
33.0–35.0

Important: In version 36.0 and later, use setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults, result).

Requires Chatter
Yes

Signature
public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults, ConnectApi.RecommendationCollection result)
Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`userId`
Type: `String`
The ID for the context user or the keyword `me`.

`action`
Type: `ConnectApi.RecommendationActionType`
Specifies the action to take on a recommendation.
- `follow`—Follow a file, record, topic, or user.
- `join`—Join a group.
- `view`—View a file, group, article, record, user, custom, or static recommendation.

`contextAction`
Type: `ConnectApi.RecommendationActionType`
Action that the context user just performed. Supported values are:
- `follow`
- `view`

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

`contextObjectId`
Type: `String`
ID of the object that the context user just performed an action on.
- If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, or record ID.
- If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, or record ID.

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

`maxResults`
Type: `Integer`
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

`result`
Type: `ConnectApi.RecommendationCollection`
The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults)`
- Testing `ConnectApi Code`
setTestGetRecommendationsForUser(communityId, userId, action, contextAction,
contextObjectId, channel, maxResults, result)

Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser
is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
36.0

Requires Chatter
Yes

Signature
public static Void setTestGetRecommendationsForUser(String communityId, String userId,
ConnectApi.RecommendationActionType action, ConnectApi.RecommendationActionType
contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer
maxResults, ConnectApi.RecommendationCollection result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
• follow—Follow a file, record, topic, or user.
• join—Join a group.
• view—View a file, group, article, record, user, custom, or static recommendation.

contextAction
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
• follow
• view

Use contextAction and contextObjectId together to get new recommendations based on the action just performed.
If you don’t want recommendations based on a recent action, specify null.

contextObjectId
Type: String
ID of the object that the context user just performed an action on.
• If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, record ID, or topic ID.
• If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**channel**

Type: `ConnectApi.RecommendationChannel`

A way to tie custom recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:

• `CustomChannel1`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.
• `CustomChannel2`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• `CustomChannel3`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• `CustomChannel4`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• `CustomChannel5`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• `DefaultChannel`—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Community Builder.

**maxResults**

Type: `Integer`

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

**result**

Type: `ConnectApi.RecommendationCollection`

The object containing test data.

Return Value

Type: Void

**SEE ALSO:**

`getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults)`

Testing ConnectApi Code

```java
setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults, result)
```

Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.
API Version
33.0–35.0

⚠️ Important: In version 36.0 and later, use `setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults, result)`.

Requires Chatter
Yes

Signature

```java
public static Void setTestGetRecommendationsForUser(String communityId, String userId,
ConnectApi.RecommendationActionType action, String objectCategory,
ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer
maxResults, ConnectApi.RecommendationCollection result)
```

Parameters

**communityId**
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**userId**
Type: `String`
The ID for the context user or the keyword `me`.

**action**
Type: `ConnectApi.RecommendationActionType`
Specifies the action to take on a recommendation.
- `follow`—Follow a file, record, topic, or user.
- `join`—Join a group.
- `view`—View a file, group, article, record, user, custom, or static recommendation.

**objectCategory**
Type: `String`
- If `action` is `follow`, `objectCategory` is `users`, `files`, or `records`.
- If `action` is `join`, `objectCategory` is `groups`.
- If `action` is `view`, `objectCategory` is `users`, `files`, `groups`, `records`, `custom`, or `apps`.

You can also specify a key prefix, the first three characters of the object ID, as the `objectCategory`. Valid values are:
- If `action` is `follow`, `objectCategory` is `005` (users), `069` (files), or `001` (accounts), for example.
- If `action` is `join`, `objectCategory` is `0F9` (groups).
- If `action` is `view`, `objectCategory` is `005` (users), `069` (files), `0F9` (groups), `0RD` (custom recommendations), `T` (static recommendations), or `001` (accounts), for example.

**contextAction**
Type: `ConnectApi.RecommendationActionType`
Action that the context user just performed. Supported values are:
Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**contextObjectId**
- **Type:** String
- ID of the object that the context user just performed an action on.
  - If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, or record ID.
  - If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, or record ID.

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**maxResults**
- **Type:** Integer
- Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

**result**
- **Type:** ConnectApi.RecommendationCollection
- The object containing test data.

**Return Value**
- **Type:** Void

SEE ALSO:
- `getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults)`

Testing ConnectApi Code

```
setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults, result)
```

Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**
- 36.0

**Requires Chatter**
- Yes

**Signature**

```
public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectCategory, ConnectApi.RecommendationActionType contextAction, String contextObjectId, String channel, Integer maxResults, ConnectApi.RecommendationCollection result)
```
ConnectApi.RecommendationChannel channel, Integer maxResults, ConnectApi.RecommendationCollection result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
- follow—Follow a file, record, topic, or user.
- join—Join a group.
- view—View a file, group, article, record, user, custom, or static recommendation.

objectCategory
Type: String
- If action is follow, objectCategory is users, files, records, or topics.
- If action is join, objectCategory is groups.
- If action is view, objectCategory is users, files, groups, records, custom, apps, or articles (version 37.0 and later).

You can also specify a key prefix, the first three characters of the object ID, as the objectCategory. Valid values are:
- If action is follow, objectCategory is 005 (users), 069 (files), 0TO (topics), or 001 (accounts), for example.
- If action is join, objectCategory is 0F9 (groups).
- If action is view, objectCategory is 005 (users), 069 (files), 0F9 (groups), 0RD (custom recommendations), T (static recommendations), 001 (accounts), or kA0 (articles), for example, (version 370 and later).

contextAction
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
- follow
- view

Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

contextObjectId
Type: String
ID of the object that the context user just performed an action on.
- If contextAction is follow, contextObjectId is a user ID, file ID, record ID, or topic ID.
- If contextAction is view, contextObjectId is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).
Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**channel**
Type: `ConnectApi.RecommendationChannel`
A way to tie custom recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:

- **CustomChannel1**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.
- **CustomChannel2**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel3**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel4**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel5**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **DefaultChannel**—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Community Builder.

**maxResults**
Type: `Integer`
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

**result**
Type: `ConnectApi.RecommendationCollection`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults)`
- Testing ConnectApi Code

**Records Class**
Access information about record motifs, which are small icons used to distinguish record types in the Salesforce UI.

**Namespace**
`ConnectApi`

**Records Methods**
The following are methods for `Records`. All methods are static.
IN THIS SECTION:

getMotif(communityId, idOrPrefix)
Get a motif that contains the URLs for a set of small, medium, and large motif icons for a record. It can also contain a base color for the record.

getMotifBatch(communityId, idOrPrefixList)
Get a motif for a list of objects.

getMotif(communityId, idOrPrefix)
Get a motif that contains the URLs for a set of small, medium, and large motif icons for a record. It can also contain a base color for the record.

API Version
28.0

Requires Chatter
No

Signature
public static ConnectApi.Motif getMotif(String communityId, String idOrPrefix)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

idOrPrefix
Type: String
An ID or key prefix.

Return Value
Type: ConnectApi.Motif

Usage
Each Salesforce record type has its own set of motif icons.

getMotifBatch(communityId, idOrPrefixList)
Get a motif for a list of objects.

API Version
31.0
Requires Chatter
No

Signature

```java
public static ConnectApi.BatchResult[] getMotifBatch(String communityId, List<String> idOrPrefixList)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **idOrPrefixList**
  - Type: List<String>
  - A list of object IDs or prefixes.

Return Value

- Type: `ConnectApi.BatchResult[]`

Example

```java
String communityId = null;
List<String> prefixIds = new List<String> { '001', '012', '069' };

// Get info about the motifs of all records in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.Records.getMotifBatch(communityId, prefixIds);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the color of each motif.
        ConnectApi.Motif motif;
        if (batchResult.getResult() instanceof ConnectApi.Motif) {
            motif = (ConnectApi.Motif) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(motif.color);
    } else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
```
SalesforceInbox Class
Access information about Automated Activity Capture, which is available in Einstein and Salesforce Inbox.

Namespace
ConnectApi

SalesforceInbox Methods
The following are methods for SalesforceInbox. All methods are static.

IN THIS SECTION:
shareActivity(activityId, sharingInfo)
Share emails or events with certain groups of users.

shareActivity(activityId, sharingInfo)
Share emails or events with certain groups of users.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.ActivitySharingResult shareActivity(String activityId, ConnectApi.ActivitySharingInput sharingInfo)

Parameters
activityId
Type: String
The ID of the activity.

sharingInfo
Type: ConnectApi.ActivitySharingInput
A ConnectApi.ActivitySharingInput object.

Return Value
Type: ConnectApi.ActivitySharingResult
Usage

This method is a feature of both Sales Cloud Einstein and Inbox. It lets users connect their email and calendar to Salesforce. Then, their emails and events are automatically added to related Salesforce records. Users can specify who their individual emails and events are shared with.

SmartDataDiscovery Class

Get predictions on Salesforce objects.

Use the ConnectApi.SmartDataDiscovery.predict method to get predictions on Salesforce objects. For more information, see Get Predictions in Apex.

SocialEngagement Class

Manage information about social accounts or fan pages for social networks.

Namespace

ConnectApi

SocialEngagement Methods

The following are methods for SocialEngagement. All methods are static.

IN THIS SECTION:

deleteSocialPost(socialPostId, socialAccountId)
Delete a social post from its social network.

followSocialPersona(socialPersonaId, socialAccountId)
Follow a social persona in its social network.

followSocialPostPersona(socialPostId, socialAccountId)
Follow a social persona on a social post in its social network.

getIntents(socialPostId)
Get available intents for a social post.

getManagedSocialAccount(id)
Get a managed social account that is in the org and assigned to the user.

getManagedSocialAccounts()
Gets a list of managed social accounts that are in the org and assigned to the user.

getManagedSocialAccounts(socialNetwork)
Get a list of managed social accounts that are in the org and assigned to the user.

getRelationship(id, socialPersonaId)
Get the follow relationship between a managed social account and a social persona.

hideSocialPost(socialPostId, socialAccountId)
Hide a social post in its social network.
likeSocialPost(socialPostId, socialAccountId)
Like a social post in its social network.

massApprove(massApproval)
Approve or reject the publishing of a large number of social posts.

recallApproval(socialPostId)
Recall an approval request to publish a social post.

unfollowSocialPersona(socialPersonaId, socialAccountId)
Stop following a social persona in its social network.

unfollowSocialPostPersona(socialPostId, socialAccountId)
Stop following a social persona of a social post in its social network.

unhideSocialPost(socialPostId, socialAccountId)
Unhide a social post in its social network.

unlikeSocialPost(socialPostId, socialAccountId)
Unlike a social post in its social network.

deleteSocialPost(socialPostId, socialAccountId)
Delete a social post from its social network.

Note: Deleting a social post from its social network doesn't delete the record from Salesforce.

API Version
46.0

Requires Chatter
No

Signature
public static ConnectApi.DeleteSocialPostIntent deleteSocialPost(String socialPostId, String socialAccountId)

Parameters
socialPostId
Type: String
ID of the social post to delete.

socialAccountId
Type: String
ID of the social account that deletes the post.

Return Value
Type: ConnectApi.DeleteSocialPostIntent
followSocialPersona(socialPersonaId, socialAccountId)
Follow a social persona in its social network.

API Version
45.0

Requires Chatter
No

Signature
public static ConnectApi.FollowSocialPersonaIntent followSocialPersona(String socialPersonaId, String socialAccountId)

Parameters
socialPersonaId
  Type: String
  ID of the social persona to follow.

socialAccountId
  Type: String
  ID of the social account that follows the social persona.

Return Value
Type: ConnectApi.FollowSocialPersonaIntent

followSocialPostPersona(socialPostId, socialAccountId)
Follow a social persona on a social post in its social network.

API Version
45.0

Requires Chatter
No

Signature
public static ConnectApi.FollowSocialPersonaIntent followSocialPostPersona(String socialPostId, String socialAccountId)
Parameters

socialPostId
Type: String
ID of the social post authored by the social persona to follow.

socialAccountId
Type: String
ID of the social account that follows the social persona.

Return Value
Type: ConnectApi.FollowSocialPersonaIntent

getIntents(socialPostId)
Get available intents for a social post.

API Version
45.0

Requires Chatter
No

Signature
public static ConnectApi.SocialPostIntents getIntents(String socialPostId)

Parameters

socialPostId
Type: String
ID of a social post.

Return Value
Type: ConnectApi.SocialPostIntents

getManagedSocialAccount(id)
Get a managed social account that is in the org and assigned to the user.

API Version
44.0

Requires Chatter
No
Signature

```java
class public static ConnectApi.ManagedSocialAccount getManagedSocialAccount(String id)
```

Parameters

`id`
- Type: `String`
- Description: Internal SFDC ID for this managed social account.

Return Value

Type: `ConnectApi.ManagedSocialAccount`

```java
class getManagedSocialAccounts()
```

Gets a list of managed social accounts that are in the org and assigned to the user.

API Version

44.0

Requires Chatter

No

Signature

```java
class public static ConnectApi.ManagedSocialAccounts getManagedSocialAccounts()
```

Return Value

Type: `ConnectApi.ManagedSocialAccounts`

```java
class getManagedSocialAccounts(socialNetwork)
```

Get a list of managed social accounts that are in the org and assigned to the user.

API Version

44.0

Requires Chatter

No

Signature

```java
class public static ConnectApi.ManagedSocialAccounts
getManagedSocialAccounts(ConnectApi.SocialNetworkProvider socialNetwork)
```
Parameters

socialNetwork
Type: `ConnectApi.SocialNetworkProvider`
Description: Filters results based on the social network. Values are:
- Facebook
- GooglePlus
- Instagram
- InstagramBusiness
- KakaoTalk
- Kik
- Line
- LinkedIn
- Messenger
- Other
- Pinterest
- QQ
- Rypple
- SinaWeibo
- SMS
- Snapchat
- Telegram
- Twitter
- VKontakte
- WeChat
- WhatsApp
- YouTube

Return Value
Type: `ConnectApi.ManagedSocialAccounts`

`getRelationship(id, socialPersonaId)`
Get the follow relationship between a managed social account and a social persona.

API Version
46.0

Requires Chatter
No
Signature

```java
public static ConnectApi.SocialAccountRelationship getRelationship(String id, String socialPersonaId)
```

Parameters

`id`
Type: `String`
ID of the managed social account.

`socialPersonaId`
Type: `String`
ID of the social persona.

Return Value
Type: `ConnectApi.SocialAccountRelationship`

`hideSocialPost(socialPostId, socialAccountId)`
Hide a social post in its social network.

API Version

46.0

Requires Chatter
No

Signature

```java
public static ConnectApi.HideSocialPostIntent hideSocialPost(String socialPostId, String socialAccountId)
```

Parameters

`socialPostId`
Type: `String`
ID of the social post to hide.

`socialAccountId`
Type: `String`
ID of the social account that hides the post.

Return Value
Type: `ConnectApi.HideSocialPostIntent`
likeSocialPost(socialPostId, socialAccountId)
Like a social post in its social network.

API Version
46.0

Requires Chatter
No

Signature
public static ConnectApi.LikeSocialPostIntent likeSocialPost(String socialPostId, String socialAccountId)

Parameters

socialPostId
Type: String
ID of the social post to like.

socialAccountId
Type: String
ID of the social account that likes the post.

Return Value
Type: ConnectApi.LikeSocialPostIntent

massApprove(massApproval)
Approve or reject the publishing of a large number of social posts.

API Version
46.0

Requires Chatter
No

Signature
public static ConnectApi.SocialPostMassApprovalOutput massApprove(ConnectApi.SocialPostMassApprovalInput massApproval)
Parameters

**massApproval**

Type: `ConnectApi.SocialPostMassApprovalInput`

A `ConnectApi.SocialPostMassApprovalInput` body that includes a list of social post IDs and the action to approve or reject publishing them.

Return Value

Type: `ConnectApi.SocialPostMassApprovalOutput`

**recallApproval(socialPostId)**

Recall an approval request to publish a social post.

API Version

46.0

Requires Chatter

No

Signature

```java
public static Void recallApproval(String socialPostId)
```

Parameters

**socialPostId**

Type: `String`

ID of the social post.

Return Value

Type: Void

**unfollowSocialPersona(socialPersonaId, socialAccountId)**

Stop following a social persona in its social network.

API Version

45.0

Requires Chatter

No
Signature

```java
public static Void unfollowSocialPersona(String socialPersonaId, String socialAccountId)
```

Parameters

- `socialPersonaId`  
  Type: `String`  
  ID of the social persona to stop following.

- `socialAccountId`  
  Type: `String`  
  ID of the social account that stops following the social persona.

Return Value

Type: Void

**unfollowSocialPostPersona(socialPostId, socialAccountId)**

Stop following a social persona of a social post in its social network.

API Version

45.0

Requires Chatter

No

Signature

```java
public static Void unfollowSocialPostPersona(String socialPostId, String socialAccountId)
```

Parameters

- `socialPostId`  
  Type: `String`  
  ID of the social post authored by the social persona to stop following.

- `socialAccountId`  
  Type: `String`  
  ID of the social account that stops following the social persona.

Return Value

Type: Void

**unhideSocialPost(socialPostId, socialAccountId)**

Unhide a social post in its social network.
API Version
46.0

Requires Chatter
No

Signature
public static Void unhideSocialPost(String socialPostId, String socialAccountId)

Parameters
socialPostId
  Type: String
  ID of the social post to unhide.
socialAccountId
  Type: String
  ID of the social account that unhides the post.

Return Value
Type: Void

unlikeSocialPost(socialPostId, socialAccountId)
Unlike a social post in its social network.

API Version
46.0

Requires Chatter
No

Signature
public static Void unlikeSocialPost(String socialPostId, String socialAccountId)

Parameters
socialPostId
  Type: String
  ID of the social post to unlike.
socialAccountId
  Type: String
  ID of the social account that unlikes the post.
Return Value
Type: Void

Topics Class
Access information about topics, such as their descriptions, the number of people talking about them, related topics, and information about groups contributing to the topic. Update a topic's name or description, merge topics, and add and remove topics from records and feed items.

Namespace
ConnectApi

Topics Methods
The following are methods for Topics. All methods are static.

IN THIS SECTION:
  assignTopic(communityId, recordId, topicId)
  Assign a topic to a record or feed item.
  assignTopicByName(communityId, recordId, topicName)
  Assign a topic to a record or feed item.
  createTopic(communityId, name, description)
  Create a topic.
  createTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory, topicNames)
  Create topic and article assignment rules by data category.
  deleteTopic(communityId, topicId)
  Delete a topic.
  getGroupsRecentlyTalkingAboutTopic(communityId, topicId)
  Get information about the five groups that most recently contributed to a topic.
  getRecentlyTalkingAboutTopicsForGroup(communityId, groupId)
  Get up to five topics most recently used in a group.
  getRecentlyTalkingAboutTopicsForUser(communityId, userId)
  Get up to five topics most recently used by a user.
  getRelatedTopics(communityId, topicId)
  Get up to five topics most closely related to a topic.
  getTopic(communityId, topicId)
  Get a topic.
  getTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory)
  Get topic and article assignment rules by data category.
  getTopics(communityId, recordId)
  Get the first page of topics assigned to a record or feed item.
getTopics(communityId)
Get the first page of topics for the org or community.

getTopics(communityId, sortParam)
Get the first page of sorted topics for the org or community.

getTopics(communityId, pageParam, pageSize)
Get a page of topics.

getTopics(communityId, pageParam, pageSize, sortParam)
Get a page of sorted topics.

getTopics(communityId, q, sortParam)
Get the sorted topics that match the search criteria.

getTopics(communityId, q, pageParam, pageSize)
Get a page of topics that match the search criteria.

getTopics(communityId, q, pageParam, pageSize, sortParam)
Get a page of sorted topics that match the search criteria.

getTopics(communityId, q, exactMatch)
Get the topic that matches the exact, case-insensitive name.

getTopicsOrFallBackToRenamedTopics(communityId, q, exactMatch, fallBackToRenamedTopics)
Get the most recent renamed topic match, if there isn’t an exact match.

getTopicSuggestions(communityId, recordId, maxResults)
Get up to a specified number of suggested topics for a record or feed item.

getTopicSuggestions(communityId, recordId)
Get suggested topics for a record or feed item.

getTopicSuggestionsForText(communityId, text, maxResults)
Get up to a specified number of suggested topics for a string of text.

getTopicSuggestionsForText(communityId, text)
Get suggested topics for a string of text.

getTrendingTopics(communityId)
Get trending topics for the org or community.

getTrendingTopics(communityId, maxResults)
Get up to a specified number of trending topics for the org or community.

mergeTopics(communityId, topicId, idsToMerge)
Merge up to five secondary topics with a primary topic.

reassignTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory, topicNames)
Reassign topic and article assignment rules by data category by deleting the existing rules and creating new rules.

reassignTopicsByName(communityId, recordId, topicNames)
Reassign all the topics on a record or feed item, that is, remove all the assigned topics on a record or feed item and add topics. Optionally, provide a list of suggested topics to assign to a record or feed item to improve future topic suggestions.

unassignTopic(communityId, recordId, topicId)
Remove a topic from a record or feed item.

updateTopic(communityId, topicId, topic)
Update the description or name of a topic or merge up to five secondary topics with a primary topic.
updateTopicsForArticlesInDataCategory(communityId, dataCategoryGroup, dataCategory, articleTopicAssignmentJob)
Assign topics to articles and unassign topics from articles in a data category.

assignTopic(communityId, recordId, topicId)
Assign a topic to a record or feed item.

API Version
29.0

Requires Chatter
No

Signature
public static ConnectApi.Topic assignTopic(String communityId, String recordId, String topicId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

recordId
Type: String
The ID for a record or feed item.

topicId
Type: String
The ID for a topic.

Return Value
Type: ConnectApi.Topic

Usage
Only users with the Assign Topics permission can add existing topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

assignTopicByName(communityId, recordId, topicName)
Assign a topic to a record or feed item.

API Version
29.0
Requires Chatter
No

Signature

public static ConnectApi.Topic assignTopicByName(String communityId, String recordId, String topicName)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

recordId
Type: String
The ID of the record or feed item to which to assign the topic.

topicName
Type: String
The name of a new or existing topic.

Return Value
Type: ConnectApi.Topic

Usage

Only users with the Assign Topics permission can add existing topics to records or feed items. Only users with the Create Topics permission can add new topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

createTopic(communityId, name, description)
Create a topic.

API Version
36.0

Requires Chatter
No

Signature

public static ConnectApi.Topic createTopic(String communityId, String name, String description)
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

name
Type: String
The name of the topic.

description
Type: String
The description of the topic.

Return Value
Type: ConnectApi.Topic

Usage
Only users with the Create Topics permission can create a topic.

createTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory, topicNames)
Create topic and article assignment rules by data category.

API Version
40.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage createTopicDataCategoryRules(String communityId, String dataCategoryGroup, String dataCategory, ConnectApi.TopicNamesInput topicNames)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

dataCategoryGroup
Type: String
The data category group used by articles.

dataCategory
Type: String
The data category used by articles.

```
topicNames
  Type: ConnectApi.TopicNamesInput
    A ConnectApi.TopicNamesInput object with the names of topics to assign to articles in a data category.
```

Return Value
Type: ConnectApi.TopicPage

### deleteTopic(communityId, topicId)
Delete a topic.

API Version
29.0

Requires Chatter
No

Signature
```
public static Void deleteTopic(String communityId, String topicId)
```

Parameters
```
communityId
  Type: String,
    Use either the ID for a community, internal, or null.

topicId
  Type: String
    The ID for a topic.
```

Return Value
Type: Void

Usage
Only users with the Delete Topics or Modify All Data permission can delete topics.

Topic deletion is asynchronous. If a topic is requested before the deletion completes, the response is successful and the `isBeingDeleted` property of ConnectApi.Topic is `true` in version 33.0 and later. If a topic is requested after the deletion completes, the response is ConnectApi.NotFoundException.

### getGroupsRecentlyTalkingAboutTopic(communityId, topicId)
Get information about the five groups that most recently contributed to a topic.
API Version
29.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterGroupSummaryPage
getGroupsRecentlyTalkingAboutTopic(String communityId, String topicId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

topicId
Type: String
The ID for a topic.

Return Value
Type: ConnectApi.ChatterGroupSummaryPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetGroupsRecentlyTalkingAboutTopic(communityId, topicId, result)
Testing ConnectApi Code

getRecentlyTalkingAboutTopicsForGroup(communityId, groupId)
Get up to five topics most recently used in a group.

API Version
29.0
Available to Guest Users
32.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.TopicPage getRecentlyTalkingAboutTopicsForGroup(String communityId, String groupId)
```

Parameters
- `communityId`
  Type: String
  Use either the ID for a community, `internal`, or `null`.
- `groupId`
  Type: String
  The ID for a group.

Return Value
Type: `ConnectApi.TopicPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetRecentlyTalkingAboutTopicsForGroup(communityId, groupId, result)`
  Testing ConnectApi Code

`getRecentlyTalkingAboutTopicsForUser(communityId, userId)`
Get up to five topics most recently used by a user.

API Version
29.0

Available to Guest Users
32.0
Requires Chatter
Yes

Signature
public static ConnectApi.TopicPage getRecentlyTalkingAboutTopicsForUser(String communityId, String userId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for a user.

Return Value
Type: ConnectApi.TopicPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRecentlyTalkingAboutTopicsForUser(communityId, userId, result)
Testing ConnectApi Code

getRelatedTopics(communityId, topicId)
Get up to five topics most closely related to a topic.
Two topics that are assigned to the same feed item at least three times are related.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No
Signature

```java
public static ConnectApi.TopicPage getRelatedTopics(String communityId, String topicId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `topicId`
  - Type: `String`
  - The ID for a topic.

Return Value

- Type: `ConnectApi.TopicPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetRelatedTopics(communityId, topicId, result)`
- Testing ConnectApi Code

```java
getTopic(communityId, topicId)
```

Get a topic.

API Version

- 29.0

Available to Guest Users

- 32.0

Requires Chatter

- No

Signature

```java
public static ConnectApi.Topic getTopic(String communityId, String topicId)
```
Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`topicId`
Type: `String`
The ID for a topic.

Return Value
Type: `ConnectApi.Topic`

`getTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory)`
Get topic and article assignment rules by data category.

API Version
40.0

Requires Chatter
No

Signature

```
public static ConnectApi.TopicPage getTopicDataCategoryRules(String communityId, String dataCategoryGroup, String dataCategory)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`dataCategoryGroup`
Type: `String`
The data category group used by articles.

`dataCategory`
Type: `String`
The data category used by articles.

Return Value
Type: `ConnectApi.TopicPage`
**getTopics(communityId, recordId)**

Get the first page of topics assigned to a record or feed item.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No

Signature

```
public static ConnectApi.TopicPage getTopics(String communityId, String recordId)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **recordId**
  - Type: `String`
  - The ID for a record or feed item.

Return Value

Type: `ConnectApi.TopicPage`

Usage

Administrators must enable topics for objects before users can add topics to records of that object type.

**getTopics(communityId)**

Get the first page of topics for the org or community.

API Version
29.0

Available to Guest Users
32.0
Requires Chatter
No

Signature

public static ConnectApi.TopicPage getTopics(String communityId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

Return Value
Type: ConnectApi.TopicPage

getTopics(communityId, sortParam)
Get the first page of sorted topics for the org or community.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No

Signature

public static ConnectApi.TopicPage getTopics(String communityId, ConnectApi.TopicSort sortParam)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

sortParam
Type: ConnectApi.TopicSort
Values are:
• popularDesc—Sorts topics by popularity with the most popular first. This value is the default.
• alphaAsc—Sorts topics alphabetically.
Return Value
Type: ConnectApi.TopicPage

getTopics(communityId, pageParam, pageSize)
Get a page of topics.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage getTopics(String communityId, Integer pageParam, Integer pageSize)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.TopicPage

getTopics(communityId, pageParam, pageSize, sortParam)
Get a page of sorted topics.

API Version
29.0
Available to Guest Users
32.0

Requires Chatter
No

Signature

```java
public static ConnectApi.TopicPage getTopics(String communityId, Integer pageParam, Integer pageSize, ConnectApi.TopicSort sortParam)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `pageParam`
  - Type: `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- `sortParam`
  - Type: `ConnectApi.TopicSort`
  - Values are:
    - `popularDesc`—Sorts topics by popularity with the most popular first. This value is the default.
    - `alphaAsc`—Sorts topics alphabetically.

Return Value

- Type: `ConnectApi.TopicPage`

**getTopics(communityId, q, sortParam)**

Get the sorted topics that match the search criteria.

API Version

29.0

Available to Guest Users
32.0
Requires Chatter
No

Signature

```java
public static ConnectApi.TopicPage getTopics(String communityId, String q, ConnectApi.TopicSort sortParam)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `q`
  Type: `String`
  Specifies the string to search. The string must contain at least two characters, not including wildcards.

- `sortParam`
  Type: `ConnectApi.TopicSort`
  Values are:
  - `popularDesc`—Sorts topics by popularity with the most popular first. This value is the default.
  - `alphaAsc`—Sorts topics alphabetically.

Return Value

Type: `ConnectApi.TopicPage`

getTopics(communityId, q, pageParam, pageSize)

Get a page of topics that match the search criteria.

API Version

29.0

Available to Guest Users

32.0

Requires Chatter
No

Signature

```java
public static ConnectApi.TopicPage getTopics(String communityId, String q, Integer pageParam, Integer pageSize)
```
Parameters

`communityId`
   Type: String
   Use either the ID for a community, internal, or null.

`q`
   Type: String
   Specifies the string to search. The string must contain at least two characters, not including wildcards.

`pageParam`
   Type: Integer
   Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

`pageSize`
   Type: Integer
   Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: `ConnectApi.TopicPage`

`getTopics(communityId, q, pageParam, pageSize, sortParam)`
Get a page of sorted topics that match the search criteria.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
`public static ConnectApi.TopicPage getTopics(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.TopicSort sortParam)`

Parameters

`communityId`
   Type: String
   Use either the ID for a community, internal, or null.

`q`
   Type: String
Specifies the string to search. The string must contain at least two characters, not including wildcards.

**pageParam**
- **Type:** Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**
- **Type:** Integer
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
- **Type:** ConnectApi.TopicSort
  - **Values are:**
    - **popularDesc**—Sorts topics by popularity with the most popular first. This value is the default.
    - **alphaAsc**—Sorts topics alphabetically.

Return Value
- **Type:** ConnectApi.TopicPage

**getTopics(communityId, q, exactMatch)**
Get the topic that matches the exact, case-insensitive name.

API Version
- 33.0

Available to Guest Users
- 33.0

Requires Chatter
- No

Signature
- `public static ConnectApi.TopicPage getTopics(String communityId, String q, Boolean exactMatch)`

Parameters
- **communityId**
  - **Type:** String
    - Use either the ID for a community, internal, or null.

- **q**
  - **Type:** String
    - Specifies the string to search. The string must contain at least two characters, not including wildcards.
**exactMatch**
Type: Boolean
Specify true to find a topic by its exact, case-insensitive name.

Return Value
Type: ConnectApi.TopicPage

**getTopicsOrFallBackToRenamedTopics(communityId, q, exactMatch, fallBackToRenamedTopics)**
Get the most recent renamed topic match, if there isn’t an exact match.

API Version
35.0

Available to Guest Users
35.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage getTopicsOrFallBackToRenamedTopics(String communityId, String q, Boolean exactMatch, Boolean fallBackToRenamedTopics)

Parameters
**communityId**
Type: String
Use either the ID for a community, internal, or null.

**q**
Type: String
Specifies the string to search. The string must contain at least two characters, not including wildcards.

**exactMatch**
Type: Boolean
Specify true to find a topic by its exact, case-insensitive name or to find the most recent renamed topic match if there isn’t an exact match.

**fallBackToRenamedTopics**
Type: Boolean
Specify true and if there isn’t an exact match, the most recent renamed topic match is returned. If there are multiple renamed topic matches, only the most recent is returned. If there are no renamed topic matches, an empty collection is returned.
Return Value
Type: ConnectApi.TopicPage

getTopicSuggestions(communityId, recordId, maxResults)
Get up to a specified number of suggested topics for a record or feed item.

API Version
29.0

Requires Chatter
No

Signature
public static ConnectApi.TopicSuggestionPage getTopicSuggestions(String communityId, String recordId, Integer maxResults)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

recordId
Type: String
The ID for a record or feed item.

maxResults
Type: Integer
Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

Return Value
Type: ConnectApi.TopicSuggestionPage

Usage
Administrators must enable topics for objects before users can see suggested topics for records of that object type.
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetTopicSuggestions(communityId, recordId, maxResults, result)
Testing ConnectApi Code
getTopicSuggestions(communityId, recordId)

Get suggested topics for a record or feed item.

API Version
29.0

Requires Chatter
No

Signature
public static ConnectApi.TopicSuggestionPage getTopicSuggestions(String communityId, String recordId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

recordId
Type: String
The ID for a record or feed item.

Return Value
Type: ConnectApi.TopicSuggestionPage

Usage
Administrators must enable topics for objects before users can see suggested topics for records of that object type.
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetTopicSuggestions(communityId, recordId, result)
Testing ConnectApi Code

getTopicSuggestionsForText(communityId, text, maxResults)

Get up to a specified number of suggested topics for a string of text.

API Version
29.0
Requires Chatter
No

Signature

```java
public static ConnectApi.TopicSuggestionPage getTopicSuggestionsForText(String communityId, String text, Integer maxResults)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or **null**.

- **text**
  - Type: String
  - String of text.

- **maxResults**
  - Type: Integer
  - Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

Return Value

Type: `ConnectApi.TopicSuggestionPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetTopicSuggestionsForText(communityId, text, maxResults, result)`
- **Testing ConnectApi Code**

```java
getTopicSuggestionsForText(communityId, text)
```

Get suggested topics for a string of text.

API Version

29.0

Requires Chatter
No
Signature

```
public static ConnectApi.TopicSuggestionPage getTopicSuggestionsForText(String communityId, String text)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **text**
  - Type: String
  - String of text.

Return Value

Type: `ConnectApi.TopicSuggestionPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetTopicSuggestionsForText(communityId, text, result)`
- `Testing ConnectApi Code`

`getTrendingTopics(communityId)`

Get trending topics for the org or community.

API Version

29.0

Available to Guest Users

32.0

Requires Chatter

No

Signature

```
public static ConnectApi.TopicPage getTrendingTopics(String communityId)
```
Parameters

`communityId`
Type: String

Use either the ID for a community, `internal`, or `null`.

Return Value

Type: `ConnectApi.TopicPage`

Usage

The more frequently people add a specific topic to their posts and comments and comment on or like posts with the same topic over a short period, the more likely it is to become a trending topic. For example, if your coworkers are attending the upcoming Dreamforce conference and have started discussing it in Chatter, you might see a trending topic for Dreamforce. A trending topic is not solely based on popularity and usually relates to a one-time or infrequent event that has a spike in activity, such as a conference or a project deadline.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetTrendingTopics(communityId, result)`
- Testing ConnectApi Code

`getTrendingTopics(communityId, maxResults)`

Get up to a specified number of trending topics for the org or community.

API Version

29.0

Available to Guest Users

32.0

Requires Chatter

No

Signature

`public static ConnectApi.TopicPage getTrendingTopics(String communityId, Integer maxResults)`

Parameters

`communityId`
Type: String

Use either the ID for a community, `internal`, or `null`.
maxResults
  Type: Integer
  Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

Return Value
Type: ConnectApi.TopicPage

Usage
The more frequently people add a specific topic to their posts and comments and comment on or like posts with the same topic over a short period, the more likely it is to become a trending topic. For example, if your coworkers are attending the upcoming Dreamforce conference and have started discussing it in Chatter, you might see a trending topic for Dreamforce. A trending topic is not solely based on popularity and usually relates to a one-time or infrequent event that has a spike in activity, such as a conference or a project deadline.

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestGetTrendingTopics(communityId, maxResults, result)
  Testing ConnectApi Code

mergeTopics(communityId, topicId, idsToMerge)
Merge up to five secondary topics with a primary topic.

API Version
33.0

Requires Chatter
No

Signature
public static ConnectApi.Topic mergeTopics(String communityId, String topicId, List<String> idsToMerge)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

topicId
  Type: String
  The ID for the primary topic for the merge. If this topic is a managed topic, it retains its topic type, topic images, and children topics.
idsToMerge
type: List<String>
A list of up to five comma-separated secondary topic IDs to merge with the primary topic. If any of these secondary topics are managed topics, they lose their topic type, topic images, and children topics. Their feed items are reassigned to the primary topic.

Return Value
Type: ConnectApi.Topic

Usage
Only users with the Delete Topics or Modify All Data permission can merge topics.

reassignTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory, topicNames)
Reassign topic and article assignment rules by data category by deleting the existing rules and creating new rules.

API Version
40.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage reassignTopicDataCategoryRules(String communityId, String dataCategoryGroup, String dataCategory, ConnectApi.TopicNamesInput topicNames)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

dataCategoryGroup
Type: String
The data category group used by articles.

dataCategory
Type: String
The data category used by articles.

topicNames
Type: ConnectApi.TopicNamesInput
A ConnectApi.TopicNamesInput object with the names of topics to reassign to articles in a data category.
Return Value
Type: **ConnectApi.TopicPage**

**reassignTopicsByName(communityId, recordId, topicNames)**
Reassign all the topics on a record or feed item, that is, remove all the assigned topics on a record or feed item and add topics. Optionally, provide a list of suggested topics to assign to a record or feed item to improve future topic suggestions.

API Version
35.0

Requires Chatter
No

Signature
```java
public static ConnectApi.TopicPage reassignTopicsByName(String communityId, String recordId, ConnectApi.TopicNamesInput topicNames)
```

Parameters
- **communityId**
  Type: **String**
  Use either the ID for a community, internal, or null.

- **recordId**
  Type: **String**
  The ID of the record or feed item to which to assign the topic.

- **topicNames**
  Type: **ConnectApi.TopicNamesInput**
  A list of topics to replace the currently assigned topics. Optionally, a list of suggested topics to assign to improve future topic suggestions.

Return Value
Type: **ConnectApi.TopicPage**

Usage
Only users with the Assign Topics permission can remove topics from records or feed items and add existing topics to records or feed items. Only users with the Create Topics permission can add new topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

**unassignTopic(communityId, recordId, topicId)**
Remove a topic from a record or feed item.
API Version
29.0

Requires Chatter
No

Signature
public static Void unassignTopic(String communityId, String recordId, String topicId)

Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or null.

`recordId`
Type: String
The ID for a record or feed item.

`topicId`
Type: String
The ID for a topic.

Return Value
Type: Void

Usage
Only users with the Assign Topics permission can remove topics from feed items or records. Administrators must enable topics for objects before users can add topics to records of that object type.

`updateTopic(communityId, topicId, topic)`
Update the description or name of a topic or merge up to five secondary topics with a primary topic.

API Version
29.0

Requires Chatter
No

Signature
public static ConnectApi.Topic updateTopic(String communityId, String topicId, ConnectApi.TopicInput topic)
Parameters

`communityId`
Type: String
Use either the ID for a community, `internal`, or `null`.

`topicId`
Type: String
The ID for a topic.

`topic`
Type: `ConnectApi.TopicInput`
A `ConnectApi.TopicInput` object containing the name and description of the topic or up to five comma-separated secondary topic IDs to merge with the primary topic.

Return Value
Type: `ConnectApi.Topic`

Usage
Only users with the Edit Topics or Modify All Data permission can update topic names and descriptions. Only users with the Delete Topics or Modify All Data permission can merge topics.

`updateTopicsForArticlesInDataCategory(communityId, dataCategoryGroup, dataCategory, articleTopicAssignmentJob)`
Assign topics to articles and unassign topics from articles in a data category.

API Version
40.0

Requires Chatter
No

Signature

```
public static ConnectApi.TopicPage updateTopicsForArticlesInDataCategory(String communityId, String dataCategoryGroup, String dataCategory, ConnectApi.ArticleTopicAssignmentJobInput articleTopicAssignmentJob)
```

Parameters

`communityId`
Type: String
Use either the ID for a community, `internal`, or `null`.

`dataCategoryGroup`
Type: String
The data category group used by articles.

dataCategory
  Type: String
  The data category used by articles.

articleTopicAssignmentJob
  Type: ConnectApi.ArticleTopicAssignmentJobInput
  A ConnectApi.ArticleTopicAssignmentJobInput object that indicates the operation to take on which topics.

Return Value
  Type: ConnectApi.TopicPage

Topics Test Methods

The following are the test methods for Topics. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

setTestGetGroupsRecentlyTalkingAboutTopic(communityId, topicId, result)

Register a ConnectApi.ChatterGroupSummaryPage object to be returned when the matching
ConnectApi.getGroupsRecentlyTalkingAboutTopic method is called in a test context. Use the method with the
same parameters or you receive an exception.

API Version
29.0

Signature

public static Void setTestGetGroupsRecentlyTalkingAboutTopic(String communityId, String
  topicId, ConnectApi.ChatterGroupSummaryPage result)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

topicId
  Type: String
  The ID for a topic.

result
  Type: ConnectApi.ChatterGroupSummaryPage
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
getGroupsRecentlyTalkingAboutTopic(communityId, topicId)
Testing ConnectApi Code

setTestGetRecentlyTalkingAboutTopicsForGroup(communityId, groupId, result)
Register a ConnectApi.TopicPage object to be returned when the matching
ConnectApi.getRecentlyTalkingAboutTopicsForGroup method is called in a test context. Use the method with
the same parameters or you receive an exception.

API Version
29.0

Signature
public static Void setTestGetRecentlyTalkingAboutTopicsForGroup(String communityId,
String groupId, ConnectApi.TopicPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

result
Type: ConnectApi.TopicPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRecentlyTalkingAboutTopicsForGroup(communityId, groupId)
Testing ConnectApi Code
**setTestGetRecentlyTalkingAboutTopicsForUser(communityId, userId, result)**

Register a `ConnectApi.TopicPage` object to be returned when the matching `ConnectApi.getRecentlyTalkingAboutTopicsForUser` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

29.0

Signature

```java
public static Void setTestGetRecentlyTalkingAboutTopicsForUser(String communityId, String userId, ConnectApi.TopicPage result)
```

Parameters

- `communityId`  
  Type: `String`  
  Use either the ID for a community, `internal`, or `null`.

- `userId`  
  Type: `String`  
  The ID for a user.

- `result`  
  Type: `ConnectApi.TopicPage`  
  Specify the test topics page.

Return Value

Type: `Void`

SEE ALSO:

- `getRecentlyTalkingAboutTopicsForUser(communityId, userId)`
- `Testing ConnectApi Code`

**setTestGetRelatedTopics(communityId, topicId, result)**

Register a `ConnectApi.TopicPage` object to be returned when the matching `ConnectApi.getRelatedTopics` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

29.0

Signature

```java
public static Void setTestGetRelatedTopics(String communityId, String topicId, ConnectApi.TopicPage result)
```
**Parameters**

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`topicId`
Type: `String`
The ID for a topic.

`result`
Type: `ConnectApi.TopicPage`
The object containing test data.

**Return Value**
Type: `Void`

**SEE ALSO:**
- `getRelatedTopics(communityId, topicId)`
- Testing ConnectApi Code

### setTestGetTopicSuggestions(communityId, recordId, maxResults, result)

Register a `ConnectApi.TopicSuggestionPage` object to be returned when the matching `ConnectApi.getTopicSuggestions` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**
29.0

**Signature**

```java
public static Void setTestGetTopicSuggestions(String communityId, String recordId, Integer maxResults, ConnectApi.TopicSuggestionPage result)
```

**Parameters**

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`recordId`
Type: `String`
The ID for a record or feed item.

`maxResults`
Type: `Integer`
Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

result
Type: ConnectApi.TopicSuggestionPage
Specify the test topic suggestions page.

Return Value
Type: Void

SEE ALSO:
getTopicSuggestions(communityId, recordId, maxResults)
Testing ConnectApi Code

setTestGetTopicSuggestions(communityId, recordId, result)
Register a ConnectApi.TopicSuggestionPage object to be returned when the matching ConnectApi.getTopicSuggestions method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature
public static Void setTestGetTopicSuggestions(String communityId, String recordId, ConnectApi.TopicSuggestionPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

recordId
Type: String
The ID for a record or feed item.

result
Type: ConnectApi.TopicSuggestionPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getTopicSuggestions(communityId, recordId)
Testing ConnectApi Code

**setTestGetTopicSuggestionsForText(communityId, text, maxResults, result)**

Register a `ConnectApi.TopicSuggestionPage` object to be returned when the matching `ConnectApi.getTopicSuggestionsForText` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**
29.0

**Signature**
```java
public static Void setTestGetTopicSuggestionsForText(String communityId, String text, Integer maxResults, ConnectApi.TopicSuggestionPage result)
```

**Parameters**

- **communityId**
  Type: String
  Use either the ID for a community, `internal`, or `null`.

- **text**
  Type: String
  String of text.

- **maxResults**
  Type: Integer
  Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

- **result**
  Type: `ConnectApi.TopicSuggestionPage`
  The object containing test data.

**Return Value**
Type: Void

SEE ALSO:
getTopicSuggestionsForText(communityId, text, maxResults)
Testing ConnectApi Code
**setTestGetTopicSuggestionsForText(communityId, text, result)**

Register a ConnectApi.TopicSuggestionPage object to be returned when the matching ConnectApi.getTopicSuggestionsForText method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

29.0

Signature

```java
public static Void setTestGetTopicSuggestionsForText(String communityId, String text, ConnectApi.TopicSuggestionPage result)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **text**
  - Type: String
  - String of text.

- **result**
  - Type: ConnectApi.TopicSuggestionPage
  - The object containing test data.

Return Value

Type: Void

SEE ALSO:

- getTopicSuggestionsForText(communityId, text)
- Testing ConnectApi Code

**setTestGetTrendingTopics(communityId, result)**

Register a ConnectApi.TopicPage object to be returned when the matching ConnectApi.getTrendingTopics method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

29.0

Signature

```java
public static Void setTestGetTrendingTopics(String communityId, ConnectApi.TopicPage result)
```
Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`result`
Type: `ConnectApi.TopicPage`
The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `getTrendingTopics(communityId)`
- Testing ConnectApi Code

**setTestGetTrendingTopics(communityId, maxResults, result)**

Register a `ConnectApi.TopicPage` object to be returned when the matching `ConnectApi.getTrendingTopics` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature

```java
public static Void setTestGetTrendingTopics(String communityId, Integer maxResults, ConnectApi.TopicPage result)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`maxResults`
Type: `Integer`
Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

`result`
Type: `ConnectApi.TopicPage`
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getTrendingTopics(communityId, maxResults)
Testing ConnectApi Code

UserProfiles Class
Access user profile data. The user profile data populates the profile page (also called the Chatter profile page). This data includes user information (such as address, manager, and phone number), some user capabilities (permissions), and a set of subtab apps, which are custom tabs on the profile page.

Namespace
ConnectApi

UserProfiles Methods
The following are methods for UserProfiles. All methods are static.

IN THIS SECTION:
deleteBannerPhoto(communityId, userId)
Delete a user’s banner photo.
deletePhoto(communityId, userId)
Delete a user’s photo.
getBannerPhoto(communityId, userId)
Get a user’s banner photo.
getPhoto(communityId, userId)
Get a user’s photo.
getUserProfile(communityId, userId)
Get the user profile of the context user.
setBannerPhoto(communityId, userId, fileId, versionNumber)
Set an uploaded file as a user’s banner photo.
setBannerPhoto(communityId, userId, fileUpload)
Set a file that hasn’t been uploaded as a user’s banner photo.
setBannerPhotoWithAttributes(communityId, userId, bannerPhoto)
Set and crop an uploaded file as a user’s banner photo.
setBannerPhotoWithAttributes(communityId, userId, bannerPhoto, fileUpload)
Set and crop a file that hasn’t been uploaded as a user’s banner photo.
setPhoto(communityId, userId, fileId, versionNumber)
Set an uploaded file as a user’s photo.
setPhoto(communityId, userId, fileUpload)
Set a file that hasn’t been uploaded as a user’s photo.

setPhotoWithAttributes(communityId, userId, photo)
Set and crop an uploaded file as a user’s photo.

setPhotoWithAttributes(communityId, userId, photo, fileUpload)
Set and crop a file that hasn’t been uploaded as a user’s photo.

deleteBannerPhoto(communityId, userId)
Delete a user’s banner photo.

API Version
36.0

Requires Chatter
No

Signature
public static Void deleteBannerPhoto(String communityId, String userId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
ID of the user.

Return Value
Type: Void

deletePhoto(communityId, userId)
Delete a user’s photo.

API Version
35.0

Requires Chatter
No
Signature

`public static Void deletePhoto(String communityId, String userId)`

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`userId`
Type: `String`
The ID for the context user or the keyword `me`.

Return Value
Type: `Void`

`getBannerPhoto(communityId, userId)`
Get a user's banner photo.

API Version
36.0

Requires Chatter
No

Signature

`public static ConnectApi.BannerPhoto getBannerPhoto(String communityId, String userId)`

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`userId`
Type: `String`
ID of the user.

Return Value
Type: `ConnectApi.BannerPhoto`

`getPhoto(communityId, userId)`
Get a user's photo.
API Version
35.0

Available to Guest Users
35.0

Requires Chatter
No

Signature
public static ConnectApi.Photo getPhoto(String communityId, String userId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for a user.

Return Value
Type: ConnectApi.Photo

SEE ALSO:
Methods Available to Communities Guest Users

getUserProfile(communityId, userId)
Get the user profile of the context user.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserProfile getUserProfile(String communityId, String userId)
Parameters

`communityId`  
Type: `String`  
Use either the ID for a community, `internal`, or `null`.

`userId`  
Type: `String`  
The ID for a user.

Return Value

Type: `ConnectApi.UserProfile`

`setBannerPhoto(communityId, userId, fileId, versionNumber)`  
Set an uploaded file as a user’s banner photo.

API Version

36.0

Requires Chatter

No

Signature

```java
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String userId, String fileId, Integer versionNumber)
```

Parameters

`communityId`  
Type: `String`  
Use either the ID for a community, `internal`, or `null`.

`userId`  
Type: `String`  
ID of the user.

`fileId`  
Type: `String`  
ID of the uploaded file to use as the user banner. The key prefix must be 069, and the image must be smaller than 8 MB.

`versionNumber`  
Type: `Integer`  
Version number of the file. Specify an existing version number or, to get the latest version, specify `null`. 
Return Value
Type: `ConnectApi.BannerPhoto`

Usage
Photos are processed asynchronously and may not be visible right away.

`setBannerPhoto(communityId, userId, fileUpload)`
Set a file that hasn’t been uploaded as a user’s banner photo.

API Version
36.0

Requires Chatter
No

Signature
```
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String userId, ConnectApi.BinaryInput fileUpload)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`userId`
Type: `String`
ID of the user.

`fileUpload`
Type: `ConnectApi.BinaryInput`
A file to use as the photo. The content type must be usable as an image.

Return Value
Type: `ConnectApi.BannerPhoto`

Usage
Photos are processed asynchronously and may not be visible right away.

`setBannerPhotoWithAttributes(communityId, userId, bannerPhoto)`
Set and crop an uploaded file as a user’s banner photo.
API Version
36.0

Requires Chatter
No

Signature
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId, String userId, ConnectApi.BannerPhotoInput bannerPhoto)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

userId
  Type: String
  ID of the user.

bannerPhoto
  Type: ConnectApi.BannerPhotoInput
  A ConnectApi.BannerPhotoInput object that specifies the ID and version of the file, and how to crop the file.

Return Value
Type: ConnectApi.BannerPhoto

Usage
Photos are processed asynchronously and may not be visible right away.

setBannerPhotoWithAttributes(communityId, userId, bannerPhoto, fileUpload)
Set and crop a file that hasn’t been uploaded as a user’s banner photo.

API Version
36.0

Requires Chatter
No

Signature
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId, String userId, ConnectApi.BannerPhotoInput bannerPhoto, ConnectApi.BinaryInput fileUpload)
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**userId**
Type: String
ID of the user.

**bannerPhoto**
Type: ConnectApi.BannerPhotoInput
A ConnectApi.BannerPhotoInput object specifying the cropping parameters.

**fileUpload**
Type: ConnectApi.BinaryInput
A file to use as the photo. The content type must be usable as an image.

Return Value
Type: ConnectApi.BannerPhoto

Usage
Photos are processed asynchronously and may not be visible right away.

**setPhoto(communityId, userId, fileId, versionNumber)**
Set an uploaded file as a user's photo.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.Photo setPhoto(String communityId, String userId, String fileId, Integer versionNumber)
The ID for the context user or the keyword `me`.

`fileId`
Type: `String`
ID of an uploaded file. The file must be an image, and be smaller than 2 GB.

`versionNumber`
Type: `Integer`
Version number of the existing file. Specify either an existing version number, or `null` to get the latest version.

Return Value
Type: `ConnectApi.Photo`

Usage
Photos are processed asynchronously and may not be visible right away.

**setPhoto(communityId, userId, fileUpload)**

Set a file that hasn’t been uploaded as a user’s photo.

API Version
35.0

Requires Chatter
No

Signature

```
public static ConnectApi.Photo setPhoto(String communityId, String userId, ConnectApi.BinaryInput fileUpload)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`userId`
Type: `String`
The ID for the context user or the keyword `me`.

`fileUpload`
Type: `ConnectApi.BinaryInput`
A file to use as the photo. The content type must be usable as an image.
Return Value
Type: `ConnectApi.Photo`

Usage
Photos are processed asynchronously and may not be visible right away.

`setPhotoWithAttributes(communityId, userId, photo)`
Set and crop an uploaded file as a user’s photo.

API Version
35.0

Requires Chatter
No

Signature
`public static ConnectApi.Photo setPhotoWithAttributes(String communityId, String userId, ConnectApi.PhotoInput photo)`

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `userId`
  Type: `String`
  The ID for the context user or the keyword `me`.

- `photo`
  Type: `ConnectApi.PhotoInput`
  A `ConnectApi.PhotoInput` object specifying the file ID, version number, and cropping parameters.

Return Value
Type: `ConnectApi.Photo`

Usage
Photos are processed asynchronously and may not be visible right away.

`setPhotoWithAttributes(communityId, userId, photo, fileUpload)`
Set and crop a file that hasn’t been uploaded as a user’s photo.
API Version
35.0

Requires Chatter
No

Signature
```java
public static ConnectApi.PhotosetPhotoWithAttributes(String communityId, String userId,
ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **userId**
  - Type: String
  - The ID for the context user or the keyword me.

- **photo**
  - Type: ConnectApi.PhotoInput
  - A ConnectApi.PhotoInput object specifying the cropping parameters.

- **fileUpload**
  - Type: ConnectApi.BinaryInput
  - A file to use as the photo. The content type must be usable as an image.

Return Value

- Type: ConnectApi.Photo

Usage

Photos are processed asynchronously and may not be visible right away.

Zones Class

Access information about Chatter Answers zones in your organization. Zones organize questions into logical groups, with each zone having its own focus and unique questions.

**Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring '18.

Namespace

ConnectApi
Zones Methods

The following are methods for Zones. All methods are static.

IN THIS SECTION:

- `getZone(communityId, zoneId)`
  Get a zone.
- `getZones(communityId)`
  Get a list of zones.
- `getZones(communityId, pageParam, pageSize)`
  Get a page of zones.
- `searchInZone(communityId, zoneId, q, filter)`
  Search articles or questions in a zone.
- `searchInZone(communityId, zoneId, q, filter, pageParam, pageSize)`
  Search a page of articles or questions in a zone.
- `searchInZone(communityId, zoneId, q, filter, language)`
  Search articles or questions in a zone, and specify the language of the results.

### getZone(communityId, zoneId)

Get a zone.

Note: With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring '18.

API Version

29.0

Requires Chatter

No

Signature

```java
public static ConnectApi.Zone getZone(String communityId, String zoneId)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, internal, or `null`
- **zoneId**
  - Type: `String`
  - The ID of a zone.
Return Value

Type: `ConnectApi.Zone`

**getZones(communityId)**

Get a list of zones.

⚠️ **Note:** With the Spring ‘18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ‘18.

API Version

29.0

Requires Chatter

No

Signature

```java
public static ConnectApi.ZonePage getZones(String communityId)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

Return Value

Type: `ConnectApi.ZonePage`

**getZones(communityId, pageParam, pageSize)**

Get a page of zones.

⚠️ **Note:** With the Spring ‘18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ‘18.

API Version

29.0

Requires Chatter

No
Signature

```java
public static ConnectApi.Zone getZones(String communityId, Integer pageParam, Integer pageSize)
```

Parameters

**communityId**
- Type: `String`
- Use either the ID for a community, `internal`, or `null`.

**pageParam**
- Type: `Integer`
- Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**
- Type: `Integer`
- Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: `ConnectApi.ZonePage`

**searchInZone(communityId, zoneId, q, filter)**

Search articles or questions in a zone.

⚠️ **Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring '18.

API Version

29.0

Available to Guest Users

37.0

Requires Chatter

No

Signature

```java
public static ConnectApi.ZoneSearchPage searchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter)
```

Parameters

**communityId**
- Type: `String`
Use either the ID for a community, internal, or null.

**zoneId**
- Type: String
- The ID of a zone.

**q**
- Type: String
- Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

**filter**
- Type: `ConnectApi.ZoneSearchResultType`
- A `ZoneSearchResultType` enum value. One of the following:
  - Article—Search results contain only articles.
  - Question—Search results contain only questions.

**Return Value**
- Type: `ConnectApi.ZoneSearchPage`

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
- `setTestSearchInZone(communityId, zoneId, q, filter, result)`
- [Testing ConnectApi Code](#)

### `searchInZone(communityId, zoneId, q, filter, pageParam, pageSize)`

Search a page of articles or questions in a zone.

**Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see [End of Support for Chatter Answers in Spring '18](#).

**API Version**
- 29.0

**Available to Guest Users**
- 37.0

**Requires Chatter**
- No
Signature

```java
public static ConnectApi.ZoneSearchPage searchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, String pageParam, Integer pageSize)
```

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

zoneId
  Type: String
  The ID of a zone.

q
  Type: String
  Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

filter
  Type: ConnectApi.ZoneSearchResultType
  A ZoneSearchResultType enum value. One of the following:
  - Article—Search results contain only articles.
  - Question—Search results contain only questions.

pageParam
  Type: String
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value

Type: ConnectApi.ZoneSearchPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

setTestSearchInZone(communityId, zoneId, q, filter, pageParam, pageSize, result)

Testing ConnectApi Code

```java
searchInZone(communityId, zoneId, q, filter, language)
```

Search articles or questions in a zone, and specify the language of the results.
Note: With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18.

API Version
36.0

Available to Guest Users
37.0

Requires Chatter
No

Signature
public static ConnectApi.ZoneSearchPage searchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, String language)

Parameters
communityId
   Type: String
   Use either the ID for a community, internal, or null.

zoneId
   Type: String
   The ID of a zone.

q
   Type: String
   Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

filter
   Type: ConnectApi.ZoneSearchResultType
   • Article—Search results contain only articles.
   • Question—Search results contain only questions.

language
   Type: String
   The language of the articles or questions. The value must be a Salesforce supported locale code.

Return Value
Type: ConnectApi.ZoneSearchPage
Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchInZone(communityId, zoneId, q, filter, language, result)

Zones Test Methods
The following are the test methods for Zones. All methods are static.
For information about using these methods to test your `ConnectApi` code, see Testing `ConnectApi` Code.

`setTestSearchInZone(communityId, zoneId, q, filter, result)`
Register a `ConnectApi.ZoneSearchPage` object to be returned when `searchInZone(communityId, zoneId, q, filter)` is called in a test context. Use the method with the same parameters or you receive an exception.

Note: With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18.

29.0

Signature
public static Void setTestSearchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, ConnectApi.ZoneSearchPage result)

Parameters
`communityId`
Type: String
Use either the ID for a community, `internal`, or `null`.

`zoneId`
Type: String
The ID of a zone.

`q`
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`filter`
Type: `ConnectApi.ZoneSearchResultType`
A `ZoneSearchResultType` enum value. One of the following:

- Article—Search results contain only articles.
- Question—Search results contain only questions.
result
Type: ConnectApi.ZoneSearchPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
searchInZone(communityId, zoneId, q, filter)
Testing ConnectApi Code

setTestSearchInZone(communityId, zoneId, q, filter, pageParam, pageSize, result)
Register a ConnectApi.ZoneSearchPage object to be returned when searchInZone(communityId, zoneId, q, filter, pageParam, pageSize) is called in a test context. Use the method with the same parameters or you receive an exception.

Note: With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring '18.

API Version
29.0

Signature
public static Void setTestSearchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, String pageParam, Integer pageSize, ConnectApi.ZoneSearchPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.
zoneId
Type: String
The ID of a zone.
q
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
filter
Type: ConnectApi.ZoneSearchResultType
A ZoneSearchResultType enum value. One of the following:
• Article—Search results contain only articles.
• Question—Search results contain only questions.

**pageParam**
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**result**
Type: ConnectApi.ZoneSearchPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
searchInZone(communityId, zoneId, q, filter, pageParam, pageSize)
Testing ConnectApi Code

**setTestSearchInZone(communityId, zoneId, q, filter, language, result)**
Register a ConnectApi.ZoneSearchPage object to be returned when searchInZone(communityId, zoneId, q, filter, language) is called in a test context. Use the method with the same parameters or you receive an exception.

**Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring '18.

API Version
36.0

Signature
public static Void setTestSearchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, String language, ConnectApi.ZoneSearchPage result)

Parameters

* communityId
  Type: String
  Use either the ID for a community, internal, or null.

* zoneId
  Type: String
The ID of a zone.

q
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

filter
Type: ConnectApi.ZoneSearchResultType
• Article—Search results contain only articles.
• Question—Search results contain only questions.

language
Type: String
The language of the articles or questions. The value must be a Salesforce supported locale code. In an <apex:page>, the default value is the language of the page. Otherwise, the default value is the user’s locale.

result
Type: ConnectApi.ZoneSearchPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
searchInZone(communityId, zoneId, q, filter, language)
Testing ConnectApi Code

ConnectApi Input Classes
Some ConnectApi methods take arguments that are instances of ConnectApi input classes.

Input classes are concrete unless marked abstract in this documentation. Concrete input classes have public constructors that have no parameters.

Some methods have parameters that are typed with an abstract class. You must pass in an instance of a concrete child class for these parameters.

Most input class properties can be set. Read-only properties are noted in this documentation.

ConnectApi.ActionLinkDefinitionInput Class
The definition of an action link. An action link is a button on a feed element. Clicking an action link can take a user to a Web page, initiate a file download, or invoke an API call to Salesforce or to an external server. An action link includes a URL and an HTTP method, and can include a request body and header information, such as an OAuth token for authentication. Use action links to integrate Salesforce and third-party services into the feed so that users can take action to drive productivity and accelerate innovation.

Usage
You can use context variables in the actionUrl, headers, and requestBody properties. Use context variables to pass information about the user who executed the action link to your server-side code. Salesforce substitutes the value when the action link is executed.
These are the available context variables:

<table>
<thead>
<tr>
<th>Context Variable</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>{!actionLinkId}</td>
<td>The ID of the action link the user executed.</td>
</tr>
<tr>
<td>{!actionLinkGroupId}</td>
<td>The ID of the action link group containing the action link the user executed.</td>
</tr>
<tr>
<td>{!communityId}</td>
<td>The ID of the community in which the user executed the action link. The value for your internal organization is the empty key &quot;000000000000000000&quot;.</td>
</tr>
<tr>
<td>{!communityUrl}</td>
<td>The URL of the community in which the user executed the action link. The value for your internal organization is empty string &quot;&quot;.</td>
</tr>
<tr>
<td>{!orgId}</td>
<td>The ID of the organization in which the user executed the action link.</td>
</tr>
<tr>
<td>{!userId}</td>
<td>The ID of the user that executed the action link.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionType</td>
<td><code>ConnectApi.ActionLinkType</code></td>
<td>Defines the type of action link. Values are:</td>
<td>Required</td>
<td>33.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Api—The action link calls a synchronous API at the action URL. Salesforce sets the status to SuccessfulStatus or FailedStatus based on the HTTP status code returned by your server.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- ApiAsync—The action link calls an asynchronous API at the action URL. The action remains in a PendingStatus state until a third party makes a request to <code>/connect/action-links/{actionLinkId}</code> to set the status to SuccessfulStatus or FailedStatus when the asynchronous operation is complete.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Download—The action link downloads a file from the action URL.</td>
<td>Can be defined in an action link template.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Ui—The action link takes the user to a web page at the action URL.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Use `Ui` if you need to load a page before the user performs an action, for example, to have the user provide input or view something before the action happens.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionUrl</td>
<td>String</td>
<td>The action link URL. For example, a Ui action link URL is a Web page. A Download action link URL is a link to the file to download. Ui and Download action link URLs are provided to clients. An Api or ApiAsync action link URL is a REST resource. Api and ApiAsync action link URLs aren’t provided to clients. Links to Salesforce can be relative. All other links must be absolute and start with https:///</td>
<td>Required</td>
<td>33.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Can be defined in an action link template.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>excludedUserId</td>
<td>String</td>
<td>ID of a single user to exclude from performing the action. If you specify an excludedUserId, you can’t specify a userId.</td>
<td>Optional</td>
<td>33.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Can be defined in an action link template using the User Visibility and Custom User Alias fields.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Note:** Invoking ApiAsync action links from an app requires a call to set the status. However, there isn’t currently a way to set the status of an action link using Apex. To set the status, use Chatter REST API. See the Action Link resource in the Chatter REST API Developer Guide for more information.

**Tip:** To avoid issues due to upgrades or changing functionality in your API, we recommend using a versioned API for actionUrl, for example, https://www.example.com/api/v1/exampleResource. If your API isn’t versioned, you can use the expirationDate property of the ConnectApi.ActionLinkGroupDefinitionInput class to avoid issues due to upgrades or changing functionality in your API.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>groupDefault</td>
<td>Boolean</td>
<td>true if this action is the default action link in the action link group; false otherwise. There can be only one default action link per action link group. The default action link gets distinct styling in the Salesforce UI.</td>
<td>Optional</td>
<td>33.0</td>
</tr>
<tr>
<td>headers</td>
<td>List&lt;ConnectApi. RequestHeader Input&gt;</td>
<td>The request headers for the Api and ApiAsync action link types. See Action Links Overview, Authentication, and Security.</td>
<td>Optional</td>
<td>33.0</td>
</tr>
<tr>
<td>labelKey</td>
<td>String</td>
<td>Key for the set of labels to show in the user interface. A set includes labels for these states: NewStatus, PendingStatus, SuccessStatus, FailedStatus. For example, if you use the Approve key, you get these labels: Approve, Pending, Approved, Failed. For a complete list of keys and labels, see Action Links Labels. If none of the predefined labels work for your action link, use a custom label. To use a custom label, create an action link template. See Create Action Link Templates.</td>
<td>Required</td>
<td>33.0</td>
</tr>
</tbody>
</table>
| method        | ConnectApi. HttpRequest Method | One of these HTTP methods:  
- HttpDelete—Returns HTTP 204 on success. Response body or output class is empty.  
- HttpGet—Returns HTTP 200 on success.  
- HttpHead—Returns HTTP 200 on success. Response body or output class is empty.  
- HttpPatch—Returns HTTP 200 on success or HTTP 204 if the response body or output class is empty.  
- HttpPost—Returns HTTP 201 on success or HTTP 204 if the response body or output class is empty. Exceptions are the batch posting resources and methods, which return HTTP 200 on success. | Required             | 33.0              |
### ConnectApi.ActionLinkGroupDefinitionInput Class

The definition of an action link group. All action links must belong to a group. Action links in a group are mutually exclusive and share some properties. Define stand-alone actions in their own action group.

Action link definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionLinks</td>
<td>List&lt;ConnectApi.ActionLinkDefinitionInput&gt;</td>
<td>The action links that make up this group. Within an action link group, action links are displayed in the order listed in the actionLinks property of the ConnectApi.ActionLinkGroupDefinitionInput class. Within a feed item, action link groups are displayed in the order specified in the</td>
<td>Required</td>
<td>33.0</td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Required or Optional</td>
<td>Available Version</td>
</tr>
<tr>
<td>--------------------</td>
<td>-----------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>----------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>actionLinkGroupIds</td>
<td>property of</td>
<td>actionLinkGroupIds property of the ConnectApi.AssociatedActions CapabilityInput class. You can create up to three action links in a Primary group and up to four in an Overflow group.</td>
<td>Optional</td>
<td></td>
</tr>
</tbody>
</table>
| category           | ConnectApi.PlatformActionGroupCategory | Indicates the priority and relative locations of action links in an associated feed item. Values are:  
  - Primary—The action link group is displayed in the body of the feed element.  
  - Overflow—The action link group is displayed in the overflow menu of the feed element.                                                                                                         | Required to instantiate this action link group without a template. To instantiate from a template, don’t specify a value. | 33.0               |
| executions Allowed | ConnectApi.ActionLinkExecutionsAllowed | Defines the number of times an action link can be executed. Values are:  
  - Once—An action link can be executed only once across all users.  
  - OncePerUser—An action link can be executed only once for each user.  
  - Unlimited—An action link can be executed an unlimited number of times by each user. If the action link’s actionType is Api or ApiAsync, you can’t use this value. | Required to instantiate this action link group without a template. To instantiate from a template, don’t specify a value. | 33.0               |
| expirationDate     | Datetime              | ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z, that represents the date and time this action link group is removed from associated feed items and can no longer be executed. The expirationDate must be within one year of the creation date.  
If the action link group definition includes an OAuth token, it is a good idea to set the expiration date of the action link group to the same value as the expiration date of the OAuth token so that users can’t execute the action link and get an OAuth error. | Required to instantiate this action link group without a template. Optional to instantiate from a template. | 33.0               |
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>templateId</td>
<td>String</td>
<td>The ID of the action link group template from which to instantiate this action link group.</td>
<td>33.0</td>
<td></td>
</tr>
<tr>
<td>templateBindings</td>
<td>List&lt;ConnectApi.ActionLinkTemplateBindingInput&gt;</td>
<td>A collection of key-value pairs to fill in binding variable values or a custom user alias from an action link template. To instantiate this action link group from an action link template that uses binding variables, you must provide values for all the variables. See Define Binding Variables.</td>
<td>To instantiate without a template, don’t specify a value. Required to instantiate this action link group from a template that uses binding variables.</td>
<td>33.0</td>
</tr>
<tr>
<td>key</td>
<td>String</td>
<td>The name of the binding variable key specified in the action link template in Setup. For example, if the binding variable in the template is {!Binding.firstName}, the key is firstName</td>
<td>Required</td>
<td>33.0</td>
</tr>
</tbody>
</table>

See ALSO:
- Define an Action Link and Post with a Feed Element
- Define an Action Link in a Template and Post with a Feed Element
- createActionLinkGroupDefinition(communityId, actionLinkGroup)

ConnectApi.ActionLinkTemplateBindingInput
A key-value pair to fill in a binding variable value from an action link template.
### ConnectApi.ActivitySharingInput

Defines who a captured email or event is shared with.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>groupsToShareWith</td>
<td>List&lt;String&gt;</td>
<td>List of IDs for the groups that you share the activity with. Valid only if sharingType is MyGroups.</td>
<td>Optional</td>
<td>39.0</td>
</tr>
</tbody>
</table>
| sharingType | ConnectApi.ActivitySharingType | Type of sharing operation. Values are:  
- **Everyone**—The activity is shared with everyone.  
- **MyGroups**—The activity is shared only with a selection of the context user’s groups.  
- **OnlyMe**—The activity is private. | Required | 39.0 |

### ConnectApi.AlternativeInput

Alternative representation for an extension on a feed element.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>textRepresentation</td>
<td>String</td>
<td>Text representation of the extension.</td>
<td>Required</td>
<td>40.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>Thumbnail URL for the extension.</td>
<td>Optional</td>
<td>40.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the extension.</td>
<td>Optional</td>
<td>40.0</td>
</tr>
</tbody>
</table>

### ConnectApi.AnnouncementInput Class

An announcement.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available</th>
</tr>
</thead>
<tbody>
<tr>
<td>body</td>
<td><code>ConnectApi.Message</code></td>
<td>Text of the announcement.</td>
<td>Required</td>
<td>31.0</td>
</tr>
<tr>
<td></td>
<td><code>BodyInput Class</code></td>
<td></td>
<td>Optional</td>
<td></td>
</tr>
<tr>
<td>expirationDate</td>
<td><code>Datetime</code></td>
<td>The Salesforce UI displays an announcement until 11:59 p.m. on this date unless another announcement is posted first. The Salesforce UI ignores the time value in the expirationDate. However, you can use the time value to create your own display logic in your own UI.</td>
<td>Required</td>
<td>31.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Optional for updating an announcement.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>feedItemId</td>
<td><code>String</code></td>
<td>ID of an AdvancedTextPost feed item that is the body of the announcement.</td>
<td>Required</td>
<td>36.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Required for creating an announcement if body isn't specified. Don't specify for updating an announcement.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>isArchived</td>
<td><code>Boolean</code></td>
<td>Specifies whether the announcement is archived.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td>parentId</td>
<td><code>String</code></td>
<td>ID of the parent entity for the announcement, that is, a group ID when the announcement appears in a group.</td>
<td>Required</td>
<td>36.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Required for creating an announcement if feedItemId isn't specified. Don't specify for updating an announcement.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Required or Optional</td>
<td>Available</td>
</tr>
<tr>
<td>--------------</td>
<td>-------------------</td>
<td>-----------------------------------------------------------------------------</td>
<td>----------------------</td>
<td>-----------</td>
</tr>
<tr>
<td>sendEmails</td>
<td>Boolean</td>
<td>Specifies whether the announcement is sent as an email to all group members regardless of their email setting for the group. If Chatter emails aren’t enabled for the organization, announcement emails aren’t sent. Default value is false.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
postAnnouncement(communityId, groupId, announcement)

**ConnectApi.ArticleTopicAssignmentJobInput**

An article and topic assignment job.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>operation</td>
<td>ConnectApi.ArticleTopicJobType</td>
<td>Type of operation to perform on articles and topics. Values are:</td>
<td>Required</td>
<td>40.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• AssignTopicsToArticle—Assign topics to articles in a data category.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• UnassignTopicsFromArticle—Unassign topics from articles in a data category.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>topicNames</td>
<td>ConnectApi.TopicNamesInput</td>
<td>List of topic names to assign to or unassign from articles.</td>
<td>Required</td>
<td>40.0</td>
</tr>
</tbody>
</table>

**ConnectApi.AssociatedActionsCapabilityInput Class**

A list of action link groups to associate with a feed element. To associate an action link group with a feed element, the call must be made from the Apex namespace that created the action link definition. In addition, the user making the call must have created the definition or have View All Data permission.

An action link is a button on a feed element. Clicking an action link can take a user to a Web page, initiate a file download, or invoke an API call to Salesforce or to an external server. An action link includes a URL and an HTTP method, and can include a request body and header information, such as an OAuth token for authentication. Use action links to integrate Salesforce and third-party services into the feed so that users can take action to drive productivity and accelerate innovation.
### ConnectApi.AudienceCriteriaInput

Custom recommendation audience criteria type.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

Superclass for:
- ConnectApi.CustomListAudienceCriteriaInput
- ConnectApi.NewUserAudienceCriteriaInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| type                            | ConnectApi.RecommendationAudienceCriteriaType | Specifies the custom recommendation audience criteria type. One of these values:  
• CustomList—A custom list of users makes up the audience.  
• MaxDaysInCommunity—New community members make up the audience. | Optional             | 36.0              |

SEE ALSO:
- ConnectApi.RecommendationAudienceInput

### ConnectApi.BannerPhotoInput

A banner photo.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>cropHeight</td>
<td>Integer</td>
<td>Height of the crop rectangle in pixels.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td>cropWidth</td>
<td>Integer</td>
<td>Width of the crop rectangle in pixels.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td>cropX</td>
<td>Integer</td>
<td>X position of the crop rectangle from the left edge of the image in pixels.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td>cropY</td>
<td>Integer</td>
<td>Y position of the crop rectangle from the top edge of the image in pixels.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td>fileId</td>
<td>String</td>
<td>ID of an existing file. The key prefix must be 069, and the file size must be less than 8 MB.</td>
<td>Required</td>
<td>36.0</td>
</tr>
<tr>
<td>versionNumber</td>
<td>Integer</td>
<td>Version number of an existing file. If not provided, the latest version is used.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
</tbody>
</table>

**ConnectApi.BinaryInput Class**

Create a `ConnectApi.BinaryInput` object to attach files to feed items and comments and to add repository files.

The constructor is:

```java
ConnectApi.BinaryInput(blob, contentType, filename)
```

The constructor takes these arguments:

<table>
<thead>
<tr>
<th>Argument</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>blob</td>
<td>Blob</td>
<td>Contents of the file to be used for input</td>
<td>28.0</td>
</tr>
<tr>
<td>contentType</td>
<td>String</td>
<td>MIME type description of the content, such as image/jpg</td>
<td>28.0</td>
</tr>
<tr>
<td>filename</td>
<td>String</td>
<td>File name with the file extension, such as UserPhoto.jpg</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

- Post a Feed Element with a New File (Binary) Attachment
- Post a Comment with a New File
- ConnectApi.BatchInput Class

**ConnectApi.BatchInput Class**

Construct a set of inputs to be passed into a method at the same time.
Use this constructor when there isn’t a binary input:

```csharp
ConnectApi.BatchInput(Object input)
```

Use this constructor to pass one binary input:

```csharp
ConnectApi.BatchInput(Object input, ConnectApi.BinaryInput binary)
```

Use this constructor to pass multiple binary inputs:

```csharp
ConnectApi.BatchInput(Object input, List<ConnectApi.BinaryInput> binaries)
```

The constructors takes these parameters:

<table>
<thead>
<tr>
<th>Argument</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>input</td>
<td>Object</td>
<td>An individual input object to be used in the batch operation. For example, for <code>postFeedElementBatch()</code>, this should be <code>ConnectApi.FeedElementInput</code>.</td>
<td>32.0</td>
</tr>
<tr>
<td>binary</td>
<td>ConnectApi.BinaryInput</td>
<td>A binary file to associate with the input object.</td>
<td>32.0</td>
</tr>
<tr>
<td>binaries</td>
<td>List&lt;ConnectApi.BinaryInput&gt;</td>
<td>A list of binary files to associate with the input object.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

- Post a Batch of Feed Elements
- Post a Batch of Feed Elements with New (Binary) Files

**ConnectApi.BookmarksCapabilityInput**

Create or update a bookmark on a feed element.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput` Class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isBookmarked ByCurrentUser</td>
<td>Boolean</td>
<td>Specifies if the feed element should be bookmarked for the user (true) or not (false).</td>
<td>No</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

- `ConnectApi.FeedElementCapabilitiesInput`

**ConnectApi.CanvasAttachmentInput Class**

**Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, use `ConnectApi.CanvasCapabilityInput`.

Used to attach a canvas app to a feed item.
### ConnectApi.CanvasCapabilityInput

Create or update a canvas app associated with a feed element. This class is a subclass of ConnectApi.FeedElementCapabilityInput Class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Optional. A description of the canvas app. The maximum size is 255 characters.</td>
<td>32.0</td>
</tr>
<tr>
<td>developerName</td>
<td>String</td>
<td>The API name (developer name) of the connected app.</td>
<td>32.0</td>
</tr>
<tr>
<td>height</td>
<td>String</td>
<td>The height of the canvas app in pixels.</td>
<td>32.0</td>
</tr>
<tr>
<td>namespacePrefix</td>
<td>String</td>
<td>A unique namespace prefix for the canvas app.</td>
<td>32.0</td>
</tr>
<tr>
<td>parameters</td>
<td>String</td>
<td>JSON parameters passed to the canvas app.</td>
<td>32.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>A thumbnail URL to a preview image. The maximum thumbnail size is 120 pixels by 120 pixels.</td>
<td>32.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>A title for the canvas link.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:  
ConnectApi.FeedElementCapabilitiesInput
**ConnectApi.ChatterStreamInput**

A Chatter feed stream.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the stream, up to 1,000 characters.</td>
<td>Optional</td>
<td>39.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>

ConnectApi.CommentCapabilitiesInput

A container for all capabilities that can be included with a comment.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>content</td>
<td>ConnectApi. ContentCapabilityInput</td>
<td>Content to attach to the comment.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>feedEntityShare</td>
<td>ConnectApi. FeedEntityShareCapabilityInput</td>
<td>Feed entity to share to the comment.</td>
<td>Optional</td>
<td>42.0</td>
</tr>
</tbody>
</table>
**ConnectApi.ContentAttachmentInput Class**

*Important:* This class isn’t available in version 32.0 and later. In version 32.0 and later, use `ConnectApi.ContentCapabilityInput`.

Used to attach existing content to a comment or feed item.

Subclass of `ConnectApi.FeedItemAttachmentInput Class`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>record</td>
<td><code>ConnectApi. RecordCapability Input</code></td>
<td>Existing knowledge article to attach to the comment.</td>
<td>Optional</td>
<td>42.0</td>
</tr>
</tbody>
</table>

**ConnectApi.ContentCapabilityInput**

Attach or update a file on a comment. Use this class to attach a new file or update a file that has already been uploaded to Salesforce.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput Class`.

To attach or remove files from a feed post (instead of a comment) in version 36.0 and later, use `ConnectApi.FilesCapabilityInput`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>contentDocumentId</td>
<td><code>String</code></td>
<td>ID of the existing content.</td>
<td>Required for existing content</td>
<td>32.0</td>
</tr>
<tr>
<td>description</td>
<td><code>String</code></td>
<td>Description of the file to be uploaded.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
</tbody>
</table>
| sharingOption     | `ConnectApi. FileSharing Option` | Sharing option of the file. Values are:  
  • Allowed—Resharing of the file is allowed.  
  • Restricted—Resharing of the file is restricted. | Optional             | 35.0              |
### ConnectApi.ContentHubFieldValuInput

The fields of the item type.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the item field.</td>
<td>Required</td>

</tr>
<tr>
<td>value</td>
<td>String</td>
<td>Value of the item field.</td>
<td>Required</td>
<td>39.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ContentHubItemInput

The item type ID and fields of the item type.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fields</td>
<td>List&lt;ConnectApi.ContentHubFieldValueInput&gt;</td>
<td>List of fields for the item to be created.</td>
<td>Required to create a SharePoint file in a repository because the file name is required; otherwise optional</td>
<td>39.0</td>
</tr>
<tr>
<td>itemTypeID</td>
<td>String</td>
<td>ID of the item type.</td>
<td>Required to create a file in a repository</td>
<td>39.0</td>
</tr>
</tbody>
</table>

### ConnectApi.CustomListAudienceCriteriaInput

Criteria for the custom list type of custom recommendation audience.
Subclass of ConnectApi.AudienceCriteriaInput.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>member</td>
<td>ConnectApi.RecommendationAudienceMemberOperationType</td>
<td>The operation to carry out on the audience members. Values are: • Add—Adds specified members to the audience. • Remove—Removes specified members from the audience.</td>
<td>Required to update a recommendation audience</td>
<td>36.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Don’t use or specify null to create a recommendation audience</td>
<td></td>
<td></td>
</tr>
<tr>
<td>members</td>
<td>List&lt;String&gt;</td>
<td>A collection of user IDs. When updating an audience, you can include up to 100 members. An audience can have up to 100,000 members, and each community can have up to 100 audiences.</td>
<td>Required to update a recommendation audience</td>
<td>36.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Don’t use or specify null to create a recommendation audience</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**ConnectApi.DatacloudOrderInput Class**

Input representation for a Datacloud order to purchase contacts or companies and retrieve purchase information.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>companyIds</td>
<td>String</td>
<td>A comma-separated list of identification numbers for the companies to be purchased. You can’t include any contact IDs or your purchase fails.</td>
<td>Required to purchase companies</td>
<td>32.0</td>
</tr>
<tr>
<td>contactIds</td>
<td>String</td>
<td>A comma-separated list of identification numbers for the contacts to be purchased. You can’t include any company IDs or your purchase fails.</td>
<td>Required to purchase contacts</td>
<td>32.0</td>
</tr>
<tr>
<td>userType</td>
<td>ConnectDatacloudUserTypeEnum</td>
<td>Indicates the Data.com user type to be used. There are two user types. • Monthly (default) • Listpool</td>
<td>Optional</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
postOrder(orderInput)
### ConnectApi.DirectMessageCapabilityInput
Create or update the members of a direct message.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>membersToAdd</td>
<td>List&lt;String&gt;</td>
<td>List of user IDs for members to include in the direct message.</td>
<td>Required when creating a direct message (POST) Optional when updating a direct message (PATCH)</td>
<td>39.0</td>
</tr>
<tr>
<td>membersToRemove</td>
<td>List&lt;String&gt;</td>
<td>List of user IDs for members to remove from the direct message.</td>
<td>Optional when updating a direct message (PATCH) Not supported when creating a direct message (POST)</td>
<td>40.0</td>
</tr>
<tr>
<td>subject</td>
<td>String</td>
<td>Subject of the direct message.</td>
<td>Optional when creating a direct message (POST) Not supported when updating a direct message (PATCH)</td>
<td>39.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.FeedElementCapabilitiesInput

### ConnectApi.EntityLinkSegmentInput
An entity link segment.
Subclass of ConnectApi.MessageSegmentInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>entityId</td>
<td>String</td>
<td>ID of the entity to link to. Only users with access to the entity see it. It’s hidden for users without access.</td>
<td>Required</td>
<td>43.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ExtensionInput
An extension.
Available Version | Required or Optional | Property | Type | Description
--- | --- | --- | --- | ---
40.0 | Required | alternative Representation | ConnectApi.AlternativeInput | Alternative representation of the extension.

extensionId | String | ID of the extension. | Required | 40.0

payload | String | Payload associated with the extension. | Required | 40.0

payloadVersion | String | Payload version that identifies the structure of the payload associated with the extension. | Optional | 40.0

SEE ALSO:
- ConnectApi.ExtensionsCapabilityInput

ConnectApi.ExtensionsCapabilityInput
Create or update extensions associated with a feed element.

This class is a subclass of ConnectApi.FeedElementCapabilityInput.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>itemsToAdd</td>
<td>List&lt;ConnectApi.ExtensionInput&gt;</td>
<td>List of extensions to associate with the feed element.</td>
<td>Required for creating an extension</td>
<td>40.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>Optional for updating an extension</td>
<td></td>
</tr>
</tbody>
</table>

| | List<String> | List of attachment IDs to remove from the feed element. | Optional for updating an extension | 41.0 |
| | | | Don’t specify for creating an extension | |

SEE ALSO:
- ConnectApi.FeedElementCapabilitiesInput

ConnectApi.FeedElementCapabilitiesInput
A container for all capabilities that can be included when creating a feed element.

<td>Optional</td>
<td>38.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- `ConnectApi.FeedElementInput Class`

**ConnectApi.FeedElementCapabilityInput Class**

A feed element capability.

In API version 30.0 and earlier, most feed items can have comments, likes, topics, and so on. In version 31.0 and later, every feed item (and feed element) can have a unique set of capabilities. If a capability property exists on a feed element, that capability is available, even if the capability property doesn’t have a value. For example, if the `ChatterLikes` capability property exists on a feed element (with or without a value), the context user can like that feed element. If the capability property doesn’t exist, it isn’t possible to like that feed element. A capability can also contain associated data. For example, the `Moderation` capability contains data about moderation flags.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

This class is a superclass of:
- `ConnectApi.AssociatedActionsCapabilityInput`
- `ConnectApi.BookmarksCapabilityInput`
- `ConnectApi.CanvasCapabilityInput`
- `ConnectApi.ContentCapabilityInput`
- `ConnectApi.DirectMessageCapabilityInput`
- `ConnectApi.ExtensionsCapabilityInput`
- `ConnectApi.FeedEntityShareCapabilityInput`
- `ConnectApi.FilesCapabilityInput`
- `ConnectApi.LinkCapabilityInput`
- `ConnectApi.MuteCapabilityInput`
- `ConnectApi.PollCapabilityInput`
- `ConnectApi.QuestionAndAnswersCapabilityInput`
- `ConnectApi.ReadByCapabilityInput`
- `ConnectApi.RecordCapabilityInput`
- `ConnectApi.StatusCapabilityInput`
- `ConnectApi.TopicsCapabilityInput`

**ConnectApi.FeedElementInput Class**

Feed elements are the top-level items that a feed contains. Feeds are feed element containers.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

Superclass of `ConnectApi.FeedItemInput Class`.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>

</table>
ConnectApi.LinkAttachmentInput Class

⚠️ Important: This class isn’t available in version 32.0 and later. In version 32.0 and later, use ConnectApi.LinkCapabilityInput.

Used as part of a feed item attachment, to add links.

Subclass of ConnectApi.FeedItemAttachmentInput Class

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>URL to be used for the link</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>urlName</td>
<td>String</td>
<td>Title of the link</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

ConnectApi.LinkCapabilityInput

Create or update a link on a feed element.

This class is a subclass of ConnectApi.FeedElementCapabilityInput Class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>Link URL. The URL can be to an external site.</td>
<td>Required</td>
<td>32.0</td>
</tr>
<tr>
<td>urlName</td>
<td>String</td>
<td>Description of the link.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.FeedElementCapabilitiesInput

ConnectApi.LinkSegmentInput Class

Used to include a link segment in a feed item or comment.

Subclass of ConnectApi.MessageSegmentInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>URL to be used for the link</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.MessageBodyInput Class

ConnectApi.ManagedTopicPositionCollectionInput Class

A collection of relative positions of managed topics.
Available Version | Required or Optional | Description |
--- | --- | ---
32.0 | Required | List of relative positions of managed topics. This list can include Featured and Navigational managed topics and doesn’t need to include all managed topics. For more information about reordering managed topics, see the example in `reorderManagedTopics(communityId, managedTopicPositionCollection)`.

**ConnectApi.ManagedTopicPositionInput Class**

Relative position of a managed topic.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>managedTopicId</td>
<td>String</td>
<td>ID of existing managed topic.</td>
<td>Required</td>
<td>32.0</td>
</tr>
<tr>
<td>position</td>
<td>Integer</td>
<td>Relative position of the managed topic, indicated by zero-indexed, ascending whole numbers.</td>
<td>Required</td>
<td>32.0</td>
</tr>
</tbody>
</table>

**ConnectApi.MarkupBeginSegmentInput**

The beginning tag for rich text markup.

Subclass of `ConnectApi.MessageSegmentInput`

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>altText</td>
<td>String</td>
<td>Alternative text for the Hyperlink segment.</td>
<td>Optional</td>
<td>45.0</td>
</tr>
</tbody>
</table>
### ConnectApi Namespace

**ConnectApi.MessageBodyInput Class**

The end tag for rich text markup.

Subclass of `ConnectApi.MessageSegmentInput`.

---

### Markup segments with a `markupType` of `Code` can include only text segments.

- **Strikethrough**—Strikethrough tag.
- **Underline**—Underline tag.
- **UnorderedList**—Unordered list tag.

**SEE ALSO:**

- Post a Rich-Text Feed Element with Inline Image
- `ConnectApi.MessageBodyInput Class`

**url**

- **Type:** `String`
- **Description:** URL for the Hyperlink segment. Supported hyperlink URLs start with `http://` or `https://`.
- **Required or Optional:** Required for `Hyperlink`
- **Available Version:** 45.0

---

**ConnectApiMarkupEndSegmentInput**

The end tag for rich text markup.

Subclass of `ConnectApi.MessageSegmentInput`
### ConnectApi.MessageBodyInput Class

Include an @mention of a user or group in a feed post or comment. When creating a feed post or comment, you can include up to 25 mentions.

Subclass of ConnectApi.MessageSegmentInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the user or group to mention.</td>
<td>Required</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>To mention a user, use either id or username. You can’t include both.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>To mention a group, you must use id.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>username</td>
<td>String</td>
<td>User name of the user to mention.</td>
<td>Required</td>
<td>38.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>To mention a user, use either id or username. You can’t include both.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.MessageBodyInput Class

### ConnectApi.MentionSegmentInput Class

ID of the user or group to mention.

To mention a user, use either id or username. You can’t include both.

To mention a group, you must use id.
ConnectApi.MessageBodyInput Class

Used to add rich messages to feed items and comments.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>messageSegments</td>
<td>List&lt;ConnectApi.MessageSegmentInput&gt;</td>

- ConnectApi.AnnouncementInput Class

ConnectApi.MessageSegmentInput

Used to add rich message segments to feed items and comments.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

Superclass for:
- ConnectApi.EntityLinkSegmentInput
- ConnectApi.HashtagSegmentInput Class
- ConnectApi.InlineImageSegmentInput
- ConnectApi.LinkSegmentInput Class
- ConnectApi.MarkupBeginSegmentInput
- ConnectApi.MarkupEndSegmentInput
- ConnectApi.MentionSegmentInput Class
- ConnectApi.TextSegmentInput Class

Use the ConnectApiHelper repository on GitHub to simplify many of the tasks accomplished with ConnectApi.MessageSegmentInput, such as posting with inline images, rich text, and mentions.
### ConnectApi.MessageSegmentType

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>type</td>
<td>ConnectApi.MessageSegmentType</td>

### ConnectApi.MuteCapabilityInput

Mute or unmute a feed element.

This class is a subclass of ConnectApi.FeedElementCapabilityInput Class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isMutedByMe</td>
<td>Boolean</td>
<td>Indicates whether the feed element is muted for the context user. Default value is false.</td>
<td>Required</td>
<td>35.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- setIsMutedByMe(communityId, feedElementId, isMutedByMe)

### ConnectApi.NBAStrategyInput

A recommendation strategy.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>contextRecordId</td>
<td>String</td>
<td>ID of the context record. For example, if the next best action is on a case detail page, the ID of the case.</td>
<td>Optional</td>
<td>45.0</td>
</tr>
<tr>
<td>maxResults</td>
<td>Integer</td>
<td>Maximum number of results. Valid values are from 1 to 25. The default is 3.</td>
<td>Optional</td>
<td>45.0</td>
</tr>
<tr>
<td>strategyContext</td>
<td>Map&lt;String, String&gt;</td>
<td>Variable and value mappings for the strategy.</td>
<td>Optional</td>
<td>45.0</td>
</tr>
<tr>
<td>debugTrace</td>
<td>Boolean</td>
<td>Specifies whether to return trace and debug information in the response (true) or not (false). If unspecified, the default is false.</td>
<td>Optional</td>
<td>45.0</td>
</tr>
</tbody>
</table>

**ConnectApi.NewFileAttachmentInput Class**

**Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, use `ConnectApi.ContentCapabilityInput`.

Describes a new file to be attached to a feed item. The actual binary file, that is the attachment, is provided as part of the `BinaryInput` in the method that takes this attachment input, such as `postFeedItem` or `postComment`.

Subclass of `ConnectApi.FeedItemAttachmentInput Class`

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the file to be uploaded.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>The title of the file. This value is required and is also used as the file name. For example, if the title is My Title, and the file is a .txt file, the file name is My Title.txt.</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

**ConnectApi.NewUserAudienceCriteriaInput**

Criteria for the new members type of custom recommendation audience.

Subclass of `ConnectApi.AudienceCriteriaInput`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>value</td>
<td>Double</td>
<td>The maximum number of days since a user became a community member. For example, if you specify 30, anyone who became a community member in the last 30 days is included in the new members audience.</td>
<td>Required</td>
<td>36.0</td>
</tr>
</tbody>
</table>
ConnectApi.PhotoInput Class

Use to specify how crop a photo. Use to specify an existing file (a file that has already been uploaded).

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available version</th>
</tr>
</thead>
<tbody>
<tr>
<td>cropSize</td>
<td>Integer</td>
<td>The length, in pixels, of any edge of the crop square.</td>
<td>29.0</td>
</tr>
<tr>
<td>cropX</td>
<td>Integer</td>
<td>The position X, in pixels, from the left edge of the image to the start of</td>
<td>29.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>the crop square. Top left is position (0,0).</td>
<td></td>
</tr>
<tr>
<td>cropY</td>
<td>Integer</td>
<td>The position Y, in pixels, from the top edge of the image to the start of</td>
<td>29.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>the crop square. Top left is position (0,0).</td>
<td></td>
</tr>
<tr>
<td>fileId</td>
<td>String</td>
<td>18 character ID of an existing file. The key prefix must be 069 and the file</td>
<td>25.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>size must be less than 2 GB.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>Note</strong>: Images uploaded on the Group page and on the User page don’t have</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>file IDs and therefore can't be used.</td>
<td></td>
</tr>
<tr>
<td>versionNumber</td>
<td>Integer</td>
<td>Version number of the existing content. If not provided, the latest version</td>
<td>25.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>is used.</td>
<td></td>
</tr>
</tbody>
</table>

ConnectApi.PinCapabilityInput

Pin or unpin a feed element to a feed.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>entityID</td>
<td>String</td>
<td>ID of the entity to pin or unpin. In version 41.0 and later, <code>entityId</code> must be a feed item ID. In version 41.0–42.0, only one feed item can be pinned per feed. In version 43.0 and later, three feed items can be pinned per feed.</td>
<td>Required</td>
<td>41.0</td>
</tr>
<tr>
<td>isPinned</td>
<td>Boolean</td>
<td>Specifies whether to pin (<code>true</code>) or unpin (<code>false</code>) the entity.</td>
<td>Required</td>
<td>41.0</td>
</tr>
</tbody>
</table>
ConnectApi.PollAttachmentInput Class

**Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, use `ConnectApi.PollCapabilityInput`.

Used to attach a poll to a feed item.

Subclass of `ConnectApi.FeedItemAttachmentInput Class`

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>pollChoices</td>
<td>List&lt;String&gt;</td>
<td>The text labels for the poll items. Polls must contain between 2 to 10 poll choices.</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

**ConnectApi.PollCapabilityInput**

Create, update, or vote on a poll on a feed element.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput Class`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>choices</td>
<td>List&lt;String&gt;</td>
<td>The choices used to create a new poll. You must specify 2–10 poll choices for each poll.</td>
<td>Required for creating a poll</td>
<td>32.0</td>
</tr>
<tr>
<td>myChoiceId</td>
<td>String</td>
<td>ID of an existing choice on the feed poll. Used to vote on an existing poll.</td>
<td>Required for voting on a poll</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.FeedElementCapabilitiesInput`
- `ConnectApi.QuestionAndAnswersCapabilityInput`

**ConnectApi.QuestionAndAnswersCapabilityInput**

Create or edit a question feed element or set the best answer of the existing question feed element.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput Class`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>bestAnswerId</td>
<td>String</td>
<td>A comment ID to use as a best answer for a question feed element. The best answer comment must already exist on the question feed element.</td>
<td>Required to update a feed element. Not supported when posting a feed element.</td>
<td>32.0</td>
</tr>
</tbody>
</table>
Available Version Required or Optional

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>questionTitle</td>
<td>String</td>
<td>Title for a question feed element. To edit the title of a question, use updateFeedElement(communityId, feedElementId, feedElement). Editing question titles is supported in version 34.0 and later.</td>
<td>Required to post a feed element. Not supported when updating a feed element.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- Edit a Question Title and Post

ConnectApi.ReadByCapabilityInput

Mark feed elements as read by the context user.

This class is a subclass of ConnectApi.FeedElementCapabilityInput Class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isReadByMe</td>
<td>Boolean</td>
<td>Specifies to mark the feed element as read (true) for the context user.</td>
<td>Required</td>
<td>40.0</td>
</tr>
<tr>
<td>lastReadDateByMe</td>
<td>Datetime</td>
<td>Specifies the last date, in ISO 8601 format, when the feed element is marked as read for the context user. If you don’t specify a date or you specify a future date, the current system date is used.</td>
<td>Optional</td>
<td>40.0</td>
</tr>
</tbody>
</table>

**ConnectApi.RecordCapabilityInput**

Attach an existing knowledge article to a comment.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput Class](#).

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recordId</td>
<td>String</td>
<td>ID of the existing knowledge article to attach.</td>
<td>Required</td>
<td>42.0</td>
</tr>
</tbody>
</table>

**ConnectApi.RequestHeaderInput Class**

An HTTP request header name and value pair.
### ConnectApi.ScheduledRecommendationInput

A scheduled custom recommendation.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| channel     | ConnectApi.RecommendationChannel | A way to tie custom recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:  
- CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.  
- CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.  
- CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.  
- CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.  
- CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. | Optional for creating a scheduled recommendation  
If not specified, defaults to DefaultChannel.  
Don't use when updating a scheduled recommendation | 36.0 |

<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>DefaultChannel</td>
<td></td>
<td>- DefaultChannel—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Community Builder. Use these channel values; you can’t rename or create other channels.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>enabled</td>
<td>Boolean</td>
<td>Indicates whether scheduling is enabled. If true, the custom recommendation is enabled and appears in communities. If false, custom recommendations in feeds in Salesforce mobile web aren’t removed, but no new custom recommendations appear. In Customer Service and Partner Central communities, disabled custom recommendations no longer appear.</td>
<td>Optional</td>
<td>35.0</td>
</tr>
<tr>
<td>rank</td>
<td>Integer</td>
<td>Relative rank of the scheduled custom recommendation indicated by ascending whole numbers starting with 1. Setting the rank is comparable to an insertion into an ordered list. The scheduled custom recommendation is inserted into the position specified by the rank. The rank of all the scheduled custom recommendations after it is pushed down. See Ranking scheduled custom recommendations example. If the specified rank is larger than the size of the list, the scheduled custom recommendation is put at the end of the list. The rank of the scheduled custom recommendation is the size of the list, instead of the one specified. If a rank is not specified, the scheduled custom recommendation is put at the end of the list.</td>
<td>Optional</td>
<td>35.0</td>
</tr>
<tr>
<td>recommendation</td>
<td>String</td>
<td>ID of the audience for this scheduled custom recommendation. When updating a recommendation, you should set the AudienceId to update it to a different audience.</td>
<td>Optional</td>
<td>35.0</td>
</tr>
<tr>
<td>AudienceId</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
scheduled custom recommendation, specify `ALL` to remove the association between a custom recommendation audience and a scheduled custom recommendation.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recommendation</td>
<td>String</td>
<td>ID of the custom recommendation definition that this scheduled recommendation schedules.</td>
<td>Required to create a scheduled recommendation. You can't specify a recommendation DefinitionId when updating a scheduled recommendation.</td>
<td>35.0</td>
</tr>
<tr>
<td>DefinitionId</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Ranking scheduled custom recommendations example**

If you have these scheduled custom recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendations</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>3</td>
</tr>
</tbody>
</table>

And you include this information in the Scheduled Custom Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
</tbody>
</table>
SEE ALSO:
createScheduledRecommendation(communityId, scheduledRecommendation)

ConnectApi.SocialPostMassApprovalInput
List of social post ids and the action to approve or reject publishing them.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isApproved</td>
<td>Boolean</td>
<td>Specifies whether to approve (true) or reject (false) publishing the social posts. If unspecified, defaults to false.</td>
<td>Optional</td>
<td>46.0</td>
</tr>
<tr>
<td>socialPostIdList</td>
<td>List&lt;String&gt;</td>
<td>A list of up to 200 social post IDs.</td>
<td>Required</td>
<td>46.0</td>
</tr>
</tbody>
</table>

ConnectApi.StatusCapabilityInput
Change the status of a feed post or comment.

This class is a subclass of ConnectApi.FeedElementCapabilityInput Class.
### Available Version

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>feedEntityStatus</td>
<td>ConnectApi.FeedEntityStatus</td>
<td>Status of the feed post or comment. Values are:</td>
<td>Required</td>
<td>37.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Draft—The feed post isn’t published but is visible to the author and users with Modify All Data or View All Data permission. Comments can’t be drafts.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- PendingReview—The feed post or comment isn’t approved yet and therefore isn’t published or visible.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Published—The feed post or comment is approved and visible.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Posts that have a status of PendingReview or Published can’t be changed to a status of Draft and vice versa.

SEE ALSO:
- ConnectApi.FeedElementCapabilitiesInput
- ConnectApi.StreamSubscriptionInput

### ConnectApi.StreamSubscriptionInput

An entity to subscribe to for a Chatter feed stream.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>entityId</td>
<td>String</td>
<td>The ID of any feed-enabled entity, such as a group, record, or user, that the context user can access. When subscribed, the entity’s feed is included in the feed stream.</td>
<td>Required</td>
<td>39.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.ChatterStreamInput

### ConnectApi.TextSegmentInput Class

Used to include a text segment in a feed item or comment.

Subclass of ConnectApi.MessageSegmentInput
### ConnectApi.TopicInput Class

Update a topic’s name or description or merge topics.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the topic</td>
<td>29.0</td>
</tr>
<tr>
<td>idsToMerge</td>
<td>List&lt;String&gt;</td>
<td>List of up to five secondary topic IDs to merge with the primary topic</td>
<td>33.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>If any of these secondary topics are managed topics, they lose their topic</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>type, topic images, and children topics. Their feed items are reassigned</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>to the primary topic.</td>
<td></td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the topic</td>
<td>29.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Use this property to change only the capitalization and spacing of the</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>topic name.</td>
<td></td>
</tr>
</tbody>
</table>

SEE ALSO:
- updateTopic(communityId, topicId, topic)

### ConnectApi.TopicNamesInput

A list of topic names to replace currently assigned topics. Also a list of suggested topics to assign.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>topicNames</td>
<td>List&lt;String&gt;</td>
<td>A list of up to 10 topic names for a feed item or 100 topic names for a</td>
<td>Required</td>
<td>35.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>record.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
### ConnectApi.TopicAssignmentJobInput

Assign topics to a record or feed item.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>topicSuggestions</code></td>
<td><code>List&lt;String&gt;</code></td>
<td>A list of suggested topics to assign to a record or feed item to improve future topic suggestions.</td>
<td>Optional</td>
<td>37.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- `reassignTopicsByName(communityId, recordId, topicNames)`
- `ConnectApi.ArticleTopicAssignmentJobInput`

### ConnectApi.TopicsCapabilityInput

Assign topics to a feed element.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>contextTopicName</code></td>
<td><code>String</code></td>
<td>Name of the parent topic in the community to which the feed element belongs.</td>
<td>Optional</td>
<td>38.0</td>
</tr>
<tr>
<td><code>topics</code></td>
<td><code>List&lt;String&gt;</code></td>
<td>List of topics to assign to the feed element.</td>
<td>Required</td>
<td>38.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- `ConnectApi.FeedElementCapabilitiesInput`

### ConnectApi.UpDownVoteCapabilityInput

Upvote or downvote a feed element or a comment.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| `vote` | `ConnectApiUpDownVoteValue` | Type of vote for a feed element or comment. Values are:  
- Down  
- None  
- Up | Required             | 41.0              |

### ConnectApi.UserInput Class

Used to update a user.
**aboutMe**

- **Type**: String
- **Description**: The `aboutMe` property of a `ConnectApi.UserDetail` output object. This property populates the “About Me” section of the user profile, which is visible to all members of a community or organization.

**SEE ALSO:**

`updateUser(communityId, userId, userInput)`

### ConnectApi Output Classes

Most `ConnectApi` methods return instances of `ConnectApi` output classes.

All properties are read-only, except for instances of output classes created within test code.

All output classes are concrete unless marked abstract in this documentation.

All concrete output classes have no-argument constructors that you can invoke only from test code. See Testing `ConnectApi` Code.

#### ConnectApi.AbstractContentHubItemType

An item type associated with a repository folder.

This class is abstract.

Superclass of:

- `ConnectApi.ContentHubItemTypeDetail`
- `ConnectApi.ContentHubItemTypeSummary`

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>contentStreamSupport</td>
<td><code>ConnectApi.ContentHubStreamSupport</code></td>
<td>Support for content streaming. Values are:</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ContentStreamAllowed</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ContentStreamNotAllowed</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ContentStreamRequired</td>
<td></td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the item type.</td>
<td>39.0</td>
</tr>
<tr>
<td>displayName</td>
<td>String</td>
<td>Display name of the item type.</td>
<td>39.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the item type.</td>
<td>39.0</td>
</tr>
<tr>
<td>isVersionable</td>
<td>Boolean</td>
<td>Indicates whether the item type can have versions.</td>
<td>39.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the detailed information of the item type.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.AbstractDirectoryEntrySummary

A directory entry with summary information.

This class is abstract.

Superclass of:
- ConnectApi.RepositoryGroupSummary
- ConnectApi.RepositoryUserSummary

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>domain</td>
<td>String</td>
<td>Domain of the directory entry.</td>
<td>39.0</td>
</tr>
<tr>
<td>email</td>
<td>String</td>
<td>Email of the directory entry.</td>
<td>39.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the directory entry.</td>
<td>39.0</td>
</tr>
<tr>
<td>type</td>
<td>DirectoryEntryType</td>
<td>Type of directory entry. Values are:</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• GroupEntry</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• UserEntry</td>
<td></td>
</tr>
</tbody>
</table>

**ConnectApi.AbstractExtensionInformation**

Extension information.
This class is abstract.
Superclass of .ConnectApi.LightningExtensionInformation

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>extension</td>
<td>ExtensionInformationType</td>
<td>Information type of the extension. Values are:</td>
<td>40.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Lightning</td>
<td></td>
</tr>
</tbody>
</table>

**ConnectApi.AbstractMessageBody Class**

This class is abstract.
Superclass of:
- ConnectApi.FeedBody Class
- ConnectApi.MessageBody Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isRichText</td>
<td>Boolean</td>
<td>Indicates whether the body is rich text.</td>
<td>35.0</td>
</tr>
<tr>
<td>messageSegments</td>
<td>List&lt;ConnectApi.MessageSegment&gt;</td>
<td>List of message segments</td>
<td>28.0</td>
</tr>
<tr>
<td>text</td>
<td>String</td>
<td>Display-ready text. Use this text if you don’t want to process the message segments.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**ConnectApi.AbstractNBAAction**

A recommended action of recommendation strategy.
This class is abstract.  
Superclass of `ConnectApi.NBAFlowAction`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>parameters</td>
<td>List&lt;ConnectApi.NBAAction Parameter&gt;</td>
<td>List of parameters to pass to the action.</td>
<td>45.0</td>
</tr>
</tbody>
</table>
| type          | ConnectApi.NBAActionType | Type of action. Values are:  
  - Flow—Automated process tool with multiple subtypes. | 45.0              |

SEE ALSO:  
`ConnectApi.NBAReservation`

**ConnectApi.AbstractNBAAction**

A recommendation target of a recommendation strategy.  
This class is abstract.  
Superclass of `ConnectApi.NBANativeRecommendation`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| type          | ConnectApi.NBATargetType | Type of target. Values are:  
  - Recommendation                        | 45.0              |

SEE ALSO:  
`ConnectApi.NBAReservation`

**ConnectApi.AbstractRecommendation**

A Chatter, custom, or static recommendation.  
This class is abstract.  
Superclass of:  
- `ConnectApi.EntityRecommendation`  
- `ConnectApi.NonEntityRecommendation`  

ConnectApi.NonEntityRecommendation isn't used in version 34.0 and later. In version 34.0 and later,  
`ConnectApi.EntityRecommendation` is used for all recommendations.
**Available Version** | **Description** | **Type** | **Property Name**
--- | --- | --- | ---
32.0 | The Chatter, custom, or static recommendation explanation. | ConnectApi.RecommendationExplanation | explanation
34.0 | A platform action group instance with state appropriate for the context user. | ConnectApi.PlatformActionGroup | platformActionGroup
32.0 | Specifies the type of record being recommended. | ConnectApi.RecommendationType | recommendationType
34.0 | URL for the Chatter, custom, or static recommendation. | String | url

**SEE ALSO:**
ConnectApi.RecommendationsCapability
ConnectApi.RecommendationCollection

**ConnectApi.AbstractRecommendationExplanation**

Explanation for a Chatter recommendation.

This class is abstract.

Superclass of ConnectApi.RecommendationExplanation.

--- | --- | --- | ---
**Property Name** | **Type** | **Description** | **Available Version**
summary | String | Summary explanation for the Chatter recommendation. | 32.0

**Available Version**

| **Property Name** | **Type** | **Description** | **Available Version**
--- | --- | --- | ---
type | ConnectApi.RecommendationExplanationType | Indicates the reason for the Chatter recommendation. | 32.0
- ArticleHasRelatedContent—Articles with related content to a context article.
- ArticleViewedTogether—Articles often viewed together with the article that the context user just viewed.
- ArticleViewedTogetherWithViewers—Articles often viewed together with other records that the context user views.
- Custom—Custom recommendations.
- FilePopular—Files with many followers or views.
- FileViewedTogether—Files often viewed at the same time as other files that the context user views.
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>FollowedTogetherWithFollowees</td>
<td>Users</td>
<td>Users often followed together with other records that the context user follows.</td>

<td>Users with many followers.</td>
</tr>
<tr>
<td>UserViewingSameRecords</td>
<td>Users</td>
<td>Users who view the same records as the context user.</td>
</tr>
</tbody>
</table>
ConnectApi.AbstractRecordField Class

This class is abstract.

Superclass of:
- ConnectApi.BlankRecordField Class
- ConnectApi.LabeledRecordField Class

A field on a record object.

Message segments in a feed item are typed as ConnectApi.MessageSegment. Feed item capabilities are typed as ConnectApi.FeedItemCapability. Record fields are typed as ConnectApi.AbstractRecordField. These classes are all abstract and have several concrete subclasses. At runtime you can use instanceof to check the concrete types of these objects and then safely proceed with the corresponding downcast. When you downcast, you must have a default case that handles unknown subclasses.

⚠️ Important: The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>type</td>
<td>String</td>
<td>The type of the field. One of these values:</td>
<td>29.0</td>
</tr>
<tr>

SEE ALSO:
- ConnectApi.RecordViewSection Class
ConnectApi.AbstractRecordView Class

This class is abstract.

Subclass of ConnectApi.ActorWithId Class

Superclass of:
- ConnectApi.RecordSummary Class
- ConnectApi.RecordView Class

A view of any record in the organization, including a custom object record. This object is used if a specialized object, such as User or ChatterGroup, is not available for the record type.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>The localized name of the record.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

ConnectApi.AbstractRepositoryFile

A repository file.

This class is abstract.

Subclass of ConnectApi.AbstractRepositoryItem.

Superclass of:
- ConnectApi.RepositoryFileDetail
- ConnectApi.RepositoryFileSummary

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>checkinComment</td>

</tr>
<tr>
<td>externalDocumentUrl</td>
<td>String</td>
<td>URL of this file in the external system.</td>
<td>39.0</td>
</tr>
<tr>
<td>externalFilePermissionInformation</td>
<td>ConnectApi.ExternalFilePermissionInformation</td>
<td>External file permission information, such as available groups, available permission types, and current sharing status, or null if includeExternalFilePermissionsInfo is false.</td>
<td>39.0</td>
</tr>
<tr>
<td>mimeType</td>
<td>String</td>
<td>Mime type of the file.</td>
<td>39.0</td>
</tr>
<tr>
<td>previewUrlThumbnail</td>
<td>String</td>
<td>URL to the thumbnail preview (240 x 180 PNG).</td>
<td>39.0</td>
</tr>
</tbody>
</table>
### ConnectApi.AbstractRepositoryFolder

A repository folder.

This class is abstract.

Subclass of: ConnectApi.AbstractRepositoryItem.

Superclass of:
- ConnectApi.RepositoryFolderDetail
- ConnectApi.RepositoryFolderSummary

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>previewUrl</td>
<td>String</td>
<td>URL to the big thumbnail preview (720 x 480 PNG).</td>
<td>39.0</td>
</tr>
<tr>
<td>previewUrl</td>
<td>String</td>
<td>URL to the tiny thumbnail preview (120 x 90 PNG).</td>
<td>39.0</td>
</tr>
<tr>
<td>previewsUrl</td>
<td>String</td>
<td>URL to the previews.</td>
<td>39.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the file.</td>
<td>39.0</td>
</tr>
<tr>
<td>versionId</td>
<td>String</td>
<td>ID of the file version in the external system.</td>
<td>39.0</td>
</tr>
<tr>
<td>externalFolderUrl</td>
<td>String</td>
<td>URL of this folder in the external system.</td>
<td>39.0</td>
</tr>
<tr>
<td>folderItemsUrl</td>
<td>String</td>
<td>URL that lists the files and folders in this folder.</td>
<td>39.0</td>
</tr>
<tr>
<td>path</td>
<td>String</td>
<td>Absolute path of the folder in the external system.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

### ConnectApi.AbstractRepositoryItem

A repository item.

This class is abstract.

Superclass of:
- ConnectApi.AbstractRepositoryFile
- ConnectApi.AbstractRepositoryFolder

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>createdBy</td>
<td>String</td>
<td>Name of the user who created the item.</td>
<td>39.0</td>

<td>Datetime</td>
<td>Date the item was created.</td>
<td>39.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the item.</td>
<td>39.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the item.</td>
<td>39.0</td>
</tr>
<tr>
<td>itemTypeUrl</td>
<td>String</td>
<td>URL to the item type information.</td>
<td>39.0</td>
</tr>
</tbody>
</table>
### ConnectApi Namespace

#### User activity associated with missions.

This class is abstract.

**Superclass of:**
- ConnectApi.UserMission
- ConnectApi.UserMissionActivity

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>activityCount</td>
<td>Integer</td>
<td>Number of mission activities of the specified type for the user.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.AbstractUserMissionActivity

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>modifiedBy</td>
<td>String</td>
<td>Name of the user who last modified the item.</td>
<td>39.0</td>
</tr>
<tr>
<td>modifiedDate</td>
<td>Datetime</td>
<td>Date the item was last modified.</td>
<td>39.0</td>
</tr>
<tr>
<td>motif</td>
<td>ConnectApi.Motif</td>
<td>Motif of the item.</td>
<td>39.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the item.</td>
<td>39.0</td>
</tr>
<tr>
<td>repository</td>
<td>ConnectApi.Reference</td>
<td>Item external repository.</td>
<td>39.0</td>
</tr>
<tr>
<td>type</td>
<td>String</td>
<td>Item type, file or folder.</td>
<td>39.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The URL to the item.</td>
<td>39.0</td>
</tr>
</tbody>
</table>
### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>

</table>
| activityType         | String | Type of mission activity for a user. Values are:  
  - FeedItemAnswerAQuestion — User answered a question.  
  - FeedItemLikeSomething — User liked a post or comment.  
  - FeedItemMarkAnswerAsBest — User marked an answer as the best answer.  
  - FeedItemPostQuestion — User posted a question.  
  - FeedItemReceiveAComment — User received a comment on a post.  
  - FeedItemReceiveALike — User received a like on a post or comment.  
  - FeedItemReceiveAnAnswer — User received an answer to a question.  
  - FeedItemWriteAComment — User commented on a post.  
  - FeedItemWriteAPost — User made a post.  
  - FeedItemYourAnswerMarkedBest — User's answer was marked as the best answer. | 45.0 |

### ConnectApi.ActionLinkDefinition Class

The definition of an action link. Action link definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td><strong>Available Version</strong></td>
</tr>
<tr>
<td>actionUrl</td>
<td>String</td>
<td>The action link URL. For example, a Ui action link URL is a Web page. A Download action link URL is a link to the file to download. Ui and Download action link URLs are provided to clients. An Api or ApiAsync action link URL is a REST resource. Api and ApiAsync action link URLs aren't provided to clients. Links to Salesforce can be relative. All other links must be absolute and start with https://.</td>
</tr>
<tr>
<td>createdDate</td>
<td>Datetime</td>
<td>An ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z.</td>
</tr>
<tr>
<td>Property Name</td>
<td>Type</td>
<td>Description</td>
</tr>
<tr>
<td>------------------</td>
<td>--------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>excludedUserId</td>
<td>String</td>
<td>ID of a single user to exclude from performing the action. If you specify an <code>excludedUserId</code>, you can’t specify a <code>userId</code>.</td>
</tr>
<tr>
<td>groupDefault</td>
<td>Boolean</td>
<td><code>true</code> if this action is the default action link in the action link group; <code>false</code> otherwise. There can be only one default action link per action link group. The default action link gets distinct styling in the Salesforce UI.</td>
</tr>
<tr>
<td>headers</td>
<td>List&lt;ConnectApi. RequestHeader&gt;</td>
<td>The request headers for the Api and ApiAsync action link types.</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>The 18-character ID for the action link definition.</td>
</tr>
<tr>
<td>label</td>
<td>String</td>
<td>A custom label to display on the action link button. A <code>label</code> value can be set only in an action link template.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Action links have four statuses: NewStatus, PendingStatus, SuccessStatus, and FailedStatus. These strings are appended to the label for each status:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- <code>label</code></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- <code>label</code> Pending</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- <code>label</code> Success</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- <code>label</code> Failed</td>
</tr>
<tr>
<td></td>
<td></td>
<td>For example, if the value of <code>label</code> is “See Example,” the values of the four action link states are: See Example, See Example Pending, See Example Success, and See Example Failed.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>An action link can use either <code>label</code> or <code>labelKey</code> to generate label names, it can’t use both. If <code>label</code> has a value, the value of <code>labelKey</code> is None. If <code>labelKey</code> has a value other than None, the value of <code>label</code> is null.</td>
</tr>
<tr>
<td>labelKey</td>
<td>String</td>
<td>Key for the set of labels to show in the user interface. A set includes labels for these states: NewStatus, PendingStatus, SuccessStatus, FailedStatus. For example, if you use the Approve key, you get these labels: Approve, Pending, Approved, Failed.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>For a complete list of label keys, see Action Links Labels.</td>
</tr>
<tr>
<td>method</td>
<td>ConnectApi. HttpRequestMethod</td>
<td>The HTTP method. One of these values:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- <code>HttpDelete</code>—Returns HTTP 204 on success. Response body or output class is empty.</td>
</tr>
</tbody>
</table>
### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>modifiedDate</td>
<td>Datetime</td>
<td>An ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z.</td>
<td>33.0</td>
</tr>
<tr>
<td>requestBody</td>
<td>String</td>
<td>The request body for Api and ApiAsync action link types.</td>
<td>33.0</td>
</tr>
<tr>
<td>requires Confirmation</td>
<td>Boolean</td>
<td>true to require the user to confirm the action; false otherwise.</td>
<td>33.0</td>
</tr>
<tr>
<td>templateId</td>
<td>String</td>
<td>The ID of the action link template from which to instantiate this action link. If the action link isn’t associated with a template, the value is null.</td>
<td>33.0</td>
</tr>
<tr>
<td>type</td>
<td>ConnectApi.ActionLinkType</td>
<td>Defines the type of action link. Values are:</td>
<td>33.0</td>
</tr>
</tbody>
</table>

- **HttpGet**—Returns HTTP 200 on success.
- **HttpHead**—Returns HTTP 200 on success. Response body or output class is empty.
- **HttpPatch**—Returns HTTP 200 on success or HTTP 204 if the response body or output class is empty.
- **HttpPost**—Returns HTTP 201 on success or HTTP 204 if the response body or output class is empty. Exceptions are the batch posting resources and methods, which return HTTP 200 on success.
- **HttpPut**—Return HTTP 200 on success or HTTP 204 if the response body or output class is empty.

**Note:** Escape quotation mark characters in the requestBody value.

```python
connectApi Namespace
```
### ConnectApi.ActionLinkDiagnosticInfo Class

Any diagnostic information that may exist for an executed action link. Diagnostic info is provided only for users who can access the action link.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>diagnosticInfo</td>
<td>String</td>
<td>Any diagnostic information returned when an action link is executed.</td>
<td>33.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The URL for this action link diagnostic information.</td>
<td>33.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ActionLinkGroupDefinition Class

The definition of an action link group. Information in the action link group definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link group definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionLinks</td>
<td>List&lt;ConnectApi.ActionLinkDefinition&gt;</td>
<td>A collection of action link definitions that make up the action link group.</td>
<td>33.0</td>
</tr>
</tbody>
</table>

**Note:** Invoking `ApiAsync` action links from an app requires a call to set the status. However, there isn't currently a way to set the status of an action link using Apex. To set the status, use Chatter REST API. See the Action Link resource in the Chatter REST API Developer Guide for more information.
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionLinkGroupIds</td>
<td></td>
<td>actionLinkGroupIds property of the ConnectApi.AssociatedActionsCapabilityInput class.</td>
<td>33.0</td>
</tr>
<tr>
<td>category</td>
<td>ConnectApi.</td>
<td>Indicates the priority and location of the action links. Values are:</td>
<td>33.0</td>
</tr>
<tr>
<td></td>
<td>PlatformAction</td>
<td>- Primary—The action link group is displayed in the body of the feed element.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>GroupCategory</td>
<td>- Overflow—The action link group is displayed in the overflow menu of the feed element.</td>
<td></td>
</tr>
<tr>
<td>createdDate</td>

</tr>
</tbody>
</table>
### ConnectApi.ApprovalAttachment Class

**Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, `ConnectApi.ApprovalCapability Class` is used.

Subclass of `ConnectApi.FeedItemAttachment Class`

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>31.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or <code>null</code> if there isn’t a next page.</td>
<td>31.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the previous page, or <code>null</code> if there isn’t a previous page.</td>
<td>31.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ApprovalCapability Class

If a feed element has this capability, it includes information about an approval.

Subclass of `ConnectApi.FeedElementCapability Class`
### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>The work item ID. The work item ID is null if there isn’t a pending work item associated with the approval record.</td>
<td>32.0</td>
</tr>
<tr>
<td>postTemplateFields</td>
<td>List&lt;ConnectApi.ApprovalPostTemplateField&gt;</td>
<td>The details of the approval post template field.</td>
<td>32.0</td>
</tr>
<tr>
<td>processInstanceStepId</td>
<td>String</td>
<td>The process instance step ID. The associated record represents one step in an approval process.</td>
<td>32.0</td>
</tr>
<tr>
<td>status</td>
<td>ConnectApi.WorkflowProcessStatus</td>
<td>The status of the approval.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

### ConnectApi.ApprovalIntent

Approval intent for a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isRecallable</td>
<td>Boolean</td>
<td>Specifies whether the social post can be recalled (true) or not (false).</td>
<td>45.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.SocialPostIntents

### ConnectApi.ApprovalPostTemplateField Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>displayName</td>
<td>String</td>
<td>The field name</td>
<td>28.0</td>
</tr>
<tr>
<td>displayValue</td>
<td>String</td>
<td>The field value or null if the field is set to null.</td>
<td>28.0</td>
</tr>
</tbody>
</table>
| record     | ConnectApi.Reference| A record ID
If no record exists or if the reference is null, this value is null. | 28.0              |

**SEE ALSO:**
- ConnectApi.ApprovalCapability Class
**ConnectApi.ArticleItem Class**

Article item in question and answers suggestions.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>Id of the article.</td>
<td>32.0</td>
</tr>
<tr>
<td>rating</td>
<td>Double</td>
<td>The rating of the article.</td>
<td>32.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the article.</td>
<td>32.0</td>
</tr>
<tr>
<td>urlLink</td>
<td>String</td>
<td>Link URL of the article.</td>
<td>32.0</td>
</tr>
<tr>
<td>viewCount</td>
<td>Integer</td>
<td>Number of votes given to the article.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO: [ConnectApi.QuestionAndAnswersSuggestions Class](#)

**ConnectApi.ArticleSummary**

A knowledge article summary.

Subclass of ConnectApi.ActorWithId Class

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>articleType</td>
<td>String</td>
<td>Type of the knowledge article.</td>
<td>37.0</td>
</tr>
<tr>
<td>knowledgeArticleVersionId</td>
<td>String</td>
<td>ID of the knowledge article version.</td>
<td>39.0</td>
</tr>
<tr>
<td>lastPublishedDate</td>
<td>Datetime</td>
<td>Last published date of the knowledge article.</td>
<td>37.0</td>
</tr>
<tr>
<td>rating</td>
<td>Double</td>
<td>The rating of the article.</td>
<td>37.0</td>
</tr>
<tr>
<td>summary</td>
<td>String</td>
<td>Summary of the knowledge article contents.</td>
<td>37.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the knowledge article.</td>
<td>37.0</td>
</tr>
<tr>
<td>urlName</td>
<td>String</td>
<td>URL name of the knowledge article.</td>
<td>37.0</td>
</tr>
<tr>
<td>viewCount</td>
<td>Integer</td>
<td>Number of times the knowledge article has been viewed.</td>
<td>38.0</td>
</tr>
</tbody>
</table>

**ConnectApi.AssociatedActionsCapability Class**

If a feed element has this capability, it has platform actions associated with it.
**ConnectApi.AudienceCriteria**

Custom recommendation audience criteria.

This class is abstract.

This class is a superclass of:

- ConnectApi.CustomListAudienceCriteria
- ConnectApi.NewUserAudienceCriteria

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| type          | ConnectApi.RecommendationAudienceCriteriaType | Specifies the custom recommendation audience criteria type. One of these values:  
- CustomList—A custom list of users makes up the audience.  
- MaxDaysInCommunity—New community members make up the audience. | 36.0 |

**SEE ALSO:**

ConnectApi.RecommendationAudience

**ConnectApi.BannerCapability Class**

If a feed element has this capability, it has a banner motif and style.

Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>motif</td>
<td>ConnectApi.Motif</td>
<td>A banner motif.</td>
<td>31.0</td>
</tr>
</tbody>
</table>
Available Version | Description | Type | Property Name
--- | --- | --- | ---
31.0 | Decorates a feed item with a color and set of icons. Possible value: 
• Announcement—An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it’s deleted or replaced by another announcement. | ConnectApi.BannerStyle | style

**ConnectApi.BasicTemplateAttachment Class**

⚠️ **Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, `ConnectApi.EnhancedLinkCapability` is used.

Subclass of `ConnectApi.FeedItemAttachment Class`

Attachments in feed items with type `BasicTemplate` return objects of this type.
### Available Version

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>An optional description with a 500 character limit.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>icon</td>
<td>ConnectApi.Icon</td>
<td>An optional icon.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>linkRecordId</td>
<td>String</td>
<td>If linkURL refers to a Salesforce record, linkRecordId contains the ID of the record.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>linkUrl</td>
<td>String</td>
<td>An optional URL to a detail page if there is more content that can’t be displayed inline. Do not specify linkUrl unless you specify a title.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>An optional title to the detail page. If linkUrl is specified, the title links to linkUrl.</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

**ConnectApi.BatchResult**

The result of an operation returned by a batch method.

**Namespace**

**ConnectApi**

**Usage**

Calls to batch methods return a list of `BatchResult` objects. Each element in the `BatchResult` list corresponds to the strings in the list parameter passed to the batch method. The first element in the `BatchResult` list matches the first string passed in the list parameter, the second element corresponds with the second string, and so on. If only one string is passed, the `BatchResult` list contains a single element.

**Example**

The following example shows how to obtain and iterate through the returned `ConnectApi.BatchResult` objects. The code adds two group IDs to a list. One of group IDs is incorrect, which causes a failure when the code calls the batch method. After it calls the batch method, it iterates through the results to determine whether the operation was successful or not for each group ID in the list. The code writes the ID of every group that was processed successfully to the debug log. The code writes an error message for every failed group.

This example generates one successful operation and one failure.

```java
List<String> myList = new List<String>();
// Add one correct group ID.
myList.add('0F9D00000000oOT');
// Add one incorrect group ID.
myList.add('0F9D00000000izf');

ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterGroups.getGroupBatch(null, myList);

// Iterate through each returned result.
for (ConnectApi.BatchResult batchResult : batchResults) {
```

1774
if (batchResult.isSuccess()) {
    // Operation was successful.
    // Print the group ID.
    ConnectApi.ChatterGroupSummary groupSummary;
    if(batchResult.getResult() instanceof ConnectApi.ChatterGroupSummary) {
        groupSummary = (ConnectApi.ChatterGroupSummary) batchResult.getResult();
    }
    System.debug('SUCCESS');
    System.debug(groupSummary.id);
} else {
    // Operation failed. Print errors.
    System.debug('FAILURE');
    System.debug(batchResult.getErrorMessage());
}

IN THIS SECTION:

BatchResult Methods

BatchResult Methods
The following are instance methods for BatchResult.

IN THIS SECTION:

gError()
If an error occurred, returns a ConnectApi.ConnectApiException object providing the error code and description.

gErrorMessage()
Returns a String that contains an error message.

gErrorTypeName()
Returns a String that contains the name of the error type.

getResult()
Returns an object that contains the results of the batch operation. The object is typed according to the batch method. For example, if you call getMembershipBatch(), a successful call to BatchResult getResult() returns a ConnectApi.GroupMembership object.

isSuccess()
Returns a Boolean that is set to true if the batch operation was successful for this object, false otherwise.

gError()
If an error occurred, returns a ConnectApi.ConnectApiException object providing the error code and description.

Signature
public ConnectApi.ConnectApiException getError()
Return Value
Type: `ConnectApi.ConnectApiException`

getErrorMessage()
Returns a String that contains an error message.

Signature
```
public String getErrorMessage()
```

Return Value
Type: `String`

Usage
The error message doesn’t make a round trip through a Visualforce view state, because exceptions can’t be serialized.

getErrorTypeName()
Returns a String that contains the name of the error type.

Signature
```
public String getErrorTypeName()
```

Return Value
Type: `String`

gResult()
Returns an object that contains the results of the batch operation. The object is typed according to the batch method. For example, if you call `getMembershipBatch()`, a successful call to `BatchResult getResult()` returns a `ConnectApi.GroupMembership` object.

Signature
```
public Object getResult()
```

Return Value
Type: `Object`

isSuccess()
Returns a Boolean that is set to `true` if the batch operation was successful for this object, `false` otherwise.
Signature

```java
public Boolean isSuccess()
```

Return Value
Type: Boolean

**ConnectApi.BlankRecordField Class**
Subclass of `ConnectApi.AbstractRecordField Class`
A record field displayed as a place holder in a grid of fields.

**ConnectApi.BookmarkSummary**
Summary of a bookmark.
Subclass of `ConnectApi.UserFeedEntityActivitySummary`
No additional properties.

**ConnectApi.BookmarksCapability Class**
If a feed element has this capability, the context user can bookmark it.
Subclass of `ConnectApi.FeedElementCapability Class`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isBookmarked</td>
<td>Boolean</td>
<td>Indicates whether the feed element has been bookmarked by the context user</td>
<td>32.0</td>
</tr>
<tr>
<td>ByCurrentUser</td>
<td></td>
<td>(true) or not (false).</td>
<td></td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.FeedElementCapabilities Class`

**ConnectApi.BundleCapability Class**
If a feed element has this capability, it has a container of feed elements called a `bundle`.
This class is abstract.
Subclass of `ConnectApi.FeedElementCapability Class`.
Superclass of:
- `ConnectApi.GenericBundleCapability Class`
- `ConnectApi.TrackedChangeBundleCapability`
ConnectApi.BundleType

Describes this feed element’s bundle type. The bundle type determines what additional information appears in the bundle.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>bundleType</td>
<td>ConnectApi.BundleType</td>
<td>Defines this feed element’s bundle type. The bundle type determines what additional information appears in the bundle.</td>
<td>31.0</td>
</tr>
<tr>
<td>page</td>
<td>ConnectApi.FeedElementPage</td>
<td>A collection of feed elements.</td>
<td>31.0</td>
</tr>
<tr>
<td>totalElements</td>
<td>Integer</td>
<td>The total number of feed elements that this bundle aggregates.</td>
<td>31.0</td>
</tr>
</tbody>
</table>

See Also:
ConnectApi.FeedElementCapabilities Class

ConnectApi.CandidateAnswersStatus

The status of candidate answers on a feed element.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>hasCandidateAnswers</td>
<td>Boolean</td>
<td>Indicates whether candidate answers are available for a question.</td>
<td>41.0</td>
</tr>
<tr>
<td>hasCandidateAnswersPublished</td>
<td>Boolean</td>
<td>Indicates whether any candidate answers are published.</td>
<td>41.0</td>
</tr>
<tr>
<td>hasCandidateAnswersRated</td>
<td>Boolean</td>
<td>Indicates whether any candidate answers are rated.</td>
<td>41.0</td>
</tr>
</tbody>
</table>

ConnectApi.QuestionAndAnswersCapability Class

ConnectApi.CanvasCapability Class

If a feed element has this capability, it renders a canvas app.

Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>A description of the canvas app. The maximum size is 255 characters.</td>
<td>32.0</td>
</tr>
<tr>
<td>developerName</td>
<td>String</td>
<td>The API name (developer name) of the connected app.</td>
<td>32.0</td>
</tr>
<tr>
<td>height</td>
<td>String</td>
<td>The height of the canvas app in pixels.</td>
<td>32.0</td>
</tr>
<tr>
<td>icon</td>
<td>ConnectApi.Icon</td>
<td>The icon for the canvas app.</td>
<td>32.0</td>
</tr>
<tr>
<td>namespacePrefix</td>
<td>String</td>
<td>A unique namespace prefix for the canvas app.</td>
<td>32.0</td>
</tr>
<tr>
<td>Property Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>---------------</td>
<td>----------</td>
<td>-----------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>parameters</td>
<td>String</td>
<td>JSON parameters passed to the canvas app.</td>
<td>32.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>A thumbnail URL to a preview image. The maximum thumbnail size is 120 pixels by 120 pixels.</td>
<td>32.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>A title for the canvas link.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

<td>Chatter REST API URL identifying the previous page, or null if there isn’t a previous page.</td>
<td>28.0</td>
</tr>
</tbody>
</table>
## ConnectApi.ChatterLikesCapability Class

If a feed element has this capability, the context user can like it. Exposes information about existing likes.

Subclass of `ConnectApi.FeedElementCapability Class`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isLikedByCurrentUser</td>
<td>Boolean</td>
<td>Indicates whether the feed element is liked by the context user (true) or not (false).</td>
<td>32.0</td>
</tr>
<tr>
<td>page</td>
<td><code>ConnectApi.ChatterLikePage</code></td>
<td>Likes information for this feed element.</td>
<td>32.0</td>
</tr>
<tr>
<td>likesMessage</td>
<td><code>ConnectApi.MessageBody</code></td>
<td>A message body that describes who likes the feed element.</td>
<td>32.0</td>
</tr>
<tr>
<td>myLike</td>
<td><code>ConnectApi.Reference</code></td>
<td>If the context user has liked the feed element, this property is a reference to the specific like, null otherwise.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

## ConnectApi.ChatterMessage Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>body</td>
<td><code>ConnectApi.MessageBody</code></td>
<td>Contents of the message</td>
<td>29.0</td>
</tr>
<tr>
<td>conversationId</td>
<td>String</td>
<td>The ID for the conversation</td>
<td>29.0</td>
</tr>
<tr>
<td>conversationUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the conversation</td>
<td>29.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>The ID of the message</td>
<td>29.0</td>
</tr>
<tr>
<td>recipients</td>
<td><code>List&lt;ConnectApi.UserSummary&gt;</code></td>
<td>List of the recipients of the message</td>
<td>29.0</td>
</tr>
<tr>
<td>sender</td>
<td><code>ConnectApi.UserSummary</code></td>
<td>The sender of the message</td>
<td>29.0</td>
</tr>
</tbody>
</table>
### ConnectApi.ReferencesendingCommunity

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>sendingCommunity</td>
<td>ConnectApi.Reference</td>
<td>Information about the community from which the message was sent.</td>
<td>32.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Returns <code>null</code> for the default community or if communities aren’t enabled.</td>
<td></td>
</tr>
<tr>
<td>sentDate</td>
<td>Datetime</td>
<td>The date and time the message was sent</td>
<td>29.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page of the conversation</td>
<td>29.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ChatterMessagePage Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>29.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>29.0</td>
</tr>
<tr>
<td>messages</td>
<td>List&lt;ConnectApi.ChatterMessage&gt;</td>
<td>The messages on the current page.</td>
<td>29.0</td>
</tr>
<tr>
<td>nextPageToken</td>
<td>String</td>
<td>Token identifying the next page, or <code>null</code> if there isn’t a next page.</td>
<td>29.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or <code>null</code> if there isn’t a next page.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ChatterStream

A Chatter feed stream.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>community</td>
<td>ConnectApi.CommunitySummary</td>
<td>Community summary for the stream.</td>
<td>41.0</td>
</tr>
<tr>
<td>createdDate</td>
<td>Datetime</td>
<td>Date the stream was created.</td>
<td>39.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the stream.</td>
<td>39.0</td>
</tr>
</tbody>
</table>
### ConnectApi.ChatterStreamPage

A collection of Chatter feed streams.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>URL to the current page of streams.</td>
<td>39.0</td>
</tr>
<tr>
<td>items</td>
<td>List&lt;ConnectApi.ChatterStream&gt;</td>
<td>List of streams.</td>
<td>39.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>URL to the next page of streams. In version 39.0, all streams are included in currentPageUrl and nextPageUrl is null.</td>
<td>39.0</td>
</tr>
<tr>
<td>total</td>
<td>Integer</td>
<td>Total number of streams in the collection.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ClientInfo Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>applicationName</td>
<td>String</td>
<td>Name of the connected app used for authentication.</td>
<td>28.0</td>
</tr>
<tr>
<td>applicationUrl</td>
<td>String</td>
<td>Value from the Info URL field of the connected app used for authentication</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.Comment
- ConnectApi.FeedItem Class
Users can’t edit (specifically the feed item body or title), comment on, or delete a closed feed element. If the closed feed element is a poll, users can’t vote on it. Users can’t edit (specifically the comment body) or delete a comment on a closed feed element or select or remove it as best answer.

Admins and moderators can edit and delete closed feed elements and comments on closed feed elements. Admins and moderators can select or remove the best answer status on comments on closed feed elements.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>canContextUser</td>
<td>Boolean</td>
<td>Specifies whether the context user has permission to set the feed element to closed (true) or not (false).</td>
<td>43.0</td>
</tr>
<tr>
<td>UpdateIsClosed</td>
<td>Boolean</td>
<td>Specifies whether the feed element is closed (true) or not (false).</td>
<td>43.0</td>
</tr>
<tr>
<td>isClosed</td>
<td>Boolean</td>
<td></td>
<td>43.0</td>
</tr>
</tbody>
</table>

### ConnectApi.Comment

A comment.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>attachment</td>
<td>ConnectApi.FeedItemAttachment</td>
<td>If the comment contains an attachment, property value is ContentAttachment. If the comment does not contain an attachment, it is null.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>body</td>
<td>ConnectApi.FeedBody</td>
<td>Body of the comment.</td>
<td>28.0</td>
</tr>
<tr>
<td>capabilities</td>
<td>ConnectApi.CommentCapabilities</td>
<td>Capabilities associated with the comment, such as any file attachments.</td>
<td>32.0</td>
</tr>
<tr>
<td>clientInfo</td>
<td>ConnectApi.ClientInfo</td>
<td>Information about the connected app used to authenticate the connection.</td>
<td>28.0</td>
</tr>
<tr>
<td>createdDate</td>
<td>Datetime</td>
<td>ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z.</td>
<td>28.0</td>
</tr>
<tr>
<td>feedElement</td>
<td>ConnectApi.Reference</td>
<td>Feed element on which the comment is posted.</td>
<td>28.0</td>
</tr>
<tr>
<td>feedItem</td>
<td>ConnectApi.Reference</td>
<td>Feed item on which the comment is posted.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>Comment’s 18-character ID.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**Important:** As of version 32.0, use the feedElement property.
<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isDelete</td>
<td>Boolean</td>
<td>If this property is <strong>true</strong>, the context user can't delete the comment. If this property is <strong>false</strong>, the context user might be able to delete the comment.</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>likes</td>
<td>ConnectApi.ChatterLikePage</td>
<td>The first page of likes for the comment. This property has no information for comments on direct messages.</td>

**ConnectApi.ContentCapability**

If a comment has this capability, it has a file attachment.

Subclass of [ConnectApi.FeedElementCapability Class](#).

For files attached to a feed post (instead of a comment) in version 36.0 and later, use [ConnectApi.FilesCapability](#).

If content is deleted from a feed element after it's posted or if the access to the content is changed to private, the ConnectApi.ContentCapability exists, however most of its properties are null.

ConnectApi.DashboardComponentAttachment Class

⚠️ Important: This class isn’t available in version 32.0 and later. In version 32.0 and later, ConnectApi.DashboardComponentSnapshotCapability is used.

Subclass of ConnectApi.FeedItemAttachment Class

Objects of this type are returned as attachments in feed items with type DashboardSnapshot.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>componentId</td>
<td>String</td>
<td>Component’s 18–character ID</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>componentName</td>
<td>String</td>
<td>Name of the component. If no name is saved with the component, returns the localized string, &quot;Untitled Component.&quot;</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>dashboardBodyText</td>
<td>String</td>
<td>Text displayed next to the actor in the body of a feed item. This is used instead of the default body text. If no text is specified, and there is no default body text, returns null.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>dashboardId</td>
<td>String</td>
<td>Dashboard’s 18–character ID</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>dashboardName</td>
<td>String</td>
<td>Name of the dashboard.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>fullSizeImageUrl</td>
<td>String</td>
<td>URL of the full-sized dashboard image</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>lastRefreshDate</td>
<td>Datetime</td>
<td>ISO8601 date string, for example, 2011-02-25T18:24:31.000Z, specifying when this dashboard was last refreshed.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>lastRefreshDateDisplayText</td>
<td>String</td>
<td>The text of the last refresh date to be displayed, such as, “Last refreshed on October 31, 2011.”</td>

</tr>
<tr>
<td>purchaseDate</td>
<td>Datetime</td>
<td>Purchase date for this order.</td>
<td>32.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>GET request URL for this order.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

**ConnectApi.DatacloudPurchaseUsage Class**

Information about Data.com point usage for monthly and list pool users.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>listpoolCreditsAvailable</td>
<td>Integer</td>
<td>The points or credits that are available in a pool of credits for your organization. This pool of credits can be used by any List Pool User in your organization.</td>
<td>32.0</td>
</tr>
<tr>
<td>listpoolCreditsUsed</td>
<td>Integer</td>
<td>The points or credits that have been used from a pool of credits that are used by List Pool Users to purchase records.</td>
<td>32.0</td>
</tr>
</tbody>
</table>
**Available Version**

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>monthlyCreditsAvailable</td>
<td>Integer</td>
<td>The total credits that are assigned to a Monthly User. Unused credits expire at the end of each month.</td>
<td>32.0</td>
</tr>
<tr>
<td>monthlyCreditsUsed</td>
<td>Integer</td>
<td>The credits that are used by a Monthly User for the current month.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

**ConnectApi.DateRecordField Class**

Subclass of ConnectApi.LabeledRecordField Class

A record field containing a date.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>dateValue</td>
<td>Datetime</td>
<td>A date that a machine can read. Ignore the trailing 00:00:00.000Z characters.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

**ConnectApi.DeleteIntent**

Delete intent for a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>managedSocialAccount</td>
<td>ConnectApi.</td>
<td>Managed social account that deletes the social post.</td>
<td>45.0</td>
</tr>
<tr>
<td></td>
<td>ManagedSocialAccount</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**ConnectApi.DeleteIntents**

List of delete intents for a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>deletes</td>
<td>List&lt;ConnectApi.</td>
<td>List of delete intents for the social post.</td>
<td>45.0</td>
</tr>
<tr>
<td></td>
<td>DeleteIntent&gt;</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**ConnectApi.DeleteSocialPostIntent**

Delete intent for the social post.
**ConnectApi.DigestJob**

Represents a successfully enqueued API digest job request.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| period        | ConnectApi.DigestPeriod | Period of time that is included in a Chatter email digest. Values are:  
  - DailyDigest—The email includes up to the 50 latest posts from the previous day.  
  - WeeklyDigest—The email includes up to the 50 latest posts from the previous week. | 37.0 |

**ConnectApi.DirectMessageCapability**

If a feed element has this capability, it’s a direct message.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>memberChanges</td>
<td>ConnectApi.DirectMessageMemberActivityPage</td>
<td>Member activities of the direct message, with the most recent activity first.</td>
<td>40.0</td>
</tr>
<tr>
<td>members</td>
<td>ConnectApi.DirectMessageMemberPage</td>
<td>Members included in the direct message.</td>
<td>39.0</td>
</tr>
<tr>
<td>originalMembers</td>
<td>ConnectApi.DirectMessageMemberPage</td>
<td>Original members of the direct message.</td>
<td>40.0</td>
</tr>
<tr>
<td>subject</td>
<td>String</td>
<td>Subject of the direct message.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

SEE ALSO:  
ConnectApi.FeedElementCapabilities Class

**ConnectApi.DirectMessageMemberActivity**

Direct message member activity.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>activityDate</td>
<td>Datetime</td>
<td>Direct message member activity date.</td>
<td>40.0</td>
</tr>
</tbody>
</table>
### ConnectApi.DirectMessageMemberActivityPage

A page of direct message member activities.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>activities</td>
<td>List&lt;ConnectApi.DirectMessageMemberActivity&gt;</td>
<td>Collection of direct message member activities.</td>
<td>40.0</td>
</tr>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>40.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>40.0</td>
</tr>
<tr>
<td>nextPageToken</td>
<td>String</td>
<td>Token identifying the next page, or null if there isn't a next page.</td>
<td>40.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or null if there isn't a next page.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

ConnectApi.DirectMessageCapability

### ConnectApi.DirectMessageMemberPage

A collection of direct message members.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Page token to access the current page of direct message members.</td>
<td>39.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>URL to the current page of direct message members.</td>
<td>39.0</td>
</tr>
</tbody>
</table>
Available Version | Description | Type | Property Name
--- | --- | --- | ---
39.0 | Page token to access the next page of direct message members. | String | nextPageToken
39.0 | URL to the next page of direct message members. | String | nextPageUrl
39.0 | Collection of direct message members. | List<ConnectApi.UserSummary> | users

SEE ALSO:
- ConnectApi.DirectMessageCapability
- ConnectApi.DirectMessageCapability

### ConnectApi.DownVoteSummary

Summary of a downvote.

Subclass of ConnectApi.UserFeedEntityActivitySummary

No additional properties.

### ConnectApi.EditCapability

If a feed element or comment has this capability, users who have permission can edit it.

Available Version | Description | Type | Property Name
--- | --- | --- | ---
34.0 | Specifies whether editing this feed element or comment is restricted. If `true`, the context user can’t edit this feed element or comment. If `false`, the context user may or may not have permission to edit this feed element or comment. To determine if the context user can edit a feed element or comment, use the `isFeedElementEditableByMe(communityId, feedElementId)` or `isCommentEditableByMe(communityId, commentId)` method. | Boolean | isEditRestricted
34.0 | The URL to check if the context user is able to edit this feed element or comment. | String | isEditableByMeUrl
34.0 | Who last edited this feed element or comment. | ConnectApi.Actor | lastEditedBy
34.0 | The most recent edit date of this feed element or comment. | Datetime | lastEditedDate
34.0 | The most recent revision of this feed element or comment. | Integer | latestRevision
### ConnectApi.EmailAddress

An email address.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>displayName</td>
<td>String</td>
<td>The display name for the email address.</td>
<td>29.0</td>
</tr>
<tr>
<td>emailAddress</td>
<td>String</td>
<td>The email address.</td>
<td>29.0</td>
</tr>
<tr>
<td>relatedRecord</td>
<td>ConnectApi. EmailAddress</td>
<td>The summary of a related record, for example, a contact or user summary.</td>
<td>36.0</td>
</tr>
</tbody>
</table>

### ConnectApi.EmailAttachment

An email attachment in an email message.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>attachment</td>
<td>ConnectApi. RecordSummary</td>
<td>Record summary of the attachment.</td>
<td>36.0</td>
</tr>
<tr>
<td>contentType</td>
<td>String</td>
<td>Type of attachment.</td>
<td>36.0</td>
</tr>
<tr>
<td>fileName</td>
<td>String</td>
<td>Name of the attachment.</td>
<td>36.0</td>
</tr>
</tbody>
</table>

### ConnectApi.EmailMergeFieldInfo

The map for objects and their merge fields.
ConnectApi.EmailMergeFieldCollectionInfo

The merge fields for an object.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>mergeFields</td>
<td>List&lt;String&gt;</td>
<td>List of merge fields for a single object.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

- ConnectApi.EmailMergeFieldInfo

ConnectApi.EmailMessage Class

⚠️ **Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, ConnectApi.EmailMessageCapability is used.

Subclass of ConnectApi.FeedItemAttachment Class

An email message from a case.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>direction</td>
<td>ConnectApi.EmailMessageDirectionEnum</td>
<td>The direction of the email message.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Inbound—An inbound message (sent by a customer).</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Outbound—An outbound message (sent to a customer by a support agent).</td>
<td></td>
</tr>
<tr>
<td>emailMessageId</td>
<td>String</td>
<td>The ID of the email message.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>subject</td>
<td>String</td>
<td>The subject of the email message.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>textBody</td>
<td>String</td>
<td>The body of the email message.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>toAddresses</td>
<td>List&lt;ConnectApi.EmailAddress&gt;</td>
<td>A list of email addresses to send the message to.</td>
<td>29.0–31.0</td>
</tr>
</tbody>
</table>

ConnectApi.EmailMessageCapability

If a feed element has this capability, it has an email message from a case.

Subclass of ConnectApi.FeedElementCapability Class.
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>attachments</td>
<td>List&lt;ConnectApi.EmailAttachment&gt;</td>

<td>List&lt;ConnectApi.EmailAddress&gt;</td>
<td>To addresses of the email message.</td>
<td>32.0</td>
</tr>
</tbody>
</table>
### ConnectApi.Emoji

An emoji.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>category</td>
<td>String</td>
<td>Emoji category.</td>
<td>39.0</td>
</tr>
<tr>
<td>shortcut</td>
<td>String</td>
<td>Emoji shortcut.</td>
<td>39.0</td>
</tr>
<tr>
<td>unicodeCharacter</td>
<td>String</td>
<td>Emoji’s unicode character.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

### ConnectApi.EmojiCollection

A collection of emojis.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>emojis</td>
<td>List&lt;ConnectApi.Emoji&gt;</td>
<td>A collection of emojis.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

### ConnectApi.EnhancedLinkCapability

If a feed element has this capability, it has a link that may contain supplemental information like an icon, a title, and a description.

Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>A description with a 500 character limit.</td>
<td>32.0</td>
</tr>
<tr>
<td>icon</td>
<td>ConnectApi.Icon</td>
<td>A icon.</td>
<td>32.0</td>
</tr>
<tr>
<td>linkRecordId</td>
<td>String</td>
<td>A ID associated with the link if the link URL refers to a Salesforce record.</td>
<td>32.0</td>
</tr>
</tbody>
</table>
**ConnectApi.EntityLabel**

An entity's label.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>label</td>
<td>String</td>
<td>Localized singular label of the entity.</td>
<td>40.0</td>
</tr>
<tr>
<td>labelPlural</td>
<td>String</td>
<td>Localized plural label of the entity.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

**ConnectApi.EntityLinkSegment Class**

Subclass of `ConnectApi.MessageSegment Class`

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>motif</td>
<td><code>ConnectApi.Motif Class</code></td>
<td>A set of small, medium, and large icons that indicate whether the entity is</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>a file, group, record, or user. The motif can also contain the object’s</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>base color.</td>
<td></td>
</tr>
<tr>
<td>reference</td>
<td><code>ConnectApi.Reference</code></td>
<td>A reference to the link object if applicable, otherwise, <code>null</code>.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**ConnectApi.EntityRecommendation**

A Chatter, custom, or static recommendation.

### ConnectApi.RecommendedObject

For user, file, group, topic, and record entity types, use this Chatter REST URL with a POST request to take action on the recommendation.

For `ConnectApi.RecommendedObject` entity types, such as custom recommendations, use the `actionUrl` property of the `ConnectApi.PlatformAction Class` to take action on the recommendation.

#### actOnUrl
- **Type:** String
- **Description:** For user, file, group, topic, and record entity types, use this Chatter REST URL with a POST request to take action on the recommendation. For `ConnectApi.RecommendedObject` entity types, such as custom recommendations, use the `actionUrl` property of the `ConnectApi.PlatformAction Class` to take action on the recommendation.
- **Available Version:** 32.0

#### action
- **Type:** `ConnectApi.RecommendationActionType`
- **Description:** Specifies the action to take on a recommendation.
  - `follow`—Follow a file, record, topic, or user.
  - `join`—Join a group.
  - `view`—View a file, group, article, record, user, custom, or static recommendation.
- **Available Version:** 32.0

#### entity
- **Type:** `ConnectApi.Actor`
- **Description:** The entity with which the receiver is recommended to take action.
- **Available Version:** 32.0

### ConnectApi.Extension

An extension.

#### Property Name
- **alternative Representation**
- **attachmentId**
- **extensionId**
- **payload**
- **payloadVersion**

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>alternative Representation</td>
<td><code>ConnectApi.Alternative</code></td>
<td>Alternative representation of the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>attachmentId</td>
<td>String</td>
<td>Attachment ID of the extension.</td>
<td>41.0</td>
</tr>
<tr>
<td>extensionId</td>
<td>String</td>
<td>ID of the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>payload</td>
<td>String</td>
<td>Payload associated with the extension.</td>
<td>40.0</td>
</tr>
<tr>

### ConnectApi.Features
Features available to the context user in the org.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>activityReminderNotificationsEnabled</td>
<td>Boolean</td>
<td>Reserved for future use.</td>
<td>37.0</td>
</tr>
<tr>
<td>chatter</td>
<td>Boolean</td>
<td>Specifies whether Chatter is enabled.</td>
<td>28.0</td>
</tr>
<tr>
<td>chatterActivity</td>
<td>Boolean</td>
<td>Specifies whether user details include information about Chatter activity.</td>
<td>28.0</td>
</tr>
<tr>
<td>chatterAnswers</td>
<td>Boolean</td>
<td>Specifies whether Chatter Answers is enabled.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

**Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring '18.

<p>| chatterGlobalInfluence | Boolean | Specifies whether user details include global Chatter activity. | 28.0 |
| chatterGroupRecords | Boolean | Specifies whether Chatter groups can have records associated with them. | 30.0 |
| chatterGroupRecordSharing | Boolean | Specifies whether Chatter records are implicitly shared among group members when records are added to groups. | 30.0 |
| chatterMessages | Boolean | Specifies whether Chatter messages are enabled. | 28.0 |
| chatterTopics | Boolean | Specifies whether topics are enabled. | 28.0 |
| communitiesEnabled | Boolean | Specifies whether Salesforce Communities is enabled. | 31.0 |
| communityModeration | Boolean | Specifies whether community moderation is enabled. | 29.0 |</p>
<table>

## ConnectApi.Feed Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>feedElement</td>
<td>String</td>
<td>Chatter REST API URL for posting feed elements to this subject.</td>
<td>31.0</td>
</tr>
<tr>
<td>PostUrl</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>feedElements</td>
<td>ConnectApi. FeedElement Page</td>
<td>Page of feed elements for the feed specified in <code>redirectedFeedType</code>. Otherwise, <code>null</code>.</td>
<td>40.0</td>
</tr>
<tr>
<td>feedElementsUrl</td>
<td>String</td>
<td>Chatter REST API URL of feed elements.</td>
<td>31.0</td>
</tr>
<tr>
<td>feedItemsUrl</td>
<td>String</td>
<td>Chatter REST API URL of feed items.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>isModifedUrl</td>
<td>String</td>
<td>A Chatter REST API URL with a <code>since</code> request parameter that contains an opaque token that describes when the feed was last modified. Returns <code>null</code> if the feed isn't a news feed. Use this URL to poll a news feed for updates.</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>Important:</strong> This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.</td>
<td></td>
</tr>
<tr>
<td>pinnedFeedElementsUrl</td>
<td>String</td>
<td>URL of pinned feed items.</td>
<td>41.0</td>
</tr>
<tr>
<td>redirectedFeedFilter</td>
<td>ConnectApi. FeedFilter</td>
<td>Filter for the feed specified in <code>redirectedFeedType</code>. Otherwise, <code>null</code>.</td>
<td>42.0</td>
</tr>
<tr>
<td>redirectedFeedSort</td>
<td>ConnectApi. FeedSort Order</td>
<td>Sort order for the feed specified in <code>redirectedFeedType</code>. Otherwise, <code>null</code>.</td>
<td>42.0</td>
</tr>
<tr>
<td>redirectedFeedType</td>
<td>ConnectApi. FeedType</td>
<td>Specifies which feed is returned if <code>pageSize</code> is specified. Otherwise, <code>null</code>.</td>
<td>40.0</td>
</tr>
<tr>
<td>respectsMute</td>
<td>Boolean</td>
<td>Indicates whether the feed respects the mute feature. If <code>true</code>, the feed shows the ability to mute or unmute each element, depending on the value of <code>isMutedByMe</code>; <code>null</code> if the mute feature is disabled for the organization.</td>
<td>35.0</td>
</tr>
</tbody>
</table>
**ConnectApi.FeedBody Class**

Subclass of ConnectApi.AbstractMessageBody Class

No additional properties.

**SEE ALSO:**
- ConnectApi.Comment
- ConnectApi.FeedElement Class
- ConnectApi.FeedEntitySummary

**ConnectApi.FeedDirectory Class**

A directory of feeds and favorites.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>favorites</td>
<td>List&lt;ConnectApi.FeedFavorite&gt;</td>
<td>A list of feed favorites</td>
<td>30.0</td>
</tr>
<tr>
<td>feeds</td>
<td>List&lt;ConnectApi.FeedDirectoryItem&gt;</td>
<td>A list of feeds</td>
<td>30.0</td>
</tr>
</tbody>
</table>

**ConnectApi.FeedDirectoryItem Class**

The definition of a feed.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>feedElementsUrl</td>
<td>String</td>
<td>Chatter REST API resource URL for the feed elements.</td>
<td></td>
</tr>
<tr>
<td>feedItemsUrl</td>
<td>String</td>
<td>Chatter REST API resource URL for the feed items of a specific feed.</td>
<td>30.0–31.0</td>
</tr>
<tr>
<td>feedType</td>
<td>ConnectApi.FeedType Enum</td>
<td>The feed type. One of these values:</td>
<td>30.0</td>
</tr>
<tr>
<td></td>
<td>• Bookmarks—Contains all feed items saved as bookmarks by the context user.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Company—Contains all feed items except feed items of type TrackedChange. To see the feed item, the user must have sharing access to its parent.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• DirectMessageModeration—Contains all direct messages that are flagged for moderation. The Direct Message Moderation feed is available only to users with Moderate Communities Chatter Messages permissions.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• DirectMessages—Contains all feed items of the context user’s direct messages.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Draft—Contains all the feed items that the context user drafted.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Files—Contains all feed items that contain files posted by people or groups that the context user follows.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
• Filter—Contains the news feed filtered to contain feed items whose parent is a specified object type.
• Groups—Contains all feed items from all groups the context user either owns or is a member of.
• Home—Contains all feed items associated with any managed topic in a community.
• Landing—Contains all feed items that best drive user engagement when the feed is requested. Allows clients to avoid an empty feed when there aren’t many personalized feed items.
• Moderation—Contains all feed items that are flagged for moderation, except direct messages. The Communities Moderation feed is available only to users with Moderate Community Feeds permissions.
• Mute—Contains all feed items that the context user muted.
• News—Contains all updates for people the context user follows, groups the user is a member of, and files and records the user is following. Contains all updates for records whose parent is the context user. Contains every feed item and comment that mentions the context user or that mentions a group the context user is a member of.
• PendingReview—Contains all feed items and comments that are pending review.
• People—Contains all feed items posted by all people the context user follows.
• Record—Contains all feed items whose parent is a specified record, which could be a group, user, object, file, or any other standard or custom object. When the record is a group, the feed also contains feed items that mention the group. When the record is a user, the feed contains only feed items on that user. You can get another user’s record feed.
• Streams—Contains all feed items for any combination of up to 25 feed-enabled entities, such as people, groups, and records, that the context user subscribes to in a stream.
• To—Contains all feed items with mentions of the context user. Contains feed items the context user commented on and feed items created by the context user that are commented on.
• Topics—Contains all feed items that include the specified topic.
• UserProfile—Contains feed items created when a user changes records that can be tracked in a feed. Contains feed items whose parent is the user and feed items that @mention the user. This feed is different than the news feed, which returns more feed items, including group updates. You can get another user’s user profile feed.
Available Version | Description | Type | Name
--- | --- | --- | ---
| 30.0 | Chatter REST API resource URL for a specific feed | String | feedUrl
| 30.0 | A key prefix is the first three characters of a record ID, which specifies the entity type. For filter feeds, this value is the key prefix associated with the entity type used to filter this feed. All feed items in this feed have a parent whose entity type matches this key prefix value. For non-filter feeds, this value is null. | String | keyPrefix
| 30.0 | Localized label of the feed | String | label

SEE ALSO:
ConnectApi.FeedDirectory Class

**ConnectApi.FeedElement Class**

Feed elements are the top-level items that a feed contains. Feeds are feed element containers. This class is abstract.

Superclass of:
- ConnectApi.FeedItem Class
- ConnectApi.GenericFeedElement Class

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>body</td>
<td>ConnectApi.FeedBody</td>
<td>Information about the feed element. <strong>Important:</strong> Use the header.text property as the default value for rendering text because the body.text property can be null.</td>
<td>22.0</td>
</tr>
<tr>
<td>capabilities</td>
<td>ConnectApi.FeedElementCapabilities Class</td>
<td>A container for all capabilities that can be included with a feed element.</td>
<td>31.0</td>
</tr>
<tr>
<td>createdDate</td>
<td>Datetime</td>
<td>An ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z.</td>
<td>31.0</td>
</tr>
</tbody>
</table>
| feedElementType | ConnectApi.FeedElementType | Feed elements are the top-level objects that a feed contains. The feed element type describes the characteristics of that feed element. One of these values:
- Bundle—A container of feed elements. A bundle also has a body made up of message | 31.0 |
segments that can always be gracefully degraded to text-only values.

- **FeedItem**—A feed item has a single parent and is scoped to one community or across all communities. A feed item can have capabilities such as bookmarks, canvas, content, comment, link, poll. Feed items have a body made up of message segments that can always be gracefully degraded to text-only values.

- **Recommendation**—A recommendation is a feed element with a recommendations capability. A recommendation suggests records to follow, groups to join, or applications that are helpful to the context user.

### Property Name | Type | Description | Available Version
--- | --- | --- | ---
questionAndAnswers | ConnectApi. QuestionAndAnswers Capability Class | If a feed element has this capability, it has a question and comments on the feed element are answers to the question. | 31.0
readBy | ConnectApi. ReadByCapability | If a feed element has this capability, the context user can mark it as read. | 40.0
recommendations | ConnectApi. Recommendations Capability | If a feed element has this capability, it has a recommendation. | 32.0
recordSnapshot | ConnectApi. RecordSnapshot Capability | If a feed element has this capability, it contains all the snapshotted fields of a record for a single create record event. | 32.0
socialPost | ConnectApi. SocialPostCapability | If a feed element has this capability, it can interact with a social post on a social network. | 36.0
status | ConnectApi. StatusCapability | If a feed post or comment has this capability, it has a status that determines its visibility. | 37.0
topics | ConnectApi. TopicsCapability Class | If a feed element has this capability, the context user can add topics to it. Topics help users organize and discover conversations. | 31.0
trackedChanges | ConnectApi. TrackedChanges Capability | If a feed element has this capability, it contains all changes to a record for a single tracked change event. | 32.0
upDownVote | ConnectApi. UpDownVoteCapability | If a feed post or comment has this capability, users can upvote or downvote it. | 41.0

- ConnectApi.FeedElement Class
- ConnectApi.FeedItemSummary

**ConnectApi.FeedElementCapability Class**

A feed element capability, which defines the characteristics of a feed element.

In API version 30.0 and earlier, most feed items can have comments, likes, topics, and so on. In version 31.0 and later, every feed item (and feed element) can have a unique set of capabilities. If a capability property exists on a feed element, that capability is available, even if the capability property doesn’t have a value. For example, if the ChatterLikes capability property exists on a feed element (with or without a value), the context user can like that feed element. If the capability property doesn’t exist, it isn’t possible to like that feed element. A capability can also contain associated data. For example, the Moderation capability contains data about moderation flags.

This class is abstract.

This class is a superclass of:
- ConnectApi.AssociatedActionsCapability Class
• ConnectApi.ApprovalCapability Class
• ConnectApi.BannerCapability Class
• ConnectApi.BookmarksCapability Class
• ConnectApi.BundleCapability Class
• ConnectApi.CanvasCapability Class
• ConnectApi.CaseCommentCapability Class

</tr>
<tr>
<td>feedEntityUrl</td>
<td>String</td>
<td>URL of the feed element or comment.</td>
<td>34.0</td>
</tr>
</tbody>
</table>

**ConnectApi.FeedEntityNotAvailableSummary**

A summary when the feed entity isn’t available.

This output class is a subclass of ConnectApi.FeedEntitySummary and has no properties.

**ConnectApi.FeedEntityReadSummary**

Summary of the feed post or comment that was read.

Subclass of ConnectApi.UserFeedEntityActivitySummary

No additional properties.

**ConnectApi.FeedEntityShareCapability**

If a feed element or comment has this capability, a feed entity is shared with it.

Subclass of ConnectApi.FeedElementCapability Class.
### connectApi Namespace

**ConnectApi.FeedEntitySummary**

The summary of a feed entity that is shared with a feed element. 
This class is abstract.

Superclass of:
- `ConnectApi.FeedItemSummary`
- `ConnectApi.FeedEntityNotAvailableSummary`

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actor</td>
<td><code>ConnectApi.Actor</code></td>
<td>Entity that created the feed entity.</td>

</table>
what can be done with a feed item. See Capabilities.

One of these values:

- **ActivityEvent**—Feed item generated in Case Feed when an event or task associated with a parent record with a feed enabled is created or updated.
- **AdvancedTextPost**—A feed item with advanced text formatting, such as a group announcement post.
- **ApprovalPost**—Feed item with an approval capability. Approvers can act on the feed item parent.
- **AttachArticleEvent**—Feed item generated when an article is attached to a case in Case Feed.
- **BasicTemplateFeedItem**—Feed item with an enhanced link capability.
- **CallLogPost**—Feed item generated when a call log is saved to a case in Case Feed.
- **CanvasPost**—Feed item generated by a canvas app in the publisher or from Chatter REST API or Chatter in Apex. The post itself is a link to a canvas app.
- **CaseCommentPost**—Feed item generated when a case comment is saved in Case Feed.
- **ChangeStatusPost**—Feed item generated when the status of a case is changed in Case Feed.
- **ChatTranscriptionPost**—Feed item generated in Case Feed when a Live Agent chat transcript is saved to a case.
- **CollaborationGroupCreated**—Feed item generated when a new public group is created. Contains a link to the new group.
- **CollaborationGroupUnarchived**—Deprecated. Feed item generated when an archived group is activated.
- **ContentPost**—Feed item with a content capability.
- **CreateRecordEvent**—Feed item that describes a record created in the publisher.
### ConnectApi Namespace

#### Description

- **DashboardComponentAlert**—Feed item with a dashboard alert.
- **DashboardComponentSnapshot**—Feed item with a dashboard component snapshot capability.
- **EmailMessageEvent**—Feed item generated when an email is sent from a case in Case Feed.
- **FacebookPost**—Deprecated. Feed item generated when a Facebook post is created from a case in Case Feed.
- **LinkPost**—Feed item with a link capability.
- **MilestoneEvent**—Feed item generated when a case milestone is either completed or reaches a violation status. Contains a link to the case milestone.
- **PollPost**—Feed item with a poll capability. Viewers of the feed item are allowed to vote on the options in the poll.
- **ProfileSkillPost**—Feed item generated when a skill is added to a user's profile.
- **QuestionPost**—Feed item generated when a question is asked.
  As of API version 33.0, a feed item of this type can have a content capability and a link capability.
- **ReplyPost**—Feed item generated by a Chatter Answers reply.
- **RypplePost**—Feed item generated when a user posts thanks.
- **SocialPost**—Feed item generated when a social post is created from a case in Case Feed.
- **TextPost**—Feed item containing text only.
- **TrackedChange**—Feed item created when one or more fields on a record have been changed.
- **UserStatus**—Deprecated. A user's post to their own profile.

</tbody>
</table>
ConnectApi.FeedItemAttachment Class

⚠️ Important: This class isn’t available in version 32.0 and later. In version 32.0 and later, ConnectApi.FeedElementCapability Class is used.

This class is abstract.

Subclasses:
- ConnectApi.ApprovalAttachment Class
- ConnectApi.BasicTemplateAttachment Class
- ConnectApi.CanvasTemplateAttachment Class
- ConnectApi.EmailMessage Class
- ConnectApi.CaseComment Class
- ConnectApi.ContentAttachment Class
- ConnectApi.DashboardComponentAttachment Class
- ConnectApi.FeedPoll Class
- ConnectApi.LinkAttachment Class
- ConnectApi.RecordSnapshotAttachment Class
- ConnectApi.TrackedChangeAttachment Class

Message segments in a feed item are typed as ConnectApi.MessageSegment. Feed item capabilities are typed as ConnectApi.FeedItemCapability. Record fields are typed as ConnectApi.AbstractRecordField. These classes are all abstract and have several concrete subclasses. At runtime you can use instanceof to check the concrete types of these objects and then safely proceed with the corresponding downcast. When you downcast, you must have a default case that handles unknown subclasses.

⚠️ Important: The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.

ConnectApi.FeedItemPage Class

⚠️ Important: This class isn’t available in version 32.0 and later. In version 32.0 and later, ConnectApi.FeedElementPage is used.

A paged collection of ConnectApi.FeedItem objects.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>isModifiedToken</td>
<td>String</td>
<td>An opaque polling token to use in the since parameter of the ChatterFeeds.isModified method. The token describes when the feed was last modified.</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

⚠️ Important: This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.
### isModifiedUrl

**Type**: `String`

A Chatter REST API URL with a `since` request parameter that contains an opaque token that describes when the feed was last modified. Returns `null` if the feed isn’t a news feed. Use this URL to poll a news feed for updates.

**Important**: This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.

### items

**Type**: `List<ConnectApi.FeedItem>`

List of feed items

### nextPageToken

**Type**: `String`

Token identifying the next page, or `null` if there isn’t a next page.

### nextPageUrl

**Type**: `String`

Chatter REST API URL identifying the next page, or `null` if there isn’t a next page.

### updatesToken

**Type**: `String`

Token to use in an `updatedSince` parameter, or `null` if not available.

### updatesUrl

**Type**: `String`

A Chatter REST API resource with a query string containing the value of the `updatesToken` property. The resource returns the feed items that have been updated since the last request. Use the URL as it is—do not modify it. Property is `null` if not available.

### ConnectApi.FeedItemSummary

A feed item summary.

Subclass of `ConnectApi.FeedEntitySummary`.

**ConnectApi.FeedModifiedInfo Class**

**Important:** This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isModified</td>
<td>Boolean</td>
<td>true if the news feed has been modified since the last time it was polled; false otherwise. Returns null if the feed is not a news feed.</td>
<td>28.0</td>
</tr>
<tr>
<td>isModifiedToken</td>
<td>String</td>
<td>An opaque polling token to use in the since parameter of the ChatterFeeds.isModified method. The token describes when the feed was last modified.</td>
<td>28.0</td>
</tr>
<tr>
<td>nextPollUrl</td>
<td>String</td>
<td>A Chatter REST API URL with a since request parameter that contains an opaque token that describes when the feed was last modified. Returns null if the feed isn’t a news feed. Use this URL to poll a news feed for updates.</td>
<td>28.0</td>
</tr>
</tbody>
</table>
ConnectApi.FeedPoll Class

⚠️ Important: This class isn't available in version 32.0 and later. In version 32.0 and later, ConnectApi.PollCapability Class is used.

Subclass of ConnectApi.FeedItemAttachment Class

This object is returned as the attachment of ConnectApi.FeedItem objects where the type property is PollPost.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>choices</td>
<td>List&lt;ConnectApi.FeedPollChoice&gt;</td>
<td>List of choices for poll.</td>
<td>28.0–31.0</td>
</tr>

</tr>
</tbody>
</table>

- **Bookmarks**—Contains all feed items saved as bookmarks by the context user.
- **Company**—Contains all feed items except feed items of type `TrackedChange`. To see the feed item, the user must have sharing access to its parent.
- **DirectMessageModeration**—Contains all direct messages that are flagged for moderation. The Direct Message Moderation feed is available only to users with Moderate Communities Chatter Messages permissions.
- **DirectMessages**—Contains all feed items of the context user’s direct messages.
- **Draft**—Contains all the feed items that the context user drafted.
- **Files**—Contains all feed items that contain files posted by people or groups that the context user follows.
- **Filter**—Contains the news feed filtered to contain feed items whose parent is a specified object type.
- **Groups**—Contains all feed items from all groups the context user either owns or is a member of.
- **Home**—Contains all feed items associated with any managed topic in a community.
- **Landing**—Contains all feed items that best drive user engagement when the feed is requested. Allows clients to avoid an empty feed when there aren’t many personalized feed items.
- **Moderation**—Contains all feed items that are flagged for moderation, except direct messages. The Communities Moderation feed is available only to users with Moderate Community Feeds permissions.
- **Mute**—Contains all feed items that the context user muted.
- **News**—Contains all updates for people the context user follows, groups the user is a member of, and files and records the user is following.
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Contains all updates for records whose parent is the context user. Contains every feed item and comment that mentions the context user or that mentions a group the context user is a member of.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>PendingReview</td>
<td></td>
<td>Contains all feed items and comments that are pending review.</td>

<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fileId</td>
<td>String</td>
<td>ID of the file.</td>
<td>39.0</td>
</tr>
<tr>
<td>previews</td>
<td>List&lt;ConnectApi.FilePreview&gt;</td>
<td>Previews supported for the file.</td>
<td>39.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the current page of file previews.</td>
<td>39.0</td>
</tr>
<tr>
<td>versionNumber</td>
<td>String</td>
<td>Version number of the file.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- [ConnectApi.InlineImageSegment](#)

#### ConnectApi.FilePreviewUrl

A URL to a file preview.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>pageNumber</td>
<td>Integer</td>
<td>Preview page number starting from zero, or null for PDF files.</td>
<td>39.0</td>
</tr>
</tbody>
</table>
### ConnectApi.FilesCapability

If a feed element has this capability, it has one or more file attachments.

Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>items</td>
<td>List&lt;ConnectApi.Content&gt;</td>
<td>Collection of files.</td>
<td>36.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.FeedElementCapabilities Class

### ConnectApi.FileSummary Class

A file summary

Subclass of ConnectApi.File

No additional properties.

### ConnectApi.FollowerPage Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>28.0</td>
</tr>
<tr>
<td>followers</td>
<td>List&lt;ConnectApi.Subscription&gt;</td>
<td>List of subscriptions</td>
<td>28.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or null if there isn’t a next page.</td>
<td>28.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the previous page, or null if there isn’t a previous page.</td>
<td>28.0</td>
</tr>
<tr>
<td>total</td>
<td>Integer</td>
<td>Total number of followers across all pages</td>
<td>28.0</td>
</tr>
</tbody>
</table>
ConnectApi.FollowingCounts Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>people</td>
<td>Integer</td>
<td>Number of people user is following</td>
<td>28.0</td>
</tr>
<tr>
<td>records</td>
<td>Integer</td>
<td>Number of records user is following</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Topics are a type of record that can be followed as of version 29.0.</td>
<td></td>
</tr>
<tr>
<td>total</td>
<td>Integer</td>
<td>Total number of items user is following</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.UserDetail Class

ConnectApi.FollowingPage Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>28.0</td>
</tr>
<tr>
<td>following</td>
<td>List&lt;ConnectApi.Subscription&gt;</td>
<td>List of subscriptions</td>
<td>28.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or null if there isn’t a next page.</td>
<td>28.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the previous page, or null if there isn’t a previous page.</td>
<td>28.0</td>
</tr>
<tr>
<td>total</td>
<td>Integer</td>
<td>Total number of records being followed across all pages</td>
<td>28.0</td>
</tr>
</tbody>
</table>

ConnectApi.FollowIntents

A list of follow intents for a social persona.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>follows</td>
<td>List&lt;ConnectApi.FollowSocialPersonaIntent&gt;</td>
<td>List of follow intents for the social persona.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.SocialPostIntents

ConnectApi.FollowSocialPersonaIntent

Follow intent on a social persona.
### ConnectApi.GenericBundleCapability Class

If a feed element has this capability, the feed element has a group of other feed elements condensed into one feed element. This group is called a **bundle**.

Subclass of **ConnectApi.BundleCapability Class**.

### ConnectApi.GenericFeedElement Class

A concrete implementation of the abstract **ConnectApi.FeedElement** class.

Subclass of **ConnectApi.FeedElement Class**

### ConnectApi.GlobalInfluence Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>percentile</td>
<td>String</td>
<td>Percentile value for the user's influence rank within the organization or community</td>
<td>28.0</td>
</tr>
<tr>
<td>rank</td>
<td>Integer</td>
<td>Number indicating the user's influence rank, relative to all other users within the organization or community</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- **ConnectApi.UserDetail Class**

### ConnectApi.GroupChatterSettings Class

A user’s Chatter settings for a specific group.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>emailFrequency</td>
<td>ConnectApi.GroupEmailFrequency Enum</td>
<td>The frequency with which a group member receives email from a group.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

### ConnectApi.GroupInformation Class

Describes the Information section of the group. If the group is private, this section is visible only to members.
<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>text</td>
<td>String</td>
<td>The text of the “Information” section of the group.</td>
<td>28.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>The title of the “Information” section of the group.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

ConnectApi.GroupMember Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>User’s 18-character ID</td>
<td>28.0</td>
</tr>
<tr>
<td>lastFeedAccessDate</td>
<td>Datetime</td>
<td>The date and time at which the group member last accessed the group feed.</td>
<td>31.0</td>
</tr>
<tr>
<td>role</td>
<td>ConnectApi.GroupMembership.TypeEnum</td>
<td>Type of membership the user has with the group.</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• GroupOwner</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• GroupManager</td>

<tr>
<td></td>
<td></td>
<td>• NotAMemberPrivateRequested</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• StandardMember</td>
<td></td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>Chatter REST API URL to this membership</td>
<td>28.0</td>
</tr>
<tr>
<td>user</td>
<td>ConnectApi.UserSummary</td>
<td>Information about the user who is subscribed to this group</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:  
ConnectApi.GroupMemberPage Class

ConnectApi.GroupMemberPage Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>28.0</td>
</tr>
<tr>
<td>members</td>
<td>List&lt;ConnectApi.GroupMember&gt;</td>
<td>List of group members</td>
<td>28.0</td>
</tr>
<tr>
<td>myMembership</td>
<td>ConnectApi.Reference</td>
<td>If the context user is a member of this group, returns information about that membership, otherwise, null.</td>
<td>28.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or null if there isn’t a next page.</td>
<td>28.0</td>
</tr>
</tbody>
</table>
### ConnectApi.GroupMembershipRequest Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the previous page, or <code>null</code> if there isn't a previous page.</td>
<td>28.0</td>
</tr>
<tr>
<td>totalMemberCount</td>
<td>Integer</td>
<td>Total number of group members across all pages</td>
<td>28.0</td>
</tr>
</tbody>
</table>

#### Properties

- **createdDate** (datetime): ISO 8601 date string, for example, `2011-02-25T18:24:31.000Z`
- **id** (string): ID for the group membership request object
- **lastUpdateDate** (datetime): ISO 8601 date string, for example, `2011-02-25T18:24:31.000Z`
- **requestedGroup** (ConnectApi.Reference): Information about the group the context user is requesting to join.
- **responseMessage** (string): A message for the user if their membership request is declined. The value of this property is used only when the value of the `status` property is Declined. The maximum length is 756 characters.
- **status** (ConnectApi.GroupMembershipRequestStatusEnum): Status of a request to join a private group. Values are:
  - Accepted
  - Declined
  - Pending
- **url** (string): URL of the group membership request object.
- **user** (ConnectApi.UserSummary): Information about the user requesting membership in a group.

**SEE ALSO:**
- ConnectApi.GroupMembershipRequests Class

### ConnectApi.GroupMembershipRequests Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>requests</td>
<td>List&lt;ConnectApi.GroupMembershipRequest&gt;</td>
<td>Information about group membership requests.</td>
<td>28.0</td>
</tr>
<tr>
<td>total</td>
<td>Integer</td>
<td>The total number of requests.</td>
<td>28.0</td>
</tr>
</tbody>
</table>
ConnectApi.GroupRecord Class
A record associated with a group.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>Record’s 18-character ID</td>
<td>33.0</td>
</tr>
<tr>
<td>record</td>
<td>ConnectApi.ActorWithId</td>
<td>Information about the record associated with the group</td>
<td>33.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>Record URL</td>
<td>33.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.GroupRecordPage Class

ConnectApi.GroupRecordPage Class
A paginated list of ConnectApi.GroupRecord objects.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>33.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or null if there isn’t a next page.</td>
<td>33.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the previous page, or null if there isn’t a previous page.</td>
<td>33.0</td>
</tr>
<tr>
<td>records</td>
<td>List&lt;ConnectApi.GroupRecord&gt;</td>
<td>List of records on the current page.</td>
<td>33.0</td>
</tr>
<tr>
<td>totalRecordCount</td>
<td>Integer</td>
<td>Total number of records associated with the group.</td>
<td>33.0</td>
</tr>
</tbody>
</table>

ConnectApi.HashtagSegment Class
Subclass of ConnectApi.MessageSegment Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>tag</td>
<td>String</td>
<td>Text of the topic without the hash symbol (#)</td>
<td>28.0</td>
</tr>
</tbody>
</table>
| topicUrl      | String  | Chatter REST API Topics resource that searches for the topic: /
|               |         | /services/data/v47.0/chatter/topics?exactMatch=true&q=topic                 | 28.0              |
Chatter REST API Feed Items resource URL that searches for the topic in all feed items in an organization:

/services/data/v47.0/chatter/feed-items?q=topic

**ConnectApi.HideSocialPostIntent**

Hide intent for a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isHidden</td>
<td>Boolean</td>
<td>Specifies whether the managed social account hid the social post (true) or not (false).</td>
<td>45.0</td>
</tr>
<tr>
<td>managedSocialAccount</td>
<td>ConnectApi.ManagedSocialAccount</td>
<td>Managed social account that hides the social post.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

- ConnectApi.SocialPostIntents

**ConnectApi.Icon Class**

An inline image in the feed body.

Subclass of ConnectApi.MessageSegment Class

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>height</td>
<td>Integer</td>
<td>The height of the icon in pixels.</td>
<td>28.0</td>
</tr>
<tr>
<td>width</td>
<td>Integer</td>
<td>The width of the icon in pixels.</td>
<td>28.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The URL of the icon. This URL is available to unauthenticated users. This URL does not expire.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

- ConnectApi.CanvasCapability Class
- ConnectApi.EnhancedLinkCapability
- ConnectApi.SocialPostCapability

**ConnectApi.InlineImageSegment**

An inline image in the feed body.

Subclass of ConnectApi.MessageSegment Class

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>altText</td>
<td>String</td>
<td>Alt text for the inline image.</td>
<td>35.0</td>
</tr>
<tr>
<td>Property Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>------------------</td>
<td>-----------------</td>
<td>-------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>contentSize</td>
<td>Integer</td>
<td>Size of the file in bytes.</td>
<td>35.0</td>
</tr>
<tr>
<td>fileExtension</td>
<td>String</td>
<td>Extension of the file, such as gif.</td>
<td>37.0</td>
</tr>
<tr>
<td>thumbnails</td>
<td>ConnectApi.File</td>
<td>Information about the available thumbnails for the</td>
<td>35.0</td>
</tr>
<tr>
<td></td>
<td>PreviewCollection</td>
<td>image.</td>
<td></td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the latest version of the inline image.</td>
<td>35.0</td>
</tr>
</tbody>
</table>

**ConnectApi.InteractionsCapability**

If a feed element has this capability, it has information about user interactions.

Subclass of `ConnectApi.FeedElementCapability Class`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>count</td>
<td>Long</td>
<td>The number of individual views, likes, and comments on a feed post.</td>
<td>37.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

- `ConnectApi.FeedElementCapabilities Class`
- `ConnectApi.RelatedQuestion`

**ConnectApi.Invitation**

An invitation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>email</td>
<td>String</td>
<td>Email address of the user.</td>
<td>39.0</td>
</tr>
<tr>
<td>status</td>
<td>ConnectApi.</td>
<td>Specifies the status of an invitation to join a group.</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td>GroupViral</td>
<td>Values are:</td>
<td></td>
</tr>
<tr>
<td></td>
<td>InvitationsStatus</td>
<td>• ActedUponUser—The user was added to the group. An email was sent asking the user to visit the group.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Invited—An email was sent asking the user to sign up for the org.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• MaxedOutUsers—The group has the maximum allowed members.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• MultipleError—The user wasn’t invited due to multiple errors.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• NoActionNeededUser—The user is already a member of the group.</td>
<td></td>
</tr>
</tbody>
</table>
### Property Name  | Type  | Description | Available Version
---|---|---|---
**NotVisibleToExternalInviter**—The user is not accessible to the user sending the invitation.
**Unhandled**—The user couldn’t be added to the group for an unknown reason.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>userId</td>
<td>String</td>
<td>ID of the user.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

SEE ALSO: [ConnectApi.Invitations](#)

### ConnectApi.Invitations
A collection of invitations.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>invitations</td>
<td>List&lt;ConnectApi.Invitation&gt;</td>
<td>Collection of invitations.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

### ConnectApi.KnowledgeArticleVersion
A knowledge article version.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>articleType</td>
<td>String</td>
<td>Type of the knowledge article.</td>
<td>36.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the knowledge article version.</td>
<td>36.0</td>
</tr>
<tr>
<td>knowledgeArticleId</td>
<td>String</td>
<td>ID of the corresponding knowledge article.</td>
<td>36.0</td>
</tr>
<tr>
<td>lastPublishedDate</td>
<td>Datetime</td>
<td>Last published date of the knowledge article.</td>
<td>36.0</td>
</tr>
<tr>
<td>summary</td>
<td>String</td>
<td>Summary of the knowledge article contents.</td>
<td>36.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the knowledge article.</td>
<td>36.0</td>
</tr>
<tr>
<td>urlName</td>
<td>String</td>
<td>URL name of the knowledge article.</td>
<td>36.0</td>
</tr>
</tbody>
</table>

SEE ALSO: [ConnectApi.KnowledgeArticleVersionCollection](#)

### ConnectApi.KnowledgeArticleVersionCollection
A collection of knowledge article versions.
**ConnectApi.LabeledRecordField Class**

This class is abstract.

Subclass of `ConnectApi.AbstractRecordField Class`

Superclass of:
- `ConnectApi.CompoundRecordField Class`
- `ConnectApi.CurrencyRecordField Class`
- `ConnectApi.DateRecordField Class`
- `ConnectApi.PercentRecordField Class`
- `ConnectApi.PicklistRecordField Class`
- `ConnectApi.RecordField Class`
- `ConnectApi.ReferenceRecordField Class`
- `ConnectApi.ReferenceWithDateRecordField Class`

A record field containing a label and a text value.

**Important:** The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>label</td>
<td>String</td>
<td>A localized string describing the record field.</td>
<td>29.0</td>
</tr>
<tr>
<td>text</td>
<td>String</td>
<td>The text value of the record field. All record fields have a text value.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

To ensure that all clients can consume new content, inspect the record field’s `type` property. If it isn’t recognized, render the text value as the default case.

**ConnectApi.LightningExtensionInformation**

Lightning extension information.

Subclass of `ConnectApi.AbstractExtensionInformation`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>compositionComponent</td>
<td>String</td>
<td>Component to use in compose state.</td>
<td>40.0</td>
</tr>
<tr>
<td>headerTextLabel</td>
<td>String</td>
<td>Label for the extension’s header.</td>
<td>40.0</td>
</tr>
<tr>
<td>hoverTextLabel</td>
<td>String</td>
<td>Label for hovering over the extension.</td>
<td>40.0</td>
</tr>
</tbody>
</table>
### Property Name | Type | Description | Available Version
---|---|---|---
renderComponent | String | Component to use in render or preview state. | 40.0

**SEE ALSO:**
[ConnectApi.ExtensionDefinition](#)

### ConnectApi.LikeIntent
Like intent for a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
</table>
isLiked | Boolean | Specifies whether the managed social account liked the social post (true) or not (false). | 45.0|
managedSocialAccount | ConnectApi.ManagedSocialAccount | Managed social account that likes the social post. | 45.0|

**SEE ALSO:**
[ConnectApi.LikeIntents](#)

### ConnectApi.LikeIntents
List of like intents for a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
</table>
likes | List<ConnectApi.LikeIntent> | List of like intents for the social post. | 45.0|

**SEE ALSO:**
[ConnectApi.SocialPostIntents](#)

### ConnectApi.LikeSocialPostIntent
Like intent on a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
</table>
socialAccountId | String | ID of the social account that likes the social post. | 46.0|
socialPostId | String | ID of the social post to like. | 46.0|

### ConnectApi.LikeSummary
Summary of a like.
Subclass of `ConnectApi.UserFeedEntityActivitySummary`

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>likeId</td>
<td>String</td>
<td>ID of the like.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

**ConnectApi.LinkAttachment Class**

⚠️ **Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, `ConnectApi.LinkCapability` is used.

Subclass of `ConnectApi.FeedItemAttachment Class`

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>title</td>
<td>String</td>
<td>Title given to the link if available, otherwise, null</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The link URL</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

**ConnectApi.LinkCapability**

If a feed element has this capability, it has a link.

Subclass of `ConnectApi.FeedElementCapability Class`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>Link URL. The URL can be to an external site.</td>
<td>32.0</td>
</tr>
<tr>
<td>urlName</td>
<td>String</td>
<td>Description of the link.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:  
`ConnectApi.FeedElementCapabilities Class`

**ConnectApi.LinkSegment Class**

Subclass of `ConnectApi.MessageSegment Class`

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>The link URL</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**ConnectApi.LinkMetadata**

Metadata for a link.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the link.</td>
<td>42.0</td>
</tr>
<tr>
<td>frameSource</td>
<td>String</td>
<td>HTML required to display the resource.</td>
<td>42.0</td>
</tr>
<tr>
<td>Property Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>----------------</td>
<td>-----------------</td>
<td>----------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>height</td>
<td>Integer</td>
<td>Height required to display the HTML.</td>
<td>42.0</td>
</tr>
<tr>
<td>originalUrl</td>
<td>String</td>
<td>Original URL that was used to request the metadata.</td>
<td>42.0</td>
</tr>
<tr>
<td>providerUrl</td>
<td>String</td>
<td>URL of the provider that the information is retrieved from.</td>
<td>42.0</td>
</tr>
<tr>
<td>source</td>
<td>ConnectApi.</td>
<td>Source of the link metadata. Values are:</td>
<td>42.0</td>
</tr>
<tr>
<td></td>
<td>LinkMetadataSource</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• None—Link metadata wasn’t retrieved.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Salesforce is the source.</td>
<td></td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>Thumbnail of the resource.</td>
<td>42.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the link.</td>
<td>42.0</td>
</tr>
<tr>
<td>type</td>
<td>ConnectApi.</td>
<td>Type of link that the metadata represents. Values are:</td>
<td>42.0</td>
</tr>
<tr>
<td></td>
<td>LinkMetadataType</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Error—Link metadata couldn’t be retrieved.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Link—Represents a link.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• None—Link metadata wasn’t retrieved because the link isn’t a whitelisted domain.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Photo—Represents a photo.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Rich—Represents rich content, typically HTML content.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Unknown—Link metadata was retrieved, but the type is unknown.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Video—Represents a video.</td>
<td></td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL of the image to display, if one is available.</td>
<td>42.0</td>
</tr>
<tr>

</tr>
</tbody>
</table>
### ConnectApi.MarkupBeginSegment

The beginning of rich text markup.

Subclass of `ConnectApi.MessageSegment` class

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>altText</td>
<td>String</td>
<td>Alternative text for the segment, if available.</td>
<td>45.0</td>
</tr>
<tr>
<td>htmlTag</td>
<td>String</td>
<td>The HTML tag for this markup.</td>
<td>35.0</td>
</tr>
<tr>
<td>markupType</td>
<td><code>ConnectApi.MarkupType</code></td>
<td>Type of rich text markup.</td>
<td>35.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Bold—Bold tag.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Hyperlink—Hyperlink anchor tag.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Italic—Italic tag.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- ListItem—List item tag.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- OrderedList—Ordered list tag.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Paragraph—Paragraph tag.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Strikethrough—Strikethrough tag.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Underline—Underline tag.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- UnorderedList—Unordered list tag.</td>
<td></td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL for the segment, if available.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

### ConnectApi.MarkupEndSegment

The end of rich text markup.

Subclass of `ConnectApi.MessageSegment` class

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>htmlTag</td>
<td>String</td>
<td>The HTML tag for this markup.</td>
<td>35.0</td>
</tr>
<tr>
<td>markupType</td>
<td><code>ConnectApi.MarkupType</code></td>
<td>Type of rich text markup.</td>
<td>35.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Bold—Bold tag.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Hyperlink—Hyperlink anchor tag.</td>
<td></td>
</tr>
</tbody>
</table>
### Available Version

<table>
<thead>
<tr>
<th>Available Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>41.0</td>
<td>URL to stream or download the media.</td>
</tr>
<tr>
<td>41.0</td>
<td>URL of the media's thumbnail, if one exists.</td>
</tr>
</tbody>
</table>

### ConnectApi.MediaReference

A media reference.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>mediaUrl</td>
<td>String</td>
<td>URL to stream or download the media.</td>
<td>41.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>URL of the media's thumbnail, if one exists.</td>
<td>41.0</td>
</tr>
</tbody>
</table>

### ConnectApi.MediaReferenceCapability

If a feed element has this capability, it has one or more media references.

Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>media</td>
<td>List&lt;ConnectApi.MediaReference&gt;</td>
<td>Collection of media references.</td>
<td>41.0</td>
</tr>
</tbody>
</table>

### ConnectApi.MentionCompletion Class

Information about a record that could be used to @mention a user or group.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>additionalLabel</td>
<td>String</td>
<td>An additional label (if one exists) for the record represented by this completion, for example, “(Customer)” or “(Acme Corporation)”.</td>
<td>29.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>A description of the record represented by this completion.</td>
<td>29.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>The name of the record represented by this completion. The name is localized, if possible.</td>
<td>29.0</td>
</tr>
<tr>
<td>Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>-----------------</td>
<td>---------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>outOfOffice</td>
<td>ConnectApi.OutOfOffice</td>
<td>If the record represented by this completion is a user, an additional out-of-office message, if one exists, for the user.</td>
<td>40.0</td>
</tr>
<tr>
<td>photoUrl</td>
<td>String</td>
<td>A URL to the photo or icon of the record represented by this completion.</td>
<td>29.0</td>
</tr>
<tr>
<td>recordId</td>
<td>String</td>
<td>The ID of the record represented by this completion.</td>
<td>29.0</td>
</tr>
<tr>
<td>userType</td>
<td>ConnectApi.UserTypeEnum</td>
<td>If the record represented by this completion is a user, this value is the user type associated with that user; otherwise the value is null. One of these values:</td>
<td>30.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ChatterGuest—User is an external user in a private group.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ChatterOnly—User is a Chatter Free customer.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Guest—User is unauthenticated.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Internal—User is a standard organization member.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Portal—User is an external user in a customer portal, partner portal, or community.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• System—User is Chatter Expert or a system user.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Undefined—User is a user type that is a custom object.</td>
<td></td>
</tr>
</tbody>
</table>

ConnectApi.MentionCompletionPage Class

ConnectApi.MentionCompletionPage Class
A paginated list of Mention Completion response bodies.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>29.0</td>
</tr>
<tr>
<td>mentionCompletions</td>
<td>List&lt;ConnectApi. MentionCompletion&gt;</td>
<td>A list of mention completion proposals. Use these proposals to build a feed post body.</td>
<td>29.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or null if there isn't a next page.</td>
<td>29.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the previous page, or null if there isn't a previous page.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

ConnectApi.MentionSegment Class
Subclass of ConnectApi.MessageSegment Class
### ConnectApi.MentionValidation Class

Information about whether a proposed mention is valid for the context user.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recordId</td>
<td>String</td>
<td>The ID of the mentioned record.</td>
<td>29.0</td>
</tr>
<tr>
<td>validationStatus</td>
<td>ConnectApi.MentionValidationStatus Enum</td>
<td>Type of validation error for a proposed mention, if any.</td>
<td>29.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Disallowed—The proposed mention is invalid and is rejected because</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>the context user is trying to mention something that is not allowed. For</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>example, a user who is not a member of a private group is trying to</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>mention the private group.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Inaccessible—The proposed mention is allowed but the user or record</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>being mentioned isn’t notified because they don’t have access to the</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>parent record being discussed.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Ok—There is no validation error for this proposed mention.</td>
<td></td>
</tr>
</tbody>
</table>

**Important:** In versions 29.0 and later, use the `record` property.

In versions before 29.0, if the mention is not a user, the mention is in a `ConnectApi.TextSegment` object.
<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>hasErrors</td>
<td>Boolean</td>
<td>Indicates whether at least one of the proposed mentions has an error (true), or not (false). For example, context users can't mention private groups they don't belong to. If such a group is included in the list of mention validations, hasErrors is true and the group has a validationStatus of Disallowed in its mention validation.</td>
<td>29.0</td>
</tr>
<tr>
<td>mentionValidations</td>
<td>List&lt;ConnectApi.MentionValidation&gt;</td>
<td>A list of mention validation information in the same order as the provided record IDs.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

**ConnectApi.MessageBody Class**

Subclass of **ConnectApi.AbstractMessageBody Class**

No additional properties.

SEE ALSO:

- ConnectApi.MarkupBeginSegment
- ConnectApi.MarkupEndSegment
- ConnectApi.MentionSegment Class
- ConnectApi.MoreChangesSegment Class
- ConnectApi.ResourceLinkSegment Class
- ConnectApi.TextSegment Class

1879
Message segments in a feed item are typed as `ConnectApi.MessageSegment`. Feed item capabilities are typed as `ConnectApi.FeedItemCapability`. Record fields are typed as `ConnectApi.AbstractRecordField`. These classes are all abstract and have several concrete subclasses. At runtime you can use `instanceof` to check the concrete types of these objects and then safely proceed with the corresponding downcast. When you downcast, you must have a default case that handles unknown subclasses.

**Important:** The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>text</td>
<td>String</td>
<td>Text-only rendition of this segment. If a client encounters an unknown message segment type, it can render this value.</td>
<td>28.0</td>
</tr>
<tr>
<td>type</td>
<td><code>ConnectApi.MessageSegment.Type</code> Enum</td>
<td>The message segment type. One of these values: - <code>EntityLink</code> - <code>FieldChange</code> - <code>FieldChangeName</code> - <code>FieldChangeValue</code> - <code>Hashtag</code> - <code>InlineImage</code> - <code>Link</code> - <code>MarkupBegin</code> - <code>MarkupEnd</code> - <code>Mention</code> - <code>MoreChanges</code> - <code>ResourceLink</code> - <code>Text</code></td>
<td>28.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- `ConnectApi.AbstractMessageBody Class`

**`ConnectApi.ModerationCapability Class`**

If a feed element has this capability, users in a community can flag it for moderation.

Subclass of `ConnectApi.FeedElementCapability Class`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>moderationFlags</td>
<td><code>ConnectApi.ModerationFlags</code></td>
<td>The moderation flags for this feed element. Community moderators can view and take action on flagged items.</td>
<td>31.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- `ConnectApi.FeedElementCapabilities Class`
ConnectApi.ModerationFlagItemDetail
Flag details on a feed item, comment, or file.

<table>

- ConnectApi.ModerationFlags

### ConnectApi.MoreChangesSegment Class

Subclass of ConnectApi.MessageSegment Class

In feed items with a large number of tracked changes, the message is formatted as: “changed A, B, and made X more changes.” The MoreChangesSegment contains the “X more changes.”
ConnectApi.Motif Class

The motif properties contain URLs for small, medium, and large icons that indicate the Salesforce record type. Common record types are files, users, and groups, but all record types have a set of motif icons. Custom object records use their tab style icon. All icons are available to unauthenticated users so that, for example, you can display the motif icons in an email. The motif can also contain the record type's base color.

**Note:** The motif images are icons, not user uploaded images or photos. For example, every user has the same set of motif icons.

Custom object records use their tab style icon, for example, the following custom object uses the “boat” tab style:

```
"motif": {
  "color": "8C004C",
  "largeIconUrl": "/img/icon/custom51_100/boat64.png",
  "mediumIconUrl": "/img/icon/custom51_100/boat32.png",
  "smallIconUrl": "/img/icon/custom51_100/boat16.png",
  "svgIconUrl": null
},
```

Users use the following icons:

```
"motif": {
  "color": "1797C0",
  "largeIconUrl": "/img/icon/profile64.png",
  "mediumIconUrl": "/img/icon/profile32.png",
  "smallIconUrl": "/img/icon/profile16.png",
  "svgIconUrl": null
},
```

Groups use the following icons:

```
"motif": {
  "color": "1797C0",
  "largeIconUrl": "/img/icon/groups64.png",
  "mediumIconUrl": "/img/icon/groups32.png",
  "smallIconUrl": "/img/icon/groups16.png",
  "svgIconUrl": null
},
```

Files use the following icons:

```
"motif": {
  "color": "1797C0",
  "largeIconUrl": "/img/content/content64.png",
  "mediumIconUrl": "/img/content/content32.png",
  "smallIconUrl": "/img/icon/files16.png",
  "svgIconUrl": null
},
```
"svgIconUrl": null
},

**Note:** To view the icons in the previous examples, preface the URL with https://instance_name. For example, https://instance_name/img/icon/profile64.png.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>color</td>
<td>String</td>
<td>A hex value representing the base color of the record type, or null.</td>
<td>29.0</td>

</tbody>
</table>

**ConnectApi.MuteCapability**

If a feed element has this capability, users can mute it. Muted feed elements are visible in the muted feed, and invisible in all other feeds that respect mute.

Subclass of `ConnectApi.FeedElementCapability` Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isMutedByMe</td>
<td>Boolean</td>
<td>Indicates whether the context user muted the feed element.</td>
<td>35.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.FeedElementCapabilities` Class

**ConnectApi.MuteSummary**

Summary of a mute.

Subclass of `ConnectApi.UserFeedEntityActivitySummary`

No additional properties.

**ConnectApi.NBAActionParameter**

A parameter for an action.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the parameter.</td>
<td>45.0</td>
</tr>
<tr>
<td>type</td>
<td>String</td>
<td>Type of the parameter.</td>
<td>45.0</td>
</tr>
</tbody>
</table>
### ConnectApi.NBAFlowAction

A recommended flow.

Subclass of `ConnectApi.AbstractNBAAction`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>flowLabel</td>
<td>String</td>
<td>Label of the recommended flow.</td>
<td>47.0</td>
</tr>
</tbody>
</table>
| flowType      | `ConnectApi.NBAFlowType` | Type of recommended flow. Values are:  
  - `AutoLaunchedFlow`—Autolaunched flow that runs in the background.  
  - `Flow`—Screen flow that accepts user inputs. | 47.0              |
| id            | String            | ID of the flow.                                                             | 45.0              |
| name          | String            | Name of the flow.                                                           | 45.0              |

### ConnectApi.NBANativeRecommendation

A record the user is recommended to take action on.

Subclass of `ConnectApi.AbstractNBAAction`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the recommendation.</td>
<td>45.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the recommendation.</td>
<td>45.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the recommendation.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

### ConnectApi.NBARecommendation

A recommendation returned by a recommendation strategy.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>aiModel</td>
<td>String</td>
<td>Reserved for future use.</td>
<td>47.0</td>
</tr>
<tr>
<td>acceptanceLabel</td>
<td>String</td>
<td>Text indicating user acceptance of the recommendation.</td>
<td>45.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the recommendation.</td>
<td>45.0</td>
</tr>
<tr>
<td>externalId</td>
<td>String</td>
<td>External ID of the recommendation. This ID doesn’t need to be a Salesforce 18-character ID. For example, it can be a product number from an external system.</td>
<td>46.0</td>
</tr>
</tbody>
</table>
### ConnectApi.NBARecommendations

Recommendations returned by a recommendation strategy.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>debug</td>
<td>String</td>
<td>Runtime debug information recorded during recommendation strategy execution.</td>
<td>45.0</td>
</tr>
<tr>
<td>errors</td>
<td>String</td>
<td>Runtime errors that occurred during recommendation strategy execution.</td>
<td>45.0</td>
</tr>
<tr>
<td>executionId</td>
<td>String</td>
<td>ID of the recommendation strategy execution.</td>
<td>45.0</td>
</tr>
<tr>
<td>onBehalfOfId</td>
<td>String</td>
<td>ID of the user or entity for which the recommendation strategy was executed.</td>
<td>45.0</td>
</tr>
<tr>
<td>recommendations</td>
<td>List&lt;ConnectApi.NBARecommendation&gt;</td>
<td>List of recommendations returned by a recommendation strategy.</td>
<td>45.0</td>
</tr>
<tr>
<td>trace</td>
<td>ConnectApi.StrategyTrace</td>
<td>Trace information for the recommendation strategy execution, if requested.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

### ConnectApi.NewUserAudienceCriteria

Criteria for the new members type of custom recommendation audience.

Subclass of ConnectApi.AudienceCriteria.
ConnectApi.NonEntityRecommendation

A recommendation for a non-Salesforce entity, such as an application.
ConnectApi.NonEntityRecommendation isn’t used in version 34.0 and later. In version 34.0 and later, ConnectApi.EntityRecommendation is used for all recommendations.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>displayLabel</td>
<td>String</td>
<td>Localized label of the non-entity object.</td>
<td>32.0</td>
</tr>
<tr>
<td>motif</td>
<td>ConnectApi.Motif</td>
<td>Motif for the non-entity object.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

ConnectApi.OauthProviderInfo

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>authorizationUrl</td>
<td>String</td>
<td>The URL used for authorization.</td>
<td>37.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>The name of the OAuth service provider.</td>
<td>37.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.UserOauthInfo

ConnectApi.OrganizationSettings Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>accessTimeout</td>
<td>Integer</td>
<td>Amount of time after which the system prompts users who have been inactive to log out or continue working</td>
<td>28.0</td>
</tr>
<tr>
<td>features</td>
<td>ConnectApi.Features</td>
<td>Information about features available in the organization</td>
<td>28.0</td>
</tr>
<tr>
<td>maintenanceInfo</td>
<td>List&lt;ConnectApi.MaintenanceInfo&gt;</td>
<td>Information about a list of upcoming scheduled maintenances for the organization.</td>
<td>34.0</td>

### ConnectApi.Photo Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fullEmailPhotoUrl</td>
<td>String</td>
<td>A temporary URL to the large profile picture. The URL expires after 30 days and is available to unauthenticated users.</td>
<td>28.0</td>
</tr>
<tr>
<td>largePhotoUrl</td>
<td>String</td>
<td>URL to the large profile picture. The default width is 200 pixels, and the height is scaled so the original image proportions are maintained. If a user hasn’t uploaded a photo, this URL points to a default photo. If the user hasn’t uploaded a photo and the request header included X-Connect-Theme: Salesforce, this URL points to a default photo based on a theme that the admin selected for the org.</td>
<td>28.0</td>
</tr>
<tr>
<td>mediumPhotoUrl</td>
<td>String</td>
<td>URL to the medium profile picture. The default width is 160 pixels, and the height is scaled so the original image proportions are maintained. If a user hasn’t uploaded a photo, this URL points to a default photo. If the user hasn’t uploaded a photo and the request header included X-Connect-Theme: Salesforce, this URL points to a</td>
<td>37.0</td>
</tr>
</tbody>
</table>
### ConnectApi.Namespace

**ConnectApi.ChatterGroup Class**

Subclass of **ConnectApi.LabeledRecordField Class**

A record field containing an enumerated value.

### ConnectApi.PinCapability

If a feed element has this capability, users who have permission can pin it to a feed.

Subclass of **ConnectApi.FeedElementCapabilities Class**

<table>
<thead>
<tr>
<th><strong>Property Name</strong></th>
<th><strong>Type</strong></th>
<th><strong>Description</strong></th>
<th><strong>Available Version</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>isPinnableByMe</td>
<td>Boolean</td>
<td>Specifies whether the context user can pin or unpin the entity to the feed ((true)) or not ((false)).</td>
<td>41.0</td>
</tr>
<tr>
<td>isPinned</td>
<td>Boolean</td>
<td>Specifies whether the entity is pinned ((true)) or not ((false)) to the feed.</td>
<td>41.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

ConnectApi.FeedElementCapabilities Class
**ConnectApi.PinnedFeedElements**

List of pinned feed elements for a feed.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>elements</td>
<td>List&lt;ConnectApi.FeedElement&gt;</td>
<td>List of pinned feed elements.</td>
<td>41.0</td>
</tr>
</tbody>
</table>

**ConnectApi.PlatformAction Class**

A platform action instance with state information for the context user.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionUrl</td>
<td>String</td>
<td>For action links of subtype Ui or Download, direct the user to download or visit the UI from this link. Salesforce issues a Javascript redirect for the link in this format: <code>/action-link-redirect/communityId/actionLinkId?_bearer=BearerToken</code>. For Api action links and for all platform actions, this value is null and Salesforce handles the call.</td>
<td>33.0</td>
</tr>
<tr>
<td>apiName</td>
<td>String</td>
<td>The API name. The value may be null.</td>
<td>33.0</td>
</tr>
<tr>
<td>confirmationMessage</td>
<td>String</td>
<td>If this action requires a confirmation and has a status of NewStatus, this is a default localized message that should be shown to an end user prior to invoking the action. Otherwise, this is null.</td>
<td>33.0</td>
</tr>
<tr>
<td>executingUser</td>
<td>ConnectApi.User Summary Class</td>
<td>The user who initiated execution of this platform action.</td>
<td>33.0</td>
</tr>
<tr>
<td>groupDefault</td>
<td>Boolean</td>
<td>true if this platform action is the default or primary platform action in the platform action group; false otherwise. There can be only one default platform action per platform action group.</td>
<td>33.0</td>
</tr>
<tr>
<td>iconUrl</td>
<td>String</td>
<td>The URL of the icon for the platform action. This value may be null.</td>
<td>33.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>The ID for the platform action.</td>
<td>33.0</td>
</tr>
<tr>
<td>label</td>
<td>String</td>
<td>The localized label for this platform action.</td>
<td>33.0</td>
</tr>
<tr>
<td>modifiedDate</td>
<td>Datetime</td>
<td>An ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z.</td>
<td>33.0</td>
</tr>
<tr>
<td>Property Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>------------------</td>
<td>-----------------------------------</td>
<td>------------------------------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>platformActionGroup</td>
<td><code>ConnectApi. Reference Class</code></td>
<td>A reference to the platform action group containing this platform action.</td>
<td>33.0</td>
</tr>
<tr>
<td>status</td>
<td><code>ConnectApi. PlatformAction Status</code></td>
<td>The execution status of the platform action. Values are:</td>
<td>33.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• FailedStatus—The action link execution failed.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• NewStatus—The action link is ready to be executed. Available for Download and Ui action links only.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• PendingStatus—The action link is executing. Choosing this value triggers the API call for Api and ApiAsync action links.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• SuccessfulStatus—The action link executed successfully.</td>
<td></td>
</tr>
<tr>
<td>subtype</td>
<td><code>String</code></td>
<td>The subtype of a platform action or <code>null</code>. If the <code>type</code> property is <code>ActionLink</code>, possible values are:</td>
<td>33.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Api—The action link calls a synchronous API at the action URL. Salesforce sets the status to SuccessfulStatus or FailedStatus based on the HTTP status code returned by your server.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ApiAsync—The action link calls an asynchronous API at the action URL. The action remains in a PendingStatus state until a third party makes a request to <code>/connect/action-links/actionLinkId</code> to set the status to SuccessfulStatus or FailedStatus when the asynchronous operation is complete.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Download—The action link downloads a file from the action URL.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Ui—The action link takes the user to a web page at the action URL.</td>
<td></td>
</tr>
</tbody>
</table>

**Note:** Invoking ApiAsync action links from an app requires a call to set the status. However, there isn’t currently a way to set the status of an action link using Apex. To set the status, use Chatter REST API. See the Action Link resource in the *Chatter REST API Developer Guide* for more information.
**Available Version**

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>type</td>
<td>ConnectApi. PlatformActionType</td>
<td>The type of platform action. Values are:</td>
<td>33.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ActionLink—An indicator on a feed element that targets an API, a web page, or a file, represented by a button in the Salesforce UI.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• CustomButton—When clicked, opens a URL or a Visualforce page in a window or executes JavaScript.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ProductivityAction—Productivity actions are predefined and attached to a limited set of objects. Productivity actions include Send Email, Call, Map, View Website, and Read News. Except for the Call action, you can’t edit or delete productivity actions.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• QuickAction—A global or object-specific action.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• StandardButton—A predefined Salesforce button such as New, Edit, or Delete.</td>
<td></td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The URL for this platform action.</td>
<td>33.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>If the type is QuickAction and the subtype is Create, this value is null.</td>
<td></td>
</tr>
</tbody>
</table>

SEE ALSO:

ConnectApi.PlatformActionGroup Class

**ConnectApi.PlatformActionGroup Class**

A platform action group instance with state appropriate for the context user.

Action link groups are one type of platform action group and are therefore represented as ConnectApi.PlatformActionGroup output classes.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>category</td>
<td>ConnectApi. PlatformActionGroupCategory</td>
<td>Indicates the priority and relative locations of platform actions. Values are:</td>
<td>33.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Primary—The action link group is displayed in the body of the feed element.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Overflow—The action link group is displayed in the overflow menu of the feed element.</td>
<td></td>
</tr>
</tbody>
</table>
### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>The 18-character ID or an opaque string ID of the platform action group. If the <code>ConnectApi.PlatformAction</code> type is <code>QuickAction</code> and the subtype is <code>Create</code>, this value is <code>null</code>.</td>
<td>33.0</td>
</tr>
<tr>
<td>modifiedDate</td>
<td>Datetime</td>
<td>ISO 8601 date string, for example, <code>2014-02-25T18:24:31.000Z</code>.</td>
<td>33.0</td>
</tr>
<tr>
<td>platformActions</td>
<td>List&lt;ConnectApi.PlatformAction&gt;</td>
<td>The platform action instances for this group. Within an action link group, action links are displayed in the order listed in the <code>actionLinks</code> property of the <code>ConnectApi.ActionLinkGroup DefinitionInput</code> class. Within a feed item, action link groups are displayed in the order specified in the <code>actionLinkGroupIds</code> property of the <code>ConnectApi.AssociatedActions CapabilityInput</code> class.</td>
<td>33.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The URL for this platform action group. If the <code>ConnectApi.PlatformAction</code> type is <code>QuickAction</code> and the subtype is <code>Create</code>, this value is <code>null</code>.</td>
<td>33.0</td>
</tr>
</tbody>
</table>

### `ConnectApi.PollCapability Class`

If a feed element has this capability, it includes a poll. Subclass of `ConnectApi.FeedElementCapability Class`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>choices</td>
<td>List&lt;ConnectApi.FeedPollChoice&gt;</td>
<td>Collection of poll choices that make up the poll.</td>
<td>32.0</td>
</tr>
<tr>
<td>myChoiceId</td>
<td>String</td>
<td>18-character ID of the poll choice that the context user has voted for in this poll. Returns <code>null</code> if the context user has not voted.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

1894
### ConnectApi.Namespace

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>totalVoteCount</td>
<td>Integer</td>
<td>Total number of votes cast on the feed poll element.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.FeedElementCapabilities Class

#### ConnectApi.QuestionAndAnswersCapability Class

If a feed element has this capability, it has a question and comments on the feed element are answers to the question.

Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>bestAnswer</td>
<td>ConnectApi.Comment</td>
<td>Comment selected as the best answer for the question.</td>
<td>32.0</td>
</tr>
<tr>
<td>bestAnswer SelectedBy</td>
<td>ConnectApi.UserSummary</td>
<td>User who selected the best answer for the question.</td>
<td>32.0</td>
</tr>
<tr>
<td>canCurrentUser SelectOrRemove BestAnswer</td>
<td>Boolean</td>
<td>Indicates whether the context user can select or remove a best answer (true) or not (false).</td>
<td>32.0</td>
</tr>
<tr>
<td>candidateAnswers</td>
<td>ConnectApi.CandidateAnswers Status</td>
<td>Status of candidate answers for the question.</td>
<td>41.0</td>
</tr>
<tr>
<td>escalatedCase</td>
<td>ConnectApi.Reference</td>
<td>If a question post is escalated, this is the case to which it was escalated.</td>
<td>33.0</td>
</tr>
<tr>
<td>questionTitle</td>
<td>String</td>
<td>Title for the question.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

`ConnectApi.FeedElementCapabilities Class`

**ConnectApi.ReadByPage**

A collection of information about who read the feed element and when.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>40.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page. The default is 25 items per page.</td>
<td>40.0</td>
</tr>
<tr>
<td>items</td>
<td>List&lt;ConnectApi.ReadBy&gt;</td>
<td>Collection of read-by information, including users and when they last read the feed element.</td>
<td>40.0</td>
</tr>
<tr>
<td>nextPageToken</td>
<td>String</td>
<td>Token identifying the next page, or null if there isn't a next page.</td>
<td>40.0</td>
</tr>
</tbody>
</table>
**Property Name** | **Type** | **Description** | **Available Version**
--- | --- | --- | ---
`nextPageUrl` | String | Chatter REST API URL identifying the next page, or `null` if there isn't a next page. | 40.0
`previousPageToken` | String | Reserved for future use. | 40.0
`previousPageUrl` | String | Reserved for future use. | 40.0
`total` | Integer | Total number of users who read the feed element. | 40.0

SEE ALSO: [ConnectApi.ReadByCapability](#)

**ConnectApi.Recommendation**

A Next Best Action recommendation object.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>acceptanceLabel</td>
<td>String</td>
<td>Text indicating user acceptance of the recommendation.</td>
<td>45.0</td>
</tr>
<tr>
<td>actionReference</td>
<td>String</td>
<td>Reference to the action to perform, for example, launching a flow.</td>
<td>45.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the recommendation.</td>
<td>45.0</td>
</tr>
<tr>
<td>externalId</td>
<td>String</td>
<td>External ID of the recommendation. This ID doesn't need to be a Salesforce 18-character ID. For example, it can be a product number from an external system.</td>
<td>46.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the recommendation.</td>
<td>45.0</td>
</tr>
<tr>
<td>image</td>
<td><code>ConnectApi.FileAsset</code></td>
<td>Image to display.</td>
<td>45.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the recommendation.</td>
<td>45.0</td>
</tr>
<tr>
<td>rejectionLabel</td>
<td>String</td>
<td>Text indicating user rejection of the recommendation.</td>
<td>45.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the recommendation.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

**ConnectApi.RecommendationAudience**

A custom recommendation audience.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>criteria</td>
<td><code>ConnectApi.AudienceCriteria</code></td>
<td>The criteria for the custom recommendation audience type.</td>
<td>36.0</td>
</tr>
</tbody>
</table>
## Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>18-character ID of the custom recommendation audience.</td>
<td>35.0</td>
</tr>
<tr>
<td>memberCount</td>
<td>Integer</td>
<td>Important: This property is available only in version 35.0. In version 36.0 and later, this property is available in ConnectApi.CustomListAudienceCriteria. Number of members in the custom recommendation audience.</td>
<td>35.0 only</td>
</tr>
<tr>
<td>members</td>
<td>ConnectApi.UserReferencePage</td>
<td>Important: This property is available only in version 35.0. In version 36.0 and later, this property is available in ConnectApi.CustomListAudienceCriteria. Members of the custom recommendation audience.</td>
<td>35.0 only</td>
</tr>
<tr>
<td>modifiedBy</td>
<td>ConnectApi.User</td>
<td>User who last modified the custom recommendation audience.</td>
<td>36.0</td>
</tr>
<tr>
<td>modifiedDate</td>
<td>Datetime</td>
<td>An ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z.</td>
<td>36.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the custom recommendation audience.</td>
<td>35.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL for the custom recommendation audience.</td>
<td>35.0</td>
</tr>
</tbody>
</table>

### ConnectApi.RecommendationAudiencePage

A list of custom recommendation audiences.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>audienceCount</td>
<td>Integer</td>
<td>The total number of custom recommendation audiences.</td>
<td>35.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>URL to the current page.</td>
<td>35.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>URL to the next page.</td>
<td>35.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>URL to the previous page.</td>
<td>35.0</td>
</tr>
<tr>
<td>recommendationAudiences</td>
<td>List&lt;ConnectApi.RecommendationAudience&gt;</td>
<td>A list of custom recommendation audiences.</td>
<td>35.0</td>
</tr>
</tbody>
</table>
### ConnectApi.RecommendationCollection

A list of Chatter, custom, and static recommendations.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recommendations</td>
<td>List&lt;ConnectApi.AbstractRecommendation&gt;</td>
<td>Collection of Chatter, custom, and static recommendations.</td>
<td>33.0</td>
</tr>
</tbody>
</table>

### ConnectApi.RecommendationDefinition

Represents a custom recommendation definition.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionUrl</td>
<td>String</td>
<td>The URL for acting on this custom recommendation.</td>
<td>35.0</td>
</tr>
<tr>
<td>actionUrlName</td>
<td>String</td>
<td>The text label for the action URL in the user interface.</td>
<td>35.0</td>
</tr>
<tr>
<td>explanation</td>
<td>String</td>
<td>Explanation of the custom recommendation definition.</td>
<td>35.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>18-character ID of the custom recommendation definition.</td>
<td>35.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the custom recommendation definition.</td>
<td>35.0</td>
</tr>
<tr>
<td>photo</td>
<td>ConnectApi.Photo</td>
<td>Photo of the custom recommendation definition.</td>
<td>35.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the custom recommendation definition.</td>
<td>35.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the Chatter REST API resource for the custom recommendation definition.</td>
<td>35.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.RecommendationDefinitionPage
- ConnectApi.ScheduledRecommendation

### ConnectApi.RecommendationDefinitionPage

A list of custom recommendation definitions.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recommendation Definitions</td>
<td>List&lt;ConnectApi.Recommendation Definition&gt;</td>

<td>35.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the Chatter REST API resource for the recommendation definition collection.</td>
<td>35.0</td>
</tr>
</tbody>
</table>
**ConnectApi.RecommendationExplanation**

Explanation for a Chatter recommendation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>detailsUrl</td>
<td>String</td>
<td>URL to explanation details or <code>null</code> if the Chatter recommendation doesn't have a detailed explanation.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

`ConnectApi.AbstractRecommendation`

**ConnectApi.RecommendationReaction**

A reaction to a recommendation produced by a recommendation strategy

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>aiModel</td>
<td>String</td>
<td>Reserved for future use.</td>
<td>47.0</td>
</tr>
<tr>
<td>contextRecord</td>
<td>ConnectApi.Reference</td>
<td>Reference to the context record.</td>
<td>45.0</td>
</tr>
<tr>
<td>createdBy</td>
<td>ConnectApi.Reference</td>
<td>Reference to the reaction creator.</td>
<td>45.0</td>
</tr>
<tr>
<td>createdDate</td>
<td>Datetime</td>
<td>Reaction creation date.</td>
<td>45.0</td>
</tr>
<tr>
<td>externalId</td>
<td>String</td>
<td>External target ID of the recommendation reacted on. This ID doesn't need to be a Salesforce 18-character ID. For example, it can be a product number from an external system.</td>
<td>46.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>Reaction record ID.</td>
<td>45.0</td>
</tr>
<tr>
<td>onBehalfOf</td>
<td>ConnectApi.Reference</td>
<td>Reference to the user or record that is indirectly reacting to the recommendation.</td>
<td>45.0</td>
</tr>
</tbody>
</table>
| reactionType    | ConnectApi.RecommendationReaction.Type | Type of reaction to a recommendation. Values are:  
- Accepted  
- Rejected | 45.0              |
| recommendationMode | String | Reserved for future use.                                                   | 46.0              |
| recommendationScore | Double | Reserved for future use.                                                   | 46.0              |
| strategy        | ConnectApi.RecordSnapshot | Strategy that recommended the target record.                            | 45.0              |
| targetAction    | ConnectApi.RecordSnapshot | Target action that is recommended.                                       | 45.0              |
### ConnectApi.RecommendationReactions

A list of recommendation reactions.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>URL to the current page of reactions in the collection.</td>
<td>45.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>URL to the next page of reactions in the collection.</td>
<td>45.0</td>
</tr>
<tr>
<td>reactions</td>
<td>List&lt;ConnectApi.RecommendationReaction&gt;</td>
<td>Collection of recommendation reactions.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

### ConnectApi.RecommendationsCapability

If a feed element has this capability, it has a recommendation.

Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>items</td>
<td>List&lt;ConnectApi.AbstractRecommendation&gt;</td>
<td>A list of recommendations.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

### ConnectApi.RecommendedObject

A recommended object, such as a custom or static recommendation.

Subclass of ConnectApi.Actor Class

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>idOrEnum</td>
<td>String</td>
<td>ID of a recommendation definition for a custom recommendation or the enum value Today for</td>
<td>34.0</td>
</tr>
</tbody>
</table>
### ConnectApi.RecordCapability

If a comment has this capability, it has a record attachment.

Subclass of `ConnectApi.FeedElementCapability Class`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recordId</td>
<td>String</td>
<td>ID of the record.</td>
<td>42.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the record.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

### ConnectApi.RecordField Class

Subclass of `ConnectApi.LabeledRecordField Class`

A generic record field containing a label and text value.

SEE ALSO:
- `ConnectApi.CompoundRecordField Class`

### ConnectApi.RecordSnapshot

A record snapshot in a recommendation reaction.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the record.</td>
<td>45.0</td>
</tr>
<tr>
<td>nameAtSnapshot</td>
<td>String</td>
<td>Name of the record when the ID was recorded.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.RecommendationReaction`

### ConnectApi.RecordSnapshotAttachment Class

⚠ **Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, `ConnectApi.RecordSnapshotCapability` is used.

Subclass of `ConnectApi.FeedItemAttachment Class`

The fields of a record at the point in time when the record was created.
ConnectApi.RecordSnapshotCapability

If a feed element has this capability, it contains all the snapshotted fields of a record for a single create record event.

Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recordView</td>
<td>ConnectApi. RecordView</td>
<td>A record representation that includes metadata and data so you can display the record easily.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:  
ConnectApi.FeedElementCapabilities Class

ConnectApi.RecordSummary Class

Subclass of ConnectApi.AbstractRecordView Class

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>entityLabel</td>
<td>ConnectApi. EntityLabel</td>
<td>Label of the record's entity.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

SEE ALSO:  
ConnectApi.EmailAddress
ConnectApi.EmailAttachment
ConnectApi.ReferenceRecordField Class
ConnectApi.ReferenceWithDateRecordField Class

ConnectApi.RecordSummaryList Class

Summary information about a list of records in the organization including custom objects.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>records</td>
<td>List&lt;ConnectApi.ActorWithId&gt;</td>
<td>A list of records.</td>
<td>30.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The URL to this list of records.</td>
<td>30.0</td>
</tr>
</tbody>
</table>
**ConnectApi.RecordView Class**

Subclass of **ConnectApi.AbstractRecordView Class**

A view of any record in the organization, including a custom object record. This object is used if a specialized object, such as User or ChatterGroup, is not available for the record type. Contains data and metadata so you can render a record with one response.

Name | Type | Description | Available Version
--- | --- | --- | ---
sections | List<ConnectApi.RecordViewSection> | A list of record view sections. | 29.0

SEE ALSO:
- ConnectApi.RecordSnapshotCapability

**ConnectApi.RecordViewSection Class**

A section of record fields and values on a record detail.

Name | Type | Description | Available Version
--- | --- | --- | ---
columnCount | Integer | The number of columns to use to lay out the fields in a record section. | 29.0
columnOrder | ConnectApi.RecordColumnOrder Enum | The order of the fields to use in the fields property to lay out the fields in a record section.  
- LeftRight—Fields are rendered from left to right.  
- TopDown—Fields are rendered from the top down. | 29.0
fields | ConnectApi.AbstractRecordField | The fields and values for the record contained in this section. | 29.0
heading | String | A localized label to display when rendering this section of fields. | 29.0
isCollapsible | Boolean | Indicates whether the section can be collapsed to hide all the fields (true) or not (false). | 29.0

SEE ALSO:
- ConnectApi.RecordView Class
ConnectApi.Reference Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>The ID of the record being referenced, which could be an 18-character ID or some other string identifier.</td>
<td>28.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The URL to the resource endpoint.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

ConnectApi.ReferenceRecordField Class

Subclass of ConnectApi.LabeledRecordField Class

A record field with a label and text value.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>reference</td>
<td>ConnectApi.RecordSummary</td>
<td>The object referenced by the record field.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

ConnectApi.ReferenceWithDateRecordField Class

Subclass of ConnectApi.LabeledRecordField Class

A record field containing a referenced object that acted at a specific time, for example, “Created By...”.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>dateValue</td>
<td>Datetime</td>
<td>A time at which the referenced object acted.</td>
<td>29.0</td>
</tr>
<tr>
<td>reference</td>
<td>ConnectApi.RecordSummary</td>
<td>The object referenced by the record field.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

ConnectApi.RelatedFeedPost

This class is abstract.

Subclass of: ConnectApi.ActorWithId Class

Superclass of: ConnectApi.RelatedQuestion

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>score</td>
<td>Double</td>
<td>Score of the related feed post that indicates how closely related it is to the context feed post.</td>
<td>37.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the related feed post.</td>
<td>37.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

ConnectApi.RelatedFeedPosts
**ConnectApi.RelatedFeedPosts**

A collection of related feed posts.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>relatedFeedPosts</td>
<td>List&lt;ConnectApi.RelatedFeedPost&gt;</td>
<td>Collection of related feed posts.</td>
<td>37.0</td>
</tr>
</tbody>
</table>

**ConnectApi.RelatedQuestion**

A related question.

Subclass of: ConnectApi.RelatedFeedPost

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>hasBestAnswer</td>
<td>Boolean</td>
<td>Indicates whether the question has a best answer.</td>
<td>37.0</td>
</tr>
<tr>
<td>interactions</td>
<td>ConnectApi.InteractionsCapability</td>
<td>The number of individual views, likes, and comments on a question.</td>
<td>38.0</td>
</tr>
</tbody>
</table>

**ConnectApi.ReplyIntent**

Reply intent for a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>managedSocialAccount</td>
<td>ConnectApi.ManagedSocialAccount</td>
<td>Managed social account that replies to the social post.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- [ConnectApi.ReplyIntents](#)

**ConnectApi.ReplyIntents**

List of reply intents for a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>replies</td>
<td>List&lt;ConnectApi.ReplyIntent&gt;</td>
<td>List of reply intents for the social post.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- [ConnectApi.SocialPostIntents](#)
ConnectApi.RepositoryFileDetail
A detailed description of a repository file.
Subclass of ConnectApi.AbstractRepositoryFile
No additional properties.

ConnectApi.RepositoryFileSummary
A summary of a repository file.
Subclass of ConnectApi.AbstractRepositoryFile
No additional properties.

SEE ALSO:
ConnectApi.RepositoryFolderItem

ConnectApi.RepositoryFolderDetail
A detailed description of a repository folder.
Subclass of ConnectApi.AbstractRepositoryFolder
No additional properties.

ConnectApi.RepositoryFolderItem
A folder item.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>file</td>
<td>ConnectApi.RepositoryFileSummary</td>
<td>If the folder item is a file, the file summary. If the folder item is a folder, null.</td>
<td>39.0</td>

<tr>
<td>folder</td>
<td>ConnectApi.RepositoryFolderSummary</td>
<td>If the folder item is a folder, the folder summary. If the folder item is a file, null.</td>
<td>39.0</td>
</tr>
<tr>
<td>type</td>
<td>ConnectApi.FolderItemType</td>
<td>Type of item in a folder. Values are:</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td>• file</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• folder</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.RepositoryFolderItemsCollection

ConnectApi.RepositoryFolderItemsCollection
A collection of repository folder items.
### ConnectApi.Namespace

**ConnectApi.RepositoryFolderSummary**

A summary of a repository folder.

Subclass of `ConnectApi.AbstractRepositoryFolder`

No additional properties.

**SEE ALSO:**

- `ConnectApi.RepositoryFolderItem`

### ConnectApi.RepositoryGroupSummary

A group summary.

Subclass of `ConnectApi.AbstractDirectoryEntrySummary`

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>groupType</strong></td>
<td><code>ConnectApi.ContentHub.GroupType</code></td>
<td>Type of group. Values are:</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Everybody—Group is public to everybody.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• EverybodyInDomain—Group is public to everybody in the same domain.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Unknown—Group type is unknown.</td>
<td></td>
</tr>
<tr>
<td><strong>name</strong></td>
<td><code>String</code></td>
<td>Name of the group.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

- `ConnectApi.ExternalFilePermissionInformation`

### ConnectApi.RepositoryUserSummary

A user summary.

Subclass of `ConnectApi.AbstractDirectoryEntrySummary`

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>firstName</strong></td>
<td><code>String</code></td>
<td>First name of the user.</td>
<td>39.0</td>
</tr>
</tbody>
</table>
### ConnectApi.Reputation Class

Reputation for a user.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>reputationLevel</td>
<td><code>ConnectApi.ReputationLevel</code></td>
<td>User’s reputation level.</td>
<td>32.0</td>
</tr>
<tr>
<td>reputationPoints</td>
<td><code>Double</code></td>
<td>User’s reputation points, which can be earned by performing different activities in the community.</td>
<td>32.0</td>
</tr>
<tr>
<td>url</td>
<td><code>String</code></td>
<td>A Chatter REST API URL to the reputation.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- `ConnectApi.User Class`

### ConnectApi.ReputationLevel Class

Reputation level for a user.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>levelImageUrl</td>
<td><code>String</code></td>
<td>URL to the reputation level image.</td>
<td>32.0</td>
</tr>
<tr>
<td>levelName</td>
<td><code>String</code></td>
<td>Name of the reputation level.</td>
<td>32.0</td>
</tr>
<tr>
<td>levelNumber</td>
<td><code>Integer</code></td>
<td>Reputation level number, which is the numerical rank of the level, with the lowest level at 1. Administrators define the reputation level point ranges.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- `ConnectApi.Reputation Class`

### ConnectApi.RequestHeader Class

An HTTP request header name and value pair.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td><code>String</code></td>
<td>The name of the request header.</td>
<td>33.0</td>
</tr>
<tr>
<td>Property Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>---------------</td>
<td>----------------</td>
<td>------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>value</td>
<td>String</td>
<td>The value of the request header.</td>
<td>33.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.ActionLinkDefinition Class`

### ConnectApi.ResourceLinkSegment Class

URL to a resource not otherwise identified by an ID field, for example, a link to a list of users.

### ConnectApi.ScheduledRecommendation

Represents a scheduled custom recommendation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| channel       | `ConnectApi.Recommendation.Channel`   | A way to tie custom recommendations together, for example, to display recommendations in specific places in the UI or to show recommendations based on time of day or geographic locations. Values are:  
  - CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Community Builder to determine where recommendations appear.  
  - CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.  
  - CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.  
  - CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.  
  - CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. | 36.0              |
**Available Version** | **Description** | **Type** | **Property Name**
--- | --- | --- | ---

- **DefaultChannel**—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Community Builder.

| enabled | Boolean | Indicates whether scheduling is enabled. If true, the custom recommendation is enabled and appears in communities. If false, custom recommendations in feeds in Salesforce mobile web aren’t removed, but no new custom recommendations appear. In Customer Service and Partner Central communities, disabled custom recommendations no longer appear. | 35.0 |
| id | String | 18-character ID of the scheduled custom recommendation. | 35.0 |
| rank | Integer | The rank determining the order of this scheduled custom recommendation. | 35.0 |
| recommendation AudienceId | String | ID of the audience for the scheduled custom recommendation. | 35.0 |
| recommendation Definition Representation | ConnectApi. Recommendation Definition | Custom recommendation definition that this scheduled recommendation schedules. | 35.0 |
| url | String | URL to the Chatter REST API resource for the scheduled custom recommendation. | 35.0 |

**SEE ALSO:**
- ConnectApi.ScheduledRecommendationPage

---

**ConnectApi.ScheduledRecommendationPage**

A list of scheduled custom recommendations.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>scheduled Recommendations</td>
<td>List&lt;ConnectApi.Scheduled Recommendation&gt;</td>
<td>A list of scheduled custom recommendations.</td>
<td>35.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the Chatter REST API resource for the scheduled custom recommendation collection.</td>
<td>35.0</td>
</tr>
</tbody>
</table>
### ConnectApi.SocialAccount

A social account on a social network.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>externalSocialAccountId</td>
<td>String</td>
<td>ID of the external social account, if available.</td>
<td>38.0</td>
</tr>
<tr>
<td>handle</td>
<td>String</td>
<td>Social handle, screen name, or alias that identifies this account.</td>
<td>36.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the account as defined by the account's owner.</td>
<td>36.0</td>
</tr>
<tr>
<td>profileUrl</td>
<td>String</td>
<td>URL to the account's profile.</td>
<td>36.0</td>
</tr>
<tr>
<td>socialPersonaId</td>
<td>String</td>
<td>ID of the social persona account, if the external social account ID isn’t available.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

ConnectApi.SocialPostCapability

### ConnectApi.SocialAccountRelationship

Follow relationship between a managed social account and a social persona.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isFollowed</td>
<td>Boolean</td>
<td>Specifies whether the social account is followed by the social persona.</td>
<td>46.0</td>
</tr>
<tr>
<td>isFollowing</td>
<td>Boolean</td>
<td>Specifies whether the social account is following the social persona.</td>
<td>46.0</td>
</tr>
<tr>
<td>socialAccountId</td>
<td>String</td>
<td>ID of the social account.</td>
<td>46.0</td>
</tr>
<tr>
<td>socialPersonaId</td>
<td>String</td>
<td>ID of the social persona.</td>
<td>46.0</td>
</tr>
</tbody>
</table>

### ConnectApi.SocialPostCapability

If a feed element has this capability, it can interact with a social post on a social network.  
Subclass of ConnectApi.FeedElementCapabilities Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>author</td>
<td>ConnectApi.SocialAccount</td>
<td>Social account that authored the social post.</td>
<td>36.0</td>
</tr>
<tr>
<td>content</td>
<td>String</td>
<td>Content body of the social post.</td>
<td>36.0</td>
</tr>
<tr>
<td>deletedBy</td>
<td>ConnectApi.UserSummaryClass</td>
<td>User who deleted the social post.</td>
<td>38.0</td>
</tr>
<tr>
<td>Property Name</td>

<tr>
<td>likeIntent</td>
<td>ConnectApi. LikeIntents</td>
<td>Like intents for the social post.</td>
<td>45.0</td>
</tr>
<tr>
<td>replyIntent</td>
<td>ConnectApi. ReplyIntents</td>
<td>Reply intents for the social post.</td>
<td>45.0</td>
</tr>
</tbody>
</table>
### ConnectApi.SocialPostMassApprovalOutput
Approval or rejection of a large number of social posts.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isApproved</td>
<td>Boolean</td>
<td>Specifies whether the social posts were approved (true) or rejected (false) for publishing.</td>
<td>46.0</td>
</tr>
</tbody>
</table>

### ConnectApi.SocialPostStatus
The status of a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>message</td>
<td>String</td>
<td>Status message.</td>
<td>36.0</td>
</tr>
<tr>
<td>type</td>
<td>ConnectApi.SocialPostStatusType</td>
<td>Status type. Values are: ApprovalPending, ApprovalRecalled, ApprovalRejected, Deleted, Failed, Hidden, Pending, Sent, Unknown</td>
<td>36.0</td>
</tr>
</tbody>
</table>

- ConnectApi.SocialPostCapability

### ConnectApi.Stamp
A user stamp.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the stamp.</td>
<td>39.0–43.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the stamp.</td>
<td>39.0–43.0</td>
</tr>
<tr>
<td>imageUrl</td>
<td>String</td>
<td>Image URL of the stamp.</td>
<td>39.0–43.0</td>
</tr>
<tr>
<td>label</td>
<td>String</td>
<td>Label of the stamp.</td>
<td>39.0–43.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.User Class
ConnectApi.StatusCapability

If a feed post or comment has this capability, it has a status that determines its visibility.

Subclass of ConnectApi.FeedElementCapability Class.

### Property Name: feedEntityStatus
- **Type:** ConnectApi.FeedEntityStatus
- **Description:** Status of the feed post or comment. Values are:
  - Draft—The feed post isn’t published but is visible to the author and users with Modify All Data or View All Data permission. Comments can’t be drafts.
  - PendingReview—The feed post or comment isn’t approved yet and therefore isn’t published or visible.
  - Published—The feed post or comment is approved and visible.
- **Available Version:** 37.0

### Property Name: isApprovableByMe
- **Type:** Boolean
- **Description:** Specifies whether the context user can change the status of the feed post or comment.
- **Available Version:** 37.0

SEE ALSO:
- ConnectApi.CommentCapabilities
- ConnectApi.FeedElementCapabilities Class

ConnectApi.StrategyTrace

Messages and trace nodes for a recommendation strategy execution.

### Property Name: messages
- **Type:** List<String>
- **Description:** Messages and errors from the strategy execution.
- **Available Version:** 45.0

### Property Name: nodes
- **Type:** List<ConnectApi.StrategyTraceNode>
- **Description:** Nodes of the strategy execution used for debugging.
- **Available Version:** 45.0

SEE ALSO:
- ConnectApi.NBARecommendations

ConnectApi.StrategyTraceNode

A trace node for a recommendation strategy execution.

### Property Name: inputCount
- **Type:** Integer
- **Description:** Number of items put into the node.
- **Available Version:** 45.0

### Property Name: messages
- **Type:** List<String>
- **Description:** Messages that occurred during node execution.
- **Available Version:** 45.0
### ConnectApi.Namespace

#### Property Name | Type | Description | Available Version
--- | --- | --- | ---
nodeName | String | Name of the node. | 45.0
nodeTime | Long | Time spent processing inside the node. | 45.0
nodeType | String | Type of node. | 45.0
outputCount | Integer | Number of items returned from the node. | 45.0
outputs | List<String> | Recommendations that are returned from the node. | 45.0
totalTime | Long | Total time spent processing. | 45.0

#### ConnectApi.Subscription Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>community</td>
<td>ConnectApi.Reference</td>
<td>Information about the community in which the subscription exists</td>
<td>28.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>Subscription’s 18–character ID</td>
<td>28.0</td>
</tr>
<tr>
<td>subject</td>
<td>ConnectApi.Actor</td>
<td>Information about the parent, that is, the thing or person being followed</td>
<td>28.0</td>
</tr>
<tr>
<td>subscriber</td>
<td>ConnectApi.Actor</td>
<td>Information about the subscriber, that is, the person following this item</td>
<td>28.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>Chatter REST API URL to this specific subscription</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.FollowerPage Class

#### ConnectApiSupportedEmojis

A collection of supported emojis.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
</table>
supportedEmojis | ConnectApi.EmojiCollection | A collection of supported emojis. | 39.0 |

#### ConnectApi.TextSegment Class

Subclass of ConnectApi.MessageSegment Class
No additional properties.

**ConnectApi.TimeZone Class**

The user’s time zone as selected in the user’s personal settings in Salesforce. This value does not reflect a device’s current location.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>gmtOffset</td>
<td>Double</td>
<td>Signed offset, in hours, from GMT</td>
<td>30.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Display name of this time zone</td>
<td>30.0</td>
</tr>
</tbody>
</table>

**ConnectApi.Topic Class**

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>createdDate</td>
<td>Datetime</td>
<td>ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z</td>
<td>29.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the topic</td>
<td>29.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>18-character ID</td>
<td>29.0</td>
</tr>
<tr>
<td>images</td>
<td>ConnectApi.TopicImages</td>
<td>Images associated with the topic</td>
<td>32.0</td>
</tr>
<tr>
<td>isBeingDeleted</td>
<td>Boolean</td>
<td>true if the topic is currently being deleted; false otherwise. After the topic is deleted, when attempting to retrieve the topic, the output is NOT_FOUND.</td>
<td>33.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the topic</td>
<td>29.0</td>
</tr>
<tr>
<td>nonLocalized Name</td>
<td>String</td>
<td>Non-localized name of the topic</td>
<td>36.0</td>
</tr>
<tr>
<td>talkingAbout</td>
<td>Integer</td>
<td>Number of people talking about this topic over the last two months, based on factors such as topic additions and comments on posts with the topic</td>
<td>29.0</td>
</tr>
</tbody>
</table>
ConnectApi.TopicEndorsement Class

Represents one user endorsing another user for a single topic.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>endorsee</td>
<td>ConnectApi.User Summary</td>
<td>User being endorsed</td>
<td>30.0</td>
</tr>
<tr>
<td>endorsementId</td>
<td>String</td>
<td>18-character ID of the endorsement record</td>
<td>30.0</td>
</tr>
<tr>
<td>endorser</td>
<td>ConnectApi.User Summary</td>
<td>User performing the endorsement</td>
<td>30.0</td>
</tr>
<tr>
<td>topic</td>
<td>ConnectApi.Topic</td>
<td>Topic the user is being endorsed for</td>
<td>30.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the resource for the endorsement record</td>
<td>30.0</td>
</tr>
</tbody>
</table>

ConnectApi.TopicEndorsementCollection Class

A collection of topic endorsement response bodies.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>30.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or null if there isn’t a next page.</td>
<td>30.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the previous page, or null if there isn’t a previous page.</td>
<td>30.0</td>
</tr>
<tr>
<td>topicEndorsements</td>
<td>List&lt;ConnectApi.Topic&gt;</td>
<td>List of topic endorsements</td>
<td>30.0</td>
</tr>
</tbody>
</table>
ConnectApi.TopicEndorsementSummary

Topic endorsement summary.
Subclass of ConnectApi.UserActivitySummary.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>endorsementId</td>
<td>ID</td>
<td>ID of the topic endorsement.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

ConnectApi.TopicImages Class

Images associated with a topic.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>coverImageUrl</td>
<td>String</td>
<td>URL to a topic’s cover image, which appears on the topic page. Both topics and managed topics can have cover images.</td>
<td>32.0</td>
</tr>
<tr>
<td>featuredImageUrl</td>
<td>String</td>
<td>URL to a managed topic’s featured image, which appears wherever you feature it, for example, on the communities home page.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

ConnectApi.Topic Class

ConnectApi.TopicPage Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>29.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or null if there isn’t a next page.</td>
<td>29.0</td>
</tr>
<tr>
<td>topics</td>
<td>List&lt;ConnectApi.Topic&gt;</td>
<td>List of topics</td>
<td>29.0</td>
</tr>
</tbody>
</table>

ConnectApi.TopicsCapability Class

If a feed element has this capability, the context user can add topics to it. Topics help users organize and discover conversations.
Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>canAssignTopics</td>
<td>Boolean</td>
<td>true if a topic can be assigned to the feed element, false otherwise.</td>
<td>32.0</td>
</tr>
</tbody>
</table>
### ConnectApi.TopicSuggestion Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>existingTopic</td>
<td>ConnectApi.Topic</td>
<td>Topic that already exists or null for a new topic</td>
<td>29.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Topic name</td>
<td>29.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>TopicSuggestions</td>
<td>List&lt;ConnectApi.TopicSuggestion&gt;</td>
<td>List of topic suggestions</td>
<td>29.0</td>
</tr>
</tbody>
</table>

### ConnectApi.TopicSummary

Summary of a topic.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the topic.</td>
<td>47.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the topic.</td>
<td>47.0</td>
</tr>
</tbody>
</table>

### ConnectApi.TrackedChangeAttachment Class

**Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, ConnectApi.TrackedChangesCapability is used.
**Available Version** | **Description** | **Name** | **Type** | **Property Name** | **Type** | **Description** | **Available Version** |
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>28.0–31.0</td>
<td>A list of tracked changes.</td>
<td>changes</td>
<td>List&lt;ConnectApi.TrackedChangeItem&gt;</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>31.0</td>
<td>Collection of feed tracked changes.</td>
<td>changes</td>
<td>List&lt;ConnectApi.TrackedChangeItem&gt;</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>28.0</td>
<td>The name of the field that was updated.</td>
<td>fieldName</td>
<td>String</td>
<td></td>
<td></td>
<td></td>
<td>28.0</td>
</tr>
<tr>
<td>28.0</td>
<td>The new value of the field or null if the field length is long.</td>
<td>newValue</td>
<td>String</td>
<td></td>
<td></td>
<td></td>
<td>28.0</td>
</tr>
<tr>
<td>28.0</td>
<td>The old value of the field or null if the field length is long.</td>
<td>oldValue</td>
<td>String</td>
<td></td>
<td></td>
<td></td>
<td>28.0</td>
</tr>
</tbody>
</table>

**ConnectApi.TrackedChangeBundleCapability**

If a feed element has this capability, it has a group of other feed elements aggregated into one feed element called a bundle. This type of bundle aggregates feed tracked changes.

Subclass of ConnectApi.BundleCapability Class.

**ConnectApi.TrackedChangesCapability**

If a feed element has this capability, it contains all changes to a record for a single tracked change event.

Subclass of ConnectApi.FeedElementCapability Class.

**ConnectApi.TrackedChangeItem Class**

**SEE ALSO:**
- ConnectApi.TrackedChangesCapability
- ConnectApi.TrackedChangeBundleCapability

**ConnectApi.TrackedChangesCapability**

If a feed element has this capability, it contains all changes to a record for a single tracked change event.

Subclass of ConnectApi.FeedElementCapability Class.

**SEE ALSO:**
- ConnectApi.FeedElementCapabilities Class
ConnectApi.UnauthenticatedUser Class

Subclass of ConnectApi.Actor Class

No additional properties.

Instances of this class are used as the actor for feed items and comments posted by Chatter customers.

ConnectApi.UnreadConversationCount Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>hasMore</td>
<td>Boolean</td>
<td>Specifies if there are more than 50 unread</td>
<td>29.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>messages (true) or not (false)</td>
<td></td>
</tr>
<tr>
<td>unreadCount</td>
<td>Integer</td>
<td>The total number of unread messages</td>
<td>29.0</td>
</tr>
</tbody>
</table>

ConnectApiUpDownVoteCapability

If a feed post or comment has this capability, users can upvote or downvote it.

Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>downVoteCount</td>
<td>Long</td>
<td>Number of downvotes.</td>
<td>41.0</td>
</tr>
<tr>
<td>myVote</td>
<td>ConnectApi.UpDownVoteValue</td>
<td>Specifies the context user’s vote. Values are:</td>
<td>41.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Down</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• None</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Up</td>
<td></td>
</tr>
<tr>

<td>String</td>
<td>Message describing the status and expected outcome of the job.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

When the job completes, you receive an email with information about the Salesforce file that contains `ConnectApi.UserActivityCollection`.

**ConnectApi.UserActivityCollection**

User activity collection.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>activityType</td>
<td>String</td>
<td>Type of user activity. Values are:</td>
<td>42.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Bookmark—User bookmarked a post.</td>
<td></td>
</tr>
</tbody>
</table>
### UserActivitySummary

User activity summary.

This class is abstract.

Superclass of:
- `ConnectApi.CommentSummary`
- `ConnectApi.FeedPostSummary`
- `ConnectApi.FeedReadSummary`
- `ConnectApi.TopicEndorsementSummary`
- `ConnectApi.UserFeedEntityActivitySummary`

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>activityDate</td>
<td>Datetime</td>
<td>Date of the user activity.</td>
<td>42.0</td>
</tr>
<tr>
<td>activityType</td>
<td>String</td>
<td>Type of user activity. Values are:</td>
<td>42.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Bookmark—User bookmarked a post.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- ChatterActivity—Total counts of posts and comments made and likes and comments received for a user.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- ChatterLike—User liked a post or comment.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Comment—User commented on a post.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- CompanyVerify—User verified comment.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- DownVote—User downvoted a post or comment.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- FeedEntityRead—User read a post.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- FeedRead—User read a feed.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Mute—User muted a post.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Post—User made a post.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- TopicEndorsement—User endorsed another user on a topic or received endorsement on a topic.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- UpVote—User upvoted a post or comment.</td>
<td></td>
</tr>
</tbody>
</table>
### ConnectApi Namespace

#### UserActivityCollection

The capabilities associated with a user profile.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>activityUrl</td>
<td>String</td>
<td>URL of the user activity.</td>
<td>42.0</td>
</tr>
<tr>
<td>community</td>
<td>ConnectApi. CommunitySummary</td>
<td>Community in which the user performed the activity.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.UserActivityCollection

**ConnectApi.UserCapabilities Class**

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>canChat</td>
<td>Boolean</td>
<td>Specifies if the context user can use Chatter Messenger with the subject user (true) or not (false)</td>
<td>29.0</td>
</tr>
<tr>
<td>canDirectMessage</td>
<td>Boolean</td>
<td>Specifies if the context user can direct message the subject user (true) or not (false)</td>
<td>29.0</td>
</tr>
<tr>
<td>canEdit</td>
<td>Boolean</td>
<td>Specifies if the context user can edit the subject user's account (true) or not (false)</td>
<td>29.0</td>

<tr>
<td>canViewFullProfile</td>
<td>Boolean</td>
<td>Specifies if the context user can view the full profile of the subject user (true) or only the limited profile (false)</td>
<td>29.0</td>
</tr>
</tbody>
</table>
### isModerator

**Type:** Boolean

**Description:** Specifies if the subject user is a Chatter moderator or admin (`true`) or not (`false`).

**Available Version:** 29.0

#### SEE ALSO:
- [ConnectApi.UserProfile Class](#)

### ConnectApi.UserChatterSettings Class

A user’s global Chatter settings.

**Name**

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>defaultGroup</td>
<td>ConnectApi.GroupEmail</td>
<td>The default frequency with which a user receives email from a group when they join it.</td>

</tr>
<tr>
<td>EmailFrequency</td>
<td>Frequency Enum</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### ConnectApi.UserDetail Class

Subclass of [ConnectApi.User Class](#)

Details about a user in an organization.

If the context user doesn’t have permission to see a property, its value is set to `null`.

**Name**

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>aboutMe</td>
<td>String</td>
<td>Text from user’s profile</td>
<td>28.0</td>
</tr>
<tr>
<td>address</td>
<td>ConnectApi.Address</td>
<td>User’s address</td>
<td>28.0</td>
</tr>
<tr>
<td>bannerPhoto</td>
<td>ConnectApi.BannerPhoto</td>
<td>User’s banner photo</td>
<td>36.0</td>
</tr>
<tr>
<td>chatterActivity</td>
<td>ConnectApi.ChatterActivity</td>
<td>Chatter activity statistics</td>
<td>28.0</td>
</tr>
<tr>
<td>chatterInfluence</td>
<td>ConnectApi.GlobalInfluence</td>
<td>User’s influence rank</td>
<td>28.0</td>
</tr>
<tr>
<td>email</td>
<td>String</td>
<td>User’s email address</td>
<td>28.0</td>
</tr>
<tr>
<td>followersCount</td>
<td>Integer</td>
<td>Number of users following this user</td>
<td>28.0</td>
</tr>
<tr>
<td>followingCounts</td>
<td>ConnectApi.FollowingCounts</td>
<td>Information about items the user is following</td>
<td>28.0</td>
</tr>
<tr>
<td>groupCount</td>
<td>Integer</td>
<td>Number of groups user is following</td>
<td>28.0</td>
</tr>
<tr>
<td>hasChatter</td>
<td>Boolean</td>
<td><code>true</code> if user has access to Chatter; <code>false</code> otherwise</td>
<td>31.0</td>
</tr>
</tbody>
</table>
### ConnectApi.UserFeedEntityActivitySummary

User feed entity activity summary.

This class is abstract.

Subclass of `ConnectApi.UserActivitySummary`

Superclass of:
- `ConnectApi.BookmarkSummary`
- `ConnectApi.ChatterActivitySummary`
- `ConnectApi.CompanyVerifySummary`
- `ConnectApi.DownVoteSummary`
- `ConnectApi.FeedEntityReadSummary`
- `ConnectApi.LikeSummary`
- `ConnectApi.MuteSummary`
- `ConnectApi.UpVoteSummary`

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>feedEntityId</td>
<td>String</td>
<td>ID of the feed entity.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

### ConnectApi.UserGroupDetailPage

A page of groups that a user is a member of.
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>URL to the current page.</td>
<td>45.0</td>
</tr>
<tr>
<td>groups</td>
<td>List&lt;ConnectApi.ChatterGroupDetail&gt;</td>
<td>Collection of groups that the user is a member of.</td>
<td>45.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>URL to the next page, or null if there is no next page.</td>
<td>45.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>URL to the previous page, or null if there is no previous page.</td>
<td>45.0</td>
</tr>
<tr>
<td>total</td>
<td>Integer</td>
<td>Total number of groups that the user is a member of.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

**ConnectApi.UserGroupPage Class**

A paginated list of groups the context user is a member of.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>28.0</td>
</tr>
<tr>
<td>groups</td>
<td>List&lt;ConnectApi.ChatterGroupSummary&gt;</td>
<td>List of groups</td>
<td>28.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or null if there isn’t a next page.</td>
<td>28.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the previous page, or null if there isn’t a previous page.</td>
<td>28.0</td>
</tr>
<tr>
<td>total</td>
<td>Integer</td>
<td>Total number of groups across all pages</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**ConnectApi.UserMission**

Mission details for a user.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>missionName</td>
<td>String</td>
<td>Name of the mission.</td>
<td>46.0</td>
</tr>
<tr>
<td>missionThreshold</td>
<td>Integer</td>
<td>Threshold of the mission. When a user reaches this activity count, the mission is achieved.</td>
<td>46.0</td>
</tr>
</tbody>
</table>

**ConnectApi.UserMissionActivitiesJob**

User mission activities job.
### ConnectApi.UserMissionActivity

User activity associated with missions.  
No additional properties.

### ConnectApi.UserMissionActivityCollection

List of mission activities for a user.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>community</td>
<td><code>ConnectApi.CommunitySummary</code></td>
<td>Community in which the user performed activities.</td>
<td>45.0</td>
</tr>
<tr>
<td>userId</td>
<td>String</td>
<td>ID of the user.</td>
<td>45.0</td>
</tr>
<tr>
<td>userMissionActivities</td>
<td><code>List&lt;ConnectApi.AbstractUserMissionActivity&gt;</code></td>
<td>List of mission activities performed by the user.</td>
<td>45.0</td>
</tr>
<tr>
<td>userName</td>
<td>String</td>
<td>Name of the user.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

SEE ALSO:  
`ConnectApi.UserMissionActivitiesJob`  

### ConnectApi.UserMissionActivityStatus

Status of mission activity for a user.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>message</td>
<td>String</td>
<td>Success or error message.</td>
<td>45.0</td>
</tr>
<tr>
<td>status</td>
<td>String</td>
<td>Status of mission activity for a user.</td>
<td>45.0</td>
</tr>
</tbody>
</table>
### ConnectApi.UserOauthInfo

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>availableExternal</td>
<td>Connect.Oauth.ProviderInfo</td>
<td>The available OAuth service provider.</td>
<td>37.0</td>
</tr>
<tr>
<td>isAuthenticated</td>
<td>Boolean</td>
<td>Specifies whether the user is authenticated (true) or not (false).</td>
<td>37.0</td>
</tr>
</tbody>
</table>

### ConnectApi.UserPage Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>Integer</td>
<td>Token identifying the current page.</td>
<td>28.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>28.0</td>
</tr>
<tr>
<td>nextPageToken</td>
<td>Integer</td>
<td>Token identifying the next page, or null if there isn’t a next page.</td>
<td>28.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or null if there isn’t a next page.</td>
<td>28.0</td>
</tr>
<tr>
<td>previousPageToken</td>
<td>Integer</td>
<td>Token identifying the previous page, or null if there isn’t a previous page.</td>
<td>28.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the previous page, or null if there isn’t a previous page.</td>
<td>28.0</td>
</tr>
<tr>
<td>users</td>
<td>List&lt;UserDetail&gt;</td>
<td>List of user detail information. If the context user doesn’t have permission to see a property, the property is set to null.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

### ConnectApi.UserProfile Class

Details necessary to render a view of a user profile.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>capabilities</td>
<td>UserCapabilities</td>
<td>The context user’s capabilities specific to the subject user's profile</td>
<td>29.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>The ID of the user attached to the profile</td>
<td>29.0</td>
</tr>
<tr>
<td>tabs</td>
<td>List&lt;Tab&gt;</td>
<td>The tabs visible to the context user specific to the subject user's profile</td>
<td>29.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The URL of the user’s profile</td>
<td>29.0</td>
</tr>
<tr>
<td>userDetail</td>
<td>UserDetail</td>
<td>The details about the user attached to the profile</td>
<td>29.0</td>
</tr>
</tbody>
</table>
ConnectApi.UserProfileTab Class

Information about a profile tab.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>The tab’s unique identifier or 18–character ID</td>
<td>29.0</td>
</tr>
<tr>
<td>isDefault</td>
<td>Boolean</td>
<td>Specifies if the tab appears first when clicking the user profile (true) or not (false)</td>
<td>29.0</td>
</tr>
<tr>
<td>tabType</td>
<td>ConnectApi.UserProfileTabType Enum</td>
<td>Specifies the type of tab</td>
<td>29.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• CustomVisualForce—Tab that displays data from a Visualforce page.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• CustomWeb—Tab that displays data from any external web-based application or web page.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Element—Tab that displays generic content inline.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Feed—Tab that displays the Chatter feed.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Overview—Tab that displays user details.</td>
<td></td>
</tr>
<tr>
<td>tabUrl</td>
<td>String</td>
<td>The current tab’s content URL (for non built-in tab types)</td>
<td>29.0</td>
</tr>
</tbody>
</table>

ConnectApi.UserProfile Class

ConnectApi.UserReferencePage

A list of user references.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>URL to the current page.</td>
<td>35.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>URL to the next page.</td>
<td>35.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>URL to the previous page.</td>
<td>35.0</td>
</tr>
<tr>
<td>userCount</td>
<td>Integer</td>
<td>Number of users in the collection.</td>
<td>35.0</td>
</tr>
<tr>
<td>users</td>
<td>List&lt;ConnectApi.UserReference&gt;</td>
<td>A collection of user references.</td>
<td>35.0</td>
</tr>
</tbody>
</table>

## ConnectApi.UserSettings Class

Settings specific to a user.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>approvalPosts</td>
<td>Boolean</td>
<td>User can approve workflows from Chatter posts.</td>
<td>28.0</td>
</tr>
<tr>
<td>canAccess PersonalStreams</td>
<td>Boolean</td>
<td>User can access personal stream feeds.</td>
<td>40.0</td>
</tr>
<tr>
<td>canFollow</td>
<td>Boolean</td>
<td>User can follow users and records.</td>
<td>28.0</td>
</tr>
<tr>
<td>canModify AllData</td>
<td>Boolean</td>
<td>User has Modify all Data permission.</td>
<td>28.0</td>
</tr>
<tr>
<td>canOwnGroups</td>
<td>Boolean</td>
<td>User can own groups.</td>
<td>28.0</td>
</tr>
<tr>
<td>canViewAllData</td>
<td>Boolean</td>
<td>User has View all Data permission.</td>
<td>28.0</td>
</tr>
<tr>
<td>canViewAllGroups</td>
<td>Boolean</td>
<td>User has View all Groups permission.</td>
<td>28.0</td>
</tr>
<tr>
<td>canViewAllUsers</td>
<td>Boolean</td>
<td>User has View all Users permission.</td>
<td>28.0</td>
</tr>
<tr>
<td>canViewCommunity Switcher</td>
<td>Boolean</td>
<td>User can see the community switcher menu.</td>
<td>34.0</td>
</tr>
<tr>
<td>canViewFull UserProfile</td>
<td>Boolean</td>
<td>User can see other user’s Chatter profile.</td>
<td>28.0</td>
</tr>
<tr>
<td>canViewPublicFiles</td>
<td>Boolean</td>
<td>User can see all files that are public.</td>
<td>28.0</td>
</tr>
<tr>
<td>currencySymbol</td>
<td>String</td>
<td>Currency symbol to use for displaying currency values.</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Applicable only when the ConnectApi.Features.multiCurrency property is false.</td>
<td></td>
</tr>
<tr>
<td>externalUser</td>
<td>Boolean</td>
<td>User is a Chatter customer.</td>
<td>28.0</td>
</tr>
<tr>
<td>fileSyncLimit</td>
<td>Integer</td>
<td>Maximum number of files user can sync.</td>
<td>32.0</td>
</tr>
<tr>
<td>fileSyncStorageLimit</td>
<td>Integer</td>
<td>Maximum storage for synced files, in megabytes (MB).</td>
<td>29.0</td>
</tr>
<tr>
<td>folderSyncLimit</td>
<td>Integer</td>
<td>Maximum number of folders user can sync.</td>
<td>32.0</td>
</tr>
<tr>
<td>hasAccessTo InternalOrg</td>
<td>Boolean</td>
<td>User is a member of the internal org.</td>
<td>28.0</td>
</tr>
<tr>
<td>hasChatter</td>
<td>Boolean</td>
<td>User has access to Chatter.</td>
<td>31.0</td>
</tr>
<tr>
<td>hasFileSync</td>
<td>Boolean</td>
<td>User has Sync Files permission.</td>
<td>28.0</td>
</tr>
<tr>
<td>hasFieldService LocationTracking</td>
<td>Boolean</td>
<td>User has Field Service Lightning GPS tracking enabled.</td>
<td>41.0</td>
</tr>
<tr>
<td>hasFieldService MobileAccess</td>
<td>Boolean</td>
<td>User has access to the Field Service Lightning mobile app.</td>
<td>41.0</td>
</tr>
</tbody>
</table>
### Available Version

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>hasFileSync</td>
<td>Boolean</td>
<td>Administrator for the user’s org allows file sync clients to update automatically.</td>

### ConnectApi.VerifiedCapability

If a comment has this capability, users with permission can mark it as verified or unverified.

Subclass of `ConnectApi.FeedElementCapability Class`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isVerifiableByMe</td>
<td>Boolean</td>
<td>Specifies whether the context user has permission to mark comments as verified or unverified (true) or not (false).</td>
<td>41.0</td>
</tr>
<tr>
<td>isVerified</td>
<td>Boolean</td>
<td>Specifies whether the comment is marked as verified (true) or not (false).</td>
<td>41.0</td>
</tr>
<tr>
<td>isVerifiedByAnonymized</td>
<td>Boolean</td>
<td>Specifies whether the comment is marked as verified by an anonymous user (true) or not (false). If the comment has never been marked as verified or unverified, null. Also null if the context user</td>
<td>43.0</td>
</tr>
</tbody>
</table>
### ConnectApi Namespace

#### ConnectApi.CommentCapabilities

Available Version | Description
--- | ---
41.0 | User who last marked the comment as verified or unverified, otherwise `null`. Also `null` if the context user doesn’t have permission to mark comments as verified or unverified.

#### lastVerifiedByUser

- **Type**: ConnectApi.UserSummary Class
- **Description**: User who last marked the comment as verified or unverified, otherwise `null`. Also `null` if the context user doesn’t have permission to mark comments as verified or unverified.
- **Available Version**: 41.0

#### lastVerifiedDate

- **Type**: Datetime
- **Description**: Date when the comment was last marked as verified or unverified, otherwise `null`. Also `null` if the context user doesn’t have permission to mark comments as verified or unverified.
- **Available Version**: 41.0

#### ConnectApi.Vote

An upvote or downvote on a feed element or comment.

### ConnectApi.Voting

- **Property Name**: type
  - **Type**: ConnectApi.UpDownVoteValue
  - **Description**: Type of vote for a feed element or comment.
  - **Available Version**: 42.0
    - Down
    - Up

- **Property Name**: user
  - **Type**: ConnectApi.UserSummary
  - **Description**: User who voted on the feed element or comment.
  - **Available Version**: 42.0

- **Property Name**: votedItem
  - **Type**: ConnectApi.Reference
  - **Description**: Reference to the feed element or comment that was voted on.
  - **Available Version**: 42.0

#### ConnectApi.VotePage

A page of upvotes or downvotes on a feed element or comment.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>Integer</td>
<td>Token identifying the current page.</td>
<td>42.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>42.0</td>
</tr>
<tr>
<td>Property Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>---------------</td>
<td>-----------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>items</td>
<td>List&lt;ConnectApi.Vote&gt;</td>
<td>Collection of users and their upvotes or downvotes. Upvotes include likes and upvotes. For example, if a post receives five likes and three upvotes, the number of upvotes is eight. For this reason, the collection of users and their upvotes also includes users who liked the post or comment. If a user both liked and upvoted a post, they appear only once in the collection.</td>
<td>42.0</td>
</tr>
<tr>
<td>nextPageToken</td>
<td>Integer</td>
<td>Token identifying the next page, or null if there isn't a next page.</td>

<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the previous page, or null if there isn't a previous page.</td>
<td>42.0</td>
</tr>
<tr>
<td>total</td>
<td>Long</td>
<td>Total number of upvotes or downvotes for the feed element or comment. The number of upvotes includes the number of likes and upvotes. For example, if a post receives five likes and three upvotes, the total number of upvotes is eight. If a user both liked and upvoted a post, we count that as two upvotes.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

**ConnectApi.Zone Class**

Information about a Chatter Answers zone.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>The description of the zone</td>
<td>29.0</td>

**ConnectApi Enums**

Enums specific to the ConnectApi namespace.

ConnectApi enums inherit all properties and methods of Apex enums.

Enums are not versioned. Enum values are returned in all API versions. Clients should handle values they don’t understand gracefully.

<table>
<thead>
<tr>
<th>Enum</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ConnectApi.ActionLinkExecutionsAllowed</td>
<td>Number of times an action link can be executed.</td>
</tr>
<tr>
<td></td>
<td>• Once—An action link can be executed only once across all users.</td>
</tr>
<tr>
<td></td>
<td>• OncePerUser—An action link can be executed only once for each user.</td>
</tr>
<tr>
<td></td>
<td>• Unlimited—An action link can be executed an unlimited number of times by each user. If the action link’s actionType is Api or ApiAsync, you can’t use this value.</td>
</tr>
<tr>
<td>ConnectApi.ActionLinkType</td>
<td>Type of action link.</td>
</tr>
<tr>
<td></td>
<td>• Api—The action link calls a synchronous API at the action URL. Salesforce sets the status to SuccessfulStatus or FailedStatus based on the HTTP status code returned by your server.</td>
</tr>
<tr>
<td></td>
<td>• ApiAsync—The action link calls an asynchronous API at the action URL. The action remains in a PendingStatus state until a third party makes a request to /connect/action-links/actionLinkId to set the status to SuccessfulStatus or FailedStatus when the asynchronous operation is complete.</td>
</tr>
<tr>
<td></td>
<td>• Download—The action link downloads a file from the action URL.</td>
</tr>
<tr>
<td></td>
<td>• Ui—The action link takes the user to a web page at the action URL.</td>
</tr>
<tr>
<td>Enum</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>ConnectApi.ActivitySharingTypeEnum</td>
<td>Type of sharing operation.</td>
</tr>
<tr>
<td>-</td>
<td>Everyone—The activity is shared with everyone.</td>
</tr>
<tr>
<td>-</td>
<td>MyGroups—The activity is shared only with a selection of the context user’s groups.</td>
</tr>
<tr>
<td>-</td>
<td>OnlyMe—The activity is private.</td>
</tr>
<tr>
<td>ConnectApi.ArticleTopicJobType</td>
<td>Type of operation to perform on articles and topics.</td>
</tr>
<tr>
<td>-</td>
<td>AssignTopicsToArticle—Assign topics to articles in a data category.</td>
</tr>
<tr>
<td>-</td>
<td>UnassignTopicsFromArticle—Unassign topics from articles in a data category.</td>
</tr>
<tr>
<td>ConnectApi.BannerStyle</td>
<td>Decorates a feed item with a color and set of icons.</td>
</tr>
<tr>
<td>-</td>
<td>Announcement—An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it’s deleted or replaced by another announcement.</td>
</tr>
<tr>
<td>ConnectApi.BundleType</td>
<td>Type of bundle.</td>
</tr>
<tr>
<td>-</td>
<td>GenericBundle—A bundle that contains no additional information and is just a collection of feed elements.</td>
</tr>
<tr>
<td>-</td>
<td>TrackedChanges—A bundle that represents a collection of feed tracked changes. The bundle includes summary information about the feed tracked changes that make up the bundle.</td>
</tr>
<tr>
<td>ConnectApi.CaseActorType</td>
<td>Type of user who made the comment.</td>
</tr>
<tr>
<td>-</td>
<td>Customer—if a Chatter customer made the comment</td>
</tr>
<tr>
<td>-</td>
<td>CustomerService—if a service representative made the comment</td>
</tr>
<tr>
<td>ConnectApi.CaseCommentEventType</td>
<td>Event type of a comment in Case Feed.</td>
</tr>
<tr>
<td>-</td>
<td>NewInternal—A case comment that has newly been marked Internal Only.</td>
</tr>
<tr>
<td>-</td>
<td>NewPublished—A newly published case comment.</td>
</tr>
<tr>
<td>-</td>
<td>NewPublishedByCustomer—A case comment by a customer that was newly published.</td>
</tr>
<tr>
<td>-</td>
<td>PublishExisting—An existing case comment that was republished.</td>
</tr>
<tr>
<td>-</td>
<td>PublishExistingByCustomer—An existing case comment by a customer that was republished.</td>
</tr>
<tr>
<td>-</td>
<td>UnpublishExistingByCustomer—An existing case comment by a customer that was unpublished.</td>
</tr>
<tr>
<td>-</td>
<td>UnpublishExisting—An existing case comment that was unpublished.</td>
</tr>
<tr>
<td></td>
<td>Note: Unfortunately, this typo is in the code, not the documentation. Use this spelling in your code.</td>
</tr>
<tr>
<td>ConnectApi.CommentType</td>
<td>Type of comment.</td>
</tr>
<tr>

<tr>
<td></td>
<td>• FlaggedByRule—Moderation rule flagged the item.</td>
</tr>
<tr>
<td></td>
<td>• FlaggedBySystem—Einstein flagged the item.</td>
</tr>
<tr>
<td></td>
<td>• FlaggedByUserAsInappropriate—User flagged the item as inappropriate.</td>
</tr>
<tr>
<td></td>
<td>• FlaggedByUserAsSpam—User flagged the item as spam.</td>
</tr>
<tr>
<td>ConnectApi.CommunityFlagType</td>
<td>Type of moderation flag.</td>
</tr>
<tr>
<td></td>
<td>• FlagAsInappropriate—Flag for inappropriate content.</td>
</tr>
<tr>
<td></td>
<td>• FlagAsSpam—Flag for spam.</td>
</tr>
<tr>
<td>ConnectApi.CommunityFlagVisibility</td>
<td>Visibility behavior of a flag for various user types.</td>
</tr>
<tr>
<td></td>
<td>• ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.</td>
</tr>
<tr>
<td></td>
<td>• SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.</td>
</tr>
<tr>
<td>ConnectApi.CommunityStatus</td>
<td>Status of the community.</td>
</tr>
<tr>
<td></td>
<td>• Live</td>
</tr>
<tr>
<td></td>
<td>• Inactive</td>
</tr>
<tr>
<td></td>
<td>• UnderConstruction</td>
</tr>

<td>Type of activity.</td>
</tr>
<tr>
<td></td>
<td>• All</td>
</tr>
<tr>
<td></td>
<td>• Event</td>
</tr>
<tr>
<td></td>
<td>• Task</td>
</tr>
<tr>
<td>ConnectApi.ContentHubAuthenticationProtocol</td>
<td>Authentication protocol used for the repository.</td>
</tr>
<tr>
<td></td>
<td>• NoAuthentication—Repository doesn’t require authentication.</td>
</tr>
<tr>
<td></td>
<td>• Oauth—Repository uses OAuth authentication protocol.</td>
</tr>
<tr>
<td></td>
<td>• Password—Repository uses user name and password authentication protocol.</td>
</tr>
<tr>
<td>ConnectApi.ContentHubDirectoryEntryType</td>
<td>Type of directory entry.</td>
</tr>
<tr>
<td></td>
<td>• GroupEntry</td>
</tr>
<tr>
<td></td>
<td>• UserEntry</td>
</tr>
<tr>
<td>ConnectApi.ContentHubExternalItemSharingType</td>
<td>Sharing status for the external file.</td>
</tr>
<tr>
<td></td>
<td>• DomainSharing—File is shared with the domain.</td>
</tr>
<tr>
<td></td>
<td>• PrivateSharing—File is private or shared only with individuals.</td>
</tr>
<tr>
<td></td>
<td>• PublicSharing—File is publicly shared.</td>
</tr>
<tr>
<td>Enum</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
</tbody>
</table>
| ConnectApi.ContentHub.GroupType | Type of group.  
  - Everybody—Group is public to everybody.  
  - EverybodyInDomain—Group is public to everybody in the same domain.  
  - Unknown—Group type is unknown. |
| ConnectApi.ContentHub.ItemType | Item types.  
  - Any—Includes files and folders.  
  - FilesOnly—Includes files only.  
  - FoldersOnly—Includes folders only. |
  - ContentStreamAllowed  
  - ContentStreamNotAllowed  
  - ContentStreamRequired |
| ConnectApi.ContentHub.VariableType | Data type of the value of the field.  
  - BooleanType  
  - DateTimeType  
  - DecimalType  
  - HtmlType  
  - IdType  
  - IntegerType  
  - StringType  
  - UriType  
  - XmlType |
| ConnectApi.DatacloudUserType | Type of user.  
  - Monthly—A user type that’s assigned monthly point limits for purchasing Data.com records. Only the assigned user can use monthly points. Points expire at the end of the month. Monthly is the default setting for DatacloudUserType.  
  - Listpool—A user type that allows users to draw from a pool of points to purchase Data.com records. |
| ConnectApi.DatacloudImport.StatusTypeEnum | Status of the import.  
  - Success—Indicates that selected records were added to the organization’s CRM.  
  - Duplicate—Marks a record that is already in the organization’s CRM. The API determines whether an organization allows the addition of duplicate records in its CRM.  
  - Error—Indicates that the selected records weren’t added to the organization’s CRM. |
| ConnectApi.DigestPeriod | Period of time that is included in a Chatter email digest.  
  - DailyDigest—The email includes up to the 50 latest posts from the previous day. |
<table>

<tr>
<td>Topics</td>
<td>The context user can add topics to the feed element.</td>
</tr>
<tr>
<td>TrackedChanges</td>
<td>The feed element has all changes to a record for a single tracked change event.</td>
</tr>
<tr>
<td>UpDownVote</td>
<td>Users can upvote or downvote the feed element.</td>
</tr>
<tr>
<td>Verified</td>
<td>Users who have permission can mark a comment as verified or unverified.</td>
</tr>
</tbody>
</table>
### ConnectApi.FeedElement Type

Feed elements are the top-level objects that a feed contains. The feed element type describes the characteristics of that feed element.

- **Bundle**—A container of feed elements. A bundle also has a body made up of message segments that can always be gracefully degraded to text-only values.
- **FeedItem**—A feed item has a single parent and is scoped to one community or across all communities. A feed item can have capabilities such as bookmarks, canvas, content, comment, link, poll. Feed items have a body made up of message segments that can always be gracefully degraded to text-only values.
- **Recommendation**—A recommendation is a feed element with a recommendations capability. A recommendation suggests records to follow, groups to join, or applications that are helpful to the context user.

### ConnectApi.FeedEntity Status

Status of the feed post or comment.

- **Draft**—The feed post isn’t published but is visible to the author and users with Modify All Data or View All Data permission. Comments can’t be drafts.
- **PendingReview**—The feed post or comment isn’t approved yet and therefore isn’t published or visible.
- **Published**—The feed post or comment is approved and visible.

### ConnectApi.FeedFavorite Type

Origin of the feed favorite.

- **ListView**
- **Search**
- **Topic**

### ConnectApi.FeedFilter

Filter value for a feed.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
## Enum

<table>
<thead>
<tr>
<th>Enum</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>• UnansweredQuestions</td>
<td>Feed elements that are questions and that don't have any answers.</td>
</tr>
<tr>
<td>• UnansweredQuestionsWithCandidateAnswers</td>
<td>Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.</td>
</tr>
<tr>
<td>• Unread</td>
<td>Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the Record feed of a group.</td>
</tr>
<tr>
<td>• UnsolvedQuestions</td>
<td>Feed elements that are questions and that don't have a best answer.</td>
</tr>
</tbody>
</table>

## Type of feed item.

<table>
<thead>
<tr>
<th>ConnectApi.FeedItemType</th>
<th>Type of feed item.</th>
</tr>
</thead>
<tbody>
<tr>
<td>• ActivityEvent</td>
<td>Feed item generated in Case Feed when an event or task associated with a parent record with a feed enabled is created or updated.</td>
</tr>
<tr>
<td>• AdvancedTextPost</td>
<td>A feed item with advanced text formatting, such as a group announcement post.</td>
</tr>
<tr>
<td>• ApprovalPost</td>
<td>Feed item with an approval capability. Approvers can act on the feed item parent.</td>
</tr>
<tr>
<td>• AttachArticleEvent</td>
<td>Feed item generated when an article is attached to a case in Case Feed.</td>
</tr>
<tr>
<td>• BasicTemplateFeedItem</td>
<td>Feed item with an enhanced link capability.</td>
</tr>
<tr>
<td>• CallLogPost</td>
<td>Feed item generated when a call log is saved to a case in Case Feed.</td>
</tr>
<tr>
<td>• CanvasPost</td>
<td>Feed item generated by a canvas app in the publisher or from Chatter REST API or Chatter in Apex. The post itself is a link to a canvas app.</td>
</tr>
<tr>
<td>• CaseCommentPost</td>
<td>Feed item generated when a case comment is saved in Case Feed.</td>
</tr>
</tbody>
</table>

## Attachment type for feed item output objects.

<table>
<thead>
<tr>
<th>ConnectApi.FeedItemAttachmentType</th>
<th>Attachment type for feed item output objects.</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Approval</td>
<td>A feed item requiring approval.</td>
</tr>
<tr>
<td>• BasicTemplate</td>
<td>A feed item with a generic rendering of an image, link, and title.</td>
</tr>
<tr>
<td>• Canvas</td>
<td>A feed item that contains the metadata to render a link to a canvas app.</td>
</tr>
<tr>
<td>• CaseComment</td>
<td>A feed item created from a comment to a case record.</td>
</tr>
<tr>
<td>• Content</td>
<td>A feed item with a file attached.</td>
</tr>
<tr>
<td>• DashboardComponent</td>
<td>A feed item with a dashboard attached.</td>
</tr>
<tr>
<td>• EmailMessage</td>
<td>An email attached to a case record in Case Feed.</td>
</tr>
<tr>
<td>• Link</td>
<td>A feed item with a URL attached.</td>
</tr>
<tr>
<td>• Poll</td>
<td>A feed item with a poll attached.</td>
</tr>
<tr>
<td>• Question</td>
<td>A feed item with a question attached.</td>
</tr>
<tr>
<td>• RecordSnapshot</td>
<td>The feed item attachment contains a view of a record at a single CreateRecordEvent.</td>
</tr>
<tr>
<td>• TrackedChange</td>
<td>All changes to a record for a single TrackedChange event.</td>
</tr>
</tbody>
</table>

<td>updates for records whose parent is the context user. Contains every feed</td>
</tr>
<tr>
<td></td>
<td>item and comment that mentions the context user or that mentions a group</td>
</tr>
<tr>
<td></td>
<td>the context user is a member of.</td>
</tr>
<tr>
<td>PendingReview</td>
<td>Contains all feed items and comments that are pending review.</td>
</tr>
<tr>
<td>People</td>
<td>Contains all feed items posted by all people the context user follows.</td>
</tr>
<tr>
<td>Record</td>
<td>Contains all feed items whose parent is a specified record, which could be a</td>
</tr>
<tr>
<td></td>
<td>group, user, object, file, or any other standard or custom object. When the</td>
</tr>
<tr>
<td></td>
<td>record is a group,</td>
</tr>
</tbody>
</table>
the feed also contains feed items that mention the group. When the record is a user, the
feed contains only feed items on that user. You can get another user’s record feed.

• Streams—Contains all feed items for any combination of up to 25 feed-enabled entities,
such as people, groups, and records, that the context user subscribes to in a stream.
• To—Contains all feed items with mentions of the context user. Contains feed items the
context user commented on and feed items created by the context user that are commented
on.
• Topics—Contains all feed items that include the specified topic.
• UserProfile—Contains feed items created when a user changes records that can be
tracked in a feed. Contains feed items whose parent is the user and feed items that @mention
the user. This feed is different than the news feed, which returns more feed items, including
group updates. You can get another user’s user profile feed.

Reason for a Chatter recommendation.

ConnectApi.

RecommendationExplanationType

- ArticleHasRelatedContent—Articles with related content to a context article.
- ArticleViewedTogether—Articles often viewed together with the article that the context user just viewed.
- ArticleViewedTogetherWithViewers—Articles often viewed together with other records that the context user views.
- Custom—Custom recommendations.
- FilePopular—Files with many followers or views.
- FileViewedTogether—Files often viewed at the same time as other files that the context user views.
- FollowedTogetherWithFollowees—Users often followed together with other records that the context user follows.
- GroupMembersFollowed—Groups with members that the context user follows.
- GroupNew—Recently created groups.
- GroupPopular—Groups with many active members.
- ItemViewedTogether—Records often viewed at the same time as other records that the context user views.
- PopularApp—Applications that are popular.
- RecordOwned—Records that the context user owns.
- RecordParentOfFollowed—Parent records of records that the context user follows.
- RecordViewed—Records that the context user recently viewed.
- TopicFollowedTogether—Topics often followed together with the record that the context user just followed.
- TopicFollowedTogetherWithFollowees—Topics often followed together with other records that the context user follows.
- TopicPopularFollowed—Topics with many followers.
- TopicPopularLiked—Topics on posts that have many likes.
- UserDirectReport—Users who report to the context user.

**ConnectApi Exceptions**

The `ConnectApi` namespace contains exception classes.

All exceptions classes support built-in methods for returning the error message and exception type. See Exception Class and Built-In Exceptions on page 2715.

The `ConnectApi` namespace contains these exceptions:

<table>
<thead>
<tr>
<th>Exception</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Any logic error in the way your application is utilizing <code>ConnectApi</code> code. This is equivalent to receiving a 400 error from Chatter REST API.</td>
</tr>
<tr>
<td></td>
<td>Any issues with the specified resource being found. This is equivalent to receiving a 404 error from Chatter REST API.</td>
</tr>
<tr>
<td></td>
<td>When you exceed the rate limit. This is equivalent to receiving a 503 Service Unavailable error from Chatter REST API.</td>
</tr>
</tbody>
</table>
Database Namespace

The Database namespace provides classes used with DML operations.

The following are the classes in the Database namespace.

IN THIS SECTION:

- **Batchable Interface**
  The class that implements this interface can be executed as a batch Apex job.

- **BatchableContext Interface**
  Represents the parameter type of a batch job method and contains the batch job ID. This interface is implemented internally by Apex.

- **DeletedRecord Class**
  Contains information about a deleted record.

- **DeleteResult Class**
  Represents the result of a delete DML operation returned by the Database.delete method.

- **DMLOptions Class**
  Enables you to set options related to DML operations.

- **DmlOptions.AssignmentRuleHeader Class**
  Enables setting assignment rule options.

- **DmlOptions.DuplicateRuleHeader Class**
  Determines options for using duplicate rules to detect duplicate records. Duplicate rules are part of the Duplicate Management feature.

- **DmlOptions.EmailHeader Class**
  Enables setting email options.

- **DuplicateError Class**
  Contains information about an error that occurred when an attempt was made to save a duplicate record. Use if your organization has set up duplicate rules, which are part of the Duplicate Management feature.

- **EmptyRecycleBinResult Class**
  The result of the emptyRecycleBin DML operation returned by the Database.emptyRecycleBin method.

- **Error Class**
  Represents information about an error that occurred during a DML operation when using a Database method.

- **GetDeletedResult Class**
  Contains the deleted records retrieved for a specific sObject type and time window.

- **GetUpdatedResult Class**
  Contains the result for the Database.getUpdated method call.

- **LeadConvert Class**
  Contains information used for lead conversion.

- **LeadConvertResult Class**
  The result of a lead conversion.

- **MergeResult Class**
  Contains the result of a merge Database method operation.
QueryLocator Class
Represents the record set returned by Database.getQueryLocator and used with Batch Apex.

QueryLocatorIterator Class
Represents an iterator over a query locator record set.

SaveResult Class
The result of an insert or update DML operation returned by a Database method.

UndeleteResult Class
The result of an undelete DML operation returned by the Database.undelete method.

UpsertResult Class
The result of an upsert DML operation returned by the Database.upsert method.

Batchable Interface
The class that implements this interface can be executed as a batch Apex job.

Namespace
Database

SEE ALSO:
Using Batch Apex

Batchable Methods
The following are methods for Batchable.

IN THIS SECTION:
execute(jobId, recordList)
Gets invoked when the batch job executes and operates on one batch of records. Contains or calls the main execution logic for the batch job.

finish(jobId)
Gets invoked when the batch job finishes. Place any clean up code in this method.

start(jobId)
Gets invoked when the batch job starts. Returns the record set as an iterable that will be batched for execution.

execute(jobId, recordList)
Gets invoked when the batch job executes and operates on one batch of records. Contains or calls the main execution logic for the batch job.

Signature
public Void execute(Database.BatchableContext jobId, List<sObject> recordList)
Parameters

`jobId`
   Type: `Database.BatchableContext`
   Contains the job ID.

`recordList`
   Type: `List<sObject>`
   Contains the batch of records to process.

Return Value
Type: Void

**finish(jobId)**

Gets invoked when the batch job finishes. Place any clean up code in this method.

Signature

```java
public Void finish(Database.BatchableContext jobId)
```

Parameters

`jobId`
   Type: `Database.BatchableContext`
   Contains the job ID.

Return Value
Type: Void

**start(jobId)**

Gets invoked when the batch job starts. Returns the record set as an iterable that will be batched for execution.

Signature

```java
public System.Iterable start(Database.BatchableContext jobId)
```

Parameters

`jobId`
   Type: `Database.BatchableContext`
   Contains the job ID.

Return Value
Type: `System.Iterable`
**start (jobId)**

Gets invoked when the batch job starts. Returns the record set as a QueryLocator object that will be batched for execution.

**Signature**

```java
public Database.QueryLocator start(Database.BatchableContext jobId)
```

**Parameters**

`jobId`

Type: `Database.BatchableContext`

Contains the job ID.

**Return Value**

Type: `Database.QueryLocator`

**BatchableContext Interface**

Represents the parameter type of a batch job method and contains the batch job ID. This interface is implemented internally by Apex.

**Namespace**

`Database`

**SEE ALSO:**

- Batchable Interface

**BatchableContext Methods**

The following are methods for `BatchableContext`.

**IN THIS SECTION:**

- `getChildJobId()`
  
  Returns the ID of the current batch job chunk that is being processed.

- `getJobId()`
  
  Returns the batch job ID.

**getChildJobId()**

Returns the ID of the current batch job chunk that is being processed.

**Signature**

```java
public Id getChildJobId()
```
Return Value
Type: ID

**getJobId()**
Returns the batch job ID.

Signature
```java
public Id getJobId()
```

DeleteRecord Class
Contains information about a deleted record.

Namespace
Database

Usage
The `getDeletedRecords` method of the `Database.GetDeletedResult` class returns a list of `Database.DeletedRecord` objects. Use the methods in the `Database.DeletedRecord` class to retrieve details about each deleted record.

DeleteRecord Methods
The following are methods for `DeleteRecord`. All are instance methods.

**IN THIS SECTION:**
- `getDeletedDate()`
  Returns the deleted date of this record.
- `getId()`
  Returns the ID of a record deleted within the time window specified in the `Database.getDeleted` method.

**getDeletedDate()**
Returns the deleted date of this record.

Signature
```java
public Date getDeletedDate()
```
Return Value
Type: Date

**getId()**

Returns the ID of a record deleted within the time window specified in the Database.getDeleted method.

Signature

```java
public Id getId()
```

Return Value
Type: ID

DeleteResult Class

Represents the result of a delete DML operation returned by the `Database.delete` method.

Namespace

`Database`

Usage

An array of `Database.DeleteResult` objects is returned with the `delete` database method. Each element in the DeleteResult array corresponds to the sObject array passed as the `sObject[]` parameter in the `delete` Database method; that is, the first element in the DeleteResult array matches the first element passed in the sObject array, the second element corresponds with the second element, and so on. If only one sObject is passed in, the DeleteResult array contains a single element.

Example

The following example shows how to obtain and iterate through the returned `Database.DeleteResult` objects. It deletes some queried accounts using `Database.delete` with a false second parameter to allow partial processing of records on failure. Next, it iterates through the results to determine whether the operation was successful or not for each record. It writes the ID of every record that was processed successfully to the debug log, or error messages and fields of the failed records.

```java
// Query the accounts to delete
Account[] accts = [SELECT Id from Account WHERE Name LIKE 'Acme%'];
// Delete the accounts
Database.DeleteResult[] drList = Database.delete(accts, false);

// Iterate through each returned result
for(Database.DeleteResult dr : drList) {
  if (dr.isSuccess()) {
    // Operation was successful, so get the ID of the record that was processed
    System.debug('Successfully deleted account with ID: ' + dr.getId());
  }
  else {
    // Operation failed, so get all errors
    for(Database.Error err : dr.getErrors()) {
      // Do something with the error
    }
  }
}
```
DeleteResult Methods

The following are methods for DeleteResult. All are instance methods.

IN THIS SECTION:

getErrors()

If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns an empty set.

getId()

Returns the ID of the sObject you were trying to delete.

isSuccess()

A Boolean value that is set to true if the DML operation was successful for this object, false otherwise.

getErrors()

If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns an empty set.

Signature

public Database.Error[] getErrors()

Return Value

Type: Database.Error[]

getId()

Returns the ID of the sObject you were trying to delete.

Signature

public ID getId()

Return Value

Type: ID

Usage

If this field contains a value, the object was successfully deleted. If this field is empty, the operation was not successful for that object.
isSuccess()  
A Boolean value that is set to true if the DML operation was successful for this object, false otherwise.

Signature  
public Boolean isSuccess()

Return Value
Type: Boolean

DMLOptions Class
Enables you to set options related to DML operations.

Namespace
Database

Usage
Database.DMLOptions is only available for Apex saved against API versions 15.0 and higher. DMLOptions settings take effect only for record operations performed using Apex DML and not through the Salesforce user interface. The DMLOptions class has three child options.

DML Child Options
- DmlOptions.AssignmentRuleHeader—Enables setting assignment rule options.
- DmlOptions.DuplicateRuleHeader—Determines options for using duplicate rules to detect duplicate records. Duplicate rules are part of the Duplicate Management feature.
- DmlOptions.EmailHeader—Enables setting email options.

DMLOptions Properties
The following are properties for DmlOptions.

IN THIS SECTION:
- allowFieldTruncation
  Specifies the truncation behavior of large strings.
- assignmentRuleHeader
  Specifies the assignment rule to be used when creating a case or lead.
- emailHeader
  Specifies additional information regarding the automatic email that gets sent when an events occurs.
- localeOptions
  Specifies the language of any labels that are returned by Apex.
- optAllOrNone
  Specifies whether the operation allows for partial success.
**allowFieldTruncation**
Specifies the truncation behavior of large strings.

**Signature**

```java
public Boolean allowFieldTruncation {get; set;}
```

**Property Value**

Type: `Boolean`

**Usage**

In Apex saved against API versions previous to 15.0, if you specify a value for a string and that value is too large, the value is truncated. For API version 15.0 and later, if a value is specified that is too large, the operation fails and an error message is returned. The `allowFieldTruncation` property allows you to specify that the previous behavior, truncation, be used instead of the new behavior in Apex saved against API versions 15.0 and later.

**assignmentRuleHeader**
Specifies the assignment rule to be used when creating a case or lead.

**Signature**

```java
public Database.DmlOptions.AssignmentRuleHeader assignmentRuleHeader {get; set;}
```

**Property Value**

Type: `Database.DMLOptions.AssignmentRuleHeader`

**Usage**

**Note:** The `Database.DMLOptions` object supports assignment rules for cases and leads, but not for accounts or territory management.

**emailHeader**
Specifies additional information regarding the automatic email that gets sent when an events occurs.

**Signature**

```java
public Database.DmlOptions.EmailHeader emailHeader {get; set;}
```

**Property Value**

Type: `Database.DMLOptions.EmailHeader`

**Usage**

The Salesforce user interface allows you to specify whether or not to send an email when the following events occur.

- Creation of a new case or task
• Conversion of a case email to a contact
• New user email notification
• Lead queue email notification
• Password reset

In Apex saved against API version 15.0 or later, the Database.DMLOptions.emailHeader property enables you to specify additional information regarding the email that gets sent when one of the events occurs because of the code's execution.

localeOptions

Specifies the language of any labels that are returned by Apex.

Signature

```java
public Database.DmlOptions.LocaleOptions localeOptions {get; set;}
```

Property Value

Type: Database.DMLOptions.LocaleOptions

Usage

The value must be a valid user locale (language and country), such as de_DE or en_GB. The value is a String, 2-5 characters long. The first two characters are always an ISO language code, for example ‘fr’ or ‘en.’ If the value is further qualified by a country, then the string also has an underscore (_) and another ISO country code, for example ‘US’ or ‘UK.’ For example, the string for the United States is ‘en_US’, and the string for French Canadian is ‘fr_CA.’

For a list of the languages that Salesforce supports, see Supported Languages in the Salesforce online help.

optAllOrNone

Specifies whether the operation allows for partial success.

Signature

```java
public Boolean optAllOrNone {get; set;}
```

Property Value

Type: Boolean

Usage

If optAllOrNone is set to true, all changes are rolled back if any record causes errors. The default for this property is false and successfully processed records are committed while records with errors aren’t.

This property is available in Apex saved against Salesforce API version 20.0 and later.

DmlOptions.AssignmentRuleHeader Class

Enables setting assignment rule options.
Namespace

Database

Example

The following example uses the useDefaultRule option:

```java
Database.DMLOptions dmo = new Database.DMLOptions();
dmo.assignmentRuleHeader.useDefaultRule = true;

Lead l = new Lead(company='ABC', lastname='Smith');
l.setOptions(dmo);
insert l;
```

The following example uses the assignmentRuleID option:

```java
Database.DMLOptions dmo = new Database.DMLOptions();
dmo.assignmentRuleHeader.assignmentRuleId = '01QD0000000EqAn';

Lead l = new Lead(company='ABC', lastname='Smith');
l.setOptions(dmo);
insert l;
```

DmlOptions.AssignmentRuleHeader Properties

The following are properties for DmlOptions.AssignmentRuleHeader.

IN THIS SECTION:

- **assignmentRuleID**
  - Specifies the ID of a specific assignment rule to run for the case or lead. The assignment rule can be active or inactive.

- **useDefaultRule**
  - If specified as `true` for a case or lead, the system uses the default (active) assignment rule for the case or lead. If specified, do not specify an assignmentRuleId.

**assignmentRuleID**

Specifies the ID of a specific assignment rule to run for the case or lead. The assignment rule can be active or inactive.

**Signature**

```java
public Id assignmentRuleId {get; set;}
```

**Property Value**

**Type:** ID

**Usage**

The ID can be retrieved by querying the AssignmentRule sObject. If specified, do not specify useDefaultRule.

If the value is not in the correct ID format (15-character or 18-character Salesforce ID), the call fails and an exception is returned.
useDefaultRule
If specified as true for a case or lead, the system uses the default (active) assignment rule for the case or lead. If specified, do not specify an assignmentRuleId.

Signature
public Boolean useDefaultRule {get; set;}

Property Value
Type: Boolean

Usage
If there are no assignment rules in the organization, in API version 29.0 and earlier, creating a case or lead with useDefaultRule set to true results in the case or lead being assigned to the predefined default owner. In API version 30.0 and later, the case or lead is unassigned and doesn’t get assigned to the default owner.

DMLOptions.DuplicateRuleHeader Class
Determines options for using duplicate rules to detect duplicate records. Duplicate rules are part of the Duplicate Management feature.

Namespace
Database

Example
The following example shows how to save an account record that’s been identified as a duplicate. To learn how to iterate through duplicate errors, see DuplicateError Class

```java
Database.DMLOptions dml = new Database.DMLOptions();
dml.DuplicateRuleHeader.allowSave = true;
dml.DuplicateRuleHeader.runAsCurrentUser = true;
Account duplicateAccount = new Account(Name='dupe');
Database.SaveResult sr = Database.insert(duplicateAccount, dml);
if (sr.isSuccess()) {
    System.debug('Duplicate account has been inserted in Salesforce!');
}
```

IN THIS SECTION:
DMLOptions.DuplicateRuleHeader Properties

DMLOptions.DuplicateRuleHeader Properties
The following are properties for DMLOptions.DuplicateRuleHeader.
IN THIS SECTION:

**allowSave**

For a duplicate rule, when the Alert option is enabled, bypass alerts and save duplicate records by setting this property to `true`. Prevent duplicate records from being saved by setting this property to `false`.

**runAsCurrentUser**

Make sure that sharing rules for the current user are enforced when duplicate rules run by setting this property to `true`. Use the sharing rules specified in the class for the request by setting this property to `false`. If no sharing rules are specified, Apex code runs in system context and sharing rules for the current user are not enforced.

**allowSave**

For a duplicate rule, when the Alert option is enabled, bypass alerts and save duplicate records by setting this property to `true`. Prevent duplicate records from being saved by setting this property to `false`.

**Signature**

```java
public Boolean allowSave {get; set;}
```

**Property Value**

Type: Boolean

**Example**

This example shows how to save an account record that’s been identified as a duplicate. `dml.DuplicateRuleHeader.allowSave = true` means the user should be allowed to save the duplicate. To learn how to iterate through duplicate errors, see DuplicateError Class.

```java
Database.DMLOptions dml = new Database.DMLOptions();
dml.DuplicateRuleHeader.allowSave = true;
dml.DuplicateRuleHeader.runAsCurrentUser = true;
Account duplicateAccount = new Account(Name='dupe');
Database.SaveResult sr = Database.insert(duplicateAccount, dml);
if (sr.isSuccess()) {
    System.debug('Duplicate account has been inserted in Salesforce!');
}
```

**runAsCurrentUser**

Make sure that sharing rules for the current user are enforced when duplicate rules run by setting this property to `true`. Use the sharing rules specified in the class for the request by setting this property to `false`. If no sharing rules are specified, Apex code runs in system context and sharing rules for the current user are not enforced.

**Signature**

```java
public Boolean runAsCurrentUser {get; set;}
```

**Property Value**

Type: Boolean
Usage

If specified as `true`, duplicate rules run for the current user, which ensures users can’t view duplicate records that aren’t available to them.

Use `runAsCurrentUser = true` to detect duplicates when converting leads to contacts. Typically, lead conversion Apex code runs in a system context and does not enforce sharing rules for the current user.

Example

This example shows how to set options so that duplicate rules run for the current user when saving a new account.

```java
Database.DMLOptions dml = new Database.DMLOptions();
dml.DuplicateRuleHeader.allowSave = true;
dml.DuplicateRuleHeader.runAsCurrentUser = true;
Account duplicateAccount = new Account(Name='dupe');
Database.SaveResult sr = Database.insert(duplicateAccount, dml);
if (sr.isSuccess()) {
    System.debug('Duplicate account has been inserted in Salesforce!');
}
```

DmLOptions.EmailHeader Class

Enables setting email options.

Namespace

Database

Usage

Even though auto-sent emails can be triggered by actions in the Salesforce user interface, the DmLOptions settings for `emailHeader` take effect only for DML operations carried out in Apex code.

Example

In the following example, the `triggerAutoResponseEmail` option is specified:

```java
Account a = new Account(name='Acme Plumbing');

    insert a;

    Contact c = new Contact(email='jplumber@salesforce.com',
        firstname='Joe', lastname='Plumber', accountid=a.id);

    insert c;

    Database.DMLOptions dlo = new Database.DMLOptions();
    dlo.EmailHeader.triggerAutoResponseEmail = true;

    Case ca = new Case(subject='Plumbing Problems', contactid=c.id);
```
Suppose that you use an after-insert or after-update trigger to change ownership of leads, contacts, or opportunities. If you use the API to change record ownership, or if a Lightning Experience user changes a record’s owner, no email notification is sent. To send email notifications to a record’s new owner, set the triggerUserEmail property to true.

**DmlOptions.EmailHeader Properties**

The following are properties for DmlOptions.EmailHeader.

**IN THIS SECTION:**

- **triggerAutoResponseEmail**
  Indicates whether to trigger auto-response rules (true) or not (false), for leads and cases.

- **triggerOtherEmail**
  Indicates whether to trigger email outside the organization (true) or not (false).

- **triggerUserEmail**
  Indicates whether to trigger email that is sent to users in the organization (true) or not (false).

**triggerAutoResponseEmail**

Indicates whether to trigger auto-response rules (true) or not (false), for leads and cases.

Signature

```java
public Boolean triggerAutoResponseEmail {get; set;}
```

Property Value

Type: Boolean

Usage

This email can be automatically triggered by a number of events, for example creating a case or resetting a user password. If this value is set to true, when a case is created, if there is an email address for the contact specified in ContactID, the email is sent to that address. If not, the email is sent to the address specified in SuppliedEmail.

**triggerOtherEmail**

Indicates whether to trigger email outside the organization (true) or not (false).

Signature

```java
public Boolean triggerOtherEmail {get; set;}
```

Property Value

Type: Boolean
Usage
This email can be automatically triggered by creating, editing, or deleting a contact for a case.

Note: Email sent through Apex because of a group event includes additional behaviors. A group event is an event for which IsGroupEvent is true. The EventAttendee object tracks the users, leads, or contacts that are invited to a group event. Note the following behaviors for group event email sent through Apex:

- Sending a group event invitation to a lead or contact respects the triggerOtherEmail option
- Email sent when updating or deleting a group event also respects the triggerUserEmail and triggerOtherEmail options, as appropriate

**triggerUserEmail**
Indicates whether to trigger email that is sent to users in the organization (true) or not (false).

Signature
`public Boolean triggerUserEmail {get; set;}`

Property Value
Type: Boolean

Usage
This email can be automatically triggered by a number of events; resetting a password, creating a new user, or creating or modifying a task.

Note: Adding comments to a case in Apex doesn’t trigger email to users in the organization even if triggerUserEmail is set to true.

Note: Email sent through Apex because of a group event includes additional behaviors. A group event is an event for which IsGroupEvent is true. The EventAttendee object tracks the users, leads, or contacts that are invited to a group event. Note the following behaviors for group event email sent through Apex:

- Sending a group event invitation to a user respects the triggerUserEmail option
- Email sent when updating or deleting a group event also respects the triggerUserEmail and triggerOtherEmail options, as appropriate

**DuplicateError Class**
Contains information about an error that occurred when an attempt was made to save a duplicate record. Use if your organization has set up duplicate rules, which are part of the Duplicate Management feature.

**Namespace**
Database
Example

When you try to save a record that’s identified as a duplicate record by a duplicate rule, you’ll receive a duplicate error. If the duplicate rule contains the Allow action, an attempt will be made to bypass the error.

```java
// Try to save a duplicate account
Account duplicateAccount = new Account(Name='Acme', BillingCity='San Francisco');
Database.SaveResult sr = Database.insert(duplicateAccount, false);
if (!sr.isSuccess()) {
    // Insertion failed due to duplicate detected
    for(Database.Error duplicateError : sr.getErrors()){
        Datacloud.DuplicateResult duplicateResult =
            ((Database.DuplicateError)duplicateError).getDuplicateResult();
        System.debug('Duplicate records have been detected by ' +
                      duplicateResult.getDuplicateRule());
        System.debug(duplicateResult.getErrorMessage());
    }
    // If the duplicate rule is an alert rule, we can try to bypass it
    Database.DMLOptions dml = new Database.DMLOptions();
    dml.DuplicateRuleHeader.AllowSave = true;
    Database.SaveResult sr2 = Database.insert(duplicateAccount, dml);
    if (sr2.isSuccess()) {
        System.debug('Duplicate account has been inserted in Salesforce!');
    }
}
```

IN THIS SECTION:

DuplicateError Methods

SEE ALSO:

SaveResult Class
DuplicateResult Class
Error Class

DuplicateError Methods

The following are methods for DuplicateError.

IN THIS SECTION:

gDuplicateResult()
Returns the details of a duplicate rule and duplicate records found by the duplicate rule.

gFields()
Returns an array of one or more field names. Identifies which fields in the object, if any, affected the error condition.

getMessage()
Returns the error message text.
**getStatusCode()**

Returns a code that characterizes the error.

**getDuplicateResult()**

Returns the details of a duplicate rule and duplicate records found by the duplicate rule.

**Signature**

```java
public Datacloud.DuplicateResult getDuplicateResult()
```

**Return Value**

Type: `Datacloud.DuplicateResult`

**Example**

This example shows the code used to get the possible duplicates and related match information after saving a new contact. This code is part of a custom application that implements duplicate management when users add a contact. See DuplicateResult Class on page 2007 to check out the entire sample applicaton.

```java
Datacloud.DuplicateResult duplicateResult = duplicateError.getDuplicateResult();
```

**getFields()**

Returns an array of one or more field names. Identifies which fields in the object, if any, affected the error condition.

**Signature**

```java
public List<String> getFields()
```

**Return Value**

Type: `List<String>`

**getMessage()**

Returns the error message text.

**Signature**

```java
public String getMessage()
```

**Return Value**

Type: `String`

**getStatusCode()**

Returns a code that characterizes the error.
Signature

```java
public StatusCode getStatusCode()
```

Return Value

Type: StatusCode

**EmptyRecycleBinResult Class**

The result of the emptyRecycleBin DML operation returned by the `Database.emptyRecycleBin` method.

**Namespace**

Database

**Usage**

A list of `Database.EmptyRecycleBinResult` objects is returned by the `Database.emptyRecycleBin` method. Each object in the list corresponds to either a record ID or an sObject passed as the parameter in the `Database.emptyRecycleBin` method. The first index in the `EmptyRecycleBinResult` list matches the first record or sObject specified in the list, the second with the second, and so on.

**EmptyRecycleBinResult Methods**

The following are methods for `EmptyRecycleBinResult`. All are instance methods.

**IN THIS SECTION:**

- `getErrors()`
  - If an error occurred during the delete for this record or sObject, returns a list of one or more `Database.Error` objects. If no errors occurred, the returned list is empty.
- `getId()`
  - Returns the ID of the record or sObject you attempted to delete.
- `isSuccess()`
  - Returns `true` if the record or sObject was successfully removed from the Recycle Bin; otherwise `false`.

**getErrors()**

If an error occurred during the delete for this record or sObject, returns a list of one or more `Database.Error` objects. If no errors occurred, the returned list is empty.

Signature

```java
public Database.Errors[] getErrors()
```

Return Value

Type: `Database.Errors[]`
**getId()**
Returns the ID of the record or sObject you attempted to delete.

Signature
```
public ID getId()
```

Return Value
Type: ID

**isSuccess()**
Returns `true` if the record or sObject was successfully removed from the Recycle Bin; otherwise `false`.

Signature
```
public Boolean isSuccess()
```

Return Value
Type: Boolean

**Error Class**
Represents information about an error that occurred during a DML operation when using a Database method.

**Namespace**
```
Database
```

**Usage**
Error class is part of `SaveResult`, which is generated when a user attempts to save a Salesforce record.

SEE ALSO:
- `SaveResult Class`
- `DuplicateError Class`

**Error Methods**
The following are methods for `Error`. All are instance methods.

IN THIS SECTION:
- `getFields()`
  Returns an array of one or more field names. Identifies which fields in the object, if any, affected the error condition.
- `getMessage()`
  Returns the error message text.
getStatusCode()
Returns a code that characterizes the error.

getFields()
Returns an array of one or more field names. Identifies which fields in the object, if any, affected the error condition.

Signature
public String[] getFields()

Return Value
Type: String[]

getMessage()
Returns the error message text.

Signature
public String getMessage()

Return Value
Type: String

getStatusCode()
Returns a code that characterizes the error.

Signature
public StatusCode getStatusCode()

Return Value
Type: StatusCode

Usage
The full list of status codes is available in the WSDL file for your organization (see Downloading Salesforce WSDLs and Client Authentication Certificates in the Salesforce online help.)

GetDeletedResult Class
Contains the deleted records retrieved for a specific sObject type and time window.

Namespace
Database
Usage
The Database.getDeleted method returns the deleted record information as a Database.GetDeletedResult object.

GetDeletedResult Methods
The following are methods for GetDeletedResult. All are instance methods.

IN THIS SECTION:
getDeletedRecords()
Returns a list of deleted records for the time window specified in the Database.getDeleted method call.

getEarliestDateAvailable()
Returns the date in Coordinated Universal Time (UTC) of the earliest physically deleted object for the sObject type specified in Database.getDeleted.

getLatestDateCovered()
Returns the date in Coordinated Universal Time (UTC) of the last date covered in the Database.getDeleted call.

getDeletedRecords()
Returns a list of deleted records for the time window specified in the Database.getDeleted method call.

Signature
public List<Database.DeletedRecord> getDeletedRecords()

Return Value
Type: List<Database.DeletedRecord>

getEarliestDateAvailable()
Returns the date in Coordinated Universal Time (UTC) of the earliest physically deleted object for the sObject type specified in Database.getDeleted.

Signature
public Date getEarliestDateAvailable()

Return Value
Type: Date

getLatestDateCovered()
Returns the date in Coordinated Universal Time (UTC) of the last date covered in the Database.getDeleted call.

Signature
public Date getLatestDateCovered()
Return Value
Type: Date

Usage
If there is a value, it is less than or equal to the endDate argument of Database.getDeleted. A value here indicates that, for safety, you should use this value for the startDate of your next call to capture the changes that started after this date but didn’t complete before endDate and were, therefore, not returned in the previous call.

GetUpdatedResult Class
Contains the result for the Database.getUpdated method call.

Namespace
Database

Usage
Use the methods in this class to obtain detailed information about the updated records returned by Database.getUpdated for a specific time window.

GetUpdatedResult Methods
The following are methods for GetUpdatedResult. All are instance methods.

IN THIS SECTION:

getIds()
Returns the IDs of records updated within the time window specified in the Database.getUpdated method.

getLatestDateCovered()
Returns the date in Coordinated Universal Time (UTC) of the last date covered in the Database.getUpdated call.

getIds()
Returns the IDs of records updated within the time window specified in the Database.getUpdated method.

Signature
public List<Id> getIds()

Return Value
Type: List<Id>

getLatestDateCovered()
Returns the date in Coordinated Universal Time (UTC) of the last date covered in the Database.getUpdated call.
Signature

```java
public Date getLatestDateCovered()
```

Return Value

Type: Date

**LeadConvert Class**

Contains information used for lead conversion.

**Namespace**

Database

**Usage**

The `convertLead` Database method converts a lead into an account and contact, as well as (optionally) an opportunity. The `convertLead` takes an instance of the `Database.LeadConvert` class as a parameter. Create an instance of this class and set the information required for conversion, such as setting the lead, and destination account and contact.

**Note:** The `Database.convertLead()` method can take one `LeadConvert` object or a list of `LeadConvert` objects.

**Example**

This example shows how to use the `Database.convertLead` method to convert a lead. It inserts a new lead, creates a `LeadConvert` object, sets its status to converted, then passes it to the `Database.convertLead` method. Finally, it verifies that the conversion was successful.

```java
Lead myLead = new Lead(LastName = 'Fry', Company='Fry And Sons');
insert myLead;

Database.LeadConvert lc = new Database.LeadConvert();
lc.setLeadId(myLead.id);

LeadStatus convertStatus = [SELECT Id, MasterLabel FROM LeadStatus WHERE IsConverted=true LIMIT 1];
lc.setConvertedStatus(convertStatus.MasterLabel);

Database.LeadConvertResult lcr = Database.convertLead(lc);
System.assert(lcr.isSuccess());
```

**IN THIS SECTION:**

- LeadConvert Constructors
- LeadConvert Methods

**LeadConvert Constructors**

The following are constructors for `LeadConvert`. 

1985
LeadConvert() Creates a new instance of the Database.LeadConvert class.

Signature

public LeadConvert()

LeadConvert Methods

The following are methods for LeadConvert. All are instance methods.

getAccountId() Gets the ID of the account into which the lead will be merged.

getContactId() Gets the ID of the contact into which the lead will be merged.

getConvertedStatus() Gets the lead status value for a converted lead.

getLeadId() Gets the ID of the lead to convert.

getOpportunityName() Gets the name of the opportunity to create.

getOwnerId() Gets the ID of the person to own any newly created account, contact, and opportunity.

isDoNotCreateOpportunity() Indicates whether an Opportunity is created during lead conversion (false, the default) or not (true).

isOverWriteLeadSource() Indicates whether the LeadSource field on the target Contact object is overwritten with the contents of the LeadSource field in the source Lead object (true), or not (false, the default).

isSendNotificationEmail() Indicates whether a notification email is sent to the owner specified by setOwnerId (true) or not (false, the default).

setAccountId(accountId) Sets the ID of the account into which the lead is merged. This value is required only when updating an existing account, including person accounts.

setContactId(contactId) Sets the ID of the contact into which the lead will be merged (this contact must be associated with the account specified with setAccountId, and setAccountId must be specified). This value is required only when updating an existing contact.
setConvertedStatus(status)
Sets the lead status value for a converted lead. This field is required.

setDoNotCreateOpportunity(createOpportunity)
Specifies whether to create an opportunity during lead conversion. The default value is false: opportunities are created by default. Set this flag to true only if you do not want to create an opportunity from the lead.

setLeadId(leadId)
Sets the ID of the lead to convert. This field is required.

setOpportunityId(opportunityId)
Sets the ID of the opportunity into which the lead is merged. This value is required only when updating an existing opportunity.

setOpportunityName(opportunityName)
Sets the name of the opportunity to create. If no name is specified, this value defaults to the company name of the lead.

setOverwriteLeadSource(overwriteLeadSource)
Specifies whether to overwrite the LeadSource field on the target contact object with the contents of the LeadSource field in the source lead object. The default value is false, to not overwrite the field. If you specify this as true, you must also specify setContactId for the target contact.

setOwnerId(ownerId)
Specifies the ID of the person to own any newly created account, contact, and opportunity. If the application does not specify this value, the owner of the new object will be the owner of the lead.

setSendNotificationEmail(sendEmail)
Specifies whether to send a notification email to the owner specified by setOwnerId. The default value is false, that is, to not send email.

getAccountId()
Gets the ID of the account into which the lead will be merged.

Signature
public ID getAccountId()

Return Value
Type: ID

ggetContactId()
Gets the ID of the contact into which the lead will be merged.

Signature
public ID getContactId()

Return Value
Type: ID
**getConvertedStatus()**
Gets the lead status value for a converted lead.

Signature
```java
public String getConvertedStatus()
```

Return Value
Type: `String`

**getLeadID()**
Gets the ID of the lead to convert.

Signature
```java
public ID getLeadID()
```

Return Value
Type: `ID`

**getOpportunityName()**
Gets the name of the opportunity to create.

Signature
```java
public String getOpportunityName()
```

Return Value
Type: `String`

**getOwnerID()**
Gets the ID of the person to own any newly created account, contact, and opportunity.

Signature
```java
public ID getOwnerID()
```

Return Value
Type: `ID`

**isDoNotCreateOpportunity()**
Indicates whether an Opportunity is created during lead conversion (`false`, the default) or not (`true`).
isDoNotCreateOpportunity()

Indicates whether an opportunity is created from the lead (true) or not (false, the default).

Signature

public Boolean isDoNotCreateOpportunity()

Return Value

Type: Boolean

isOverWriteLeadSource()

Indicates whether the LeadSource field on the target Contact object is overwritten with the contents of the LeadSource field in the source Lead object (true), or not (false, the default).

Signature

public Boolean isOverWriteLeadSource()

Return Value

Type: Boolean

isSendNotificationEmail()

Indicates whether a notification email is sent to the owner specified by setOwnerId (true) or not (false, the default).

Signature

public Boolean isSendNotificationEmail()

Return Value

Type: Boolean

setAccountId(accountId)

Sets the ID of the account into which the lead is merged. This value is required only when updating an existing account, including person accounts.

Signature

public Void setAccountId(ID accountId)

Parameters

accountId

Type: ID

Return Value

Type: Void
**setContactId(contactId)**
Sets the ID of the contact into which the lead will be merged (this contact must be associated with the account specified with `setAccountId`, and `setAccountId` must be specified). This value is required only when updating an existing contact.

**Signature**

```java
public Void setContactId(ID contactId)
```

**Parameters**

- `contactId`
  - Type: ID

**Return Value**

Type: Void

**Usage**

If `setContactId` is specified, then the application creates a new contact that is implicitly associated with the account. The contact name and other existing data are not overwritten (unless `setOverwriteLeadSource` is set to true, in which case only the `LeadSource` field is overwritten).

**Important:** If you are converting a lead into a person account, do not specify `setContactId` or an error will result. Specify only `setAccountId` of the person account.

**setConvertedStatus(status)**

Sets the lead status value for a converted lead. This field is required.

**Signature**

```java
public Void setConvertedStatus(String status)
```

**Parameters**

- `status`
  - Type: String

**Return Value**

Type: Void

**setDoNotCreateOpportunity(createOpportunity)**

Specifies whether to create an opportunity during lead conversion. The default value is `false`: opportunities are created by default. Set this flag to `true` only if you do not want to create an opportunity from the lead.

**Signature**

```java
public Void setDoNotCreateOpportunity(Boolean createOpportunity)
```
Parameters

\texttt{createOpportunity}

Type: \texttt{Boolean}

Return Value

Type: \texttt{Void}

\texttt{setLeadId(leadId)}

Sets the ID of the lead to convert. This field is required.

Signature

\texttt{public Void setLeadId(ID leadId)}

Parameters

\texttt{leadId}

Type: \texttt{ID}

Return Value

Type: \texttt{Void}

\texttt{setOpportunityId(opportunityId)}

Sets the ID of the opportunity into which the lead is merged. This value is required only when updating an existing opportunity.

Signature

\texttt{public Void setOpportunityId(ID opportunityId)}

Parameters

\texttt{opportunityId}

Type: \texttt{ID}

Return Value

Type: \texttt{Void}

\texttt{setOpportunityName(opportunityName)}

Sets the name of the opportunity to create. If no name is specified, this value defaults to the company name of the lead.

Signature

\texttt{public Void setOpportunityName(String opportunityName)}
Parameters

`opportunityName`

Type: String

Return Value

Type: Void

Usage

The maximum length of this field is 80 characters.

If `setDoNotCreateOpportunity` is true, no Opportunity is created and this field must be left blank; otherwise, an error is returned.

**setOverwriteLeadSource(overwriteLeadSource)**

Specifies whether to overwrite the `LeadSource` field on the target contact object with the contents of the `LeadSource` field in the source lead object. The default value is `false`, to not overwrite the field. If you specify this as `true`, you must also specify `setContactId` for the target contact.

Signature

```
public Void setOverwriteLeadSource(Boolean overwriteLeadSource)
```

Parameters

`overwriteLeadSource`

Type: Boolean

Return Value

Type: Void

**setOwnerId(ownerId)**

Specifies the ID of the person to own any newly created account, contact, and opportunity. If the application does not specify this value, the owner of the new object will be the owner of the lead.

Signature

```
public Void setOwnerId(ID ownerId)
```

Parameters

`ownerId`

Type: ID

Return Value

Type: Void
Usage
This method is not applicable when merging with existing objects— if setOwnerId is specified, the ownerId field is not overwritten in an existing account or contact.

`setSendNotificationEmail(sendEmail)`
Specifies whether to send a notification email to the owner specified by setOwnerId. The default value is `false`, that is, to not send email.

Signature
```
public Void setSendNotificationEmail(Boolean sendEmail)
```

Parameters
`sendEmail`
Type: `Boolean`

Return Value
Type: `Void`

**LeadConvertResult Class**
The result of a lead conversion.

**Namespace**
`Database`

**Usage**
An array of LeadConvertResult objects is returned with the `convertLead` Database method. Each element in the LeadConvertResult array corresponds to the sObject array passed as the `SObject[]` parameter in the `convertLead` Database method, that is, the first element in the LeadConvertResult array matches the first element passed in the SObject array, the second element corresponds to the second element, and so on. If only one sObject is passed in, the LeadConvertResult array contains a single element.

**LeadConvertResult Methods**
The following are methods for LeadConvertResult. All are instance methods.

IN THIS SECTION:
- `getAccountId()`
  The ID of the new account (if a new account was specified) or the ID of the account specified when `convertLead` was invoked.
- `getContactId()`
  The ID of the new contact (if a new contact was specified) or the ID of the contact specified when `convertLead` was invoked.
- `getErrors()`
  If an error occurred, an array of one or more database error objects providing the error code and description.
getLeadId()
The ID of the converted lead.

getOpportunityId()
The ID of the new opportunity, if one was created when convertLead was invoked.

isSuccess()
A Boolean value that is set to true if the DML operation was successful for this object, false otherwise.

getAccountId()
The ID of the new account (if a new account was specified) or the ID of the account specified when convertLead was invoked.

Signature
public ID getAccountId()

Return Value
Type: ID

getContactId()
The ID of the new contact (if a new contact was specified) or the ID of the contact specified when convertLead was invoked.

Signature
public ID getContactId()

Return Value
Type: ID

getErrors()
If an error occurred, an array of one or more database error objects providing the error code and description.

Signature
public Database.Error[] getErrors()

Return Value
Type: Database.Error[]

getLeadId()
The ID of the converted lead.

Signature
public ID getLeadId()
Return Value
Type: ID

**getOpportunityId()**
The ID of the new opportunity, if one was created when `convertLead` was invoked.

Signature
`public ID getOpportunityId()`

Return Value
Type: ID

**isSuccess()**
A Boolean value that is set to `true` if the DML operation was successful for this object, `false` otherwise.

Signature
`public Boolean isSuccess()`

Return Value
Type: Boolean

**MergeResult Class**
Contains the result of a merge Database method operation.

**Namespace**
`Database`

**Usage**
The `Database.merge` method returns a `Database.MergeResult` object for each merged record.

**MergeResult Methods**
The following are methods for `MergeResult`. All are instance methods.

**IN THIS SECTION:**
- `getErrors()`
  Returns a list of `Database.Error` objects representing the errors encountered, if any, during a merge operation using the `Database.merge` method. If no error occurred, returns null.
- `getId()`
  Returns the ID of the master record into which other records were merged.
getMergedRecordIds()
Returns the IDs of the records merged into the master record.

getUpdatedRelatedIds()
Returns the IDs of all related records that were reparented as a result of the merge that are viewable by the user sending the merge call.

isSuccess()
Indicates whether the merge was successful (true) or not (false).

getErrors()
Returns a list of Database.Error objects representing the errors encountered, if any, during a merge operation using the Database.merge method. If no error occurred, returns null.

Signature
public List<Database.Error> getErrors()

Return Value
Type: List<Database.Error>

getId()
Returns the ID of the master record into which other records were merged.

Signature
public Id getId()

Return Value
Type: ID

getMergedRecordIds()
Returns the IDs of the records merged into the master record.

Signature
public List<String> getMergedRecordIds()

Return Value
Type: List<String>

getUpdatedRelatedIds()
Returns the IDs of all related records that were reparented as a result of the merge that are viewable by the user sending the merge call.
Signature

```java
public List<String> getUpdatedRelatedIds()
```

Return Value
Type: `List<String>`

**isSuccess()**
Indicates whether the merge was successful (`true`) or not (`false`).

Signature

```java
public Boolean isSuccess()
```

Return Value
Type: `Boolean`

**QueryLocator Class**
Represents the record set returned by `Database.getQueryLocator` and used with Batch Apex.

**Namespace**
`Database`

**QueryLocator Methods**
The following are methods for `QueryLocator`. All are instance methods.

---

**getQuery()**
Returns the query used to instantiate the `Database.QueryLocator` object. This is useful when testing the `start` method.

**iterator()**
Returns a new instance of a query locator iterator.

---

**getQuery()**
Returns the query used to instantiate the `Database.QueryLocator` object. This is useful when testing the `start` method.

Signature

```java
public String getQuery()
```

Return Value
Type: `String`
Usage

You cannot use the `FOR UPDATE` keywords with a `getQueryLocator` query to lock a set of records. The `start` method automatically locks the set of records in the batch.

Example

```java
System.assertEquals(QLReturnedFromStart.getQuery(),
    Database.getQueryLocator([SELECT Id
        FROM Account]).getQuery() );
```

### iterator()

Returns a new instance of a query locator iterator.

**Signature**

```java
public Database.QueryLocatorIterator iterator()
```

**Return Value**

Type: `Database.QueryLocatorIterator`

**Usage**

⚠️ **Warning**: To iterate over a query locator, save the iterator instance that this method returns in a variable and then use this variable to iterate over the collection. Calling `iterator` every time you want to perform an iteration can result in incorrect behavior because each call returns a new iterator instance.

For an example, see `QueryLocatorIterator Class`.

### QueryLocatorIterator Class

Represents an iterator over a query locator record set.

**Namespace**

`Database`

**Example**

This sample shows how to obtain an iterator for a query locator, which contains five accounts. This sample calls `hasNext` and `next` to get each record in the collection.

```java
// Get a query locator
Database.QueryLocator q = Database.getQueryLocator(
    [SELECT Name FROM Account LIMIT 5]);
// Get an iterator
Database.QueryLocatorIterator it = q.iterator();
// Iterate over the records
```
while (it.hasNext())
{
    Account a = (Account)it.next();
    System.debug(a);
}

**QueryLocatorIterator Methods**

The following are methods for `QueryLocatorIterator`. All are instance methods.

**IN THIS SECTION:**
- `hasNext()`
  - Returns `true` if there are one or more records remaining in the collection; otherwise, returns `false`.
- `next()`
  - Advances the iterator to the next sObject record and returns the sObject.

### hasNext()

Returns `true` if there are one or more records remaining in the collection; otherwise, returns `false`.

**Signature**

```java
public Boolean hasNext()
```

**Return Value**

Type: `Boolean`

### next()

Advances the iterator to the next sObject record and returns the sObject.

**Signature**

```java
public sObject next()
```

**Return Value**

Type: `sObject`

**Usage**

Because the return value is the generic `sObject` type, you must cast it if using a more specific type. For example:

```java
Account a = (Account)myIterator.next();
```

**Example**

```java
Account a = (Account)myIterator.next();
```
SaveResult Class

The result of an insert or update DML operation returned by a Database method.

Namespace

Database

Usage

An array of SaveResult objects is returned with the insert and update database methods. Each element in the SaveResult array corresponds to the sObject array passed as the sObject[] parameter in the Database method, that is, the first element in the SaveResult array matches the first element passed in the sObject array, the second element corresponds with the second element, and so on. If only one sObject is passed in, the SaveResult array contains a single element.

A SaveResult object is generated when a new or existing Salesforce record is saved.

Example

The following example shows how to obtain and iterate through the returned Database.SaveResult objects. It inserts two accounts using Database.insert with a false second parameter to allow partial processing of records on failure. One of the accounts is missing the Name required field, which causes a failure. Next, it iterates through the results to determine whether the operation was successful or not for each record. It writes the ID of every record that was processed successfully to the debug log, or error messages and fields of the failed records. This example generates one successful operation and one failure.

```java
// Create two accounts, one of which is missing a required field
Account[] accts = new List<Account>{
    new Account(Name='Account1'),
    new Account();
};
Database.SaveResult[] srList = Database.insert(accts, false);

// Iterate through each returned result
for (Database.SaveResult sr : srList) {
    if (sr.isSuccess()) {
        // Operation was successful, so get the ID of the record that was processed
        System.debug('Successfully inserted account. Account ID: ' + sr.getId());
    } else {
        // Operation failed, so get all errors
        for(Database.Error err : sr.getErrors()) {
            System.debug('The following error has occurred.
            System.debug(err.getStatusCode() + ': ' + err.getMessage());
            System.debug('Account fields that affected this error: ' + err.getFields());
        }
    }
}
```

SEE ALSO:

Error Class

DuplicateError Class
SaveResult Methods

The following are methods for SaveResult. All are instance methods.

IN THIS SECTION:

getErrors()
If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error
occurred, returns an empty set.

getId()
Returns the ID of the sObject you were trying to insert or update.

isSuccess()
Returns a Boolean that is set to true if the DML operation was successful for this object, false otherwise.

getErrors()
If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred,
returns an empty set.

Signature

public Database.Error[] getErrors()

Return Value
Type: Database.Error[]

getId()
Returns the ID of the sObject you were trying to insert or update.

Signature

public ID getId()

Return Value
Type: ID

Usage
If this field contains a value, the object was successfully inserted or updated. If this field is empty, the operation was not successful for
that object.

isSuccess()
Returns a Boolean that is set to true if the DML operation was successful for this object, false otherwise.
Signature

public Boolean isSuccess()

Return Value

Type: Boolean

Example

This example shows the code used to process duplicate records, which are detected when there is an unsuccessful save due to an error. This code is part of a custom application that implements duplicate management when users add a contact. See DuplicateResult Class on page 2007 to check out the entire sample application.

```java
if (!saveResult.isSuccess()) { ... }
```

UndeleteResult Class

The result of an undelete DML operation returned by the Database.undelete method.

Namespace

Database

Usage

An array of Database.UndeleteResult objects is returned with the undelete database method. Each element in the UndeleteResult array corresponds to the sObject array passed as the sObject[] parameter in the undelete Database method; that is, the first element in the UndeleteResult array matches the first element passed in the sObject array, the second element corresponds with the second element, and so on. If only one sObject is passed in, the UndeleteResults array contains a single element.

UndeleteResult Methods

The following are methods for UndeleteResult. All are instance methods.

IN THIS SECTION:

- getErrors()  
  If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns null.
- getId()  
  Returns the ID of the sObject you were trying to undelete.
- isSuccess()  
  Returns a Boolean value that is set to true if the DML operation was successful for this object, false otherwise.

getErrors()

If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns null.
Signature
public Database.Error[] getErrors()

Return Value
Type: Database.Error[]

getErrors()

Returns the ID of the sObject you were trying to undelete.

Signature
public ID getId()

Return Value
Type: ID

Usage
If this field contains a value, the object was successfully undeleted. If this field is empty, the operation was not successful for that object.

isSuccess()

Returns a Boolean value that is set to true if the DML operation was successful for this object, false otherwise.

Signature
public Boolean isSuccess()

Return Value
Type: Boolean

UpsertResult Class

The result of an upsert DML operation returned by the Database.upsert method.

Namespace
Database

Usage
An array of Database.UpsertResult objects is returned with the upsert database method. Each element in the UpsertResult array corresponds to the sObject array passed as the sObject[] parameter in the upsert Database method; that is, the first element in the UpsertResult array matches the first element passed in the sObject array, the second element corresponds with the second element, and so on. If only one sObject is passed in, the UpsertResults array contains a single element.
UpsertResult Methods
The following are methods for UpsertResult. All are instance methods.

IN THIS SECTION:

getErrors()
If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns an empty set.

getId()
Returns the ID of the sObject you were trying to update or insert.

isCreated()
A Boolean value that is set to true if the record was created, false if the record was updated.

isSuccess()
Returns a Boolean value that is set to true if the DML operation was successful for this object, false otherwise.

getErrors()
If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns an empty set.

Signature
public Database.Error[] getErrors()

Return Value
Type: Database.Error []

getId()
Returns the ID of the sObject you were trying to update or insert.

Signature
public ID getId()

Return Value
Type: ID

Usage
If this field contains a value, the object was successfully updated or inserted. If this field is empty, the operation was not successful for that object.

isCreated()
A Boolean value that is set to true if the record was created, false if the record was updated.
Signature
public Boolean isCreated()

Return Value
Type: Boolean

isSuccess()
Returns a Boolean value that is set to true if the DML operation was successful for this object, false otherwise.

Signature
public Boolean isSuccess()

Return Value
Type: Boolean

Datacloud Namespace

The Datacloud namespace provides classes and methods for retrieving information about duplicate rules. Duplicate rules let you control whether and when users can save duplicate records within Salesforce.

The following are the classes in the Datacloud namespace.

IN THIS SECTION:

- AdditionalInformationMap Class
  - Represents other information, if any, about matched records.

- DuplicateResult Class
  - Represents the details of a duplicate rule that detected duplicate records and information about those duplicate records.

- FieldDiff Class
  - Represents the name of a matching rule field and how the values of the field compare for the duplicate and its matching record.

- FindDuplicates Class
  - Performs rule-based searches for duplicate records. The input is an array of sObjects. Each sObject represents a record you want to find duplicates of. The output identifies the detected duplicates for each input sObject based on active duplicate rules for the given object.

- FindDuplicatesByIds Class
  - Performs rule-based searches for duplicate records. The input is an array of IDs. Each ID specifies records to search for duplicates among. The duplicates are detected based on the active duplicate rules applicable to the object type corresponding to the input IDs.

- FindDuplicatesResult Class
  - Output for rule-based searches for duplicate records. FindDuplicatesResult contains results of detecting duplicates using instances of FindDuplicates or FindDuplicatesByIds classes.

- MatchRecord Class
  - Represents a duplicate record detected by a matching rule.
MatchResult Class
Represents the duplicate results for a matching rule.

AdditionalInformationMap Class
Represents other information, if any, about matched records.

Namespace
Datacloud

IN THIS SECTION:
AdditionalInformationMap Methods

AdditionalInformationMap Methods
The following are methods for AdditionalInformationMap.

IN THIS SECTION:
getName()
Returns the element name.

getValue()
Returns the value of the element.

**getName()**
Returns the element name.

Signature
```
public String getName()
```

Return Value
Type: String

**getValue()**
Returns the value of the element.

Signature
```
public String getValue()
```

Return Value
Type: String
**DuplicateResult Class**

Represents the details of a duplicate rule that detected duplicate records and information about those duplicate records.

**Namespace**

Datacloud

**Usage**

The DuplicateResult class and its methods are available to organizations that use duplicate rules. DuplicateResult is contained within DuplicateError, which is part of SaveResult. SaveResult is generated when a user attempts to save a record in Salesforce.

**Example**

This example shows a custom application that lets users add a contact. When a contact is saved, an alert displays if there are duplicate records.

The sample application consists of a Visualforce page and an Apex controller. The Visualforce page is listed first so that you can see how the page makes use of the Apex controller. Save the Apex class first before saving the Visualforce page.

```xml
<apex:page controller="ContactDedupeController">
    <apex:form>
        <apex:pageBlock title="Duplicate Records" rendered="{!hasDuplicateResult}"
            <apex:pageMessages />
            <apex:pageBlockTable value="{!duplicateRecords}" var="item">
                <apex:column>
                    <apex:facet name="header">Name</apex:facet>
                    <apex:outputLink value="/{!item['Id']}">{!item['Name']}</apex:outputLink>
                </apex:column>
                <apex:column>
                    <apex:facet name="header">Owner</apex:facet>
                    <apex:outputField value="{!item['OwnerId']}"/>
                </apex:column>
                <apex:column>
                    <apex:facet name="header">Last Modified Date</apex:facet>
                    <apex:outputField value="{!item['LastModifiedDate']}"/>
                </apex:column>
            </apex:pageBlockTable>
        </apex:pageBlock>
        <apex:pageBlock title="Contact" mode="edit">
            <apex:pageBlockButtons>
                <apex:commandButton value="Save" action="{!save}"/>
            </apex:pageBlockButtons>
            <apex:pageBlockSection>
                <apex:inputField value="{!Contact.FirstName}"/>
                <apex:inputField value="{!Contact.LastName}"/>
                <apex:inputField value="{!Contact.Email}"/>
                <apex:inputField value="{!Contact.Phone}"/>
            </apex:pageBlockSection>
        </apex:pageBlock>
    </apex:form>
</apex:page>
```
This is the Apex controller for the page. This controller contains the action method for the Save button. The `save` method inserts the new contact. If errors are returned, this method iterates through each error, checks if it’s a duplicate error, adds the error message to the page, and returns information about the duplicate records to be displayed on the page.

```java
public class ContactDedupeController {

    // Initialize a variable to hold the contact record you're processing
    private final Contact contact;

    // Initialize a list to hold any duplicate records
    private List<sObject> duplicateRecords;

    // Define variable that's true if there are duplicate records
    public boolean hasDuplicateResult{get;set;}

    // Define the constructor
    public ContactDedupeController() {

        // Define the values for the contact you're processing based on its ID
        Id id = ApexPages.currentPage().getParameters().get('id');
        this.contact = (id == null) ? new Contact() :
            [SELECT Id, FirstName, LastName, Email, Phone, AccountId
             FROM Contact WHERE Id = :id];

        // Initialize empty list of potential duplicate records
        this.duplicateRecords = new List<sObject>();
        this.hasDuplicateResult = false;
    }

    // Return contact and its values to the Visualforce page for display
    public Contact getContact() {
        return this.contact;
    }

    // Return duplicate records to the Visualforce page for display
    public List<sObject> getDuplicateRecords() {
        return this.duplicateRecords;
    }

    // Process the saved record and handle any duplicates
    public PageReference save() {

        // Optionally, set DML options here, use "DML" instead of "false"
        // in the insert()
        Database.DMLOptions dml = new Database.DMLOptions();
        dml.DuplicateRuleHeader.allowSave = true;
        dml.DuplicateRuleHeader.runAsCurrentUser = true;
        Database.SaveResult saveResult = Database.insert(contact, false);
    }
}
```
if (!saveResult.isSuccess()) {
  for (Database.Error error : saveResult.getErrors()) {
    // If there are duplicates, an error occurs
    // Process only duplicates and not other errors
    // (e.g., validation errors)
    if (error instanceof Database.DuplicateError) {
      // Handle the duplicate error by first casting it as a
      // DuplicateError class
      // This lets you use methods of that class
      // (e.g., getDuplicateResult())
      Database.DuplicateError duplicateError =
        (Database.DuplicateError)error;
      Datacloud.DuplicateResult duplicateResult =
        duplicateError.getDuplicateResult();

      // Display duplicate error message as defined in the duplicate rule
      ApexPages.Message errorMessage = new ApexPages.Message{
        ApexPages.Severity.ERROR, 'Duplicate Error: ' +
        duplicateResult.getErrorMessage());
      ApexPages.addMessage(errorMessage);

      // Get duplicate records
      this.duplicateRecords = new List<sObject>();

      // Return only match results of matching rules that
      // find duplicate records
      Datacloud.MatchResult[] matchResults =
        duplicateResult.getMatchResults();

      // Just grab first match result (which contains the
      // duplicate record found and other match info)
      Datacloud.MatchResult matchResult = matchResults[0];
      Datacloud.MatchRecord[] matchRecords = matchResult.getMatchRecords();

      // Add matched record to the duplicate records variable
      for (Datacloud.MatchRecord matchRecord : matchRecords) {
        System.debug('MatchRecord: ' + matchRecord.getRecord());
        this.duplicateRecords.add(matchRecord.getRecord());
      }
      this.hasDuplicateResult = !this.duplicateRecords.isEmpty();
    }
  }

  // If there’s a duplicate record, stay on the page
  return null;
}

// After save, navigate to the view page:
return (new ApexPages.StandardController(contact)).view();

DuplicateResult Methods

SEE ALSO:

SaveResult Class
DuplicateError Class

DuplicateResult Methods

The following are methods for DuplicateResult.

IN THIS SECTION:

gDuplicateRule()  
Returns the developer name of the executed duplicate rule that returned duplicate records.

gErrorMessage()  
Returns the error message configured by the administrator to warn users they may be creating duplicate records. This message is associated with a duplicate rule.

gMatchResults()  
Returns the duplicate records and match information.

isAllowSave()  
Indicates whether the duplicate rule will allow a record that’s identified as a duplicate to be saved. Set to true if duplicate rule should allow save; otherwise, false.

getDuplicateRule()

Returns the developer name of the executed duplicate rule that returned duplicate records.

Signature

public String getDuplicateRule()

Return Value

Type: String

gErrorMessage()

Returns the error message configured by the administrator to warn users they may be creating duplicate records. This message is associated with a duplicate rule.

Signature

public String getErrorMessage()

Return Value

Type: String
Example
This example shows the code used to display the error message when duplicates are found while saving a new contact. This code is part of a custom application that lets users add a contact. When a contact is saved, an alert displays if there are duplicate records. Review DuplicateResult Class on page 2007 to check out the entire sample application.

```java
ApexPages.Message errorMessage = new ApexPages.Message{
    ApexPages.Severity.ERROR, 'Duplicate Error: ' +
    duplicateResult.getErrorMessage());
ApexPages.addMessage(errorMessage);
```

getMatchResults()
Returns the duplicate records and match information.

Signature
```java
public List<Datacloud.MatchResult> getMatchResults()
```

Return Value
Type: List<Datacloud.MatchResult>

Example
This example shows the code used to return duplicate record and match information and assign it to the matchResults variable. This code is part of a custom application that implements duplicate management when users add a contact. See DuplicateResult Class on page 2007 to check out the entire sample application.

```java
Datacloud.MatchResult[] matchResults =
    duplicateResult.getMatchResults();
```

isAllowSave()
Indicates whether the duplicate rule will allow a record that’s identified as a duplicate to be saved. Set to true if duplicate rule should allow save; otherwise, false.

Signature
```java
public Boolean isAllowSave()
```

Return Value
Type: Boolean

FieldDiff Class
Represents the name of a matching rule field and how the values of the field compare for the duplicate and its matching record.

Namespace
Datacloud
FieldDiff Methods

The following are methods for FieldDiff.

getDifference()

Returns how the field values compare for the duplicate and its matching record.

Signature

public String getDifference()

Return Value

Type: String

Possible values include:

- **SAME**: Indicates the field values match exactly.
- **DIFFERENT**: Indicates that the field values do not match.
- **NULL**: Indicates that the field values are a match because both values are blank.

getName()

Returns the name of a field on a matching rule that detected duplicates.

Signature

public String getName()

Return Value

Type: String

FindDuplicates Class

Performs rule-based searches for duplicate records. The input is an array of sObjects. Each sObject represents a record you want to find duplicates of. The output identifies the detected duplicates for each input sObject based on active duplicate rules for the given object.
Namespace

Datacloud

IN THIS SECTION:

FindDuplicates Methods

FindDuplicates Methods

The following are methods for FindDuplicates.

IN THIS SECTION:

findDuplicates(sObjects)

Identifies duplicates for sObjects provided and returns a list of FindDuplicatesResult objects.

findDuplicates(sObjects)

Identifies duplicates for sObjects provided and returns a list of FindDuplicatesResult objects.

Usage

Use FindDuplicates to apply active duplicate rules associated with an object to records represented by input sObjects. FindDuplicates uses the duplicate rules for the object that has the same type as the input sObjects.

Input

• All sObjects in the input array must be of the same object type, and that type must correspond to an object type that supports duplicate rules.

• The input array is limited to 50 elements. If you exceed this limit, an exception is thrown with the following message: Configuration error: The number of records to check is greater than the permitted batch size.

Output

• The output of FindDuplicates is an array of objects with the same number of elements as the input array, and in the same order. The output objects encapsulate record IDs for duplicate records. The output objects also contain values from the duplicate records.

• Each element contains an array of DuplicateResult objects. If FindDuplicates doesn't find any duplicates, the duplicateRule field in DuplicateResult contains the name of the duplicate rule that FindDuplicates applied, but the matchResults array is empty.

Example

```java
Account acct = new Account();
acct.Name = 'Acme';
acct.BillingStreet = '123 Fake St';
acct.BillingCity = 'Springfield';
acct.BillingState = 'VT';
acct.BillingCountry = 'US';
List<Account> acctList = new List<Account>();
```
acctList.add(acct);

if (Datacloud.FindDuplicates.findDuplicates(acctList).size() == 0) {
// If the new account doesn't have duplicates, insert it.
    insert(acct);
}

Signature

public static List<Datacloud.FindDuplicatesResult> findDuplicates(List<SObject> sObjects)

Parameters

sObjects
Type: List<SObject>
An array of sObjects for which you want to find duplicates.

Return Value

Type: List<Datacloud.FindDuplicatesResult>

FindDuplicatesByIds Class

Performs rule-based searches for duplicate records. The input is an array of IDs. Each ID specifies records to search for duplicates among. The duplicates are detected based on the active duplicate rules applicable to the object type corresponding to the input IDs.

Namespace

Datacloud

IN THIS SECTION:

FindDuplicatesByIds Methods

FindDuplicatesByIds Methods

The following are methods for FindDuplicatesByIds.

IN THIS SECTION:

findDuplicatesByIds(ids)
Identifies duplicates of sObjects provided and returns a list of Datacloud.FindDuplicatesResult objects.

findDuplicatesByIds(ids)
Identifies duplicates of sObjects provided and returns a list of Datacloud.FindDuplicatesResult objects.

Usage

Use FindDuplicatesByIds to apply active duplicate rules associated with an object to records represented by the record IDs.
FindDuplicatesByIds uses the duplicate rules for the object that has the same type as the input record IDs. For example, if the record ID represents an Account, FindDuplicatesByIds uses the duplicate rules associated with the Account object.

**Input**
- All record IDs in the input array must be of the same object type, and that type must correspond to an object type that supports duplicate rules.
- The input array is limited to 50 elements. If you exceed this limit, an exception is thrown with the following message: Configuration error: The number of records to check is greater than the permitted batch size.

**Output**
- The output of FindDuplicatesByIds is an array of objects with the same number of elements as the input array, and in the same order. The output objects encapsulate record IDs for duplicate records. The output objects also contain values from the duplicate records.
- Each element contains an array of DuplicateResult objects. If FindDuplicatesByIds doesn’t find any duplicates, the duplicateRule field in DuplicateResult contains the name of the duplicate rule that FindDuplicatesByIds applied, but the matchResults array is empty.

**Example**

```java
Account acct = new Account(name='Salesforce');
insert acct;

List<Id> idList = new List<Id>();
idList.add(acct.id);

if (Datacloud.FindDuplicatesByIds.findDuplicatesByIds(idList).size() > 0) {
    System.debug('Found duplicates');
}
```

**Signature**

```java
public static List<Datacloud.FindDuplicatesResult> findDuplicatesByIds(List<Id> ids)
```

**Parameters**

- **ids**
  - Type: List<Id>
  - A list of IDs for which you want to find duplicates.

**Return Value**

- Type: List<Datacloud.FindDuplicatesResult>

### FindDuplicatesResult Class

Output for rule-based searches for duplicate records. FindDuplicatesResult contains results of detecting duplicates using instances of FindDuplicates or FindDuplicatesByIds classes.
Namespace
Datacloud

IN THIS SECTION:
FindDuplicatesResult Properties
FindDuplicatesResult Methods

FindDuplicatesResult Properties
The following are properties for FindDuplicatesResult.

IN THIS SECTION:
duplicateresults
A list of DuplicateResult objects representing the results of calling FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids). Elements in the list correspond to sObjects or IDs in the input list.

errors
A list of Database.Error objects holding errors resulting from calling FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids).

success
Boolean signifying whether the call to FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids) was successful.

duplicateresults
A list of DuplicateResult objects representing the results of calling FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids). Elements in the list correspond to sObjects or IDs in the input list.

Signature
public List<Datacloud.DuplicateResult> duplicateresults

Property Value
Type: List<DuplicateResult>

errors
A list of Database.Error objects holding errors resulting from calling FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids).

Signature
public List<Database.Error> errors {get; set;}

2016
Property Value
Type: List<Database.Error>

**success**
Boolean signifying whether the call to `FindDuplicates.findDuplicates(sObjects)` or `FindDuplicatesByIds.findDuplicatesByIds(ids)` was successful.

Signature
`public Boolean success {get; set;}`

FindDuplicatesResult Methods
The following are methods for `FindDuplicatesResult`.

**IN THIS SECTION:**
- `getDuplicateResults()`
  Returns a list of `DuplicateResult` objects representing the results of calling `FindDuplicates.findDuplicates(sObjects)` or `FindDuplicatesByIds.findDuplicatesByIds(ids)`. Elements in the list correspond to `sObjects` or IDs in the input list.
- `getErrors()`
  Returns a list of `DatabaseError` objects containing errors resulting from calling `FindDuplicates.findDuplicates(sObjects)` or `FindDuplicatesByIds.findDuplicatesByIds(ids)`, if errors were encountered.
- `isSuccess()`
  Returns a Boolean signifying whether the call to `FindDuplicates.findDuplicates(sObjects)` or `FindDuplicatesByIds.findDuplicatesByIds(ids)` was successful.

**getDuplicateResults()**
Returns a list of `DuplicateResult` objects representing the results of calling `FindDuplicates.findDuplicates(sObjects)` or `FindDuplicatesByIds.findDuplicatesByIds(ids)`. Elements in the list correspond to `sObjects` or IDs in the input list.

Example
```java
Account acct = new Account(name='Salesforce');
List<Account> acctList = new List<Account>();
acctList.add(acct);

Datacloud.FindDuplicatesResult[] results = Datacloud.FindDuplicates.findDuplicates(acctList);
for (Datacloud.FindDuplicatesResult findDupeResult : results) {
    for (Datacloud.DuplicateResult dupeResult : findDupeResult.getDuplicateResults()) {
```
for (Datacloud.MatchResult matchResult : dupeResult.getMatchResults()) {
    for (Datacloud.MatchRecord matchRecord : matchResult.getMatchRecords()) {
        System.debug('Duplicate Record: ' + matchRecord.getRecord());
    }
}

Signature

public List<Datacloud.DuplicateResult> getDuplicateResults()

Return Value

Type: List<DuplicateResult> on page 2007

getErrors()

Returns a list of DatabaseError objects containing errors resulting from calling
FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids),
if errors were encountered.

Signature

public List<Database.Error> getErrors()

Return Value

Type: List<Database.Error>

isSuccess()

Returns a Boolean signifying whether the call to FindDuplicates.findDuplicates(sObjects) or
FindDuplicatesByIds.findDuplicatesByIds(ids) was successful.

Signature

public Boolean isSuccess()

Return Value

Type: Boolean

MatchRecord Class

Represents a duplicate record detected by a matching rule.

Namespace

Datacloud
IN THIS SECTION:
MatchRecord Methods

MatchRecord Methods
The following are methods for MatchRecord.

IN THIS SECTION:

getAdditionalInformation()
Returns other information about a matched record. For example, a matchGrade represents the quality of the data for the D&B fields in the matched record.

getFieldDiffs()
Returns all matching rule fields and how each field value compares for the duplicate and its matching record.

getMatchConfidence()
Returns the ranking of how similar a matched record’s data is to the data in your request. Must be equal to or greater than the value of the minMatchConfidence specified in your request. Returns -1 if unused.

getRecord()
Returns the fields and field values for the duplicate.

getAdditionalInformation()
Returns other information about a matched record. For example, a matchGrade represents the quality of the data for the D&B fields in the matched record.

Signature
public List<Datacloud.AdditionalInformationMap> getAdditionalInformation()

Return Value
Type: List<Datacloud.AdditionalInformationMap>

ggetFieldDiffs()
Returns all matching rule fields and how each field value compares for the duplicate and its matching record.

Signature
public List<Datacloud.FieldDiff> getFieldDiffs()

Return Value
Type: List<Datacloud.FieldDiff>

getMatchConfidence()
Returns the ranking of how similar a matched record’s data is to the data in your request. Must be equal to or greater than the value of the minMatchConfidence specified in your request. Returns -1 if unused.
Signature
```
public Double getMatchConfidence()
```

Return Value
Type: Double

**getRecord()**
Returns the fields and field values for the duplicate.

Signature
```
public SObject getRecord()
```

Return Value
Type: SObject

**MatchResult Class**
Represents the duplicate results for a matching rule.

**Namespace**
Datacloud

**IN THIS SECTION:**
- MatchResult Methods

**MatchResult Methods**
The following are methods for MatchResult.

**IN THIS SECTION:**
- getEntityType
  Returns the entity type of the matching rule.
- getErrors
  Returns errors that occurred during matching for the matching rule.
- getMatchEngine
  Returns the match engine for the matching rule.
- getMatchRecords
  Returns information about the duplicates for the matching rule.
- getRule
  Returns the developer name of the matching rule.
getSize()
Returns the number of duplicates detected by the matching rule.

isSuccess()
Returns false if there’s an error with the matching rule, and true if the matching rule successfully ran.

g_EntityType()
Returns the entity type of the matching rule.

Signature
public String getEntityType()

Return Value
Type: String

g_Errors()
Returns errors that occurred during matching for the matching rule.

Signature
public List<Database.Error> getErrors()

Return Value
Type: List<Database.Error>

g_MatchEngine()
Returns the match engine for the matching rule.

Signature
public String getMatchEngine()

Return Value
Type: String

g_MatchRecords()
Returns information about the duplicates for the matching rule.

Signature
public List<Datacloud.MatchRecord> getMatchRecords()
Return Value
Type: List<Datacloud.MatchRecord>

getRule()
Returns the developer name of the matching rule.

Signature
public String getRule()

Return Value
Type: String

getSize()
Returns the number of duplicates detected by the matching rule.

Signature
public Integer getSize()

Return Value
Type: Integer

isSuccess()
Returns false if there's an error with the matching rule, and true if the matching rule successfully ran.

Signature
public Boolean isSuccess()

Return Value
Type: Boolean

DataSource Namespace
The DataSource namespace provides the classes for the Apex Connector Framework. Use the Apex Connector Framework to develop a custom adapter for Salesforce Connect. Then connect your Salesforce organization to any data anywhere via the Salesforce Connect custom adapter.

The following are the classes in the DataSource namespace.
IN THIS SECTION:

**AsyncDeleteCallback Class**
A callback class that the `Database.deleteAsync` method references. Salesforce calls this class after the remote `deleteAsync` operation is completed. This class provides the compensating transaction in the completion context of the delete operation. Extend this class to define the actions to execute after the remote delete operation finishes execution.

**AsyncSaveCallback Class**
A callback class that the `Database.insertAsync` or `Database.updateAsync` method references. Salesforce calls this class after the remote operation is completed. This class provides the compensating transaction in the completion context of the insert or update operation. Extend this class to define the actions to execute after the remote insert or update operation finishes execution.

**AuthenticationCapability Enum**
Specifies the types of authentication that can be used to access the external system.

**AuthenticationProtocol Enum**
Determines what type of credentials are used to authenticate to the external system.

**Capability Enum**
Declares which functional operations the external system supports. Also specifies required endpoint settings for the external data source definition.

**Column Class**
Describes a column on a `DataSource.Table`. This class extends the `DataSourceUtil` class and inherits its methods.

**ColumnSelection Class**
Identifies the list of columns to return during a query or search.

**Connection Class**
Extend this class to enable your Salesforce org to sync the external system's schema and to handle queries, searches, and write operations (upsert and delete) of the external data. This class extends the `DataSourceUtil` class and inherits its methods.

**ConnectionParams Class**
Contains the credentials for authenticating to the external system.

**DataSourceUtil Class**
Parent class for the `DataSource.Provider`, `DataSource.Connection`, `DataSource.Table`, and `DataSource.Column` classes.

**DataType Enum**
Specifies the data types that are supported by the Apex Connector Framework.

**DeleteContext Class**
An instance of `DeleteContext` is passed to the `deleteRows()` method on your `Database.Connection` class. The class provides context information about the delete request to the implementor of `deleteRows()`.

**DeleteResult Class**
Represents the result of a delete operation on an sObject record. The result is returned by the `DataSource.deleteRows` method of the `DataSource.Connection` class.

**Filter Class**
Represents a `WHERE` clause in a SOSL or SOQL query.

**FilterType Enum**
Referenced by the `type` property on a `DataSource.Filter`. 2023
IdentityType Enum
Determines which set of credentials is used to authenticate to the external system.

Order Class
Contains details about how to sort the rows in the result set. Equivalent to an ORDER BY statement in a SOQL query.

OrderDirection Enum
Specifies the direction for sorting rows based on column values.

Provider Class
Extend this base class to create a custom adapter for Salesforce Connect. The class informs Salesforce of the functional and authentication capabilities that are supported by or required to connect to the external system. This class extends the DataSourceUtil class and inherits its methods.

QueryAggregation Enum
 Specifies how to aggregate a column in a query.

QueryContext Class
An instance of QueryContext is provided to the query method on your DataSource.Connection class. The instance corresponds to a SOQL request.

QueryUtils Class
Contains helper methods to locally filter, sort, and apply limit and offset clauses to data rows. This helper class is provided for your convenience during early development and tests, but it isn’t supported for use in production environments.

ReadContext Class
Abstract base class for the QueryContext and SearchContext classes.

SearchContext Class
An instance of SearchContext is provided to the search method on your DataSource.Connection class. The instance corresponds to a search or SOSL request.

SearchUtils Class
Helper class for implementing search on a custom adapter for Salesforce Connect.

Table Class
Describes a table on an external system that the Salesforce Connect custom adapter connects to. This class extends the DataSourceUtil class and inherits its methods.

TableResult Class
Contains the results of a search or query.

TableSelection Class
Contains a breakdown of the SOQL or SOSL query. Its properties represent the FROM, ORDER BY, SELECT, and WHERE clauses in the query.

UpsertContext Class
An instance of UpsertContext is passed to the upsertRows() method on your DataSource.Connection class. This class provides context information about the upsert request to the implementor of upsertRows().

UpsertResult Class
Represents the result of an upsert operation on an external object record. The result is returned by the upsertRows method of the DataSource.Connection class.

DataSource Exceptions
The DataSource namespace contains exception classes.
AsyncDeleteCallback Class

A callback class that the `Database.deleteAsync` method references. Salesforce calls this class after the remote `deleteAsync` operation is completed. This class provides the compensating transaction in the completion context of the delete operation. Extend this class to define the actions to execute after the remote delete operation finishes execution.

Namespace

`DataSource`

IN THIS SECTION:

AsyncDeleteCallback Methods

AsyncDeleteCallback Methods

The following are methods for `AsyncDeleteCallback`.

IN THIS SECTION:

`processDelete(deleteResult)`

Override this method to define actions that Salesforce executes after a remote `Database.deleteAsync` operation is completed. For example, based on the results of the remote operation, you can update custom object data or other data that’s stored in the Salesforce org..

`processDelete(deleteResult)`

Override this method to define actions that Salesforce executes after a remote `Database.deleteAsync` operation is completed. For example, based on the results of the remote operation, you can update custom object data or other data that’s stored in the Salesforce org..

Signature

`public void processDelete(Database.DeleteResult deleteResult)`

Parameters

`deleteResult`

Type: `Database.DeleteResult`

The result of the asynchronous delete operation.

Return Value

Type: `void`

AsyncSaveCallback Class

A callback class that the `Database.insertAsync` or `Database.updateAsync` method references. Salesforce calls this class after the remote operation is completed. This class provides the compensating transaction in the completion context of the insert or update operation. Extend this class to define the actions to execute after the remote insert or update operation finishes execution.
AsyncSaveCallback Methods

The following are methods for AsyncSaveCallback.

过程Save (saveResult)

Override this method to define actions that Salesforce executes after the remote Database.insertAsync or Database.updateAsync operation is completed. For example, based on the results of the remote operation, you can update custom object data or other data that's stored in the Salesforce org.

Signature

public void processSave(Database.SaveResult saveResult)

Parameters

saveResult
Type: Database.SaveResult
The result of the asynchronous insert or update operation.

Return Value

Type: void

AuthenticationCapability Enum

Specifies the types of authentication that can be used to access the external system.

Usage

The DataSource.Provider class returns DataSource.AuthenticationCapability enum values. The returned values determine which authentication settings are available on the external data source definition in Salesforce.

If you set up callouts in your DataSource.Connection class, you can specify the callout endpoints as named credentials instead of URLs. If you do so for all callouts, return ANONYMOUS as the sole entry in the list of data source authentication capabilities. That way,
the external data source definition doesn’t require authentication settings. Salesforce manages all authentication for Apex callouts that specify a named credential as the callout endpoint so that your code doesn’t have to.

**Enum Values**

The following are the values of the `DataSource.AuthenticationCapability` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ANONYMOUS</td>
<td>No credentials are required to authenticate to the external system.</td>
</tr>
<tr>
<td>BASIC</td>
<td>A username and password can be used to authenticate to the external system.</td>
</tr>
<tr>
<td>CERTIFICATE</td>
<td>A security certificate can be supplied when establishing each connection to the external system.</td>
</tr>
<tr>
<td>OAUTH</td>
<td>OAuth can be used to authenticate to the external system.</td>
</tr>
</tbody>
</table>

**AuthenticationProtocol Enum**

Determines what type of credentials are used to authenticate to the external system.

**Enum Values**

The following are the values of the `DataSource.AuthenticationProtocol` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NONE</td>
<td>No credentials are used to authenticate to the external system.</td>
</tr>
<tr>
<td>OAUTH</td>
<td>OAuth 2.0 is used to authenticate to the external system.</td>
</tr>
<tr>
<td>PASSWORD</td>
<td>A username and password are used to authenticate to the external system.</td>
</tr>
</tbody>
</table>

**Capability Enum**

Declares which functional operations the external system supports. Also specifies required endpoint settings for the external data source definition.

**Usage**

The `DataSource.Provider` class returns `DataSource.Capability` enum values, which:

- Specify the functional capabilities of the external system.
- Determine which endpoint settings are available on the external data source definition in Salesforce.

**Enum Values**

The following are the values of the `DataSource.Capability` enum.

---

2027
With server-driven paging, the external system determines the page sizes and batch boundaries. The external system’s paging settings can optimize the external system’s performance and improve the load times for external objects in your org. Also, the external data set can change while your users or the Lightning Platform are paging through the result set. Typically, server-driven paging adjusts batch boundaries to accommodate changing data sets more effectively than client-driven paging.

If you enable server-driven paging on an external data source, Salesforce ignores the requested page sizes, including the default `queryMore()` batch size of 500 rows. The pages returned by the external system determine the batches, but each page can’t exceed 2,000 rows. Also, the Apex code must generate a query token and use it to determine and fetch the next batch of results.

The external system can provide the total number of rows that meet the query criteria, even when requested to return a smaller batch size. This capability enables you to simplify how you paginate results by using `queryMore()`.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>QUERY_PAGINATION_SERVER_DRIVEN</td>
<td>With server-driven paging, the external system determines the page sizes and batch boundaries. The external system’s paging settings can optimize the external system’s performance and improve the load times for external objects in your org. Also, the external data set can change while your users or the Lightning Platform are paging through the result set. Typically, server-driven paging adjusts batch boundaries to accommodate changing data sets more effectively than client-driven paging. If you enable server-driven paging on an external data source, Salesforce ignores the requested page sizes, including the default <code>queryMore()</code> batch size of 500 rows. The pages returned by the external system determine the batches, but each page can’t exceed 2,000 rows. Also, the Apex code must generate a query token and use it to determine and fetch the next batch of results.</td>
</tr>
</tbody>
</table>
| QUERY_TOTAL_SIZE          | The external system can provide the total number of rows that meet the query criteria, even when requested to return a smaller batch size. This capability enables you to simplify how you paginate results by using `queryMore()`.

* Salesforce Help: Validate and Sync an External Data Source

### Column Class

Describes a column on a `DataSource.Table`. This class extends the `DataSourceUtil` class and inherits its methods.
Namespace

DataSource

Usage

A list of column metadata is provided by the `DataSource.Connection` class when the `sync()` method is invoked. Each column can become a field on an external object.

The metadata is stored in Salesforce. Updating the Apex code to return new or updated values for the column metadata doesn’t automatically update the stored metadata in Salesforce.

IN THIS SECTION:
- Column Properties
- Column Methods

Column Properties

The following are properties for `Column`.

IN THIS SECTION:
- `decimalPlaces`
  If the data type is numeric, the number of decimal places to the right of the decimal point.
- `description`
  Description of what the column represents.
- `filterable`
  Whether a result set can be filtered based on the values of the column.
- `label`
  User-friendly name for the column that appears in the Salesforce user interface.
- `length`
  If the column is a string data type, the number of characters in the column. If the column is a numeric data type, the total number of digits on both sides of the decimal point, but excluding the decimal point.
- `name`
  Name of the column in the external system.
- `referenceTargetField`
  API name of the custom field on the parent object whose values are compared against this column’s values. Matching values identify related records in an indirect lookup relationship. Applies only when the column’s data type is `INDIRECT_LOOKUP_TYPE`. For other data types, this value is ignored.
- `referenceTo`
  API name of the parent object in the relationship that’s represented by this column. Applies only when the column’s data type is `LOOKUP_TYPE`, `EXTERNAL_LOOKUP_TYPE`, or `INDIRECT_LOOKUP_TYPE`. For other data types, this value is ignored.
- `sortable`
  Whether a result set can be sorted based on the values of the column via an `ORDER BY` clause.
type
Data type of the column.

decimalPlaces
If the data type is numeric, the number of decimal places to the right of the decimal point.

Signature
public Integer decimalPlaces {get; set;}

Property Value
Type: Integer

description
Description of what the column represents.

Signature
public String description {get; set;}

Property Value
Type: String

filterable
Whether a result set can be filtered based on the values of the column.

Signature
public Boolean filterable {get; set;}

Property Value
Type: Boolean

label
User-friendly name for the column that appears in the Salesforce user interface.

Signature
public String label {get; set;}

Property Value
Type: String
**length**

If the column is a string data type, the number of characters in the column. If the column is a numeric data type, the total number of digits on both sides of the decimal point, but excluding the decimal point.

Signature

```java
public Integer length {get; set;}
```

Property Value

Type: Integer

**name**

Name of the column in the external system.

Signature

```java
public String name {get; set;}
```

Property Value

Type: String

**referenceTargetField**

API name of the custom field on the parent object whose values are compared against this column’s values. Matching values identify related records in an indirect lookup relationship. Applies only when the column’s data type is INDIRECT_LOOKUP_TYPE. For other data types, this value is ignored.

Signature

```java
public String referenceTargetField {get; set;}
```

Property Value

Type: String

**referenceTo**

API name of the parent object in the relationship that’s represented by this column. Applies only when the column’s data type is LOOKUP_TYPE, EXTERNAL_LOOKUP_TYPE, or INDIRECT_LOOKUP_TYPE. For other data types, this value is ignored.

Signature

```java
public String referenceTo {get; set;}
```

Property Value

Type: String
**sortable**
Whether a result set can be sorted based on the values of the column via an ORDER BY clause.

Signature
```
public Boolean sortable {get; set;}
```

Property Value
Type: `Boolean`

**type**
Data type of the column.

Signature
```
public DataSource.DataType type {get; set;}
```

Property Value
Type: `DataSource.DataType`

**Column Methods**
The following are methods for `Column`.

**IN THIS SECTION:**
- `boolean(name)`
  Returns a new column of data type `BOOLEAN_TYPE`.
- `externalLookup(name, domain)`
  Returns a new column of data type `EXTERNAL_LOOKUP_TYPE`.
- `get(name, label, description, isSortable, isFilterable, type, length, decimalPlaces, referenceTo, referenceTargetField)`
  Returns a new column with the ten specified `Column` property values.
- `get(name, label, description, isSortable, isFilterable, type, length, decimalPlaces)`
  Returns a new column with the eight specified `Column` property values.
- `get(name, label, description, isSortable, isFilterable, type, length)`
  Returns a new column with the seven specified `Column` property values.
- `indirectLookup(name, domain, targetField)`
  Returns a new column of data type `INDIRECT_LOOKUP_TYPE`.
- `integer(name, length)`
  Returns a new numeric column with no decimal places using the specified name and length.
- `lookup(name, domain)`
  Returns a new column of data type `LOOKUP_TYPE`. 
number(name, length, decimalPlaces)
Returns a new column of data type NUMBER_TYPE.

text(name, label, length)
Returns a new column of data type STRING_SHORT_TYPE or STRING_LONG_TYPE, with the specified name, label, and length.

text(name, length)
Returns a new column of data type STRING_SHORT_TYPE or STRING_LONG_TYPE, with the specified name and length.

text(name)
Returns a new column of data type STRING_SHORT_TYPE with the specified name and the length of 255 characters.

textarea(name)
Returns a new column of data type STRING_LONG_TYPE with the specified name and the length of 32,000 characters.

url(name, length)
Returns a new column of data type URL_TYPE with the specified name and length.

url(name)
Returns a new column of data type URL_TYPE with the specified name and the length of 1,000 characters.

**boolean(name)**
Returns a new column of data type BOOLEAN_TYPE.

**Signature**

```
public static DataSource.Column boolean(String name)
```

**Parameters**

- **name**
  - Type: String
  - Name of the column.

**Return Value**

Type: DataSource.Column

**externalLookup(name, domain)**

Returns a new column of data type EXTERNAL_LOOKUP_TYPE.

**Signature**

```
public static DataSource.Column externalLookup(String name, String domain)
```

**Parameters**

- **name**
  - Type: String
  - Name of the column.
domain
    Type: String
    API name of the parent object in the external lookup relationship.

Return Value
Type: DataSource.Column
The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>name</td>
</tr>
<tr>
<td>label</td>
<td>name</td>
</tr>
<tr>
<td>description</td>
<td>name</td>
</tr>
<tr>
<td>isSortable</td>
<td>true</td>
</tr>
<tr>
<td>isFilterable</td>
<td>true</td>
</tr>
<tr>
<td>type</td>
<td>DataSource.DataType.EXTERNAL_LOOKUP_TYPE</td>
</tr>
<tr>
<td>length</td>
<td>255</td>
</tr>
<tr>
<td>decimalPlaces</td>
<td>0</td>
</tr>
<tr>
<td>referenceTo</td>
<td>domain</td>
</tr>
<tr>
<td>referenceTargetField</td>
<td>null</td>
</tr>
</tbody>
</table>

get(name, label, description, isSortable, isFilterable, type, length, decimalPlaces, referenceTo, referenceTargetField)
Returns a new column with the ten specified Column property values.

Signature
public static DataSource.Column get(String name, String label, String description, Boolean isSortable, Boolean isFilterable, DataSource.DataType type, Integer length, Integer decimalPlaces, String referenceTo, String referenceTargetField)

Parameters
See Column Properties on page 2029 for information about each parameter.

name
    Type: String

label
    Type: String

description
    Type: String
isSortable
  Type: Boolean
isFilterable
  Type: Boolean
type
  Type: DataSource.DataType
length
  Type: Integer
decimalPlaces
  Type: Integer
referenceTo
  Type: String
referenceTargetField
  Type: String

Return Value
Type: DataSource.Column

get(name, label, description, isSortable, isFilterable, type, length, decimalPlaces)

Returns a new column with the eight specified Column property values.

Signature
public static DataSource.Column get(String name, String label, String description, Boolean isSortable, Boolean isFilterable, DataSource.DataType type, Integer length, Integer decimalPlaces)

Parameters
See Column Properties on page 2029 for information about each parameter.

name
  Type: String
label
  Type: String
description
  Type: String
isSortable
  Type: Boolean
isFilterable
  Type: Boolean
type
  Type: DataSource.DataType
length
Type: Integer

decimalPlaces
Type: Integer

Return Value
Type: DataSource.Column

get(name, label, description, isSortable, isFilterable, type, length)
Returns a new column with the seven specified Column property values.

Signature
public static DataSource.Column get(String name, String label, String description, Boolean isSortable, Boolean isFilterable, DataSource.DataType type, Integer length)

Parameters
See Column Properties on page 2029 for information about each parameter.

name
Type: String

label
Type: String

description
Type: String

isSortable
Type: Boolean

isFilterable
Type: Boolean

type
Type: DataSource.DataType

length
Type: Integer

Return Value
Type: DataSource.Column

indirectLookup(name, domain, targetField)
Returns a new column of data type INDIRECT_LOOKUP_TYPE.
Signature

```java
public static DataSource.Column indirectLookup(String name, String domain, String targetField)
```

Parameters

- **name**
  Type: `String`
  Name of the column.

- **domain**
  Type: `String`
  API name of the parent object in the indirect lookup relationship.

- **targetField**
  Type: `String`
  API name of the custom field on the parent object whose values are compared against this column's values. Matching values identify related records in an indirect lookup relationship.

Return Value

Type: `DataSource.Column`

The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td><code>name</code></td>
</tr>
<tr>
<td>label</td>
<td><code>name</code></td>
</tr>
<tr>
<td>description</td>
<td><code>name</code></td>
</tr>
<tr>
<td>isSortable</td>
<td>true</td>
</tr>
<tr>
<td>isFilterable</td>
<td>true</td>
</tr>
<tr>
<td>type</td>
<td><code>DataSource.DataType.INDIRECT_LOOKUP_TYPE</code></td>
</tr>
<tr>
<td>length</td>
<td>255</td>
</tr>
<tr>
<td>decimalPlaces</td>
<td>0</td>
</tr>
<tr>
<td>referenceTo</td>
<td><code>domain</code></td>
</tr>
<tr>
<td>referenceTargetField</td>
<td><code>targetField</code></td>
</tr>
</tbody>
</table>

**integer(name, length)**

Returns a new numeric column with no decimal places using the specified name and length.

Signature

```java
public static DataSource.Column integer(String name, Integer length)
```
Parameters

\textit{name}
Type: \texttt{String}
The column name.

\textit{length}
Type: \texttt{Integer}
The column length.

Return Value
Type: \texttt{DataSource.Column}

\texttt{lookup(name, domain)}
Returns a new column of data type \texttt{LOOKUP\_TYPE}.

Signature
\begin{verbatim}
public static DataSource.Column lookup(String name, String domain)
\end{verbatim}

Parameters
\begin{itemize}
\item \textit{name}
Type: \texttt{String}
Name of the column.
\item \textit{domain}
Type: \texttt{String}
Name of the column.
\end{itemize}

Return Value
Type: \texttt{DataSource.Column}
The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>\textit{name}</td>
</tr>
<tr>
<td>label</td>
<td>\textit{name}</td>
</tr>
<tr>
<td>description</td>
<td>\textit{name}</td>
</tr>
<tr>
<td>isSortable</td>
<td>true</td>
</tr>
<tr>
<td>isFilterable</td>
<td>true</td>
</tr>
<tr>
<td>type</td>
<td>\texttt{DataSource.DataType.LOOKUP_TYPE}</td>
</tr>
<tr>
<td>length</td>
<td>255</td>
</tr>
</tbody>
</table>
**number(name, length, decimalPlaces)**

Returns a new column of data type `NUMBER_TYPE`.

**Signature**

```java
public static DataSource.Column number(String name, Integer length, Integer decimalPlaces)
```

**Parameters**

See [Column Properties](#) on page 2029 for information about each parameter.

- **name**
  - Type: `String`
- **length**
  - Type: `Integer`
- **decimalPlaces**
  - Type: `Integer`

**Return Value**

Type: `DataSource.Column`

The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td><code>name</code></td>
</tr>
<tr>
<td>label</td>
<td><code>name</code></td>
</tr>
<tr>
<td>description</td>
<td><code>name</code></td>
</tr>
<tr>
<td>isSortable</td>
<td><code>true</code></td>
</tr>
<tr>
<td>isSortable</td>
<td><code>true</code></td>
</tr>
<tr>
<td>type</td>
<td><code>DataSource.DataType.NUMBER_TYPE</code></td>
</tr>
<tr>
<td>length</td>
<td><code>length</code></td>
</tr>
<tr>
<td>decimalPlaces</td>
<td><code>decimalPlaces</code></td>
</tr>
</tbody>
</table>
text(name, label, length)
Returns a new column of data type STRING_SHORT_TYPE or STRING_LONG_TYPE, with the specified name, label, and length.

Signature
public static DataSource.Column text(String name, String label, Integer length)

Parameters
name
Type: String
Name of the column.

label
Type: String
User-friendly name for the column that appears in the Salesforce user interface.

length
Type: Integer
Number of characters allowed in the column.

Return Value
Type: DataSource.Column
The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>name</td>
</tr>
<tr>
<td>label</td>
<td>label</td>
</tr>
<tr>
<td>description</td>
<td>label</td>
</tr>
<tr>
<td>isSortable</td>
<td>true</td>
</tr>
<tr>
<td>isFilterable</td>
<td>true</td>
</tr>
<tr>
<td>type</td>
<td>DataSource.DataType.STRING_SHORT_TYPE if length is 255 or less DataSource.DataType.STRING_LONG_TYPE if length is greater than 255</td>
</tr>
<tr>
<td>length</td>
<td>length</td>
</tr>
<tr>
<td>decimalPlaces</td>
<td>0</td>
</tr>
</tbody>
</table>

text(name, length)
Returns a new column of data type STRING_SHORT_TYPE or STRING_LONG_TYPE, with the specified name and length.

Signature
public static DataSource.Column text(String name, Integer length)
Parameters

- **name**  
  Type: *String*  
  Name of the column.

- **length**  
  Type: *Integer*  
  Number of characters allowed in the column.

Return Value

Type: *DataSource.Column*

The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>name</td>
</tr>
<tr>
<td>label</td>
<td>name</td>
</tr>
<tr>
<td>description</td>
<td>name</td>
</tr>
<tr>
<td>isSortable</td>
<td>true</td>
</tr>
<tr>
<td>isFilterable</td>
<td>true</td>
</tr>
</tbody>
</table>
| type          | *DataSource.DataType.STRING_SHORT_TYPE* if **length** is 255 or less  
                 *DataSource.DataType.STRING_LONG_TYPE* if **length** is greater than 255 |
| length        | **length**                                                          |
| decimalPlaces | 0                                                                   |

**text(name)**

Returns a new column of data type *STRING_SHORT_TYPE* with the specified name and the length of 255 characters.

Signature

```java
public static DataSource.Column text(String name)
```

Parameters

- **name**  
  Type: *String*  
  Name of the column.
Return Value

Type: DataSource.Column

The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>name</td>
</tr>
<tr>
<td>label</td>
<td>name</td>
</tr>
<tr>
<td>description</td>
<td>name</td>
</tr>
<tr>
<td>isSortable</td>
<td>true</td>
</tr>
<tr>
<td>isFilterable</td>
<td>true</td>
</tr>
<tr>
<td>type</td>
<td>DataSource.DataType.STRING_SHORT_TYPE</td>
</tr>
<tr>
<td>length</td>
<td>255</td>
</tr>
<tr>
<td>decimalPlaces</td>
<td>0</td>
</tr>
</tbody>
</table>

textarea(name)

Returns a new column of data type STRING_LONG_TYPE with the specified name and the length of 32,000 characters.

Signature

```
public static DataSource.Column textarea(String name)
```

Parameters

name

Type: String

Name of the column.

Return Value

Type: DataSource.Column

The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>name</td>
</tr>
<tr>
<td>label</td>
<td>name</td>
</tr>
<tr>
<td>description</td>
<td>name</td>
</tr>
<tr>
<td>isSortable</td>
<td>true</td>
</tr>
<tr>
<td>isFilterable</td>
<td>true</td>
</tr>
<tr>
<td>type</td>
<td>DataSource.DataType.STRING_LONG_TYPE</td>
</tr>
</tbody>
</table>
url(name, length)

Returns a new column of data type URL_TYPE with the specified name and length.

Signature

```
public static DataSource.Column url(String name, Integer length)
```

Parameters

- **name**
  - Type: String
  - Name of the column.

- **length**
  - Type: Integer
  - Number of characters allowed in the column.

Return Value

Type: DataSource.Column

The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>name</td>
</tr>
<tr>
<td>label</td>
<td>name</td>
</tr>
<tr>
<td>description</td>
<td>name</td>
</tr>
<tr>
<td>isSortable</td>
<td>true</td>
</tr>
<tr>
<td>isFilterable</td>
<td>true</td>
</tr>
<tr>
<td>type</td>
<td>DataSource.DataType.URL_TYPE</td>
</tr>
<tr>
<td>length</td>
<td>length</td>
</tr>
<tr>
<td>decimalPlaces</td>
<td>0</td>
</tr>
</tbody>
</table>

url(name)

Returns a new column of data type URL_TYPE with the specified name and the length of 1,000 characters.
Signature

```java
public static DataSource.Column url(String name)
```

Parameters

- `name`
  - Type: `String`
  - Name of the column.

Return Value

- Type: `DataSource.Column`
- The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td><code>name</code></td>
</tr>
<tr>
<td>label</td>
<td><code>name</code></td>
</tr>
<tr>
<td>description</td>
<td><code>name</code></td>
</tr>
<tr>
<td>isSortable</td>
<td>true</td>
</tr>
<tr>
<td>isFilterable</td>
<td>true</td>
</tr>
<tr>
<td>type</td>
<td><code>DataSource.DataType.URL_TYPE</code></td>
</tr>
<tr>
<td>length</td>
<td>1000</td>
</tr>
<tr>
<td>decimalPlaces</td>
<td>0</td>
</tr>
</tbody>
</table>

**ColumnSelection Class**

Identifies the list of columns to return during a query or search.

**Namespace**

`DataSource Namespace`

**Usage**

This class is associated with the `SELECT` clause for a SOQL query, or the `RETURNING` clause for a SOSL query.

**IN THIS SECTION:**

- ColumnSelection Properties

**ColumnSelection Properties**

The following are properties for `ColumnSelection`. 
IN THIS SECTION:

aggregation
How to aggregate the column’s data.

columnName
Name of the selected column.

tableName
Name of the column’s table.

aggregation
How to aggregate the column’s data.

Signature

```java
public DataSource.QueryAggregation aggregation {get; set;}
```

Property Value
Type: `DataSource.QueryAggregation`

columnName
Name of the selected column.

Signature

```java
public String columnName {get; set;}
```

Property Value
Type: `String`

tableName
Name of the column’s table.

Signature

```java
public String tableName {get; set;}
```

Property Value
Type: `String`

Connection Class
Extend this class to enable your Salesforce org to sync the external system’s schema and to handle queries, searches, and write operations (upsert and delete) of the external data. This class extends the `DataSourceUtil` class and inherits its methods.
Namespace

**DataSource**

Usage

Your `DataSource.Connection` and `DataSource.Provider` classes compose a custom adapter for Salesforce Connect. Changing the `sync` method on the `DataSource.Connection` class doesn’t automatically resync any external objects.

Example

```apex
global class SampleDataSourceConnection extends DataSource.Connection {
    global SampleDataSourceConnection(DataSource.ConnectionParams connectionParams) {
    }

    override global List<DataSource.Table> sync() {
        List<DataSource.Table> tables = new List<DataSource.Table>();
        List<DataSource.Column> columns = new List<DataSource.Column>();
        columns.add(DataSource.Column.text('Name', 255));
        columns.add(DataSource.Column.text('ExternalId', 255));
        columns.add(DataSource.Column.url('DisplayUrl'));

IN THIS SECTION:

Connection Methods

**Connection Methods**

The following are methods for Connection.

**deleteRows(deleteContext)**
Invoked when external object records are deleted via the Salesforce user interface, APIs, or Apex.

**query(queryContext)**
Invoked by a SOQL query of an external object. A SOQL query is generated and executed when a user visits an external object’s list view or record detail page in Salesforce. Returns the results of the query.

**search(searchContext)**
Invoked by a SOSL query of an external object or when a user performs a Salesforce global search that also searches external objects. Returns the results of the query.

**sync()**
Invoked when an administrator clicks **Validate and Sync** on the external data source detail page. Returns a list of tables that describe the external system’s schema.

**upsertRows(upsertContext)**
Invoked when external object records are created or updated via the Salesforce user interface, APIs, or Apex.

### deleteRows (deleteContext)
Invoked when external object records are deleted via the Salesforce user interface, APIs, or Apex.

**Signature**

```java
public List<DataSource.DeleteResult> deleteRows(DataSource.DeleteContext deleteContext)
```
Parameters

`deleteContext`
Type: `DataSource.DeleteContext`
Contains context information about the delete request.

Return Value
Type: `List<DataSource.DeleteResult>`
The results of the delete operation.

`query(queryContext)`
Invoked by a SOQL query of an external object. A SOQL query is generated and executed when a user visits an external object’s list view or record detail page in Salesforce. Returns the results of the query.

Signature
```
public DataSource.TableResult query(DataSource.QueryContext queryContext)
```

Parameters

`queryContext`
Type: `DataSource.QueryContext`
Represents the query to run against a data table.

Return Value
Type: `DataSource.TableResult`

`search(searchContext)`
Invoked by a SOSL query of an external object or when a user performs a Salesforce global search that also searches external objects. Returns the results of the query.

Signature
```
public List<DataSource.TableResult> search(DataSource.SearchContext searchContext)
```

Parameters

`searchContext`
Type: `DataSource.SearchContext`
Represents the query to run against an external data table.

Return Value
Type: `List<DataSource.TableResult>`
**sync()**
Invoked when an administrator clicks **Validate and Sync** on the external data source detail page. Returns a list of tables that describe the external system’s schema.

Signature
```
public List<DataSource.Table> sync()
```

Return Value
Type: List<DataSource.Table>
Each returned table can be used to create an external object in Salesforce. On the Validate External Data Source page, the administrator views the list of returned tables and selects which tables to sync. When the administrator clicks **Sync**, an external object is created for each selected table. Each column within the selected tables also becomes a field in the external object.

**upsertRows(upsertContext)**
Invoked when external object records are created or updated via the Salesforce user interface, APIs, or Apex.

Signature
```
public List<DataSource.UpsertResult> upsertRows(DataSource.UpsertContext upsertContext)
```

Parameters
`upsertContext`
Type: DataSource.UpsertContext
Contains context information about the upsert request.

Return Value
Type: List<DataSource.UpsertResult>
The results of the upsert operation.

**ConnectionParams Class**
Contains the credentials for authenticating to the external system.

**Namespace**
DataSource

**Usage**
If your extension of the DataSource.Provider class returns DataSource.AuthenticationCapability values that indicate support for authentication, the DataSource.Connection class is instantiated with a DataSource.ConnectionParams instance in the constructor.
The authentication credentials in the DataSource.ConnectionParams instance depend on the Identity Type field of the external data source definition in Salesforce.

- If Identity Type is set to Named Principal, the credentials come from the external data source definition.
- If Identity Type is set to Per User:
  - For queries and searches, the credentials are specific to the current user who invokes the query or search. The credentials come from the user’s authentication settings for the external system.
  - For administrative connections, such as syncing the external system’s schema, the credentials come from the external data source definition.

The values in this class can appear in debug logs and can be accessed by users who have the “Author Apex” permission. If you require better security, we recommend that you specify named credentials instead of URLs as your Apex callout endpoints. Salesforce manages all authentication for Apex callouts that specify a named credential as the callout endpoint so that your code doesn’t have to.

IN THIS SECTION:
ConnectionParams Properties

ConnectionParams Properties
The following are properties for ConnectionParams.

IN THIS SECTION:
certificateName
The name of the certificate for establishing each connection to the external system.
endpoint
The URL of the external system.
oauthToken
The OAuth token that’s issued by the external system.
password
The password for authenticating to the external system.
principalType
An instance of DataSource.IdentityType, which determines which set of credentials to use to access the external system.
protocol
The type of protocol that’s used to authenticate to the external system.
repository
Reserved for future use.
username
The username for authenticating to the external system.

certificateName
The name of the certificate for establishing each connection to the external system.
Signature

```java
public String certificateName {get; set;}
```

**Property Value**

**Type:** String

The value comes from the external data source definition in Salesforce.

---

endpoint

The URL of the external system.

Signature

```java
public String endpoint {get; set;}
```

**Property Value**

**Type:** String

The value comes from the external data source definition in Salesforce.

---

oauthToken

The OAuth token that’s issued by the external system.

Signature

```java
public String oauthToken {get; set;}
```

**Property Value**

**Type:** String

---

password

The password for authenticating to the external system.

Signature

```java
public String password {get; set;}
```

**Property Value**

**Type:** String

The value depends on the Identity Type field of the external data source definition in Salesforce.

- If Identity Type is set to Named Principal, the credentials come from the external data source definition.
- If Identity Type is set to Per User:
  - For queries and searches, the credentials are specific to the current user who invokes the query or search. The credentials come from the user’s authentication settings for the external system.
For administrative connections, such as syncing the external system’s schema, the credentials come from the external data source definition.

**principalType**
An instance of `DataSource.IdentityType`, which determines which set of credentials to use to access the external system.

Signature
```csharp
public DataSource.IdentityType principalType {get; set;}
```

Property Value
Type: `DataSource.IdentityType`

**protocol**
The type of protocol that’s used to authenticate to the external system.

Signature
```csharp
public DataSource.AuthenticationProtocol protocol {get; set;}
```

Property Value
Type: `DataSource.AuthenticationProtocol`

**repository**
Reserved for future use.

Signature
```csharp
public String repository {get; set;}
```

Property Value
Type: `String`
Reserved for future use.

**username**
The username for authenticating to the external system.

Signature
```csharp
public String username {get; set;}
```

Property Value
Type: `String`
The value depends on the Identity Type field of the external data source definition in Salesforce.

- If Identity Type is set to Named Principal, the credentials come from the external data source definition.
- If Identity Type is set to Per User:
  - For queries and searches, the credentials are specific to the current user who invokes the query or search. The credentials come from the user’s authentication settings for the external system.
  - For administrative connections, such as syncing the external system’s schema, the credentials come from the external data source definition.

**DataSourceUtil Class**

Parent class for the DataSource.Provider, DataSource.Connection, DataSource.Table, and DataSource.Column classes.

**Namespace**

DataSource

**DataSourceUtil Methods**

The following are methods for DataSourceUtil.

**IN THIS SECTION:**

- DataSourceUtil Methods

**DataSourceUtil Methods**

The following are methods for DataSourceUtil.

**IN THIS SECTION:**

- logWarning(message)
  Logs the error message in the debug log.
- throwException(message)
  Throws a DataSourceException and displays the provided message to the user.

**logWarning(message)**

Logs the error message in the debug log.

Signature

```java
public void logWarning(String message)
```

Parameters

- `message`
  Type: `String`
  The error message.
Return Value
Type: void

**throwException(message)**
Throws a `DataSourceException` and displays the provided message to the user.

Signature

```java
public void throwException(String message)
```

Parameters

*message*
Type: `String`
Error message to display to the user.

Return Value
Type: void

**DataType Enum**
Specifies the data types that are supported by the Apex Connector Framework.

**Usage**
The `DataSource.DataType` enum is referenced by the `type` property on the `DataSource.Column` class.

**Enum Values**
The following are the values of the `DataSource.DataType` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BOOLEAN_TYPE</td>
<td>Boolean</td>
</tr>
<tr>
<td>DATETIME_TYPE</td>
<td>Date/time</td>
</tr>
<tr>
<td>EXTERNAL_LOOKUP_TYPE</td>
<td>External lookup relationship</td>
</tr>
<tr>
<td>INDIRECT_LOOKUP_TYPE</td>
<td>Indirect lookup relationship</td>
</tr>
<tr>
<td>LOOKUP_TYPE</td>
<td>Lookup relationship</td>
</tr>
<tr>
<td>NUMBER_TYPE</td>
<td>Number</td>
</tr>
<tr>
<td>STRING_LONG_TYPE</td>
<td>Long text area</td>
</tr>
<tr>
<td>STRING_SHORT_TYPE</td>
<td>Text area</td>
</tr>
<tr>
<td>URL_TYPE</td>
<td>URL</td>
</tr>
</tbody>
</table>
DeleteContext Class

An instance of DeleteContext is passed to the deleteRows() method on your Database.Connection class. The class provides context information about the delete request to the implementor of deleteRows().

Namespace

DataSource

Usage

The Apex Connector Framework creates context for operations. Context is comprised of parameters about the operations, which other methods can use. An instance of the DeleteContext class packages these parameters into an object that can be used when a deleteRows() operation is initiated.

IN THIS SECTION:

DeleteContext Properties

DeleteContext Properties

The following are properties for DeleteContext.

IN THIS SECTION:

externalIds

The external IDs of the rows representing external object records to delete.

tableSelected

The name of the table to delete rows from.

externalIds

The external IDs of the rows representing external object records to delete.

Signature

public List<String> externalIds {get; set;}

Property Value

Type: List<String>

tableSelected

The name of the table to delete rows from.

Signature

public String tableSelected {get; set;}
DeleteResult Class

Represents the result of a delete operation on an sObject record. The result is returned by the `DataSource.deleteRows` method of the `DataSource.Connection` class.

Namespace

`DataSource`

Usage

A delete operation on external object records generates an array of objects of type `DataSource.DeleteResult`. Its methods create result records that indicate whether the delete operation succeeded or failed.

IN THIS SECTION:

- DeleteResult Properties
- DeleteResult Methods

DeleteResult Properties

The following are properties for `DeleteResult`.

IN THIS SECTION:

- `errorMessage`
  The error message that’s generated by a failed delete operation. Recorded with a result of type `DataSource.DeleteResult`.
- `externalId`
  The unique identifier of a row that represents an external object record to delete.
- `success`
  Indicates whether a delete operation succeeded or failed.

**errorMessage**

The error message that’s generated by a failed delete operation. Recorded with a result of type `DataSource.DeleteResult`.

Signature

```csharp
public String errorMessage {get; set;}
```

Property Value

Type: `String`
**externalId**

The unique identifier of a row that represents an external object record to delete.

Signature

```
public String externalId {get; set;}
```

Property Value

Type: **String**

**success**

Indicates whether a delete operation succeeded or failed.

Signature

```
public Boolean success {get; set;}
```

Property Value

Type: **Boolean**

**DeleteResult Methods**

The following are methods for **DeleteResult**.

IN THIS SECTION:

- **equals(obj)**
  
  Maintains the integrity of lists of type **DeleteResult** by determining the equality of external objects in a list. This method is dynamic and is based on the **equals** method in Java.

- **failure(externalId, errorMessage)**
  
  Creates a delete result indicating the failure of a delete request for a given external ID.

- **hashCode()**
  
  Maintains the integrity of lists of type **DeleteResult** by determining the uniqueness of the external object records in a list.

- **success(externalId)**
  
  Creates a delete result indicating the successful completion of a delete request for a given external ID.

**equals(obj)**

Maintains the integrity of lists of type **DeleteResult** by determining the equality of external objects in a list. This method is dynamic and is based on the **equals** method in Java.

Signature

```
public Boolean equals(Object obj)
```
Parameters

**obj**
Type: Object
External object whose key is to be validated.

For information about the `equals` method, see Using Custom Types in Map Keys and Sets on page 111.

Return Value
Type: Boolean

### failure(externalId, errorMessage)
Creates a delete result indicating the failure of a delete request for a given external ID.

**Signature**

```java
public static DataSource.DeleteResult failure(String externalId, String errorMessage)
```

**Parameters**

- **externalId**
  Type: String
  The unique identifier of the sObject record to delete.

- **errorMessage**
  Type: String
  The reason the delete operation failed.

**Return Value**
Type: DataSource.DeleteResult
Status result of the delete operation.

### hashCode()
Maintains the integrity of lists of type `DeleteResult` by determining the uniqueness of the external object records in a list.

**Signature**

```java
public Integer hashCode()
```

**Return Value**
Type: Integer

### success(externalId)
Creates a delete result indicating the successful completion of a delete request for a given external ID.
Signature

```java
public static DataSource.DeleteResult success(String externalId)
```

Parameters

`externalId`
- Type: `String`
- The unique identifier of the sObject record to delete.

Return Value

- Type: `DataSource.DeleteResult`
- Status result of the delete operation for the sObject with the given external ID.

Filter Class

- Represents a `WHERE` clause in a SOSL or SOQL query.

Namespace

- `DataSource`

Usage

- Compound types require child filters. Specifically, the `subfilters` property can’t be null if the `type` property is `NOT_`, `AND_`, or `OR_`.

IN THIS SECTION:

Filter Properties

Filter Properties

The following are properties for `Filter`.

IN THIS SECTION:

- `columnName`
- Name of the column that's being evaluated in a simple comparative type of filter.
- `columnValue`
- Value that the filter compares records against in a simple comparative type of filter.
- `subfilters`
- List of subfilters for compound filter types, such as `NOT_`, `AND_`, and `OR_`.
- `tableName`
- Name of the table whose column is being evaluated in a simple comparative type of filter.
- `type`
- Type of filter operation that limits the returned data.
**columnName**
Name of the column that’s being evaluated in a simple comparative type of filter.

Signature
```
public String columnName {get; set;}
```

Property Value
Type: String

**columnValue**
Value that the filter compares records against in a simple comparative type of filter.

Signature
```
public Object columnValue {get; set;}
```

Property Value
Type: Object

**subfilters**
List of subfilters for compound filter types, such as NOT_, AND_, and OR_.

Signature
```
public List<DataSource.Filter> subfilters {get; set;}
```

Property Value
Type: List<DataSource.Filter>

**tableName**
Name of the table whose column is being evaluated in a simple comparative type of filter.

Signature
```
public String tableName {get; set;}
```

Property Value
Type: String

**type**
Type of filter operation that limits the returned data.
**Signature**

```csharp
public DataSource.FilterType type {get; set;}
```

**Property Value**

Type: `DataSource.FilterType`

---

## FilterType Enum

Referenced by the `type` property on a `DataSource.Filter`.

### Usage

Determines how to limit the returned data.

### Enum Values

The following are the values of the `DataSource.FilterType` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AND_</td>
<td>This compound filter type returns all rows that match all the subfilters.</td>
</tr>
<tr>
<td>CONTAINS</td>
<td>Simple comparative filter type.</td>
</tr>
<tr>
<td>ENDS_WITH</td>
<td>Simple comparative filter type.</td>
</tr>
<tr>
<td>EQUALS</td>
<td>Simple comparative filter type.</td>
</tr>
<tr>
<td>GREATER_THAN</td>
<td>Simple comparative filter type.</td>
</tr>
<tr>
<td>GREATER_THAN_OR_EQUAL_TO</td>
<td>Simple comparative filter type.</td>
</tr>
<tr>
<td>LESS_THAN</td>
<td>Simple comparative filter type.</td>
</tr>
<tr>
<td>LESS_THAN_OR_EQUAL_TO</td>
<td>Simple comparative filter type.</td>
</tr>
<tr>
<td>LIKE_</td>
<td>Simple comparative filter type.</td>
</tr>
<tr>
<td>NOT_</td>
<td>This compound filter type returns the rows that don’t match the subfilter.</td>
</tr>
<tr>
<td>NOT_EQUALS</td>
<td>Simple comparative filter type.</td>
</tr>
<tr>
<td>OR_</td>
<td>This compound filter type returns all rows that match any of the subfilters.</td>
</tr>
<tr>
<td>STARTS_WITH</td>
<td>Simple comparative filter type.</td>
</tr>
</tbody>
</table>

---

## IdentityType Enum

Determines which set of credentials is used to authenticate to the external system.

### Usage

The relevant credentials are passed to your `DataSource.Connection` class.
Enum Values
The following are the values of the `DataSource.IdentityType` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ANONYMOUS</td>
<td>No credentials are used to authenticate to the external system.</td>
</tr>
<tr>
<td>NAMED_USER</td>
<td>The credentials in the external data source definition are used to authenticate to the external system, regardless of which user is accessing the external data from your organization.</td>
</tr>
</tbody>
</table>
| PER_USER       | For queries and searches, the credentials are specific to the current user who invokes the query or search. The credentials come from the user’s authentication settings for the external system.  
                 | For administrative connections, such as syncing the external system’s schema, the credentials come from the external data source definition. |

Order Class
Contains details about how to sort the rows in the result set. Equivalent to an `ORDER BY` statement in a SOQL query.

Namespace
`DataSource`

Usage
Used in the `order` property on the `DataSource.TableSelection` class.

IN THIS SECTION:
- Order Properties
- Order Methods

Order Properties
The following are properties for `Order`.

IN THIS SECTION:
- `columnName`
  Name of the column whose values are used to sort the rows in the result set.
- `direction`
  Direction for sorting rows based on column values.
- `tableName`
  Name of the table whose column values are used to sort the rows in the result set.
**columnName**
Name of the column whose values are used to sort the rows in the result set.

Signature
```
public String columnName {get; set;}
```

Property Value
Type: String

**direction**
Direction for sorting rows based on column values.

Signature
```
public DataSource.OrderDirection direction {get; set;}
```

Property Value
Type: DataSource.OrderDirection

**tableName**
Name of the table whose column values are used to sort the rows in the result set.

Signature
```
public String tableName {get; set;}
```

Property Value
Type: String

**Order Methods**
The following are methods for `Order`.

IN THIS SECTION:
```
get(tableName, columnName, direction)
```
Creates an instance of the `DataSource.Order` class.

```
get(tableName, columnName, direction)
```
Creates an instance of the `DataSource.Order` class.
public static DataSource.Order get(String tableName, String columnName, DataSource.OrderDirection direction)

Parameters

tableName  
Type: String
Name of the table whose column values are used to sort the rows in the result set.

columnName  
Type: String
Name of the column whose values are used to sort the rows in the result set.

direction  
Type: DataSource.OrderDirection
Direction for sorting rows based on column values.

Return Value
Type: DataSource.Order

OrderDirection Enum
Specifies the direction for sorting rows based on column values.

Usage
Used by the direction property on the DataSource.Order class.

Enum Values
The following are the values of the DataSource.OrderDirection enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ASCENDING</td>
<td>Sort rows in ascending order (A–Z).</td>
</tr>
<tr>
<td>DESCENDING</td>
<td>Sort rows in descending order (Z–A).</td>
</tr>
</tbody>
</table>

Provider Class
Extend this base class to create a custom adapter for Salesforce Connect. The class informs Salesforce of the functional and authentication capabilities that are supported by or required to connect to the external system. This class extends the DataSourceUtil class and inherits its methods.

Namespace
DataSource
Usage
Create an Apex class that extends `DataSource.Provider` to specify the following.

- The types of authentication that can be used to access the external system
- The features that are supported for the connection to the external system
- The Apex class that extends `DataSource.Connection` to sync the external system’s schema and to handle the queries and searches of the external data

The values that are returned by the `DataSource.Provider` class determine which settings are available in the external data source definition in Salesforce. To access the external data source definition from Setup, enter `External Data Sources` in the Quick Find box, then select `External Data Sources`.

IN THIS SECTION:
Provider Methods

Provider Methods
The following are methods for `Provider`.

IN THIS SECTION:
`getAuthenticationCapabilities()`
Returns the types of authentication that can be used to access the external system.

`getCapabilities()`
Returns the functional operations that the external system supports and the required endpoint settings for the external data source definition in Salesforce.

`getConnection(connectionParams)`
Returns a connection that points to an instance of the external data source.

`getAuthenticationCapabilities()`
Returns the types of authentication that can be used to access the external system.

Signature

```java
public List<DataSource.AuthenticationCapability> getAuthenticationCapabilities()
```

Return Value

Type: `List<DataSource.AuthenticationCapability>`

`getCapabilities()`
Returns the functional operations that the external system supports and the required endpoint settings for the external data source definition in Salesforce.

Signature

```java
public List<DataSource.Capability> getCapabilities()
```
Return Value
Type: List<DataSource.Capability>

getConnection(connectionParams)
Returns a connection that points to an instance of the external data source.

Signature
public DataSource.Connection getConnection(DataSource.ConnectionParams connectionParams)

Parameters
connectionParams
  Type: DataSource.ConnectionParams
  Credentials for authenticating to the external system.

Return Value
Type: DataSource.Connection

QueryAggregation Enum
Specifies how to aggregate a column in a query.

Usage
Used by the aggregation property on the DataSource.ColumnSelection class.

Enum Values
The following are the values of the DataSource.QueryAggregation enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AVG</td>
<td>Reserved for future use.</td>
</tr>
<tr>
<td>COUNT</td>
<td>Returns the number of rows that meet the query criteria.</td>
</tr>
<tr>
<td>MAX</td>
<td>Reserved for future use.</td>
</tr>
<tr>
<td>MIN</td>
<td>Reserved for future use.</td>
</tr>
<tr>
<td>NONE</td>
<td>No aggregation.</td>
</tr>
<tr>
<td>SUM</td>
<td>Reserved for future use.</td>
</tr>
</tbody>
</table>

QueryContext Class
An instance of QueryContext is provided to the query method on your DataSource.Connection class. The instance corresponds to a SOQL request.
Namespace

DataSource

IN THIS SECTION:
- QueryContext Properties
- QueryContext Methods

QueryContext Properties

The following are properties for QueryContext.

IN THIS SECTION:
- queryMoreToken
- tableSelection

queryMoreToken

Query token that’s used for server-driven paging to determine and fetch the subsequent batch of results.

**Signature**

```java
public String queryMoreToken {get; set;}
```

**Property Value**

Type: String

**tableSelection**

Query details that represent the FROM, ORDER BY, SELECT, and WHERE clauses in a SOQL or SOSL query.

**Signature**

```java
public DataSource.TableSelection tableSelection {get; set;}
```

**Property Value**

Type: DataSource.TableSelection

QueryContext Methods

The following are methods for QueryContext.
IN THIS SECTION:

get(metadata, offset, maxResults, tableSelection)
Creates an instance of the QueryContext class.

get(metadata, offset, maxResults, tableSelection)
Creates an instance of the QueryContext class.

Signature

public static DataSource.QueryContext get(List<DataSource.Table> metadata, Integer offset, Integer maxResults, DataSource.TableSelection tableSelection)

Parameters

metadata
Type: List<DataSource.Table>
List of table metadata that describes the external system’s tables to query.

offset
Type: Integer
Used for client-driven paging. Specifies the starting row offset into the query’s result set.

maxResults
Type: Integer
Used for client-driven paging. Specifies the maximum number of rows to return in each batch.

tableSelection
Type: DataSource.TableSelection
Query details that represent the FROM, ORDER BY, SELECT, and WHERE clauses in a SOQL or SOSL query.

Return Value

Type: DataSource.QueryContext

QueryUtils Class

Contains helper methods to locally filter, sort, and apply limit and offset clauses to data rows. This helper class is provided for your convenience during early development and tests, but it isn’t supported for use in production environments.

Namespace

DataSource

Usage

The DataSource.QueryUtils class and its helper methods can process query results locally within your Salesforce org. This class is provided for your convenience to simplify the development of your Salesforce Connect custom adapter for initial tests. However, the DataSource.QueryUtils class and its methods aren’t supported for use in production environments that use callouts to retrieve data from external systems. Complete the filtering and sorting on the external system before sending the query results to Salesforce.
When possible, use server-driven paging or another technique to have the external system determine the appropriate data subsets according to the limit and offset clauses in the query.

IN THIS SECTION:
QueryUtils Methods

**QueryUtils Methods**

The following are methods for `QueryUtils`.

IN THIS SECTION:

- `applyLimitAndOffset(queryContext, rows)`
  - Returns a subset of data rows after locally applying limit and offset clauses from the query. This helper method is provided for your convenience during early development and tests, but it isn’t supported for use in production environments.

- `filter(queryContext, rows)`
  - Returns a subset of data rows after locally ordering and applying filters from the query. This helper method is provided for your convenience during early development and tests, but it isn’t supported for use in production environments.

- `process(queryContext, rows)`
  - Returns data rows after locally filtering, sorting, ordering, and applying limit and offset clauses from the query. This helper method is provided for your convenience during early development and tests, but it isn’t supported for use in production environments.

- `sort(queryContext, rows)`
  - Returns data rows after locally sorting and applying the order from the query. This helper method is provided for your convenience during early development and tests, but it isn’t supported for use in production environments.

**applyLimitAndOffset(queryContext, rows)**

Returns a subset of data rows after locally applying limit and offset clauses from the query. This helper method is provided for your convenience during early development and tests, but it isn’t supported for use in production environments.

**Signature**

```java
public static List<Map<String, Object>> applyLimitAndOffset(DataSource.QueryContext queryContext, List<Map<String, Object>> rows)
```

**Parameters**

- `queryContext`
  - Type: `DataSource.QueryContext`
  - Represents the query to run against a data table.

- `rows`
  - Type: `List<Map<String, Object>>`
  - Rows of data.

**Return Value**

- Type: `List<Map<String, Object>>`
filter(queryContext, rows)
Returns a subset of data rows after locally ordering and applying filters from the query. This helper method is provided for your convenience during early development and tests, but it isn’t supported for use in production environments.

Signature
public static List<Map<String, Object>> filter(DataSource.QueryContext queryContext, List<Map<String, Object>> rows)

Parameters
queryContext
  Type: DataSource.QueryContext
  Represents the query to run against a data table.
rows
  Type: List<Map<String, Object>>
  Rows of data.

Return Value
Type: List<Map<String, Object>>

process(queryContext, rows)
Returns data rows after locally filtering, sorting, ordering, and applying limit and offset clauses from the query. This helper method is provided for your convenience during early development and tests, but it isn’t supported for use in production environments.

Signature
public static List<Map<String, Object>> process(DataSource.QueryContext queryContext, List<Map<String, Object>> rows)

Parameters
queryContext
  Type: DataSource.QueryContext
  Represents the query to run against a data table.
rows
  Type: List<Map<String, Object>>
  Rows of data.

Return Value
Type: List<Map<String, Object>>
sort(queryContext, rows)
Returns data rows after locally sorting and applying the order from the query. This helper method is provided for your convenience during early development and tests, but it isn’t supported for use in production environments.

Signature
public static List<Map<String, Object>> sort(DataSource.QueryContext queryContext, List<Map<String, Object>> rows)

Parameters
queryContext
Type: DataSource.QueryContext
Represents the query to run against a data table.
rows
Type: List<Map<String, Object>>
Rows of data.

Return Value
Type: List<Map<String, Object>>

ReadContext Class
Abstract base class for the QueryContext and SearchContext classes.

Namespace
DataSource

IN THIS SECTION:
ReadContext Properties

ReadContext Properties
The following are properties for ReadContext.

IN THIS SECTION:
maxResults
Maximum number of rows that the query can return.
metadata
Describes the external system’s tables to query.
offset
The starting row offset into the query’s result set. Used for client-driven paging.
**maxResults**
Maximum number of rows that the query can return.

Signature
public Integer maxResults {get; set;}

Property Value
Type: Integer

**metadata**
Describes the external system’s tables to query.

Signature
public List<DataSource.Table> metadata {get; set;}

Property Value
Type: List<DataSource.Table>

**offset**
The starting row offset into the query’s result set. Used for client-driven paging.

Signature
public Integer offset {get; set;}

Property Value
Type: Integer

**SearchContext Class**
An instance of `SearchContext` is provided to the `search` method on your `DataSource.Connection` class. The instance corresponds to a search or SOSL request.

**Namespace**
`DataSource`

---

IN THIS SECTION:
- SearchContext Constructors
- SearchContext Properties
SearchContext Constructors

The following are constructors for SearchContext.

IN THIS SECTION:

- SearchContext(metadata, offset, maxResults, tableSelections, searchPhrase)
  Creates an instance of the SearchContext class with the specified parameter values.
- SearchContext()
  Creates an instance of the SearchContext class.

**SearchContext(metadata, offset, maxResults, tableSelections, searchPhrase)**

Creates an instance of the SearchContext class with the specified parameter values.

**Signature**

```java
public SearchContext(List<DataSource.Table> metadata, Integer offset, Integer maxResults,
List<DataSource.TableSelection> tableSelections, String searchPhrase)
```

**Parameters**

- **metadata**
  Type: List<DataSource.Table>
  List of table metadata that describes the external system's tables to query.

- **offset**
  Type: Integer
  Specifies the starting row offset into the query's result set.

- **maxResults**
  Type: Integer
  Specifies the maximum number of rows to return in each batch.

- **tableSelections**
  Type: List<DataSource.TableSelection>
  List of queries and their details. The details represent the FROM, ORDER BY, SELECT, and WHERE clauses in each SOQL or SOSL query.

- **searchPhrase**
  Type: String
  The user-entered search string as a case-sensitive single phrase, with all non-alphanumeric characters removed.

**SearchContext()**

Creates an instance of the SearchContext class.

**Signature**

```java
public SearchContext()
```
SearchContext Properties

The following are properties for SearchContext.

**IN THIS SECTION:**

  - **searchPhrase**
    - The user-entered search string as a case-sensitive single phrase, with all non-alphanumeric characters removed.
  - **tableSelections**
    - List of queries and their details. The details represent the FROM, ORDER BY, SELECT, and WHERE clauses in each SOQL or SOSL query.

**searchPhrase**

The user-entered search string as a case-sensitive single phrase, with all non-alphanumeric characters removed.

Signature

```java
public String searchPhrase {get; set;}
```

Property Value

Type: String

**tableSelections**

List of queries and their details. The details represent the FROM, ORDER BY, SELECT, and WHERE clauses in each SOQL or SOSL query.

Signature

```java
public List<DataSource.TableSelection> tableSelections {get; set;}
```

Property Value

Type: List<DataSource.TableSelection>

**SearchUtils Class**

Helper class for implementing search on a custom adapter for Salesforce Connect.

**Namespace**

DataSource

**Usage**

We recommend that you develop your own search implementation that can search columns in addition to the designated name field.

**IN THIS SECTION:**

  - SearchUtils Methods
SearchUtils Methods

The following are methods for SearchUtils.

IN THIS SECTION:
  - searchByName(searchDetails, connection)
    Queries all the tables and returns each row whose designated name field contains the search phrase.

**searchByName(searchDetails, connection)**

Queries all the tables and returns each row whose designated name field contains the search phrase.

Signature

```java
public static List<DataSource.TableResult> searchByName(DataSource.SearchContext searchDetails, DataSource.Connection connection)
```

Parameters

- **searchDetails**
  Type: `DataSource.SearchContext`
  The `SearchContext` class that specifies which data to search and what to search for.

- **connection**
  Type: `DataSource.Connection`
  The `DataSource.Connection` class that connects to the external system.

Return Value

Type: `List<DataSource.TableResult>`

### Table Class

Describes a table on an external system that the Salesforce Connect custom adapter connects to. This class extends the `DataSourceUtil` class and inherits its methods.

### Namespace

**DataSource**

### Usage

A list of table metadata is provided by the `DataSource.Connection` class when the `sync()` method is invoked. Each table can become an external object in Salesforce.

The metadata is stored in Salesforce. Updating the Apex code to return new or updated values for the table metadata doesn’t automatically update the stored metadata in Salesforce.
Table Properties

The following are properties for Table.

IN THIS SECTION:

- columns
- description
- labelPlural
- labelSingular
- name
- nameColumn

**columns**
List of table columns.

**Signature**

```java
public List<DataSource.Column> columns {get; set;}
```

**Property Value**

Type: List<DataSource.Column>

**description**
Description of what the table represents.

**Signature**

```java
public String description {get; set;}
```
Property Value
Type: String

**labelPlural**
Plural form of the user-friendly name for the table. The `labelPlural` becomes the object’s plural label in the Salesforce user interface.

Signature
```java
public String labelPlural {get; set;}
```

Property Value
Type: String

**labelSingular**
Singular form of the user-friendly name for the table. The `labelSingular` becomes the object label in the Salesforce user interface. We recommend that you make object labels unique across all standard, custom, and external objects in the org.

Signature
```java
public String labelSingular {get; set;}
```

Property Value
Type: String

**name**
Name of the table on the external system.

Signature
```java
public String name {get; set;}
```

Property Value
Type: String

**nameColumn**
Name of the table column that becomes the name field of the external object when the administrator syncs the table.

Signature
```java
public String nameColumn {get; set;}
```

Property Value
Type: String
Table Methods

The following are methods for Table.

IN THIS SECTION:

get(name, labelSingular, labelPlural, description, nameColumn, columns)
Returns the table metadata with the specified parameter values.

get(name, nameColumn, columns)
Returns the table metadata with the specified parameter values, using the name for the labels and description.

get(name, labelSingular, labelPlural, description, nameColumn, columns)
Returns the table metadata with the specified parameter values.

Signature

public static DataSource.Table get(String name, String labelSingular, String labelPlural, String description, String nameColumn, List<DataSource.Column> columns)

Parameters

name
Type: String
Name of the external table.

labelSingular
Type: String
Singular form of the user-friendly name for the table. The labelSingular becomes the object label in the Salesforce user interface.

labelPlural
Type: String
Plural form of the user-friendly name for the table. The labelPlural becomes the object’s plural label in the Salesforce user interface.

description
Type: String
Description of the external table.

nameColumn
Type: String
Name of the table column that becomes the name field of the external object when the administrator syncs the table.

columns
Type: List<DataSource.Column>
List of table columns.

Return Value

Type: DataSource.Table
**get(name, nameColumn, columns)**

Returns the table metadata with the specified parameter values, using the name for the labels and description.

**Signature**

```java
public static DataSource.Table get(String name, String nameColumn,
List<DataSource.Column> columns)
```

**Parameters**

- **name**
  - Type: `String`
  - Name of the external table.

- **nameColumn**
  - Type: `String`
  - Name of the table column that becomes the name field of the external object when the administrator syncs the table.

- **columns**
  - Type: `List<DataSource.Column>`
  - List of table columns.

**Return Value**

Type: `DataSource.Table`

The returned table metadata has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>name</td>
</tr>
<tr>
<td>labelSingular</td>
<td>name</td>
</tr>
<tr>
<td>labelPlural</td>
<td>name</td>
</tr>
<tr>
<td>description</td>
<td>name</td>
</tr>
<tr>
<td>nameColumn</td>
<td>nameColumn</td>
</tr>
<tr>
<td>columns</td>
<td>columns</td>
</tr>
</tbody>
</table>

**TableResult Class**

Contains the results of a search or query.

**Namespace**

`DataSource`
TableResult Properties
The following are properties for TableResult.

errorMessage
Error message to display to the user.

queryMoreToken
Query token that’s used for server-driven paging to determine and fetch the subsequent batch of results. This token is passed back to the Apex data source on subsequent queries in the queryMoreToken property on the QueryContext.

rows
Rows of data.

success
Whether the search or query was successful.

tableName
Name of the table that was queried.

totalSize
The total number of rows that meet the query criteria, even when the external system is requested to return a smaller batch size.

**errorMessage**
Error message to display to the user.

Signature
```
public String errorMessage {get; set;}
```

Property Value
Type: String

**queryMoreToken**
Query token that’s used for server-driven paging to determine and fetch the subsequent batch of results. This token is passed back to the Apex data source on subsequent queries in the queryMoreToken property on the QueryContext.

Signature
```
public String queryMoreToken {get; set;}
```
Property Value
Type: String

**rows**
Rows of data.

Signature
```java
public List<Map<String, Object>> rows {get; set;}
```

Property Value
Type: List<Map<String, Object>>

**success**
Whether the search or query was successful.

Signature
```java
public Boolean success {get; set;}
```

Property Value
Type: Boolean

**tableName**
Name of the table that was queried.

Signature
```java
public String tableName {get; set;}
```

Property Value
Type: String

**totalSize**
The total number of rows that meet the query criteria, even when the external system is requested to return a smaller batch size.

Signature
```java
public Integer totalSize {get; set;}
```

Property Value
Type: Integer
**TableResult Methods**

The following are methods for `TableResult`.

**IN THIS SECTION:**
- `error(errorMessage)`
  Returns failed search or query results with the provided error message.
- `get(success, errorMessage, tableName, rows, totalSize)`
  Returns a subset of data rows in a `TableResult` with the provided property values and the number of rows in the table.
- `get(success, errorMessage, tableName, rows)`
  Returns a subset of data rows in a `TableResult` with the provided property values.
- `get(queryContext, rows)`
  Returns the subset of data rows that meet the query criteria, and the number of rows in the table, in a `TableResult`.
- `get(tableSelection, rows)`
  Returns the subset of data rows that meet the query criteria, and the number of rows in the table, in a `TableResult`.

**error(errorMessage)**

Returns failed search or query results with the provided error message.

**Signature**

```java
public static DataSource.TableResult error(String errorMessage)
```

**Parameters**

- `errorMessage`
  Type: `String`
  Error message to display to the user.

**Return Value**

Type: `DataSource.TableResult`

The returned `TableResult` has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>success</td>
<td>false</td>
</tr>
<tr>
<td>errorMessage</td>
<td><code>errorMessage</code></td>
</tr>
<tr>
<td>tableName</td>
<td>null</td>
</tr>
<tr>
<td>rows</td>
<td>null</td>
</tr>
<tr>
<td>rows.size()</td>
<td>0</td>
</tr>
</tbody>
</table>
get(success, errorMessage, tableName, rows, totalSize)

Returns a subset of data rows in a TableResult with the provided property values and the number of rows in the table.

Signature

public static DataSource.TableResult get(Boolean success, String errorMessage, String tableName, List<Map<String, Object>> rows, Integer totalSize)

Parameters

success
Type: Boolean
Whether the search or query was successful.

errorMessage
Type: String
Error message to display to the user.

tableName
Type: String
Name of the table that was queried.

rows
Type: List<Map<String, Object>>
Rows of data.

totalSize
Type: Integer
The total number of rows that meet the query criteria, even when the external system is requested to return a smaller batch size.

Return Value

Type: DataSource.TableResult

generic(success, errorMessage, tableName, rows)

Returns a subset of data rows in a TableResult with the provided property values.

Signature

public static DataSource.TableResult get(Boolean success, String errorMessage, String tableName, List<Map<String, Object>> rows)
Error message to display to the user.

tableName
Type: String
Name of the table that was queried.

rows
Type: List<Map<String, Object>>
Rows of data.

Return Value
Type: DataSource.TableResult

get(queryContext, rows)
Returns the subset of data rows that meet the query criteria, and the number of rows in the table, in a TableResult.

Signature
public static DataSource.TableResult get(DataSource.QueryContext queryContext, List<Map<String, Object>> rows)

Parameters
queryContext
Type: DataSource.QueryContext
Represents the query to run against a data table.

rows
Type: List<Map<String, Object>>
Rows of data.

Return Value
Type: DataSource.TableResult

get(tableSelection, rows)
Returns the subset of data rows that meet the query criteria, and the number of rows in the table, in a TableResult.

Signature
public static DataSource.TableResult get(DataSource.TableSelection tableSelection, List<Map<String, Object>> rows)

Parameters
tableSelection
Type: DataSource.TableSelection
Query details that represent the FROM, ORDER BY, SELECT, and WHERE clauses in a SOQL or SOSL query.
rows
   Type: List<Map<String, Object>>
   Rows of data.

Return Value
Type: DataSource.TableResult

TableSelection Class
Contains a breakdown of the SOQL or SOSL query. Its properties represent the FROM, ORDER BY, SELECT, and WHERE clauses in the query.

Namespace
DataSource

IN THIS SECTION:
   TableSelection Properties

TableSelection Properties
The following are properties for TableSelection.

IN THIS SECTION:
   columnsSelected
   filter
   order
   tableSelected

columnsSelected
List of columns to query. Corresponds to the SELECT clause in a SOQL or SOSL query.

Signature
public List<DataSource.ColumnSelection> columnsSelected {get; set;}

Property Value
Type: List<DataSource.ColumnSelection>
**filter**

Identifies the query filter, which can be a compound filter that has a list of subfilters. The filter corresponds to the **WHERE** clause in a SOQL or SOSL query.

Signature

```java
public DataSource.Filter filter {get; set;}
```

**Property Value**

Type: `DataSource.Filter`

**order**

Identifies the order for sorting the query results. Corresponds to the **ORDER BY** clause in a SOQL or SOSL query.

Signature

```java
public List<DataSource.Order> order {get; set;}
```

**Property Value**

Type: `List<DataSource.Order>`

**tableSelected**

Name of the table to query. Corresponds to the **FROM** clause in a SOQL or SOSL query.

Signature

```java
public String tableSelected {get; set;}
```

**Property Value**

Type: `String`

**UpsertContext Class**

An instance of `UpsertContext` is passed to the `upsertRows()` method on your `DataSource.Connection` class. This class provides context information about the upsert request to the implementor of `upsertRows()`.

**Namespace**

`DataSource`

**Usage**

The Apex Connector Framework creates the contet for operations. Context is comprised of parameters about the operations, which other methods can use. An instance of the `UpsertContext` class packages these parameters into an object that can be used when an `upsertRows()` operation is initiated.
IN THIS SECTION:

UpsertContext Properties

UpsertContext Properties
The following are properties for UpsertContext.

IN THIS SECTION:

rows
List of rows corresponding to the external object records to upsert.

tableSelected
The name of the table to upsert rows in.

rows
List of rows corresponding to the external object records to upsert.

Signature

```java
public List<Map<String,ANY>> rows {get; set;}
```

Property Value
Type: List<Map<String,Object>>

tableSelected
The name of the table to upsert rows in.

Signature

```java
public String tableSelected {get; set;}
```

Property Value
Type: String

UpsertResult Class
Represents the result of an upsert operation on an external object record. The result is returned by the upsertRows method of the DataSource.Connection class.

Namespace
DataSource
Usage
An upsert operation on external object records generates an array of objects of type `DataSource.UpsertResult`. Its methods create result records that indicate whether the upsert operation succeeded or failed.

IN THIS SECTION:
- UpsertResult Properties
- UpsertResult Methods

UpsertResult Properties
The following are properties for `UpsertResult`.

IN THIS SECTION:
- errorMessage
- externalId
- success

errorMessage
The error message that's generated by a failed upsert operation.

Signature
`public String errorMessage {get; set;}`

Property Value
Type: String

externalId
The unique identifier of a row that represents an external object record to upsert.

Signature
`public String externalId {get; set;}`

Property Value
Type: String

success
Indicates whether a delete operation succeeded or failed.
Signature

```java
public Boolean success {get; set;}
```

Property Value

Type: `Boolean`

### UpsertResult Methods

The following are methods for `UpsertResult`.

**IN THIS SECTION:**

- `equals(obj)`
  - Maintains the integrity of lists of type `UpsertResult` by determining the equality of external object records in a list. This method is dynamic and is based on the `equals` method in Java.

- `failure(externalId, errorMessage)`
  - Creates an upsert result that indicates the failure of a delete request for a given external ID.

- `hashCode()`
  - Maintains the integrity of lists of type `UpsertResult` by determining the uniqueness of the external object records in a list.

- `success(externalId)`
  - Creates a delete result that indicates the successful completion of an upsert request for a given external ID.

#### equals(obj)

Maintains the integrity of lists of type `UpsertResult` by determining the equality of external object records in a list. This method is dynamic and is based on the `equals` method in Java.

Signature

```java
public Boolean equals(Object obj)
```

Parameters

- `obj`
  - Type: `Object`
  - External object whose key is to be validated.

Return Value

Type: `Boolean`

#### failure(externalId, errorMessage)

Creates an upsert result that indicates the failure of a delete request for a given external ID.
Signature

```java
public static DataSource.UpsertResult failure(String externalId, String errorMessage)
```

Parameters

- `externalId`
  - Type: `String`
  - The unique identifier of the external object record to upsert.

- `errorMessage`
  - Type: `String`
  - The reason the upsert operation failed.

Return Value

Type: `DataSource.UpsertResult`

Status result for the upsert operation.

`hashCode()`

Maintains the integrity of lists of type `UpsertResult` by determining the uniqueness of the external object records in a list.

Signature

```java
public Integer hashCode()
```

Return Value

Type: `Integer`

`success(externalId)`

Creates a delete result that indicates the successful completion of an upsert request for a given external ID.

Signature

```java
public static DataSource.UpsertResult success(String externalId)
```

Parameters

- `externalId`
  - Type: `String`
  - The unique identifier of the external object record to upsert.

Return Value

Type: `DataSource.UpsertResult`

Status result of the upsert operation for the external object record with the given external ID.
**DataSource Exceptions**

The **DataSource** namespace contains exception classes.

All exception classes support built-in methods for returning the error message and exception type. See [Exception Class and Built-In Exceptions](#excep).

The **DataSource** namespace contains these exceptions.

<table>
<thead>
<tr>
<th>Exception</th>
<th>Description</th>
<th>Methods</th>
</tr>
</thead>
<tbody>
<tr>
<td>DataSource.DataSourceException</td>
<td>Throw this exception to indicate that an error occurred while communicating with an external data source.</td>
<td>To get the error message and write it to debug log, use the String getMessage().</td>
</tr>
<tr>
<td>DataSource.OAuthTokenExpiredException</td>
<td>Throw this exception to indicate that an OAuth token has expired. The system then attempts to refresh the token automatically and restart the query, search, or sync operation.</td>
<td>To get the error message and write it to debug log, use the String getMessage().</td>
</tr>
</tbody>
</table>

**Dom Namespace**

The **Dom** namespace provides classes and methods for parsing and creating XML content.

The following are the classes in the **Dom** namespace.

**IN THIS SECTION:**

- **Document Class**
  Use the **Document** class to process XML content. You can parse nested XML content that’s up to 50 nodes deep.

- **XmlNode Class**
  Use the **XmlNode** class to work with a node in an XML document.

**Document Class**

Use the **Document** class to process XML content. You can parse nested XML content that’s up to 50 nodes deep.

**Namespace**

- **Dom**

**Usage**

One common application is to use it to create the body of a request for **HttpRequest** or to parse a response accessed by **HttpResponse**.

**IN THIS SECTION:**

- **Document Constructors**
Document Constructors

The following are constructors for Document.

IN THIS SECTION:
- Document()

**Document()**

Signature

```java
public Document()
```

Document Methods

The following are methods for Document. All are instance methods.

IN THIS SECTION:
- createRootElement(name, namespace, prefix)
- Creates the top-level root element for a document.
- getRootElement()
- Returns the top-level root element node in the document. If this method returns null, the root element has not been created yet.
- load(xml)
- Parse the XML representation of the document specified in the xml argument and load it into a document.
- toXmlString()
- Returns the XML representation of the document as a String.

**createRootElement(name, namespace, prefix)**

Creates the top-level root element for a document.

Signature

```java
public Dom.XmlNode createRootElement(String name, String namespace, String prefix)
```
Parameters

- **name**
  - Type: String
- **namespace**
  - Type: String
- **prefix**
  - Type: String

Return Value

Type: Dom.XmlNode

Usage

For more information about namespaces, see XML Namespaces.

Calling this method more than once on a document generates an error as a document can have only one root element.

**getRootElement()**

Returns the top-level root element node in the document. If this method returns null, the root element has not been created yet.

Signature

```
public Dom.XmlNode getRootElement()
```

Return Value

Type: Dom.XmlNode

**load(xml)**

Parse the XML representation of the document specified in the xml argument and load it into a document.

Signature

```
public Void load(String xml)
```

Parameters

- **xml**
  - Type: String

Return Value

Type: Void
Example

```java
doc.load(xml);
```

**toXmlString()**

Returns the XML representation of the document as a String.

**Signature**

```java
public String toXmlString()
```

**Return Value**

Type: String

**XmlNode Class**

Use the `XmlNode` class to work with a node in an XML document.

**Namespace**

`Dom`

**XmlNode Methods**

The following are methods for `XmlNode`. All are instance methods.

**IN THIS SECTION:**

- `addChildElement(name, namespace, prefix)`
  Creates a child element node for this node.
- `addCommentNode(text)`
  Creates a child comment node for this node.
- `addTextNode(text)`
  Creates a child text node for this node.
- `getAttribute(key, keyNamespace)`
  Returns `namespacePrefix:attributeValue` for the given key and key namespace.
- `getAttributeCount()`
  Returns the number of attributes for this node.
- `getAttributeKeyAt(index)`
  Returns the attribute key for the given index. Index values start at 0.
- `getAttributeKeyNsAt(index)`
  Returns the attribute key namespace for the given index.
- `getAttributeValue(key, keyNamespace)`
  Returns the attribute value for the given key and key namespace.
getAttributeValueNs(key, keyNamespace)
Returns the attribute value namespace for the given key and key namespace.

getChildElement(name, namespace)
Returns the child element node for the node with the given name and namespace.

getChildElements()
Returns the child element nodes for this node. This doesn't include child text or comment nodes.

getChildren()
Returns the child nodes for this node. This includes all node types.

getName()
Returns the element name.

getNamespace()
Returns the namespace of the element.

getNamespaceFor(prefix)
Returns the namespace of the element for the given prefix.

getNodeType()
Returns the node type.

getParent()
Returns the parent of this element.

getPrefixFor(namespace)
Returns the prefix of the given namespace.

getText()
Returns the text for this node.

insertBefore(newChild, refChild)
Inserts a new child node before the specified node.

removeAttribute(key, keyNamespace)
Removes the attribute with the given key and key namespace. Returns true if successful, false otherwise.

removeChild(childNode)
Removes the given child node.

setAttribute(key, value)
Sets the key attribute value.

setAttributeNs(key, value, keyNamespace, valueNamespace)
Sets the key attribute value.

setNamespace(prefix, namespace)
Sets the namespace for the given prefix.

addChildElement(name, namespace, prefix)
Creates a child element node for this node.

**Signature**

```java
public Dom.XmlNode addChildElement(String name, String namespace, String prefix)
```
Parameters

name
  Type: String
  The name argument can't have a null value.

namespace
  Type: String

prefix
  Type: String

Return Value
Type: Dom.XmlNode

Usage
- If the namespace argument has a non-null value and the prefix argument is null, the namespace is set as the default namespace.
- If the prefix argument is null, Salesforce automatically assigns a prefix for the element. The format of the automatic prefix is ns{i}, where i is a number. If the prefix argument is '', the namespace is set as the default namespace.

addCommentNode(text)
Creates a child comment node for this node.

Signature
public Dom.XmlNode addCommentNode(String text)

Parameters
text
  Type: String
  The text argument can't have a null value.

Return Value
Type: Dom.XmlNode

addTextNode(text)
Creates a child text node for this node.

Signature
public Dom.XmlNode addTextNode(String text)
Parameters

- `text`: Type: `String`
  The `text` argument can't have a `null` value.

Return Value

- Type: `Dom.XmlNode`

**getAttribute(key, keyNamespace)**

Returns `namespacePrefix:attributeValue` for the given key and key namespace.

Signature

```
public String getAttribute(String key, String keyNamespace)
```

Parameters

- `key`: Type: `String`
- `keyNamespace`: Type: `String`

Return Value

- Type: `String`

Example

For example, for the `<xyz a:b="c:d" />` element:
- `getAttribute` returns `c:d`
- `getAttributeValue` returns `d`

**getAttributeCount()**

Returns the number of attributes for this node.

Signature

```
public Integer getAttributeCount()
```

Return Value

- Type: `Integer`

**getAttributeKeyAt(index)**

Returns the attribute key for the given index. Index values start at 0.
Signature

public String getAttributeKeyAt(Integer index)

Parameters

index
  Type: Integer

Return Value

Type: String

getAttributeKeyNsAt(index)

Returns the attribute key namespace for the given index.

Signature

public String getAttributeKeyNsAt(Integer index)

Parameters

index
  Type: Integer

Return Value

Type: String

getAttributeValue(key, keyNamespace)

Returns the attribute value for the given key and key namespace.

Signature

public String getAttributeValue(String key, String keyNamespace)

Parameters

key
  Type: String

keyNamespace
  Type: String

Return Value

Type: String
Example
For example, for the `<xyz a:b="c:d" />` element:
- `getAttribute` returns `c:d`
- `getAttributeValue` returns `d`

`getAttributeValueNs(key, keyNamespace)`
Returns the attribute value namespace for the given key and key namespace.

Signature
```java
public String getAttributeValueNs(String key, String keyNamespace)
```

Parameters
- `key`
  Type: `String`
- `keyNamespace`
  Type: `String`

Return Value
Type: `String`

`getChildElement(name, namespace)`
Returns the child element node for the node with the given name and namespace.

Signature
```java
public Dom.XmlNode getChildElement(String name, String namespace)
```

Parameters
- `name`
  Type: `String`
- `namespace`
  Type: `String`

Return Value
Type: `Dom.XmlNode`

`getChildElements()`
Returns the child element nodes for this node. This doesn’t include child text or comment nodes.
getChildren()
Returns the child nodes for this node. This includes all node types.

Signature
public Dom.XmlNode[] getChildren()

Return Value
Type: Dom.XmlNode[]

getName()
Returns the element name.

Signature
public String getName()

Return Value
Type: String

getNamespace()
Returns the namespace of the element.

Signature
public String getNamespace()

Return Value
Type: String

gNamespaceFor (prefix)
Returns the namespace of the element for the given prefix.

Signature
public String getNamespaceFor(String prefix)
Parameters

**prefix**
  Type: String

Return Value
Type: String

**getNodeType()**
Returns the node type.

Signature

```java
public Dom.XmlNodeType getNodeType()
```

Return Value
Type: Dom.XmlNodeType

**getParent()**
Returns the parent of this element.

Signature

```java
public Dom.XmlNode getParent()
```

Return Value
Type: Dom.XmlNode

**getPrefixFor(namespace)**
Returns the prefix of the given namespace.

Signature

```java
public String getPrefixFor(String namespace)
```

Parameters

**namespace**
  Type: String
  The namespace argument can’t have a null value.

Return Value
Type: String
**getText()**

Returns the text for this node.

Signature

```java
public String getText()
```

Return Value

Type: `String`

**insertBefore(newChild, refChild)**

Inserts a new child node before the specified node.

Signature

```java
public Dom.XmlNode insertBefore(Dom.XmlNode newChild, Dom.XmlNode refChild)
```

Parameters

- `newChild`
  - Type: `Dom.XmlNode`
  - The node to insert.

- `refChild`
  - Type: `Dom.XmlNode`
  - The node before the new node.

Return Value

Type: `Dom.XmlNode`

Usage

- If `refChild` is `null`, `newChild` is inserted at the end of the list.
- If `refChild` doesn’t exist, an exception is thrown.

**removeAttribute(key, keyNamespace)**

Removes the attribute with the given key and key namespace. Returns `true` if successful, `false` otherwise.

Signature

```java
public Boolean removeAttribute(String key, String keyNamespace)
```

Parameters

- `key`
  - Type: `String`
keyNamespace
   Type: String

Return Value
Type: Boolean

**removeChild(childNode)**
Removes the given child node.

Signature
public Boolean removeChild(Dom.XmlNode childNode)

Parameters
childNode
   Type: Dom.XmlNode

Return Value
Type: Boolean

**setAttribute(key, value)**
Sets the key attribute value.

Signature
public Void setAttribute(String key, String value)

Parameters
key
   Type: String
value
   Type: String

Return Value
Type: Void

**setAttributeNs(key, value, keyNamespace, valueNamespace)**
Sets the key attribute value.
Signature

```java
public Void setAttributeNs(String key, String value, String keyNamespace, String valueNamespace)
```

Parameters

- **key**
  - Type: `String`
- **value**
  - Type: `String`
- **keyNamespace**
  - Type: `String`
- **valueNamespace**
  - Type: `String`

Return Value

Type: `Void`

**setNamespace(prefix, namespace)**

Sets the namespace for the given prefix.

Signature

```java
public Void setNamespace(String prefix, String namespace)
```

Parameters

- **prefix**
  - Type: `String`
- **namespace**
  - Type: `String`

Return Value

Type: `Void`

**EventBus Namespace**

The **EventBus** namespace provides classes and methods for platform events and Change Data Capture events. The following are the classes in the **EventBus** namespace.

IN THIS SECTION:

- **ChangeEventHeader Class**
  - Contains header fields of Change Data Capture events.
TestBroker Class
Contains a method that delivers platform event or change event messages in an Apex test.

TriggerContext Class
Provides information about the platform event or change event trigger that’s currently executing, such as how many times the trigger was retried due to the EventBus.RetryableException. Also, provides a method to resume trigger executions.

SEE ALSO:
Platform Events Developer Guide

ChangeEventHeader Class
Contains header fields of Change Data Capture events.

Namespace
EventBus

IN THIS SECTION:
ChangeEventHeader Properties

SEE ALSO:
Change Data Capture Developer Guide

ChangeEventHeader Properties
The following are properties for ChangeEventHeader.

IN THIS SECTION:
changedfields
A list of the fields that were changed in an update operation, including the LastModifiedDate system field. This field is empty for other operations, including record creation. This property is available in Apex saved using API version 47.0 or later.

changeorigin
Only populated for changes done by API apps or from Lightning Experience; empty otherwise. The Salesforce API and the API client ID that initiated the change, if set by the client. Use this field to detect whether your app initiated the change to not process the change again and potentially avoid a deep cycle of changes.

changetype
The operation that caused the change.

commitnumber
The system change number (SCN) of a committed transaction, which increases sequentially. This field is provided for diagnostic purposes. The field value is not guaranteed to be unique in Salesforce—it is unique only in a single database instance. If your Salesforce org migrates to another database instance, the commit number might not be unique or sequential.

committimestamp
The date and time when the change occurred, represented as the number of milliseconds since January 1, 1970 00:00:00 GMT.
commituser
The ID of the user that ran the change operation.

difffields
Contains the names of fields whose values are sent as a unified diff because they contain large text values.

entityname
The API name of the standard or custom object that the change pertains to. For example, Account or MyObject__c.

nulledfields
Contains the names of fields whose values were changed to null in an update operation. Use this field in Apex change event messages to determine if a field was changed to null in an update and isn’t an unchanged field.

recordids
One or more record IDs for the changed records. Typically, this field contains one record ID. But if the same change occurred in multiple records of the same object type during the same transaction, Salesforce groups the change notifications and sends one change event for all affected records. In this case, the recordids field contains an array of record IDs for all records that have the same change.

sequencenumber
The sequence of the change within a transaction. The sequence number starts from 1.

transactionkey
A string that uniquely identifies each Salesforce transaction. You can use this key to identify and group all changes that were made in the same transaction.

changedfields
A list of the fields that were changed in an update operation, including the LastModifiedDate system field. This field is empty for other operations, including record creation. This property is available in Apex saved using API version 47.0 or later.

Signature

public List<String> changedfields {get; set;}

Property Value

Type: List<String>

changeorigin
Only populated for changes done by API apps or from Lightning Experience; empty otherwise. The Salesforce API and the API client ID that initiated the change, if set by the client. Use this field to detect whether your app initiated the change to not process the change again and potentially avoid a deep cycle of changes.

Signature

public String changeorigin {get; set;}

Property Value

Type: String
The format of the \texttt{changeOrigin} field value is:

\begin{verbatim}
com/salesforce/api/<API_Name>/<API_Version>;client=<Client_ID>
\end{verbatim}

- \texttt{<API_Name>} is the name of the Salesforce API used to make the data change. It can take one of these values: soap, rest, bulkapi, xmlrpc, oldsoap, toolingsoap, toolingrest, apex, apexdebuggerrest.
- \texttt{<API_Version>} is the version of the API call that made the change and is in the format \texttt{XX.X}.
- \texttt{<Client_ID>} is a string that contains the client ID of the app that initiated the change. If the client ID is not set in the API call, \texttt{client=<Client_ID>} is not appended to the \texttt{changeOrigin} field.

\textbf{Example:}

\begin{verbatim}
com/salesforce/api/soap/47.0;client=Astro
\end{verbatim}

The client ID is set in the Call Options header of an API call. For an example on how to set the Call Options header, see:
- REST API: Sforce-Call-Options Header. (Bulk API also uses the Sforce-Call-Options header.)
- SOAP API: CallOptions Header. (Apex API also uses the CallOptions element.)

\textbf{changetype}

The operation that caused the change.

\textbf{Signature}

\begin{verbatim}
public String changetype {get; set;}
\end{verbatim}

\textbf{Property Value}

\textbf{Type: String}

Can be one of the following values:
- CREATE
- UPDATE
- DELETE
- UNDELETE

For gap events, the change type starts with the \texttt{GAP} prefix.
- GAP_CREATE
- GAP_UPDATE
- GAP_DELETE
- GAP_UNDELETE

For overflow events, the change type is \texttt{GAP OVERFLOW}.

\textbf{commitnumber}

The system change number (SCN) of a committed transaction, which increases sequentially. This field is provided for diagnostic purposes. The field value is not guaranteed to be unique in Salesforce—it is unique only in a single database instance. If your Salesforce org migrates to another database instance, the commit number might not be unique or sequential.
Signature
public Long commitnumber {get; set;}

Property Value
Type: Long

difffields
Contains the names of fields whose values are sent as a unified diff because they contain large text values.

Signature
public List<String> difffields {get; set;}

Property Value
Type: List<String>

SEE ALSO:
    Change Data Capture Developer Guide: Sending Data Differences for Fields of Updated Records

entityname
The API name of the standard or custom object that the change pertains to. For example, Account or MyObject__c.
Signature

`public String entityname {get; set;}`

Property Value

Type: `String`

**nulledfields**

Contains the names of fields whose values were changed to null in an update operation. Use this field in Apex change event messages to determine if a field was changed to null in an update and isn't an unchanged field.

Signature

`public List<String> nulledfields {get; set;}`

Property Value

Type: `List<String>`

**recordids**

One or more record IDs for the changed records. Typically, this field contains one record ID. But if the same change occurred in multiple records of the same object type during the same transaction, Salesforce groups the change notifications and sends one change event for all affected records. In this case, the recordIds field contains an array of record IDs for all records that have the same change.

Signature

`public List<String> recordids {get; set;}`

Property Value

Type: `List<String>`

Examples of operations with same changes are:

- Update of fieldA to valueA in Account records.
- Deletion of Account records.
- Renaming or replacing a picklist value that results in updating the field value in all affected records.

The recordIds field can contain a wildcard value when a change event message is generated for custom field type conversions that cause data loss. In this case, the recordIds value is the three-character prefix of the object, followed by the wildcard character `*`. For example, for accounts, the value is `001*`.

**sequencenumber**

The sequence of the change within a transaction. The sequence number starts from 1.

Signature

`public Integer sequencenumber {get; set;}`
A lead conversion is an example of a transaction that can have multiple changes. A lead conversion results in the following sequence of changes, all within the same transaction.

1. Create an account
2. Create a contact
3. Create an opportunity
4. Update a lead

**transactionkey**

A string that uniquely identifies each Salesforce transaction. You can use this key to identify and group all changes that were made in the same transaction.

**TestBroker Class**

Contains a method that delivers platform event or change event messages in an Apex test.

**Namespace**

**EventBus**

**TestBroker Methods**

The following are methods for TestBroker.

**deliver()**

Delivers platform event messages to the test event bus. Use this method to deliver test event messages multiple times and verify that event subscribers have processed the test events each step of the way.
Signature

```java
public void deliver()
```

Return Value
Type: void

Usage
Enclose `Test.getEventBus().deliver()` within the `Test.startTest()` and `Test.stopTest()` statement block.

```java
Test.startTest();
// Create test events
// ...
// Publish test events with EventBus.publish()
// ...
// Deliver test events
Test.getEventBus().deliver();
// Perform validation
// ...
Test.stopTest();
```

SEE ALSO:
- Platform Events Developer Guide

### TriggerContext Class

Provides information about the platform event or change event trigger that's currently executing, such as how many times the trigger was retried due to the `EventBus.RetryableException`. Also, provides a method to resume trigger executions.

### Namespace

**EventBus**

### IN THIS SECTION:
- TriggerContext Properties
- TriggerContext Methods

### TriggerContext Properties

The following are properties for `TriggerContext`.

### IN THIS SECTION:
- `lastError`
  Read-only. The error message that the last thrown `EventBus.RetryableException` contains.
- `retries`
  Read-only. The number of times the trigger was retried due to throwing the `EventBus.RetryableException`. 
**lastError**
Read-only. The error message that the last thrown EventBus.RetryableException contains.

Signature

```java
public String lastError {get;}
```

Property Value

Type: **String**

Usage

The error message that this property returns is the message that was passed in when creating the EventBus.RetryableException exception, as follows.

```java
throw new EventBus.RetryableException(
    'Condition is not met, so retrying the trigger again.');
```

**retries**

Read-only. The number of times the trigger was retried due to throwing the EventBus.RetryableException.

Signature

```java
public Integer retries {get;}
```

Property Value

Type: **Integer**

**TriggerContext Methods**

The following are methods for TriggerContext.

IN THIS SECTION:

- **currentContext()**
  Returns an instance of the EventBus.TriggerContext class containing information about the currently executing trigger.

- **getResumeCheckpoint()**
  Returns the replay ID that was set by setResumeCheckpoint(). The returned value is the replay ID of the event message after which trigger processing resumes in a new trigger invocation.

- **setResumeCheckpoint(resumeReplayId)**
  Sets a checkpoint in the event stream where the platform event trigger resumes execution in a new invocation. Use this method to recover from limit and uncaught exceptions, or to control the number of events processed in one trigger execution. When calling this method, pass in the replay ID of the last successfully processed event message. When the trigger stops execution before all events in Trigger.New are processed, either because of an uncaught exception or intentionally, the trigger is invoked again. The new execution starts with the event message in the stream after the one with the checkpointed Replay ID.
**currentContext()**

Returns an instance of the `EventBus.TriggerContext` class containing information about the currently executing trigger.

Signature

```java
public static EventBus.TriggerContext currentContext()
```

Return Value

Type: `EventBus.TriggerContext`

Information about the currently executing trigger.

**getResumeCheckpoint()**

Returns the replay ID that was set by `setResumeCheckpoint()`. The returned value is the replay ID of the event message after which trigger processing resumes in a new trigger invocation.

Signature

```java
public String getResumeCheckpoint()
```

Return Value

Type: `String`

**setResumeCheckpoint(resumeReplayId)**

Sets a checkpoint in the event stream where the platform event trigger resumes execution in a new invocation. Use this method to recover from limit and uncaught exceptions, or to control the number of events processed in one trigger execution. When calling this method, pass in the replay ID of the last successfully processed event message. When the trigger stops execution before all events in `Trigger.New` are processed, either because of an uncaught exception or intentionally, the trigger is invoked again. The new execution starts with the event message in the stream after the one with the checkpointed Replay ID.

Signature

```java
public void setResumeCheckpoint(String resumeReplayId)
```

Parameters

`resumeReplayId`

Type: `String`

The replay ID of the last successfully processed platform event message, after which to resume processing in a new trigger execution context.

Return Value

Type: `void`
Usage
The method throws an EventBus.InvalidReplayIdException if the supplied Replay ID is not valid—the replay ID is not in the current trigger batch of events, in the Trigger.new list.

Example
This snippet shows how to call the method and pass in the replayId property of an event instance.

```
EventBus.TriggerContext.currentContext().setResumeCheckpoint(event.replayId);
```

Flow Namespace
The Flow namespace provides a class for advanced Visualforce controller access to flows.

IN THIS SECTION:

Interview Class
The Flow.Interview class provides advanced controller access to flows and the ability to start a flow.

Interview Class
The Flow.Interview class provides advanced controller access to flows and the ability to start a flow.

Namespace
Flow

Usage
SOQL and DML limits apply during flow execution. See Per-Transaction Flow Limits in the Salesforce Help.

To create an Interview object, you have two options.

- Create the object directly in your class by using:
  - No namespace: Flow.Interview.\texttt{flowName}
  - Namespace: Flow.Interview.\texttt{namespace.flowName}

- Create the object dynamically by using createInterview()

\textbf{Note:} We recommend only using createInterview() if you need to reuse your method or class. Using createInterview() has these drawbacks.

- If you package a class that uses createInterview(), you have to add the associated flow manually.
- If you delete a flow, Salesforce doesn’t check if it’s referenced with createInterview().

Examples: Starting Flow Interviews
The following examples are all sample controllers that start an interview for the flow from the Build a Discount Calculator project on Trailhead. Each shows a different permutation, based on:
• Whether the interview is created statically, with `Flow.Interview.myFlow`, or dynamically, with `createInterview()`.
• Whether the flow is managed or local.

**Interview Created Statically for a Local Flow**

```java
// Interview Created Statically for a Local Flow
{
    Map<String, Object> inputs = new Map<String, Object>();
    inputs.put('AccountID', myAccount);
    inputs.put('OpportunityID', myOppty);

    Flow.Interview.Calculate_discounts myFlow =
        new Flow.Interview.Calculate_discounts(inputs);
    myFlow.start();
}
```

**Interview Created Dynamically for a Local Flow**

```java
public void callFlow(String flowName, Map<String, Object> inputs) {
    Flow.Interview myFlow = Flow.Interview.createInterview(flowName, inputs);
    myFlow.start();
}
```

**Interview Created Statically for a Managed Flow**

```java
// Interview Created Statically for a Managed Flow
{
    Map<String, Object> inputs = new Map<String, Object>();
    inputs.put('AccountID', myAccount);
    inputs.put('OpportunityID', myOppty);

    Flow.Interview.myNamespace.Calculate_discounts myFlow =
        new Flow.Interview.myNamespace.Calculate_discounts(inputs);
    myFlow.start();
}
```

**Interview Created Dynamically for a Managed Flow**

```java
public void callFlow(String namespace, String flowName, Map<String, Object> inputs) {
    Flow.Interview myFlow = Flow.Interview.createInterview(namespace, flowName, inputs);
    myFlow.start();
}
```

**Example: Getting Variable Values**

This sample uses the `getVariableValue` method to obtain breadcrumb (navigation) information from a flow. If that flow contains subflow elements, and each of the referenced flows also contains a `vaBreadCrumb` variable, you can provide users with breadcrumbs regardless of which flow the interview is running.

```java
public class SampleController {

    //Instance of the flow
    public Flow.Interview.Flow_Template_Gallery myFlow {get; set;}

    public String getBreadCrumb() {
        String aBreadCrumb;
        if (myFlow==null) { return 'Home';}
        else aBreadCrumb = (String) myFlow.getVariableValue('vaBreadCrumb');
    }
}
```
Interview Methods

The following are instance methods for Interview.

createInterview(namespace, flowName, inputVariables)

Creates an interview for a namespaced flow.

Signature

```java
public static Flow.Interview createInterview(String namespace, String flowName,
Map<String, ANY> inputVariables)
```

Parameters

- **namespace**
  Type: String
  The flow's namespace.

- **flowName**
  Type: String
  The flow's API name.

- **inputVariables**
  Type: Map<String, Object>
  Initial values for the flow's input variables.

Return Value

Type: Flow.Interview

Usage

Use this method to dynamically create a Flow.Interview object for the `start()` method.

How you get output variable values from an interview depends on the type of the Apex variable where you’re storing the interview.

- If the variable is cast to a specific flow, you can use `myFlow.myVar` to access a variable, where `myVar` is the name of the variable.

  ```java
  system.debug('My Output Variable: ' + myFlow.varName);
  ```

- If the variable is of type Flow.Interview but not cast to a specific flow, you must use `getVariableValue()` to access the flow's variables.

  ```java
  system.debug('My Output Variable: ' + myFlow.getVariableValue('varName'));
  ```

If the flow doesn't exist in the current org, a TypeException is thrown.
createInterview(flowName, inputVariables)

Creates an interview for a flow.

Signature

```java
public static Flow.Interview createInterview(String flowName, Map<String, Object> inputVariables)
```

Parameters

- `flowName`
  Type: String
  The flow's API name.

- `inputVariables`
  Type: Map<String, Object>
  Initial values for the flow's input variables.

Return Value

Type: Flow.Interview

Usage

Use this method to dynamically create a Flow.Interview object for the `start` method.

How you get output variable values from an interview depends on the type of the Apex variable where you're storing the interview.

- If the variable is cast to a specific flow, you can use `myFlow.myVar` to access a variable, where `myVar` is the name of the variable.
  ```java
  system.debug('My Output Variable: ' + myFlow.myVar);
  ```

- If the variable is of type Flow.Interview but not cast to a specific flow, you must use `getVariableValue()` to access the flow's variables.
  ```java
  system.debug('My Output Variable: ' + myFlow.getVariableValue('varName'));
  ```

If the flow doesn't exist in the current org, a TypeException is thrown.

getVariableValue(variableName)

Returns the value of the specified flow variable. The flow variable can be in the flow embedded in the Visualforce page, or in a separate flow that is called by a subflow element.

Signature

```java
public Object getVariableValue(String variableName)
```

Parameters

- `variableName`
  Type: String
  Specifies the unique name of the flow variable.
Return Value
Type: Object

Usage
The returned variable value comes from whichever flow the interview is running. If the specified variable can’t be found in that flow, the method returns `null`. This method checks for the existence of the variable at run time only, not at compile time.

`start()`
Starts an instance (interview) for an autolaunched or user provisioning flow.

Signature
```
public Void start()
```

Return Value
Type: Void

Usage
This method can be used only with flows that have one of these types.
- Autolaunched Flow
- User Provisioning Flow

For details, see “Flow Types” in Salesforce Help.

When a flow user invokes an autolaunched flow, the active flow version runs. If there’s no active version, the latest version runs. When a flow admin invokes a flow, the latest version always runs.

**KbManagement Namespace**

The `KbManagement` namespace provides a class for managing knowledge articles.

The following is the class in the `KbManagement` namespace.

IN THIS SECTION:
- `PublishingService Class`
  Use the methods in the `KbManagement.PublishingService` class to manage the lifecycle of an article and its translations.

**PublishingService Class**
Use the methods in the `KbManagement.PublishingService` class to manage the lifecycle of an article and its translations.

**Namespace**
`KbManagement`
### Usage

Use the methods in the `KbManagement.PublishingService` class to manage the following parts of the lifecycle of an article and its translations:

- Publishing
- Updating
- Retrieving
- Deleting
- Submitting for translation
- Setting a translation to complete or incomplete status
- Archiving
- Assigning review tasks for draft articles or translations

**Note:** Date values are based on GMT.

To use the methods in this class, you must enable Salesforce Knowledge. See Salesforce Knowledge Implementation Guide for more information on setting up Salesforce Knowledge.

### PublishingService Methods

The following are methods for `PublishingService`. All methods are static.

**IN THIS SECTION:**

- `archiveOnlineArticle(articleId, scheduledDate)`
  Archives an online version of an article. If the specified scheduledDate is null, the article is archived immediately. Otherwise, it archives the article on the scheduled date.

- `assignDraftArticleTask(articleId, assigneeId, instructions, dueDate, sendEmailNotification)`
  Assigns a review task related to a draft article.

- `assignDraftTranslationTask(articleVersionId, assigneeId, instructions, dueDate, sendEmailNotification)`
  Assigns a review task related to a draft translation.

- `cancelScheduledArchivingOfArticle(articleId)`
  Cancels the scheduled archiving of an online article.

- `cancelScheduledPublicationOfArticle(articleId)`
  Cancels the scheduled publication of a draft article.

- `completeTranslation(articleVersionId)`
  Puts a translation in a completed state that is ready to publish.

- `deleteArchivedArticle(articleId)`
  Deletes an archived article.

- `deleteArchivedArticleVersion(articleId, versionNumber)`
  Deletes a specific version of an archived article.

- `deleteDraftArticle(articleId)`
  Deletes a draft article.

- `deleteDraftTranslation(articleVersionId)`
  Deletes a draft translation.
editArchivedArticle(articleId)
Creates a draft article from the archived master version and returns the new draft master version ID of the article.

editOnlineArticle(articleId, unpublish)
Creates a draft article from the online version and returns the new draft master version ID of the article. Also, unpublishes the online article, if `unpublish` is set to `true`.

editPublishedTranslation(articleId, language, unpublish)
Creates a draft version of the online translation for a specific language and returns the new draft master version ID of the article. Also, unpublishes the article, if set to `true`.

publishArticle(articleId, flagAsNew)
Publishes an article. If `flagAsNew` is set to `true`, the article is published as a major version.

restoreOldVersion(articleId, versionNumber)
Creates a draft article from an existing online article based on the specified archived version of the article and returns the article version ID.

scheduleForPublication(articleId, scheduledDate)
Schedules the article for publication as a major version. If the specified date is null, the article is published immediately.

setTranslationToIncomplete(articleVersionId)
Sets a draft translation that is ready for publication back to "in progress" status.

submitForTranslation(articleId, language, assigneeId, dueDate)
Submits an article for translation to the specified language. Also assigns the specified user and due date to the submittal and returns new ID of the draft translation.

archiveOnlineArticle(articleId, scheduledDate)
Archives an online version of an article. If the specified scheduledDate is null, the article is archived immediately. Otherwise, it archives the article on the scheduled date.

Signature

```java
public static Void archiveOnlineArticle(String articleId, Datetime scheduledDate)
```

Parameters

- `articleId` Type: `String`
- `scheduledDate` Type: `Datetime`

Return Value

Type: `Void`

Example

```java
String articleId = 'Insert article ID';
Datetime scheduledDate = Datetime.newInstanceGmt(2012, 12,13,30,0);
KbManagement.PublishingService.archiveOnlineArticle(articleId, scheduledDate);
```
assignDraftArticleTask(articleId, assigneeId, instructions, dueDate, sendEmailNotification)
Assigns a review task related to a draft article.

Signature
public static Void assignDraftArticleTask(String articleId, String assigneeId, String instructions, Datetime dueDate, Boolean sendEmailNotification)

Parameters
articleId
Type: String
assigneeId
Type: String
instructions
Type: String
dueDate
Type: Datetime
sendEmailNotification
Type: Boolean

Return Value
Type: Void

Example
String articleId = 'Insert article ID';
String assigneeId = '';
String instructions = 'Please review this draft.';
Datetime dueDate = Datetime.newInstanceGmt(2012, 12, 1);
KbManagement.PublishingService.assignDraftArticleTask(articleId, assigneeId, instructions, dueDate, true);

assignDraftTranslationTask(articleVersionId, assigneeId, instructions, dueDate, sendEmailNotification)
Assigns a review task related to a draft translation.

Signature
public static Void assignDraftTranslationTask(String articleVersionId, String assigneeId, String instructions, Datetime dueDate, Boolean sendEmailNotification)
Parameters

- **articleVersionId**
  - Type: String
- **assigneeId**
  - Type: String
- **instructions**
  - Type: String
- **dueDate**
  - Type: Datetime
- **sendEmailNotification**
  - Type: Boolean

Return Value

Type: Void

Example

```java
String articleId = 'Insert article ID';
String assigneeId = 'Insert assignee ID';
String instructions = 'Please review this draft.';
Datetime dueDate = Datetime.newInstanceGmt(2012, 12, 1);
KbManagement.PublishingService.assignDraftTranslationTask(articleId, assigneeId, instructions, dueDate, true);
```

cancelScheduledArchivingOfArticle(articleId)

Cancels the scheduled archiving of an online article.

Signature

```java
public static Void cancelScheduledArchivingOfArticle(String articleId)
```

Parameters

- **articleId**
  - Type: String

Return Value

Type: Void

Example

```java
String articleId = 'Insert article ID';
KbManagement.PublishingService.cancelScheduledArchivingOfArticle(articleId);
```
cancelScheduledPublicationOfArticle(articleId)
Cancels the scheduled publication of a draft article.

Signature
public static Void cancelScheduledPublicationOfArticle(String articleId)

Parameters
articleId
Type: String

Return Value
Type: Void

Example
String articleId = 'Insert article ID';
KbManagement.PublishingService.cancelScheduledPublicationOfArticle (articleId);

completeTranslation(articleVersionId)
Puts a translation in a completed state that is ready to publish.

Signature
public static Void completeTranslation(String articleVersionId)

Parameters
articleVersionId
Type: String

Return Value
Type: Void

Example
String articleVersionId = 'Insert article ID';
KbManagement.PublishingService.completeTranslation(articleVersionId);

deleteArchivedArticle(articleId)
Deletes an archived article.

Signature
public static Void deleteArchivedArticle(String articleId)
Parameters

articleId  
  Type: String

Return Value

Type: Void

Example

```java
String articleId = 'Insert article ID';
KbManagement.PublishingService.deleteArchivedArticle(articleId);
```

delteArchivedArticleVersion(articleId, versionNumber)

Deletes a specific version of an archived article.

Signature

```java
public static Void deleteArchivedArticleVersion(String articleId, Integer versionNumber)
```

Parameters

articleId  
  Type: String

versionNumber  
  Type: Integer

Return Value

Type: Void

Example

```java
String articleId = 'Insert article ID';
Integer versionNumber = 1;
KbManagement.PublishingService.deleteArchivedArticleVersion(articleId, versionNumber);
```

delteDraftArticle(articleId)

Deletes a draft article.

Signature

```java
public static Void deleteDraftArticle(String articleId)
```
Parameters

**articleId**
Type: **String**

Return Value
Type: Void

Example

```java
String articleId = 'Insert article ID';
KbManagement.PublishingService.deleteDraftArticle(articleId);
```

**deleteDraftTranslation(articleVersionId)**

Deletes a draft translation.

Signature

```java
public static Void deleteDraftTranslation(String articleVersionId)
```

Parameters

**articleVersionId**
Type: **String**

Return Value
Type: Void

Example

```java
String articleVersionId = 'Insert article ID';
KbManagement.PublishingService.deleteDraftTranslation(articleVersionId);
```

**editArchivedArticle(articleId)**

Creates a draft article from the archived master version and returns the new draft master version ID of the article.

Signature

```java
public static String editArchivedArticle(String articleId)
```

Parameters

**articleId**
Type: **String**
Return Value
Type: String

Example
```java
String articleId = 'Insert article ID';
String id = KbManagement.PublishingService.editArchivedArticle(articleId);
```

editOnlineArticle(articleId, unpublish)

Creates a draft article from the online version and returns the new draft master version ID of the article. Also, unpublishes the online article, if `unpublish` is set to `true`.

Signature
```java
public static String editOnlineArticle(String articleId, Boolean unpublish)
```

Parameters
```
articleId
  Type: String

unpublish
  Type: Boolean
```

Return Value
Type: String

Example
```java
String articleId = 'Insert article ID';
String id = KbManagement.PublishingService.editOnlineArticle(articleId, true);
```

editPublishedTranslation(articleId, language, unpublish)

Creates a draft version of the online translation for a specific language and returns the new draft master version ID of the article. Also, unpublishes the article, if set to `true`.

Signature
```java
public static String editPublishedTranslation(String articleId, String language, Boolean unpublish)
```

Parameters
```
articleId
  Type: String

language
  Type: String
```

Example
```java
String articleId = 'Insert article ID';
String id = KbManagement.PublishingService.editPublishedTranslation(articleId, 'language', true);
```
unpublish
Type: Boolean

Return Value
Type: String

Example
String articleId = 'Insert article ID';
String language = 'fr';
String id = KbManagement.PublishingService.editPublishedTranslation(articleId, language, true);

publishArticle(articleId, flagAsNew)
Publishes an article. If flagAsNew is set to true, the article is published as a major version.

Signature
public static Void publishArticle(String articleId, Boolean flagAsNew)

Parameters
articleId
Type: String
flagAsNew
Type: Boolean

Return Value
Type: Void

Example
String articleId = 'Insert article ID';
KbManagement.PublishingService.publishArticle(articleId, true);

restoreOldVersion(articleId, versionNumber)
Creates a draft article from an existing online article based on the specified archived version of the article and returns the article version ID.

Signature
public static String restoreOldVersion(String articleId, Integer versionNumber)
Parameters

`articleId`
Type: `String`

`versionNumber`
Type: `Integer`

Return Value
Type: `String`

Example

```java
String articleId = 'Insert article ID';
String id = KbManagement.PublishingService.restoreOldVersion (articleId, 1);
```

`scheduledForPublication(articleId, scheduledDate)`
Schedules the article for publication as a major version. If the specified date is null, the article is published immediately.

Signature

```java
public static Void scheduledForPublication(String articleId, Datetime scheduledDate)
```

Parameters

`articleId`
Type: `String`

`scheduledDate`
Type: `Datetime`

Return Value
Type: `Void`

Example

```java
String articleId = 'Insert article ID'
Datetime scheduledDate = Datetime.newInstanceGmt(2012, 12, 1, 13, 30, 0);
KbManagement.PublishingService.scheduleForPublication(articleId, scheduledDate);
```

`setTranslationToIncomplete(articleVersionId)`
Sets a draft translation that is ready for publication back to “in progress” status.

Signature

```java
public static Void setTranslationToIncomplete(String articleVersionId)
```
submitForTranslation(articleId, language, assigneeId, dueDate)

Submits an article for translation to the specified language. Also assigns the specified user and due date to the submittal and returns new ID of the draft translation.

Signature

public static String submitForTranslation(String articleId, String language, String assigneeId, Datetime dueDate)

Parameters

articleId
Type: String

language
Type: String

assigneeId
Type: String

dueDate
Type: Datetime

Return Value
Type: String

Example

String articleId = 'Insert article ID';
String language = 'fr';
String assigneeId = 'Insert assignee ID';
Datetime dueDate = Datetime.newInstanceGmt(2012, 12, 1);
String id = KbManagement.PublishingService.submitForTranslation(articleId, language, assigneeId, dueDate);
Messaging Namespace

The **Messaging** namespace provides classes and methods for Salesforce outbound and inbound email functionality.

The following are the classes in the **Messaging** namespace.

**IN THIS SECTION:**

- **AttachmentRetrievalOption Enum**
  Provides options for including attachment metadata only, attachment metadata and content, or excluding attachments.

- **Email Class (Base Email Methods)**
  Contains base email methods common to both single and mass email.

- **EmailFileAttachment Class**
  EmailFileAttachment is used in SingleEmailMessage to specify attachments passed in as part of the request, as opposed to existing documents in Salesforce.

- **InboundEmail Class**
  Represents an inbound email object.

- **InboundEmail.BinaryAttachment Class**
  An InboundEmail object stores binary attachments in an InboundEmail.BinaryAttachment object.

- **InboundEmail.TextAttachment Class**
  An InboundEmail object stores text attachments in an InboundEmail.TextAttachment object.

- **InboundEmailResult Class**
  The InboundEmailResult object is used to return the result of the email service. If this object is null, the result is assumed to be successful.

- **InboundEnvelope Class**
  The InboundEnvelope object stores the envelope information associated with the inbound email, and has the following fields.

- **MassEmailMessage Class**
  Contains methods for sending mass email.

- **InboundEmail.Header Class**
  An InboundEmail object stores RFC 2822 email header information in an InboundEmail.Header object with the following properties.

- **PushNotification Class**
  PushNotification is used to configure push notifications and send them from an Apex trigger.

- **PushNotificationPayload Class**
  Contains methods to create the notification message payload for an Apple device.

- **RenderEmailTemplateBodyResult Class**
  Contains the results for rendering email templates.

- **RenderEmailTemplateError Class**
  Represents an error that the RenderEmailTemplateBodyResult object can contain.

- **SendEmailError Class**
  Represents an error that the SendEmailResult object may contain.

- **SendEmailResult Class**
  Contains the result of sending an email message.
**SingleEmailMessage Methods**
Contains methods for sending single email messages.

**AttachmentRetrievalOption Enum**
Provides options for including attachment metadata only, attachment metadata and content, or excluding attachments.

**Namespace**
Messaging

**Usage**
Use these enum values with the `renderStoredEmailTemplate(templateId, whoId, whatId, attachmentRetrievalOption)` method.

**Enum Values**
The following are the values of the `Messaging.AttachmentRetrievalOption` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>METADATA_ONLY</td>
<td>Includes only the file name, content type, and the object ID in the <code>fileAttachments</code> property of <code>Messaging.SingleEmailMessage</code>. Note: When the template is rendered from a Visualforce template (and not from a static file attached to the template), the object ID is not available.</td>
</tr>
<tr>
<td>METADATA_WITH_BODY</td>
<td>Includes the attachment content, in addition to the file name, content type, and the object ID in the <code>fileAttachments</code> property of <code>Messaging.SingleEmailMessage</code>.</td>
</tr>
<tr>
<td>NONE</td>
<td>Doesn't include any attachments in <code>Messaging.SingleEmailMessage</code>.</td>
</tr>
</tbody>
</table>

**Email Class (Base Email Methods)**
Contains base email methods common to both single and mass email.

**Namespace**
Messaging

**Usage**
Note: If templates are not being used, all email content must be in plain text, HTML, or both. Visualforce email templates cannot be used for mass email.

**Email Methods**
The following are methods for `Email`. All are instance methods.
IN THIS SECTION:

setBccSender(bcc)
Indicates whether the email sender receives a copy of the email that is sent. For a mass mail, the sender is only copied on the first email sent.

setReplyTo(replyAddress)
Optional. The email address that receives the message when a recipient replies.

setTemplateID(templateId)
The ID of the template to be merged to create this email. Specify a value for setTemplateId, setHtmlBody, or setPlainTextBody. Or, you can define both setHtmlBody and setPlainTextBody.

setSaveAsActivity(saveAsActivity)
Optional. The default value is true, meaning the email is saved as an activity. This argument only applies if the recipient list is based on targetObjectId or targetObjectIds. If HTML email tracking is enabled for the organization, you will be able to track open rates.

setSenderDisplayName(displayName)
Optional. The name that appears on the From line of the email. This cannot be set if the object associated with a setOrgWideEmailAddressId for a SingleEmailMessage has defined its DisplayName field.

setUseSignature(useSignature)
Indicates whether the email includes an email signature if the user has one configured. The default is true, meaning if the user has a signature it is included in the email unless you specify false.

**setBccSender (bcc)**
Indicates whether the email sender receives a copy of the email that is sent. For a mass mail, the sender is only copied on the first email sent.

**Signature**

```java
public Void setBccSender(Boolean bcc)
```

**Parameters**

**bcc**
Type: Boolean

**Return Value**
Type: Void

**Usage**

**Note:** If the BCC compliance option is set at the organization level, the user cannot add BCC addresses on standard messages. The following error code is returned: BCC_NOT_ALLOWED_IF_BCC_COMPLIANCE_ENABLED. Contact your Salesforce representative for information on BCC compliance.

**setReplyTo (replyAddress)**
Optional. The email address that receives the message when a recipient replies.
Signature
public Void setReplyTo(String replyAddress)

Parameters
replyAddress
  Type: String

Return Value
Type: Void

**setTemplateID(templatedId)**
The ID of the template to be merged to create this email. Specify a value for setTemplateId, setHtmlBody, or setPlainTextBody. Or, you can define both setHtmlBody and setPlainTextBody.

Signature
public Void setTemplateID(ID templateId)

Parameters
templateId
  Type: ID

Return Value
Type: Void

Usage
**Note:** setHtmlBody and setPlainTextBody apply only to single email methods, not to mass email methods.

**setSaveAsActivity(saveAsActivity)**
Optional. The default value is true, meaning the email is saved as an activity. This argument only applies if the recipient list is based on targetObjectId or targetObjectIds. If HTML email tracking is enabled for the organization, you will be able to track open rates.

Signature
public Void setSaveAsActivity(Boolean saveAsActivity)

Parameters
saveAsActivity
  Type: Boolean
Return Value
Type: Void

**setSenderDisplayName(displayName)**
Optional. The name that appears on the From line of the email. This cannot be set if the object associated with a setOrgWideEmailAddressId for a SingleEmailMessage has defined its DisplayName field.

Signature
```
public Void setSenderDisplayName(String displayName)
```

Parameters
```
displayName
    Type: String
```

Return Value
Type: Void

**setUseSignature(useSignature)**
Indicates whether the email includes an email signature if the user has one configured. The default is `true`, meaning if the user has a signature it is included in the email unless you specify `false`.

Signature
```
public Void setUseSignature(Boolean useSignature)
```

Parameters
```
useSignature
    Type: Boolean
```

Return Value
Type: Void

**EmailFileAttachment Class**
EmailFileAttachment is used in SingleEmailMessage to specify attachments passed in as part of the request, as opposed to existing documents in Salesforce.

**Namespace**
`Messaging`
EmailFileAttachment Constructors
The following are constructors for EmailFileAttachment.

EmailFileAttachment()
Creates a new instance of the Messaging.EmailFileAttachment class.

Signature
public EmailFileAttachment()

EmailFileAttachment Properties
The following are properties for EmailFileAttachment.

body
Gets or sets the attachment itself.

contenttype
Gets or sets the attachment’s Content-Type.

filename
Gets or sets the name of the file to attach.

id
Read-Only. Gets the attachment ID.

inline
Specifies a Content-Disposition of inline (true) or attachment (false).

body
Gets or sets the attachment itself.

Signature
public Blob body {get; set;}

2137
**contenttype**
Gets or sets the attachment’s Content-Type.

Signature

```java
public String contenttype {get; set;}
```

**filename**
Gets or sets the name of the file to attach.

Signature

```java
public String filename {get; set;}
```

**id**
Read-Only. Gets the attachment ID.

Signature

```java
public Id id {get;}
```

**inline**
Specifies a Content-Disposition of inline (true) or attachment (false).

Signature

```java
public Boolean inline {get; set;}
```
InboundEmail Class

Represents an inbound email object.

Namespace

Messaging

IN THIS SECTION:

InboundEmail Constructors

InboundEmail Properties

InboundEmail Constructors

The following are constructors for InboundEmail.

IN THIS SECTION:

InboundEmail()

InboundEmail() creates a new instance of the Messaging.InboundEmail class.

InboundEmail()

InboundEmail() creates a new instance of the Messaging.InboundEmail class.

Signature

public InboundEmail()

InboundEmail Properties

The following are properties for InboundEmail.

IN THIS SECTION:

binaryAttachments

A list of binary attachments received with the email, if any.

ccAddresses

A list of carbon copy (CC) addresses, if any.

fromAddress

The email address that appears in the From field.

fromName

The name that appears in the From field, if any.

headers

A list of the RFC 2822 headers in the email.

htmlBody

The HTML version of the email, if specified by the sender.
htmlBodyIsTruncated
Indicates whether the HTML body text is truncated (true) or not (false).

inReplyTo
The In-Reply-To field of the incoming email. Identifies the email or emails to which this one is a reply (parent emails). Contains the parent email or emails' message-IDs.

messageId
The Message-ID—the incoming email's unique identifier.

plainTextBody
The plain text version of the email, if specified by the sender.

plainTextBodyIsTruncated
Indicates whether the plain body text is truncated (true) or not (false).

references
The References field of the incoming email. Identifies an email thread. Contains a list of the parent emails' References and message IDs, and possibly the In-Reply-To fields.

replyTo
The email address that appears in the reply-to header.

subject
The subject line of the email, if any.

textAttachments
A list of text attachments received with the email, if any.

toAddresses
The email address that appears in the To field.

binaryAttachments
A list of binary attachments received with the email, if any.

Signature

public InboundEmail.BinaryAttachment[] binaryAttachments {get; set;}

Property Value
Type: InboundEmail.BinaryAttachment[]

Usage
Examples of binary attachments include image, audio, application, and video files.

ccAddresses
A list of carbon copy (CC) addresses, if any.

Signature

public String[] ccAddresses {get; set;}

2140
**fromAddress**
The email address that appears in the From field.

Signature
```
public String fromAddress {get; set;}
```

**fromName**
The name that appears in the From field, if any.

Signature
```
public String fromName {get; set;}
```

**headers**
A list of the RFC 2822 headers in the email.

Signature
```
public InboundEmail.Header[] headers {get; set;}
```

**htmlBody**
The HTML version of the email, if specified by the sender.
**htmlBody**

Property Value

Type: `String`

**htmlBodyIsTruncated**

Indicates whether the HTML body text is truncated (`true`) or not (`false`).

**inReplyTo**

The In-Reply-To field of the incoming email. Identifies the email or emails to which this one is a reply (parent emails). Contains the parent email or emails' message-IDs.

**messageId**

The Message-ID—the incoming email's unique identifier.

**plainTextBody**

The plain text version of the email, if specified by the sender.
Property Value
Type: String

**plaintextBodyIsTruncated**
Indicates whether the plain body text is truncated (true) or not (false).

Signature
```java
public Boolean plainTextBodyIsTruncated {get; set;}
```

Property Value
Type: Boolean

**references**
The References field of the incoming email. Identifies an email thread. Contains a list of the parent emails' References and message IDs, and possibly the In-Reply-To fields.

Signature
```java
public String[] references {get; set;}
```

Property Value
Type: String[]

**replyTo**
The email address that appears in the reply-to header.

Signature
```java
public String replyTo {get; set;}
```

Property Value
Type: String

Usage
If there is no reply-to header, this field is identical to the fromAddress field.

**subject**
The subject line of the email, if any.

Signature
```java
public String subject {get; set;}
```
Property Value
Type: String

textAttachments
A list of text attachments received with the email, if any.

Signature
public InboundEmail.TextAttachment[] textAttachments {get; set;}

Property Value
Type: InboundEmail.TextAttachment[]

Usage
The text attachments can be any of the following:
• Attachments with a Multipurpose Internet Mail Extension (MIME) type of text
• Attachments with a MIME type of application/octet-stream and a file name that ends with either a .vcf or .vcs extension. These are saved as text/x-vcard and text/calendar MIME types, respectively.

toAddresses
The email address that appears in the To field.

Signature
public String[] toAddresses {get; set;}

Property Value
Type: String[]

InboundEmail.BinaryAttachment Class
An InboundEmail object stores binary attachments in an InboundEmail.BinaryAttachment object.

Namespace
Messaging

Usage
Examples of binary attachments include image, audio, application, and video files.

IN THIS SECTION:
InboundEmail.BinaryAttachment Constructors
InboundEmail.BinaryAttachment Properties

InboundEmail.BinaryAttachment Constructors

The following are constructors for InboundEmail.BinaryAttachment.

IN THIS SECTION:

InboundEmail.BinaryAttachment()

Creates a new instance of the Messaging.InboundEmail.BinaryAttachment class.

InboundEmail.BinaryAttachment()

Creates a new instance of the Messaging.InboundEmail.BinaryAttachment class.

Signature

public InboundEmail.BinaryAttachment()

InboundEmail.BinaryAttachment Properties

The following are properties for InboundEmail.BinaryAttachment.

IN THIS SECTION:

body

The body of the attachment.

fileName

The name of the attached file.

headers

Any header values associated with the attachment. Examples of header names include Content-Type, Content-Transfer-Encoding, and Content-ID.

mimeTypeSubType

The primary and sub MIME-type.

body

The body of the attachment.

Signature

public Blob body {get; set;}

Property Value

Type: Blob
**fileName**
The name of the attached file.

Signature
public String fileName {get; set;}

Property Value
Type: String

**headers**
Any header values associated with the attachment. Examples of header names include Content-Type, Content-Transfer-Encoding, and Content-ID.

Signature
public List<Messaging.InboundEmail.Header> headers {get; set;}

Property Value
Type: List<Messaging.InboundEmail.Header>

**mimeTypeSubType**
The primary and sub MIME-type.

Signature
public String mimeTypeSubType {get; set;}

Property Value
Type: String

**InboundEmail.TextAttachment Class**
An InboundEmail object stores text attachments in an InboundEmail.TextAttachment object.

**Namespace**
Messaging

**Usage**
The text attachments can be any of the following:

- Attachments with a Multipurpose Internet Mail Extension (MIME) type of text
- Attachments with a MIME type of application/octet-stream and a file name that ends with either a .vcf or .vcs extension. These are saved as text/x-vcard and text/calendar MIME types, respectively.
In this section:

**InboundEmail.TextAttachment Constructors**

The following are constructors for `InboundEmail.TextAttachment`.

**InboundEmail.TextAttachment()**

Creates a new instance of the `Messaging.InboundEmail.TextAttachment` class.

Signature

```java
public InboundEmail.TextAttachment()
```

**InboundEmail.TextAttachment Properties**

The following are properties for `InboundEmail.TextAttachment`.

**body**

The body of the attachment.

**bodyIsTruncated**

Indicates whether the attachment body text is truncated (true) or not (false).

**charset**

The original character set of the body field. The body is re-encoded as UTF-8 as input to the Apex method.

**fileName**

The name of the attached file.

**headers**

Any header values associated with the attachment. Examples of header names include `Content-Type`, `Content-Transfer-Encoding`, and `Content-ID`.

**mimeTypeSubType**

The primary and sub MIME-type.

**body**

The body of the attachment.
Signature

```java
public String body {get; set;}
```

Property Value
Type: `String`

**bodyIsTruncated**
Indicates whether the attachment body text is truncated (`true`) or not (`false`).

Signature

```java
public Boolean bodyIsTruncated {get; set;}
```

Property Value
Type: `Boolean`

**charset**
The original character set of the body field. The body is re-encoded as UTF-8 as input to the Apex method.

Signature

```java
public String charset {get; set;}
```

Property Value
Type: `String`

**fileName**
The name of the attached file.

Signature

```java
public String fileName {get; set;}
```

Property Value
Type: `String`

**headers**
Any header values associated with the attachment. Examples of header names include `Content-Type`, `Content-Transfer-Encoding`, and `Content-ID`.

Signature

```java
public List<Messaging.InboundEmail.Header> headers {get; set;}
```
Property Value
Type: List<Messaging.InboundEmail.Header>

mimeTypeSubType
The primary and sub MIME-type.

Signature
public String mimeTypeSubType {get; set;}

Property Value
Type: String

InboundEmailResult Class
The InboundEmailResult object is used to return the result of the email service. If this object is null, the result is assumed to be successful.

Namespace
Messaging

InboundEmailResult Properties
The following are properties for InboundEmailResult.

IN THIS SECTION:
message
A message that Salesforce returns in the body of a reply email. This field can be populated with text irrespective of the value returned by the Success field.
success
A value that indicates whether the email was successfully processed.

message
A message that Salesforce returns in the body of a reply email. This field can be populated with text irrespective of the value returned by the Success field.

Signature
public String message {get; set;}

Property Value
Type: String
**success**
A value that indicates whether the email was successfully processed.

Signature

```java
public Boolean success {get; set;}
```

Property Value
Type: Boolean

Usage
If `false`, Salesforce rejects the inbound email and sends a reply email to the original sender containing the message specified in the `Message` field.

**InboundEnvelope Class**
The InboundEnvelope object stores the envelope information associated with the inbound email, and has the following fields.

**Namespace**
Messaging

**InboundEnvelope Properties**
The following are properties for InboundEnvelope.

IN THIS SECTION:
- `fromAddress`
The name that appears in the `From` field of the envelope, if any.
- `toAddress`
The name that appears in the `To` field of the envelope, if any.

**fromAddress**
The name that appears in the `From` field of the envelope, if any.

Signature

```java
public String fromAddress {get; set;}
```

Property Value
Type: String

**toAddress**
The name that appears in the `To` field of the envelope, if any.
Signature

```java
public String toAddress {get; set;}
```

Property Value

Type: String

---

**MassEmailMessage Class**

Contains methods for sending mass email.

---

**Namespace**

`Messaging`

---

**Usage**

MassEmailMessage extends Email and inherits all of its methods. All base email (Email class) methods are also available to the MassEmailMessage objects.

---

**IN THIS SECTION:**

- MassEmailMessage Constructors
- MassEmailMessage Methods

---

**SEE ALSO:**

- Email Class (Base Email Methods)

---

**MassEmailMessage Constructors**

The following are constructors for MassEmailMessage.

---

**IN THIS SECTION:**

- MassEmailMessage()
  - Creates a new instance of the Messaging.MassEmailMessage class.

---

**MassEmailMessage ()**

Creates a new instance of the Messaging.MassEmailMessage class.

---

**Signature**

```java
public MassEmailMessage()
```

---

**MassEmailMessage Methods**

The following are methods for MassEmailMessage. All are instance methods. All base email (Email class) methods are also available to the MassEmailMessage objects. These methods are described in Email Class (Base Email Methods).
IN THIS SECTION:

setDescription(description)
The description of the email.

setTargetObjectIds(targetObjectIds)
A list of IDs of the contacts, leads, or users to which the email will be sent. The IDs you specify set the context and ensure that merge fields in the template contain the correct data. The objects must be of the same type (all contacts, all leads, or all users).

setWhatIds(whatIds)
Optional. If you specify a list of contacts for the targetObjectIds field, you can specify a list of whatIds as well. This helps to further ensure that merge fields in the template contain the correct data.

setDescription(description)
The description of the email.

Signature

public Void setDescription(String description)

Parameters

description
Type: String

Return Value
Type: Void

setTargetObjectIds(targetObjectIds)
A list of IDs of the contacts, leads, or users to which the email will be sent. The IDs you specify set the context and ensure that merge fields in the template contain the correct data. The objects must be of the same type (all contacts, all leads, or all users).

Signature

public Void setTargetObjectIds(ID[] targetObjectIds)

Parameters

targetObjectIds
Type: ID[]

Return Value
Type: Void

Usage
You can list up to 250 IDs per email. If you specify a value for the targetObjectIds field, optionally specify a whatId as well to set the email context to a user, contact, or lead. This ensures that merge fields in the template contain the correct data.
Do not specify the IDs of records that have the Email Opt Out option selected.

All emails must have a recipient value in at least one of the following fields:

- toAddresses
- ccAddresses
- bccAddresses
- targetObjectId

**setWhatIds(whatIds)**

Optional. If you specify a list of contacts for the targetObjectId field, you can specify a list of whatIds as well. This helps to further ensure that merge fields in the template contain the correct data.

Signature

```java
public Void setWhatIds(ID[] whatIds)
```

Parameters

- `whatIds`
  - Type: ID[]

Return Value

Type: Void

Usage

The values must be one of the following types:

- Contract
- Case
- Opportunity
- Product

**Note:** If you specify whatIds, specify one for each targetObjectId; otherwise, you will receive an INVALID_ID_FIELD error.

### InboundEmail.Header Class

An InboundEmail object stores RFC 2822 email header information in an InboundEmail.Header object with the following properties.

**Namespace**

Messaging

**InboundEmail.Header Properties**

The following are properties for InboundEmail.Header.
IN THIS SECTION:

name
The name of the header parameter, such as Date or Message-ID.

value
The value of the header.

**name**
The name of the header parameter, such as Date or Message-ID.

Signature

```java
public String name {get; set;}
```

Property Value
Type: String

**value**
The value of the header.

Signature

```java
public String value {get; set;}
```

Property Value
Type: String

**PushNotification Class**

PushNotification is used to configure push notifications and send them from an Apex trigger.

**Namespace**

Messaging

**Example**

This sample Apex trigger sends push notifications to the connected app named Test_App, which corresponds to a mobile app on iOS mobile clients. The trigger fires after cases have been updated and sends the push notification to two users: the case owner and the user who last modified the case.

```java
trigger caseAlert on Case (after update) {
  for(Case cs : Trigger.New)
  {
    // Instantiating a notification
    Messaging.PushNotification msg =
```
new Messaging.PushNotification();

// Assembling the necessary payload parameters for Apple.
// Apple params are:
// (<alert text>,<alert sound>,<badge count>,
// <free-form data>)
// This example doesn't use badge count or free-form data.
// The number of notifications that haven't been acted
// upon by the intended recipient is best calculated
// at the time of the push. This timing helps
// ensure accuracy across multiple target devices.
Map<String, Object> payload =
    Messaging.PushNotificationPayload.apple(
        'Case ' + cs.CaseNumber + ' status changed to: ' + cs.Status, '', null, null);

// Adding the assembled payload to the notification
msg.setPayload(payload);

// Getting recipient users
String userId1 = cs.OwnerId;
String userId2 = cs.LastModifiedById;

// Adding recipient users to list
Set<String> users = new Set<String>();
users.add(userId1);
users.add(userId2);

// Sending the notification to the specified app and users.
// Here we specify the API name of the connected app.
msg.send('Test_App', users);

IN THIS SECTION:

PushNotification Constructors
PushNotification Methods

PushNotification Constructors

The following are the constructors for PushNotification.

IN THIS SECTION:

PushNotification(payload) Creates a new instance of the Messaging.PushNotification class using the specified payload parameters as key-value pairs. When you use this constructor, you don't need to call setPayload to set the payload.
**PushNotification()**

Creates a new instance of the Messaging.PushNotification class.

Signature

```java
public PushNotification()
```

**PushNotification(payload)**

Creates a new instance of the Messaging.PushNotification class using the specified payload parameters as key-value pairs. When you use this constructor, you don’t need to call setPayload to set the payload.

Signature

```java
public PushNotification(Map<String, Object> payload)
```

Parameters

**payload**

Type: `Map<String, Object>`

The payload, expressed as a map of key-value pairs.

**PushNotification Methods**

The following are the methods for PushNotification. All are global methods.

**IN THIS SECTION:**

- **send(application, users)**
  Sends a push notification message to the specified users.

- **setPayload(payload)**
  Sets the payload of the push notification message.

- **setTtl(ttl)**
  Reserved for future use.

**send(application, users)**

Sends a push notification message to the specified users.

Signature

```java
public void send(String application, Set<String> users)
```

Parameters

**application**

Type: `String`

The connected app API name. This corresponds to the mobile client app the notification should be sent to.
users
Type: Set
A set of user IDs that correspond to the users the notification should be sent to.

Example
See the Push Notification Example.

**setPayload(payload)**
Sets the payload of the push notification message.

Signature
```
public void setPayload(Map<String, Object> payload)
```

Parameters

payload
Type: Map<String, Object>
The payload, expressed as a map of key-value pairs.

Payload parameters can be different for each mobile OS vendor. For more information on Apple's payload parameters, search for "Apple Push Notification Service" at https://developer.apple.com/library/mac/documentation/.
To create the payload for an Apple device, see the PushNotificationPayload Class.

Example
See the Push Notification Example.

**setTtl(ttl)**
Reserved for future use.

Signature
```
public void setTtl(Integer ttl)
```

Parameters

ttl
Type: Integer
Reserved for future use.

**PushNotificationPayload Class**
Contains methods to create the notification message payload for an Apple device.
Namespace
Messaging

Usage
Apple has specific requirements for the notification payload, and this class has helper methods to create the payload. For more information on Apple’s payload parameters, search for “Apple Push Notification Service” at https://developer.apple.com/library/mac/documentation/.

Example
See the Push Notification Example.

IN THIS SECTION:
PushNotificationPayload Methods

PushNotificationPayload Methods
The following are the methods for PushNotificationPayload. All are global static methods.

IN THIS SECTION:

apple(alert, sound, badgeCount, userData)
Helper method that creates a valid Apple payload from the specified arguments.

apple(alertBody, actionLocKey, locKey, locArgs, launchImage, sound, badgeCount, userData)
Helper method that creates a valid Apple payload from the specified arguments.

apple(alert, sound, badgeCount, userData)
Helper method that creates a valid Apple payload from the specified arguments.

Signature

public static Map<String,Object> apple(String alert, String sound, Integer badgeCount, Map<String,Object> userData)

Parameters

alert
Type: String
Notification message to be sent to the mobile client.

sound
Type: String
Name of a sound file to be played as an alert. This sound file should be in the mobile application bundle.

badgeCount
Type: Integer
Number to display as the badge of the application icon.
userData
Type: Map<String, Object>
Map of key-value pairs that contains any additional data used to provide context for the notification. For example, it can contain IDs of the records that caused the notification to be sent. The mobile client app can use these IDs to display these records.

Return Value
Type: Map<String, Object>
Returns a formatted payload that includes all of the specified arguments.

Usage
To generate a valid payload, you must provide a value for at least one of the following parameters: alert, sound, badgeCount.

Example
See the Push Notification Example.

apple(alertBody, actionLocKey, locKey, locArgs, launchImage, sound, badgeCount, userData)
Helper method that creates a valid Apple payload from the specified arguments.

Signature
public static Map<String,Object> apple(String alertBody, String actionLocKey, String locKey, String[] locArgs, String launchImage, String sound, Integer badgeCount, Map<String,Object> userData)

Parameters
alertBody
Type: String
Text of the alert message.

actionLocKey
Type: String
If a value is specified for the actionLocKey argument, an alert with two buttons is displayed. The value is a key to get a localized string in a Localizable.strings file to use for the right button’s title.

locKey
Type: String
Key to an alert-message string in a Localizable.strings file for the current localization.

locArgs
Type: List<String>
Variable string values to appear in place of the format specifiers in locKey.

launchImage
Type: String
File name of an image file in the application bundle.

**sound**
Type: **String**
Name of a sound file to be played as an alert. This sound file should be in the mobile application bundle.

**badgeCount**
Type: **Integer**
Number to display as the badge of the application icon.

**userData**
Type: **Map<String, Object>**
Map of key-value pairs that contains any additional data used to provide context for the notification. For example, it can contain IDs of the records that caused the notification to be sent. The mobile client app can use these IDs to display these records.

Return Value
Type: **Map<String, Object>**
Returns a formatted payload that includes all of the specified arguments.

Usage
To generate a valid payload, you must provide a value for at least one of the following parameters: alert, sound, badgeCount.

---

**RenderEmailTemplateBodyResult Class**
Contains the results for rendering email templates.

**Namespace**
**Messaging**

IN THIS SECTION:
- **RenderEmailTemplateBodyResult Methods**

**RenderEmailTemplateBodyResult Methods**
The following are methods for RenderEmailTemplateBodyResult.

IN THIS SECTION:
- **getErrors()**
  If an error occurred during the renderEmailTemplate method, a RenderEmailTemplateError object is returned.
- **getMergedBody()**
  Returns the rendered body text with merge field references replaced with the corresponding record data.
- **getSuccess()**
  Indicates whether the operation was successful.
getErrors()  
If an error occurred during the renderEmailTemplate method, a RenderEmailTemplateError object is returned.

Signature  
public List<Messaging.RenderEmailTemplateError> getErrors()

Return Value  
Type: List<Messaging.RenderEmailTemplateError>

getMergedBody()  
Returns the rendered body text with merge field references replaced with the corresponding record data.

Signature  
public String getMergedBody()

Return Value  
Type: String

getSuccess()  
Indicates whether the operation was successful.

Signature  
public Boolean getSuccess()

Return Value  
Type: Boolean

RenderEmailTemplateError Class  
Represents an error that the RenderEmailTemplateBodyResult object can contain.

Namespace  
Messaging

IN THIS SECTION:  
RenderEmailTemplateError Methods

RenderEmailTemplateError Methods  
The following are methods for RenderEmailTemplateError.
IN THIS SECTION:
  
  **getFieldName()**
  Returns the name of the merge field in the error.

  **getMessage()**
  Returns a message describing the error.

  **getOffset()**
  Returns the offset within the supplied body text where the error was discovered. If the offset cannot be determined, -1 is returned.

  **getStatusCode()**
  Returns a Salesforce API status code.

---

**getFieldName()**

Returns the name of the merge field in the error.

**Signature**

```java
public String getFieldName()
```

**Return Value**

Type: `String`

**getMessage()**

Returns a message describing the error.

**Signature**

```java
public String getMessage()
```

**Return Value**

Type: `String`

**getOffset()**

Returns the offset within the supplied body text where the error was discovered. If the offset cannot be determined, -1 is returned.

**Signature**

```java
public Integer getOffset()
```

**Return Value**

Type: `Integer`

**getStatusCode()**

Returns a Salesforce API status code.
SendEmailError Class

Represents an error that the SendEmailResult object may contain.

Namespace
Messaging

SendEmailError Methods

The following are methods for SendEmailError. All are instance methods.

IN THIS SECTION:

getFields()  
A list of one or more field names. Identifies which fields in the object, if any, affected the error condition.

getMessage()  
The text of the error message.

getStatusCode()  
Returns a code that characterizes the error.

getTargetObjectId()  
The ID of the target record for which the error occurred.

getFields()
A list of one or more field names. Identifies which fields in the object, if any, affected the error condition.

Signature

public String[] getFields()

Return Value

Type: String[]
Return Value
Type: String

getStatusCode()
Returns a code that characterizes the error.

Signature
public System.StatusCode getStatusCode()}

Return Value
Type: System.StatusCode

Usage
The full list of status codes is available in the WSDL file for your organization. For more information about accessing the WSDL file for your organization, see “Downloading Salesforce WSDLs and Client Authentication Certificates” in the Salesforce online help.

getTargetObjectId()
The ID of the target record for which the error occurred.

Signature
public String getTargetObjectId()

Return Value
Type: String

SendEmailResult Class
Contains the result of sending an email message.

Namespace
Messaging

SendEmailResult Methods
The following are methods for SendEmailResult. All are instance methods.

IN THIS SECTION:
getErrors()
If an error occurred during the sendEmail method, a SendEmailError object is returned.
**isSuccess**
Indicates whether the email was successfully submitted for delivery (true) or not (false). Even if isSuccess is true, it does not mean the intended recipients received the email, as there could have been a problem with the email address or it could have bounced or been blocked by a spam blocker.

**getErrors()**
If an error occurred during the sendEmail method, a SendEmailError object is returned.

Signature
public SendEmailError[] getErrors()

Return Value
Type: Messaging.SendEmailError[]

**isSuccess()**
Indicates whether the email was successfully submitted for delivery (true) or not (false). Even if isSuccess is true, it does not mean the intended recipients received the email, as there could have been a problem with the email address or it could have bounced or been blocked by a spam blocker.

Signature
public Boolean isSuccess()

Return Value
Type: Boolean

**SingleEmailMessage Methods**
Contains methods for sending single email messages.

**Namespace**
Messaging

**Usage**
SingleEmailMessage extends Email and inherits all of its methods. All base email (Email class) methods are also available to the SingleEmailMessage objects.

Email properties are readable and writable. Each property has corresponding setter and getter methods. For example, the toAddresses() property is equivalent to the setToAddresses() and getToAddresses() methods. Only the setter methods are documented. However, the getTemplateName() method doesn’t have an equivalent setter method; use setTemplateId() to specify a template name.
IN THIS SECTION:

SingleEmailMessage Constructors

SingleEmailMessage Methods

SEE ALSO:

Email Class (Base Email Methods)

SingleEmailMessage Constructors

The following are constructors for SingleEmailMessage.

IN THIS SECTION:

SingleEmailMessage()

Creates a new instance of the Messaging.SingleEmailMessage class.

SingleEmailMessage()

Creates a new instance of the Messaging.SingleEmailMessage class.

Signature

public SingleEmailMessage()

SingleEmailMessage Methods

The following are methods for SingleEmailMessage. All are instance methods. All base email (Email class) methods are also available to the SingleEmailMessage objects. These methods are described in Email Class (Base Email Methods).

IN THIS SECTION:

getTemplateName()

The name of the template used to create the email.

setBccAddresses(bccAddresses)

Optional. A list of blind carbon copy (BCC) addresses or object IDs of the contacts, leads, and users you're sending the email to. The maximum size for this field is 4,000 bytes. The maximum total of toAddresses, ccAddresses, and bccAddresses per email is 150.

setCcAddresses(ccAddresses)

Optional. A list of carbon copy (CC) addresses or object IDs of the contacts, leads, and users you’re sending the email to. The maximum size for this field is 4,000 bytes. The maximum total of toAddresses, ccAddresses, and bccAddresses per email is 150.

setCharset(charset)

Optional. The character set for the email. If this value is null, the user's default value is used.

setDocumentAttachments(documentIds)

(Deprecated. Use setEntityAttachments() instead.) Optional. A list containing the ID of each document object you want to attach to the email.
setEntityAttachments(ids)
Optional. Array of IDs of Document, ContentVersion, or Attachment items to attach to the email.

setFileAttachments(fileNames)
Optional. A list containing the file names of the binary and text files you want to attach to the email.

setHtmlBody(htmlBody)
Optional. The HTML version of the email, specified by the sender. The value is encoded according to the specification associated with the organization. Specify a value for setTemplateId, setHtmlBody, or setPlainTextBody. Or, you can define both setHtmlBody and setPlainTextBody.

setInReplyTo(parentMessageIds)
Sets the optional In-Reply-To field of the outgoing email. This field identifies the email or emails to which this email is a reply (parent emails).

setOptOutPolicy(emailOptOutPolicy)
Optional. If you added recipients by ID instead of email address and the Email Opt Out option is set, this method determines the behavior of the sendEmail() call. If you add recipients by their email addresses, the opt-out settings for those recipients aren't checked and those recipients always receive the email.

setPlainTextBody(plainTextBody)
Optional. The text version of the email, specified by the sender. Specify a value for setTemplateId, setHtmlBody, or setPlainTextBody. Or, you can define both setHtmlBody and setPlainTextBody.

setOrgWideEmailAddressId(emailAddressId)
Optional. The ID of the organization-wide email address associated with the outgoing email. The object's DisplayName field cannot be set if the setSenderDisplayName field is already set.

setReferences(references)
Optional. The References field of the outgoing email. Identifies an email thread. Contains the parent emails' References and message IDs, and possibly the In-Reply-To fields.

setSubject(subject)
Optional. The email subject line. If you are using an email template, the subject line of the template overrides this value.

setTargetObjectId(targetObjectId)
Required if using a template, optional otherwise. The ID of the contact, lead, or user to which the email will be sent. The ID you specify sets the context and ensures that merge fields in the template contain the correct data.

setTemplateId(templateId)
Required if using a template, optional otherwise. The ID of the template used to create the email.

setToAddresses(toAddresses)
Optional. A list of email addresses or object IDs of the contacts, leads, and users you're sending the email to. The maximum size for this field is 4,000 bytes. The maximum total of toAddresses, ccAddresses, and bccAddresses per email is 150.

setTreatBodiesAsTemplate(treatAsTemplate)
Optional. If set to true, the subject, plain text, and HTML text bodies of the email are treated as template data. The merge fields are resolved using the renderEmailTemplate method. Default is false.

setTreatTargetObjectAsRecipient(treatAsRecipient)
Optional. If set to true, the targetObjectId (a contact, lead, or user) is the recipient of the email. If set to false, the targetObjectId is supplied as the WhoId field for template rendering but isn't a recipient of the email. The default is true.

setWhatId(whatId)
If you specify a contact for the targetObjectId field, you can specify an optional whatId as well. This helps to further ensure that merge fields in the template contain the correct data.
**getTemplateName()**

The name of the template used to create the email.

Signature

```java
public STRING getTemplateName()
```

Return Value

Type: String

Usage

There is no equivalent setter method for `getTemplateName()`. If the email didn’t use a template, `getTemplateName()` returns nothing. If you use `setTemplateId()`, and then call `getTemplateName()`, the template name associated to the template ID is returned.

**setBccAddresses(bccAddresses)**

Optional. A list of blind carbon copy (BCC) addresses or object IDs of the contacts, leads, and users you’re sending the email to. The maximum size for this field is 4,000 bytes. The maximum total of `toAddresses`, `ccAddresses`, and `bccAddresses` per email is 150.

Signature

```java
public Void setBccAddresses(String[] bccAddresses)
```

Parameters

`bccAddresses`

Type: String[]

Return Value

Type: Void

Usage

All emails must have a recipient value in at least one of the following fields:

- `toAddresses`
- `ccAddresses`
- `bccAddresses`
- `targetObjectId`

If the BCC compliance option is set at the organization level, the user cannot add BCC addresses on standard messages. The following error code is returned: `BCC_NOT_ALLOWED_IF_BCC_COMPLIANCE_ENABLED`. Contact your Salesforce representative for information on BCC compliance.
**setCcAddresses(ccAddresses)**

Optional. A list of carbon copy (CC) addresses or object IDs of the contacts, leads, and users you're sending the email to. The maximum size for this field is 4,000 bytes. The maximum total of `toAddresses`, `ccAddresses`, and `bccAddresses` per email is 150.

Signature

```java
public Void setCcAddresses(String[] ccAddresses)
```

Parameters

- `ccAddresses`  
  Type: `String`[

Return Value

Type: Void

Usage

All emails must have a recipient value in at least one of the following fields:

- `toAddresses`
- `ccAddresses`
- `bccAddresses`
- `targetObjectId`

**setCharset(characterSet)**

Optional. The character set for the email. If this value is null, the user’s default value is used.

Signature

```java
public Void setCharset(String characterSet)
```

Parameters

- `characterSet`  
  Type: `String`

Return Value

Type: Void

**setDocumentAttachments(documentIds)**

*(Deprecated. Use `setEntityAttachments()` instead.)* Optional. A list containing the ID of each document object you want to attach to the email.
public Void setDocumentAttachments(ID[] documentIds)

Parameters

documentIds
Type: ID[]

Return Value
Type: Void

Usage
You can attach multiple documents as long as the total size of all attachments does not exceed 10 MB.

setEntityAttachments(ids)
Optional. Array of IDs of Document, ContentVersion, or Attachment items to attach to the email.

public void setEntityAttachments(List<String> ids)

Parameters

ids
Type: List<String>

Return Value
Type: void

setFileAttachments(fileNames)
Optional. A list containing the file names of the binary and text files you want to attach to the email.

public Void setFileAttachments(EmailFileAttachment[] fileNames)

Parameters

fileNames
Type: Messaging.EmailFileAttachment[]

Return Value
Type: Void
Usage
You can attach multiple files as long as the total size of all attachments does not exceed 10 MB.

**setHtmlBody(htmlBody)**
Optional. The HTML version of the email, specified by the sender. The value is encoded according to the specification associated with the organization. Specify a value for setTemplateId, setHtmlBody, or setPlainTextBody. Or, you can define both setHtmlBody and setPlainTextBody.

**Signature**
```java
public Void setHtmlBody(String htmlBody)
```

**Parameters**

htmlBody
- Type: String

**Return Value**
Type: Void

**setInReplyTo(parentMessageIds)**
Sets the optional In-Reply-To field of the outgoing email. This field identifies the email or emails to which this email is a reply (parent emails).

**Signature**
```java
public Void setInReplyTo(String parentMessageIds)
```

**Parameters**

parentMessageIds
- Type: String
  - Contains one or more parent email message IDs.

**Return Value**
Type: Void

**setOptOutPolicy(emailOptOutPolicy)**
Optional. If you added recipients by ID instead of email address and the Email Opt Out option is set, this method determines the behavior of the sendEmail() call. If you add recipients by their email addresses, the opt-out settings for those recipients aren’t checked and those recipients always receive the email.

**Signature**
```java
public void setOptOutPolicy(String emailOptOutPolicy)
```
Parameters

**emailOptOutPolicy**
Type: String

Possible values of the `emailOptOutPolicy` parameter are:

- **SEND** (default)—The email is sent to all recipients. The recipients’ Email Opt Out setting is ignored. The setting Enforce email privacy settings is ignored.
- **FILTER**—No email is sent to recipients that have the Email Opt Out option set. Emails are sent to the other recipients. The setting Enforce email privacy settings is ignored.
- **REJECT**—If any of the recipients have the Email Opt Out option set, `sendEmail()` throws an error and no email is sent. The setting Enforce email privacy settings is respected, as are the selections in the data privacy record based on the Individual object. If any of the recipients have Don’t Market, Don’t Process, or Forget this Individual selected, `sendEmail()` throws an error and no email is sent.

Return Value
Type: void

Example
This example shows how to send an email with the opt-out setting enforced. Recipients are specified by their IDs. The FILTER option causes the email to be sent only to recipients that haven’t opted out from email. This example uses dot notation of the email properties, which is equivalent to using the set methods.

```java
Messaging.SingleEmailMessage message = new Messaging.SingleEmailMessage();
// Set recipients to two contact IDs.
// Replace IDs with valid record IDs in your org.
message.toAddresses = new String[] { '003D000000QDexS', '003D000000QDfW5' };
message.optOutPolicy = 'FILTER';
message.subject = 'Opt Out Test Message';
message.plainTextBody = 'This is the message body.';
Messaging.SingleEmailMessage[] messages =
    new List<Messaging.SingleEmailMessage> { message };
Messaging.SendEmailResult[] results = Messaging.sendEmail(messages);
if (results[0].success) {
    System.debug('The email was sent successfully.');
} else {
    System.debug('The email failed to send: ' + results[0].errors[0].message);
}
```

**setPlainTextBody(plainTextBody)**
Optional. The text version of the email, specified by the sender. Specify a value for setTemplateId, setHtmlBody, or setPlainTextBody. Or, you can define both setHtmlBody and setPlainTextBody.

Signature

```java
public Void setPlainTextBody(String plainTextBody)
```
Parameters

plainTextBody
Type: String

Return Value
Type: Void

**setOrgWideEmailAddressId(emailAddressId)**
Optional. The ID of the organization-wide email address associated with the outgoing email. The object’s `DisplayName` field cannot be set if the `setSenderDisplayName` field is already set.

Signature

```java
generic Void setOrgWideEmailAddressId(ID emailAddressId)
```

Parameters

```java
emailAddressId
Type: ID
```

Return Value
Type: Void

**setReferences(references)**
Optional. The References field of the outgoing email. Identifies an email thread. Contains the parent emails’ References and message IDs, and possibly the In-Reply-To fields.

Signature

```java
generic Void setReferences(String references)
```

Parameters

```java
references
Type: String
```

Return Value
Type: Void

**setSubject(subject)**
Optional. The email subject line. If you are using an email template, the subject line of the template overrides this value.

Signature

```java
generic Void setSubject(String subject)
```
Parameters

subject
  Type: String

Return Value
Type: Void

**setTargetObjectId(targetObjectId)**

Required if using a template, optional otherwise. The ID of the contact, lead, or user to which the email will be sent. The ID you specify sets the context and ensures that merge fields in the template contain the correct data.

Signature

```java
public Void setTargetObjectId(ID targetObjectId)
```

Parameters

targetObjectId
  Type: ID

Return Value
Type: Void

Usage

Do not specify the IDs of records that have the Email Opt Out option selected.

All emails must have a recipient value in at least one of the following fields:

- `toAddresses`
- `ccAddresses`
- `bccAddresses`
- `targetObjectId`

**setTemplateId(templateId)**

Required if using a template, optional otherwise. The ID of the template used to create the email.

Signature

```java
public Void setTemplateId(ID templateId)
```

Parameters

templateId
  Type: ID
Return Value
Type: Void

**setToAddresses(toAddresses)**

Optional. A list of email addresses or object IDs of the contacts, leads, and users you’re sending the email to. The maximum size for this field is 4,000 bytes. The maximum total of toAddresses, ccAddresses, and bccAddresses per email is 150.

Signature

```java
public Void setToAddresses(String[] toAddresses)
```

Parameters

- **toAddresses**
  Type: `String[]`

Return Value
Type: Void

Usage

All emails must have a recipient value in at least one of the following fields:

- toAddresses
- ccAddresses
- bccAddresses
- targetObjectId

**setTreatBodiesAsTemplate(treatAsTemplate)**

Optional. If set to `true`, the subject, plain text, and HTML text bodies of the email are treated as template data. The merge fields are resolved using the `renderEmailTemplate` method. Default is `false`.

Signature

```java
public void setTreatBodiesAsTemplate(Boolean treatAsTemplate)
```

Parameters

- **treatAsTemplate**
  Type: `Boolean`

Return Value
Type: void
**setTreatTargetObjectAsRecipient** *(treatAsRecipient)*

Optional. If set to true, the **targetObjectId** (a contact, lead, or user) is the recipient of the email. If set to false, the **targetObjectId** is supplied as the WhoId field for template rendering but isn't a recipient of the email. The default is true.

**Signature**

```java
public void setTreatTargetObjectAsRecipient(Boolean treatAsRecipient)
```

**Parameters**

- **treatAsRecipient**
  
  Type: Boolean

**Return Value**

Type: void

**Usage**

钗 Note:钗 You can set TO, CC, and BCC addresses using the email messaging methods regardless of whether a template is used for the email or the target object is a recipient.

**setWhatId** *(whatId)*

If you specify a contact for the **targetObjectId** field, you can specify an optional **whatId** as well. This helps to further ensure that merge fields in the template contain the correct data.

**Signature**

```java
public Void setWhatId(ID whatId)
```

**Parameters**

- **whatId**

  Type: ID

**Return Value**

Type: Void

**Usage**

The value must be one of the following types:

- Account
- Asset
- Campaign
- Case
- Contract
- Opportunity
Metadata Namespace

The Metadata namespace provides classes and methods for working with custom metadata in Salesforce. Salesforce uses metadata types and components to represent org configuration and customization. Metadata is used for org settings that admins control or configuration information applied by installed apps and packages. Use the classes in the Metadata namespace to access metadata from within Apex code.

Metadata access in Apex is available for Apex classes using API version 40.0 and later. For more information, see Metadata.

The following are the classes in the Metadata namespace.

IN THIS SECTION:

- AnalyticsCloudComponentLayoutItem Class
  Represents the settings for a Wave Analytics dashboard on a standard or custom page.
- ConsoleComponent Class
  Represents a custom console component on a section of a page layout.
- Container Class
  Represents a location and style in which to display more than one custom console component in the sidebars of the console.
- CustomConsoleComponents Class
  Represents custom console components (Visualforce pages, lookup fields, or related lists) on a page layout.
- CustomMetadata Class
  Represents records of custom metadata types.
- CustomMetadataValue Class
  Represents custom metadata values for a custom metadata component.
- DeployCallback Interface
  An interface for metadata deployment callback classes.
- DeployCallbackContext Class
  Represents context information for a deployment job.
- DeployContainer Class
  Represents a container for custom metadata components to be deployed.
- DeployDetails Class
  Contains detailed information on deployed components.
- DeployMessage Class
  Represents result information for the deployment of a metadata component.
- DeployProblemType Enum
  Describes the problem type for an unsuccessful component deploy.
DeployResult Class
Represents the results of a metadata deployment.

DeployStatus Enum
The result status of a deployment.

FeedItemTypeEnum Enum
The type of feed item in a feed-based page layout.

FeedLayout Class
Represents the values that define the feed view of a feed-based page layout. Feed-based layouts are available on Account, Case, Contact, Lead, Opportunity, custom, and external objects. They include a feed view and a detail view.

FeedLayoutComponent Class
Represents a component in the feed view of a feed-based page layout.

FeedLayoutComponentType Enum
Indicates the type of feed layout component.

FeedLayoutFilter Class
Represents a feed filter option in the feed view of a feed-based page layout. A filter can have only standardFilter or feedItemType set.

FeedLayoutFilterPosition Enum
Describes where the feed filters list is included in the layout.

FeedLayoutFilterType Enum
The type of feed layout filter.

Layout Class
Represents the metadata associated with a page layout.

LayoutColumn Class
Represents the items in a column within a layout section.

LayoutHeader Enum
Represents tagging types used for Metadata.Layout.headers

LayoutItem Class
Represents the valid values that define a layout item.

LayoutSection Class
Represents a section of a page layout, such as the Custom Links section.

LayoutSectionStyle Enum
Describes the possible styles for a layout section.

Metadata Class
An abstract base class that represents a custom metadata component.

MetadataType Enum
Represents the custom metadata components available in Apex.

MetadataValue Class
An abstract base class that represents a custom metadata component field.

MiniLayout Class
Represents a mini view of a record in the Console tab, hover details, and event overlays.
Operations Class
Represents a class to execute metadata operations, such as retrieving or deploying custom metadata.

PlatformActionList Class
Represents the list of actions, and their order, that display in the Salesforce mobile action bar for the layout.

PlatformActionListContextEnum Enum
Describes the different contexts of action lists.

PlatformActionListItem Class
Represents an action in the platform action list for a layout.

PlatformActionTypeEnum Enum
The type of action for a PlatformActionListItem.

PrimaryTabComponents Class
Represents custom console components on primary tabs in the Salesforce console.

QuickActionList Class
Represents the list of actions associated with the page layout.

QuickActionListItem Class
Represents an action in the QuickActionList.

RelatedContent Class
Represents the Mobile Cards section of the page layout.

RelatedContentItem Class
Represents an individual item in the RelatedContent list.

RelatedList Class
Represents related list custom components on the sidebars of the Salesforce console.

RelatedListItem Class
Represents an item in the related list in a page layout.

ReportChartComponentLayoutItem Class
Represents the settings for a report chart on a standard or custom page.

ReportChartComponentSize Enum
Describes the size of the displayed report chart component.

SidebarComponent Class
Represents a specific custom console component to display in a container that hosts multiple components in one of the sidebars of the Salesforce console.

SortOrder Enum
Describes the sort order of a related list.

StatusCode Enum
Describes the status code for an unsuccessful component deploy.

SubtabComponents Class
Represents custom console components on subtabs in the Salesforce console.

SummaryLayoutStyleEnum Enum
Describes the highlights panel style for a SummaryLayout.
SummaryLayout Class
Controls the appearance of the highlights panel, which summarizes key fields in a grid at the top of a page layout, when Case Feed is enabled.

SummaryLayoutItem Class
Controls the appearance of an individual field and its column and row position within the highlights panel grid, when Case Feed is enabled. You can have two fields per each grid in a highlights panel.

UiBehavior Enum
Describes the behavior for a layout item on a layout page.

AnalyticsCloudComponentLayoutItem Class
Represents the settings for a Wave Analytics dashboard on a standard or custom page.

Namespace
Metadata

Usage
Use this class when accessing Metadata.Layout metadata components. For more information, see “AnalyticsCloudComponentLayoutItem” in the Metadata API Developer Guide.

IN THIS SECTION:
AnalyticsCloudComponentLayoutItem Properties
AnalyticsCloudComponentLayoutItem Methods

AnalyticsCloudComponentLayoutItem Properties
The following are properties for AnalyticsCloudComponentLayoutItem.

IN THIS SECTION:
assetType
Specifies the type of Wave Analytics asset.
devName
Unique development name of the dashboard to add.
error
An error string that is populated only when an error occurred in the underlying dashboard.
filter
Dashboard filters for mapping data fields in the dashboard to the object's fields.
height
Specifies the height of the dashboard, in pixels.
hideOnError
Controls whether users see a dashboard that has an error.
showHeader
If true, includes the dashboard's header bar. If false, the dashboard appears without a header bar.

showSharing
If set to true, and the dashboard is shareable the dashboard shows the Share icon. If set to false, the dashboard doesn't show the Share icon.

showTitle
If true, includes the dashboard's title above the dashboard. If false, the dashboard appears without a title.

width
Specifies the width of the dashboard, in pixels or percentage.

**assetType**
Specifies the type of Wave Analytics asset.

Signature
```java
public String assetType {get; set;}
```

Property Value
Type: String

**devName**
Unique development name of the dashboard to add.

Signature
```java
public String devName {get; set;}
```

Property Value
Type: String

**error**
An error string that is populated only when an error occurred in the underlying dashboard.

Signature
```java
public String error {get; set;}
```

Property Value
Type: String

**filter**
Dashboard filters for mapping data fields in the dashboard to the object's fields.
Signature
public String filter {get; set;}

Property Value
Type: String

**height**
Specifies the height of the dashboard, in pixels.

Signature
public Integer height {get; set;}

Property Value
Type: Integer

**hideOnError**
Controls whether users see a dashboard that has an error.

Signature
public Boolean hideOnError {get; set;}

Property Value
Type: Boolean

**showHeader**
If true, includes the dashboard's header bar. If false, the dashboard appears without a header bar.

Signature
public Boolean showHeader {get; set;}

Property Value
Type: Boolean

**showSharing**
If set to true, and the dashboard is shareable the dashboard shows the Share icon. If set to false, the dashboard doesn't show the Share icon.

Signature
public Boolean showSharing {get; set;}

2182
Property Value
Type: Boolean

**showTitle**
If true, includes the dashboard’s title above the dashboard. If false, the dashboard appears without a title.

Signature
public Boolean showTitle {get; set;}

Property Value
Type: Boolean

**width**
Specifies the width of the dashboard, in pixels or percentage.

Signature
public String width {get; set;}

Property Value
Type: String

**AnalyticsCloudComponentLayoutItem Methods**
The following are methods for AnalyticsCloudComponentLayoutItem.

IN THIS SECTION:

**clone()**
Makes a duplicate copy of the Metadata.AnalyticsCloudComponentLayoutItem.

Signature
public Object clone()

Return Value
Type: Object
**ConsoleComponent Class**

Represents a custom console component on a section of a page layout.

**Namespace**

Metadata

**Usage**

Use this class when accessing `Metadata.Layout` metadata components. For more information, see “ConsoleComponent” in the Metadata API Developer Guide.

**IN THIS SECTION:**

- ConsoleComponent Properties
- ConsoleComponent Methods

**ConsoleComponent Properties**

The following are properties for `ConsoleComponent`.

**IN THIS SECTION:**

- `height`
  The height of the custom console component in pixels.
- `location`
  The location of the custom console component on the page layout. Valid values are right, left, top, and bottom.
- `visualforcePage`
  The unique name of the custom console component.
- `width`
  The width of the custom console component in pixels.

**height**

The height of the custom console component in pixels.

**Signature**

```
public Integer height {get; set;}
```

**Property Value**

Type: `Integer`

**location**

The location of the custom console component on the page layout. Valid values are right, left, top, and bottom.
Signature

public String location {get; set;}

Property Value
Type: String

**visualforcePage**
The unique name of the custom console component.

Signature

public String visualforcePage {get; set;}

Property Value
Type: String

**width**
The width of the custom console component in pixels.

Signature

public Integer width {get; set;}

Property Value
Type: Integer

**ConsoleComponent Methods**
The following are methods for ConsoleComponent.

**IN THIS SECTION:**

- **clone()**
  Makes a duplicate copy of the Metadata.ConsoleComponent.

**clone()**
Makes a duplicate copy of the Metadata.ConsoleComponent.

Signature

public Object clone()

Return Value
Type: Object
Container Class

Represents a location and style in which to display more than one custom console component in the sidebars of the console.

Namespace

Metadata

Usage

Use this class when accessing `Metadata.Layout` metadata components. For more information, see “Container” in the `Metadata API Developer Guide`.

IN THIS SECTION:

- Container Properties
- Container Methods

Container Properties

The following are properties for `Container`.

IN THIS SECTION:

- `height`
The height of the component’s container. The `unit` property determines the unit of measurement, in pixels or percent.
- `isContainerAutoSizeEnabled`
If set to true, stacked console components in the sidebars autosize vertically.
- `region`
The location of the component’s container (right, left, bottom, top).
- `sidebarComponents`
Represents a specific custom console component to display in the components’ container.
- `style`
The style of the container in which to display multiple components (stack, tab, accordion).
- `unit`
The unit of measurement, in pixels or percent, for the height or width of the components’ container.
- `width`
The width of the component’s container. The `unit` property determines the unit of measurement, in pixels or percent.

**height**
The height of the component’s container. The `unit` property determines the unit of measurement, in pixels or percent.

Signature

```java
public Integer height {get; set;}
```
Property Value  
Type: Integer

**isContainerAutoSizeEnabled**  
If set to true, stacked console components in the sidebars autosize vertically.

Signature  
```java
public Boolean isContainerAutoSizeEnabled {get; set;}
```

Property Value  
Type: Boolean

**region**  
The location of the component’s container (right, left, bottom, top).

Signature  
```java
public String region {get; set;}
```

Property Value  
Type: String

**sidebarComponents**  
Represents a specific custom console component to display in the components’ container.

Signature  
```java
public List<Metadata.SidebarComponent> sidebarComponents {get; set;}
```

Property Value  
Type: List<Metadata.SidebarComponent>

**style**  
The style of the container in which to display multiple components (stack, tab, accordion).

Signature  
```java
public String style {get; set;}
```

Property Value  
Type: String
**unit**
The unit of measurement, in pixels or percent, for the height or width of the components' container.

Signature
```java
public String unit {get; set;}
```

Property Value
Type: `String`

**width**
The width of the component’s container. The `unit` property determines the unit of measurement, in pixels or percent.

Signature
```java
public Integer width {get; set;}
```

Property Value
Type: `Integer`

**Container Methods**
The following are methods for `Container`.

**IN THIS SECTION:**
`clone()` Makes a duplicate copy of the `Metadata.Container`.

**clone()**
Makes a duplicate copy of the `Metadata.Container`.

Signature
```java
public Object clone()
```

Return Value
Type: `Object`

**CustomConsoleComponents Class**
Represents custom console components (Visualforce pages, lookup fields, or related lists) on a page layout.
Namespace

Metadata

Usage

Use this class when accessing Metadata.Layout metadata components. For more information, see “CustomConsoleComponents” in the Metadata API Developer Guide.

IN THIS SECTION:

CustomConsoleComponents Properties

CustomConsoleComponents Methods

CustomConsoleComponents Properties

The following are properties for CustomConsoleComponents.

IN THIS SECTION:

primaryTabComponents

subtabComponents

primaryTabComponents

Represents custom console components on primary tabs in the Salesforce console.

Signature

public Metadata.PrimaryTabComponents primaryTabComponents {get; set;}

Property Value

Type: Metadata.PrimaryTabComponents

subtabComponents

Represents custom console components on subtabs in the Salesforce console.

Signature

public Metadata.SubtabComponents subtabComponents {get; set;}

Property Value

Type: Metadata.SubtabComponents
CustomConsoleComponents Methods

The following are methods for CustomConsoleComponents.

IN THIS SECTION:
  clone()
  Makes a duplicate copy of the Metadata.CustomConsoleComponents.

clone()

Makes a duplicate copy of the Metadata.CustomConsoleComponents.

Signature

public Object clone()

Return Value

Type: Object

CustomMetadata Class

Represents records of custom metadata types.

⚠️ **Warning:** Protected custom metadata types behave like public custom metadata types when they are outside of a managed package. Public custom metadata types are readable for all profiles, including the guest user. Do not store secrets, personally identifying information, or any private data in these records. Use protected custom metadata types only in managed packages. Outside of a managed package, use named credentials or encrypted custom fields to store secrets like OAuth tokens, passwords, and other confidential material.

Namespace

Metadata

Usage

Use Metadata.CustomMetadata to represent records of custom metadata types in Apex. For more information, see Custom Metadata Types in the Metadata API Developer Guide.

Example

```java
// Set up custom metadata to be created in the subscriber org.
Metadata.CustomMetadata customMetadata = new Metadata.CustomMetadata();
customMetadata.fullName = 'ISVNamespace__MetadataTypeName.MetadataRecordName';

Metadata.CustomMetadataValue customField = new Metadata.CustomMetadataValue();
customField.field = 'customField__c';
customField.value = 'New value';

customMetadata.values.add(customField);
```
Note: When you assign namespaces to records, provide full, qualified record names to the app. If both the type and the record are in Namespace, use something like: `customMetadata.fullName = 'Namespace__MetadataTypeName.Namespace__MetadataRecordName'`

IN THIS SECTION:

CustomMetadata Properties

CustomMetadata Methods

CustomMetadata Properties

The following are properties for CustomMetadata.

IN THIS SECTION:

description
The description of the custom metadata.

label
The label of the custom metadata record.

protected_x
Property that describes whether the custom metadata record is a protected component.

values
A list of custom metadata values, such as custom fields, for the custom metadata record.

description
The description of the custom metadata.

Signature

```java
public String description {get; set;}
```

Property Value

Type: String

label
The label of the custom metadata record.

Signature

```java
public String label {get; set;}
```

Property Value

Type: String
**protected_x**
Property that describes whether the custom metadata record is a protected component.

Signature

```java
public Boolean protected_x {get; set;}
```

Property Value
Type: Boolean

**values**
A list of custom metadata values, such as custom fields, for the custom metadata record.

Signature

```java
public List<Metadata.CustomMetadataValue> values {get; set;}
```

Property Value
Type: List<Metadata.CustomMetadataValue>

**CustomMetadata Methods**
The following are methods for CustomMetadata.

IN THIS SECTION:
- `clone()`
  Makes a duplicate copy of the `Metadata.CustomMetadata`

**clone()**
Makes a duplicate copy of the `Metadata.CustomMetadata`

Signature

```java
public Object clone()
```

Return Value
Type: Object

**CustomMetadataValue Class**
Represents custom metadata values for a custom metadata component.
Namespace
Metadata

Usage
Use `Metadata.CustomMetadataValue` to access values for custom fields of custom metadata records. Supported Apex primitive types are:

- Boolean
- Date
- DateTime
- Decimal
- Double
- Integer
- Long
- String

Example

```java
// Set a custom field value for a custom metadata record
Metadata.CustomMetadataValue customField = new Metadata.CustomMetadataValue();
customField.field = 'CustomField1__c';
customField.value = 'New Value';
customMetadata.values.add(customField);
```

IN THIS SECTION:
- CustomMetadataValue Properties
- CustomMetadataValue Methods

CustomMetadataValue Properties
The following are properties for `CustomMetadataValue`.

IN THIS SECTION:
- `field`
The field name for the custom metadata value.
- `value`
The field value for the custom metadata value.

`field`
The field name for the custom metadata value.
Signature

```java
public String field {get; set;}
```

Property Value
Type: String

**value**
The field value for the custom metadata value.

Signature

```java
public Object value {get; set;}
```

Property Value
Type: Object
Supported Apex primitive types are:
- Boolean
- Date
- DateTime
- Decimal
- Double
- Integer
- Long
- String

When setting the value for relationship fields, use the qualified API name of the related metadata, not the ID. For more information, see Primitive Data Types.

**CustomMetadataValue Methods**
The following are methods for CustomMetadataValue.

**IN THIS SECTION:**

- **clone()**
  Makes a duplicate copy of the Metadata.CustomMetadataValue.

- **clone()**
  Makes a duplicate copy of the Metadata.CustomMetadataValue.

Signature

```java
public Object clone()
```
DeployCallback Interface

An Interface for metadata deployment callback classes.

Namespace

Metadata

Usage

You must provide a callback class for the asynchronous deployment of custom metadata through Apex. This class must implement the Metadata.DeployCallback interface.

Salesforce calls your DeployCallback.handleResult() method asynchronously once the queued deployment completes. Because the callback is called as asynchronous Apex after deployment, there may be a brief period where the deploy has completed, but your callback has not been called yet.

DeployCallback Methods

The following are methods for DeployCallback.

handleResult(var1, var2)

Method that is called when the asynchronous deployment of custom metadata completes.

Signature

public void handleResult(Metadata_DeployResult var1, Metadata_DeployCallbackContext var2)

Parameters

var1

Type: Metadata_DeployResult

The results of the asynchronous deployment.
The context for the queued asynchronous deployment job.

Return Value
Type: void

DeployCallback Example Implementation
This is an example implementation of the Metadata.DeployCallback interface.

```java
public class MyCallback implements Metadata.DeployCallback {
    public void handleResult(Metadata.DeployResult result,
                              Metadata.DeployCallbackContext context) {
        if (result.status == Metadata.DeployStatus.Succeeded) {
            // Deployment was successful
        } else {
            // Deployment was not successful
        }
    }
}
```

The following example uses this implementation for a deployment.

```java
// Setup callback and deploy
MyCallback callback = new MyCallback();
Metadata.Operations.enqueueDeployment(mdContainer, callback);
```

DeployCallbackContext Class
Represents context information for a deployment job.

Namespace
Metadata

Usage
After an asynchronous metadata deployment finishes, Salesforce provides an instance of Metadata.DeployCallbackContext in an asynchronous call to your implementation of handleResult() in your Metadata.DeployCallback class.

Example

```java
public void handleResult(Metadata.DeployResult result,
                         Metadata.DeployCallbackContext context) {
    // Check the callback job ID for the deployment
    Id jobId = context.getCallbackJobId();
    // ...process the results...
}
```
DeployCallbackContext Methods

The following are methods for DeployCallbackContext.

### clone()

Makes a duplicate copy of the Metadata.DeployCallbackContext.

### getCallbackJobId()

Gets the asynchronous Apex job ID for the callback job.

#### clone()

Makes a duplicate copy of the Metadata.DeployCallbackContext.

**Signature**

```java
public Object clone()
```

**Return Value**

Type: Object

#### getCallbackJobId()

Gets the asynchronous Apex job ID for the callback job.

**Signature**

```java
public Id getCallbackJobId()
```

**Return Value**

Type: Id

### DeployContainer Class

Represents a container for custom metadata components to be deployed.

#### Namespace

`Metadata`
Usage

Use `Metadata.DeployContainer` to manage custom metadata components for deployment. A container must have one or more components before being deployed.

Example

```java
// Use DeployContainer for deployment
Metadata.DeployContainer mdContainer = new Metadata.DeployContainer();
mdContainer.addMetadata(customMetadata);

... // Enqueue deploy
Metadata.Operations.enqueueDeployment(mdContainer, callback);
```

IN THIS SECTION:

**DeployContainer Methods**

The following are methods for `DeployContainer`.

**addMetadata(md)**

Add a custom metadata component to the container.

**clone()**

Makes a duplicate copy of the `Metadata.DeployContainer`.

**getMetadata()**

Retrieves a list of custom metadata components from the container.

**removeMetadata(md)**

Removes a metadata component from the container.

**removeMetadataByFullName(fullName)**

Removes a metadata component from the container using the component’s full name.

### addMetadata (md)

Add a custom metadata component to the container.

**Signature**

```java
public void addMetadata(Metadata.Metadata md)
```

**Parameters**

`md`

Type: `Metadata.Metadata`
A custom metadata component class that derives from Metadata.Metadata. Avoid adding components to a Metadata.DeployContainer that have the same Metadata.Metadata.fullName because it causes deployment errors.

Return Value
Type: void

close()

Makes a duplicate copy of the Metadata.DeployContainer.

Signature
public Object clone()

Return Value
Type: Object

getMetadata()

Retrieves a list of custom metadata components from the container.

Signature
public List<Metadata.Metadata> getMetadata()

Return Value
Type: List<Metadata.Metadata>

removeMetadata(md)

Removes a metadata component from the container.

Signature
public Boolean removeMetadata(Metadata.Metadata md)

Parameters
md
Type: Metadata.Metadata
Metadata component to remove.

Return Value
Type: Boolean
Returns true if the container changed as a result of the call.
**removeMetadataByFullName** *(fullName)*
Removes a metadata component from the container using the component’s full name.

**Signature**
```
public Boolean removeMetadataByFullName(String fullName)
```

**Parameters**

**fullName**
Type: *String*
Full name of the component to remove.

**Return Value**
Type: *Boolean*
Returns `true` if the container changed as a result of the call.

---

**DeployDetails Class**
Contains detailed information on deployed components.

**Namespace**
Metadata

**Usage**
Use this class to obtain a list of the successfully and unsuccessfully deployed components after a completed deployment by Salesforce in your `Metadata.DeployCallback` results.

**IN THIS SECTION:**
- DeployDetails Properties
- DeployDetails Methods

**DeployDetails Properties**
The following are properties for `DeployDetails`.

**IN THIS SECTION:**
- `componentFailures`
  Contains a list of information about components that failed to deploy.
- `componentSuccesses`
  Contains a list of information about components that deployed successfully.
**componentFailures**
Contains a list of information about components that failed to deploy.

Signature

```csharp
public List<Metadata_DeployMessage> componentFailures {get; set;}
```

Property Value
Type: `List<Metadata_DeployMessage>`

**componentSuccesses**
Contains a list of information about components that deployed successfully.

Signature

```csharp
public List<Metadata_DeployMessage> componentSuccesses {get; set;}
```

Property Value
Type: `List<Metadata_DeployMessage>`

**DeployDetails Methods**
The following are methods for `DeployDetails`.

**IN THIS SECTION:**
- `clone()`
  Makes a duplicate copy of the `Metadata.DeployDetails`.

`clone()`
Makes a duplicate copy of the `Metadata.DeployDetails`.

Signature

```csharp
public Object clone()
```

Return Value
Type: `Object`

**DeployMessage Class**
Represents result information for the deployment of a metadata component.
Namespace

Metadata

Usage

Use `DeployMessage` to access detailed information about component deployments. Salesforce provides a list of `DeployMessage`es for a completed deployment via the `DeployDetails` and `DeployResults` instances sent in the `DeployCallback.handleResult()` callback.

IN THIS SECTION:

- DeployMessage Properties
- DeployMessage Methods

DeployMessage Properties

The following are properties for `DeployMessage`.

IN THIS SECTION:

- changed
  - Determines whether the component was changed after deployment. If true, the component was changed as a result of the deployment. If false, the deployed component was the same as the corresponding component already in the org.
- columnNumber
  - Each component is represented by a text file. If an error occurs during deployment, this property represents the column of the text file where the error occurred.
- componentType
  - The metadata type of the component in the deployment.
- created
  - If true, the component was created as a result of the deployment. If false, the component was modified as a result of the deployment.
- createdDate
  - The date and time when the component was created as a result of the deployment.
- deleted
  - If true, the component was deleted as a result of the deployment. If false, the component was either new or modified as result of the deployment.
- fileName
  - The name of the file in the metadata archive used to deploy the component.
- fullName
  - Full name for the custom metadata component.
- id
  - ID of the component that was deployed.
- lineNumber
  - Each component is represented by a text file. If an error occurs during deployment, this field represents the line number of the text file where the error occurred.
problem
If an error or warning occurred, this field contains a description of the problem that caused the deployment to fail.

problemType
Indicates the problem type, for example, an error or warning.

success
Indicates whether the component was successfully deployed (true) or not (false).

changed
Determines whether the component was changed after deployment. If true, the component was changed as a result of the deployment. If false, the deployed component was the same as the corresponding component already in the org.

Signature

```public Boolean changed {get; set;}```

Property Value
Type: Boolean

columnNumber
Each component is represented by a text file. If an error occurs during deployment, this property represents the column of the text file where the error occurred.

Signature

```public Integer columnNumber {get; set;}```

Property Value
Type: Integer

componentType
The metadata type of the component in the deployment.

Signature

```public String componentType {get; set;}```

Property Value
Type: String

created
If true, the component was created as a result of the deployment. If false, the component was modified as a result of the deployment.
Signature

public Boolean created {get; set;}

Property Value
Type: Boolean

**createdDate**
The date and time when the component was created as a result of the deployment.

Signature

public Datetime createdDate {get; set;}

Property Value
Type: Datetime

**deleted**
If true, the component was deleted as a result of the deployment. If false, the component was either new or modified as result of the deployment.

Signature

public Boolean deleted {get; set;}

Property Value
Type: Boolean

**fileName**
The name of the file in the metadata archive used to deploy the component.

Signature

public String fileName {get; set;}

Property Value
Type: String

**fullName**
Full name for the custom metadata component.

Signature

public String fullName {get; set;}
id
ID of the component that was deployed.

Signature
public Id id {get; set;}

lineNumber
Each component is represented by a text file. If an error occurs during deployment, this field represents the line number of the text file where the error occurred.

Signature
public Integer lineNumber {get; set;}

problem
If an error or warning occurred, this field contains a description of the problem that caused the deployment to fail.

Signature
public String problem {get; set;}

problemType
Indicates the problem type, for example, an error or warning.

Signature
public Metadata.DeployProblemType problemType {get; set;}

Property Value
Type: Metadata.DeployProblemType
success
Indicates whether the component was successfully deployed (true) or not (false).

Signature
public Boolean success {get; set;}

Property Value
Type: Boolean

DeployMessage Methods
The following are methods for DeployMessage.

IN THIS SECTION:
- clone()
  Makes a duplicate copy of the Metadata.DeployMessage.

clone()
Makes a duplicate copy of the Metadata.DeployMessage.

Signature
public Object clone()

Return Value
Type: Object

DeployProblemType Enum
Describes the problem type for an unsuccessful component deploy.

Enum Values
The following are the values of the Metadata.DeployProblemType enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Error</td>
<td>The deploy problem is an error.</td>
</tr>
<tr>
<td>Info</td>
<td>The deploy problem is of type &quot;Info&quot;.</td>
</tr>
<tr>
<td>Warning</td>
<td>The deploy problem is a warning.</td>
</tr>
</tbody>
</table>

SEE ALSO:
- StatusCode Enum
DeployResult Class

Represents the results of a metadata deployment.

Namespace

Metadata

Usage

After an asynchronous metadata deployment finishes, Salesforce provides an instance of Metadata.DeployResult in a call to your implementation of handleResult() in your Metadata.DeployCallback class.

Example

```java
public void handleResult(Metadata.DeployResult result,
                        Metadata.DeployCallbackContext context) {
    if (result.status == Metadata.DeployStatus.Succeeded) {
        // Deployment was successful
    } else {
        // Deployment was not successful
    }
}
```

DeployResult Properties

The following are properties for DeployResult.

IN THIS SECTION:

DeployResult Properties
DeployResult Methods

IN THIS SECTION:

canceledBy
ID of the user who canceled the queued deployment.

canceledByName
Full name of the user who canceled the queued deployment.

checkOnly
Indicates whether the deployment checked only the validity of the deployed files without making changes in the org. A check-only deployment does not deploy components or change the org in any way.

completedDate
Date and time for when the deployment process ended.

createdBy
ID of the user who created the deployment job.
createdByName
Full name of the user who created the deployment job.

createdDate
Date and time the deployment job was first queued.

details
Provides the details for components in a completed deployment.

done
Indicates whether Salesforce finished processing the deployment.

errorMessage
Message corresponding to the values in the errorStatusCode property, if any.

errorStatusCode
If an error occurs during deployment, a status code is returned. The message corresponding to the status code is returned in the errorMessage property.

id
ID of the deployment job.

ignoreWarnings
Specifies whether a deployment continues, even if the deployment generates warnings.

lastModifiedDate
Date and time of the last update for the deployment process.

messages
A list of all the detail messages for a deployment.

numberComponentErrors
The number of components that generated errors during the deployment.

numberComponentsDeployed
The number of components deployed in the deployment process. Use this value with the numberComponentsTotal property to get an estimate of the deployment’s progress.

numberComponentsTotal
The total number of components in the deployment. Use this value with the numberComponentsDeployed property to get an estimate of the deployment’s progress.

rollbackOnError
Indicates whether any failure causes a complete rollback (true) or not (false) of the deployment.

startDate
Date and time the deployment process began.

stateDetail
Indicates which component is being deployed.

status
Indicates the current state of the deployment.

success
Indicates whether the deployment was successful (true) or not (false).
canceledBy
ID of the user who canceled the queued deployment.

Signature
public String canceledBy {get; set;}

Property Value
Type: String

canceledByName
Full name of the user who canceled the queued deployment.

Signature
public String canceledByName {get; set;}

Property Value
Type: String

checkOnly
Indicates whether the deployment checked only the validity of the deployed files without making changes in the org. A check-only deployment does not deploy components or change the org in any way.

Signature
public Boolean checkOnly {get; set;}

Property Value
Type: Boolean

completedDate
Date and time for when the deployment process ended.

Signature
public Datetime completedDate {get; set;}

Property Value
Type: Datetime

createdBy
ID of the user who created the deployment job.
Signature
public String createdBy {get; set;}

Property Value
Type: String

createdByName
Full name of the user who created the deployment job.

Signature
public String createdBy {get; set;}

Property Value
Type: String

createdDate
Date and time the deployment job was first queued.

Signature
public Datetime createdDate {get; set;}

Property Value
Type: Datetime

details
Provides the details for components in a completed deployment.

Signature
public Metadata.DeployDetails details {get; set;}

Property Value
Type: Metadata.DeployDetails

done
Indicates whether Salesforce finished processing the deployment.

Signature
public Boolean done {get; set;}

2210
Property Value
Type: Boolean

**errorMessage**
Message corresponding to the values in the `errorStatusCode` property, if any.

Signature
```java
public String errorMessage {get; set;}
```

Property Value
Type: String

**errorStatusCode**
If an error occurs during deployment, a status code is returned. The message corresponding to the status code is returned in the `errorMessage` field property.

Signature
```java
public String errorStatusCode {get; set;}
```

Property Value
Type: String
For a description of each status code value, see “StatusCode” under “Core Data Types Used in API Calls” in the SOAP API Developer Guide.

**id**
ID of the deployment job.

Signature
```java
public Id id {get; set;}
```

Property Value
Type: Id

**ignoreWarnings**
Specifies whether a deployment continues, even if the deployment generates warnings.

Signature
```java
public Boolean ignoreWarnings {get; set;}
```
**lastModifiedDate**
Date and time of the last update for the deployment process.

Signature
```
public Datetime lastModifiedDate {get; set;}
```

**messages**
A list of all the detail messages for a deployment.

Signature
```
public List<Metadata.DeployMessage> messages {get; set;}
```

**numberComponentErrors**
The number of components that generated errors during the deployment.

Signature
```
public Integer numberComponentErrors {get; set;}
```

**numberComponentsDeployed**
The number of components deployed in the deployment process. Use this value with the `numberComponentsTotal` property to get an estimate of the deployment’s progress.

Signature
```
public Integer numberComponentsDeployed {get; set;}
```

Property Value
Type: `Integer`
**numberComponentsTotal**
The total number of components in the deployment. Use this value with the `numberComponentsDeployed` property to get an estimate of the deployment’s progress.

Signature
```
public Integer numberComponentsTotal {get; set;}
```

Property Value
Type: Integer

**rollbackOnError**
Indicates whether any failure causes a complete rollback (true) or not (false) of the deployment.

Signature
```
public Boolean rollbackOnError {get; set;}
```

Property Value
Type: Boolean

**startDate**
Date and time the deployment process began.

Signature
```
public Datetime startDate {get; set;}
```

Property Value
Type: Datetime

**stateDetail**
Indicates which component is being deployed.

Signature
```
public String stateDetail {get; set;}
```

Property Value
Type: String

**status**
Indicates the current state of the deployment.
**Signature**

```csharp
public Metadata.DeployStatus status {get; set;}
```

**Property Value**

Type: `Metadata.DeployStatus`

---

**success**

Indicates whether the deployment was successful (true) or not (false).

**Signature**

```csharp
public Boolean success {get; set;}
```

**Property Value**

Type: `Boolean`

---

**DeployResult Methods**

The following are methods for `DeployResult`.

**IN THIS SECTION:**

- `clone()`

  Makes a duplicate copy of the `Metadata.DeployResult`.

**clone()**

Makes a duplicate copy of the `Metadata.DeployResult`.

**Signature**

```csharp
public Object clone()
```

**Return Value**

Type: `Object`

---

**DeployStatus Enum**

The result status of a deployment.

**Usage**

`Metadata.DeployResult.status` uses this enum to describe the results of the deployment.
### Enum Values

The following are the values of the `Metadata.DeployStatus` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Canceled</td>
<td>The queued deployment was canceled.</td>
</tr>
<tr>
<td>Canceling</td>
<td>The queued deployment is being canceled.</td>
</tr>
<tr>
<td>Failed</td>
<td>The deployment failed.</td>
</tr>
<tr>
<td>InProgress</td>
<td>The deployment has been started and is in progress.</td>
</tr>
<tr>
<td>Pending</td>
<td>The deployment has been queued but not started.</td>
</tr>
<tr>
<td>Succeeded</td>
<td>The deployment succeeded.</td>
</tr>
<tr>
<td>SucceededPartial</td>
<td>The deployment succeeded, but some components might not have been successfully deployed. Check <code>Metadata.DeployResult</code> for more details.</td>
</tr>
</tbody>
</table>

### FeedItemTypeEnum Enum

The type of feed item in a feed-based page layout.

### Enum Values

The following are the values of the `Metadata.FeedItemTypeEnum` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ActivityEvent</td>
<td>Activity on tasks and events associated with a case. Available only on Case layouts.</td>
</tr>
<tr>
<td>AdvancedTextPost</td>
<td>Group announcements posted on a feed.</td>
</tr>
<tr>
<td>AnnouncementPost</td>
<td>Not used.</td>
</tr>
<tr>
<td>ApprovalPost</td>
<td>Approvals submitted on a feed.</td>
</tr>
<tr>
<td>AttachArticleEvent</td>
<td>Activity related to attaching articles to cases.</td>
</tr>
<tr>
<td>BasicTemplateFeedItem</td>
<td>Activity from the Log a Call action. Available only on layouts for objects that support Activities (tasks and events).</td>
</tr>
<tr>
<td>CallLogPost</td>
<td>Activity from the Log a Call action. Available only on layouts for objects that support Activities (tasks and events).</td>
</tr>
<tr>
<td>CanvasPost</td>
<td>Posts a canvas app makes on a feed.</td>
</tr>
<tr>
<td>CaseCommentPost</td>
<td>Activity from the Case Note action. Available only on Case layouts.</td>
</tr>
<tr>
<td>ChangeStatusPost</td>
<td>Activity from the Change Status action. Available only on Case layouts.</td>
</tr>
<tr>
<td>ChatTranscriptPost</td>
<td>Activity related to attaching Chat transcripts to cases. Available only on Case layouts.</td>
</tr>
<tr>
<td>CollaborationGroupCreated</td>
<td>Creating a public group.</td>
</tr>
<tr>
<td>Value</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------------------</td>
<td>------------------------------------------</td>
</tr>
<tr>
<td>CollaborationGroupUnarchived</td>
<td>Not used.</td>
</tr>
<tr>
<td>ContentPost</td>
<td>Attaching a file to a post.</td>
</tr>
<tr>
<td>CreateRecordEvent</td>
<td>Creating a record from the publisher.</td>
</tr>
<tr>
<td>DashboardComponentAlert</td>
<td>Not used.</td>
</tr>
<tr>
<td>DashboardComponentSnapshot</td>
<td>Posting a dashboard snapshot on a feed.</td>
</tr>
<tr>
<td>EmailMessageEvent</td>
<td>Activity from the Email action. Available only on Case layouts.</td>
</tr>
<tr>
<td>FacebookPost</td>
<td>Not used.</td>
</tr>
<tr>
<td>LinkPost</td>
<td>Attaching a URL to a post.</td>
</tr>
<tr>
<td>MilestoneEvent</td>
<td>Changing the milestone status on a case. Available only on Case layouts.</td>
</tr>
<tr>
<td>PollPost</td>
<td>Posting a poll on a feed.</td>
</tr>
<tr>
<td>ProfileSkillPost</td>
<td>Adding skills to a user’s Chatter profile.</td>
</tr>
<tr>
<td>QuestionPost</td>
<td>Posting a question on a feed.</td>
</tr>
<tr>
<td>ReplyPost</td>
<td>Activity from the Portal action. Available only on Case layouts.</td>
</tr>
<tr>
<td>RypplePost</td>
<td>Creating a Thanks badge in Work.com.</td>
</tr>
<tr>
<td>SocialPost</td>
<td>Activity on Twitter from the Social Post action.</td>
</tr>
<tr>
<td>TestItem</td>
<td>Creating a text post from the publisher.</td>
</tr>
<tr>
<td>TextPost</td>
<td>Making a change or group of changes to a tracked field.</td>
</tr>
<tr>
<td>TrackedChange</td>
<td>Not used.</td>
</tr>
<tr>
<td>Undefined</td>
<td>Undefined feed item.</td>
</tr>
<tr>
<td>UserStatus</td>
<td>Not used.</td>
</tr>
</tbody>
</table>

### FeedLayout Class

Represents the values that define the feed view of a feed-based page layout. Feed-based layouts are available on Account, Case, Contact, Lead, Opportunity, custom, and external objects. They include a feed view and a detail view.

### Namespace

Metadata

### Usage

Use this class when accessing Metadata.Layout metadata components. For more information, see “FeedLayout” in the Metadata API Developer Guide.
FeedLayout Properties

The following are properties for FeedLayout.

IN THIS SECTION:
  autocollapsePublisher
  compactFeed
  feedFilterPosition
  feedFilters
  fullWidthFeed
  hideSidebar
  highlightExternalFeedItems
  leftComponents
  rightComponents
  useInlineFiltersInConsole

autocollapsePublisher

Specifies whether the publisher is collapsed when the page loads (true) or not (false).

Signature

public Boolean autocollapsePublisher {get; set;}

Property Value

Type: Boolean
**compactFeed**
Specifies whether the feed-based page layout uses a compact feed (true) or not (false). If set to true, feed items on the page are collapsed by default, and the feed view has an updated design.

Signature

```csharp
public Boolean compactFeed {get; set;}
```

Property Value
Type: **Boolean**

**feedFilterPosition**
Indicates where the feed filters list is included in the layout.

Signature

```csharp
public Metadata.FeedLayoutFilterPosition feedFilterPosition {get; set;}
```

Property Value
Type: **FeedLayoutFilterPosition Enum**

**feedFilters**
The individual filters displayed in the feed filters list.

Signature

```csharp
public List<Metadata.FeedLayoutFilter> feedFilters {get; set;}
```

Property Value
Type: **List<FeedLayoutFilter Class>**.

**fullWidthFeed**
Specifies whether the feed expands horizontally to take up all available space on the page (true) or not (false).

Signature

```csharp
public Boolean fullWidthFeed {get; set;}
```

Property Value
Type: **Boolean**

**hideSidebar**
Specifies whether the sidebar is hidden (true) or not (false).
Signature
public Boolean hideSidebar {get; set;}

Property Value
Type: Boolean

**highlightExternalFeedItems**
Controls whether to highlight external feed items (true) or not (false).

Signature
public Boolean highlightExternalFeedItems {get; set;}

Property Value
Type: Boolean

**leftComponents**
The individual components displayed in the left column of the feed view.

Signature
public List<Metadata.FeedLayoutComponent> leftComponents {get; set;}

Property Value
Type: List<FeedLayoutComponent Class>

**rightComponents**
Lists the individual components displayed in the right column of the feed view.

Signature
public List<Metadata.FeedLayoutComponent> rightComponents {get; set;}

Property Value
Type: List<FeedLayoutComponent Class>

**useInlineFiltersInConsole**
Indicates whether to use inline filters in the Salesforce console.

Signature
public Boolean useInlineFiltersInConsole {get; set;}

Property Value
Type: Boolean

FeedLayout Methods
The following are methods for FeedLayout.

IN THIS SECTION:
  clone()
  Makes a duplicate copy of the Metadata.FeedLayout.

clone()
Makes a duplicate copy of the Metadata.FeedLayout.

Signature
public Object clone()

Return Value
Type: Object

FeedLayoutComponent Class
Represents a component in the feed view of a feed-based page layout.

Namespace
Metadata

Usage
Use this class when accessing Metadata.Layout metadata components. For more information, see “FeedLayoutComponent” in the Metadata API Developer Guide.

IN THIS SECTION:
  FeedLayoutComponent Properties
  FeedLayoutComponent Methods

FeedLayoutComponent Properties
The following are properties for FeedLayoutComponent.
See FeedLayoutComponent in the Metadata API Developer Guide
IN THIS SECTION:

**componentType**
Represents a component in the feed view of a feed-based page layout. The type of component is required.

**height**
The height, in pixels, of the component. Doesn’t apply to *standardComponents*

**page_x**
The name of the Visualforce page used as a custom component.

---

**componentType**
Represents a component in the feed view of a feed-based page layout. The type of component is required.

**Signature**

```java
public Metadata.FeedLayoutComponentType componentType {get; set;}
```

**Property Value**

Type: `Metadata.FeedLayoutComponentType` on page 2222

---

**height**
The height, in pixels, of the component. Doesn’t apply to *standardComponents*

**Signature**

```java
public Integer height {get; set;}
```

**Property Value**

Type: `Integer`

---

**page_x**
The name of the Visualforce page used as a custom component.

**Signature**

```java
public String page_x {get; set;}
```

**Property Value**

Type: `String`

---

**FeedLayoutComponent Methods**
The following are methods for `FeedLayoutComponent`. [2221]
IN THIS SECTION:

**clone()**
Makes a duplicate copy of the `Metadata.FeedLayoutComponent`.

**Signature**

```java
public Object clone()
```

**Return Value**
Type: `Object`

---

**FeedLayoutComponentType Enum**
Indicates the type of feed layout component.

**Enum Values**
The following are the values of the `Metadata.FeedLayoutComponentType` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CaseExperts</td>
<td>List of case experts.</td>
</tr>
<tr>
<td>CaseUnifiedFiles</td>
<td>List of all files attached to the case.</td>
</tr>
<tr>
<td>CustomButtons</td>
<td>Custom button.</td>
</tr>
<tr>
<td>CustomLinks</td>
<td>Custom link.</td>
</tr>
<tr>
<td>Followers</td>
<td>List of followers.</td>
</tr>
<tr>
<td>Following</td>
<td>Icon that toggles between a Follow button (if the user viewing a record doesn’t already follow it) and a Following indicator (if the user viewing a record does follow it).</td>
</tr>
<tr>
<td>HelpAndToolLinks</td>
<td>Icons that link to the help topic for the page, the page layout, and, the printable view of the page. Available only on Case layouts.</td>
</tr>
<tr>
<td>Milestones</td>
<td>Milestone tracker, which lets users see the status of a milestone on a case. Available only on Case layouts.</td>
</tr>
<tr>
<td>SimilarCases</td>
<td>List of similar cases.</td>
</tr>
<tr>
<td>Topics</td>
<td>List of topics related to the record.</td>
</tr>
<tr>
<td>Visualforce</td>
<td>Custom Visualforce component.</td>
</tr>
</tbody>
</table>
FeedLayoutFilter Class

Represents a feed filter option in the feed view of a feed-based page layout. A filter can have only standardFilter or feedItemType set.

Namespace

Metadata

Usage

Use this class when accessing Metadata.Layout metadata components. For more information, see “FeedLayoutFilter” in the Metadata API Developer Guide.

IN THIS SECTION:

FeedLayoutFilter Properties
FeedLayoutFilter Methods

FeedLayoutFilter Properties

The following are properties for FeedLayoutFilter.

IN THIS SECTION:

feedFilterName

The name of a CustomFeedFilter component. Names are prefixed with the name of the parent object. For example, Case.MyCustomFeedFilter.

feedFilterType

The type of filter.

feedItemType

The type of feed item to display.

**feedFilterName**

The name of a CustomFeedFilter component. Names are prefixed with the name of the parent object. For example, Case.MyCustomFeedFilter.

Signature

public String feedFilterName {get; set;}

Property Value

Type: String

**feedFilterType**

The type of filter.
Signature

```csharp
public Metadata.FeedLayoutFilterType feedFilterType {get; set;}
```

Property Value
Type: *Metadata.FeedLayoutFilterType* Enum

### feedItemType

The type of feed item to display.

Signature

```csharp
public Metadata.FeedItemTypeEnum feedItemType {get; set;}
```

Property Value
Type: *Metadata.FeedItemTypeEnum* Enum

### FeedLayoutFilter Methods

The following are methods for *FeedLayoutFilter*.

**IN THIS SECTION:**

`clone()`
Makes a duplicate copy of the *Metadata.FeedLayoutFilter*.

`clone()`
Makes a duplicate copy of the *Metadata.FeedLayoutFilter*.

#### FeedLayoutFilterPosition Enum

Describes where the feed filters list is included in the layout.

#### Enum Values

The following are the values of the *Metadata.FeedLayoutFilterPosition* enum.
### FeedLayoutFilterType Enum

The type of feed layout filter.

#### Enum Values

The following are the values of the `Metadata.FeedLayoutFilterType` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AllUpdates</td>
<td>Shows all feed items on a record.</td>
</tr>
<tr>
<td>Custom</td>
<td>Shows custom feed items.</td>
</tr>
<tr>
<td>FeedItemType</td>
<td>Shows feed items only for a particular type of activity on the record.</td>
</tr>
</tbody>
</table>

### Layout Class

Represents the metadata associated with a page layout.

### Namespace

`Metadata`

### Usage

Use this class to access layout metadata components. For more information, see Layout in the Metadata API Developer Guide.

### Layout Properties

The following are properties for `Layout`.

#### IN THIS SECTION:
- `customButtons`
  - The custom buttons for this layout.
customConsoleComponents
Represents custom console components (Visualforce pages, lookup fields, or related lists) on a page layout.

emailDefault
Default value for the email checkbox. Only relevant if the showEmailCheckbox property is set.

excludeButtons
List of standard buttons to exclude from this layout.

feedLayout
Represents the values that define the feed view of a feed-based page layout.

headers
Represents the layout headers used for tagging.

layoutSections
The main sections of the layout containing fields, s-controls, and custom links. The order here determines the layout order.

miniLayout
Represents a minilayout, which is used in the mini view of a record in the Console tab, hover details, and event overlays.

multilineLayoutFields
Fields for special multiline layout fields which appear in OpportunityProduct layouts.

platformActionList
The list of actions, and their order, that display in the Salesforce mobile action bar for the layout.

quickActionList
The list of quick actions that display in the full Salesforce site for the page layout.

relatedContent
The Related Content section of the page layout.

relatedLists
The related lists for the layout, listed in the order they appear in the user interface.

relatedObjects
The list of related objects that appears in the mini view of the console.

runAssignmentRulesDefault
Default value for the “run assignment rules” checkbox. Only relevant if the showRunAssignmentRulesCheckbox property is set.

showEmailCheckbox
Controls whether to show the email checkbox. Only allowed on Case, CaseClose, and Task layouts. The default state of checkbox is controlled by the emailDefault property.

showHighlightsPanel
If set, the highlights panel displays on pages in the Salesforce console.

showInteractionLogPanel
If set, the interaction log displays on pages in the Salesforce console.

showKnowledgeComponent
Only allowed on Case layouts. If set, the Knowledge sidebar displays on cases in the Salesforce console.

showRunAssignmentRulesCheckbox
Controls whether to show the Run Assignment Rules checkbox. Only allowed on Lead and Case layouts. The default state of checkbox is controlled by the runAssignmentRulesDefault property.
showSolutionSection
Only allowed on CaseClose layout. If set, the built-in solution information section shows up on the page.

showSubmitAndAttachButton
For Cast layouts only. If set, the Submit & Add Attachment button displays on case edit pages to portal users in the Customer Portal.

summaryLayout
The summary layout for this layout.

customButtons
The custom buttons for this layout.

Signature
public List<String> customButtons {get; set;}

Property Value
Type: List<String>

customConsoleComponents
Represents custom console components (Visualforce pages, lookup fields, or related lists) on a page layout.

Signature
public Metadata.CustomConsoleComponents customConsoleComponents {get; set;}

Property Value
Type: CustomConsoleComponents Class

emailDefault
Default value for the email checkbox. Only relevant if the showEmailCheckbox property is set.

Signature
public Boolean emailDefault {get; set;}

Property Value
Type: Boolean

excludeButtons
List of standard buttons to exclude from this layout.

Signature
public List<String> excludeButtons {get; set;}

feedLayout
Represents the values that define the feed view of a feed-based page layout.

Signature
public Metadata.FeedLayout feedLayout {get; set;}

Property Value
Type: Metadata.FeedLayout

headers
Represents the layout headers used for tagging.

Signature
public List<Metadata.LayoutHeader> headers {get; set;}

Property Value
Type: List<Metadata.LayoutHeader>

layoutSections
The main sections of the layout containing fields, s-controls, and custom links. The order here determines the layout order.

Signature
public List<Metadata.LayoutSection> layoutSections {get; set;}

Property Value
Type: List<Metadata.LayoutSection>

miniLayout
Represents a minilayout, which is used in the mini view of a record in the Console tab, hover details, and event overlays.

Signature
public Metadata.MiniLayout miniLayout {get; set;}

Property Value
Type: Metadata.MiniLayout
multilineLayoutFields
Fields for special multiline layout fields which appear in OpportunityProduct layouts.

Signature
public List<String> multilineLayoutFields {get; set;}

Property Value
Type: List<String>

platformActionList
The list of actions, and their order, that display in the Salesforce mobile action bar for the layout.

Signature
public Metadata.PlatformActionList platformActionList {get; set;}

Property Value
Type: Metadata.PlatformActionList

quickActionList
The list of quick actions that display in the full Salesforce site for the page layout.

Signature
public Metadata.QuickActionList quickActionList {get; set;}

Property Value
Type: Metadata.QuickActionList

relatedContent
The Related Content section of the page layout.

Signature
public Metadata.RelatedContent relatedContent {get; set;}

Property Value
Type: Metadata.RelatedContent

relatedLists
The related lists for the layout, listed in the order they appear in the user interface.
**relatedLists**
The list of related objects that appears in the mini view of the console.

Signature
```
public List<Metadata.RelatedListItem> relatedLists {get; set;}
```

Property Value
Type: List<Metadata.RelatedListItem>

---

**relatedObjects**
The list of related objects that appears in the mini view of the console.

Signature
```
public List<String> relatedObjects {get; set;}
```

Property Value
Type: List<String>

---

**runAssignmentRulesDefault**
Default value for the “run assignment rules” checkbox. Only relevant if the showRunAssignmentRulesCheckbox property is set.

Signature
```
public Boolean runAssignmentRulesDefault {get; set;}
```

Property Value
Type: Boolean

---

**showEmailCheckbox**
Controls whether to show the email checkbox. Only allowed on Case, CaseClose, and Task layouts. The default state of checkbox is controlled by the emailDefault property.

Signature
```
public Boolean showEmailCheckbox {get; set;}
```

Property Value
Type: Boolean

---

**showHighlightsPanel**
If set, the highlights panel displays on pages in the Salesforce console.
Signature

public Boolean showHighlightsPanel {get; set;}

Property Value
Type: Boolean

showInteractionLogPanel
If set, the interaction log displays on pages in the Salesforce console.

Signature

public Boolean showInteractionLogPanel {get; set;}

Property Value
Type: Boolean

showKnowledgeComponent
Only allowed on Case layouts. If set, the Knowledge sidebar displays on cases in the Salesforce console.

Signature

public Boolean showKnowledgeComponent {get; set;}

Property Value
Type: Boolean

showRunAssignmentRulesCheckbox
Controls whether to show the Run Assignment Rules checkbox. Only allowed on Lead and Case layouts. The default state of checkbox is controlled by the runAssignmentRulesDefault property.

Signature

public Boolean showRunAssignmentRulesCheckbox {get; set;}

Property Value
Type: Boolean

showSolutionSection
Only allowed on CaseClose layout. If set, the built-in solution information section shows up on the page.

Signature

public Boolean showSolutionSection {get; set;}

2231
Property Value
Type: Boolean

**showSubmitAndAttachButton**
For Cast layouts only. If set, the Submit & Add Attachment button displays on case edit pages to portal users in the Customer Portal.

Signature

```java
public Boolean showSubmitAndAttachButton {get; set;}
```

Property Value
Type: Boolean

**summaryLayout**
The summary layout for this layout.

Signature

```java
public Metadata.SummaryLayout summaryLayout {get; set;}
```

Property Value
Type: Metadata.SummaryLayout

**Layout Methods**
The following are methods for Layout.

IN THIS SECTION:

- **clone()**
  Makes a duplicate copy of the Metadata.Layout.

**clone()**
Makes a duplicate copy of the Metadata.Layout.

Signature

```java
public Object clone()
```

Return Value
Type: Object
**LayoutColumn Class**

Represents the items in a column within a layout section.

**Namespace**

Metadata

**Usage**

Use this class when accessing `Metadata.Layout` metadata components. For more information, see “LayoutColumn” in the Metadata API Developer Guide.

IN THIS SECTION:

- LayoutColumn Properties
- LayoutColumn Methods

**LayoutColumn Properties**

The following are properties for `LayoutColumn`.

IN THIS SECTION:

- `layoutItems`
  - The individual items within a column (ordered from top to bottom).
- `reserved`
  - This field is reserved for Salesforce.

**layoutItems**

The individual items within a column (ordered from top to bottom).

Signature

```
public List<Metadata.LayoutItem> layoutItems {get; set;}
```

Property Value

Type: `List<Metadata.LayoutItem>`

**reserved**

This field is reserved for Salesforce.

Signature

```
public String reserved {get; set;}
```
Property Value
Type: String

LayoutColumn Methods
The following are methods for LayoutColumn.

IN THIS SECTION:

clone()

Makes a duplicate copy of the Metadata.LayoutColumn.

Signature
public Object clone()

Return Value
Type: Object

LayoutHeader Enum
Represents tagging types used for Metadata.Layout.headers

Enum Values
The following are the values of the Metadata.LayoutHeader enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>PersonalTagging</td>
<td>Tag is set to private user.</td>
</tr>
<tr>
<td>PublicTagging</td>
<td>Tag is viewable to any user who can access the record.</td>
</tr>
</tbody>
</table>

LayoutItem Class
Represents the valid values that define a layout item.

Namespace
Metadata

Usage
Use this class when accessing Metadata.Layout metadata components. For more information, see "LayoutItem" in the Metadata API Developer Guide.
IN THIS SECTION:

LayoutItem Properties
LayoutItem Methods

LayoutItem Properties

The following are properties for LayoutItem.

IN THIS SECTION:

analyticsCloudComponent
A Wave Analytics dashboard component on a page.

behavior
Determines the field behavior.

canvas
References a canvas app.

component
References a component.

customLink
The custom link reference.

emptySpace
Controls if this layout item is a blank space.

field
The field name reference, relative to the layout, for example “Description” or “MyField__c”.

height
For s-controls and pages only, the height in pixels.

page_x
Reference to a Visualforce page.

reportChartComponent
Refers to a report chart that you can add to a standard or custom object page.

scontrol
Reference to an s-control.

showLabel
For s-control and pages only, whether to show the label.

showScrollbars
For s-control and pages only, whether to show scrollbars.

width
For s-control and pages only, the width in pixels or percent. Pixel values are simply the number of pixels, for example, 500. Percentage values must include the percent sign, for example, 20%.

analyticsCloudComponent
A Wave Analytics dashboard component on a page.
Signature
public Metadata.AnalyticsCloudComponentLayoutItem analyticsCloudComponent {get; set;}

Property Value
Type: Metadata.AnalyticsCloudComponentLayoutItem

**behavior**
Determines the field behavior.

Signature
public Metadata.UiBehavior behavior {get; set;}

Property Value
Type: Metadata.UiBehavior

**canvas**
References a canvas app.

Signature
public String canvas {get; set;}

Property Value
Type: String

**component**
References a component.

Signature
public String component {get; set;}

Property Value
Type: String

**customLink**
The custom link reference.

Signature
public String customLink {get; set;}

2236
Property Value
Type: String

**emptySpace**
Controls if this layout item is a blank space.

Signature
```java
public Boolean emptySpace {get; set;}
```

Property Value
Type: Boolean

**field**
The field name reference, relative to the layout, for example “Description” or “MyField__c”.

Signature
```java
public String field {get; set;}
```

Property Value
Type: String

**height**
For s-controls and pages only, the height in pixels.

Signature
```java
public Integer height {get; set;}
```

Property Value
Type: Integer

**page_x**
Reference to a Visualforce page.

Signature
```java
public String page_x {get; set;}
```

Property Value
Type: String
**reportChartComponent**

Refers to a report chart that you can add to a standard or custom object page.

Signature

```java
public Metadata.ReportChartComponentLayoutItem reportChartComponent {get; set;}
```

Property Value

Type: [Metadata ReportChartComponentLayoutItem](#)

**scontrol**

Reference to an s-control.

Signature

```java
public String scontrol {get; set;}
```

Property Value

Type: String

**showLabel**

For s-control and pages only, whether to show the label.

Signature

```java
public Boolean showLabel {get; set;}
```

Property Value

Type: Boolean

**showScrollbars**

For s-control and pages only, whether to show scrollbars.

Signature

```java
public Boolean showScrollbars {get; set;}
```

Property Value

Type: Boolean

**width**

For s-control and pages only, the width in pixels or percent. Pixel values are simply the number of pixels, for example, 500. Percentage values must include the percent sign, for example, 20%.
Signature

```
public String width {get; set;}
```

Property Value
Type: String

**LayoutItem Methods**

The following are methods for LayoutItem.

**IN THIS SECTION:**

`clone()`

Makes a duplicate copy of the Metadata.LayoutItem.

**clone()**

Makes a duplicate copy of the Metadata.LayoutItem.

Signature

```
public Object clone()
```

**Return Value**
Type: Object

**LayoutSection Class**

Represents a section of a page layout, such as the Custom Links section.

**Namespace**

Metadata

**Usage**

Use this class when accessing Metadata.Layout metadata components. For more information, see “LayoutSection” in the Metadata API Developer Guide.

**IN THIS SECTION:**

- LayoutSection Properties
- LayoutSection Methods

**LayoutSection Properties**

The following are properties for LayoutSection.
IN THIS SECTION:

- **customLabel**
  Indicates if this section's label is custom or standard (built-in).

- **detailHeading**
  Controls if this section appears in the detail page.

- **editHeading**
  Controls if this section appears in the edit page.

- **label**
  The label, either standard or custom, based on the customLabel property.

- **layoutColumns**
  Lists the layout columns. You can have one, two, or three columns, ordered left to right, are possible.

- **style**
  The style of the layout for this section.

---

**customLabel**
Indicates if this section's label is custom or standard (built-in).

**Signature**

```
public Boolean customLabel {get; set;}
```

**Property Value**
Type: **Boolean**

**detailHeading**
Controls if this section appears in the detail page.

**Signature**

```
public Boolean detailHeading {get; set;}
```

**Property Value**
Type: **Boolean**

**editHeading**
Controls if this section appears in the edit page.

**Signature**

```
public Boolean editHeading {get; set;}
```
Property Value
Type: Boolean

label
The label; either standard or custom, based on the customLabel property.

Signature
public String label {get; set;}

Property Value
Type: String

layoutColumns
Lists the layout columns. You can have one, two, or three columns, ordered left to right, are possible.

Signature
public List<Metadata.LayoutColumn> layoutColumns {get; set;}

Property Value
Type: List<Metadata.LayoutColumn>

style
The style of the layout for this section.

Signature
public Metadata.LayoutSectionStyle style {get; set;}

Property Value
Type: Metadata.LayoutSectionStyle

LayoutSection Methods
The following are methods for LayoutSection.

IN THIS SECTION:
clone()
Makes a duplicate copy of the Metadata.LayoutSection.

clone()  
Makes a duplicate copy of the Metadata.LayoutSection.
**Signature**

```java
public Object clone()
```

**Return Value**

Type: Object

---

**LayoutSectionStyle Enum**

Describes the possible styles for a layout section.

**Enum Values**

The following are the values of the `Metadata.LayoutSectionStyle` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CustomLinks</td>
<td>Contains custom links only</td>
</tr>
<tr>
<td>OneColumn</td>
<td>One column</td>
</tr>
<tr>
<td>TwoColumnsLeftToRight</td>
<td>Two columns, tab goes left to right</td>
</tr>
<tr>
<td>TwoColumnsTopToBottom</td>
<td>Two columns, tab goes top to bottom</td>
</tr>
</tbody>
</table>

**Metadata Class**

An abstract base class that represents a custom metadata component.

**Namespace**

`Metadata`

**Usage**

You can't create instances of this abstract class. Instead, create an instance of a specific custom metadata component class that derives from `Metadata`. Metadata, such as `Metadata.CustomMetadata`. For more information, see Metadata in the [Metadata API Developer Guide](#).

---

**IN THIS SECTION:**

- Metadata Properties
- Metadata Methods

**Metadata Properties**

The following are properties for `Metadata`. 
IN THIS SECTION:

**fullName**
The full name of the custom metadata, which can include the namespace, type, and component name.

**fullName**
The full name of the custom metadata, which can include the namespace, type, and component name.

Signature

```java
public String fullName {get; set;}
```

Property Value

**Type:** String

The format of the full name can include the namespace, metadata type, and metadata component name. If you’re updating components in a namespace, you also need to qualify the namespace for the component in the full name. For example, the full name for a custom metadata “MDType1__mdt” component named “Component1” that is contained in the “myPackage” namespace is “myPackage__MDType1__mdt.myPackage__Component1”. For more information on full name formats for different metadata types, see reference documentation on the metadata types in the Metadata API Developer Guide.

**Metadata Methods**
The following are methods for Metadata.

IN THIS SECTION:

**clone()**
Makes a duplicate copy of the Metadata.Metadata.

**clone()**
Makes a duplicate copy of the Metadata.Metadata.

Signature

```java
public Object clone()
```

Return Value

**Type:** Object

**MetadataType Enum**
Represents the custom metadata components available in Apex.

**Enum Values**
The following are the values of the Metadata.MetadataType enum.
### MetadataValue Class
An abstract base class that represents a custom metadata component field.

#### Namespace
```
Metadata
```

#### Usage
You can’t create instances of this abstract class. Instead, create an instance of a specific custom metadata component value class that derives from `Metadata.MetadataValue`, such as `Metadata.CustomMetadataValue`.

#### MetadataValue Methods
The following are methods for `MetadataValue`.

#### clone()
```
Makes a duplicate copy of the `Metadata.MetadataValue`.
```

```java
public Object clone()
```

#### Signature
```
public Object clone()
```

#### Return Value
Type: `Object`

### MiniLayout Class
Represents a mini view of a record in the Console tab, hover details, and event overlays.

---

### Value Description

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CustomMetadata</td>
<td>Records of custom metadata types</td>
</tr>
<tr>
<td>Layout</td>
<td>Layouts</td>
</tr>
</tbody>
</table>
Namespace

Metadata

Usage

Use this class when accessing `Metadata.Layout` metadata components. For more information, see “MiniLayout” in the `Metadata API Developer Guide`.

IN THIS SECTION:

MiniLayout Properties
MiniLayout Methods

MiniLayout Properties

The following are properties for `MiniLayout`.

IN THIS SECTION:

fields
The fields for the mini-layout, listed in the order they appear in the UI. Fields that appear in the mini-layout must appear in the main layout.

relatedLists
The mini related lists, listed in the order they appear in the UI. You cannot set sorting on mini related lists. Fields that appear in the mini related lists must appear in the main layout.

fields
The fields for the mini-layout, listed in the order they appear in the UI. Fields that appear in the mini-layout must appear in the main layout.

Signature

```java
public List<String> fields {get; set;}
```

Property Value

Type: `List<String>`

relatedLists
The mini related lists, listed in the order they appear in the UI. You cannot set sorting on mini related lists. Fields that appear in the mini related lists must appear in the main layout.

Signature

```java
public List<Metadata.RelatedListItem> relatedLists {get; set;}
```
**MiniLayout Methods**

The following are methods for MiniLayout.

**IN THIS SECTION:**

- **clone()**
  
  Makes a duplicate copy of the Metadata.MiniLayout.

**clone()**

Makes a duplicate copy of the Metadata.MiniLayout.

**Signature**

```java
public Object clone()
```

**Return Value**

Type: Object

**Operations Class**

Represents a class to execute metadata operations, such as retrieving or deploying custom metadata.

**Namespace**

Metadata

**Usage**

Use the Metadata.Operations class to execute metadata operations. For more information on use cases and restrictions of metadata operations in Apex, see Metadata.

**Example: Retrieve Metadata**

The following example retrieves the “MyTestCustomMDType” custom metadata record from the subscriber org, and inspects the custom fields.

```java
public class ReadMetadata {
    public void retrieveMetadata () {
        // List fullnames of components we want to retrieve
        List<String> componentNameList = new List<String>{'ISVNamespace__TestCustomMDType.MyTestCustomMDType'};

        // Retrieve components that are records of custom metadata types
        // based on name
        List<Metadata.Metadata> components = Metadata.Operations.retrieve(
```
Example: Deploy Metadata

The following example uses the Metadata API in Apex to update the customField custom field value of the MetadataRecordName custom metadata record and deploy this change into the subscriber org. Because the deployment is asynchronous, you must provide a callback class that implements the `Metadata DeployCallback` interface, which is then used when the queued deployment completes.

```java
public class CreateMetadata{
    public void updateAndDeployMetadata() {
        // Setup custom metadata to be created in the subscriber org.
        Metadata.CustomMetadata customMetadata = new Metadata.CustomMetadata();
        customMetadata.fullName = 'ISVNamespace__MetadataTypeName.MetadataRecordName';

        Metadata.CustomMetadataValue customField = new Metadata.CustomMetadataValue();
        customField.field = 'customField__c';
        customField.value = 'New value';

        customMetadata.values.add(customField);

        Metadata.DeployContainer mdContainer = new Metadata.DeployContainer();
        mdContainer.addMetadata(customMetadata);

        // Setup deploy callback, MyDeployCallback implements
        // the Metadata DeployCallback interface (code for
        // this class not shown in this example)
        MyDeployCallback callback = new MyDeployCallback();

        // Enqueue custom metadata deployment
        Id jobId = Metadata.Operations.enqueueDeployment(mdContainer, callback);
    }
}
```

Example: Create Two Metadata Records Synchronously

Create a metadata record along with another one that references it in the same transaction. If the parent record was installed with a namespace, prefix the developer name with `recordNs__`. 
**Note:** No custom metadata relationship can relate records of the same type to each other.

```java
public class CreateMetadata {

    public Id doCreate(
        String parentRecDevName,
        String parentRecLabel,
        String childRecDevName,
        String childRecLabel) {

        Metadata.DeployContainer mdContainer = new Metadata.DeployContainer();
        Metadata.CustomMetadata parentRecord = new Metadata.CustomMetadata();
        parentRecord.fullName = 'ParentType.' + parentRecDevName;
        parentRecord.label = parentRecLabel;
        mdContainer.addMetadata(parentRecord);
        Metadata.CustomMetadata childRecord = new Metadata.CustomMetadata();
        childRecord.fullName = 'ChildType.' + childRecDevName;
        childRecord.label = childRecLabel;
        Metadata.CustomMetadataValue relValue = new Metadata.CustomMetadataValue();
        relValue.field = 'Parent__c';
        relValue.value = parentRecDevName;
        childRecord.values.add(relValue);
        mdContainer.addMetadata(childRecord);

        Id jobId = Metadata.Operations.enqueueDeployment(mdContainer, null);
        return jobId;
    }
}
```

**IN THIS SECTION:**

- **Operations Methods**

**Operations Methods**

The following are methods for `Operations`.

**IN THIS SECTION:**

- `clone()`
- `enqueueDeployment(container, callback)`
  Deploys custom metadata components asynchronously.
- `retrieve(type, fullNames)`
  Retrieves a list of custom metadata components.
**clone()**

**Signature**
```java
public Object clone()
```

**Return Value**
Type: Object

---

**enqueueDeployment(container, callback)**
Deploys custom metadata components asynchronously.

**Signature**
```java
public static Id enqueueDeployment(Metadata.DeployContainer container,
                                          Metadata.DeployCallback callback)
```

**Parameters**
- **container**
  - Type: `Metadata.DeployContainer`
  - Container that contains the set of metadata components to deploy.
- **callback**
  - Type: `Metadata.DeployCallback`
  - A class that implements the `Metadata.DeployCallback` interface. Used by Salesforce to return information about the deployment results.

**Return Value**
Type: `Id`
ID of deployment request.

---

**retrieve(type, fullNames)**
Retrieves a list of custom metadata components.

**Signature**
```java
public static List<Metadata.Metadata> retrieve(Metadata.MetadataType type, List<String> fullNames)
```

**Parameters**
- **type**
  - Type: `Metadata.MetadataType`
  - The metadata component type.
**FullNames**
Type: `List<String>`
A list of component names to retrieve. For information on component name formats, see `Metadata.fullName()`.

Return Value
Type: `List<Metadata.Metadata>`

---

**PlatformActionList Class**

Represents the list of actions, and their order, that display in the Salesforce mobile action bar for the layout.

**Namespace**
`Metadata`

**Usage**
Use this class when accessing `Metadata.Layout` metadata components. For more information, see “PlatformActionList” in the `Metadata API Developer Guide`.

IN THIS SECTION:
- PlatformActionList Properties
- PlatformActionList Methods

**PlatformActionList Properties**
The following are properties for `PlatformActionList`.

IN THIS SECTION:
- `actionListContext`
  The context of the action list.
- `platformActionListItems`
  The actions in the platform action list.
- `relatedSourceEntity`
  When the `actionListContext` property is “RelatedList” or “RelatedListRecord”, this field represents the API name of the related list to which the action belongs.

**actionListContext**
The context of the action list.

Signature
```csharp
public Metadata.PlatformActionListContextEnum actionListContext {get; set;}
```
Property Value
Type: `Metadata.PlatformActionListContextEnum`

`platformActionListItems`
The actions in the platform action list.

Signature
`public List<Metadata.PlatformActionListItem> platformActionListItems {get; set;}`

Property Value
Type: `List<Metadata.PlatformActionListItem>`

`relatedSourceEntity`
When the `actionListContext` property is “RelatedList” or “RelatedListRecord”, this field represents the API name of the related list to which the action belongs.

Signature
`public String relatedSourceEntity {get; set;}`

Property Value
Type: `String`

**PlatformActionList Methods**
The following are methods for `PlatformActionList`.

IN THIS SECTION:
- **clone()**
  Makes a duplicate copy of the `Metadata.PlatformActionList`.

**clone()**
Makes a duplicate copy of the `Metadata.PlatformActionList`.

Signature
`public Object clone()`

Return Value
Type: `Object`
PlatformActionListContextEnum Enum

Describes the different contexts of action lists.

Enum Values

The following are the values of the Metadata.PlatformActionListContextEnum enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ActionDefinition</td>
<td>Action definition context. Reserved for future use.</td>
</tr>
<tr>
<td>Assistant</td>
<td>Assistant context.</td>
</tr>
<tr>
<td>BannerPhoto</td>
<td>Banner photo context.</td>
</tr>
<tr>
<td>Chatter</td>
<td>Chatter context.</td>
</tr>
<tr>
<td>Dockable</td>
<td>Dockable context.</td>
</tr>
<tr>
<td>FeedElement</td>
<td>Feed element context.</td>
</tr>
<tr>
<td>Flexipage</td>
<td>Flexipage context.</td>
</tr>
<tr>
<td>Global_x</td>
<td>Global context.</td>
</tr>
<tr>
<td>ListView</td>
<td>Listview context.</td>
</tr>
<tr>
<td>ListViewDefinition</td>
<td>Listview definition context.</td>
</tr>
<tr>
<td>ListViewRecord</td>
<td>Listview record context.</td>
</tr>
<tr>
<td>Lookup</td>
<td>Lookup context.</td>
</tr>
<tr>
<td>MruList</td>
<td>MRU list context.</td>
</tr>
<tr>
<td>MruRow</td>
<td>MRU row context.</td>
</tr>
<tr>
<td>ObjectHomeChart</td>
<td>Object home chart context.</td>
</tr>
<tr>
<td>Photo</td>
<td>Photo context.</td>
</tr>
<tr>
<td>Record</td>
<td>Record context.</td>
</tr>
<tr>
<td>RecordEdit</td>
<td>Record edit context.</td>
</tr>
<tr>
<td>RelatedList</td>
<td>Related list context.</td>
</tr>
<tr>
<td>RelatedListRecord</td>
<td>Related list record context.</td>
</tr>
</tbody>
</table>

PlatformActionListItem Class

Represents an action in the platform action list for a layout.

Namespace

Metadata
Usage
Use this class when accessing `Metadata.Layout` metadata components. For more information, see “PlatformActionListItem” in the Metadata API Developer Guide.

IN THIS SECTION:
- PlatformActionListItem Properties
- PlatformActionListItem Methods

PlatformActionListItem Properties
The following are properties for PlatformActionListItem.

IN THIS SECTION:
- actionName
- actionType
- sortOrder
- subtype

actionName
The API name for the action in the list.

Signature
```java
public String actionName {get; set;}
```

Property Value
Type: `String`

actionType
The type of action.

Signature
```java
public Metadata.PlatformActionTypeEnum actionType {get; set;}
```

Property Value
Type: `Metadata.PlatformActionTypeEnum`
**sortOrder**
The placement of the action in the list.

Signature

```java
public Integer sortOrder {get; set;}
```

Property Value

Type: Integer

**subtype**
The subtype of the action.

Signature

```java
public String subtype {get; set;}
```

Property Value

Type: String

**PlatformActionListItem Methods**
The following are methods for `PlatformActionListItem`.

**IN THIS SECTION:**

- **clone()**
  
  Makes a duplicate copy of the `Metadata.PlatformActionListItem`.

**clone()**

Makes a duplicate copy of the `Metadata.PlatformActionListItem`.

Signature

```java
public Object clone()
```

Return Value

Type: Object

**PlatformActionTypeEnum Enum**
The type of action for a `PlatformActionListItem`.
Enum Values

The following are the values of the Metadata.PlatformActionTypeEnum enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ActionLink</td>
<td>An indicator on a feed element that targets an API, a web page, or a file, represented by a button in the Salesforce Chatter feed UI.</td>
</tr>
<tr>
<td>CustomButton</td>
<td>When clicked, opens a URL or a Visualforce page in a window or executes JavaScript.</td>
</tr>
<tr>
<td>InvocableAction</td>
<td>An invocable action such as posting to Chatter.</td>
</tr>
<tr>
<td>ProductivityAction</td>
<td>Productivity actions are predefined by Salesforce and are attached to a limited set of objects. You can't edit or delete productivity actions.</td>
</tr>
<tr>
<td>QuickAction</td>
<td>A global or object-specific action.</td>
</tr>
<tr>
<td>StandardButton</td>
<td>A predefined Salesforce button such as New, Edit, and Delete.</td>
</tr>
</tbody>
</table>

PrimaryTabComponents Class

Represents custom console components on primary tabs in the Salesforce console.

Namespace

Metadata

Usage

Use this class when accessing Metadata.Layout metadata components. For more information, see “PrimaryTabComponents” in the Metadata API Developer Guide.

IN THIS SECTION:

PrimaryTabComponents Properties

The following are properties for PrimaryTabComponents.

IN THIS SECTION:

component

container

Represents a custom console component (Visualforce page, lookup field, or related lists) on a section of a page layout.

container

Represents a location and style in which to display more than one custom console component on the sidebars of the Salesforce console.
**component**
Represents a custom console component (Visualforce page, lookup field, or related lists) on a section of a page layout.

Signature
```
public List<Metadata.ConsoleComponent> component {get; set;}
```

Property Value
Type: `List<Metadata.ConsoleComponent>`

**containers**
Represents a location and style in which to display more than one custom console component on the sidebars of the Salesforce console.

Signature
```
public List<Metadata.Container> containers {get; set;}
```

Property Value
Type: `List<Metadata.Container>`

**PrimaryTabComponents Methods**
The following are methods for `PrimaryTabComponents`.

IN THIS SECTION:
- `clone()`
  Makes a duplicate copy of the `Metadata.PrimaryTabComponents`.

**clone()**
Makes a duplicate copy of the `Metadata.PrimaryTabComponents`.

Signature
```
public Object clone()
```

Return Value
Type: `Object`

**QuickActionList Class**
Represents the list of actions associated with the page layout.
Namespace

Metadata

Usage

Use this class when accessing `Metadata.Layout` metadata components. For more information, see “QuickActionList” in the Metadata API Developer Guide.

IN THIS SECTION:
  - QuickActionList Properties
  - QuickActionList Methods

QuickActionList Properties

The following are properties for `QuickActionList`.

IN THIS SECTION:
  - quickActionListItems
  - quickActionListItems

quickActionListItems

List of `QuickActionList` objects.

Signature

```java
public List<Metadata.QuickActionListItem> quickActionListItems {get; set;}
```

Property Value

Type: `List<Metadata.QuickActionListItem>`

QuickActionList Methods

The following are methods for `QuickActionList`.

IN THIS SECTION:
  - clone()

clone()

Makes a duplicate copy of the `Metadata.QuickActionList`.

Signature

```java
public Object clone()
```
QuickActionListItem Class

Represents an action in the QuickActionList.

Namespace

Metadata

Usage

Use this class when accessing Metadata.Layout metadata components. For more information, see “QuickActionListItem” in the Metadata API Developer Guide.

IN THIS SECTION:

- QuickActionListItem Properties
- QuickActionListItem Methods

QuickActionListItem Properties

The following are properties for QuickActionListItem.

IN THIS SECTION:

- quickActionName
  The API name of the action.

quickActionName

The API name of the action.

Signature

public String quickActionName {get; set;}

Property Value

Type: String

QuickActionListItem Methods

The following are methods for QuickActionListItem.
clone()

Makes a duplicate copy of the Metadata.QuickActionListItem

**Signature**

```
public Object clone()
```

**Return Value**

Type: Object

---

**RelatedContent Class**

Represents the Mobile Cards section of the page layout.

**Namespace**

Metadata

**Usage**

Use this class when accessing Metadata.Layout metadata components. For more information, see “RelatedContent” in the Metadata API Developer Guide.

---

**RelatedContent Properties**

The following are properties for RelatedContent.

**relatedContentItems**

A list of layout items in the Mobile Cards section of the page layout.

```
relatedContentItems
```

A list of layout items in the Mobile Cards section of the page layout.
Signature

```csharp
public List<Metadata.RelatedContentItem> relatedContentItems {get; set;}
```

Property Value
Type: List<Metadata.RelatedContentItem>

**RelatedContent Methods**
The following are methods for RelatedContent.

**IN THIS SECTION:**
- `clone()`: Makes a duplicate copy of the Metadata.RelatedContent.

```csharp
clone()
Makes a duplicate copy of the Metadata.RelatedContent.
```

**RelatedContentItem Class**
Represents an individual item in the RelatedContent list.

**Namespace**
Metadata

**Usage**
Use this class when accessing Metadata.Layout metadata components. For more information, see “RelatedContentItem” in the Metadata API Developer Guide.

**IN THIS SECTION:**
- RelatedContentItem Properties
- RelatedContentItem Methods

**RelatedContentItem Properties**
The following are properties for RelatedContentItem.
IN THIS SECTION:

*layoutItem*
An individual layout item in the Mobile Cards section.

**layoutItem**
An individual layout item in the Mobile Cards section.

Signature

```csharp
public Metadata.LayoutItem layoutItem {get; set;}
```

Property Value
- Type: `Metadata.LayoutItem`

**RelatedContentItem Methods**
The following are methods for `RelatedContentItem`.

IN THIS SECTION:

*clone()
Makes a duplicate copy of the `Metadata.RelatedContentItem`.

**clone ()**
Makes a duplicate copy of the `Metadata.RelatedContentItem`.

Signature

```csharp
public Object clone()
```

Return Value
- Type: `Object`

**RelatedList Class**
Represents related list custom components on the sidebars of the Salesforce console.

**Namespace**
- `Metadata`

**Usage**
Use this class when accessing `Metadata.Layout` metadata components. For more information, see “RelatedList” in the `Metadata API Developer Guide`.

2261
IN THIS SECTION:
  RelatedList Properties
  RelatedList Methods

RelatedList Properties
The following are properties for RelatedList.

IN THIS SECTION:
  hideOnDetail
  name

**hideOnDetail**
When set to true, the related list is hidden from detail pages where it appears as a component to prevent duplicate information from showing.

Signature
```
public Boolean hideOnDetail {get; set;}
```

Property Value
Type: Boolean

**name**
The name of the component as it appears to console users.

Signature
```
public String name {get; set;}
```

Property Value
Type: String

RelatedList Methods
The following are methods for RelatedList.

IN THIS SECTION:
  clone()
clone()
Makes a duplicate copy of the Metadata.RelatedList.

Signature
public Object clone()

Return Value
Type: Object

RelatedListItem Class
Represents an item in the related list in a page layout.

Namespace
Metadata

Usage
Use this class when accessing Metadata.Layout metadata components. For more information, see “RelatedListItem” in the Metadata API Developer Guide.

IN THIS SECTION:
- RelatedListItem Properties
- RelatedListItem Methods

RelatedListItem Properties
The following are properties for RelatedListItem.

IN THIS SECTION:
- customButtons
  A list of custom buttons used in the related list.
- excludeButtons
  A list of excluded related-list buttons.
- fields
  A list of fields displayed in the related list. Uses aliases instead of field or API names.
- relatedList
  The name of the related list.
- sortField
  The name of the field used for sorting.
- sortOrder
  When sortField is set, the sortOrder property determines the sort order.
customButtons
A list of custom buttons used in the related list.

Signature
public List<String> customButtons {get; set;}

Property Value
Type: List<String>
For more information, see “Define Custom Buttons and Links” in the Salesforce online help.

excludeButtons
A list of excluded related-list buttons.

Signature
public List<String> excludeButtons {get; set;}

Property Value
Type: List<String>

fields
A list of fields displayed in the related list. Uses aliases instead of field or API names.

Signature
public List<String> fields {get; set;}

Property Value
Type: List<String>

relatedList
The name of the related list.

Signature
public String relatedList {get; set;}

Property Value
Type: String
sortField
The name of the field used for sorting.

Signature
public String sortField {get; set;}

Property Value
Type: String

sortOrder
When sortField is set, the sortOrder property determines the sort order.

Signature
public Metadata.SortOrder sortOrder {get; set;}

Property Value
Type: Metadata.SortOrder

RelatedListItem Methods
The following are methods for RelatedListItem.

IN THIS SECTION:
  clone()
  Makes a duplicate copy of the Metadata.RelatedListItem.

clone()
Makes a duplicate copy of the Metadata.RelatedListItem.

Signature
public Object clone()

Return Value
Type: Object

ReportChartComponentLayoutItem Class
Represents the settings for a report chart on a standard or custom page.
Namespace
Metadata

Usage
Use this class when accessing `Metadata.Layout` metadata components. For more information, see “ReportChartComponentLayoutItem” in the `Metadata API Developer Guide`.

IN THIS SECTION:
- ReportChartComponentLayoutItem Properties
- ReportChartComponentLayoutItem Methods

ReportChartComponentLayoutItem Properties
The following are properties for `ReportChartComponentLayoutItem`.

IN THIS SECTION:
- `cacheData`
  Indicates whether to use cached data when displaying the chart. When the attribute is set to true, data is cached for 24 hours. When the attribute is set to false, the report is run every time the page is refreshed.
- `contextFilterableField`
  Unique development name of the field by which a report chart is filtered to return data relevant to the page. If set, the ID field for the parent object of the page or report type is the chart data filter. The parent object for the report type and the page must match for a chart to return relevant data.
- `error`
  Error string that is populated only when an error occurs in the underlying report.
- `hideOnError`
  Controls whether users see a chart that has an error. When an error occurs and this attribute is not set, the chart doesn't show any data except the error. Set the attribute to true to hide the chart from a page on error.
- `includeContext`
  If true, filters the report chart to return data that's relevant to the page.
- `reportName`
  Unique development name of a report that includes a chart.
- `showTitle`
  If true, applies the title from the report to the chart.
- `size`
  Size of the displayed chart. The default is medium.

`cacheData`
Indicates whether to use cached data when displaying the chart. When the attribute is set to true, data is cached for 24 hours. When the attribute is set to false, the report is run every time the page is refreshed.
Signature

```
public Boolean cacheData {get; set;}
```

Property Value
Type: Boolean

**contextFilterableField**

Unique development name of the field by which a report chart is filtered to return data relevant to the page. If set, the ID field for the parent object of the page or report type is the chart data filter. The parent object for the report type and the page must match for a chart to return relevant data.

Signature

```
public String contextFilterableField {get; set;}
```

Property Value
Type: String

**error**

Error string that is populated only when an error occurs in the underlying report.

Signature

```
public String error {get; set;}
```

Property Value
Type: String

**hideOnError**

Controls whether users see a chart that has an error. When an error occurs and this attribute is not set, the chart doesn’t show any data except the error. Set the attribute to true to hide the chart from a page on error.

Signature

```
public Boolean hideOnError {get; set;}
```

Property Value
Type: Boolean

**includeContext**

If true, filters the report chart to return data that’s relevant to the page.
Signature
public Boolean includeContext {get; set;}

Property Value
Type: Boolean

`reportName`
Unique development name of a report that includes a chart.

Signature
public String reportName {get; set;}

Property Value
Type: String

`showTitle`
If true, applies the title from the report to the chart.

Signature
public Boolean showTitle {get; set;}

Property Value
Type: Boolean

`size`
Size of the displayed chart. The default is medium.

Signature
public Metadata.ReportChartComponentSize size {get; set;}

Property Value
Type: Metadata.ReportChartComponentSize

**ReportChartComponentLayoutItem Methods**
The following are methods for `ReportChartComponentLayoutItem`.

IN THIS SECTION:
- **clone()**
clone()  

Signature

```
public Object clone()
```

Return Value
Type: Object

ReportChartComponentSize Enum

Describes the size of the displayed report chart component.

Enum Values

The following are the values of the Metadata.ReportChartComponentSize enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>LARGE</td>
<td>Large chart size.</td>
</tr>
<tr>
<td>MEDIUM</td>
<td>Medium chart size.</td>
</tr>
<tr>
<td>SMALL</td>
<td>Small chart size.</td>
</tr>
</tbody>
</table>

SidebarComponent Class

Represents a specific custom console component to display in a container that hosts multiple components in one of the sidebars of the Salesforce console.

Namespace

Metadata

Usage

Use this class when accessing Metadata.Layout metadata components. For more information, see "SidebarComponent" in the Metadata API Developer Guide.

IN THIS SECTION:
- SidebarComponent Properties
- SidebarComponent Methods

SidebarComponent Properties

The following are properties for SidebarComponent.
IN THIS SECTION:

- **componentType**
  Specifies the component type. Valid values are “KnowledgeOne”, “Lookup”, “Milestones”, “RelatedList”, “Topics”, “Files”, and “CaseExperts”.

- **createAction**
  If the component is a lookup field, the name of the quick action used to create a record.

- **enableLinking**
  If the component is a lookup field, lets users associate a record with this field.

- **height**
  The height of the component in the container. The `unit` property determines the unit of measurement, in pixels or percent.

- **knowledgeOneEnable**
  Indicates if the component is enabled for Knowledge One.

- **label**
  The name of the component as it displays to console users. Available for components in a container with the style of tabs or accordion.

- **lookup**
  If the component is a lookup field, the name of the field.

- **page_x**
  If the component is a Visualforce page, the name of the Visualforce page.

- **relatedLists**
  If the component is a related list component, the list of related list names.

- **unit**
  The unit of measurement (pixels or percent) for the height and width of the component in the container.

- **updateAction**
  If the component is a lookup field, the name of the quick action used to update a record.

- **width**
  The width of the component in the container. The `unit` property determines the unit of measurement, in pixels or percent.

**componentType**

Specifies the component type. Valid values are “KnowledgeOne”, “Lookup”, “Milestones”, “RelatedList”, “Topics”, “Files”, and “CaseExperts”.

**Signature**

```
public String componentType {get; set;}
```

**Property Value**

Type: String

**createAction**

If the component is a lookup field, the name of the quick action used to create a record.
Signature

public String createAction {get; set;}

Property Value
Type: String

enableLinking
If the component is a lookup field, lets users associate a record with this field.

Signature

public Boolean enableLinking {get; set;}

Property Value
Type: Boolean

height
The height of the component in the container. The unit property determines the unit of measurement, in pixels or percent.

Signature

public Integer height {get; set;}

Property Value
Type: Integer

knowledgeOneEnable
Indicates if the component is enabled for Knowledge One.

Signature

public Boolean knowledgeOneEnable {get; set;}

Property Value
Type: Boolean

label
The name of the component as it displays to console users. Available for components in a container with the style of tabs or accordion.

Signature

public String label {get; set;}

Property Value
Type: **String**

**lookup**
If the component is a lookup field, the name of the field.

Signature
```
public String lookup {get; set;}
```

Property Value
Type: **String**

**page_x**
If the component is a Visualforce page, the name of the Visualforce page.

Signature
```
public String page_x {get; set;}
```

Property Value
Type: **String**

**relatedLists**
If the component is a related list component, the list of related list names.

Signature
```
public List<Metadata.RelatedList> relatedLists {get; set;}
```

Property Value
Type: **List<Metadata.RelatedList>**

**unit**
The unit of measurement (pixels or percent) for the height and width of the component in the container.

Signature
```
public String unit {get; set;}
```

Property Value
Type: **String**
**updateAction**
If the component is a lookup field, the name of the quick action used to update a record.

Signature

```java
public String updateAction {get; set;}
```

Property Value
Type: String

**width**
The width of the component in the container. The unit property determines the unit of measurement, in pixels or percent.

Signature

```java
public Integer width {get; set;}
```

Property Value
Type: Integer

**SidebarComponent Methods**
The following are methods for SidebarComponent.

**IN THIS SECTION:**

**clone()**

Makes a duplicate copy of the Metadata.SidebarComponent.

Signature

```java
public Object clone()
```

Return Value
Type: Object

**SortOrder Enum**

Describes the sort order of a related list.
Enum Values

The following are the values of the `Metadata.SortOrder` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Asc_x</td>
<td>Sort in ascending order.</td>
</tr>
<tr>
<td>Desc_x</td>
<td>Sort in descending order.</td>
</tr>
</tbody>
</table>

StatusCode Enum

Describes the status code for an unsuccessful component deploy.

Enum Values

The following are the values of the `Metadata.StatusCode` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>INVALID_SCS_INBOUND_USER</td>
<td>Log in as the RunAs user configured in your SCS setup.</td>
</tr>
<tr>
<td>REQUIRE_CONNECTED_APP_SCS</td>
<td>SCS Connected App is not installed.</td>
</tr>
<tr>
<td>REQUIRE_CONNECTED_APP_SESSION_SCS</td>
<td>To use the SCS connected app, the user must be authenticated.</td>
</tr>
<tr>
<td>REQUIRE_RUNAS_USER</td>
<td>A RunAs user must be configured in your org.</td>
</tr>
</tbody>
</table>

SEE ALSO:

- DeployProblemType Enum

SubtabComponents Class

Represents custom console components on subtabs in the Salesforce console.

Namespace

`Metadata`

Usage

Use this class when accessing `Metadata.Layout` metadata components. For more information, see “SubtabComponents” in the `Metadata API Developer Guide`.

IN THIS SECTION:

- SubtabComponents Properties
- SubtabComponents Methods
SubtabComponents Properties

The following are properties for SubtabComponents.

IN THIS SECTION:

component
Represents a custom console component (Visualforce page, lookup field, or related lists) on a section of a page layout.

containers
Represents a location and style in which to display more than one custom console component on the sidebars of the Salesforce console.

component
Represents a custom console component (Visualforce page, lookup field, or related lists) on a section of a page layout.

Signature

public List<Metadata.ConsoleComponent> component {get; set;}

Property Value

Type: List<Metadata.ConsoleComponent>

containers
Represents a location and style in which to display more than one custom console component on the sidebars of the Salesforce console.

Signature

public List<Metadata.Container> containers {get; set;}

Property Value

Type: List<Metadata.Container>

SubtabComponents Methods

The following are methods for SubtabComponents.

IN THIS SECTION:

clone()
Makes a duplicate copy of the Metadata.SubtabComponents.

clone()
Makes a duplicate copy of the Metadata.SubtabComponents.
Signature
public Object clone()

Return Value
Type: Object

**SummaryLayoutStyleEnum Enum**
Describes the highlights panel style for a SummaryLayout.

**Enum Values**
The following are the values of the Metadata.SummaryLayoutStyleEnum enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CaseInteraction</td>
<td>Case interaction style.</td>
</tr>
<tr>
<td>ChildServiceReportTemplateStyle</td>
<td>Child service report template style.</td>
</tr>
<tr>
<td>DefaultQuoteTemplate</td>
<td>Default quote template style.</td>
</tr>
<tr>
<td>DefaultServiceReportTemplate</td>
<td>Default service report style</td>
</tr>
<tr>
<td>Default_x</td>
<td>Default style.</td>
</tr>
<tr>
<td>PathAssistant</td>
<td>Path assistant style.</td>
</tr>
<tr>
<td>QuickActionLayoutLeftRight</td>
<td>Quick action left-right layout style.</td>
</tr>
<tr>
<td>QuickActionLayoutTopDown</td>
<td>Quick action top-down layout style.</td>
</tr>
<tr>
<td>QuoteTemplate</td>
<td>Quote template style.</td>
</tr>
<tr>
<td>ServiceReportTemplate</td>
<td>Service report style.</td>
</tr>
</tbody>
</table>

**SummaryLayout Class**
Controls the appearance of the highlights panel, which summarizes key fields in a grid at the top of a page layout, when Case Feed is enabled.

**Namespace**
Metadata

**Usage**
Use this class when accessing Metadata.Layout metadata components. For more information, see “SummaryLayout” in the Metadata API Developer Guide.
SummaryLayout Properties

The following are properties for SummaryLayout.

masterLabel
The name of the layout label.

signature
public String masterLabel {get; set;}

Property Value
Type: String

sizeX
Number of columns in the highlights pane, between 1 and 4 (inclusive).

signature
public Integer sizeX {get; set;}

Property Value
Type: Integer

summaryLayoutItems
Controls the appearance of an individual field and its column and row position within the highlights panel grid, when Case Feed is enabled. At least one is required.

summaryLayoutStyle
Specifies the panel style.
**sizeY**
Number of rows in each column, either 1 or 2.

Signature
```csharp
public Integer sizeY {get; set;}
```

Property Value
Type: Integer

**sizeZ**
If provided, the setting is not visible to users.

Signature
```csharp
public Integer sizeZ {get; set;}
```

Property Value
Type: Integer

**summaryLayoutItems**
Controls the appearance of an individual field and its column and row position within the highlights panel grid, when Case Feed is enabled. At least one is required.

Signature
```csharp
public List<Metadata.SummaryLayoutItem> summaryLayoutItems {get; set;}
```

Property Value
Type: List<Metadata.SummaryLayoutItem>

**summaryLayoutStyle**
Specifies the panel style.

Signature
```csharp
public Metadata.SummaryLayoutStyleEnum summaryLayoutStyle {get; set;}
```

Property Value
Type: Metadata.SummaryLayoutStyleEnum

**SummaryLayout Methods**
The following are methods for SummaryLayout.
IN THIS SECTION:

clone()
Makes a duplicate copy of the Metadata.SummaryLayout.

clone()
Makes a duplicate copy of the Metadata.SummaryLayout.

Signature

```java
public Object clone()
```

Return Value

Type: Object

### SummaryLayoutItem Class

Controls the appearance of an individual field and its column and row position within the highlights panel grid, when Case Feed is enabled. You can have two fields per each grid in a highlights panel.

### Namespace

Metadata

### Usage

Use this class when accessing Metadata.Layout metadata components. For more information, see “SummaryLayoutItem” in the Metadata API Developer Guide.

IN THIS SECTION:

SummaryLayoutItem Properties
SummaryLayoutItem Methods

### SummaryLayoutItem Properties

The following are properties for SummaryLayoutItem.

IN THIS SECTION:

customLink
The custom link reference.
field
The field name reference, relative to the page layout. Must be a standard or custom field that also exists on the detail page.
posX
The item's column position in the highlights panel grid. Must be within the range of sizeX.
posY
The item's row position in the highlights panel grid. Must be within the range of sizeY.

posZ
Reserved for future use. If provided, the setting is not visible to users.

customLink
The custom link reference.

Signature
public String customLink {get; set;}

Property Value
Type: String

field
The field name reference, relative to the page layout. Must be a standard or custom field that also exists on the detail page.

Signature
public String field {get; set;}

Property Value
Type: String

posX
The item's column position in the highlights panel grid. Must be within the range of sizeX.

Signature
public Integer posX {get; set;}

Property Value
Type: Integer

posY
The item's row position in the highlights panel grid. Must be within the range of sizeY.

Signature
public Integer posY {get; set;}

2280
Property Value
Type: Integer

posZ
Reserved for future use. If provided, the setting is not visible to users.

Signature
public Integer posZ {get; set;}

Property Value
Type: Integer

SummaryLayoutItem Methods
The following are methods for SummaryLayoutItem.

IN THIS SECTION:
  clone()
    Makes a duplicate copy of the Metadata.SummaryLayoutItem.

  clone()
    Makes a duplicate copy of the Metadata.SummaryLayoutItem.

Signature
public Object clone()

Return Value
Type: Object

UiBehavior Enum
Describes the behavior for a layout item on a layout page.

Enum Values
The following are the values of the Metadata.UiBehavior enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Edit</td>
<td>The layout field can be edited but is not required.</td>
</tr>
<tr>
<td>Readonly</td>
<td>The layout field is read-only.</td>
</tr>
<tr>
<td>Required</td>
<td>The layout field can be edited and is required.</td>
</tr>
</tbody>
</table>
Process Namespace

The Process namespace provides an interface and classes for passing data between your organization and a flow.

The following are the interfaces and classes in the Process namespace.

IN THIS SECTION:

- Plugin Interface
  Allows you to pass data between your organization and a specified flow.

- PluginDescribeResult Class
  Describes the input and output parameters for Process.PluginResult.

- PluginDescribeResult.InputParameter Class
  Describes the input parameter for Process.PluginResult.

- PluginDescribeResult.OutputParameter Class
  Describes the output parameter for Process.PluginResult.

- PluginRequest Class
  Passes input parameters from the class that implements the Process.Plugin interface to the flow.

- PluginResult Class
  Returns output parameters from the class that implements the Process.Plugin interface to the flow.

Plugin Interface

Allows you to pass data between your organization and a specified flow.

⚠️ Tip: We recommend using the @InvocableMethod annotation instead of the Process.Plugin interface.

- The interface doesn’t support Blob, Collection, sObject, and Time data types, and it doesn’t support bulk operations. Once you implement the interface on a class, the class can be referenced only from flows.
- The annotation supports all data types and bulk operations. Once you implement the annotation on a class, the class can be referenced from flows, processes, and the Custom Invocable Actions REST API endpoint.

Namespace

Process

IN THIS SECTION:

- Plugin Methods
- Plugin Example Implementation

Plugin Methods

The following are instance methods for Plugin.
IN THIS SECTION:

**describe()**

Returns a `Process.PluginDescribeResult` object that describes this method call.

**invoke(request)**

Primary method that the system invokes when the class that implements the interface is instantiated.

### describe()

Returns a `Process.PluginDescribeResult` object that describes this method call.

**Signature**

```
public Process.PluginDescribeResult describe()
```

**Return Value**

Type: `Process.PluginDescribeResult`

### invoke(request)

Primary method that the system invokes when the class that implements the interface is instantiated.

**Signature**

```
```

**Parameters**

- `request`
  
  Type: `Process.PluginRequest`

**Return Value**

Type: `Process.PluginResult`

### Plugin Example Implementation

```java
global class flowChat implements Process.Plugin {

  // The main method to be implemented. The Flow calls this at run time.
  global Process.PluginResult invoke(Process.PluginRequest request) {
    // Get the subject of the Chatter post from the flow
    String subject = (String) request.inputParameters.get('subject');

    // Use the Chatter APIs to post it to the current user's feed
    FeedItem fItem = new FeedItem();
    fItem.ParentId = UserInfo.getUserId();
    fItem.Body = 'Flow Update: ' + subject;
    insert fItem;
  }
}
```
// return to Flow
Map<String, Object> result = new Map<String, Object>();
return new Process.PluginResult(result);
}

// Returns the describe information for the interface
global Process.PluginDescribeResult describe() {
    Process.PluginDescribeResult result = new Process.PluginDescribeResult();
    result.Name = 'flowchatplugin';
    result.Tag = 'chat';
    result.inputParameters = new
        List<Process.PluginDescribeResult.InputParameter>{
            new Process.PluginDescribeResult.InputParameter('subject',
                Process.PluginDescribeResult.ParameterType.STRING, true)
        }
    result.outputParameters = new
        List<Process.PluginDescribeResult.OutputParameter>{ };
    return result;
}

Test Class
The following is a test class for the above class.

@isTest
private class flowChatTest {
    static testmethod void flowChatTests() {
        flowChat plugin = new flowChat();
        Map<String, Object> inputParams = new Map<String, Object>();

        string feedSubject = 'Flow is alive';
        InputParams.put('subject', feedSubject);

        Process.PluginRequest request = new Process.PluginRequest(inputParams);

        plugin.invoke(request);
    }
}

PluginDescribeResult Class
Describes the input and output parameters for Process.PluginResult.

Tip: We recommend using the @InvocableMethod annotation instead of the Process.Plugin interface.

- The interface doesn’t support Blob, Collection, sObject, and Time data types, and it doesn’t support bulk operations. Once you implement the interface on a class, the class can be referenced only from flows.
- The annotation supports all data types and bulk operations. Once you implement the annotation on a class, the class can be referenced from flows, processes, and the Custom Invocable Actions REST API endpoint.

PluginDescribeResult Constructors

PluginDescribeResult Properties

PluginDescribeResult Constructors

The following are constructors for PluginDescribeResult.

IN THIS SECTION:

PluginDescribeResult()

Creates a new instance of the Process.PluginDescribeResult class.

PluginDescribeResult()

Creates a new instance of the Process.PluginDescribeResult class.

Signature

public PluginDescribeResult()

PluginDescribeResult Properties

The following are properties for PluginDescribeResult.

IN THIS SECTION:

description

This optional field describes the purpose of the plug-in.

inputParameters

The input parameters passed by the Process.PluginRequest class from a flow to the class that implements the Process.Plugin interface.

name

Unique name of the plug-in.

outputParameters

The output parameters passed by the Process.PluginResult class from the class that implements the Process.Plugin interface to the flow.

description

This optional field describes the purpose of the plug-in.
Signature
public String description {get; set;}

Property Value
Type: String

Usage
Size limit: 255 characters.

**inputParameters**
The input parameters passed by the Process.PluginRequest class from a flow to the class that implements the Process.Plugin interface.

Signature
public List<Process.PluginDescribeResult.InputParameter> inputParameters {get; set;}

Property Value
Type: List<Process.PluginDescribeResult.InputParameter>

**name**
Unique name of the plug-in.

Signature
public String name {get; set;}

Property Value
Type: String

Usage
Size limit: 40 characters.

**outputParameters**
The output parameters passed by the Process.PluginResult class from the class that implements the Process.Plugin interface to the flow.

Signature
public List<Process.PluginDescribeResult.OutputParameter> outputParameters {get; set;}

2286
Property Value
Type: List<Process.PluginDescribeResult.OutputParameter>

PluginDescribeResult.InputParameter Class

Describes the input parameter for Process.PluginResult.

Tip: We recommend using the @InvocableMethod annotation instead of the Process.Plugin interface.

• The interface doesn’t support Blob, Collection, sObject, and Time data types, and it doesn’t support bulk operations. Once you implement the interface on a class, the class can be referenced only from flows.
• The annotation supports all data types and bulk operations. Once you implement the annotation on a class, the class can be referenced from flows, processes, and the Custom Invocable Actions REST API endpoint.

PluginDescribeResult.InputParameter Constructors

The following are constructors for PluginDescribeResult.InputParameter.

IN THIS SECTION:

PluginDescribeResult.InputParameter(name, description, parameterType, required)
Creates a new instance of the Process.PluginDescribeResult.InputParameter class using the specified name, description, parameter type, and required option.

PluginDescribeResult.InputParameter(name, parameterType, required)
Creates a new instance of the Process.PluginDescribeResult.InputParameter class using the specified name, parameter type, and required option.

PluginDescribeResult.InputParameter(name, description, parameterType, required)
Creates a new instance of the Process.PluginDescribeResult.InputParameter class using the specified name, description, parameter type, and required option.

Signature
public PluginDescribeResult.InputParameter(String name, String description, Process.PluginDescribeResult.ParameterType parameterType, Boolean required)
Parameters

`name`
Type: `String`
Unique name of the plug-in.

description
Type: `String`
Describes the purpose of the plug-in.

`parameterType`
Type: `Process.PluginDescribeResult.ParameterType`
The data type of the input parameter.

`required`
Type: `Boolean`
Set to `true` for required and `false` otherwise.

**PluginDescribeResult.InputParameter(name, parameterType, required)**

Creates a new instance of the `Process.PluginDescribeResult.InputParameter` class using the specified name, parameter type, and required option.

Signature

```java
public PluginDescribeResult.InputParameter(String name,
                                           Process.PluginDescribeResult.ParameterType parameterType,
                                           Boolean required)
```

Properties

**PluginDescribeResult.InputParameter Properties**
The following are properties for `PluginDescribeResult.InputParameter`.

**IN THIS SECTION:**

- **Description**
  - This optional field describes the purpose of the plug-in.
Name
Unique name of the plug-in.

ParameterType
The data type of the input parameter.

Required
Set to true for required and false otherwise.

Description
This optional field describes the purpose of the plug-in.

Signature
public String Description {get; set;}

Property Value
Type: String

Usage
Size limit: 255 characters.

Name
Unique name of the plug-in.

Signature
public String Name {get; set;}

Property Value
Type: String

Usage
Size limit: 40 characters.

ParameterType
The data type of the input parameter.

Signature
public Process.PluginDescribeResult.ParameterType ParameterType {get; set;}

Property Value
Type: Process.PluginDescribeResult.ParameterType
Required
Set to `true` for required and `false` otherwise.

Signature
```
public Boolean Required {get; set;}
```

Property Value
Type: `Boolean`

PluginDescribeResult.OutputParameter Class
Describes the output parameter for `Process.PluginResult`.

⚠️ Tip: We recommend using the `@InvocableMethod` annotation instead of the `Process.Plugin` interface.

- The interface doesn’t support Blob, Collection, sObject, and Time data types, and it doesn’t support bulk operations. Once you implement the interface on a class, the class can be referenced only from flows.
- The annotation supports all data types and bulk operations. Once you implement the annotation on a class, the class can be referenced from flows, processes, and the Custom Invocable Actions REST API endpoint.

Namespace
Process

IN THIS SECTION:
- PluginDescribeResult.OutputParameter Constructors
- PluginDescribeResult.OutputParameter Properties

PluginDescribeResult.OutputParameter Constructors
The following are constructors for `PluginDescribeResult.OutputParameter`.

IN THIS SECTION:
- `PluginDescribeResult.OutputParameter(name, description, parameterType)`
  Creates a new instance of the `Process.PluginDescribeResult.OutputParameter` class using the specified name, description, and parameter type.
- `PluginDescribeResult.OutputParameter(name, parameterType)`
  Creates a new instance of the `Process.PluginDescribeResult.OutputParameter` class using the specified name, description, and parameter type.

`PluginDescribeResult.OutputParameter(name, description, parameterType)`
Creates a new instance of the `Process.PluginDescribeResult.OutputParameter` class using the specified name, description, and parameter type.
Signature

```java
public PluginDescribeResult.OutputParameter(String name, String description,
Process.PluginDescribeResult.ParameterType parameterType)
```

Parameters

- **name**
  - Type: `String`
  - Unique name of the plug-in.

- **description**
  - Type: `String`
  - Describes the purpose of the plug-in.

- **parameterType**
  - Type: `Process.PluginDescribeResult.ParameterType`
  - The data type of the input parameter.

`PluginDescribeResult.OutputParameter(name, parameterType)`

Creates a new instance of the `Process.PluginDescribeResult.OutputParameter` class using the specified name, description, and parameter type.

Signature

```java
public PluginDescribeResult.OutputParameter(String name,
Process.PluginDescribeResult.ParameterType parameterType)
```

Parameters

- **name**
  - Type: `String`
  - Unique name of the plug-in.

- **parameterType**
  - Type: `Process.PluginDescribeResult.ParameterType`
  - The data type of the input parameter.

`PluginDescribeResult.OutputParameter` Properties

The following are properties for `PluginDescribeResult.OutputParameter`.

IN THIS SECTION:

- **Description**
  - This optional field describes the purpose of the plug-in.

- **Name**
  - Unique name of the plug-in.
**ParameterType**
The data type of the input parameter.

**Description**
This optional field describes the purpose of the plug-in.

**Signature**
public String Description {get; set;}

**Property Value**
Type: String

**Usage**
Size limit: 255 characters.

**Name**
Unique name of the plug-in.

**Signature**
public String Name {get; set;}

**Property Value**
Type: String

**Usage**
Size limit: 40 characters.

**ParameterType**
The data type of the input parameter.

**Signature**
