**Important:** In version 32.0 and later, use getFeedElements(communityId, subjectId, favoriteId, recentCommentCount, elementsPerBundle, pageParam, pageSize, sortParam).

**Requires Chatter**
Yes
Signature

```java
public static ConnectApi.FeedItemPage getFeedItems(String communityId, String subjectId, String favoriteId, Integer recentCommentCount, String pageParam, Integer pageSize, FeedSortOrder sortParam)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `subjectId`
  - Type: `String`
  - The ID of the context user or the alias `me`.

- `favoriteId`
  - Type: `String`
  - The ID of a favorite.

- `recentCommentCount`
  - Type: `Integer`
  - The maximum number of comments to return with each feed item. The default value is 3.

- `pageParam`
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- `pageSize`
  - Type: `Integer`
  - Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- `sortParam`
  - Type: `ConnectApi.FeedSortOrder`
  - Values are:
    - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
    - `CreatedDateDesc`—Sorts by most recent creation date.
    - `LastModifiedDateDesc`—Sorts by most recent activity.
    - `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
    - `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

Return Value

- Type: `ConnectApi.FeedItemPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```
setTestGetFeedItems(communityId, subjectId, favoriteld, recentCommentCount, pageParam, pageSize, sortParam, result)
```

Testing ConnectApi Code

### `setTestGetFeedItems(communityId, subjectId, favoriteld, result)`

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItems` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

28.0–31.0

Signature

```java
public static Void setTestGetFeedItems(String communityId, String subjectId, String favoriteld, ConnectApi.FeedItemPage result)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **subjectId**
  - Type: `String`
  - The ID of the context user or the alias `me`.

- **favoriteld**
  - Type: `String`
  - The ID of a favorite.

- **result**
  - Type: `ConnectApi.FeedItemPage`
  - The object containing test data.

Return Value

Type: `Void`

SEE ALSO:

```
getFeedItems(communityId, subjectId, favoriteld)
```

Testing ConnectApi Code
setTestGetFeedItems(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedItemPage object to be returned when getFeedItems is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
28.0–31.0

Signature
public static Void setTestGetFeedItems(String communityId, String subjectId, String favoriteId, String pageParam, Integer pageSize, FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

favoriteId
Type: String
The ID of a favorite.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**result**
- Type: `ConnectApi.FeedItemPage`
  - The object containing test data.

**Return Value**
- Type: Void

**SEE ALSO:**
- `getFeedItems(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam)`
- Testing ConnectApi Code

```java
public static Void setTestGetFeedItems(String communityId, String subjectId, String favoriteId, Integer recentCommentCount, String pageParam, Integer pageSize, FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItems` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**
- 29.0–31.0

**Signature**
- `public static Void setTestGetFeedItems(String communityId, String subjectId, String favoriteId, Integer recentCommentCount, String pageParam, Integer pageSize, FeedSortOrder sortParam, ConnectApi.FeedItemPage result)`

**Parameters**
- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.
- `subjectId`
  - Type: `String`
  - The ID of the context user or the alias `me`.
- `favoriteId`
  - Type: `String`
  - The ID of a favorite.
- `recentCommentCount`
  - Type: `Integer`
  - The maximum number of comments to return with each feed item. The default value is 3.
- `pageParam`
  - Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

`result`
Type: `ConnectApi.FeedItemPage`
The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `getFeedItems(communityId, subjectId, favoriteld, recentCommentCount, pageParam, pageSize, sortParam)`
- Testing ConnectApi Code

**ChatterFeeds Class**
Get, post, and delete feed elements, likes, comments, and bookmarks. You can also search feed elements, share feed elements, and vote on polls.

**Namespace**
`ConnectApi`

**Usage**
In API versions 30.0 and earlier, a Chatter feed was a container of feed items. In API version 31.0, the definition of a feed expanded to include new objects that didn’t entirely fit the feed item model. The Chatter feed became a container of feed elements. The abstract class `ConnectApi.FeedElement` was introduced as a parent class to the existing `ConnectApi.FeedItem` class. The subset of properties that feed elements share was moved into the `ConnectApi.FeedElement` class. Because feeds and feed elements are
the core of Chatter, understanding them is crucial to developing applications with Chatter in Apex. For detailed information, see Feeds and Feed Elements.

**Important:** Feed item methods aren’t available in version 32.0. In version 32.0 and later, use feed element methods.

Message segments in a feed item are typed as `ConnectApi.MessageSegment`. Feed item capabilities are typed as `ConnectApi.FeedItemCapability`. Record fields are typed as `ConnectApi.AbstractRecordField`. These classes are all abstract and have several concrete subclasses. At runtime you can use `instanceof` to check the concrete types of these objects and then safely proceed with the corresponding downcast. When you downcast, you must have a default case that handles unknown subclasses.

**Important:** The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.

### ChatterFeeds Methods

The following are methods for `ChatterFeeds`. All methods are static.

**IN THIS SECTION:**

- `createStream(communityId, streamInput)`
  Create a Chatter feed stream.

- `deleteComment(communityId, commentId)`
  Delete a comment.

- `deleteFeedElement(communityId, feedElementId)`
  Delete a feed element.

- `deleteLike(communityId, likeId)`
  Delete a like on a comment or post.

- `deleteStream(communityId, streamId)`
  Delete a Chatter feed stream.

- `getComment(communityId, commentId)`
  Get a comment.

- `getCommentBatch(communityId, commentIds)`
  Get a list of comments.

- `getCommentInContext(communityId, commentId, pageSize)`
  Get a threaded comment in the context of its parent comments and post.

- `getCommentsForFeedElement(communityId, feedElementId)`
  Get comments for a feed element.

- `getCommentsForFeedElement(communityId, feedElementId, threadedCommentsCollapsed)`
  Get comments in a threaded style for a feed element.

- `getCommentsForFeedElement(communityId, feedElementId, pageParam, pageSize)`
  Get a page of comments for a feed element.

- `getCommentsForFeedElement(communityId, feedElementId, pageParam, pageSize, threadedCommentsCollapsed)`
  Get a page of comments in a threaded style for a feed element.
getCommentsForFeedElement(communityId, feedElementId, threadedCommentsCollapsed, sortParam)
Get sorted comments in a threaded style for a feed element.

getCommentsForFeedElement(communityId, feedElementId, pageParam, pageSize, threadedCommentsCollapsed, sortParam)
Get a page of sorted comments in a threaded style for a feed element.

getCommentsForFeedElement(communityId, feedElementId, sortParam)
Get sorted comments for a feed element.

getCommentsForFeedElement(communityId, feedElementId, sortParam, threadedCommentsCollapsed)
Get sorted comments in a threaded style for a feed element.

getExtensions(communityId, pageParam, pageSize)
Get extensions.

getAddressDirectory(String)
Get a list of all feeds available to the context user.

getFeed(communityId, feedType)
Get a feed.

getFeed(communityId, feedType, sortParam)
Get a sorted feed.

getFeed(communityId, feedType, subjectId)
Get a feed for a record or user.

getFeed(communityId, feedType, subjectId, sortParam)
Get a sorted feed for a record or user.

getFeedElement(communityId, feedElementId)
Get a feed element.

getFeedElement(communityId, feedElementId, commentSort)
Get a feed element with sorted comments.

getFeedElement(communityId, feedElementId, threadedCommentsCollapsed)
Get a feed element and its comments in a threaded style.

getFeedElement(communityId, feedElementId, threadedCommentsCollapsed, commentSort)
Get a feed element and its sorted comments in a threaded style.

getFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle)
Get a feed element with the specified number of elements per bundle including no more than the specified number of comments per feed element.

getFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle, threadedCommentsCollapsed)
Get a feed element with its comments in a threaded style with the specified number of elements per bundle and comments per feed element.

getFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle, threadedCommentsCollapsed, commentSort)
Get a feed element with its sorted comments in a threaded style with the specified number of elements per bundle and comments per feed element.

getFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle, commentSort)
Get a feed element with the specified number of elements per bundle including no more than the specified number of sorted comments per feed element.
getFeedElementBatch(communityId, feedElementIds)
Get a list of feed elements.

getFeedElementPoll(communityId, feedElementId)
Get the poll associated with a feed element.

getFeedElementsFromBundle(communityId, feedElementId)
Get feed elements from a bundle.

getFeedElementsFromBundle(communityId, feedElementId, pageParam, pageSize, elementsPerBundle, recentCommentCount)
Get a page of feed elements from a bundle. Specify the number of elements per bundle and include no more than the specified number of comments per feed element.

getFeedElementsFromFeed(communityId, feedType)

getFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)
Get a page of sorted feed elements from the Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview feeds. Each feed element contains no more than the specified number of comments.

getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)
Get a page of sorted and filtered feed elements from the Home feed. Each feed element contains no more than the specified number of comments.

getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, threadedCommentsCollapsed)
Get a page of filtered and sorted feed elements with comments in a threaded style from the Home feed. Each feed element contains no more than the specified number of comments.

getFeedElementsFromFeed(communityId, feedType, subjectId)
Get feed elements from any feed other than Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview for a user or record.

getFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam)
Get a page of sorted feed elements from any feed other than Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam)
Get a page of sorted feed elements from any feed other than Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview. Each feed element includes no more than the specified number of comments.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)
Get a page of sorted feed elements from a record feed. Each feed element includes no more than the specified number of comments. Specify whether to return feed elements posted by internal (non-community) users only.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter)
Get a page of sorted and filtered feed elements from the UserProfile feed.
getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed)
Get a page of feed elements with comments in a threaded style from the UserProfile feed.

getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix)
Get feed elements from a feed filtered by a key prefix for a user.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly)
Get a page of sorted feed elements from a record feed. Specify the number of elements per bundle and include no more than the specified number of comments per feed element. Specify whether to return feed elements posted by internal (non-community) users only.

getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam)
Get a page of sorted feed elements from a feed filtered by a key prefix for a user.

getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam)
Get a page of sorted feed elements from a feed filtered by a key prefix for a user. Each feed element contains no more than the specified number of comments.

getFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince)
Get a page of feed elements from a feed filtered by a key prefix for a user. Include only feed elements that have been updated since the time specified in the updatedSince parameter.

getFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)
Get a page of feed elements from the Company, DirectMessageModeration, Home, and Moderation feeds. Include only feed elements that have been updated since the time specified in the updatedSince parameter. Each feed element contains no more than the specified number of comments.
getFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, filter)
Get a page of filtered feed elements from the Home feed. Include only feed elements that have been updated since the time specified in the updatedSince parameter. Each feed element contains no more than the specified number of comments.

getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince)
Get a page of feed elements from the Files, Groups, News, People, and Record feeds. Include only feed elements that have been updated since the time specified in the updatedSince parameter. Each feed element contains no more than the specified number of comments.

getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly)
Get a page of feed elements from a record feed. Include only feed elements that have been updated since the time specified in the updatedSince parameter. Specify whether to return feed elements posted by internal (non-community) users only.

getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, filter)
Get a page of filtered feed elements from a UserProfile feed. Include only feed elements that have been updated since the time specified in the updatedSince parameter.

getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, customFilter)
Get a page of filtered feed elements from a case feed. Include only feed elements that have been updated since the time specified in the updatedSince parameter.

getFeedWithFeedElements(communityId, feedType, pageSize)
Get information about a feed and a page of feed elements from the feed.

getFeedWithFeedElements(communityId, feedType, pageSize, recentCommentCount)
Get a page of information about the feed and the feed elements with the specified number of comments per feed element from the feed.

getFilterFeed(communityId, subjectId, keyPrefix)
Get a feed filtered by a key prefix for a user.

getFilterFeed(communityId, subjectId, keyPrefix, sortParam)
Get a sorted feed filtered by a key prefix for a user.
getFilterFeedDirectory(communityId, subjectId)
Get a feed directory of filter feeds available to the context user.

getLike(communityId, likeId)
Get a like on a post or comment.

getLikesForComment(communityId, commentId)
Get likes for a comment.

getLikesForComment(communityId, commentId, pageParam, pageSize)
Get a page of likes for a comment.

getLikesForFeedElement(communityId, feedElementId)
Get likes for a feed element.

getLikesForFeedElement(communityId, feedElementId, pageParam, pageSize)
Get a page of likes for a feed element.

getLinkMetadata(communityId, urls)
Get link metadata for URLs.

getPinnedFeedElementsFromFeed(communityId, feedType, subjectId)
Get pinned feed elements from a group or topic feed.

getReadByForFeedElement(communityId, feedElementId)
Get information about who read a feed element and when.

getReadByForFeedElement(communityId, feedElementId, pageParam, pageSize)
Get a page of information about who read a feed element and when.

getRelatedPosts(communityId, feedElementId, filter, maxResults)
Get posts related to the context feed element.

getAddress(communityId, streamId)
Get information about a Chatter feed stream.

getAddress(communityId, streamId, globalScope)
Get information about a Chatter feed stream, regardless of community.

getStreams(communityId)
Get the Chatter feed streams for the context user.

getStreams(communityId, sortParam)
Get and sort the Chatter feed streams for the context user.

getStreams(communityId, pageParam, pageSize)
Get a page of Chatter feed streams for the context user.

getStreams(communityId, pageParam, pageSize, sortParam)
Get a sorted page of Chatter feed streams for the context user.

getStreams(communityId, pageParam, pageSize, sortParam, globalScope)
Get a sorted page of Chatter feed streams from all communities for the context user.

getSupportedEmojis()
Get supported emojis for the org.

getThreadsForFeedComment(communityId, commentId)
Get threaded comments for a comment.
getThreadsForFeedComment(communityId, commentId, pageParam, pageSize)
Get a page of threaded comments for a comment.

getThreadsForFeedComment(communityId, commentId, threadedCommentsCollapsed)
Access the comments capability for a comment.

getTopUnansweredQuestions(communityId) (Pilot)
Get top unanswered questions for the context user in a community.

getTopUnansweredQuestions(communityId, filter) (Pilot)
Get filtered top unanswered questions for the context user in a community.

getTopUnansweredQuestions(communityId, pageSize) (Pilot)
Get a page of top unanswered questions for the context user in a community.

getTopUnansweredQuestions(communityId, filter, pageSize) (Pilot)
Get a page of filtered top unanswered questions for the context user in a community.

gVotesForComment(communityId, commentId, vote)
Get the first page of users who upvoted or downvoted a comment.

gVotesForComment(communityId, commentId, vote, pageParam, pageSize)
Get a page of users who upvoted or downvoted a comment.

gVotesForFeedElement(communityId, feedElementId, vote)
Get the first page of users who upvoted or downvoted a feed element.

gVotesForFeedElement(communityId, feedElementId, vote, pageParam, pageSize)
Get a page of users who upvoted or downvoted a feed element.

isCommentEditableByMe(communityId, commentId)
Discover whether the context user can edit a comment.

isFeedElementEditableByMe(communityId, feedElementId)
Discover whether the context user can edit a feed element.

isModified(communityId, feedType, subjectId, since)
Discover whether a news feed has been updated or changed. Use this method to poll a news feed for updates.

likeComment(communityId, commentId)
Like a comment for the context user.

likeFeedElement(communityId, feedElementId)
Like a feed element.

postCommentToFeedElement(communityId, feedElementId, text)
Post a plain-text comment to a feed element.

postCommentToFeedElement(communityId, feedElementId, comment, feedElementFileUpload)
Post a rich-text comment to a feed element. Use this method to include mentions and to attach a file.

postFeedElement(communityId, subjectId, feedElementType, text)
Post a plain-text feed element.

postFeedElement(communityId, feedElement)
Post a rich-text feed element. Include mentions and hashtag topics, attach already uploaded files to a feed element, and associate action link groups with a feed element. You can also use this method to share a feed element and add a comment.

postFeedElementBatch(communityId, feedElements)
Post a list of feed elements.
publishDraftFeedElement(communityId, feedElementId, feedElement)
Publish a draft feed element.

searchFeedElements(communityId, q)
Get the first page of feed elements that match the search criteria.

searchFeedElements(communityId, q, sortParam)
Get the first page of sorted feed elements that match the search criteria.

searchFeedElements(communityId, q, threadedCommentsCollapsed)
Get the feed elements and comments that match the search criteria.

searchFeedElements(communityId, q, pageParam, pageSize)
Get a page of feed elements that match the search criteria.

searchFeedElements(communityId, q, pageParam, pageSize, sortParam)
Get a page of sorted feed elements that match the search criteria.

searchFeedElements(communityId, q, pageParam, pageSize, threadedCommentsCollapsed)
Get a page of feed elements with comments in a threaded style that match the search criteria.

searchFeedElements(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)
Get a page of sorted feed elements that match the search criteria. Each feed element includes no more than the specified number of comments.

searchFeedElementsInFeed(communityId, feedType, q)
Get the feed elements from the Company, DirectMessageModeration, Home, Moderation, and PendingReview feeds that match the search criteria.

searchFeedElementsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)
Get a page of sorted feed elements from the Company, DirectMessageModeration, Home, Moderation, and PendingReview feeds that match the search criteria.

searchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Get a page of sorted feed elements from the Company, DirectMessageModeration, Home, Moderation, and PendingReview feeds that match the search criteria. Each feed element includes no more than the specified number of comments.

searchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter)
Get a page of sorted and filtered feed elements from a UserProfile feed that match the search criteria. Each feed element includes no more than the specified number of comments.

searchFeedElementsInFeed(communityId, feedType, subjectId, q)
Get the feed elements from a feed that match the search criteria.

searchFeedElementsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q)
Get a page of sorted feed elements from a feed for a record or user that match the search criteria.

searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Get a page of sorted feed elements from a feed that match the search criteria. Each feed element includes no more than the specified number of comments.

searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter)
Get a page of sorted and filtered feed elements from a UserProfile feed that match the search criteria.
searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, customFilter)
Get a page of sorted and filtered feed elements from a case feed that match the search criteria.

searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly)
Get a page of sorted feed elements from a feed for a record or user that match the search criteria. Each feed element includes no more than the specified number of comments. Specify whether to return feed elements posted by internal (non-community) users only.

searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, filter)
Get a page of sorted and filtered feed elements from a feed for a record or user that match the search criteria. Each feed element includes no more than the specified number of comments. Specify whether to return feed elements posted by internal (non-community) users only.

searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q)
Get the feed elements from a feed filtered by a key prefix that match the search criteria.

searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q)
Get a page of sorted feed elements from a feed filtered by a key prefix that match the search criteria.

searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Get a page of sorted feed elements from a feed filtered by a key prefix that match the search criteria. Each feed element includes no more than the specified number of comments.

searchStreams(communityId, q)
Search the Chatter feed streams for the context user.

searchStreams(communityId, q, sortParam)
Search and sort the Chatter feed streams for the context user.

searchStreams(communityId, q, pageParam, pageSize)
Search the Chatter feed streams for the context user and return a page of results.

searchStreams(communityId, q, pageParam, pageSize, sortParam)
Search the Chatter feed streams for the context user and return a sorted page of results.

searchStreams(communityId, q, pageParam, pageSize, sortParam, globalScope)
Search the Chatter feed streams from all communities for the context user and return a sorted page of results.

setCommentIsVerified(communityId, commentId, isVerified)
Mark a comment as verified or unverified.

setCommentIsVerifiedByAnonymized(communityId, commentId, isVerified, isVerifiedByAnonymized)
Mark a comment as verified by an anonymous user.

setCommentVote(communityId, commentId, upDownVote)
Upvote or downvote a comment.

setFeedCommentStatus(communityId, commentId, status)
Set the status of a comment.
setFeedElementIsClosed(communityId, feedElementId, isClosed)
Set a feed element to closed.

setFeedElementVote(communityId, feedElementId, upDownVote)
Upvote or downvote a feed element.

setFeedEntityStatus(communityId, feedElementId, status)
Set the status of a feed post.

setIsMutedByMe(communityId, feedElementId, isMutedByMe)
Mute or unmute a feed element.

setIsReadByMe(communityId, feedElementId, readBy)
Mark a feed element as read for the context user using an input class.

setIsReadByMe(communityId, feedElementId, isReadByMe)
Mark a feed element as read for the context user.

updateComment(communityId, commentId, comment)
Edit a comment.

updateDirectMessage(communityId, feedElementId, directMessage)
Update the members of a direct message.

updateFeedElement(communityId, feedElementId, feedElement)
Edit a feed element.

updateFeedElementBookmarks(communityId, feedElementId, bookmarks)
Bookmark a feed element or remove a bookmark from a feed element using an input class.

updateFeedElementBookmarks(communityId, feedElementId, isBookmarkedByCurrentUser)
Bookmark a feed element or remove a bookmark from a feed element.

updateFeedElementReadByCapabilityBatch(communityId, feedElementIds, readBy)
Mark multiple feed elements as read by the context user at the same time using an input class.

updateFeedElementReadByCapabilityBatch(communityId, feedElementIds, isReadByMe)
Mark multiple feed elements as read by the context user at the same time.

updateLikeForComment(communityId, commentId, isLikedByCurrentUser)
Like or unlike a comment.

updateLikeForFeedElement(communityId, feedElementId, isLikedByCurrentUser)
Like or unlike a feed element.

updatePinnedFeedElements(communityId, feedType, subjectId, pin)
Pin or unpin feed elements to a group or topic feed.

updateStream(communityId, streamId, streamInput)
Update a Chatter feed stream.

voteOnFeedElementPoll(communityId, feedElementId, myChoiceld)
Vote on a poll or change your vote on a poll.

createStream(communityId, streamInput)
Create a Chatter feed stream.
API Version
39.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterStream createStream(String communityId, ConnectApi.ChatterStreamInput streamInput)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **streamInput**
  - Type: `ConnectApi.ChatterStreamInput`

Return Value

Type: `ConnectApi.ChatterStream`

### deleteComment(communityId, commentId)
Delete a comment.

API Version
28.0

Requires Chatter
Yes

Signature
```java
public static Void deleteComment(String communityId, String commentId)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **commentId**
  - Type: `String`
The ID for a comment.

Return Value
Type: Void

**deleteFeedElement(communityId, feedElementId)**
Delete a feed element.

API Version
31.0

Requires Chatter
Yes

Signature
```
public static deleteFeedElement(String communityId, String feedElementId)
```

Parameters
- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.
- **feedElementId**
  Type: String
  ID of the feed element.

Return Value
Type: Void

**deleteLike(communityId, likeId)**
Delete a like on a comment or post.

API Version
28.0

Requires Chatter
Yes

Signature
```
public static Void deleteLike(String communityId, String likeId)
```
Parameters

\textit{communityId}
Type: \texttt{String}
Use either the ID for a community, \texttt{internal}, or \texttt{null}.

\textit{likeId}
Type: \texttt{String}
The ID for a like.

Return Value
Type: \texttt{Void}

\texttt{deleteStream(communityId, streamId)}
Delete a Chatter feed stream.

API Version
39.0

Requires Chatter
Yes

Signature
\begin{verbatim}
public static Void deleteStream(String communityId, String streamId)
\end{verbatim}

Parameters

\textit{communityId}
Type: \texttt{String}
Use either the ID for a community, \texttt{internal}, or \texttt{null}.

\textit{streamId}
Type: \texttt{String}
ID of the Chatter feed stream.

Return Value
Type: \texttt{Void}

\texttt{getComment(communityId, commentId)}
Get a comment.

API Version
28.0
Available to Guest Users
31.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.Comment getComment(String communityId, String commentId)
```

Parameters

- `communityId`  
  Type: `String`  
  Use either the ID for a community, `internal`, or `null`.

- `commentId`  
  Type: `String`  
  The ID for a comment.

Return Value

Type: `ConnectApi.Comment`

```java
getCommentBatch(communityId, commentIds)
```

Get a list of comments.

API Version
42.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.BatchResult[] getCommentBatch(String communityId, List<String> commentIds)
```

Parameters

- `communityId`  
  Type: `String`  
  Use either the ID for a community, `internal`, or `null`.

- `commentIds`  
  Type: `List<String>`
A list of up to 100 comment IDs.

Return Value
Type: `ConnectApi.BatchResult[]`

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.Comment` object and errors for comments that didn't load.

**getCommentInContext(communityId, commentId, pageSize)**
Get a threaded comment in the context of its parent comments and post.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedElement getCommentInContext(String communityId, String commentId, Integer pageSize)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `commentId`
  - Type: `String`
  - ID of the comment.

- `pageSize`
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you don’t specify a value, the default size is 25.

Return Value
Type: `ConnectApi.FeedElement`

If the comment doesn’t support the `comments` capability, the return value is `ConnectApi.NotFoundException`.
getCommentsForFeedElement(communityId, feedElementId)
Get comments for a feed element.

API Version
32.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.CommentPage getCommentsForFeedElement(String communityId, String feedElementId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

Return Value
Type: ConnectApi.CommentPage
If the feed element doesn’t support the Comments capability, the return value is ConnectApi.NotFoundException.

getCommentsForFeedElement(communityId, feedElementId, threadedCommentsCollapsed)
Get comments in a threaded style for a feed element.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes
public static ConnectApi.CommentPage getCommentsForFeedElement(String communityId, String feedElementId, Boolean threadedCommentsCollapsed)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedElementId
  Type: String
  ID of the feed element.

threadedCommentsCollapsed
  Type: Boolean
  Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value

Type: ConnectApi.CommentPage

If the feed element doesn’t support the Comments capability, the return value is ConnectApi.NotNotFoundException.

getCommentsForFeedElement(communityId, feedElementId, pageParam, pageSize)

Get a page of comments for a feed element.

API Version

32.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

public static ConnectApi.CommentPage getCommentsForFeedElement(String communityId, String feedElementId, String pageParam, Integer pageSize)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.
feedElementId
Type: String
ID of the feed element.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of comments per page. Valid values are from 1 through 100. If you pass null, the default size is 25.

Return Value
Type: ConnectApi.CommentPage
If the feed element doesn’t support the Comments capability, the return value is ConnectApi.NotFoundException.

getCommentsForFeedElement(communityId, feedElementId, pageParam, pageSize, threadedCommentsCollapsed)
Get a page of comments in a threaded style for a feed element.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.CommentPage getCommentsForFeedElement(String communityId, String feedElementId, String pageParam, Integer pageSize, Boolean threadedCommentsCollapsed)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.
pageParam  
Type: String  
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize  
Type: Integer  
Specifies the number of comments per page. Valid values are from 1 through 100. If you pass null, the default size is 25.

threadedCommentsCollapsed  
Type: Boolean  
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value  
Type: ConnectApi.CommentPage  
If the feed element doesn’t support the Comments capability, the return value is ConnectApi.NotFoundException.

getCommentsForFeedElement(communityId, feedElementId, threadedCommentsCollapsed, sortParam)  
Get sorted comments in a threaded style for a feed element.

API Version  
44.0  
Available to Guest Users  
44.0  
Requires Chatter  
Yes  
Signature  
public static ConnectApi.CommentsCapability getCommentsForFeedElement(String communityId, String feedElementId, Boolean threadedCommentsCollapsed, ConnectApi.FeedCommentSortOrder sortParam)

Parameters  
communityId  
Type: String  
Use either the ID for a community, internal, or null.

feedElementId  
Type: String
ID of the feed element.

threadedCommentsCollapsed
  Type: Boolean
  Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

sortParam
  Type: ConnectApi.FeedCommentSortOrder
  Order of comments. Values are:
  • CreatedDateLatestAsc—Sorts by most recently created comments in ascending order.
  • CreatedDateOldestAsc—Sorts by oldest comments in ascending order.
  • Relevance—Sorts by most relevant content.

Return Value
  Type: ConnectApi.CommentPage
  If the feed element doesn’t support the Comments capability, the return value is ConnectApi.NotFoundException.

getCommentsForFeedElement(communityId, feedElementId, pageParam, pageSize, threadedCommentsCollapsed, sortParam)
Get a page of sorted comments in a threaded style for a feed element.

API Version
  44.0

Available to Guest Users
  44.0

Requires Chatter
  Yes

Signature
  public static ConnectApi.CommentPage getCommentsForFeedElement(String communityId, String feedElementId, String pageParam, Integer pageSize, Boolean threadedCommentsCollapsed, ConnectApi.FeedCommentSortOrder sortParam)

Parameters
  communityId
    Type: String
    Use either the ID for a community, internal, or null.

  feedElementId
    Type: String
ID of the feed element.

**pageParam**
Type: String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: Integer

Specifies the number of comments per page. Valid values are from 1 through 100. If you pass `null`, the default size is 25.

**threadedCommentsCollapsed**
Type: Boolean

Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in `null`, the default is false.

**sortParam**
Type: `ConnectApi.FeedCommentSortOrder`

Order of comments. Values are:
- `CreatedDateLatestAsc`—Sorts by most recently created comments in ascending order.
- `CreatedDateOldestAsc`—Sorts by oldest comments in ascending order.
- `Relevance`—Sorts by most relevant content.

Return Value
Type: `ConnectApi.CommentPage`

If the feed element doesn’t support the Comments capability, the return value is `ConnectApi.NotFoundException`.

**getCommentsForFeedElement(communityId, feedElementId, sortParam)**
Get sorted comments for a feed element.

API Version
41.0

Available to Guest Users
41.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.CommentsCapability getCommentsForFeedElement(String communityId,
String feedElementId, ConnectApi.FeedCommentSortOrder sortParam)
```
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

sortParam
Type: ConnectApi.FeedCommentSortOrder
Order of comments. Values are:
• CreatedDateLatestAsc—Sorts by most recently created comments in ascending order.
• CreatedDateOldestAsc—Sorts by oldest comments in ascending order.
• Relevance—Sorts by most relevant content.

Return Value
Type: ConnectApi.CommentsCapability
If the feed element doesn't support the Comments capability, the return value is ConnectApi.NotFoundException.

getCommentsForFeedElement(communityId, feedElementId, sortParam, threadedCommentsCollapsed)
Get sorted comments in a threaded style for a feed element.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.CommentsCapability getCommentsForFeedElement(String communityId, String feedElementId, ConnectApi.FeedCommentSortOrder sortParam, Boolean threadedCommentsCollapsed)
**feedElementId**
   Type: String
   ID of the feed element.

**sortParam**
   Type: ConnectApi.FeedCommentSortOrder
   Order of comments. Values are:
   - CreatedDateLatestAsc—Sorts by most recently created comments in ascending order.
   - CreatedDateOldestAsc—Sorts by oldest comments in ascending order.
   - Relevance—Sorts by most relevant content.

**threadedCommentsCollapsed**
   Type: Boolean
   Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

**Return Value**
   Type: ConnectApi.CommentsCapability
   If the feed element doesn’t support the Comments capability, the return value is ConnectApi.NotFoundException.

### getExtensions(communityId, pageParam, pageSize)
Get extensions.

**API Version**
40.0

**Available to Guest Users**
40.0

**Requires Chatter**
Yes

**Signature**

```java
public static ConnectApi.ExtensionDefinitions getExtensions(String communityId, String pageParam, Integer pageSize)
```

**Parameters**

**communityId**
   Type: String
   Use either the ID for a community, internal, or null.
pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. The default size is 15.

Return Value
Type: ConnectApi.ExtensionDefinitions

getFeed(communityId, feedType)
Get a feed.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.Feed getFeed(String communityId, ConnectApi.FeedType feedType)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

Return Value
Type: ConnectApi.Feed
getFeed(communityId, feedType, sortParam)

Get a sorted feed.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.Feed getFeed(String communityId, ConnectApi.FeedType feedType, ConnectApi.FeedSortOrder sortParam)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

If feedType is DirectMessages, sortParam must be LastModifiedDateDesc.

Return Value
Type: ConnectApi.Feed
getFeed(communityId, feedType, subjectId)
Get a feed for a record or user.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.Feed getFeed(String communityId, ConnectApi.FeedType feedType, String subjectId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

Return Value
Type: ConnectApi.Feed

getFeed(communityId, feedType, subjectId, sortParam)
Get a sorted feed for a record or user.

API Version
28.0
Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.Feed getFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, ConnectApi.FeedSortOrder sortParam)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.Feed

getFeedDirectory(String)
Get a list of all feeds available to the context user.
API Version 30.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedDirectory getFeedDirectory(String communityId)

Parameters
*communityId*
  Type: String
  Use either the ID for a community, internal, or null.

Return Value
Type: ConnectApi.FeedDirectory

**getFeedElement(communityId, feedElementId)**
Get a feed element.

API Version 31.0

Available to Guest Users 31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId)

Parameters
*communityId*
  Type: String
  Use either the ID for a community, internal, or null.

*feedElementId*
  Type: String
ID of the feed element.

Return Value
Type: `ConnectApi.FeedElement`

`getFeedElement(communityId, feedElementId, commentSort)`
Get a feed element with sorted comments.

API Version
41.0

Available to Guest Users
41.0

Requires Chatter
Yes

Signature
`public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, ConnectApi.FeedCommentSortOrder commentSort)`

Parameters
- `communityId`
  Type: String
  Use either the ID for a community, internal, or null.
- `feedElementId`
  Type: String
  ID of the feed element.
- `commentSort`
  Type: `ConnectApi.FeedCommentSortOrder`
  Order of comments.
  - `CreatedAtLatestAsc`—Sorts by most recently created comments in ascending order.
  - `CreatedAtOldestAsc`—Sorts by oldest comments in ascending order.
  - `Relevance`—Sorts by most relevant content.
  The default value is `CreatedAtLatestAsc`.

Return Value
Type: `ConnectApi.FeedElement`
**getFeedElement(communityId, feedElementId, threadedCommentsCollapsed)**

Get a feed element and its comments in a threaded style.

**API Version**

44.0

**Available to Guest Users**

44.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, Boolean threadedCommentsCollapsed)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedElementId**
  - Type: `String`
  - ID of the feed element.

- **threadedCommentsCollapsed**
  - Type: `Boolean`
  - Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

**Return Value**

Type: `ConnectApi.FeedElement`

**getFeedElement(communityId, feedElementId, threadedCommentsCollapsed, commentSort)**

Get a feed element and its sorted comments in a threaded style.

**API Version**

Yes

Signature

```java
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, Boolean threadedCommentsCollapsed, ConnectApi.FeedCommentSortOrder commentSort)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `feedElementId`
  Type: `String`
  ID of the feed element.

- `threadedCommentsCollapsed`
  Type: `Boolean`
  Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

- `commentSort`
  Type: `ConnectApi.FeedCommentSortOrder`
  Order of comments.
  - `CreatedDateLatestAsc`—Sorts by most recently created comments in ascending order.
  - `CreatedDateOldestAsc`—Sorts by oldest comments in ascending order.
  - `Relevance`—Sorts by most relevant content.

Return Value

Type: `ConnectApi.FeedElement`

```java
getFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle)
```

Get a feed element with the specified number of elements per bundle including no more than the specified number of comments per feed element.

API Version

Available to Guest Users
31.0
Requires Chatter
Yes

Signature
```
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, Integer recentCommentCount, Integer elementsPerBundle)
```

Parameters
- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.
- **feedElementId**
  - Type: `String`
  - ID of the feed element.
- **recentCommentCount**
  - Type: `Integer`
  - Maximum number of comments to return with each feed element. The default value is 3.
- **elementsPerBundle**
  - Type: `Integer`
  - Maximum number of feed elements per bundle. The default and maximum value is 10.

Return Value
- Type: `ConnectApi.FeedElement`

```
getFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle, threadedCommentsCollapsed)
```

Get a feed element with its comments in a threaded style with the specified number of elements per bundle and comments per feed element.

API Version

Available to Guest Users
44.0

Requires Chatter
Yes
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, Integer recentCommentCount, Integer elementsPerBundle, Boolean threadedCommentsCollapsed)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value
Type: ConnectApi.FeedElement

getFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle, threadedCommentsCollapsed, commentSort)

Get a feed element with its sorted comments in a threaded style with the specified number of elements per bundle and comments per feed element.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, Integer recentCommentCount, Integer elementsPerBundle, Boolean threadedCommentsCollapsed, ConnectApi.FeedCommentSortOrder commentSort)
```

Parameters

- `communityId`
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- `feedElementId`
  - Type: String
  - ID of the feed element.

- `recentCommentCount`
  - Type: Integer
  - Maximum number of comments to return with each feed element. The default value is 3.

- `elementsPerBundle`
  - Type: Integer
  - Maximum number of feed elements per bundle. The default and maximum value is 10.

- `threadedCommentsCollapsed`
  - Type: Boolean
  - Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

- `commentSort`
  - Type: `ConnectApi.FeedCommentSortOrder`
  - Order of comments.
    - CreatedDateLatestAsc—Sorts by most recently created comments in ascending order.
    - CreatedDateOldestAsc—Sorts by oldest comments in ascending order.
    - Relevance—Sorts by most relevant content.

Return Value

- Type: `ConnectApi.FeedElement`

```java
getFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle, threadedCommentsCollapsed, commentSort)
```

Get a feed element with the specified number of elements per bundle including no more than the specified number of sorted comments per feed element.

API Version

Available to Guest Users
41.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedCommentSortOrder commentSort)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

commentSort
Type: ConnectApi.FeedCommentSortOrder
Order of comments.
• CreatedDateLatestAsc—Sorts by most recently created comments in ascending order.
• CreatedDateOldestAsc—Sorts by oldest comments in ascending order.
• Relevance—Sorts by most relevant content.
The default value is CreatedDateLatestAsc.

Return Value
Type: ConnectApi.FeedElement

getFeedElementBatch(communityId, feedElementIds)
Get a list of feed elements.
API Version
31.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.BatchResult[] getFeedElementBatch(String communityId, List<String> feedElementIds)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementIds
Type: List<String>
A list of up to 500 feed element IDs.

Return Value
Type: ConnectApi.BatchResult[]
The ConnectApi.BatchResult.getResult() method returns a ConnectApi.FeedElement object and errors for feed elements that didn't load.

getFeedElementPoll(communityId, feedElementId)
Get the poll associated with a feed element.

API Version
32.0

Available to Guest Users
32.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.PollCapability getFeedElementPoll(String communityId, String feedElementId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedElementId`
  - Type: `String`
  - ID of the feed element.

Return Value

Type: `ConnectApi.PollCapability`

If the feed element doesn't support this capability, the return value is `ConnectApi.NotFoundException`.

⚠️ **Note:** Triggers on FeedItem objects run before their attachment and capabilities information is saved, which means that `ConnectApi.FeedItem.attachment` information and `ConnectApi.FeedElement.capabilities` information may not be available in the trigger.

---

### getFeedElementsFromBundle(communityId, feedElementId)

Get feed elements from a bundle.

**API Version**

31.0

**Requires Chatter**

Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromBundle(String communityId, String feedElementId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedElementId`
  - Type: `String`
  - ID of the feed element.
getFeedElementsFromBundle(communityId, feedElementId, pageParam, pageSize, elementsPerBundle, recentCommentCount)

Get a page of feed elements from a bundle. Specify the number of elements per bundle and include no more than the specified number of comments per feed element.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromBundle(String communityId, String feedElementId, String pageParam, Integer pageSize, Integer elementsPerBundle, Integer recentCommentCount)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedElementId
  Type: String
  ID of the feed element.

pageParam
  Type: String
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

recentCommentCount
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.
Return Value
Type: `ConnectApi.FeedElementPage`

**getFeedElementsFromFeed(communityId, feedType)**

API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId,
                     ConnectApi.FeedType feedType)
```

Parameters

**communityId**
Type: `String`
Use either the ID for a community, internal, or `null`.

**feedType**
Type: `ConnectApi.FeedType`
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

getFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)

API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.

- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

If feedType is DirectMessages, sortParam must be LastModifiedDateDesc.

Return Value

Type: ConnectApi.FeedElementPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

setTestGetFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)

Testing ConnectApi Code

gGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)

Get a page of sorted feed elements from the Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview feeds. Each feed element contains no more than the specified number of comments.

API Version

31.0

Available to Guest Users

31.0

Requires Chatter

Yes

Signature

public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters

communityId

Type: String

Use either the ID for a community, internal, or null.
**feedType**
Type: `ConnectApi.FeedType`

The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

**recentCommentCount**
Type: `Integer`

The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value CreatedDateDesc is used.

If `feedType` is DirectMessages, `sortParam` must be LastModifiedDateDesc.

**Return Value**
Type: `ConnectApi.FeedElementPage`
Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

  Testing ConnectApi Code

getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter)
Get a page of sorted and filtered feed elements from the Home feed. Each feed element contains no more than the specified number of comments.

API Version
32.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  The type of feed. The only valid value is Home.

recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

density
  Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**

Type: **String**

The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

When the `sortParam` is MostViewed, you must pass in null for the `pageParam`.

**pageSize**

Type: **Integer**

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

When the `sortParam` is MostViewed, the `pageSize` must be a value from 1 to 25.

**sortParam**

Type: **ConnectApi.FeedSortOrder**

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

**filter**

Type: **ConnectApi.FeedFilter**

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
• UnansweredQuestions—Feed elements that are questions and that don’t have any answers.
• UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
• Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
• UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

`getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed)`
Get a page of filtered and sorted feed elements with comments in a threaded style from the Home feed. Each feed element contains no more than the specified number of comments.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature
`public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed)`
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedType**
Type: ConnectApi.FeedType
The type of feed. The only valid value is Home.

**recentCommentCount**
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
When the **sortParam** is MostViewed, you must pass in null for the pageParam.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
When the **sortParam** is MostViewed, the pageSize must be a value from 1 to 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

**filter**
Type: ConnectApi.FeedFilter
Specifies the feed filters.
• **AllQuestions**—Feed elements that are questions.
• **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
• **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.
• **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
• **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
• **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
• **SolvedQuestions**—Feed elements that are questions and that have a best answer.
• **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
• **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
• **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
• **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**threadedCommentsCollapsed**
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

**Return Value**
Type: ConnectApi.FeedElementPage

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed, result)

Testing ConnectApi Code

**getFeedElementsFromFeed(communityId, feedType, subjectId)**
Get feed elements from any feed other than Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview for a user or record.
API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example for Getting the Context User’s News Feed

```java
ConnectApi.FeedElementPage fep =
ConnectApi.ChatterFeeds.getFeedElementsFromFeed(Network.getNetworkId(),
ConnectApi.FeedType.News, 'me');
```
Example for Getting Another User’s Profile Feed

```java
ConnectApi.FeedElementPage fep =
    ConnectApi.ChatterFeeds.getFeedElementsFromFeed(Network.getNetworkId(),
    ConnectApi.FeedType.UserProfile, '005R0000000HwMA');
```

Example for Getting Another User’s Record Feed

```java
ConnectApi.FeedElementPage fep =
    ConnectApi.ChatterFeeds.getFeedElementsFromFeed(Network.getNetworkId(),
    ConnectApi.FeedType.Record, '005R0000000HwMA');
```

SEE ALSO:

getFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam)

Get a page of sorted feed elements from any feed other than Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

API Version

31.0

Available to Guest Users

31.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId,
    ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize,
    ConnectApi.FeedSortOrder sortParam)
```

Parameters

`communityId`

Type: `String`

Use either the ID for a community, `internal`, or `null`.

`feedType`

Type: `ConnectApi.FeedType`
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
The number of feed elements per page.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

Return Value

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)
Get a page of sorted feed elements from a record feed. Each feed element includes no more than the specified number of comments. Specify whether to return feed elements posted by internal (non-community) users only.
API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly)
```

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, `internal`, or `null`.

- **feedType**
  Type: `ConnectApi.FeedType`
  Value must be `ConnectApi.FeedType.Record`.

- **subjectId**
  Type: String
  Any record ID, including a group ID.

- **recentCommentCount**
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

- **density**
  Type: `ConnectApi.FeedDensity`
  Specify the amount of content in a feed.
  - `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- **pageParam**
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**

Type: `ConnectApi.FeedSortOrder`  
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.  
- `CreatedDateDesc`—Sorts by most recent creation date.  
- `LastModifiedDateDesc`—Sorts by most recent activity.  
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.  
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.  
If you pass in `null`, the default value `CreatedDateDesc` is used.

**showInternalOnly**

Type: `Boolean`  
Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

**Return Value**

Type: `ConnectApi.FeedElementPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
- Get Feed Elements From Another User's Feed
- `setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly, result)`
- Testing ConnectApi Code

`getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter)`

Get a page of sorted and filtered feed elements from the `UserProfile` feed.

**API Version**

35.0

**Available to Guest Users**

35.0

Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`feedType`
Type: `ConnectApi.FeedType`
Value must be `ConnectApi.FeedType.UserProfile`.

`subjectId`
Type: `String`
The ID of any user. To specify the context user, use the user ID or the alias `me`.

`recentCommentCount`
Type: `Integer`
Maximum number of comments to return with each feed element. The default value is 3.

`density`
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

**filter**

Type: ConnectApi.FeedFilter

Value must be ConnectApi.FeedFilter.CommunityScoped or ConnectApi.FeedFilter.AuthoredBy.

**Return Value**

Type: ConnectApi.FeedElementPage

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

**Example**

This example gets only community-specific feed elements.

```java
ConnectApi.FeedElementPage fep = ConnectApi.ChatterFeeds.getFeedElementsFromFeed(Network.getNetworkId(), ConnectApi.FeedType.UserProfile, 'me', 3, ConnectApi.FeedDensity.FewerUpdates, null, null, ConnectApi.FeedSortOrder.LastModifiedDateDesc, ConnectApi.FeedFilter.CommunityScoped);
```

**SEE ALSO:**

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, result)

Testing ConnectApi Code

```java
getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed)
```

Get a page of feed elements with comments in a threaded style from the UserProfile feed.

**API Version**

44.0

Available to Guest Users

44.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, Boolean
threadedCommentsCollapsed)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.UserProfile`.

- **subjectId**
  - Type: String
  - The ID of any user. To specify the context user, use the user ID or the alias `me`.

- **recentCommentCount**
  - Type: Integer
  - Maximum number of comments to return with each feed element. The default value is 3.

- **density**
  - Type: `ConnectApi.FeedDensity`
  - Specify the amount of content in a feed.
    - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- **pageParam**
  - Type: String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **sortParam**
  - Type: `ConnectApi.FeedSortOrder`
  - Values are:
**CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.

**CreatedDateDesc**—Sorts by most recent creation date.

**LastModifiedDateDesc**—Sorts by most recent activity.

**MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.

**Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

**filter**
- Type: ConnectApi.FeedFilter
  Value must be ConnectApi.FeedFilter.CommunityScoped or ConnectApi.FeedFilter.AuthoredBy.

**threadedCommentsCollapsed**
- Type: Boolean
  Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

**Return Value**
- Type: ConnectApi.FeedElementPage

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

**getFeedElementsFromFeed**
- Type: ConnectApi.FeedElementPage
  Get a page of sorted and filtered feed elements from the case feed.

**API Version**
- 40.0

**Available to Guest Users**
- 40.0

**Requires Chatter**
- Yes
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String customFilter)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
The ID of a case.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
**MostViewed**—Sorts by most viewed content. This sort order is available only for **Home** feeds when the `ConnectApi.FeedFilter` is **UnansweredQuestions**.

**Relevance**—Sorts by most relevant content. This sort order is available only for **Company**, **Home**, and **Topics** feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

`customFilter`

Type: `String`

Custom filter that applies only to the case feed. See `customFeedFilter` in the *Metadata API Developer Guide* for supported values.

Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, customFilter, result)`

Testing ConnectApi Code

```java
getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly)
```

Get a page of sorted feed elements from a record feed. Specify the number of elements per bundle and include no more than the specified number of comments per feed element. Specify whether to return feed elements posted by internal (non-community) users only.

API Version

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly)
```
Parameters

*communityId*
  Type: String
  Use either the ID for a community, internal, or null.

*feedType*
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

*subjectId*
  Type: String
  Any record ID, including a group ID.

*recentCommentCount*
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

*elementsPerBundle*
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

*density*
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

*pageSize*
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

*sortParam*
  Type: ConnectApi.FeedSortOrder
  Values are:
  - CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  - CreatedDateDesc—Sorts by most recent creation date.
  - LastModifiedDateDesc—Sorts by most recent activity.
  - MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  - Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

`showInternalOnly`
Type: `Boolean`
Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedFilter filter)
```
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedType**
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

**subjectId**
Type: String
Any record ID, including a group ID.

**recentCommentCount**
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

**elementsPerBundle**
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

**density**
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortBy**
Type: ConnectApi.FeedSortOrder
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

**showInternalOnly**
- **Type:** `Boolean`
- Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

**filter**
- **Type:** `ConnectApi.FeedFilter`
- Specifies the feed filters.
  - **AllQuestions**—Feed elements that are questions.
  - **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
  - **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
  - **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
  - **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
  - **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
  - **SolvedQuestions**—Feed elements that are questions and that have a best answer.
  - **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
  - **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
  - **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the `Record` feed of a group.
  - **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**Return Value**
- **Type:** `ConnectApi.FeedElementPage`

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  Any record ID, including a group ID.

recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

density
  Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**

Type: **String**

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**

Type: **Integer**

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**

Type: **ConnectApi.FeedSortOrder**

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**showInternalOnly**

Type: **Boolean**

Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

**filter**

Type: **ConnectApi.FeedFilter**

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the **Record** feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**threadedCommentsCollapsed**

Type: **Boolean**

Specifies whether to return threaded comments in a collapsed style (**true**) or not (**false**). If you pass in **null**, the default is **false**.

**Return Value**

Type: **ConnectApi.FeedElementPage**

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with **setTest**). Use the set test method with the same parameters or the code throws an exception.

public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, String customFilter)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  The ID of a case.

recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam

Parameters

communityId
   Type: String
   Use either the ID for a community, internal, or null.

feedType
   Type: ConnectApi.FeedType
   Value must be ConnectApi.FeedType.Record.

subjectId
   Type: String
   The ID of a case.

recentCommentCount
   Type: Integer
   The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
   Type: Integer
   Maximum number of feed elements per bundle. The default and maximum value is 10.

density
   Type: ConnectApi.FeedDensity
   Specify the amount of content in a feed.
   • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
   • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

   Type: String
   The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
   Type: Integer
   Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
   Type: ConnectApi.FeedSortOrder
   Values are:
• **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.

• **CreatedDateDesc**—Sorts by most recent creation date.

• **LastModifiedDateDesc**—Sorts by most recent activity.

• **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.

• **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in **null**, the default value **CreatedDateDesc** is used.

**showInternalOnly**
Type: **Boolean**
Specifies whether to show only feed items from internal (non-community) users (**true**), or not (**false**). The default value is **false**.

**customFilter**
Type: **String**
Custom filter that applies only to the case feed. See **customFeedFilter** in the Metadata API Developer Guide for supported values.

**threadedCommentsCollapsed**
Type: **Boolean**
Specifies whether to return threaded comments in a collapsed style (**true**) or not (**false**). If you pass in **null**, the default is **false**.

Return Value
Type: **ConnectApi.FeedElementPage**

Usage
To test code that uses this method, use the matching set test method (prefix the method name with **setTest**). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Testing ConnectApi Code

**getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix)**
Get feed elements from a feed filtered by a key prefix for a user.
Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFilterFeed(String communityId, String subjectId, String keyPrefix)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **subjectId**
  - Type: `String`
  - The ID of the context user or the alias `me`.

- **keyPrefix**
  - Type: `String`
  - A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

- `setTestGetFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, result)`
- Testing ConnectApi Code

`getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam)`

Get a page of sorted feed elements from a feed filtered by a key prefix for a user.

API Version

31.0

Requires Chatter

Yes
Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Parameters

- `communityId`  
  Type: `String`  
  Use either the ID for a community, internal, or `null`.

- `subjectId`  
  Type: `String`  
  The ID of the context user or the alias `me`.

- `keyPrefix`  
  Type: `String`  
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

- `pageParam`  
  Type: `String`  
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- `pageSize`  
  Type: `Integer`  
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- `sortParam`  
  Type: `ConnectApi.FeedSortOrder`  
  Values are:
  - `CreatedAtAsc`—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  - `CreatedAtDesc`—Sorts by most recent creation date.
  - `LastModifiedDateDesc`—Sorts by most recent activity.
  - `MostViewed`—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
  - `Relevance`—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value `CreatedAtDesc` is used.

Return Value

Type: `ConnectApi.FeedElementPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Testing ConnectApi Code

getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam)

Get a page of sorted feed elements from a feed filtered by a key prefix for a user. Each feed element contains no more than the specified number of comments.

API Version

31.0

Requires Chatter

Yes

Signature

public static ConnectApi.FeedElementPage getFeedElementsFromFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

**Return Value**
Type: `ConnectApi.FeedElementPage`

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
- `setTestGetFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, result)`
Testing ConnectApi Code
getFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince)

Get a page of feed elements from a feed filtered by a key prefix for a user. Include only feed elements that have been updated since the time specified in the updatedSince parameter.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromFilterFeedUpdatedSince(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

subjectId
  Type: String
  The ID of the context user or the alias me.

keyPrefix
  Type: String
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.
**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**updatedSince**
Type: String
An opaque token defining the modification time stamp of the feed and the sort order.
The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density,
String pageParam, Integer pageSize, String updatedSince)
```

Parameters

**communityId**
- Type: String
- Use either the ID for a community, `internal`, or `null`.

**feedType**
- Type: `ConnectApi.FeedType`
- The type of feed. Valid values are `Company`, `DirectMessageModeration`, `Home`, and `Moderation`.

**recentCommentCount**
- Type: Integer
- Maximum number of comments to return with each feed element. The default value is 3.

**density**
- Type: `ConnectApi.FeedDensity`
- Specify the amount of content in a feed.
  - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
- Type: String
- The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
- Type: Integer
- Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
- Type: String
- An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

  The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

Return Value

- Type: `ConnectApi.FeedElementPage`
Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedFilter filter)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, internal, or null.

- `feedType`
  - Type: `ConnectApi.FeedType`
  - The type of feed. The only valid value is Home.

- `recentCommentCount`
  - Type: `Integer`
  - Maximum number of comments to return with each feed element. The default value is 3.

- `density`
  - Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: **String**

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: **Integer**

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
Type: **String**

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

**filter**
Type: **ConnectApi.FeedFilter**

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the `Record` feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.
Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, filter, result)`
- Testing ConnectApi Code

`getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince)`
Get a page of feed elements from the Files, Groups, News, People, and Record feeds. Include only feed elements that have been updated since the time specified in the `updatedSince` parameter. Each feed element contains no more than the specified number of comments.

Signature
```java
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `feedType`
  Type: `ConnectApi.FeedType`
  One of these values:
  - Files
• Groups
• News
• People
• Record

subjectId
Type: String

If feedType is ConnectApi.Record, subjectId can be any record ID, including a group ID. Otherwise, it must be the context user or the alias me.

recentCommentCount
Type: Integer

The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity

Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

Return Value
Type: ConnectApi.FeedElementPage
Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Signature

    public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly)

Parameters

    communityId
        Type: String
        Use either the ID for a community, internal, or null.

    feedType
        Type: ConnectApi.FeedType
        Value must be ConnectApi.FeedType.Record.

    subjectId
        Type: String
        Any record ID, including a group ID.

    recentCommentCount
        Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Parameters

communityId
Type: String
Use either the ID for a community, internal or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.UserProfile.

subjectId
Type: String
The ID of any user. To specify the context user, use the user ID or the alias me.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
- **Type:** Integer
- Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**updatedSince**
- **Type:** String
- An opaque token defining the modification time stamp of the feed and the sort order.
- The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

**filter**
- **Type:** ConnectApi.FeedFilter
- Value must be ConnectApi.FeedFilter.CommunityScoped. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out.

**Return Value**
- **Type:** ConnectApi.FeedElementPage

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, String customFilter)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
The ID of a case.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token defining the modification time stamp of the feed and the sort order.

The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.
customFilter
Type: String

Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly)

Parameters
communityId
Type: String

Use either the ID for a community, internal, or null.
feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  Any record ID, including a group ID.

recentCommentCount
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
  Type: String
  An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.
  The updatedSince parameter doesn't return feed elements that are created in the same second as the call.

showInternalOnly
  Type: Boolean
  Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

Return Value
  Type: ConnectApi.FeedElementPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

```java
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly, ConnectApi.FeedFilter filter)
```

Parameters

`communityId`

Type: `String`

Use either the ID for a community, `internal`, or `null`.

`feedType`

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.Record`.

`subjectId`

Type: `String`

Any record ID, including a group ID.
recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

filter
Type: ConnectApi.FeedFilter
Specifies the feed filters.
  • AllQuestions—Feed elements that are questions.
  • AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
  • CommunityScoped—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.
  • QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
• **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.

• **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the **Record** feed of a group.

• **SolvedQuestions**—Feed elements that are questions and that have a best answer.

• **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.

• **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the **Record** feed of a group.

• **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**Return Value**

**Type:** `ConnectApi.FeedElementPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with **setTest**). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

`setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, filter, result)`

**Testing ConnectApi Code**

`getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, customFilter)`

Get a page of filtered feed elements from a case feed. Include only feed elements that have been updated since the time specified in the **updatedSince** parameter.

**API Version**

40.0

**Available to Guest Users**

40.0

**Requires Chatter**

Yes
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly, String customFilter)

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedType**
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

**subjectId**
Type: String
The ID of a case.

**recentCommentCount**
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

**elementsPerBundle**
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

**density**
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**updatedSince**
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

The **updatedSince** parameter doesn’t return feed elements that are created in the same second as the call.
showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.
customFilter
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, customFilter, result)
Testing ConnectApi Code

getFeedWithFeedElements(communityId, feedType, pageSize)
Get information about a feed and a page of feed elements from the feed.

API Version
40.0

Available to Guest Users
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.Feed getFeedWithFeedElements(String communityId, ConnectApi.FeedType feedType, Integer pageSize)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.
**feedType**

Type: `ConnectApi.FeedType`

The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Landing, Moderation, and PendingReview. Landing is valid only when `communityId` is internal.

**pageSize**

Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in 0, feed elements aren’t returned with the feed.

Return Value

Type: `ConnectApi.Feed`

**getFeedWithFeedElements(communityId, feedType, pageSize, recentCommentCount)**

Get a page of information about the feed and the feed elements with the specified number of comments per feed element from the feed.

API Version

40.0

Available to Guest Users

40.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.Feed getFeedWithFeedElements(String communityId, ConnectApi.FeedType feedType, Integer pageSize, Integer recentCommentCount)
```

Parameters

**communityId**

Type: `String`

Use either the ID for a community, internal, or null.

**feedType**

Type: `ConnectApi.FeedType`

The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Landing, Moderation, and PendingReview. Landing is valid only when `communityId` is internal.

**pageSize**

Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in 0, feed elements aren’t returned with the feed.

**recentCommentCount**  
Type: **Integer**  
Maximum number of comments to return with each feed element. The default value is 3.

Return Value  
Type: `ConnectApi.Feed`

### getFilterFeed(communityId, subjectId, keyPrefix)
Get a feed filtered by a key prefix for a user.

API Version  
28.0

Requires Chatter  
Yes

**Signature**

```java
public static ConnectApi.Feed getFilterFeed(String communityId, String subjectId, String keyPrefix)
```

**Parameters**

- **communityId**  
  Type: **String**  
  Use either the ID for a community, `internal`, or `null`.

- **subjectId**  
  Type: **String**  
  The ID of the context user or the alias `me`.

- **keyPrefix**  
  Type: **String**  
  A **key prefix** is the first three characters of a record ID, which specifies the entity type.

Return Value  
Type: `ConnectApi.Feed`

### getFilterFeed(communityId, subjectId, keyPrefix, sortParam)
Get a sorted feed filtered by a key prefix for a user.
API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.Feed getFilterFeed(String communityId, String subjectId, String keyPrefix, ConnectApi.FeedType sortParam)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

sortParam
Type: ConnectApi.FeedType
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.Feed

getFilterFeedDirectory(communityId, subjectId)
Get a feed directory of filter feeds available to the context user.
API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedDirectory getFilterFeedDirectory(String communityId, String subjectId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

Return Value
Type: ConnectApi.FeedDirectory
This feed directory contains a list of filter feeds, which are the news feed filtered to include feed items whose parent is a specific entity type.

Usage
Call this method to return a directory containing a list of ConnectApi.FeedDirectoryItem objects. Each object contains a key prefix associated with an entity type the context user is following. A key prefix is the first three characters of a record ID, which specifies the entity type.

Use key prefixes to filter the news feed so that it contains only feed items whose parent is the entity type associated with the key prefix. For example, get all the feed items whose parent is an Account. To get the feed items, pass a key prefix to the ConnectApi.getFeedItemsFromFilterFeed method.

The information about filter feeds never contains the key prefixes for users (005) or groups (0F9), but all users can use those key prefixes as filters.

The ConnectApi.FeedDirectory.favorites property is always empty when returned by a call to getFilterFeedDirectory because you can’t filter a news feed by favorites.

Example
This example calls getFilterFeedDirectory and loops through the returned FeedDirectoryItem objects to find the key prefixes the context user can use to filter their news feed. It then copies each keyPrefix value to a list. Finally, it passes one of
the key prefixes from the list to the `getFeedItemsFromFilterFeed` method. The returned feed items include every feed item from the news feed whose parent is the entity type specified by the passed key prefix.

```java
String communityId = null;
String subjectId = 'me';

// Create a list to populate with key prefixes.
List<String> keyPrefixList = new List<String>();

// Prepopulate with User and Group record types
// which are available to all users.
keyPrefixList.add('005');
keyPrefixList.add('0F9');

System.debug(keyPrefixList);

// Get the key prefixes available to the context user.
ConnectApi.FeedDirectory myFeedDirectory =
    ConnectApi.ChatterFeeds.getFilterFeedDirectory(null, 'me');

// Loop through the returned feeds list.
for (ConnectApi.FeedDirectoryItem i : myFeedDirectory.feeds) {
    // Grab each key prefix and add it to the list.
    keyPrefixList.add(i.keyPrefix);
}
System.debug(keyPrefixList);

// Use a key prefix from the list to filter the feed items in the news feed.
ConnectApi.FeedItemPage myFeedItemPage =
    ConnectApi.ChatterFeeds.getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefixList[0]);
System.debug(myFeedItemPage);
```

**getLike(communityId, likeId)**

Get a like on a post or comment.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

**Signature**

```java
public static ConnectApi.ChatterLike getLike(String communityId, String likeId)
```
Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or null.

`likeId`
Type: String
The ID for a like.

Return Value
Type: `ConnectApi.ChatterLike`

`getLikesForComment(communityId, commentId)`
Get likes for a comment.

API Version
28.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterLikePage getLikesForComment(String communityId, String commentId)
```

Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or null.

`commentId`
Type: String
The ID for a comment.

Return Value
Type: `ConnectApi.ChatterLikePage`
getLikesForComment(communityId, commentId, pageParam, pageSize)
Get a page of likes for a comment.

API Version
28.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterLikePage getLikesForComment(String communityId, String commentId, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
The ID for a comment.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ChatterLikePage

getLikesForFeedElement(communityId, feedElementId)
Get likes for a feed element.

API Version
32.0
Available to Guest Users
32.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterLikePage getLikesForFeedElement(String communityId, String feedElementId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedElementId`
  - Type: `String`
  - ID of the feed element.

Return Value

- Type: `ConnectApi.ChatterLikePage Class`
- If the feed element doesn’t support the ChatterLikes capability, the return value is `ConnectApi.NotFoundException`.

```java
getLikesForFeedElement(communityId, feedElementId, pageParam, pageSize)
```

Get a page of likes for a feed element.

API Version
32.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterLikePage getLikesForFeedElement(String communityId, String feedElementId, Integer pageParam, Integer pageSize)
```
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedElementId**
Type: String
ID of the feed element.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ChatterLikePage Class
If the feed element doesn’t support the ChatterLikes capability, the return value is ConnectApi.NotSupportedException.

```java
getLinkMetadata(communityId, urls)
```
Get link metadata for URLs.

AP| Version
---|---
API Version | 42.0
Available to Guest Users | 42.0
Requires Chatter | No

Signature
public static ConnectApi.LinkMetadataCollection getLinkMetadata(String communityId, String urls)

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.
urls
Type: String
Comma-separated list of URL-encoded URLs.

Return Value
Type: ConnectApi.LinkMetadataCollection

getPinnedFeedElementsFromFeed(communityId, feedType, subjectId)
Get pinned feed elements from a group or topic feed.

API Version
41.0

Available to Guest Users
41.0

Requires Chatter
Yes

Signature
public static ConnectApi.PinnedFeedElements getPinnedFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Record and Topics.

subjectId
Type: String
If feedType is Record, subjectId must be a group ID. If feedType is Topics, subjectId must be a topic ID.

Return Value
Type: ConnectApi.PinnedFeedElements
If the feed doesn’t support this capability, the return value is ConnectApi.NotFoundException.
**getReadByForFeedElement(communityId, feedElementId)**

Get information about who read a feed element and when.

**API Version**

40.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.ReadByPage getReadByForFeedElement(String communityId, String feedElementId)
```

**Parameters**

- `communityId`  
  Type: `String`  
  Use either the ID for a community, internal, or null.

- `feedElementId`  
  Type: `String`  
  ID of the feed element.

**Return Value**

Type: `ConnectApi.ReadByPage`

If the feed element doesn't support this capability, the return value is `ConnectApi.NotFoundException`.

**getReadByForFeedElement(communityId, feedElementId, pageParam, pageSize)**

Get a page of information about who read a feed element and when.

**API Version**

40.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.ReadByPage getReadByForFeedElement(String communityId, String feedElementId, Integer pageParam, Integer pageSize)
```
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedElementId**
Type: String
ID of the feed element.

**pageParam**
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ReadByPage
If the feed element doesn’t support this capability, the return value is ConnectApi.NotNotFoundException.

**getRelatedPosts(communityId, feedElementId, filter, maxResults)**
Get posts related to the context feed element.

API Version
37.0

Available to Guest Users
37.0

Requires Chatter
Yes

Signature
public static ConnectApi.RelatedFeedPosts getRelatedPosts(String communityId, String feedElementId, ConnectApi.RelatedFeedPostType filter, Integer maxResults)

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.
feedElementId
Type: String
ID of the feed element. The feed element must be a question.

filter
Type: ConnectApi.RelatedFeedPostType
Specifies the type of related post. Values are:
- Answered—Related questions that have at least one answer.
- BestAnswer—Related questions that have a best answer.
- Generic—All types of related questions, including answered, with a best answer, and unanswered.
- Unanswered—Related questions that don’t have answers.

Generic is the default value.

maxResults
Type: Integer
The maximum number of results to return. You can return up to 25 results; 5 is the default.

Return Value
Type: ConnectApi.RelatedFeedPosts
In version 37.0 and later, related feed posts are questions.
Each related feed post has a score indicating how closely it’s related to the context feed post. We return related feed posts sorted by score, with the highest score first.

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

getStream(communityId, streamId)
Get information about a Chatter feed stream.

API Version
39.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterStream getStream(String communityId, String streamId)
Parameters

- **communityId**: String
  - Use either the ID for a community, *internal*, or *null*.

- **streamId**: String
  - ID of the Chatter feed stream.

Return Value

Type: `ConnectApi.ChatterStream`

```java
public static ConnectApi.ChatterStream getStream(String communityId, String streamId, Boolean globalScope)
```

**getStream(communityId, streamId, globalScope)**

Get information about a Chatter feed stream, regardless of community.

API Version

41.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ChatterStream getStream(String communityId, String streamId, Boolean globalScope)
```

Parameters

- **communityId**: String
  - Use either the ID for a community, *internal*, or *null*.

- **streamId**: String
  - ID of the Chatter feed stream.

- **globalScope**: Boolean
  - Specifies whether to get streams from all the context user’s communities, regardless of the *communityId* value.

Tips: If you know the community ID for the stream, we recommend setting *globalScope* to *false*.

Return Value

Type: `ConnectApi.ChatterStream`
**getStreams(communityId)**
Get the Chatter feed streams for the context user.

API Version
39.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterStreamPage getStreams(String communityId)
```

Parameters
- **communityId**
  Type: `String`
  Use either the ID for a community, internal, or `null`.

Return Value
Type: `ConnectApi.ChatterStreamPage`

**getStreams(communityId, sortParam)**
Get and sort the Chatter feed streams for the context user.

API Version
40.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterStreamPage getStreams(String communityId,
            ConnectApi.SortOrder sortParam)
```

Parameters
- **communityId**
  Type: `String`
  Use either the ID for a community, internal, or `null`.
- **sortParam**
  Type: `ConnectApi.SortOrder`
Specifies the sort order. Values are:

- **Ascending**—Items are in ascending alphabetical order (A-Z).
- **Descending**—Items are in descending alphabetical order (Z-A).
- **MostRecentlyViewed**—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is *Ascending*.

Return Value

Type: `ConnectApi.ChatterStreamPage`

`getStreams(communityId, pageParam, pageSize)`

Get a page of Chatter feed streams for the context user.

API Version

39.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ChatterStreamPage getStreams(String communityId, Integer pageParam, Integer pageSize)
```

Parameters

- `communityId`  
  Type: `String`  
  Use either the ID for a community, `internal`, or `null`.

- `pageParam`  
  Type: `Integer`  
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`  
  Type: `Integer`  
  Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

Return Value

Type: `ConnectApi.ChatterStreamPage`

`getStreams(communityId, pageParam, pageSize, sortParam)`

Get a sorted page of Chatter feed streams for the context user.
API Version
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterStreamPage getStreams(String communityId, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

sortParam
Type: ConnectApi.SortOrder
Specifies the sort order. Values are:
- Ascending—Items are in ascending alphabetical order (A-Z).
- Descending—Items are in descending alphabetical order (Z-A).
- MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.
  If not specified, default value is Ascending.

Return Value
Type: ConnectApi.ChatterStreamPage

getStreams(communityId, pageParam, pageSize, sortParam, globalScope)
Get a sorted page of Chatter feed streams from all communities for the context user.

API Version
41.0
Requires Chatter
Yes

Signature
public static ConnectApi.ChatterStreamPage getStreams(String communityId, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam, Boolean globalScope)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

sortParam
Type: ConnectApi.SortOrder
Specifies the sort order. Values are:
• Ascending—Items are in ascending alphabetical order (A-Z).
• Descending—Items are in descending alphabetical order (Z-A).
• MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is Ascending.

globalScope
Type: Boolean
Specifies whether to get streams from all the context user’s communities, regardless of the communityId value.

⚠ Tip: If you know the community ID for the streams, we recommend setting globalScope to false.

Return Value
Type: ConnectApi.ChatterStreamPage

getSupportedEmojis()
Get supported emojis for the org.

API Version
39.0
Requires Chatter
Yes

Signature
public static ConnectApi.SupportedEmojis getSupportedEmojis()

Return Value
Type: ConnectApi.SupportedEmojis

Usage
To get the list, emojis must be enabled in your org.

getThreadsForFeedComment(communityId, commentId)
Get threaded comments for a comment.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.CommentPage getThreadsForFeedComment(String communityId, String commentId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
ID of the comment.

Return Value
Type: ConnectApi.CommentPage
If the comment doesn’t support the comments capability, the return value is ConnectApiNotFoundException.
getThreadsForFeedComment(communityId, commentId, pageParam, pageSize)
Get a page of threaded comments for a comment.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.CommentPage getThreadsForFeedComment(String communityId, String commentId, String pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
ID of the comment.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.CommentPage
If the comment doesn’t support the comments capability, the return value is ConnectApi.NotFoundException.

getThreadsForFeedComment(communityId, commentId, threadedCommentsCollapsed)
Access the comments capability for a comment.
API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.CommentsCapability getThreadsForFeedComment(String communityId, String commentId, Boolean threadedCommentsCollapsed)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
ID of the comment.

threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value
Type: ConnectApi.CommentsCapability
If the comment doesn’t support the comments capability, the return value is ConnectApi.NotFoundException.

getTopUnansweredQuestions(communityId) (Pilot)
Get top unanswered questions for the context user in a community.

Note: We provide top-five unanswered questions to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can’t guarantee acceptance. Top five unanswered questions isn’t generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can’t guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features.
Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getTopUnansweredQuestions(String communityId)

Parameters
communityId
Type: String
ID of the community.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetTopUnansweredQuestions(communityId, result) (Pilot)
Testing ConnectApi Code

getTopUnansweredQuestions(communityId, filter) (Pilot)
Get filtered top unanswered questions for the context user in a community.

Note: We provide top-five unanswered questions to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can’t guarantee acceptance. Top five unanswered questions isn’t generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can’t guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features.

API Version
42.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getTopUnansweredQuestions(String communityId, ConnectApi.TopUnansweredQuestionsFilterType filter)
Parameters

`communityId`
- Type: `String`
- ID of the community.

`filter`
- Type: `ConnectApi.FeedFilter`
- Specifies the filter for the feed. `UnansweredQuestionsWithCandidateAnswers` is the only valid value.

Return Value

- Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetTopUnansweredQuestions(communityId, filter, result)` (Pilot)

**getTopUnansweredQuestions(communityId, pageSize)** (Pilot)

Get a page of top unanswered questions for the context user in a community.

**Note:** We provide top-five unanswered questions to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can’t guarantee acceptance. Top five unanswered questions isn’t generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can’t guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features.

API Version

42.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElementPage getTopUnansweredQuestions(String communityId, Integer pageSize)
```
Parameters

**communityId**
Type: String
ID of the community.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 0 through 10. If you pass in null, the default size is 5.

Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetTopUnansweredQuestions(communityId, pageSize, result) (Pilot)`

### `getTopUnansweredQuestions(communityId, filter, pageSize) (Pilot)`

Get a page of filtered top unanswered questions for the context user in a community.

**Note:** We provide top-five unanswered questions to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can’t guarantee acceptance. Top five unanswered questions isn’t generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can’t guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features.

API Version
42.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedElementPage getTopUnansweredQuestions(String communityId, ConnectApi.FeedFilter filter, Integer pageSize)
```
Parameters

- **communityId**
  - Type: `String`
  - ID of the community.

- **filter**
  - Type: `ConnectApi.FeedFilter`
  - Specifies the filter for the feed. `UnansweredQuestionsWithCandidateAnswers` is the only valid value.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 0 through 10. If you pass in `null`, the default size is 5.

Return Value

- Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetTopUnansweredQuestions(communityId, filter, pageSize, result)` (Pilot)

### getVotesForComment(communityId, commentId, vote)

Get the first page of users who upvoted or downvoted a comment.

**API Version**

42.0

**Available to Guest Users**

42.0

**Requires Chatter**

Yes

**Signature**

```
public static ConnectApi.VotePage getVotesForComment(String communityId, String commentId, ConnectApi.UpDownVoteValue vote)
```
Parameters

`communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

`commentId`
  Type: `String`
  ID of the comment.

`vote`
  Type: `ConnectApi.UpDownVoteValue`
  Specifies the value of the vote for the feed element. Values are:
  • Down
  • Up
  You can't specify None.

Return Value

Type: `ConnectApi.VotePage`
If the comment doesn't support this capability, the return value is `ConnectApi.NotFoundException`.

`getVotesForComment(communityId, commentId, vote, pageParam, pageSize)`
Get a page of users who upvoted or downvoted a comment.

API Version

42.0

Available to Guest Users

42.0

Requires Chatter

Yes

Signature

`public static ConnectApi.VotePage getVotesForComment(String communityId, String commentId, ConnectApi.UpDownVoteValue vote, Integer pageParam, Integer pageSize)`

Parameters

`communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`. 
commentId
   Type: String
   ID of the comment.

vote
   Type: ConnectApiUpDownVoteValue
   Specifies the value of the vote for the feed element. Values are:
   • Down
   • Up
   You can’t specify None.

pageParam
   Type: Integer
   Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
   Type: Integer
   Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
   Type: ConnectApiVotePage
   If the comment doesn’t support this capability, the return value is ConnectApiNotFoundException.

getVotesForFeedElement(communityId, feedElementId, vote)
Get the first page of users who upvoted or downvoted a feed element.

API Version
42.0

Available to Guest Users
42.0

Requires Chatter
Yes

Signature
public static ConnectApiVotePage getVotesForFeedElement(String communityId, String feedElementId, ConnectApiUpDownVoteValue vote)

Parameters
communityId
   Type: String
Use either the ID for a community, internal, or null.

(feedElementId

Type: String

ID of the feed element.

vote

Type: ConnectApi.UpDownVoteValue

Specifies the value of the vote for the feed element. Values are:

- Down
- Up

You can’t specify None.

Return Value

Type: ConnectApi.VotePage

If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

getVotesForFeedElement(communityId, feedElementId, vote, pageParam, pageSize)

Get a page of users who upvoted or downvoted a feed element.

API Version

42.0

Available to Guest Users

42.0

Requires Chatter

Yes

Signature

public static ConnectApi.VotePage getVotesForFeedElement(String communityId, String feedElementId, ConnectApi.UpDownVoteValue vote, Integer pageParam, Integer pageSize)

Parameters

communityId

Type: String

Use either the ID for a community, internal, or null.

feedElementId

Type: String

ID of the feed element.
vote
Type: `ConnectApi.UpDownVoteValue`
Specifies the value of the vote for the feed element. Values are:
- Down
- Up
You can't specify None.

`pageParam`
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: `ConnectApi.VotePage`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

**isCommentEditableByMe(communityId, commentId)**
Discover whether the context user can edit a comment.

API Version
34.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedEntityIsEditable isCommentEditableByMe(String communityId, String commentId)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, internal, or null.
- `commentId`
  Type: `String`
  ID of the comment.
Return Value
Type: 
If the comment doesn't support the edit capability, the return value is .

SEE ALSO:

 isFeedElementEditableByMe(communityId, feedElementId)
Discover whether the context user can edit a feed element.

API Version
34.0

Requires Chatter
Yes

Signature

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element. Feed items are the only type of feed element that can be edited.

Return Value
Type: 
If the feed element doesn't support the edit capability, the return value is .

SEE ALSO:

 isModified(communityId, feedType, subjectId, since)
Discover whether a news feed has been updated or changed. Use this method to poll a news feed for updates.
Important: This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedModifiedInfo isModified(String communityId, ConnectApi.FeedType feedType, String subjectId, String since)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Specifies the type of feed. The only supported type is News

subjectId
Type: String
The ID of the context user or the alias me.

since
Type: String
An opaque token containing information about the last modified date of the feed. Retrieve this token from the FeedElementPage.isModifiedToken property.

Return Value
Type: ConnectApi.FeedModifiedInfo

likeComment(communityId, commentId)
Like a comment for the context user.

API Version
28.0

Requires Chatter
Yes
Signature

public static ConnectApi.ChatterLike likeComment(String communityId, String commentId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
The ID for a comment.

Return Value
Type: ConnectApi.ChatterLike
If the context user has already liked the comment, this method is a non-operation and returns the existing like.

likeFeedElement(communityId, feedElementId)
Like a feed element.

API Version
32.0

Requires Chatter
Yes

Signature

public static ConnectApi.ChatterLike likeFeedElement(String communityId, String feedElementId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

Return Value
Type: ConnectApi.ChatterLike
If the feed element doesn’t support the ChatterLikes capability, the return value is ConnectApi.NotFoundException.
postCommentToFeedElement(communityId, feedElementId, text)

Post a plain-text comment to a feed element.

API Version
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.Comment postCommentToFeedElement(String communityId, String feedElementId, String text)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

text
Type: String
Text of the comment. A comment can contain up to 10,000 characters.

Return Value
Type: ConnectApi.Comment
If the feed element doesn't support the Comments capability, the return value is ConnectApi.NotFoundException.

Example
ConnectApi.Comment comment = ConnectApi.ChatterFeeds.postCommentToFeedElement(null, '0D5D0000000KuGh', 'I agree with the proposal.' );

postCommentToFeedElement(communityId, feedElementId, comment, feedElementFileUpload)

Post a rich-text comment to a feed element. Use this method to include mentions and to attach a file.
API Version
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.Comment postCommentToFeedElement(String communityId, String feedElementId, ConnectApi.CommentInput comment, ConnectApi.BinaryInput feedElementFileUpload)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

comment
Type: ConnectApi.CommentInput
The comment body, including text and mentions, and capabilities, such as information about an attached file. A comment can contain up to 10,000 characters.

feedElementFileUpload
Type: ConnectApi.BinaryInput
A new binary file to attach to the comment, or null. If you specify a binary file, specify the title and description of the file in the comment parameter.

Return Value
Type: ConnectApi.Comment
If the feed element doesn’t support the Comments capability, the return value is ConnectApi.NotFoundException.

Example for Posting a Comment with Mentions
You can post comments with mentions two ways. Use the ConnectApiHelper repository on GitHub to write a single line of code, or use this method example.

```java
String communityId = null;
String feedElementId = '0D5D0000000KtW3';

ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput();
ConnectApi.MentionSegmentInput mentionSegmentInput = new ConnectApi.MentionSegmentInput();
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
```
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

textSegmentInput.text = 'Does anyone in this group have an idea? '
messageBodyInput.messageSegments.add(textSegmentInput);

mentionSegmentInput.id = '005D00000000oOT';
messageBodyInput.messageSegments.add(mentionSegmentInput);

commentInput.body = messageBodyInput;

ConnectApi.Comment commentRep = ConnectApi.ChatterFeeds.postCommentToFeedElement(communityId,
feedElementId, commentInput, null);

---

Example for Posting a Comment with an Existing File

```java
String feedElementId = '0D5D0000000KtW3';

ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput();

ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

textSegmentInput.text = 'I attached this file from Salesforce Files.';
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);

ConnectApi.CommentCapabilitiesInput commentCapabilitiesInput = new
ConnectApi.CommentCapabilitiesInput();
ConnectApi.ContentCapabilityInput contentCapabilityInput = new
ConnectApi.ContentCapabilityInput();

contentCapabilityInput.contentDocumentId = '069D00000001rNJ';

commentInput.capabilities = commentCapabilitiesInput;

ConnectApi.Comment commentRep =
ConnectApi.ChatterFeeds.postCommentToFeedElement(Network.getNetworkId(), feedElementId,
commentInput, null);
```

---

Example for Posting a Comment with a New File

```java
String feedElementId = '0D5D0000000KtW3';

ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput();

ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

textSegmentInput.text = 'Enjoy this new file.';
```
Example for Posting a Rich-Text Comment with an Inline Image

You can post rich-text comments with inline images and mentions two ways. Use the ConnectApiHelper repository on GitHub to write a single line of code, or use this method example. In this example, the image file is existing content that has already been uploaded to Salesforce.

```java
String communityId = null;
String feedElementId = '0D5R0000000SBEr';
String imageId = '069R00000000IgQ';
String mentionedUserId = '005R0000000DiMz';

ConnectApi.CommentInput input = new ConnectApi.CommentInput();
ConnectApi.TextSegmentInput textSegment;
ConnectApi.MentionSegmentInput mentionSegment;
ConnectApi.MarkupBeginSegmentInput markupBeginSegment;
ConnectApiMarkupEndSegmentInput markupEndSegment;
ConnectApiInlineImageSegmentInput inlineImageSegment;

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

markupBeginSegment = new ConnectApiMarkupBeginSegmentInput();
markupBeginSegment.markupType = ConnectApiMarkupType.Bold;
messageInput.messageSegments.add(markupBeginSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'Hello ';
messageInput.messageSegments.add(textSegment);
```
Example for Posting a Rich-Text Comment with a Code Block

```java
String communityId = null;
String feedElementId = '0D5R0000000SBEr';
String codeSnippet = '<html>
	<body>
		Hello, world!
	</body>
</html>';`

```java
ConnectApi.CommentInput input = new ConnectApi.CommentInput();
ConnectApi.TextSegmentInput textSegment;
ConnectApi.MarkupBeginSegmentInput markupBeginSegment;
ConnectApi.MarkupEndSegmentInput markupEndSegment;
messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

markupBeginSegment = new ConnectApi.MarkupBeginSegmentInput();
markupBeginSegment.markupType = ConnectApi.MarkupType.Code;
messageInput.messageSegments.add(markupBeginSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = codeSnippet;
messageInput.messageSegments.add(textSegment);

markupEndSegment = new ConnectApi.MarkupEndSegmentInput();
markupEndSegment.markupType = ConnectApi.MarkupType.Code;
messageInput.messageSegments.add(markupEndSegment);

input.body = messageInput;
ConnectApi.ChatterFeeds.postCommentToFeedElement(communityId, feedElementId, input, null);
```
**postFeedElement(communityId, subjectId, feedElementType, text)**

Post a plain-text feed element.

API Version

31.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElement postFeedElement(String communityId, String subjectId, ConnectApi.FeedElementType feedElementType, String text)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, internal, or null.

- **subjectId**
  - Type: `String`
  - The ID of the parent this feed element is being posted to. This value can be the ID of a user, group, or record, or the string `me` to indicate the context user.

- **feedElementType**
  - Type: `ConnectApi.FeedElementType`
  - The only possible value is `FeedItem`.

- **text**
  - Type: `String`
  - The text of the feed element. A feed element can contain up to 10,000 characters.

Return Value

Type: `ConnectApi.FeedElement`

Example

```java
ConnectApi.FeedElement feedElement =
    ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), '0F9d0000000TreH',
    ConnectApi.FeedElementType.FeedItem, 'On vacation this week.');
```

**postFeedElement(communityId, feedElement)**

Post a rich-text feed element. Include mentions and hashtag topics, attach already uploaded files to a feed element, and associate action link groups with a feed element. You can also use this method to share a feed element and add a comment.
API Version
36.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElement postFeedElement(String communityId,
ConnectApi.FeedElementInput feedElement)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedElement
  Type: ConnectApi.FeedElementInput
  Specify rich text, including mentions. Optionally, specify a link, a poll, or up to 10 existing files.

Return Value
Type: ConnectApi.FeedElement

Example for Posting a Feed Element with a Mention
You can post feed elements with mentions two ways. Use the ConnectApiHelper repository on GitHub to write a single line of code, or use this method example.

```java
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
ConnectApi.MentionSegmentInput mentionSegmentInput = new ConnectApi.MentionSegmentInput();
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

mentionSegmentInput.id = '005RR000000Dme9';
messageBodyInput.messageSegments.add(mentionSegmentInput);

textSegmentInput.text = 'Could you take a look?';
messageBodyInput.messageSegments.add(textSegmentInput);

feedItemInput.body = messageBodyInput;
feedItemInput.feedElementType = ConnectApi.FeedElementType.FeedItem;
feedItemInput.subjectId = '0F9RR0000004CPw';

ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput, null);
```
Example for Posting a Feed Element with Existing Content

```java
// Define the FeedItemInput object to pass to postFeedElement
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
feedItemInput.subjectId = 'me';

ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
textSegmentInput.text = 'Would you please review these docs?'

// The MessageBodyInput object holds the text in the post
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);

feedItemInput.body = messageBodyInput;

// The FeedElementCapabilitiesInput object holds the capabilities of the feed item.
// For this feed item, we define a files capability to hold the file(s).
List<String> fileIds = new List<String>();
fileIds.add('069xx00000000QO');
fileIds.add('069xx00000000QT');
fileIds.add('069xx00000000Qn');
fileIds.add('069xx00000000Qi');
fileIds.add('069xx00000000Qd');

ConnectApi.FilesCapabilityInput filesInput = new ConnectApi.FilesCapabilityInput();
filesInput.items = new List<ConnectApi.FileIdInput>();
for (String fileId : fileIds) {
    ConnectApi.FileIdInput idInput = new ConnectApi.FileIdInput();
    idInput.id = fileId;
    filesInput.items.add(idInput);
}

ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new
ConnectApi.FeedElementCapabilitiesInput();
feedElementCapabilitiesInput.files = filesInput;

feedItemInput.capabilities = feedElementCapabilitiesInput;

// Post the feed item.
ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);
```

Example for Posting a Rich-Text Feed Element with an Inline Image

You can post rich-text feed elements with inline images and mentions two ways. Use the ConnectApiHelper repository on GitHub to write a single line of code, or use this method example. In this example, the image file is existing content that has already been uploaded to Salesforce. The post also includes text and a mention.

```java
String communityId = null;
String imageId = '069D00000000INIA';
String mentionedUserId = '005D0000001QNpr';
String targetUserOrGroupOrRecordId = '005D0000001Gif0';
```
ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
input.subjectId = targetUserOrGroupOrRecordId;
input.feedElementType = ConnectApi.FeedElementType.FeedItem;

ConnectApi.TextSegmentInput textSegment;
ConnectApi.MentionSegmentInput mentionSegment;
ConnectApi.MarkupBeginSegmentInput markupBeginSegment;
ConnectApi.MarkupEndSegmentInput markupEndSegment;
ConnectApi.InlineImageSegmentInput inlineImageSegment;

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
markupBeginSegment = new ConnectApi.MarkupBeginSegmentInput();
markupBeginSegment.markupType = ConnectApi.MarkupType.Bold;
messageInput.messageSegments.add(markupBeginSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'Hello ';
messageInput.messageSegments.add(textSegment);

mentionSegment = new ConnectApi.MentionSegmentInput();
mentionSegment.id = mentionedUserId;
messageInput.messageSegments.add(mentionSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = '!';
messageInput.messageSegments.add(textSegment);

markupEndSegment = new ConnectApi.MarkupEndSegmentInput();
markupEndSegment.markupType = ConnectApi.MarkupType.Bold;
messageInput.messageSegments.add(markupEndSegment);

inlineImageSegment = new ConnectApi.InlineImageSegmentInput();
inlineImageSegment.altText = 'image one';
inlineImageSegment.fileId = imageId;
messageInput.messageSegments.add(inlineImageSegment);

input.body = messageInput;
ConnectApi.ChatterFeeds.postFeedElement(communityId, input, null);

Example for Posting a Rich-Text Feed Element with a Code Block

String communityId = null;
String targetUserOrGroupOrRecordId = 'me';
String codeSnippet = '<html>
	<body>
		Hello, world!
	</body>
</html>';
ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
input.subjectId = targetUserOrGroupOrRecordId;
input.feedElementType = ConnectApi.FeedElementType.FeedItem;

ConnectApi.TextSegmentInput textSegment;
ConnectApi.MarkupBeginSegmentInput markupBeginSegment;
ConnectApi.MarkupEndSegmentInput markupEndSegment;

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

markupBeginSegment = new ConnectApi.MarkupBeginSegmentInput();
markupBeginSegment.markupType = ConnectApi.MarkupType.Code;
messageInput.messageSegments.add(markupBeginSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = codeSnippet;
messageInput.messageSegments.add(textSegment);

markupEndSegment = new ConnectApi.MarkupEndSegmentInput();
markupEndSegment.markupType = ConnectApi.MarkupType.Code;
messageInput.messageSegments.add(markupEndSegment);

input.body = messageInput;
ConnectApi.ChatterFeeds.postFeedElement(communityId, input);

Example for Sharing a Feed Element (in Version 39.0 and Later)

// Define the FeedItemInput object to pass to postFeedElement
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
feedItemInput.subjectId = 'me';
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
textSegmentInput.text = 'Look at this post I'm sharing.';
// The MessageBodyInput object holds the text in the post
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);
feedItemInput.body = messageBodyInput;

ConnectApi.FeedEntityShareCapabilityInput shareInput = new
ConnectApi.FeedEntityShareCapabilityInput();
shareInput.feedEntityId = '005R0000000SEbc';
ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new
ConnectApi.FeedElementCapabilitiesInput();
feedElementCapabilitiesInput.feedEntityShare = shareInput;
feedItemInput.capabilities = feedElementCapabilitiesInput;
// Post the feed item.
ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);

Example for Sending a Direct Message

// Define the FeedItemInput object to pass to postFeedElement
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();

ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
textSegmentInput.text = 'Thanks for attending my presentation test run this morning. Send me any feedback.';
// The MessageBodyInput object holds the text in the post
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);
feedItemInput.body = messageBodyInput;

// The FeedElementCapabilitiesInput object holds the capabilities of the feed item.
// For this feed item, we define a direct message capability to hold the member(s) and the subject.
List<String> memberIds = new List<String>();
memberIds.add('005B00000016OUQ');
memberIds.add('005B0000001rIN6');

ConnectApi.DirectMessageCapabilityInput dmInput = new
ConnectApi.DirectMessageCapabilityInput();

Define an Action Link in a Template and Post with a Feed Element

postFeedElementBatch(communityId, feedElements)
Post a list of feed elements.

API Version
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.BatchResult[] postFeedElementBatch(String communityId,
List<ConnectApi.BatchInput> feedElements)
Parameters

**communityId**

*Type: String*

Use either the ID for a community, internal, or null.

**feedElements**

*Type: List<ConnectApi.BatchInput>*

The list can contain up to 500 ConnectApi.BatchInput objects. In the ConnectApi.BatchInput constructor, the input object must be a concrete instance of the abstract ConnectApi.FeedElementInput class.

Return Value

*Type: ConnectApi.BatchResult[]*

The returned objects correspond to each of the input objects and are returned in the same order as the input objects.

The method call fails only if an error occurs that affects the entire operation (such as a parsing failure). If an individual object causes an error, the error is embedded within the ConnectApi.BatchResult list.

Usage

Use this method to post a list of feed elements efficiently. Create a list containing up to 500 objects and insert them all for the cost of one DML statement.

The ConnectApi.BatchInput has three constructors, but the postFeedElementBatch method only supports the two listed here. It doesn’t support multiple binary inputs.

In each constructor, the input object must be an instance of ConnectApi.FeedElementInput. Pick a constructor based on whether you want to pass a binary input.

- ConnectApi.BatchInput(Object input)—No binary input
- ConnectApi.BatchInput(Object input, ConnectApi.BinaryInput binary)—One binary input

Example

This trigger bulk posts to the feeds of newly inserted accounts.

```
trigger postFeedItemToAccount on Account (after insert) {
    Account[] accounts = Trigger.new;

    // Bulk post to the account feeds.
    List<ConnectApi.BatchInput> batchInputs = new List<ConnectApi.BatchInput>();

    for (Account a : accounts) {
        ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
        input.subjectId = a.id;

        body.messageSegments = new List<ConnectApi.MessageSegmentInput>();
        ConnectApi.TextSegmentInput textSegment = new ConnectApi.TextSegmentInput();
```

1092
textSegment.text = 'Let\'s win the ' + a.name + ' account.；

body.messageSegments.add(textSegment);
input.body = body;

ConnectApi.BatchInput batchInput = new ConnectApi.BatchInput(input);
batchInputs.add(batchInput);
}

ConnectApi.ChatterFeeds.postFeedElementBatch(Network.getNetworkId(), batchInputs);

publishDraftFeedElement(communityId, feedElementId, feedElement)
Publish a draft feed element.

API Version
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElement publishDraftFeedElement(String communityId, String feedElementId, ConnectApi.FeedElementInput feedElement)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element to publish.

feedElement
Type: ConnectApi.FeedElementInput
Use this optional parameter to edit your draft before publishing.

Return Value
Type: ConnectApi.FeedElement
The published feed element has a new ID.

searchFeedElements(communityId, q)
Get the first page of feed elements that match the search criteria.
API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

q
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestSearchFeedElements(communityId, q, result)
  Testing ConnectApi Code

searchFeedElements(communityId, q, sortParam)
Get the first page of sorted feed elements that match the search criteria.

API Version
31.0
Available to Guest Users
31.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, ConnectApi.FeedSortOrder sortParam)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `q`
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- `sortParam`
  - Type: `ConnectApi.FeedSortOrder`
  - Values are:
    - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
    - `CreatedDateDesc`—Sorts by most recent creation date.
    - `LastModifiedDateDesc`—Sorts by most recent activity.
    - `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
    - `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
  - If you pass in `null`, the default value `CreatedDateDesc` is used.

Return Value

- Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Yes

**Signature**

```java
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, Boolean threadedCommentsCollapsed)
```

**Parameters**

- **`communityId`**
  - Type: **String**
  - Use either the ID for a community, `internal`, or `null`.

- **`q`**
  - Type: **String**
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **`threadedCommentsCollapsed`**
  - Type: **Boolean**
  - Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

**Return Value**

Type: **ConnectApi.FeedElementPage**

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, String pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.FeedElementPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with set:Test). Use the set test method with the same parameters or the code throws an exception.

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density,
String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, internal, or `null`.

`feedType`
Type: `ConnectApi.FeedType`
The type of feed. Valid values are `Company`, `DirectMessageModeration`, `Home`, `Moderation`, and `PendingReview`.

`recentCommentCount`
Type: `Integer`
Maximum number of comments to return with each feed element. The default value is 3.

`density`
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
• **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. If you pass in `null`, the default value **CreatedDateDesc** is used.

- **q**
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See **Wildcards**.

**Return Value**
Type: `ConnectApi.FeedElementPage`

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Yes

**Signature**

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedFilter filter)
```
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedType**
Type: ConnectApi.FeedType
The type of feed. The only valid value is Home.

**recentCommentCount**
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

When the **sortParam** is MostViewed, you must pass in null for the **pageParam**.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

When the **sortParam** is MostViewed, the **pageSize** must be a value from 1 to 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

**q**
Type: String
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**filter**

Type: `ConnectApi.FeedFilter`

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the `Record` feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter, result)`
- Testing ConnectApi Code

```java
searchFeedElementsInFeed(communityId, feedType, subjectId, q)
```

Get the feed elements from a feed that match the search criteria.
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String q)

Parameters

**communityId**
Type: String

Use either the ID for a community, internal, or null.

**feedType**
Type: ConnectApi.FeedType

The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

**subjectId**
Type: String

If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

**q**
Type: String

Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

Type: ConnectApi.FeedElementPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Requires Chatter

Yes

Signature

`public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)`

Parameters

`communityId`

Type: `String`

Use either the ID for a community, `internal`, or `null`.

`feedType`

Type: `ConnectApi.FeedType`

The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessages`, `Filter`, `Landing`, and `Streams`.

`subjectId`

Type: `String`

If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

`pageParam`

Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Order of feed items in the feed.

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

**q**
Type: String
Search term. Searches keywords in the user or group name. A minimum of one character is required. This parameter does not support wildcards. This parameter is required.

**Return Value**
Type: ConnectApi.FeedElementPage

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q, result)

Testing ConnectApi Code

**searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q)**

Get a page of sorted feed elements from a feed that match the search criteria. Each feed element includes no more than the specified number of comments.

**API Version**
31.0
Available to Guest Users
31.0

Yes

Signature
```
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId,
                      ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
                      ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
                      ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, internal, or `null`.

`feedType`
Type: `ConnectApi.FeedType`
The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessages, Filter, Landing, and Streams.

`subjectId`
Type: `String`
If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

`recentCommentCount`
Type: `Integer`
Maximum number of comments to return with each feed element. The default value is 3.

`density`
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**

Type: `ConnectApi.FeedSortOrder`

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**

Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

**Return Value**

Type: `ConnectApi.FeedElementPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

- `setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)`
- [Testing ConnectApi Code](#)

**searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter)**

Get a page of sorted and filtered feed elements from a `UserProfile` feed that match the search criteria.

**API Version**

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId,
                    ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
                    ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
                    ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedFilter filter)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, internal, or `null`.

- `feedType`
  Type: `ConnectApi.FeedType`
  Value must be `ConnectApi.FeedType.UserProfile`.

- `subjectId`
  Type: `String`
  The ID of any user. To specify the context user, use the user ID or the alias `me`.

- `recentCommentCount`
  Type: `Integer`
  Maximum number of comments to return with each feed element. The default value is 3.

- `density`
  Type: `ConnectApi.FeedDensity`
  Specify the amount of content in a feed.
  - `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- `pageParam`
  Type: `String`
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- `pageSize`
  Type: `Integer`
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- `sortParam`
  Type: `ConnectApi.FeedSortOrder`
  Values are:
  - `CreateDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
• **CreatedDateDesc**—Sorts by most recent creation date.
• **LastModifiedDateDesc**—Sorts by most recent activity.
• **MostViewed**—Sorts by most viewed content. This sort order is available only for **Home** feeds when the **ConnectApi.FeedFilter** is **UnansweredQuestions**.
• **Relevance**—Sorts by most relevant content. This sort order is available only for **Company**, **Home**, and **Topics** feeds.

If you pass in **null**, the default value **CreatedDateDesc** is used.

**q**

Type: **String**

One or more keywords to search for in the feed elements visible to the context user. The search string can contain wildcards and must contain at least two characters that aren’t wildcards. See **Wildcards**.

**filter**

Type: **ConnectApi.FeedFilter**

Value must be **ConnectApi.FeedFilter.CommunityScoped**. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out.

**Return Value**

Type: **ConnectApi.FeedElementPage**

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with **setTest**). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId,
                     ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
                     ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
                     ConnectApi.FeedSortOrder sortParam, String q, String customFilter)
```

Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or null.

`feedType`
Type: `ConnectApi.FeedType`
Value must be `ConnectApi.FeedType.Record`.

`subjectId`
Type: String
The ID of a case.

`recentCommentCount`
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

`density`
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

`pageSize`
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the
ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

q
  Type: String
  One or more keywords to search for in the feed elements visible to the context user. The search string can contain wildcards and
must contain at least two characters that aren't wildcards. See Wildcards.

customFilter
  Type: String
  Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method
with the same parameters or the code throws an exception.

    ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
    ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.Record`.

- **subjectId**
  - Type: `String`
  - Any record ID, including a group ID.

- **recentCommentCount**
  - Type: `Integer`
  - Maximum number of comments to return with each feed element. The default value is 3.

- **density**
  - Type: `ConnectApi.FeedDensity`
  - Specify the amount of content in a feed.
    - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- **pageParam**
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **sortParam**
  - Type: `ConnectApi.FeedSortOrder`
  - Values are:
    - **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
    - **CreatedDateDesc**—Sorts by most recent creation date.
    - **LastModifiedDateDesc**—Sorts by most recent activity.
• **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.

• **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value CreatedDateDesc is used.

`q`

Type: `String`  
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`showInternalOnly`

Type: `Boolean`  
Specifies whether to show only feed elements from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

ConnectApi.FeedFilter filter)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.Record`.

- **subjectId**
  - Type: `String`
  - Any record ID, including a group ID.

- **recentCommentCount**
  - Type: `Integer`
  - Maximum number of comments to return with each feed element. The default value is 3.

- **density**
  - Type: `ConnectApi.FeedDensity`
  - Specify the amount of content in a feed.
    - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **sortParam**
  - Type: `ConnectApi.FeedSortOrder`
  - Values are:
    - CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
    - CreatedDateDesc—Sorts by most recent creation date.
    - LastModifiedDateDesc—Sorts by most recent activity.
• **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.

• **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value CreatedDateDesc is used.

`q`

Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`showInternalOnly`

Type: `Boolean`

Specifies whether to show only feed elements from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

`filter`

Type: `ConnectApi.FeedFilter`

Specifies the feed filters.

• **AllQuestions**—Feed elements that are questions.

• **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.

• **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.

• **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.

• **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.

• **SolvedQuestions**—Feed elements that are questions and that have a best answer.

• **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.

• **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.

• **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**Return Value**

Type: `ConnectApi.FeedElementPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, String customFilter)

Parameters

communityId
   Type: String
   Use either the ID for a community, internal, or null.

feedType
   Type: ConnectApi.FeedType
   Value must be ConnectApi.FeedType.Record.

subjectId
   Type: String
   The ID of a case.

recentCommentCount
   Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**showInternalOnly**
Type: `Boolean`
Specifies whether to show only feed elements from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

**filter**
Type: `String`
Custom filter that applies only to the case feed. See `customFeedFilter` in the Metadata API Developer Guide for supported values.

Return Value
Type: `ConnectApi.FeedElementPage`
Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q)**
Get the feed elements from a feed filtered by a key prefix that match the search criteria.

API Version
31.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedElementPage searchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, String q)
```

Parameters
- **communityId**
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- **subjectId**
  - Type: String
  - The ID of the context user or the alias `me`.

- **keyPrefix**
  - Type: String
  - A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of `005` and Group objects have a prefix of `0F9`.

- **q**
  - Type: String
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
- Type: `ConnectApi.FeedElementPage`
Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage searchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)

Parameters
- communityId
  Type: String
  Use either the ID for a community, internal, or null.
- subjectId
  Type: String
  The ID of the context user or the alias me.
- keyPrefix
  Type: String
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.
- pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
- pageSize
  Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
- Type: `ConnectApi.FeedSortOrder`
- Values are:
  - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
  - `CreatedDateDesc`—Sorts by most recent creation date.
  - `LastModifiedDateDesc`—Sorts by most recent activity.
  - `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
  - `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
- If you pass in `null`, the default value `CreatedDateDesc` is used.

`q`
- Type: `String`
- Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

Return Value
- Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

`searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)`
Get a page of sorted feed elements from a feed filtered by a key prefix that match the search criteria. Each feed element includes no more than the specified number of comments.

API Version
- 31.0

Requires Chatter
- Yes
public static ConnectApi.FeedElementPage searchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• **Most Viewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.

• **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value CreatedDateDesc is used.

`q`  
Type: `String`  
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**Return Value**  
Type: `ConnectApi.FeedElementPage`

**Usage**  
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:  
`setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)`  
Testing ConnectApi Code

**searchStreams (communityId, q)**  
Search the Chatter feed streams for the context user.

**API Version**  
40.0

**Requires Chatter**  
Yes

**Signature**  
`public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q)`

**Parameters**  
`communityId`  
Type: `String`  
Use either the ID for a community, `internal`, or `null`.

`q`  
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: `ConnectApi.ChatterStreamPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestSearchStreams(communityId, q, result)`
- Testing ConnectApi Code

`searchStreams(communityId, q, sortParam)`
Search and sort the Chatter feed streams for the context user.

API Version
40.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q, ConnectApi.SortOrder sortParam)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`q`
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`sortParam`
Type: `ConnectApi.SortOrder`
Specifies the sort order. Values are:
- **Ascending** — Items are in ascending alphabetical order (A-Z).
- **Descending** — Items are in descending alphabetical order (Z-A).
• **MostRecentlyViewed**—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.
  
  If not specified, default value is **Ascending**.

**Return Value**

Type: `ConnectApi.ChatterStreamPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

  - `setTestSearchStreams(communityId, q, sortParam, result)`
  - Testing ConnectApi Code

**searchStreams** *(communityId, q, pageParam, pageSize)*

Search the Chatter feed streams for the context user and return a page of results.

**API Version**

40.0

**Requires Chatter**

Yes

**Signature**

```
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q, Integer pageParam, Integer pageSize)
```

**Parameters**

**communityId**
  
  Type: **String**
  
  Use either the ID for a community, `internal`, or `null`.

**q**
  
  Type: **String**
  
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**pageParam**
  
  Type: **Integer**
  
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.
pageSize
   Type: Integer
   Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

Return Value
Type: ConnectApi.ChatterStreamPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
   setTestSearchStreams(communityId, q, pageParam, pageSize, result)
   Testing ConnectApi Code

searchStreams(communityId, q, pageParam, pageSize, sortParam)
Search the Chatter feed streams for the context user and return a sorted page of results.

API Version
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam)

Parameters
communityId
   Type: String
   Use either the ID for a community, internal, or null.

q
   Type: String
   Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
   Type: Integer
   Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.
pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

sortParam
Type: ConnectApi.SortOrder
Specifies the sort order. Values are:
• Ascending—Items are in ascending alphabetical order (A-Z).
• Descending—Items are in descending alphabetical order (Z-A).
• MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.
If not specified, default value is Ascending.

Return Value
Type: ConnectApi.ChatterStreamPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestSearchStreams(communityId, q, pageParam, pageSize, sortParam, result)
  Testing ConnectApi Code

searchStreams(communityId, q, pageParam, pageSize, sortParam, globalScope)
Search the Chatter feed streams from all communities for the context user and return a sorted page of results.

API Version
41.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam, Boolean globalScope)

Parameters

  communityId
Type: String
  Use either the ID for a community, internal, or null.
q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

sortParam
Type: ConnectApi.SortOrder
Specifies the sort order. Values are:
- Ascending—Items are in ascending alphabetical order (A-Z).
- Descending—Items are in descending alphabetical order (Z-A).
- MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is Ascending.

globalScope
Type: Boolean
Specifies whether to get streams from all the context user’s communities, regardless of the communityId value.

Tip: If you know the community ID for the streams, we recommend setting globalScope to false.

Return Value
Type: ConnectApi.ChatterStreamPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

**setCommentIsVerified(communityId, commentId, isVerified)**
Mark a comment as verified or unverified.

API Version
41.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.VerifiedCapability setCommentIsVerified(String communityId,
                     String commentId, Boolean isVerified)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `commentId`
  Type: `String`
  ID of the comment on a question post. Only one comment on a question post can be marked as verified.

- `isVerified`
  Type: `Boolean`
  Specifies whether to mark the comment as verified (`true`) or unverified (`false`).
  Only verified comments can be marked as unverified, and only unverified comments can be marked as verified.

Return Value

Type: `ConnectApi.VerifiedCapability`

If the comment doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

```
setCommentIsVerifiedByAnonymized(communityId, commentId, isVerified,
                                  isVerifiedByAnonymized)
```

Mark a comment as verified by an anonymous user.

API Version

43.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.VerifiedCapability setCommentIsVerifiedByAnonymized(String
                        communityId, String commentId, Boolean isVerified, Boolean isVerifiedByAnonymized)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `commentId`
  Type: `String`
ID of the comment on a question post. Only one comment on a question post can be marked as verified.

`isVerified`

Type: Boolean

Specifies whether to mark the comment as verified (true) or unverified (false).

Only verified comments can be marked as unverified, and only unverified comments can be marked as verified.

`isVerifiedByAnonymized`

Type: Boolean

Specifies whether to mark the comment as verified by an anonymous user (true).

If a user previously verified a comment and then requested the activity to be deleted, use `isVerifiedByAnonymized` to maintain the verification and anonymize the value of `lastVerifiedByUser`.

You can't set `isVerified` and `isVerifiedByAnonymized` to true at the same time. `isVerifiedByAnonymized` can be set to true only if `isVerified` is already set to true.

You can't set `isVerifiedByAnonymized` to false. After `isVerifiedByAnonymized` is set to true, it can be undone only when another user marks the comment as unverified and then reverifies the comment.

Return Value

Type: `ConnectApi.VerifiedCapability`

If the comment doesn't support this capability, the return value is `ConnectApi.NotFoundException`.

`setCommentVote(communityId, commentId, upDownVote)`

Upvote or downvote a comment.

API Version

41.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.UpDownVoteCapability setCommentVote(String communityId, String commentId, ConnectApi.UpDownVoteCapabilityInput upDownVote)
```

Parameters

`communityId`

Type: String

Use either the ID for a community, internal, or null.

`commentId`

Type: String

ID of the comment.
upDownVote

Type: `ConnectApi.UpDownVoteCapabilityInput`

A `ConnectApi.UpDownVoteCapabilityInput` object that includes your vote.

Return Value

Type: `ConnectApi.UpDownVoteCapability`

If the comment doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

```java
setFeedCommentStatus(communityId, commentId, status)
```

Set the status of a comment.

API Version

38.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.StatusCapability setFeedCommentStatus(String communityId, String commentId, ConnectApi.StatusCapabilityInput status)
```

Parameters

`communityId`

Type: `String`

Use either the ID for a community, `internal`, or `null`.

`commentId`

Type: `String`

ID of the comment.

`status`

Type: `ConnectApi.StatusCapabilityInput`

A `ConnectApi.StatusCapabilityInput` object that includes the status you want to set.

Return Value

Type: `ConnectApi.StatusCapability`

If the comment doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

Usage

Only users with the Can Approve Feed Post and Comment permission can set the status of a feed post or comment.
**setFeedElementIsClosed(communityId, feedElementId, isClosed)**

Set a feed element to closed.

Users can't edit (specifically the feed item body or title), comment on, or delete a closed feed element. If the closed feed element is a poll, users can't vote on it. Users can't edit (specifically the comment body) or delete a comment on a closed feed element or select or remove it as best answer.

Admins and moderators can edit and delete closed feed elements and comments on closed feed elements. Admins and moderators can select or remove the best answer status on comments on closed feed elements.

API Version
43.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.CloseCapability setFeedElementIsClosed(String communityId, String feedElementId, Boolean isClosed)
```

Parameters
- **communityId**
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.
- **feedElementId**
  - Type: String
  - ID of the feed element.
- **isClosed**
  - Type: Boolean
  - Specifies whether to set the feed element to closed (`true`) or not (`false`).

Return Value
Type: `ConnectApi.CloseCapability`

If the feed element doesn't support this capability, the return value is `ConnectApi.NotFoundException`.

**setFeedElementVote(communityId, feedElementId, upDownVote)**

Upvote or downvote a feed element.

API Version
41.0
**Public static ConnectApi.UpDownVoteCapability setFeedElementVote(String communityId, String feedElementId, ConnectApi.UpDownVoteCapabilityInput upDownVote)**

**Parameters**

- **communityId**
  Type: `String`
  Use either the ID for a community, internal, or `null`.

- **feedElementId**
  Type: `String`
  ID of the feed element.

- **upDownVote**
  Type: `ConnectApi.UpDownVoteCapabilityInput`
  A `ConnectApi.UpDownVoteCapabilityInput` object that includes your vote.

**Return Value**

Type: `ConnectApi.UpDownVoteCapability`

If the feed element doesn’t support this capability, the return value is `ConnectApiNotFoundException`.

---

**setFeedEntityStatus(String communityId, String feedElementId, ConnectApi.StatusCapabilityInput status)**

Set the status of a feed post.

**API Version**

37.0

**Requirements**

- **Requires Chatter**
  Yes

**Signature**

```java
public static ConnectApi.StatusCapability setFeedEntityStatus(String communityId, String feedElementId, ConnectApi.StatusCapabilityInput status)
```

**Parameters**

- **communityId**
  Type: `String`
  Use either the ID for a community, internal, or `null`.
**feedElementId**
Type: **String**
ID of the feed element.

**status**
Type: **ConnectApi.StatusCapabilityInput**
A ConnectApi.StatusCapabilityInput object that includes the status you want to set.

Return Value
Type: **ConnectApi.StatusCapability**
If the feed element doesn’t support this capability, the return value is **ConnectApi.NotFoundException**.

Usage
Only users with the Can Approve Feed Post and Comment permission can set the status of a feed post or comment.

**setIsMutedByMe(communityId, feedElementId, isMutedByMe)**
Mute or unmute a feed element.

**API Version**
35.0

**Requires Chatter**
Yes

**Signature**
```
public static ConnectApi.MuteCapability setIsMutedByMe(String communityId, String feedElementId, Boolean isMutedByMe)
```

**Parameters**
- **communityId**
  Type: **String**
  Use either the ID for a community, internal, or null.

- **feedElementId**
  Type: **String**
  ID of the feed element.

- **isMutedByMe**
  Type: **Boolean**
  Indicates whether the feed element is muted for the context user. Default value is **false**.
Return Value
Type: `ConnectApi.MuteCapability`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

`setIsReadByMe(communityId, feedElementId, readBy)`
Mark a feed element as read for the context user using an input class.

API Version
40.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ReadByCapability setIsReadByMe(String communityId, String feedElementId, ConnectApi.ReadByCapabilityInput readBy)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, internal, or null.
- `feedElementId`
  Type: `String`
  ID of the feed element to mark as read.
- `readBy`
  Type: `ConnectApi.ReadByCapabilityInput`
  A `ConnectApi.ReadByCapabilityInput` body indicating to mark the feed elements as read.

Return Value
Type: `ConnectApi.ReadByCapability`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

`setIsReadByMe(communityId, feedElementId, isReadByMe)`
Mark a feed element as read for the context user.

API Version
40.0
public static ConnectApi.ReadByCapability setIsReadByMe(String communityId, String feedElementId, Boolean isReadByMe)

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedElementId**
Type: String
ID of the feed element to mark as read.

**isReadByMe**
Type: Boolean
Specifies to mark the feed element as read (true) for the context user.

Return Value

Type: ConnectApi.ReadByCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

public static ConnectApi.Comment updateComment(String communityId, String commentId, ConnectApi.CommentInput comment)

Edit a comment.

updateComment(communityId, commentId, comment)
commentId
Type: String
ID of the comment to be edited.

comment
Type: ConnectApi.CommentInput
Information about the comment to be edited.

Return Value
Type: ConnectApi.Comment
If the comment doesn’t support the edit capability, the return value is ConnectApi.NotFoundException.

Example

```apex
String commentId;
String communityId = Network.getNetworkId();

// Get the last feed item created by the context user.
List<FeedItem> feedItems = [SELECT Id FROM FeedItem WHERE CreatedById = :UserInfo.getUserId()
ORDER BY CreatedDate DESC];
if (feedItems.isEmpty()) {
    // Return null within anonymous apex.
    return null;
}
String feedElementId = feedItems[0].id;

ConnectApi.CommentPage commentPage =
ConnectApi.ChatterFeeds.getCommentsForFeedElement(communityId, feedElementId);
if (commentPage.items.isEmpty()) {
    // Return null within anonymous apex.
    return null;
}
commentId = commentPage.items[0].id;

ConnectApi.FeedEntityIsEditable isEditable =
ConnectApi.ChatterFeeds.isCommentEditableByMe(communityId, commentId);

if (isEditable.isEditableByMe == true){
    ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput();
    ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

    messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

    textSegmentInput.text = 'This is my edited comment.';
    messageBodyInput.messageSegments.add(textSegmentInput);

    commentInput.body = messageBodyInput;
    ConnectApi.Comment editedComment = ConnectApi.ChatterFeeds.updateComment(communityId,
```
updateDirectMessage(communityId, feedElementId, directMessage)

Update the members of a direct message.

API Version
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.DirectMessageCapability updateDirectMessage(String communityId, 
String feedElementId, ConnectApi.DirectMessageCapabilityInput directMessage)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

directMessage
Type: ConnectApi.DirectMessageCapabilityInput
A ConnectApi.DirectMessageCapabilityInput body that includes the members to add and remove.

Return Value
Type: ConnectApi.DirectMessageCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

updateFeedElement(communityId, feedElementId, feedElement)

Edit a feed element.

API Version
34.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.FeedElement updateFeedElement(String communityId, String feedElementId, ConnectApi.FeedElementInput feedElement)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **feedElementId**
  - Type: String
  - ID of the feed element to be edited. Feed items are the only type of feed element that can be edited.

- **feedElement**
  - Type: `ConnectApi.FeedElementInput`
  - Information about the feed item to be edited.

Return Value

- Type: `ConnectApi.FeedElement`
  - If the feed element doesn’t support the edit capability, the return value is `ConnectApi.NotFoundException`.

Example for Editing a Feed Post

```java
String communityId = Network.getNetworkId();

// Get the last feed item created by the context user.
List<FeedItem> feedItems = [SELECT Id FROM FeedItem WHERE CreatedById = :UserInfo.getUserId()
ORDER BY CreatedDate DESC];
if (feedItems.isEmpty()) {
    // Return null within anonymous apex.
    return null;
}
String feedElementId = feedItems[0].id;

ConnectApi.FeedEntityIsEditable isEditable =
ConnectApi.ChatterFeeds.isFeedElementEditableByMe(communityId, feedElementId);

if (isEditable.isEditableByMe == true){
    ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
    ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
    messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
    textSegmentInput.text = 'This is my edited post.';
    messageBodyInput.messageSegments.add(textSegmentInput);
    feedItemInput.body = messageBodyInput;
```
Example for Editing a Question Title and Post

```java
String communityId = Network.getNetworkId();

// Get the last feed item created by the context user.
List<FeedItem> feedItems = [SELECT Id FROM FeedItem WHERE CreatedById = :UserInfo.getUserId()
ORDER BY CreatedDate DESC];
if (feedItems.isEmpty()) {
    // Return null within anonymous apex.
    return null;
}
String feedElementId = feedItems[0].id;
ConnectApi.FeedEntityIsEditable isEditable =
    ConnectApi.ChatterFeeds.isFeedElementEditableByMe(communityId, feedElementId);
if (isEditable.isEditableByMe == true){
    ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
    ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new
    ConnectApi.FeedElementCapabilitiesInput();
    ConnectApi.QuestionAndAnswersCapabilityInput questionAndAnswersCapabilityInput = new
    ConnectApi.QuestionAndAnswersCapabilityInput();
    ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

    messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
    textSegmentInput.text = 'This is my edited question.';
    messageBodyInput.messageSegments.add(textSegmentInput);

    feedItemInput.body = messageBodyInput;
    feedItemInput.capabilities = feedElementCapabilitiesInput;

    feedElementCapabilitiesInput.questionAndAnswers = questionAndAnswersCapabilityInput;
    questionAndAnswersCapabilityInput.questionTitle = 'Where is my edited question?';

    ConnectApi.FeedElement editedFeedElement =
    ConnectApi.ChatterFeeds.updateFeedElement(communityId, feedElementId, feedItemInput);
}
```

`updateFeedElementBookmarks (communityId, feedElementId, bookmarks)`

Bookmark a feed element or remove a bookmark from a feed element using an input class.

API Version

32.0
Requires Chatter
Yes

Signature
public static ConnectApi.BookmarksCapability updateFeedElementBookmarks(String communityId, String feedElementId, ConnectApi.BookmarksCapabilityInput bookmarks)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

bookmarks
Type: ConnectApi.BookmarksCapabilityInput
Information about a bookmark.

Return Value
Type: ConnectApi.BookmarksCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

updateFeedElementBookmarks(communityId, feedElementId, isBookmarkedByCurrentUser)
Bookmark a feed element or remove a bookmark from a feed element.

API Version
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.BookmarksCapability updateFeedElementBookmarks(String communityId, String feedElementId, Boolean isBookmarkedByCurrentUser)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.
feedElementId
   Type: String
   ID of the feed element.

isBookmarkedByCurrentUser
   Type: Boolean
   Specify whether to bookmark the feed element (true) or not (false).

Return Value
   Type: ConnectApi.BookmarksCapability
   If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

Example
   ConnectApi.BookmarksCapability bookmark =
   ConnectApi.ChatterFeeds.updateFeedElementBookmarks(null, '0D5D0000000KuGh', true);

updateFeedElementReadByCapabilityBatch(communityId, feedElementIds, readBy)
Mark multiple feed elements as read by the context user at the same time using an input class.

API Version
   40.0

Requires Chatter
   Yes

Signature
   public static ConnectApi.BatchResult[] updateFeedElementReadByCapabilityBatch(String communityId, List<String> feedElementIds, ConnectApi.ReadByCapabilityInput readBy)

Parameters

communityId
   Type: String
   Use either the ID for a community, internal, or null.

feedElementIds
   Type: List<String>
   Up to 500 feed element IDs to mark as read.

readBy
   Type: ConnectApi.ReadByCapabilityInput
   A ConnectApi.ReadByCapabilityInput body indicating to mark the feed elements as read.
updateFeedElementReadByCapabilityBatch(communityId, feedElementIds, isReadByMe)

Mark multiple feed elements as read by the context user at the same time.

API Version
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.BatchResult[] updateFeedElementReadByCapabilityBatch(String communityId, List<String> feedElementIds, Boolean isReadByMe)

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **feedElementIds**
  - Type: List<String>
  - Up to 500 feed element IDs to mark as read.

- **isReadByMe**
  - Type: Boolean
  - Specifies to mark the feed element as read (true) for the context user.

Return Value
Type: ConnectApi.BatchResult[]

If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

updateLikeForComment(communityId, commentId, isLikedByCurrentUser)

Like or unlike a comment.
API Version
39.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterLikePage updateLikeForComment(String communityId, String commentId, Boolean isLikedByCurrentUser)
```

Parameters
- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.
- **commentId**
  - Type: String
  - ID of the comment.
- **isLikedByCurrentUser**
  - Type: Boolean
  - Specifies if the context user likes (true) or unlikes (false) the comment.

Return Value
Type: `ConnectApi.ChatterLikePage`

```
updateLikeForFeedElement(communityId, feedElementId, isLikedByCurrentUser)
```
Like or unlike a feed element.

API Version
39.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterLikePage updateLikeForFeedElement(String communityId, String feedElementId, Boolean isLikedByCurrentUser)
```

Parameters
- **communityId**
  - Type: String
feedElementId
Type: String
ID of the feed element.

isLikedByCurrentUser
Type: Boolean
Specifies if the context user likes (true) or unlikes (false) the feed element.

Return Value
Type: ConnectApi.ChatterLikePage
If the feed element doesn’t support the ChatterLikes capability, the return value is ConnectApi.NotFoundException.

updatePinnedFeedElements(communityId, feedType, subjectId, pin)
Pin or unpin feed elements to a group or topic feed.

API Version
41.0

Available to Guest Users
41.0

Requires Chatter
Yes

Signature
public static ConnectApi.PinCapability updatePinnedFeedElements(String communityId, ConnectApi.FeedType feedType, String subjectId, ConnectApi.PinCapabilityInput pin)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Record and Topics.

subjectId
Type: String
If feedType is Record, subjectId must be a group ID. If feedType is Topics, subjectId must be a topic ID.

pin
Type: ConnectApi.PinCapabilityInput
A `ConnectApi.PinCapabilityInput` object indicating the feed element to pin or unpin.

Return Value
Type: `ConnectApi.PinCapability`
If the feed doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

`updateStream(communityId, streamId, streamInput)`
Update a Chatter feed stream.

API Version
39.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ChatterStream updateStream(String communityId, String streamId, ConnectApi.ChatterStreamInput streamInput)`

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`streamId`
Type: `String`
ID of the Chatter feed stream.

`streamInput`
Type: `ConnectApi.ChatterStreamInput`

Return Value
Type: `ConnectApi.ChatterStream`

`voteOnFeedElementPoll(communityId, feedElementId, myChoiceId)`
Vote on a poll or change your vote on a poll.

API Version
32.0
Requires Chatter
Yes

Signature

public static ConnectApi.PollCapability voteOnFeedElementPoll(String communityId, String feedElementId, String myChoiceId)

Parameters

  communityId
   Type: String
   Use either the ID for a community, internal, or null.

  feedElementId
   Type: String
   ID of the feed element.

  myChoiceId
   Type: String
   ID of the poll item you’re voting for. The key prefix for poll items is 09A.

Return Value

Type: ConnectApi.PollCapability Class
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

Example

ConnectApi.PollCapability poll = ConnectApi.ChatterFeeds.voteOnFeedElementPoll(null, '0D5D0000000XZaUKAW', '09A0000000000TKMAY');

ChatterFeeds Test Methods

The following are the test methods for ChatterFeeds. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

IN THIS SECTION:

  setTestGetFeedElementsFromFeed(communityId, feedType, result)
  Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

  setTestGetFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)
  Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

  setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, result)
  Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.
setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, threadedCommentsCollapsed, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.getFeedElementsFromFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, threadedCommentsCollapsed, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.getFeedElementsFromFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, filter, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, filter, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.
setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, filter, threadedCommentsCollapsed, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, customFilter, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

setTestGetFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching getFeedElementsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching getFeedElementsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, result)

Register a ConnectApi.FeedElementPage object to be returned when the getFeedElementsFromFilterFeedUpdatedSince method is called in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, result)

Register a ConnectApi.FeedElementPage object to be returned when the getFeedElementsUpdatedSince method is called in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.
setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, filter, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, customFilter, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, customFilter, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetRelatedPosts(communityId, feedElementId, filter, maxResults, result)
Register a ConnectApi.RelatedFeedPosts object to be returned when the matching ConnectApi.getRelatedPosts(communityId, feedElementId, filter, maxResults) method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestGetTopUnansweredQuestions(communityId, result) (Pilot)
Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.getTopUnansweredQuestions method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestGetTopUnansweredQuestions(communityId, filter, result) (Pilot)
Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.getTopUnansweredQuestions method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestGetTopUnansweredQuestions(communityId, pageSize, result) (Pilot)
Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.getTopUnansweredQuestions method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestGetTopUnansweredQuestions(communityId, filter, pageSize, result) (Pilot)
Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.getTopUnansweredQuestions method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedElements(communityId, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you receive an exception.
setTestSearchFeedElements(communityId, q, sortParam, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you
receive an exception.

setTestSearchFeedElements(communityId, q, threadedCommentsCollapsed, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you
receive an exception.

setTestSearchFeedElements(communityId, q, pageParam, pageSize, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you
receive an exception.

setTestSearchFeedElements(communityId, q, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you
receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q,
filter, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.
setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize,
sortParam, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize,
sortParam, q, filter, result)
Register a ConnectApi.FeedElementPage object to be returned when searchFeedElementsInFeed is called
with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize,
sortParam, q, customFilter, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize,
sortParam, q, showInternalOnly, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize,
sortParam, q, showInternalOnly, filter, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize,
sortParam, q, showInternalOnly, customFilter, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFilterFeed method is called in a test context. Use the method with the same
parameters or you receive an exception.

setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFilterFeed method is called in a test context. Use the method with the same
parameters or you receive an exception.
setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFilterFeed method is called in a test context. Use the method with the same
parameters or you receive an exception.

setTestSearchStreams(communityId, q, result)
Register a ConnectApi.ChatterStreamPage object to be returned when the matching
ConnectApi.searchStream(communityId, q) method is called in a test context. Use the method with the same
parameters or you receive an exception.

setTestSearchStreams(communityId, q, sortParam, result)
Register a ConnectApi.ChatterStreamPage object to be returned when the matching
ConnectApi.searchStream(communityId, q, sortParam) method is called in a test context. Use the method with the same
parameters or you receive an exception.

setTestSearchStreams(communityId, q, pageParam, pageSize, result)
Register a ConnectApi.ChatterStreamPage object to be returned when the matching
ConnectApi.searchStreams(communityId, q, pageParam, pageSize) method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchStreams(communityId, q, pageParam, pageSize, sortParam, result)
Register a ConnectApi.ChatterStreamPage object to be returned when the matching
ConnectApi.searchStreams(communityId, q, pageParam, pageSize, sortParam) method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchStreams(communityId, q, pageParam, pageSize, sortParam, globalScope, result)
Register a ConnectApi.ChatterStreamPage object to be returned when the matching
ConnectApi.searchStreams(communityId, q, pageParam, pageSize, sortParam, globalScope) method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestGetFeedElementsFromFeed(communityId, feedType, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with
matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedElementsFromFeed(communityId, feedType)
Testing ConnectApi Code

setTestGetFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The only valid value for this parameter is Company.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.
result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)
Testing ConnectApi Code

setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.
**feedType**
Type: `ConnectApi.FeedType`
- The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

**recentCommentCount**
Type: `Integer`
- Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
- Specify the amount of content in a feed.
  - `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
- The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
- Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
- Values are:
  - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
  - `CreatedDateDesc`—Sorts by most recent creation date.
  - `LastModifiedDateDesc`—Sorts by most recent activity.
  - `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
  - `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
- If you pass in `null`, the default value `CreatedDateDesc` is used.

**result**
Type: `ConnectApi.FeedElementPage`
- The object containing test data.
Return Value
Type: Void

SEE ALSO:
getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)
Testing ConnectApi Code

setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
32.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. The only valid value is Home.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

**filter**
Type: ConnectApi.FeedFilter
Specifies the feed filters.
- AllQuestions—Feed elements that are questions.
- AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- CommunityScoped—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.
- QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- SolvedQuestions—Feed elements that are questions and that have a best answer.
- UnansweredQuestions—Feed elements that are questions and that don't have any answers.
- UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- Unread—Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the Record feed of a group.
- UnsolvedQuestions—Feed elements that are questions and that don't have a best answer.

**result**
Type: ConnectApi.FeedElementPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter)
Testing ConnectApi Code

setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentscollapsed, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.getFeedElementsFromFeed method is called in a test context. Use the method with the same parameters or
you receive an exception.

API Version
44.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType
feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam,
Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter,
Boolean threadedCommentscollapsed, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. The only valid value is Home.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays
custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also
displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**  
Type: **Integer**

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**  
Type: **ConnectApi.FeedSortOrder**

Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `createdDateDesc` is used.

**filter**  
Type: **ConnectApi.FeedFilter**

Specifies the feed filters.
- `AllQuestions`—Feed elements that are questions.
- `AuthoredBy`—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- `CommunityScoped`—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- `QuestionsWithCandidateAnswers`—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- `QuestionsWithCandidateAnswersReviewedPublished`—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- `Read`—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- `SolvedQuestions`—Feed elements that are questions and that have a best answer.
- `UnansweredQuestions`—Feed elements that are questions and that don’t have any answers.
- `UnansweredQuestionsWithCandidateAnswers`—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- `Unread`—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the `Record` feed of a group.
- `UnsolvedQuestions`—Feed elements that are questions and that don’t have a best answer.

**threadedCommentsCollapsed**  
Type: **Boolean**
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
Testing ConnectApi Code
getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed)

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The feed type.

subjectId
Type: String
The ID of the context user or the alias me.

result
Type: ConnectApi.FeedElementPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getFeedElementsFromFeed(communityId, feedType, subjectId)
Testing ConnectApi Code

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- getFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam)
- Testing ConnectApi Code

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.
feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedElementPage
The object containing test data.
Return Value
Type: Void

Testing ConnectApi Code

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.
**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

**showInternalOnly**
Type: Boolean
Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

**result**
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)
- Testing ConnectApi Code

**setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, result)**
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**
35.0
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedType**
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.UserProfile.

**subjectId**
Type: String
The ID of any user. To specify the context user, use the user ID or the alias me.

**recentCommentCount**
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

**filter**
Type: `ConnectApi.FeedFilter`
Value must be `ConnectApi.FeedFilter.CommunityScoped`. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out. Currently, feed elements scoped to communities have a User or a Group parent record. However, other parent record types could be scoped to communities in the future.

**result**
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter)

Testing ConnectApi Code

`setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed, result)`

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.getFeedElementsFromFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
44.0

Signature

`public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)`

Parameters

**communityId**
Type: `String`
Use either the ID for a community, internal, or null.
feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.UserProfile.

subjectId
Type: String
The ID of any user. To specify the context user, use the user ID or the alias me.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

filter
Type: ConnectApi.FeedFilter
Value must be ConnectApi.FeedFilter.CommunityScoped. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out. Currently, feed elements scoped to communities have a User or a Group parent record. However, other parent record types could be scoped to communities in the future.
threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
The ID of a case.
recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortBy
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

customFilter
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

result
Type: ConnectApi.FeedElementPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:

Testing ConnectApi Code

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrdersortParam, Boolean showInternalOnly, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: **String**

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: **Integer**

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: **ConnectApi.FeedSortOrder**

Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. If you pass in `null`, the default value CreatedDateDesc is used.

**showInternalOnly**
Type: **Boolean**

Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

**result**
Type: **ConnectApi.FeedElementPage**

The object containing test data.

Return Value
Type: **Void**

SEE ALSO:

- Testing ConnectApi Code
setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, filter, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
32.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  Any record ID, including a group ID.

recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreateDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreateDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreateDateDesc` is used.

**showInternalOnly**
Type: `Boolean`
Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

**filter**
Type: `ConnectApi.FeedFilter`
Specifies the feed filters.
- `AllQuestions`—Feed elements that are questions.
- `AuthoredBy`—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- `CommunityScoped`—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- `QuestionsWithCandidateAnswers`—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- `QuestionsWithCandidateAnswersReviewedPublished`—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- `Read`—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- `SolvedQuestions`—Feed elements that are questions and that have a best answer.
- `UnansweredQuestions`—Feed elements that are questions and that don’t have any answers.
- `UnansweredQuestionsWithCandidateAnswers`—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- `Unread`—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the `Record` feed of a group.
UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

**result**
Type: `ConnectApi.FeedElementPage`

The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, filter)`

### `setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, filter, threadedCommentsCollapsed, result)`

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

**API Version**
44.0

**Signature**
```java
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)
```

**Parameters**

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **feedType**
  Type: `ConnectApi.FeedType`
  Value must be `ConnectApi.FeedType.Record`.

- **subjectId**
  Type: `String`
  Any record ID, including a group ID.

- **recentCommentCount**
  Type: `Integer`
The maximum number of comments to return with each feed item. The default value is 3.

`elementsPerBundle`
Type: `Integer`
Maximum number of feed elements per bundle. The default and maximum value is 10.

`density`
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- Relevance—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

`showInternalOnly`
Type: `Boolean`
Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

`filter`
Type: `ConnectApi.FeedFilter`
Specifies the feed filters.
- AllQuestions—Feed elements that are questions.
- AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- CommunityScoped—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.

Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.

SolvedQuestions—Feed elements that are questions and that have a best answer.

UnansweredQuestions—Feed elements that are questions and that don’t have any answers.

UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.

UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, filter, threadedCommentsCollapsed)
Testing ConnectApi Code

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, customFilter, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, String customFilter, ConnectApi.FeedElementPage result)

Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or null.

`feedType`
Type: `ConnectApi.FeedType`
Value must be `ConnectApi.FeedType.Record`.

`subjectId`
Type: String
The ID of a case.

`recentCommentCount`
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

`elementsPerBundle`
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

`density`
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in null, the first page is returned.

`pageSize`
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

### showInternalOnly

**Type:** Boolean

Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

### customFilter

**Type:** String

Custom filter that applies only to the case feed. See `customFeedFilter` in the [Metadata API Developer Guide](#) for supported values.

### result

**Type:** `ConnectApi.FeedElementPage`

The object containing test data.

**Return Value**

**Type:** Void

**SEE ALSO:**

- `getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, customFilter)`
- `Testing ConnectApi Code`

---

### setTestGetFeedElementsFromFeed

**Signature**

```java
def setTestGetFeedElementsFromFeed(communityId: String, feedType: ConnectApi.FeedType, subjectId: String, recentCommentCount: Integer, elementsPerBundle: Integer, density: ConnectApi.FeedDensity, pageParam: String, pageSize: Integer, sortParam: String, showInternalOnly: Boolean, customFilter: String, threadedCommentsCollapsed: Boolean, result: ConnectApi.FeedElementPage)
```

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.getFeedElementsFromFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

44.0

---

1185
ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, String customFilter, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  The ID of a case.

recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  - CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  - CreatedDateDesc—Sorts by most recent creation date.
  - LastModifiedDateDesc—Sorts by most recent activity.
• **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.

• **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

**showInternalOnly**
- **Type**: Boolean
- Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

**customFilter**
- **Type**: String
- Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

**threadedCommentsCollapsed**
- **Type**: Boolean
- Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

**result**
- **Type**: ConnectApi.FeedElementPage
- The object containing test data.

**Return Value**
- **Type**: Void

**SEE ALSO:**

**setTestGetFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, result)**
Register a ConnectApi.FeedElementPage object to be returned when the matching getFeedElementsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**
- 31.0

**Signature**
public static Void setTestGetFeedElementsFromFilterFeed(String communityId, String subjectId, String keyPrefix, ConnectApi.FeedElementPage result)

**Parameters**
- **communityId**
  - **Type**: String
Use either the ID for a community, internal, or null.

**subjectId**

Type: String

The ID of the context user or the alias me.

**keyPrefix**

Type: String

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

**result**

Type: `ConnectApi.FeedElementPage`

The object containing test data.

Return Value

Type: Void

- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

result

Type: ConnectApi.FeedElementPage

The object containing test data.

Return Value

Type: Void

SEE ALSO:

getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam)

Testing ConnectApi Code

setTestGetFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, result)

Register a ConnectApi.FeedElementPage object to be returned when the getFeedElementsFromFilterFeedUpdatedSince method is called in a test context.

API Version

31.0

Signature

public static Void setTestGetFeedElementsFromFilterFeedUpdatedSince(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedElementPage result)

Parameters

communityId

Type: String

Use either the ID for a community, internal, or null.

subjectId

Type: String
keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token defining the modification time stamp of the feed and the sort order.
The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

Testing ConnectApi Code
setTestGetFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, Home, Moderation, and PendingReview.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

**result**
- **Type:** `ConnectApi.FeedElementPage`
  - The object containing test data.

Return Value
- **Type:** Void

SEE ALSO:

- `Testing ConnectApi Code`

```java
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)
```

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**
- 32.0

**Signature**

Function to register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**

Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**

Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**

Type: `String`

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

**filter**

Type: `ConnectApi.FeedFilter`

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the `Record` feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**result**

Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: Void

Testing ConnectApi Code

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
One of these values:
- Files
- Groups
- News
- People
- Record

subjectId
Type: String
If feedType is ConnectApi.Record, subjectId can be any record ID, including a group ID. Otherwise, it must be the context user or the alias me.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince)
- Testing ConnectApi Code

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
31.0
public static Void setTestGetFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince,
Boolean showInternalOnly, ConnectApi.FeedElementPage result)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  Any record ID, including a group ID.

recentCommentCount
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
  Type: String
  An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.
  The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

showInternalOnly
  Type: Boolean
Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

API Version
35.0

Signature
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.UserProfile.

subjectId
Type: String
The ID of any user. To specify the context user, use the user ID or the alias me.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token defining the modification time stamp of the feed and the sort order.
The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

filter
Type: ConnectApi.FeedFilter
Value must be ConnectApi.FeedFilter.CommunityScoped. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out. Currently, feed elements scoped to communities have a User or a Group parent record. However, other parent record types could be scoped to communities in the future.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, filter)
Testing ConnectApi Code
setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, customFilter, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
40.0

Signature
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, String customFilter, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
The ID of a case.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
Type: `String`
An opaque token defining the modification time stamp of the feed and the sort order.

The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

**customFilter**
Type: `String`
Custom filter that applies only to the case feed. See `customFeedFilter` in the Metadata API Developer Guide for supported values.

**result**
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
`getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, customFilter)`

Testing ConnectApi Code

```java
setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, result)
```

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**

31.0

**Signature**

```java
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly, ConnectApi.FeedElementPage result)
```
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.
The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly)`

Testing ConnectApi Code

```java
setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, filter, result)
```

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
32.0

Signature
```
public static Void setTestGetFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer
elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
String updatedSince, Boolean showInternalOnly, ConnectApi.FeedFilter filter,
ConnectApi.FeedElementPage result)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, internal, or `null`.

- `feedType`
  Type: `ConnectApi.FeedType`
  Value must be `ConnectApi.FeedType.Record`.

- `subjectId`
  Type: `String`
  Any record ID, including a group ID.

- `recentCommentCount`
  Type: `Integer`
  Maximum number of comments to return with each feed element. The default value is 3.

- `elementsPerBundle`
  Type: `Integer`
Maximum number of feed elements per bundle. The default and maximum value is 10.

**density**

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**

Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**

Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**

Type: `String`

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

**showInternalOnly**

Type: `Boolean`

Specifies whether to show only feed elements from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

**filter**

Type: `ConnectApi.FeedFilter`

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.

UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

Testing ConnectApi Code

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, customFilter, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
40.0

Signature
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly, String customFilter, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.
subjectId
Type: String
The ID of a case.
recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.
elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.
density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.
pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.
The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.
showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.
customFilter
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.
result
Type: ConnectApi.FeedElementPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, customFilter)
Testing ConnectApi Code

setTestGetRelatedPosts(communityId, feedElementId, filter, maxResults, result)
Register a ConnectApi.RelatedFeedPosts object to be returned when the matching ConnectApi.getRelatedPosts(communityId, feedElementId, filter, maxResults) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
37.0

Signature
public static Void setTestGetRelatedPosts(String communityId, String feedElementId, ConnectApi.RelatedFeedPostType filter, Integer maxResults, ConnectApi.RelatedFeedPosts result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element. The feed element must be a question.

filter
Type: ConnectApi.RelatedFeedPostType
Specifies the type of related feed post. Values are:
• Answered—Related questions that have at least one answer.
• BestAnswer—Related questions that have a best answer.
• Generic—All types of related questions, including answered, with a best answer, and unanswered.
• Unanswered—Related questions that don’t have answers.
Generic is the default value.

maxResults
Type: Integer
The maximum number of results to return. You can return up to 25 results; 5 is the default.
result
Type: `ConnectApi.RelatedFeedPosts`
The object containing test data.
In version 37.0 and later, related feed posts are questions.

Return Value
Type: Void

**setTestGetTopUnansweredQuestions** *(communityId, result) (Pilot)*

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.getTopUnansweredQuestions` method is called in a test context. Use the method with the same parameters or you receive an exception.

**Note:** We provide top-five unanswered questions to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can’t guarantee acceptance. Top five unanswered questions isn’t generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can’t guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features.

API Version
42.0

Signature

```
public static Void setTestGetTopUnansweredQuestions(String communityId,
ConnectApi.FeedElementPage result)
```

Parameters

`communityId`
Type: `String`
ID of the community.

`result`
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:

Testing ConnectApi Code

```
setTestSearchFeedElements(communityId, q, result)
```

Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature
```
public static Void setTestSearchFeedElements(String communityId, String q,
ConnectApi.FeedElementPage result)
```
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
searchFeedElements(communityId, q)
Testing ConnectApi Code

setTestSearchFeedElements(communityId, q, sortParam, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature

public static Void setTestSearchFeedElements(String communityId, String q, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

**result**

Type: `ConnectApi.FeedElementPage`

The object containing test data.

Return Value

Type: Void

SEE ALSO:

- `searchFeedElements(communityId, q, sortParam)`

**setTestSearchFeedElements(communityId, q, threadedCommentsCollapsed, result)**

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElements` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

44.0

Signature

```java
public static Void setTestSearchFeedElements(String communityId, String q, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)
```

Parameters

**communityId**

Type: `String`

Use either the ID for a community, internal, or null.

**q**

Type: `String`

Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
threadedCommentsCollapsed
   Type: Boolean
   Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

result
   Type: ConnectApi.FeedElementPage
   The object containing test data.

Return Value
   Type: Void

SEE ALSO:

API Version
  31.0

Signature
  public static Void setTestSearchFeedElements(String communityId, String q, Integer recentCommentCount, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)
Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

q
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

recentCommentCount
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
  • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  If you pass in null, the default value CreatedDateDesc is used.

result
  Type: ConnectApi.FeedElementPage
  The object containing test data.

Return Value
  Type: Void

SEE ALSO:
  searchFeedElements(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)
  Testing ConnectApi Code
**setTestSearchFeedElementsInFeed(communityId, feedType, q, result)**

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**
31.0

**Signature**

```java
public static Void setTestSearchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String q, ConnectApi.FeedElementPage result)
```

**Parameters**

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `feedType`
  Type: `ConnectApi.FeedType`
  The type of feed. Valid values are `Company`, `DirectMessageModeration`, `Home`, `Moderation`, and `PendingReview`.

- `q`
  Type: `String`
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

- `result`
  Type: `ConnectApi.FeedElementPage`
  The object containing test data.

**Return Value**

Type: `Void`

**SEE ALSO:**

- `searchFeedElementsInFeed(communityId, feedType, q)`
- `Testing ConnectApi Code`

**setTestSearchFeedElementsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q, result)**

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
31.0

Signature
public static Void setTestSearchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, Home, Moderation, and PendingReview.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
Type: ConnectApi.FeedElementPage
The object containing test data.
Return Value
Type: Void

searchFeedElementsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)

Testing ConnectApi Code

setTestSearchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature
public static Void setTestSearchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density,
String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q,
ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, Home, Moderation, and PendingReview.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**result**
Type: ConnectApi.FeedElementPage
The object containing test data.

**Return Value**
Type: Void

**SEE ALSO:**

**setTestSearchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter, result)**
Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**
32.0
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. The only valid value is Home.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.
**q**
Type: **String**
Required and cannot be **null**. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See **Wildcards**.

**filter**
Type: **ConnectApi.FeedFilter**
Specifies the feed filters.
- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the **UserProfile** feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the **UserProfile** feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the **Record** feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don't have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the **Record** feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don't have a best answer.

**result**
Type: **ConnectApi.FeedElementPage**
The object containing test data.

Return Value
Type: **Void**

SEE ALSO:
- **searchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter)**
- **Testing ConnectApi Code**

**setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, q, result)**

API Version
31.0

Signature
public static Void setTestSearchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, String q, ConnectApi.FeedElementPage
result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter,
Landing, and Streams.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feed type is UserProfile, subjectId
can be any user ID. If feedType is any other value, subjectId must be the ID of the context user or the alias me.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including
wildcards. See Wildcards.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

searchFeedElementsInFeed(communityId, feedType, subjectId, q)

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, pageParam,
pageSize, sortParam, q, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.
API Version
31.0

Signature
public static Void setTestSearchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Order of feed items in the feed.
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Search term. Searches keywords in the user or group name. A minimum of one character is required. This parameter does not support wildcards. This parameter is required.

result
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `searchFeedElementsInFeed` (communityId, feedType, subjectId, pageParam, pageSize, sortParam, q)

Testing ConnectApi Code

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature

```java
public static Void setTestSearchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)
```

Parameters

- `communityId` Type: `String`
  Use either the ID for a community, internal, or `null`.

- `feedType` Type: `ConnectApi.FeedType`
  The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessages, Filter, Landing, and Streams.

- `subjectId` Type: `String`
  If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.  

1228

ConnectApi Namespace

Apex Developer Guide
recentCommentCount

Type: **Integer**

Maximum number of comments to return with each feed element. The default value is 3.

density

Type: **ConnectApi.FeedDensity**

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam

Type: **String**

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

pageSize

Type: **Integer**

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

sortParam

Type: **ConnectApi.FeedSortOrder**

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

q

Type: **String**

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See **Wildcards**.

result

Type: **ConnectApi.FeedElementPage**

The object containing test data.
Return Value
Type: Void

SEE ALSO:

Testing ConnectApi Code

define setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter, result):
    Register a ConnectApi.FeedElementPage object to be returned when searchFeedElementsInFeed is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
35.0

Signature
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.UserProfile.

subjectId
Type: String
The ID of any user. To specify the context user, use the user ID or the alias me.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
The amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String

Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder

Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

q
Type: String

One or more keywords to search for in the feed elements visible to the context user. The search string can contain wildcards and must contain at least two characters that aren’t wildcards. See Wildcards.

filter
Type: ConnectApi.FeedFilter

Value must be ConnectApi.FeedFilter.CommunityScoped. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out. Currently, feed elements scoped to communities have a User or a Group parent record. However, other parent record types could be scoped to communities in the future.

result

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
The ID of a case.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
The amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

Testing ConnectApi Code

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**
31.0
**Signature**

```java
public static Void setTestSearchFeedElementsInFeed(String communityId,
       ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
       ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
       ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly,
       ConnectApi.FeedElementPage result)
```

**Parameters**

- **communityId**
  - **Type:** String
  - Use either the ID for a community, internal, or null.

- **feedType**
  - **Type:** ConnectApi.FeedType
  - Value must be ConnectApi.FeedType.Record.

- **subjectId**
  - **Type:** String
  - Any record ID, including a group ID.

- **recentCommentCount**
  - **Type:** Integer
  - Maximum number of comments to return with each feed element. The default value is 3.

- **density**
  - **Type:** ConnectApi.FeedDensity
  - Specify the amount of content in a feed.
  - - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- **pageParam**
  - **Type:** String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

- **pageSize**
  - **Type:** Integer
  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

- **sortParam**
  - **Type:** ConnectApi.FeedSortOrder
  - Values are:
    - **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
    - **CreatedDateDesc**—Sorts by most recent creation date.
    - **LastModifiedDateDesc**—Sorts by most recent activity.
Most Viewed—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.

Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

$q$

Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

`showInternalOnly`  
Type: `Boolean`

Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

`result`  
Type: `ConnectApi.FeedElementPage`

The object containing test data.

Return Value

Type: `Void`

SEE ALSO:

- `searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly)`
- `Testing ConnectApi Code`

`setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, filter, result)`

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

32.0

Signature

```java
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)
```
Parameters

**communityId**
Type: `String`
Use either the ID for a community, internal, or `null`.

**feedType**
Type: `ConnectApi.FeedType`
Value must be `ConnectApi.FeedType.Record`.

**subjectId**
Type: `String`
Any record ID, including a group ID.

**recentCommentCount**
Type: `Integer`
Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

**showInternalOnly**
Type: `Boolean`
Specifies whether to show only feed elements from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

**filter**
Type: `ConnectApi.FeedFilter`
Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the `Record` feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**result**
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, filter)`
- Testing ConnectApi Code
setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, customFilter, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, String customFilter, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
The ID of a case.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
**pageSize**
Type: Integer

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder

Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

**q**
Type: String

Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**showInternalOnly**
Type: Boolean

Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

**customFilter**
Type: String

Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

**result**
Type: ConnectApi.FeedElementPage

The object containing test data.

Return Value
Type: Void

SEE ALSO:

Testing ConnectApi Code

**setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q, result)**

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
31.0

Signature
public static Void setTestSearchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, String q, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q)
Testing ConnectApi Code

setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.
Signature

public static Void setTestSearchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

subjectId
  Type: String
  The ID of the context user or the alias me.

keyPrefix
  Type: String
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
  • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  If you pass in null, the default value CreatedDateDesc is used.

q
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
result
Type: `ConnectApi.FeedElementPage`

The object containing test data.

Return Value
Type: Void

SEE ALSO:

Testing ConnectApi Code

```java
setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)
```

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFilterFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature

```java
public static Void setTestSearchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)
```

Parameters

`communityId`
Type: `String`

Use either the ID for a community, `internal`, or `null`.

`subjectId`
Type: `String`

The ID of the context user or the alias `me`.

`keyPrefix`
Type: `String`

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of `005` and Group objects have a prefix of `0F9`.

`recentCommentCount`
Type: `Integer`

Maximum number of comments to return with each feed element. The default value is 3.
**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

**result**
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)`
- Testing ConnectApi Code
`setTestSearchStreams(communityId, q, result)`

Register a `ConnectApi.ChatterStreamPage` object to be returned when the matching `ConnectApi.searchStream(communityId, q)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
```
public static Void setTestSearchStreams(String communityId, String q, 
ConnectApi.ChatterStreamPage result)
```

Parameters
```
communityId
  Type: String
  Use either the ID for a community, internal, or null.

q
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
  Type: ConnectApi.ChatterStreamPage
  The object containing test data.
```

Return Value
Type: Void

SEE ALSO:
```
searchStreams(communityId, q)
Testing ConnectApi Code

`setTestSearchStreams(communityId, q, sortParam, result)`

Register a `ConnectApi.ChatterStreamPage` object to be returned when the matching `ConnectApi.searchStream(communityId, q, sortParam)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0
Signature

```
public static Void setTestSearchStreams(String communityId, String q, ConnectApi.SortOrder sortParam, ConnectApi.ChatterStreamPage result)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **q**
  - Type: String
  - Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **sortParam**
  - Type: `ConnectApi.SortOrder`
  - Specifies the sort order. Values are:
    - Ascending—Items are in ascending alphabetical order (A-Z).
    - Descending—Items are in descending alphabetical order (Z-A).
    - MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.
  - If not specified, default value is Ascending.

- **result**
  - Type: `ConnectApi.ChatterStreamPage`
  - The object containing test data.

Return Value

- Type: Void

SEE ALSO:

- `searchStreams(communityId, q, sortParam)`

**setTestSearchStreams(communityId, q, pageParam, pageSize, result)**

Register a `ConnectApi.ChatterStreamPage` object to be returned when the matching `ConnectApi.searchStreams(communityId, q, pageParam, pageSize)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

- 40.0
Signature
public static Void setTestSearchStreams(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.ChatterStreamPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

result
Type: ConnectApi.ChatterStreamPage
The object containing test data.

Return Value
Type: Void

setTestSearchStreams(communityId, q, pageParam, pageSize, sortParam, globalScope, result)

Register a ConnectApi.ChatterStreamPage object to be returned when the matching
ConnectApi.searchStreams(communityId, q, pageParam, pageSize, sortParam, globalScope) method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
41.0

Signature

```java
public static Void setTestSearchStreams(String communityId, String q, Integer pageParam,
Integer pageSize, ConnectApi.SortOrder sortParam, Boolean globalScope,
ConnectApi.ChatterStreamPage result)
```

Parameters

- **communityId**
  - Type: **String**
  - Use either the ID for a community, `internal`, or `null`.

- **q**
  - Type: **String**
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **pageParam**
  - Type: **Integer**
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  - Type: **Integer**
  - Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

- **sortParam**
  - Type: **ConnectApi.SortOrder**
  - Specifies the sort order. Values are:
    - **Ascending**—Items are in ascending alphabetical order (A-Z).
    - **Descending**—Items are in descending alphabetical order (Z-A).
    - **MostRecentlyViewed**—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.
      If not specified, default value is **Ascending**.

- **globalScope**
  - Type: **Boolean**
  - Specifies whether to get streams from all the context user’s communities, regardless of the `communityId` value.

- **result**
  - Type: **ConnectApi.ChatterStreamPage**
  - The object containing test data.

Return Value

Type: **Void**
Retired ChatterFeeds Methods

The following methods for ChatterFeeds are retired.

IN THIS SECTION:

- deleteFeedItem(communityId, feedItemId)
  Delete a feed item.

- getCommentsForFeedItem(communityId, feedItemId)
  Get comments for a feed item.

- getCommentsForFeedItem(communityId, feedItemId, pageParam, pageSize)
  Get a page of comments for a feed item.

- getFeedItem(communityId, feedItemId)
  Get a feed item.

- getFeedItemBatch(communityId, feedItemIds)
  Get a list of feed items.

- getFeedItemsFromFeed(communityId, feedType)
  Get feed items from the Company, Home, and Moderation feeds.

- getFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)
  Get a page of sorted feed items from the Company, Home, and Moderation feeds.

- getFeedItemsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)
  Get a page of sorted feed items from the Company, Home, and Moderation feeds. Each feed item contains no more than the specified number of comments.

- getFeedItemsFromFeed(communityId, feedType, subjectId)
  Get feed items from a feed for a user or record.

- getFeedItemsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam)
  Get a page of sorted feed items from a feed for a user or record.

- getFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam)
  Get a page of sorted feed items from a feed for a user or record. Each feed item includes no more than the specified number of comments.

- getFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)
  Get a page of sorted feed items from a record feed for a user or record. Each feed item includes no more than the specified number of comments. Specify whether to return feed items posted by internal (non-community) users only.

- getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix)
  Get feed items from a feed filtered by a key prefix for a user.

- getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam)
  Get a page of sorted feed items from a feed filtered by a key prefix for a user.

- getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam)
  Get a page of sorted feed items from a feed filtered by a key prefix for a user. Each feed item contains no more than the specified number of comments.
getFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, updatedSince)
Get a page of feed items from a feed filtered by a key prefix for a user. Include only feed items that have been updated since the time specified in the updatedSince parameter.

getFeedItemsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)
Get a page of feed items from the Company, Home, and Moderation feeds. Include only feed items that have been updated since the time specified in the updatedSince parameter. Each feed item contains no more than the specified number of comments.

getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince)
Get a page of feed items from the Files, Groups, News, People, and Record feeds. Include only feed items that have been updated since the time specified in the updatedSince parameter. Each feed item contains no more than the specified number of comments.

getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly)
Get a page of feed items from a record feed. Include only feed items that have been updated since the time specified in the updatedSince parameter. Specify whether to return feed items posted by internal (non-community) users only.

getFeedPoll(communityId, feedItemId)
Get the poll associated with a feed item.

getLikesForFeedItem(communityId, feedItemId)
Get likes for a feed item.

getLikesForFeedItem(communityId, feedItemId, pageParam, pageSize)
Get a page of likes for a feed item.

likeFeedItem(communityId, feedItemId)
Like a feed item for the context user.

postComment(communityId, feedItemId, text)
Post a plain-text comment to a feed item.

postComment(communityId, feedItemId, comment, feedItemFileUpload)
Post a rich-text comment to a feed item. Use this method to include mentions and to attach a file to a comment.

postFeedElement(communityId, feedElement, feedElementFileUpload)
Post a rich-text feed element. Include mentions and hashtag topics, attach a file to a feed element, and associate action link groups with a feed element. You can also use this method to share a feed element and add a comment.

postFeedItem(communityId, feedType, subjectId, text)
Post a plain-text feed item.

postFeedItem(communityId, feedType, subjectId, feedItemInput, feedItemFileUpload)
Post a rich-text feed item to a feed. Use this method to include mentions and hashtag topics and to attach a file to a feed item. You can also use this method to share a feed item and add a comment.

searchFeedItems(communityId, q)
Get the feed items that match the search criteria.

searchFeedItems(communityId, q, sortParam)
Get the sorted feed items that match the search criteria.

searchFeedItems(communityId, q, pageParam, pageSize)
Get a page of feed items that match the search criteria.
searchFeedItems(communityId, q, pageParam, pageSize, sortParam)
Get a page of sorted feed items that match the search criteria.

searchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)
Get a page of sorted feed items that match the search criteria.

searchFeedItemsInFeed(communityId, feedType, q)
Get the feed items from the Company, Home, and Moderation feeds that match the search criteria.

searchFeedItemsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items from the Company, Home, and Moderation feeds that match the search criteria.

searchFeedItemsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items from the Company, Home, and Moderation feeds that match the search criteria. Each feed item includes no more than the specified number of comments.

searchFeedItemsInFeed(communityId, feedType, subjectId, q)
Get the feed items from a feed that match the search criteria.

searchFeedItemsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items from a feed for a user or record that match the search criteria.

searchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items from a feed that match the search criteria. Each feed item includes no more than the specified number of comments.

searchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly)
Get a page of sorted feed items from a feed for a user or record that match the search criteria. Each feed item includes no more than the specified number of comments. Specify whether to return feed items posted by internal (non-community) users only.

searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q)
Get the feed items that match the search criteria from a feed filtered by a key prefix for a user.

searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items that match the search criteria from a feed filtered by a key prefix for a user.

searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items that match the search criteria from a feed filtered by a key prefix for a user. Each feed item includes no more than the specified number of comments.

shareFeedElement(communityId, subjectId, feedElementType, originalFeedElementId)
Share the originalFeedElementId as the context user.

shareFeedItem(communityId, feedType, subjectId, originalFeedItemId)
Share the originalFeedItemId to the feed specified by the feedType.

updateBookmark(communityId, feedItemId, isBookmarkedByCurrentUser)
Bookmark a feed item or remove a bookmark from a feed item.

voteOnFeedPoll(communityId, feedItemId, myChoiceId)
Vote or change your vote on a feed poll.

setTestGetFeedItemsFromFeed(communityId, feedType, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.
setTestGetFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

setTestGetFeedItemsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching getFeedItemsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching getFeedItemsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching getFeedItemsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, updatedSince, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching getFeedItemsFromFilterFeedUpdatedSince method is called in a test context.

setTestGetFeedItemsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, ConnectApi.FeedItemPage, results)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.
setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, 
updatedSince, showInternalOnly, result)

Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsUpdatedSince is called with 
matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestSearchFeedItems(communityId, q, result)

Register a test feed item page to be returned when searchFeedItems(communityId, q) is called during a test.

setTestSearchFeedItems(communityId, q, sortParam, result)

Register a test feed item page to be returned when searchFeedItems(String, String, 
ConnectApi.FeedSortOrder) is called during a test.

setTestSearchFeedItemsInFeed(communityId, q, pageParam, pageSize, result)

Register a test feed item page to be returned when searchFeedItems(String, String, String, Integer) is 
called during a test.

setTestSearchFeedItems(communityId, q, pageParam, pageSize, sortParam, result)

Register a test feed item page to be returned when searchFeedItems(String, String, String, Integer, 
ConnectApi.FeedSortOrder) is called during a test.

setTestSearchFeedItemsInFeed(communityId, feedType, q, result)

Register a ConnectApi.FeedItemPage object to be returned when the matching 
ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters 
or you receive an exception.

setTestSearchFeedItemsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedItemPage object to be returned when the matching 
ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters 
or you receive an exception.

setTestSearchFeedItemsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedItemPage object to be returned when the matching 
ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters 
or you receive an exception.

setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, q, result)

Register a ConnectApi.FeedItemPage object to be returned when the matching 
ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters 
or you receive an exception.

setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedItemPage object to be returned when the matching 
ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters 
or you receive an exception.

setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedItemPage object to be returned when the matching 
ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters 
or you receive an exception.
setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, result)
Register a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q, result)
Register a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFilterFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedItemsInFilterFeed(communityId, feedType, subjectId, keyPrefix, pageParam, pageSize, sortParam, q, result)
Register a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFilterFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedItemsInFilterFeed(communityId, feedType, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)
Register a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFilterFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

```
deleteFeedItem(communityId, feedItemIds)
```
Delete a feed item.

API Version
28.0–31.0

| Important: In version 32.0 and later, use `deleteFeedElement(communityId, feedElementId)`. |

Requires Chatter
Yes

Signature
```
public static Void deleteFeedItem(String communityId, String feedItemIds)
```

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, `internal`, or `null`.

- **feedItemIds**
  Type: String
  The ID for a feed item.
Return Value
Type: Void

`getCommentsForFeedItem(communityId, feedItemId)`
Get comments for a feed item.

API Version
28.0–31.0

⚠️ **Important**: In version 32.0 and later, use `getCommentsForFeedElement(communityId, feedElementId)`.

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
`public static ConnectApi.CommentPage getCommentsForFeedItem(String communityId, String feedItemId)`

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`feedItemId`
Type: `String`
The ID for a feed item.

Return Value
Type: `ConnectApi.CommentPage`

`getCommentsForFeedItem(communityId, feedItemId, pageParam, pageSize)`
Get a page of comments for a feed item.

API Version
28.0–31.0

⚠️ **Important**: In version 32.0 and later, use `getCommentsForFeedElement(communityId, feedElementId, pageParam, pageSize)`.
Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature

```
public static ConnectApi.CommentPage getCommentsForFeedItem(String communityId, String feedItemId, String pageParam, Integer pageSize)
```

Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or null.

`feedItemId`
Type: String
The ID for a feed item.

`pageParam`
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

`pageSize`
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.CommentPage

`getFeedItem(communityId, feedItemId)`
Get a feed item.

API Version
28.0–31.0

⚠️ Important: In version 32.0 and later, use `getFeedElement(communityId, feedElementId)`.

Available to Guest Users
31.0 only
getFeedItemBatch(communityId, feedItemIds)

Get a list of feed items.

API Version
31.0–31.0

Important: In version 32.0 and later, use getFeedElementBatch(communityId, feedElementIds).

Requires Chatter
Yes

Signature
public static ConnectApi.BatchResult[] getFeedItemBatch(String communityId, List<String> feedItemIds)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedItemIds
Type: String
The ID for a feed item.
feedItemIds
Type: List<String>
A list of up to 500 feed item IDs.

Return Value
Type: ConnectApi.BatchResult[]
The ConnectApi.BatchResult.getResult() method returns a ConnectApi.FeedItem object and errors for feed items that didn’t load.

Example
```java
// Create a list of feed items.
ConnectApi.FeedItemPage feedItemPage = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(null, ConnectApi.FeedType.Company);
System.debug(feedItemPage);

// Create a list of feed item IDs.
List<String> feedItemIds = new List<String>();
for (ConnectApi.FeedItem aFeedItem : feedItemPage.items){
    feedItemIds.add(aFeedItem.id);
}

// Get info about the feed items in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterFeeds.getFeedItemBatch(null, feedItemIds);
for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the header for each feed item.
        ConnectApi.FeedItem aFeedItem;
        if(batchResult.getResult() instanceof ConnectApi.FeedItem) {
            aFeedItem = (ConnectApi.FeedItem) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(aFeedItem.header.text);
    } else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
```

getFeedItemsFromFeed(communityId, feedType)
Get feed items from the Company, Home, and Moderation feeds.

API Version
28.0–31.0
Important: In version 32.0 and later, use `getFeedElementsFromFeed(communityId, feedType)`.

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
```
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

Return Value

Type: `ConnectApi.FeedItemPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetFeedItemsFromFeed(communityId, feedType, result)`

Testing ConnectApi Code

```
getFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)
```

Get a page of sorted feed items from the `Company`, `Home`, and `Moderation` feeds.

API Version

28.0–31.0

Important: In version 32.0 and later, use `getFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)`.
Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature

```
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId,
ConnectApi.FeedType feedType, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam)
```

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedItemPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```java
setTestGetFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)
```

Testing ConnectApi Code

```java
getFeedItemsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)
```

Get a page of sorted feed items from the Company, Home, and Moderation feeds. Each feed item contains no more than the specified number of comments.

API Version

29.0–31.0

⚠️ Important: In version 32.0 and later, use `getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)`.

Available to Guest Users

31.0 only

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedType`
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

- `recentCommentCount`
  - Type: `Integer`
  - The maximum number of comments to return with each feed item. The default value is 3.
density
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

pageSize
Type: `Integer`
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

sortParam
Type: `ConnectApi.FeedSortOrder`
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- Relevance—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

Return Value
Type: `ConnectApi.FeedItemPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetFeedItemsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, result)`

Testing ConnectApi Code

`getFeedItemsFromFeed(communityId, feedType, subjectId)`
Get feed items from a feed for a user or record.
API Version
28.0–31.0

⚠️ Important: In version 32.0 and later, use `getFeedElementsFromFeed(communityId, feedType, subjectId)`.

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId,
 ConnectApi.FeedType feedType, String subjectId)
```

Parameters

`communityId`
Type: `String`

Use either the ID for a community, `internal`, or `null`.

`feedType`
Type: `ConnectApi.FeedType`

The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

`subjectId`
Type: `String`

If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

Return Value

Type: `ConnectApi.FeedItemPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, result)`
- Testing `ConnectApi` Code
getFeedItemsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam)

Get a page of sorted feed items from a feed for a user or record.

API Version
28.0–31.0

**Important:** In version 32.0 and later, use getFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam).

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
```
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam)
```

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedType**
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

**subjectId**
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
sortParam
Type: ConnectApi.FeedSortOrder
Values are:

• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, result)

Testing ConnectApi Code

gGetFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam)
Get a page of sorted feed items from a feed for a user or record. Each feed item includes no more than the specified number of comments.

API Version
29.0–31.0

Important: In version 32.0 and later, use getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam).

Available to Guest Users
31.0 only

Requires Chatter
Yes
Signature

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId,
    ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
    ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
    ConnectApi.FeedSortOrder sortParam)
```

Parameters

**communityId**
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**feedType**
Type: `ConnectApi.FeedType`
The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

**subjectId**
Type: `String`
If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

**recentCommentCount**
Type: `Integer`
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
• **CreatedDateDesc**—Sorts by most recent creation date.
• **LastModifiedDateDesc**—Sorts by most recent activity.
• **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

Return Value

Type: `ConnectApi.FeedItemPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

`setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, result)`

**Testing ConnectApi Code**

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId,
    ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
    ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
    ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly)
```

Get a page of sorted feed items from a record feed for a user or record. Each feed item includes no more than the specified number of comments. Specify whether to return feed items posted by internal (non-community) users only.

**API Version**

30.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)`.

**Available to Guest Users**

31.0 only

**Requires Chatter**

Yes

**Signature**

`public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly)`
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedType**
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

**subjectId**
Type: String
Any record ID, including a group ID.

**recentCommentCount**
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**showInternalOnly**
Type: Boolean
Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly, result)
Testing ConnectApi Code

getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix)
Get feed items from a feed filtered by a key prefix for a user.

API Version
28.0–31.0

⚠️ Important: In version 32.0 and later, use getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix).

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage getFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 00S and Group objects have a prefix of 0F9.
Return Value

Type: `ConnectApi.FeedItemPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, result)`
- Testing ConnectApi Code

`getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam)`

Get a page of sorted feed items from a feed filtered by a key prefix for a user.

API Version

28.0–31.0

⚠️ **Important:** In version 32.0 and later, use `getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam)`.

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **subjectId**
  - Type: `String`
  - The ID of the context user or the alias `me`.

- **keyPrefix**
  - Type: `String`
  - A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.
pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, result)
Testing ConnectApi Code

gGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam)
Get a page of sorted feed items from a feed filtered by a key prefix for a user. Each feed item contains no more than the specified number of comments.

API Version
29.0–31.0

Important: In version 32.0 and later, use getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam).
Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFilterFeed(String communityId,
String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity
density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, internal, or `null`.

- `subjectId`
  Type: `String`
  The ID of the context user or the alias me.

- `keyPrefix`
  Type: `String`
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

- `recentCommentCount`
  Type: `Integer`
  The maximum number of comments to return with each feed item. The default value is 3.

- `density`
  Type: `ConnectApi.FeedDensity`
  Specify the amount of content in a feed.
  
  - `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  
  - `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- `pageParam`
  Type: `String`
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- `pageSize`
  Type: `Integer`
  Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- `sortParam`
  Type: `ConnectApi.FeedSortOrder`
  Values are:
  
  - `createdDateAsc`—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
Returns a list of feed items, where each feed item contains a title, a message, and a timestamp. The feed items are sorted by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**Return Value**

Type: `ConnectApi.FeedItemPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

- `setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, result)`

**Testing ConnectApi Code**

`getFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, updatedSince)`

Get a page of feed items from a feed filtered by a key prefix for a user. Include only feed items that have been updated since the time specified in the `updatedSince` parameter.

**API Version**

30.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince)`.

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFilterFeedUpdatedSince(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)
```

**Parameters**

- `communityId`
  
  Type: `String`
Use either the ID for a community, `internal`, or `null`.

**subjectId**
- **Type:** `String`
- The ID of the context user or the alias `me`.

**keyPrefix**
- **Type:** `String`
- A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of `00S` and Group objects have a prefix of `0F9`.

**recentCommentCount**
- **Type:** `Integer`
- The maximum number of comments to return with each feed item. The default value is 3.

**density**
- **Type:** `ConnectApi.FeedDensity`
- Specify the amount of content in a feed.
  - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
- **Type:** `String`
- The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
- **Type:** `Integer`
- Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
- **Type:** `String`
- An opaque token containing information about the last modified date of the feed. Do not construct this token. To retrieve this token, call `getFeedItemsFromFilterFeed` and take the value from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

**Return Value**
- **Type:** `ConnectApi.FeedItemPage`

**Usage**
This method returns only feed items that have been updated since the time specified in the `updatedSince` argument. A feed item is considered to be updated if it was created since the last feed request, or if `sort=LastModifiedDateDesc` and a comment was added to the feed item since the last feed request. Adding likes and topics doesn’t update a feed item.
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```
setTestGetFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, updatedSince, result)
```

Testing `ConnectApi` Code

```java
public static ConnectApi.FeedItemPage getFeedItemsUpdatedSince(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)
```

Get a page of feed items from the Company, Home, and Moderation feeds. Include only feed items that have been updated since the time specified in the `updatedSince` parameter. Each feed item contains no more than the specified number of comments.

API Version

30.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)`.

Available to Guest Users

31.0 only

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedItemPage getFeedItemsUpdatedSince(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)
```

Parameters

- `communityId` Type: `String`
  
  Use either the ID for a community, `internal`, or `null`.

- `feedType` Type: `ConnectApi.FeedType`
  
  The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

- `recentCommentCount` Type: `Integer`
  
  The maximum number of comments to return with each feed item. The default value is 3.
density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedItemPage response body.

Return Value
Type: ConnectApi.FeedItemPage

Usage
This method returns only feed items that have been updated since the time specified in the updatedSince argument. A feed item is considered to be updated if it was created since the last feed request, or if sort=LastModifiedDateDesc and a comment was added to the feed item since the last feed request. Adding likes and topics doesn’t update a feed item.

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example
This example gets the feed items in the company feed and grabs the updatesToken property from the returned object. It then passes the value of updatesToken to the getFeedItemsUpdatedSince method to get the feed items updated since the first call:

```java
// Get the feed items in the company feed and return the updatesToken
String communityId = null;

// Get the feed and extract the update token
ConnectApi.FeedItemPage page = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(communityId,
    ConnectApi.FeedType.Company);

// page.updatesToken is opaque and has a value like '2:1384549034000'
// Get the feed items that changed since the provided updatesToken
```
ConnectApi.FeedItemPage feedItems = ConnectApi.ChatterFeeds.getFeedItemsUpdatedSince
(communityId, ConnectApi.FeedType.Company, 1, ConnectApi.FeedDensity.AllUpdates, null, 1, page.updatesToken);

SEE ALSO:
setTestGetFeedItemsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, ConnectApi.FeedItemPage, results)
Testing ConnectApi Code

getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince)

Get a page of feed items from the Files, Groups, News, People, and Record feeds. Include only feed items that have been updated since the time specified in the updatedSince parameter. Each feed item contains no more than the specified number of comments.

API Version
30.0–31.0

Important: In version 32.0 and later, use getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince).

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage getFeedItemsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
One of these values:
• Files
• Groups
• News
- **People**
- **Record**

**subjectId**
Type: **String**
If `feedType` is `ConnectApi.Record`, `subjectId` can be any record ID, including a group ID. Otherwise, it must be the context user or the alias `me`.

**recentCommentCount**
Type: **Integer**
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: **ConnectApi.FeedDensity**
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: **String**
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: **Integer**
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
Type: **String**
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

**Return Value**
Type: **ConnectApi.FeedItemPage**

**Usage**
This method returns only feed items that have been updated since the time specified in the `updatedSince` argument. A feed item is considered to be updated if it was created since the last feed request, or if `sort=LastModifiedDateDesc` and a comment was added to the feed item since the last feed request. Adding likes and topics doesn’t update a feed item.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.
Example

This example gets the feed items in the news feed and grabs the `updatesToken` property from the returned object. It then passes the value of `updatesToken` to the `getFeedItemsUpdatedSince` method to get the feed items updated since the first call:

```java
// Get the feed items in the news feed and return the updatesToken
String communityId = null;
String subjectId = 'me';

// Get the feed and extract the update token
ConnectApi.FeedItemPage page = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(communityId,
ConnectApi.FeedType.News, subjectId);

// page.updatesToken is opaque and has a value like '2:1384549034000'

// Get the feed items that changed since the provided updatesToken
ConnectApi.FeedItemPage feedItems= ConnectApi.ChatterFeeds.getFeedItemsUpdatedSince
  (communityId, ConnectApi.FeedType.News, subjectId, 1, ConnectApi.FeedDensity.AllUpdates,
null, 1, page.updatesToken);
```

SEE ALSO:

```java
setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize,
updatedSince, result)
```

Testing ConnectApi Code

```java
getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount,
density, pageParam, pageSize, updatedSince, showInternalOnly)
```

Get a page of feed items from a record feed. Include only feed items that have been updated since the time specified in the `updatedSince` parameter. Specify whether to return feed items posted by internal (non-community) users only.

API Version
30.0–31.0

⚠️ Important: In version 32.0 and later, use `getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount,
density, pageParam, pageSize, updatedSince, showInternalOnly)`. 

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedItemPage getFeedItemsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince,
Boolean showInternalOnly)
```
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedType**
Type: `ConnectApi.FeedType`
Value must be `ConnectApi.FeedType.Record`.

**subjectId**
Type: String
Any record ID, including a group ID.

**recentCommentCount**
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**updatedSince**
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

**showInternalOnly**
Type: Boolean
Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

Return Value
Type: `ConnectApi.FeedItemPage`
Usage
This method returns only feed items that have been updated since the time specified in the `updatedSince` argument. A feed item is considered to be updated if it was created since the last feed request, or if `sort=LastModifiedDateDesc` and a comment was added to the feed item since the last feed request. Adding likes and topics doesn’t update a feed item.

If `showInternalOnly` is `true` and Salesforce Communities is enabled, feed items from communities are included. Otherwise, only feed items from the internal community are included.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example
This example gets the feed items in the news feed and grabs the `updatesToken` property from the returned object. It then passes the value of `updatesToken` to the `getFeedItemsUpdatedSince` method to get the feed items updated since the first call:

```java
// Get the feed items in the news feed and return the updatesToken
String communityId = null;
String subjectId = 'me';

// Get the feed and extract the update token
ConnectApi.FeedItemPage page = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(communityId,
 ConnectApi.FeedType.News, subjectId);

// page.updatesToken is opaque and has a value like '2:1384549034000'

// Get the feed items that changed since the provided updatesToken
ConnectApi.FeedItemPage feedItems = ConnectApi.ChatterFeeds.getFeedItemsUpdatedSince
    (communityId, ConnectApi.FeedType.News, subjectId, 1, ConnectApi.FeedDensity.AllUpdates,
    null, 1, page.updatesToken, true);
```

SEE ALSO:
- `setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize,
  updatedSince, showInternalOnly, result)`
- Testing ConnectApi Code

`getFeedPoll(communityId, feedItemId)`
Get the poll associated with a feed item.

API Version
28.0–31.0

⚠️ Important: In version 32.0 and later, use `getElementPoll(communityId, feedElementId)`. 

Requires Chatter
Yes
**Signature**

```java
public static ConnectApi.FeedPoll getFeedPoll(String communityId, String feedItemId)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedItemId**
  - Type: `String`
  - The ID for a feed item.

**Return Value**

Type: `ConnectApi.FeedPoll`

**Note:** Triggers on FeedItem objects run before their attachment and capabilities information is saved, which means that `ConnectApi.FeedItem.attachment` information and `ConnectApi.FeedElement.capabilities` information may not be available in the trigger.

---

**getLikesForFeedItem(communityId, feedItemId)**

Get likes for a feed item.

**API Version**

28.0–31.0

**Important:** In version 32.0 and later, use `getLikesForFeedElement(communityId, feedElementId)`.

**Available to Guest Users**

31.0 only

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.ChatterLikePage getLikesForFeedItem(String communityId, String feedItemId)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`. 
**feedItemId**
Type: **String**
The ID for a feed item.

Return Value
Type: **ConnectApi.ChatterLikePage**

**getLikesForFeedItem(communityId, feedItemId, pageParam, pageSize)**
Get a page of likes for a feed item.

**API Version**
28.0–31.0

**Important:** In version 32.0 and later, use `getLikesForFeedElement(communityId, feedElementId, pageParam, pageSize)`.

Available to Guest Users
31.0 only

Requires Chatter
Yes

**Signature**
```
public static ConnectApi.ChatterLikePage getLikesForFeedItem(String communityId, String feedItemId, Integer pageParam, Integer pageSize)
```

**Parameters**

- **communityId**
  Type: **String**
  Use either the ID for a community, `internal`, or `null`.

- **feedItemId**
  Type: **String**
  The ID for a feed item.

- **pageParam**
  Type: **Integer**
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  Type: **Integer**
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
Return Value
Type: `ConnectApi.ChatterLikePage`

```java
likeFeedItem(communityId, feedItemId)
```
Like a feed item for the context user.

API Version
28.0–31.0

⚠️ Important: In version 32.0 and later, use `likeFeedElement(communityId, feedElementId)`.

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterLike likeFeedItem(String communityId, String feedItemId)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `feedItemId`
  Type: `String`
  The ID for a feed item.

Return Value
Type: `ConnectApi.ChatterLike`
If the context user already liked the feed item, this method is a non-operation and returns the existing like.

```java
postComment(communityId, feedItemId, text)
```
Post a plain-text comment to a feed item.

API Version
28.0–31.0

⚠️ Important: In version 32.0 and later, use `postCommentToFeedElement(communityId, feedElementId, text)`.

Requires Chatter
Yes
public static ConnectApi.Comment postComment(String communityId, String feedItemId, String text)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedItemId
Type: String
The ID for a feed item.

text
Type: String
The text of the comment. Mentions are downgraded to plain text. To include a mention that links to a user, call postComment(communityId, feedItemId, comment, feedItemFileUpload) and pass the mention in a ConnectApi.CommentInput object.

Return Value
Type: ConnectApi.Comment

Usage
If hashtags or links are detected in text, they are included in the comment as hashtag and link segments. Mentions are not detected in text and are not separated out of the text.
Feed items and comments can contain up to 10,000 characters.

postComment(communityId, feedItemId, comment, feedItemFileUpload)
Post a rich-text comment to a feed item. Use this method to include mentions and to attach a file to a comment.

API Version
28.0–31.0

Important: In version 32.0 and later, use postCommentToFeedElement(communityId, feedElementId, comment, feedElementFileUpload).

Requires Chatter
Yes

Signature
public static ConnectApi.Comment postComment(String communityId, String feedItemId, ConnectApi.CommentInput comment, ConnectApi.BinaryInput feedItemFileUpload)
Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **feedItemId**
  - Type: String
  - The ID for a feed item.

- **comment**
  - Type: ConnectApi.CommentInput
  - In the CommentInput object, specify rich text, including @mentions. Optionally, in the CommentInput.attachment property, specify an existing file or a new file.

- **feedItemFileUpload**
  - Type: ConnectApi.BinaryInput
  - If you specify a NewFileAttachmentInput object in the CommentInput.attachment property, specify the new binary file to attach in this argument. Otherwise, do not specify a value.

Return Value

- Type: ConnectApi.Comment

Usage

Feed items and comments can contain up to 10,000 characters.

Sample: Posting a Comment with a New File Attachment

To post a comment and upload and attach a new file to the comment, create a ConnectApi.CommentInput object and a ConnectApi.BinaryInput object to pass to the ConnectApi.ChatterFeeds.postComment method.

```java
String communityId = null;
String feedItemId = '0D5D0000000Kcd1';

ConnectApi.CommentInput input = new ConnectApi.CommentInput();
ConnectApi.TextSegmentInput textSegment;

ConnectApi.TextSegmentInput textSegment;

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageInput.messageSegments.add(textSegment);

input.body = messageInput;

ConnectApi.NewFileAttachmentInput attachmentInput = new ConnectApi.NewFileAttachmentInput();
attachmentInput.description = 'The description of the file';
attachmentInput.title = 'contentFile.txt';
input.attachment = attachmentInput;
```
**postFeedElement(communityId, feedElement, feedElementFileUpload)**

Post a rich-text feed element. Include mentions and hashtag topics, attach a file to a feed element, and associate action link groups with a feed element. You can also use this method to share a feed element and add a comment.

**API Version**

31.0–35.0

⚠️ **Important:** In version 36.0 and later, this method is no longer available because you can’t create a feed post and upload a binary file in the same call. Upload files to Salesforce first, and then use `postFeedElement(communityId, feedElement)` to create the feed post and attach the files.

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.FeedElement postFeedElement(String communityId,
ConnectApi.FeedElementInput feedElement, ConnectApi.BinaryInput feedElementFileUpload)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedElement**
  - Type: `ConnectApi.FeedElementInput`
  - Specify rich text, including mentions. Optionally, specify a link, a poll, an existing file, or a new file.

- **feedElementFileUpload**
  - Type: `ConnectApi.BinaryInput`
  - Specify the new binary file to attach to the post only if you also specify a `NewFileAttachmentInput` object in the `feedElement` parameter. Otherwise, pass `null`.

**Return Value**

Type: `ConnectApi.FeedElement`
Example for Posting a Feed Element with a New (Binary) File

```java
ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
input.subjectId = 'me';

ConnectApi.ContentCapabilityInput contentInput = new ConnectApi.ContentCapabilityInput();
contentInput.title = 'Title';

ConnectApi.FeedElementCapabilitiesInput capabilities = new
ConnectApi.FeedElementCapabilitiesInput();
capabilities.content = contentInput;
input.capabilities = capabilities;

String text = 'These are the contents of the new file.';
Blob myBlob = Blob.valueOf(text);
ConnectApi.BinaryInput binInput = new ConnectApi.BinaryInput(myBlob, 'text/plain',
'fileName');

ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), input, binInput);
```

**postFeedItem(communityId, feedType, subjectId, text)**

Post a plain-text feed item.

**API Version**

28.0–31.0

**Important:** In version 32.0 and later, use `postFeedElement(communityId, subjectId, feedElementType, text).`

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.FeedItem postFeedItem(String communityId, ConnectApi.FeedType
feedType, String subjectId, String text)
```

**Parameters**

**communityId**

Type: `String`

Use either the ID for a community, internal, or `null`.

**feedType**

Type: `ConnectApi.FeedType`

One of the following:

- News
- Record
• UserProfile
  Use Record to post to a group.

**subjectId**
Type: String
The value depends on the `feedType`:
- News—ID of the context user or the keyword `me`.
- Record—ID of any record with a feed, including groups.
- UserProfile—ID of any user.

**text**
Type: String
Text of the feed item. Mentions are downgraded to plain text. To include a mention that links to the user, call the `postFeedItem(communityId, feedType, subjectId, feedItemInput, feedItemFileUpload)` method and pass the mention in a `ConnectApi.FeedItemInput` object.

Return Value
Type: `ConnectApi.FeedItem`

**Note:** Triggers on `FeedItem` objects run before their attachment and capabilities information is saved, which means that `ConnectApi.FeedItem.attachment` information and `ConnectApi.FeedElement.capabilities` information may not be available in the trigger.

Usage
Feed items and comments can contain up to 10,000 characters.

Posts to `ConnectApi.FeedType.UserProfile` in API versions 23.0 and 24.0 created user status updates, not feed items. For posts to the User Profile Feed in those API versions, the character limit is 1,000 characters.

**postFeedItem(communityId, feedType, subjectId, feedItemInput, feedItemFileUpload)**
Post a rich-text feed item to a feed. Use this method to include mentions and hashtag topics and to attach a file to a feed item. You can also use this method to share a feed item and add a comment.

**API Version**
28.0–31.0

**Important:** In version 32.0 and later, use `postFeedElement(communityId, feedElement, feedElementFileUpload)`.

Requires Chatter
Yes

**Signature**
```java
public static ConnectApi.FeedItem postFeedItem(String communityId, ConnectApi.FeedType feedType, String subjectId, ConnectApi.FeedItemInput feedItemInput,
                                               ConnectApi.BinaryInput feedItemFileUpload)
```
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedType**
Type: ConnectApi.FeedType
One of the following:
- News
- Record
- UserProfile
To post a feed item to a group, use Record and use a group ID as the subjectId.

**subjectId**
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

**feedItemInput**
Type: ConnectApi.FeedItemInput
In the FeedItemInput object, specify rich text. Optionally, in the FeedItemInput.attachment property, specify a link, a poll, an existing file, or a new file.

**feedItemFileUpload**
Type: ConnectApi.BinaryInput
If you specify a NewFileAttachmentInput object in the FeedItemInput.attachment property, specify the new binary file to attach in this argument. Otherwise, do not specify a value.

Return Value
Type: ConnectApi.FeedItem

Note: Triggers on FeedItem objects run before their attachment and capabilities information is saved, which means that ConnectApi.FeedItem.attachment information and ConnectApi.FeedElement.capabilities information may not be available in the trigger.

Usage
Feed items and comments can contain up to 10,000 characters. Posts to ConnectApi.FeedType.UserProfile in API versions 23.0 and 24.0 created user status updates, not feed items. For posts to the User Profile Feed in those API versions, the character limit is 1,000 characters.
Example for Sharing a Feed Item and Adding a Comment

To share a feed item and add a comment, create a `ConnectApi.FeedItemInput` object containing the comment and the feed item to share. Then pass the object to `ConnectApi.ChatterFeeds.postFeedItem` in the `feedItemInput` argument. The message segments in the message body input are used as the comment.

```java
ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
input.originalFeedItemId = '0D5D0000000JuAG';

body.body = 'I hope you enjoy this post I found in another group.';

ConnectApi.ChatterFeeds.postFeedItem(null, ConnectApi.FeedType.UserProfile, 'me', input, null);
```

Example for Posting a Mention to a User Profile Feed

To post to a user profile feed and include an @mention, call the `ConnectApi.ChatterFeeds.postFeedItem` method.

```java
String communityId = null;
ConnectApi.FeedType feedType = ConnectApi.FeedType.UserProfile;

ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
ConnectApi.TextSegmentInput textSegment;
ConnectApi.MentionSegmentInput mentionSegment = new ConnectApi.MentionSegmentInput();
messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>(){
    textSegment = new ConnectApi.TextSegmentInput();
    textSegment.text = 'Hey there ';
    messageInput.messageSegments.add(textSegment);
    mentionSegment.id = '005D0000001LLO1';
    messageInput.messageSegments.add(mentionSegment);
    textSegment = new ConnectApi.TextSegmentInput();
    textSegment.text = '. How are you?';
    messageInput.messageSegments.add(textSegment);

    input.body = messageInput;

    ConnectApi.FeedItem feedItemRep = ConnectApi.ChatterFeeds.postFeedItem(communityId, feedType, 'me', input, null);
```

`searchFeedItems(communityId, q)`

Get the feed items that match the search criteria.
API Version
28.0–31.0

⚠️ **Important:** In version 32.0 and later, use `searchFeedElements(communityId, q)`.

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedItemPage searchFeedItems(String communityId, String q)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `q`
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

Type: `ConnectApi.FeedItemPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchFeedItems(communityId, q, result)`
- Testing ConnectApi Code

`searchFeedItems(communityId, q, sortParam)`

Get the sorted feed items that match the search criteria.

API Version
28.0–31.0
Important: In version 32.0 and later, use searchFeedElements(communityId, q, sortParam).

Available to Guest Users

31.0 only

Requires Chatter

Yes

Signature

public static ConnectApi.FeedItemPage searchFeedItems(String communityId, String q, ConnectApi.FeedSortOrder sortParam)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

Return Value

Type: ConnectApi.FeedItemPage
Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- setTestSearchFeedItems(communityId, q, sortParam, result)
  Testing ConnectApi Code

**searchFeedItems(communityId, q, pageParam, pageSize)**
Get a page of feed items that match the search criteria.

API Version
28.0–31.0

**Important:** In version 32.0 and later, use searchFeedElements(communityId, q, pageParam, pageSize).

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
```
public static ConnectApi.FeedItemPage searchFeedItems(String communityId, String q, String pageParam, Integer pageSize)
```

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestSearchFeedItems(communityId, q, pageParam, pageSize, result)

Yes

Signature
public static ConnectApi.FeedItemPage searchFeedItems(String communityId, String q, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

**searchFeedItems** (communityId, q, recentCommentCount, pageParam, pageSize, sortParam)
Get a page of sorted feed items that match the search criteria.

**API Version**
29.0–31.0

**Important:** In version 32.0 and later, use searchFeedElements(communityId, q, recentCommentCount, pageParam, pageSize, sortParam).

**Available to Guest Users**
31.0 only
Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedItemPage searchFeedItems(String communityId, String q,
Integer recentCommentCount, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder
sortParam)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **q**
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **recentCommentCount**
  - Type: `Integer`
  - The maximum number of comments to return with each feed item. The default value is 3.

- **pageParam**
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **sortParam**
  - Type: `ConnectApi.FeedSortOrder`
  - Values are:
    - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
    - `CreatedDateDesc`—Sorts by most recent creation date.
    - `LastModifiedDateDesc`—Sorts by most recent activity.
    - `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
    - `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
  - Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

Return Value

- Type: `ConnectApi.FeedItemPage`
Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

### `searchFeedItemsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)`
Get a page of sorted feed items from the Company, Home, and Moderation feeds that match the search criteria.

API Version
28.0–31.0

**Important:** In version 32.0 and later, use `searchFeedElementsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)`.

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
```
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters
- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.
- **feedType**
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.
- **pageParam**
  - Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**Return Value**
Type: ConnectApi.FeedItemPage

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
setTestSearchFeedItemsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q, result)

Testing ConnectApi Code

**searchFeedItemsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q)**
Get a page of sorted feed items from the Company, Home, and Moderation feeds that match the search criteria. Each feed item includes no more than the specified number of comments.

**API Version**
29.0–31.0
Important: In version 32.0 and later, use `searchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q)`.

Available to Guest Users

31.0 only

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters

`communityId`

Type: String

Use either the ID for a community, internal, or null.

`feedType`

Type: `ConnectApi.FeedType`

The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

`recentCommentCount`

Type: Integer

The maximum number of comments to return with each feed item. The default value is 3.

`density`

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`

Type: String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in null, the first page is returned.

`pageSize`

Type: Integer

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

`sortParam`

Type: `ConnectApi.FeedSortOrder`
Values are:

- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Yes
**Signature**

```java
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String q)
```

**Parameters**

- `communityId`
  - Type: String
  - Use either the ID for a community, internal, or null.

- `feedType`
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessages, Filter, Landing, and Streams.

- `subjectId`
  - Type: String
  - If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

- `q`
  - Type: String
  - Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**Return Value**

- Type: `ConnectApi.FeedItemPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**searchFeedItemsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q)**

Get a page of sorted feed items from a feed for a user or record that match the search criteria.

**API Version**

28.0–31.0

**Important:** In version 32.0 and later, use `searchFeedElementsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q)`. 
Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature

public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Order of feed items in the feed.

• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Search term. Searches keywords in the user or group name. A minimum of one character is required. This parameter does not support wildcards. This parameter is required.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q, result)

Testing ConnectApi Code

searchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items from a feed that match the search criteria. Each feed item includes no more than the specified number of comments.

API Version
29.0–31.0

Important: In version 32.0 and later, use searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q).

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
Parameters

*communityId*
Type: String
Use either the ID for a community, internal, or null.

*feedType*
Type: `ConnectApi.FeedType`
The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessages, Filter, Landing, and Streams.

*subjectId*
Type: String
If *feedType* is Record, *subjectId* can be any record ID, including a group ID. If *feedType* is Streams, *subjectId* must be a stream ID. If *feedType* is Topics, *subjectId* must be a topic ID. If *feedType* is UserProfile, *subjectId* can be any user ID. If the *feedType* is any other value, *subjectId* must be the ID of the context user or the alias me.

*recentCommentCount*
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

*density*
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in null, the first page is returned.

*pageSize*
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

*sortParam*
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

\[ q \]

Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

Return Value

Type: `ConnectApi.FeedItemPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly)`

Testing ConnectApi Code

```java
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly)
```

Get a page of sorted feed items from a feed for a user or record that match the search criteria. Each feed item includes no more than the specified number of comments. Specify whether to return feed items posted by internal (non-community) users only.

API Version

30.0–31.0

**Important:** In version 32.0 and later, use `searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly)`.

Available to Guest Users

31.0 only

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly)
```
Parameters

**communityId**
Type: **String**
Use either the ID for a community, `internal`, or `null`.

**feedType**
Type: `ConnectApi.FeedType`
Value must be `ConnectApi.FeedType.Record`.

**subjectId**
Type: **String**
Any record ID, including a group ID.

**recentCommentCount**
Type: **Integer**
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: **String**
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: **Integer**
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**
Type: **String**
**searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q)**

Get the feed items that match the search criteria from a feed filtered by a key prefix for a user.

**API Version**

28.0–31.0

⚠️ **Important:** In version 32.0 and later, use `searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q)`.

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.FeedItemPage searchFeedItemsInFilterFeed(String communityId, String subjectId, String keyPrefix, String q)
```

**Parameters**

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `subjectId`
  - Type: `String`
  - The ID of the context user or the alias `me`. 
keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q, result)

Testing ConnectApi Code

searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items that match the search criteria from a feed filtered by a key prefix for a user.

API Version
28.0–31.0

Important: In version 32.0 and later, use searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q).

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage searchFeedItemsInFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

**subjectId**
Type: String
The ID of the context user or the alias me.

**keyPrefix**
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 00S and Group objects have a prefix of 0F9.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedItemPage
Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```
setTestSearchFeedItemsInFilterFeed(communityId, feedType, subjectId, keyPrefix, pageParam, pageSize, sortParam, q, result)
```

Testing ConnectApi Code

```
searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)
```

Get a page of sorted feed items that match the search criteria from a feed filtered by a key prefix for a user. Each feed item includes no more than the specified number of comments.

API Version
29.0–31.0

⚠️ **Important:** In version 32.0 and later, use `searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)`.

Requires Chatter
Yes

Signature

```
public static ConnectApi.FeedItemPage searchFeedItemsInFilterFeed(String communityId,
                      String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity
density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String
q)
```

Parameters

- `communityId`
  
  Type: `String`

  Use either the ID for a community, `internal`, or `null`.

- `subjectId`
  
  Type: `String`

  The ID of the context user or the alias `me`.

- `keyPrefix`
  
  Type: `String`

  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of `005` and Group objects have a prefix of `0F9`.

- `recentCommentCount`
  
  Type: `Integer`

  The maximum number of comments to return with each feed item. The default value is 3.
density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedItemPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchFeedItemsInFilterFeed(communityId, feedType, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)`
- `Testing ConnectApi Code`

`shareFeedElement(communityId, subjectId, feedElementType, originalFeedElementId)`

Share the `originalFeedElementId` as the context user.

API Version

31.0–38.0

⚠️ **Important:** In version 39.0 and later, use `postFeedElement(communityId, feedElement)` or `updateFeedElement(communityId, feedElementId, feedElement)` with the `ConnectApi.FeedEntityShareCapabilityInput` to share a feed entity with a feed element.

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElement shareFeedElement(String communityId, String subjectId, ConnectApi.FeedElementType feedElementType, String originalFeedElementId)
```

Parameters

`communityId`

Type: `String`

Use either the ID for a community, `internal`, or `null`.

`subjectId`

Type: `String`

The ID of the user or group with whom to share the feed element.

`feedElementType`

Type: `ConnectApi.FeedElementType`

Values are:

- `Bundle`—A container of feed elements. A bundle also has a body made up of message segments that can always be gracefully degraded to text-only values.
- `FeedItem`—A feed item has a single parent and is scoped to one community or across all communities. A feed item can have capabilities such as bookmarks, canvas, content, comment, link, poll. Feed items have a body made up of message segments that can always be gracefully degraded to text-only values.
• Recommendation—A recommendation is a feed element with a recommendations capability. A recommendation suggests records to follow, groups to join, or applications that are helpful to the context user.

originalFeedElementId
  Type: String
  The ID of the feed element to share.

Return Value
  Type: ConnectApi.FeedElement

Example
  ConnectApi.ChatterFeeds.shareFeedElement(null, '0F9RR0000004CPw', ConnectApi.FeedElementType.FeedItem, '0D5RR0000004Gxc');

shareFeedItem(communityId, feedType, subjectId, originalFeedItemId)

Share the originalFeedItemId to the feed specified by the feedType.

API Version
  28.0–31.0

⚠️ Important:
  • In version 32.0–38.0, use shareFeedElement(communityId, subjectId, feedElementType, originalFeedElementId).
  • In version 39.0 and later, use postFeedElement(communityId, feedElement) or updateFeedElement(communityId, feedElementId, feedElement) with the ConnectApi.FeedEntityShareCapabilityInput.

Requires Chatter
  Yes

Signature
  public static ConnectApi.FeedItem shareFeedItem(String communityId, ConnectApi.FeedType feedType, String subjectId, String originalFeedItemId)

Parameters
  communityId
    Type: String
    Use either the ID for a community, internal, or null.

  feedType
    Type: ConnectApi.FeedType
    One of the following:
To share a feed item with a group, use `Record` and use a group ID as the `subjectId`.

**subjectId**

Type: `String`

The value depends on the value of `feedType`:

- **News**—`subjectId` must be the ID of the context user or the keyword `me`.
- **Record**—`subjectId` can be a group ID or the ID of the context user (or `me`).
- **UserProfile**—`subjectId` can be any user ID.

**originalFeedItemId**

Type: `String`

The ID of the feed item to share.

**Return Value**

Type: `ConnectApi.FeedItem`

**Example**

To share a feed item with a group, pass in the community ID (or `null`), the feed type `Record`, the group ID, and the ID of the feed item to share.

```java
ConnectApi.ChatterFeeds.shareFeedItem(null, ConnectApi.FeedType.Record, '0F9D00000000izf', '0D5D0000000JuAG');
```

**updateBookmark(communityId, feedItemId, isBookmarkedByCurrentUser)**

Bookmark a feed item or remove a bookmark from a feed item.

**API Version**

28.0–31.0

**Important:** In version 32.0 and later, use `updateFeedElementBookmarks(communityId, feedElementId, bookmarks)` or `updateFeedElementBookmarks(communityId, feedElementId, isBookmarkedByCurrentUser)`.

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.FeedItem updateBookmark(String communityId, String feedItemId, Boolean isBookmarkedByCurrentUser)
```
Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedItemId
  Type: String
  The ID for a feed item.

isBookmarkedByCurrentUser
  Type: Boolean
  —Specifying true adds the feed item to the list of bookmarks for the context user. Specify false to remove a bookmark.

Return Value
Type: ConnectApi.FeedItem

voteOnFeedPoll(communityId, feedItemId, myChoiceId)
Vote or change your vote on a feed poll.

API Version
28.0–31.0

⚠️ Important: In version 32.0 and later, use voteOnFeedElementPoll(communityId, feedElementId, myChoiceId).

Requires Chatter
Yes

Signature
public static ConnectApi.FeedPoll voteOnFeedPoll(String communityId, String feedItemId, String myChoiceId)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedItemId
  Type: String
  ID of the feed item that is associated with the poll.

myChoiceId
  Type: String
  ID of the item in the poll you’re voting for.
Return Value
Type: `ConnectApi.FeedPoll`

`setTestGetFeedItemsFromFeed(communityId, feedType, result)`

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
28.0–31.0

Signature
```
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, ConnectApi.FeedItemPage result)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `feedType`
  Type: `ConnectApi.FeedType`
  The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

- `result`
  Type: `ConnectApi.FeedItemPage`
  The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `getFeedItemsFromFeed(communityId, feedType)`
- Testing ConnectApi Code

`setTestGetFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)`

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
28.0–31.0
**Signature**

```java
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

**Parameters**

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

- **pageParam**
  - Type: String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in null, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

- **sortParam**
  - Type: `ConnectApi.FeedSortOrder`
  - Values are:
    - CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
    - CreatedDateDesc—Sorts by most recent creation date.
    - LastModifiedDateDesc—Sorts by most recent activity.
    - MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is UnansweredQuestions.
    - Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  - Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

- **result**
  - Type: `ConnectApi.FeedItemPage`
  - The object containing test data.
Return Value
Type: Void

SEE ALSO:
- `getFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)

Testing ConnectApi Code

```java
setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
29.0–31.0

Signature
```java
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `feedType`
  Type: `ConnectApi.FeedType`
  The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.
- `recentCommentCount`
  Type: `Integer`
  The maximum number of comments to return with each feed item. The default value is 3.
- `density`
  Type: `ConnectApi.FeedDensity`
  Specify the amount of content in a feed.
  - `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.
- `pageParam`
  Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**result**
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedItemsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)

Testing ConnectApi Code

**setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, result)**
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
28.0–31.0

Signature
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, ConnectApi.FeedItemPage result)
Parameters

`communityId`  
Type: `String`  
Use either the ID for a community, `internal`, or `null`.

`feedType`  
Type: `ConnectApi.FeedType`  
The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

`subjectId`  
Type: `String`  
If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

`result`  
Type: `ConnectApi.FeedItemPage`  
The object containing test data.

Return Value

Type: `Void`

SEE ALSO:

- `getFeedItemsFromFeed(communityId, feedType, subjectId)`
- Testing ConnectApi Code

`setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, result)`

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version

28.0–31.0

Signature

```java
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

Parameters

`communityId`  
Type: `String`  
Use either the ID for a community, `internal`, or `null`.  

Page dimensions: 612.0x792.0
feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedItemsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam)
Testing ConnectApi Code
setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
29.0–31.0

Signature

```java
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **feedType**
  - Type: ConnectApi.FeedType
  - The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

- **subjectId**
  - Type: String
  - If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

- **recentCommentCount**
  - Type: Integer
  - The maximum number of comments to return with each feed item. The default value is 3.

- **density**
  - Type: ConnectApi.FeedDensity
  - Specify the amount of content in a feed.
    - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- **pageParam**
  - Type: String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- getFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam)
- Testing ConnectApi Code

setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
30.0–31.0

Signature
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedItemPage result)
Parameters

communityId
Type: String

Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType

The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String

If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

recentCommentCount
Type: Integer

The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity

Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder

Values are:

- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**showInternalOnly**

Type: Boolean

Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

**result**

Type: `ConnectApi.FeedItemPage`

The object containing test data.

Return Value

Type: Void

SEE ALSO:

- `getFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)`
- Testing ConnectApi Code

### `setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, result)`

Register a `ConnectApi.FeedItemPage` object to be returned when the matching `getFeedItemsFromFilterFeed` method is called in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**

28.0–31.0

**Signature**

```java
public static Void setTestGetFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix, ConnectApi.FeedItemPage result)
```

**Parameters**

- **communityId**
  
  Type: `String`
  
  Use either the ID for a community, `internal`, or `null`.

- **subjectId**
  
  Type: `String`
  
  The ID of the context user or the alias `me`.

- **keyPrefix**
  
  Type: `String`
  
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.
result
Type: `ConnectApi.FeedItemPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
`getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix)`
Testing ConnectApi Code

`setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, result)`
Register a `ConnectApi.FeedItemPage` object to be returned when the matching `getFeedItemsFromFilterFeed` method is called in a test context. Use the method with the same parameters or the code throws an exception.

API Version
28.0–31.0

Signature
```java
public static Void setTestGetFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

Parameters
`communityId`
Type: `String`
Use either the ID for a community, internal, or `null`.

`subjectId`
Type: `String`
The ID of the context user or the alias `me`.

`keyPrefix`
Type: `String`
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

The returned feed is sorted by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

Testing ConnectApi Code

setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedItemPage object to be returned when the matching getFeedItemsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

API Version
29.0–31.0

Signature
public static Void setTestGetFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or `null`.

**subjectId**
Type: `String`
The ID of the context user or the alias `me`.

**keyPrefix**
Type: `String`
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 00S and Group objects have a prefix of 0F9.

**recentCommentCount**
Type: `Integer`
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**result**
Type: `ConnectApi.FeedItemPage`
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam)
Testing ConnectApi Code

setTestGetFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, updatedSince, result)
Register a ConnectApi.FeedItemPage object to be returned when the getFeedItemsFromFilterFeedUpdatedSince method is called in a test context.

API Version
30.0–31.0

Signature
public static Void setTestGetFeedItemsFromFilterFeedUpdatedSince(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String updatedSince, ConnectApi.FeedItemPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**

Type: String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**

Type: Integer

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**

Type: ConnectApi.FeedSortOrder

Values are:

• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**updatedSince**

Type: String

An opaque token containing information about the last modified date of the feed. Do not construct this token. To retrieve this token, call getFeedItemsFromFilterFeed and take the value from the updatesToken property of the ConnectApi.FeedItemPage response body.

**result**

Type: ConnectApi.FeedItemPage

The object containing test data.

Return Value

Type: Void

SEE ALSO:

getFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, updatedSince)

Testing ConnectApi Code
setTestGetFeedItemsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, ConnectApi.FeedItemPage, results)

Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
30.0–31.0

Signature
public static Void setTestGetFeedItemsUpdatedSince(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedItemPage results)

Parameters
communityId
Type: String
Use either the ID for a community, *internal*, or *null*.

feedType
Type: *ConnectApi.FeedType*
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: *ConnectApi.FeedDensity*
Specify the amount of content in a feed.

• **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

• **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, *currentPageToken* or *nextPageToken*. If you pass in *null*, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in *null*, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

**result**

Type: `ConnectApi.FeedItemPage`

The object containing test data.

Return Value

Type: Void

SEE ALSO:

- `getFeedItemsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)`

Testing ConnectApi Code

**setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, result)**

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

30.0–31.0

Signature

```java
public static Void setTestGetFeedItemsUpdatedSince(String communityId, 
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, 
ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, 
ConnectApi.FeedItemPage result)
```

Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **feedType**
  Type: `ConnectApi.FeedType`
  One of these values:
  - Files
  - Groups
  - News
  - People
  - Record

- **subjectId**
  Type: `String`
If `feedType` is `ConnectApi.Record`, `subjectId` can be any record ID, including a group ID. Otherwise, it must be the context user or the alias `me`.

`recentCommentCount`

Type: `Integer`

The maximum number of comments to return with each feed item. The default value is 3.

`density`

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`

Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`

Type: `Integer`

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`updatedSince`

Type: `String`

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

`result`

Type: `ConnectApi.FeedItemPage`

The object containing test data.

Return Value

Type: `Void`

SEE ALSO:

- `getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince)`
- `Testing ConnectApi Code`

`setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly, result)`

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

30.0–31.0
public static Void setTestGetFeedItemsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly, ConnectApi.FeedItemPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
One of these values:
• Files
• Groups
• News
• People
• Record

subjectId
Type: String
If feedType is ConnectApi.Record, subjectId can be any record ID, including a group ID. Otherwise, it must be the context user or the alias me.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedItemPage response body.

`showInternalOnly`
  Type: Boolean
  Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

`result`
  Type: ConnectApi.FeedItemPage
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
  - `getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly)`
  - Testing ConnectApi Code

`setTestSearchFeedItems(communityId, q, result)`
Register a test feed item page to be returned when `searchFeedItems(communityId, q)` is called during a test.

API Version
28.0–31.0

Signature
`public static Void searchFeedItems(String communityId, String q, ConnectApi.FeedItemPage result)`

Parameters
`communityId`
  Type: String
  Use either the ID for a community, `internal`, or `null`.

`q`
  Type: String
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`result`
  Type: ConnectApi.FeedItemPage
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
searchFeedItems(communityId, q)
Testing ConnectApi Code

**setTestSearchFeedItems(communityId, q, sortParam, result)**

Register a test feed item page to be returned when searchFeedItems(String, String,
ConnectApi.FeedSortOrder) is called during a test.

API Version
28.0–31.0

Signature
```java
public static Void setTestSearchFeedItems(String communityId, String q,
ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**result**
Type: ConnectApi.FeedItemPage
The feed item test page.

Return Value
Type: Void

SEE ALSO:
searchFeedItems(communityId, q, sortParam)
Testing ConnectApi Code

`setTestSearchFeedItems(communityId, q, pageParam, pageSize, result)`
Register a test feed item page to be returned when `searchFeedItems(String, String, String, Integer)` is called during a test.

API Version
28.0–31.0

Signature
`public static Void setTestSearchFeedItems(String communityId, String q, String pageParam, Integer pageSize, ConnectApi.FeedItemPage result)`

Parameters
`communityId`  
Type: String  
Use either the ID for a community, internal, or `null`.

`q`  
Type: String  
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`pageParam`  
Type: String  
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in `null`, the first page is returned.

`pageSize`  
Type: Integer  
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`result`  
Type: `ConnectApi.FeedItemPage`  
The test feed item page.
Return Value
Type: Void

SEE ALSO:
searchFeedItems(communityId, q, pageParam, pageSize)
Testing ConnectApi Code

setTestSearchFeedItems(communityId, q, pageParam, pageSize, sortParam, result)
Register a test feed item page to be returned when searchFeedItems(String, String, String, Integer, ConnectApi.FeedSortOrder) is called during a test.

API Version
28.0–31.0

Signature
public static Void setTestSearchFeedItems(String communityId, String q, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

```java
result
Type: ConnectApi.FeedItemPage
The test feed item page.
```

Return Value
Type: Void

SEE ALSO:
- `searchFeedItems(communityId, q, pageParam, pageSize, sortParam)`

```java
setTestSearchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam, result)
```

Register a test feed item page to be returned when `searchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)` is called during a test.

API Version
29.0–31.0

Signature
```java
public static Void setTestSearchFeedItems(String communityId, String q, Integer recentCommentCount, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

Parameters
- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- **q**
  Type: `String`
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
- **recentCommentCount**
  Type: `Integer`
  The maximum number of comments to return with each feed item. The default value is 3.
**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**result**
Type: ConnectApi.FeedItemPage
The test feed item page.

Return Value
Type: Void

SEE ALSO:
searchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)
Testing ConnectApi Code

**setTestSearchFeedItemsInFeed(communityId, feedType, q, result)**
Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0–31.0
Signature

```java
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String q, ConnectApi.FeedItemPage result)
```

Parameters

**communityId**
- Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

**feedType**
- Type: `ConnectApi.FeedType`
  - The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

**q**
- Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**result**
- Type: `ConnectApi.FeedItemPage`
  - The object containing test data.

Return Value

Type: `Void`

SEE ALSO:
- `searchFeedItemsInFeed(communityId, feedType, q)`
- Testing ConnectApi Code

```java
setTestSearchFeedItemsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q, result)
```

Register a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

28.0–31.0

Signature

```java
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrdersortParam, String q, ConnectApi.FeedItemPage result)
```
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
searchFeedItemsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)
**setTestSearchFeedItemsInFeed** *(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)*

Register a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**
29.0–31.0

**Signature**
```java
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)
```

**Parameters**

*communityId*  
Type: `String`  
Use either the ID for a community, `internal`, or `null`.

*feedType*  
Type: `ConnectApi.FeedType`  
The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

*recentCommentCount*  
Type: `Integer`  
The maximum number of comments to return with each feed item. The default value is 3.

*density*  
Type: `ConnectApi.FeedDensity`  
Specify the amount of content in a feed.
  - `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

*pageParam*  
Type: `String`  
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*  
Type: `Integer`  
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- searchFeedItemsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q)
- Testing ConnectApi Code

setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, q, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0–31.0

Signature
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String q, ConnectApi.FeedItemPage result)
Parameters

*communityId*
Type: `String`
Use either the ID for a community, `internal`, or `null`.

*feedType*
Type: `ConnectApi.FeedType`
The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessages`, `Filter`, `Landing`, and `Streams`.

*subjectId*
Type: `String`
If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

*q*
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

*result*
Type: `ConnectApi.FeedItemPage`
The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `searchFeedItemsInFeed(communityId, feedType, subjectId, q)`
- Testing ConnectApi Code

```java
setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)
```

Register a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0–31.0

Signature
`public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)`
Parameters

**communityId**  
Type: String  
Use either the ID for a community, internal, or null.

**feedType**  
Type: ConnectApi.FeedType  
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

**subjectId**  
Type: String  
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

**pageParam**  
Type: String  
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**  
Type: Integer  
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**  
Type: ConnectApi.FeedSortOrder  
Values are:

- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**q**  
Type: String  
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**result**  
Type: ConnectApi.FeedItemPage  
The object containing test data.
Return Value
Type: Void

SEE ALSO:
searchFeedItemsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q)
Testing ConnectApi Code

setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedItemPage object to be returned when the matching
ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0–31.0

Signature
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: **String**

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: **Integer**

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: **ConnectApi.FeedSortOrder**

Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**
Type: **String**

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**result**
Type: **ConnectApi.FeedItemPage**

The object containing test data.

**Return Value**
Type: **Void**

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

showInternalOnly
Type: Boolean
Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

Testing ConnectApi Code

setTestSearchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.
**API Version**

28.0–31.0

**Signature**

```java
public static Void setTestSearchFeedItemsInFilterFeed(String communityId, String subjectId, String keyPrefix, String q, ConnectApi.FeedItemPage result)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **subjectId**
  - Type: `String`
  - The ID of the context user or the alias `me`.

- **keyPrefix**
  - Type: `String`
  - A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

- **q**
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

- **result**
  - Type: `ConnectApi.FeedItemPage`
  - Specify the test feed item page.

**Return Value**

Type: Void

**SEE ALSO:**

- Testing ConnectApi Code

```java
setTestSearchFeedItemsInFilterFeed(communityId, feedType, subjectId, keyPrefix, pageParam, pageSize, sortParam, q, result)
```

Register a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFilterFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.
Signature

```java
public static Void setTestSearchFeedItemsInFilterFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)
```

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedType**
Type: `ConnectApi.FeedType`
The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

**subjectId**
Type: String
The ID of the context user or the alias me.

**keyPrefix**
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:

- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
Type: ConnectApi.FeedItemPage
Specify the test feed item page.

Return Value
Type: Void

  Testing ConnectApi Code

ChatterGroups Class

Information about groups, such as the group’s members, photo, and the groups the specified user is a member of. Add members to a group, remove members, and change the group photo.

Namespace
ConnectApi

ChatterGroups Methods

The following are methods for ChatterGroups. All methods are static.

IN THIS SECTION:
  addMember(communityId, groupId, userId)
  Add a user to a group as a standard member.
  addMemberWithRole(communityId, groupId, userId, role)
  Add a user with a role to a group.
  addRecord(communityId, groupId, recordId)
  Associate a record with a group.
  createGroup(communityId, groupInput)
  Create a group.
  deleteBannerPhoto(communityId, groupId)
  Delete the group banner photo.
  deleteGroup(communityId, groupId)
  Delete a group.
  deleteMember(communityId, membershipId)
  Remove a member from a group.
  deletePhoto(communityId, groupId)
  Delete the group photo.
getAnnouncements(communityId, groupId)
Get the first page of announcements in a group.

degetAnnouncements(communityId, groupId, pageParam, pageSize)
Get a page of announcements in a group.

getBannerPhoto(communityId, groupId)
Get the group banner photo.

group(communityId, groupId)
Get information about a group.

detGroupBatch(communityId, groupIds)
Get information about a list of groups.

groupMembershipRequest(communityId, requestId)
Get information about a request to join a private group.

groupMembershipRequests(communityId, groupId)
Get information about every request to join a private group.

groupMembershipRequests(communityId, groupId, status)
Get information about every request to join a private group that has a specified status.

groups(communityId)
Get the first page of groups.

groups(communityId, pageParam, pageSize)
Get a page of groups.

groups(communityId, pageParam, pageSize, archiveStatus)
Get a page of groups with an archive status.

group(communityId, membershipId)
Get information about a group member.

groups(communityId, groupId)
Get the first page of information about the members of a group.

groups(communityId, groupId, pageParam, pageSize)
Get a page of information about the members of a group.

groupMembershipBatch(communityId, membershipIds)
Get information about a list of group memberships.

groupChatterSettings(communityId, groupId)
Get the context user’s Chatter settings for a group.

groupPhoto(communityId, groupId)
Get the photo for a group.

groupRecord(communityId, groupRecordId)
Get a record associated with a group.

groupRecords(communityId, groupId)
Get the first page of records associated with a group.

groupRecords(communityId, groupId, pageParam, pageSize)
Get a page of records associated with a group.
inviteUsers(groupId, invite)
Invite internal and external users to join a group.
postAnnouncement(communityId, groupId, announcement)
Post an announcement to a group.
removeRecord(communityId, groupRecordId)
Remove the association of a record with a group.
requestGroupMembership(communityId, groupId)
Request membership in a private group.
searchGroups(communityId, q)
Get the first page of groups that match the search criteria.
searchGroups(communityId, q, pageParam, pageSize)
Get a page of groups that match the search criteria.
searchGroups(communityId, q, archiveStatus, pageParam, pageSize)
Get a page of groups with the archive status that match the search criteria.
setBannerPhoto(communityId, groupId, fileId, versionNumber)
Set an uploaded file as the group banner photo.
setBannerPhoto(communityId, groupId, fileUpload)
Set a file that hasn’t been uploaded as the group banner photo.
setBannerPhotoWithAttributes(communityId, groupId, bannerPhoto)
Set and crop an uploaded file as the group banner photo.
setBannerPhotoWithAttributes(communityId, groupId, bannerPhoto, fileUpload)
Set and crop a file that hasn’t been uploaded as the group banner photo.
setPhoto(communityId, groupId, fileId, versionNumber)
Set an uploaded file as the group photo.
setPhoto(communityId, groupId, fileUpload)
Set a file that hasn’t been uploaded as the group photo.
setPhotoWithAttributes(communityId, groupId, photo)
Set and crop an uploaded file as the group photo.
setPhotoWithAttributes(communityId, groupId, photo, fileUpload)
Set and crop a file that hasn’t been uploaded as the group photo.
updateGroup(communityId, groupId, groupInput)
Update the settings of a group.
updateGroupMember(communityId, membershipId, role)
Update the role of a group member.
updateMyChatterSettings(communityId, groupId, emailFrequency)
Update the context user’s email frequency for a group.
updateRequestStatus(communityId, requestId, status)
Update a request to join a private group.
updateRequestStatus(communityId, requestId, status, responseMessage)
Update a request to join a private group and optionally provide a message when the request is denied.
addMember(communityId, groupId, userId)

Add a user to a group as a standard member.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.GroupMember addMember(String communityId, String groupId, String userId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

userId
Type: String
The ID for a user.

Return Value
Type: ConnectApi.GroupMember

Usage
To execute this method, the context user must be the group owner or moderator.

addMemberWithRole(communityId, groupId, userId, role)

Add a user with a role to a group.

API Version
29.0

Requires Chatter
Yes
Signature

```
public static ConnectApi.GroupMember addMemberWithRole(String communityId, String groupId, String userId, ConnectApi.GroupMembershipType role)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **groupId**
  - Type: String
  - The ID for a group.

- **userId**
  - Type: String
  - The ID for a user.

- **role**
  - Type: `ConnectApi.GroupMembershipType`
  - The group membership type. One of these values:
    - GroupManager
    - StandardMember

Return Value

Type: `ConnectApi.GroupMember`

Usage

To execute this method, the context user must be the group owner or moderator.

```
addRecord(communityId, groupId, recordId)
```

Associate a record with a group.

API Version

34.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.GroupRecord addRecord(String communityId, String groupId, String recordId)
```
Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`groupId`
Type: `String`
ID of the group with which to associate the record.

`recordId`
Type: `String`
ID of the record to associate with the group.

Return Value
Type: `ConnectApi.GroupRecord`

`createGroup(communityId, groupInput)`
Create a group.

API Version
29.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterGroupDetail createGroup(String communityId,
ConnectApi.ChatterGroupInput groupInput)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`groupInput`
Type: `ConnectApi.ChatterGroupInput`
The properties of the group.

Return Value
Type: `ConnectApi.ChatterGroupDetail`
deleteBannerPhoto(communityId, groupId)
Delete the group banner photo.

API Version
36.0

Requires Chatter
Yes

Signature
public static Void deleteBannerPhoto(String communityId, String groupId)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

groupId
  Type: String
  ID of the group.

Return Value
Type: Void

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

deleteGroup(communityId, groupId)
Delete a group.

API Version
29.0

Requires Chatter
Yes

Signature
public static Void deleteGroup(String communityId, String groupId)
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**groupId**
Type: String
The ID for a group.

Return Value
Type: Void

**deleteMember(communityId, membershipId)**
Remove a member from a group.

API Version
28.0

Requires Chatter
Yes

Signature
public static Void deleteMember(String communityId, String membershipId)

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**membershipId**
Type: String
The ID for a membership.

Return Value
Type: Void

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

**deletePhoto(communityId, groupId)**
Delete the group photo.
API Version
28.0

Requires Chatter
Yes

Signature
public static Void deletePhoto(String communityId, String groupId)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

groupId
  Type: String
  The ID for a group.

Return Value
Type: Void

Usage
This method is only successful when the context user is the group manager or owner, or has Modify All Data permission.

getAnnouncements(communityId, groupId)
Get the first page of announcements in a group.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.AnnouncementPage getAnnouncements(String communityId, String groupId)

Parameters
communityId
  Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

Return Value
Type: ConnectApi.AnnouncementPage

Usage
To post an announcement, get information about an announcement, update the expiration date of an announcement, or delete an announcement, use the methods of the ConnectApi.Announcements class.

getAnnouncements(communityId, groupId, pageParam, pageSize)
Get a page of announcements in a group.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.AnnouncementPage getAnnouncements(String communityId, String groupId, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
Return Value
Type: ConnectApi.AnnouncementPage

Usage
To post an announcement, get information about an announcement, update the expiration date of an announcement, or delete an announcement, use the methods of the ConnectApi.Announcements class.

getBannerPhoto(communityId, groupId)
Get the group banner photo.

API Version
36.0

Requires Chatter
Yes

Signature
public static ConnectApi.BannerPhoto getBannerPhoto(String communityId, String groupId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID of the group.

Return Value
Type: ConnectApi.BannerPhoto

group(communityId, groupId)
Get information about a group.

API Version
28.0

Available to Guest Users
31.0
Requires Chatter
Yes

Signature
public static ConnectApi.ChatterGroupDetail getGroup(String communityId, String groupId)

Parameters

  communityId
    Type: String
    Use either the ID for a community, internal, or null.

  groupId
    Type: String
    The ID for a group.

Return Value
Type: ConnectApi.ChatterGroupDetail

**getGroupBatch(communityId, groupIds)**
Get information about a list of groups.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.BatchResult[] getGroupBatch(String communityId, List<String> groupIds)

Parameters

  communityId
    Type: String
    Use either the ID for a community, internal, or null.

  groupIds
    Type: List<String>
    A list of up to 500 group IDs.
Return Value

Type: `ConnectApi.BatchResult[]`

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.ChatterGroup` object and errors embedded in the results for groups that didn’t load.

Example

```java
// Create a list of groups.
ConnectApi.ChatterGroupPage groupPage = ConnectApi.ChatterGroups.getGroups(null);

// Create a list of group IDs.
List<String> groupIds = new List<String>();
for (ConnectApi.ChatterGroup aGroup : groupPage.groups) {
    groupIds.add(aGroup.id);
}

// Get info about all the groups in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterGroups.getGroupBatch(null, groupIds);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the number of members in each group.
        ConnectApi.ChatterGroup aGroup;
        if (batchResult.getResult() instanceof ConnectApi.ChatterGroup) {
            aGroup = (ConnectApi.ChatterGroup) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(aGroup.memberCount);
    } else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
```

SEE ALSO:

- `getMembershipBatch(communityId, membershipIds)`
- `getGroupMembershipRequest(communityId, requestId)`

Get information about a request to join a private group.

API Version

28.0
Requires Chatter
Yes

Signature

public static ConnectApi.GroupMembershipRequest getGroupMembershipRequest(String communityId, String requestId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

requestId
Type: String
The ID of a request to join a private group.

Return Value
Type: ConnectApi.GroupMembershipRequest

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

getGroupMembershipRequests(communityId, groupId)
Get information about every request to join a private group.

API Version
28.0

Requires Chatter
Yes

Signature

public static ConnectApi.GroupMembershipRequests getGroupMembershipRequests(String communityId, String groupId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

Return Value
Type: ConnectApi.GroupMembershipRequests

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

`getGroupMembershipRequests(communityId, groupId, status)`
Get information about every request to join a private group that has a specified status.

API Version
28.0

Requires Chatter
Yes

Signature
`public static ConnectApi.GroupMembershipRequests getGroupMembershipRequests(String communityId, String groupId, ConnectApi.GroupMembershipRequestStatus status)`

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`groupId`
Type: `String`
The ID for a group.

`status`
Type: `ConnectApi.GroupMembershipRequestStatus`
`status`—Status of a request to join a private group.
- Accepted
- Declined
- Pending

Return Value
Type: `ConnectApi.GroupMembershipRequests`
Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

**getGroups(communityId)**
Get the first page of groups.

API Version
28.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterGroupPage getGroups(String communityId)
```

Parameters
```
communityId
Type: String
```
Use either the ID for a community, internal, or null.

Return Value
Type: `ConnectApi.ChatterGroupPage`

**getGroups(communityId, pageParam, pageSize)**
Get a page of groups.

API Version
28.0

Available to Guest Users
31.0

Requires Chatter
Yes
public static ConnectApi.ChatterGroupPage getGroups(String communityId, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ChatterGroupPage

groups(communityId, pageParam, pageSize, archiveStatus)
Get a page of groups with an archive status.

API Version
29.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterGroupPage getGroups(String communityId, Integer pageParam, Integer pageSize, ConnectApi.GroupArchiveStatus archiveStatus)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`archiveStatus`
Type: `ConnectApi.GroupArchiveStatus`
Archive status of groups.
- `All`—All groups, including groups that are archived and groups that aren't archived.
- `Archived`—Groups that are archived.
- `NotArchived`—Groups that aren't archived.

If you pass in `null`, the default value is `All`.

Return Value
Type: `ConnectApi.ChatterGroupPage`

`getMember(communityId, membershipId)`
Get information about a group member.

API Version
28.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.GroupMember getMember(String communityId, String membershipId)
```

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`membershipId`
Type: `String`
The ID for a membership.

Return Value
Type: `ConnectApi.GroupMember`
**getMembers(communityId, groupId)**

Get the first page of information about the members of a group.

API Version
28.0

Available to Guest Users
36.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.GroupMemberPage getMembers(String communityId, String groupId)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, internal, or null.

- **groupId**
  - Type: `String`
  - The ID for a group.

Return Value

Type: `ConnectApi.GroupMemberPage`

**getMembers(communityId, groupId, pageParam, pageSize)**

Get a page of information about the members of a group.

API Version
28.0

Available to Guest Users
36.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.GroupMemberPage getMembers(String communityId, String groupId, Integer pageParam, Integer pageSize)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `groupId`
  - Type: `String`
  - The ID for a group.

- `pageParam`
  - Type: `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: `ConnectApi.GroupMemberPage`

`getMembershipBatch(communityId, membershipIds)`

Get information about a list of group memberships.

API Version

31.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.BatchResult[] getMembershipBatch(String communityId, List<String> membershipIds)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `membershipIds`
  - Type: `List<String>`
A list of up to 500 group membership IDs.

Return Value

Type: `ConnectApi.BatchResult[]`

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.GroupMember` object and errors embedded in the results for group memberships that didn’t load.

Example

```java
// Get members of a group.
ConnectApi.GroupMemberPage membersPage = ConnectApi.ChatterGroups.getMembers(null, '0F9D0000000oOT');

// Create a list of membership IDs.
List<String> membersList = new List<String>();
for (ConnectApi.GroupMember groupMember : membersPage.members)
    membersList.add(groupMember.id);

// Get info about all group memberships in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterGroups.getMembershipBatch(null, membersList);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the first name of each member.
        ConnectApi.GroupMember groupMember;
        if(batchResult.getResult() instanceof ConnectApi.GroupMember) {
            groupMember = (ConnectApi.GroupMember) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(groupMember.user.firstName);
    } else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
```

SEE ALSO:

- `getGroupBatch(communityId, groupIds)`
- `getMyChatterSettings(communityId, groupId)`

Get the context user’s Chatter settings for a group.

API Version

28.0
Requires Chatter
Yes

Signature

public static ConnectApi.GroupChatterSettings getMyChatterSettings(String communityId, String groupId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

Return Value
Type: ConnectApi.GroupChatterSettings

getPhoto(communityId, groupId)
Get the photo for a group.

API Version
28.0

Requires Chatter
Yes

Signature

public static ConnectApi.Photo getPhoto(String communityId, String groupId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.
getRecord(communityId, groupRecordId)
Get a record associated with a group.

API Version
34.0

Requires Chatter
Yes

Signature
public static ConnectApi.GroupRecord getRecord(String communityId, String groupRecordId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

groupRecordId
Type: String
ID of the group record.

Return Value
Type: ConnectApi.GroupRecord

gGetRecords(communityId, groupId)
Get the first page of records associated with a group.

API Version
33.0

Requires Chatter
Yes

Signature
public static ConnectApi.GroupRecordPage getRecords(String communityId, String groupId)
Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **groupId**
  - Type: String
  - The ID for a group.

Return Value

Type: `ConnectApi.GroupRecordPage`

```java
public static ConnectApi.GroupRecordPage getRecords(String communityId, String groupId,
                                                     Integer pageParam, Integer pageSize)
```

getRecords(communityId, groupId, pageParam, pageSize)

Get a page of records associated with a group.

API Version

33.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.GroupRecordPage getRecords(String communityId, String groupId,
                                                     Integer pageParam, Integer pageSize)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **groupId**
  - Type: String
  - The ID for a group.

- **pageParam**
  - Type: Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
Return Value
Type: ConnectApi.GroupRecordPage

**inviteUsers(groupId, invite)**
Invite internal and external users to join a group.

API Version
39.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.Invitations inviteUsers(String groupId, ConnectApi.InviteInput invite)
```

Parameters
- `groupId`
  Type: String
  ID of the group.
- `invite`
  Type: ConnectApi.InviteInput
  A ConnectApi.InviteInput body.

Return Value
Type: ConnectApi.Invitations

**postAnnouncement(communityId, groupId, announcement)**
Post an announcement to a group.

API Version
31.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.Announcement postAnnouncement(String communityId, String groupId, ConnectApi.AnnouncementInput announcement)
```
Parameters

`communityId`
- Type: `String`
  - Use either the ID for a community, internal, or `null`.

`groupId`
- Type: `String`
  - The ID for a group.

`announcement`
- Type: `ConnectApi.AnnouncementInput`

Return Value
- Type: `ConnectApi.Announcement`

Usage
Use an announcement to highlight information. Users can discuss, like, and post comments on announcements. Deleting the feed post deletes the announcement.

To post an announcement, get information about an announcement, update the expiration date of an announcement, or delete an announcement, use the methods of the `ConnectApi.Announcements` class.

`removeRecord(communityId, groupRecordId)`
Remove the association of a record with a group.

API Version
34.0

Requires Chatter
Yes

Signature
```
public static Void removeRecord(String communityId, String groupRecordId)
```

Parameters

`communityId`
- Type: `String`
  - Use either the ID for a community, internal, or `null`.

`groupRecordId`
- Type: `String`
  - ID of the group record.
requestGroupMembership(communityId, groupId)
Request membership in a private group.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.GroupMembershipRequest requestGroupMembership(String communityId, String groupId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

Return Value
Type: ConnectApi.GroupMembershipRequest

Sample: Requesting to Join a Private Group
This sample code calls ConnectApi.ChatterGroups.requestGroupMembership to request to join a private group.

```java
String communityId = null;
ID groupId = '0F9x00000000hAZ';

ConnectApi.GroupMembershipRequest membershipRequest =
    ConnectApi.ChatterGroups.requestGroupMembership(communityId, groupId);
```

searchGroups(communityId, q)
Get the first page of groups that match the search criteria.

API Version
28.0
Available to Guest Users
31.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterGroupPage searchGroups(String communityId, String q)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `q`
  - Type: `String`
  - Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as `null`.

Return Value

Type: `ConnectApi.ChatterGroupPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchGroups(communityId, q, result)`
- Testing ConnectApi Code

**searchGroups(communityId, q, pageParam, pageSize)**

Get a page of groups that match the search criteria.

API Version

28.0

Available to Guest Users
31.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterGroupPage searchGroups(String communityId, String q,
Integer pageParam, Integer pageSize)
```

Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **q**
  Type: `String`
  Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as `null`.

- **pageParam**
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: `ConnectApi.ChatterGroupPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchGroups(communityId, q, pageParam, pageSize, result)`
  Testing ConnectApi Code

```java
searchGroups(communityId, q, archiveStatus, pageParam, pageSize)
```
Get a page of groups with the archive status that match the search criteria.

API Version

29.0
Available to Guest Users
31.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterGroupPage searchGroups(String communityId, String q,
ConnectApi.GroupArchiveStatus archiveStatus, Integer pageParam, Integer pageSize)
```

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, `internal`, or `null`.

- **q**
  Type: String
  Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as `null`.

- **archiveStatus**
  Type: ConnectApi.GroupArchiveStatus
  Archive status of groups.
  - All—All groups, including groups that are archived and groups that aren’t archived.
  - Archived—Groups that are archived.
  - NotArchived—Groups that aren’t archived.

- **pageParam**
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: ConnectApi.ChatterGroupPage
Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestSearchGroups(communityId, q, archiveStatus, pageParam, pageSize, result)`
- Testing ConnectApi Code

**setBannerPhoto(communityId, groupId, fileId, versionNumber)**
Set an uploaded file as the group banner photo.

API Version
36.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String groupId, String fileId, Integer versionNumber)
```

Parameters
- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.
- **groupId**
  - Type: `String`
  - The ID of the group.
- **fileId**
  - Type: `String`
  - The ID of the already uploaded file. The key prefix must be 069, and the image must be smaller than 8 MB.
- **versionNumber**
  - Type: `Integer`
  - Version number of the existing file. Specify either an existing version number or, to get the latest version, specify `null`.

Return Value
Type: `ConnectApi.BannerPhoto`

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.
Photos are processed asynchronously and may not be visible right away.

**setBannerPhoto***(communityId, groupId, fileUpload)**
Set a file that hasn’t been uploaded as the group banner photo.

API Version
36.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String groupId,
ConnectApi.BinaryInput fileUpload)
```

Parameters

- **communityId**
  Type: **String**
  Use either the ID for a community, internal, or null.

- **groupId**
  Type: **String**
  The ID of the group.

- **fileUpload**
  Type: ConnectApi.BinaryInput
  A file to use as the photo. The content type must be usable as an image.

Return Value
Type: **ConnectApi.BannerPhoto**

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

**setBannerPhotoWithAttributes***(communityId, groupId, bannerPhoto)**
Set and crop an uploaded file as the group banner photo.

API Version
36.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId,
String groupId, ConnectApi.BannerPhotoInput bannerPhoto)
```

Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **groupId**
  Type: `String`
  The ID of the group.

- **bannerPhoto**
  Type: `ConnectApi.BannerPhotoInput`
  A `ConnectApi.BannerPhotoInput` object that specifies the ID and version of the file, and how to crop the file.

Return Value

Type: `ConnectApi.BannerPhoto`

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

```java
setBannerPhotoWithAttributes(communityId, groupId, bannerPhoto, fileUpload)
```

Set and crop a file that hasn’t been uploaded as the group banner photo.

API Version

36.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId,
String groupId, ConnectApi.BannerPhotoInput bannerPhoto, ConnectApi.BinaryInput
fileUpload)
```
Parameters

**communityId**
- Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

**groupId**
- Type: `String`
  - The ID of the group.

**bannerPhoto**
- Type: `ConnectApi.BannerPhotoInput`
  - A `ConnectApi.BannerPhotoInput` object specifying the cropping parameters.

**fileUpload**
- Type: `ConnectApi.BinaryInput`
  - A file to use as the photo. The content type must be usable as an image.

Return Value
- Type: `ConnectApi.BannerPhoto`

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

**setPhoto(communityId, groupId, fileId, versionNumber)**
Set an uploaded file as the group photo.

API Version
- 28.0

Requires Chatter
- Yes

Signature

```java
public static ConnectApi.Photo setPhoto(String communityId, String groupId, String fileId, Integer versionNumber)
```

Parameters

**communityId**
- Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

---

1390
groupId
  Type: String
  The ID for a group.

fileId
  Type: String
  ID of a file already uploaded. The key prefix must be 069, and the file must be an image that is smaller than 2 GB.

versionNumber
  Type: Integer
  Version number of the existing file. Specify either an existing version number or, to get the latest version, specify null.

Return Value
Type: ConnectApi.Photo

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

Sample: Updating a Group Photo with an Existing File
When a group is created, it doesn't have a group photo. You can set an existing photo that has already been uploaded to Salesforce as the group photo. The key prefix must be 069 and the file size must be less than 2 GB.

```java
String communityId = null;
ID groupId = '0F9x00000000hAK';
ID fileId = '069x000000001Ion';

// Set photo
ConnectApi.Photo photo = ConnectApi.ChatterGroups.setPhoto(communityId, groupId, fileId, null);
```

setPhoto(communityId, groupId, fileUpload)
Set a file that hasn't been uploaded as the group photo.

API Version
28.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.Photo setPhoto(String communityId, String groupId,
ConnectApi.BinaryInput fileUpload)
```
Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **groupId**
  Type: `String`
  The ID for a group.

- **fileUpload**
  Type: `ConnectApi.BinaryInput`
  A file to use as the photo. The content type must be usable as an image.

Return Value

Type: `ConnectApi.Photo`

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

Sample: Uploading a New File and Using It as a Group Photo

When a group is created, it doesn’t have a group photo. You can upload a photo and set it as the group photo.

```java
String communityId = null;
ID groupId = '0F9x00000000hAP';
ID photoId = '069x00000001Ioo';

// Set photo
List<ContentVersion> groupPhoto = [Select c.VersionData From ContentVersion c where ContentDocumentId=:photoId];
ConnectApi.BinaryInput binary = new ConnectApi.BinaryInput(groupPhoto.get(0).VersionData, 'image/png', 'image.png');
ConnectApi.Photo photo = ConnectApi.ChatterGroups.setPhoto(communityId, groupId, binary);
```

**setPhotoWithAttributes(communityId, groupId, photo)**

Set and crop an uploaded file as the group photo.

API Version

29.0

Requires Chatter

Yes
Signature

```java
public static ConnectApi.PhotosetPhotoWithAttributes(String communityId, String groupId,
    ConnectApi.PhotoInput photo)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **groupId**
  - Type: `String`
  - The ID for a group.

- **photo**
  - Type: `ConnectApi.PhotoInput`
  - A `ConnectApi.PhotoInput` object that specifies the ID and version of the file, and how to crop the file.

Return Value

- Type: `ConnectApi.Photo`

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

**setPhotoWithAttributes(communityId, groupId, photo, fileUpload)**

Set and crop a file that hasn’t been uploaded as the group photo.

API Version

- 29.0

Requires Chatter

- Yes

Signature

```java
public static ConnectApi.PhotosetPhotoWithAttributes(String communityId, String groupId,
    ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.  

...
groupId
Type: String
The ID for a group.

photo
Type: ConnectApi.PhotoInput
A ConnectApi.PhotoInput object that specifies how to crop the file specified in fileUpload.

fileUpload
Type: ConnectApi.BinaryInput
A file to use as the photo. The content type must be usable as an image.

Return Value
Type: ConnectApi.Photo

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

updateGroup(communityId, groupId, groupInput)
Update the settings of a group.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterGroup updateGroup(String communityId, String groupId, ConnectApi.ChatterGroupInput groupInput)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

groupInput
Type: ConnectApi.ChatterGroupInput
A `ConnectApi.ChatterGroupInput` object.

Return Value
Type: `ConnectApi.ChatterGroup`

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Use this method to update any settings in the `ConnectApi.ChatterGroupInput` class. These settings include the group title and text in the “Information” section, whether the group is public or private, and whether the group is archived.

Example
This example archives a group.

```java
String groupId = '0F9D00000000qSz';
String communityId = null;

ConnectApi.ChatterGroupInput groupInput = new ConnectApi.ChatterGroupInput();
groupInput.isArchived = true;

ConnectApi.ChatterGroups.updateGroup(communityId, groupId, groupInput);
```

`updateGroupMember(communityId, membershipId, role)`
Update the role of a group member.

AP Version
29.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterGroup updateGroupMember(String communityId, String membershipId, ConnectApi.GroupMembershipType role)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `membershipId`
  Type: `String`
  The ID for a membership.
role
Type: ConnectApi.GroupMembershipType
The group membership type. One of these values:
- GroupManager
- StandardMember

Return Value
Type: ConnectApi.ChatterGroup

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

updateMyChatterSettings(communityId, groupId, emailFrequency)
Update the context user’s email frequency for a group.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.GroupChatterSettings updateMyChatterSettings(String communityId, String groupId, ConnectApi.GroupEmailFrequency emailFrequency)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

emailFrequency
Type: ConnectApi.GroupEmailFrequency
Frequency with which a user receives email.
- EachPost
- DailyDigest
- WeeklyDigest
- Never
• UseDefault

The value UseDefault uses the value set in a call to `updateChatterSettings(communityId, userId, defaultGroupEmailFrequency)`.

Return Value
Type: `ConnectApi.GroupChatterSettings`

`updateRequestStatus(communityId, requestId, status)`

Update a request to join a private group.

API Version
28.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.GroupMembershipRequest updateRequestStatus(String communityId, String requestId, ConnectApi.GroupMembershipRequestStatus status)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`requestId`
Type: `String`
ID for a request to join a private group.

`status`
Type: `ConnectApi.GroupMembershipRequestStatus`
Status of the request:
• Accepted
• Declined

The `Pending` value of the enum is not valid in this method.

Return Value
Type: `ConnectApi.GroupMembershipRequest`

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.
Sample: Accepting or Declining a Request to Join a Private Group

This sample code calls ConnectApi.ChatterGroups.updateRequestStatus and passes it the membership request ID and an ConnectApi.GroupMembershipRequestStatus.Accepted status. You can also pass ConnectApi.GroupMembershipRequestStatus.Declined.

```java
String communityId = null;
ID groupId = '0F9x00000000hAZ';
String requestId = '0I5x000000001snCAA';

ConnectApi.GroupMembershipRequest membershipRequestRep =
ConnectApi.ChatterGroups.updateRequestStatus(communityId, requestId,
ConnectApi.GroupMembershipRequestStatus.Accepted);
```

**updateRequestStatus**(communityId, requestId, status, responseMessage)**

Update a request to join a private group and optionally provide a message when the request is denied.

**API Version**
35.0

**Requires Chatter**
Yes

**Signature**

```java
public static ConnectApi.GroupMembershipRequest updateRequestStatus(String communityId,
String requestId, ConnectApi.GroupMembershipRequestStatus status, String responseMessage)
```

**Parameters**

- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **requestId**
  Type: String
  ID for a request to join a private group.

- **status**
  Type: ConnectApi.GroupMembershipRequestStatus
  Status of the request:
  - Accepted
  - Declined
  The Pending value of the enum is not valid in this method.

- **responseMessage**
  Type: String
Provide a message to the user if their membership request is declined. The value of this property is used only when the value of the status property is Declined.

The maximum length is 756 characters.

Return Value
Type: `ConnectApi.GroupMembershipRequest`

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

ChatterGroups Test Methods
The following are the test methods for ChatterGroups. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

`setTestSearchGroups(communityId, q, result)`
Register a `ConnectApi.ChatterGroupPage` object to be returned when the matching `ConnectApi.searchGroups` method is called in a test context. Use the test method with the same parameters or you receive an exception.

API Version
29.0

Signature
```
public static Void setTestSearchGroups(String communityId, String q,
ConnectApi.ChatterGroupPage result)
```

Parameters
`communityId`
Type: `String`
Use either the ID for a community, internal, or `null`.

`q`
Type: `String`
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as `null`.

`result`
Type: `ConnectApi.ChatterGroupPage`
The test `ConnectApi.ChatterGroupPage` object.
Return Value
Type: Void

SEE ALSO:
searchGroups(communityId, q)
Testing ConnectApi Code

setTestSearchGroups(communityId, q, pageParam, pageSize, result)
Register a ConnectApi.ChatterGroupPage object to be returned when the matching ConnectApi.searchGroups method is called in a test context. Use the test method with the same parameters or you receive an exception.

API Version
28.0

Signature
public static Void setTestSearchGroups(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.ChatterGroupPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

result
Type: ConnectApi.ChatterGroupPage
The test ConnectApi.ChatterGroupPage object.
Return Value
Type: Void

SEE ALSO:
searchGroups(communityId, q, pageParam, pageSize)
Testing ConnectApi Code

setTestSearchGroups(communityId, q, archiveStatus, pageParam, pageSize, result)
Register a ConnectApi.ChatterGroupPage object to be returned when the matching ConnectApi.searchGroups method is called in a test context. Use the test method with the same parameters or you receive an exception.

API Version
29.0

Signature
public static Void setTestSearchGroups(String communityId, String q, ConnectApi.GroupArchiveStatus, archiveStatus, Integer pageParam, Integer pageSize, ConnectApi.ChatterGroupPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as null.

archiveStatus
Type: ConnectApi.GroupArchiveStatus
Archive status of groups.
- All—All groups, including groups that are archived and groups that aren’t archived.
- Archived—Groups that are archived.
- NotArchived—Groups that aren’t archived.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
result
Type: ConnectApi.ChatterGroupPage
The test ConnectApi.ChatterGroupPage object.

Return Value
Type: Void

SEE ALSO:
searchGroups(communityId, q, archiveStatus, pageParam, pageSize)
Testing ConnectApi Code

ChatterMessages Class
Access and modify message and conversation data.

Namespace
ConnectApi

Usage
Use Chatter in Apex to get, send, search, and reply to messages. You can also get and search conversations, mark conversations as read, and get a count of unread messages.

ChatterMessages Methods
The following are methods for ChatterMessages. All methods are static.

IN THIS SECTION:
getConversation(conversationId)
Get a conversation.
getConversation(conversationId, pageParam, pageSize)
Get a page of a conversation.
getConversation(communityId, conversationId)
Get a conversation from a community.
getConversation(communityId, conversationId, pageParam, pageSize)
Get a page of a conversation from a community.
getConversations()
Get the most recent conversations.
getConversations(pageParam, pageSize)
Get a page of conversations.
getConversations(communityId)
Get the most recent conversations from a community.
getConversations(communityId, pageParam, pageSize)
Get a page of conversations from a community.
getMessage(messageId)
Get a message.
getMessage(communityId, messageId)
Get a message from a community.
getMessages()
Get the most recent messages.
getMessages(pageParam, pageSize)
Get a page of messages.
getMessages(communityId)
Get the most recent messages from a community.
getMessages(communityId, pageParam, pageSize)
Get a page of messages from a community.
getUnreadCount()
Get the number of conversations that are marked unread.
getUnreadCount(communityId)
Get the number of conversations that are marked unread in a community.
markConversationRead(conversationId, read)
Mark a conversation as read or unread.
markConversationRead(communityId, conversationId, read)
Mark a conversation as read or unread in a community.
replyToMessage(text, inReplyTo)
Reply to a message.
replyToMessage(communityId, text, inReplyTo)
Reply to a message in a community.
searchConversation(conversationId, q)
Get a conversation that matches the search criteria.
searchConversation(conversationId, pageParam, pageSize, q)
Get a conversation with a page of messages that match the search criteria.
searchConversation(communityId, conversationId, q)
Get a conversation with messages that match the search criteria in a community.
searchConversation(communityId, conversationId, pageParam, pageSize, q)
Get a conversation with a page of messages that match the search criteria in a community.
searchConversations(q)
Get conversations in which member names and messages match the search criteria.
searchConversations(pageParam, pageSize, q)
Get a page of conversations in which member names and messages match the search criteria.
searchConversations(communityId, q)
Get conversations in which member names and messages match the search criteria in a community.
searchConversations(communityId, pageParam, pageSize, q)
Get a page of conversations in which member names and messages match the search criteria in a community.

searchMessages(q)
Get messages that match the search criteria.

searchMessages(pageParam, pageSize, q)
Get a page of messages that match the search criteria.

searchMessages(communityId, q)
Get messages that match the search criteria in a community.

searchMessages(communityId, pageParam, pageSize, q)
Get a page of messages that match the search criteria in a community.

sendMessage(text, recipients)
Send a message to a list of recipients.

sendMessage(communityId, text, recipients)
Send a message to a list of recipients in a community.

getConversation(conversationId)
Get a conversation.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversation getConversation(String conversationId)

Parameters
conversationId
Type: String
Specify the ID for the conversation.

Return Value
Type: ConnectApi.ChatterConversation

getConversation(conversationId, pageParam, pageSize)
Get a page of a conversation.
API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversation getConversation(String conversationId, String pageParam, Integer pageSize)

Parameters
conversationId
Type: String
Specify the ID for the conversation.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ChatterConversation

getConversation(communityId, conversationId)
Get a conversation from a community.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversation getConversation(String communityId, String conversationId)
Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

conversationId
  Type: String
  Specify the ID for the conversation.

Return Value

Type: ConnectApi.ChatterConversation

getConversation(communityId, conversationId, pageParam, pageSize)

Get a page of a conversation from a community.

API Version
30.0

Requires Chatter
Yes

Signature

public static ConnectApi.ChatterConversation getConversation(String communityId, String conversationId, String pageParam, String pageSize)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

conversationId
  Type: String
  Specify the ID for the conversation.

pageParam
  Type: String
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
Return Value
Type: ConnectApi.ChatterConversation

getConversations()
Get the most recent conversations.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversationPage getConversations()

Return Value
Type: ConnectApi.ChatterConversationPage

getConversations(pageParam, pageSize)
Get a page of conversations.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversationPage getConversations(String pageParam, Integer pageSize)

Parameters
pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
Return Value
Type: `ConnectApi.ChatterConversationPage`

`getConversations(communityId)`
Get the most recent conversations from a community.

API Version
30.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterConversationPage getConversations(String communityId)
```

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

Return Value
Type: `ConnectApi.ChatterConversationPage`

`getConversations(communityId, pageParam, pageSize)`
Get a page of conversations from a community.

API Version
30.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterConversationPage getConversations(String communityId, String pageParam, Integer pageSize)
```

Parameters
`communityId`
Type: `String`
Use either the ID for a community, \texttt{internal}, or \texttt{null}.

\textit{pageParam}
\begin{itemize}
  \item \texttt{Type: String}
  \item Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as \texttt{currentPageToken} or \texttt{nextPageToken}. If you pass in \texttt{null}, the first page is returned.
\end{itemize}

\textit{pageSize}
\begin{itemize}
  \item \texttt{Type: Integer}
  \item Specifies the number of items per page. Valid values are from 1 through 100. If you pass in \texttt{null}, the default size is 25.
\end{itemize}

Return Value
\begin{itemize}
  \item \texttt{Type: ConnectApi.ChatterConversationPage}
\end{itemize}

\texttt{getMessage(messageId)}
\begin{itemize}
  \item Get a message.
\end{itemize}

API Version
\begin{itemize}
  \item 29.0
\end{itemize}

Requires Chatter
\begin{itemize}
  \item Yes
\end{itemize}

Signature
\begin{itemize}
  \item \texttt{public static ConnectApi.ChatterMessage getMessage(String messageId)}
\end{itemize}

Parameters
\begin{itemize}
  \item \texttt{messageId}
  \begin{itemize}
    \item \texttt{Type: String}
    \item ID for the message.
  \end{itemize}
\end{itemize}

Return Value
\begin{itemize}
  \item \texttt{Type: ConnectApi.ChatterMessage}
\end{itemize}

\texttt{getMessage(communityId, messageId)}
\begin{itemize}
  \item Get a message from a community.
\end{itemize}

API Version
\begin{itemize}
  \item 30.0
\end{itemize}
Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterMessage getMessage(String communityId, String messageId)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **messageId**
  - Type: `String`
  - ID for the message.

Return Value

Type: `ConnectApi.ChatterMessage`

**getMessages()**

Get the most recent messages.

API Version

29.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterMessagePage getMessages()
```

Return Value

Type: `ConnectApi.ChatterMessagePage`

**getMessages(pageParam, pageSize)**

Get a page of messages.

API Version

29.0
Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessagePage getMessages(String pageParam, Integer pageSize)

Parameters
pageParam
  Type: String
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ChatterMessagePage

getMessages(communityId)
Get the most recent messages from a community.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessagePage getMessages(String communityId)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

Return Value
Type: ConnectApi.ChatterMessagePage
getMessages(communityId, pageParam, pageSize)
Get a page of messages from a community.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessagePage getMessages(String communityId, String pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ChatterMessagePage

getUnreadCount()
Get the number of conversations that are marked unread.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.UnreadConversationCount getUnreadCount()
Return Value

Type: `ConnectApi.UnreadConversationCount`

If there are fewer than 50 unread conversations, `ConnectApi.UnreadConversationCount` returns the exact number of unread conversations and the `hasMore` property is `false`. If there are more than 50 unread conversations, `ConnectApi.UnreadConversationCount` returns 50 unread conversations and the `hasMore` property is `true`.

Example

```java
ConnectApi.UnreadConversationCount unread = ConnectApi.ChatterMessages.getUnreadCount();
```

### getUnreadCount(communityId)

Get the number of conversations that are marked unread in a community.

API Version

30.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.UnreadConversationCount getUnreadCount(String communityId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

Return Value

Type: `ConnectApi.UnreadConversationCount`

If there are fewer than 50 unread conversations, `ConnectApi.UnreadConversationCount` returns the exact number of unread conversations and the `hasMore` property is `false`. If there are more than 50 unread conversations, `ConnectApi.UnreadConversationCount` returns 50 unread conversations and the `hasMore` property is `true`.

### markConversationRead(conversationId, read)

Mark a conversation as read or unread.

API Version

29.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterConversationSummary markConversationRead(String conversationId, Boolean read)
```

Parameters

- `conversationId`
  Type: `String`
  Specify the ID for the conversation.

- `read`
  Type: `Boolean`
  Specify whether the conversation is read (`true`) or not (`false`).

Return Value

Type: `ConnectApi.ChatterConversationSummary`

markConversationRead(communityId, conversationID, read)
Mark a conversation as read or unread in a community.

API Version
30.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterConversationSummary markConversationRead(String communityId, String conversationID, Boolean read)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `conversationId`
  Type: `String`
  Specify the ID for the conversation.

- `read`
  Type: `Boolean`
Specify whether the conversation is read (true) or not (false).

Return Value
Type: ConnectApi.ChatterConversationSummary

`replyToMessage(text, inReplyTo)`
Reply to a message.

API Version
29.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ChatterMessage replyToMessage(String text, String inReplyTo)`

Parameters
`text`
Type: String
The text of the message. Cannot be empty or over 10,000 characters.

`inReplyTo`
Type: String
ID of the message that is being responded to.

Return Value
Type: ConnectApi.ChatterMessage

`replyToMessage(communityId, text, inReplyTo)`
Reply to a message in a community.

API Version
30.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.ChatterMessage replyToMessage(String communityId, String text, String inReplyTo)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **text**
  - Type: `String`
  - The text of the message. Cannot be empty or over 10,000 characters.

- **inReplyTo**
  - Type: `String`
  - ID of the message that is being responded to.

Return Value

Type: `ConnectApi.ChatterMessage`

`searchConversation(conversationId, q)`

Get a conversation that matches the search criteria.

API Version

29.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ChatterConversation searchConversation(String conversationId, String q)
```

Parameters

- **conversationId**
  - Type: `String`
  - Specify the ID for the conversation.

- **q**
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
Return Value
Type: ConnectApi.ChatterConversation

searchConversation(conversationId, pageParam, pageSize, q)
Get a conversation with a page of messages that match the search criteria.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversation searchConversation(String conversationId, String pageParam, Integer pageSize, String q)

Parameters
conversationId
Type: String
Specify the ID for the conversation.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterConversation

searchConversation(communityId, conversationId, q)
Get a conversation with messages that match the search criteria in a community.

API Version
30.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterConversation searchConversation(String communityId, String conversationId, String q)
```

Parameters

- `communityId`  
  Type: `String`  
  Use either the ID for a community, `internal`, or `null`.

- `conversationId`  
  Type: `String`  
  Specify the ID for the conversation.

- `q`  
  Type: `String`  
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

Return Value

Type: `ConnectApi.ChatterConversation`

```java
searchConversation(communityId, conversationId, pageParam, pageSize, q)
```

Get a conversation with a page of messages that match the search criteria in a community.

API Version

30.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterConversation searchConversation(String communityId, String conversationId, String pageParam, Integer pageSize, String q)
```

Parameters

- `communityId`  
  Type: `String`  
  Use either the ID for a community, `internal`, or `null`.
conversationId
Type: String
Specify the ID for the conversation.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterConversation

searchConversations(q)
Get conversations in which member names and messages match the search criteria.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversationPage searchConversations(String q)

Parameters
q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterConversationPage
searchConversations(pageParam, pageSize, q)
Get a page of conversations in which member names and messages match the search criteria.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversationPage searchConversations(String pageParam, Integer pageSize, String q)

Parameters
pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterConversationPage

searchConversations(communityId, q)
Get conversations in which member names and messages match the search criteria in a community.

API Version
30.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.ChatterConversationPage searchConversations(String communityId,
String q)
```

Parameters

- `communityId`
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- `q`
  - Type: String
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

Type: `ConnectApi.ChatterConversationPage`

**searchConversations(communityId, pageParam, pageSize, q)**

Get a page of conversations in which member names and messages match the search criteria in a community.

API Version

30.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ChatterConversationPage searchConversations(String communityId,
String pageParam, Integer pageSize, String q)
```

Parameters

- `communityId`
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- `pageParam`
  - Type: String
  - Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- `pageSize`
  - Type: Integer
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterConversationPage

searchMessages(q)
Get messages that match the search criteria.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessagePage searchMessages(String q)

Parameters
q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterMessagePage

searchMessages(pageParam, pageSize, q)
Get a page of messages that match the search criteria.

API Version
29.0

Requires Chatter
Yes
**public static** ConnectApi.ChatterMessagePage searchMessages(String pageParam, Integer pageSize, String q)

**Parameters**

*pageParam*  
Type: String  
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

*pageSize*  
Type: Integer  
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

*q*  
Type: String  
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).  

**Return Value**  
Type: ConnectApi.ChatterMessagePage

**searchMessages(communityId, q)**  
Get messages that match the search criteria in a community.

**API Version**  
30.0

**Requires Chatter**  
Yes

**Signature**  
**public static** ConnectApi.ChatterMessagePage searchMessages(String communityId, String q)

**Parameters**

*communityId*  
Type: String  
Use either the ID for a community, `internal`, or `null`.

*q*  
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterMessagePage

**searchMessages(communityId, pageParam, pageSize, q)**
Get a page of messages that match the search criteria in a community.

API Version
30.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterMessagePage searchMessages(String communityId, String pageParam, Integer pageSize, String q)
```

Parameters
- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **pageParam**
  Type: String
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

- **pageSize**
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

- **q**
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterMessagePage

**sendMessage(text, recipients)**
Send a message to a list of recipients.
API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessage sendMessage(String text, String recipients)

Parameters
text
  Type: String
  The text of the message. Cannot be empty or over 10,000 characters.

recipients
  Type: String
  Up to nine comma-separated IDs of the users receiving the message.

Return Value
Type: ConnectApi.ChatterMessage

sendMessage(communityId, text, recipients)
Send a message to a list of recipients in a community.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessage sendMessage(String communityId, String text, String recipients)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.
text
  Type: String
The text of the message. Cannot be empty or over 10,000 characters.

**recipients**
Type: String
Up to nine comma-separated IDs of users to receive the message.

**Return Value**
Type: `ConnectApi.ChatterMessage`

**ChatterUsers Class**
Access information about users, such as activity, followers, subscriptions, files, and groups.

**Namespace**
`ConnectApi`

**ChatterUsers Methods**
The following are methods for `ChatterUsers`. All methods are static.

**IN THIS SECTION:**
- `exportUserActivities(communityId, userId)`
  Export Chatter-related user activity, such as bookmarks, topic endorsements, and votes.
- `follow(communityId, userId, subjectId)`
  Follow a user or record.
- `getChatterSettings(communityId, userId)`
  Get the default Chatter settings for a user.
- `getFollowers(communityId, userId)`
  Get the first page of followers for a user.
- `getFollowers(communityId, userId, pageParam, pageSize)`
  Get a page of followers for a user.
- `getFollowings(communityId, userId)`
  Get the first page of users and records that a user follows.
- `getFollowings(communityId, userId, pageParam)`
  Get a page of users and records that a user follows.
- `getFollowings(communityId, userId, pageParam, pageSize)`
  Get a page with the specified number of users and records that a user follows.
- `getFollowings(communityId, userId, filterType)`
  Get the first page of records, filtered by key prefix, that a user follows.
- `getFollowings(communityId, userId, filterType, pageParam)`
  Get a page of records, filtered by key prefix, that a user follows.
getFollowings(communityId, userId, filterType, pageParam, pageSize)
Get a page with the specified number of records, filtered by key prefix, that a user follows.

getReputation(communityId, userId)
Get a user’s reputation.

getUser(communityId, userId)
Get information about a user.

getUserBatch(communityId, userIds)
Get information about a list of users.

getUserGroups(communityId, userId)
Get a user’s groups.

getUserGroups(communityId, userId, pageParam, pageSize)
Get a page of a user’s groups.

getUsers(communityId)
Get the first page of users.

getUsers(communityId, pageParam, pageSize)
Get a page of users.

purgeUserActivities(communityId, userId)
Start a job to purge Chatter-related user activity, such as bookmarks, topic endorsements, and votes.

searchUserGroupDetails(communityId, userId, q)
Get the user’s groups that match the search criteria.

searchUserGroupDetails(communityId, userId, q, pageParam, pageSize)
Get a page of a user’s groups that match the search criteria.

searchUsers(communityId, q)
Get the first page of users that match the search criteria.

searchUsers(communityId, q, pageParam, pageSize)
Get a page of users that match the search criteria.

searchUsers(communityId, q, searchContextId, pageParam, pageSize)
Get a page of users that match the search criteria.

updateChatterSettings(communityId, userId, defaultGroupEmailFrequency)
Update the default Chatter settings for a user.

updateUser(communityId, userId, userInput)
Update the About Me section for a user.

exportUserActivities(communityId, userId)
Export Chatter-related user activity, such as bookmarks, topic endorsements, and votes.

API Version
42.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.UserActivitiesJob exportUserActivities(String communityId, String userId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.
- `userId`
  - Type: `String`
  - ID of the user.

Return Value

- Type: `ConnectApi.UserActivitiesJob`

Usage

The following activities can be exported.

- **Bookmark**—User bookmarked a post.
- **ChatterActivity**—Total counts of posts and comments made and likes and comments received for a user.
- **ChatterLike**—User liked a post or comment.
- **Comment**—User commented on a post.
- **CompanyVerify**—User verified comment.
- **DownVote**—User downvoted a post or comment.
- **FeedEntityRead**—User read a post.
- **FeedRead**—User read a feed.
- **Mute**—User muted a post.
- **Post**—User made a post.
- **TopicEndorsement**—User endorsed another user on a topic or received endorsement on a topic.
- **UpVote**—User upvoted a post or comment.

```java
follow(communityId, userId, subjectId)
```
Follow a user or record.

API Version

28.0
Requires Chatter
Yes

Signature
public static ConnectApi.Subscription follow(String communityId, String userId, String subjectId)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

userId
  Type: String
  The ID for the context user or the keyword me.

subjectId
  Type: String
  ID of the user or record to follow.

Return Value
Type: ConnectApi.Subscription

Example
ChatterUsers.ConnectApi.Subscription subscriptionToRecord =
ConnectApi.ChatterUsers.follow(null, 'me', '001RR000002G4Y0');

SEE ALSO:
Unfollow a Record

getChatterSettings(communityId, userId)
Get the default Chatter settings for a user.

API Version
28.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.UserChatterSettings getChatterSettings(String communityId, String userId)
```

Parameters

- **communityId**
  - Type: **String**
  - Use either the ID for a community, internal, or **null**.

- **userId**
  - Type: **String**
  - The ID for the context user or the keyword `me`.

Return Value

Type: `ConnectApi.UserChatterSettings`

**getFollowers(communityId, userId)**

Get the first page of followers for a user.

API Version

28.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FollowerPage getFollowers(String communityId, String userId)
```

Parameters

- **communityId**
  - Type: **String**
  - Use either the ID for a community, internal, or **null**.

- **userId**
  - Type: **String**
  - The ID for a user.
Return Value
Type: `ConnectApi.FollowerPage`

`getFollowers(communityId, userId, pageParam, pageSize)`
Get a page of followers for a user.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
`public static ConnectApi.FollowerPage getFollowers(String communityId, String userId, Integer pageParam, Integer pageSize)`

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `userId`
  Type: `String`
  The ID for a user.
- `pageParam`
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.
- `pageSize`
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.FollowerPage`

`getFollowings(communityId, userId)`
Get the first page of users and records that a user follows.
API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature

public static ConnectApi.FollowingPage getFollowings(String communityId, String userId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for a user.

Return Value
Type: ConnectApi.FollowingPage

getFollowings(communityId, userId, pageParam)
Get a page of users and records that a user follows.
Parameters

`communityId`  
Type: `String`  
Use either the ID for a community, `internal`, or `null`.

`userId`  
Type: `String`  
The ID for a user.

`pageParam`  
Type: `Integer`  
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

Return Value  
Type: `ConnectApi.FollowingPage`

`getFollowings(communityId, userId, pageParam, pageSize)`  
Get a page with the specified number of users and records that a user follows.

API Version  
28.0

Available to Guest Users  
32.0

Requires Chatter  
Yes

Signature  
`public static ConnectApi.FollowingPage getFollowings(String communityId, String userId, Integer pageParam, Integer pageSize)`

Parameters

`communityId`  
Type: `String`  
Use either the ID for a community, `internal`, or `null`.

`userId`  
Type: `String`  
The ID for a user.

`pageParam`  
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**
Type: `Integer`

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.FollowingPage`

**getFollowings(communityId, userId, filterType)**
Get the first page of records, filtered by key prefix, that a user follows.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId, String filterType)
```

Parameters

**communityId**
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**userId**
Type: `String`
The ID for a user.

**filterType**
Type: `String`
Specifies the key prefix to filter the type of objects returned. A key prefix is the first three characters of the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

Return Value
Type: `ConnectApi.FollowingPage`
getFollowings(communityId, userId, filterType, pageParam)
Get a page of records, filtered by key prefix, that a user follows.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId, String filterType, Integer pageParam)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for a user.

filterType
Type: String
Specifies the key prefix to filter the type of objects returned. A key prefix is the first three characters of the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

Return Value
Type: ConnectApi.FollowingPage

getFollowings(communityId, userId, filterType, pageParam, pageSize)
Get a page with the specified number of records, filtered by key prefix, that a user follows.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId, String filterType, Integer pageParam, Integer pageSize)
Available to Guest Users
32.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId, String filterType, Integer pageParam, Integer pageSize)
```

Parameters

- `communityId`
  
  Type: `String`
  
  Use either the ID for a community, `internal`, or `null`.

- `userId`
  
  Type: `String`
  
  The ID for a user.

- `filterType`
  
  Type: `String`
  
  Specifies the key prefix to filter the type of objects returned. A key prefix is the first three characters of the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

- `pageParam`
  
  Type: `Integer`
  
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  
  Type: `Integer`
  
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: `ConnectApi.FollowingPage`

```java
getReputation(communityId, userId)
```

Get a user’s reputation.

API Version
32.0

Available to Guest Users
32.0
Requires Chatter
Yes

Signature
public static ConnectApi.Reputation getReputation(String communityId, String userId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
ID of the user.

Return Value
Type: ConnectApi.Reputation

getUser(communityId, userId)
Get information about a user.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserSummary getUser(String communityId, String userId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for a user.
Return Value
Type: `ConnectApi.UserDetail`

Usage
If the user is external, the properties that the `ConnectApi.UserDetail` output class shares with the `ConnectApi.UserSummary` output class can have non-null values. Other properties are always `null`.

`getUserBatch(communityId, userIds)`
Get information about a list of users.

API Version
31.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.BatchResult[] getUserBatch(String communityId, List<String> userIds)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `userIds`
  Type: `List<String>`
  A list of up to 500 user IDs.

Return Value
Type: `ConnectApi.BatchResult[]`

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.User` object and errors for users that didn’t load.

Example
```
// Get users in an organization.
ConnectApi.UserPage userPage = ConnectApi.ChatterUsers.getUsers(null);
```
// Create a list of user IDs.
List<String> userList = new List<String>();
for (ConnectApi.User user : userPage.users){
    userList.add(user.id);
}

// Get info about all users in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterUsers.getUserBatch(null, userList);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print each user's username.
        ConnectApi.UserDetail user;
        if (batchResult.getResult() instanceof ConnectApi.UserDetail) {
            user = (ConnectApi.UserDetail) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(user.username);
    } else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}

getUserGroups(communityId, userId)
Get a user's groups.

API Version
45.0

Available to Guest Users
45.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserGroupDetailPage getUserGroups(String communityId, String userId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for a user.

Return Value
Type: ConnectApi.UserGroupDetailPage

**getUserGroups(communityId, userId, pageParam, pageSize)**

Get a page of a user’s groups.

API Version
45.0

Available to Guest Users
45.0

Requires Chatter
Yes

Signature

public static ConnectApi.UserGroupDetailPage getUserGroups(String communityId, String userId, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for a user.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
Return Value
Type: `ConnectApi.UserGroupDetailPage`

**getUsers(communityId)**
Get the first page of users.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
`public static ConnectApi.UserPage getUsers(String communityId)`

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

Return Value
Type: `ConnectApi.UserPage`

**getUsers(communityId, pageParam, pageSize)**
Get a page of users.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.UserPage getUsers(String communityId, Integer pageParam, Integer pageSize)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `pageParam`
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: `ConnectApi.UserPage`

**purgeUserActivities(communityId, userId)**

Start a job to purge Chatter-related user activity, such as bookmarks, topic endorsements, and votes.

API Version

42.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.UserActivitiesJob purgeUserActivities(String communityId, String userId)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `userId`
  Type: `String`
  ID of the user.
Return Value
Type: `ConnectApi.UserActivitiesJob`

Usage
The following activities can be purged with this method.
- **Bookmark**—User bookmarked a post.
- **ChatterActivity**—Total counts of posts and comments made and likes and comments received for a user.
- **ChatterLike**—User liked a post or comment.
- **CompanyVerify**—User verified comment.
- **DownVote**—User downvoted a post or comment.
- **FeedEntityRead**—User read a post.
- **FeedRead**—User read a feed.
- **Mute**—User muted a post.
- **TopicEndorsement**—User endorsed another user on a topic or received endorsement on a topic.
- **UpVote**—User upvoted a post or comment.

To delete a user’s posts and comments, use these methods, respectively.
- `deleteFeedElement(communityId, feedElementId)`
- `deleteComment(communityId, commentId)`

### searchUserGroupDetails(communityId, userId, q)
Get the user’s groups that match the search criteria.

**API Version**
45.0

**Available to Guest Users**
45.0

**Requires Chatter**
Yes

**Signature**
```java
public static ConnectApi.UserGroupDetailPage searchUserGroupDetails(String communityId, String userId, String q)
```

**Parameters**
- `communityId`  
  Type: `String`  
  Use either the ID for a community, `internal`, or `null`.  

1443
userId
   Type: String
   The ID for a user.

q
   Type: String
   Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.UserGroupDetailPage

searchUserGroupDetails(communityId, userId, q, pageParam, pageSize)
Get a page of a user’s groups that match the search criteria.

API Version
45.0

Available to Guest Users
45.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserGroupDetailPage searchUserGroupDetails(String communityId, String userId, String q, Integer pageParam, Integer pageSize)

Parameters

communityId
   Type: String
   Use either the ID for a community, internal, or null.

userId
   Type: String
   The ID for a user.

q
   Type: String
   Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
   Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: `Integer`

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.UserGroupDetailPage`

`searchUsers(communityId, q)`
Get the first page of users that match the search criteria.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.UserPage searchUsers(String communityId, String q)
```

Parameters

`communityId`
Type: `String`

Use either the ID for a community, `internal`, or `null`.

`q`
Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: `ConnectApi.UserPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

  setTestSearchUsers(communityId, q, result)
  Testing ConnectApi Code

searchUsers(communityId, q, pageParam, pageSize)

Get a page of users that match the search criteria.

API Version

28.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

public static ConnectApi.UserPage searchUsers(String communityId, String q, Integer pageParam, Integer pageSize)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

q
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
Return Value
Type: ConnectApi.UserPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestSearchUsers(communityId, q, pageParam, pageSize, result)
  Testing ConnectApi Code

searchUsers(communityId, q, searchContextId, pageParam, pageSize)
Get a page of users that match the search criteria.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserPage searchUsers(String communityId, String q, String searchContextId, Integer pageParam, Integer pageSize)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

q
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

searchContextId
  Type: String
  A feed item ID that filters search results for feed @mentions. More useful results are listed first. When you specify this argument, you cannot query more than 500 results and you cannot use wildcards in the search term.
pageParam
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
  Type: ConnectApi.UserPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestSearchUsers(communityId, q, searchContextId, pageParam, pageSize, result)
  Testing ConnectApi Code

updateChatterSettings(communityId, userId, defaultGroupEmailFrequency)
Update the default Chatter settings for a user.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserChatterSettings updateChatterSettings(String communityId,
  String userId, ConnectApi.GroupEmailFrequency defaultGroupEmailFrequency)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

userId
  Type: String
  The ID for the context user or the keyword me.

defaultGroupEmailFrequency
  Type: ConnectApi.GroupEmailFrequency
Frequency with which a user receives email. Values are:

- EachPost
- DailyDigest
- WeeklyDigest
- Never
- UseDefault

Don’t pass the value UseDefault for the defaultGroupEmailFrequency parameter because calling updateChatterSettings sets the default value.

Return Value
Type: ConnectApi.UserChatterSettings

**updateUser(communityId, userId, userInput)**
Update the About Me section for a user.

API Version
29.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.UserDetail updateUser(String communityId, String userId, ConnectApi.UserInput userInput)
```

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **userId**
  Type: String
  The ID for the context user or the keyword me.

- **userInput**
  Type: ConnectApi.UserInput
  Specifies the updated information.

Return Value
Type: ConnectApi.UserDetail
ChatterUsers Test Methods

The following are the test methods for ChatterUsers. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

IN THIS SECTION:

setTestSearchUsers(communityId, q, result)
Register a ConnectApi.UserPage object to be returned when the matching ConnectApi.searchUsers method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchUsers(communityId, q, pageParam, pageSize, result)
Register a ConnectApi.UserPage object to be returned when the matching ConnectApi.searchUsers method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchUsers(communityId, q, searchContextId, pageParam, pageSize, result)
Register a ConnectApi.UserPage object to be returned when the matching ConnectApi.searchUsers method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchUsers(communityId, q, result)
Register a ConnectApi.UserPage object to be returned when the matching ConnectApi.searchUsers method is called in a test context. Use the method with the same parameters or you receive an exception.

**setTestSearchUsers(communityId, q, result)**

Register a ConnectApi.UserPage object to be returned when the matching ConnectApi.searchUsers method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0

Signature

```java
public static Void setTestSearchUsers(String communityId, String q, ConnectApi.UserPage result)
```

Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or null.

`q`
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`result`
Type: ConnectApi.UserPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
- searchUsers(communityId, q)
- Testing ConnectApi Code

**setTestSearchUsers(communityId, q, pageParam, pageSize, result)**

Register a ConnectApi.UserPage object to be returned when the matching ConnectApi.searchUsers method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**
28.0

**Signature**

```
public static Void setTestSearchUsers(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.UserPage result)
```

**Parameters**

- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **q**
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **pageParam**
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

- **pageSize**
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

- **result**
  Type: ConnectApi.UserPage
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
- searchUsers(communityId, q, pageParam, pageSize)
- Testing ConnectApi Code

**setTestSearchUsers(communityId, q, searchContextId, pageParam, pageSize, result)**

Register a `ConnectApi.UserPage` object to be returned when the matching `ConnectApi.searchUsers` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0

Signature

```java
public static Void setTestSearchUsers(String communityId, String q, String searchContextId, Integer pageParam, Integer pageSize, ConnectApi.UserPage result)
```

Parameters

**communityId**
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**q**
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**searchContextId**
Type: `String`
A feed item ID that filters search results for feed @mentions. More useful results are listed first. When you specify this argument, you cannot query more than 500 results and you cannot use wildcards in the search term.

**pageParam**
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**result**
Type: `ConnectApi.UserPage`
The object containing test data.
Return Value
Type: Void

SEE ALSO:
searchUsers(communityId, q, searchContextId, pageParam, pageSize)
Testing ConnectApi Code

Retired ChatterUsers Methods
The following methods for ChatterUsers are retired.

IN THIS SECTION:
deletePhoto(communityId, userId)
Delete a user’s photo.
getGroups(communityId, userId)
Get the groups that a user is a member of.
getGroups(communityId, userId, pageParam, pageSize)
Get a page of groups that a user is a member of.
getPhoto(communityId, userId)
Get a user’s photo.
searchUserGroups(communityId, userId, q)
Get the user’s groups that match the search criteria.
searchUserGroups(communityId, userId, q, pageParam, pageSize)
Get a page of a user’s groups that match the search criteria.
setPhoto(communityId, userId, fileId, versionNumber)
Set an uploaded file as a user’s photo.
setPhoto(communityId, userId, fileUpload)
Set a file that hasn’t been uploaded as the user’s photo.
setPhotoWithAttributes(communityId, userId, photo)
Set and crop an uploaded file as a user’s photo.
setPhotoWithAttributes(communityId, userId, photo, fileUpload)
Set and crop a file that hasn’t been uploaded as a user’s photo.

deletePhoto(communityId, userId)
Delete a user’s photo.

API Version
28.0–34.0

⚠️ Important: In version 35.0 and later, use ConnectApi.UserProfiles.deletePhoto(communityId, userId)
Signature

```java
public static Void deletePhoto(String communityId, String userId)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **userId**
  - Type: `String`
  - The ID for the context user or the keyword `me`.

Return Value

Type: `Void`

---

**getGroups(communityId, userId)**

Get the groups that a user is a member of.

API Version

28.0–44.0

ℹ️ **Important:** In version 45.0 and later, use `getUserGroups(communityId, userId)`.

Available to Guest Users

32.0–44.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.UserGroupPage getGroups(String communityId, String userId)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **userId**
  - Type: `String`
  - The ID for a user.
Return Value
Type: `ConnectApi.UserGroupPage`

```getGroups(communityId, userId, pageParam, pageSize)`
Get a page of groups that a user is a member of.
```

API Version
28.0–44.0

⚠️ Important: In version 45.0 and later, use `getUserGroups(communityId, userId, pageParam, pageSize)`.

Available to Guest Users
32.0–44.0

Requires Chatter
Yes

Signature
```public static ConnectApi.UserGroupPage getGroups(String communityId, String userId, Integer pageParam, Integer pageSize)`
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`userId`
Type: `String`
The ID for a user.

`pageParam`
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.UserGroupPage`

```getPhoto(communityId, userId)`
Get a user's photo.
```

1455
API Version
28.0–34.0

ℹ️ Important: In version 35.0 and later, use `ConnectApi.UserProfiles.getPhoto(communityId, userId)`.

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.Photo getPhoto(String communityId, String userId)
```

Parameters
- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.
- **userId**
  - Type: `String`
  - The ID for a user.

Return Value
Type: `ConnectApi.Photo`

`searchUserGroups(communityId, userId, q)`
Get the user’s groups that match the search criteria.

API Version
30.0–44.0

ℹ️ Important: In version 45.0 and later, use `searchUserGroupDetails(communityId, userId, q)`.

Available to Guest Users
32.0–44.0

Requires Chatter
Yes
public static ConnectApi.UserGroupPage searchUserGroups(String communityId, String userId, String q)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for a user.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

Type: ConnectApi.UserGroupPage

searchUserGroups(communityId, userId, q, pageParam, pageSize)
Get a page of a user’s groups that match the search criteria.

API Version
30.0–44.0

Important: In version 45.0 and later, use searchUserGroupDetails(communityId, userId, q, pageParam, pageSize).

Available to Guest Users
32.0–44.0

Requires Chatter
Yes

Signature

public static ConnectApi.UserGroupPage searchUserGroups(String communityId, String userId, String q, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

**userId**
Type: String
The ID for a user.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**pageParam**
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.UserGroupPage

**setPhoto(communityId, userId, fileId, versionNumber)**
Set an uploaded file as a user’s photo.

API Version
28.0–34.0

**Important:** In version 35.0 and later, use ConnectApi.UserProfiles.setPhoto(communityId, userId, fileId, versionNumber)

Requires Chatter
Yes

Signature

```java
public static ConnectApi.Photo setPhoto(String communityId, String userId, String fileId, Integer versionNumber)
```

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**userId**
Type: String
The ID for the context user or the keyword me.
**fileId**
Type: **String**
ID of a file already uploaded. The file must be an image, and be smaller than 2 GB.

**versionNumber**
Type: **Integer**
Version number of the existing file. Specify either an existing version number, or `null` to get the latest version.

**Return Value**
Type: `ConnectApi.Photo`

**Usage**
Photos are processed asynchronously and may not be visible right away.

**setPhoto(communityId, userId, fileUpload)**
Set a file that hasn’t been uploaded as the user’s photo.

**API Version**
28.0–34.0

⚠️ **Important:** In version 35.0 and later, use `ConnectApi.UserProfiles.setPhoto(communityId, userId, fileUpload)`

**Requires Chatter**
Yes

**Signature**
```
public static ConnectApi.Photo setPhoto(String communityId, String userId, 
ConnectApi.BinaryInput fileUpload)
```

**Parameters**

- **communityId**
  Type: **String**
  Use either the ID for a community, `internal`, or `null`.

- **userId**
  Type: **String**
  The ID for the context user or the keyword `me`.

- **fileUpload**
  Type: `ConnectApi.BinaryInput`
  A file to use as the photo. The content type must be usable as an image.
Return Value
Type: `ConnectApi.Photo`

Usage
Photos are processed asynchronously and may not be visible right away.

**setPhotoWithAttributes(communityId, userId, photo)**
Set and crop an uploaded file as a user’s photo.

API Version
29.0–34.0

⚠️ **Important:** In version 35.0 and later, use
`ConnectApi.UserProfiles.setPhotoWithAttributes(communityId, userId, photo)`

Requires Chatter
Yes

Signature
```java
public static ConnectApi.Photo setPhotoWithAttributes(String communityId, String userId,
ConnectApi.PhotoInput photo)
```

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`userId`
Type: `String`
The ID for the context user or the keyword `me`.

`photo`
Type: `ConnectApi.PhotoInput`
A `ConnectApi.PhotoInput` object specifying the file ID, version number, and cropping parameters.

Return Value
Type: `ConnectApi.Photo`

Usage
Photos are processed asynchronously and may not be visible right away.
setPhotoWithAttributes(communityId, userId, photo, fileUpload)

Set and crop a file that hasn't been uploaded as a user's photo.

API Version
29.0–34.0

⚠️ Important: In version 35.0 and later, use

ConnectApi.UserProfiles.setPhotoWithAttributes(communityId, userId, photo, fileUpload)

Requires Chatter
Yes

Signature
public static ConnectApi.Photo setPhotoWithAttributes(String communityId, String userId, ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

photo
Type: ConnectApi.PhotoInput
A ConnectApi.PhotoInput object specifying the cropping parameters.

fileUpload
Type: ConnectApi.BinaryInput
A file to use as the photo. The content type must be usable as an image.

Return Value
Type: ConnectApi.Photo

Usage
Photos are processed asynchronously and may not be visible right away.

Communities Class
Access general information about communities in your organization.
Namespace
ConnectApi

Communities Methods
The following are methods for Communities. All methods are static.

IN THIS SECTION:
- `getCommunities()`  
  Get a list of communities that the context user has access to.
- `getCommunities(communityStatus)`  
  Get a list of communities with the specified status that the context user has access to.
- `getCommunity(communityId)`  
  Get information about a community.

**getCommunities()**
Get a list of communities that the context user has access to.

API Version
28.0

Requires Chatter
No

Signature
```java
public static ConnectApi.CommunityPage getCommunities()
```

Return Value
Type: `ConnectApi.CommunityPage`

**getCommunities(communityStatus)**
Get a list of communities with the specified status that the context user has access to.

API Version
28.0

Requires Chatter
No
Signature

```java
public static ConnectApi.CommunityPage getCommunities(ConnectApi.CommunityStatus communityStatus)
```

Parameters

- `communityStatus`  
  Type: `ConnectApi.CommunityStatus`  
  `communityStatus`—Status of the community. Values are:
  - Live
  - Inactive
  - UnderConstruction

Return Value

Type: `ConnectApi.CommunityPage`

---

**getCommunity(communityId)**

Get information about a community.

API Version

28.0

Available to Guest Users

35.0

Requires Chatter

No

Signature

```java
public static ConnectApi.Community getCommunity(String communityId)
```

Parameters

- `communityId`  
  Type: `String`  
  ID of a community. You can’t specify `null` or internal.

Return Value

Type: `ConnectApi.Community`
CommunityModeration Class

Access information about flagged feed items and comments in a community. Add and remove flags from comments and feed items.

Namespace

ConnectApi

CommunityModeration Methods

The following are methods for CommunityModeration. All methods are static.

IN THIS SECTION:

addFlagToComment(communityId, commentId)
Add a moderation flag to a comment.
addFlagToComment(communityId, commentId, visibility)
Add a moderation flag of the specified visibility to a comment.
addFlagToComment(communityId, commentId, type)
Add a moderation flag of the specified type to a comment.
addFlagToComment(communityId, commentId, note)
Add a moderation flag with a note to a comment.
addFlagToComment(communityId, commentId, type, note)
Add a moderation flag of the specified type with a note to a comment.
addFlagToComment(communityId, commentId, type, visibility)
Add a moderation flag of the specified type and visibility to a comment.
addFlagToComment(communityId, commentId, visibility, note)
Add a moderation flag of the specified visibility with a note to a comment.
addFlagToComment(communityId, commentId, type, visibility, note)
Add a moderation flag of the specified type and visibility with a note to a comment.
addFlagToFeedElement(communityId, feedElementId)
Add a moderation flag to a feed element.
addFlagToFeedElement(communityId, feedElementId, visibility)
Add a moderation flag of the specified visibility to a feed element.
addFlagToFeedElement(communityId, feedElementId, type)
Add a moderation flag of the specified type to a feed element.
addFlagToFeedElement(communityId, feedElementId, note)
Add a moderation flag with a note to a feed element.
addFlagToFeedElement(communityId, feedElementId, type, note)
Add a moderation flag of the specified type with a note to a feed element.
addFlagToFeedElement(communityId, feedElementId, type, visibility)
Add a moderation flag of the specified type and visibility to a feed element.
addFlagToFeedElement(communityId, feedElementId, visibility, note)
Add a moderation flag of the specified visibility with a note to a feed element.

addFlagToFeedElement(communityId, feedElementId, type, visibility, note)
Add a moderation flag of the specified type and visibility with a note to a feed element.

getFlagsOnComment(communityId, commentId)
Get the moderation flags on a comment.

getFlagsOnComment(communityId, commentId, visibility)
Get the moderation flags with specified visibility on a comment.

getFlagsOnComment(communityId, commentId, pageSize, pageParam)
Get a page of moderation flags on a comment.

getFlagsOnComment(communityId, commentId, visibility, pageSize, pageParam)
Get a page of moderation flags with specified visibility on a comment.

getFlagsOnFeedElement(communityId, feedElementId)
Get the moderation flags on a feed element.

getFlagsOnFeedElement(communityId, feedElementId, visibility)
Get the moderation flags with specified visibility on a feed element.

getFlagsOnFeedElement(communityId, feedElementId, pageParam, pageSize)
Get a page of moderation flags on a feed element.

getFlagsOnFeedElement(communityId, feedElementId, visibility, pageParam, pageSize)
Get a page of moderation flags with specified visibility on a feed element.

removeFlagFromComment(communityId, commentId, userId)
Remove a moderation flag from a comment.

removeFlagFromFeedElement(communityId, feedElementId, userId)
Remove a moderation flag from a feed element.

addFlagToComment(communityId, commentId)
Add a moderation flag to a comment.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId)
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
The ID for a comment.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To add a flag to a comment, Allow members to flag content must be selected for a community.

addFlagToComment(communityId, commentId, visibility)
Add a moderation flag of the specified visibility to a comment.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagVisibility visibility)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
The ID for a comment.

visibility
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types.
- ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
- SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.
Return Value
Type: \texttt{ConnectApi.ModerationFlags}

Usage
To add a flag to a comment, Allow members to flag content must be selected for a community.

\texttt{addFlagToComment(communityId, commentId, type)}

Add a moderation flag of the specified type to a comment.

API Version
38.0

Requires Chatter
Yes

Signature
\texttt{public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagType type)}

Parameters
\texttt{communityId}
Type: \texttt{String}
Use either the ID for a community, \texttt{internal}, or \texttt{null}.

\texttt{commentId}
Type: \texttt{String}
The ID for a comment.

\texttt{type}
Type: \texttt{ConnectApi.CommunityFlagType}
Type of moderation flag.
- \texttt{FlagAsInappropriate}—Flag for inappropriate content.
- \texttt{FlagAsSpam}—Flag for spam.
If a type isn’t specified, it defaults to \texttt{FlagAsInappropriate}.

Return Value
Type: \texttt{ConnectApi.ModerationFlags}

Usage
To add a flag to a comment, Allow members to flag content must be selected for a community.
addFlagToComment(communityId, commentId, note)
Add a moderation flag with a note to a comment.

API Version
38.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, String note)

Parameters
communityId
 Type: String
Use either the ID for a community, internal, or null.
commentId
 Type: String
The ID for a comment.
note
 Type: String
A note of up to 4,000 characters about the flag.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To add a flag to a comment, Allow members to flag content must be selected for a community.

addFlagToComment(communityId, commentId, type, note)
Add a moderation flag of the specified type with a note to a comment.

API Version
38.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagType type, String note)
```

Parameters

- **communityId**
  
  **Type:** String
  
  Use either the ID for a community, internal, or null.

- **commentId**
  
  **Type:** String
  
  The ID for a comment.

- **type**
  
  **Type:** ConnectApi.CommunityFlagType
  
  Type of moderation flag.
  
  - FlagAsInappropriate—Flag for inappropriate content.
  
  - FlagAsSpam—Flag for spam.
  
  If a type isn’t specified, it defaults to FlagAsInappropriate.

- **note**
  
  **Type:** String
  
  A note of up to 4,000 characters about the flag.

Return Value

**Type:** ConnectApi.ModerationFlags

Usage

To add a flag to a comment, Allow members to flag content must be selected for a community.

```java
addFlagToComment(communityId, commentId, type, visibility)
```

Add a moderation flag of the specified type and visibility to a comment.

API Version

38.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagType type, ConnectApi.CommunityFlagVisibility visibility)
```
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**commentId**
Type: String
The ID for a comment.

**type**
Type: ConnectApi.CommunityFlagType
Type of moderation flag.
- FlagAsInappropriate—Flag for inappropriate content.
- FlagAsSpam—Flag for spam.
If a type isn’t specified, it defaults to FlagAsInappropriate.

**visibility**
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types.
- ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
- SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To add a flag to a comment, Allow members to flag content must be selected for a community.

**addFlagToComment(communityId, commentId, visibility, note)**
Add a moderation flag of the specified visibility with a note to a comment.

API Version
38.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagVisibility visibility, String note)
```
Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`commentId`
Type: `String`
The ID for a comment.

`visibility`
Type: `ConnectApi.CommunityFlagVisibility`
Visibility behavior of a flag for various user types.
- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

`note`
Type: `String`
A note of up to 4,000 characters about the flag.

Return Value
Type: `ConnectApi.ModerationFlags`

Usage
To add a flag to a comment, Allow members to flag content must be selected for a community.

`addFlagToComment(communityId, commentId, type, visibility, note)`
Add a moderation flag of the specified type and visibility with a note to a comment.

API Version
38.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagType type, ConnectApi.CommunityFlagVisibility visibility, String note)`

Parameters
`communityId`
Type: `String`
Use either the ID for a community, internal, or null.

**commentId**
- Type: String
  - The ID for a comment.

**type**
- Type: ConnectApi.CommunityFlagType
  - Type of moderation flag.
    - FlagAsInappropriate—Flag for inappropriate content.
    - FlagAsSpam—Flag for spam.
  - If a type isn’t specified, it defaults to FlagAsInappropriate.

**visibility**
- Type: ConnectApi.CommunityFlagVisibility
  - Visibility behavior of a flag for various user types.
    - ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
    - SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

**note**
- Type: String
  - A note of up to 4,000 characters about the flag.

**Return Value**
- Type: ConnectApi.ModerationFlags

**Usage**
To add a flag to a comment, Allow members to flag content must be selected for a community.

**addFlagToFeedElement(communityId, feedElementId)**
- Add a moderation flag to a feed element.

**API Version**
- 31.0

**Requires Chatter**
- Yes

**Signature**
- public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId)
Parameters

\texttt{communityId}
Type: \texttt{String}
Use either the ID for a community, \texttt{internal}, or \texttt{null}.

\texttt{feedElementId}
Type: \texttt{String}
ID of the feed element.

Return Value
Type: \texttt{ConnectApi.ModerationCapability}
If the feed element doesn’t support this capability, the return value is \texttt{ConnectApi.NotFoundException}.

Usage
To add a flag to a feed element, Allow members to flag content must be selected for a community.

\texttt{addFlagToFeedElement(communityId, feedElementId, visibility)}
Add a moderation flag of the specified visibility to a feed element.

API Version
31.0

Requires Chatter
Yes

Signature
\texttt{public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagVisibility visibility)}

Parameters
\texttt{communityId}
Type: \texttt{String}
Use either the ID for a community, \texttt{internal}, or \texttt{null}.

\texttt{feedElementId}
Type: \texttt{String}
ID of the feed element.

\texttt{visibility}
Type: \texttt{ConnectApi.CommunityFlagVisibility}
Visibility behavior of a flag for various user types. One of these values:

- \texttt{ModeratorsOnly}—The flag is visible only to users with moderation permissions on the flagged element or item.
• SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value

Type: ConnectApi.ModerationCapability

If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

Usage

To add a flag to a feed element, Allow members to flag content must be selected for a community.

addFlagToFeedElement(communityId, feedElementId, type)

Add a moderation flag of the specified type to a feed element.

API Version

38.0

Requires Chatter

Yes

Signature

public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagType type)

Parameters

communityId

Type: String

Use either the ID for a community, internal, or null.

feedElementId

Type: String

ID of the feed element.

type

Type: ConnectApi.CommunityFlagType

Type of moderation flag.

• FlagAsInappropriate—Flag for inappropriate content.

• FlagAsSpam—Flag for spam.

If a type isn’t specified, it defaults to FlagAsInappropriate.

Return Value

Type: ConnectApi.ModerationCapability
Usage
To add a flag to a feed element, Allow members to flag content must be selected for a community.

`addFlagToFeedElement(communityId, feedElementId, note)`
Add a moderation flag with a note to a feed element.

API Version
38.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, String note)`

Parameters
`communityId`
Type: String
Use either the ID for a community, internal, or null.

`feedElementId`
Type: String
ID of the feed element.

`note`
Type: String
A note of up to 4,000 characters about the flag.

Return Value
Type: `ConnectApi.ModerationCapability`

Usage
To add a flag to a feed element, Allow members to flag content must be selected for a community.

`addFlagToFeedElement(communityId, feedElementId, type, note)`
Add a moderation flag of the specified type with a note to a feed element.

API Version
38.0
Requires Chatter
Yes

Signature
`public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagType type, String note)`

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `feedElementId`
  Type: `String`
  ID of the feed element.
- `type`
  Type: `ConnectApi.CommunityFlagType`
  Type of moderation flag.
  - FlagAsInappropriate—Flag for inappropriate content.
  - FlagAsSpam—Flag for spam.
  If a type isn’t specified, it defaults to FlagAsInappropriate.
- `note`
  Type: `String`
  A note of up to 4,000 characters about the flag.

Return Value
Type: `ConnectApi.ModerationCapability`

Usage
To add a flag to a feed element, Allow members to flag content must be selected for a community.

`addFlagToFeedElement(communityId, feedElementId, type, visibility)`
Add a moderation flag of the specified type and visibility to a feed element.

API Version
38.0

Requires Chatter
Yes
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagType type, ConnectApi.CommunityFlagVisibility visibility)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

type
Type: ConnectApi.CommunityFlagType
Type of moderation flag.
- FlagAsInappropriate—Flag for inappropriate content.
- FlagAsSpam—Flag for spam.
If a type isn't specified, it defaults to FlagAsInappropriate.

visibility
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types. One of these values:
- ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
- SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: ConnectApi.ModerationCapability

Usage
To add a flag to a feed element, Allow members to flag content must be selected for a community.

addFlagToFeedElement(communityId, feedElementId, visibility, note)
Add a moderation flag of the specified visibility with a note to a feed element.

API Version
38.0

Requires Chatter
Yes
Signature

```
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId,
                      String feedElementId, ConnectApi.CommunityFlagVisibility visibility, String note)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedElementId**
  - Type: `String`
  - ID of the feed element.

- **visibility**
  - Type: `ConnectApi.CommunityFlagVisibility`
  - Visibility behavior of a flag for various user types. One of these values:
    - `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
    - `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

- **note**
  - Type: `String`
  - A note of up to 4,000 characters about the flag.

Return Value

Type: `ConnectApi.ModerationCapability`

Usage

To add a flag to a feed element, Allow members to flag content must be selected for a community.

```
addFlagToFeedElement(communityId, feedElementId, type, visibility, note)
```

Add a moderation flag of the specified type and visibility with a note to a feed element.

API Version

38.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId,
                      String feedElementId, ConnectApi.CommunityFlagType type,
                      ConnectApi.CommunityFlagVisibility visibility, String note)
```
Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedElementId
  Type: String
  ID of the feed element.

type
  Type: ConnectApi.CommunityFlagType
  Type of moderation flag.
  • FlagAsInappropriate—Flag for inappropriate content.
  • FlagAsSpam—Flag for spam.
  If a type isn’t specified, it defaults to FlagAsInappropriate.

visibility
  Type: ConnectApi.CommunityFlagVisibility
  Visibility behavior of a flag for various user types. One of these values:
  • ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
  • SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

note
  Type: String
  A note of up to 4,000 characters about the flag.

Return Value

Type: ConnectApi.ModerationCapability

Usage

To add a flag to a feed element, Allow members to flag content must be selected for a community.

getFlagsOnComment(communityId, commentId)

Get the moderation flags on a comment.
Signature

```java
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- **commentId**
  - Type: String
  - The ID for a comment.

Return Value

Type: `ConnectApi.ModerationFlags`

Usage

To get moderation flags, the context user must have the Moderate Communities Feeds permission.

**getFlagsOnComment(communityId, commentId, visibility)**

Get the moderation flags with specified visibility on a comment.

API Version

30.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId, ConnectApi.CommunityFlagVisibility visibility)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- **commentId**
  - Type: String
  - The ID for a comment.

- **visibility**
  - Type: `ConnectApi.CommunityFlagVisibility`
Visibility behavior of a flag for various user types.

- **ModeratorsOnly**—The flag is visible only to users with moderation permissions on the flagged element or item.
- **SelfAndModerators**—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: `ConnectApi.ModerationFlags`

Usage
To get moderation flags, the context user must have the Moderate Communities Feeds permission.

```java
getFlagsOnComment(communityId, commentId, pageSize, pageParam)
```
Get a page of moderation flags on a comment.

API Version
40.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId, Integer pageSize, String pageParam)
```

Parameters
- **communityId**
  Type: `String`
  Use either the ID for a community, internal, or `null`.
- **commentId**
  Type: `String`
  The ID for a comment.
- **pageSize**
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.
- **pageParam**
  Type: `String`
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.
Return Value
Type: `ConnectApi.ModerationFlags`

Usage
To get moderation flags, the context user must have the Moderate Communities Feeds permission.

```java
getFlagsOnComment(communityId, commentId, visibility, pageSize, pageParam)
```
Get a page of moderation flags with specified visibility on a comment.

API Version
40.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId, ConnectApi.CommunityFlagVisibility visibility, Integer pageSize, String pageParam)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `commentId`
  Type: `String`
  The ID for a comment.
- `visibility`
  Type: `ConnectApi.CommunityFlagVisibility`
  Visibility behavior of a flag for various user types.
  - `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
  - `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.
- `pageSize`
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.
- `pageParam`
  Type: `String`
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.
Return Value
Type: `ConnectApi.ModerationFlags`

Usage
To get moderation flags, the context user must have the Moderate Communities Feeds permission.

`getFlagsOnFeedElement(communityId, feedElementId)`
Get the moderation flags on a feed element.

API Version
31.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId, String feedElementId)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `feedElementId`
  Type: `String`
  ID of the feed element.

Return Value
Type: `ConnectApi.ModerationCapability Class`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

Usage
To get moderation flags, the context user must have the Moderate Communities Feeds permission.

`getFlagsOnFeedElement(communityId, feedElementId, visibility)`
Get the moderation flags with specified visibility on a feed element.
Requires Chatter
Yes

Signature

```java
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagVisibility visibility)
```

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **feedElementId**
  Type: String
  ID of the feed element.

- **visibility**
  Type: ConnectApi.CommunityFlagVisibility
  Visibility behavior of a flag for various user types. One of these values:
  - ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
  - SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value

Type: ConnectApi.ModerationCapability Class

If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

Usage

To get moderation flags, the context user must have the Moderate Communities Feeds permission.

```java
getFlagsOnFeedElement(communityId, feedElementId, pageParam, pageSize)
```

Get a page of moderation flags on a feed element.

API Version

40.0

Requires Chatter
Yes
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId,
String feedElementId, String pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

Return Value

Type: ConnectApi.ModerationCapability Class
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

Usage

To get moderation flags, the context user must have the Moderate Communities Feeds permission.

getFlagsOnFeedElement(communityId, feedElementId, visibility, pageSize, pageParam)
Get a page of moderation flags with specified visibility on a feed element.

API Version

40.0

Requires Chatter

Yes

Signature

public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId,
String feedElementId, ConnectApi.CommunityFlagVisibility visibility, Integer pageSize,
String pageParam)
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

visibility
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types.
- ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
- SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

Return Value
Type: ConnectApi.ModerationCapability Class
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

Usage
To get moderation flags, the context user must have the Moderate Communities Feeds permission.

removeFlagFromComment(communityId, commentId, userId)
Remove a moderation flag from a comment.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags removeFlagFromComment(String communityId, String commentId, String userId)
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
The ID for a comment.

userId
Type: String
The ID for a user.

Return Value
Type: Void

Usage
To remove a moderation flag, the context user must have added the flag or must have the Moderate Communities Feeds permission.

removeFlagFromFeedElement(communityId, feedElementId, userId)
Remove a moderation flag from a feed element.

API Version
31.0

Requires Chatter
Yes

Signature
public static void removeFlagFromFeedElement(String communityId, String feedElementId, String userId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

userId
Type: String
The ID for a user.

Return Value

Type: ConnectApi.ModerationCapability Class

If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

Usage

To remove a moderation flag, the context user must have added the flag or must have the Moderate Communities Feeds permission.

Retired CommunityModeration Methods

The following methods for CommunityModeration are retired.

IN THIS SECTION:

addFlagToFeedItem(communityId, feedItemId)
Add a moderation flag to a feed item.
addFlagToFeedItem(communityId, feedItemId, visibility)
Add a moderation flag with specified visibility to a feed item.
getFlagsOnFeedItem(communityId, feedItemId)
Get the moderation flags on a feed item.
getFlagsOnFeedItem(communityId, feedItemId, visibility)
Get the moderation flags with specified visibility on a feed item.
removeFlagsOnFeedItem(communityId, feedItemId, userId)
Remove a moderation flag from a feed item.

addFlagToFeedItem(communityId, feedItemId)
Add a moderation flag to a feed item.

API Version

29.0–31.0

Important: In version 32.0 and later, use addFlagToFeedElement(communityId, feedElementId).

Requires Chatter

Yes

Signature

public static ConnectApi.ModerationFlags addFlagToFeedItem(String communityId, String feedItemId)
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedItemId**
Type: String
The ID for a feed item.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To add a flag to a feed item, Allow members to flag content must be selected for a community.

```java
addFlagToFeedItem(communityId, feedItemId, visibility)
```
Add a moderation flag with specified visibility to a feed item.

API Version
30.0–31.0

⚠️ Important: In version 32.0 and later, use `addFlagToFeedElement(communityId, feedElementId, visibility)`.

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ModerationFlags addFlagToFeedItem(String communityId, String feedItemId, ConnectApi.CommunityFlagVisibility visibility)
```

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedItemId**
Type: String
The ID for a feed item.

**visibility**
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types.

- ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
• SelfAndModerators—the flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To add a flag to a feed item, Allow members to flag content must be selected for a community.

getFlagsOnFeedItem(communityId, feedItemId)
Get the moderation flags on a feed item.

API Version
29.0–31.0

Important: In version 32.0 and later, use getFlagsOnFeedElement(communityId, feedElementId).

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags getFlagsOnFeedItem(String communityId, String feedItemId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedItemId
Type: String
The ID for a feed item.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To get moderation flags, the context user must have the Moderate Communities Feeds permission.

getFlagsOnFeedItem(communityId, feedItemId, visibility)
Get the moderation flags with specified visibility on a feed item.
API Version
30.0–31.0

⚠️ **Important:** In version 32.0 and later, use `getFlagsOnFeedElement(communityId, feedElementId, visibility)`.

Requires Chatter
Yes

Signature
`public static ConnectApi.ModerationFlags getFlagsOnFeedItem(String communityId, String feedItemId, ConnectApi.CommunityFlagVisibility visibility)`

Parameters
`communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

`feedItemId`
  Type: `String`
  The ID for a feed item.

`visibility`
  Type: `ConnectApi.CommunityFlagVisibility`
  Visibility behavior of a flag for various user types.
  - ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
  - SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: `ConnectApi.ModerationFlags`

Usage
To get moderation flags, the context user must have the Moderate Communities Feeds permission.

`removeFlagsOnFeedItem(communityId, feedItemId, userId)`
Remove a moderation flag from a feed item.

API Version
29.0–31.0

⚠️ **Important:** In version 32.0 and later, use `removeFlagFromFeedElement(communityId, feedElementId, userId)`. 
Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags removeFlagsOnFeedItem(String communityId, String feedItemId, String userId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedItemId
Type: String
The ID for a feed item.

userId
Type: String
The ID for a user.

Return Value
Type: Void

Usage
To remove a moderation flag, the context user must have added the flag or must have the Moderate Communities Feeds permission.

ContentHub Class
Access Files Connect repositories and their files and folders.

Namespace
ConnectApi

ContentHub Methods
The following are methods for ContentHub. All methods are static.
Use ContentHub methods to work with Files Connect repositories.

IN THIS SECTION:
addRepositoryItem(repositoryId, repositoryFolderId, file)
Add a repository item.
addRepositoryItem(communityId, repositoryId, repositoryFolderId, file)
Add a repository item in a community.
addRepositoryItem(repositoryId, repositoryFolderId, file, fileData)
Add a repository item, including the binary file.

addRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData)
Add a repository item, including the binary file, in a community.

getAllowedItemTypes(repositoryId, repositoryFolderId)
Get the item types that the context user is allowed to create in the repository folder.

getAllowedItemTypes(repositoryId, repositoryFolderId, filter)
Get the item types, filtered by type, that the context user is allowed to create in the repository folder.

getAllowedItemTypes(communityId, repositoryId, repositoryFolderId)
Get the item types that the context user is allowed to create in the repository folder in a community.

getAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter)
Get the item types, filtered by type, that the context user is allowed to create in the repository folder in a community.

ggetFilePreview(repositoryId, repositoryFileId, formatType)
Get a repository file preview.

ggetFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)
Get a page or page range of a repository file preview.

ggetFilePreview(communityId, repositoryId, repositoryFileId, formatType)
Get a repository file preview in a community.

ggetFilePreview(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)
Get a page or page range of a repository file preview in a community.

ggetItemType(repositoryId, repositoryItemTypeId)
Get information about an item type associated with a repository.

ggetItemType(communityId, repositoryId, repositoryItemTypeId)
Get information about an item type associated with a repository in a community.

getPreviews(repositoryId, repositoryFileId)
Get information about a repository file's supported previews.

getPreviews(communityId, repositoryId, repositoryFileId)
Get information about a repository file's supported previews in a community.

ggetRepositories()
Get a list of repositories.

ggetRepositories(communityId)
Get a list of repositories in a community.

ggetRepositories(pageParam, pageSize)
Get a page of repositories.

ggetRepositories(communityId, pageParam, pageSize)
Get a page of repositories in a community.

ggetRepository(repositoryId)
Get a repository.

ggetRepository(communityId, repositoryId)
Get a repository in a community.
getRepositoryFile(repositoryId, repositoryFileId)
Get a repository file.

getRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)
Get a repository file with or without permissions information.

getRepositoryFile(communityId, repositoryId, repositoryFileId)
Get a repository file in a community.

getRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)
Get a repository file with or without permissions information in a community.

getRepositoryFolder(repositoryId, repositoryFolderId)
Get a repository folder.

getRepositoryFolder(communityId, repositoryId, repositoryFolderId)
Get a repository folder in a community.

getRepositoryFolderItems(repositoryId, repositoryFolderId)
Get repository folder items.

getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId)
Get repository folder items in a community.

getRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize)
Get a page of repository folder items.

getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize)
Get a page of repository folder items in a community.

updateRepositoryFile(repositoryId, repositoryFileId, file)
Update the metadata of a repository file.

updateRepositoryFile(repositoryId, repositoryFileId, file, fileData)
Update the content of a repository file.

updateRepositoryFile(communityId, repositoryId, repositoryFileId, file)
Update the metadata of a repository file in a community.

updateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData)
Update the content of a repository file in a community.

addRepositoryItem(repositoryId, repositoryFolderId, file)
Add a repository item.

API Version
39.0

Requires Chatter
No
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file)

Parameters

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.

Return Value

Type: ConnectApi.RepositoryFolderItem

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example

This example creates a file without binary content (metadata only) in a Google Drive repository folder. After the file is created, we show the file's ID, name, description, external URL, and download URL.

```
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFolderId = 'folder:0B0lTys1KmM3eSVJ2bJ1zTGFqSWs';

final ConnectApi.ContentHubItemInput newItem = new ConnectApi.ContentHubItemInput();
newItem.itemTypeId = 'document'; //see getAllowedTypes for any file item types available for creation/update
newItem.fields = new List<ConnectApi.ContentHubFieldValueInput>();

//Metadata: name field
final ConnectApi.ContentHubFieldValueInput fieldValueInput = new ConnectApi.ContentHubFieldValueInput();
fieldValueInput.name = 'name';
fieldValueInput.value = 'new folder item name.txt';
newItem.fields.add(fieldValueInput);

//Metadata: description field
final ConnectApi.ContentHubFieldValueInput fieldValueInputDesc = new ConnectApi.ContentHubFieldValueInput();
fieldValueInputDesc.name = 'description';
fieldValueInputDesc.value = 'It does describe it';
```
newItem.fields.add(fieldValueInputDesc);

```java
final ConnectApi.RepositoryFolderItem newFolderItem = ConnectApi.ContentHub.addRepositoryItem(gDriveRepositoryId, gDriveFolderId, newItem);
final ConnectApi.RepositoryFileSummary newFile = newFolderItem.file;
System.debug(String.format('New file - id: "{0}", name: "{1}", description: "{2}
 external URL: "{3}", download URL: "{4}", new String[]{newFile.id, newFile.name, newFile.description, newFile.externalDocumentUrl, newFile.downloadUrl});
```

SEE ALSO:
- `setTestAddRepositoryItem(repositoryId, repositoryFolderId, file, result)`
- Testing ConnectApi Code

**addRepositoryItem(communityId, repositoryId, repositoryFolderId, file)**

Add a repository item in a community.

**API Version**

39.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **repositoryId**
  - Type: `String`
  - The ID of the repository.

- **repositoryFolderId**
  - Type: `String`
  - The ID of the repository folder.

- **file**
  - Type: `ConnectApi.ContentHubItemInput`
  - The item type ID and fields of the item type.
Return Value

Type: `ConnectApi.RepositoryFolderItem`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

`setTestAddRepositoryItem(communityId, repositoryId, repositoryFolderId, file, result)`

`Testing ConnectApi Code`

```java
addRepositoryItem(repositoryId, repositoryFolderId, file, fileData)
```

Add a repository item, including the binary file.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String repositoryId,
   String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput
   fileData)
```

Parameters

- `repositoryId`
  
  Type: `String`
  
  The ID of the repository.

- `repositoryFolderId`
  
  Type: `String`
  
  The ID of the repository folder.

- `file`
  
  Type: `ConnectApi.ContentHubItemInput`
  
  The item type ID and fields of the item type.

- `fileData`
  
  Type: `ConnectApi.BinaryInput`
  
  The binary file.
Return Value

Type: `ConnectApi.RepositoryFolderItem`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example creates a file with binary content and metadata in a Google Drive repository folder. After the file is created, we show the file’s ID, name, description, external URL, and download URL.

```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFolderId = 'folder:0B0lTys1KmM3sSVJ2bjIzTGFqSWs';

final ConnectApi.ContentHubItemInput newItem = new ConnectApi.ContentHubItemInput();
newItem.itemTypeId = 'document'; //see getAllowedTypes for any file item types available for creation/update
newItem.fields = new List<ConnectApi.ContentHubFieldValueInput>();

//Metadata: name field
final String newFileName = 'new folder item name.txt';
final ConnectApi.ContentHubFieldValueInput fieldValueInput = new ConnectApi.ContentHubFieldValueInput();
fieldValueInput.name = 'name';
fieldValueInput.value = newFileName;
newItem.fields.add(fieldValueInput);

//Metadata: description field
final ConnectApi.ContentHubFieldValueInput fieldValueInputDesc = new
ConnectApi.ContentHubFieldValueInput();
fieldValueInputDesc.name = 'description';
fieldValueInputDesc.value = 'It does describe it';
newItem.fields.add(fieldValueInputDesc);

//Binary content
final Blob newFileBlob = Blob.valueOf('awesome content for brand new file');
final String newFileMimeType = 'text/plain';
final ConnectApi.BinaryInput fileBinaryInput = new ConnectApi.BinaryInput(newFileBlob, newFileMimeType, newFileName);

final ConnectApi.RepositoryFolderItem newFolderItem = ConnectApi.ContentHub.addRepositoryItem(gDriveRepositoryId, gDriveFolderId, newItem, fileBinaryInput);
final ConnectApi.RepositoryFileSummary newFile = newFolderItem.file;
System.debug(String.format('New file - id: ''{0}''
, name: ''{1}''
, description: ''{2}''
\n external URL: ''{3}''
, download URL: ''{4}''
, new String[]
});
```
Add a repository item, including the binary file, in a community.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData)

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **repositoryId**
  Type: String
  The ID of the repository.

- **repositoryFolderId**
  Type: String
  The ID of the repository folder.

- **file**
  Type: ConnectApi.ContentHubItemInput
  The item type ID and fields of the item type.

- **fileData**
  Type: ConnectApi.BinaryInput
  The binary file.

Return Value
Type: ConnectApi.RepositoryFolderItem
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestAddRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData, result)`
- Testing ConnectApi Code

```java
getAllowedItemTypes(repositoryId, repositoryFolderId)
```

Get the item types that the context user is allowed to create in the repository folder.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes(String repositoryId, String repositoryFolderId)
```

Parameters

- `repositoryId`
  - Type: `String`
  - The ID of the repository.

- `repositoryFolderId`
  - Type: `String`
  - The ID of the repository folder.

Return Value

Type: `ConnectApi.ContentHubAllowedItemTypeCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGet AllowedItemTypes(repositoryId, repositoryFolderId, result)`
- Testing ConnectApi Code
**getAllowedItemTypes**(repositoryId, repositoryFolderId, filter)

Get the item types, filtered by type, that the context user is allowed to create in the repository folder.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes(String repositoryId, String repositoryFolderId, ConnectApi.ConnectContentHubItemType filter)
```

Parameters

- **repositoryId**
  - Type: String
  - The ID of the repository.

- **repositoryFolderId**
  - Type: String
  - The ID of the repository folder.

- **filter**
  - Type: `ConnectApi.ContentHubItemType`
  - Item types. Values are:
    - Any—including files and folders.
    - FilesOnly—including files only.
    - FoldersOnly—including folders only.

Return Value

Type: `ConnectApi.ContentHubAllowedItemTypeCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example calls `getAllowedItemTypes` with `repositoryId`, `repositoryFolderId`, and `ConnectApi.ConnectContentHubItemType.FilesOnly` to get the first `ConnectApi.ContentHubItemTypeSummary.id` of a file. The context user can create allowed files in a repository folder in the external system.

```java
final ConnectApi.ContentHubAllowedItemTypeCollection allowedItemTypesColl = ConnectApi.ContentHub.getAllowedItemTypes(repositoryId, repositoryFolderId,
```
ConnectApi.ContentHubItemType.FilesOnly);
final List<ConnectApi.ContentHubItemTypeSummary> allowedItemTypes =
allowedItemTypesColl.allowedItemTypes;
string allowedFileItemTypeId = null;
if(allowedItemTypes.size() > 0){
    ConnectApi.ContentHubItemTypeSummary allowedItemTypeSummary = allowedItemTypes.get(0);

    allowedFileItemTypeId = allowedItemTypeSummary.id;
}

SEE ALSO:
    setTestGetAllowedItemTypes(repositoryId, repositoryFolderId, filter, result)
    Testing ConnectApi Code

getAllowedItemTypes(communityId, repositoryId, repositoryFolderId)
Get the item types that the context user is allowed to create in the repository folder in a community.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes(String communityId, String repositoryId, String repositoryFolderId)

Parameters
communityId
    Type: String
    Use either the ID for a community, internal, or null.
repositoryId
    Type: String
    The ID of the repository.
repositoryFolderId
    Type: String
    The ID of the repository folder.

Return Value
Type: ConnectApi.ContentHubAllowedItemTypeCollection
Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetAllowedItemTypes(communityId, repositoryId, repositoryFolderId, result)`

Testing ConnectApi Code

`getAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter)`
Get the item types, filtered by type, that the context user is allowed to create in the repository folder in a community.

API Version
39.0

Requires Chatter
No

Signature
```java
public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ConnectContentHubItemType filter)
```

Parameters
- **communityId**
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- **repositoryId**
  - Type: String
  - The ID of the repository.

- **repositoryFolderId**
  - Type: String
  - The ID of the repository folder.

- **filter**
  - Type: `ConnectApi.ContentHubItemType`
  - Item types. Values are:
    - `Any`—Includes files and folders.
    - `FilesOnly`—Includes files only.
    - `FoldersOnly`—Includes folders only.
Return Value
Type: ConnectApi.ContentHubAllowedItemTypeCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter, result)
Testing ConnectApi Code

gFilePreview(repositoryId, repositoryFileId, formatType)
Get a repository file preview.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.FilePreview getFilePreview(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType)

Parameters
repositoryId
Type: String
The ID of the repository.
repositoryFileId
Type: String
The ID of the repository file.
formatType
Type: ConnectApi.FilePreviewFormat
Specifies the format of the file preview. Values are:
- Jpg—Preview format is JPG.
- Pdf—Preview format is PDF.
- Svg—Preview format is compressed SVG.
- Thumbnail—Preview format is 240 x 180 PNG.
- ThumbnailBig—Preview format is 720 x 480 PNG.
- ThumbnailTiny—Preview format is 120 x 90 PNG.
PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand. If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter `general` in the Quick Find box in Setup. Select General Settings, and then select Display alternative file previews.

Return Value

Type: `ConnectApi.FilePreview`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example calls `getFilePreview(repositoryId, repositoryFileId, ConnectApi.FilePreviewFormat.Thumbnail)` to get the thumbnail format preview along with its respective URL and number of thumbnail renditions. For each thumbnail format, we show every rendition URL available.

```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFileId = 'document:1-zcAlBaoQbo2_yNF1HCcK6QJ7PmOke-kHFC4TYg3rk';final ConnectApi.FilePreview filePreview = ConnectApi.ContentHub.getFilePreview(gDriveRepositoryId, gDriveFileId, ConnectApi.FilePreviewFormat.Thumbnail);System.debug(String.format('Preview - URL: \''{0}''\', format: \''{1}''\', nbr of renditions for this format: {2}', new String[]{ filePreview.url, filePreview.format.name(),String.valueOf(filePreview.previewUrls.size())});for(ConnectApi.FilePreviewUrl filePreviewUrl : filePreview.previewUrls){    System.debug('-----> Rendition URL: ' + filePreviewUrl.previewUrl);
}
```

SEE ALSO:

`setTestGetFilePreview(repositoryId, repositoryFileId, formatType, result)`

Testing ConnectApi Code

`getFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)`

Get a page or page range of a repository file preview.

API Version

39.0

Requires Chatter

No
Signature

```java
public static ConnectApi.FilePreview getFilePreview(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, Integer startPageNumber, Integer endPageNumber)
```

Parameters

**repositoryId**
Type: `String`
The ID of the repository.

**repositoryFileId**
Type: `String`
The ID of the repository file.

**formatType**
Type: `ConnectApi.FilePreviewFormat`
Specifies the format of the file preview. Values are:
- `Jpg`—Preview format is JPG.
- `Pdf`—Preview format is PDF.
- `Svg`—Preview format is compressed SVG.
- `Thumbnail`—Preview format is 240 x 180 PNG.
- `ThumbnailBig`—Preview format is 720 x 480 PNG.
- `ThumbnailTiny`—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand. If you're concerned that feature-rich SVG previews don't work in your org, choose alternative file previews. To use JPG file previews, enter `general` in the Quick Find box in Setup. Select General Settings, and then select **Display alternative file previews**.

**startPageNumber**
Type: `Integer`
The starting page number in the range of file preview URLs.

**endPageNumber**
Type: `Integer`
The ending page number in the range of file preview URLs.

Return Value

Type: `ConnectApi.FilePreview`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

`setTestGetFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber, result)`

`Testing ConnectApi Code`

**getFilePreview(communityId, repositoryId, repositoryFileId, formatType)**

Get a repository file preview in a community.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.FilePreview getFilePreview(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **repositoryId**
  - Type: `String`
  - The ID of the repository.

- **repositoryFileId**
  - Type: `String`
  - The ID of the repository file.

- **formatType**
  - Type: `ConnectApi.FilePreviewFormat`
  - Specifies the format of the file preview. Values are:
    - Jpg—Preview format is JPG.
    - Pdf—Preview format is PDF.
    - Svg—Preview format is compressed SVG.
    - Thumbnail—Preview format is 240 x 180 PNG.
    - ThumbnailBig—Preview format is 720 x 480 PNG.
    - ThumbnailTiny—Preview format is 120 x 90 PNG.
PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand. If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter `general` in the Quick Find box in Setup. Select General Settings, and then select **Display alternative file previews**.

Return Value
Type: `ConnectApi.FilePreview`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

`Testing ConnectApi Code`

**getEmailPreview(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)**
Get a page or page range of a repository file preview in a community.

API Version
39.0

Requires Chatter
No

Signature
```
public static ConnectApi.FilePreview getFilePreview(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, Integer startPageNumber, Integer endPageNumber)
```

Parameters
```
communityId
  Type: String
  Use either the ID for a community, internal, or null.

repositoryId
  Type: String
  The ID of the repository.

repositoryFileId
  Type: String
  The ID of the repository file.
```
**formatType**

Type: `ConnectApi.FilePreviewFormat`

Specifies the format of the file preview. Values are:

- **Jpg**—Preview format is JPG.
- **Pdf**—Preview format is PDF.
- **Svg**—Preview format is compressed SVG.
- **Thumbnail**—Preview format is 240 x 180 PNG.
- **ThumbnailBig**—Preview format is 720 x 480 PNG.
- **ThumbnailTiny**—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

If you're concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter `general` in the Quick Find box in Setup. Select General Settings, and then select **Display alternative file previews**.

**startPageNumber**

Type: `Integer`

The starting page number in the range of file preview URLs.

**endPageNumber**

Type: `Integer`

The ending page number in the range of file preview URLs.

Return Value

Type: `ConnectApi.FilePreview`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

getItemType(communityId, repositoryId, repositoryItemTypeId)
Get information about an item type associated with a repository in a community.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.ContentHubItemTypeDetail getItemType(String communityId, String repositoryId, String repositoryItemTypeId)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.
repositoryId
Type: String
The ID of the repository.
repositoryItemType
Type: String
The ID of the repository item type.

Return Value
Type: ConnectApi.ContentHubItemTypeDetail

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetItemType(communityId, repositoryId, repositoryItemType, result)
Testing ConnectApi Code

getPreviews(repositoryId, repositoryFileId)
Get information about a repository file's supported previews.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.FilePreviewCollection getPreviews(String repositoryId, String repositoryFileId)

Parameters
repositoryId
Type: String
The ID of the repository.
repositoryFileId
Type: String
The ID of the repository file.
Return Value

Type: `ConnectApi.FilePreviewCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example gets all supported preview formats and their respective URLs and number of renditions. For each supported preview format, we show every rendition URL available.

```java
final String gDriveRepositoryId = '0Xcxy00000000000DGAY', gDriveFileId = 'document:1-zcAlBaeoQbo2_yNFiHCcK6QJTPmOke-kHFC4TYg3rk';
final ConnectApi.FilePreviewCollection previewsCollection = ConnectApi.ContentHub.getPreviews(gDriveRepositoryId, gDriveFileId);
for(ConnectApi.FilePreview filePreview : previewsCollection.previews){
    System.debug(String.format('Preview - URL: \'\'{0}\', format: \'\'{1}\', nbr of renditions for this format: {2}', new String[]{ filePreview.url, filePreview.format.name(),String.valueOf(filePreview.previewUrls.size())});
    for(ConnectApi.FilePreviewUrl filePreviewUrl : filePreview.previewUrls){
        System.debug('-----> Rendition URL: ' + filePreviewUrl.previewUrl);
    }
}
```

SEE ALSO:

setTestGetPreviews(repositoryId, repositoryFileId, result)

Testing ConnectApi Code

`getPreviews(communityId, repositoryId, repositoryFileId)`

Get information about a repository file’s supported previews in a community.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.FilePreviewCollection getPreviews(String communityId, String repositoryId, String repositoryFileId)
```
Parameters

* **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

* **repositoryId**
  Type: String
  The ID of the repository.

* **repositoryFileId**
  Type: String
  The ID of the repository file.

Return Value

Type: `ConnectApi.FilePreviewCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

  - `setTestGetPreviews(communityId, repositoryId, repositoryFileId, result)`
  - Testing ConnectApi Code

### getRepositories()

Get a list of repositories.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.ContentHubRepositoryCollection getRepositories()
```

Return Value

Type: `ConnectApi.ContentHubRepositoryCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.
Example

This example gets all repositories and gets the first SharePoint online repository found.

```java
final string sharePointOnlineProviderType = 'ContentHubSharepointOffice365';
final ConnectApi.ContentHubRepositoryCollection repositoryCollection = ConnectApi.ContentHub.getRepositories();
ConnectApi.ContentHubRepository sharePointOnlineRepository = null;
for (ConnectApi.ContentHubRepository repository : repositoryCollection.repositories) {
    if (sharePointOnlineProviderType.equalsIgnoreCase(repository.providerType.type)) {
        sharePointOnlineRepository = repository;
        break;
    }
}
```

SEE ALSO:

- setTestGetRepositories(result)
- Testing ConnectApi Code

**getRepositories(communityId)**

Get a list of repositories in a community.

**API Version**

39.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.ContentHubRepositoryCollection getRepositories(String communityId)
```

**Parameters**

- **communityId**
  - Type: String
    - Use either the ID for a community, internal, or null.

**Return Value**

- Type: `ConnectApi.ContentHubRepositoryCollection`
Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetRepositories(communityId, result)`
- Testing ConnectApi Code

**getRepositories** (*pageParam, pageSize*)

Get a page of repositories.

API Version
39.0

Requires Chatter
No

Signature
```
public static ConnectApi.ContentHubRepositoryCollection getRepositories(Integer pageParam, Integer pageSize)
```

Parameters

`pageParam`
- Type: `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
- Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.

Return Value
Type: `ConnectApi.ContentHubRepositoryCollection`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetRepositories(pageParam, pageSize, result)`
- Testing ConnectApi Code
getRepository(communityId, pageParam, pageSize)
Get a page of repositories in a community.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.ContentHubRepositoryCollection getRepositories(String communityId, Integer pageParam, Integer pageSize)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default page size is 25.

Return Value
Type: ConnectApi.ContentHubRepositoryCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRepositories(communityId, pageParam, pageSize, result)
Testing ConnectApi Code

getRepository(repositoryId)
Get a repository.

API Version
369.0
Requires Chatter
No

Signature

```java
public static ConnectApi.ContentHubRepository getRepository(String repositoryId)
```

Parameters

`repositoryId`
Type: `String`
The ID of the repository.

Return Value

Type: `ConnectApi.ContentHubRepository`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

```java
final string repositoryId = '0XCxx000000123GAA';
final ConnectApi.ContentHubRepository repository =
  ConnectApi.ContentHub.getRepository(repositoryId);
```

SEE ALSO:

- `setTestGetRepository(repositoryId, result)`
- Testing ConnectApi Code

`getRepository(communityId, repositoryId)`
Get a repository in a community.

API Version

39.0

Requires Chatter
No

Signature

```java
public static ConnectApi.ContentHubRepository getRepository(String communityId, String repositoryId)
```
Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

repositoryId
  Type: String
  The ID of the repository.

Return Value

Type: ConnectApi.ContentHubRepository

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestGetRepository(communityId, repositoryId, result)
  Testing ConnectApi Code

getRepositoryFile(repositoryId, repositoryFileId)

Get a repository file.

API Version

39.0

Requires Chatter

No

Signature

public static ConnectApi.RepositoryFileDetail getRepositoryFile(String repositoryId,
  String repositoryFileId)

Parameters

repositoryId
  Type: String
  The ID of the repository.

repositoryFileId
  Type: String
  The ID of the repository file.
Return Value
Type: `ConnectApi.RepositoryFileDetail`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example
```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY',1519gDriveFileId = 'file:0B01Tys1KmM3sTmxKJbWZja00';
final ConnectApi.RepositoryFileDetail file = ConnectApi.ContentHub.getRepositoryFile(gDriveRepositoryId, gDriveFileId);
System.debug(String.format('File - name: `{0}`, size: `{1}`, external URL: `{2}`, download URL: `{3}`',
    file.name, String.valueOf(file.contentSize), file.externalDocumentUrl, file.downloadUrl));
```

SEE ALSO:
- `setTestGetRepositoryFile(repositoryId, repositoryFileId, result)`
- Testing ConnectApi Code

`getRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)`
Get a repository file with or without permissions information.

API Version
39.0

Requires Chatter
No

Signature
```
public static ConnectApi.RepositoryFileDetail getRepositoryFile(String repositoryId, String repositoryFileId, Boolean includeExternalFilePermissionsInfo)
```

Parameters
- `repositoryId`
  Type: `String`
  The ID of the repository.
- `repositoryFileId`
  Type: `String`
  The ID of the repository file.
**includeExternalFilePermissionsInfo**

Type: `Boolean`

Specifies whether to include permission information, such as whether the file is shared and what are the available permission types.

Managing external file permissions is supported for Google Drive, SharePoint Online, and OneDrive for Business.

**Return Value**

Type: `ConnectApi.RepositoryFileDetail`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**Example**

```java
final String gDriveRepositoryId = '0XCxx00000000DGYAY', gDriveFileId = 'file:0B01Tys1KmM3sTmxKNjVfWZja00';

final ConnectApi.RepositoryFileDetail file = ConnectApi.ContentHub.getRepositoryFile(gDriveRepositoryId, gDriveFileId, true);
System.debug(String.format('File - name: \'{0}\', size: {1}, external URL: \'{2}\', download URL: \'{3}\', new String[]{ file.name, String.valueOf(file.contentSize), file.externalDocumentUrl, file.downloadUrl});
final ConnectApi.ExternalFilePermissionInformation externalFilePermInfo = file.externalFilePermissionInformation;

//permission types
final List<ConnectApi.ContentHubPermissionType> permissionTypes = externalFilePermInfo.externalFilePermissionTypes;
for (ConnectApi.ContentHubPermissionType permissionType : permissionTypes){
     System.debug(String.format('Permission type - id: \'{0}\', label: \'{1}\', new String[]{ permissionType.id, permissionType.label});
}

//permission groups
final List<ConnectApi.RepositoryGroupSummary> groups = externalFilePermInfo.repositoryPublicGroups;
for (ConnectApi.RepositoryGroupSummary ggroup : groups){
     System.debug(String.format('Group - id: \'{0}\', name: \'{1}\', type: \'{2}\', new String[]{ ggroup.id, ggroup.name, ggroup.type.name});
}
```

**SEE ALSO:**

- `setTestGetRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo, result)`
- Testing ConnectApi Code

**getRepositoryFile(communityId, repositoryId, repositoryFileId)**

Get a repository file in a community.
API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFileDetail getRepositoryFile(String communityId, String repositoryId, String repositoryFileId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

Return Value
Type: ConnectApi.RepositoryFileDetail

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRepositoryFile(communityId, repositoryId, repositoryFileId, result)
Testing ConnectApi Code

getRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)
Get a repository file with or without permissions information in a community.
Requires Chatter
No

Signature
public static ConnectApi.RepositoryFileDetail getRepositoryFile(String communityId, String repositoryId, String repositoryFileId, Boolean includeExternalFilePermissionsInfo)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

includeExternalFilePermissionsInfo
Type: Boolean
Specifies whether to include permission information, such as whether the file is shared and what are the available permission types.
Managing external file permissions is supported for Google Drive, SharePoint Online, and OneDrive for Business.

Return Value
Type: ConnectApi.RepositoryFileDetail

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo, result)
Testing ConnectApi Code

getRepositoryFolder(repositoryId, repositoryFolderId)
Get a repository folder.

API Version
39.0
Requires Chatter
No

Signature

```java
public static ConnectApi.RepositoryFolderDetail getRepositoryFolder(String repositoryId, String repositoryFolderId)
```

Parameters

- `repositoryId`
  Type: `String`
  The ID of the repository.

- `repositoryFolderId`
  Type: `String`
  The ID of the repository folder.

Return Value

Type: `ConnectApi.RepositoryFolderDetail`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

```java
final String gDriveRepositoryId = '0XCxx000000000ODGAY', gDriveFolderId = 'folder:0B0lTys1KmM3sSVJ2bJlzTGFqSWs';
final ConnectApi.RepositoryFolderDetail folder = ConnectApi.ContentHub.getRepositoryFolder(gDriveRepositoryId, gDriveFolderId);
System.debug(String.format('Folder - name: \'\'{0}\', description: \'\'{1}\', external URL: \'\'{2}\', folder items URL: \'\'{3}\',
    new String[]{ folder.name, folder.description, folder.externalFolderUrl, folder.folderItemsUrl});
```

SEE ALSO:

- `setTestGetRepositoryFolder(repositoryId, repositoryFolderId, result)`
- Testing ConnectApi Code

**getRepositoryFolder(communityId, repositoryId, repositoryFolderId)**

Get a repository folder in a community.

API Version

39.0
public static ConnectApi.RepositoryFolderDetail getRepositoryFolder(String communityId, String repositoryId, String repositoryFolderId)

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **repositoryId**
  - Type: String
  - The ID of the repository.

- **repositoryFolderId**
  - Type: String
  - The ID of the repository folder.

Return Value

Type: ConnectApi.RepositoryFolderDetail

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- setTestGetRepositoryFolder(communityId, repositoryId, repositoryFolderId, result)
- Testing ConnectApi Code

getRepositoryFolderItems(repositoryId, repositoryFolderId)

Get repository folder items.

API Version

39.0

Requires Chatter

No
Signature

public static ConnectApi.RepositoryFolderItemsCollection getRepositoryFolderItems(String repositoryId, String repositoryFolderId)

Parameters

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

Return Value

Type: ConnectApi.RepositoryFolderItemsCollection

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example

This example gets the collection of items in a repository folder. For files, we show the file’s name, size, external URL, and download URL. For folders, we show the folder’s name, description, and external URL.

```java
final String gDriveRepositoryId = '0XCxx000000000000DGA', gDriveFolderId = 'folder:0B0lTys1KmM3sSVJ2b1lzTGFqSWs';
final ConnectApi.RepositoryFolderItemsCollection folderItemsColl = ConnectApi.ContentHub.getRepositoryFolderItems(gDriveRepositoryId,gDriveFolderId);
final List<ConnectApi.RepositoryFolderItem> folderItems = folderItemsColl.items;
System.debug('Number of items in repository folder: ' + folderItems.size());
for(ConnectApi.RepositoryFolderItem item : folderItems){
    ConnectApi.RepositoryFileSummary fileSummary = item.file;
    if(fileSummary != null){
        System.debug(String.format('File item - name: `{0}`, size: {1}, external URL: `{2}`, download URL: `{3}`', fileSummary.name, String.valueOf(fileSummary.contentSize), fileSummary.externalDocumentUrl, fileSummary.downloadUrl));
    }else{
        ConnectApi.RepositoryFolderSummary folderSummary = item.folder;
        System.debug(String.format('Folder item - name: `{0}`, description: `{1}`, external URL: `{2}`', folderSummary.name, folderSummary.description, folderSummary.externalDocumentUrl));
    }
}
```

SEE ALSO:

Testing ConnectApi Code

1525
getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId)
Get repository folder items in a community.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFolderItemsCollection getRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

Return Value
Type: ConnectApi.RepositoryFolderItemsCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, result)

getRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize)
Get a page of repository folder items.

API Version
39.0
Requires Chatter
No

Signature
public static ConnectApi.RepositoryFolderItemsCollection getRepositoryFolderItems(String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize)

Parameters
repositoryId
Type: String
The ID of the repository.
repositoryFolderId
Type: String
The ID of the repository folder.
pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.
pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default page size is 25.

Return Value
Type: ConnectApi.RepositoryFolderItemsCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

gGetRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize)
Get a page of repository folder items in a community.

API Version
39.0
Requires Chatter
No

Signature

```java
public static ConnectApi.RepositoryFolderItemsCollection getRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `repositoryId`
  - Type: `String`
  - The ID of the repository.

- `repositoryFolderId`
  - Type: `String`
  - The ID of the repository folder.

- `pageParam`
  - Type: `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.

Return Value

Type: `ConnectApi.RepositoryFolderItemsCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

```java
updateRepositoryFile(repositoryId, repositoryFileId, file)
```

Update the metadata of a repository file.
API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String repositoryId,
String repositoryFileId, ConnectApi.ContentHubItemInput file)

Parameters
 repositoryId
  Type: String
  The ID of the repository.
 repositoryFileId
  Type: String
  The ID of the repository file.
 file
  Type: ConnectApi.ContentHubItemInput
  The item type ID and fields of the item type.

Return Value
Type: ConnectApi.RepositoryFileDetail

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example
This example updates the metadata of a file in a repository. After the file is updated, we show the file’s ID, name, description, external URL, download URL.

```java
final String gDriveRepositoryId = '0XCxx00000000000DGAY', gDriveFolderId =
  'folder:0B01Tys1km3sSVJ2bj1z7TGFqSWS', gDriveFileId =
  'document:1q9oatVpcYBK-jWzP8hr75ulQghwFP15zhkamKrRcQ';

final ConnectApi.ContentHubItemInput updatedItem = new ConnectApi.ContentHubItemInput();
updatedItem.itemTypeId = 'document'; //see getAllowedTypes for any file item types available
for creation/update
updatedItem.fields = new List<ConnectApi.ContentHubFieldValueInput>{};

//Metadata: name field
final ConnectApi.ContentHubFieldValueInput fieldValueInputName = new
```
ConnectApi.ContentHubFieldValueInput();
fieldValueInputName.name = 'name';
fieldValueInputName.value = 'updated file name.txt';
updatedItem.fields.add(fieldValueInputName);

//Metadata: description field
final ConnectApi.ContentHubFieldValueInput fieldValueInputNameDesc = new
ConnectApi.ContentHubFieldValueInput();
fieldValueInputNameDesc.name = 'description';
fieldValueInputNameDesc.value = 'that updates the former description';
updatedItem.fields.add(fieldValueInputNameDesc);

final ConnectApi.RepositoryFileDetail updatedFile =
ConnectApi.ContentHub.updateRepositoryFile(gDriveRepositoryId, gDriveFileId, updatedItem);
System.debug(String.format('Updated file - id: `{0}`, name: `{1}`, description: `{2}`,
external URL: `{3}`, download URL: `{4}`, new String[]{
updatedFile.id, updatedFile.name, updatedFile.description, updatedFile.externalDocumentUrl,
updatedFile.downloadUrl});

SEE ALSO:
setTestUpdateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData, result)
Testing ConnectApi Code

updateRepositoryFile(repositoryId, repositoryFileId, file, fileData)
Update the content of a repository file.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData)

Parameters
repositoryId
Type: String
The ID of the repository.
repositoryFileId
Type: String
The ID of the repository file.
file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.

fileData
Type: ConnectApi.BinaryInput
The binary file.

Return Value
Type: ConnectApi.RepositoryFileDetail

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example
This example updates the content and metadata of a file in a repository. After the file is updated, we show the file’s ID, name, description, external URL, and download URL.

```java
final String gDriveRepositoryId = '0Xcxx000000000DDGAY', gDriveFolderId = 'folder:0B0lTys1KmM3sSVJ2bJ1zTGFqSWS', gDriveFileId = 'document:1q90atVpcyYBK-JWzp_Phr75ulQghwFP15zhkamKrRcQ';

final ConnectApi.ContentHubItemInput updatedItem = new ConnectApi.ContentHubItemInput();
updatedItem.itemTypeId = 'document'; //see getAllowedTypes for any file item types available for creation/update
updatedItem.fields = new List<ConnectApi.ContentHubFieldValueInput>();

//Metadata: name field
final ConnectApi.ContentHubFieldValueInput fieldValueInputName = new ConnectApi.ContentHubFieldValueInput();
fieldValueInputName.name = 'name';
fieldValueInputName.value = 'updated file name.txt';
updatedItem.fields.add(fieldValueInputName);

//Metadata: description field
final ConnectApi.ContentHubFieldValueInput fieldValueInputNameDesc = new ConnectApi.ContentHubFieldValueInput();
fieldValueInputNameDesc.name = 'description';
fieldValueInputNameDesc.value = 'that updates the former description';
updatedItem.fields.add(fieldValueInputNameDesc);

//Binary content
final Blob updatedFileBlob = Blob.valueOf('even more awesome content for updated file');
final String updatedFileMimeType = 'text/plain';
final ConnectApi.BinaryInput fileBinaryInput = new ConnectApi.BinaryInput(updatedFileBlob, updatedFileMimeType, updatedFileName);

final ConnectApi.RepositoryFileDetail updatedFile = ConnectApi.ContentHub.updateRepositoryFile(gDriveRepositoryId, gDriveFileId, updatedItem);
```
System.debug(String.format('Updated file - id: \'{0}\', name: \'{1}\', description: \\'{2}\',
 external URL: \'{3}\', download URL: \'{4}\', new String[]{
updatedFile.id, updatedFile.name, updatedFile.description, updatedFile.externalDocumentUrl,
updatedFile.downloadUrl})));

SEE ALSO:
   setTestUpdateRepositoryFile(repositoryId, repositoryFileId, file, result)
   Testing ConnectApi Code

updateRepositoryFile(communityId, repositoryId, repositoryFileId, file)
Update the metadata of a repository file in a community.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String communityId,
String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file)

Parameters
communityId
   Type: String
   Use either the ID for a community, internal, or null.
repositoryId
   Type: String
   The ID of the repository.
repositoryFileId
   Type: String
   The ID of the repository file.
file
   Type: ConnectApi.ContentHubItemInput
   The item type ID and fields of the item type.

Return Value
Type: ConnectApi.RepositoryFileDetail
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestUpdateRepositoryFile(repositoryId, repositoryFileId, file, fileData, result)`  
- Testing ConnectApi Code

`updateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData)`

Update the content of a repository file in a community.

API Version

39.0

Requires Chatter

No

Signature

```
public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String communityId, 
String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file, 
ConnectApi.BinaryInput fileData)
```

Parameters

- **communityId**  
  Type: `String`  
  Use either the ID for a community, `internal`, or `null`.

- **repositoryId**  
  Type: `String`  
  The ID of the repository.

- **repositoryFileId**  
  Type: `String`  
  The ID of the repository file.

- **file**  
  Type: `ConnectApi.ContentHubItemInput`  
  The item type ID and fields of the item type.

- **fileData**  
  Type: `ConnectApi.BinaryInput`  
  The binary file.
Return Value

Type: ConnectApi.RepositoryFileDetail

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

ContentHub Test Methods

The following are the test methods for ContentHub. All methods are static.
For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

setTestAddRepositoryItem(repositoryId, repositoryFolderId, file, result)

Register a ConnectApi.RepositoryFolderItem object to be returned when the matching addRepositoryItem(repositoryId, repositoryFolderId, file) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

public static Void setTestAddRepositoryItem(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.RepositoryFolderItem result)

Parameters

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.

result
Type: ConnectApi.RepositoryFolderItem
The object containing test data.

Return Value
Type: Void

SEE ALSO:
addRepositoryItem(repositoryId, repositoryFolderId, file)
Testing ConnectApi Code

setTestAddRepositoryItem(communityId, repositoryId, repositoryFolderId, file, result)
Register a ConnectApi.RepositoryFolderItem object to be returned when the matching
addRepositoryItem (communityId, repositoryId, repositoryFolderId, file) method is called in a
test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestAddRepositoryItem(String communityId, String repositoryId,
String repositoryFolderId, ConnectApi.ContentHubItemInput file,
ConnectApi.RepositoryFolderItem result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.

result
Type: ConnectApi.RepositoryFolderItem
The object containing test data.
Return Value
Type: Void

SEE ALSO:
- `addRepositoryItem(communityId, repositoryId, repositoryFolderId, file)`

Testing ConnectApi Code

```java
setTestAddRepositoryItem(repositoryId, repositoryFolderId, file, fileData, result)
```

Register a `ConnectApi.RepositoryFolderItem` object to be returned when the matching
`addRepositoryItem(repositoryId, repositoryFolderId, file, fileData)` method is called in a test
context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
```java
public static Void setTestAddRepositoryItem(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData, ConnectApi.RepositoryFolderItem result)
```

Parameters

- `repositoryId`
  Type: `String`
  The ID of the repository.

- `repositoryFolderId`
  Type: `String`
  The ID of the repository folder.

- `file`
  Type: `ConnectApi.ContentHubItemInput`
  The item type ID and fields of the item type.

- `fileData`
  Type: `ConnectApi.BinaryInput`
  The binary file.

- `result`
  Type: `ConnectApi.RepositoryFolderItem`
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
- addRepositoryItem(repositoryId, repositoryFolderId, file, fileData)
- Testing ConnectApi Code

setTestAddRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData, result)

Register a ConnectApi.RepositoryFolderItem object to be returned when the matching addRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestAddRepositoryItem(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData, ConnectApi.RepositoryFolderItem result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.

fileData
Type: ConnectApi.BinaryInput
The binary file.

result
Type: ConnectApi.RepositoryFolderItem
The object containing test data.
setTestGetAllowedItemTypes (repositoryId, repositoryFolderId, result)

Register a ConnectApi.ContentHubAllowedItemTypeCollection object to be returned when the matching getNotAllowedItemTypes (repositoryId, repositoryFolderId) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetAllowedItemTypes(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubAllowedItemTypeCollection result)

Parameters
repositoryId
Type: String
The ID of the repository.
repositoryFolderId
Type: String
The ID of the repository folder.
result
Type: ConnectApi.ContentHubAllowedItemTypeCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getNotAllowedItemTypes (repositoryId, repositoryFolderId)
Testing ConnectApi Code
**setTestGet AllowedItemTypes(repositoryId, repositoryFolderId, filter, result)**

Register a ConnectApi.ContentHubAllowedItemTypeCollection object to be returned when the matching `getAllowedItemTypes(repositoryId, repositoryFolderId, filter)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestGetAllowedItemTypes(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemType filter, ConnectApi.ContentHubAllowedItemTypeCollection result)
```

**Parameters**

- **repositoryId**
  - Type: String
  - The ID of the repository.

- **repositoryFolderId**
  - Type: String
  - The ID of the repository folder.

- **filter**
  - Type: ConnectApi.ContentHubItemType
  - Item types. Values are:
    - Any—Includes files and folders.
    - FilesOnly—Includes files only.
    - FoldersOnly—Includes folders only.

- **result**
  - Type: ConnectApi.ContentHubAllowedItemTypeCollection
  - The object containing test data.

**Return Value**

Type: Void

**SEE ALSO:**

- `getAllowedItemTypes(repositoryId, repositoryFolderId, filter)`
- Testing ConnectApi Code
**setTestGetAllowedItemTypes(communityId, repositoryId, repositoryFolderId, result)**

Register a `ConnectApi.ContentHubAllowedItemTypeCollection` object to be returned when the matching `getAllowedItemTypes(communityId, repositoryId, repositoryFolderId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestGetAllowedItemTypes(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ContentHubAllowedItemTypeCollection result)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.
- **repositoryId**
  - Type: `String`
  - The ID of the repository.
- **repositoryFolderId**
  - Type: `String`
  - The ID of the repository folder.
- **result**
  - Type: `ConnectApi.ContentHubAllowedItemTypeCollection`
  - The object containing test data.

**Return Value**

Type: `Void`

**SEE ALSO:**

- `getAllowedItemTypes(communityId, repositoryId, repositoryFolderId)`
- Testing ConnectApi Code

**setTestGetAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter, result)**

Register a `ConnectApi.ContentHubAllowedItemTypeCollection` object to be returned when the matching `getAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter)` method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
40.0

Signature
public static Void setTestGetAllowedItemTypes(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemType filter, ConnectApi.ContentHubAllowedItemTypeCollection result)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

repositoryId
  Type: String
  The ID of the repository.

repositoryFolderId
  Type: String
  The ID of the repository folder.

filter
  Type: ConnectApi.ContentHubItemType
  Item types. Values are:
  • Any—including files and folders.
  • FilesOnly—including files only.
  • FoldersOnly—including folders only.

result
  Type: ConnectApi.ContentHubAllowedItemTypeCollection
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
  getTestGetAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter)
  Testing ConnectApi Code

setTestGetFilePreview(repositoryId, repositoryFileId, formatType, result)

Register a ConnectApi.FilePreview object to be returned when the matching getFilePreview(repositoryId, repositoryFileId, formatType) method is called in a test context. Use the method with the same parameters or you receive an exception.
public static Void setTestGetFilePreview(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, ConnectApi.FilePreview result)

repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

formatType
Type: ConnectApi.FilePreviewFormat
Specifies the format of the file preview. Values are:
- Jpg—Preview format is JPG.
- Pdf—Preview format is PDF.
- Svg—Preview format is compressed SVG.
- Thumbnail—Preview format is 240 x 180 PNG.
- ThumbnailBig—Preview format is 720 x 480 PNG.
- ThumbnailTiny—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter general in the Quick Find box in Setup. Select General Settings, and then select Display alternative file previews.

result
Type: ConnectApi.FilePreview
The object containing test data.

SEE ALSO:
- getFilePreview(repositoryId, repositoryFileId, formatType)

Testing ConnectApi Code
setTestGetFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber, result)

Register a ConnectApi.FilePreview object to be returned when the matching getFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetFilePreview(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, Integer startPageNumber, Integer endPageNumber, ConnectApi.FilePreview result)

Parameters

repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

formatType
Type: ConnectApi.FilePreviewFormat
Specifies the format of the file preview. Values are:
- Jpg—Preview format is JPG.
- Pdf—Preview format is PDF.
- Svg—Preview format is compressed SVG.
- Thumbnail—Preview format is 240 x 180 PNG.
- ThumbnailBig—Preview format is 720 x 480 PNG.
- ThumbnailTiny—Preview format is 120 x 90 PNG.
PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.
If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter general in the Quick Find box in Setup. Select General Settings, and then select Display alternative file previews.

startPageNumber
Type: Integer
The starting page number in the range of file preview URLs.

endPageNumber
Type: Integer
The ending page number in the range of file preview URLs.
result
  Type: ConnectApi.FilePreview
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
  getFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)
  Testing ConnectApi Code

```java
setTestGetFilePreview(communityId, repositoryId, repositoryFileId, formatType, result)
```

Register a ConnectApi.FilePreview object to be returned when the matching `getFilePreview(communityId, repositoryId, repositoryFileId, formatType)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
```java
public static Void setTestGetFilePreview(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, ConnectApi.FilePreview result)
```

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **repositoryId**
  Type: String
  The ID of the repository.

- **repositoryFileId**
  Type: String
  The ID of the repository file.

- **formatType**
  Type: ConnectApi.FilePreviewFormat
  Specifies the format of the file preview. Values are:
  - Jpg—Preview format is JPG.
  - Pdf—Preview format is PDF.
PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

   Testing ConnectApi Code

setTestGetFilePreview(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber, result)
Register a ConnectApi.FilePreview object to be returned when the matching getFilePreview(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetFilePreview(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, Integer startPageNumber, Integer endPageNumber, ConnectApi.FilePreview result)

Parameters
communityId
Type: String
  Use either the ID for a community, internal, or null.
repositoryId
Type: String
  The ID of the repository.
repositoryFileId
Type: String
The ID of the repository file.

formatType
Type: ConnectApi.FilePreviewFormat
Specifies the format of the file preview. Values are:
- Jpg—Preview format is JPG.
- Pdf—Preview format is PDF.
- Svg—Preview format is compressed SVG.
- Thumbnail—Preview format is 240 x 180 PNG.
- ThumbnailBig—Preview format is 720 x 480 PNG.
- ThumbnailTiny—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

If you're concerned that feature-rich SVG previews don't work in your org, choose alternative file previews. To use JPG file previews, enter general in the Quick Find box in Setup. Select General Settings, and then select Display alternative file previews.

startPageNumber
Type: Integer
The starting page number in the range of file preview URLs.

d_endPageNumber
Type: Integer
The ending page number in the range of file preview URLs.

result
Type: ConnectApi.FilePreview
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- getFilePreview(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)
- Testing ConnectApi Code

setTestGetItemType(repositoryId, repositoryItemType, result)
Register a ConnectApi.ContentHubItemTypeDetail object to be returned when the matching getItemType(repositoryId, repositoryItemType) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0
**Signature**

```java
public static Void setTestGetItemType(String repositoryId, String repositoryItemType, ConnectApi.ContentHubItemTypeDetail result)
```

**Parameters**

- `repositoryId`
  - Type: `String`
  - The ID of the repository.

- `repositoryItemType`
  - Type: `String`
  - The ID of the repository item type.

- `result`
  - Type: `ConnectApi.ContentHubItemTypeDetail`
  - The object containing test data.

**Return Value**

Type: `Void`

**SEE ALSO:**

- `getItemType(repositoryId, repositoryItemType)`
- Testing ConnectApi Code

---

**setTestGetItemType(communityId, repositoryId, repositoryItemType, result)**

Register a `ConnectApi.ContentHubItemTypeDetail` object to be returned when the matching `getItemType(communityId, repositoryId, repositoryItemType)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestGetItemType(String communityId, String repositoryId, String repositoryItemType, ConnectApi.ContentHubItemTypeDetail result)
```

**Parameters**

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `repositoryId`
  - Type: `String`
The ID of the repository.

```java
repositoryItemTypeId
Type: String
```

The ID of the repository item type.

```java
result
Type: ConnectApi.ContentHubItemTypeDetail
```

The object containing test data.

Return Value

Type: Void

SEE ALSO:

- `getItemType(communityId, repositoryId, repositoryItemTypeId)`
- Testing ConnectApi Code

**setTestGetPreviews(repositoryId, repositoryFileId, result)**

Register a `ConnectApi.FilePreviewCollection` object to be returned when the matching `getPreviews(repositoryId, repositoryFileId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```java
public static Void setTestGetPreviews(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewCollection result)
```

Parameters

- `repositoryId`
  Type: String
  The ID of the repository.

- `repositoryFileId`
  Type: String
  The ID of the repository file.

- `result`
  Type: `ConnectApi.FilePreviewCollection`
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
   getPreviews(repositoryId, repositoryFileId)
   Testing ConnectApi Code

setTestGetPreviews(communityId, repositoryId, repositoryFileId, result)

Register a ConnectApi.FilePreviewCollection object to be returned when the matching
getPreviews(communityId, repositoryId, repositoryFileId) method is called in a test context. Use the
method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetPreviews(String communityId, String repositoryId, String
repositoryFileId, ConnectApi.FilePreviewCollection result)

Parameters
communityId
   Type: String
   Use either the ID for a community, internal, or null.
repositoryId
   Type: String
   The ID of the repository.
repositoryFileId
   Type: String
   The ID of the repository file.
result
   Type: ConnectApi.FilePreviewCollection
   The object containing test data.

Return Value
Type: Void

SEE ALSO:
   getPreviews(communityId, repositoryId, repositoryFileId)
   Testing ConnectApi Code
**setTestGetRepositories(result)**

Register a `ConnectApi.ContentHubRepositoryCollection` object to be returned when the matching `getRepositories()` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

```
public static Void setTestGetRepositories(ConnectApi.ContentHubRepositoryCollection result)
```

Parameters

`result`
- Type: `ConnectApi.ContentHubRepositoryCollection`
- The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getRepositories()`
- Testing ConnectApi Code

**setTestGetRepositories(communityId, result)**

Register a `getRepositories(communityId)` object to be returned when the matching `ConnectApi.ContentHubRepositoryCollection` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

```
public static Void setTestGetRepositories(String communityId, ConnectApi.ContentHubRepositoryCollection result)
```

Parameters

`communityId`
- Type: `String`
- Use either the ID for a community, `internal`, or `null`.
result
Type: `ConnectApi.ContentHubRepositoryCollection`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getRepositories(communityId)`
- Testing ConnectApi Code

**setTestGetRepositories(pageParam, pageSize, result)**

Register a `ConnectApi.ContentHubRepositoryCollection` object to be returned when the matching `getRepositories(pageParam, pageSize)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
```java
public static Void setTestGetRepositories(Integer pageParam, Integer pageSize, ConnectApi.ContentHubRepositoryCollection result)
```

Parameters
- **pageParam**
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.

- **result**
  Type: `ConnectApi.ContentHubRepositoryCollection`
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getRepositories(pageParam, pageSize)`
- Testing ConnectApi Code
setTestGetRepositories(String communityId, Integer pageParam, Integer pageSize, ConnectApi.ContentHubRepositoryCollection result)

Register a ConnectApi.ContentHubRepositoryCollection object to be returned when the matching getRepositories(communityId, pageParam, pageSize) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetRepositories(String communityId, Integer pageParam, Integer pageSize, ConnectApi.ContentHubRepositoryCollection result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

deparam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default page size is 25.

result
Type: ConnectApi.ContentHubRepositoryCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:

getRepositories(communityId, pageParam, pageSize)
Testing ConnectApi Code

setTestGetRepository(repositoryId, result)

Register a ConnectApi.ContentHubRepository object to be returned when the matching getRepository(repositoryId) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0
Signature

public static Void setTestGetRepository(String repositoryId, ConnectApi.ContentHubRepository result)

Parameters

repositoryId
  Type: String
  The ID of the repository.

result
  Type: ConnectApi.ContentHubRepository
  The object containing test data.

Return Value

Type: Void

SEE ALSO:
  getRepository(repositoryId)
  Testing ConnectApi Code

setTestGetRepository(communityId, repositoryId, result)

Register a ConnectApi.ContentHubRepository object to be returned when the matching
getRepository(communityId, repositoryId) method is called in a test context. Use the method with the same
parameters or you receive an exception.

API Version

40.0

Signature

public static Void setTestGetRepository(String communityId, String repositoryId, ConnectApi.ContentHubRepository result)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

repositoryId
  Type: String
  The ID of the repository.

result
  Type: ConnectApi.ContentHubRepository
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepository(communityId, repositoryId)
Testing ConnectApi Code

**setTestGetRepositoryFile(repositoryId, repositoryFileId, result)**

Register a `ConnectApi.RepositoryFileDetail` object to be returned when the matching `getRepositoryFile(repositoryId, repositoryFileId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
```
public static Void setTestGetRepositoryFile(String repositoryId, String repositoryFileId, ConnectApi.RepositoryFileDetail result)
```

Parameters
- `repositoryId`
  Type: `String`
  The ID of the repository.
- `repositoryFileId`
  Type: `String`
  The ID of the repository file.
- `result`
  Type: `ConnectApi.RepositoryFileDetail`
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepositoryFile(repositoryId, repositoryFileId)
Testing ConnectApi Code
setTestGetRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo, result)

Register a ConnectApi.RepositoryFileDetail object to be returned when the matching
getRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetRepositoryFile(String repositoryId, String repositoryFileId, Boolean includeExternalFilePermissionsInfo, ConnectApi.RepositoryFileDetail result)

Parameters
repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

includeExternalFilePermissionsInfo
Type: Boolean
Specifies whether to include permission information, such as whether the file is shared and what are the available permission types. Managing external file permissions is supported for Google Drive, SharePoint Online, and OneDrive for Business.

result
Type: ConnectApi.RepositoryFileDetail
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)
Testing ConnectApi Code

setTestGetRepositoryFile(communityId, repositoryId, repositoryFileId, result)

Register a ConnectApi.RepositoryFileDetail object to be returned when the matching
getRepositoryFile(communityId, repositoryId, repositoryFileId) method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
40.0

Signature

```java
public static Void setTestGetRepositoryFile(String communityId, String repositoryId, String repositoryFileId, ConnectApi.RepositoryFileDetail result)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.
- `repositoryId`
  - Type: `String`
  - The ID of the repository.
- `repositoryFileId`
  - Type: `String`
  - The ID of the repository file.
- `result`
  - Type: `ConnectApi.RepositoryFileDetail`
  - The object containing test data.

Return Value

Type: `Void`

SEE ALSO:

- `getRepositoryFile(communityId, repositoryId, repositoryFileId)`
- Testing ConnectApi Code

```java
setTestGetRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo, result)
```

Register a `ConnectApi.RepositoryFileDetail` object to be returned when the matching `getRepositoryFile (communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0
public static Void setTestGetRepositoryFile(String communityId, String repositoryId, String repositoryFileId, Boolean includeExternalFilePermissionsInfo, ConnectApi.RepositoryFileDetail result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

includeExternalFilePermissionsInfo
Type: Boolean
Specifies whether to include permission information, such as whether the file is shared and what are the available permission types.
Managing external file permissions is supported for Google Drive, SharePoint Online, and OneDrive for Business.

result
Type: ConnectApi.RepositoryFileDetail
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)
Testing ConnectApi Code

setTestGetRepositoryFolder(repositoryId, repositoryFolderId, result)

Register a ConnectApi.RepositoryFolderDetail object to be returned when the matching getRepositoryFolder(repositoryId, repositoryFolderId) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
4.0
Signature

```java
public static Void setTestGetRepositoryFolder(String repositoryId, String repositoryFolderId, ConnectApi.RepositoryFolderDetail result)
```

Parameters

- `repositoryId`
  - Type: `String`
  - The ID of the repository.

- `repositoryFolderId`
  - Type: `String`
  - The ID of the repository folder.

- `result`
  - Type: `ConnectApi.RepositoryFolderDetail`
  - The object containing test data.

Return Value

Type: Void

SEE ALSO:

- `getRepositoryFolder(repositoryId, repositoryFolderId)`
- Testing ConnectApi Code

**setTestGetRepositoryFolder(communityId, repositoryId, repositoryFolderId, result)**

Register a `ConnectApi.RepositoryFolderDetail` object to be returned when the matching `getRepositoryFolder(communityId, repositoryId, repositoryFolderId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```java
public static Void setTestGetRepositoryFolder(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.RepositoryFolderDetail result)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `repositoryId`
  - Type: `String`
The ID of the repository.
repositoryFolderId
  Type: String
  The ID of the repository folder.
result
  Type: ConnectApi.RepositoryFolderDetail
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
  getRepositoryFolder(communityId, repositoryId, repositoryFolderId)
  Testing ConnectApi Code

**setTestGetRepositoryFolderItems(repositoryId, repositoryFolderId, result)**

Register a ConnectApi.RepositoryFolderItemsCollection object to be returned when the matching getRepositoryFolderItems(repositoryId, repositoryFolderId) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
```java
public static Void setTestGetRepositoryFolderItems(String repositoryId, String repositoryFolderId, ConnectApi.RepositoryFolderItemsCollection result)
```

Parameters
repositoryId
  Type: String
  The ID of the repository.
repositoryFolderId
  Type: String
  The ID of the repository folder.
result
  Type: ConnectApi.RepositoryFolderItemsCollection
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
- getRepositoryFolderItems(repositoryId, repositoryFolderId)

**setTestGetRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, result)**

Register a ConnectApi.RepositoryFolderItemsCollection object to be returned when the matching getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
```java
public static Void setTestGetRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.RepositoryFolderItemsCollection result)
```

Parameters
- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.
- **repositoryId**
  Type: String
  The ID of the repository.
- **repositoryFolderId**
  Type: String
  The ID of the repository folder.
- **result**
  Type: ConnectApi.RepositoryFolderItemsCollection
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId)

Testing ConnectApi Code

setTestGetRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize, result)

Register a ConnectApi.RepositoryFolderItemsCollection object to be returned when the matching
getRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize) method
is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetRepositoryFolderItems(String repositoryId, String
repositoryFolderId, Integer pageParam, Integer pageSize,
ConnectApi.RepositoryFolderItemsCollection result)

Parameters
repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default page size is 25.

result
Type: ConnectApi.RepositoryFolderItemsCollection
The object containing test data.
Return Value
Type: Void

SEE ALSO:
   getRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize)

**setTestGetRepositoryFolderItems**(communityId, repositoryId, repositoryFolderId, pageParam, pageSize, result)

Register a `ConnectApi.RepositoryFolderItemsCollection` object to be returned when the matching `getRepositoryFolderItems` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

```java
public static Void setTestGetRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize, ConnectApi.RepositoryFolderItemsCollection result)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `repositoryId`
  Type: `String`
  The ID of the repository.

- `repositoryFolderId`
  Type: `String`
  The ID of the repository folder.

- `pageParam`
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.

- `result`
  Type: `ConnectApi.RepositoryFolderItemsCollection`
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize)

```
setTestUpdateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData, result)
```

Register a `ConnectApi.RepositoryFileDetail` object to be returned when the matching `updateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
```
public static Void setTestUpdateRepositoryFile(String communityId, String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData, ConnectApi.RepositoryFileDetail result)
```

Parameters
- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **repositoryId**
  Type: `String`
  The ID of the repository.

- **repositoryFileId**
  Type: `String`
  The ID of the repository file.

- **file**
  Type: `ConnectApi.ContentHubItemInput`
  The item type ID and fields of the item type.

- **fileData**
  Type: `ConnectApi.BinaryInput`
  The binary file.

- **result**
  Type: `ConnectApi.RepositoryFileDetail`
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
updateRepositoryFile(repositoryId, repositoryFileId, file)
Testing ConnectApi Code

setTestUpdateRepositoryFile(repositoryId, repositoryFileId, file, result)

Register a ConnectApi.RepositoryFileDetail object to be returned when the matching
updateRepositoryFile(repositoryId, repositoryFileId, file) method is called in a test context. Use the
method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestUpdateRepositoryFile(String repositoryId, String
repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.RepositoryFileDetail
result)

Parameters
repositoryId
  Type: String
  The ID of the repository.
repositoryFileId
  Type: String
  The ID of the repository file.
file
  Type: ConnectApi.ContentHubItemInput
  The item type ID and fields of the item type.
result
  Type: ConnectApi.RepositoryFileDetail
  The object containing test data.

Return Value
Type: Void

SEE ALSO:

**Datacloud Class**

Purchase Data.com contact or company records, and retrieve purchase information.
Namespace

ConnectApi

Note: Data.com Prospector and Data.com Clean licenses can no longer be renewed. These products are scheduled for retirement on July 31, 2020. Existing contracts will be honored. For more information, see Data.com Prospector and Clean Retirement.

IN THIS SECTION:
Datacloud Methods

Datacloud Methods

The following are methods for Datacloud. All methods are static.

IN THIS SECTION:
getCompaniesFromOrder(orderId, pageSize, page)
Get a list of purchased company records for an order.

getCompany(companyId)
Get a company record.

getContact(contactId)
Get a contact.

getContactsFromOrder(orderId, page, pageSize)
Get a list of purchased contacts for an order.

getOrder(orderId)
Get an order.

getUsage(userId)
Get purchase usage information for a user.

postOrder(orderInput)
Purchase records that are listed in an input file.

getCompaniesFromOrder(orderId, pageSize, page)
Get a list of purchased company records for an order.

API Version
32.0

Requires Chatter
No

Signature
public static ConnectApi.DatacloudCompanies getCompaniesFromOrder(String orderId, String pageSize, String page)
Parameters

**orderId**
Type: String
ID of an order.

**page**
Type: Integer
Number of the page that you want returned.

**pageSize**
Type: Integer
Number of companies to show on a page. The default `pageSize` is 25.

Return Value
Type: `ConnectApi.DatacloudCompanies`

---

**getCompany(companyId)**
Get a company record.

API Version
32.0

Requires Chatter
No

Signature

```java
public static ConnectApi.DatacloudCompany getCompany(String companyId)
```

Parameters

**companyId**
Type: String
ID of a company in the Data.com database.

Return Value
Type: `ConnectApi.DatacloudCompany`

---

**getContact(contactId)**
Get a contact.

API Version
32.0
Requires Chatter
No

Signature
public static ConnectApi.DatacloudContact getContact(String contactId)

Parameters
contactId
  Type: String
  ID of a contact in the Data.com database.

Return Value
Type: ConnectApi.DatacloudContact

getContactsFromOrder(orderId, page, pageSize)
Get a list of purchased contacts for an order.

API Version
32.0

Requires Chatter
No

Signature
public static ConnectApi.DatacloudContacts getContactsFromOrder(String orderId, String page, String pageSize)

Parameters
orderId
  Type: String
  ID of an order.
page
  Type: Integer
  Number of the page that you want returned.
pageSize
  Type: Integer
  Number of contacts to show on a page. The default pageSize is 25.
Return Value
Type: ConnectApi.DatacloudContacts

**getOrder(orderId)**
Get an order.

API Version
32.0

Requires Chatter
No

Signature
`public static ConnectApi.DatacloudOrder getOrder(String orderId)`

Parameters
`orderId`
Type: String
ID of an order.

Return Value
Type: ConnectApi.DatacloudOrder

**getUsage(userId)**
Get purchase usage information for a user.

API Version
32.0

Requires Chatter
No

Signature
`public static ConnectApi.DatacloudPurchaseUsage getUsage(String userId)`

Parameters
`userId`
Type: String
ID of a user.
Return Value
Type: ConnectApi.DatacloudPurchaseUsage

postOrder(orderInput)
Purchase records that are listed in an input file.

API Version
32.0

Requires Chatter
No

Signature
public static ConnectApi.DatacloudOrder postOrder(ConnectApi.DatacloudOrderInput orderInput)

Parameters
orderInput
Type: ConnectApi.DatacloudOrderInput
A list that contains IDs for the contacts or companies that you want to see.

Return Value
Type: ConnectApi.DatacloudOrder

Example
ConnectApi.DatacloudOrderInput inputOrder=new ConnectApi.DatacloudOrderInput();
List<String> ids=new List<String>();
ids.add('1234');
inputOrder.companyIds=ids;
ConnectApi.DatacloudOrder datacloudOrderRep = ConnectApi.Datacloud.postOrder(inputOrder);

EmailMergeFieldService Class
Extract a list of merge fields for an object. A merge field is a field you can put in an email template, mail merge template, custom link, or formula to incorporate values from a record.

Namespace
ConnectApi

EmailMergeFieldService Methods
The following are methods for EmailMergeFieldService. All methods are static.
IN THIS SECTION:

**getMergeFields(objectApiNames)**
Extract the merge fields for a specific object.

**getMergeFields(objectApiNames)**
Extract the merge fields for a specific object.

API Version
39.0

Requires Chatter
No

Signature
```java
public static ConnectApi.EmailMergeFieldInfo getMergeFields(List<String> objectApiNames)
```

Parameters
```
objectApiNames
  Type: List<String>
  The API names for the objects being referenced.
```

Return Value
Type: `ConnectApi.EmailMergeFieldInfo`

**ExternalEmailServices Class**
Access information about integration with external email services, such as sending email within Salesforce through an external email account.

**Namespace**
`ConnectApi`

**External Email Services Methods**
The following are methods for `ExternalEmailService`. All methods are static.

IN THIS SECTION:

**getUserOauthInfo(landingPage)**
Get information about whether an external email service has been authorized to send email on behalf of a user.
getUserOauthInfo(landingPage)
Get information about whether an external email service has been authorized to send email on behalf of a user.

API Version
37.0

Requires Chatter
No

Signature
public static getUserOauthInfo(String landingPage)

Parameters
landingPage
Type: String
The landing page that the user starts on when they are finished with the OAuth authorization process.

Return Value
Type: ConnectApi.UserOauthInfo

SEE ALSO:
Testing ConnectApi Code

FulfillmentOrder Class
Fulfill orders in Order Management.

Namespace
ConnectApi

FulfillmentOrder Methods
The following are methods for FulfillmentOrder. All methods are static.

IN THIS SECTION:
cancelFulfillmentOrderLineItems(fulfillmentOrderId, cancelFulfillmentOrderLineItemsInput)
Cancel FulfillmentOrderLineItems from a FulfillmentOrder. This action doesn’t cancel the associated OrderItemSummaries, so reallocate the canceled quantities to a new FulfillmentOrder.
createFulfillmentOrders(fulfillmentOrderInput)
Create one or more FulfillmentOrders and FulfillmentOrderLineItems for an OrderDeliveryGroupSummary, which defines a delivery method and recipient for an OrderSummary. You specify the OrderItemSummaries to allocate, which can be fulfilled from different locations. Specifying multiple fulfillment groups creates one FulfillmentOrder for each location. For each OrderItemSummary, a FulfillmentOrderLineItem is created and assigned to the corresponding FulfillmentOrder.

createInvoice(fulfillmentOrderId, invoiceInput)
Create an invoice for a FulfillmentOrder that doesn’t have one.

cancelFulfillmentOrderLineItems(fulfillmentOrderId, cancelFulfillmentOrderLineItemsInput)
Cancel FulfillmentOrderLineItems from a FulfillmentOrder. This action doesn’t cancel the associated OrderItemSummaries, so reallocate the canceled quantities to a new FulfillmentOrder.

API Version
48.0

Requires Chatter
No

Signature
public static ConnectApi.FulfillmentOrderCancelLineItemsOutputRepresentation cancelFulfillmentOrderLineItems(String fulfillmentOrderId,
ConnectApi.FulfillmentOrderLineItemsToCancelInputRepresentation cancelFulfillmentOrderLineItemsInput)

Parameters
fulfillmentOrderId
Type: String
ID of the FulfillmentOrder.

cancelFulfillmentOrderLineItemsInput
Type: ConnectApi.FulfillmentOrderLineItemsToCancelInputRepresentation
List of FulfillmentOrderLineItems to cancel.

Return Value
Type: ConnectApi.FulfillmentOrderCancelLineItemsOutputRepresentation

Example
String fulfillmentOrderId = '0a3xx0000000085AAA';
List<ConnectApi.FulfillmentOrderLineItemInputRepresentation> itemToCancelList = new List<ConnectApi.FulfillmentOrderLineItemInputRepresentation>();
for(FulfillmentOrderLineItem fulfillmentOrderLineItem :
createFulfillmentOrders(fulfillmentOrderInput)

Create one or more FulfillmentOrders and FulfillmentOrderLineItems for an OrderDeliveryGroupSummary, which defines a delivery method and recipient for an OrderSummary. You specify the OrderItemSummaries to allocate, which can be fulfilled from different locations. Specifying multiple fulfillment groups creates one FulfillmentOrder for each location. For each OrderItemSummary, a FulfillmentOrderLineItem is created and assigned to the corresponding FulfillmentOrder.

API Version
48.0

Requires Chatter
No

Signature
public static ConnectApi.FulfillmentOrderOutputRepresentation createFulfillmentOrders(ConnectApi.FulfillmentOrderInputRepresentation fulfillmentOrderInput)

Parameters
fulfillmentOrderInput
Type: ConnectApi.FulfillmentOrderInputRepresentation
OrderItemSummaries to allocate, with location and delivery information.

Return Value
Type: ConnectApi.FulfillmentOrderOutputRepresentation

Example
String orderSummaryId = '1Osxx0000004CCG';
String fulfillmentType = 'warehouse';
```java
String warehouseFromLocationId = [SELECT Id from Location WHERE LocationType='Warehouse' LIMIT 1].Id;

ConnectApi.FulfillmentOrderInputRepresentation fulfillmentOrderInput = new
ConnectApi.FulfillmentOrderInputRepresentation();
fulfillmentOrderInput.orderSummaryId = orderSummaryId;

List<OrderDeliveryGroupSummary> orderDeliveryGroupSummaryList = [SELECT Id FROM
OrderDeliveryGroupSummary WHERE OrderSummaryId =: orderSummaryId];

for (OrderDeliveryGroupSummary orderDeliveryGroupSummary: orderDeliveryGroupSummaryList){
    fulfillmentOrderInput.orderDeliveryGroupSummaryId = orderDeliveryGroupSummary.Id;
    List<ConnectApi.FulfillmentGroupInputRepresentation> fulfillmentGroups = new
    List<ConnectApi.FulfillmentGroupInputRepresentation>{};
    ConnectApi.FulfillmentGroupInputRepresentation fulfillmentGroup = new
    ConnectApi.FulfillmentGroupInputRepresentation();
    fulfillmentGroup.fulfilledFromLocationId = warehouseFromLocationId;
    fulfillmentGroup.fulfillmentType = fulfillmentType;

    List<ConnectApi.OrderItemSummaryInputRepresentation> orderItemSummaries = new
    List<ConnectApi.OrderItemSummaryInputRepresentation>{};
    List<OrderItemSummary> orderItemSummaryList = [Select Id, quantity FROM OrderItemSummary
WHERE OrderSummaryId =: orderSummaryId AND OrderDeliveryGroupSummaryId =:
orderDeliveryGroupSummary.Id];
    for(OrderItemSummary orderItemSummary : orderItemSummaryList){
        ConnectApi.OrderItemSummaryInputRepresentation oisInputRepresentation = new
        ConnectApi.OrderItemSummaryInputRepresentation();
        oisInputRepresentation.orderItemSummaryId = orderItemSummary.Id;
        oisInputRepresentation.quantity = orderItemSummary.quantity;
        orderItemSummaries.add(oisInputRepresentation);
    }
    fulfillmentGroup.orderItemSummaries = orderItemSummaries;
    fulfillmentGroups.add(fulfillmentGroup);
}

fulfillmentOrderInput.fulfillmentGroups = fulfillmentGroups;

ConnectApi.FulfillmentOrderOutputRepresentation result =
ConnectAPI.FulfillmentOrder.createFulfillmentOrders(fulfillmentOrderInput);
```

createInvoice(fulfillmentOrderId, invoiceInput)

Create an invoice for a FulfillmentOrder that doesn’t have one.

API Version

48.0
Requires Chatter
No

Signature
public static ConnectApi.FulfillmentOrderInvoiceOutputRepresentation createInvoice(String fulfillmentOrderId, ConnectApi.FulfillmentOrderInvoiceInputRepresentation invoiceInput)

Parameters

fulfillmentOrderId
Type: String
ID of the FulfillmentOrder.

invoiceInput
Type: ConnectApi.FulfillmentOrderInvoiceInputRepresentation
Required input with no data.

Return Value
Type: ConnectApi.FulfillmentOrderInvoiceOutputRepresentation

Example

```java
String fulfillmentOrderId = '0a3xx0000000085AAA';
ConnectApi.FulfillmentOrderInvoiceInputRepresentation input = new ConnectApi.FulfillmentOrderInvoiceInputRepresentation();
ConnectAPI.FulfillmentOrderInvoiceOutputRepresentation result = ConnectApi.FulfillmentOrder.createInvoice(fulfillmentOrderId, input);
```

Knowledge Class
Access information about trending articles in communities.

Namespace
ConnectApi

Knowledge Methods
The following are methods for Knowledge. All methods are static.

IN THIS SECTION:
- `getTopViewedArticlesForTopic(communityId, topicId, maxResults)`
  Get the top viewed articles for a topic.
- `getTrendingArticles(communityId, maxResults)`
  Get trending articles for a community.
getTrendingArticlesForTopic(communityId, topicId, maxResults)
Get the trending articles for a topic in a community.

getTopViewedArticlesForTopic(communityId, topicId, maxResults)
Get the top viewed articles for a topic.

API Version
41.0

Available to Guest Users
41.0

Requires Chatter
No

Signature
public static ConnectApi.KnowledgeArticleVersionCollection
getTopViewedArticlesForTopic(String communityId, String topicId, Integer maxResults)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

topicId
Type: String
ID of the topic.

maxResults
Type: Integer
The maximum number of articles returned for each topic ID. Values can be from 1 to 25. The default value is 5.

Return Value
Type: ConnectApi.KnowledgeArticleVersionCollection

getTrendingArticles(communityId, maxResults)
Get trending articles for a community.

API Version
36.0
Available to Guest Users
36.0

Requires Chatter
No

Signature
public static ConnectApi.KnowledgeArticleVersionCollection getTrendingArticles(String communityId, Integer maxResults)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

maxResults
Type: Integer
The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

Return Value
Type: ConnectApi.KnowledgeArticleVersionCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetTrendingArticles(communityId, maxResults, result)
Testing ConnectApi Code

getTrendingArticlesForTopic(communityId, topicId, maxResults)
Get the trending articles for a topic in a community.

API Version
36.0

Available to Guest Users
36.0
Requires Chatter
No

Signature
`public static ConnectApi.KnowledgeArticleVersionCollection getTrendingArticlesForTopic(String communityId, String topicId, Integer maxResults)`

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `topicId`
  Type: `String`
  ID of the topic.
- `maxResults`
  Type: `Integer`
  The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

Return Value
Type: `ConnectApi.KnowledgeArticleVersionCollection`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetTrendingArticlesForTopic(communityId, topicId, maxResults, result)`
- Testing ConnectApi Code

Knowledge Test Methods
The following are the test methods for `Knowledge`. All methods are static.
For information about using these methods to test your `ConnectApi` code, see Testing ConnectApi Code.

`setTestGetTrendingArticles(communityId, maxResults, result)`
Register a `ConnectApi.KnowledgeVersionArticleCollection` object to be returned when the matching `ConnectApi.getTrendingArticles` method is called in a test context. Use the method with the same parameters or you receive an exception.
Signature

```java
public static Void setTestGetTrendingArticles(String communityId, Integer maxResults,
ConnectApi.KnowledgeArticleVersionCollection result)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **maxResults**
  - Type: `Integer`
  - The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

- **result**
  - Type: `ConnectApi.KnowledgeArticleVersionCollection`
  - The object containing test data.

Return Value

Type: Void

SEE ALSO:
- `getTrendingArticles(communityId, maxResults)`
- Testing `ConnectApi` Code

**setTestGetTrendingArticlesForTopic(communityId, topicId, maxResults, result)**

Register a `ConnectApi.KnowledgeVersionArticleCollection` object to be returned when the matching `ConnectApi.getTrendingArticlesForTopic` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

36.0

Signature

```java
public static Void setTestGetTrendingArticlesForTopic(String communityId, String topicId,
Integer maxResults, ConnectApi.KnowledgeArticleVersionCollection result)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **topicId**
  - Type: `String`
ID of the topic.

maxResults

Type: Integer

The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

result

Type: ConnectApi.KnowledgeArticleVersionCollection

The object containing test data.

Return Value

Type: Void

SEE ALSO:

getTrendingArticlesForTopic(communityId, topicId, maxResults)

Testing ConnectApi Code

ManagedContent Class

Get managed content versions.

Namespace

ConnectApi

ManagedContent Methods

The following are methods for ManagedContent. All methods are static.

IN THIS SECTION:

getAllContent(channelId, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate) (Beta)

Get all managed content versions for a channel.

getAllDeliveryChannels(pageParam, pageSize) (Beta)

Get managed content delivery channels for the context user.

getAllManagedContent(communityId, pageParam, pageSize, language, managedContentType)

Get all managed content versions for a community.

ggetContentByIlds(channelId, managedContentIds, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate) (Beta)

Get managed content versions for a channel using a list of managed content IDs.

ggetManagedContentByIlds(communityId, managedContentIds, pageParam, pageSize, language, managedContentType)

Get managed content versions for a community using a list of managed content IDs.

ggetManagedContentByTopics(communityId, topics, pageParam, pageSize, language, managedContentType)

Get managed content versions using a list of content topic names.
getManagedContentByTopicsAndIds(communityId, managedContentIds, topics, pageParam, pageSize, language, managedContentType)

Get managed content versions using a list of managed content IDs and content topic names.

getAllContent(channelId, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate) {Beta}

Get all managed content versions for a channel.

API Version
48.0

Available to Guest Users
48.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedContentVersionCollection getAllContent(String channelId, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean includeMetadata, String startDate, String endDate)

Parameters
channelId
Type: String
ID of the channel.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 250. If you pass in null, the default size is 25.

language
Type: String
Language locale for the managed content, for example, en_US. If the requested translation isn’t available, the language defaults to the context user's language. If the context user's language isn’t available, the language defaults to the content type’s original language.

managedContentType
Type: String
The developer name of the content version.

includeMetadata
Type: Boolean
Specifies whether to include metadata in the response (true) or not (false). The default value is false.

startDate
Type: String
Publish start date in ISO 8601 format, for example, 2011-02-25T18:24:31.000Z.

date
Type: String
Publish end date in ISO 8601 format, for example, 2011-02-25T18:24:31.000Z.

Return Value
Type: ConnectApi.ManagedContentVersionCollection

getAllDeliveryChannels(pageParam, pageSize) (Beta)
Get managed content delivery channels for the context user.

Note: As a beta feature, this API is a preview and isn't part of the “Services” under your master subscription agreement with Salesforce. API Version
48.0

Available to Guest Users
48.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedContentChannelCollection getAllDeliveryChannels(Integer pageParam, Integer pageSize)
Parameters

`pageParam`  
Type: `Integer`  
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`  
Type: `Integer`  
Specifies the number of items per page. Valid values are from 1 through 250. If you pass in `null`, the default size is 25.

Return Value

Type: `ConnectApi.ManagedContentChannelCollection`  

`getAllManagedContent(communityId, pageParam, pageSize, language, managedContentType)`  
Get all managed content versions for a community.

API Version  
47.0

Available to Guest Users  
47.0

Requires Chatter  
No

Signature  

```java
public static ConnectApi.ManagedContentVersionCollection getAllManagedContent(String communityId, Integer pageParam, Integer pageSize, String language, String managedContentType)
```

Parameters

`communityId`  
Type: `String`  
ID of the community.

`pageParam`  
Type: `Integer`  
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`  
Type: `Integer`  
Specifies the number of items per page. Valid values are from 1 through 250. If you pass in `null`, the default size is 25.

`language`  
Type: `String`
Language locale for the managed content, for example, en_US. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

managedContentType
Type: String
The developer name of the content version.

Return Value
Type: ConnectApi.ManagedContentVersionCollection

cGetContentByIds(channelId, managedContentIds, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate) (Beta)
Get managed content versions for a channel using a list of managed content IDs.

Note: As a beta feature, this API is a preview and isn’t part of the “Services” under your master subscription agreement with Salesforce. Use this feature at your sole discretion, and make your purchase decisions only on the basis of generally available products and features. Signature
public static ConnectApi.ManagedContentVersionCollection getContentByIds(String channelId, List<String> managedContentIds, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean includeMetadata, String startDate, String endDate)

Parameters
channelId
Type: String
ID of the channel.
managedContentIds
Type: List<String>
Comma-separated list of managed content IDs.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 250. If you pass in null, the default size is 25.

language
Type: String
Language locale for the managed content, for example, en_US. If the requested translation isn't available, the language defaults to the context user's language. If the context user's language isn't available, the language defaults to the content type's original language.

managedContentType
Type: String
The developer name of the content version.

includeMetadata
Type: Boolean
Specifies whether to include metadata in the response (true) or not (false). The default value is false.

startDate
Type: String
Publish start date in ISO 8601 format, for example, 2011-02-25T18:24:31.000Z.

endDate
Type: String
Publish end date in ISO 8601 format, for example, 2011-02-25T18:24:31.000Z.

Return Value
Type: ConnectApi.ManagedContentVersionCollection

getManagedContentByIds(communityId, managedContentIds, pageParam, pageSize, language, managedContentType)
Get managed content versions for a community using a list of managed content IDs.

API Version
47.0

Available to Guest Users
47.0
Requires Chatter
No

Signature

```java
public static ConnectApi.ManagedContentVersionCollection getManagedContentByIds(String communityId, List<String> managedContentIds, Integer pageParam, Integer pageSize, String language, String managedContentType)
```

Parameters

- `communityId`
  - Type: String
  - ID of the community.

- `managedContentIds`
  - Type: List<String>
  - Comma-separated list of managed content IDs.

- `pageParam`
  - Type: Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  - Type: Integer
  - Specifies the number of items per page. Valid values are from 1 through 250. If you pass in `null`, the default size is 25.

- `language`
  - Type: String
  - Language locale for the managed content, for example, `en_US`. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

- `managedContentType`
  - Type: String
  - The developer name of the content version.

Return Value

Type: `ConnectApi.ManagedContentVersionCollection`

```java
getManagedContentByTopics(communityId, topics, pageParam, pageSize, language, managedContentType)
```

Get managed content versions using a list of content topic names.

API Version

47.0
Available to Guest Users
47.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedContentVersionCollection getManagedContentByTopics(String communityId, List<String> topics, Integer pageParam, Integer pageSize, String language, String managedContentType)

Parameters

communityId
Type: String
ID of the community.

topics
Type: List<String>
Comma-separated list of up to 15 content topic names.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 250. If you pass in null, the default size is 25.

language
Type: String
Language locale for the managed content, for example, en_US. If the requested translation isn't available, the language defaults to the context user's language. If the context user's language isn't available, the language defaults to the content type's original language.

managedContentType
Type: String
The developer name of the content version.

Return Value
Type: ConnectApi.ManagedContentVersionCollection

getManagedContentByTopicsAndIds(communityId, managedContentIds, topics, pageParam, pageSize, language, managedContentType)
Get managed content versions using a list of managed content IDs and content topic names.
API Version
47.0

Available to Guest Users
47.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedContentVersionCollection
getManagedContentByTopicsAndIds(String communityId, List<String> managedContentIds,
List<String> topics, Integer pageParam, Integer pageSize, String language, String
managedContentType)

Parameters
communityId
  Type: String
  ID of the community.

managedContentIds
  Type: List<String>
  Comma-separated list of managed content IDs.

topics
  Type: List<String>
  Comma-separated list of up to 15 content topic names.

pageParam
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 250. If you pass in null, the default size is 25.

language
  Type: String
  Language locale for the managed content, for example, en_US. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

managedContentType
  Type: String
  The developer name of the content version.
ManagedTopics Class
Access information about managed topics in a community. Create, delete, and reorder managed topics.

Namespace
ConnectApi

ManagedTopics Methods
The following are methods for ManagedTopics. All methods are static.

IN THIS SECTION:
createManagedTopic(communityId, recordId, managedTopicType)
Create a managed topic of a specific type for a community.
createManagedTopic(communityId, recordId, managedTopicType, parentId)
Create a child managed topic for a community.
createManagedTopicByName(communityId, name, managedTopicType)
Create a managed topic of a specific type by name for a community.
createManagedTopicByName(communityId, name, managedTopicType, parentId)
Create a child managed topic by name for a community.
deleteManagedTopic(communityId, managedTopicId)
Delete a managed topic from a community.
getManagedTopic(communityId, managedTopicId)
Get a managed topic in a community.
getManagedTopic(communityId, managedTopicId, depth)
Get a managed topic, including its parent and children managed topics, in a community.
getManagedTopics(communityId)
Get the featured and navigational managed topics for the community.
getManagedTopics(communityId, managedTopicType)
Get managed topics of the specified type for a community.
getManagedTopics(communityId, managedTopicType, depth)
Get managed topics of the specified type, including their parent and children managed topics, in a community.
getManagedTopics(communityId, managedTopicType, recordIds, depth)
Get managed topics of the specified type, including their parent and children managed topics, that are associated with topics in a community.
getManagedTopics(communityId, managedTopicType, pageParam, pageSize)
Get a page of managed topics.
reorderManagedTopics(communityId, managedTopicPositionCollection)
Reorder the relative positions of managed topics in a community.
createManagedTopic(communityId, recordId, managedTopicType)
Create a managed topic of a specific type for a community.

API Version
32.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedTopic createManagedTopic(String communityId, String recordId, ConnectApi.ManagedTopicType managedTopicType)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

recordId
Type: String
ID of the topic.

managedTopicType
Type: ConnectApi.ManagedTopicType
Specify the type of managed topic.
• Content—Topics that are associated with native content.
• Featured—Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
• Navigational—Topics that display in a navigational menu in the community.

A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.
You can create up to 25 Featured and 5,000 Content topics. You can create up to eight levels of Navigational managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 Navigational topics.

Return Value
Type: ConnectApi.ManagedTopic

Usage
Only community managers (users with the Create and Set Up Communities or Manage Communities permission) can create managed topics.

createManagedTopic(communityId, recordId, managedTopicType, parentId)
Create a child managed topic for a community.
API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedTopic createManagedTopic(String communityId, String recordId, ConnectApi.ManagedTopicType managedTopicType, String parentId)

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **recordId**
  - Type: String
  - ID of the topic.

- **managedTopicType**
  - Type: ConnectApi.ManagedTopicType
  - Specify Navigational for the type of managed topic to create a child managed topic.
  - You can create up to 25 Featured and 5,000 Content topics. You can create up to eight levels of Navigational managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 Navigational topics.

- **parentId**
  - Type: String
  - ID of the parent managed topic.
  - You can create up to eight levels (parent, direct children, their children, etc.) of managed topics and up to 10 children managed topics per managed topic.

Return Value
Type: ConnectApi.ManagedTopic

Usage
Only community managers (users with the Create and Set Up Communities or Manage Communities permission) can create managed topics.

createManagedTopicByName(communityId, name, managedTopicType)
Create a managed topic of a specific type by name for a community.
public static ConnectApi.ManagedTopic createManagedTopicByName(String communityId, String name, ConnectApi.ManagedTopicType managedTopicType)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

name
Type: String
Name of the topic.

managedTopicType
Type: ConnectApi.ManagedTopicType
Specify the type of managed topic.

• Content—Topics that are associated with native content.
• Featured—Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
• Navigational—Topics that display in a navigational menu in the community.

A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.

You can create up to 25 Featured and 5,000 Content topics. You can create up to eight levels of Navigational managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 Navigational topics.

Return Value
Type: ConnectApi.ManagedTopic

Usage
Only community managers (users with the Create and Set Up Communities or Manage Communities permission) can create managed topics.

createManagedTopicByName(communityId, name, managedTopicType, parentId)
Create a child managed topic by name for a community.
Signature

```java
public static ConnectApi.ManagedTopic createManagedTopicByName(String communityId,
String name, ConnectApi.ManagedTopicType managedTopicType, String parentId)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **name**
  - Type: `String`
  - Name of the topic.

- **managedTopicType**
  - Type: `ConnectApi.ManagedTopicType`
  - Specify `Navigational` for the type of managed topic to create a child managed topic.
  - You can create up to 25 `Featured` and 5,000 `Content` topics. You can create up to eight levels of `Navigational` managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 `Navigational` topics.

- **parentId**
  - Type: `String`
  - ID of the parent managed topic.
  - You can create up to eight levels (parent, direct children, their children, etc.) of managed topics and up to 10 children managed topics per managed topic.

Return Value

- Type: `ConnectApi.ManagedTopic`

Usage

Only community managers (users with the Create and Set Up Communities or Manage Communities permission) can create managed topics.

```java
deleteManagedTopic(communityId, managedTopicId)
```

Delete a managed topic from a community.

API Version

32.0

Requires Chatter

No

Signature

```java
public static deleteManagedTopic(String communityId, String managedTopicId)
```
Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or null.

`managedTopicId`
Type: String
ID of managed topic.

Return Value
Type: Void

Usage
Only community managers (users with the Create and Set Up Communities or Manage Communities permission) can delete managed topics.

`getManagedTopic(communityId, managedTopicId)`
Get a managed topic in a community.

API Version
32.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
`public static ConnectApi.ManagedTopic getManagedTopic(String communityId, String managedTopicId)`

Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or null.

`managedTopicId`
Type: String
ID of managed topic.
Return Value
Type: `ConnectApi.ManagedTopic`

**getManagedTopic(communityId, managedTopicId, depth)**
Get a managed topic, including its parent and children managed topics, in a community.

API Version
35.0

Available to Guest Users
35.0

Requires Chatter
No

Signature
```
public static ConnectApi.ManagedTopic getManagedTopic(String communityId, String managedTopicId, Integer depth)
```

Parameters
```
communityId
Type: String
Use either the ID for a community, internal, or null.
```
```
managedTopicId
Type: String
ID of managed topic.
```
```
depth
Type: Integer
Specify an integer 1–8. If you specify 1, the children property of the ConnectApi.ManagedTopic output class is null. If you specify 2, the children property of the ConnectApi.ManagedTopic output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If depth isn't specified, it defaults to 1.
```

Return Value
Type: `ConnectApi.ManagedTopic`

**getManagedTopics(communityId)**
Get the featured and navigational managed topics for the community.

To get the content topics for the community, use `getManagedTopics(communityId, managedTopicType)`.
API Version
32.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId)

Parameters
communityId
  Type: String

Use either the ID for a community, internal, or null.

Return Value
Type: ConnectApi.ManagedTopicCollection

getManagedTopics(communityId, managedTopicType)
Get managed topics of the specified type for a community.

API Version
32.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId, ConnectApi.ManagedTopicType managedTopicType)

Parameters
communityId
  Type: String
Use either the ID for a community, internal, or null.

managedTopicType
Type: ConnectApi.ManagedTopicType
Type of managed topic.
• Content—Topics that are associated with native content.
• Featured—Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
• Navigational—Topics that display in a navigational menu in the community.
A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.
If you specify Content, up to 50 topics are returned. If you want more than 50 Content topics, use getManagedTopics(communityId, managedTopicType, pageParam, pageSize).

Return Value
Type: ConnectApi.ManagedTopicCollection

getManagedTopics(communityId, managedTopicType, depth)
Get managed topics of the specified type, including their parent and children managed topics, in a community.

API Version
35.0

Available to Guest Users
35.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId, ConnectApi.ManagedTopicType managedTopicType, Integer depth)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

managedTopicType
Type: ConnectApi.ManagedTopicType
Type of managed topic.
• Content—Topics that are associated with native content.
- **Featured**—Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
- **Navigational**—Topics that display in a navigational menu in the community.

A topic can be associated with all three managed topic types, so a topic can be a **Featured**, **Navigational**, and **Content** topic.

**depth**
Type: **Integer**

Specify an integer 1–8. If you specify 1, the `children` property of the `ConnectApi.ManagedTopic` output class is **null**. If you specify 2, the `children` property of the `ConnectApi.ManagedTopic` output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If depth isn’t specified, it defaults to 1.

**Return Value**
Type: `ConnectApi.ManagedTopicCollection`

**getManagedTopics (communityId, managedTopicType, recordIds, depth)**

Get managed topics of the specified type, including their parent and children managed topics, that are associated with topics in a community.

**API Version**
38.0

**Available to Guest Users**
38.0

**Requires Chatter**
No

**Signature**

```java
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId, ConnectApi.ManagedTopicType managedTopicType, List<String> recordIds, Integer depth)
```

**Parameters**

- **communityId**
  Type: **String**
  Use either the ID for a community, `internal`, or **null**.

- **managedTopicType**
  Type: `ConnectApi.ManagedTopicType`
  Type of managed topic.

  - **Content**—Topics that are associated with native content.
  - **Featured**—Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
• Navigational—Topics that display in a navigational menu in the community.

A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.

`recordIds`
Type: `List<String>`
A list of up to 100 topic IDs associated with the managed topics.
If you list more than 10 topic IDs, you can't specify 2–8 for `depth`.

`depth`
Type: `Integer`
Specify an integer 1–8. If you specify 1, the `children` property of the `ConnectApi.ManagedTopic` output class is `null`. If you specify 2, the `children` property of the `ConnectApi.ManagedTopic` output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If `depth` isn't specified, it defaults to 1.

Return Value
Type: `ConnectApi.ManagedTopicCollection`

`getManagedTopics(communityId, managedTopicType, pageParam, pageSize)`
Get a page of managed topics.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
No

Signature
`public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId, ConnectApi.ManagedTopicType managedTopicType, Integer pageParam, Integer pageSize)`

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`managedTopicType`
Type: `ConnectApi.ManagedTopicType`
Type of managed topic.
• Content—Topics that are associated with native content.
• Featured—Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
• Navigational—Topics that display in a navigational menu in the community.

A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.

`pageParam`  
Type: `Integer`

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`  
Type: `Integer`

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 50.

Return Value
Type: `ConnectApi.ManagedTopicCollection`

`reorderManagedTopics(communityId, managedTopicPositionCollection)`  
Reorder the relative positions of managed topics in a community.

API Version
32.0

Requires Chatter
No

Signature
```java
public static ConnectApi.ManagedTopicCollection reorderManagedTopics(String communityId, ConnectApi.ManagedTopicPositionCollectionInput managedTopicPositionCollection)
```

Parameters
`communityId`  
Type: `String`

Use either the ID for a community, internal, or `null`.

`managedTopicPositionCollection`  
Type: `ConnectApi.ManagedTopicPositionCollectionInput`

A collection of relative positions of managed topics. This collection can include only Featured and Navigational topics and doesn’t have to include all managed topics.

Return Value
Type: `ConnectApi.ManagedTopicCollection`
Usage

Only community managers (users with the Create and Set Up Communities or Manage Communities permission) can reorder managed topics.

You can reorder parent managed topics or children managed topics with the same parent. If you don’t include all managed topics in the `ConnectApi.ManagedTopicPositionCollectionInput`, the managed topics are reordered by respecting the positions indicated in the `ConnectApi.ManagedTopicPositionCollectionInput` and then by pushing down any managed topics that aren’t included in the `ConnectApi.ManagedTopicPositionCollectionInput` to the next available position.

Example

If you have these managed topics:

<table>
<thead>
<tr>
<th>Managed Topic</th>
<th>Position</th>
</tr>
</thead>
<tbody>
<tr>
<td>ManagedTopicA</td>
<td>0</td>
</tr>
<tr>
<td>ManagedTopicB</td>
<td>1</td>
</tr>
<tr>
<td>ManagedTopicC</td>
<td>2</td>
</tr>
<tr>
<td>ManagedTopicD</td>
<td>3</td>
</tr>
<tr>
<td>ManagedTopicE</td>
<td>4</td>
</tr>
</tbody>
</table>

And you reorder managed topics by including this information in `ConnectApi.ManagedTopicPositionCollectionInput`:

<table>
<thead>
<tr>
<th>Managed Topic</th>
<th>Position</th>
</tr>
</thead>
<tbody>
<tr>
<td>ManagedTopicD</td>
<td>0</td>
</tr>
<tr>
<td>ManagedTopicE</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Managed Topic</th>
<th>Position</th>
</tr>
</thead>
<tbody>
<tr>
<td>ManagedTopicD</td>
<td>0</td>
</tr>
<tr>
<td>ManagedTopicA</td>
<td>1</td>
</tr>
<tr>
<td>ManagedTopicE</td>
<td>2</td>
</tr>
<tr>
<td>ManagedTopicB</td>
<td>3</td>
</tr>
<tr>
<td>ManagedTopicC</td>
<td>4</td>
</tr>
</tbody>
</table>

Retired ManagedTopics Methods

The following methods for ManagedTopics are retired.
**getManagedTopics(communityId, managedTopicType, recordId, depth)**

Get managed topics of the specified type, including their parent and children managed topics, that are associated with a given topic in a community.

**API Version**

35.0–37.0

**Important:** In version 38.0 and later, use `getManagedTopics(communityId, managedTopicType, recordIds, depth)`.

**Available to Guest Users**

35.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId, ConnectApi.ManagedTopicType managedTopicType, String recordId, Integer depth)
```

**Parameters**

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `managedTopicType`
  - Type: `ConnectApi.ManagedTopicType`
  - Type of managed topic.
    - **Content**—Topics that are associated with native content.
    - **Featured**—Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
    - **Navigational**—Topics that display in a navigational menu in the community.
    
    A topic can be associated with all three managed topic types, so a topic can be a **Featured**, **Navigational**, and **Content** topic.

- `recordId`
  - Type: `String`
  - ID of the topic associated with the managed topics.
**depth**
Type: Integer

Specify an integer 1–8. If you specify 1, the `children` property of the `ConnectApi.ManagedTopic` output class is **null**. If you specify 2, the `children` property of the `ConnectApi.ManagedTopic` output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If `depth` isn’t specified, it defaults to 1.

---

**Return Value**
Type: `ConnectApi.ManagedTopicCollection`

---

**Mentions Class**
Access information about mentions. A mention is an "@" character followed by a user or group name. When a user or group is mentioned, they receive a notification.

---

**Namespace**
`ConnectApi`

---

**Mentions Methods**
The following are methods for `Mentions`. All methods are static.

**IN THIS SECTION:**
- `getMentionCompletions(communityId, q, contextId)`
  - Get the first page of possible users and groups to mention in a feed item body or comment body.
- `getMentionCompletions(communityId, q, contextId, type, pageParam, pageSize)`
  - Get a page of possible mention proposals of the specified type.
- `getMentionValidations(communityId, parentId, recordIds, visibility)`
  - Get information about whether the mentions are valid for the context user.

---

**getMentionCompletions(communityId, q, contextId)**
Get the first page of possible users and groups to mention in a feed item body or comment body.

---

**API Version**
29.0

---

**Requires Chatter**
Yes

---

**Signature**

```java
public static ConnectApi.MentionCompletionPage getMentionCompletions (String communityId, String q, String contextId)
```
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**q**
Type: String
A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn’t require a minimum number of characters. This parameter does not support wildcards.

**contextId**
Type: String
A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

Return Value

Type: ConnectApi.MentionCompletionPage

Usage

Call this method to generate a page of proposed mentions that a user can choose from when they enter characters after @ in a feed item body or a comment body.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

  setTestGetMentionCompletions(communityId, q, contextId, result)

Testing ConnectApi Code

**getMentionCompletions(communityId, q, contextId, type, pageParam, pageSize)**

Get a page of possible mention proposals of the specified type.

API Version

29.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.Mentions getMentionCompletions (String communityId, String q, String contextId, ConnectApi.MentionCompletionType type, Integer pageParam, Integer pageSize)
```
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn’t require a minimum number of characters. This parameter does not support wildcards.

contextId
Type: String
A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

type
Type: ConnectApi.MentionCompletionType
Type of mention completion.
- All—All mention completions, regardless of the type of record to which the mention refers.
- Group—Mention completions for groups.
- User—Mention completions for users.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.MentionCompletionPage

Usage
Call this method to generate a page of proposed mentions that a user can choose from when they enter characters after @ in a feed item body or a comment body.

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- setTestGetMentionCompletions(communityId, q, contextId, type, pageParam, pageSize, result)
- Testing ConnectApi Code

getMentionValidations(communityId, parentId, recordIds, visibility)
Get information about whether the mentions are valid for the context user.
API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.Mentions getMentionValidations(String communityId, String parentId, List<String> recordIds, ConnectApi.FeedItemVisibilityType visibility)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

parentId
Type: String
The feed item parent ID.

recordIds
Type: List<String>
A comma separated list of IDs to be mentioned. The maximum value is 25.

visibility
Type: ConnectApi.FeedItemVisibilityType
Type of users who can see a feed item.
- AllUsers—Visibility is not limited to internal users.
- InternalUsers—Visibility is limited to internal users.

Return Value
Type: ConnectApi.MentionValidations

Usage
Call this method to check whether the record IDs returned from a call to ConnectApi.Mentions.getMentionCompletions are valid for the context user. For example, the context users can’t mention private groups they don’t belong to. If such a group were included in the list of mention validations, the ConnectApi.MentionValidations.hasErrors property would be true and the group would have a ConnectApi.MentionValidation.validationStatus of Disallowed.

Mentions Test Methods
The following are the test methods for Mentions. All methods are static.
For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.
**setTestGetMentionCompletions(communityId, q, contextId, result)**

Register a `ConnectApi.MentionCompletionPage` object to be returned when `getMentionCompletions(String, String, String)` is called in a test context.

**API Version**

29.0

**Signature**

```java
public static Void setTestGetMentionCompletions (String communityId, String q, String contextId, ConnectApi.MentionCompletionPage result)
```

**Parameters**

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `q`
  - Type: `String`
  - A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn't require a minimum number of characters. This parameter does not support wildcards.

- `contextId`
  - Type: `String`
  - A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

- `result`
  - Type: `ConnectApi.MentionCompletionPage`
  - A `ConnectApi.MentionCompletionPage` object containing test data.

**Return Value**

Type: `Void`

**SEE ALSO:**

- `getMentionCompletions(communityId, q, contextId)`
- `Testing ConnectApi Code`

**setTestGetMentionCompletions(communityId, q, contextId, type, pageParam, pageSize, result)**

Register a `ConnectApi.MentionCompletionPage` object to be returned when `getMentionCompletions(String, String, String, ConnectApi.MentionCompletionType, Integer, Integer)` is called in a test context.
API Version
29.0

Signature
public static Void setTestGetMentionCompletions (String communityId, String q, String contextId, ConnectApi.MentionCompletionType type, Integer pageParam, Integer pageSize, ConnectApi.MentionCompletionPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn’t require a minimum number of characters. This parameter does not support wildcards.

contextId
Type: String
A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

type
Type: ConnectApi.MentionCompletionType
Type of mention completion.
• All—All mention completions, regardless of the type of record to which the mention refers.
• Group—Mention completions for groups.
• User—Mention completions for users.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

result
Type: ConnectApi.MentionCompletionPage
A ConnectApi.MentionCompletionPage object containing test data.
Return Value
Type: Void

SEE ALSO:
  getMentionCompletions(communityId, q, contextId, type, pageParam, pageSize)
  Testing ConnectApi Code

Missions Class
Export and purge mission activity for users. Get a user's mission progress. Update mission activity counts for users.

Namespace
ConnectApi

Missions Methods
The following are methods for Missions. All methods are static.

IN THIS SECTION:
  exportUserMissionsActivities(communityId, userId)
  Export mission activity for a user.
  getUserMissionsProgress(communityId, userId)
  Get mission activity progress for a user.
  purgeUserMissionsActivities(communityId, userId)
  Start a job to purge mission activity for a user.
  updateUserMissionActivityCount(activityType, activityCount, communityId, userId)
  Update the mission activity count for a user.

exportUserMissionsActivities(communityId, userId)
Export mission activity for a user.

API Version
45.0

Requires Chatter
No

Signature
public static ConnectApi.UserMissionActivitiesJob exportUserMissionsActivities(String communityId, String userId)
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
ID of the user.

Return Value
Type: ConnectApi.UserMissionActivitiesJob

Usage
You can export these activities with this method.

- FeedItemAnswerAQuestion—User answered a question.
- FeedItemLikeSomething—User liked a post or comment.
- FeedItemMarkAnswerAsBest—User marked an answer as the best answer.
- FeedItemPostQuestion—User posted a question.
- FeedItemReceiveAComment—User received a comment on a post.
- FeedItemReceiveALike—User received a like on a post or comment.
- FeedItemReceiveAnAnswer—User received an answer to a question.
- FeedItemWriteAComment—User commented on a post.
- FeedItemWriteAPost—User made a post.
- FeedItemYourAnswerMarkedBest—User’s answer was marked as the best answer.

getUserMissionsProgress(communityId, userId)
Get mission activity progress for a user.
Parameters

communityId
  Type: String
  Use either the ID for a community, internal or null.

userId
  Type: String
  ID of the user.

Return Value

Type: ConnectApi.UserMissionActivityCollection

purgeUserMissionsActivities(communityId, userId)

Start a job to purge mission activity for a user.

API Version
45.0

Requires Chatter
No

Signature

public static ConnectApi.UserMissionActivitiesJob purgeUserMissionsActivities(String
  communityId, String userId)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal or null.

userId
  Type: String
  ID of the user.

Return Value

Type: ConnectApi.UserMissionActivitiesJob

Usage

You can purge these activities with this method.

- FeedItemAnswerAQuestion—User answered a question.
- FeedItemLikeSomething—User liked a post or comment.
• FeedItemMarkAnswerAsBest—User marked an answer as the best answer.
• FeedItemPostQuestion—User posted a question.
• FeedItemReceiveAComment—User received a comment on a post.
• FeedItemReceiveALike—User received a like on a post or comment.
• FeedItemReceiveAnAnswer—User received an answer to a question.
• FeedItemWriteAComment—User commented on a post.
• FeedItemWriteAPost—User made a post.
• FeedItemYourAnswerMarkedBest—User’s answer was marked as the best answer.

**updateUserMissionActivityCount**(activityType, activityCount, communityId, userId)

Update the mission activity count for a user.

API Version
45.0

Requires Chatter
No

Signature
```java
public static ConnectApi.UserMissionActivityStatus updateUserMissionActivityCount(ConnectApi.UserMissionActivityType activityType, Integer activityCount, String communityId, String userId)
```

Parameters

**activityType**
Type: `ConnectApi.UserMissionActivityType`
Type of mission activity for a user. Values are:
• FeedItemAnswerAQuestion—User answered a question.
• FeedItemLikeSomething—User liked a post or comment.
• FeedItemMarkAnswerAsBest—User marked an answer as the best answer.
• FeedItemPostQuestion—User posted a question.
• FeedItemReceiveAComment—User received a comment on a post.
• FeedItemReceiveALike—User received a like on a post or comment.
• FeedItemReceiveAnAnswer—User received an answer to a question.
• FeedItemWriteAComment—User commented on a post.
• FeedItemWriteAPost—User made a post.
• FeedItemYourAnswerMarkedBest—User’s answer was marked as the best answer.

**activityCount**
Type: `Integer`
Number of mission activities of the specified type for the user.
communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
ID of the user.

Return Value
Type: ConnectApi.UserMissionActivityStatus

NextBestAction Class
Execute recommendation strategies, get recommendations, manage recommendation reactions.

Namespace
ConnectApi

NextBestAction Methods
The following are methods for NextBestAction. All methods are static.

IN THIS SECTION:
- deleteRecommendationReaction(reactionId)
  Delete a recommendation reaction.
- executeStrategy(strategyName, maxResults, contextRecordId)
  Execute a strategy.
- executeStrategy(strategyName, maxResults, contextRecordId, debugTrace)
  Execute a strategy and request a trace.
- executeStrategy(strategyName, strategyInput)
  Execute a strategy using an input class.
- getRecommendation(recommendationId)
  Get a recommendation.
- getRecommendationReaction(reactionId)
  Get a recommendation reaction.
- getRecommendationReactions(onBehalfOfId, createdById, targetId, contextRecordId, pageParam, pageSize)
  Get recommendation reactions.
- setRecommendationReaction(reaction)
  Record user reactions to recommendations.

deleteRecommendationReaction(reactionId)
Delete a recommendation reaction.
API Version
45.0

Requires Chatter
No

Signature
public static Void deleteRecommendationReaction(String reactionId)

Parameters
reactionId
Type: String
ID of the recommendation reaction.

Return Value
Type: Void

Usage
Users with the Manage Next Best Action Recommendations or Modify All Data permission can delete recommendation reactions.

executeStrategy(strategyName, maxResults, contextRecordId)
Execute a strategy.

API Version
45.0

Available to Guest Users
45.0

Requires Chatter
No

Signature
public static ConnectApi.NBARecommendations executeStrategy(String strategyName, Integer maxResults, String contextRecordId)

Parameters
strategyName
Type: String
Name of the strategy.

*maxResults*

Type: `Integer`

Maximum number of results. Valid values are from 1 to 25. The default is 3.

*contextRecordId*

Type: `String`

ID of the context record. For example, if the next best action is on a case detail page, the ID of the case.

Return Value

Type: `ConnectApi.NBARecommendations`

**executeStrategy**(strategyName, maxResults, contextRecordId, debugTrace)

Execute a strategy and request a trace.

API Version

45.0

Available to Guest Users

45.0

Requires Chatter

No

Signature

```java
public static ConnectApi.NBARecommendations executeStrategy(String strategyName, Integer maxResults, String contextRecordId, Boolean debugTrace)
```

Parameters

*strategyName*

Type: `String`

Name of the strategy.

*maxResults*

Type: `Integer`

Maximum number of results. Valid values are from 1 to 25. The default is 3.

<contextRecordId>

Type: `String`

ID of the context record. For example, if the next best action is on a case detail page, the ID of the case.

*debugTrace*

Type: `Boolean`

Specifies whether to return trace and debug information in the response (`true`) or not (`false`).
Return Value
Type: `ConnectApi.NBARecommendations`

`executeStrategy(strategyName, strategyInput)`
Execute a strategy using an input class.

API Version
45.0

Available to Guest Users
45.0

Requires Chatter
No

Signature
```java
public static ConnectApi.NBARecommendations executeStrategy(String strategyName, ConnectApi.NBAStrategyInput strategyInput)
```

Parameters
- `strategyName`
  Type: `String`
  Name of the strategy.
- `strategyInput`
  Type: `ConnectApi.NBAStrategyInput`
  A `ConnectApi.NBAStrategyInput` body.

Return Value
Type: `ConnectApi.NBARecommendations`

`getRecommendation(recommendationId)`
Get a recommendation.

API Version
45.0

Requires Chatter
No
Signature

```java
public static ConnectApi.Recommendation getRecommendation(String recommendationId)
```

Parameters

- `recommendationId`
  Type: `String`
  ID of the recommendation.

Return Value

Type: `ConnectApi.Recommendation`

**getRecommendationReaction(reactionId)**

Get a recommendation reaction.

API Version

45.0

Requires Chatter

No

Signature

```java
public static ConnectApi.RecommendationReaction getRecommendationReaction(String reactionId)
```

Parameters

- `reactionId`
  Type: `String`
  ID of the recommendation reaction.

Return Value

Type: `ConnectApi.RecommendationReaction`

Usage

Users with the Manage Next Best Action Recommendations or Modify All Data permission can get recommendation reactions.

**getRecommendationReactions(onBehalfOfId, createdBy, targetId, contextRecordId, pageParam, pageSize)**

Get recommendation reactions.
API Version
45.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationReactions getRecommendationReactions(String onBehalfOfId, String createdById, String targetId, String contextRecordId, Integer pageParam, Integer pageSize)

Parameters
onBehalfOfId
  Type: String
  Use the ID of the user who is indirectly reacting to the recommendation to filter the results.

createdById
  Type: String
  Use the ID of the user or record that created the recommendation reaction to filter the results.

targetId
  Type: String
  Use the ID of the target to filter the results.

contextRecordId
  Type: String
  Use the ID of a context record to filter the results.

pageParam
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.RecommendationReactions

Usage
Users with the Manage Next Best Action Recommendations or Modify All Data permission can get recommendation reactions.

setRecommendationReaction(reaction)
Record user reactions to recommendations.
API Version
45.0

Available to Guest Users
48.0

Requires Chatter
No

Signature

```java
public static ConnectApi.RecommendationReaction setRecommendationReaction(ConnectApi.RecommendationReactionInput reaction)
```

Parameters

- `reaction`
  
  Type: `ConnectApi.RecommendationReactionInput`
  
  A `ConnectApi.RecommendationReactionInput` object representing a reaction to a recommendation produced by a recommendation strategy.

Return Value

Type: `ConnectApi.RecommendationReaction`

**OrderPaymentSummary Class**

Work with payments in Order Management.

**Namespace**

`ConnectApi`

**OrderPaymentSummary Methods**

The following are methods for `OrderPaymentSummary`. All methods are static.

**IN THIS SECTION:**

- `createOrderPaymentSummary(orderPaymentSummaryInput)`
  
  Create an `OrderPaymentSummary` for an `OrderSummary`. Specify a payment authorization or payments that share the same payment method.

- `createOrderPaymentSummary(String orderPaymentSummaryInput)`
  
  Create an `OrderPaymentSummary` for an `OrderSummary`. Specify a payment authorization or payments that share the same payment method.
API Version
48.0

Requires Chatter
No

Signature
public static ConnectApi.CreateOrderPaymentSummaryOutputRepresentation
createOrderPaymentSummary(ConnectApi.CreateOrderPaymentSummaryInputRepresentation
orderPaymentSummaryInput)

Parameters
orderPaymentSummaryInput
  Type: ConnectApi.CreateOrderPaymentSummaryInputRepresentation
  The OrderSummary and payment authorization or payments.

Return Value
Type: ConnectApi.CreateOrderPaymentSummaryOutputRepresentation

Example
String orderSummaryId = '1Oszx00000004CCG';
String paymentId1 = '0a3xx0000000085AAA';
String paymentId2 = '0a3xx0000000085BBB';

ConnectApi.CreateOrderPaymentSummaryInputRepresentation orderPaymentSummaryInput = new
ConnectApi.CreateOrderPaymentSummaryInputRepresentation();
orderPaymentSummaryInput.orderSummaryId = orderSummaryId;
List<String> paymentList = new List<String>();
paymentList.add(paymentId1);
paymentList.add(paymentId2);
orderPaymentSummaryInput.paymentIds = paymentList;

ConnectApi.CreateOrderPaymentSummaryOutputRepresentation result =
ConnectAPI.OrderPaymentSummary.createOrderPaymentSummary(orderPaymentSummaryInput);

OrderSummary Class
Work with orders in Order Management.

Namespace
ConnectApi
OrderSummary Methods
The following are methods for OrderSummary. All methods are static.

IN THIS SECTION:
createCreditMemo(orderSummaryId, creditMemoInput)
Create a credit memo to represent the refund for one or more change orders associated with an OrderSummary.
ensureFundsAsync(orderSummaryId, ensureFundsInput)
Ensure funds or capture a payment for an invoice. This method inserts a background operation into the event queue to asynchronously interact with a payment provider by sending a request and awaiting a response. It returns the ID of that operation so you can track it.
ensureRefundsAsync(orderSummaryId, ensureRefundsInput)
Ensure refunds for a credit memo. This method inserts a background operation into the event queue to asynchronously interact with a payment provider by sending a request and awaiting a response. It returns the ID of that operation so you can track it.
previewCancel(orderSummaryId, changeInput)
Retrieve the expected change order values for canceling one or more OrderItemSummaries from an OrderSummary, without actually executing the cancel.
previewReturn(orderSummaryId, changeInput)
Retrieve the expected change order values for returning one or more OrderItemSummaries from an OrderSummary, without actually executing the return.
submitCancel(orderSummaryId, changeInput)
Cancel one or more OrderItemSummaries from an OrderSummary, and create a corresponding change order.
submitReturn(orderSummaryId, changeInput)
Return one or more OrderItemSummaries from an OrderSummary, and create a corresponding change order.

createCreditMemo(orderSummaryId, creditMemoInput)
Create a credit memo to represent the refund for one or more change orders associated with an OrderSummary.

API Version
48.0

Requires Chatter
No

Signature
public static ConnectApi.CreateCreditMemoOutputRepresentation createCreditMemo(String orderSummaryId, ConnectApi.CreateCreditMemoInputRepresentation creditMemoInput)

Parameters
orderSummaryId
Type: String
ID of the OrderSummary.
creditMemoInput
   Type: ConnectApi.CreateCreditMemoInputRepresentation
   The list of change order IDs.

Return Value
Type: ConnectApi.CreateCreditMemoOutputRepresentation

ensureFundsAsync(orderSummaryId, ensureFundsInput)
Ensure funds or capture a payment for an invoice. This method inserts a background operation into the event queue to asynchronously interact with a payment provider by sending a request and awaiting a response. It returns the ID of that operation so you can track it.

API Version
48.0

Requires Chatter
No

Signature
public static ConnectApi.EnsureFundsAsyncOutputRepresentation ensureFundsAsync(String orderSummaryId, ConnectApi.EnsureFundsAsyncInputRepresentation ensureFundsInput)

Parameters
orderSummaryId
   Type: String
   ID of the OrderSummary.

ensureFundsInput
   Type: ConnectApi.EnsureFundsAsyncInputRepresentation
   The ID of the invoice.

Return Value
Type: ConnectApi.EnsureFundsAsyncOutputRepresentation

Usage
This method checks the OrderPaymentSummaries associated with the specified order summary for captured funds to pay the invoice amount. If an OrderPaymentSummary exists that matches the invoice amount, it applies that one. Otherwise, it traverses the list of associated OrderPaymentSummaries from largest to smallest, applying funds from each one, until the invoice amount is met. If the invoice isn’t covered after all existing payments have been applied, the method tries to capture more funds. If that fails, it returns an error.
**ensureRefundsAsync(orderSummaryId, ensureRefundsInput)**

Ensure refunds for a credit memo. This method inserts a background operation into the event queue to asynchronously interact with a payment provider by sending a request and awaiting a response. It returns the ID of that operation so you can track it.

**API Version**

48.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.EnsureRefundsAsyncOutputRepresentation ensureRefundsAsync(String orderSummaryId, ConnectApi.EnsureRefundsAsyncInputRepresentation ensureRefundsInput)
```

**Parameters**

- `orderSummaryId`
  - Type: String
  - ID of the OrderSummary.
- `ensureRefundsInput`
  - Type: ConnectApi.EnsureRefundsAsyncInputRepresentation
  - Object that wraps the ID of the credit memo.

**Return Value**

Type: ConnectApi.EnsureRefundsAsyncOutputRepresentation

**previewCancel(orderSummaryId, changeInput)**

Retrieve the expected change order values for canceling one or more OrderItemSummaries from an OrderSummary, without actually executing the cancel.

**API Version**

48.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.PreviewCancelOutputRepresentation previewCancel(String orderSummaryId, ConnectApi.ChangeInputRepresentation changeInput)
```
Parameters

**orderSummaryId**
Type: String
ID of the OrderSummary.

**changeInput**
Type: `ConnectApi.ChangeInputRepresentation`
A list of changes to OrderItemSummaries that make up an order change, such as a cancel or return.

Return Value
Type: `ConnectApi.PreviewCancelOutputRepresentation`

**previewReturn(orderSummaryId, changeInput)**
Retrieve the expected change order values for returning one or more OrderItemSummaries from an OrderSummary, without actually executing the return.

API Version
48.0

Requires Chatter
No

Signature

```java
public static ConnectApi.PreviewReturnOutputRepresentation previewReturn(String orderSummaryId, ConnectApi.ChangeInputRepresentation changeInput)
```

Parameters

**orderSummaryId**
Type: String
ID of the OrderSummary.

**changeInput**
Type: `ConnectApi.ChangeInputRepresentation`
A list of changes to OrderItemSummaries that make up an order change, such as a cancel or return.

Return Value
Type: `ConnectApi.PreviewReturnOutputRepresentation`

**submitCancel(orderSummaryId, changeInput)**
Cancel one or more OrderItemSummaries from an OrderSummary, and create a corresponding change order.
API Version
48.0

Requires Chatter
No

Signature
`public static ConnectApi.SubmitCancelOutputRepresentation submitCancel(String orderSummaryId, ConnectApi.ChangeInputRepresentation changeInput)`

Parameters
- `orderSummaryId`
  Type: String
  ID of the OrderSummary.
- `changeInput`
  Type: `ConnectApi.ChangeInputRepresentation`
  A list of changes to OrderItemSummaries that make up an order change, such as a cancel or return.

Return Value
Type: `ConnectApi.SubmitCancelOutputRepresentation`

`submitReturn(orderSummaryId, changeInput)`
Return one or more OrderItemSummaries from an OrderSummary, and create a corresponding change order.

API Version
48.0

Requires Chatter
No

Signature
`public static ConnectApi.SubmitReturnOutputRepresentation submitReturn(String orderSummaryId, ConnectApi.ChangeInputRepresentation changeInput)`

Parameters
- `orderSummaryId`
  Type: String
  ID of the OrderSummary.
- `changeInput`
  Type: `ConnectApi.ChangeInputRepresentation`
A list of changes to OrderItemSummaries that make up an order change, such as a cancel or return.

Return Value

Type: ConnectApi.SubmitReturnOutputRepresentation

OrderSummaryCreation Class

Create Order Summaries in Order Management.

Namespace

ConnectApi

OrderSummaryCreation Methods

The following are methods for OrderSummaryCreation. All methods are static.

IN THIS SECTION:

createOrderSummary(orderSummaryInput)

Create an OrderSummary based on an order. That order is considered the original order for the OrderSummary. Subsequent change orders that apply to the OrderSummary are also represented as orders.

createOrderSummary(orderSummaryInput)

Create an OrderSummary based on an order. That order is considered the original order for the OrderSummary. Subsequent change orders that apply to the OrderSummary are also represented as orders.

API Version

48.0

Requires Chatter

No

Signature

public static ConnectApi.OrderSummaryOutputRepresentation createOrderSummary(ConnectApi.OrderSummaryInputRepresentation orderSummaryInput)

Parameters

orderSummaryInput

Type: ConnectApi.OrderSummaryInputRepresentation

Input object that wraps the ID of the source order.
Return Value
Type: ConnectApi.OrderSummaryOutputRepresentation

Organization Class
Access information about an org.

Namespace
ConnectApi

Organization Methods
The following are methods for Organization. All methods are static.

IN THIS SECTION:

getSettings()
Get information about the context user and the org, including which features are enabled.

getSettings()
Get information about the context user and the org, including which features are enabled.

API Version
28.0

Requires Chatter
No

Signature
public static ConnectApi.OrganizationSettings getSettings()

Return Value
Type: ConnectApi.OrganizationSettings

Personalization Class
Get, create, update, and delete personalization audiences and targets.

Namespace
ConnectApi
Personalization Methods

The following are methods for Personalization. All methods are static.

IN THIS SECTION:
- `createAudience(communityId, audience)`
  Create an audience.
- `createTargets(communityId, target)`
  Create targets.
- `deleteAudience(communityId, audienceId)`
  Delete an audience.
- `deleteTarget(communityId, targetId)`
  Delete a target.
- `getAudience(communityId, audienceId, includeAudienceCriteria)`
  Get an audience.
- `getAudienceBatch(communityId, audienceIds)`
  Get audience information for a comma-separated list of audience IDs.
- `getAudiences(communityId, ipAddress, domain, userId, publishStatus, includeAudienceCriteria, targetTypes)`
  Get a list of audiences that include a user.
- `getTarget(communityId, targetId)`
  Get a target.
- `getTargets(communityId, ipAddress, domain, userId, publishStatus, recordId, targetTypes, includeAudience, includeAllMatchingTargetsWithinGroup, groupNames)`
  Get a list of targets that match the context user, based on the audiences that include the user.
- `updateAudience(communityId, audienceId, audience)`
  Update an audience.
- `updateTargets(communityId, target)`
  Update targets.

**createAudience(communityId, audience)**

Create an audience.

API Version

48.0

Requires Chatter

No

Signature

```java
public static ConnectApi.Audience createAudience(String communityId, ConnectApi.AudienceInput audience)
```
Parameters

communityId
  Type: String
  ID of the community.

audience
  Type: ConnectApi.AudienceInput
  A ConnectApi.AudienceInput object that defines the audience.

Return Value
  Type: ConnectApi.Audience

createTargets(communityId, target)
Create targets.

API Version
48.0

Requires Chatter
No

Signature
public static ConnectApi.TargetCollection createTargets(String communityId,
ConnectApi.TargetCollectionInput target)

Parameters

communityId
  Type: String
  ID of the community.

target
  Type: ConnectApi.TargetCollectionInput
  A ConnectApi.TargetCollectionInput object that defines the targets.

Return Value
  Type: ConnectApi.TargetCollection

deleteAudience(communityId, audienceId)
Delete an audience.
API Version
48.0

Requires Chatter
No

Signature
public static Void deleteAudience(String communityId, String audienceId)

Parameters
communityId
Type: String
ID of the community.
audienceId
Type: String
ID of the audience.

Return Value
Type: Void

deleteTarget(communityId, targetId)
Delete a target.

API Version
48.0

Requires Chatter
No

Signature
public static Void deleteTarget(String communityId, String targetId)

Parameters
communityId
Type: String
ID of the community.
targetId
Type: String
ID of the target.
getAudience(communityId, audienceId, includeAudienceCriteria)
Get an audience.

API Version
48.0

Available to Guest Users
48.0

Requires Chatter
No

Signature
public static ConnectApi.Audience getAudience(String communityId, String audienceId, Boolean includeAudienceCriteria)

Parameters

communityId
Type: String
ID of the community.

audienceId
Type: String
ID of the audience.

includeAudienceCriteria
Type: Boolean
Specifies whether to include audience criteria (true) or not (false). If unspecified, defaults to false.

Return Value
Type: ConnectApi.Audience

getAudienceBatch(communityId, audienceIds)
Get audience information for a comma-separated list of audience IDs.

API Version
48.0
Available to Guest Users

48.0

Requires Chatter

No

Signature

`public static ConnectApi.BatchResult[] getAudienceBatch(String communityId, List<String> audienceIds)`

Parameters

- **communityId**
  - Type: `String`
  - ID of the community.

- **audienceIds**
  - Type: `List<String>`
  - Comma-separated list of audience IDs.

Return Value

Type: `ConnectApi.BatchResult[]`

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.Audience` object and errors for audiences that didn’t load.

`getAudiences(communityId, ipAddress, domain, userId, publishStatus, includeAudienceCriteria, targetTypes)`

Get a list of audiences that include a user.

API Version

48.0

Available to Guest Users

48.0

Requires Chatter

No

Signature

`public static ConnectApi.AudienceCollection getAudiences(String communityId, String ipAddress, String domain, String userId, ConnectApi.PublishStatus publishStatus, Boolean includeAudienceCriteria, List<String> targetTypes)`
Parameters

`communityId`
  Type: `String`
  ID of the community.

`ipAddress`
  Type: `String`
  IP address of the user. If `null`, no audiences with location criteria are returned.

`domain`
  Type: `String`
  Name of the user’s Salesforce custom domain. If `null`, no audiences with domain criteria are returned.

`userId`
  Type: `String`
  ID of the user. If `null`, defaults to the ID of the context user.

`publishStatus`
  Type: `ConnectApi.PublishStatus`
  Publish status of the audience. Values are:
  - `Draft`
  - `Live`
  If `null`, defaults to `Live`.

`includeAudienceCriteria`
  Type: `Boolean`
  Specifies whether to include audience criteria (`true`) or not (`false`). If unspecified, defaults to `false`.

`targetTypes`
  Type: `List<String>`
  Comma-separated list of target types to filter the results. In version 48.0 and later, supported values include `ExperienceVariation` and custom object API names, such as `CustomObjectName__c`. If `null`, all target types are returned.

Return Value

Type: `ConnectApi.AudienceCollection`

`getTarget(communityId, targetId)`

Get a target.

API Version

48.0

Available to Guest Users

48.0
Requires Chatter
No

Signature

```java
public static ConnectApi.Target getTarget(String communityId, String targetId)
```

Parameters

- **communityId**
  - Type: `String`
  - ID of the community.

- **targetId**
  - Type: `String`
  - ID of the target.

Return Value

Type: `ConnectApi.Target`

```java
getTargets(communityId, ipAddress, domain, userId, publishStatus, recordId,
targetTypes, includeAudience, includeAllMatchingTargetsWithinGroup, groupNames)
```

Get a list of targets that match the context user, based on the audiences that include the user.

API Version

48.0

Available to Guest Users

48.0

Requires Chatter

No

Signature

```java
public static ConnectApi.TargetCollection getTargets(String communityId, String ipAddress, String domain, String userId, ConnectApi.PublishStatus publishStatus, String recordId, List<String> targetTypes, Boolean includeAudience, Boolean includeAllMatchingTargetsWithinGroup, List<String> groupNames)
```

Parameters

- **communityId**
  - Type: `String`
  - ID of the community.
ipAddress
  Type: String
  IP address of the user. If null, no audiences with location criteria are returned.

domain
  Type: String
  Name of the user's Salesforce custom domain. If null, no audiences with domain criteria are returned.

userId
  Type: String
  ID of the user. If null, the default is the ID of the context user.

publishStatus
  Type: ConnectApi.PublishStatus
  Publish status of the target. Values are:
  • Draft
  • Live

recordId
  Type: String
  ID of the record, if you want to specify field based criteria in audiences.

targetTypes
  Type: List<String>
  Comma-separated list of target types to filter the results. In version 48.0 and later, supported values include ExperienceVariation and custom object API names, such as CustomObjectName__c. If null, all target types are returned.

includeAudience
  Type: Boolean
  Specifies whether to include the matching audience (true) or not (false). If null, the default is false.

includeAllMatchingTargetsWithinGroup
  Type: Boolean
  Specifies whether to include all the matching targets within a target group (true) or not (false). If null, the default is false.
  If false, the first matching target within each group, based on priority within the group, is returned.

groupNames
  Type: List<String>
  A comma-separated list of group names. Groups bundle related target and audience pairs.

Return Value
  Type: ConnectApi.TargetCollection

updateAudience(communityId, audienceId, audience)
Update an audience.
API Version
48.0

Requires Chatter
No

Signature
public static ConnectApi.Audience updateAudience(String communityId, String audienceId, ConnectApi.AudienceInput audience)

Parameters
communityId
- Type: String
  - ID of the community.
audienceId
- Type: String
  - ID of the audience.
audience
- Type: ConnectApi.AudienceInput
  - A ConnectApi.AudienceInput object that defines the updates to the audience.

Return Value
Type: ConnectApi.Audience

updateTargets(communityId, target)
Update targets.

API Version
48.0

Requires Chatter
No

Signature
public static ConnectApi.TargetCollection updateTargets(String communityId, ConnectApi.TargetCollectionUpdateInput target)

Parameters
communityId
- Type: String
ID of the community.

**target**
- Type: `ConnectApi.TargetCollectionUpdateInput`
  - A `ConnectApi.TargetCollectionUpdateInput` object that defines the updates for the targets.

**Return Value**
- Type: `ConnectApi.TargetCollection`

---

**QuestionAndAnswers Class**

Access question and answers suggestions.

**Namespace**
- `ConnectApi`

**IN THIS SECTION:**
- **QuestionAndAnswers Methods**

---

**QuestionAndAnswers Methods**

The following are methods for `QuestionAndAnswers`. All methods are static.

**IN THIS SECTION:**
- `getSuggestions(communityId, q, subjectId, includeArticles, maxResults)`
  - Get question and answers suggestions.
- `setTestGetSuggestions(communityId, q, subjectId, includeArticles, maxResults, result)`
  - Register a `ConnectApi.QuestionAndAnswersSuggestions` object to be returned when `getSuggestions` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.
- `updateQuestionAndAnswers(communityId, feedElementId, questionAndAnswersCapability)`
  - Choose or change the best answer for a question.

**getSuggestions(communityId, q, subjectId, includeArticles, maxResults)**

Get question and answers suggestions.

**API Version**

32.0

**Requires Chatter**

No
public static ConnectApi.QuestionAndAnswersSuggestions getSuggestions(String communityId, String q, String subjectId, Boolean includeArticles, Integer maxResults)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

subjectId
Type: String
Specify a subject ID to search only questions on that object. If the ID is a topic or a user, the ID is ignored.

includeArticles
Type: Boolean
Specify true to include knowledge articles in the search results. To return only questions, specify false.

maxResults
Type: Integer
The maximum number of results to return for each type of item. Possible values are 1–10. The default value is 5.

Return Value
Type: ConnectApi.QuestionAndAnswersSuggestions

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetSuggestions(communityId, q, subjectId, includeArticles, maxResults, result)
Testing ConnectApi Code

setTestGetSuggestions(communityId, q, subjectId, includeArticles, maxResults, result)
Register a ConnectApi.QuestionAndAnswersSuggestions object to be returned when getSuggestions is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
32.0
Signature

```java
public static Void setTestGetSuggestions(String communityId, String q, String subjectId,
Boolean includeArticles, Integer maxResults, ConnectApi.QuestionAndAnswersSuggestions
result)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **q**
  - Type: String
  - Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **subjectId**
  - Type: String
  - Specify a subject ID to search only questions on that object. If the ID is a topic or a user, the ID is ignored.

- **includeArticles**
  - Type: Boolean
  - Specify true to include knowledge articles in the search results. To return only questions, specify false.

- **maxResults**
  - Type: Integer
  - The maximum number of results to return for each type of item. Possible values are 1–10. The default value is 5.

- **result**
  - Type: ConnectApi.QuestionAndAnswersSuggestions
  - The object containing test data.

Return Value

- Type: Void

SEE ALSO:
- `getSuggestions(communityId, q, subjectId, includeArticles, maxResults)`
- Testing ConnectApi Code

**updateQuestionAndAnswers** (communityId, feedElementId, questionAndAnswersCapability)

Choose or change the best answer for a question.

API Version

32.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.QuestionAndAnswersCapability updateQuestionAndAnswers(String communityId, String feedElementId, ConnectApi.QuestionAndAnswersCapabilityInput questionAndAnswersCapability)
```

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **feedElementId**
  Type: String
  ID of the feed element.

- **questionAndAnswersCapability**
  Type: ConnectApi.QuestionAndAnswersCapabilityInput
  Specify the best answer (comment ID) for the question.

Return Value

Type: ConnectApi.QuestionAndAnswersCapability

If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`

Example

```java
ConnectApi.QuestionAndAnswersCapabilityInput qaInput = new ConnectApi.QuestionAndAnswersCapabilityInput();
qaInput.bestAnswerId = '0D7D00000000lMAKAY';

ConnectApi.QuestionAndAnswersCapability qa = ConnectApi.QuestionAndAnswers.updateQuestionAndAnswers(null, '0D5D0000000XZjJ', qaInput);
```

**Recommendations Class**

Get and reject Chatter, custom, and static recommendations. Create, get, update, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

For Next Best Action recommendations, see `NextBestAction Class`.

**Namespace**

ConnectApi
Recommendations Methods

The following are methods for Recommendations. All methods are static.

IN THIS SECTION:

createRecommendationAudience(communityId, recommendationAudience)
Create an audience for a custom recommendation.

createRecommendationAudience(communityId, name)
Create an audience for a custom recommendation.

createRecommendationDefinition(communityId, recommendationDefinition)
Create a custom recommendation definition.

createRecommendationDefinition(communityId, name, title, actionUrl, actionUrlName, explanation)
Create a custom recommendation definition with the specified parameters.

createScheduledRecommendation(communityId, scheduledRecommendation)
Create a scheduled custom recommendation.

createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId, channel)
Create a scheduled custom recommendation with the specified parameters.

deleteRecommendationAudience(communityId, recommendationAudienceId)
Delete a custom recommendation audience.

deleteRecommendationDefinition(communityId, recommendationDefinitionId)
Delete a custom recommendation definition.

deleteRecommendationDefinitionPhoto(communityId, recommendationDefinitionId)
Delete a custom recommendation definition photo.

deleteScheduledRecommendation(communityId, scheduledRecommendationId, deleteDefinitionIfLast)
Delete a scheduled custom recommendation.

getRecommendationAudience(communityId, recommendationAudienceId)
Get information about a custom recommendation audience.

getRecommendationAudienceMembership(communityId, recommendationAudienceId)
Get the members of a custom recommendation audience.

getRecommendationAudienceMembership(communityId, recommendationAudienceId, pageParam, pageSize)
Get a page of custom recommendation audience members.

getRecommendationAudiences(communityId)
Get custom recommendation audiences.

getRecommendationAudiences(communityId, pageParam, pageSize)
Get a page of custom recommendation audiences.

getRecommendationDefinition(communityId, recommendationDefinitionId)
Get a custom recommendation definition.

getRecommendationDefinitionPhoto(communityId, recommendationDefinitionId)
Get a custom recommendation definition photo.

getRecommendationDefinitions(communityId)
Get custom recommendation definitions.
getRecommendationForUser(communityId, userId, action, objectId)
Get the Chatter, custom, or static recommendation for the context user for the specified action and object ID.

getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults)
Get the Chatter recommendations, such as user, group, file, article, record, and topic recommendations for the context user. Get the custom and static recommendations for the context user.

getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults)
Get the Chatter, custom, and static recommendations for the context user for the specified action.

getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults)
Get the Chatter, custom, and static recommendations for the context user for the specified action and object category.

getScheduledRecommendation(communityId, scheduledRecommendationId)
Get a scheduled custom recommendation.

getScheduledRecommendations(communityId, channel)
Get scheduled custom recommendations.

rejectRecommendationForUser(communityId, userId, action, objectId)
Reject a Chatter, custom, or static recommendation for the context user for the specified action and object ID.

rejectRecommendationForUser(communityId, userId, action, objectEnum)
Reject a static recommendation for the context user.

updateRecommendationAudience(communityId, recommendationAudienceId, recommendationAudience)
Update a custom recommendation audience.

updateRecommendationDefinition(communityId, recommendationDefinitionId, name, title, actionUrl, actionUrlName, explanation)
Update a custom recommendation definition with the specified parameters.

updateRecommendationDefinition(communityId, recommendationDefinitionId, recommendationDefinition)
Update a custom recommendation definition.

updateRecommendationDefinitionPhoto(communityId, recommendationDefinitionId, fileUpload)
Update a custom recommendation definition photo with a file that hasn’t been uploaded.

updateRecommendationDefinitionPhoto(communityId, recommendationDefinitionId, fileId, versionNumber)
Update a custom recommendation definition photo with an uploaded file.

updateRecommendationDefinitionPhotoWithAttributes(communityId, recommendationDefinitionId, photo)
Update a custom recommendation definition photo with an uploaded file that requires cropping.

updateRecommendationDefinitionPhotoWithAttributes(communityId, recommendationDefinitionId, photo, fileUpload)
Update a custom recommendation definition photo with a file that hasn’t been uploaded and requires cropping.

updateScheduledRecommendation(communityId, scheduledRecommendationId, scheduledRecommendation)
Update a scheduled custom recommendation.

updateScheduledRecommendation(communityId, scheduledRecommendationId, rank, enabled, recommendationAudienceId)
Update a scheduled custom recommendation with the specified parameters.

createRecommendationAudience(communityId, recommendationAudience)
Create an audience for a custom recommendation.
API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationAudience createRecommendationAudience(String communityId, ConnectApi.RecommendationAudienceInput recommendationAudience)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

recommendationAudience
Type: ConnectApi.RecommendationAudienceInput
A ConnectApi.RecommendationAudienceInput object.

Return Value
Type: ConnectApi.RecommendationAudience

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

createRecommendationAudience(communityId, name)
Create an audience for a custom recommendation.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationAudience createRecommendationAudience(String communityId, String name)
Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **name**
  - Type: `String`
  - Name of the audience.

Return Value

Type: `ConnectApi.RecommendationAudience`

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

### `createRecommendationDefinition(communityId, recommendationDefinition)`

Create a custom recommendation definition.

API Version

35.0

Requires Chatter

No

Signature

```
public static ConnectApi.RecommendationDefinition createRecommendationDefinition(String communityId, ConnectApi.RecommendationDefinitionInput recommendationDefinition)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **recommendationDefinition**
  - Type: `ConnectApi.RecommendationDefinitionInput`

Return Value

Type: `ConnectApi.RecommendationDefinition`
Recommendation definitions allow you to create custom recommendations that appear in communities, encouraging users to watch videos, take training and more.

Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

These recommendations appear by default on the Customer Service template. They appear on the community home and question detail pages and in the feed in communities in Salesforce mobile web. They also appear anywhere community managers add recommendations using Experience Builder in communities using the Customer Service template.

`createRecommendationDefinition(communityId, name, title, actionUrl, actionUrlName, explanation)`

Create a custom recommendation definition with the specified parameters.

**API Version**

35.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.RecommendationDefinition createRecommendationDefinition(String communityId, String name, String title, String actionUrl, String actionUrlName, String explanation)
```

**Parameters**

- `communityId`  
  Type: String  
  Use either the ID for a community, internal, or null.

- `name`  
  Type: String
  Name of the custom recommendation definition. The name is displayed in Setup.

- `title`  
  Type: String
  Title of the custom recommendation definition.

- `actionUrl`  
  Type: String
  URL for acting on the custom recommendation, for example, the URL to join a group.

- `actionUrlName`  
  Type: String
Text label for the action URL in the user interface, for example, “Launch.”

**explanation**

Type: `String`

Explanation, or body, of the custom recommendation.

**Return Value**

Type: `ConnectApi.RecommendationDefinition`

**Usage**

Recommendation definitions allow you to create custom recommendations that appear in communities, encouraging users to watch videos, take training and more.

Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

These recommendations appear by default on the Customer Service template. They appear on the community home and question detail pages and in the feed in communities in Salesforce mobile web. They also appear anywhere community managers add recommendations using Experience Builder in communities using the Customer Service template.

**createScheduledRecommendation(communityId, scheduledRecommendation)**

Create a scheduled custom recommendation.

**API Version**

35.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.ScheduledRecommendation createScheduledRecommendation(String communityId, ConnectApi.ScheduledRecommendationInput scheduledRecommendation)
```

**Parameters**

- `communityId`
  
  Type: `String`
  
  Use either the ID for a community, `internal`, or `null`.

- `scheduledRecommendation`
  
  Type: `ConnectApi.ScheduledRecommendationInput`
  
  A `ConnectApi.ScheduledRecommendationInput` object.
Return Value
Type: ConnectApi.ScheduledRecommendation

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId, channel)
Create a scheduled custom recommendation with the specified parameters.

API Version
36.0

Requires Chatter
No

Signature
public static ConnectApi.ScheduledRecommendation createScheduledRecommendation(String communityId, String recommendationDefinitionId, Integer rank, Boolean enabled, String recommendationAudienceId, ConnectApi.RecommendationChannel channel)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

recommendationDefinitionId
Type: String
ID of the custom recommendation definition.

rank
Type: Integer
Relative rank of the scheduled custom recommendation indicated by ascending whole numbers starting with 1.

Setting the rank is comparable to an insertion into an ordered list. The scheduled custom recommendation is inserted into the position specified by the rank. The rank of all the scheduled custom recommendations after it is pushed down. See Ranking scheduled custom recommendations example.

If the specified rank is larger than the size of the list, the scheduled custom recommendation is put at the end of the list. The rank of the scheduled custom recommendation is the size of the list, instead of the one specified.

If a rank is not specified, the scheduled custom recommendation is put at the end of the list.
enabled
Type: Boolean
Indicates whether scheduling is enabled. If true, the custom recommendation is enabled and appears in communities. If false, custom recommendations in feeds in Salesforce mobile web aren’t removed, but no new custom recommendations appear. In Customer Service and Partner Central communities, disabled custom recommendations no longer appear.

recommendationAudienceId
Type: String
ID of the custom recommendation definition that this scheduled recommendation schedules.

channel
Type: ConnectApi.RecommendationChannel
A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:

- CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.

Use these channel values; you can’t rename or create other channels.

Return Value
Type: ConnectApi.ScheduledRecommendation

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**Ranking scheduled custom recommendations example**

If you have these scheduled custom recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendations</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
</tbody>
</table>
And you include this information in the Scheduled Custom Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>

`deleteRecommendationAudience(communityId, recommendationAudienceId)`

Delete a custom recommendation audience.

API Version

35.0

Requires Chatter

No

Signature

`public static Void deleteRecommendationAudience(String communityId, String recommendationAudienceId)`

Parameters

`communityId`

Type: `String`

Use either the ID for a community, internal, or `null`.

`recommendationAudienceId`

Type: `String`

ID of the custom recommendation audience.
Return Value
Type: Void

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

delReComDefinition(communityId, recommendationDefinitionId)
Delete a custom recommendation definition.

API Version
35.0

Requires Chatter
No

Signature
public static Void delReComDefinition(String communityId, String recommendationDefinitionId)

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **recommendationDefinitionId**
  Type: String
  ID of the custom recommendation definition.

Return Value
Type: Void

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.
**deleteRecommendationDefinitionPhoto(communityId, recommendationDefinitionId)**

Delete a custom recommendation definition photo.

**API Version**
35.0

**Requires Chatter**
Yes

**Signature**
```java
public static Void deleteRecommendationDefinitionPhoto(String communityId, String recommendationDefinitionId)
```

**Parameters**
- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.
- `recommendationDefinitionId`
  - Type: `String`
  - ID of the custom recommendation definition.

**Return Value**
Type: `Void`

**Usage**
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**deleteScheduledRecommendation(communityId, scheduledRecommendationId, deleteDefinitionIfLast)**

Delete a scheduled custom recommendation.

**API Version**
35.0

**Requires Chatter**
No
public static Void deleteScheduledRecommendation(String communityId, String scheduledRecommendationId, Boolean deleteDefinitionIfLast)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

scheduledRecommendationId
Type: String
ID of the scheduled custom recommendation.

deleteDefinitionIfLast
Type: Boolean
If true and if this is the last scheduled custom recommendation of a custom recommendation definition, deletes the custom recommendation definition. Default is false.

Return Value
Type: Void

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

Deleting a scheduled custom recommendation is comparable to a deletion in an ordered list. All scheduled custom recommendations after the deleted scheduled custom recommendation receive a new, higher rank automatically.

getRecommendationAudience(communityId, recommendationAudienceId)
Get information about a custom recommendation audience.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationAudience getRecommendationAudience(String communityId, String recommendationAudienceId)
Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **recommendationAudienceId**
  - Type: String
  - ID of the custom recommendation audience.

Return Value

- Type: `ConnectApi.RecommendationAudience`

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**getRecommendationAudienceMembership(communityId, recommendationAudienceId)**

Get the members of a custom recommendation audience.

API Version

35.0

Requires Chatter

No

Signature

```java
public static ConnectApi.UserReferencePage getRecommendationAudienceMembership(String communityId, String recommendationAudienceId)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **recommendationAudienceId**
  - Type: String
  - ID of the custom recommendation audience.

Return Value

- Type: `ConnectApi.UserReferencePage`
Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

getRecommendationAudienceMembership(communityId, recommendationAudienceId, pageParam, pageSize)

Get a page of custom recommendation audience members.

API Version

35.0

Requires Chatter

No

Signature

public static ConnectApi.UserReferencePage getRecommendationAudienceMembership(String communityId, String recommendationAudienceId, Integer pageParam, Integer pageSize)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

recommendationAudienceId
  Type: String
  ID of the custom recommendation audience.

pageParam
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of members per page.

Return Value

Type: ConnectApi.UserReferencePage

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.
All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

getRecommendationAudiences(communityId)
Get custom recommendation audiences.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationAudiencePage getRecommendationAudiences(String communityId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

Return Value
Type: ConnectApi.RecommendationAudiencePage

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

getRecommendationAudiences(communityId, pageParam, pageSize)
Get a page of custom recommendation audiences.

API Version
35.0

Requires Chatter
No
Signature

```java
public static ConnectApi.RecommendationAudiencePage getRecommendationAudiences(String communityId, Integer pageParam, Integer pageSize)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **pageParam**
  - Type: Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of audiences per page.

Return Value

Type: `ConnectApi.RecommendationAudiencePage`

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

```java
getRecommendationDefinition(communityId, recommendationDefinitionId)
```

Get a custom recommendation definition.

API Version

35.0

Requires Chatter

No

Signature

```java
public static ConnectApi.RecommendationDefinition getRecommendationDefinition(String communityId, String recommendationDefinitionId)
```

Parameters

- **communityId**
  - Type: String
Use either the ID for a community, internal, or null.

**recommendationDefinitionId**
Type: String
ID of the custom recommendation definition.

Return Value
Type: `ConnectApi.RecommendationDefinition`

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**getRecommendationDefinitionPhoto(communityId, recommendationDefinitionId)**
Get a custom recommendation definition photo.

API Version
35.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.Photo getRecommendationDefinitionPhoto(String communityId, String recommendationDefinitionId)
```

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **recommendationDefinitionId**
  Type: String
  ID of the custom recommendation definition.

Return Value
Type: `ConnectApi.Photo`
Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

getRecommendationDefinitions(communityId)

Get custom recommendation definitions.

API Version

35.0

Requires Chatter

No

Signature

```java
public static ConnectApi.RecommendationDefinitionPage getRecommendationDefinitions(String communityId)
```

Parameters

`communityId`

Type: String

Use either the ID for a community, internal, or null.

Return Value

Type: `ConnectApi.RecommendationDefinitionPage`

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

getRecommendationForUser(communityId, userId, action, objectId)

Get the Chatter, custom, or static recommendation for the context user for the specified action and object ID.

API Version

33.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.RecommendationCollection getRecommendationForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectId)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- **userId**
  - Type: String
  - The ID for the context user or the keyword `me`.

- **action**
  - Type: `ConnectApi.RecommendationActionType`
  - Specifies the action to take on a recommendation.
    - `follow`—Follow a file, record, topic, or user.
    - `join`—Join a group.
    - `view`—View a file, group, article, record, user, custom, or static recommendation.

- **objectId**
  - Type: String
  - Specifies the object to act on.
    - If `action` is `follow`, `objectId` is a user ID, file ID, record ID, or topic ID (version 36.0 and later).
    - If `action` is `join`, `objectId` is a group ID.
    - If `action` is `view`, `objectId` is a user ID, file ID, group ID, record ID, custom recommendation ID (version 34.0 and later), the enum `Today` for static recommendations (version 35.0 and later), or an article ID (version 37.0 and later).

Return Value

- Type: `ConnectApi.RecommendationCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

- `setTestGetRecommendationForUser(communityId, userId, action, objectId, result)`
- Testing `ConnectApi` Code
getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults)

Get the Chatter recommendations, such as user, group, file, article, record, and topic recommendations for the context user. Get the custom and static recommendations for the context user.

API Version
36.0

Available to Guest Users
38.0

Note: Only article and file recommendations are available to guest users.

Requires Chatter
Yes

Signature
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

contextAction
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
- follow
- view

Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

contextObjectId
Type: String
ID of the object that the context user just performed an action on.
- If contextAction is follow, contextObjectId is a user ID, file ID, record ID, or topic ID.
- If contextAction is view, contextObjectId is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).
Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**channel**

Type: `ConnectApi.RecommendationChannel`

A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:

- **CustomChannel1** — Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- **CustomChannel2** — Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel3** — Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel4** — Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel5** — Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **DefaultChannel** — Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.

**maxResults**

Type: `Integer`

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

**Return Value**

Type: `ConnectApi.RecommendationCollection`

**Usage**

If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam’s user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Testing ConnectApi Code

```java
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults)
```

Get the Chatter, custom, and static recommendations for the context user for the specified action.

API Version
36.0

Available to Guest Users
38.0

Note: Only article and file recommendations are available to guest users.

Requires Chatter
Yes

Signature
- `public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults)`
Parameters

**communityId**
Type: **String**
Use either the ID for a community, `internal`, or `null`.

**userId**
Type: **String**
The ID for the context user or the keyword `me`.

**action**
Type: **ConnectApi.RecommendationActionType**
Specifies the action to take on a recommendation.
- **follow**—Follow a file, record, topic, or user.
- **join**—Join a group.
- **view**—View a file, group, article, record, user, custom, or static recommendation.

**contextAction**
Type: **ConnectApi.RecommendationActionType**
Action that the context user just performed. Supported values are:
- **follow**
- **view**

Use **contextAction** and **contextObjectId** together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**contextObjectId**
Type: **String**
ID of the object that the context user just performed an action on.
- If **contextAction** is **follow**, **contextObjectId** is a user ID, file ID, record ID, or topic ID.
- If **contextAction** is **view**, **contextObjectId** is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use **contextAction** and **contextObjectId** together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**channel**
Type: **ConnectApi.RecommendationChannel**
A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:
- **CustomChannel1**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- **CustomChannel2**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel3**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel4**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• **CustomChannel**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.

• **DefaultChannel**—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.

**maxResults**
Type: **Integer**

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

**Return Value**
Type: **ConnectApi.RecommendationCollection**

**Usage**
If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam’s user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**Testing ConnectApi Code**
getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults)

Get the Chatter, custom, and static recommendations for the context user for the specified action and object category.

API Version
36.0

Available to Guest Users
38.0

Note: Only article and file recommendations are available to guest users.

Requires Chatter
Yes

Signature

public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectCategory, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.

• follow—Follow a file, record, topic, or user.
• join—Join a group.
• view—View a file, group, article, record, user, custom, or static recommendation.

objectCategory
Type: String

• If action is follow, objectCategory is users, files, topics, or records.
• If action is join, objectCategory is groups.
• If action is view, objectCategory is users, files, groups, records, custom, apps, or articles (version 37.0 and later).
You can also specify a key prefix, the first three characters of the object ID, as the `objectCategory`. Valid values are:

- If `action` is `follow`, `objectCategory` is 005 (users), 069 (files), 0TO (topics), or 001 (accounts), for example.
- If `action` is `join`, `objectCategory` is 0F9 (groups).
- If `action` is `view`, `objectCategory` is 005 (users), 069 (files), 0F9 (groups), 0RD (custom recommendations), T (static recommendations), 001 (accounts), or kA0 (articles), for example, (version 370 and later).

`contextAction`

Type: `ConnectApi.RecommendationActionType`

Action that the context user just performed. Supported values are:

- `follow`
- `view`

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

`contextObjectId`

Type: `String`

ID of the object that the context user just performed an action on.

- If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, record ID, or topic ID.
- If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

`channel`

Type: `ConnectApi.RecommendationChannel`

A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:

- `CustomChannel1`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- `CustomChannel2`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel3`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel4`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel5`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.

`maxResults`

Type: `Integer`

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.
Return Value

Type: `ConnectApi.RecommendationCollection`

Usage

If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam’s user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Testing ConnectApi Code

`getScheduledRecommendation(communityId, scheduledRecommendationId)`

Get a scheduled custom recommendation.

API Version

35.0

Requires Chatter

No
Signature

```java
public static ConnectApi.ScheduledRecommendation getScheduledRecommendation(String communityId, String scheduledRecommendationId)
```

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **scheduledRecommendationId**
  Type: String
  ID of the scheduled custom recommendation.

Return Value

Type: `ConnectApi.ScheduledRecommendation`

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

```java
getScheduledRecommendations(communityId, channel)
```

Get scheduled custom recommendations.

API Version

36.0

Requires Chatter

No

Signature

```java
public static ConnectApi.ScheduledRecommendationPage getScheduledRecommendations(String communityId, ConnectApi.RecommendationChannel channel)
```

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **channel**
  Type: `ConnectApi.RecommendationChannel`
A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:

- **CustomChannel1**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- **CustomChannel2**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel3**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel4**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel5**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **DefaultChannel**—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.

Return Value

Type: `ConnectApi.ScheduledRecommendationPage`

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

`rejectRecommendationForUser(communityId, userId, action, objectId)`

Reject a Chatter, custom, or static recommendation for the context user for the specified action and object ID.

API Version

33.0

Requires Chatter

Yes

Signature

`public static rejectRecommendationForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectId)`

Parameters

`communityId`

Type: `String`

Use either the ID for a community, `internal`, or `null`.
userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation. Supported values are:
- follow—Follow a file, record, topic, or user.
- join—Join a group.
- view—View a file, group, article, record, user, custom, or static recommendation.

objectId
Type: String
Specifies the object to take action on.
- If action is follow, objectId is a user ID, file ID, record ID, or topic ID (version 36.0 and later).
- If action is join, objectId is a group ID.
- If action is view, objectId is a custom recommendation ID, the enum Today for static recommendations, or an article ID (version 37.0 and later).

Return Value
Type: Void

rejectRecommendationForUser(communityId, userId, action, objectEnum)
Reject a static recommendation for the context user.

API Version
34.0

Requires Chatter
Yes

Signature
public static rejectRecommendationForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, ConnectApi.RecommendedObjectType objectEnum)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

```markdown
**action**
Type: `ConnectApi.RecommendationActionType`
Specifies the action to take on a recommendation. Supported values are:
- `view`—View a static recommendation.

**objectEnum**
Type: `ConnectApi.RecommendedObjectType`
Specifies the object type to take action on.
- `Today`—Static recommendations that don’t have an ID, for example, the Today app recommendation.
```

Return Value
Type: Void

```markdown
**updateRecommendationAudience(communityId, recommendationAudienceId, recommendationAudience)**
Update a custom recommendation audience.

**API Version**
35.0

**Requires Chatter**
No

**Signature**
```java
public static ConnectApi.RecommendationAudience updateRecommendationAudience(String communityId, String recommendationAudienceId, ConnectApi.RecommendationAudienceInput recommendationAudience)
```

**Parameters**
```java
**communityId**
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**recommendationAudienceId**
Type: `String`
ID of the custom recommendation audience.

**recommendationAudience**
Type: `ConnectApi.RecommendationAudienceInput`
A `ConnectApi.RecommendationAudienceInput` object.
```
Return Value
Type: `ConnectApi.RecommendationAudience`

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

`updateRecommendationDefinition(communityId, recommendationDefinitionId, name, title, actionUrl, actionUrlName, explanation)`
Update a custom recommendation definition with the specified parameters.

API Version
35.0

Requires Chatter
No

Signature
`public static ConnectApi.RecommendationDefinition updateRecommendationDefinition(String communityId, String recommendationDefinitionId, String name, String title, String actionUrl, String actionUrlName, String explanation recommendationDefinition)`

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`recommendationDefinitionId`
Type: `String`
ID of the custom recommendation definition.

`name`
Type: `String`
Name of the custom recommendation definition. The name is displayed in Setup.

`title`
Type: `String`
Title of the custom recommendation definition.

`actionUrl`
Type: `String`
URL for acting on the custom recommendation, for example, the URL to join a group.
**actionUrlName**  
Type: **String**  
Text label for the action URL in the user interface, for example, “Launch.”

**explanation**  
Type: **String**  
Explanation, or body, of the custom recommendation.

Return Value  
Type: **ConnectApi.RecommendationDefinition**

Usage  
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**updateRecommendationDefinition(communityId, recommendationDefinitionId, recommendationDefinition)**  
Update a custom recommendation definition.

API Version  
35.0

Requires Chatter  
No

**Signature**  
```java
public static ConnectApi.RecommendationDefinition updateRecommendationDefinition(String communityId, String recommendationDefinitionId, ConnectApi.RecommendationDefinitionInput recommendationDefinition)
```

**Parameters**

**communityId**  
Type: **String**  
Use either the ID for a community, internal, or null.

**recommendationDefinitionId**  
Type: **String**  
ID of the custom recommendation definition.

**recommendationDefinition**  
Type: **ConnectApi.RecommendationDefinitionInput**
A `ConnectApi.RecommendationDefinitionInput` object containing the properties to update.

Return Value
Type: `ConnectApi.RecommendationDefinition`

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

`updateRecommendationDefinitionPhoto(communityId, recommendationDefinitionId, fileUpload)`
Update a custom recommendation definition photo with a file that hasn't been uploaded.

API Version
35.0

Requires Chatter
Yes

Signature
`public static ConnectApi.Photo updateRecommendationDefinitionPhoto(String communityId, String recommendationDefinitionId, ConnectApi.BinaryInput fileUpload)`

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `recommendationDefinitionId`
  Type: `String`
  ID of the custom recommendation definition.
- `fileUpload`
  Type: `ConnectApi.BinaryInput`
  A file to use as the photo. The content type must be usable as an image.

Return Value
Type: `ConnectApi.Photo`
Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

`updateRecommendationDefinitionPhoto(communityId, recommendationDefinitionId, fileId, versionNumber)`
Update a custom recommendation definition photo with an uploaded file.

API Version
35.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.Photo updateRecommendationDefinitionPhoto(String communityId,
      String recommendationDefinitionId, String fileId, Integer versionNumber)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, internal, or null.

- `recommendationDefinitionId`
  - Type: `String`
  - ID of the custom recommendation definition.

- `fileId`
  - Type: `String`
  - ID of a file already uploaded. The file must be an image, and be smaller than 2 GB.

- `versionNumber`
  - Type: `Integer`
  - Version number of the existing file. Specify either an existing version number, or null to get the latest version.

Return Value

Type: `ConnectApi.Photo`

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.
All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**updateRecommendationDefinitionPhotoWithAttributes(communityId, recommendationDefinitionId, photo)**

Update a custom recommendation definition photo with an uploaded file that requires cropping.

**API Version**
35.0

**Requires Chatter**
Yes

**Signature**

```java
public static ConnectApi.Photo updateRecommendationDefinitionPhotoWithAttributes(String communityId, String recommendationDefinitionId, ConnectApi.PhotoInput photo)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **recommendationDefinitionId**
  - Type: `String`
  - ID of the custom recommendation definition.

- **photo**
  - Type: `ConnectApi.PhotoInput`
  - A `ConnectApi.PhotoInput` object specifying the file ID, version number, and cropping parameters.

**Return Value**

Type: `ConnectApi.Photo`

**Usage**

Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**updateRecommendationDefinitionPhotoWithAttributes(communityId, recommendationDefinitionId, photo, fileUpload)**

Update a custom recommendation definition photo with a file that hasn’t been uploaded and requires cropping.
API Version
35.0

Requires Chatter
Yes

Signature
public static ConnectApi.Photo updateRecommendationDefinitionPhotoWithAttributes(String communityId, String recommendationDefinitionId, ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

recommendationDefinitionId
Type: String
ID of the custom recommendation definition.

photo
Type: ConnectApi.PhotoInput
A ConnectApi.PhotoInput object specifying the cropping parameters.

fileUpload
Type: ConnectApi.BinaryInput
A file to use as the photo. The content type must be usable as an image.

Return Value
Type: ConnectApi.Photo

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

updateScheduledRecommendation(communityId, scheduledRecommendationId, scheduledRecommendation)
Update a scheduled custom recommendation.

API Version
35.0
Requires Chatter
No

Signature

```java
public static ConnectApi.ScheduledRecommendation updateScheduledRecommendation(String communityId, String scheduledRecommendationId, ConnectApi.ScheduledRecommendationInput scheduledRecommendation)
```

Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **scheduledRecommendationId**
  Type: `String`
  ID of the scheduled custom recommendation.

- **scheduledRecommendation**
  Type: `ConnectApi.ScheduledRecommendationInput`
  A `ConnectApi.ScheduledRecommendationInput` object containing the properties to update.

Return Value

Type: `ConnectApi.ScheduledRecommendation`

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**Ranking scheduled custom recommendations example**

If you have these scheduled custom recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendations</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>3</td>
</tr>
</tbody>
</table>

And you include this information in the Scheduled Custom Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>
The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>

**updateScheduledRecommendation(communityId, scheduledRecommendationId, rank, enabled, recommendationAudienceId)**

Update a scheduled custom recommendation with the specified parameters.

**API Version**

35.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.ScheduledRecommendation updateScheduledRecommendation(String communityId, String scheduledRecommendationId, Integer rank, Boolean enabled, String recommendationAudienceId)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **scheduledRecommendationId**
  - Type: `String`
  - ID of the scheduled custom recommendation.

- **rank**
  - Type: `Integer`
  - Relative rank of the scheduled custom recommendation indicated by ascending whole numbers starting with 1.
  - Setting the rank is comparable to an insertion into an ordered list. The scheduled custom recommendation is inserted into the position specified by the `rank`. The `rank` of all the scheduled custom recommendations after it is pushed down. See Ranking scheduled custom recommendations example.
  - If the specified `rank` is larger than the size of the list, the scheduled custom recommendation is put at the end of the list. The `rank` of the scheduled custom recommendation is the size of the list, instead of the one specified.
  - If a `rank` is not specified, the scheduled custom recommendation is put at the end of the list.
enabled
Type: Boolean
Indicates whether scheduling is enabled. If true, the custom recommendation is enabled and appears in communities. If false, custom recommendations in feeds in Salesforce mobile web aren’t removed, but no new custom recommendations appear. In Customer Service and Partner Central communities, disabled custom recommendations no longer appear.

recommendationAudienceId
Type: String
ID of the custom recommendation definition that this scheduled recommendation schedules.

Return Value
Type: ConnectApi.ScheduledRecommendation

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**Ranking scheduled custom recommendations example**

If you have these scheduled custom recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendations</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>3</td>
</tr>
</tbody>
</table>

And you include this information in the Scheduled Custom Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>
Recommendations Test Methods

The following are the test methods for Recommendations. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

IN THIS SECTION:

- `setTestGetRecommendationForUser(communityId, userId, action, objectId, result)`
  - Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults, result)`
  - Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults, result)`
  - Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults, result)`
  - Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetRecommendationForUser(communityId, userId, action, objectId, result)`
  - Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

### `setTestGetRecommendationForUser(communityId, userId, action, objectId, result)`

Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**
33.0

**Requires Chatter**
Yes

**Signature**

```java
public static Void setTestGetRecommendationForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectId, ConnectApi.RecommendationCollection result)
```

**Parameters**

- **communityId**
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- **userId**
  - Type: String
  - The ID for the context user or the keyword `me`.

---

1683
**action**
Type: `ConnectApi.RecommendationActionType`
Specifies the action to take on a recommendation.
- **follow**—Follow a file, record, topic, or user.
- **join**—Join a group.
- **view**—View a file, group, article, record, user, custom, or static recommendation.

**objectId**
Type: `String`
Specifies the object to take action on.
- If `action` is `follow`, `objectId` is a user ID, file ID, record ID, or topic ID (version 36.0 and later).
- If `action` is `join`, `objectId` is a group ID.
- If `action` is `view`, `objectId` is a user ID, file ID, group ID, record ID, custom recommendation ID, the enum `Today` for static recommendations, or an article ID (version 37.0 and later).

**result**
Type: `ConnectApi.RecommendationCollection`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getRecommendationForUser(communityId, userId, action, objectId)`
- Testing ConnectApi Code

`setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults, result)`
Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
36.0

Requires Chatter
Yes

Signature
```java
public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults, ConnectApi.RecommendationCollection result)
```
Parameters

**communityId**
- Type: String
- Use either the ID for a community, internal, or null.

**userId**
- Type: String
- The ID for the context user or the keyword me.

**contextAction**
- Type: ConnectApi.RecommendationActionType
- Action that the context user just performed. Supported values are:
  - follow
  - view

  Use **contextAction** and **contextObjectId** together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

**contextObjectId**
- Type: String
- ID of the object that the context user just performed an action on.
  - If **contextAction** is follow, **contextObjectId** is a user ID, file ID, record ID, or topic ID.
  - If **contextAction** is view, **contextObjectId** is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

  Use **contextAction** and **contextObjectId** together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

**channel**
- Type: ConnectApi.RecommendationChannel
- A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:
  - CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
  - CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
  - CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
  - CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
  - CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.

**maxResults**
- Type: Integer
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

**result**
- Type: `ConnectApi.RecommendationCollection`
  - The object containing test data.

Return Value
- Type: Void

SEE ALSO:
- `getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults)`
- Testing ConnectApi Code

```java
public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults, ConnectApi.RecommendationCollection result)
```

Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
- 36.0

Requires Chatter
- Yes

Signature
```java
public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults, ConnectApi.RecommendationCollection result)
```

Parameters
- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.
- **userId**
  - Type: `String`
  - The ID for the context user or the keyword `me`.
- **action**
  - Type: `ConnectApi.RecommendationActionType`
  - Specifies the action to take on a recommendation.
    - `follow`—Follow a file, record, topic, or user.
• join—Join a group.
• view—View a file, group, article, record, user, custom, or static recommendation.

contextAction
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
• follow
• view

Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

contextObjectId
Type: String
ID of the object that the context user just performed an action on.
• If contextAction is follow, contextObjectId is a user ID, file ID, record ID, or topic ID.
• If contextAction is view, contextObjectId is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

channel
Type: ConnectApi.RecommendationChannel
A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:
• CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
• CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• DefaultChannel—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.

maxResults
Type: Integer
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

result
Type: ConnectApi.RecommendationCollection
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults)
Testing ConnectApi Code

**setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults, result)**

Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
36.0

Requires Chatter
Yes

Signature
```java
public static Void setTestGetRecommendationsForUser(String communityId, String userId, 
ConnectApi.RecommendationActionType action, String objectCategory, 
ConnectApi.RecommendationActionType contextAction, String contextObjectId, 
ConnectApi.RecommendationChannel channel, Integer maxResults, 
ConnectApi.RecommendationCollection result)
```

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**userId**
Type: String
The ID for the context user or the keyword me.

**action**
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
- follow—Follow a file, record, topic, or user.
- join—Join a group.
- view—View a file, group, article, record, user, custom, or static recommendation.

**objectCategory**
Type: String
- If `action` is `follow`, `objectCategory` is `users`, `files`, `records`, or `topics`.
- If `action` is `join`, `objectCategory` is `groups`.
- If `action` is `view`, `objectCategory` is `users`, `files`, `groups`, `records`, `custom`, `apps`, or `articles` (version 37.0 and later).

You can also specify a key prefix, the first three characters of the object ID, as the `objectCategory`. Valid values are:
- If `action` is `follow`, `objectCategory` is `005` (users), `069` (files), `0TO` (topics), or `001` (accounts), for example.
- If `action` is `join`, `objectCategory` is `0F9` (groups).
- If `action` is `view`, `objectCategory` is `005` (users), `069` (files), `0F9` (groups), `0RD` (custom recommendations), `T` (static recommendations), `001` (accounts), or `kA0` (articles), for example, (version 37.0 and later).

**contextAction**
Type: `ConnectApi.RecommendationActionType`

Action that the context user just performed. Supported values are:
- `follow`
- `view`

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**contextObjectId**
Type: `String`

ID of the object that the context user just performed an action on.
- If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, record ID, or topic ID.
- If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**channel**
Type: `ConnectApi.RecommendationChannel`

A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:
- `CustomChannel1`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- `CustomChannel2`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel3`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel4`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel5`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
**maxResults**
Type: `Integer`
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

**result**
Type: `ConnectApi.RecommendationCollection`
The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults)`
- `Testing ConnectApi Code`

**Retired Recommendations Methods**
The following methods for `Recommendations` are retired.

IN THIS SECTION:
- `createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId)`
  Create a scheduled custom recommendation with the specified parameters.
- `getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults)`
  Get the Chatter recommendations, such as user, group, file, and record recommendations for the context user. Get the custom and static recommendations for the context user.
- `getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults)`
  Get the Chatter, custom, and static recommendations for the context user for the specified action.
- `getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults)`
  Get the Chatter, custom, and static recommendations for the context user for the specified action and object category.
- `getScheduledRecommendations(communityId)`
  Get scheduled custom recommendations.
- `setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults, result)`
  Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.
- `setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults, result)`
  Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.
- `setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults, result)`
  Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.
createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId)

Create a scheduled custom recommendation with the specified parameters.

API Version

35.0 only

Important: In version 36.0 and later, use createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId, channel).

Requires Chatter

No

Signature

public static ConnectApi.ScheduledRecommendation createScheduledRecommendation(String communityId, String recommendationDefinitionId, Integer rank, Boolean enabled, String recommendationAudienceId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

recommendationDefinitionId
Type: String
ID of the custom recommendation definition.

rank
Type: Integer
Relative rank of the scheduled custom recommendation indicated by ascending whole numbers starting with 1.

Setting the rank is comparable to an insertion into an ordered list. The scheduled custom recommendation is inserted into the position specified by the rank. The rank of all the scheduled custom recommendations after it is pushed down. See Ranking scheduled custom recommendations example.

If the specified rank is larger than the size of the list, the scheduled custom recommendation is put at the end of the list. The rank of the scheduled custom recommendation is the size of the list, instead of the one specified.

If a rank is not specified, the scheduled custom recommendation is put at the end of the list.

enabled
Type: Boolean
Indicates whether scheduling is enabled. If true, the custom recommendation is enabled and appears in communities. If false, custom recommendations in feeds in Salesforce mobile web aren’t removed, but no new custom recommendations appear. In Customer Service and Partner Central communities, disabled custom recommendations no longer appear.

recommendationAudienceId
Type: String
ID of the custom recommendation definition that this scheduled recommendation schedules.
Return Value

Type: `ConnectApi.ScheduledRecommendation`

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**Ranking scheduled custom recommendations example**

If you have these scheduled custom recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendations</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>3</td>
</tr>
</tbody>
</table>

And you include this information in the Scheduled Custom Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>

`getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults)`

Get the Chatter recommendations, such as user, group, file, and record recommendations for the context user. Get the custom and static recommendations for the context user.

API Version

33.0–35.0

**Important:** In version 36.0 and later, use `getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults).`
Requires Chatter

Yes

Signature

public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

contextAction
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
• follow
• view

Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

contextObjectId
Type: String
ID of the object that the context user just performed an action on.
• If contextAction is follow, contextObjectId is a user ID, file ID, or record ID.
• If contextAction is view, contextObjectId is a user ID, file ID, group ID, or record ID.

Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

maxResults
Type: Integer
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

Return Value

Type: ConnectApi.RecommendationCollection

Usage

If you want to get recommendations based on a recent action performed, such as following a user, use contextAction and contextObjectId together. For example, if you just followed Pam, you specify follow for contextAction and Pam’s user ID for contextObjectId.
This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults, result)`
- Testing ConnectApi Code

`getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults)`

Get the Chatter, custom, and static recommendations for the context user for the specified action.

API Version

33.0–35.0

⚠️ Important: In version 36.0 and later, use `getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults)`.

Requires Chatter

Yes

Signature

```java
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults)
```
Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

userId
  Type: String
  The ID for the context user or the keyword me.

action
  Type: ConnectApi.RecommendationActionType
  Specifies the action to take on a recommendation.
  • follow—Follow a file, record, topic, or user.
  • join—Join a group.
  • view—View a file, group, article, record, user, custom, or static recommendation.

contextAction
  Type: ConnectApi.RecommendationActionType
  Action that the context user just performed. Supported values are:
  • follow
  • view
  Use contextAction and contextObjectId together to get new recommendations based on the action just performed.
  If you don’t want recommendations based on a recent action, specify null.

contextObjectId
  Type: String
  ID of the object that the context user just performed an action on.
  • If contextAction is follow, contextObjectId is a user ID, file ID, or record ID.
  • If contextAction is view, contextObjectId is a user ID, file ID, group ID, or record ID.
  Use contextAction and contextObjectId together to get new recommendations based on the action just performed.
  If you don’t want recommendations based on a recent action, specify null.

maxResults
  Type: Integer
  Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

Return Value

Type: ConnectApi.RecommendationCollection

Usage

If you want to get recommendations based on a recent action performed, such as following a user, use contextAction and contextObjectId together. For example, if you just followed Pam, you specify follow for contextAction and Pam’s user ID for contextObjectId.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

*setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults, result)*

Testing ConnectApi Code

**getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults)**

Get the Chatter, custom, and static recommendations for the context user for the specified action and object category.

**API Version**

33.0–35.0

**Important:** In version 36.0 and later, use **getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults)**.

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectCategory, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults)
```
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**userId**
Type: String
The ID for the context user or the keyword me.

**action**
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
- follow—Follow a file, record, topic, or user.
- join—Join a group.
- view—View a file, group, article, record, user, custom, or static recommendation.

**objectCategory**
Type: String
- If **action** is follow, **objectCategory** is users, files, or records.
- If **action** is join, **objectCategory** is groups.
- If **action** is view, **objectCategory** is users, files, groups, records, custom, or apps.
You can also specify a key prefix, the first three characters of the object ID, as the **objectCategory**. Valid values are:
- If **action** is follow, **objectCategory** is 005 (users), 069 (files), or 001 (accounts), for example.
- If **action** is join, **objectCategory** is 0F9 (groups).
- If **action** is view, **objectCategory** is 005 (users), 069 (files), 0F9 (groups), 0RD (custom recommendations), T (static recommendations), or 001 (accounts), for example.

**contextAction**
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
- follow
- view
Use **contextAction** and **contextObjectId** together to get new recommendations based on the action just performed.
If you don't want recommendations based on a recent action, specify null.

**contextObjectId**
Type: String
ID of the object that the context user just performed an action on.
- If **contextAction** is follow, **contextObjectId** is a user ID, file ID, or record ID.
- If **contextAction** is view, **contextObjectId** is a user ID, file ID, group ID, or record ID.
Use **contextAction** and **contextObjectId** together to get new recommendations based on the action just performed.
If you don't want recommendations based on a recent action, specify null.

**maxResults**
Type: Integer
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.
Return Value
Type: `ConnectApi.RecommendationCollection`

Usage
If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam’s user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults, result)`
- Testing ConnectApi Code

**getScheduledRecommendations(communityId)**
Get scheduled custom recommendations.

API Version
35.0 only

**Important**: In version 36.0 and later, use `getScheduledRecommendations(communityId, channel)`.

Requires Chatter
No
Signature

```java
public static ConnectApi.ScheduledRecommendationPage getScheduledRecommendations(String communityId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

Return Value

Type: `ConnectApi.ScheduledRecommendationPage`

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

```java
setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults, result)
```

Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

33.0–35.0

Requires Chatter

Yes

Signature

```java
public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults, ConnectApi.RecommendationCollection result)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `userId`
  - Type: `String`
  - The ID for the context user or the keyword `me`.

1699
contextAction
  Type: ConnectApi.RecommendationActionType
  Action that the context user just performed. Supported values are:
  - follow
  - view

Use contextAction and contextObjectId together to get new recommendations based on the action just performed.
If you don’t want recommendations based on a recent action, specify null.

contextObjectId
  Type: String
  ID of the object that the context user just performed an action on.
  - If contextAction is follow, contextObjectId is a user ID, file ID, or record ID.
  - If contextAction is view, contextObjectId is a user ID, file ID, group ID, or record ID.

Use contextAction and contextObjectId together to get new recommendations based on the action just performed.
If you don’t want recommendations based on a recent action, specify null.

maxResults
  Type: Integer
  Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

result
  Type: ConnectApi.RecommendationCollection
  The object containing test data.

Return Value
  Type: Void

SEE ALSO:
  - getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults)
  - Testing ConnectApi Code

setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults, result)

Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
  33.0–35.0

Requires Chatter
  Yes
public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults, ConnectApi.RecommendationCollection result)

Parameters:

communityId
 Type: String
 Use either the ID for a community, internal, or null.

userId
 Type: String
 The ID for the context user or the keyword me.

action
 Type: ConnectApi.RecommendationActionType
 Specifies the action to take on a recommendation.
 • follow—Follow a file, record, topic, or user.
 • join—Join a group.
 • view—View a file, group, article, record, user, custom, or static recommendation.

contextAction
 Type: ConnectApi.RecommendationActionType
 Action that the context user just performed. Supported values are:
 • follow
 • view

Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

contextObjectId
 Type: String
 ID of the object that the context user just performed an action on.
 • If contextAction is follow, contextObjectId is a user ID, file ID, or record ID.
 • If contextAction is view, contextObjectId is a user ID, file ID, group ID, or record ID.

Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

maxResults
 Type: Integer
 Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

result
 Type: ConnectApi.RecommendationCollection
 The object containing test data.
Return Value
Type: Void

SEE ALSO:
- getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults)
- Testing ConnectApi Code

setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults, result)

Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
33.0–35.0

Requires Chatter
Yes

Signature
public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectCategory, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults, ConnectApi.RecommendationCollection result)

Parameters
communityId
- Type: String
  - Use either the ID for a community, internal, or null.

userId
- Type: String
  - The ID for the context user or the keyword me.

action
- Type: ConnectApi.RecommendationActionType
  - Specifies the action to take on a recommendation.
  - follow—Follow a file, record, topic, or user.
  - join—Join a group.
  - view—View a file, group, article, record, user, custom, or static recommendation.

objectCategory
- Type: String
  - If action is follow, objectCategory is users, files, or records.
- If `action` is `join`, `objectCategory` is `groups`.
- If `action` is `view`, `objectCategory` is `users`, `files`, `groups`, `records`, `custom`, or `apps`.

You can also specify a key prefix, the first three characters of the object ID, as the `objectCategory`. Valid values are:

- If `action` is `follow`, `objectCategory` is `005` (users), `069` (files), or `001` (accounts), for example.
- If `action` is `join`, `objectCategory` is `0F9` (groups).
- If `action` is `view`, `objectCategory` is `005` (users), `069` (files), `0F9` (groups), `0RD` (custom recommendations), `T` (static recommendations), or `001` (accounts), for example.

**contextAction**
Type: `ConnectApi.RecommendationActionType`
Action that the context user just performed. Supported values are:
- `follow`
- `view`

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**contextObjectId**
Type: `String`
ID of the object that the context user just performed an action on.
- If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, or record ID.
- If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, or record ID.

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**maxResults**
Type: `Integer`
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

**result**
Type: `ConnectApi.RecommendationCollection`
The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults)`
- Testing ConnectApi Code

**Records Class**
Access information about record motifs, which are small icons used to distinguish record types in the Salesforce UI.
Namespace

ConnectApi

Records Methods

The following are methods for Records. All methods are static.

IN THIS SECTION:

- getMotif(communityId, idOrPrefix)
  - Get a motif that contains the URLs for a set of small, medium, and large motif icons for a record. It can also contain a base color for the record.
- getMotifBatch(communityId, idOrPrefixList)
  - Get a motif for a list of objects.

getMotif(communityId, idOrPrefix)

Get a motif that contains the URLs for a set of small, medium, and large motif icons for a record. It can also contain a base color for the record.

API Version

28.0

Requires Chatter

No

Signature

public static ConnectApi.Motif getMotif(String communityId, String idOrPrefix)

Parameters

- communityId
  - Type: String
  - Use either the ID for a community, internal, or null.
- idOrPrefix
  - Type: String
  - An ID or key prefix.

Return Value

Type: ConnectApi.Motif

Usage

Each Salesforce record type has its own set of motif icons.
getMotifBatch(communityId, idOrPrefixList)
Get a motif for a list of objects.

API Version
31.0

Requires Chatter
No

Signature
public static ConnectApi.BatchResult[] getMotifBatch(String communityId, List<String> idOrPrefixList)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

idOrPrefixList
  Type: List<String>
  A list of object IDs or prefixes.

Return Value
Type: ConnectApi.BatchResult[]

Example
String communityId = null;
List<String> prefixIds = new List<String> { '001', '012', '069' };

// Get info about the motifs of all records in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.Records.getMotifBatch(communityId, prefixIds);

for (ConnectApi.BatchResult batchResult : batchResults) {
  if (batchResult.isSuccess()) {
    // Operation was successful.
    // Print the color of each motif.
    ConnectApi.Motif motif;
    if (batchResult.getResult() instanceof ConnectApi.Motif) {
      motif = (ConnectApi.Motif) batchResult.getResult();
    }
    System.debug('SUCCESS');
    System.debug(motif.color);
SalesforceInbox Class
Access information about Automated Activity Capture, which is available in Einstein and Salesforce Inbox.

Namespace
ConnectApi

SalesforceInbox Methods
The following are methods for SalesforceInbox. All methods are static.

IN THIS SECTION:
shareActivity(activityId, sharingInfo)
Share emails or events with certain groups of users.

shareActivity(activityId, sharingInfo)
Share emails or events with certain groups of users.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.ActivitySharingResult shareActivity(String activityId, ConnectApi.ActivitySharingInput sharingInfo)

Parameters
activityId
Type: String
The ID of the activity.
sharingInfo
Type: ConnectApi.ActivitySharingInput
A `ConnectApi.ActivitySharingInput` object.

Return Value

Type: `ConnectApi.ActivitySharingResult`

Usage

This method is a feature of both Sales Cloud Einstein and Inbox. It lets users connect their email and calendar to Salesforce. Then, their emails and events are automatically added to related Salesforce records. Users can specify who their individual emails and events are shared with.

**SmartDataDiscovery Class**

Get predictions on Salesforce objects.

Use the `ConnectApi.SmartDataDiscovery.predict` method to get predictions on Salesforce objects. For more information, see [Get Predictions in Apex](#).

**SocialEngagement Class**

Manage information about social accounts or fan pages for social networks.

**Namespace**

`ConnectApi`

**SocialEngagement Methods**

The following are methods for `SocialEngagement`. All methods are static.

IN THIS SECTION:

- `deleteSocialPost(socialPostId, socialAccountId)`
  - Delete a social post from its social network.
- `followSocialPersona(socialPersonaId, socialAccountId)`
  - Follow a social persona in its social network.
- `followSocialPostPersona(socialPostId, socialAccountId)`
  - Follow a social persona on a social post in its social network.
- `getIntents(socialPostId)`
  - Get available intents for a social post.
- `getManagedSocialAccount(id)`
  - Get a managed social account that is in the org and assigned to the user.
- `getManagedSocialAccounts()`
  - Gets a list of managed social accounts that are in the org and assigned to the user.
- `getManagedSocialAccounts(socialNetwork)`
  - Get a list of managed social accounts that are in the org and assigned to the user.
getRelationship(id, socialPersonaId)
Get the follow relationship between a managed social account and a social persona.

hideSocialPost(socialPostId, socialAccountId)
Hide a social post in its social network.

likeSocialPost(socialPostId, socialAccountId)
Like a social post in its social network.

massApprove(massApproval)
Approve or reject the publishing of a large number of social posts.

recallApproval(socialPostId)
Recall an approval request to publish a social post.

unfollowSocialPersona(socialPersonaId, socialAccountId)
Stop following a social persona in its social network.

unfollowSocialPostPersona(socialPostId, socialAccountId)
Stop following a social persona of a social post in its social network.

unhideSocialPost(socialPostId, socialAccountId)
Unhide a social post in its social network.

unlikeSocialPost(socialPostId, socialAccountId)
Unlike a social post in its social network.

deleteSocialPost(socialPostId, socialAccountId)
deleteSocialPost(socialPostId, socialAccountId)
deleteSocialPost(socialPostId, socialAccountId)
deleteSocialPost(socialPostId, socialAccountId)
deleteSocialPost(socialPostId, socialAccountId)

Delete a social post from its social network.

Note: Deleting a social post from its social network doesn't delete the record from Salesforce.

API Version
46.0

Requires Chatter
No

Signature
public static ConnectApi.DeleteSocialPostIntent deleteSocialPost(String socialPostId, String socialAccountId)

Parameters

socialPostId
  Type: String
  ID of the social post to delete.

socialAccountId
  Type: String
ID of the social account that deletes the post.

Return Value
Type: `ConnectApi.DeleteSocialPostIntent`

```java
followSocialPersona(socialPersonaId, socialAccountId)
```
Follow a social persona in its social network.

API Version
45.0

Requires Chatter
No

Signature
```java
public static ConnectApi.FollowSocialPersonaIntent followSocialPersona(String socialPersonaId, String socialAccountId)
```

Parameters
```java
socialPersonaId
  Type: String
  ID of the social persona to follow.

socialAccountId
  Type: String
  ID of the social account that follows the social persona.
```

Return Value
Type: `ConnectApi.FollowSocialPersonaIntent`

```java
followSocialPostPersona(socialPostId, socialAccountId)
```
Follow a social persona on a social post in its social network.

API Version
45.0

Requires Chatter
No
public static ConnectApi.FollowSocialPersonaIntent followSocialPostPersona(String socialPostId, String socialAccountId)

Parameters

socialPostId
Type: String
ID of the social post authored by the social persona to follow.

socialAccountId
Type: String
ID of the social account that follows the social persona.

Return Value
Type: ConnectApi.FollowSocialPersonaIntent

gIntents(socialPostId)
Get available intents for a social post.

API Version
45.0

Requires Chatter
No

Signature
public static ConnectApi.SocialPostIntents getIntents(String socialPostId)

Parameters

socialPostId
Type: String
ID of a social post.

Return Value
Type: ConnectApi.SocialPostIntents

gManagedSocialAccount(id)
Get a managed social account that is in the org and assigned to the user.
API Version
44.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedSocialAccount getManagedSocialAccount(String id)

Parameters
id
Type: String
Description: Internal SFDC ID for this managed social account.

Return Value
Type: ConnectApi.ManagedSocialAccount

getManagedSocialAccounts()

Gets a list of managed social accounts that are in the org and assigned to the user.

API Version
44.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedSocialAccounts getManagedSocialAccounts()

Return Value
Type: ConnectApi.ManagedSocialAccounts

getManagedSocialAccounts(socialNetwork)

Get a list of managed social accounts that are in the org and assigned to the user.

API Version
44.0
Requires Chatter
No

Signature

```java
public static ConnectApi.ManagedSocialAccounts
getManagedSocialAccounts(ConnectApi.SocialNetworkProvider socialNetwork)
```

Parameters

- `socialNetwork`
  - Type: `ConnectApi.SocialNetworkProvider`
  - Description: Filters results based on the social network. Values are:
    - Facebook
    - GooglePlus
    - Instagram
    - InstagramBusiness
    - KakaoTalk
    - Kik
    - Line
    - LinkedIn
    - Messenger
    - Other
    - Pinterest
    - QQ
    - Rypple
    - SinaWeibo
    - SMS
    - Snapchat
    - Telegram
    - Twitter
    - VKontakte
    - WeChat
    - WhatsApp
    - YouTube

Return Value

- Type: `ConnectApi.ManagedSocialAccounts`

```java
getRelationship(id, socialPersonaId)
```

Get the follow relationship between a managed social account and a social persona.
API Version
46.0

Requires Chatter
No

Signature

public static ConnectApi.SocialAccountRelationship getRelationship(String id, String socialPersonaId)

Parameters

id
Type: String
ID of the managed social account.
socialPersonaId
Type: String
ID of the social persona.

Return Value
Type: ConnectApi.SocialAccountRelationship

hideSocialPost(socialPostId, socialAccountId)
Hide a social post in its social network.

API Version
46.0

Requires Chatter
No

Signature

public static ConnectApi.HideSocialPostIntent hideSocialPost(String socialPostId, String socialAccountId)

Parameters

socialPostId
Type: String
ID of the social post to hide.
socialAccountId
Type: String
ID of the social account that hides the post.

Return Value
Type: `ConnectApi.HideSocialPostIntent`

`likeSocialPost(socialPostId, socialAccountId)`
Like a social post in its social network.

API Version
46.0

Requires Chatter
No

Signature
`public static ConnectApi.LikeSocialPostIntent likeSocialPost(String socialPostId, String socialAccountId)`

Parameters
`socialPostId`
Type: `String`
ID of the social post to like.

`socialAccountId`
Type: `String`
ID of the social account that likes the post.

Return Value
Type: `ConnectApi.LikeSocialPostIntent`

`massApprove(massApproval)`
Approve or reject the publishing of a large number of social posts.

API Version
46.0

Requires Chatter
No
Signature

public static ConnectApi.SocialPostMassApprovalOutput
massApprove(ConnectApi.SocialPostMassApprovalInput massApproval)

Parameters

massApproval
  Type: ConnectApi.SocialPostMassApprovalInput
  A `ConnectApi.SocialPostMassApprovalInput` body that includes a list of social post IDs and the action to approve or reject publishing them.

Return Value

Type: ConnectApi.SocialPostMassApprovalOutput

`recallApproval(socialPostId)`
Recall an approval request to publish a social post.

API Version
46.0

Requires Chatter
No

Signature

public static Void recallApproval(String socialPostId)

Parameters

socialPostId
  Type: String
  ID of the social post.

Return Value

Type: Void

`unfollowSocialPersona(socialPersonaId, socialAccountId)`
Stop following a social persona in its social network.

API Version
45.0
Requires Chatter
No

Signature
public static Void unfollowSocialPersona(String socialPersonaId, String socialAccountId)

Parameters
socialPersonaId
Type: String
ID of the social persona to stop following.

socialAccountId
Type: String
ID of the social account that stops following the social persona.

Return Value
Type: Void

unfollowSocialPostPersona(socialPostId, socialAccountId)
Stop following a social persona of a social post in its social network.

API Version
45.0

Requires Chatter
No

Signature
public static Void unfollowSocialPostPersona(String socialPostId, String socialAccountId)

Parameters
socialPostId
Type: String
ID of the social post authored by the social persona to stop following.

socialAccountId
Type: String
ID of the social account that stops following the social persona.

Return Value
Type: Void
unhideSocialPost(socialpostId, socialAccountId)

Unhide a social post in its social network.

API Version
46.0

Requires Chatter
No

Signature
public static Void unhideSocialPost(String socialpostId, String socialAccountId)

Parameters
socialpostId
  Type: String
  ID of the social post to unhide.

socialAccountId
  Type: String
  ID of the social account that unhides the post.

Return Value
Type: Void

unlikeSocialPost(socialpostId, socialAccountId)

Unlike a social post in its social network.

API Version
46.0

Requires Chatter
No

Signature
public static Void unlikeSocialPost(String socialpostId, String socialAccountId)

Parameters
socialpostId
  Type: String
  ID of the social post to unlike.
socialAccountId
Type: String
ID of the social account that unlikes the post.

Return Value
Type: Void

Topics Class
Access information about topics, such as their descriptions, the number of people talking about them, related topics, and information about groups contributing to the topic. Update a topic's name or description, merge topics, and add and remove topics from records and feed items.

Namespace
ConnectApi

Topics Methods
The following are methods for Topics. All methods are static.

IN THIS SECTION:
assignTopic(communityId, recordId, topicId)
Assign a topic to a record or feed item.
assignTopicByName(communityId, recordId, topicName)
Assign a topic to a record or feed item.
createTopic(communityId, name, description)
Create a topic.
createTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory, topicNames)
Create topic and article assignment rules by data category.
deleteTopic(communityId, topicId)
Delete a topic.
getGroupsRecentlyTalkingAboutTopic(communityId, topicId)
Get information about the five groups that most recently contributed to a topic.
getRecentlyTalkingAboutTopicsForGroup(communityId, groupId)
Get up to five topics most recently used in a group.
getRecentlyTalkingAboutTopicsForUser(communityId, userId)
Get up to five topics most recently used by a user.
getRelatedTopics(communityId, topicId)
Get up to five topics most closely related to a topic.
getTopic(communityId, topicId)
Get a topic.
getTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory)
Get topic and article assignment rules by data category.

getTopics(communityId, recordId)
Get the first page of topics assigned to a record or feed item.

getTopics(communityId)
Get the first page of topics for the org or community.

getTopics(communityId, sortParam)
Get the first page of sorted topics for the org or community.

getTopics(communityId, pageParam, pageSize)
Get a page of topics.

getTopics(communityId, pageParam, pageSize, sortParam)
Get a page of sorted topics.

getTopics(communityId, q, sortParam)
Get the sorted topics that match the search criteria.

getTopics(communityId, q, pageParam, pageSize)
Get a page of topics that match the search criteria.

getTopics(communityId, q, pageParam, pageSize, sortParam)
Get a page of sorted topics that match the search criteria.

getTopics(communityId, q, exactMatch)
Get the topic that matches the exact, case-insensitive name.

getTopicsOrFallBackToRenamedTopics(communityId, q, exactMatch, fallBackToRenamedTopics)
Get the most recent renamed topic match, if there isn’t an exact match.

getTopicSuggestions(communityId, recordId, maxResults)
Get up to a specified number of suggested topics for a record or feed item.

getTopicSuggestions(communityId, recordId)
Get suggested topics for a record or feed item.

getTopicSuggestionsForText(communityId, text, maxResults)
Get up to a specified number of suggested topics for a string of text.

getTopicSuggestionsForText(communityId, text)
Get suggested topics for a string of text.

getTrendingTopics(communityId)
Get trending topics for the org or community.

getTrendingTopics(communityId, maxResults)
Get up to a specified number of trending topics for the org or community.

mergeTopics(communityId, topicId, idsToMerge)
Merge up to five secondary topics with a primary topic.

reassignTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory, topicNames)
Reassign topic and article assignment rules by data category by deleting the existing rules and creating new rules.

reassignTopicsByName(communityId, recordId, topicNames)
Reassign all the topics on a record or feed item, that is, remove all the assigned topics on a record or feed item and add topics. Optionally, provide a list of suggested topics to assign to a record or feed item to improve future topic suggestions.
unassignTopic(communityId, recordId, topicId)
Remove a topic from a record or feed item.

updateTopic(communityId, topicId, topic)
Update the description or name of a topic or merge up to five secondary topics with a primary topic.

updateTopicsForArticlesInDataCategory(communityId, dataCategoryGroup, dataCategory, articleTopicAssignmentJob)
Assign topics to articles and unassign topics from articles in a data category.

assignTopic(communityId, recordId, topicId)
Assign a topic to a record or feed item.

API Version
29.0

Requires Chatter
No

Signature
public static ConnectApi.Topic assignTopic(String communityId, String recordId, String topicId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

recordId
Type: String
The ID for a record or feed item.

topicId
Type: String
The ID for a topic.

Return Value
Type: ConnectApi.Topic

Usage
Only users with the Assign Topics permission can add existing topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

assignTopicByName(communityId, recordId, topicName)
Assign a topic to a record or feed item.
API Version
29.0

Requires Chatter
No

Signature
public static ConnectApi.Topic assignTopicByName(String communityId, String recordId, String topicName)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

recordId
Type: String
The ID of the record or feed item to which to assign the topic.

topicName
Type: String
The name of a new or existing topic.

Return Value
Type: ConnectApi.Topic

Usage
Only users with the Assign Topics permission can add existing topics to records or feed items. Only users with the Create Topics permission can add new topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

createTopic(communityId, name, description)
Create a topic.

API Version
36.0

Requires Chatter
No
Signature

```java
public static ConnectApi.Topic createTopic(String communityId, String name, String description)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `name`
  - Type: `String`
  - The name of the topic.

- `description`
  - Type: `String`
  - The description of the topic.

Return Value

Type: `ConnectApi.Topic`

Usage

Only users with the Create Topics permission can create a topic.

```java
createTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory, topicNames)
```

Create topic and article assignment rules by data category.

API Version

40.0

Requires Chatter

No

Signature

```java
public static ConnectApi.TopicPage createTopicDataCategoryRules(String communityId, String dataCategoryGroup, String dataCategory, ConnectApi.TopicNamesInput topicNames)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`. 
dataCategoryGroup
  Type: String
  The data category group used by articles.

dataCategory
  Type: String
  The data category used by articles.

topicNames
  Type: ConnectApi.TopicNamesInput
  A ConnectApi.TopicNamesInput object with the names of topics to assign to articles in a data category.

Return Value
Type: ConnectApi.TopicPage

**deleteTopic(communityId, topicId)**
Delete a topic.

API Version
29.0

Requires Chatter
No

Signature
public static Void deleteTopic(String communityId, String topicId)

Parameters

**communityId**
  Type: String,
  Use either the ID for a community, internal, or null.

**topicId**
  Type: String
  The ID for a topic.

Return Value
Type: Void

Usage
Only users with the Delete Topics or Modify All Data permission can delete topics.
Topic deletion is asynchronous. If a topic is requested before the deletion completes, the response is successful and the `isBeingDeleted` property of `ConnectApi.Topic` is `true` in version 33.0 and later. If a topic is requested after the deletion completes, the response is `ConnectApiNotFoundException`.

**getGroupsRecentlyTalkingAboutTopic(communityId, topicId)**
Get information about the five groups that most recently contributed to a topic.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterGroupSummaryPage getGroupsRecentlyTalkingAboutTopic(String communityId, String topicId)
```

Parameters

- `communityId`
  Type: String
  Use either the ID for a community, `internal`, or `null`.

- `topicId`
  Type: String
  The ID for a topic.

Return Value
Type: `ConnectApi.ChatterGroupSummaryPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetGroupsRecentlyTalkingAboutTopic(communityId, topicId, result)`
- Testing ConnectApi Code
getRecentlyTalkingAboutTopicsForGroup(communityId, groupId)
Get up to five topics most recently used in a group.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.TopicPage getRecentlyTalkingAboutTopicsForGroup(String communityId, String groupId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

Return Value
Type: ConnectApi.TopicPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRecentlyTalkingAboutTopicsForGroup(communityId, groupId, result)
Testing ConnectApi Code

getRecentlyTalkingAboutTopicsForUser(communityId, userId)
Get up to five topics most recently used by a user.
API Version
29.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.TopicPage getRecentlyTalkingAboutTopicsForUser(String communityId, String userId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for a user.

Return Value
Type: ConnectApi.TopicPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRecentlyTalkingAboutTopicsForUser(communityId, userId, result)
Testing ConnectApi Code

getRelatedTopics(communityId, topicId)
Get up to five topics most closely related to a topic.
Two topics that are assigned to the same feed item at least three times are related.

API Version
29.0
Available to Guest Users
32.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage getRelatedTopics(String communityId, String topicId)

Parameters

 communityId
Type: String
Use either the ID for a community, internal, or null.

topicId
Type: String
The ID for a topic.

Return Value
Type: ConnectApi.TopicPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRelatedTopics(communityId, topicId, result)

Testing ConnectApi Code

gGetTopic(communityId, topicId)
Get a topic.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No
Signature

```
public static ConnectApi.Topic getTopic(String communityId, String topicId)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`topicId`
Type: `String`
The ID for a topic.

Return Value

Type: `ConnectApi.Topic`

---

**getTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory)**

Get topic and article assignment rules by data category.

API Version

40.0

Requires Chatter

No

Signature

```
public static ConnectApi.TopicPage getTopicDataCategoryRules(String communityId, String dataCategoryGroup, String dataCategory)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`dataCategoryGroup`
Type: `String`
The data category group used by articles.

`dataCategory`
Type: `String`
The data category used by articles.
Return Value
Type: `ConnectApi.TopicPage`

```java
getTopics(communityId, recordId)
```
Get the first page of topics assigned to a record or feed item.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
```java
public static ConnectApi.TopicPage getTopics(String communityId, String recordId)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, internal, or `null`.
- `recordId`
  Type: `String`
  The ID for a record or feed item.

Return Value
Type: `ConnectApi.TopicPage`

Usage
Administrators must enable topics for objects before users can add topics to records of that object type.

```java
getTopics(communityId)
```
Get the first page of topics for the org or community.

API Version
29.0
Available to Guest Users
32.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage getTopics(String communityId)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

Return Value
Type: ConnectApi.TopicPage

getTopics(communityId, sortParam)
Get the first page of sorted topics for the org or community.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage getTopics(String communityId, ConnectApi.TopicSort sortParam)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

sortParam
  Type: ConnectApi.TopicSort
Values are:
- **popularDesc**—Sorts topics by popularity with the most popular first. This value is the default.
- **alphaAsc**—Sorts topics alphabetically.

Return Value
Type: `ConnectApi.TopicPage`

```java
public static ConnectApi.TopicPage getTopics(String communityId, Integer pageParam, Integer pageSize)
```

Get a page of topics.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No

Signature

```java
public static ConnectApi.TopicPage getTopics(String communityId, Integer pageParam, Integer pageSize)
```

Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, internal, or `null`.

- **pageParam**
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.TopicPage`

```java
public static ConnectApi.TopicPage getTopics(String communityId, Integer pageParam, Integer pageSize, Integer sortParam)
```

Get a page of sorted topics.
API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage getTopics(String communityId, Integer pageParam, Integer pageSize, ConnectApi.TopicSort sortParam)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.TopicSort
Values are:
• popularDesc—Sorts topics by popularity with the most popular first. This value is the default.
• alphaAsc—Sorts topics alphabetically.

Return Value
Type: ConnectApi.TopicPage

getTopics(communityId, q, sortParam)
Get the sorted topics that match the search criteria.
Available to Guest Users
32.0

Requires Chatter
No

Signature

public static ConnectApi.TopicPage getTopics(String communityId, String q, ConnectApi.TopicSort sortParam)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Specifies the string to search. The string must contain at least two characters, not including wildcards.

sortParam
Type: ConnectApi.TopicSort
Values are:
- popularDesc—Sorts topics by popularity with the most popular first. This value is the default.
- alphaAsc—Sorts topics alphabetically.

Return Value

Type: ConnectApi.TopicPage

getTopics(communityId, q, pageParam, pageSize)
Get a page of topics that match the search criteria.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No
Signature

```java
public static ConnectApi.TopicPage getTopics(String communityId, String q, Integer pageParam, Integer pageSize)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, internal, or `null`.

- `q`
  Type: `String`
  Specifies the string to search. The string must contain at least two characters, not including wildcards.

- `pageParam`
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: `ConnectApi.TopicPage`

```java
getTopics(communityId, q, pageParam, pageSize, sortParam)
```

Get a page of sorted topics that match the search criteria.

API Version

29.0

Available to Guest Users

32.0

Requires Chatter

No

Signature

```java
public static ConnectApi.TopicPage getTopics(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.TopicSort sortParam)
```

Parameters

- `communityId`
  Type: `String`
Use either the ID for a community, `internal`, or `null`.

q
  Type: String
  Specifies the string to search. The string must contain at least two characters, not including wildcards.

`pageParam`
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
  Type: `ConnectApi.TopicSort`
  Values are:
  - `popularDesc`—Sorts topics by popularity with the most popular first. This value is the default.
  - `alphaAsc`—Sorts topics alphabetically.

Return Value
  Type: `ConnectApi.TopicPage`

`getTopics(communityId, q, exactMatch)`
Get the topic that matches the exact, case-insensitive name.

API Version
  33.0

Available to Guest Users
  33.0

Requires Chatter
  No

Signature
  `public static ConnectApi.TopicPage getTopics(String communityId, String q, Boolean exactMatch)`

Parameters
`communityId`
  Type: String
  Use either the ID for a community, `internal`, or `null`.
q
  Type: String
  Specifies the string to search. The string must contain at least two characters, not including wildcards.

exactMatch
  Type: Boolean
  Specify true to find a topic by its exact, case-insensitive name.

Return Value
Type: ConnectApi.TopicPage

getTopicsOrFallBackToRenamedTopics(communityId, q, exactMatch, fallBackToRenamedTopics)
Get the most recent renamed topic match, if there isn’t an exact match.

API Version
35.0

Available to Guest Users
35.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage getTopicsOrFallBackToRenamedTopics(String communityId, String q, Boolean exactMatch, Boolean fallBackToRenamedTopics)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

q
  Type: String
  Specifies the string to search. The string must contain at least two characters, not including wildcards.

exactMatch
  Type: Boolean
  Specify true to find a topic by its exact, case-insensitive name or to find the most recent renamed topic match if there isn’t an exact match.

fallBackToRenamedTopics
  Type: Boolean
Specify `true` and if there isn’t an exact match, the most recent renamed topic match is returned. If there are multiple renamed topic matches, only the most recent is returned. If there are no renamed topic matches, an empty collection is returned.

Return Value
Type: `ConnectApi.TopicPage`

getTopicSuggestions(communityId, recordId, maxResults)
Get up to a specified number of suggested topics for a record or feed item.

API Version
29.0

Requires Chatter
No

Signature
public static ConnectApi.TopicSuggestionPage getTopicSuggestions(String communityId, String recordId, Integer maxResults)

Parameters
communityId
Type: `String`
Use either the ID for a community, `internal`, or `null`.

recordId
Type: `String`
The ID for a record or feed item.

maxResults
Type: `Integer`
Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

Return Value
Type: `ConnectApi.TopicSuggestionPage`

Usage
Administrators must enable topics for objects before users can see suggested topics for records of that object type.
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetTopicSuggestions(communityId, recordId, maxResults, result)`
- Testing ConnectApi Code

**getTopicSuggestions(communityId, recordId)**

Get suggested topics for a record or feed item.

**API Version**

29.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.TopicSuggestionPage getTopicSuggestions(String communityId, String recordId)
```

**Parameters**

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `recordId`
  - Type: `String`
  - The ID for a record or feed item.

**Return Value**

Type: `ConnectApi.TopicSuggestionPage`

**Usage**

Administrators must enable topics for objects before users can see suggested topics for records of that object type.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetTopicSuggestions(communityId, recordId, result)`
- Testing ConnectApi Code
**getTopicSuggestionsForText(communityId, text, maxResults)**

Get up to a specified number of suggested topics for a string of text.

API Version
29.0

Requires Chatter
No

Signature
```
public static ConnectApi.TopicSuggestionPage getTopicSuggestionsForText(String communityId, String text, Integer maxResults)
```

Parameters
- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.
- **text**
  Type: String
  String of text.
- **maxResults**
  Type: Integer
  Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

Return Value
Type: `ConnectApi.TopicSuggestionPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetTopicSuggestionsForText(communityId, text, maxResults, result)`
- Testing ConnectApi Code

**getTopicSuggestionsForText(communityId, text)**

Get suggested topics for a string of text.
API Version
29.0

Requires Chatter
No

Signature
public static ConnectApi.TopicSuggestionPage getTopicSuggestionsForText(String communityId, String text)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

text
Type: String
String of text.

Return Value
Type: ConnectApi.TopicSuggestionPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetTopicSuggestionsForText(communityId, text, result)
Testing ConnectApi Code

getTrendingTopics(communityId)
Get trending topics for the org or community.

API Version
29.0

Available to Guest Users
32.0
Requires Chatter
No

Signature
public static ConnectApi.TopicPage getTrendingTopics(String communityId)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

Return Value
Type: ConnectApi.TopicPage

Usage
The more frequently people add a specific topic to their posts and comments and comment on or like posts with the same topic over a short period, the more likely it is to become a trending topic. For example, if your coworkers are attending the upcoming Dreamforce conference and have started discussing it in Chatter, you might see a trending topic for Dreamforce. A trending topic is not solely based on popularity and usually relates to a one-time or infrequent event that has a spike in activity, such as a conference or a project deadline.

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestGetTrendingTopics(communityId, result)
  Testing ConnectApi Code

getTrendingTopics(communityId, maxResults)
Get up to a specified number of trending topics for the org or community.
Signature

```java
public static ConnectApi.TopicPage getTrendingTopics(String communityId, Integer maxResults)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **maxResults**
  - Type: Integer
  - Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

Return Value

- Type: `ConnectApi.TopicPage`

Usage

The more frequently people add a specific topic to their posts and comments and comment on or like posts with the same topic over a short period, the more likely it is to become a trending topic. For example, if your coworkers are attending the upcoming Dreamforce conference and have started discussing it in Chatter, you might see a trending topic for Dreamforce. A trending topic is not solely based on popularity and usually relates to a one-time or infrequent event that has a spike in activity, such as a conference or a project deadline.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetTrendingTopics(communityId, maxResults, result)`
- Testing ConnectApi Code

```java
mergeTopics(String communityId, String topicId, List<String> idsToMerge)
```

Merge up to five secondary topics with a primary topic.

API Version

33.0

Requires Chatter

No

Signature

```java
public static ConnectApi.Topic mergeTopics(String communityId, String topicId,
List<String> idsToMerge)
```
Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`topicId`
Type: `String`
The ID for the primary topic for the merge. If this topic is a managed topic, it retains its topic type, topic images, and children topics.

`idsToMerge`
Type: `List<String>`
A list of up to five comma-separated secondary topic IDs to merge with the primary topic. If any of these secondary topics are managed topics, they lose their topic type, topic images, and children topics. Their feed items are reassigned to the primary topic.

Return Value
Type: `ConnectApi.Topic`

Usage
Only users with the Delete Topics or Modify All Data permission can merge topics.

```
reassignTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory, topicNames)
```
Reassign topic and article assignment rules by data category by deleting the existing rules and creating new rules.

API Version
40.0

Requires Chatter
No

Signature
```
public static ConnectApi.TopicPage reassignTopicDataCategoryRules(String communityId, String dataCategoryGroup, String dataCategory, ConnectApi.TopicNamesInput topicNames)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`dataCategoryGroup`
Type: `String`
The data category group used by articles.
dataCategory
   Type: String
   The data category used by articles.

topicNames
   Type: ConnectApi.TopicNamesInput
   A ConnectApi.TopicNamesInput object with the names of topics to reassign to articles in a data category.

Return Value
   Type: ConnectApi.TopicPage

reassignTopicsByName(communityId, recordId, topicNames)
Reassign all the topics on a record or feed item, that is, remove all the assigned topics on a record or feed item and add topics. Optionally, provide a list of suggested topics to assign to a record or feed item to improve future topic suggestions.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage reassignTopicsByName(String communityId, String recordId, ConnectApi.TopicNamesInput topicNames)

Parameters

communityId
   Type: String
   Use either the ID for a community, internal, or null.

recordId
   Type: String
   The ID of the record or feed item to which to assign the topic.

topicNames
   Type: ConnectApi.TopicNamesInput
   A list of topics to replace the currently assigned topics. Optionally, a list of suggested topics to assign to improve future topic suggestions.

Return Value
   Type: ConnectApi.TopicPage
Usage

Only users with the Assign Topics permission can remove topics from records or feed items and add existing topics to records or feed items. Only users with the Create Topics permission can add new topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

unassignTopic(communityId, recordId, topicId)

Remove a topic from a record or feed item.

API Version

29.0

Requires Chatter

No

Signature

public static Void unassignTopic(String communityId, String recordId, String topicId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

recordId
Type: String
The ID for a record or feed item.

topicId
Type: String
The ID for a topic.

Return Value

Type: Void

Usage

Only users with the Assign Topics permission can remove topics from feed items or records. Administrators must enable topics for objects before users can add topics to records of that object type.

updateTopic(communityId, topicId, topic)

Update the description or name of a topic or merge up to five secondary topics with a primary topic.

API Version

29.0
Requires Chatter
No

Signature
public static ConnectApi.Topic updateTopic(String communityId, String topicId, ConnectApi.TopicInput topic)

Parameters
communityId
    Type: String
    Use either the ID for a community, internal, or null.

topicId
    Type: String
    The ID for a topic.

topic
    Type: ConnectApi.TopicInput
    A ConnectApi.TopicInput object containing the name and description of the topic or up to five comma-separated secondary topic IDs to merge with the primary topic.

Return Value
Type: ConnectApi.Topic

Usage
Only users with the Edit Topics or Modify All Data permission can update topic names and descriptions. Only users with the Delete Topics or Modify All Data permission can merge topics.

updateTopicsForArticlesInDataCategory(communityId, dataCategoryGroup, dataCategory, articleTopicAssignmentJob)

Assign topics to articles and unassign topics from articles in a data category.

API Version
40.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage updateTopicsForArticlesInDataCategory(String communityId, String dataCategoryGroup, String dataCategory, ConnectApi.ArticleTopicAssignmentJobInput articleTopicAssignmentJob)
Parameters

**communityId**
- Type: **String**
- Use either the ID for a community, **internal**, or **null**.

**dataCategoryGroup**
- Type: **String**
- The data category group used by articles.

**dataCategory**
- Type: **String**
- The data category used by articles.

**articleTopicAssignmentJob**
- Type: `ConnectApi.ArticleTopicAssignmentJobInput`
- A `ConnectApi.ArticleTopicAssignmentJobInput` object that indicates the operation to take on which topics.

Return Value
- Type: `ConnectApi.TopicPage`

**Topics Test Methods**
The following are the test methods for `Topics`. All methods are static.
For information about using these methods to test your `ConnectApi` code, see Testing `ConnectApi` Code.

**setTestGetGroupsRecentlyTalkingAboutTopic** *(communityId, topicId, result)*
Register a `ConnectApi.ChatterGroupSummaryPage` object to be returned when the matching `ConnectApi.getGroupsRecentlyTalkingAboutTopic` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
- **29.0**

Signature
- **public static Void setTestGetGroupsRecentlyTalkingAboutTopic(String communityId, String topicId, ConnectApi.ChatterGroupSummaryPage result)**

Parameters
- **communityId**
  - Type: **String**
  - Use either the ID for a community, **internal**, or **null**.

- **topicId**
  - Type: **String**
  - The ID for a topic.
result
Type: ConnectApi.ChatterGroupSummaryPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getGroupsRecentlyTalkingAboutTopic(communityId, topicId)
Testing ConnectApi Code

setTestGetRecentlyTalkingAboutTopicsForGroup(communityId, groupId, result)
Register a ConnectApi.TopicPage object to be returned when the matching
ConnectApi.getRecentlyTalkingAboutTopicsForGroup method is called in a test context. Use the method with
the same parameters or you receive an exception.

API Version
29.0

Signature
public static Void setTestGetRecentlyTalkingAboutTopicsForGroup(String communityId, String groupId, ConnectApi.TopicPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

result
Type: ConnectApi.TopicPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRecentlyTalkingAboutTopicsForGroup(communityId, groupId)
Testing ConnectApi Code
**setTestGetRecentlyTalkingAboutTopicsForUser(communityId, userId, result)**

Register a `ConnectApi.TopicPage` object to be returned when the matching `ConnectApi.getRecentlyTalkingAboutTopicsForUser` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

29.0

**Signature**

```java
public static Void setTestGetRecentlyTalkingAboutTopicsForUser(String communityId, String userId, ConnectApi.TopicPage result)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **userId**
  - Type: `String`
  - The ID for a user.

- **result**
  - Type: `ConnectApi.TopicPage`
  - Specify the test topics page.

**Return Value**

Type: `Void`

**SEE ALSO:**

- `getRecentlyTalkingAboutTopicsForUser(communityId, userId)`
- Testing `ConnectApi Code`

**setTestGetRelatedTopics(communityId, topicId, result)**

Register a `ConnectApi.TopicPage` object to be returned when the matching `ConnectApi.getRelatedTopics` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

29.0

**Signature**

```java
public static Void setTestGetRelatedTopics(String communityId, String topicId, ConnectApi.TopicPage result)
```
Parameters

`communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

`topicId`
  Type: `String`
  The ID for a topic.

`result`
  Type: `ConnectApi.TopicPage`
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getRelatedTopics(communityId, topicId)`
- Testing ConnectApi Code

`setTestGetTopicSuggestions(communityId, recordId, maxResults, result)`

Register a `ConnectApi.TopicSuggestionPage` object to be returned when the matching `ConnectApi.getTopicSuggestions` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature

```java
public static Void setTestGetTopicSuggestions(String communityId, String recordId, Integer maxResults, ConnectApi.TopicSuggestionPage result)
```

Parameters

`communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

`recordId`
  Type: `String`
  The ID for a record or feed item.

`maxResults`
  Type: `Integer`
Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

**result**
Type: ConnectApi.TopicSuggestionPage
Specify the test topic suggestions page.

Return Value
Type: Void

SEE ALSO:
- getTopicSuggestions(communityId, recordId, maxResults)
- Testing ConnectApi Code

**setTestGetTopicSuggestions(communityId, recordId, result)**

Register a ConnectApi.TopicSuggestionPage object to be returned when the matching ConnectApi.getTopicSuggestions method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature

```java
public static Void setTestGetTopicSuggestions(String communityId, String recordId, ConnectApi.TopicSuggestionPage result)
```

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**recordId**
Type: String
The ID for a record or feed item.

**result**
Type: ConnectApi.TopicSuggestionPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
- getTopicSuggestions(communityId, recordId)
- Testing ConnectApi Code

**setTestGetTopicSuggestionsForText(communityId, text, maxResults, result)**

Register a ConnectApi.TopicSuggestionPage object to be returned when the matching ConnectApi.getTopicSuggestionsForText method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature
```java
public static Void setTestGetTopicSuggestionsForText(String communityId, String text, Integer maxResults, ConnectApi.TopicSuggestionPage result)
```

Parameters
- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.
- **text**
  Type: String
  String of text.
- **maxResults**
  Type: Integer
  Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.
- **result**
  Type: ConnectApi.TopicSuggestionPage
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
- getTopicSuggestionsForText(communityId, text, maxResults)
- Testing ConnectApi Code
setTestGetTopicSuggestionsForText(communityId, text, result)

Register a ConnectApi.TopicSuggestionPage object to be returned when the matching ConnectApi.getTopicSuggestionsForText method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature
public static Void setTestGetTopicSuggestionsForText(String communityId, String text, ConnectApi.TopicSuggestionPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

text
Type: String
String of text.

result
Type: ConnectApi.TopicSuggestionPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

getTopicSuggestionsForText(communityId, text)
Testing ConnectApi Code

setTestGetTrendingTopics(communityId, result)

Register a ConnectApi.TopicPage object to be returned when the matching ConnectApi.getTrendingTopics method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature
public static Void setTestGetTrendingTopics(String communityId, ConnectApi.TopicPage result)
Parameters
com
Type: String
Use either the ID for a community, internal, or null.

result
Type: ConnectApi.TopicPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- getTrendingTopics(communityId)
- Testing ConnectApi Code

setTestGetTrendingTopics(communityId, maxResults, result)
Register a ConnectApi.TopicPage object to be returned when the matching ConnectApi.getTrendingTopics method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature
public static Void setTestGetTrendingTopics(String communityId, Integer maxResults, ConnectApi.TopicPage result)

Parameters
com
Type: String
Use either the ID for a community, internal, or null.

maxResults
Type: Integer
Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

result
Type: ConnectApi.TopicPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getTrendingTopics(communityId, maxResults)
Testing ConnectApi Code

UserProfiles Class
Access user profile data. The user profile data populates the profile page (also called the Chatter profile page). This data includes user information (such as address, manager, and phone number), some user capabilities (permissions), and a set of subtab apps, which are custom tabs on the profile page.

Namespace
ConnectApi

UserProfiles Methods
The following are methods for UserProfiles. All methods are static.

IN THIS SECTION:

deleteBannerPhoto(communityId, userId)
delete a user’s banner photo.
deletePhoto(communityId, userId)
delete a user’s photo.
getBannerPhoto(communityId, userId)
get a user’s banner photo.
getPhoto(communityId, userId)
get a user’s photo.
getUserProfile(communityId, userId)
get the user profile of the context user.
setBannerPhoto(communityId, userId, fileId, versionNumber)
set an uploaded file as a user’s banner photo.
setBannerPhoto(communityId, userId, fileUpload)
set a file that hasn’t been uploaded as a user’s banner photo.
setBannerPhotoWithAttributes(communityId, userId, bannerPhoto)
set and crop an uploaded file as a user’s banner photo.
setBannerPhotoWithAttributes(communityId, userId, bannerPhoto, fileUpload)
set and crop a file that hasn’t been uploaded as a user’s banner photo.
setPhoto(communityId, userId, fileId, versionNumber)
set an uploaded file as a user’s photo.
setPhoto(communityId, userId, fileUpload)
Set a file that hasn’t been uploaded as a user’s photo.

setPhotoWithAttributes(communityId, userId, photo)
Set and crop an uploaded file as a user’s photo.

setPhotoWithAttributes(communityId, userId, photo, fileUpload)
Set and crop a file that hasn’t been uploaded as a user’s photo.

deleteBannerPhoto(communityId, userId)
Delete a user’s banner photo.

API Version
36.0

Requires Chatter
No

Signature
public static Void deleteBannerPhoto(String communityId, String userId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
ID of the user.

Return Value
Type: Void

deletePhoto(communityId, userId)
Delete a user’s photo.

API Version
35.0

Requires Chatter
No
Signature

```java
public static Void deletePhoto(String communityId, String userId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `userId`
  - Type: `String`
  - The ID for the context user or the keyword `me`.

Return Value

Type: Void

`getBannerPhoto(communityId, userId)`

Get a user's banner photo.

API Version

36.0

Requires Chatter

No

Signature

```java
public static ConnectApi.BannerPhoto getBannerPhoto(String communityId, String userId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `userId`
  - Type: `String`
  - ID of the user.

Return Value

Type: `ConnectApi.BannerPhoto`

`getPhoto(communityId, userId)`

Get a user's photo.
public static ConnectApi.Photo getPhoto(String communityId, String userId)

Parameters

- communityId
  - Type: String
  - Use either the ID for a community, internal, or null.

- userId
  - Type: String
  - The ID for a user.

Return Value

Type: ConnectApi.Photo

SEE ALSO:

Methods Available to Communities Guest Users

getUserProfile(communityId, userId)

Get the user profile of the context user.

public static ConnectApi.UserProfile getUserProfile(String communityId, String userId)
Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`userId`
Type: `String`
The ID for a user.

Return Value
Type: `ConnectApi.UserProfile`

`setBannerPhoto(communityId, userId, fileId, versionNumber)`
Set an uploaded file as a user’s banner photo.

API Version
36.0

Requires Chatter
No

Signature

```java
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String userId, String fileId, Integer versionNumber)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`userId`
Type: `String`
ID of the user.

`fileId`
Type: `String`
ID of the uploaded file to use as the user banner. The key prefix must be 069, and the image must be smaller than 8 MB.

`versionNumber`
Type: `Integer`
Version number of the file. Specify an existing version number or, to get the latest version, specify `null`. 
Return Value
Type: `ConnectApi.BannerPhoto`

Usage
Photos are processed asynchronously and may not be visible right away.

```java
setBannerPhoto(communityId, userId, fileUpload)
```
Set a file that hasn’t been uploaded as a user’s banner photo.

API Version
36.0

Requires Chatter
No

Signature
```java
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String userId,
ConnectApi.BinaryInput fileUpload)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `userId`
  Type: `String`
  ID of the user.
- `fileUpload`
  Type: `ConnectApi.BinaryInput`
  A file to use as the photo. The content type must be usable as an image.

Return Value
Type: `ConnectApi.BannerPhoto`

Usage
Photos are processed asynchronously and may not be visible right away.

```java
setBannerPhotoWithAttributes(communityId, userId, bannerPhoto)
```
Set and crop an uploaded file as a user’s banner photo.
API Version
36.0

Requires Chatter
No

Signature
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId,
String userId, ConnectApi.BannerPhotoInput bannerPhoto)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
ID of the user.

bannerPhoto
Type: ConnectApi.BannerPhotoInput
A ConnectApi.BannerPhotoInput object that specifies the ID and version of the file, and how to crop the file.

Return Value
Type: ConnectApi.BannerPhoto

Usage
Photos are processed asynchronously and may not be visible right away.

setBannerPhotoWithAttributes(communityId, userId, bannerPhoto, fileUpload)
Set and crop a file that hasn't been uploaded as a user's banner photo.

API Version
36.0

Requires Chatter
No

Signature
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId,
String userId, ConnectApi.BannerPhotoInput bannerPhoto, ConnectApi.BinaryInput fileUpload)
Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or null.

`userId`
Type: String
ID of the user.

`bannerPhoto`
Type: ConnectApi.BannerPhotoInput
A ConnectApi.BannerPhotoInput object specifying the cropping parameters.

`fileUpload`
Type: ConnectApi.BinaryInput
A file to use as the photo. The content type must be usable as an image.

Return Value
Type: ConnectApi.BannerPhoto

Usage
Photos are processed asynchronously and may not be visible right away.

```
setPhoto(communityId, userId, fileId, versionNumber)
```
Set an uploaded file as a user’s photo.

API Version
35.0

Requires Chatter
No

Signature
```
public static ConnectApi.Photo setPhoto(String communityId, String userId, String fileId, Integer versionNumber)
```
The ID for the context user or the keyword `me`.

**fileId**
Type: `String`
ID of an uploaded file. The file must be an image, and be smaller than 2 GB.

**versionNumber**
Type: `Integer`
Version number of the existing file. Specify either an existing version number, or `null` to get the latest version.

Return Value
Type: `ConnectApi.Photo`

Usage
Photos are processed asynchronously and may not be visible right away.

**setPhoto(communityId, userId, fileUpload)**
Set a file that hasn’t been uploaded as a user’s photo.

API Version
35.0

Requires Chatter
No

Signature
`public static ConnectApi.Photo setPhoto(String communityId, String userId, ConnectApi.BinaryInput fileUpload)`

Parameters

**communityId**
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**userId**
Type: `String`
The ID for the context user or the keyword `me`.

**fileUpload**
Type: `ConnectApi.BinaryInput`
A file to use as the photo. The content type must be usable as an image.
Return Value
Type: ConnectApi.Photo

Usage
Photos are processed asynchronously and may not be visible right away.

**setPhotoWithAttributes(communityId, userId, photo)**
Set and crop an uploaded file as a user’s photo.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.Photo setPhotoWithAttributes(String communityId, String userId, ConnectApi.PhotoInput photo)

Parameters

* **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

* **userId**
  Type: String
  The ID for the context user or the keyword me.

* **photo**
  Type: ConnectApi.PhotoInput
  A ConnectApi.PhotoInput object specifying the file ID, version number, and cropping parameters.

Return Value
Type: ConnectApi.Photo

Usage
Photos are processed asynchronously and may not be visible right away.

**setPhotoWithAttributes(communityId, userId, photo, fileUpload)**
Set and crop a file that hasn’t been uploaded as a user’s photo.
API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.PhotosetPhotoWithAttributes(String communityId, String userId, ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

photo
Type: ConnectApi.PhotoInput
A ConnectApi.PhotoInput object specifying the cropping parameters.

fileUpload
Type: ConnectApi.BinaryInput
A file to use as the photo. The content type must be usable as an image.

Return Value
Type: ConnectApi.Photo

Usage
Photos are processed asynchronously and may not be visible right away.

Zones Class
Access information about Chatter Answers zones in your organization. Zones organize questions into logical groups, with each zone having its own focus and unique questions.

⚠️ Note: With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18.

Namespace
ConnectApi
Zones Methods
The following are methods for Zones. All methods are static.

IN THIS SECTION:
- `getZone(communityId, zoneId)`
  Get a zone.
- `getZones(communityId)`
  Get a list of zones.
- `getZones(communityId, pageParam, pageSize)`
  Get a page of zones.
- `searchInZone(communityId, zoneId, q, filter)`
  Search articles or questions in a zone.
- `searchInZone(communityId, zoneId, q, filter, pageParam, pageSize)`
  Search a page of articles or questions in a zone.
- `searchInZone(communityId, zoneId, q, filter, language)`
  Search articles or questions in a zone, and specify the language of the results.

**getZone(communityId, zoneId)**
Get a zone.

**Note:** With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18.

API Version
29.0

Requires Chatter
No

Signature
```
public static ConnectApi.Zone getZone(String communityId, String zoneId)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `zoneId`
  Type: `String`
  The ID of a zone.
Return Value
Type: `ConnectApi.Zone`

```java
getZones(communityId)
```

Get a list of zones.

Note: With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring '18.

API Version
29.0

Requires Chatter
No

Signature
```java
public static ConnectApi.ZonePage getZones(String communityId)
```

Parameters

```java
communityId
Type: String
```

Use either the ID for a community, `internal`, or `null`.

Return Value
Type: `ConnectApi.ZonePage`

```java
getZones(communityId, pageParam, pageSize)
```

Get a page of zones.

Note: With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring '18.

API Version
29.0

Requires Chatter
No
Signature

public static ConnectApi.Zone getZones(String communityId, Integer pageParam, Integer pageSize)

Parameters

communityId
    Type: String
    Use either the ID for a community, internal, or null.

pageParam
    Type: Integer
    Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
    Type: Integer
    Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value

Type: ConnectApi.ZonePage

searchInZone(communityId, zoneId, q, filter)

Search articles or questions in a zone.

**Note:** With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18.

37.0

Requires Chatter

No

Signature

public static ConnectApi.ZoneSearchPage searchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter)

Parameters

communityId
    Type: String
Use either the ID for a community, internal, or null.

**zoneId**
Type: String
The ID of a zone.

**q**
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**filter**
Type: ConnectApi.ZoneSearchResultType
A ZoneSearchResultType enum value. One of the following:
- Article—Search results contain only articles.
- Question—Search results contain only questions.

**Return Value**
Type: ConnectApi.ZoneSearchPage

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
setTestSearchInZone(communityId, zoneId, q, filter, result)
Testing ConnectApi Code

**searchInZone(communityId, zoneId, q, filter, pageParam, pageSize)**
Search a page of articles or questions in a zone.

**Note:** With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. No
public static ConnectApi.ZoneSearchPage searchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, String pageParam, Integer pageSize)

Parameters

communityId
   Type: String
   Use either the ID for a community, internal, or null.

zoneId
   Type: String
   The ID of a zone.

q
   Type: String
   Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

filter
   Type: ConnectApi.ZoneSearchResultType
   A ZoneSearchResultType enum value. One of the following:
   • Article—Search results contain only articles.
   • Question—Search results contain only questions.

pageParam
   Type: String
   Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
   Type: Integer
   Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value

Type: ConnectApi.ZoneSearchPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
   setTestSearchInZone(communityId, zoneId, q, filter, pageParam, pageSize, result)
   Testing ConnectApi Code

searchInZone(communityId, zoneId, q, filter, language)

Search articles or questions in a zone, and specify the language of the results.
Note: With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. Available to Guest Users
37.0

Requires Chatter
No

Signature
public static ConnectApi.ZoneSearchPage searchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, String language)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

zoneId
  Type: String
  The ID of a zone.

q
  Type: String
  Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

filter
  Type: ConnectApi.ZoneSearchResultType
  • Article—Search results contain only articles.
  • Question—Search results contain only questions.

language
  Type: String
  The language of the articles or questions. The value must be a Salesforce supported locale code.

Return Value
Type: ConnectApi.ZoneSearchPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Zones Test Methods

The following are the test methods for `Zones`. All methods are static.

For information about using these methods to test your `ConnectApi` code, see Testing `ConnectApi` Code.

`setTestSearchInZone(communityId, zoneId, q, filter, result)`

Register a `ConnectApi.ZoneSearchPage` object to be returned when `searchInZone(communityId, zoneId, q, filter)` is called in a test context. Use the method with the same parameters or you receive an exception.

**Note:** With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18.

API Version

29.0

Signature

```java
public static Void setTestSearchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, ConnectApi.ZoneSearchPage result)
```

Parameters

`communityId`

Type: `String`

Use either the ID for a community, `internal`, or `null`.

`zoneId`

Type: `String`

The ID of a zone.

`q`

Type: `String`

Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`filter`

Type: `ConnectApi.ZoneSearchResultType`

A `ZoneSearchResultType` enum value. One of the following:

- **Article**—Search results contain only articles.
- **Question**—Search results contain only questions.
result
  Type: ConnectApi.ZoneSearchPage
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
  - searchInZone(communityId, zoneId, q, filter)
  - Testing ConnectApi Code

setTestSearchInZone(communityId, zoneId, q, filter, pageParam, pageSize, result)

Register a ConnectApi.ZoneSearchPage object to be returned when searchInZone(communityId, zoneId, q, filter, pageParam, pageSize) is called in a test context. Use the method with the same parameters or you receive an exception.

Note: With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. API Version
29.0

Signature
public static Void setTestSearchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, String pageParam, Integer pageSize, ConnectApi.ZoneSearchPage result)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

zoneId
  Type: String
  The ID of a zone.

q
  Type: String
  Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

filter
  Type: ConnectApi.ZoneSearchResultType
  A ZoneSearchResultType enum value. One of the following:
• **Article**—Search results contain only articles.
• **Question**—Search results contain only questions.

`pageParam`  
Type: **String**  
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`  
Type: **Integer**  
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`result`  
Type: `ConnectApi.ZoneSearchPage`  
The object containing test data.

Return Value  
Type: **Void**

SEE ALSO:  
- `searchInZone(communityId, zoneId, q, filter, pageParam, pageSize)`  
- **Testing ConnectApi Code**

**setTestSearchInZone(communityId, zoneId, q, filter, language, result)**  
Register a `ConnectApi.ZoneSearchPage` object to be returned when `searchInZone(communityId, zoneId, q, filter, language)` is called in a test context. Use the method with the same parameters or you receive an exception.

⚠️ **Note:** With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. **Parameters**  
- **communityId**  
  Type: **String**  
  Use either the ID for a community, `internal`, or `null`.
- **zoneId**  
  Type: **String**
The ID of a zone.

q
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

filter
Type: ConnectApi.ZoneSearchResultType
- Article—Search results contain only articles.
- Question—Search results contain only questions.

language
Type: String
The language of the articles or questions. The value must be a Salesforce supported locale code. In an <apex:page>, the default value is the language of the page. Otherwise, the default value is the user’s locale.

result
Type: ConnectApi.ZoneSearchPage
The object containing test data.

Return Value
Type: Void

ConnectApi Input Classes
Some ConnectApi methods take arguments that are instances of ConnectApi input classes.

Input classes are concrete unless marked abstract in this documentation. Concrete input classes have public constructors that have no parameters.

Some methods have parameters that are typed with an abstract class. You must pass in an instance of a concrete child class for these parameters.

Most input class properties can be set. Read-only properties are noted in this documentation.

ConnectApi.ActionLinkDefinitionInput Class
The definition of an action link. An action link is a button on a feed element. Clicking an action link can take a user to a Web page, initiate a file download, or invoke an API call to Salesforce or to an external server. An action link includes a URL and an HTTP method, and can include a request body and header information, such as an OAuth token for authentication. Use action links to integrate Salesforce and third-party services into the feed so that users can take action to drive productivity and accelerate innovation.

Usage
You can use context variables in the actionUrl, headers, and requestBody properties. Use context variables to pass information about the user who executed the action link to your server-side code. Salesforce substitutes the value when the action link is executed.
These are the available context variables:

<table>
<thead>
<tr>
<th>Context Variable</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>{!actionLinkId}</td>
<td>The ID of the action link the user executed.</td>
</tr>
<tr>
<td>{!actionLinkGroupId}</td>
<td>The ID of the action link group containing the action link the user executed.</td>
</tr>
<tr>
<td>{!communityId}</td>
<td>The ID of the community in which the user executed the action link. The value for your internal organization is the empty key &quot;000000000000000000&quot;.</td>
</tr>
<tr>
<td>{!communityUrl}</td>
<td>The URL of the community in which the user executed the action link. The value for your internal organization is empty string &quot;&quot;.</td>
</tr>
<tr>
<td>{!orgId}</td>
<td>The ID of the organization in which the user executed the action link.</td>
</tr>
<tr>
<td>{!userId}</td>
<td>The ID of the user that executed the action link.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| actionType     | ConnectApi.ActionLinkType | Defines the type of action link. Values are:  
- **Api**—The action link calls a synchronous API at the action URL. Salesforce sets the status to **SuccessfulStatus** or **FailedStatus** based on the HTTP status code returned by your server.  
- **ApiAsync**—The action link calls an asynchronous API at the action URL. The action remains in a **PendingStatus** state until a third party makes a request to `/connect/action-links/{actionLinkId}` to set the status to **SuccessfulStatus** or **FailedStatus** when the asynchronous operation is complete.  
- **Download**—The action link downloads a file from the action URL.  
- **Ui**—The action link takes the user to a web page at the action URL. Use **Ui** if you need to load a page before the user performs an action, for example, to have the user provide input or view something before the action happens. | Required            | 33.0                |

Can be defined in an action link template.
### Property Description

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionUrl</td>
<td>String</td>
<td>Required</td>
<td>33.0</td>
</tr>
<tr>
<td>excludedUserId</td>
<td>String</td>
<td>Optional</td>
<td>33.0</td>
</tr>
</tbody>
</table>

**Note:** Invoking `ApiAsync` action links from an app requires a call to set the status. However, there isn’t currently a way to set the status of an action link using Apex. To set the status, use Chatter REST API. See the Action Link resource in the [Chatter REST API Developer Guide](https://www.example.com) for more information.

- **actionUrl**: The action link URL. For example, a `Ui` action link URL is a Web page. A `Download` action link URL is a link to the file to download. `Ui` and `Download` action link URLs are provided to clients. An `Api` or `ApiAsync` action link URL is a REST resource. `Api` and `ApiAsync` action link URLs aren’t provided to clients. Links to Salesforce can be relative. All other links must be absolute and start with `https://`. Tip: To avoid issues due to upgrades or changing functionality in your API, we recommend using a versioned API for `actionUrl`, for example, `https://www.example.com/api/v1/exampleResource`. If your API isn’t versioned, you can use the `expirationDate` property of the `ConnectApi.ActionLinkGroupDefinitionInput` class to avoid issues due to upgrades or changing functionality in your API.

- **excludedUserId**: ID of a single user to exclude from performing the action. If you specify an `excludedUserId`, you can’t specify a `userId`. Tip: Can be defined in an action link template using the `User Visibility` and `Custom User Alias` fields.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>groupDefault</td>
<td>Boolean</td>
<td>True if this action is the default action link in the action link group; false otherwise. There can be only one default action link per action link group. The default action link gets distinct styling in the Salesforce UI.</td>
<td>Optional</td>
<td>33.0</td>
</tr>
<tr>
<td>headers</td>
<td>List&lt;ConnectApi.</td>
<td>The request headers for the Api and ApiAsync action link types. See Action Links Overview, Authentication, and Security.</td>
<td>Optional</td>
<td>33.0</td>
</tr>
<tr>
<td></td>
<td>HttpRequestRequestHeader&gt;</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>labelKey</td>
<td>String</td>
<td>Key for the set of labels to show in the user interface. A set includes labels for these states: NewStatus, PendingStatus, SuccessStatus, FailedStatus. For example, if you use the Approve key, you get these labels: Approve, Pending, Approved, Failed. For a complete list of keys and labels, see Action Links Labels. If none of the predefined labels work for your action link, use a custom label. To use a custom label, create an action link template. See Create Action Link Templates.</td>
<td>Required</td>
<td>33.0</td>
</tr>
</tbody>
</table>
| method          | ConnectApi.HttpRequestMethod | One of these HTTP methods:  
• HttpDelete—Returns HTTP 204 on success. Response body or output class is empty.  
• HttpGet—Returns HTTP 200 on success.  
• HttpHead—Returns HTTP 200 on success. Response body or output class is empty.  
• HttpPatch—Returns HTTP 200 on success or HTTP 204 if the response body or output class is empty.  
• HttpPost—Returns HTTP 201 on success or HTTP 204 if the response body or output class is empty. Exceptions are the batch posting resources and methods, which return HTTP 200 on success. | Required             | 33.0              |
### Property Types, Description, and Availability

<table>
<thead>
<tr>

<td>The request body for API action links. Note: Escape quotation mark characters in the requestBody value.</td>
<td>Optional</td>
<td>33.0</td>
</tr>
<tr>
<td>requires</td>
<td>Boolean</td>
<td>true to require the user to confirm the action; false otherwise.</td>
<td>Required</td>
<td>33.0</td>
</tr>
<tr>
<td>userId</td>
<td>String</td>
<td>The ID of the user who can execute the action. If not specified or null, any user can execute the action. If you specify a userId, you can’t specify an excludedUserId.</td>
<td>Optional</td>
<td>33.0</td>
</tr>
</tbody>
</table>

**See Also:**

ConnectApi.ActionLinkGroupDefinitionInput Class

#### ConnectApi.ActionLinkGroupDefinitionInput Class

The definition of an action link group. All action links must belong to a group. Action links in a group are mutually exclusive and share some properties. Define stand-alone actions in their own action group.

Action link definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

</tr>
<tr>
<td></td>
<td></td>
<td>• UnassignTopicsFromArticle—Unassign topics from articles in a data category.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>topicNames</td>
<td>ConnectApi.TopicNamesInput</td>
<td>List of topic names to assign to or unassign from articles.</td>
<td>Required</td>
<td>40.0</td>
</tr>
</tbody>
</table>

### ConnectApi.AssociatedActionsCapabilityInput Class

A list of action link groups to associate with a feed element. To associate an action link group with a feed element, the call must be made from the Apex namespace that created the action link definition. In addition, the user making the call must have created the definition or have View All Data permission.

An action link is a button on a feed element. Clicking an action link can take a user to a Web page, initiate a file download, or invoke an API call to Salesforce or to an external server. An action link includes a URL and an HTTP method, and can include a request body and header information, such as an OAuth token for authentication. Use action links to integrate Salesforce and third-party services into the feed so that users can take action to drive productivity and accelerate innovation.
### actionLinkGroupIds

**Property**: actionLinkGroupIds  
**Type**: List<String>  
**Description**: The action link group IDs to associate with the feed element. Associate one primary and up to 10 total action link groups to a feed item. Action link groups are returned in the order specified in this property. An action link group ID is returned from a call to `ConnectApi.ActionLinks.createActionLinkGroupDefinition(communityId, actionLinkGroup)`.  
**Required or Optional**: Required  
**Available Version**: 33.0

**SEE ALSO:**  
`ConnectApi.FeedElementCapabilitiesInput`

### ConnectApi.AudienceCriterionInput

Custom recommendation audience criteria type.  

This class is abstract and has no public constructor. You can make an instance only of a subclass.  

**Superclass for:**  
- `ConnectApi.CustomListAudienceCriterionInput`  
- `ConnectApi.NewUserAudienceCriterionInput`

### type

**Property**: type  
**Type**: ConnectApi.RecommendationAudienceCriteriaType  
**Description**: Specifies the custom recommendation audience criteria type. One of these values:  
- CustomList—A custom list of users makes up the audience.  
- MaxDaysInCommunity—New community members make up the audience.  
**Required or Optional**: Optional  
**Available Version**: 36.0

**SEE ALSO:**  
`ConnectApi.RecommendationAudienceInput`

### ConnectApi.AudienceCriterionInput

Personalization audience criterion.
<table>
<thead>
<tr>
<th>Property</th>

<td>Integer</td>
<td>X position of the crop rectangle from the left edge of the image in pixels.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td>cropY</td>
<td>Integer</td>
<td>Y position of the crop rectangle from the top edge of the image in pixels.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td>fileId</td>
<td>String</td>
<td>ID of an existing file. The key prefix must be 069, and the file size must</td>
<td>Required</td>
<td>36.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>be less than 8 MB.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Note:** Images uploaded on the Group page and on the User page don't have file IDs and therefore can't be used.

| versionNumber     | Integer | Version number of an existing file. If not provided, the latest version is used. | Optional | 36.0 |

### ConnectApi.BinaryInput Class

Create a `ConnectApi.BinaryInput` object to attach files to feed items and comments and to add repository files.
The constructor is:

```java
ConnectApi.BinaryInput(blob, contentType, filename)
```

The constructor takes these arguments:

<table>
<thead>
<tr>
<th>Argument</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>blob</td>
<td>Blob</td>
<td>Contents of the file to be used for input</td>
<td>28.0</td>
</tr>
<tr>
<td>contentType</td>
<td>String</td>
<td>MIME type description of the content, such as <code>image/jpg</code></td>
<td>28.0</td>
</tr>
<tr>
<td>filename</td>
<td>String</td>
<td>File name with the file extension, such as <code>UserPhoto.jpg</code></td>
<td>28.0</td>
</tr>
</tbody>
</table>

- Post a Feed Element with a New File (Binary) Attachment
- Post a Comment with a New File
- ConnectApi.BatchInput

### ConnectApi.BatchInput

Construct a set of inputs to be passed into a method at the same time.

Use this constructor when there isn’t a binary input:

```java
ConnectApi.BatchInput(Object input)
```

Use this constructor to pass one binary input:

```java
ConnectApi.BatchInput(Object input, ConnectApi.BinaryInput binary)
```

Use this constructor to pass multiple binary inputs:

```java
ConnectApi.BatchInput(Object input, List<ConnectApi.BinaryInput> binaries)
```

The constructors takes these parameters:

<table>
<thead>
<tr>
<th>Argument</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>input</td>
<td>Object</td>
<td>An individual input object to be used in the batch operation. For example, for <code>postFeedElementBatch()</code>, this should be <code>ConnectApi.FeedElementInput</code>.</td>
<td>32.0</td>
</tr>
<tr>
<td>binary</td>
<td><code>ConnectApi.BinaryInput</code></td>
<td>A binary file to associate with the input object.</td>
<td>32.0</td>
</tr>
<tr>
<td>binaries</td>
<td><code>List&lt;ConnectApi.BinaryInput&gt;</code></td>
<td>A list of binary files to associate with the input object.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- Post a Batch of Feed Elements
- Post a Batch of Feed Elements with New (Binary) Files
ConnectApi.BookmarksCapabilityInput
Create or update a bookmark on a feed element.
This class is a subclass of ConnectApi.FeedElementCapabilityInput Class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isBookmarked</td>
<td>Boolean</td>
<td>Specifies if the feed element should be bookmarked for the user (true) or not (false).</td>
<td>No</td>
<td>32.0</td>
</tr>
<tr>
<td>ByCurrentUser</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.FeedElementCapabilitiesInput

ConnectApi.CanvasCapabilityInput
Create or update a canvas app associated with a feed element.
This class is a subclass of ConnectApi.FeedElementCapabilityInput Class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>A description of the canvas app. The maximum size is 255 characters.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>developerName</td>
<td>String</td>
<td>The API name (developer name) of the connected app.</td>
<td>Required</td>
<td>32.0</td>
</tr>
<tr>
<td>height</td>
<td>String</td>
<td>The height of the canvas app in pixels.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>namespacePrefix</td>
<td>String</td>
<td>A unique namespace prefix for the canvas app.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>parameters</td>
<td>String</td>
<td>JSON parameters passed to the canvas app.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>A thumbnail URL to a preview image. The maximum thumbnail size is 120 pixels by 120 pixels.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>A title for the canvas link.</td>
<td>Required</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.FeedElementCapabilitiesInput

ConnectApi.ChangeInputRepresentation
A list of changes to OrderItemSummaries that make up an order change, such as a cancel or return.
### ConnectApi.ChangeItemInputRepresentation

Change to an OrderItemSummary, such as a return or cancel. You specify whether to prorate the associated shipping charge based on the price change. The OrderItemSummary can't be a shipping charge.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>orderItemSummaryId</td>
<td>String</td>
<td>ID of the OrderItemSummary.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>quantity</td>
<td>Double</td>
<td>Quantity to change. Use a positive value. For example, a value of 2 means &quot;cancel or return 2 units.&quot;</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>reason</td>
<td>String</td>
<td>Reason for the change.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>shippingReductionFlag</td>
<td>Boolean</td>
<td>Specifies whether to prorate the shipping charge.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

- submitReturn(orderSummaryId, changeInput)
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the stream, up to 1,000 characters.</td>
<td>Optional</td>
<td>39.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the stream, up to 120 characters. Required when creating a stream, Optional when updating a stream.</td>
<td>Required</td>
<td>39.0</td>
</tr>
<tr>
<td>subscriptions</td>
<td>List&lt;ConnectApi.StreamSubscriptionInput&gt;</td>
<td>List of up to 25 entities whose feeds are included in the stream. Adding an entity that is already added results in no operation. Including the same entity in subscriptionsToAdd and subscriptionsToRemove results in no operation.</td>
<td>Optional</td>
<td>39.0</td>
</tr>
<tr>
<td>subscriptionsToRemove</td>
<td>List&lt;ConnectApi.StreamSubscriptionInput&gt;</td>
<td>List of entities whose feeds are removed from the stream. Removing an entity that is already removed results in no operation. Including the same entity in subscriptionsToAdd and subscriptionsToRemove results in no operation.</td>
<td>Optional when updating a stream</td>
<td>39.0</td>
</tr>
</tbody>
</table>

ConnectApi.ChatterGroupInput Class

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>announcement</td>
<td>String</td>
<td>The 18-character ID of an announcement. An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it’s deleted or replaced by another announcement.</td>
<td>31.0</td>
</tr>
<tr>
<td>canHaveChatterGuests</td>
<td>Boolean</td>
<td>true if this group allows Chatter customers, false otherwise. After this property is set to true, it cannot be set to false.</td>
<td>29.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>The “Description” section of the group.</td>
<td>29.0</td>
</tr>
<tr>
<td>information</td>
<td>ConnectApi.GroupInformationInput</td>
<td>The “Information” section of a group. If the group is private, this section is visible only to members.</td>
<td>28.0</td>
</tr>
<tr>
<td>isArchived</td>
<td>Boolean</td>
<td>true if the group is archived, false otherwise. Defaults to false.</td>
<td>29.0</td>
</tr>
</tbody>
</table>
### AvailableDescriptionTypeProperty

- **isAutoArchiveDisabled**
  - Type: Boolean
  - Description: true if automatic archiving is turned off for the group, false otherwise. Defaults to false.
  - Available: 29.0

- **name**
  - Type: String
  - Description: The name of the group.
  - Available: 29.0

- **owner**
  - Type: String
  - Description: The ID of the group owner. This property is available for PATCH requests only.
  - Available: 29.0

- **visibility**
  - Type: ConnectApi.GroupVisibilityType
  - Description: Group visibility type.
  - Available: 29.0
    - PrivateAccess—Only members of the group can see posts to this group.
    - PublicAccess—All users within the community can see posts to this group.
    - Unlisted—Reserved for future use.

---

**SEE ALSO:**

- `createGroup(communityId, groupInput)`
- `updateGroup(communityId, groupId, groupInput)`

### ConnectApi.CommentInput

A comment.

Used to add rich comments, for example, comments that include mentions or file attachments.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>attachment</td>
<td>ConnectApi.FeedItemAttachmentInput Class</td>
<td>Specifies an attachment for the comment. Valid values are:</td>
<td>Optional</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- ContentAttachmentInput</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- NewFileAttachmentInput</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>LinkAttachmentInput is not permitted for comments.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>Important:</strong> As of version 32.0, use the capabilities property.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

| body           | ConnectApi.MessageBodyInput Class    | Description of message body. The body can contain up to 10,000 characters and 25 mentions. Because the character limit can change, clients should make a `describeSObjects()` call on the FeedItem or FeedComment object and look at the length of the Body or Comment.Body field to determine the maximum number of allowed characters. | Required             | 28.0              |
To edit this property in a comment, use `updateComment(communityId, commentId, comment)`. Editing comments is supported in version 34.0 and later. Rich text and inline images are supported in comment bodies in version 35.0 and later. Entity links are supported in version 43.0 and later.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>capabilities</td>
<td>ConnectApi. CommentCapabilitiesInput</td>
<td>Specifies any capabilities for the comment, such as a file attachment.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>threadParentId</td>
<td>String</td>
<td>ID of the parent comment for a threaded comment.</td>
<td>Optional</td>
<td>44.0</td>
</tr>
</tbody>
</table>

**ConnectApi.CommentCapabilitiesInput**

A container for all capabilities that can be included with a comment.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>content</td>
<td>ConnectApi. ContentCapability Input</td>
<td>Content to attach to the comment.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>feedEntityShare</td>
<td>ConnectApi. FeedEntityShare CapabilityInput</td>
<td>Feed entity to share to the comment.</td>
<td>Optional</td>
<td>42.0</td>
</tr>
</tbody>
</table>
ConnectApi.ContentCapabilityInput

Attach or update a file on a comment. Use this class to attach a new file or update a file that has already been uploaded to Salesforce. This class is a subclass of ConnectApi.FeedElementCapabilityInput Class.

To attach or remove files from a feed post (instead of a comment) in version 36.0 and later, use ConnectApi.FilesCapabilityInput.

### Properties

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>contentDocumentId</td>
<td>String</td>
<td>ID of the existing content.</td>
<td>Required for existing content</td>
<td>32.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the file to be uploaded.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>sharingOption</td>
<td>ConnectApi.FileSharingOption</td>
<td>Sharing option of the file. Values are:</td>
<td>Optional</td>
<td>35.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the file. This value is used as the file name for new content. For example, if the title is My Title, and the file is a .txt file, the file name is My Title.txt.</td>
<td>Required for new content</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.FeedElementCapabilitiesInput
ConnectApi.ContentHubFieldValueInput

The fields of the item type.

### Properties

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the item field.</td>
<td>Required</td>
<td>39.0</td>
</tr>
</tbody>
</table>
### ConnectApi.ContentHubItemInput

The item type ID and fields of the item type.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fields</td>
<td>List&lt;ConnectApi.</td>
<td>List of fields for the item to be created.</td>
<td>Required</td>

<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Input&gt;</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>itemTypeID</td>
<td>String</td>
<td>ID of the item type.</td>
<td>Required</td>
<td>39.0</td>
</tr>
</tbody>
</table>

### ConnectApi.CreateCreditMemoInputRepresentation

A list of change orders used to create a credit memo.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>changeOrderIds</td>
<td>List&lt;String&gt;</td>
<td>List of IDs of the change orders.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

### ConnectApi.CreateOrderPaymentSummaryInputRepresentation

An OrderSummary for which to create an OrderPaymentSummary, with the payment authorization or payments to include in it.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>orderSummaryId</td>
<td>String</td>
<td>ID of the OrderSummary.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>paymentAuthorizationId</td>
<td>String</td>
<td>ID of the payment authorization.</td>
<td>Either a payment authorization or at</td>
<td>48.0</td>
</tr>
</tbody>
</table>
Available Version Required or Optional Description Type Property

least one payment is required. 48.0

paymentIds List<String> List of IDs of the payments. Either a payment authorization or at least one payment is required. 48.0

SEE ALSO:
createOrderPaymentSummary(orderPaymentSummaryInput)

ConnectApi.CustomListAudienceCriteriaInput

Criteria for the custom list type of custom recommendation audience.

Subclass of ConnectApi.AudienceCriteriaInput.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>member</td>
<td>ConnectApi.RecommendationAudienceMemberOperationType</td>
<td>The operation to carry out on the audience members. Values are: • Add—Adds specified members to the audience. • Remove—Removes specified members from the audience.</td>
<td>Required to update a recommendation audience Don’t use or specify null to create a recommendation audience</td>
<td>36.0</td>
</tr>
<tr>
<td>members</td>
<td>List&lt;String&gt;</td>
<td>A collection of user IDs. When updating an audience, you can include up to 100 members. An audience can have up to 100,000 members, and each community can have up to 100 audiences.</td>
<td>Required to update a recommendation audience Don’t use or specify null to create a recommendation audience</td>
<td>36.0</td>
</tr>
</tbody>
</table>

ConnectApi.DatacloudOrderInput Class

Input representation for a Datacloud order to purchase contacts or companies and retrieve purchase information.
### Property | Type | Description | Required or Optional | Available Version
--- | --- | --- | --- | ---
 companyIds | String | A comma-separated list of identification numbers for the companies to be purchased. You can't include any contact IDs or your purchase fails. | Required to purchase companies | 32.0  
 contactIds | String | A comma-separated list of identification numbers for the contacts to be purchased. You can't include any company IDs or your purchase fails. | Required to purchase contacts | 32.0  
 userType | ConnectDatacloudUserTypeEnum | Indicates the Data.com user type to be used. There are two user types.  
  - Monthly (default)  
  - Listpool | Optional | 32.0  

**SEE ALSO:**

`postOrder(orderInput)`

### ConnectApi.DirectMessageCapabilityInput

Create or update the members of a direct message.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| membersToAdd | List<String> | List of user IDs for members to include in the direct message. | Required when creating a direct message (POST)  
Optional when updating a direct message (PATCH) | 39.0 |
| membersToRemove | List<String> | List of user IDs for members to remove from the direct message. | Optional when updating a direct message (PATCH)  
Not supported when creating a direct message (POST) | 40.0 |
### **ConnectApi.Namespace**

#### **ConnectApi.EnsureFundsAsyncInputRepresentation**

ID of an invoice to ensure funds or capture payment for.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>invoiceId</td>
<td>String</td>
<td>ID of the invoice.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- `ensureFundsAsync(orderSummaryId, ensureFundsInput)`

#### **ConnectApi.EnsureRefundsAsyncInputRepresentation**

ID of a credit memo to ensure refunds for.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>creditMemoId</td>
<td>String</td>
<td>ID of the credit memo.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- `ensureRefundsAsync(orderSummaryId, ensureRefundsInput)`

#### **ConnectApi.EntityLinkSegmentInput**

An entity link segment.

Subclass of **ConnectApi.MessageSegmentInput**
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>entityId</td>
<td>String</td>
<td>ID of the entity to link to. Only users with access to the entity see it. It’s hidden for users without access.</td>
<td>Required</td>
<td>43.0</td>
</tr>
</tbody>
</table>

**ConnectApi.ExtensionInput**

An extension.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>alternativeId</td>
<td>ConnectApi.</td>
<td>Alternative representation of the extension.</td>
<td>Required</td>
<td>40.0</td>
</tr>
<tr>
<td>AlternativeInput</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>extensionId</td>
<td>String</td>
<td>ID of the extension.</td>
<td>Required</td>
<td>40.0</td>
</tr>
<tr>
<td>payload</td>
<td>String</td>
<td>Payload associated with the extension.</td>
<td>Required</td>
<td>40.0</td>
</tr>
<tr>
<td>payloadVersion</td>
<td>String</td>
<td>Payload version that identifies the structure of the payload associated with the extension.</td>
<td>Optional</td>
<td>40.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

- ConnectApi.ExtensionsCapabilityInput

**ConnectApi.ExtensionsCapabilityInput**

Create or update extensions associated with a feed element.

This class is a subclass of ConnectApi.FeedElementCapabilityInput Class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>itemsToAdd</td>
<td>List&lt;ConnectApi. ExtensionInput&gt;</td>
<td>List of extensions to associate with the feed element.</td>
<td>Required</td>
<td>40.0</td>
</tr>
</tbody>
</table>
Available Version | Required or Optional | Description
--- | --- | ---
41.0 | Optional for updating an extension | Don't specify for creating an extension

**SEE ALSO:**

`ConnectApi.FeedElementCapabilitiesInput`

**ConnectApi.FeedElementCapabilitiesInput**

A container for all capabilities that can be included when creating a feed element.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>itemsToRemove</td>
<td><code>List&lt;String&gt;</code></td>
<td>List of attachment IDs to remove from the feed element.</td>
<td>Optional</td>
<td>41.0</td>
</tr>
</tbody>
</table>

**Important:**

This class isn’t available for feed posts in version 36.0 and later. In version 36.0 and later, use `ConnectApi.FilesCapabilityInput`.

See the Apex Developer Guide for more information.
<table>
<thead>
<tr>
<th>Property</th>

<td>ConnectApi. TopicsCapabilityInput</td>
<td>Describes topics assigned to the feed element.</td>
<td>Optional</td>
<td>38.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.FeedElementInput Class

ConnectApi.FeedElementCapabilityInput Class

A feed element capability.

In API version 30.0 and earlier, most feed items can have comments, likes, topics, and so on. In version 31.0 and later, every feed item (and feed element) can have a unique set of capabilities. If a capability property exists on a feed element, that capability is available, even if the capability property doesn’t have a value. For example, if the ChatterLikes capability property exists on a feed element (with or without a value), the context user can like that feed element. If the capability property doesn’t exist, it isn’t possible to like that feed element. A capability can also contain associated data. For example, the Moderation capability contains data about moderation flags.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

This class is a superclass of:
- ConnectApi.AssociatedActionsCapabilityInput
- ConnectApi.BookmarksCapabilityInput
- ConnectApi.CanvasCapabilityInput
- ConnectApi.ContentCapabilityInput
- ConnectApi.DirectMessageCapabilityInput
- ConnectApi.ExtensionsCapabilityInput
- ConnectApi.FeedEntityShareCapabilityInput
• `ConnectApi.FilesCapabilityInput`
• `ConnectApi.LinkCapabilityInput`
• `ConnectApi.MuteCapabilityInput`
• `ConnectApi.PollCapabilityInput`
• `ConnectApi.QuestionAndAnswersCapabilityInput`
• `ConnectApi.ReadByCapabilityInput`
• `ConnectApi.RecordCapabilityInput`
• `ConnectApi.StatusCapabilityInput`
• `ConnectApi.TopicsCapabilityInput`

### `ConnectApi.FeedElementInput` Class

Feed elements are the top-level items that a feed contains. Feeds are feed element containers.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

Superclass of `ConnectApi.FeedItemInput` Class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>capabilities</td>
<td><code>ConnectApi.FeedElementCapabilitiesInput</code></td>
<td>The capabilities that define auxiliary information on this feed element.</td>
<td>Optional</td>
<td>31.0</td>
</tr>
<tr>
<td>feedElementType</td>
<td><code>ConnectApi.FeedElementType</code></td>
<td>The type of feed element this input represents.</td>
<td>Required when creating a feed element Optional when updating a feed element</td>
<td>31.0</td>
</tr>
</tbody>
</table>
**Available Version|Required or Optional|Available Version**
---|---|---
subjectId | String | The ID of the parent this feed element is being posted to. This value can be the ID of a user, group, or record, or the string me to indicate the context user.

In version 45.0 and later, you can move a feed element from one public group to another by setting this property to the ID of the new public group. You can’t include or change any other properties when moving a feed element.

SEE ALSO:
- Post a Feed Element with a Mention
- Post a Feed Element with Existing Content
- Post a Feed Element with a New File (Binary) Attachment
- Define an Action Link and Post with a Feed Element
- Define an Action Link in a Template and Post with a Feed Element
- Share a Feed Element (in Version 39.0 and Later)
- Edit a Feed Element
- Edit a Question Title and Post
- Post a Rich-Text Feed Element with Inline Image

**ConnectApi.FeedEntityShareCapabilityInput**

Share a feed entity with a feed post or comment.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput` Class.

**Available Version|Required or Optional|Available Version**
---|---|---
feedEntityId | String | ID of the feed entity to share with the feed post or comment.

SEE ALSO:
- `ConnectApi.FeedElementCapabilitiesInput`

**ConnectApi.FeedItemInput Class**

Used to create rich feed items, for example, feed items that include @mentions or files.

Subclass of `ConnectApi.FeedElementInput Class` as of version 31.0.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>attachment</td>
<td>ConnectApi.FeedItemAttachment Input Class</td>
<td>Specifies the attachment for the feed item. The feed item type is inferred based on the provided attachment. <strong>Important:</strong> As of API version 32.0, use the inherited capabilities property.</td>
<td>Optional</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>body</td>
<td>ConnectApi.MessageBody Input Class</td>
<td>Message body. The body can contain up to 10,000 characters and 25 mentions. Because the character limit can change, clients should make a describeSObjects() call on the FeedItem or FeedComment object and look at the length of the Body or CommentBody field to determine the maximum number of allowed characters. If you specify originalFeedElementId to share a feed item, use the body property to add the first comment to the feed item. To edit this property in a feed item, use updateFeedElement(communityId, feedElementId, feedElement). Editing feed posts is supported in version 34.0 and later.</td>
<td>Required unless the feed item has a link capability or a content capability.</td>
<td>28.0</td>
</tr>
<tr>
<td>isBookmarked ByCurrentUser</td>
<td>Boolean</td>
<td>Specifies if the new feed item should be bookmarked for the user (true) or not (false). <strong>Important:</strong> As of API version 32.0, use the capabilities.bookmarks.isBookmarkedByCurrentUser property.</td>
<td>Optional</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>originalFeedElementId</td>
<td>String</td>
<td>To share a feed element, specify its 18-character ID. <strong>Important:</strong> As of API version 39.0, use the capabilities.feedEntity Share.feedEntityId property.</td>
<td>Optional</td>
<td>31.0–38.0</td>
</tr>
<tr>
<td>originalFeedItemId</td>
<td>String</td>
<td>To share a feed item, specify its 18-character ID. <strong>Important:</strong> In API version 32.0–38.0, use the originalFeedElementId property. In API version 39.0 and later, use the capabilities.feedEntity Share.feedEntityId property.</td>
<td>Optional</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>visibility</td>
<td>ConnectApi.FeedItemVisibilityVisibilityType Enum</td>
<td>Type of users who can see a feed item. • AllUsers—Visibility is not limited to internal users. • InternalUsers—Visibility is limited to internal users.</td>
<td>Optional</td>
<td>28.0</td>
</tr>
</tbody>
</table>
Default values:

- For external users, the default value is `AllUsers`. External users must use this value to see their posts.
- For internal users, the default value is `InternalUsers`. Internal users can accept this value or use the value `AllUsers` to allow external users to see their posts.

If the parent of the feed item is a user, group, or direct message, the visibility of the feed item must be `AllUsers`.

### ConnectApi.FileIdInput

Attach a file that has already been uploaded or remove a file from a feed element.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>ID of a file that has already been uploaded.</td>
<td>Required</td>
<td>36.0</td>
</tr>
<tr>
<td>operationType</td>
<td>ConnectApi. OperationType</td>
<td>Operation to carry out on the file. Values are: Add—Adds the file to the feed element. Remove—Removes the file from the feed element. Remove operations are processed before Add operations. Adding content that is already added and removing content that is already removed result in no operation.</td>
<td>Optional If not specified, defaults to Add.</td>
<td>36.0</td>
</tr>
</tbody>
</table>

See ALSO:

ConnectApi.FilesCapabilityInput

### ConnectApi.FilesCapabilityInput

Attach up to 10 files that have already been uploaded or remove one or more files from a feed element.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput` Class.
### ConnectApi.FulfillmentGroupInputRepresentation

A list of OrderItemSummaries to be fulfilled together, and the fulfillment location that will handle them. The fulfillment type is one of the values defined for the Type field on the FulfillmentOrder object, such as "Warehouse" or "Retail Store." The specified type is assigned to the FulfillmentOrder for this fulfillment group.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fulfilledFrom</td>
<td>String</td>
<td>ID of the fulfillment location.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>LocationId</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>fulfillmentType</td>
<td>String</td>
<td>Fulfillment type. One of the Type field values defined for FulfillmentOrders.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>orderItemSummaries</td>
<td>List&lt;ConnectApi.OrderItemSummaryInputRepresentation&gt;</td>
<td>List of OrderItemSummaries.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

### ConnectApi.FulfillmentOrderInputRepresentation

An OrderDeliveryGroupSummary that defines a delivery method and recipient, and a list of fulfillment groups to assign to FulfillmentOrders. Each fulfillment group is a set of OrderItemSummaries that match the OrderDeliveryGroupSummary and share the same fulfillment location. The method creates a FulfillmentOrder for each fulfillment group and a FulfillmentOrderLineItem for each OrderItemSummary.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fulfillmentGroups</td>
<td>List&lt;ConnectApi.FulfillmentGroupInputRepresentation&gt;</td>
<td>List of fulfillment groups that specify the OrderItemSummaries and fulfillment locations.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>orderDeliveryGroupSummaryId</td>
<td>String</td>
<td>ID of the OrderDeliveryGroupSummary.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

  `createFulfillmentOrders(fulfillmentOrderInput)`

**ConnectApi.FulfillmentOrderInvoiceInputRepresentation**

Instantiate and include this object with no properties when creating an invoice. This input class has no properties.

SEE ALSO:
  `createInvoice(fulfillmentOrderId, invoiceInput)`

**ConnectApi.FulfillmentOrderLineItemInputRepresentation**

A FulfillmentOrderLineItem and quantity to cancel. You can cancel less than the full quantity, in which case you reallocate the canceled quantity to a different FulfillmentOrder.

SEE ALSO:
  `cancelFulfillmentOrderLineItems(fulfillmentOrderId, cancelFulfillmentOrderLineItemsInput)`

**ConnectApi.FulfillmentOrderLineItemsToCancelInputRepresentation**

A list of FulfillmentOrderLineItems and quantities to cancel.
Available Version Required or Optional Available Version

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
</tr>
</thead>
<tbody>
<tr>

ConnectApi.GroupInformationInput Class

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>text</td>
<td>String</td>
<td>The text in the “Information” section of a group.</td>
<td>28.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>The title of the “Information” section of a group.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:  
ConnectApi.ChatterGroupInput Class

ConnectApi.HashtagSegmentInput Class

Used to include a hashtag in a feed item or comment.
Subclass of ConnectApi.MessageSegmentInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>tag</td>
<td>String</td>
<td>Text of the hash tag without the # (hash tag) prefix</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**Note:** Closing square brackets (]) are not supported in hash tag text. If the text contains a closing square bracket (]), the hash tag ends at the bracket.

SEE ALSO:  
ConnectApi.MessageBodyInput Class

ConnectApi.InlineImageSegmentInput

An inline image segment.
Subclass of ConnectApi.MessageSegmentInput
altText  |  String  |  Alt text for the inline image.  |  Optional  |  35.0  

If not specified, the title of the inline image file is used as the alt text.

fileId  |  String  |  ID of the inline image file.  |  Required  |  35.0  

SEE ALSO:
- Post a Rich-Text Feed Element with Inline Image

**ConnectApi.InviteInput**

An invitation.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| invitees  | List<String>  | List of email addresses to send the invitation to.  | Required  | 39.0  

message  | String  | Message to include in the invitation.  | Optional  | 39.0  

**ConnectApi.LinkCapabilityInput**

Create or update a link on a feed element.

This class is a subclass of ConnectApi.FeedElementCapabilityInput Class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| url       | String  | Link URL. The URL can be to an external site.  | Required  | 32.0  

urlName  | String  | Description of the link.  | Optional  | 32.0  

SEE ALSO:
- ConnectApi.FeedElementCapabilitiesInput

**ConnectApi.LinkSegmentInput Class**

Used to include a link segment in a feed item or comment.

Subclass of ConnectApi.MessageSegmentInput

1811
**ConnectApi.MessageBodyInput Class**

A collection of relative positions of managed topics.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>

### ConnectApi. MentionSegmentInput Class

Include an @mention of a user or group in a feed post or comment. When creating a feed post or comment, you can include up to 25 mentions.

Subclass of ConnectApi.MessageSegmentInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the user or group to mention.</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>To mention a user, use either id or username. You can’t include both.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>To mention a group, you must use id.</td>
<td></td>
</tr>
<tr>
<td>username</td>
<td>String</td>
<td>User name of the user to mention.</td>
<td>38.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>To mention a user, use either id or username. You can’t include both.</td>
<td></td>
</tr>
</tbody>
</table>

<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.FeedItemInput Class
- ConnectApi.CommentInput
- ConnectApi.AnnouncementInput Class

ConnectApi.MessageSegmentInput

Used to add rich message segments to feed items and comments.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

Superclass for:
- ConnectApi.EntityLinkSegmentInput
- ConnectApi.HashtagSegmentInput Class
- ConnectApi.InlineImageSegmentInput
- ConnectApi.LinkSegmentInput Class
- ConnectApi.MarkupBeginSegmentInput
- ConnectApi.MarkupEndSegmentInput
- ConnectApi.MentionSegmentInput Class
- ConnectApi.TextSegmentInput Class

Use the ConnectApiHelper repository on GitHub to simplify many of the tasks accomplished with ConnectApi.MessageSegmentInput, such as posting with inline images, rich text, and mentions.
### ConnectApi.MessageSegmentType

The type of message segment. Values are:
- EntityLink
- FieldChange
- FieldChangeName
- FieldChangeValue
- Hashtag
- InlineImage
- Link
- MarkupBegin
- MarkupEnd
- Mention
- MoreChanges
- ResourceLink
- Text

**SEE ALSO:**
- Edit a Comment
- Edit a Feed Element
- Edit a Question Title and Post
- Post a Rich-Text Feed Element with Inline Image
- ConnectApi.MessageBodyInput Class

### ConnectApi.MuteCapabilityInput

Mute or unmute a feed element.

This class is a subclass of ConnectApi.FeedElementCapabilityInput Class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isMutedByMe</td>
<td>Boolean</td>
<td>Indicates whether the feed element is muted for the context user. Default value is false.</td>
<td>Required</td>
<td>35.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- setIsMutedByMe(communityId, feedElementId, isMutedByMe)

### ConnectApi.NBAStrategyInput

A recommendation strategy.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>contextRecordId</td>
<td>String</td>
<td>ID of the context record. For example, if the next best action is on a case detail page, the ID of the case.</td>
<td>Optional</td>
<td>45.0</td>
</tr>
<tr>
<td>maxResults</td>
<td>Integer</td>
<td>Maximum number of results. Valid values are from 1 to 25. The default is 3.</td>
<td>Optional</td>
<td>45.0</td>
</tr>
<tr>
<td>strategyContext</td>
<td>Map&lt;String, String&gt;</td>
<td>Variable and value mappings for the strategy.</td>
<td>Optional</td>
<td>45.0</td>
</tr>
<tr>
<td>debugTrace</td>
<td>Boolean</td>
<td>Specifies whether to return trace and debug information in the response (true) or not (false). If unspecified, the default is false.</td>
<td>Optional</td>
<td>45.0</td>
</tr>
</tbody>
</table>

**ConnectApi.NewUserAudienceCriteriaInput**

Criteria for the new members type of custom recommendation audience.

Subclass of `ConnectApi.AudienceCriteriaInput`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>value</td>
<td>Double</td>
<td>The maximum number of days since a user became a community member. For example, if you specify 30, anyone who became a community member in the last 30 days is included in the new members audience.</td>
<td>Required</td>
<td>36.0</td>
</tr>
</tbody>
</table>

**ConnectApi.OrderItemSummaryInputRepresentation**

An OrderItemSummary and quantity.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>orderItemSummaryId</td>
<td>String</td>
<td>ID of the OrderItemSummary.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>quantity</td>
<td>Double</td>
<td>Quantity to include.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.FulfillmentGroupInputRepresentation`
- `ConnectApi.FulfillmentOrderInputRepresentation`
- `createFulfillmentOrders(fulfillmentOrderInput)`
### ConnectApi.OrderSummaryInputRepresentation

An order from which to create an OrderSummary.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>orderId</td>
<td>String</td>
<td>ID of the original order.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- `createOrderSummary(orderSummaryInput)`

### ConnectApi.PhotoInput Class

Use to specify how crop a photo. Use to specify an existing file (a file that has already been uploaded).

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available version</th>
</tr>
</thead>
<tbody>
<tr>
<td>cropSize</td>
<td>Integer</td>
<td>The length, in pixels, of any edge of the crop square.</td>
<td>29.0</td>
</tr>
<tr>
<td>cropX</td>
<td>Integer</td>
<td>The position X, in pixels, from the left edge of the image to the start of the crop square. Top left is position (0,0).</td>
<td>29.0</td>
</tr>
<tr>
<td>cropY</td>
<td>Integer</td>
<td>The position Y, in pixels, from the top edge of the image to the start of the crop square. Top left is position (0,0).</td>
<td>29.0</td>
</tr>
<tr>
<td>fileId</td>
<td>String</td>
<td>18 character ID of an existing file. The key prefix must be 069 and the file size must be less than 2 GB.</td>
<td>25.0</td>
</tr>
</tbody>
</table>

**Note:** Images uploaded on the Group page and on the User page don’t have file IDs and therefore can’t be used.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available version</th>
</tr>
</thead>
<tbody>
<tr>
<td>versionNumber</td>
<td>Integer</td>
<td>Version number of the existing content. If not provided, the latest version is used.</td>
<td>25.0</td>
</tr>
</tbody>
</table>

### ConnectApi.PinCapabilityInput

Pin or unpin a feed element to a feed.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>entityId</td>
<td>String</td>
<td>ID of the entity to pin or unpin. In version 41.0 and later, entityId must be a feed item ID. In version 41.0–42.0, only one feed item can be pinned per feed. In version 43.0 and later, three feed items can be pinned per feed.</td>
<td>Required</td>
<td>41.0</td>
</tr>
<tr>
<td>isPinned</td>
<td>Boolean</td>
<td>Specifies whether to pin (true) or unpin (false) the entity.</td>
<td>Required</td>
<td>41.0</td>
</tr>
</tbody>
</table>

**ConnectApi.PollCapabilityInput**

Create, update, or vote on a poll on a feed element.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput` Class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>choices</td>
<td>List&lt;String&gt;</td>
<td>The choices used to create a new poll. You must specify 2–10 poll choices for each poll.</td>
<td>Required for creating a poll</td>
<td>32.0</td>
</tr>
<tr>
<td>myChoiceId</td>
<td>String</td>
<td>ID of an existing choice on the feed poll. Used to vote on an existing poll.</td>
<td>Required for voting on a poll</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

`ConnectApi.FeedElementCapabilitiesInput`

**ConnectApi.QuestionAndAnswersCapabilityInput**

Create or edit a question feed element or set the best answer of the existing question feed element.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput` Class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>bestAnswerId</td>
<td>String</td>
<td>A comment ID to use as a best answer for a question feed element. The best answer comment must already exist on the question feed element.</td>
<td>Required to update a feed element. Not supported when posting a feed element.</td>
<td>32.0</td>
</tr>
</tbody>
</table>
### questionTitle
- **Type**: String
- **Description**: Title for a question feed element. To edit the title of a question, use `updateFeedElement(communityId, feedElementId, feedElement)`. Editing question titles is supported in version 34.0 and later.
- **Available Version**: 32.0

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>questionTitle</td>
<td>String</td>
<td>Title for a question feed element. To edit the title of a question, use <code>updateFeedElement(communityId, feedElementId, feedElement)</code>. Editing question titles is supported in version 34.0 and later.</td>
<td>Required to post a feed element. Not supported when updating a feed element.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ReadByCapabilityInput
Mark feed elements as read by the context user.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput Class](#).

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isReadByMe</td>
<td>Boolean</td>
<td>Specifies to mark the feed element as read (<code>true</code>) for the context user.</td>
<td>Required</td>
<td>40.0</td>
</tr>
<tr>
<td>lastReadDateByMe</td>
<td>Datetime</td>
<td>Specifies the last date, in ISO 8601 format, when the feed element is marked as read for the context user. If you don’t specify a date or you specify a future date, the current system date is used.</td>
<td>Optional</td>
<td>40.0</td>
</tr>
</tbody>
</table>

**ConnectApi.RecommendationDefinitionInput**

A custom recommendation definition.
### ConnectApi Namespace

**connectApi.Namespace**

#### createRecommendationDefinition(communityId, recommendationDefinition)

**Summary:**
A reaction to a recommendation produced by a recommendation strategy.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>aiModel</td>

<td>46.0</td>
</tr>
<tr>
<td>strategyName</td>
<td>String</td>
<td>Name of the recommendation strategy.</td>
<td>Required</td>
<td>45.0</td>
</tr>
<tr>
<td>targetActionId</td>
<td>String</td>
<td>ID of the target action.</td>
<td>Optional</td>
<td>45.0</td>
</tr>
<tr>
<td>targetActionName</td>
<td>String</td>
<td>Name of the target action.</td>
<td>Required</td>
<td>45.0</td>
</tr>
<tr>
<td>targetId</td>
<td>String</td>
<td>ID of the recommendation that is being reacted to.</td>
<td>Required</td>
<td>45.0</td>
</tr>
</tbody>
</table>

**ConnectApi.RecordCapabilityInput**

Attach an existing knowledge article to a comment.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput Class](#).

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recordId</td>
<td>String</td>
<td>ID of the existing knowledge article to attach.</td>
<td>Required</td>
<td>42.0</td>
</tr>
</tbody>
</table>

**ConnectApi.RequestHeaderInput Class**

An HTTP request header name and value pair.
### Available Version

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>The name of the request header.</td>
<td>Required</td>
<td>33.0</td>
</tr>
<tr>
<td>value</td>
<td>String</td>
<td>The value of the request header.</td>
<td>Required</td>
<td>33.0</td>
</tr>
</tbody>
</table>

---

**SEE ALSO:**

Define an Action Link and Post with a Feed Element

---

**ConnectApi.ScheduledRecommendationInput**

A scheduled custom recommendation.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| channel  | ConnectApi.RecommendationChannel | A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:  
  • CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.  
  • CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.  
  • CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.  
  • CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.  
  • CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.  
  • DefaultChannel—Default recommendation channel.                                                                                                                                                                                                                           | Optional for creating a scheduled recommendation If not specified, defaults to DefaultChannel. Don’t use when updating a scheduled recommendation                                                                 | 36.0                |
Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.

Use these channel values; you can’t rename or create other channels.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>enabled</td>
<td>Boolean</td>
<td>Indicates whether scheduling is enabled. If true, the custom recommendation is enabled and appears in communities. If false, custom recommendations in feeds in Salesforce mobile web aren’t removed, but no new custom recommendations appear. In Customer Service and Partner Central communities, disabled custom recommendations no longer appear.</td>
<td>Optional</td>
<td>35.0</td>
</tr>
<tr>
<td>rank</td>
<td>Integer</td>
<td>Relative rank of the scheduled custom recommendation indicated by ascending whole numbers starting with 1. Setting the rank is comparable to an insertion into an ordered list. The scheduled custom recommendation is inserted into the position specified by the rank. The rank of all the scheduled custom recommendations after it is pushed down. See Ranking scheduled custom recommendations example. If the specified rank is larger than the size of the list, the scheduled custom recommendation is put at the end of the list. The rank of the scheduled custom recommendation is the size of the list, instead of the one specified. If a rank is not specified, the scheduled custom recommendation is put at the end of the list.</td>
<td>Optional</td>
<td>35.0</td>
</tr>
<tr>
<td>recommendation AudienceId</td>
<td>String</td>
<td>ID of the audience for this scheduled custom recommendation. When updating a scheduled custom recommendation, specify ALL to remove the association between a scheduled recommendation and an audience.</td>
<td>Optional</td>
<td>35.0</td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Required or Optional</td>
<td>Available Version</td>
</tr>
<tr>
<td>-----------------</td>
<td>---------</td>
<td>-----------------------------------------------------------------------------</td>
<td>----------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>recommendation</td>
<td>String</td>
<td>ID of the custom recommendation definition that this scheduled recommendation schedules.</td>
<td>Required to create a scheduled recommendation. You can't specify a recommendation DefinitionId when updating a scheduled recommendation.</td>
<td>35.0</td>
</tr>
</tbody>
</table>

**Ranking scheduled custom recommendations example**

If you have these scheduled custom recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendations</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>3</td>
</tr>
</tbody>
</table>

And you include this information in the Scheduled Custom Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>

SEE ALSO:

`createScheduledRecommendation(communityId, scheduledRecommendation)`
### ConnectApi.SocialPostMassApprovalInput

List of social post ids and the action to approve or reject publishing them.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isApproved</td>
<td>Boolean</td>
<td>Specifies whether to approve (true) or reject (false) publishing the social posts. If unspecified, defaults to false.</td>
<td>Optional</td>
<td>46.0</td>
</tr>
<tr>
<td>socialPostIdList</td>
<td>List&lt;String&gt;</td>
<td>A list of up to 200 social post IDs.</td>
<td>Required</td>
<td>46.0</td>
</tr>
</tbody>
</table>

### ConnectApi.StatusCapabilityInput

Change the status of a feed post or comment.

This class is a subclass of [ConnectApi.FeedElementCapabilityInput Class](#).

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>feedEntityStatus</td>
<td>ConnectApi.FeedEntityStatus</td>
<td>Status of the feed post or comment. Values are:</td>
<td>Required</td>
<td>37.0</td>
</tr>
<tr>
<td>Draft</td>
<td></td>
<td>The feed post isn’t published but is visible to the author and users with Modify All Data or View All Data permission. Comments can't be drafts.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>PendingReview</td>
<td></td>
<td>The feed post or comment isn’t approved yet and therefore isn’t published or visible.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Published</td>
<td></td>
<td>The feed post or comment is approved and visible.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Posts that have a status of PendingReview or Published can’t be changed to a status of Draft and vice versa.

### ConnectApi.StreamSubscriptionInput

An entity to subscribe to for a Chatter feed stream.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>entityId</td>
<td>String</td>
<td>The ID of any feed-enabled entity, such as a group, record, or user, that the context user can access. When subscribed, the entity's feed is included in the feed stream.</td>
<td>Required</td>
<td>39.0</td>
</tr>
</tbody>
</table>

SEE ALSO:  
`ConnectApi.ChatterStreamInput`

### ConnectApi.TargetInput

Target to create.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>audienceId</td>
<td>String</td>
<td>ID of the audience to assign to the target.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>groupName</td>
<td>String</td>
<td>Group name of the target. Groups bundle related target and audience pairs.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>priority</td>
<td>Integer</td>
<td>Priority of the target. Within a group, priority determines which target is returned if the user matches more than one audience.</td>
<td>Optional</td>
<td>48.0</td>
</tr>
<tr>
<td>publishStatus</td>
<td>ConnectApi.PublishStatus</td>
<td>The publish status of the target. Values are: Draft, Live</td>
<td>Optional</td>
<td>48.0</td>
</tr>
<tr>
<td>targetType</td>
<td>String</td>
<td>Type of target, indicating the nature of the data being targeted. In version 48.0 and later, supported values include ExperienceVariation and custom object API names, such as <code>CustomObjectName__c</code>.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Required or Optional</td>
<td>Available Version</td>
</tr>
<tr>
<td>--------------</td>
<td>--------------</td>
<td>------------------------------------------------------------------------------</td>
<td>----------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td><code>targetValue</code></td>
<td><code>String</code></td>
<td>Value of the target. If <code>targetType</code> is <code>ExperienceVariation</code>, <code>targetValue</code> is the developer name of the experience variation. If <code>targetType</code> is <code>CustomObjectName__c</code>, <code>targetValue</code> is the ID of the custom object.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

ConnectApi.TargetCollectionInput

**ConnectApi.TargetCollectionInput**

Collection of targets to create.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>targets</code></td>
<td>List&lt;ConnectApi.TargetInput&gt;</td>
<td>List of targets to create.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**ConnectApi.TargetCollectionUpdateInput**

Collection of targets to update.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>targets</code></td>
<td>List&lt;ConnectApi.TargetUpdateInput&gt;</td>
<td>List of targets to update.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**ConnectApi.TargetUpdateInput**

Target to update.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>audienceId</code></td>
<td><code>String</code></td>
<td>ID of the audience to assign to the target.</td>
<td>Required if priority isn't specified. Otherwise, Optional</td>
<td>48.0</td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Required or Optional</td>
<td>Available Version</td>
</tr>
<tr>
<td>------------</td>
<td>---------</td>
<td>-----------------------------------------------------------------------------</td>
<td>----------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>priority</td>
<td>Integer</td>
<td>Priority of the target. Within a group, priority determines which target is returned if the user matches more than one audience.</td>
<td>Required if audienceId isn’t specified. Otherwise, Optional</td>
<td>48.0</td>
</tr>
<tr>
<td>targetId</td>
<td>String</td>
<td>ID of the target to update.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**ConnectApi.TextSegmentInput Class**

Used to include a text segment in a feed item or comment.

Subclass of **ConnectApi.MessageSegmentInput**

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>text</td>
<td>String</td>
<td>Plain text for this segment. If hashtags or links are detected in text, they are included in the comment as hashtag and link segments. Mentions are not detected in text and are not separated out of the text. Mentions require <strong>ConnectApi.MentionSegmentInput Class</strong>.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**ConnectApi.TopicInput Class**

Update a topic’s name or description or merge topics.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the topic</td>
<td>29.0</td>
</tr>
<tr>
<td>idsToMerge</td>
<td>List&lt;String&gt;</td>
<td>List of up to five secondary topic IDs to merge with the primary topic. If any of these secondary topics are managed topics, they lose their topic type, topic images, and children topics. Their feed items are reassigned to the primary topic.</td>
<td>33.0</td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Required or Optional</td>
</tr>
<tr>
<td>--------------------</td>
<td>---------</td>
<td>-----------------------------------------------------------------------------</td>
<td>----------------------</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the topic</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>Use this property to change only the capitalization and spacing of the topic name.</td>
<td></td>
</tr>
</tbody>
</table>

SEE ALSO:
updateTopic(communityId, topicId, topic)

**ConnectApi.TopicNamesInput**

A list of topic names to replace currently assigned topics. Also a list of suggested topics to assign.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>topicNames</td>
<td>List&lt;String&gt;</td>
<td>A list of up to 10 topic names for a feed item or 100 topic names for a record.</td>
<td>Required</td>
<td>35.0</td>
</tr>
<tr>
<td>topicSuggestions</td>
<td>List&lt;String&gt;</td>
<td>A list of suggested topics to assign to a record or feed item to improve future topic suggestions.</td>
<td>Optional</td>
<td>37.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
reassignTopicsByName(communityId, recordId, topicNames)
ConnectApi.ArticleTopicAssignmentJobInput

**ConnectApi.TopicsCapabilityInput**

Assign topics to a feed element.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>contextTopicName</td>
<td>String</td>
<td>Name of the parent topic in the community to which the feed element belongs.</td>
<td>Optional</td>
<td>38.0</td>
</tr>
<tr>
<td>topics</td>
<td>List&lt;String&gt;</td>
<td>List of topics to assign to the feed element.</td>
<td>Required</td>
<td>38.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.FeedElementCapabilitiesInput

**ConnectApi.UpDownVoteCapabilityInput**

Upvote or downvote a feed element or a comment.
### Property
<table>
<thead>
<tr>
<th><strong>Property</strong></th>
<th><strong>Type</strong></th>
<th><strong>Description</strong></th>
<th><strong>Required or Optional</strong></th>
<th><strong>Available Version</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>vote</td>
<td><code>ConnectApi.UpDownVoteValue</code></td>
<td>Type of vote for a feed element or comment. Values are: Down, None, Up</td>
<td>Required</td>
<td>41.0</td>
</tr>
</tbody>
</table>

### ConnectApi.UserInput Class

Used to update a user.

<table>
<thead>
<tr>
<th><strong>Property</strong></th>
<th><strong>Type</strong></th>
<th><strong>Description</strong></th>
<th><strong>Available Version</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>aboutMe</td>
<td>String</td>
<td>The <code>aboutMe</code> property of a <code>ConnectApi.UserDetail</code> output object. This property populates the “About Me” section of the user profile, which is visible to all members of a community or organization.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

- `updateUser(communityId, userId, userInput)`

### Retired ConnectApi Input Classes

These `ConnectApi` input classes are retired.

IN THIS SECTION:

- `ConnectApi.CanvasAttachmentInput Class`
- `ConnectApi.ContentAttachmentInput Class`
- `ConnectApi.FeedItemAttachmentInput Class`
- `ConnectApi.LinkAttachmentInput Class`
- `ConnectApi.NewFileAttachmentInput Class`
- `ConnectApi.PollAttachmentInput Class`

### ConnectApi.CanvasAttachmentInput Class

**Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, use `ConnectApi.CanvasCapabilityInput`.

Used to attach a canvas app to a feed item.

Subclass of `ConnectApi.FeedItemAttachmentInput Class`

<table>
<thead>
<tr>
<th><strong>Property</strong></th>
<th><strong>Type</strong></th>
<th><strong>Description</strong></th>
<th><strong>Available Version</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Optional. The description of the canvas app.</td>
<td>29.0–31.0</td>
</tr>
</tbody>
</table>
### ConnectApi.ContentAttachmentInput Class

**Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, use `ConnectApi.ContentCapabilityInput`. Used to attach existing content to a comment or feed item.

Subclass of `ConnectApi.FeedItemAttachmentInput Class`

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>developerName</td>
<td>String</td>
<td>The developer name (API name) of the canvas app</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>height</td>
<td>String</td>
<td>Optional. The height of the canvas app in pixels. Default height is 200 pixels.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>namespacePrefix</td>
<td>String</td>
<td>Optional. The namespace prefix of the Developer Edition organization in which the canvas app was created.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>parameters</td>
<td>String</td>
<td>Optional. Parameters passed to the canvas app in JSON format. Example: {'isUpdated='true'}</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>Optional. A URL to a thumbnail image for the canvas app. Maximum dimensions are 120x120 pixels.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>The title of the link used to call the canvas app.</td>
<td>29.0–31.0</td>
</tr>
</tbody>
</table>

### ConnectApi.FeedItemAttachmentInput Class

**Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, use `ConnectApi.FeedElementCapabilityInput Class`. Used to attach a file to a feed item.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

Superclass for:
- `ConnectApi.CanvasAttachmentInput Class`
- `ConnectApi.ContentAttachmentInput Class`
- `ConnectApi.LinkAttachmentInput Class`
- `ConnectApi.NewFileAttachmentInput Class`
- `ConnectApi.PollAttachmentInput Class`

### ConnectApi.LinkAttachmentInput Class

**Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, use `ConnectApi.LinkCapabilityInput`. Used as part of a feed item attachment, to add links.
Subclass of ConnectApi.FeedItemAttachmentInput Class

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>URL to be used for the link</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>urlName</td>
<td>String</td>
<td>Title of the link</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

ConnectApi.NewFileAttachmentInput Class

⚠️ Important: This class isn’t available in version 32.0 and later. In version 32.0 and later, use ConnectApi.ContentCapabilityInput.

Describes a new file to be attached to a feed item. The actual binary file, that is the attachment, is provided as part of the BinaryInput in the method that takes this attachment input, such as `postFeedItem` or `postComment`.

Subclass of ConnectApi.FeedItemAttachmentInput Class

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the file to be uploaded.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>The title of the file. This value is required and is also used as the file name. For example, if the title is My Title, and the file is a .txt file, the file name is My Title.txt.</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

ConnectApi.PollAttachmentInput Class

⚠️ Important: This class isn’t available in version 32.0 and later. In version 32.0 and later, use ConnectApi.PollCapabilityInput.

Used to attach a poll to a feed item.

Subclass of ConnectApi.FeedItemAttachmentInput Class

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>pollChoices</td>
<td>List&lt;String&gt;</td>
<td>The text labels for the poll items. Polls must contain between 2 to 10 poll choices.</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

ConnectApi Output Classes

Most ConnectApi methods return instances of ConnectApi output classes.

All properties are read-only, except for instances of output classes created within test code.

All output classes are concrete unless marked abstract in this documentation.

All concrete output classes have no-argument constructors that you can invoke only from test code. See Testing ConnectApi Code.

ConnectApi_AbstractContentHubItemType

An item type associated with a repository folder.

This class is abstract.
Superclass of:
- `ConnectApi.ContentHubItemTypeDetail`
- `ConnectApi.ContentHubItemTypeSummary`

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>contentStreamSupport</code></td>
<td><code>ConnectApi.ContentHubStreamSupport</code></td>
<td>Support for content streaming. Values are:</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- ContentStreamAllowed</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- ContentStreamNotAllowed</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- ContentStreamRequired</td>
<td></td>
</tr>
<tr>
<td><code>description</code></td>
<td><code>String</code></td>
<td>Description of the item type.</td>
<td>39.0</td>
</tr>
<tr>
<td><code>displayName</code></td>
<td><code>String</code></td>
<td>Display name of the item type.</td>
<td>39.0</td>
</tr>
<tr>
<td><code>id</code></td>
<td><code>String</code></td>
<td>ID of the item type.</td>
<td>39.0</td>
</tr>
<tr>
<td><code>isVersionable</code></td>
<td><code>Boolean</code></td>
<td>Indicates whether the item type can have versions.</td>
<td>39.0</td>
</tr>
<tr>
<td><code>url</code></td>
<td><code>String</code></td>
<td>URL to the detailed information of the item type.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

**ConnectApi.AbstractDirectoryEntrySummary**

A directory entry with summary information.

This class is abstract.

Superclass of:
- `ConnectApi.RepositoryGroupSummary`
- `ConnectApi.RepositoryUserSummary`

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>domain</code></td>
<td><code>String</code></td>
<td>Domain of the directory entry.</td>
<td>39.0</td>
</tr>
<tr>
<td><code>email</code></td>
<td><code>String</code></td>
<td>Email of the directory entry.</td>
<td>39.0</td>
</tr>
<tr>
<td><code>id</code></td>
<td><code>String</code></td>
<td>ID of the directory entry.</td>
<td>39.0</td>
</tr>
<tr>
<td><code>type</code></td>
<td><code>ConnectApi.ContentHubDirectoryEntryType</code></td>
<td>Type of directory entry. Values are:</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- GroupEntry</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- UserEntry</td>
<td></td>
</tr>
</tbody>
</table>

**ConnectApi.AbstractExtensionInformation**

Extension information.

This class is abstract.

Superclass of `ConnectApi.LightningExtensionInformation`
**ConnectApi.AbstractMessageBody Class**

This class is abstract.

Superclass of:
- `ConnectApi.FeedBody Class`
- `ConnectApi.MessageBody Class`

<table>

</table>

**ConnectApi.AbstractRecordField Class**

This class is abstract.

Superclass of:
- ConnectApi.BlankRecordField Class
- ConnectApi.LabeledRecordField Class

A field on a record object.

Message segments in a feed item are typed as ConnectApi.MessageSegment. Feed item capabilities are typed as ConnectApi.FeedItemCapability. Record fields are typed as ConnectApi.AbstractRecordField. These classes are all abstract and have several concrete subclasses. At runtime you can use `instanceof` to check the concrete types of these objects and then safely proceed with the corresponding downcast. When you downcast, you must have a default case that handles unknown subclasses.

**Important:** The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.
### ConnectApi.RecordViewSection Class

This class is abstract.

Subclass of [ConnectApi.ActorWithId Class](#).

Superclass of:
- [ConnectApi.RecordSummary Class](#)
- [ConnectApi.RecordView Class](#)

A view of any record in the organization, including a custom object record. This object is used if a specialized object, such as User or ChatterGroup, is not available for the record type.

#### Name | Type | Description |
<table>
<thead>
<tr>
<th></th>
<th></th>

</tr>
</tbody>
</table>

ConnectApi.AbstractUserMissionActivity

User activity associated with missions.
This class is abstract.
Superclass of:
- ConnectApi.UserMission
- ConnectApi.UserMissionActivity
### ConnectApi.UserMissionActivityCollection

The definition of an action link. Action link definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

#### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>activityCount</td>
<td>Integer</td>
<td>Number of mission activities of the specified type for the user.</td>
<td>45.0</td>

### ConnectApi.ActionLinkDefinition Class

The action link URL. For example, a Ui action link URL is a Web page. A Download action link URL is a link to the file to download. Ui and Download action link URLs are provided to clients. An Api or ApiAsync action link URL is a REST resource. Api and ApiAsync action link URLs aren’t provided to clients. Links to Salesforce can be relative. All other links must be absolute and start with `https://`.

#### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionUrl</td>
<td>String</td>
<td>The action link URL. For example, a Ui action link URL is a Web page. A Download action link URL is a link to the file to download. Ui and Download action link URLs are provided to clients. An Api or ApiAsync action link URL is a REST resource. Api and ApiAsync action link URLs aren’t provided to clients. Links to Salesforce can be relative. <tr>
<td></td>
<td></td>
<td>• Download—The action link downloads a file from the action URL.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Ui—The action link takes the user to a web page at the action URL.</td>
<td></td>
</tr>
</tbody>
</table>

**Note:** Invoking ApiAsync action links from an app requires a call to set the status. However, there isn’t currently a way to set the status of an action link using Apex. To set the status, use Chatter REST API. See the Action Link resource in the Chatter REST API Developer Guide for more information.

<table>

<td>The ID of the action link group template from which to instantiate this action link group, or null if this group isn’t associated with a template.</td>
<td>33.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The URL for this action link group definition.</td>
<td>33.0</td>
</tr>
</tbody>
</table>
ConnectApi.ActivitySharingResult

The results of sharing a captured email or event.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>success</td>
<td>Boolean</td>
<td>Whether the share operation succeeded or not.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

ConnectApi.Actor Class

This class is abstract.

Superclass of:
- ConnectApi.ActorWithId Class
- ConnectApi.RecommendedObject
- ConnectApi.UnauthenticatedUser Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>

<td>Boolean</td>
<td>Indicates whether the transaction was successful.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**ConnectApi.BatchResult**

The result of an operation returned by a batch method.

**Namespace**

ConnectApi

**Usage**

Calls to batch methods return a list of BatchResult objects. Each element in the BatchResult list corresponds to the strings in the list parameter passed to the batch method. The first element in the BatchResult list matches the first string passed in the list parameter, the second element corresponds with the second string, and so on. If only one string is passed, the BatchResult list contains a single element.
Example

The following example shows how to obtain and iterate through the returned `ConnectApi.BatchResult` objects. The code adds two group IDs to a list. One of group IDs is incorrect, which causes a failure when the code calls the batch method. After it calls the batch method, it iterates through the results to determine whether the operation was successful or not for each group ID in the list. The code writes the ID of every group that was processed successfully to the debug log. The code writes an error message for every failed group.

This example generates one successful operation and one failure.

```java
List<String> myList = new List<String>();
// Add one correct group ID.
myList.add('0F9D00000000oOT');
// Add one incorrect group ID.
myList.add('0F9D00000000izf');

ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterGroups.getGroupBatch(null, myList);

// Iterate through each returned result.
for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the group ID.
        ConnectApi.ChatterGroupSummary groupSummary;
        if (batchResult.getResult() instanceof ConnectApi.ChatterGroupSummary) {
            groupSummary = (ConnectApi.ChatterGroupSummary) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(groupSummary.id);
    } else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
```

IN THIS SECTION:

BatchResult Methods

BatchResult Methods

The following are instance methods for `BatchResult`.

IN THIS SECTION:

getError()
If an error occurred, returns a `ConnectApi.ConnectApiException` object providing the error code and description.

getErrorMessage()
Returns a String that contains an error message.
getErrorTypeName()
Returns a String that contains the name of the error type.

getResult()
Returns an object that contains the results of the batch operation. The object is typed according to the batch method. For example, if you call getMembershipBatch(), a successful call to BatchResult getResult() returns a ConnectApi.GroupMembership object.

isSuccess()
Returns a Boolean that is set to true if the batch operation was successful for this object, false otherwise.

g.getError()
If an error occurred, returns a ConnectApi.ConnectApiException object providing the error code and description.

**Signature**

```java
public ConnectApi.ConnectApiException getError()
```

**Return Value**

Type: ConnectApi.ConnectApiException

g.getErrorMessage()
Returns a String that contains an error message.

**Signature**

```java
public String getErrorMessage()
```

**Return Value**

Type: String

**Usage**

The error message doesn't make a round trip through a Visualforce view state, because exceptions can't be serialized.
getResult()
Returns an object that contains the results of the batch operation. The object is typed according to the batch method. For example, if you call getMembershipBatch(), a successful call to BatchResult getResult() returns a ConnectApi.GroupMembership object.

**Signature**

```java
public Object getResult()
```

**Return Value**

Type: Object

isSuccess()
Returns a Boolean that is set to `true` if the batch operation was successful for this object, `false` otherwise.

**Signature**

```java
public Boolean isSuccess()
```

**Return Value**

Type: Boolean

**ConnectApi.BlankRecordField Class**
Subclass of ConnectApi.AbstractRecordField Class
A record field displayed as a place holder in a grid of fields.

**ConnectApi.BookmarkSummary**
Summary of a bookmark.
Subclass of ConnectApi.UserFeedEntityActivitySummary
No additional properties.

**ConnectApi.BookmarksCapability Class**
If a feed element has this capability, the context user can bookmark it.
Subclass of ConnectApi.FeedElementCapability Class.
Available Version | Description | Type | Property Name
--- | --- | --- | ---
32.0 | Indicates whether the feed element has been bookmarked by the context user (true) or not (false). | Boolean | isBookmarkedByCurrentUser

- ConnectApi.FeedElementCapabilities Class

**ConnectApi.BundleCapability Class**

If a feed element has this capability, it has a container of feed elements called a *bundle*.

This class is abstract.

Subclass of ConnectApi.FeedElementCapability Class.

Superclass of:
- ConnectApi.GenericBundleCapability Class
- ConnectApi.TrackedChangeBundleCapability

#### Property Table

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>bundleType</td>
<td>ConnectApi.BundleType</td>
<td>Defines this feed element's bundle type. The bundle type determines what additional information appears in the bundle.</td>
<td>31.0</td>
</tr>
<tr>
<td>page</td>
<td>ConnectApi.FeedElementPage</td>
<td>A collection of feed elements.</td>
<td>31.0</td>
</tr>
<tr>
<td>totalElements</td>
<td>Integer</td>
<td>The total number of feed elements that this bundle aggregates.</td>
<td>31.0</td>
</tr>
</tbody>
</table>

See Also:
- ConnectApi.FeedElementCapabilities Class

**ConnectApi.CandidateAnswersStatus**

The status of candidate answers on a feed element.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>hasCandidateAnswers</td>
<td>Boolean</td>
<td>Indicates whether candidate answers are available for a question.</td>
<td>41.0</td>
</tr>
<tr>
<td>hasCandidateAnswersPublished</td>
<td>Boolean</td>
<td>Indicates whether any candidate answers are published.</td>
<td>41.0</td>
</tr>
</tbody>
</table>
### ConnectApi.QuestionAndAnswersCapability Class

If a feed element has this capability, it renders a canvas app.

Subclass of [ConnectApi.FeedElementCapability Class](#).

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>hasCandidateAnswersRated</td>
<td>Boolean</td>
<td>Indicates whether any candidate answers are rated.</td>
<td>41.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- [ConnectApi.QuestionAndAnswersCapability Class](#)

### ConnectApi.CanvasCapability Class

If a feed element has this capability, it renders a canvas app.

Subclass of [ConnectApi.FeedElementCapability Class](#).

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>A description of the canvas app. The maximum size is 255 characters.</td>
<td>32.0</td>
</tr>
<tr>
<td>developerName</td>
<td>String</td>
<td>The API name (developer name) of the connected app.</td>
<td>32.0</td>
</tr>
<tr>
<td>height</td>
<td>String</td>
<td>The height of the canvas app in pixels.</td>
<td>32.0</td>
</tr>
<tr>
<td>icon</td>
<td>ConnectApi.Icon</td>
<td>The icon for the canvas app.</td>
<td>32.0</td>
</tr>
<tr>
<td>namespacePrefix</td>
<td>String</td>
<td>A unique namespace prefix for the canvas app.</td>
<td>32.0</td>
</tr>
<tr>
<td>parameters</td>
<td>String</td>
<td>JSON parameters passed to the canvas app.</td>
<td>32.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>A thumbnail URL to a preview image. The maximum thumbnail size is 120 pixels by 120 pixels.</td>
<td>32.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>A title for the canvas link.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- [ConnectApi.FeedElementCapabilities Class](#)

### ConnectApi.CaseCommentCapability Class

If a feed element has this capability, it has a case comment on the case feed.

Subclass of [ConnectApi.FeedElementCapability Class](#).

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actorType</td>
<td>ConnectApi.CaseActorType</td>
<td>Specifies the type of user who made the comment.</td>
<td>32.0</td>
</tr>
<tr>
<td>createdBy</td>
<td>ConnectApi.Actor</td>
<td>Information about the user who created the comment.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- [ConnectApi.FeedElementCapabilities Class](#)
### Property Name | Type | Description | Available Version
--- | --- | --- | ---
createdDate | Datetime | ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z. | 32.0
eventType | ConnectApi.CaseCommentEventType | Specifies an event type for a comment in the case feed. | 32.0
id | String | 18-character ID of case comment. | 32.0
published | Boolean | Specifies whether the comment has been published. | 32.0
text | String | Text of the case comment. | 32.0

ConnectApi.FeedElementCapabilities Class

**ConnectApi.ChangeItemOutputRepresentation**

Financial information on a change order. The values represent the deltas of the values on the associated OrderSummary.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>grandTotalAmount</td>
<td>Double</td>
<td>Change to the GrandTotalAmount field.</td>
<td>48.0</td>
</tr>
<tr>
<td>totalAdjustedDeliveryAmount</td>
<td>Double</td>
<td>Change to the TotalAdjustedDeliveryAmount field.</td>
<td>48.0</td>
</tr>
<tr>
<td>totalAdjustedDeliveryTaxAmount</td>
<td>Double</td>
<td>Change to the TotalAdjustedDeliveryTaxAmount field.</td>
<td>48.0</td>
</tr>
<tr>
<td>totalAdjustedProductAmount</td>
<td>Double</td>
<td>Change to the TotalAdjustedProductAmount field.</td>
<td>48.0</td>
</tr>
<tr>
<td>totalAdjustedProductTaxAmount</td>
<td>Double</td>
<td>Change to the TotalAdjustedProductTaxAmount field.</td>
<td>48.0</td>
</tr>
<tr>
<td>totalAdjustmentDistributedAmount</td>
<td>Double</td>
<td>Change to the TotalAdjustmentDistributedAmount field.</td>
<td>48.0</td>
</tr>
<tr>
<td>totalAdjustmentDistributedTaxAmount</td>
<td>Double</td>
<td>Change to the TotalAdjustmentDistributedTaxAmount field.</td>
<td>48.0</td>
</tr>
<tr>
<td>totalAmount</td>
<td>Double</td>
<td>Change to the TotalAmount field.</td>
<td>48.0</td>
</tr>
<tr>
<td>totalExcessFundsAmount</td>
<td>Double</td>
<td>Change to the TotalExcessFundsAmount field.</td>
<td>48.0</td>
</tr>
<tr>
<td>totalRefundableAmount</td>
<td>Double</td>
<td>Change to the TotalRefundableAmount field.</td>
<td>48.0</td>
</tr>
</tbody>
</table>
### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>totalTaxAmount</td>
<td>Double</td>
<td>Change to the TotalTaxAmount field.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

- ConnectApi.SubmitReturnOutputRepresentation

### ConnectApi.ChatterActivity Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>commentCount</td>
<td>Integer</td>
<td>Total number of comments in the org or community made by the user.</td>
<td>28.0</td>
</tr>
<tr>
<td>commentReceivedCount</td>
<td>Integer</td>
<td>Total number of comments in the org or community received by the user.</td>
<td>28.0</td>
</tr>
<tr>
<td>likeReceivedCount</td>
<td>Integer</td>
<td>Total number of likes and upvotes (in version 45.0 and later) on posts and comments in the org or community received by the user.</td>
<td>28.0</td>
</tr>
<tr>
<td>postCount</td>
<td>Integer</td>
<td>Total number of posts in the org or community made by the user.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.UserDetail Class

### ConnectApi.ChatterActivitySummary

Summary of Chatter activity.
Subclass of ConnectApi.UserFeedEntityActivitySummary

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>commentCount</td>
<td>Integer</td>
<td>Total number of comments in the org or community made by the user.</td>
<td>42.0</td>
</tr>
<tr>
<td>commentReceivedCount</td>
<td>Integer</td>
<td>Total number of comments in the org or community received by the user.</td>
<td>42.0</td>
</tr>
<tr>
<td>likeReceivedCount</td>
<td>Integer</td>
<td>Total number of likes and upvotes (in version 45.0 and later) on posts and comments in the org or community received by the user.</td>
<td>42.0</td>
</tr>
<tr>
<td>postCount</td>
<td>Integer</td>
<td>Total number of posts in the org or community made by the user.</td>
<td>42.0</td>
</tr>
</tbody>
</table>
### ConnectApi.ChatterConversation Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>conversationId</td>
<td>String</td>
<td>The ID for the conversation</td>
<td>29.0</td>
</tr>
<tr>
<td>conversationUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the conversation</td>
<td>29.0</td>
</tr>
<tr>
<td>members</td>
<td>List&lt;ConnectApi.UserSummary&gt;</td>
<td>List of users in the conversation</td>
<td>29.0</td>
</tr>
<tr>
<td>messages</td>
<td>ConnectApi.ChatterMessagePage</td>
<td>The content of the conversation</td>
<td>29.0</td>
</tr>
<tr>
<td>read</td>
<td>Boolean</td>
<td>Specifies if the conversation is read (true) or not read (false)</td>
<td>29.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ChatterConversationPage Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>conversations</td>
<td>List&lt;ConnectApi.ChatterConversationSummary&gt;</td>
<td>List of conversations on the page</td>
<td>29.0</td>
</tr>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>29.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>29.0</td>
</tr>
<tr>
<td>nextPageToken</td>
<td>String</td>
<td>Token identifying the next page, or null if there isn’t a next page.</td>
<td>29.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or null if there isn’t a next page.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ChatterConversationSummary Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>The ID for the conversation summary</td>
<td>29.0</td>
</tr>
<tr>
<td>latestMessage</td>
<td>ConnectApi.ChatterMessage</td>
<td>The contents of the latest message</td>
<td>29.0</td>
</tr>
<tr>
<td>members</td>
<td>List&lt;ConnectApi.UserSummary&gt;</td>
<td>List of members in the conversation</td>
<td>29.0</td>
</tr>
<tr>
<td>read</td>
<td>Boolean</td>
<td>Specifies if the conversation is read (true) or not read (false)</td>
<td>29.0</td>
</tr>
</tbody>
</table>
### ConnectApi.ChatterGroup Class

This class is abstract.

Subclass of `ConnectApi.ActorWithId` Class

Superclass of:
- `ConnectApi.ChatterGroupDetail` Class
- `ConnectApi.ChatterGroupSummary` Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>additionalLabel</td>
<td>String</td>
<td>An extra label for the group, for example, &quot;Archived,&quot; &quot;Private,&quot; or &quot;Private With Customers.&quot; If there isn’t an extra label, the value is null.</td>
<td>30.0</td>
</tr>
<tr>
<td>announcement</td>
<td>ConnectApi.Announcement</td>
<td>The current announcement for this group. An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it’s deleted or replaced by another announcement.</td>
<td>31.0</td>
</tr>
<tr>
<td>bannerPhoto</td>
<td>ConnectApi.BannerPhoto</td>
<td>The banner photo for the group.</td>
<td>36.0</td>
</tr>
<tr>
<td>canHaveChatterGuests</td>
<td>Boolean</td>
<td>true if this group allows Chatter guests.</td>
<td>28.0</td>
</tr>
<tr>
<td>community</td>
<td>ConnectApi.Reference</td>
<td>Information about the community the group is in.</td>
<td>28.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>Group’s description.</td>
<td>28.0</td>
</tr>
<tr>
<td>emailToChatterAddress</td>
<td>String</td>
<td>Group’s email address for posting to this group by email. Returns null if Chatter emails and posting to Chatter by email aren’t both enabled in your organization.</td>
<td>30.0</td>
</tr>
<tr>
<td>isArchived</td>
<td>Boolean</td>
<td>Specifies whether the group is archived (true) or not (false).</td>
<td>29.0</td>
</tr>
<tr>
<td>isAutoArchiveDisabled</td>
<td>Boolean</td>
<td>Specifies whether automatic archiving is disabled for the group (true) or not (false).</td>
<td>29.0</td>
</tr>
<tr>
<td>isBroadcast</td>
<td>Boolean</td>
<td>Specifies whether the group is a broadcast group (true) or not (false). In a broadcast group, only group owners and managers can post to the group.</td>
<td>36.0</td>
</tr>
<tr>
<td>lastFeedElementPostDate</td>
<td>Datetime</td>
<td>ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z, of the most recent feed element posted to the group.</td>
<td>31.0</td>
</tr>
<tr>
<td>Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>------------------</td>
<td>---------------------</td>
<td>------------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>lastFeedItemPostDate</td>
<td>Datetime</td>
<td>ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z, of the most recent feed item posted to the group. Use <code>lastFeedElementPosted</code>.</td>
<td>28.0–30.0</td>
</tr>
<tr>
<td>memberCount</td>
<td>Integer</td>
<td>Total number of group members.</td>
<td>28.0</td>
</tr>
</tbody>
</table>
| myRole           | ConnectApi.GroupMembership.TypeEnum | Type of membership the user has with the group.  
|                  |                     | • GroupOwner  
|                  |                     | • GroupManager

- ConnectApi.FeedItem Class

**ConnectApi.CloseCapability**

If a feed element has this capability, users with permission can close it.

Users can’t edit (specifically the feed item body or title), comment on, or delete a closed feed element. If the closed feed element is a poll, users can’t vote on it. Users can’t edit (specifically the comment body) or delete a comment on a closed feed element or select or remove it as best answer.

Admins and moderators can edit and delete closed feed elements and comments on closed feed elements. Admins and moderators can select or remove the best answer status on comments on closed feed elements.

SEE ALSO:

ConnectApi.FilesCapability

**ConnectApi.ContentCapability**

If a comment has this capability, it has a file attachment.

Subclass of ConnectApi.FeedElementCapability Class.

For files attached to a feed post (instead of a comment) in version 36.0 and later, use ConnectApi.FilesCapability.

If content is deleted from a feed element after it’s posted or if the access to the content is changed to private, the ConnectApi.ContentCapability exists, however most of its properties are null.

<td>isMandatory</td>
<td>Boolean</td>
<td>Specifies whether this field is mandatory for the item type.</td>
<td>39.0</td>
</tr>
<tr>
<td>maxLength</td>
<td>Integer</td>
<td>Maximum length of the value of this field.</td>
<td>39.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the field.</td>
<td>39.0</td>
</tr>
</tbody>
</table>
**Property Name** | **Type** | **Description** | **Available Version**
--- | --- | --- | ---
type | ConnectApi.ContentHubVariableType | Data type of the value of the field. Values are: BooleanType, DateTimeType, DecimalType, HtmlType, IdType, IntegerType, StringType, UriType, XmlType | 39.0

**SEE ALSO:**
ConnectApi.ContentHubItemTypeDetail

**ConnectApi.ContentHubItemTypeDetail**
The details of an item type associated with a repository folder.
Subclass of ConnectApi.AbstractContentHubItemType

**Property Name** | **Type** | **Description** | **Available Version**
--- | --- | --- | ---
fields | List<ConnectApi.ContentHubFieldDefinition> | A list of fields that the context user is allowed to set in the metadata of this item type. | 39.0

**ConnectApi.ContentHubItemTypeSummary**
The summary of an item type associated with a repository folder.
Subclass of ConnectApi.AbstractContentHubItemType

No additional properties.

**SEE ALSO:**
ConnectApi.ContentHubAllowedItemTypeCollection

**ConnectApi.ContentHubPermissionType**
A permission type.

**Property Name** | **Type** | **Description** | **Available Version**
--- | --- | --- | ---
id | String | Internal ID of the permission type in the repository. | 39.0
<table>

<td>URL to the list of items in the repository root folder.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.ContentHubRepositoryCollection

### ConnectApi.ContentHubRepositoryAuthentication

Authentication information for a repository.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>authFlowUrl</td>
<td>String</td>
<td>Depends on the authProtocol.</td>
<td>40.0</td>
</tr>
</tbody>
</table>
| authProtocol    | ConnectApi.ContentHub.Authentication.Protocol | Authentication protocol used for the repository. Values are:  
|                 |                       | • NoAuthentication—null.                                                      |                   |
|                 |                       | • Oauth—URL to start the OAuth flow.                                         |                   |
|                 |                       | • Password—URL to the authentication settings for external systems.          |                   |
| userHasAuthSettings | Boolean              | Specifies whether the user has credentials or the administrator configured the external data source to use the same set of credentials for every user (true). Otherwise, false. | 40.0              |

**SEE ALSO:**
- ConnectApi.ContentHubRepository

### ConnectApi.ContentHubRepositoryCollection

A collection of repositories.
### ConnectApi.ContentHubRepositoryFeatures

The features of a repository.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>canBrowse</td>
<td>Boolean</td>
<td>Specifies whether the repository’s folder hierarchy can be browsed (true) or not (false).</td>
<td>39.0</td>
</tr>
<tr>
<td>canSearch</td>
<td>Boolean</td>
<td>Specifies whether the repository can be searched (true) or not (false).</td>
<td>39.0</td>
</tr>
</tbody>
</table>

Image file details.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>height</td>
<td>Integer</td>
<td>Image’s height in pixels.</td>
<td>40.0</td>
</tr>
<tr>
<td>imageFormat</td>
<td>String</td>
<td>Image’s format.</td>
<td>40.0</td>
</tr>
<tr>
<td>orientation</td>
<td>String</td>
<td>Image’s EXIF orientation value, if present.</td>
<td>40.0</td>
</tr>
<tr>
<td>width</td>
<td>Integer</td>
<td>Image’s width in pixels.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.InlineImageSegment

### ConnectApi.CreateCreditMemoOutputRepresentation

ID of a created Credit Memo.

Subclass of ConnectApi.BaseOutputRepresentation.
### ConnectApi.CreateOrderPaymentSummaryOutputRepresentation

ID of the created Order Payment Summary.

Subclass of `ConnectApi.BaseOutputRepresentation`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>orderPaymentSummaryId</code></td>
<td>String</td>
<td>ID of the Order Payment Summary.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

### ConnectApi.CurrencyRecordField Class

Subclass of `ConnectApi.LabeledRecordField Class`

A record field containing a currency value.

### ConnectApi.CustomListAudienceCriteria

Criteria for the custom list type of custom recommendation audience.

Subclass of `ConnectApi.AudienceCriteria`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>memberCount</code></td>
<td>Integer</td>
<td>Total number of members in the custom recommendation audience.</td>
<td>36.0</td>
</tr>
<tr>
<td><code>members</code></td>
<td><a href="#">ConnectApi.UserReferencePage</a></td>
<td>Members of the custom recommendation audience.</td>
<td>36.0</td>
</tr>
</tbody>
</table>

### ConnectApi.DashboardComponentSnapshotCapability

If a feed element has this capability, it has a dashboard component snapshot. A snapshot is a static image of a dashboard component at a specific point in time.

Subclass of `ConnectApi.FeedElementCapability Class`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>dashboardComponentSnapshot</code></td>
<td><a href="#">ConnectApi.DashboardComponentSnapshot</a></td>
<td>The dashboard component snapshot.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

- [ConnectApi.FeedElementCapabilities Class](#)
**ConnectApi.DashboardComponentSnapshot**

Represents both dashboard component snapshots and alerts you receive when a dashboard component value crosses a threshold.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>componentId</td>
<td>String</td>
<td>18-character ID of the dashboard component.</td>
<td>32.0</td>
</tr>
<tr>
<td>componentName</td>
<td>String</td>
<td>The dashboard component name.</td>
<td>32.0</td>
</tr>
<tr>
<td>dashboardBodyText</td>
<td>String</td>
<td>Display this text next to the actor in the feed element. Use this text in place of the default body text.</td>
<td>32.0</td>
</tr>
<tr>
<td>dashboardId</td>
<td>String</td>
<td>18-character ID of the dashboard.</td>
<td>32.0</td>
</tr>
<tr>
<td>dashboardName</td>
<td>String</td>
<td>The name of the dashboard.</td>
<td>32.0</td>
</tr>
<tr>
<td>fullSizeImageUrl</td>
<td>String</td>
<td>The source URL to retrieve the full-size image of a snapshot. Access this URL with OAuth credentials.</td>
<td>32.0</td>
</tr>
<tr>
<td>lastRefreshDate</td>
<td>Datetime</td>
<td>ISO 8601 date specifying when this dashboard component was last refreshed.</td>
<td>32.0</td>
</tr>
<tr>
<td>lastRefreshDateDisplayText</td>
<td>String</td>
<td>Display text for the last refresh date, for example, “Last Refreshed on October 31, 2013.”</td>
<td>32.0</td>
</tr>
<tr>
<td>runningUser</td>
<td>ConnectApi.UserSummary</td>
<td>The running user of the dashboard at the time the snapshot was posted. This value may be null. Each dashboard has a running user, whose security settings determine which data to display in a dashboard.</td>
<td>32.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>The source URL to retrieve the thumbnail image of a snapshot. Access this URL with OAuth credentials.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>socialAccountId</td>
<td>String</td>
<td>ID of the social account that deletes the social post.</td>
<td>46.0</td>
</tr>
<tr>
<td>socialPostId</td>
<td>String</td>
<td>ID of the social post to delete.</td>
<td>46.0</td>
</tr>
</tbody>
</table>

**ConnectApi.DigestJob**

Represents a successfully enqueued API digest job request.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>period</td>
<td>ConnectApi.</td>
<td>Time period that’s included in a Chatter email digest.</td>
<td>37.0</td>
</tr>
<tr>
<td></td>
<td>DigestPeriod</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>Values are:</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• DailyDigest—The email includes up to the 50 latest posts</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>from the previous day.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• WeeklyDigest—The email includes up to the 50 latest</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>posts from the previous week.</td>
<td></td>
</tr>
</tbody>
</table>
ConnectApi.DirectMessageCapability

If a feed element has this capability, it's a direct message.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>memberChanges</td>
<td>ConnectApi. DirectMessageMemberActivityPage</td>
<td>Member activities of the direct message, with the most recent activity first.</td>
<td>40.0</td>
</tr>
<tr>
<td>members</td>
<td>ConnectApi. DirectMessageMemberPage</td>
<td>Members included in the direct message.</td>
<td>39.0</td>
</tr>
<tr>
<td>originalMembers</td>
<td>ConnectApi. DirectMessageMemberPage</td>
<td>Original members of the direct message.</td>
<td>40.0</td>
</tr>
<tr>
<td>subject</td>
<td>String</td>
<td>Subject of the direct message.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

ConnectApi.FeedElementCapabilities Class

ConnectApi.DirectMessageMemberActivity

Direct message member activity.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>activityDate</td>
<td>Datetime</td>
<td>Direct message member activity date.</td>
<td>40.0</td>
</tr>
<tr>
<td>actor</td>
<td>ConnectApi. UserSummary</td>
<td>User who changed the direct message membership.</td>
<td>40.0</td>
</tr>
<tr>
<td>membersAdded</td>
<td>ConnectApi. DirectMessageMemberPage</td>
<td>Members added to the direct message as part of the activity.</td>
<td>40.0</td>
</tr>
<tr>
<td>membersRemoved</td>
<td>ConnectApi. DirectMessageMemberPage</td>
<td>Members removed from the direct message as part of the activity.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.DirectMessageMemberActivityPage

ConnectApi.DirectMessageMemberActivityPage

A page of direct message member activities.
### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>activities</td>
<td>List&lt;ConnectApi.DirectMessageMemberActivity&gt;</td>
<td>Collection of direct message member activities.</td>
<td>40.0</td>
</tr>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>40.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>40.0</td>
</tr>
<tr>
<td>nextPageToken</td>
<td>String</td>
<td>Token identifying the next page, or null if there isn't a next page.</td>
<td>40.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or null if there isn't a next page.</td>

### ConnectApi.DirectMessageMemberPage

A collection of direct message members.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Page token to access the current page of direct message members.</td>
<td>39.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>URL to the current page of direct message members.</td>
<td>39.0</td>
</tr>
<tr>
<td>nextPageToken</td>
<td>String</td>
<td>Page token to access the next page of direct message members.</td>
<td>39.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>URL to the next page of direct message members.</td>
<td>39.0</td>
</tr>
<tr>
<td>users</td>
<td>List&lt;ConnectApi.UserSummary&gt;</td>
<td>Collection of direct message members.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

### ConnectApi.DownVoteSummary

Summary of a downvote.

Subclass of `ConnectApi.UserFeedEntityActivitySummary`

No additional properties.
ConnectApi.EditCapability

If a feed element or comment has this capability, users who have permission can edit it.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isEditRestricted</td>
<td>Boolean</td>
<td>Specifies whether editing this feed element or comment is restricted. If true, the context user can't edit this feed element or comment. If false, the context user may or may not have permission to edit this feed element or comment. To determine if the context user can edit a feed element or comment, use the isFeedElementEditableByMe(communityId, feedElementId) or isCommentEditableByMe(communityId, commentId) method.</td>
<td>34.0</td>
</tr>
<tr>
<td>isEditableByMeUrl</td>
<td>String</td>
<td>The URL to check if the context user is able to edit this feed element or comment.</td>
<td>34.0</td>
</tr>
<tr>
<td>lastEditedBy</td>
<td>ConnectApi.Actor</td>
<td>Who last edited this feed element or comment.</td>
<td>34.0</td>
</tr>
<tr>
<td>lastEditedDate</td>
<td>Datetime</td>
<td>The most recent edit date of this feed element or comment.</td>
<td>34.0</td>
</tr>
<tr>
<td>latestRevision</td>
<td>Integer</td>
<td>The most recent revision of this feed element or comment.</td>
<td>34.0</td>
</tr>
<tr>
<td>relativeLastEditedDate</td>
<td>String</td>
<td>Relative last edited date, for example, “2h ago.”</td>
<td>34.0</td>
</tr>
</tbody>
</table>

ConnectApi.EmailAddress

An email address.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>displayName</td>
<td>String</td>
<td>The display name for the email address.</td>
<td>29.0</td>
</tr>
<tr>
<td>emailAddress</td>
<td>String</td>
<td>The email address.</td>
<td>29.0</td>
</tr>
</tbody>
</table>
### ConnectApiNamespace

**relatedRecord**  
The summary of a related record, for example, a contact or user summary.

**SEE ALSO:**  
- ConnectApi.EmailMessageCapability

### ConnectApi.EmailAttachment

An email attachment in an email message.

**Property Name** | **Type** | **Description** | **Available Version**  
--- | --- | --- | ---  
attachment | ConnectApi.RecordSummary | Record summary of the attachment. | 36.0  
contentType | String | Type of attachment. | 36.0  
fileName | String | Name of the attachment. | 36.0

**SEE ALSO:**  
- ConnectApi.EmailMessageCapability

### ConnectApi.EmailMergeFieldInfo

The map for objects and their merge fields.

**Property Name** | **Type** | **Description** | **Available Version**  
--- | --- | --- | ---  
entityToMergeFieldsMap | Map<String, ConnectApi.EmailMergeFieldCollectionInfo> | Map for multiple objects and their merge field collections. | 39.0

### ConnectApi.EmailMergeFieldCollectionInfo

The merge fields for an object.

**Property Name** | **Type** | **Description** | **Available Version**  
--- | --- | --- | ---  
mergeFields | List<String> | List of merge fields for a single object. | 39.0

**SEE ALSO:**  
- ConnectApi.EmailMergeFieldInfo
ConnectApi.EmailMessageCapability

If a feed element has this capability, it has an email message from a case.

Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>attachments</td>
<td>List&lt;ConnectApi.EmailAttachment&gt;</td>
<td>Attachments in the email message.</td>
<td>36.0</td>
</tr>
<tr>
<td>bccAddresses</td>
<td>List&lt;ConnectApi.EmailAddress&gt;</td>
<td>BCC addresses for the email message.</td>
<td>36.0</td>
</tr>
<tr>
<td>body</td>
<td>String</td>
<td>Body of the email message.</td>
<td>36.0</td>
</tr>
<tr>
<td>ccAddresses</td>
<td>List&lt;ConnectApi.EmailAddress&gt;</td>
<td>CC addresses for the email message.</td>
<td>36.0</td>
</tr>
<tr>
<td>direction</td>
<td>ConnectApi.EmailMessageDirection</td>
<td>Direction of the email message. Values are:</td>
<td>32.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Inbound—An inbound message (sent by a customer).</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Outbound—An outbound message (sent to a customer by a support agent).</td>
<td></td>
</tr>
<tr>
<td>emailMessageId</td>
<td>String</td>
<td>ID of the email message.</td>
<td>32.0</td>
</tr>
<tr>
<td>fromAddress</td>
<td>ConnectApi.EmailAddress</td>
<td>From address for the email message.</td>
<td>36.0</td>
</tr>
<tr>
<td>htmlExpand</td>
<td>Integer</td>
<td>Start location of previous email thread.</td>
<td>47.0</td>
</tr>
<tr>
<td>EmailThread</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>isRichText</td>
<td>Boolean</td>
<td>Indicates whether the body of the email message is in rich text format.</td>
<td>36.0</td>
</tr>
<tr>
<td>status</td>
<td>ConnectApi.EmailMessageStatus</td>
<td>Status of an email message on a case. Values are:</td>
<td>47.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• DraftStatus</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ForwardedStatus</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• NewStatus</td>
<td></td>

<tr>
<td></td>
<td></td>
<td>• ReadStatus</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• RepliedStatus</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• SentStatus</td>
<td></td>
</tr>
<tr>
<td>subject</td>
<td>String</td>
<td>Subject of the email message.</td>
<td>32.0</td>
</tr>
<tr>
<td>textBody</td>
<td>String</td>
<td>Body of the email message.</td>
<td>32.0–35.0</td>
</tr>
</tbody>
</table>

**Important:** In version 36.0 and later, use the `body` property.

| toAddresses       | List<ConnectApi.EmailAddress> | To addresses of the email message.                    | 32.0              |
### ConnectApi.Emoji

An emoji.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>category</td>
<td>String</td>
<td>Emoji category.</td>
<td>39.0</td>
</tr>
<tr>
<td>shortcut</td>
<td>String</td>
<td>Emoji shortcut.</td>
<td>39.0</td>
</tr>
<tr>
<td>unicodeCharacter</td>
<td>String</td>
<td>Emoji’s unicode character.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- [ConnectApi.EmojiCollection](#)

### ConnectApi.EmojiCollection

A collection of emojis.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>emojis</td>
<td>List&lt;ConnectApi.Emoji&gt;</td>
<td>A collection of emojis.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- [ConnectApi.SupportedEmojis](#)

### ConnectApi.EnhancedLinkCapability

If a feed element has this capability, it has a link that may contain supplemental information like an icon, a title, and a description.

Subclass of [ConnectApi.FeedElementCapability Class](#).

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>A description with a 500 character limit.</td>
<td>32.0</td>
</tr>
<tr>
<td>icon</td>
<td>ConnectApi.Icon</td>
<td>A icon.</td>
<td>32.0</td>
</tr>
<tr>
<td>linkRecordId</td>
<td>String</td>
<td>A ID associated with the link if the link URL refers to a Salesforce record.</td>
<td>32.0</td>
</tr>
</tbody>
</table>
### ConnectApi.EnsureFundsAsyncOutputRepresentation

ID of the background operation that interacts with the payment provider.

Subclass of `ConnectApi.BaseOutputRepresentation`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>background</td>
<td>String</td>
<td>ID of the background operation.</td>
<td>48.0</td>
</tr>
<tr>
<td>OperationId</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### ConnectApi.EnsureRefundsAsyncOutputRepresentation

ID of the background operation that interacts with the payment provider.

Subclass of `ConnectApi.BaseOutputRepresentation`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>background</td>
<td>String</td>
<td>ID of the background operation.</td>
<td>48.0</td>
</tr>
<tr>
<td>OperationId</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### ConnectApi.EntityLabel

An entity's label.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>label</td>
<td>String</td>
<td>Localized singular label of the entity.</td>
<td>40.0</td>
</tr>
<tr>
<td>labelPlural</td>
<td>String</td>
<td>Localized plural label of the entity.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

### ConnectApi.EntityLinkSegment Class

Subclass of `ConnectApi.MessageSegment Class`
**Available Version**
- 28.0

**Description**
- A set of small, medium, and large icons that indicate whether the entity is a file, group, record, or user. The motif can also contain the object’s base color.

**Available Version**
- 28.0

**Description**
- A reference to the link object if applicable, otherwise, null.

---

### ConnectApi.EntityRecommendation

A Chatter, custom, or static recommendation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>actOnUrl</code></td>
<td>String</td>
<td>For user, file, group, topic, and record entity types, use this Chatter REST URL with a POST request to take action on the recommendation. For <code>ConnectApi.RecommendedObject</code> entity types, such as custom recommendations, use the <code>actionUrl</code> property of the <code>ConnectApi.PlatformAction Class</code> to take action on the recommendation.</td>
<td>32.0</td>
</tr>
<tr>
<td><code>action</code></td>
<td><code>ConnectApi.Recommendation ActionType</code></td>
<td>Specifies the action to take on a recommendation. - <code>follow</code>—Follow a file, record, topic, or user. - <code>join</code>—Join a group. - <code>view</code>—View a file, group, article, record, user, custom, or static recommendation.</td>
<td>32.0</td>
</tr>
<tr>
<td><code>entity</code></td>
<td><code>ConnectApi.Actor</code></td>
<td>The entity with which the receiver is recommended to take action.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

---

### ConnectApi.ErrorResponse

Base error response.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>errorCode</code></td>
<td>String</td>
<td>Error code.</td>
<td>48.0</td>
</tr>
<tr>
<td><code>message</code></td>
<td>String</td>
<td>More error detail, if available.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- `ConnectApi.BaseOutputRepresentation`
### ConnectApi.Extension

An extension.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>alternative Representation</td>
<td><code>ConnectApi. Alternative</code></td>
<td>Alternative representation of the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>attachmentId</td>
<td>String</td>
<td>Attachment ID of the extension.</td>
<td>41.0</td>
</tr>
<tr>
<td>extensionId</td>
<td>String</td>
<td>ID of the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>payload</td>
<td>String</td>
<td>Payload associated with the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>payloadVersion</td>
<td>String</td>
<td>Payload version that identifies the structure of the payload associated with the extension.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

- `ConnectApi.ExtensionsCapability`

### ConnectApi.ExtensionDefinition

An extension’s definition.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>canAccess</td>
<td>Boolean</td>
<td>Indicates whether users can access the extension when it’s associated with a feed element.</td>
<td>40.0</td>
</tr>
<tr>
<td>canCreate</td>
<td>Boolean</td>
<td>Indicates whether users can create a feed element with the extension in the org.</td>
<td>40.0</td>
</tr>
<tr>
<td>createdDate</td>
<td>Datetime</td>
<td>Date when the extension was created.</td>
<td>40.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>iconUrl</td>
<td>String</td>
<td>URL to the icon for the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>information Collection</td>
<td>List&lt;<code>ConnectApi. AbstractExtension Information</code>&gt;</td>
<td>Collection of extension information.</td>
<td>40.0</td>
</tr>
<tr>
<td>isEnabled InCommunity</td>
<td>Boolean</td>
<td>Indicates whether the extension is enabled in communities.</td>
<td>40.0 only</td>
</tr>
<tr>
<td>isEnabled InLightningPublisher</td>
<td>Boolean</td>
<td>Indicates whether the extension is enabled in the Lightning publisher.</td>
<td>40.0 only</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the extension.</td>
<td>40.0</td>
</tr>
</tbody>
</table>
### ConnectApi.ExtensionDefinitions

A collection of extension definitions.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>40.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>40.0</td>
</tr>
<tr>
<td>extensionDefinitions</td>
<td>List&lt;ConnectApi.ExtensionDefinition&gt;</td>
<td>Collection of extension definitions.</td>
<td>40.0</td>
</tr>
<tr>
<td>nextPageToken</td>
<td>String</td>
<td>Token identifying the next page, or null if there isn’t a next page.</td>
<td>40.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or null if there isn’t a next page.</td>
<td>40.0</td>
</tr>
<tr>
<td>total</td>
<td>Integer</td>
<td>Total number of extensions returned.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ExtensionsCapability

If a feed element has this capability, it has one or more extension attachments.

Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>items</td>
<td>List&lt;ConnectApi.Extension&gt;</td>
<td>List of extensions associated with the feed element.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ExternalFilePermissionInformation

External file permission information.
### ConnectApi Namespace

#### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>externalFilePermissionTypes</td>
<td>List&lt;ConnectApi.ContentHub.PermissionType&gt;</td>
<td>Available permission types for the parent folder of the external file, or null for non-external files or when includeExternalFilePermissionsInfo is false.</td>
<td>39.0</td>
</tr>
<tr>
<td>externalFilePermissionsFailure</td>
<td>Boolean</td>
<td>True if the retrieval of external file information failed or if includeExternalFilePermissionsInfo is false; false otherwise.</td>
<td>39.0</td>
</tr>
<tr>
<td>externalFilePermissionsInfoFailureReason</td>
<td>String</td>
<td>Explanation of the failure if a failure occurred and includeExternalFilePermissionsInfo is true; null otherwise.</td>
<td>39.0</td>
</tr>
<tr>
<td>externalFileSharingStatus</td>
<td>ConnectApi.ContentHub.ExternalItem.SharingType</td>
<td>Sharing status for the external file. Values are:</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td>• DomainSharing—File is shared with the domain.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• PrivateSharing—File is private or shared only with individuals.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• PublicSharing—File is publicly shared.</td>
<td>Value is null for non-external files or when includeExternalFilePermissionsInfo is false.</td>
<td></td>
</tr>
<tr>
<td>repositoryPublicGroups</td>
<td>List&lt;ConnectApi.RepositoryGroupSummary&gt;</td>
<td>Available public groups in the external repository or null for non-external files or when includeExternalFilePermissionsInfo is false.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

ConnectApi.AbstractRepositoryFile

### ConnectApi.Features

Features available to the context user in the org.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>activityReminderNotificationsEnabled</td>
<td>Boolean</td>
<td>Reserved for future use.</td>
<td>37.0</td>
</tr>
<tr>
<td>chatter</td>
<td>Boolean</td>
<td>Specifies whether Chatter is enabled.</td>
<td>28.0</td>
</tr>
<tr>
<td>chatterActivity</td>
<td>Boolean</td>
<td>Specifies whether user details include information about Chatter activity.</td>
<td>28.0</td>
</tr>
</tbody>
</table>
### Property | Type | Description | Available Version
--- | --- | --- | ---
chatterAnswers | Boolean | Specifies whether Chatter Answers is enabled. | 29.0
| | | ☢️ **Note:** With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18. | 
chatterGlobalInfluence | Boolean | Specifies whether user details include global Chatter activity. | 28.0
chatterGroupRecords | Boolean | Specifies whether Chatter groups can have records associated with them. | 30.0
chatterGroupRecordSharing | Boolean | Specifies whether Chatter records are implicitly shared among group members when records are added to groups. | 30.0
chatterMessages | Boolean | Specifies whether Chatter messages are enabled. | 28.0
chatterTopics | Boolean | Specifies whether topics are enabled. | 28.0
communitiesEnabled | Boolean | Specifies whether Salesforce Communities is enabled. | 31.0
communityModeration | Boolean | Specifies whether community moderation is enabled. | 29.0
communityReputation | Boolean | Specifies whether reputation is enabled for communities. | 32.0
dashboardComponentSnapshots | Boolean | Specifies whether the user can post dashboard component snapshots. | 28.0
defaultCurrencyIsoCode | String | ISO code of the default currency. Applicable only when multiCurrency is false. | 28.0
einsteinVoiceEnabled | Boolean | Reserved for future use. | 46.0
einsteinVoiceInPilotEnabled | Boolean | Reserved for future use. | 46.0
einsteinVoiceLoggingEnabled | Boolean | Reserved for future use. | 46.0
<table>
<thead>
<tr>

<td></td>
<td>• DirectMessages—Contains all feed items of the context user’s direct</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>messages.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Draft—Contains all the feed items that the context user drafted.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Files—Contains all feed items that contain files posted by people or</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>groups that the context user follows.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Filter—Contains the news feed filtered to contain feed items whose</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>parent is a specified object type.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Groups—Contains all feed items from all groups the context user either</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>owns or is a member of.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Home—Contains all feed items associated with any managed topic in a</td>

<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>feed is requested. Allows clients to avoid an empty feed when there aren’t</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>many personalized feed items.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Moderation—Contains all feed items that are flagged for moderation,</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>except direct messages. The Communities Moderation feed is available only</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>to users with Moderate Community Feeds permissions.</td>
<td></td>
</tr>
</tbody>
</table>
• **Mute**—Contains all feed items that the context user muted.

• **News**—Contains all updates for people the context user follows, groups the user is a member of, and files and records the user is following. Contains all updates for records whose parent is the context user. Contains every feed item and comment that mentions the context user or that mentions a group the context user is a member of.

• **PendingReview**—Contains all feed items and comments that are pending review.

• **People**—Contains all feed items posted by all people the context user follows.

• **Record**—Contains all feed items whose parent is a specified record, which could be a group, user, object, file, or any other standard or custom object. When the record is a group, the feed also contains feed items that mention the group. When the record is a user, the feed contains only feed items on that user. You can get another user’s record feed.

• **Streams**—Contains all feed items for any combination of up to 25 feed-enabled entities that the context user subscribes to in a stream. Examples of feed-enabled entities include people, groups, and records.

• **To**—Contains all feed items with mentions of the context user. Contains feed items the context user commented on and feed items created by the context user that are commented on.

• **Topics**—Contains all feed items that include the specified topic.

• **UserProfile**—Contains feed items created when a user changes records that can be tracked in a feed. Contains feed items whose parent is the user and feed items that @mention the user. This feed is different than the news feed, which returns more feed items, including group updates. You can get another user’s user profile feed.

- ConnectApi.FeedItemSummary

**ConnectApi.FeedElementCapability Class**

A feed element capability, which defines the characteristics of a feed element.

In API version 30.0 and earlier, most items can have comments, likes, topics, and so on. In version 31.0 and later, every item (and feed element) can have a unique set of capabilities. If a capability property exists on a feed element, that capability is available, even if the capability property doesn’t have a value. For example, if the ChatterLikes capability property exists on a feed element (with or without a value), the context user can like that feed element. If the capability property doesn’t exist, it isn’t possible to like that feed element. A capability can also contain associated data. For example, the Moderation capability contains data about moderation flags.

This class is abstract.

This class is a superclass of:
- ConnectApi.AssociatedActionsCapability Class
- ConnectApi.ApprovalCapability Class
- ConnectApi.BannerCapability Class
- ConnectApi.BookmarksCapability Class
- ConnectApi.BundleCapability Class
- ConnectApi.CanvasCapability Class
- ConnectApi.CaseCommentCapability Class
- ConnectApi.ChatterLikesCapability Class
- ConnectApi.CloseCapability
This class doesn’t have any properties.

### ConnectApi.FeedElementPage

A paged collection of ConnectApi.FeedElement objects.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>31.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>31.0</td>
</tr>
<tr>
<td>elements</td>
<td>List&lt;ConnectApi.FeedElement&gt;</td>
<td>Collection of feed elements.</td>
<td>31.0</td>
</tr>
</tbody>
</table>
### isModifiedToken
- **Type:** String
- **Description:** An opaque polling token to use in the `since` parameter of the `ChatterFeeds.isModified` method. The token describes when the feed was last modified.
- **Available Version:** 31.0

**Important:** This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.

### isModifiedUrl
- **Type:** String
- **Description:** A Chatter REST API URL with a `since` request parameter that contains an opaque token that describes when the feed was last modified. Returns `null` if the feed isn't a news feed. Use this URL to poll a news feed for updates.
- **Available Version:** 31.0

**Important:** This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.

### nextPageToken
- **Type:** String
- **Description:** Token identifying the next page, or `null` if there isn't a next page.
- **Available Version:** 31.0

### nextPageUrl
- **Type:** String
- **Description:** Chatter REST API URL identifying the next page, or `null` if there isn't a next page.
- **Available Version:** 31.0

### updatesToken
- **Type:** String
- **Description:** A token to use in a request to the `ConnectApi.ChatterFeeds.getFeedElementsUpdatedSince` method.
- **Available Version:** 31.0

### updatesUrl
- **Type:** String
- **Description:** A Chatter REST API feed resource containing the feed elements that have been updated since the feed was refreshed. If the feed doesn't support this feature, the value is `null`.
- **Available Version:** 31.0

**SEE ALSO:**
- `ConnectApi.BundleCapability Class`
- `ConnectApi.Feed Class`

### ConnectApi.FeedEnabledEntity
An entity that can have feeds associated with it.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>id</code></td>
<td>String</td>
<td>The 18-character ID of the record.</td>
<td>39.0</td>
</tr>
<tr>
<td>Property Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>---------------</td>
<td>--------------------</td>
<td>-----------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>motif</td>
<td>ConnectApi.Motif</td>
<td>Small, medium, and large icons indicating the record’s type.</td>
<td>39.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>The localized name of the record.</td>
<td>39.0</td>
</tr>
<tr>
<td>type</td>
<td>String</td>
<td>The type of the record.</td>
<td>39.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the record.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.ChatterStream

**ConnectApi.FeedEntityIsEditable**

Indicates if the context user can edit a feed element or comment.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>areAttachments</td>
<td>Boolean</td>
<td>true if the context user can add and remove attachments on the feed element or comment, false otherwise.</td>
<td>36.0</td>
</tr>
<tr>
<td>EditableByMe</td>
<td>Boolean</td>
<td>true if the context user can edit the feed element or comment, false otherwise.</td>
<td>34.0</td>
</tr>
<tr>
<td>feedEntityUrl</td>
<td>String</td>
<td>URL of the feed element or comment.</td>
<td>34.0</td>
</tr>
</tbody>
</table>

**ConnectApi.FeedEntityNotAvailableSummary**

A summary when the feed entity isn’t available.

This output class is a subclass of ConnectApi.FeedEntitySummary and has no properties.

**ConnectApi.FeedEntityReadSummary**

Summary of the feed post or comment that was read.

Subclass of ConnectApi.UserFeedEntityActivitySummary

No additional properties.

**ConnectApi.FeedEntityShareCapability**

If a feed element or comment has this capability, a feed entity is shared with it.

Subclass of ConnectApi.FeedElementCapability Class.
### ConnectApi.FeedEntitySummary

The summary of a feed entity that is shared with a feed element. This class is abstract.

**Superclass of:**
- ConnectApi.FeedItemSummary
- ConnectApi.FeedEntityNotAvailableSummary

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>feedEntity</td>
<td>ConnectApi.FeedEntitySummary</td>
<td>The summary of the feed entity that is shared with the feed element or comment.</td>

</table>

**SEE ALSO:**
- ConnectApi.FeedElementCapabilities Class

- **Bundle**—A container of feed elements. A bundle also has a body made up of message segments that can always be gracefully degraded to text-only values.
- **FeedItem**—A feed item has a single parent and is scoped to one community or across all communities. A feed item can have capabilities such as bookmarks, canvas, content, comment, link, poll. Feed items have a body made up of message segments that can always be gracefully degraded to text-only values.
- **Recommendation**—A recommendation is a feed element with a recommendations capability. A recommendation suggests records to follow, groups to join, or applications that are helpful to the context user.

</tbody>
</table>

One of these values:

- **ActivityEvent**—Feed item generated in Case Feed when an event or task associated with a parent record with a feed enabled is created or updated.
- **AdvancedTextPost**—A feed item with advanced text formatting, such as a group announcement post.
- **ApprovalPost**—Feed item with an approval capability. Approvers can act on the feed item parent.
- **AttachArticleEvent**—Feed item generated when an article is attached to a case in Case Feed.
- **BasicTemplateFeedItem**—Feed item with an enhanced link capability.
- **CallLogPost**—Feed item generated when a call log is saved to a case in Case Feed.
- **CanvasPost**—Feed item generated by a canvas app in the publisher or from Chatter REST API or Chatter in Apex. The post itself is a link to a canvas app.
- **CaseCommentPost**—Feed item generated when a case comment is saved in Case Feed.
- **ChangeStatusPost**—Feed item generated when the status of a case is changed in Case Feed.
- **ChatTranscriptionPost**—Feed item generated in Case Feed when a Live Agent chat transcript is saved to a case.
- **CollaborationGroupCreated**—Feed item generated when a new public group is created. Contains a link to the new group.
- **CollaborationGroupUnarchived**—Deprecated. Feed item generated when an archived group is activated.
- **ContentPost**—Feed item with a content capability.
- **CreateRecordEvent**—Feed item that describes a record created in the publisher.
<table>

<td>Boolean</td>
<td>true if the file is a major version; false if the file is a minor version. Major versions can't be replaced.</td>
<td>31.0</td>
</tr>
<tr>
<td>mimeType</td>
<td>String</td>
<td>File's MIME type.</td>
<td>28.0</td>
</tr>
<tr>
<td>moderationFlags</td>
<td>ConnectApi.ModerationFlags</td>
<td>Information about the moderation flags on a file. If ConnectApi.Features.communityModeration is false, this property is null.</td>
<td>30.0</td>
</tr>
<tr>
<td>modifiedDate</td>
<td>Datetime</td>
<td>An ISO 8601 format date string, for example, 2011-02-25T18:31:00Z. Modifications to the file from within Salesforce update this date.</td>
<td>28.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the file.</td>
<td>28.0</td>
</tr>
<tr>
<td>origin</td>
<td>String</td>
<td>Specifies the file source. Valid values are:</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Chatter—file came from Chatter</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Content—file came from content</td>
<td></td>
</tr>
<tr>
<td>owner</td>
<td>ConnectApi.User Summary</td>
<td>File's owner.</td>
<td>28.0</td>
</tr>
<tr>
<td>pdfRenditionStatus</td>
<td>String</td>
<td>Specifies if a PDF preview version of the file has been rendered.</td>
<td>28.0</td>
</tr>
<tr>
<td>publishStatus</td>
<td>ConnectApi.FilePublishStatus</td>
<td>Specifies the publish status of the file.</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• PendingAccess—File is pending publishing.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• PrivateAccess—File is private.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• PublicAccess—File is public.</td>
<td></td>
</tr>
<tr>
<td>renditionUrl</td>
<td>String</td>
<td>URL to the rendition for the file.</td>
<td>28.0</td>
</tr>
<tr>
<td>renditionUrl240By180</td>
<td>String</td>
<td>URL to the 240 x 180 rendition resource for the file. For shared files, renditions process asynchronously after upload. For private files, renditions process when the first file preview is requested, and aren't available immediately after the file is uploaded.</td>
<td>29.0</td>
</tr>
<tr>
<td>renditionUrl720By480</td>
<td>String</td>
<td>URL to the 720 x 480 rendition resource for the file. For shared files, renditions process asynchronously after upload. For private files, renditions process when the first file preview is requested, and aren't available immediately after the file is uploaded.</td>
<td>29.0</td>
</tr>
<tr>
<td>sharingOption</td>
<td>ConnectApi.FileSharingOption</td>
<td>Sharing option of the file. Values are:</td>
<td>35.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Allowed—Resharing of the file is allowed.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Restricted—Resharing of the file is restricted.</td>
<td></td>
</tr>

### ConnectApi.FilePreview

A file preview.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| format | ConnectApi.FilePreviewFormat | The format of the preview. Values are:  
  - Jpg—Preview format is JPG.  
  - Pdf—Preview format is PDF.  
  - Svg—Preview format is compressed SVG.  
  - Thumbnail—Preview format is 240 x 180 PNG.  
  - ThumbnailBig—Preview format is 720 x 480 PNG.  
  - ThumbnailTiny—Preview format is 120 x 90 PNG. | 39.0 |
| previewUrlCount | Integer | The total number of preview URLs for this preview format. | 39.0 |
| previewUrls | List<ConnectApi.FilePreviewUrl> | A list of file preview URLs. | 39.0 |
| status | ConnectApi.FilePreviewStatus | The availability status of the preview. Values are:  
  - Available—Preview is available.  
  - InProgress—Preview is being processed.  
  - NotAvailable—Preview is unavailable.  
  - NotScheduled—Generation of the preview isn’t scheduled yet. | 39.0 |
| url | String | The URL for the file preview. | 39.0 |

### ConnectApi.FileAsset

An asset file.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>baseAssetUrl</td>
<td>String</td>
<td>Base download URL of the asset.</td>
<td>45.0</td>
</tr>
<tr>
<td>baseUnauthenticatedAssetUrl</td>
<td>String</td>
<td>Base download URL of the asset for unauthenticated users if isVisibleByExternalUsers is true, otherwise null.</td>
<td>45.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the asset.</td>
<td>45.0</td>
</tr>
</tbody>
</table>
### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isVisibleByExternalUsers</td>
<td>Boolean</td>
<td>Indicates whether unauthenticated users can see the asset file (true) or not (false).</td>
<td>45.0</td>
</tr>
<tr>
<td>masterLabel</td>
<td>String</td>
<td>Master label of the asset.</td>
<td>45.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Unique name of the asset.</td>
<td>45.0</td>
</tr>
<tr>
<td>namespacePrefix</td>
<td>String</td>
<td>Namespace prefix of the package containing the asset.</td>
<td>45.0</td>
</tr>
<tr>
<td>type</td>
<td>String</td>
<td>Type of asset.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.FilePreviewCollection

A collection of file previews.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fileId</td>
<td>String</td>
<td>ID of the file.</td>
<td>39.0</td>
</tr>
<tr>
<td>previews</td>
<td>List&lt;ConnectApi.FilePreview&gt;</td>
<td>Previews supported for the file.</td>
<td>39.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the current page of file previews.</td>
<td>39.0</td>
</tr>
<tr>
<td>versionNumber</td>
<td>String</td>
<td>Version number of the file.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

- ConnectApi.InlineImageSegment

#### ConnectApi.FilePreviewUrl

A URL to a file preview.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>pageNumber</td>
<td>Integer</td>
<td>Preview page number starting from zero, or null for PDF files.</td>
<td>39.0</td>
</tr>
<tr>
<td>previewUrl</td>
<td>String</td>
<td>File preview URL.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

- ConnectApi.FilePreview
ConnectApi.FilesCapability

If a feed element has this capability, it has one or more file attachments.
Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>items</td>
<td>List&lt;ConnectApi.Content&gt;</td>
<td>Collection of files.</td>
<td>36.0</td>
</tr>
</tbody>
</table>

ConnectApi.FeedElementCapabilities Class

ConnectApi.FileSummary Class

A file summary
Subclass of ConnectApi.File
No additional properties.

ConnectApi.FollowerPage Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>28.0</td>
</tr>
<tr>
<td>followers</td>
<td>List&lt;ConnectApi.Subscription&gt;</td>
<td>List of subscriptions</td>
<td>28.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or null if there isn’t a next page.</td>
<td>28.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the previous page, or null if there isn’t a previous page.</td>
<td>28.0</td>
</tr>
<tr>
<td>total</td>
<td>Integer</td>
<td>Total number of followers across all pages</td>
<td>28.0</td>
</tr>
</tbody>
</table>

ConnectApi.FollowingCounts Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>people</td>
<td>Integer</td>
<td>Number of people user is following</td>
<td>28.0</td>
</tr>
<tr>
<td>records</td>
<td>Integer</td>
<td>Number of records user is following</td>
<td>28.0</td>
</tr>
</tbody>
</table>

Topics are a type of record that can be followed as of version 29.0.
### ConnectApi.FollowingPage Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>28.0</td>
</tr>
<tr>
<td>following</td>
<td>List&lt;ConnectApi.Subscription&gt;</td>
<td>List of subscriptions</td>
<td>28.0</td>
</tr>
<tr>
<td>nextPageUrl</td>

<td>Chatter REST API URL identifying the next page, or null if there isn’t a next page.</td>
<td>28.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the previous page, or null if there isn’t a previous page.</td>
<td>28.0</td>
</tr>
<tr>
<td>total</td>
<td>Integer</td>
<td>Total number of records being followed across all pages</td>
<td>28.0</td>
</tr>
</tbody>
</table>

### ConnectApi.FollowIntents

A list of follow intents for a social persona.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>follows</td>
<td>List&lt;ConnectApi.FollowSocialPersonaIntent&gt;</td>
<td>List of follow intents for the social persona.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

### ConnectApi.FollowSocialPersonaIntent

Follow intent on a social persona.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>managedSocialAccount</td>
<td>ConnectApi.ManagedSocialAccount</td>
<td>Managed social account that follows the social persona.</td>
<td>45.0</td>
</tr>
</tbody>
</table>
### ConnectApi Namespace

#### ConnectApi.FollowIntents

**Available Version**
- **45.0**

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>socialPersonaId</td>
<td>String</td>
<td>ID of the social persona to follow.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- [ConnectApi.FollowIntents](#)

#### ConnectApi.FulfillmentOrderCancelLineItemsOutputRepresentation

Wraps the base output.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

No additional properties.

#### ConnectApi.FulfillmentOrderInvoiceOutputRepresentation

ID of the created invoice.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>invoiceId</td>
<td>String</td>
<td>ID of the created invoice.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.FulfillmentOrderOutputRepresentation

A list of IDs of the created FulfillmentOrders.

Subclass of [ConnectApi.BaseOutputRepresentation](#).

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fulfillmentOrderIds</td>
<td>List&lt;String&gt;</td>
<td>A list of IDs of created Fulfillment Orders.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.GenericBundleCapability Class

If a feed element has this capability, the feed element has a group of other feed elements condensed into one feed element. This group is called a **bundle**.

Subclass of [ConnectApi.BundleCapability Class](#).

#### ConnectApi.GenericFeedElement Class

A concrete implementation of the abstract [ConnectApi.FeedElement class](#).

Subclass of [ConnectApi.FeedElement Class](#)
### ConnectApi.GlobalInfluence Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>percentile</td>
<td>String</td>
<td>Percentile value for the user’s influence rank within the organization or community</td>
<td>28.0</td>
</tr>
<tr>
<td>rank</td>
<td>Integer</td>
<td>Number indicating the user’s influence rank, relative to all other users within the organization or community</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.UserDetail Class

### ConnectApi.GroupChatterSettings Class

A user’s Chatter settings for a specific group.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>emailFrequency</td>
<td>ConnectApi.GroupEmailFrequencyEnum</td>
<td>The frequency with which a group member receives email from a group.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

### ConnectApi.GroupInformation Class

Describes the Information section of the group. If the group is private, this section is visible only to members.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>text</td>
<td>String</td>
<td>The text of the “Information” section of the group.</td>
<td>28.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>The title of the “Information” section of the group.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.ChatterGroupDetail Class

### ConnectApi.GroupMember Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>User's 18-character ID</td>
<td>28.0</td>
</tr>
<tr>
<td>lastFeed</td>
<td>Datetime</td>
<td>The date and time at which the group member last accessed the group feed.</td>
<td>31.0</td>
</tr>
<tr>
<td>role</td>
<td>ConnectApi.GroupMembershipTypeEnum</td>
<td>Type of membership the user has with the group.</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• GroupOwner</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• GroupManager</td>
<td></td>
</tr>
<tr>
<td>Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>------------------</td>
<td>---------------------</td>
<td>-----------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>Chatter REST API URL to this membership</td>
<td>28.0</td>
</tr>
<tr>
<td>user</td>
<td>ConnectApi.User</td>
<td>Information about the user who is subscribed to this group</td>
<td>28.0</td>
</tr>
</tbody>
</table>

</tbody>
</table>

ConnectApi.HashtagSegment Class

Subclass of ConnectApi.MessageSegment Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>tag</td>
<td>String</td>
<td>Text of the topic without the hash symbol (#)</td>
<td>28.0</td>
</tr>
<tr>
<td>topicUrl</td>
<td>String</td>
<td>Chatter REST API Topics resource that searches for the topic:</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>/services/data/v48.0/chatter/topics?exactMatch=true&amp;q=topic</td>
<td></td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>Chatter REST API Feed Items resource URL that searches for the topic in all feed items in an organization:</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>/services/data/v48.0/chatter/feed-items?q=topic</td>
<td></td>

ConnectApi.InlineImageSegment

An inline image in the feed body.  
Subclass of ConnectApi.MessageSegment Class

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>altText</td>
<td>String</td>
<td>Alt text for the inline image.</td>
<td>35.0</td>
</tr>
<tr>
<td>contentSize</td>
<td>Integer</td>
<td>Size of the file in bytes.</td>
<td>35.0</td>
</tr>
<tr>
<td>fileExtension</td>
<td>String</td>
<td>Extension of the file, such as gif.</td>
<td>37.0</td>
</tr>
<tr>
<td>thumbnails</td>
<td>ConnectApi.File PreviewCollection</td>
<td>Information about the available thumbnails for the image.</td>
<td>35.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the latest version of the inline image.</td>
<td>35.0</td>
</tr>
</tbody>
</table>

ConnectApi.InteractionsCapability

If a feed element has this capability, it has information about user interactions.  
Subclass of ConnectApi.FeedElementCapability Class.
### ConnectApi.Invitation

An invitation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>

### ConnectApi.LabeledRecordField Class

This class is abstract.

Subclass of [ConnectApi.AbstractRecordField Class](#)

Superclass of:
- [ConnectApi.CompoundRecordField Class](#)
- [ConnectApi.CurrencyRecordField Class](#)
- [ConnectApi.DateRecordField Class](#)
- [ConnectApi.PercentRecordField Class](#)
- [ConnectApi.PicklistRecordField Class](#)
• ConnectApi.RecordField Class
• ConnectApi.ReferenceRecordField Class
• ConnectApi.ReferenceWithDateRecordField Class

A record field containing a label and a text value.

⚠️ **Important:** The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>label</td>
<td>String</td>
<td>A localized string describing the record field.</td>
<td>29.0</td>
</tr>
<tr>
<td>text</td>
<td>String</td>
<td>The text value of the record field. All record fields have a text value. To ensure that all clients can consume new content, inspect the record field’s type property. If it isn’t recognized, render the text value as the default case.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

**ConnectApi.LightningExtensionInformation**

Lightning extension information.

Subclass of ConnectApi.AbstractExtensionInformation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>compositionComponent</td>
<td>String</td>
<td>Component to use in compose state.</td>
<td>40.0</td>
</tr>
<tr>
<td>headerTextLabel</td>
<td>String</td>
<td>Label for the extension’s header.</td>
<td>40.0</td>
</tr>
<tr>
<td>hoverTextLabel</td>
<td>String</td>
<td>Label for hovering over the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>renderComponent</td>
<td>String</td>
<td>Component to use in render or preview state.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

**ConnectApi.MessageBody Class**

Subclass of `ConnectApi.AbstractMessageBody Class`

No additional properties.

**SEE ALSO:**
- `ConnectApi.ChatterLikesCapability Class`
- `ConnectApi.ChatterMessage Class`
- `ConnectApi.Comment`
- `ConnectApi.FeedElement Class`
- `ConnectApi.FeedItemSummary`

**ConnectApi.MessageSegment Class**

This class is abstract.

Superclass of:
- `ConnectApi.ComplexSegment Class`
- `ConnectApi.EntityLinkSegment Class`
- `ConnectApi.FieldChangeSegment Class`
- `ConnectApi.FieldChangeNameSegment Class`
- `ConnectApi.FieldChangeValueSegment Class`
- `ConnectApi.HashtagSegment Class`
- `ConnectApi.InlineImageSegment`
- `ConnectApi.LinkSegment Class`
- `ConnectApi.MarkupBeginSegment`
- `ConnectApi.MarkupEndSegment`
- `ConnectApi.MentionSegment Class`
- `ConnectApi.MoreChangesSegment Class`
- `ConnectApi.ResourceLinkSegment Class`
- `ConnectApi.TextSegment Class`
Message segments in a feed item are typed as `ConnectApi.MessageSegment`. Feed item capabilities are typed as `ConnectApi.FeedItemCapability`. Record fields are typed as `ConnectApi.AbstractRecordField`. These classes are all abstract and have several concrete subclasses. At runtime you can use `instanceof` to check the concrete types of these objects and then safely proceed with the corresponding downcast. When you downcast, you must have a default case that handles unknown subclasses.

**Important:** The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>text</td>
<td>String</td>
<td>Text-only rendition of this segment. If a client encounters an unknown message segment type, it can render this value.</td>

<td>Number of items per page.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.ModerationFlags

### ConnectApi.ModerationCapability Class

Subclass of ConnectApi.MessageSegment Class

In feed items with a large number of tracked changes, the message is formatted as: “changed A, B, and made X more changes.” The MoreChangesSegment contains the “X more changes.”

---

**flaggedByMe**

**Type:** Boolean

**Description:**

- `true` if the context user flagged the feed item, comment, or file for moderation;
- `false` otherwise.

**Available Version:** 29.0

**flags**

**Type:** ConnectApi.ModerationFlags.Collection

**Description:** Collection of flags.

**Available Version:** 40.0
ConnectApi.Motif Class

The motif properties contain URLs for small, medium, and large icons that indicate the Salesforce record type. Common record types are files, users, and groups, but all record types have a set of motif icons. Custom object records use their tab style icon. All icons are available to unauthenticated users so that, for example, you can display the motif icons in an email. The motif can also contain the record type's base color.

Note: The motif images are icons, not user uploaded images or photos. For example, every user has the same set of motif icons.

Custom object records use their tab style icon, for example, the following custom object uses the "boat" tab style:

```json
    "motif": {
        "color": "8C004C",
        "largeIconUrl": "/img/icon/custom51_100/boat64.png",
        "mediumIconUrl": "/img/icon/custom51_100/boat32.png",
        "smallIconUrl": "/img/icon/custom51_100/boat16.png",
        "svgIconUrl": null
    },
```

Users use the following icons:

```json
    "motif": {
        "color": "1797C0",
        "largeIconUrl": "/img/icon/profile64.png",
        "mediumIconUrl": "/img/icon/profile32.png",
        "smallIconUrl": "/img/icon/profile16.png",
        "svgIconUrl": null
    },
```

Groups use the following icons:

```json
    "motif": {
        "color": "1797C0",
        "largeIconUrl": "/img/icon/groups64.png",
        "mediumIconUrl": "/img/icon/groups32.png",
        "smallIconUrl": "/img/icon/groups16.png",
        "svgIconUrl": null
    },
```

Files use the following icons:

```json
    "motif": {
        "color": "1797C0",
        "largeIconUrl": "/img/content/content64.png",
        "mediumIconUrl": "/img/content/content32.png",
        "smallIconUrl": "/img/icon/files16.png",
```
Note: To view the icons in the previous examples, preface the URL with https://instance_name. For example, https://instance_name/img/icon/profile64.png.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>

<td>largePhotoUrl</td>
<td>String</td>
<td>URL to the large profile picture. The default width is 200 pixels, and the height is scaled so the original image proportions are maintained. If a user hasn’t uploaded a photo, this URL points to a default photo. If the user hasn’t uploaded a photo and the request header included <code>X-Connect-Theme: Salesforce1</code>, this URL points to a default photo based on a theme that the admin selected for the org.</td>
<td>28.0</td>
</tr>
<tr>
<td>mediumPhotoUrl</td>
<td>String</td>
<td>URL to the medium profile picture. The default width is 160 pixels, and the height is scaled so the original image proportions are maintained. If a user hasn’t uploaded a photo, this URL points to a default photo. If the user hasn’t uploaded a photo and the request header included <code>X-Connect-Theme: Salesforce1</code>, this URL points to a default photo based on a theme that the admin selected for the org.</td>
<td>37.0</td>
</tr>
<tr>
<td>photoVersionId</td>
<td>String</td>
<td>18-character ID to that version of the photo</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**Note:** This property is not available after version 29.0. Use the `phoneType` property instead.

Values are:
- Fax
- Mobile
- Work

These values are not localized.
**Available Version** | **Description** | **Name** | **Type**
--- | --- | --- | ---
28.0 | URL to the small profile picture. The default size is 64x64 pixels. If a user hasn’t uploaded a photo, this URL points to a default photo. If the user hasn’t uploaded a photo and the request header included X-Connect-Theme: Salesforce1, this URL points to a default photo based on a theme that the admin selected for the org. | smallPhotoUrl | String
28.0 | A temporary URL to the small profile. The URL expires after 30 days and is available to unauthenticated users. | standardEmailPhotoUrl | String
28.0 | A resource that returns a Photo object: for example, /services/data/v48.0/chatter/users/005D0000001LL8OIAW/photo | url | String

**ConnectApi.PicklistRecordField Class**
Subclass of ConnectApi.LabeledRecordField Class
A record field containing an enumerated value.

**ConnectApi.PinCapability**
If a feed element has this capability, users who have permission can pin it to a feed.
Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isPinnableByMe</td>
<td>Boolean</td>
<td>Specifies whether the context user can pin or unpin the entity to the feed (true) or not (false).</td>
<td>41.0</td>
</tr>
<tr>
<td>isPinned</td>
<td>Boolean</td>
<td>Specifies whether the entity is pinned (true) or not pinned (false) to the feed.</td>
<td>41.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

<td>41.0</td>
</tr>
</tbody>
</table>

**ConnectApi.PlatformAction Class**

A platform action instance with state information for the context user.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionUrl</td>
<td>String</td>
<td>For action links of subtype Ui or Download, direct the user to download or visit the UI from this link. Salesforce issues a Javascript redirect for the link in this format: /action-link-redirect/{communityId}/{actionLinkId}?_bearer={bearerToken}. For Api action links and for all platform actions, this value is null and Salesforce handles the call.</td>
<td>33.0</td>
</tr>
<tr>
<td>apiName</td>
<td>String</td>
<td>The API name. The value may be null.</td>
<td>33.0</td>
</tr>
<tr>
<td>confirmation Message</td>
<td>String</td>
<td>If this action requires a confirmation and has a status of NewStatus, this is a default localized message that should be shown to an end user prior to invoking the action. Otherwise, this is null.</td>
<td>33.0</td>
</tr>
<tr>
<td>executingUser</td>
<td>ConnectApi.UserSummary Class</td>
<td>The user who initiated execution of this platform action.</td>
<td>33.0</td>
</tr>
<tr>
<td>groupDefault</td>
<td>Boolean</td>
<td>true if this platform action is the default or primary platform action in the platform action group; false otherwise. There can be only one default platform action per platform action group.</td>
<td>33.0</td>
</tr>
<tr>
<td>iconUrl</td>
<td>String</td>
<td>The URL of the icon for the platform action. This value may be null.</td>
<td>33.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>The ID for the platform action.</td>
<td>33.0</td>
</tr>
<tr>
<td>label</td>
<td>String</td>
<td>The localized label for this platform action.</td>
<td>33.0</td>
</tr>
<tr>
<td>modifiedDate</td>
<td>Datetime</td>
<td>An ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z.</td>
<td>33.0</td>
</tr>
<tr>

<td>Property Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>---------------</td>
<td>--------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
</tbody>
</table>
| status        | `ConnectApi. PlatformAction Status` | The execution status of the platform action. Values are:  
• FailedStatus—The action link execution failed.  
• NewStatus—The action link is ready to be executed. Available for Download and Ui action links only.  
• PendingStatus—The action link is executing. Choosing this value triggers the API call for Api and ApiAsync action links.  
• SuccessfulStatus—The action link executed successfully. | 33.0              |
| subtype       | `String`     | The subtype of a platform action or `null`. If the `type` property is `ActionLink`, possible values are:  
• Api—The action link calls a synchronous API at the action URL. Salesforce sets the status to `SuccessfulStatus` or `FailedStatus` based on the HTTP status code returned by your server.  
• ApiAsync—The action link calls an asynchronous API at the action URL. The action remains in a `PendingStatus` state until a third party makes a request to `/connect/action-links/<actionLinkId>` to set the status to `SuccessfulStatus` or `FailedStatus` when the asynchronous operation is complete.  
• Download—The action link downloads a file from the action URL.  
• Ui—The action link takes the user to a web page at the action URL.  

**Note:** Invoking `ApiAsync` action links from an app requires a call to set the status. However, there isn’t currently a way to set the status of an action link using Apex. To set the status, use Chatter REST API. See the Action Link resource in the *Chatter REST API Developer Guide* for more information. | 33.0              |
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>type</td>
<td><code>ConnectApi.PlatformActionType</code></td>
<td>The type of platform action. Values are:</td>

<tr>
<td></td>
<td></td>
<td>• Primary—The action link group is displayed in the body of the feed element.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Overflow—The action link group is displayed in the overflow menu of the feed element.</td>
<td></td>
</tr>
</tbody>
</table>
### ConnectApi.PollCapability Class

If a feed element has this capability, it includes a poll.

Subclass of `ConnectApi.FeedElementCapability Class`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>choices</td>
<td>List&lt;ConnectApi.FeedPollChoice&gt;</td>
<td>Collection of poll choices that make up the poll.</td>
<td>32.0</td>
</tr>
<tr>
<td>myChoiceId</td>
<td>String</td>
<td>18-character ID of the poll choice that the context user has voted for in this poll. Returns null if the context user has not voted.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.AbstractRecommendation`
- `ConnectApi.AssociatedActionsCapability Class`
Available Version | Description | Property Name
--- | --- | ---
32.0 | Total number of votes cast on the feed poll element. | totalVoteCount

**SEE ALSO:**
- ConnectApi.FeedElementCapabilities Class

**ConnectApi.PreviewCancelOutputRepresentation**

Expected change order financial values for a proposed cancel action.
Subclass of ConnectApi.BaseOutputRepresentation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>changeBalances</td>
<td>ConnectApi.ChangeItemOutputRepresentation</td>
<td>Expected change order financial values for the cancel action.</td>
<td>48.0</td>
</tr>
<tr>
<td>orderSummaryId</td>
<td>String</td>
<td>ID of the OrderSummary.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**ConnectApi.PreviewReturnOutputRepresentation**

Expected change order financial values for a proposed return action.
Subclass of ConnectApi.BaseOutputRepresentation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td>orderSummaryId</td>
<td>String</td>
<td>ID of the OrderSummary.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**ConnectApi.QuestionAndAnswersCapability Class**

If a feed element has this capability, it has a question and comments on the feed element are answers to the question.
Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>bestAnswer</td>
<td>ConnectApi.Comment</td>
<td>Comment selected as the best answer for the question.</td>
<td>32.0</td>
</tr>
<tr>
<td>bestAnswer</td>
<td>ConnectApi.UserSummary</td>
<td>User who selected the best answer for the question.</td>
<td>32.0</td>
</tr>
<tr>
<td>canCurrentUserSelectOrRemoveBestAnswer</td>
<td>Boolean</td>
<td>Indicates whether the context user can select or remove a best answer (true) or not (false).</td>
<td>32.0</td>
</tr>
</tbody>
</table>
### ConnectApi.CandidateAnswers

Status of candidate answers for the question.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>candidateAnswers</td>
<td>ConnectApi.CandidateAnswers.Status</td>
<td>Status of candidate answers for the question.</td>
<td>41.0</td>
</tr>
</tbody>
</table>

If a question post is escalated, this is the case to which it was escalated.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>escalatedCase</td>
<td>ConnectApi.Reference</td>
<td>If a question post is escalated, this is the case to which it was escalated.</td>
<td>33.0</td>
</tr>
</tbody>
</table>

Title for the question.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>questionTitle</td>
<td>String</td>
<td>Title for the question.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

- ConnectApi.ReadByPage

### ConnectApi.ReadByCapability

If a feed element has this capability, the context user can mark it as read.

Subclass of ConnectApi.FeedElementCapability Class.
### ConnectApi Namespace

#### ConnectApi.ReadByPage

A collection of information about who read the feed element and when.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>40.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page. The default is 25 items per page.</td>
<td>40.0</td>
</tr>
<tr>
<td>items</td>
<td>List&lt;ConnectApi.ReadBy&gt;</td>
<td>Collection of read-by information, including users and when they last read the feed element.</td>
<td>40.0</td>
</tr>
<tr>
<td>nextPageToken</td>
<td>String</td>
<td>Token identifying the next page, or null if there isn't a next page.</td>
<td>40.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or null if there isn't a next page.</td>
<td>40.0</td>
</tr>
<tr>
<td>previousPageToken</td>
<td>String</td>
<td>Reserved for future use.</td>
<td>40.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Reserved for future use.</td>
<td>40.0</td>
</tr>
<tr>
<td>total</td>
<td>Integer</td>
<td>Total number of users who read the feed element.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.Recommendation

A Next Best Action recommendation object.
### Property Name | Type | Description | Available Version
--- | --- | --- | ---
acceptanceLabel | String | Text indicating user acceptance of the recommendation. | 45.0
actionReference | String | Reference to the action to perform, for example, launching a flow. | 45.0
description | String | Description of the recommendation. | 45.0
externalId | String | External ID of the recommendation. This ID doesn’t need to be a Salesforce 18-character ID. For example, it can be a product number from an external system. | 46.0
id | String | ID of the recommendation. | 45.0
image | ConnectApi.FileAsset | Image to display. | 45.0
name | String | Name of the recommendation. | 45.0
rejectionLabel | String | Text indicating user rejection of the recommendation. | 45.0
url | String | URL to the recommendation. | 45.0

#### ConnectApi.RecommendationAudience
A custom recommendation audience.

### Property Name | Type | Description | Available Version
--- | --- | --- | ---
criteria | ConnectApi.AudienceCriteria | The criteria for the custom recommendation audience type. | 36.0
id | String | 18-character ID of the custom recommendation audience. | 35.0
memberCount | Integer | **Important**: This property is available only in version 35.0. In version 36.0 and later, this property is available in ConnectApi.CustomListAudienceCriteria. Number of members in the custom recommendation audience. | 35.0 only
members | ConnectApi.UserReferencePage | **Important**: This property is available only in version 35.0. In version 36.0 and later, this property is available in ConnectApi.CustomListAudienceCriteria. Members of the custom recommendation audience. | 35.0 only
modifiedBy | ConnectApi.User | User who last modified the custom recommendation audience. | 36.0
### ConnectApi.RecommendationAudience

A list of custom recommendation audiences.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>modifiedDate</td>
<td>Datetime</td>
<td>An ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z.</td>
<td>36.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the custom recommendation audience.</td>
<td>35.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL for the custom recommendation audience.</td>
<td>35.0</td>
</tr>
</tbody>
</table>

### ConnectApi.RecommendationReaction

A reaction to a recommendation produced by a recommendation strategy

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>aiModel</td>
<td>String</td>
<td>Reserved for future use.</td>
<td>47.0</td>
</tr>
<tr>
<td>contextRecord</td>
<td>ConnectApi.Reference</td>
<td>Reference to the context record.</td>
<td>45.0</td>
</tr>
<tr>
<td>createdBy</td>
<td>ConnectApi.Reference</td>
<td>Reference to the reaction creator.</td>
<td>45.0</td>
</tr>
<tr>
<td>createdDate</td>
<td>Datetime</td>
<td>Reaction creation date.</td>
<td>45.0</td>
</tr>
<tr>
<td>externalId</td>
<td>String</td>
<td>External target ID of the recommendation reacted on. This ID doesn’t need to be a Salesforce 18-character ID. For example, it can be a product number from an external system.</td>
<td>46.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>Reaction record ID.</td>
<td>45.0</td>
</tr>
<tr>
<td>onBehalfOf</td>
<td>ConnectApi.Reference</td>
<td>Reference to the user or record that is indirectly reacting to the recommendation.</td>
<td>45.0</td>
</tr>
<tr>
<td>reactionType</td>
<td>ConnectApi.RecommendationReaction.Type</td>
<td>Type of reaction to a recommendation. Values are: Accepted, Rejected</td>

ConnectApi.FeedElementCapabilities Class

**ConnectApi.RecommendedObject**

A recommended object, such as a custom or static recommendation.

Subclass of ConnectApi.Actor Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>idOrEnum</td>
<td>String</td>
<td>ID of a recommendation definition for a custom recommendation or the enum value Today for static recommendations that don’t have an ID (version 35.0 and later).</td>
<td>34.0</td>
</tr>
<tr>
<td>motif</td>
<td>ConnectApi.Motif</td>
<td>Motif of the recommended object.</td>
<td>34.0</td>
</tr>
</tbody>
</table>

**ConnectApi.RecordCapability**

If a comment has this capability, it has a record attachment.

Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recordId</td>
<td>String</td>
<td>ID of the record.</td>
<td>42.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the record.</td>
<td>42.0</td>
</tr>
</tbody>
</table>
ConnectApi.RecordField Class
Subclass of ConnectApi.LabeledRecordField Class
A generic record field containing a label and text value.

SEE ALSO:
  ConnectApi.CompoundRecordField Class

ConnectApi.RecordSnapshot
A record snapshot in a recommendation reaction.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the record.</td>
<td>45.0</td>
</tr>
<tr>
<td>nameAtSnapshot</td>
<td>String</td>
<td>Name of the record when the ID was recorded.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
  ConnectApi.RecommendationReaction

ConnectApi.RecordSnapshotCapability
If a feed element has this capability, it contains all the snapshotted fields of a record for a single create record event.
Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recordView</td>
<td>ConnectApi.RecordView</td>
<td>A record representation that includes metadata and data so you can display the record easily.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
  ConnectApi.FeedElementCapabilities Class

ConnectApi.RecordSummary Class
Subclass of ConnectApi.AbstractRecordView Class
### ConnectApi.RecordSummaryList Class

Summary information about a list of records in the organization including custom objects.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>records</td>
<td>List&lt;ConnectApi.ActorWithId&gt;</td>
<td>A list of records.</td>
<td>30.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The URL to this list of records.</td>
<td>30.0</td>
</tr>
</tbody>
</table>

### ConnectApi.RecordView Class

Subclass of ConnectApi.AbstractRecordView Class

A view of any record in the organization, including a custom object record. This object is used if a specialized object, such as User or ChatterGroup, is not available for the record type. Contains data and metadata so you can render a record with one response.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>sections</td>
<td>List&lt;ConnectApi. RecordViewSection&gt;</td>
<td>A list of record view sections.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

### ConnectApi.RecordViewSection Class

A section of record fields and values on a record detail.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>columnCount</td>
<td>Integer</td>
<td>The number of columns to use to lay out the fields in a record section.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

- ConnectApi.EmailAddress
- ConnectApi.EmailAttachment
- ConnectApi.ReferenceRecordField Class
- ConnectApi.ReferenceWithDateRecordField Class
### ConnectApi.RecordColumnOrder Enum

- **LeftRight**—Fields are rendered from left to right.
- **TopDown**—Fields are rendered from the top down.

### ConnectApi.AbstractRecordField

- **columnOrder**: The order of the fields to use in the `fields` property to layout the fields in a record section.
- **fields**: The fields and values for the record contained in this section.
- **heading**: A localized label to display when rendering this section of fields.
- **isCollapsible**: Indicates whether the section can be collapsed to hide all the fields (`true`) or not (`false`).

### ConnectApi.Reference Class

- **id**: The ID of the record being referenced, which could be an 18-character ID or some other string identifier.
- **url**: The URL to the resource endpoint.

### ConnectApi.ReferenceRecordField Class

A record field with a label and text value.

- **reference**: The object referenced by the record field.

### ConnectApi.ReferenceWithDateRecordField Class

A record field containing a referenced object that acted at a specific time, for example, “Created By...”.

- **dateValue**: A time at which the referenced object acted.
### ConnectApi.RelatedFeedPost

This class is abstract.

**Subclass of:** ConnectApi.ActorWithId Class

**Superclass of:** ConnectApi.RelatedQuestion

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>score</td>
<td>Double</td>
<td>Score of the related feed post that indicates how closely related it is to the context feed post.</td>
<td>37.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the related feed post.</td>
<td>37.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

ConnectApi.RelatedFeedPosts

### ConnectApi.RelatedFeedPosts

A collection of related feed posts.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>relatedFeedPosts</td>
<td>List&lt;ConnectApi.RelatedFeedPost&gt;</td>
<td>Collection of related feed posts.</td>
<td>37.0</td>
</tr>
</tbody>
</table>

### ConnectApi.RelatedQuestion

A related question.

**Subclass of:** ConnectApi.RelatedFeedPost

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>hasBestAnswer</td>
<td>Boolean</td>
<td>Indicates whether the question has a best answer.</td>
<td>37.0</td>
</tr>
<tr>
<td>interactions</td>
<td>ConnectApi.InteractionsCapability</td>
<td>The number of individual views, likes, and comments on a question.</td>
<td>38.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ReplyIntent

Reply intent for a social post.
### ConnectApi.ReplyIntents

List of reply intents for a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>replies</td>
<td>List&lt;ConnectApi.ReplyIntent&gt;</td>
<td>List of reply intents for the social post.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

- ConnectApi.SocialPostIntents

### ConnectApi.RepositoryFileDetail

A detailed description of a repository file.

Subclass of ConnectApi.AbstractRepositoryFile

No additional properties.

### ConnectApi.RepositoryFileSummary

A summary of a repository file.

Subclass of ConnectApi.AbstractRepositoryFile

No additional properties.

SEE ALSO:

- ConnectApi.RepositoryFolderItem

### ConnectApi.RepositoryFolderDetail

A detailed description of a repository folder.

Subclass of ConnectApi.AbstractRepositoryFolder

No additional properties.

### ConnectApi.RepositoryFolderItem

A folder item.
## Available Version Description Type Property Name

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>file</td>
<td>ConnectApi. Repository FileSummary</td>
<td>If the folder item is a file, the file summary. If the folder item is a folder, null.</td>
<td>39.0</td>

<tr>
<td>folder</td>
<td>ConnectApi. Repository FolderSummary</td>
<td>If the folder item is a folder, the folder summary. If the folder item is a file, null.</td>
<td>39.0</td>
</tr>
<tr>
<td>type</td>
<td>ConnectApi. FolderItemType</td>
<td>Type of item in a folder. Values are: • file • folder</td>
<td>39.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.RepositoryFolderItemsCollection

## ConnectApi.RepositoryFolderItemsCollection
A collection of repository folder items.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>URL to the current page.</td>
<td>39.0</td>
</tr>
<tr>
<td>items</td>
<td>List&lt;ConnectApi. Repository FolderItem&gt;</td>
<td>Collection of items in a repository folder.</td>
<td>39.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>URL to the next page.</td>
<td>39.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>URL to the previous page.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

## ConnectApi.RepositoryFolderSummary
A summary of a repository folder.
Subclass of ConnectApi.AbstractRepositoryFolder
No additional properties.

SEE ALSO:
ConnectApi.RepositoryFolderItem

## ConnectApi.RepositoryGroupSummary
A group summary.
Subclass of ConnectApi.AbstractDirectoryEntrySummary
### ConnectApi.Namespace

#### ConnectApi.GroupType

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| groupType     | ConnectApi.ContentHub.GroupType | Type of group. Values are:  
  - Everybody—Group is public to everybody.  
  - EverybodyInDomain—Group is public to everybody in the same domain.  
  - Unknown—Group type is unknown. | 39.0 |

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the group.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.ExternalFilePermissionInformation

#### ConnectApi.RepositoryUserSummary

A user summary.
Subclass of ConnectApi.AbstractDirectoryEntrySummary

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>firstName</td>
<td>String</td>
<td>First name of the user.</td>
<td>39.0</td>
</tr>
<tr>
<td>lastName</td>
<td>String</td>
<td>Last name of the user.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.Reputation Class

Reputation for a user.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>reputationLevel</td>
<td>ConnectApi.ReputationLevel</td>
<td>User’s reputation level.</td>
<td>32.0</td>
</tr>
<tr>
<td>reputationPoints</td>
<td>Double</td>
<td>User’s reputation points, which can be earned by performing different activities in the community.</td>
<td>32.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>A Chatter REST API URL to the reputation.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.User Class

#### ConnectApi.ReputationLevel Class

Reputation level for a user.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>levelImageUrl</td>
<td>String</td>
<td>URL to the reputation level image.</td>
<td>32.0</td>
</tr>
<tr>
<td>Property Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>----------------</td>
<td>----------</td>
<td>-----------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>levelName</td>
<td>String</td>
<td>Name of the reputation level.</td>
<td>32.0</td>
</tr>
<tr>
<td>levelNumber</td>
<td>Integer</td>
<td>Reputation level number, which is the numerical rank of the level, with the lowest level at 1. Administrators define the reputation level point ranges.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.Reputation Class

**ConnectApi.RequestHeader Class**

An HTTP request header name and value pair.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>The name of the request header.</td>
<td>33.0</td>
</tr>
<tr>
<td>value</td>
<td>String</td>
<td>The value of the request header.</td>
<td>33.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.ActionLinkDefinition Class

**ConnectApi.ResourceLinkSegment Class**

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>URL to a resource not otherwise identified by an ID field, for example, a link to a list of users.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**ConnectApi.ScheduledRecommendation**

Represents a scheduled custom recommendation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| channel        | ConnectApi.RecommendationChannel | A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:  
- CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear. | 36.0 |
Available Version | Description | Type
--- | --- | ---

- **CustomChannel2**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel3**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel4**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel5**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **DefaultChannel**—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>enabled</td>
<td>Boolean</td>
<td>Indicates whether scheduling is enabled. If true, the custom recommendation is enabled and appears in communities. If false, custom recommendations in feeds in Salesforce mobile web aren’t removed, but no new custom recommendations appear. In Customer Service and Partner Central communities, disabled custom recommendations no longer appear.</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>18-character ID of the scheduled custom recommendation.</td>
</tr>
<tr>
<td>rank</td>
<td>Integer</td>
<td>The rank determining the order of this scheduled custom recommendation.</td>
</tr>
<tr>
<td>recommendation AudienceId</td>
<td>String</td>
<td>ID of the audience for the scheduled custom recommendation.</td>
</tr>
<tr>
<td>recommendation Definition Representation</td>
<td>ConnectApi. Recommendation Definition</td>
<td>Custom recommendation definition that this scheduled recommendation schedules.</td>
</tr>
</tbody>
</table>
**Property Name** | **Type** | **Description** | **Available Version**
--- | --- | --- | ---
url | String | URL to the Chatter REST API resource for the scheduled custom recommendation. | 35.0

SEE ALSO: ConnectApi.ScheduledRecommendationPage

**ConnectApi.ScheduledRecommendationPage**
A list of scheduled custom recommendations.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
</table>
scheduled Recommendations | List<ConnectApi.Scheduled Recommendation> | A list of scheduled custom recommendations. | 35.0 |
url | String | URL to the Chatter REST API resource for the scheduled custom recommendation collection. | 35.0 |

**ConnectApi.Scope**
Scope information for a target.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
</table>
name | String | Name of the scope for the target. | 48.0 |
value | String | Value of the scope for the target. | 48.0 |

SEE ALSO: ConnectApi.Target

**ConnectApi.SocialAccount**
A social account on a social network.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
</table>
externalSocial AccountId | String | ID of the external social account, if available. | 38.0 |
handle | String | Social handle, screen name, or alias that identifies this account. | 36.0 |
name | String | Name of the account as defined by the account’s owner. | 36.0 |
profileUrl | String | URL to the account’s profile. | 36.0 |
### Available Version Description Type Property Name

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>socialPersonaId</td>
<td>String</td>
<td>ID of the social persona account, if the external social account ID isn't available.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

ConnectApi.SocialPostCapability

---

**ConnectApi.SocialAccountRelationship**

Follow relationship between a managed social account and a social persona.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isFollowed</td>
<td>Boolean</td>
<td>Specifies whether the social account is followed by the social persona.</td>
<td>46.0</td>
</tr>
<tr>
<td>isFollowing</td>
<td>Boolean</td>
<td>Specifies whether the social account is following the social persona.</td>
<td>46.0</td>
</tr>
<tr>
<td>socialAccountId</td>
<td>String</td>
<td>ID of the social account.</td>
<td>46.0</td>
</tr>
<tr>
<td>socialPersonaId</td>
<td>String</td>
<td>ID of the social persona.</td>
<td>46.0</td>
</tr>
</tbody>
</table>

---

**ConnectApi.SocialPostCapability**

If a feed element has this capability, it can interact with a social post on a social network.

Subclass of ConnectApi.FeedElementCapabilities Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>author</td>
<td>ConnectApi.SocialAccount</td>
<td>Social account that authored the social post.</td>
<td>36.0</td>
</tr>
<tr>
<td>content</td>
<td>String</td>
<td>Content body of the social post.</td>
<td>36.0</td>
</tr>
<tr>
<td>deletedBy</td>
<td>ConnectApi.UserSummaryClass</td>
<td>User who deleted the social post.</td>
<td>38.0</td>
</tr>
<tr>
<td>hiddenBy</td>
<td>ConnectApi.UserSummaryClass</td>
<td>User who hid the social post.</td>
<td>41.0</td>
</tr>
<tr>
<td>icon</td>
<td>ConnectApi.IconClass</td>
<td>Icon of the social network.</td>
<td>36.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID associated with the social post Salesforce record.</td>
<td>36.0</td>
</tr>
<tr>
<td>isOutbound</td>
<td>Boolean</td>
<td>If true, the social post originated from the Salesforce application.</td>
<td>36.0</td>
</tr>
<tr>
<td>likedBy</td>
<td>String</td>
<td>External social account who liked the social post.</td>
<td>40.0</td>
</tr>
<tr>
<td>Property Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>---------------</td>
<td>------</td>
<td>-------------</td>
<td>-------------------</td>
</tr>
</tbody>
</table>
| messageType   | ConnectApi. SocialPostMessageType | Message type of the social post. Values are:  
  - Comment  
  - Direct  
  - Post  
  - PrivateMessage  
  - Reply  
  - Retweet  
  - Tweet | 38.0 |
| name          | String | Title or heading of the social post. | 36.0 |
| postUrl       | String | External URL to the social post on the social network. | 36.0 |
| provider      | ConnectApi. SocialNetworkProvider | Social network that this social post belongs to. Values are:  
  - Facebook  
  - GooglePlus  
  - Instagram  
  - InstagramBusiness  
  - KakaoTalk  
  - Kik  
  - Line  
  - LinkedIn  
  - Messenger

### ConnectApi.SocialPostIntents

Intents available for a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>approvalIntent</td>
<td>ConnectApi.ApprovalIntent</td>
<td>Approval intent for the social post.</td>
<td>45.0</td>
</tr>
<tr>
<td>deleteIntent</td>
<td>ConnectApi.DeleteIntents</td>
<td>Delete intents for the social post.</td>
<td>45.0</td>
</tr>
<tr>
<td>followIntent</td>
<td>ConnectApi.FollowIntents</td>
<td>Follow intents for the social persona.</td>
<td>45.0</td>
</tr>
<tr>
<td>hideIntent</td>
<td>ConnectApi.HideSocialPostIntent</td>
<td>Hide intent for the social post.</td>
<td>45.0</td>
</tr>
<tr>
<td>likeIntent</td>
<td>ConnectApi.LikeIntents</td>
<td>Like intents for the social post.</td>
<td>45.0</td>
</tr>
<tr>
<td>replyIntent</td>
<td>ConnectApi.ReplyIntents</td>
<td>Reply intents for the social post.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

### ConnectApi.SocialPostMassApprovalOutput

Approval or rejection of a large number of social posts.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isApproved</td>
<td>Boolean</td>
<td>Specifies whether the social posts were approved (true) or rejected (false) for publishing.</td>
<td>46.0</td>
</tr>
</tbody>
</table>

### ConnectApi.SocialPostStatus

The status of a social post.
**Available Version**

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>message</td>
<td>String</td>
<td>Status message.</td>
<td>36.0</td>
</tr>
<tr>
<td>type</td>
<td>ConnectApi. SocialPostStatusType</td>
<td>Status type. Values are: ApprovalPending, ApprovalRecalled, ApprovalRejected, Deleted, Failed, Hidden, Pending, Sent, Unknown</td>
<td>36.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.SocialPostCapability

**ConnectApi.Stamp**

A user stamp.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the stamp.</td>
<td>39.0–43.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the stamp.</td>
<td>39.0–43.0</td>
</tr>
<tr>
<td>imageUrl</td>
<td>String</td>
<td>Image URL of the stamp.</td>
<td>39.0–43.0</td>
</tr>
<tr>
<td>label</td>
<td>String</td>
<td>Label of the stamp.</td>
<td>39.0–43.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.User Class

**ConnectApi.StatusCapability**

If a feed post or comment has this capability, it has a status that determines its visibility.

Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>feedEntityStatus</td>
<td>ConnectApi. FeedEntityStatus</td>
<td>Status of the feed post or comment. Values are: Draft—The feed post isn’t published but is visible to the author and users with Modify All</td>
<td>37.0</td>
</tr>
<tr>
<td>Property Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>

### ConnectApi.StrategyTrace

Messages and trace nodes for a recommendation strategy execution.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>messages</td>
<td>List&lt;String&gt;</td>
<td>Messages and errors from the strategy execution.</td>
<td>45.0</td>
</tr>
<tr>
<td>nodes</td>
<td>List&lt;ConnectApi.StrategyTraceNode&gt;</td>
<td>Nodes of the strategy execution used for debugging.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- [ConnectApi.NBARecommendations](#)

### ConnectApi.StrategyTraceNode

A trace node for a recommendation strategy execution.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>inputCount</td>
<td>Integer</td>
<td>Number of items put into the node.</td>
<td>45.0</td>
</tr>
<tr>
<td>messages</td>
<td>List&lt;String&gt;</td>
<td>Messages that occurred during node execution.</td>
<td>45.0</td>
</tr>
<tr>
<td>nodeName</td>
<td>String</td>
<td>Name of the node.</td>
<td>45.0</td>
</tr>
<tr>
<td>nodeTime</td>
<td>Long</td>
<td>Time spent processing inside the node.</td>
<td>45.0</td>
</tr>
<tr>
<td>nodeType</td>
<td>String</td>
<td>Type of node.</td>
<td>45.0</td>
</tr>
<tr>
<td>outputCount</td>
<td>Integer</td>
<td>Number of items returned from the node.</td>
<td>45.0</td>
</tr>
<tr>
<td>outputs</td>
<td>List&lt;String&gt;</td>
<td>Recommendations that are returned from the node.</td>
<td>45.0</td>
</tr>
</tbody>
</table>
**Available Version** | **Description** | **Property Name** | **Type**
--- | --- | --- | ---
45.0 | Total time spent processing. | totalTime | Long

**SEE ALSO:**
- `ConnectApi.StrategyTrace`

**ConnectApi.SubmitCancelOutputRepresentation**

ID of the change order created for a cancel action, and a set of its financial values.

Subclass of `ConnectApi.BaseOutputRepresentation`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>changeBalances</td>
<td><code>ConnectApi.ChangeItem OutputRepresentation</code></td>
<td>Financial values from the created change order.</td>
<td>48.0</td>
</tr>
<tr>
<td>changeOrderId</td>
<td>String</td>
<td>ID of the created change order.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**ConnectApi.SubmitReturnOutputRepresentation**

ID of the change order created for a return action, and a set of its financial values.

Subclass of `ConnectApi.BaseOutputRepresentation`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>

<tr>
<td>endorser</td>
<td>ConnectApi.User Summary</td>
<td>User performing the endorsement</td>
<td>30.0</td>
</tr>
<tr>
<td>topic</td>
<td>ConnectApi.Topic</td>
<td>Topic the user is being endorsed for</td>
<td>30.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the resource for the endorsement record</td>
<td>30.0</td>
</tr>
</tbody>
</table>

### ConnectApi.TopicEndorsementCollection Class
A collection of topic endorsement response bodies.
### Chatter REST API URL Identifying the Current Page

- **Name**: currentPageUrl
- **Type**: String
- **Description**: Chatter REST API URL identifying the current page.
- **Available Version**: 30.0

### Chatter REST API URL Identifying the Next Page

- **Name**: nextPageUrl
- **Type**: String
- **Description**: Chatter REST API URL identifying the next page, or **null** if there isn't a next page.
- **Available Version**: 30.0

### Chatter REST API URL Identifying the Previous Page

- **Name**: previousPageUrl
- **Type**: String
- **Description**: Chatter REST API URL identifying the previous page, or **null** if there isn't a previous page.
- **Available Version**: 30.0

### List of Topic Endorsements

- **Name**: topicEndorsements
- **Type**: List<ConnectApi.Topic>
- **Description**: List of topic endorsements
- **Available Version**: 30.0

---

### ConnectApi.TopicEndorsementSummary

**Topic endorsement summary.**

Subclass of ConnectApi.UserActivitySummary.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>endorsementId</td>
<td>ID</td>
<td>ID of the topic endorsement.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

---

### ConnectApi.TopicImages Class

**Images associated with a topic.**

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>coverImageUrl</td>
<td>String</td>
<td>URL to a topic’s cover image, which appears on the topic page. Both topics and managed topics can have cover images.</td>
<td>32.0</td>
</tr>
<tr>
<td>featuredImageUrl</td>
<td>String</td>
<td>URL to a managed topic’s featured image, which appears wherever you feature it, for example, on the communities home page.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

---

### ConnectApi.TopicPage Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>

**ConnectApi.TopicsCapability Class**

If a feed element has this capability, the context user can add topics to it. Topics help users organize and discover conversations. Subclass of `ConnectApi.FeedElementCapability Class`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>canAssignTopics</td>
<td>Boolean</td>
<td><code>true</code> if a topic can be assigned to the feed element, <code>false</code> otherwise.</td>
<td>32.0</td>
</tr>
<tr>
<td>items</td>
<td>List&lt;ConnectApi.Topic&gt;</td>
<td>A collection of topics associated with this feed element.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

- `ConnectApi.FeedElementCapabilities Class`

**ConnectApi.TopicSuggestion Class**

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>existingTopic</td>
<td>ConnectApi.Topic</td>
<td>Topic that already exists or null for a new topic</td>
<td>29.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Topic name</td>
<td>29.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

<tbody>
<tr>
<td>TopicSuggestions</td>
<td>List&lt;ConnectApi.TopicSuggestion&gt;</td>
<td>List of topic suggestions</td>
<td>29.0</td>
</tr>
</tbody>
</table>

**ConnectApi.TopicSummary**

Summary of a topic.
ConnectApi.TrackedChangeBundleCapability

If a feed element has this capability, it has a group of other feed elements aggregated into one feed element called a bundle. This type of bundle aggregates feed tracked changes.

Subclass of ConnectApi.BundleCapability Class.

ConnectApi.TrackedChangeItem Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fieldName</td>
<td>String</td>
<td>The name of the field that was updated.</td>
<td>28.0</td>
</tr>
<tr>
<td>newValue</td>
<td>String</td>
<td>The new value of the field or null if the field length is long.</td>
<td>28.0</td>
</tr>
<tr>
<td>oldValue</td>
<td>String</td>
<td>The old value of the field or null if the field length is long.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.TrackedChangesCapability
- ConnectApi.TrackedChangeBundleCapability

ConnectApi.TrackedChangesCapability

If a feed element has this capability, it contains all changes to a record for a single tracked change event.

Subclass of ConnectApi.FeedElementCapability Class.
ConnectApi Namespace

### Available Version

<table>
<thead>
<tr>

ConnectApi.FeedElementCapabilities Class

### ConnectApi.UnauthenticatedUser Class

Subclass of ConnectApi.Actor Class  
No additional properties.

Instances of this class are used as the actor for feed items and comments posted by Chatter customers.

### ConnectApi.UnreadConversationCount Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>hasMore</td>
<td>Boolean</td>
<td>Specifies if there are more than 50 unread messages (true) or not (false)</td>
<td>29.0</td>
</tr>
<tr>
<td>unreadCount</td>
<td>Integer</td>
<td>The total number of unread messages</td>
<td>29.0</td>
</tr>
</tbody>
</table>

### ConnectApi.UpDownVoteCapability

If a feed post or comment has this capability, users can upvote or downvote it.  
Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>downVoteCount</td>
<td>Long</td>
<td>Number of downvotes.</td>

**ConnectApi.UserChatterSettings Class**

A user’s global Chatter settings.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>defaultGroup</td>
<td>ConnectApi.GroupEmail Frequency Enum</td>
<td>The default frequency with which a user receives email from a group when they join it.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**ConnectApi.UserDetail Class**

Subclass of ConnectApi.User Class

Details about a user in an organization.

If the context user doesn’t have permission to see a property, its value is set to null.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>aboutMe</td>
<td>String</td>
<td>Text from user’s profile</td>
<td>28.0</td>
</tr>

- [ConnectApi.UpVoteSummary](#)

### Property Name | Type | Description | Available Version
---|---|---|---
feedEntityId | String | ID of the feed entity. | 42.0

### ConnectApi.UserGroupDetailPage
A page of groups that a user is a member of.
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>URL to the current page.</td>
<td>45.0</td>
</tr>
<tr>
<td>groups</td>
<td>List&lt;ConnectApi.ChatterGroupDetail&gt;</td>
<td>Collection of groups that the user is a member of.</td>
<td>45.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>URL to the next page, or null if there is no next page.</td>
<td>45.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>URL to the previous page, or null if there is no previous page.</td>
<td>45.0</td>
</tr>
<tr>
<td>total</td>
<td>Integer</td>
<td>Total number of groups that the user is a member of.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

**ConnectApi.UserGroupPage Class**

A paginated list of groups the context user is a member of.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>28.0</td>
</tr>
<tr>
<td>groups</td>
<td>List&lt;ConnectApi.ChatterGroupSummary&gt;</td>
<td>List of groups</td>
<td>28.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or null if there isn’t a next page.</td>
<td>28.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the previous page, or null if there isn’t a previous page.</td>
<td>28.0</td>
</tr>
<tr>
<td>total</td>
<td>Integer</td>
<td>Total number of groups across all pages</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**ConnectApi.UserMission**

Mission details for a user.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>missionName</td>
<td>String</td>
<td>Name of the mission.</td>
<td>46.0</td>
</tr>
<tr>
<td>missionThreshold</td>
<td>Integer</td>
<td>Threshold of the mission. When a user reaches this activity count, the mission is achieved.</td>
<td>46.0</td>
</tr>
</tbody>
</table>

**ConnectApi.UserMissionActivitiesJob**

User mission activities job.
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>jobToken</td>
<td>String</td>
<td>Token that identifies the mission user activities job.</td>
<td>45.0</td>
</tr>
<tr>
<td>jobType</td>
<td>String</td>
<td>Type of user activities job, either <code>export</code> or <code>purge</code>.</td>
<td>45.0</td>
</tr>
<tr>
<td>message</td>
<td>String</td>
<td>Message describing the status and expected outcome of the job. When the job completes, you receive an email with information about the Salesforce file that contains <code>ConnectApi.UserMissionActivityCollection</code>.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

**ConnectApi.UserMissionActivity**

**ConnectApi.UserMissionActivityCollection**

List of mission activities for a user.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>community</td>
<td><code>ConnectApi. CommunitySummary</code></td>
<td>Community in which the user performed activities.</td>
<td>45.0</td>
</tr>
<tr>
<td>userId</td>
<td>String</td>
<td>ID of the user.</td>
<td>45.0</td>
</tr>
<tr>
<td>userMissionActivities</td>
<td>List&lt;<code>ConnectApi. AbstractUserMissionActivity</code>&gt;</td>
<td>List of mission activities performed by the user.</td>
<td>45.0</td>
</tr>
<tr>
<td>userName</td>
<td>String</td>
<td>Name of the user.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

**ConnectApi.UserMissionActivityStatus**

Status of mission activity for a user.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>message</td>
<td>String</td>
<td>Success or error message.</td>
<td>45.0</td>
</tr>
<tr>
<td>status</td>
<td>String</td>
<td>Status of mission activity for a user.</td>
<td>45.0</td>
</tr>
</tbody>
</table>
### ConnectApi.UserOauthInfo

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>availableExternal</td>
<td>Connect.Oauth ProviderInfo</td>
<td>The available OAuth service provider.</td>
<td>37.0</td>
</tr>
<tr>
<td>isAuthenticated</td>
<td>Boolean</td>
<td>Specifies whether the user is authenticated (true) or not (false).</td>
<td>37.0</td>
</tr>
</tbody>
</table>

### ConnectApi.UserPage Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>Integer</td>
<td>Token identifying the current page.</td>
<td>28.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>28.0</td>
</tr>
<tr>
<td>nextPageToken</td>
<td>Integer</td>
<td>Token identifying the next page, or null if there isn’t a next page.</td>
<td>28.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or null if there isn’t a next page.</td>
<td>28.0</td>
</tr>
<tr>
<td>previousPageToken</td>
<td>Integer</td>
<td>Token identifying the previous page, or null if there isn’t a previous page.</td>
<td>28.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the previous page, or null if there isn’t a previous page.</td>
<td>28.0</td>
</tr>
<tr>
<td>users</td>
<td>List&lt;ConnectApi.UserDetail&gt;</td>
<td>List of user detail information. If the context user doesn’t have permission to see a property, the property is set to null.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

### ConnectApi.UserProfile Class

Details necessary to render a view of a user profile.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>capabilities</td>
<td>ConnectApi.UserCapabilities</td>
<td>The context user’s capabilities specific to the subject user’s profile</td>
<td>29.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>The ID of the user attached to the profile</td>
<td>29.0</td>
</tr>
<tr>
<td>tabs</td>
<td>List&lt;ConnectApi.UserProfileTab&gt;</td>
<td>The tabs visible to the context user specific to the subject user’s profile</td>
<td>29.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The URL of the user’s profile</td>
<td>29.0</td>
</tr>
<tr>
<td>userDetail</td>
<td>ConnectApi.UserDetail</td>
<td>The details about the user attached to the profile</td>
<td>29.0</td>
</tr>
</tbody>
</table>
## ConnectApi.UserProfileTab Class

Information about a profile tab.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>The tab’s unique identifier or 18-character ID</td>
<td>29.0</td>
</tr>
<tr>
<td>isDefault</td>
<td>Boolean</td>
<td>Specifies if the tab appears first when clicking the user profile (true) or not (false)</td>
<td>29.0</td>
</tr>
<tr>
<td>tabType</td>
<td>ConnectApi.UserProfileTabType Enum</td>
<td>Specifies the type of tab</td>
<td>29.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• CustomVisualForce—Tab that displays data from a Visualforce page.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• CustomWeb—Tab that displays data from any external web-based application or web page.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Element—Tab that displays generic content inline.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Feed—Tab that displays the Chatter feed.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Overview—Tab that displays user details.</td>
<td></td>
</tr>
<tr>
<td>tabUrl</td>
<td>String</td>
<td>The current tab’s content URL (for non built-in tab types)</td>
<td>29.0</td>
</tr>
</tbody>
</table>

### ConnectApi.UserSettings Class

Settings specific to a user.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>approvalPosts</td>
<td>Boolean</td>
<td>User can approve workflows from Chatter posts.</td>
<td>28.0</td>
</tr>
<tr>
<td>canAccess PersonalStreams</td>
<td>Boolean</td>
<td>User can access personal stream feeds.</td>
<td>40.0</td>
</tr>
<tr>
<td>canFollow</td>
<td>Boolean</td>
<td>User can follow users and records.</td>
<td>28.0</td>
</tr>
<tr>
<td>canModify AllData</td>
<td>Boolean</td>
<td>User has Modify all Data permission.</td>
<td>28.0</td>
</tr>
<tr>
<td>canOwnGroups</td>
<td>Boolean</td>
<td>User can own groups.</td>
<td>28.0</td>
</tr>
<tr>
<td>canViewAllData</td>
<td>Boolean</td>
<td>User has View all Data permission.</td>
<td>28.0</td>
</tr>
<tr>
<td>canViewAllGroups</td>
<td>Boolean</td>
<td>User has View all Groups permission.</td>
<td>28.0</td>
</tr>
<tr>
<td>canViewAllUsers</td>
<td>Boolean</td>
<td>User has View all Users permission.</td>
<td>28.0</td>
</tr>
<tr>
<td>canViewCommunitySwitcher</td>
<td>Boolean</td>
<td>User can see the community switcher menu.</td>
<td>34.0</td>
</tr>
<tr>
<td>canViewFullUserProfile</td>
<td>Boolean</td>
<td>User can see other user’s Chatter profile.</td>
<td>28.0</td>
</tr>
<tr>
<td>canViewPublicFiles</td>
<td>Boolean</td>
<td>User can see all files that are public.</td>
<td>28.0</td>
</tr>
<tr>
<td>currencySymbol</td>
<td>String</td>
<td>Currency symbol to use for displaying currency values. Applicable only when the ConnectApi.Features.multiCurrency property is false.</td>
<td>28.0</td>

- `ConnectApi.FeedItemTopicPage Class`
- `ConnectApi.FeedPoll Class`
- `ConnectApi.LinkAttachment Class`
- `ConnectApi.NonEntityRecommendation`  
  A recommendation for a non-Salesforce entity, such as an application.
- `ConnectApi.RecordSnapshotAttachment Class`
- `ConnectApi.TrackedChangeAttachment Class`
### ConnectApi.ApprovalAttachment Class

**Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, `ConnectApi.ApprovalCapability Class` is used.

Subclass of `ConnectApi.FeedItemAttachment Class`

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>A work item ID.</td>
<td>28.0–31.0</td>
</tr>
<tr>

### ConnectApi.BasicTemplateAttachment Class

**Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, `ConnectApi.EnhancedLinkCapability` is used.

Subclass of `ConnectApi.FeedItemAttachment Class`

Attachments in feed items with type `BasicTemplate` return objects of this type.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>An optional description with a 500 character limit.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>icon</td>
<td>ConnectApi.Icon</td>
<td>An optional icon.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>linkRecordId</td>
<td>String</td>
<td>If linkURL refers to a Salesforce record, linkRecordId contains the ID of the record.</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>
## ConnectApi.CanvasTemplateAttachment Class

### Important:
This class isn't available in version 32.0 and later. In version 32.0 and later, ConnectApi.CanvasCapability Class is used.

Subclass of ConnectApi.FeedItemAttachment Class

Objects of this type are returned by attachments in feed items with type CanvasPost.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>linkUrl</td>
<td>String</td>
<td>An optional URL to a detail page if there is more content that can't be displayed inline. Do not specify linkUrl unless you specify a title.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>An optional title to the detail page. If linkUrl is specified, the title links to linkUrl.</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

## ConnectApi.CaseComment Class

### Important:
This class isn’t available in version 32.0 and later. In version 32.0 and later, ConnectApi.CaseCommentCapability Class is used.

Subclass of ConnectApi.FeedItemAttachment Class

Objects of this type are returned by attachments in feed items with type CaseCommentPost.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Optional. Description of the canvas app. The maximum length of this field is 500 characters.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>developerName</td>
<td>String</td>
<td>Specifies the developer name (API name) of the canvas app.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>height</td>
<td>String</td>
<td>Optional. The height of the canvas app in pixels. Default height is 200 pixels.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>icon</td>
<td>ConnectApi.Icon</td>
<td>The canvas app icon.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>namespacePrefix</td>
<td>String</td>
<td>Optional. The namespace prefix of the Developer Edition organization in which the canvas app was created.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>parameters</td>
<td>String</td>
<td>Optional. Parameters passed to the canvas app in JSON format. Example: <code>{'isUpdated':true}</code></td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>Optional. A URL to a thumbnail image for the canvas app. Maximum dimensions are 120x120 pixels.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Specifies the title of the link used to call the canvas app.</td>
<td>29.0–31.0</td>
</tr>
</tbody>
</table>

**ConnectApi.DashboardComponentAttachment Class**

ℹ️ **Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, `ConnectApi.DashboardComponentSnapshotCapability` is used.

Subclass of `ConnectApi.FeedItemAttachment Class`
Objects of this type are returned as attachments in feed items with type `DashboardSnapshot`.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>componentId</td>
<td>String</td>
<td>Component’s 18-character ID</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>componentName</td>
<td>String</td>
<td>Name of the component. If no name is saved with the component, returns the localized string, &quot;Untitled Component.&quot;</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>dashboardBodyText</td>
<td>String</td>
<td>Text displayed next to the actor in the body of a feed item. This is used instead of the default body text. If no text is specified, and there is no default body text, returns null.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>dashboardId</td>
<td>String</td>
<td>Dashboard’s 18-character ID</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>dashboardName</td>
<td>String</td>
<td>Name of the dashboard.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>fullSizeImageUrl</td>
<td>String</td>
<td>URL of the full-sized dashboard image</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>lastRefreshDate</td>
<td>Datetime</td>
<td>ISO8601 date string, for example, 2011-02-25T18:24:31.000Z, specifying when this dashboard was last refreshed.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>lastRefreshDateDisplayText</td>
<td>String</td>
<td>The text of the last refresh date to be displayed, such as, “Last refreshed on October 31, 2011.”</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>runningUser</td>
<td>ConnectApi.UserSummary</td>
<td>The user running the dashboard.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>URL of the thumbnail-sized dashboard image.</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

### ConnectApi.EmailMessage Class

**Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, `ConnectApi.EmailMessageCapability` is used.

Subclass of `ConnectApi.FeedItemAttachment Class`

An email message from a case.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>direction</td>
<td>ConnectApi.EmailMessageDirectionEnum</td>
<td>The direction of the email message.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Inbound—An inbound message (sent by a customer).</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Outbound—An outbound message (sent to a customer by a support agent).</td>
<td></td>
</tr>
<tr>
<td>emailMessageId</td>
<td>String</td>
<td>The ID of the email message.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>subject</td>
<td>String</td>
<td>The subject of the email message.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>textBody</td>
<td>String</td>
<td>The body of the email message.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>toAddresses</td>
<td>List&lt;ConnectApi.EmailAddress&gt;</td>
<td>A list of email addresses to send the message to.</td>
<td>29.0–31.0</td>
</tr>
</tbody>
</table>
ConnectApi.FeedItemAttachment Class

⚠️ **Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, `ConnectApi.FeedElementCapability` is used.

This class is abstract.

Subclasses:
- `ConnectApi.ApprovalAttachment Class`
- `ConnectApi.BasicTemplateAttachment Class`
- `ConnectApi.CanvasTemplateAttachment Class`
- `ConnectApi.EmailMessage Class`
- `ConnectApi.CaseComment Class`
- `ConnectApi.ContentAttachment Class`
- `ConnectApi.DashboardComponentAttachment Class`
- `ConnectApi.FeedPoll Class`
- `ConnectApi.LinkAttachment Class`
- `ConnectApi.RecordSnapshotAttachment Class`
- `ConnectApi.TrackedChangeAttachment Class`

Message segments in a feed item are typed as `ConnectApi.MessageSegment`. Feed item capabilities are typed as `ConnectApi.FeedItemCapability`. Record fields are typed as `ConnectApi.AbstractRecordField`. These classes are all abstract and have several concrete subclasses. At runtime you can use `instanceof` to check the concrete types of these objects and then safely proceed with the corresponding downcast. When you downcast, you must have a default case that handles unknown subclasses.

⚠️ **Important:** The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.

ConnectApi.FeedItemPage Class

⚠️ **Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, `ConnectApi.FeedElementPage` is used.

A paged collection of `ConnectApi.FeedItem` objects.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the current page.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>isModifiedToken</td>
<td>String</td>
<td>An opaque polling token to use in the <code>since</code> parameter of the <code>ChatterFeeds.isModified</code> method. The token describes when the feed was last modified.</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

⚠️ **Important:** This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.
### ConnectApi Namespace

#### Apex Developer Guide

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isModifiedUrl</td>
<td>String</td>
<td>A Chatter REST API URL with a <code>since</code> request parameter that contains an opaque token that describes when the feed was last modified. Returns <code>null</code> if the feed isn't a news feed. Use this URL to poll a news feed for updates.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>Important:</strong> This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.</td>
<td></td>
</tr>
<tr>
<td>items</td>
<td>List&lt;ConnectApi.FeedItem&gt;</td>
<td>List of feed items</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>nextPageToken</td>
<td>String</td>
<td>Token identifying the next page, or <code>null</code> if there isn't a next page.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Chatter REST API URL identifying the next page, or <code>null</code> if there isn't a next page.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>updatesToken</td>
<td>String</td>
<td>Token to use in an <code>updatedSince</code> parameter, or <code>null</code> if not available.</td>
<td>30.0–31.0</td>
</tr>
<tr>
<td>updatesUrl</td>
<td>String</td>
<td>A Chatter REST API resource with a query string containing the value of the <code>updatesToken</code> property. The resource returns the feed items that have been updated since the last request. Use the URL as it is—do not modify it. Property is <code>null</code> if not available.</td>
<td>30.0–31.0</td>
</tr>
</tbody>
</table>

### ConnectApi.FeedItemTopicPage Class

**Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, **ConnectApi.TopicsCapability Class** is used.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>canAssignTopics</td>
<td>Boolean</td>
<td>true if a topic can be assigned to the feed item, false otherwise</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>topics</td>
<td>List&lt;ConnectApi.Topic&gt;</td>
<td>List of topics</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

### ConnectApi.FeedPoll Class

**Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, **ConnectApi.PollCapability Class** is used.

Subclass of **ConnectApi.FeedItemAttachment Class**

This object is returned as the attachment of **ConnectApi.FeedItem** objects where the `type` property is `PollPost`. 
### ConnectApi.Namespace

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>choices</td>
<td>List&lt;ConnectApi.FeedPollChoice&gt;</td>
<td>List of choices for poll.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>myChoiceId</td>
<td>String</td>
<td>ID of the poll choice that the context user has voted for in this poll. Returns null if the context user hasn’t voted.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>totalVoteCount</td>
<td>Integer</td>
<td>Total number of votes cast on the feed poll item.</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.LinkAttachment Class

- **Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, ConnectApi.LinkCapability is used.

  Subclass of ConnectApi.FeedItemAttachment Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>title</td>
<td>String</td>
<td>Title given to the link if available, otherwise, null</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The link URL</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.NonEntityRecommendation

A recommendation for a non-Salesforce entity, such as an application.

- **Important:** ConnectApi.NonEntityRecommendation isn’t used in version 34.0 and later. In version 34.0 and later, ConnectApi.EntityRecommendation is used for all recommendations.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>displayLabel</td>
<td>String</td>
<td>Localized label of the non-entity object.</td>
<td>32.0</td>
</tr>
<tr>
<td>motif</td>
<td>ConnectApi.Motif</td>
<td>Motif for the non-entity object.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.RecordSnapshotAttachment Class

- **Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, ConnectApi.RecordSnapshotCapability is used.

  Subclass of ConnectApi.FeedItemAttachment Class

The fields of a record at the point in time when the record was created.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recordView</td>
<td>ConnectApi.RecordView</td>
<td>The representation of the record.</td>
<td>29.0–31.0</td>
</tr>
</tbody>
</table>
ConnectApi.TrackedChangeAttachment Class

⚠️ Important: This class isn’t available in version 32.0 and later. In version 32.0 and later, ConnectApi.TrackedChangesCapability is used.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>changes</td>
<td>List&lt;ConnectApi.TrackedChangeItem&gt;</td>
<td>A list of tracked changes.</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

**ConnectApi Enums**

 Enums specific to the ConnectApi namespace.

ConnectApi enums inherit all properties and methods of Apex enums.

 Enums are not versioned. Enum values are returned in all API versions. Clients should handle values they don't understand gracefully.

<table>
<thead>
<tr>
<th>Enum</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ConnectApi.ActionLinkExecutionsAllowed</td>
<td>Number of times an action link can be executed.</td>
</tr>
<tr>
<td></td>
<td>• Once—An action link can be executed only once across all users.</td>
</tr>
<tr>
<td></td>
<td>• OncePerUser—An action link can be executed only once for each user.</td>
</tr>
<tr>
<td></td>
<td>• Unlimited—An action link can be executed an unlimited number of times by each user. If the action link’s actionType is Api or ApiAsync, you can’t use this value.</td>
</tr>
<tr>
<td>ConnectApi.ActionLinkType</td>
<td>Type of action link.</td>
</tr>
<tr>
<td></td>
<td>• Api—The action link calls a synchronous API at the action URL. Salesforce sets the status to SuccessfulStatus or FailedStatus based on the HTTP status code returned by your server.</td>
</tr>
<tr>
<td></td>
<td>• ApiAsync—The action link calls an asynchronous API at the action URL. The action remains in a PendingStatus state until a third party makes a request to /connect/action-links/actionLinkId to set the status to SuccessfulStatus or FailedStatus when the asynchronous operation is complete.</td>
</tr>
<tr>
<td></td>
<td>• Download—The action link downloads a file from the action URL.</td>
</tr>
<tr>
<td></td>
<td>• Ui—The action link takes the user to a web page at the action URL.</td>
</tr>
<tr>
<td>ConnectApi.ActivitySharingTypeEnum</td>
<td>Type of sharing operation.</td>
</tr>
<tr>
<td></td>
<td>• Everyone—The activity is shared with everyone.</td>
</tr>
<tr>
<td></td>
<td>• MyGroups—The activity is shared only with a selection of the context user’s groups.</td>
</tr>
<tr>
<td></td>
<td>• OnlyMe—The activity is private.</td>
</tr>
<tr>
<td>ConnectApi.ArticleTopicJobType</td>
<td>Type of operation to perform on articles and topics.</td>
</tr>
<tr>
<td></td>
<td>• AssignTopicsToArticle—Assign topics to articles in a data category.</td>
</tr>
<tr>
<td></td>
<td>• UnassignTopicsFromArticle—Unassign topics from articles in a data category.</td>
</tr>
<tr>
<td>Enum</td>
<td>Description</td>
</tr>
<tr>

<td>Interactions</td>
<td>The feed element has information about user interactions.</td>
</tr>
<tr>
<td>Link</td>
<td>The feed element has a URL.</td>
</tr>
<tr>
<td>MediaReferences</td>
<td>The feed element has one or more media references.</td>
</tr>
<tr>
<td>Moderation</td>
<td>Users in a community can flag the feed element for moderation.</td>
</tr>
<tr>
<td>Mute</td>
<td>The context user can mute the feed element.</td>
</tr>
<tr>
<td>Origin</td>
<td>A feed action created the feed element.</td>
</tr>
<tr>
<td>Pin</td>
<td>Users who have permission can pin the feed element.</td>
</tr>
<tr>
<td>Poll</td>
<td>The feed element has poll voting.</td>
</tr>
</tbody>
</table>
### Enum

<table>
<thead>
<tr>
<th>Enum</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>• QuestionAndAnswers</td>
<td>The feed element has a question, and users can add answers to the feed element instead of comments. Users can also select the best answer.</td>
</tr>
<tr>
<td>• ReadBy</td>
<td>The context user can mark the feed element as read.</td>
</tr>
<tr>
<td>• Recommendations</td>
<td>The feed element has a recommendation.</td>
</tr>
<tr>
<td>• Record</td>
<td>The comment has a record attachment.</td>
</tr>
<tr>
<td>• RecordSnapshot</td>
<td>The feed element has all the snapshot fields of a record for a single create record event.</td>
</tr>
<tr>
<td>• SocialPost</td>
<td>The feed element can interact with a social post on a social network.</td>
</tr>
<tr>
<td>• Status</td>
<td>The feed element has a status that determines its visibility.</td>
</tr>
<tr>
<td>• Topics</td>
<td>The context user can add topics to the feed element.</td>
</tr>
<tr>
<td>• TrackedChanges</td>
<td>The feed element has all changes to a record for a single tracked change event.</td>
</tr>
<tr>
<td>• UpDownVote</td>
<td>Users can upvote or downvote the feed element.</td>
</tr>
<tr>
<td>• Verified</td>
<td>Users who have permission can mark a comment as verified or unverified.</td>
</tr>
</tbody>
</table>

### Feed elements are the top-level objects that a feed contains. The feed element type describes the characteristics of that feed element.

- **Bundle**—A container of feed elements. A bundle also has a body made up of message segments that can always be gracefully degraded to text-only values.
- **FeedItem**—A feed item has a single parent and is scoped to one community or across all communities. A feed item can have capabilities such as bookmarks, canvas, content, comment, link, poll. Feed items have a body made up of message segments that can always be gracefully degraded to text-only values.
- **Recommendation**—A recommendation is a feed element with a recommendations capability. A recommendation suggests records to follow, groups to join, or applications that are helpful to the context user.

### Status of the feed post or comment.

- **Draft**—The feed post isn’t published but is visible to the author and users with Modify All Data or View All Data permission. Comments can’t be drafts.
- **PendingReview**—The feed post or comment isn’t approved yet and therefore isn’t published or visible.
- **Published**—The feed post or comment is approved and visible.

### Origin of the feed favorite.

- **ListView**
- **Search**
- **Topic**

### Filter value for a feed.

- **AllQuestions**—Feed elements that are questions.
<table>
<thead>
<tr>
<th>Enum</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AuthoredBy</td>
<td>Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.</td>
</tr>
<tr>
<td>CommunityScoped</td>
<td>Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.</td>
</tr>
<tr>
<td>QuestionsWithCandidateAnswers</td>
<td>Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.</td>
</tr>
<tr>
<td>QuestionsWithCandidateAnswersReviewedPublished</td>
<td>Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.</td>
</tr>

<tr>
<td>DirectMessages</td>
<td>Contains all feed items of the context user’s direct messages.</td>
</tr>
<tr>
<td>Draft</td>
<td>Contains all the feed items that the context user drafted.</td>
</tr>
<tr>
<td>Files</td>
<td>Contains all feed items that contain files posted by people or groups that the context user follows.</td>
</tr>
<tr>
<td>Filter</td>
<td>Contains the news feed filtered to contain feed items whose parent is a specified object type.</td>
</tr>
<tr>
<td>Groups</td>
<td>Contains all feed items from all groups the context user either owns or is a member of.</td>
</tr>
<tr>
<td>Home</td>
<td>Contains all feed items associated with any managed topic in a community.</td>
</tr>
<tr>
<td>Landing</td>
<td>Contains all feed items that best drive user engagement when the feed is requested. Allows clients to avoid an empty feed when there aren’t many personalized feed items.</td>
</tr>
</tbody>
</table>
### Enum

<table>
<thead>
<tr>
<th>Enum</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Moderation</td>
<td>Contains all feed items that are flagged for moderation, except direct messages. The Communities Moderation feed is available only to users with Moderate Community Feeds permissions.</td>
</tr>
<tr>
<td>Mute</td>
<td>Contains all feed items that the context user muted.</td>
</tr>
<tr>
<td>News</td>
<td>Contains all updates for people the context user follows, groups the user is a member of, and files and records the user is following. Contains all updates for records whose parent is the context user. Contains every feed item and comment that mentions the context user or that mentions a group the context user is a member of.</td>
</tr>
<tr>
<td>PendingReview</td>
<td>Contains all feed items and comments that are pending review.</td>
</tr>
<tr>
<td>People</td>
<td>Contains all feed items posted by all people the context user follows.</td>
</tr>
<tr>
<td>Record</td>
<td>Contains all feed items whose parent is a specified record, which could be a group, user, object, file, or any other standard or custom object. When the record is a group, the feed also contains feed items that mention the group. When the record is a user, the feed contains only feed items on that user. You can get another user’s record feed.</td>
</tr>
<tr>
<td>Streams</td>
<td>Contains all feed items for any combination of up to 25 feed-enabled entities that the context user subscribes to in a stream. Examples of feed-enabled entities include people, groups, and records.</td>
</tr>
<tr>
<td>To</td>
<td>Contains all feed items with mentions of the context user. Contains feed items the context user commented on and feed items created by the context user that are commented on.</td>
</tr>
<tr>
<td>Topics</td>
<td>Contains all feed items that include the specified topic.</td>
</tr>
<tr>
<td>UserProfile</td>
<td>Contains feed items created when a user changes records that can be tracked in a feed. Contains feed items whose parent is the user and feed items that @mention the user. This feed is different than the news feed, which returns more feed items, including group updates. You can get another user’s user profile feed.</td>
</tr>
</tbody>
</table>

### ConnectApi.FieldChange

<table>
<thead>
<tr>
<th>ValueType</th>
<th>Description</th>

<tr>
<td></td>
<td>• Flow—Automated process tool with multiple subtypes.</td>
</tr>
<tr>
<td>ConnectApi.NBAFlowType</td>
<td>Type of recommended flow.</td>
</tr>
<tr>
<td></td>
<td>• AutoLaunchedFlow—Autolaunched flow that runs in the background.</td>
</tr>
<tr>
<td></td>
<td>• Flow—Screen flow that accepts user inputs.</td>
</tr>
<tr>
<td>ConnectApi.NBATargetType</td>
<td>Type of target.</td>
</tr>
<tr>
<td></td>
<td>• Recommendation</td>
</tr>
<tr>
<td>ConnectApi.OperationType</td>
<td>Operation to carry out on the file.</td>
</tr>
<tr>
<td></td>
<td>• Add—Adds the file to the feed element.</td>
</tr>
<tr>
<td></td>
<td>• Remove—Removes the file from the feed element.</td>
</tr>
<tr>
<td>ConnectApi.PeriodType</td>
<td>Time period used for forecasting.</td>
</tr>
<tr>
<td></td>
<td>• Month</td>
</tr>
<tr>
<td></td>
<td>• Quarter</td>
</tr>
<tr>
<td></td>
<td>• Week</td>
</tr>
<tr>
<td></td>
<td>• Year</td>
</tr>
<tr>
<td>ConnectApi.PlatformActionGroupCategory</td>
<td>Location of an action link group on an associated feed element.</td>
</tr>
<tr>
<td></td>
<td>• Primary—The action link group is displayed in the body of the feed element.</td>
</tr>
<tr>
<td></td>
<td>• Overflow—The action link group is displayed in the overflow menu of the feed element.</td>
</tr>
<tr>
<td></td>
<td>• FailedStatus—The action link execution failed.</td>
</tr>
<tr>
<td></td>
<td>• NewStatus—The action link is ready to be executed. Available for Download and Ui action links only.</td>
</tr>
<tr>
<td></td>
<td>• PendingStatus—The action link is executing. Choosing this value triggers the API call for Api and ApiAsync action links.</td>
</tr>
<tr>
<td></td>
<td>• SuccessfulStatus—The action link executed successfully.</td>
</tr>
<tr>
<td>ConnectApi.PlatformActionType</td>
<td>Type of platform action.</td>
</tr>
<tr>
<td></td>
<td>• ActionLink—An indicator on a feed element that targets an API, a web page, or a file, represented by a button in the Salesforce UI.</td>
</tr>
<tr>
<td>Enum</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>• CustomButton</td>
<td>When clicked, opens a URL or a Visualforce page in a window or executes JavaScript.</td>
</tr>
<tr>
<td>• ProductivityAction</td>
<td>Productivity actions are predefined and attached to a limited set of objects. Productivity actions include Send Email, Call, Map, View Website, and Read News. Except for the Call action, you can’t edit or delete productivity actions.</td>
</tr>
<tr>
<td>• QuickAction</td>
<td>A global or object-specific action.</td>
</tr>
<tr>
<td>• StandardButton</td>
<td>A predefined Salesforce button such as New, Edit, or Delete.</td>
</tr>
<tr>
<td>ConnectApi. PublishStatus</td>
<td>Publish status of a personalization audience or target.</td>
</tr>
<tr>
<td>• Draft</td>
<td></td>
</tr>
<tr>
<td>• Live</td>
<td></td>
</tr>
<tr>
<td>ConnectApi. RecommendationActionType</td>
<td>Action to take on a recommendation.</td>
</tr>
<tr>
<td>• follow</td>
<td>Follow a file, record, topic, or user.</td>
</tr>
<tr>
<td>• join</td>
<td>Join a group.</td>
</tr>
<tr>
<td>• view</td>
<td>View a file, group, article, record, user, custom, or static recommendation.</td>
</tr>
<tr>
<td>ConnectApi. RecommendationAudienceCriteriaType</td>
<td>Custom recommendation audience criteria type.</td>
</tr>
<tr>
<td>• CustomList</td>
<td>A custom list of users makes up the audience.</td>
</tr>
<tr>
<td>• MaxDaysInCommunity</td>
<td>New community members make up the audience.</td>
</tr>
<tr>
<td>ConnectApi. RecommendationAudienceMemberOperationType</td>
<td>Operation to carry out on the custom recommendation audience members.</td>
</tr>
<tr>
<td>• Add</td>
<td>Adds specified members to the audience.</td>
</tr>
<tr>
<td>• Remove</td>
<td>Removes specified members from the audience.</td>
</tr>
<tr>
<td>ConnectApi. RecommendationChannel</td>
<td>A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations.</td>
</tr>
<tr>
<td>• CustomChannel1</td>
<td>Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.</td>
</tr>
<tr>
<td>• CustomChannel2</td>
<td>Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</td>
</tr>
<tr>
<td>• CustomChannel3</td>
<td>Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</td>
</tr>
<tr>
<td>• CustomChannel4</td>
<td>Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</td>
</tr>
<tr>
<td>• CustomChannel5</td>
<td>Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</td>
</tr>
<tr>
<td>• DefaultChannel</td>
<td>Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.</td>
</tr>
</tbody>
</table>
### Reason for a Chatter recommendation.

<table>
<thead>
<tr>
<th>Enum</th>
<th>Description</th>
</tr>

## ConnectApi.SortOrder

Order for sorting.

- **Ascending**—Items are in ascending alphabetical order (A-Z).
- **Descending**—Items are in descending alphabetical order (Z-A).
- **MostRecentlyViewed**—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

## ConnectApi.TopicSort

Order returned by the sort.

- **popularDesc**—Sorts topics by popularity with the most popular first. This value is the default.
- **alphaAsc**—Sorts topics alphabetically.

## ConnectApiUpDownVoteValue

Type of vote for a feed element or comment.

- Down
- None
- Up

## ConnectApi.UserActivityType

Type of user activity.

- Bookmark—User bookmarked a post.
- ChatterActivity—Total counts of posts and comments made and likes and comments received for a user.
- ChatterLike—User liked a post or comment.
- Comment—User commented on a post.
- CompanyVerify—User verified comment.
- DownVote—User downvoted a post or comment.
- FeedEntityRead—User read a post.
- FeedRead—User read a feed.
- Mute—User muted a post.
- Post—User made a post.
- TopicEndorsement—User endorsed another user on a topic or received endorsement on a topic.
- UpVote—User upvoted a post or comment.
<table>
<thead>
<tr>
<th>Enum</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ConnectApi.UserMission.ActivityType</td>
<td>Type of mission activity for a user.</td>
</tr>
<tr>
<td>ConnectApi.UserProfile.TabType</td>
<td>Type of user profile tab.</td>
</tr>
<tr>
<td>ConnectApi.UserType</td>
<td>Type of user.</td>
</tr>
</tbody>
</table>

**ConnectApi.UserMission.ActivityType**
- **FeedItemAnswerAQuestion**—User answered a question.
- **FeedItemLikeSomething**—User liked a post or comment.
- **FeedItemMarkAnswerAsBest**—User marked an answer as the best answer.
- **FeedItemPostQuestion**—User posted a question.
- **FeedItemReceiveAComment**—User received a comment on a post.
- **FeedItemReceiveALike**—User received a like on a post or comment.
- **FeedItemReceiveAnAnswer**—User received an answer to a question.
- **FeedItemWriteAComment**—User commented on a post.
- **FeedItemWriteAPost**—User made a post.
- **FeedItemYourAnswerMarkedBest**—User’s answer was marked as the best answer.

**ConnectApi.UserProfile.TabType**
- **CustomVisualForce**—Tab that displays data from a Visualforce page.
- **CustomWeb**—Tab that displays data from any external web-based application or web page.
- **Element**—Tab that displays generic content inline.
- **Feed**—Tab that displays the Chatter feed.
- **Overview**—Tab that displays user details.

**ConnectApi.UserType**
- **ChatterGuest**—User is an external user in a private group.
- **ChatterOnly**—User is a Chatter Free customer.
- **Guest**—User is unauthenticated.
- **Internal**—User is a standard organization member.
- **Portal**—User is an external user in a customer portal, partner portal, or community.
- **System**—User is Chatter Expert or a system user.
- **Undefined**—User is a user type that is a custom object.

**ConnectApi.WorkflowProcessStatus**
- **Approved**
- **Fault**
- **Held**
- **NoResponse**
- **Pending**
- **Reassigned**
- **Rejected**
- **Removed**
- **Started**
## ConnectApi Exceptions

The `ConnectApi` namespace contains exception classes.

All exceptions classes support built-in methods for returning the error message and exception type. See Exception Class and Built-In Exceptions on page 2815.

The `ConnectApi` namespace contains these exceptions:

<table>
<thead>
<tr>
<th>Exception</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>ConnectApi.ConnectApiException</code></td>
<td>Any logic error in the way your application is utilizing <code>ConnectApi</code> code. This is equivalent to receiving a 400 error from Chatter REST API.</td>
</tr>
<tr>
<td><code>ConnectApi.NotFoundException</code></td>
<td>Any issues with the specified resource being found. This is equivalent to receiving a 404 error from Chatter REST API.</td>
</tr>
<tr>
<td><code>ConnectApi.RateLimitException</code></td>
<td>When you exceed the rate limit. This is equivalent to receiving a 503 Service Unavailable error from Chatter REST API.</td>
</tr>
</tbody>
</table>

## Database Namespace

The `Database` namespace provides classes used with DML operations.

The following are the classes in the `Database` namespace.

IN THIS SECTION:

- **Batchable Interface**
  The class that implements this interface can be executed as a batch Apex job.

- **BatchableContext Interface**
  Represents the parameter type of a batch job method and contains the batch job ID. This interface is implemented internally by Apex.

- **DeletedRecord Class**
  Contains information about a deleted record.
DeleteResult Class
Represents the result of a delete DML operation returned by the Database.delete method.

DMLOptions Class
Enables you to set options related to DML operations.

DmlOptions.AssignmentRuleHeader Class
Enables setting assignment rule options.

DMLOptions.DuplicateRuleHeader Class
Determines options for using duplicate rules to detect duplicate records. Duplicate rules are part of the Duplicate Management feature.

DmlOptions.EmailHeader Class
Enables setting email options.

DuplicateError Class
Contains information about an error that occurred when an attempt was made to save a duplicate record. Use if your organization has set up duplicate rules, which are part of the Duplicate Management feature.

EmptyRecycleBinResult Class
The result of the emptyRecycleBin DML operation returned by the Database.emptyRecycleBin method.

Error Class
Represents information about an error that occurred during a DML operation when using a Database method.

GetDeletedResult Class
Contains the deleted records retrieved for a specific sObject type and time window.

GetUpdatedResult Class
Contains the result for the Database.getUpdated method call.

LeadConvert Class
Contains information used for lead conversion.

LeadConvertResult Class
The result of a lead conversion.

MergeResult Class
Contains the result of a merge Database method operation.

QueryLocator Class
Represents the record set returned by Database.getQueryLocator and used with Batch Apex.

QueryLocatorIterator Class
Represents an iterator over a query locator record set.

SaveResult Class
The result of an insert or update DML operation returned by a Database method.

UndeleteResult Class
The result of an undelete DML operation returned by the Database.undelete method.

UpsertResult Class
The result of an upsert DML operation returned by the Database.upsert method.
Batchable Interface

The class that implements this interface can be executed as a batch Apex job.

Namespace

Database

SEE ALSO:

Using Batch Apex

Batchable Methods

The following are methods for Batchable.

IN THIS SECTION:

execute(jobId, recordList)

Gets invoked when the batch job executes and operates on one batch of records. Contains or calls the main execution logic for the batch job.

finish(jobId)

Gets invoked when the batch job finishes. Place any clean up code in this method.

start(jobId)

Gets invoked when the batch job starts. Returns the record set as an iterable that will be batched for execution.

start(jobId)

Gets invoked when the batch job starts. Returns the record set as a QueryLocator object that will be batched for execution.

execute(jobId, recordList)

Gets invoked when the batch job executes and operates on one batch of records. Contains or calls the main execution logic for the batch job.

Signature

public Void execute(Database.BatchableContext jobId, List<sObject> recordList)

Parameters

jobId

Type: Database.BatchableContext

Contains the job ID.

recordList

Type: List<sObject>

Contains the batch of records to process.
**finish(jobId)**
Gets invoked when the batch job finishes. Place any clean up code in this method.

Signature
```
public Void finish(Database.BatchableContext jobId)
```

Parameters

* jobId
  - Type: `Database.BatchableContext`
  - Contains the job ID.

**start(jobId)**
Gets invoked when the batch job starts. Returns the record set as an iterable that will be batched for execution.

Signature
```
public System.Iterable start(Database.BatchableContext jobId)
```

Parameters

* jobId
  - Type: `Database.BatchableContext`
  - Contains the job ID.

Return Value
Type: `System.Iterable`

**start(jobId)**
Gets invoked when the batch job starts. Returns the record set as a `QueryLocator` object that will be batched for execution.

Signature
```
public Database.QueryLocator start(Database.BatchableContext jobId)
```
Parameters

jobId
  Type: Database.BatchableContext
  Contains the job ID.

Return Value

Type: Database.QueryLocator

BatchableContext Interface

Represents the parameter type of a batch job method and contains the batch job ID. This interface is implemented internally by Apex.

Namespace

Database

SEE ALSO:

Batchable Interface

BatchableContext Methods

The following are methods for BatchableContext.

IN THIS SECTION:

  getChildJobId()
  Returns the ID of the current batch job chunk that is being processed.
  getJobId()
  Returns the batch job ID.

getChildJobId()

Returns the ID of the current batch job chunk that is being processed.

Signature

public Id getChildJobId()

Return Value

Type: ID

gJobId()

Returns the batch job ID.
Signature

```java
public Id getJobId()
```

Return Value

Type: ID

### DeletedRecord Class

Contains information about a deleted record.

### Namespace

Database

### Usage

The `getDeletedRecords` method of the `Database.GetDeletedResult` class returns a list of `Database.DeletedRecord` objects. Use the methods in the `Database.DeletedRecord` class to retrieve details about each deleted record.

### DeletedRecord Methods

The following are methods for `DeletedRecord`. All are instance methods.

**IN THIS SECTION:**

- `getDeletedDate()`: Returns the deleted date of this record.
- `getId()`: Returns the ID of a record deleted within the time window specified in the `Database.getDeleted` method.

#### `getDeletedDate()`

Returns the deleted date of this record.

**Signature**

```java
public Date getDeletedDate()
```

**Return Value**

Type: `Date`

#### `getId()`

Returns the ID of a record deleted within the time window specified in the `Database.getDeleted` method.
Signature

public Id getId()

Return Value

Type: ID

DeleteResult Class

Represents the result of a delete DML operation returned by the Database.delete method.

Namespace

Database

Usage

An array of Database.DeleteResult objects is returned with the delete database method. Each element in the DeleteResult array corresponds to the sObject array passed as the sObject[] parameter in the delete Database method; that is, the first element in the DeleteResult array matches the first element passed in the sObject array, the second element corresponds with the second element, and so on. If only one sObject is passed in, the DeleteResult array contains a single element.

Example

The following example shows how to obtain and iterate through the returned Database.DeleteResult objects. It deletes some queried accounts using Database.delete with a false second parameter to allow partial processing of records on failure. Next, it iterates through the results to determine whether the operation was successful or not for each record. It writes the ID of every record that was processed successfully to the debug log, or error messages and fields of the failed records.

```java
// Query the accounts to delete
Account[] accts = [SELECT Id from Account WHERE Name LIKE 'Acme%'];
// Delete the accounts
Database.DeleteResult[] drList = Database.delete(accts, false);

// Iterate through each returned result
for(Database.DeleteResult dr : drList) {
    if (dr.isSuccess()) {
        // Operation was successful, so get the ID of the record that was processed
        System.debug('Successfully deleted account with ID: ' + dr.getId());
    } else {
        // Operation failed, so get all errors
        for(Database.Error err : dr.getErrors()) {
            System.debug('The following error has occurred:');
            System.debug(err.getStatusCode() + ': ' + err.getMessage());
            System.debug('Account fields that affected this error: ' + err.getFields());
        }
    }
}
```
DeleteResult Methods

The following are methods for DeleteResult. All are instance methods.

IN THIS SECTION:

getErrors()
If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns an empty set.

gId()
Returns the ID of the sObject you were trying to delete.

isSuccess()
A Boolean value that is set to true if the DML operation was successful for this object, false otherwise.

getErrors()
If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns an empty set.

Signature

public Database.Error[] getErrors()

Return Value
Type: Database.Error[]

getId()
Returns the ID of the sObject you were trying to delete.

Signature

public ID getId()

Return Value
Type: ID

Usage
If this field contains a value, the object was successfully deleted. If this field is empty, the operation was not successful for that object.

isSuccess()
A Boolean value that is set to true if the DML operation was successful for this object, false otherwise.

Signature

public Boolean isSuccess()
Return Value
Type: Boolean

DMLOptions Class
Enables you to set options related to DML operations.

Namespace
Database

Usage
Database.DMLOptions is only available for Apex saved against API versions 15.0 and higher. DMLOptions settings take effect only for record operations performed using Apex DML and not through the Salesforce user interface. The DMLOptions class has three child options.

DML Child Options
  - DmlOptions.AssignmentRuleHeader—Enables setting assignment rule options.
  - DmlOptions.DuplicateRuleHeader—Determines options for using duplicate rules to detect duplicate records. Duplicate rules are part of the Duplicate Management feature.
  - DmlOptions.EmailHeader—Enables setting email options.

DmlOptions Properties
The following are properties for DmlOptions.

IN THIS SECTION:
  - allowFieldTruncation
    Specifies the truncation behavior of large strings.
  - assignmentRuleHeader
    Specifies the assignment rule to be used when creating a case or lead.
  - emailHeader
    Specifies additional information regarding the automatic email that gets sent when an events occurs.
  - localeOptions
    Specifies the language of any labels that are returned by Apex.
  - optAllOrNone
    Specifies whether the operation allows for partial success.

allowFieldTruncation
Specifies the truncation behavior of large strings.

Signature
public Boolean allowFieldTruncation {get; set;}
Property Value

Type: Boolean

Usage

In Apex saved against API versions previous to 15.0, if you specify a value for a string and that value is too large, the value is truncated. For API version 15.0 and later, if a value is specified that is too large, the operation fails and an error message is returned. The allowFieldTruncation property allows you to specify that the previous behavior, truncation, be used instead of the new behavior in Apex saved against API versions 15.0 and later.

assignmentRuleHeader

Specifies the assignment rule to be used when creating a case or lead.

Signature

public Database.DmlOptions.Assignmentruleheader assignmentRuleHeader {get; set;}

Property Value

Type: Database.DML.Options.AssignmentRuleHeader

Usage

Note: The Database.DMLOptions object supports assignment rules for cases and leads, but not for accounts or territory management.

emailHeader

Specifies additional information regarding the automatic email that gets sent when an events occurs.

Signature

public Database.DmlOptions.EmailHeader emailHeader {get; set;}

Property Value

Type: Database.DML.Options.EmailHeader

Usage

The Salesforce user interface allows you to specify whether or not to send an email when the following events occur.

- Creation of a new case or task
- Conversion of a case email to a contact
- New user email notification
- Lead queue email notification
- Password reset

In Apex saved against API version 15.0 or later, the Database.DMLOptions emailHeader property enables you to specify additional information regarding the email that gets sent when one of the events occurs because of the code's execution.
localeOptions
Specifies the language of any labels that are returned by Apex.

Signature
public Database.DmlOptions.LocaleOptions localeOptions {get; set;}

Property Value
Type: Database.DmlOptions.LocaleOptions

Usage
The value must be a valid user locale (language and country), such as de_DE or en_GB. The value is a String, 2-5 characters long. The first two characters are always an ISO language code, for example ‘fr’ or ‘en.’ If the value is further qualified by a country, then the string also has an underscore (_) and another ISO country code, for example ‘US’ or ‘UK.’ For example, the string for the United States is ‘en_US’, and the string for French Canadian is ‘fr_CA.’

For a list of the languages that Salesforce supports, see Supported Languages in the Salesforce online help.

optAllOrNone
Specifies whether the operation allows for partial success.

Signature
public Boolean optAllOrNone {get; set;}

Property Value
Type: Boolean

Usage
If optAllOrNone is set to true, all changes are rolled back if any record causes errors. The default for this property is false and successfully processed records are committed while records with errors aren’t.

This property is available in Apex saved against Salesforce API version 20.0 and later.

DmlOptions.AssignmentRuleHeader Class
Enables setting assignment rule options.

Namespace
Database
The following example uses the `useDefaultRule` option:

```java
Database.DMLOptions dmo = new Database.DMLOptions();
dmo.assignmentRuleHeader.useDefaultRule = true;

Lead l = new Lead(company='ABC', lastname='Smith');
l.setOptions(dmo);
insert l;
```

The following example uses the `assignmentRuleID` option:

```java
Database.DMLOptions dmo = new Database.DMLOptions();
dmo.assignmentRuleHeader.assignmentRuleId = '01QD0000000EqAn';

Lead l = new Lead(company='ABC', lastname='Smith');
l.setOptions(dmo);
insert l;
```

### DmlOptions.AssignmentRuleHeader Properties

The following are properties for `DmlOptions.AssignmentRuleHeader`.

**IN THIS SECTION:**

- **assignmentRuleID**
  - Specifies the ID of a specific assignment rule to run for the case or lead. The assignment rule can be active or inactive.
  - Type: ID
  - Usage: The ID can be retrieved by querying the AssignmentRule sObject. If specified, do not specify `useDefaultRule`.

- **useDefaultRule**
  - If specified as `true` for a case or lead, the system uses the default (active) assignment rule for the case or lead. If specified, do not specify an `assignmentRuleId`.

### assignmentRuleID

Specifies the ID of a specific assignment rule to run for the case or lead. The assignment rule can be active or inactive.

**Signature**

```java
public Id assignmentRuleID {get; set;}
```

**Property Value**

- **Type**: ID

**Usage**

- The ID can be retrieved by querying the AssignmentRule sObject. If specified, do not specify `useDefaultRule`.
- If the value is not in the correct ID format (15-character or 18-character Salesforce ID), the call fails and an exception is returned.
**useDefaultRule**

If specified as `true` for a case or lead, the system uses the default (active) assignment rule for the case or lead. If specified, do not specify an `assignmentRuleId`.

**Signature**

```java
public Boolean useDefaultRule {get; set;}
```

**Property Value**

Type: Boolean

**Usage**

If there are no assignment rules in the organization, in API version 29.0 and earlier, creating a case or lead with `useDefaultRule` set to `true` results in the case or lead being assigned to the predefined default owner. In API version 30.0 and later, the case or lead is unassigned and doesn’t get assigned to the default owner.

**DMLOptions.DuplicateRuleHeader Class**

Determines options for using duplicate rules to detect duplicate records. Duplicate rules are part of the Duplicate Management feature.

**Namespace**

Database

**Example**

The following example shows how to save an account record that’s been identified as a duplicate. To learn how to iterate through duplicate errors, see `DuplicateError Class`

```java
Database.DMLOptions dml = new Database.DMLOptions();
dml.DuplicateRuleHeader.allowSave = true;
dml.DuplicateRuleHeader.runAsCurrentUser = true;
Account duplicateAccount = new Account(Name='dupe');
Database.SaveResult sr = Database.insert(duplicateAccount, dml);
if (sr.isSuccess()) {
    System.debug('Duplicate account has been inserted in Salesforce!');
}
```

**IN THIS SECTION:**

- DMLOptions.DuplicateRuleHeader Properties

**DMLOptions.DuplicateRuleHeader Properties**

The following are properties for `DMLOptions.DuplicateRuleHeader`. 
IN THIS SECTION:

**allowSave**
For a duplicate rule, when the Alert option is enabled, bypass alerts and save duplicate records by setting this property to `true`. Prevent duplicate records from being saved by setting this property to `false`.

**runAsCurrentUser**
Make sure that sharing rules for the current user are enforced when duplicate rules run by setting this property to `true`. Use the sharing rules specified in the class for the request by setting this property to `false`. If no sharing rules are specified, Apex code runs in system context and sharing rules for the current user are not enforced.

**allowSave**
For a duplicate rule, when the Alert option is enabled, bypass alerts and save duplicate records by setting this property to `true`. Prevent duplicate records from being saved by setting this property to `false`.

Signature
```
public Boolean allowSave {get; set;}
```

Property Value
Type: `Boolean`

Example
This example shows how to save an account record that’s been identified as a duplicate.
```
dml.DuplicateRuleHeader.allowSave = true;
Account duplicateAccount = new Account(Name='dupe');
Database.SaveResult sr = Database.insert(duplicateAccount, dml);
if (sr.isSuccess()) {
    System.debug('Duplicate account has been inserted in Salesforce!');
}
```

**runAsCurrentUser**
Make sure that sharing rules for the current user are enforced when duplicate rules run by setting this property to `true`. Use the sharing rules specified in the class for the request by setting this property to `false`. If no sharing rules are specified, Apex code runs in system context and sharing rules for the current user are not enforced.

Signature
```
public Boolean runAsCurrentUser {get; set;}
```

Property Value
Type: `Boolean`
Usage

If specified as `true`, duplicate rules run for the current user, which ensures users can’t view duplicate records that aren’t available to them.

Use `runAsCurrentUser = true` to detect duplicates when converting leads to contacts. Typically, lead conversion Apex code runs in a system context and does not enforce sharing rules for the current user.

Example

This example shows how to set options so that duplicate rules run for the current user when saving a new account.

```java
Database.DMLOptions dml = new Database.DMLOptions();
dml.DuplicateRuleHeader.allowSave = true;
dml.DuplicateRuleHeader.runAsCurrentUser = true;
Account duplicateAccount = new Account(Name='dupe');
Database.SaveResult sr = Database.insert(duplicateAccount, dml);
if (sr.isSuccess()) {
    System.debug('Duplicate account has been inserted in Salesforce!');
}
```

DmLOptions.EmailHeader Class

Enables setting email options.

Namespace

Database

Usage

Even though auto-sent emails can be triggered by actions in the Salesforce user interface, the DmLOptions settings for `emailHeader` take effect only for DML operations carried out in Apex code.

Example

In the following example, the `triggerAutoResponseEmail` option is specified:

```java
Account a = new Account(name='Acme Plumbing');

    insert a;

    Contact c = new Contact(email='jplumber@salesforce.com',
firstname='Joe',lastname='Plumber', accountid=a.id);

    insert c;

    Database.DMLOptions dlo = new Database.DMLOptions();

dlo.EmailHeader.triggerAutoResponseEmail = true;

Case ca = new Case(subject='Plumbing Problems', contactid=c.id);
```
Suppose that you use an after-insert or after-update trigger to change ownership of leads, contacts, or opportunities. If you use the API to change record ownership, or if a Lightning Experience user changes a record’s owner, no email notification is sent. To send email notifications to a record’s new owner, set the `triggerUserEmail` property to `true`.

**DmlOptions.EmailHeader Properties**

The following are properties for `DmlOptions.EmailHeader`.

**IN THIS SECTION:**

- `triggerAutoResponseEmail`
  Indicates whether to trigger auto-response rules (`true`) or not (`false`), for leads and cases.

- `triggerOtherEmail`
  Indicates whether to trigger email outside the organization (`true`) or not (`false`).

- `triggerUserEmail`
  Indicates whether to trigger email that is sent to users in the organization (`true`) or not (`false`).

**triggerAutoResponseEmail**

Indicates whether to trigger auto-response rules (`true`) or not (`false`), for leads and cases.

**Signature**

```csharp
public Boolean triggerAutoResponseEmail {get; set;}
```

**Property Value**

Type: `Boolean`

**Usage**

This email can be automatically triggered by a number of events, for example creating a case or resetting a user password. If this value is set to `true`, when a case is created, if there is an email address for the contact specified in `ContactID`, the email is sent to that address. If not, the email is sent to the address specified in `SuppliedEmail`.

**triggerOtherEmail**

Indicates whether to trigger email outside the organization (`true`) or not (`false`).

**Signature**

```csharp
public Boolean triggerOtherEmail {get; set;}
```

**Property Value**

Type: `Boolean`
Usage
This email can be automatically triggered by creating, editing, or deleting a contact for a case.

**Note:** Email sent through Apex because of a group event includes additional behaviors. A group event is an event for which IsGroupEvent is true. The EventAttendee object tracks the users, leads, or contacts that are invited to a group event.

Note the following behaviors for group event email sent through Apex:

- Sending a group event invitation to a lead or contact respects the triggerOtherEmail option
- Email sent when updating or deleting a group event also respects the triggerUserEmail and triggerOtherEmail options, as appropriate

**triggerUserEmail**
Indicates whether to trigger email that is sent to users in the organization (**true**) or not (**false**).

Signature
```csharp
public Boolean triggerUserEmail {get; set;}
```

**Property Value**
**Type:** Boolean

Usage
This email can be automatically triggered by a number of events; resetting a password, creating a new user, or creating or modifying a task.

**Note:** Adding comments to a case in Apex doesn’t trigger email to users in the organization even if triggerUserEmail is set to **true**.

**Note:** Email sent through Apex because of a group event includes additional behaviors. A group event is an event for which IsGroupEvent is true. The EventAttendee object tracks the users, leads, or contacts that are invited to a group event.

Note the following behaviors for group event email sent through Apex:

- Sending a group event invitation to a user respects the triggerUserEmail option
- Email sent when updating or deleting a group event also respects the triggerUserEmail and triggerOtherEmail options, as appropriate

**DuplicateError Class**
Contains information about an error that occurred when an attempt was made to save a duplicate record. Use if your organization has set up duplicate rules, which are part of the Duplicate Management feature.

**Namespace**
**Database**
Example

When you try to save a record that’s identified as a duplicate record by a duplicate rule, you’ll receive a duplicate error. If the duplicate rule contains the Allow action, an attempt will be made to bypass the error.

```java
// Try to save a duplicate account
Account duplicateAccount = new Account(Name='Acme', BillingCity='San Francisco');
Database.SaveResult sr = Database.insert(duplicateAccount, false);
if (!sr.isSuccess()) {
    // Insertion failed due to duplicate detected
    for(Database.Error duplicateError : sr.getErrors()){
        Datacloud.DuplicateResult duplicateResult =
            ((Database.DuplicateError)duplicateError).getDuplicateResult();
        System.debug('Duplicate records have been detected by ' +
                      duplicateResult.getDuplicateRule());
        System.debug(duplicateResult.getErrorMessage());
    }
    // If the duplicate rule is an alert rule, we can try to bypass it
    Database.DMLOptions dml = new Database.DMLOptions();
    dml.DuplicateRuleHeader.AllowSave = true;
    Database.SaveResult sr2 = Database.insert(duplicateAccount, dml);
    if (sr2.isSuccess()) {
        System.debug('Duplicate account has been inserted in Salesforce!');
    }
}
```

IN THIS SECTION:

DuplicateError Methods

SEE ALSO:

SaveResult Class
DuplicateResult Class
Error Class

DuplicateError Methods

The following are methods for DuplicateError.

IN THIS SECTION:

getDuplicateResult()
Returns the details of a duplicate rule and duplicate records found by the duplicate rule.

getFields()
Returns an array of one or more field names. Identifies which fields in the object, if any, affected the error condition.

getMessage()
Returns the error message text.
getStatusCode()
Returns a code that characterizes the error.

getDuplicateResult()
Returns the details of a duplicate rule and duplicate records found by the duplicate rule.

Signature
public Datacloud.DuplicateResult getDuplicateResult()

Return Value
Type: Datacloud.DuplicateResult

Example
This example shows the code used to get the possible duplicates and related match information after saving a new contact. This code is part of a custom application that implements duplicate management when users add a contact. See DuplicateResult Class on page 2103 to check out the entire sample application.

```
Datacloud.DuplicateResult duplicateResult =
    duplicateError.getDuplicateResult();
```

getFields()
Returns an array of one or more field names. Identifies which fields in the object, if any, affected the error condition.

Signature
public List<String> getFields()

Return Value
Type: List<String>

getMessage()
Returns the error message text.

Signature
public String getMessage()

Return Value
Type: String

getStatusCode()
Returns a code that characterizes the error.
Signature

```java
public StatusCode getStatusCode()
```

Return Value

Type: StatusCode

**EmptyRecycleBinResult Class**

The result of the emptyRecycleBin DML operation returned by the `Database.emptyRecycleBin` method.

**Namespace**

Database

**Usage**

A list of `Database.EmptyRecycleBinResult` objects is returned by the `Database.emptyRecycleBin` method. Each object in the list corresponds to either a record ID or an sObject passed as the parameter in the `Database.emptyRecycleBin` method. The first index in the EmptyRecycleBinResult list matches the first record or sObject specified in the list, the second with the second, and so on.

**EmptyRecycleBinResult Methods**

The following are methods for `EmptyRecycleBinResult`. All are instance methods.

IN THIS SECTION:

- `getErrors()`
  - If an error occurred during the delete for this record or sObject, returns a list of one or more `Database.Error` objects. If no errors occurred, the returned list is empty.

- `getId()`
  - Returns the ID of the record or sObject you attempted to delete.

- `isSuccess()`
  - Returns `true` if the record or sObject was successfully removed from the Recycle Bin; otherwise `false`.

**getErrors()**

If an error occurred during the delete for this record or sObject, returns a list of one or more `Database.Error` objects. If no errors occurred, the returned list is empty.

Signature

```java
public Database.Errors[] getErrors()
```

Return Value

Type: `Database.Errors[]`
**getId()**
Returns the ID of the record or sObject you attempted to delete.

Signature

```java
public ID getId()
```

Return Value
Type: ID

**isSuccess()**
Returns `true` if the record or sObject was successfully removed from the Recycle Bin; otherwise `false`.

Signature

```java
public Boolean isSuccess()
```

Return Value
Type: Boolean

**Error Class**
Represents information about an error that occurred during a DML operation when using a Database method.

**Namespace**
`Database`

**Usage**
`Error` class is part of `SaveResult`, which is generated when a user attempts to save a Salesforce record.

SEE ALSO:
- `SaveResult Class`
- `DuplicateError Class`

**Error Methods**
The following are methods for `Error`. All are instance methods.

IN THIS SECTION:
- `getFields()`
  Returns an array of one or more field names. Identifies which fields in the object, if any, affected the error condition.
- `getMessage()`
  Returns the error message text.
getStatusCode()
Returns a code that characterizes the error.

getFields()
Returns an array of one or more field names. Identifies which fields in the object, if any, affected the error condition.

Signature
public String[] getFields()

Return Value
Type: String[]

getMessage()
Returns the error message text.

Signature
public String getMessage()

Return Value
Type: String

getStatusCode()
Returns a code that characterizes the error.

Signature
public StatusCode getStatusCode()

Return Value
Type: StatusCode

Usage
The full list of status codes is available in the WSDL file for your organization (see Downloading Salesforce WSDLs and Client Authentication Certificates in the Salesforce online help.)

GetDeletedResult Class
Contains the deleted records retrieved for a specific sObject type and time window.

Namespace
Database
Usage

The Database.getDeleted method returns the deleted record information as a Database.GetDeletedResult object.

GetDeletedResult Methods

The following are methods for GetDeletedResult. All are instance methods.

IN THIS SECTION:

getDeletedRecords()
Returns a list of deleted records for the time window specified in the Database.getDeleted method call.

getEarliestDateAvailable()
Returns the date in Coordinated Universal Time (UTC) of the earliest physically deleted object for the sObject type specified in Database.getDeleted.

getLatestDateCovered()
Returns the date in Coordinated Universal Time (UTC) of the last date covered in the Database.getDeleted call.

getDeletedRecords()

Returns a list of deleted records for the time window specified in the Database.getDeleted method call.

Signature

public List<Database.DeletedRecord> getDeletedRecords()

Return Value

Type: List<Database.DeletedRecord>

getEarliestDateAvailable()

Returns the date in Coordinated Universal Time (UTC) of the earliest physically deleted object for the sObject type specified in Database.getDeleted.

Signature

public Date getEarliestDateAvailable()

Return Value

Type: Date

getLatestDateCovered()

Returns the date in Coordinated Universal Time (UTC) of the last date covered in the Database.getDeleted call.

Signature

public Date getLatestDateCovered()
Return Value
Type: Date

Usage
If there is a value, it is less than or equal to the \texttt{endDate} argument of \texttt{Database.getDeleted}. A value here indicates that, for safety, you should use this value for the \texttt{startDate} of your next call to capture the changes that started after this date but didn’t complete before \texttt{endDate} and were, therefore, not returned in the previous call.

GetUpdatedResult Class
Contains the result for the \texttt{Database.getUpdated} method call.

Namespace
\texttt{Database}

Usage
Use the methods in this class to obtain detailed information about the updated records returned by \texttt{Database.getUpdated} for a specific time window.

GetUpdatedResult Methods
The following are methods for \texttt{GetUpdatedResult}. All are instance methods.

\textbf{IN THIS SECTION:}
- \texttt{getIds()}
  Returns the IDs of records updated within the time window specified in the \texttt{Database.getUpdated} method.
- \texttt{getLatestDateCovered()}
  Returns the date in Coordinated Universal Time (UTC) of the last date covered in the \texttt{Database.getUpdated} call.

\texttt{getIds()}
Returns the IDs of records updated within the time window specified in the \texttt{Database.getUpdated} method.

Signature
\texttt{public List<Id> getIds()}

Return Value
Type: \texttt{List<Id>}

\texttt{getLatestDateCovered()}
Returns the date in Coordinated Universal Time (UTC) of the last date covered in the \texttt{Database.getUpdated} call.
Signature

```java
public Date getLatestDateCovered()
```

Return Value

Type: Date

**LeadConvert Class**

Contains information used for lead conversion.

**Namespace**

Database

**Usage**

The `convertLead` Database method converts a lead into an account and contact, as well as (optionally) an opportunity. The `convertLead` takes an instance of the `Database.LeadConvert` class as a parameter. Create an instance of this class and set the information required for conversion, such as setting the lead, and destination account and contact.

**Note:** The `Database.convertLead()` method can take one `LeadConvert` object or a list of `LeadConvert` objects.

**Example**

This example shows how to use the `Database.convertLead` method to convert a lead. It inserts a new lead, creates a `LeadConvert` object, sets its status to converted, then passes it to the `Database.convertLead` method. Finally, it verifies that the conversion was successful.

```java
Lead myLead = new Lead(LastName = 'Fry', Company='Fry And Sons');
insert myLead;

Database.LeadConvert lc = new Database.LeadConvert();
lc.setLeadId(myLead.id);

LeadStatus convertStatus = [SELECT Id, MasterLabel FROM LeadStatus WHERE IsConverted=true LIMIT 1];
lc.setConvertedStatus(convertStatus.MasterLabel);

Database.LeadConvertResult lcr = Database.convertLead(lc);
System.assert(lcr.isSuccess());
```

**IN THIS SECTION:**

- LeadConvert Constructors
- LeadConvert Methods

**LeadConvert Constructors**

The following are constructors for `LeadConvert`. 
IN THIS SECTION:

LeadConvert()
Creates a new instance of the Database.LeadConvert class.

LeadConvert()
Creates a new instance of the Database.LeadConvert class.

Signature
public LeadConvert()

LeadConvert Methods
The following are methods for LeadConvert. All are instance methods.

IN THIS SECTION:

getAccountId()
Gets the ID of the account into which the lead will be merged.

getContactId()
Gets the ID of the contact into which the lead will be merged.

getConvertedStatus()
Gets the lead status value for a converted lead.

getLeadId()
Gets the ID of the lead to convert.

getOpportunityName()
Gets the name of the opportunity to create.

getOwnerId()
Gets the ID of the person to own any newly created account, contact, and opportunity.

isDoNotCreateOpportunity()
Indicates whether an Opportunity is created during lead conversion (false, the default) or not (true).

isOverWriteLeadSource()
Indicates whether the LeadSource field on the target Contact object is overwritten with the contents of the LeadSource field in the source Lead object (true), or not (false, the default).

isSendNotificationEmail()
Indicates whether a notification email is sent to the owner specified by setOwnerId (true) or not (false, the default).

setAccountId(accountId)
Sets the ID of the account into which the lead is merged. This value is required only when updating an existing account, including person accounts.

setContactId(contactId)
Sets the ID of the contact into which the lead will be merged (this contact must be associated with the account specified with setAccountId, and setAccountId must be specified). This value is required only when updating an existing contact.
setConvertedStatus(status)
Sets the lead status value for a converted lead. This field is required.

setDoNotCreateOpportunity(createOpportunity)
Specifies whether to create an opportunity during lead conversion. The default value is `false`: opportunities are created by default. Set this flag to `true` only if you do not want to create an opportunity from the lead.

setLeadId(leadId)
Sets the ID of the lead to convert. This field is required.

setOpportunityId(opportunityId)
Sets the ID of the opportunity into which the lead is merged. This value is required only when updating an existing opportunity.

setOpportunityName(opportunityName)
Sets the name of the opportunity to create. If no name is specified, this value defaults to the company name of the lead.

setOverwriteLeadSource(overwriteLeadSource)
Specifies whether to overwrite the `LeadSource` field on the target contact object with the contents of the `LeadSource` field in the source lead object. The default value is `false`, to not overwrite the field. If you specify this as `true`, you must also specify `setContactId` for the target contact.

setOwnerId(ownerId)
Specifies the ID of the person to own any newly created account, contact, and opportunity. If the application does not specify this value, the owner of the new object will be the owner of the lead.

setSendNotificationEmail(sendEmail)
Specifies whether to send a notification email to the owner specified by `setOwnerId`. The default value is `false`, that is, to not send email.

**getAccountId()**

Gets the ID of the account into which the lead will be merged.

Signature

```
public ID getAccountId()
```

Return Value

Type: ID

**getContactId()**

Gets the ID of the contact into which the lead will be merged.

Signature

```
public ID getContactId()
```

Return Value

Type: ID
**getConvertedStatus()**
Gets the lead status value for a converted lead.

Signature

```
public String getConvertedStatus()
```

Return Value
Type: **String**

**getLeadID()**
Gets the ID of the lead to convert.

Signature

```
public ID getLeadID()
```

Return Value
Type: **ID**

**getOpportunityName()**
Gets the name of the opportunity to create.

Signature

```
public String getOpportunityName()
```

Return Value
Type: **String**

**getOwnerID()**
Gets the ID of the person to own any newly created account, contact, and opportunity.

Signature

```
public ID getOwnerID()
```

Return Value
Type: **ID**

**isDoNotCreateOpportunity()**
Indicates whether an Opportunity is created during lead conversion (**false**, the default) or not (**true**).
**isDoNotCreateOpportunity()**

Indicates whether the `LeadSource` field on the target Contact object is overwritten with the contents of the `LeadSource` field in the source Lead object (`true`), or not (`false`, the default).

**isOverWriteLeadSource()**

Indicates whether the `LeadSource` field on the target Contact object is overwritten with the contents of the `LeadSource` field in the source Lead object (`true`), or not (`false`, the default).

**isSendNotificationEmail()**

Indicates whether a notification email is sent to the owner specified by `setOwnerId` (`true`) or not (`false`, the default).

**setAccountId(accountId)**

Sets the ID of the account into which the lead is merged. This value is required only when updating an existing account, including person accounts.
**setContactId(contactId)**

Sets the ID of the contact into which the lead will be merged (this contact must be associated with the account specified with `setAccountId`, and `setAccountId` must be specified). This value is required only when updating an existing contact.

Signature

```java
public Void setContactId(ID contactId)
```

Parameters

- `contactId`
  - Type: ID

Return Value

Type: Void

Usage

If `setContactId` is specified, then the application creates a new contact that is implicitly associated with the account. The contact name and other existing data are not overwritten (unless `setOverwriteLeadSource` is set to true, in which case only the `LeadSource` field is overwritten).

⚠️ **Important:** If you are converting a lead into a person account, do not specify `setContactId` or an error will result. Specify only `setAccountId` of the person account.

**setConvertedStatus(status)**

Sets the lead status value for a converted lead. This field is required.

Signature

```java
public Void setConvertedStatus(String status)
```

Parameters

- `status`
  - Type: String

Return Value

Type: Void

**setDoNotCreateOpportunity(createOpportunity)**

Specifies whether to create an opportunity during lead conversion. The default value is `false`: opportunities are created by default. Set this flag to `true` only if you do not want to create an opportunity from the lead.

Signature

```java
public Void setDoNotCreateOpportunity(Boolean createOpportunity)
```
Parameters

createOpportunity
   Type: Boolean

Return Value
Type: Void

**setLeadId(leadId)**

Sets the ID of the lead to convert. This field is required.

Signature

```java
public Void setLeadId(ID leadId)
```

Parameters

leadId
   Type: ID

Return Value
Type: Void

**setOpportunityId(opportunityId)**

Sets the ID of the opportunity into which the lead is merged. This value is required only when updating an existing opportunity.

Signature

```java
public Void setOpportunityId(ID opportunityId)
```

Parameters

opportunityId
   Type: ID

Return Value
Type: Void

**setOpportunityName(opportunityName)**

Sets the name of the opportunity to create. If no name is specified, this value defaults to the company name of the lead.

Signature

```java
public Void setOpportunityName(String opportunityName)
```
Parameters

`opportunityName`
Type: `String`

Return Value
Type: Void

Usage
The maximum length of this field is 80 characters.

If `setDoNotCreateOpportunity` is true, no Opportunity is created and this field must be left blank; otherwise, an error is returned.

`setOverwriteLeadSource(overwriteLeadSource)`

Specifies whether to overwrite the `LeadSource` field on the target contact object with the contents of the `LeadSource` field in the source lead object. The default value is `false`, to not overwrite the field. If you specify this as `true`, you must also specify `setContactId` for the target contact.

Signature

`public Void setOverwriteLeadSource(Boolean overwriteLeadSource)`

Parameters

`overwriteLeadSource`
Type: `Boolean`

Return Value
Type: Void

`setOwnerId(ownerId)`

Specifies the ID of the person to own any newly created account, contact, and opportunity. If the application does not specify this value, the owner of the new object will be the owner of the lead.

Signature

`public Void setOwnerId(ID ownerId)`

Parameters

`ownerId`
Type: `ID`

Return Value
Type: Void
Usage

This method is not applicable when merging with existing objects—if setOwnerId is specified, the ownerId field is not overwritten in an existing account or contact.

**setSendNotificationEmail(sendEmail)**

Specifies whether to send a notification email to the owner specified by setOwnerId. The default value is `false`, that is, to not send email.

Signature

```java
public Void setSendNotificationEmail(Boolean sendEmail)
```

Parameters

- **sendEmail**
  
  Type: `Boolean`

Return Value

Type: `Void`

**LeadConvertResult Class**

The result of a lead conversion.

**Namespace**

Database

**Usage**

An array of LeadConvertResult objects is returned with the `convertLead` Database method. Each element in the LeadConvertResult array corresponds to the sObject array passed as the `SOBJECT[]` parameter in the `convertLead` Database method, that is, the first element in the LeadConvertResult array matches the first element passed in the SObject array, the second element corresponds to the second element, and so on. If only one sObject is passed in, the LeadConvertResult array contains a single element.

**LeadConvertResult Methods**

The following are methods for LeadConvertResult. All are instance methods.

**IN THIS SECTION:**

- `getAccountId()`
  
  The ID of the new account (if a new account was specified) or the ID of the account specified when `convertLead` was invoked.

- `getContactId()`
  
  The ID of the new contact (if a new contact was specified) or the ID of the contact specified when `convertLead` was invoked.

- `getErrors()`
  
  If an error occurred, an array of one or more database error objects providing the error code and description.
getAccountId()
The ID of the new account (if a new account was specified) or the ID of the account specified when convertLead was invoked.

Signature
public ID getAccountId()

Return Value
Type: ID

getContactId()
The ID of the new contact (if a new contact was specified) or the ID of the contact specified when convertLead was invoked.

Signature
public ID getContactId()

Return Value
Type: ID

getErrors()
If an error occurred, an array of one or more database error objects providing the error code and description.

Signature
public Database.Error[] getErrors()

Return Value
Type: Database.Error[]

getLeadId()
The ID of the converted lead.

Signature
public ID getLeadId()
Return Value
Type: ID

getOpportunityId()
The ID of the new opportunity, if one was created when convertLead was invoked.

Signature
public ID getOpportunityId()

Return Value
Type: ID

isSuccess()
A Boolean value that is set to true if the DML operation was successful for this object, false otherwise.

Signature
public Boolean isSuccess()

Return Value
Type: Boolean

MergeResult Class
Contains the result of a merge Database method operation.

Namespace
Database

Usage
The Database.merge method returns a Database.MergeResult object for each merged record.

MergeResult Methods
The following are methods for MergeResult. All are instance methods.

IN THIS SECTION:

getErrors()
Returns a list of Database.Error objects representing the errors encountered, if any, during a merge operation using the Database.merge method. If no error occurred, returns null.

getId()
Returns the ID of the master record into which other records were merged.
getMergedRecordIds()
Retrieves the IDs of the records merged into the master record.

getUpdatedRelatedIds()
Retrieves the IDs of all related records that were reparented as a result of the merge that are viewable by the user sending the merge call.

isSuccess()
Indicates whether the merge was successful (true) or not (false).

getErrors()
Returns a list of Database.Error objects representing the errors encountered, if any, during a merge operation using the Database.merge method. If no error occurred, returns null.

Signature
public List<Database.Error> getErrors()

Return Value
Type: List<Database.Error>

getId()
Retrieves the ID of the master record into which other records were merged.

Signature
public Id getId()

Return Value
Type: ID

getMergedRecordIds()
Retrieves the IDs of the records merged into the master record.

Signature
public List<String> getMergedRecordIds()

Return Value
Type: List<String>

getUpdatedRelatedIds()
Retrieves the IDs of all related records that were reparented as a result of the merge that are viewable by the user sending the merge call.
Signature
public List<String> getUpdatedRelatedIds()

Return Value
Type: List<String>

**isSuccess()**
Indicates whether the merge was successful (true) or not (false).

Signature
public Boolean isSuccess()

Return Value
Type: Boolean

**QueryLocator Class**
Represents the record set returned by Database.getQueryLocator and used with Batch Apex.

**Namespace**
Database

**QueryLocator Methods**
The following are methods for QueryLocator. All are instance methods.

**IN THIS SECTION:**
- **getQuery()**
  Returns the query used to instantiate the Database.QueryLocator object. This is useful when testing the start method.

- **iterator()**
  Returns a new instance of a query locator iterator.

**getQuery()**
Returns the query used to instantiate the Database.QueryLocator object. This is useful when testing the start method.

Signature
public String getQuery()
Usage
You cannot use the `FOR UPDATE` keywords with a getQueryLocator query to lock a set of records. The `start` method automatically locks the set of records in the batch.

Example

```java
System.assertEquals(QLReturnedFromStart.getQuery(),
                    Database.getQueryLocator(
                        [SELECT Id FROM Account]).getQuery());
```

`iterator()`
Returns a new instance of a query locator iterator.

Signature

```java
public Database.QueryLocatorIterator iterator()
```

Return Value
Type: `Database.QueryLocatorIterator`

Usage

⚠️ **Warning:** To iterate over a query locator, save the iterator instance that this method returns in a variable and then use this variable to iterate over the collection. Calling `iterator` every time you want to perform an iteration can result in incorrect behavior because each call returns a new iterator instance.

For an example, see `QueryLocatorIterator Class`.

**QueryLocatorIterator Class**
Represents an iterator over a query locator record set.

**Namespace**
`Database`

**Example**
This sample shows how to obtain an iterator for a query locator, which contains five accounts. This sample calls `hasNext` and `next` to get each record in the collection.

```java
// Get a query locator
Database.QueryLocator q = Database.getQueryLocator(
    [SELECT Name FROM Account LIMIT 5]);
// Get an iterator
Database.QueryLocatorIterator it = q.iterator();
// Iterate over the records
```
while (it.hasNext())
{
    Account a = (Account)it.next();
    System.debug(a);
}

QueryLocatorIterator Methods

The following are methods for QueryLocatorIterator. All are instance methods.

IN THIS SECTION:

  hasNext()  
  Returns true if there are one or more records remaining in the collection; otherwise, returns false.

  next()    
  Advances the iterator to the next sObject record and returns the sObject.

hasNext()

Returns true if there are one or more records remaining in the collection; otherwise, returns false.

Signature

public Boolean hasNext()

Return Value

Type: Boolean

next()

Advances the iterator to the next sObject record and returns the sObject.

Signature

public sObject next()

Return Value

Type: sObject

Example

Account a = (Account)myIterator.next();
**SaveResult Class**

The result of an insert or update DML operation returned by a Database method.

**Namespace**

*Database*

**Usage**

An array of SaveResult objects is returned with the `insert` and `update` database methods. Each element in the SaveResult array corresponds to the sObject array passed as the `sObject[]` parameter in the Database method, that is, the first element in the SaveResult array matches the first element passed in the sObject array, the second element corresponds with the second element, and so on. If only one sObject is passed in, the SaveResult array contains a single element.

A SaveResult object is generated when a new or existing Salesforce record is saved.

**Example**

The following example shows how to obtain and iterate through the returned `Database.SaveResult` objects. It inserts two accounts using `Database.insert` with a false second parameter to allow partial processing of records on failure. One of the accounts is missing the Name required field, which causes a failure. Next, it iterates through the results to determine whether the operation was successful or not for each record. It writes the ID of every record that was processed successfully to the debug log, or error messages and fields of the failed records. This example generates one successful operation and one failure.

```java
// Create two accounts, one of which is missing a required field
Account[] accts = new List<Account>{
    new Account(Name='Account1'),
    new Account();
} Database.SaveResult[] srList = Database.insert(accts, false);

// Iterate through each returned result
for (Database.SaveResult sr : srList) {
    if (sr.isSuccess()) {
        // Operation was successful, so get the ID of the record that was processed
        System.debug('Successfully inserted account. Account ID: ' + sr.getId());
    } else {
        // Operation failed, so get all errors
        for(Database.Error err : sr.getErrors()) {
            System.debug('The following error has occurred.');
            System.debug(err.getStatusCode() + ': ' + err.getMessage());
            System.debug('Account fields that affected this error: ' + err.getFields());
        }
    }
}
```

**SEE ALSO:**

- Error Class
- DuplicateError Class
SaveResult Methods
The following are methods for SaveResult. All are instance methods.

IN THIS SECTION:
  getErrors()
  If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns an empty set.
  getId()
  Returns the ID of the sObject you were trying to insert or update.
  isSuccess()
  Returns a Boolean that is set to true if the DML operation was successful for this object, false otherwise.

getErrors()
If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns an empty set.

Signature
public Database.Error[] getErrors()

Return Value
Type: Database.Error[]

getId()
Returns the ID of the sObject you were trying to insert or update.

Signature
public ID getId()

Return Value
Type: ID

Usage
If this field contains a value, the object was successfully inserted or updated. If this field is empty, the operation was not successful for that object.

isSuccess()
Returns a Boolean that is set to true if the DML operation was successful for this object, false otherwise.
Signature

```
public Boolean isSuccess()
```

Return Value

Type: Boolean

Example

This example shows the code used to process duplicate records, which are detected when there is an unsuccessful save due to an error. This code is part of a custom application that implements duplicate management when users add a contact. See DuplicateResult Class on page 2103 to check out the entire sample application.

```java
if (!saveResult.isSuccess()) { ... }
```

UndeleteResult Class

The result of an undelete DML operation returned by the Database undelete method.

Namespace

Database

Usage

An array of Database.UndeleteResult objects is returned with the undelete database method. Each element in the UndeleteResult array corresponds to the sObject array passed as the sObject[] parameter in the undelete Database method; that is, the first element in the UndeleteResult array matches the first element passed in the sObject array, the second element corresponds with the second element, and so on. If only one sObject is passed in, the UndeleteResults array contains a single element.

UndeleteResult Methods

The following are methods for UndeleteResult. All are instance methods.

IN THIS SECTION:

- getErrors()
- getId()
- isSuccess()

`getErrors()`

If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns null.

`getId()`

Returns the ID of the sObject you were trying to undelete.

`isSuccess()`

Returns a Boolean value that is set to true if the DML operation was successful for this object, false otherwise.

`getErrors()`

If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns null.
Signature

```java
public Database.Error[] getErrors()
```

Return Value

Type: `Database.Error[]`

**getID()**

Returns the ID of the sObject you were trying to undelete.

Signature

```java
public ID getId()
```

Return Value

Type: `ID`

Usage

If this field contains a value, the object was successfully undeleted. If this field is empty, the operation was not successful for that object.

**isSuccess()**

Returns a Boolean value that is set to `true` if the DML operation was successful for this object, `false` otherwise.

Signature

```java
public Boolean isSuccess()
```

Return Value

Type: `Boolean`

**UpsertResult Class**

The result of an upsert DML operation returned by the `Database.upsert` method.

**Namespace**

`Database`

**Usage**

An array of `Database.UpsertResult` objects is returned with the `upsert` database method. Each element in the UpsertResult array corresponds to the sObject array passed as the `sObject[]` parameter in the `upsert` Database method; that is, the first element in the UpsertResult array matches the first element passed in the sObject array, the second element corresponds with the second element, and so on. If only one sObject is passed in, the UpsertResults array contains a single element.
UpsertResult Methods

The following are methods for UpsertResult. All are instance methods.

**IN THIS SECTION:**

- `getErrors()`: If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns an empty set.

- `getId()`: Returns the ID of the sObject you were trying to update or insert.

- `isCreated()`: A Boolean value that is set to `true` if the record was created, `false` if the record was updated.

- `isSuccess()`: Returns a Boolean value that is set to `true` if the DML operation was successful for this object, `false` otherwise.

### getErrors()

If an error occurred, returns an array of one or more database error objects providing the error code and description. If no error occurred, returns an empty set.

**Signature**

```java
public Database.Error[] getErrors()
```

**Return Value**

Type: `Database.Error[]`

### getId()

Returns the ID of the sObject you were trying to update or insert.

**Signature**

```java
public ID getId()
```

**Return Value**

Type: `ID`

**Usage**

If this field contains a value, the object was successfully updated or inserted. If this field is empty, the operation was not successful for that object.

### isCreated()

A Boolean value that is set to `true` if the record was created, `false` if the record was updated.
public Boolean isCreated()

Return Value
Type: Boolean

isSuccess()
Returns a Boolean value that is set to true if the DML operation was successful for this object, false otherwise.

Signature
public Boolean isSuccess()

Return Value
Type: Boolean

Datacloud Namespace

The Datacloud namespace provides classes and methods for retrieving information about duplicate rules. Duplicate rules let you control whether and when users can save duplicate records within Salesforce.

The following are the classes in the Datacloud namespace.

IN THIS SECTION:

AdditionalInformationMap Class
Represents other information, if any, about matched records.

DuplicateResult Class
Represents the details of a duplicate rule that detected duplicate records and information about those duplicate records.

FieldDiff Class
Represents the name of a matching rule field and how the values of the field compare for the duplicate and its matching record.

FindDuplicates Class
Performs rule-based searches for duplicate records. The input is an array of sObjects. Each sObject represents a record you want to find duplicates of. The output identifies the detected duplicates for each input sObject based on active duplicate rules for the given object.

FindDuplicatesByIds Class
Performs rule-based searches for duplicate records. The input is an array of IDs. Each ID specifies records to search for duplicates among. The duplicates are detected based on the active duplicate rules applicable to the object type corresponding to the input IDs.

FindDuplicatesResult Class
Output for rule-based searches for duplicate records. FindDuplicatesResult contains results of detecting duplicates using instances of FindDuplicates or FindDuplicatesByIds classes.

MatchRecord Class
Represents a duplicate record detected by a matching rule.
**MatchResult Class**
Represents the duplicate results for a matching rule.

**AdditionalInformationMap Class**
Represents other information, if any, about matched records.

**Namespace**
*Datacloud*

**IN THIS SECTION:**
*AdditionalInformationMap Methods*

**AdditionalInformationMap Methods**
The following are methods for `AdditionalInformationMap`.

**IN THIS SECTION:**
*getName()*
Returns the element name.

*getValue()*
Returns the value of the element.

**getName()**
Returns the element name.

**Signature**
```
public String getName()
```

**Return Value**
Type: *String*

**getValue()**
Returns the value of the element.

**Signature**
```
public String getValue()
```

**Return Value**
Type: *String*
DuplicateResult Class

Represents the details of a duplicate rule that detected duplicate records and information about those duplicate records.

Namespace

Datacloud

Usage

The DuplicateResult class and its methods are available to organizations that use duplicate rules.

DuplicateResult is contained within DuplicateError, which is part of SaveResult. SaveResult is generated when a user attempts to save a record in Salesforce.

Example

This example shows a custom application that lets users add a contact. When a contact is saved, an alert displays if there are duplicate records.

The sample application consists of a Visualforce page and an Apex controller. The Visualforce page is listed first so that you can see how the page makes use of the Apex controller. Save the Apex class first before saving the Visualforce page.

```apex
<apex:page controller="ContactDedupeController">
    <apex:form>
        <apex:pageBlock title="Duplicate Records" rendered="{!hasDuplicateResult}"
            <apex:pageBlockTable value="{!duplicateRecords}" var="item">
            <apex:column>
                <apex:facet name="header">Name</apex:facet>
                <apex:outputLink value="/ {!item['Id']}">{!item['Name']}</apex:outputLink>
            </apex:column>
            <apex:column>
                <apex:facet name="header">Owner</apex:facet>
                <apex:outputField value="{!item['OwnerId']}"/>
            </apex:column>
            <apex:column>
                <apex:facet name="header">Last Modified Date</apex:facet>
                <apex:outputField value="{!item['LastModifiedDate']}"/>
            </apex:column>
        </apex:pageBlockTable>
    </apex:pageBlock>

    <apex:pageBlock title="Contact" mode="edit">
        <apex:pageBlockButtons>
            <apex:commandButton value="Save" action="{!save}"/>
        </apex:pageBlockButtons>

        <apex:pageBlockSection>
            <apex:inputField value="{!Contact.FirstName}"/>
            <apex:inputField value="{!Contact.LastName}"/>
            <apex:inputField value="{!Contact.Email}"/>
            <apex:inputField value="{!Contact.Phone}"/>
        </apex:pageBlockSection>
    </apex:pageBlock>
</apex:form>
```
This sample is the Apex controller for the page. This controller contains the action method for the Save button. The `save` method inserts the new contact. If errors are returned, this method iterates through each error, checks if it’s a duplicate error, adds the error message to the page, and returns information about the duplicate records to be displayed on the page.

```apex
public class ContactDedupeController {

    // Initialize a variable to hold the contact record you're processing
    private final Contact contact;

    // Initialize a list to hold any duplicate records
    private List<sObject> duplicateRecords;

    // Define variable that's true if there are duplicate records
    public boolean hasDuplicateResult {get;set;}

    // Define the constructor
    public ContactDedupeController() {

        // Define the values for the contact you're processing based on its ID
        Id id = ApexPages.currentPage().getParameters().get('id');
        this.contact = (id == null) ? new Contact() :
            [SELECT Id, FirstName, LastName, Email, Phone, AccountId
            FROM Contact WHERE Id = :id];

        // Initialize empty list of potential duplicate records
        this.duplicateRecords = new List<sObject>();
        this.hasDuplicateResult = false;
    }

    // Return contact and its values to the Visualforce page for display
    public Contact getContact() {
        return this.contact;
    }

    // Return duplicate records to the Visualforce page for display
    public List<sObject> getDuplicateRecords() {
        return this.duplicateRecords;
    }

    // Process the saved record and handle any duplicates
    public PageReference save() {

        // Optionally, set DML options here, use "DML" instead of "false"
        // in the insert()
        // Database.DMLOptions dml = new Database.DMLOptions();
        // dml.DuplicateRuleHeader.allowSave = true;
        // dml.DuplicateRuleHeader.runAsCurrentUser = true;
        Database.SaveResult saveResult = Database.insert(contact, false);
    }
}
```
if (!saveResult.isSuccess()) {
    // If there are duplicates, an error occurs
    // Process only duplicates and not other errors
    // (e.g., validation errors)
    for (Database.Error error : saveResult.getErrors()) {
        if (error instanceof Database.DuplicateError) {
            // Handle the duplicate error by first casting it as a
            // DuplicateError class
            // This lets you use methods of that class
            // (e.g., getDuplicateResult())
            Database.DuplicateError duplicateError =
                (Database.DuplicateError) error;
            Datacloud.DuplicateResult duplicateResult =
                duplicateError.getDuplicateResult();
            // Display duplicate error message as defined in the duplicate rule
            ApexPages.Message errorMessage = new ApexPages.Message{
                ApexPages.Severity.ERROR, 'Duplicate Error: ' +
                duplicateResult.getErrorMessage());
            ApexPages.addMessage(errorMessage);
        }
    }
    this.hasDuplicateResult = !this.duplicateRecords.isEmpty();
}
// If there’s a duplicate record, stay on the page
return null;

// After save, navigate to the view page:
return (new ApexPages.StandardController(contact)).view();

DuplicateResult Methods

SEE ALSO:
SaveResult Class
DuplicateError Class

DuplicateResult Methods
The following are methods for DuplicateResult.

getDuplicateRule()
Returns the developer name of the executed duplicate rule that returned duplicate records.

gErrorMessage()
Returns the error message configured by the administrator to warn users they may be creating duplicate records. This message is associated with a duplicate rule.

getMatchResults()
Returns the duplicate records and match information.

isAllowSave()
Indicates whether the duplicate rule will allow a record that’s identified as a duplicate to be saved. Set to true if duplicate rule should allow save; otherwise, false.

getDuplicateRule()
Returns the developer name of the executed duplicate rule that returned duplicate records.

Signature
public String getDuplicateRule()

Return Value
Type: String

gErrorMessage()
Returns the error message configured by the administrator to warn users they may be creating duplicate records. This message is associated with a duplicate rule.

Signature
public String getErrorMessage()

Return Value
Type: String
Example

This example shows the code used to display the error message when duplicates are found while saving a new contact. This code is part of a custom application that lets users add a contact. When a contact is saved, an alert displays if there are duplicate records. Review DuplicateResult Class on page 2103 to check out the entire sample application.

```apex
```

**getMatchResults()**

Returns the duplicate records and match information.

**Signature**

```apex
public List<Datacloud.MatchResult> getMatchResults()
```

**Return Value**

Type: List<Datacloud.MatchResult>

**Example**

This example shows the code used to return duplicate record and match information and assign it to the `matchResults` variable. This code is part of a custom application that implements duplicate management when users add a contact. See DuplicateResult Class on page 2103 to check out the entire sample application.

```apex
Datacloud.MatchResult[] matchResults =    duplicateResult.getMatchResults();
```

**isAllowSave()**

Indicates whether the duplicate rule will allow a record that’s identified as a duplicate to be saved. Set to `true` if duplicate rule should allow save; otherwise, `false`.

**Signature**

```apex
public Boolean isAllowSave()
```

**Return Value**

Type: Boolean

---

**FieldDiff Class**

Represents the name of a matching rule field and how the values of the field compare for the duplicate and its matching record.

**Namespace**

Datacloud
IN THIS SECTION:
FieldDiff Methods

FieldDiff Methods
The following are methods for FieldDiff.

getDifference()
Returns how the field values compare for the duplicate and its matching record.

getName()
Returns the name of a field on a matching rule that detected duplicates.

getDifference()
Returns how the field values compare for the duplicate and its matching record.

Signature
public String getDifference()

Return Value
Type: String
Possible values include:
- SAME: Indicates the field values match exactly.
- DIFFERENT: Indicates that the field values do not match.
- NULL: Indicates that the field values are a match because both values are blank.

getName()
Returns the name of a field on a matching rule that detected duplicates.

Signature
public String getName()

Return Value
Type: String

FindDuplicates Class
Performs rule-based searches for duplicate records. The input is an array of sObjects. Each sObject represents a record you want to find duplicates of. The output identifies the detected duplicates for each input sObject based on active duplicate rules for the given object.
Namespace
Datacloud

IN THIS SECTION:
FindDuplicates Methods

FindDuplicates Methods
The following are methods for FindDuplicates.

IN THIS SECTION:
findDuplicates(sObjects)
Identifies duplicates for sObjects provided and returns a list of FindDuplicatesResult objects.

findDuplicates(sObjects)
Identifies duplicates for sObjects provided and returns a list of FindDuplicatesResult objects.

Usage
Use FindDuplicates to apply active duplicate rules associated with an object to records represented by input sObjects.

FindDuplicates uses the duplicate rules for the object that has the same type as the input sObjects.

Input
• All sObjects in the input array must be of the same object type, and that type must correspond to an object type that supports duplicate rules.
• The input array is limited to 50 elements. If you exceed this limit, an exception is thrown with the following message:
  Configuration error: The number of records to check is greater than the permitted batch size.

Output
• The output of FindDuplicates is an array of objects with the same number of elements as the input array, and in the same order. The output objects encapsulate record IDs for duplicate records. The output objects also contain values from the duplicate records.
• Each element contains an array of DuplicateResult objects. If FindDuplicates doesn't find any duplicates, the duplicateRule field in DuplicateResult contains the name of the duplicate rule that FindDuplicates applied, but the matchResults array is empty.

Example
Account acct = new Account();
acct.Name = 'Acme';
acct.BillingStreet = '123 Fake St';
acct.BillingCity = 'Springfield';
acct.BillingState = 'VT';
acct.BillingCountry = 'US';
List<Account> acctList = new List<Account>();
acctList.add(acct);

if (Datacloud.FindDuplicates.findDuplicates(acctList).size() == 0) {
    // If the new account doesn't have duplicates, insert it.
    insert(acct);
}

Signature

public static List<Datacloud.FindDuplicatesResult> findDuplicates(List<SObject> sObjects)

Parameters

sObjects
Type: List<SObject>
An array of sObjects for which you want to find duplicates.

Return Value

Type: List<FindDuplicatesResult>

FindDuplicatesByIds Class

Performs rule-based searches for duplicate records. The input is an array of IDs. Each ID specifies records to search for duplicates among. The duplicates are detected based on the active duplicate rules applicable to the object type corresponding to the input IDs.

Namespace

Datacloud

IN THIS SECTION:

FindDuplicatesByIds Methods

FindDuplicatesByIds Methods

The following are methods for FindDuplicatesByIds.

IN THIS SECTION:

findDuplicatesByIds(ids)
Identifies duplicates of sObjects provided and returns a list of FindDuplicatesResult objects.

findDuplicatesByIds(ids)
Identifies duplicates of sObjects provided and returns a list of FindDuplicatesResult objects.

Usage

Use FindDuplicatesByIds to apply active duplicate rules associated with an object to records represented by the record IDs.
FindDuplicatesByIds uses the duplicate rules for the object that has the same type as the input record IDs. For example, if the record ID represents an Account, FindDuplicatesByIds uses the duplicate rules associated with the Account object.

**Input**
- All record IDs in the input array must be of the same object type, and that type must correspond to an object type that supports duplicate rules.
- The input array is limited to 50 elements. If you exceed this limit, an exception is thrown with the following message:
  Configuration error: The number of records to check is greater than the permitted batch size.

**Output**
- The output of FindDuplicatesByIds is an array of objects with the same number of elements as the input array, and in the same order. The output objects encapsulate record IDs for duplicate records. The output objects also contain values from the duplicate records.
- Each element contains an array of DuplicateResult objects. If FindDuplicatesByIds doesn’t find any duplicates, the duplicateRule field in DuplicateResult contains the name of the duplicate rule that FindDuplicatesByIds applied, but the matchResults array is empty.

**Example**

```apex
Account acct = new Account(name='Salesforce');
insert acct;

List<Id< idList = new List<Id<();
idList.add(acct.id);

if (Datacloud.FindDuplicatesByIds.findDuplicatesByIds(idList).size() > 0) {
    System.debug('Found duplicates');
}
```

**Signature**

```apex
public static List<Datacloud.FindDuplicatesResult> findDuplicatesByIds(List<Id> ids)
```

**Parameters**

- `ids`  
  Type: List<ID>  
  A list of IDs for which you want to find duplicates.

**Return Value**

Type: List<FindDuplicatesResult>

**FindDuplicatesResult Class**

Output for rule-based searches for duplicate records. FindDuplicatesResult contains results of detecting duplicates using instances of FindDuplicates or FindDuplicatesByIds classes.
Namespace
Datacloud

IN THIS SECTION:
FindDuplicatesResult Properties
FindDuplicatesResult Methods

FindDuplicatesResult Properties
The following are properties for FindDuplicatesResult.

IN THIS SECTION:

duplicateresults
A list of DuplicateResult objects representing the results of calling FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids). Elements in the list correspond to sObjects or IDs in the input list.

errors
A list of Database.Error objects holding errors resulting from calling FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids).

success
Boolean signifying whether the call to FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids) was successful.

duplicateresults
A list of DuplicateResult objects representing the results of calling FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids). Elements in the list correspond to sObjects or IDs in the input list.

Signature
public List<Datacloud.DuplicateResult> duplicateresults

Property Value
Type: List<DuplicateResult>

errors
A list of Database.Error objects holding errors resulting from calling FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids).

Signature
public List<Database.Error> errors {get; set;}

success
Boolean signifying whether the call to FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids) was successful.

Signature
public Boolean success {get; set;}

FindDuplicatesResult Methods
The following are methods for FindDuplicatesResult.

IN THIS SECTION:

getDuplicateResults()
Returns a list of DuplicateResult objects representing the results of calling
FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids). Elements in the list correspond to sObjects or IDs in the input list.

getErrors()
Returns a list of DatabaseError objects containing errors resulting from calling
FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids), if errors were encountered.

isSuccess()
Returns a Boolean signifying whether the call to FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids) was successful.

getDuplicateResults()
Returns a list of DuplicateResult objects representing the results of calling
FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids). Elements in the list correspond to sObjects or IDs in the input list.

Example
```java
Account acct = new Account(name='Salesforce');
List<Account> acctList = new List<Account>();
acctList.add(acct);

Datacloud.FindDuplicatesResult[] results = Datacloud.FindDuplicates.findDuplicates(acctList);
for (Datacloud.FindDuplicatesResult findDupeResult : results) {
    for (Datacloud.DuplicateResult dupeResult : findDupeResult.getDuplicateResults()) {
```
for (Datacloud.MatchResult matchResult : dupeResult.getMatchResults()) {
    for (Datacloud.MatchRecord matchRecord : matchResult.getMatchRecords()) {
        System.debug('Duplicate Record: ' + matchRecord.getRecord());
    }
}

public List<Datacloud.DuplicateResult> getDuplicateResults()

Return Value
Type: List<DuplicateResult> on page 2103

getErrors()

Returns a list of DatabaseError objects containing errors resulting from calling
FindDuplicates.findDuplicates(sObjects) or FindDuplicatesByIds.findDuplicatesByIds(ids),
if errors were encountered.

public List<Database.Error> getErrors()

Return Value
Type: List<Database.Error>

isSuccess()

Returns a Boolean signifying whether the call to FindDuplicates.findDuplicates(sObjects) or
FindDuplicatesByIds.findDuplicatesByIds(ids) was successful.

public Boolean isSuccess()

Return Value
Type: Boolean

MatchRecord Class

Represents a duplicate record detected by a matching rule.

Namespace

Datacloud
IN THIS SECTION:

MatchRecord Methods

**MatchRecord Methods**
The following are methods for MatchRecord.

IN THIS SECTION:

- **getAdditionalInformation()**
  Returns other information about a matched record. For example, a matchGrade represents the quality of the data for the D&B fields in the matched record.

- **getFieldDiffs()**
  Returns all matching rule fields and how each field value compares for the duplicate and its matching record.

- **getMatchConfidence()**
  Returns the ranking of how similar a matched record's data is to the data in your request. Must be equal to or greater than the value of the minMatchConfidence specified in your request. Returns -1 if unused.

- **getRecord()**
  Returns the fields and field values for the duplicate.

- **getAdditionalInformation()**
  Returns other information about a matched record. For example, a matchGrade represents the quality of the data for the D&B fields in the matched record.

  **Signature**
  ```java
  public List<Datacloud.AdditionalInformationMap> getAdditionalInformation()
  ```

  **Return Value**
  Type: List<Datacloud.AdditionalInformationMap>

- **getFieldDiffs()**
  Returns all matching rule fields and how each field value compares for the duplicate and its matching record.

  **Signature**
  ```java
  public List<Datacloud.FieldDiff> getFieldDiffs()
  ```

  **Return Value**
  Type: List<Datacloud.FieldDiff>

- **getMatchConfidence()**
  Returns the ranking of how similar a matched record's data is to the data in your request. Must be equal to or greater than the value of the minMatchConfidence specified in your request. Returns -1 if unused.
Signature

```java
public Double getMatchConfidence()
```

Return Value
Type: Double

**getRecord()**

Returns the fields and field values for the duplicate.

Signature

```java
public SObject getRecord()
```

Return Value
Type: SObject

**MatchResult Class**

Represents the duplicate results for a matching rule.

**Namespace**

Datacloud

IN THIS SECTION:

**MatchResult Methods**

The following are methods for MatchResult.

IN THIS SECTION:

- `getEntityType()`
  Returns the entity type of the matching rule.
- `getErrors()`
  Returns errors that occurred during matching for the matching rule.
- `getMatchEngine()`
  Returns the match engine for the matching rule.
- `getMatchRecords()`
  Returns information about the duplicates for the matching rule.
- `getRule()`
  Returns the developer name of the matching rule.
getSize()
Returns the number of duplicates detected by the matching rule.

isSuccess()
Returns false if there’s an error with the matching rule, and true if the matching rule successfully ran.

getEntityType()
Returns the entity type of the matching rule.

Signature
public String getEntityType()

Return Value
Type: String

getErrors()
Returns errors that occurred during matching for the matching rule.

Signature
public List<Database.Error> getErrors()

Return Value
Type: List<Database.Error>

getMatchEngine()
Returns the match engine for the matching rule.

Signature
public String getMatchEngine()

Return Value
Type: String

getMatchRecords()
Returns information about the duplicates for the matching rule.

Signature
public List<Datacloud.MatchRecord> getMatchRecords()
Return Value
Type: List<Datacloud.MatchRecord>

**getRule()**
Returns the developer name of the matching rule.

Signature
public String getRule()

Return Value
Type: String

**getSize()**
Returns the number of duplicates detected by the matching rule.

Signature
public Integer getSize()

Return Value
Type: Integer

**isSuccess()**
Returns `false` if there's an error with the matching rule, and `true` if the matching rule successfully ran.

Signature
public Boolean isSuccess()

Return Value
Type: Boolean

**DataSource Namespace**

The `DataSource` namespace provides the classes for the Apex Connector Framework. Use the Apex Connector Framework to develop a custom adapter for Salesforce Connect. Then connect your Salesforce organization to any data anywhere via the Salesforce Connect custom adapter.

The following are the classes in the `DataSource` namespace.
IN THIS SECTION:

AsyncDeleteCallback Class
A callback class that the Database.deleteAsync method references. Salesforce calls this class after the remote deleteAsync operation is completed. This class provides the compensating transaction in the completion context of the delete operation. Extend this class to define the actions to execute after the remote delete operation finishes execution.

AsyncSaveCallback Class
A callback class that the Database.insertAsync or Database.updateAsync method references. Salesforce calls this class after the remote operation is completed. This class provides the compensating transaction in the completion context of the insert or update operation. Extend this class to define the actions to execute after the remote insert or update operation finishes execution.

AuthenticationCapability Enum
Specifies the types of authentication that can be used to access the external system.

AuthenticationProtocol Enum
Determines what type of credentials are used to authenticate to the external system.

Capability Enum
Declares which functional operations the external system supports. Also specifies required endpoint settings for the external data source definition.

Column Class
Describes a column on a DataSource.Table. This class extends the DataSourceUtil class and inherits its methods.

ColumnSelection Class
Identifies the list of columns to return during a query or search.

Connection Class
Extend this class to enable your Salesforce org to sync the external system’s schema and to handle queries, searches, and write operations (upsert and delete) of the external data. This class extends the DataSourceUtil class and inherits its methods.

ConnectionParams Class
Contains the credentials for authenticating to the external system.

DataSourceUtil Class
Parent class for the DataSource.Provider, DataSource.Connection, DataSource.Table, and DataSource.Column classes.

DataType Enum
Specifies the data types that are supported by the Apex Connector Framework.

DeleteContext Class
An instance of DeleteContext is passed to the deleteRows() method on your Database.Connection class. The class provides context information about the delete request to the implementor of deleteRows().

DeleteResult Class
Represents the result of a delete operation on an sObject record. The result is returned by the DataSource.deleteRows method of the DataSource.Connection class.

Filter Class
Represents a WHERE clause in a SOSL or SOQL query.

FilterType Enum
Referenced by the type property on a DataSource.Filter.
IdentityType Enum
Determines which set of credentials is used to authenticate to the external system.

Order Class
Contains details about how to sort the rows in the result set. Equivalent to an ORDER BY statement in a SOQL query.

OrderDirection Enum
Specifies the direction for sorting rows based on column values.

Provider Class
Extend this base class to create a custom adapter for Salesforce Connect. The class informs Salesforce of the functional and authentication capabilities that are supported by or required to connect to the external system. This class extends the DataSourceUtil class and inherits its methods.

QueryAggregation Enum
Specifies how to aggregate a column in a query.

QueryContext Class
An instance of QueryContext is provided to the query method on your DataSource.Connection class. The instance corresponds to a SOQL request.

QueryUtils Class
Contains helper methods to locally filter, sort, and apply limit and offset clauses to data rows. This helper class is provided for your convenience during early development and tests, but it isn’t supported for use in production environments.

ReadContext Class
Abstract base class for the QueryContext and SearchContext classes.

SearchContext Class
An instance of SearchContext is provided to the search method on your DataSource.Connection class. The instance corresponds to a search or SOSL request.

SearchUtils Class
Helper class for implementing search on a custom adapter for Salesforce Connect.

Table Class
Describes a table on an external system that the Salesforce Connect custom adapter connects to. This class extends the DataSourceUtil class and inherits its methods.

TableResult Class
Contains the results of a search or query.

TableSelection Class
Contains a breakdown of the SOQL or SOSL query. Its properties represent the FROM, ORDER BY, SELECT, and WHERE clauses in the query.

UpsertContext Class
An instance of UpsertContext is passed to the upsertRows() method on your DataSource.Connection class. This class provides context information about the upsert request to the implementor of upsertRows().

UpsertResult Class
Represents the result of an upsert operation on an external object record. The result is returned by the upsertRows method of the DataSource.Connection class.

DataSource Exceptions
The DataSource namespace contains exception classes.
AsyncDeleteCallback Class

A callback class that the Database.deleteAsync method references. Salesforce calls this class after the remote deleteAsync operation is completed. This class provides the compensating transaction in the completion context of the delete operation. Extend this class to define the actions to execute after the remote delete operation finishes execution.

Namespace

DataSource

IN THIS SECTION:

AsyncDeleteCallback Methods

AsyncDeleteCallback Methods

The following are methods for AsyncDeleteCallback.

IN THIS SECTION:

processDelete(deleteResult)

Override this method to define actions that Salesforce executes after a remote Database.deleteAsync operation is completed. For example, based on the results of the remote operation, you can update custom object data or other data that’s stored in the Salesforce org.

processDelete (deleteResult)

Override this method to define actions that Salesforce executes after a remote Database.deleteAsync operation is completed. For example, based on the results of the remote operation, you can update custom object data or other data that’s stored in the Salesforce org.

Signature

public void processDelete(Database.DeleteResult deleteResult)

Parameters

deleteResult

Type: Database.DeleteResult

The result of the asynchronous delete operation.

Return Value

Type: void

AsyncSaveCallback Class

A callback class that the Database.insertAsync or Database.updateAsync method references. Salesforce calls this class after the remote operation is completed. This class provides the compensating transaction in the completion context of the insert or update operation. Extend this class to define the actions to execute after the remote insert or update operation finishes execution.
IN THIS SECTION: AsyncSaveCallback Methods

AsyncSaveCallback Methods
The following are methods for AsyncSaveCallback.

IN THIS SECTION: processSave(saveResult)
Override this method to define actions that Salesforce executes after the remote Database.insertAsync or Database.updateAsync operation is completed. For example, based on the results of the remote operation, you can update custom object data or other data that’s stored in the Salesforce org.

processSave(saveResult)
Override this method to define actions that Salesforce executes after the remote Database.insertAsync or Database.updateAsync operation is completed. For example, based on the results of the remote operation, you can update custom object data or other data that’s stored in the Salesforce org.

Signature
public void processSave(Database.SaveResult saveResult)

Parameters
saveResult
Type: Database.SaveResult
The result of the asynchronous insert or update operation.

Return Value
Type: void

AuthenticationCapability Enum
Specifies the types of authentication that can be used to access the external system.

Usage
The DataSource.Provider class returns DataSource.AuthenticationCapability enum values. The returned values determine which authentication settings are available on the external data source definition in Salesforce.

If you set up callouts in your DataSource.Connection class, you can specify the callout endpoints as named credentials instead of URLs. If you do so for all callouts, return ANONYMOUS as the sole entry in the list of data source authentication capabilities. That way,
the external data source definition doesn’t require authentication settings. Salesforce manages all authentication for Apex callouts that specify a named credential as the callout endpoint so that your code doesn’t have to.

**Enum Values**
The following are the values of the `DataSource.AuthenticationCapability` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ANONYMOUS</td>
<td>No credentials are required to authenticate to the external system.</td>
</tr>
<tr>
<td>BASIC</td>
<td>A username and password can be used to authenticate to the external system.</td>
</tr>
<tr>
<td>CERTIFICATE</td>
<td>A security certificate can be supplied when establishing each connection to the external system.</td>
</tr>
<tr>
<td>OAUTH</td>
<td>OAuth can be used to authenticate to the external system.</td>
</tr>
</tbody>
</table>

**AuthenticationProtocol Enum**
Determines what type of credentials are used to authenticate to the external system.

**Enum Values**
The following are the values of the `DataSource.AuthenticationProtocol` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NONE</td>
<td>No credentials are used to authenticate to the external system.</td>
</tr>
<tr>
<td>OAUTH</td>
<td>OAuth 2.0 is used to authenticate to the external system.</td>
</tr>
<tr>
<td>PASSWORD</td>
<td>A username and password are used to authenticate to the external system.</td>
</tr>
</tbody>
</table>

**Capability Enum**
Declares which functional operations the external system supports. Also specifies required endpoint settings for the external data source definition.

**Usage**
The `DataSource.Provider` class returns `DataSource.Capability` enum values, which:

- Specify the functional capabilities of the external system.
- Determine which endpoint settings are available on the external data source definition in Salesforce.

**Enum Values**
The following are the values of the `DataSource.Capability` enum.
With server-driven paging, the external system determines the page sizes and batch boundaries. The external system’s paging settings can optimize the external system’s performance and improve the load times for external objects in your org. Also, the external data set can change while your users or the Lightning Platform are paging through the result set. Typically, server-driven paging adjusts batch boundaries to accommodate changing data sets more effectively than client-driven paging.

If you enable server-driven paging on an external data source, Salesforce ignores the requested page sizes, including the default `queryMore()` batch size of 500 rows. The pages returned by the external system determine the batches, but each page can’t exceed 2,000 rows. Also, the Apex code must generate a query token and use it to determine and fetch the next batch of results.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>QUERY_PAGINATION_SERVER_DRIVEN</td>
<td>With server-driven paging, the external system determines the page sizes and batch boundaries. The external system’s paging settings can optimize the external system’s performance and improve the load times for external objects in your org. Also, the external data set can change while your users or the Lightning Platform are paging through the result set. Typically, server-driven paging adjusts batch boundaries to accommodate changing data sets more effectively than client-driven paging. If you enable server-driven paging on an external data source, Salesforce ignores the requested page sizes, including the default <code>queryMore()</code> batch size of 500 rows. The pages returned by the external system determine the batches, but each page can’t exceed 2,000 rows. Also, the Apex code must generate a query token and use it to determine and fetch the next batch of results.</td>
</tr>
<tr>
<td>QUERY_TOTAL_SIZE</td>
<td>The external system can provide the total number of rows that meet the query criteria, even when requested to return a smaller batch size. This capability enables you to simplify how you paginate results by using <code>queryMore()</code></td>
</tr>
<tr>
<td>REQUIRE_ENDPOINT</td>
<td>Requires the administrator to specify the endpoint in the URL field in the external data source definition.</td>
</tr>
<tr>
<td>REQUIRE_HTTPS</td>
<td>Requires the endpoint URL to use secure HTTP. If <code>REQUIRE_ENDPOINT</code> isn’t declared, <code>REQUIRE_HTTPS</code> is ignored.</td>
</tr>
<tr>
<td>ROW_CREATE</td>
<td>Allows creating of external data.</td>
</tr>
<tr>
<td>ROW_DELETE</td>
<td>Allows deleting external data.</td>
</tr>
<tr>
<td>ROW_QUERY</td>
<td>Allows API and SOQL queries of the external data. Also allows reports on the external objects.</td>
</tr>
<tr>
<td>ROW_UPDATE</td>
<td>Allows updating external data.</td>
</tr>
<tr>
<td>SEARCH</td>
<td>Allows SOSL and Salesforce searches of the external data.</td>
</tr>
<tr>
<td></td>
<td>When the custom adapter declares the <code>SEARCH</code> capability, you can control which external objects are searchable by selecting or deselecting <code>Allow Search</code> on each external object. However, syncing always overwrites the external object’s search status to match the search status of the external data source. Only text, text area, and long text area fields on external objects can be searched. If an external object has no searchable fields, searches on that object return no records.</td>
</tr>
</tbody>
</table>

*Salesforce Help: Validate and Sync an External Data Source*

**Column Class**

Describes a column on a `DataSource.Table`. This class extends the `DataSourceUtil` class and inherits its methods.
Namespace

**DataSource**

Usage

A list of column metadata is provided by the **DataSource.Connection** class when the `sync()` method is invoked. Each column can become a field on an external object.

The metadata is stored in Salesforce. Updating the Apex code to return new or updated values for the column metadata doesn’t automatically update the stored metadata in Salesforce.

**IN THIS SECTION:**

- Column Properties
- Column Methods

Column Properties

The following are properties for **Column**.

**IN THIS SECTION:**

- `decimalPlaces`
  - If the data type is numeric, the number of decimal places to the right of the decimal point.
- `description`
  - Description of what the column represents.
- `filterable`
  - Whether a result set can be filtered based on the values of the column.
- `label`
  - User-friendly name for the column that appears in the Salesforce user interface.
- `length`
  - If the column is a string data type, the number of characters in the column. If the column is a numeric data type, the total number of digits on both sides of the decimal point, but excluding the decimal point.
- `name`
  - Name of the column in the external system.
- `referenceTargetField`
  - API name of the custom field on the parent object whose values are compared against this column’s values. Matching values identify related records in an indirect lookup relationship. Applies only when the column’s data type is **INDIRECT_LOOKUP_TYPE**. For other data types, this value is ignored.
- `referenceTo`
  - API name of the parent object in the relationship that’s represented by this column. Applies only when the column’s data type is **LOOKUP_TYPE**, **EXTERNAL_LOOKUP_TYPE**, or **INDIRECT_LOOKUP_TYPE**. For other data types, this value is ignored.
- `sortable`
  - Whether a result set can be sorted based on the values of the column via an **ORDER BY** clause.
type
Data type of the column.

decimalPlaces
If the data type is numeric, the number of decimal places to the right of the decimal point.

Signature
public Integer decimalPlaces {get; set;}

Property Value
Type: Integer

description
Description of what the column represents.

Signature
public String description {get; set;}

Property Value
Type: String

filterable
Whether a result set can be filtered based on the values of the column.

Signature
public Boolean filterable {get; set;}

Property Value
Type: Boolean

label
User-friendly name for the column that appears in the Salesforce user interface.

Signature
public String label {get; set;}

Property Value
Type: String
**length**
If the column is a string data type, the number of characters in the column. If the column is a numeric data type, the total number of digits on both sides of the decimal point, but excluding the decimal point.

Signature
```java
public Integer length {get; set;}
```

Property Value
Type: `Integer`

**name**
Name of the column in the external system.

Signature
```java
public String name {get; set;}
```

Property Value
Type: `String`

**referenceTargetField**
API name of the custom field on the parent object whose values are compared against this column’s values. Matching values identify related records in an indirect lookup relationship. Applies only when the column’s data type is `INDIRECT_LOOKUP_TYPE`. For other data types, this value is ignored.

Signature
```java
public String referenceTargetField {get; set;}
```

Property Value
Type: `String`

**referenceTo**
API name of the parent object in the relationship that’s represented by this column. Applies only when the column’s data type is `LOOKUP_TYPE`, `EXTERNAL_LOOKUP_TYPE`, or `INDIRECT_LOOKUP_TYPE`. For other data types, this value is ignored.

Signature
```java
public String referenceTo {get; set;}
```

Property Value
Type: `String`
**sortable**
Whether a result set can be sorted based on the values of the column via an ORDER BY clause.

Signature

```csharp
public Boolean sortable {get; set;}
```

Property Value
Type: `Boolean`

**type**
Data type of the column.

Signature

```csharp
public DataSource.DataType type {get; set;}
```

Property Value
Type: `DataSource.DataType`

**Column Methods**
The following are methods for `Column`.

**IN THIS SECTION:**

- `boolean(name)`
  Returns a new column of data type `BOOLEAN_TYPE`.

- `externalLookup(name, domain)`
  Returns a new column of data type `EXTERNAL_LOOKUP_TYPE`.

- `get(name, label, description, isSortable, isFilterable, type, length, decimalPlaces, referenceTo, referenceTargetField)`
  Returns a new column with the ten specified `Column` property values.

- `get(name, label, description, isSortable, isFilterable, type, length, decimalPlaces)`
  Returns a new column with the eight specified `Column` property values.

- `get(name, label, description, isSortable, isFilterable, type, length)`
  Returns a new column with the seven specified `Column` property values.

- `indirectLookup(name, domain, targetField)`
  Returns a new column of data type `INDIRECT_LOOKUP_TYPE`.

- `integer(name, length)`
  Returns a new numeric column with no decimal places using the specified name and length.

- `lookup(name, domain)`
  Returns a new column of data type `LOOKUP_TYPE`. 
number(name, length, decimalPlaces)
Returns a new column of data type NUMBER_TYPE.

text(name, label, length)
Returns a new column of data type STRING_SHORT_TYPE or STRING_LONG_TYPE, with the specified name, label, and length.

text(name, length)
Returns a new column of data type STRING_SHORT_TYPE or STRING_LONG_TYPE, with the specified name and length.

text(name)
Returns a new column of data type STRING_SHORT_TYPE with the specified name and the length of 255 characters.

textarea(name)
Returns a new column of data type STRING_LONG_TYPE with the specified name and the length of 32,000 characters.

url(name, length)
Returns a new column of data type URL_TYPE with the specified name and length.

url(name)
Returns a new column of data type URL_TYPE with the specified name and the length of 1,000 characters.

boolean(name)
Returns a new column of data type BOOLEAN_TYPE.

Signature

public static DataSource.Column boolean(String name)

Parameters

name
Type: String
Name of the column.

Return Value

Type: DataSource.Column

textarea(name)
Returns a new column of data type STRING_LONG_TYPE with the specified name and the length of 32,000 characters.

url(name, length)
Returns a new column of data type URL_TYPE with the specified name and length.

url(name)
Returns a new column of data type URL_TYPE with the specified name and the length of 1,000 characters.

Signature

public static DataSource.Column externalLookup(String name, String domain)

Parameters

name
Type: String
Name of the column.
domain
Type: String
API name of the parent object in the external lookup relationship.

Return Value
Type: DataSource.Column
The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>name</td>
</tr>
<tr>
<td>label</td>
<td>name</td>
</tr>
<tr>
<td>description</td>
<td>name</td>
</tr>
<tr>
<td>isSortable</td>
<td>true</td>
</tr>
<tr>
<td>isFilterable</td>
<td>true</td>
</tr>
<tr>
<td>type</td>
<td>DataSource.DataType.EXTERNAL_LOOKUP_TYPE</td>
</tr>
<tr>
<td>length</td>
<td>255</td>
</tr>
<tr>
<td>decimalPlaces</td>
<td>0</td>
</tr>
<tr>
<td>referenceTo</td>
<td>domain</td>
</tr>
<tr>
<td>referenceTargetField</td>
<td>null</td>
</tr>
</tbody>
</table>

get(name, label, description, isSortable, isFilterable, type, length, decimalPlaces, referenceTo, referenceTargetField)

Returns a new column with the ten specified Column property values.

Signature

public static DataSource.Column get(String name, String label, String description, Boolean isSortable, Boolean isFilterable, DataSource.DataType type, Integer length, Integer decimalPlaces, String referenceTo, String referenceTargetField)

Parameters

See Column Properties on page 2125 for information about each parameter.

name
Type: String

label
Type: String

description
Type: String
get(name, label, description, isSortable, isFilterable, type, length, decimalPlaces)

Returns a new column with the eight specified Column property values.

Signature

public static DataSource.Column get(String name, String label, String description, Boolean isSortable, Boolean isFilterable, DataSource.DataType type, Integer length, Integer decimalPlaces)

Parameters

See Column Properties on page 2125 for information about each parameter.

ame
  Type: String
label
  Type: String
description
  Type: String
isSortable
  Type: Boolean
isFilterable
  Type: Boolean
type
  Type: DataSource.DataType
get(name, label, description, isSortable, isFilterable, type, length)

Returns a new column with the seven specified Column property values.

Signature

public static DataSource.Column get(String name, String label, String description, Boolean isSortable, Boolean isFilterable, DataSource.DataType type, Integer length)

Parameters

See Column Properties on page 2125 for information about each parameter.

name
  Type: String

label
  Type: String

description
  Type: String

isSortable
  Type: Boolean

isFilterable
  Type: Boolean

type
  Type: DataSource.DataType

length
  Type: Integer

Return Value

Type: DataSource.Column

indirectLookup(name, domain, targetField)

Returns a new column of data type INDIRECT_LOOKUP_TYPE.
Signature

```java
public static DataSource.Column indirectLookup(String name, String domain, String targetField)
```

Parameters

- **name**
  - Type: `String`
  - Name of the column.

- **domain**
  - Type: `String`
  - API name of the parent object in the indirect lookup relationship.

- **targetField**
  - Type: `String`
  - API name of the custom field on the parent object whose values are compared against this column's values. Matching values identify related records in an indirect lookup relationship.

Return Value

Type: `DataSource.Column`

The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td><code>name</code></td>
</tr>
<tr>
<td>label</td>
<td><code>name</code></td>
</tr>
<tr>
<td>description</td>
<td><code>name</code></td>
</tr>
<tr>
<td>isSortable</td>
<td><code>true</code></td>
</tr>
<tr>
<td>isFilterable</td>
<td><code>true</code></td>
</tr>
<tr>
<td>type</td>
<td><code>DataSource.DataType.INDIRECT_LOOKUP_TYPE</code></td>
</tr>
<tr>
<td>length</td>
<td><code>255</code></td>
</tr>
<tr>
<td>decimalPlaces</td>
<td><code>0</code></td>
</tr>
<tr>
<td>referenceTo</td>
<td><code>domain</code></td>
</tr>
<tr>
<td>referenceTargetField</td>
<td><code>targetField</code></td>
</tr>
</tbody>
</table>

`integer(name, length)`

Returns a new numeric column with no decimal places using the specified name and length.

Signature

```java
public static DataSource.Column integer(String name, Integer length)
```
Parameters

\( name \)
  Type: String
  The column name.

\( length \)
  Type: Integer
  The column length.

Return Value
Type: DataSource.Column

\texttt{lookup(name, domain)}

Returns a new column of data type \texttt{LOOKUP\_TYPE}.

Signature
\texttt{public static DataSource.Column lookup(String name, String domain)}

Parameters

\( name \)
  Type: String
  Name of the column.

\( domain \)
  Type: String
  API name of the parent object in the lookup relationship.

Return Value
Type: DataSource.Column

The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>\texttt{name}</td>
</tr>
<tr>
<td>label</td>
<td>\texttt{name}</td>
</tr>
<tr>
<td>description</td>
<td>\texttt{name}</td>
</tr>
<tr>
<td>isSortable</td>
<td>true</td>
</tr>
<tr>
<td>isFilterable</td>
<td>true</td>
</tr>
<tr>
<td>type</td>
<td>\texttt{DataSource.DataType_LOOKUP_TYPE}</td>
</tr>
<tr>
<td>length</td>
<td>255</td>
</tr>
</tbody>
</table>
number(name, length, decimalPlaces)
Returns a new column of data type NUMBER_TYPE.

Signature
public static DataSource.Column number(String name, Integer length, Integer decimalPlaces)

Parameters
See Column Properties on page 2125 for information about each parameter.

name
Type: String

length
Type: Integer

decimalPlaces
Type: Integer

Return Value
Type: DataSource.Column
The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>name</td>
</tr>
<tr>
<td>label</td>
<td>name</td>
</tr>

<tr>
<td>isFilterable</td>
<td>true</td>
</tr>
<tr>
<td>type</td>
<td>DataSource.DataType.NUMBER_TYPE</td>
</tr>
<tr>
<td>length</td>
<td>length</td>
</tr>
<tr>
<td>decimalPlaces</td>
<td>decimalPlaces</td>
</tr>
</tbody>
</table>
**text(name, label, length)**

Returns a new column of data type `STRING_SHORT_TYPE` or `STRING_LONG_TYPE`, with the specified name, label, and length.

**Signature**

```java
public static DataSource.Column text(String name, String label, Integer length)
```

**Parameters**

- **name**
  - Type: `String`
  - Name of the column.

- **label**
  - Type: `String`
  - User-friendly name for the column that appears in the Salesforce user interface.

- **length**
  - Type: `Integer`
  - Number of characters allowed in the column.

**Return Value**

Type: `DataSource.Column`

The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>name</td>
</tr>
<tr>
<td>label</td>
<td>label</td>

<tr>
<td>type</td>
<td><code>DataSource.DataType.STRING_SHORT_TYPE</code> if <code>length</code> is 255 or less</td>
</tr>
<tr>
<td></td>
<td><code>DataSource.DataType.STRING_LONG_TYPE</code> if <code>length</code> is greater than 255</td>
</tr>
<tr>
<td>length</td>
<td><code>length</code></td>
</tr>
<tr>
<td>decimalPlaces</td>
<td>0</td>
</tr>
</tbody>
</table>

**text(name, length)**

Returns a new column of data type `STRING_SHORT_TYPE` or `STRING_LONG_TYPE`, with the specified name and length.

**Signature**

```java
public static DataSource.Column text(String name, Integer length)
```
Parameters

*name*
  Type: **String**
  Name of the column.

*length*
  Type: **Integer**
  Number of characters allowed in the column.

Return Value

Type: **DataSource.Column**

The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td><em>name</em></td>
</tr>
<tr>
<td>label</td>
<td><em>name</em></td>
</tr>

<td><em>name</em></td>
</tr>
<tr>
<td>isSortable</td>
<td>true</td>
</tr>
<tr>
<td>isFilterable</td>
<td>true</td>
</tr>
<tr>
<td>type</td>
<td><strong>DataSource.DataType.STRING_SHORT_TYPE</strong> if <em>length</em> is 255 or less</td>
</tr>
<tr>
<td></td>
<td><strong>DataSource.DataType.STRING_LONG_TYPE</strong> if <em>length</em> is greater than 255</td>
</tr>
<tr>
<td>length</td>
<td><em>length</em></td>
</tr>
<tr>
<td>decimalPlaces</td>
<td>0</td>
</tr>
</tbody>
</table>

**text(name)**

Returns a new column of data type **STRING_SHORT_TYPE** with the specified name and the length of 255 characters.

Signature

```java
public static DataSource.Column text(String name)
```

Parameters

*name*
  Type: **String**
  Name of the column.
textarea(name)

Returns a new column of data type STRING_LONG_TYPE with the specified name and the length of 32,000 characters.

Signature

public static DataSource.Column textarea(String name)

Parameters

name
  Type: String
  Name of the column.

Return Value

Type: DataSource.Column
The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>name</td>
</tr>
<tr>
<td>label</td>
<td>name</td>
</tr>
<tr>
<td>description</td>
<td>name</td>
</tr>
<tr>
<td>isSortable</td>
<td>true</td>

<tr>
<td>isFilterable</td>
<td>true</td>
</tr>
<tr>
<td>type</td>
<td>DataSource.DataType.STRING_LONG_TYPE</td>
</tr>
<tr>
<td>length</td>
<td>2138</td>
</tr>
<tr>
<td>decimalPlaces</td>
<td>0</td>
</tr>
</tbody>
</table>

textarea(name)

Returns a new column of data type STRING_SHORT_TYPE with the specified name and the length of 255 characters.

Signature

public static DataSource.Column textarea(String name)

Parameters

name
  Type: String
  Name of the column.

Return Value

Type: DataSource.Column
The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>name</td>
</tr>
<tr>
<td>label</td>
<td>name</td>
</tr>

</tr>
<tr>
<td>decimalPlaces</td>
<td>0</td>
</tr>
</tbody>
</table>
url(name, length)

Returns a new column of data type URL_TYPE with the specified name and length.

Signature

```java
public static DataSource.Column url(String name, Integer length)
```

Parameters

- **name**
  - Type: String
  - Name of the column.

- **length**
  - Type: Integer
  - Number of characters allowed in the column.

Return Value

Type: DataSource.Column

The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>name</td>
</tr>
<tr>
<td>label</td>
<td>name</td>
</tr>
<tr>
<td>description</td>
<td>name</td>
</tr>
<tr>
<td>isSortable</td>
<td>true</td>
</tr>
<tr>
<td>isFilterable</td>
<td>true</td>
</tr>
<tr>
<td>type</td>
<td>DataSource.DataType.URL_TYPE</td>
</tr>
<tr>
<td>length</td>
<td>length</td>
</tr>
<tr>
<td>decimalPlaces</td>
<td>0</td>
</tr>
</tbody>
</table>

url(name)

Returns a new column of data type URL_TYPE with the specified name and the length of 1,000 characters.
Signature

```java
public static DataSource.Column url(String name)
```

Parameters

`name`
Type: `String`
Name of the column.

Return Value

Type: `DataSource.Column`
The returned column has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td><code>name</code></td>
</tr>
<tr>
<td>label</td>
<td><code>name</code></td>

<tr>
<td>type</td>
<td><code>DataSource.DataType.URL_TYPE</code></td>
</tr>
<tr>
<td>length</td>
<td>1000</td>
</tr>
<tr>
<td>decimalPlaces</td>
<td>0</td>
</tr>
</tbody>
</table>

### ColumnSelection Class

Identifies the list of columns to return during a query or search.

#### Namespace

`DataSource Namespace`

#### Usage

This class is associated with the `SELECT` clause for a SOQL query, or the `RETURNING` clause for a SOSL query.

**IN THIS SECTION:**

ColumnSelection Properties

The following are properties for `ColumnSelection`. 
IN THIS SECTION:

aggregation
How to aggregate the column’s data.

columnName
Name of the selected column.

tableName
Name of the column’s table.

**aggregation**
How to aggregate the column’s data.

Signature
public DataSource.QueryAggregation aggregation {get; set;}

Property Value
Type: DataSource.QueryAggregation

**columnName**
Name of the selected column.

Signature
public String columnName {get; set;}

Property Value
Type: String

**tableName**
Name of the column’s table.

Signature
public String tableName {get; set;}

Property Value
Type: String

**Connection Class**
Extend this class to enable your Salesforce org to sync the external system’s schema and to handle queries, searches, and write operations (upsert and delete) of the external data. This class extends the DataSourceUtil class and inherits its methods.
Namespace

DataSource

Usage

Your DataSource.Connection and DataSource.Provider classes compose a custom adapter for Salesforce Connect. Changing the sync method on the DataSource.Connection class doesn’t automatically resync any external objects.

Example

global class SampleDataSourceConnection extends DataSource.Connection {
  global SampleDataSourceConnection(DataSource.ConnectionParams connectionParams) {
  }

  override global List<DataSource.Table> sync() {
    List<DataSource.Table> tables = new List<DataSource.Table>();
    List<DataSource.Column> columns;
    columns = new List<DataSource.Column>();
    columns.add(DataSource.Column.text('Name', 255));
    columns.add(DataSource.Column.text('ExternalId', 255));
    columns.add(DataSource.Column.url('DisplayUrl'));
    tables.add(DataSource.Table.get('Sample', 'Title', columns));
    return tables;
  }

  override global DataSource.TableResult query(DataSource.QueryContext c) {
    return DataSource.TableResult.get(c, DataSource.QueryUtils.process(c, getRows()));
  }

  override global List<DataSource.TableResult> search(DataSource.SearchContext c) {
    List<DataSource.TableResult> results = new List<DataSource.TableResult>();
    for (DataSource.TableSelection tableSelection : c.tableSelections) {
      results.add(DataSource.TableResult.get(tableSelection, getRows()));
    }
    return results;
  }

  // Helper method to get record values from the external system for the Sample table.
  private List<Map<String, Object>> getRows () {
    // Get row field values for the Sample table from the external system via a callout.
    HttpResponse response = makeGetCallout();
    // Parse the JSON response and populate the rows.
    Map<String, Object> m = (Map<String, Object>)JSON.deserializeUntyped(response.getBody());
    Map<String, Object> error = (Map<String, Object>)m.get('error');
    if (error != null) {
      throwException(string.valueOf(error.get('message')));
    }
    List<Map<String, Object>> rows = new List<Map<String, Object>>(){};
  }
}
List<Object> jsonRows = (List<Object>)m.get('value');
if (jsonRows == null) {
    rows.add(foundRow(m));
} else {
    for (Object jsonRow : jsonRows) {
        Map<String, Object> row = (Map<String, Object>)jsonRow;
        rows.add(foundRow(row));
    }
}
return rows;

global override List<DataSource.UpsertResult> upsertRows(DataSource.UpsertContext context) {
    if (context.tableSelected == 'Sample') {
        List<DataSource.UpsertResult> results = new List<DataSource.UpsertResult>();
        List<Map<String, Object>> rows = context.rows;

        for (Map<String, Object> row : rows) {
            // Make a callout to insert or update records in the external system.
            HttpResponse response;
            // Determine whether to insert or update a record.
            if (row.get('ExternalId') == null) {
                // Send a POST HTTP request to insert new external record.
                // Make an Apex callout and get HttpResponse.
                response = makePostCallout(
                    '{"name":"' + row.get('Name') + '","ExternalId":"' + row.get('ExternalId') + '"'});
            } else {
                // Send a PUT HTTP request to update an existing external record.
                // Make an Apex callout and get HttpResponse.
                response = makePutCallout(
                    '{"name":"' + row.get('Name') + '","ExternalId":"' + row.get('ExternalId') + '"',
                    String.valueOf(row.get('ExternalId')));
            }
        // Check the returned response.
        // First, deserialize it.
        Map<String, Object> m = (Map<String, Object>)JSON.deserializeUntyped(
            response.getBody());
        if (response.getStatusCode() == 200) {
            results.add(DataSource.UpsertResult.success(
                String.valueOf(m.get('id'))));
        } else {
            results.add(DataSource.UpsertResult.failure(
                String.valueOf(m.get('id')),
                'The callout resulted in an error: ' +
                response.getStatusCode()));
        }
    }
    return results;
global override List<DataSource.DeleteResult> deleteRows(DataSource.DeleteContext context) {
    if (context.tableSelected == 'Sample') {
        List<DataSource.DeleteResult> results = new List<DataSource.DeleteResult>();
        for (String externalId : context.externalIds) {
            HttpResponse response = makeDeleteCallout(externalId);
            if (response.getStatusCode() == 200) {
                results.add(DataSource.DeleteResult.success(externalId));
            } else {
                results.add(DataSource.DeleteResult.failure(externalId,
                    'Callout delete error:'
                    + response.getBody()));
            }
        }
        return results;
    }
    return null;
}

// Helper methods

// Make a GET callout
private static HttpResponse makeGetCallout() {
    HttpResponse response;
    // Make callout
    // ...
    return response;
}

// Populate a row based on values from the external system.
private Map<String, Object> foundRow(Map<String, Object> foundRow) {
    Map<String, Object> row = new Map<String, Object>();
    row.put('ExternalId', string.valueOf(foundRow.get('Id')));
    row.put('DisplayUrl', string.valueOf(foundRow.get('DisplayUrl')));
    row.put('Name', string.valueOf(foundRow.get('Name')));
    return row;
}

// Make a POST callout
private static HttpResponse makePostCallout(String jsonBody) {
    HttpResponse response;
    // Make callout
    // ...
    return response;
}

// Make a PUT callout
private static HttpResponse makePutCallout(String jsonBody, String externalID) {
    HttpResponse response;
IN THIS SECTION:

Connection Methods

**Connection Methods**

The following are methods for Connection.

**deleteRows(deleteContext)**
Invoked when external object records are deleted via the Salesforce user interface, APIs, or Apex.

**query(queryContext)**
Invoked by a SOQL query of an external object. A SOQL query is generated and executed when a user visits an external object’s list view or record detail page in Salesforce. Returns the results of the query.

**search(searchContext)**
Invoked by a SOSL query of an external object or when a user performs a Salesforce global search that also searches external objects. Returns the results of the query.

**sync()**
Invoked when an administrator clicks **Validate and Sync** on the external data source detail page. Returns a list of tables that describe the external system’s schema.

**upsertRows(upsertContext)**
Invoked when external object records are created or updated via the Salesforce user interface, APIs, or Apex.

**deleteRows(deleteContext)**
Invoked when external object records are deleted via the Salesforce user interface, APIs, or Apex.

Signature

```
public List<DataSource.DeleteResult> deleteRows(DataSource.DeleteContext deleteContext)
```
Parameters

`deleteContext`
Type: `DataSource.DeleteContext`
Contains context information about the delete request.

Return Value
Type: List<`DataSource.DeleteResult`>
The results of the delete operation.

`query(queryContext)`
Invoked by a SOQL query of an external object. A SOQL query is generated and executed when a user visits an external object’s list view or record detail page in Salesforce. Returns the results of the query.

Signature
`public DataSource.TableResult query(DataSource.QueryContext queryContext)`

Parameters

`queryContext`
Type: `DataSource.QueryContext`
Represents the query to run against a data table.

Return Value
Type: `DataSource.TableResult`

`search(searchContext)`
Invoked by a SOSL query of an external object or when a user performs a Salesforce global search that also searches external objects. Returns the results of the query.

Signature
`public List<DataSource.TableResult> search(DataSource.SearchContext searchContext)`

Parameters

`searchContext`
Type: `DataSource.SearchContext`
Represents the query to run against an external data table.

Return Value
Type: List<`DataSource.TableResult`>
sync()  
Invoked when an administrator clicks **Validate and Sync** on the external data source detail page. Returns a list of tables that describe the external system’s schema.

Signature  
```java
public List<DataSource.Table> sync()
```

Return Value  
Type: List<DataSource.Table>  
Each returned table can be used to create an external object in Salesforce. On the Validate External Data Source page, the administrator views the list of returned tables and selects which tables to sync. When the administrator clicks **Sync**, an external object is created for each selected table. Each column within the selected tables also becomes a field in the external object.

upsertRows(upsertContext)  
Invoked when external object records are created or updated via the Salesforce user interface, APIs, or Apex.

Signature  
```java
public List<DataSource.UpsertResult> upsertRows(DataSource.UpsertContext upsertContext)
```

Parameters  
`upsertContext`  
Type: DataSource.UpsertContext  
Contains context information about the upsert request.

Return Value  
Type: List<DataSource.UpsertResult>  
The results of the upsert operation.

**ConnectionParams Class**  
Contains the credentials for authenticating to the external system.

**Namespace**  
DataSource

**Usage**  
If your extension of the DataSource.Provider class returns DataSource.AuthenticationCapability values that indicate support for authentication, the DataSource.Connection class is instantiated with a DataSource.ConnectionParams instance in the constructor.
The authentication credentials in the DataSource.ConnectionParams instance depend on the Identity Type field of the external data source definition in Salesforce.

- If Identity Type is set to Named Principal, the credentials come from the external data source definition.
- If Identity Type is set to Per User:
  - For queries and searches, the credentials are specific to the current user who invokes the query or search. The credentials come from the user’s authentication settings for the external system.
  - For administrative connections, such as syncing the external system’s schema, the credentials come from the external data source definition.

The values in this class can appear in debug logs and can be accessed by users who have the “Author Apex” permission. If you require better security, we recommend that you specify named credentials instead of URLs as your Apex callout endpoints. Salesforce manages all authentication for Apex callouts that specify a named credential as the callout endpoint so that your code doesn’t have to.

IN THIS SECTION:

ConnectionParams Properties

The following are properties for ConnectionParams.

IN THIS SECTION:

- certificateName
  The name of the certificate for establishing each connection to the external system.
- endpoint
  The URL of the external system.
- oauthToken
  The OAuth token that’s issued by the external system.
- password
  The password for authenticating to the external system.
- principalType
  An instance of DataSource.IdentityType, which determines which set of credentials to use to access the external system.
- protocol
  The type of protocol that’s used to authenticate to the external system.
- repository
  Reserved for future use.
- username
  The username for authenticating to the external system.

**certificateName**

The name of the certificate for establishing each connection to the external system.
Signature
public String certificateName {get; set;}

Property Value
Type: String
The value comes from the external data source definition in Salesforce.

**endpoint**
The URL of the external system.

Signature
public String endpoint {get; set;}

Property Value
Type: String
The value comes from the external data source definition in Salesforce.

**oauthToken**
The OAuth token that’s issued by the external system.

Signature
public String oauthToken {get; set;}

Property Value
Type: String

**password**
The password for authenticating to the external system.

Signature
public String password {get; set;}

Property Value
Type: String
The value depends on the Identity Type field of the external data source definition in Salesforce.

- If Identity Type is set to Named Principal, the credentials come from the external data source definition.
- If Identity Type is set to Per User:
  - For queries and searches, the credentials are specific to the current user who invokes the query or search. The credentials come from the user’s authentication settings for the external system.
For administrative connections, such as syncing the external system’s schema, the credentials come from the external data source definition.

**principalType**
An instance of `DataSource.IdentityType`, which determines which set of credentials to use to access the external system.

Signature
```
public DataSource.IdentityType principalType {get; set;}
```

Property Value
Type: `DataSource.IdentityType`

**protocol**
The type of protocol that’s used to authenticate to the external system.

Signature
```
public DataSource.AuthenticationProtocol protocol {get; set;}
```

Property Value
Type: `DataSource.AuthenticationProtocol`

**repository**
Reserved for future use.

Signature
```
public String repository {get; set;}
```

Property Value
Type: `String`
Reserved for future use.

**username**
The username for authenticating to the external system.

Signature
```
public String username {get; set;}
```

Property Value
Type: `String`
The value depends on the Identity Type field of the external data source definition in Salesforce.

- If Identity Type is set to Named Principal, the credentials come from the external data source definition.
- If Identity Type is set to Per User:
  - For queries and searches, the credentials are specific to the current user who invokes the query or search. The credentials come from the user's authentication settings for the external system.
  - For administrative connections, such as syncing the external system’s schema, the credentials come from the external data source definition.

### DataSourceUtil Class

Parent class for the DataSource.Provider, DataSource.Connection, DataSource.Table, and DataSource.Column classes.

### Namespace

**DataSource**

### IN THIS SECTION:

**DataSourceUtil Methods**

The following are methods for DataSourceUtil.

### IN THIS SECTION:

- **logWarning(message)**
  Logs the error message in the debug log.
- **throwException(message)**
  Throws a DataSourceException and displays the provided message to the user.

**logWarning(message)**

Logs the error message in the debug log.

**Signature**

```java
public void logWarning(String message)
```

**Parameters**

- **message**
  Type: String
  The error message.
Return Value
Type: void

throwException(message)
Throws a DataSourceException and displays the provided message to the user.

Signature
public void throwException(String message)

Parameters
message
Type: String
Error message to display to the user.

Return Value
Type: void

DataType Enum
Specifies the data types that are supported by the Apex Connector Framework.

Usage
The DataSource.DataType enum is referenced by the type property on the DataSource.Column class.

Enum Values
The following are the values of the DataSource.DataType enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BOOLEAN_TYPE</td>
<td>Boolean</td>
</tr>
<tr>
<td>DATETIME_TYPE</td>
<td>Date/time</td>
</tr>
<tr>
<td>EXTERNAL_LOOKUP_TYPE</td>
<td>External lookup relationship</td>
</tr>
<tr>
<td>INDIRECT_LOOKUP_TYPE</td>
<td>Indirect lookup relationship</td>
</tr>
<tr>
<td>LOOKUP_TYPE</td>
<td>Lookup relationship</td>
</tr>
<tr>
<td>NUMBER_TYPE</td>
<td>Number</td>
</tr>
<tr>
<td>STRING_LONG_TYPE</td>
<td>Long text area</td>
</tr>
<tr>
<td>STRING_SHORT_TYPE</td>
<td>Text area</td>
</tr>
<tr>
<td>URL_TYPE</td>
<td>URL</td>
</tr>
</tbody>
</table>
DeleteContext Class

An instance of DeleteContext is passed to the deleteRows() method on your Database.Connection class. The class provides context information about the delete request to the implementor of deleteRows().

Namespace

DataSource

Usage

The Apex Connector Framework creates context for operations. Context is comprised of parameters about the operations, which other methods can use. An instance of the DeleteContext class packages these parameters into an object that can be used when a deleteRows() operation is initiated.

IN THIS SECTION:

DeleteContext Properties

DeleteContext Properties

The following are properties for DeleteContext.

IN THIS SECTION:

externalIds

The external IDs of the rows representing external object records to delete.

tableSelected

The name of the table to delete rows from.

externalIds

The external IDs of the rows representing external object records to delete.

Signature

public List<String> externalIds {get; set;}

Property Value

Type: List<String>

tableSelected

The name of the table to delete rows from.

Signature

public String tableSelected {get; set;}

2153
DeleteResult Class

Represents the result of a delete operation on an sObject record. The result is returned by the `DataSource.deleteRows` method of the `DataSource.Connection` class.

Namespace

`DataSource`

Usage

A delete operation on external object records generates an array of objects of type `DataSource.DeleteResult`. Its methods create result records that indicate whether the delete operation succeeded or failed.

IN THIS SECTION:

- DeleteResult Properties
- DeleteResult Methods

DeleteResult Properties

The following are properties for `DeleteResult`.

IN THIS SECTION:

- `errorMessage`
- `externalId`
- `success`

**errorMessage**

The error message that's generated by a failed delete operation. Recorded with a result of type `DataSource.DeleteResult`.

Signature

```
public String errorMessage {get; set;}
```

Property Value

Type: `String`
**externalId**
The unique identifier of a row that represents an external object record to delete.

Signature
public String externalId {get; set;}

Property Value
Type: String

**success**
Indicates whether a delete operation succeeded or failed.

Signature
public Boolean success {get; set;}

Property Value
Type: Boolean

**DeleteResult Methods**
The following are methods for DeleteResult.

IN THIS SECTION:

- **equals(obj)**
  Maintains the integrity of lists of type DeleteResult by determining the equality of external objects in a list. This method is dynamic and is based on the equals method in Java.

- **failure(externalId, errorMessage)**
  Creates a delete result indicating the failure of a delete request for a given external ID.

- **hashCode()**
  Maintains the integrity of lists of type DeleteResult by determining the uniqueness of the external object records in a list.

- **success(externalId)**
  Creates a delete result indicating the successful completion of a delete request for a given external ID.

**equals(obj)**
Maintains the integrity of lists of type DeleteResult by determining the equality of external objects in a list. This method is dynamic and is based on the equals method in Java.

Signature
public Boolean equals(Object obj)
Parameters

(obj)
  Type: Object
  External object whose key is to be validated.

For information about the equals method, see Using Custom Types in Map Keys and Sets on page 113.

Return Value
Type: Boolean

failure(externalId, errorMessage)
Creates a delete result indicating the failure of a delete request for a given external ID.

Signature
public static DataSource.DeleteResult failure(String externalId, String errorMessage)

Parameters

externalId
  Type: String
  The unique identifier of the sObject record to delete.

errorMessage
  Type: String
  The reason the delete operation failed.

Return Value
Type: DataSource.DeleteResult
Status result of the delete operation.

hashCode()
Maintains the integrity of lists of type DataSource.DeleteResult by determining the uniqueness of the external object records in a list.

Signature
public Integer hashCode()

Return Value
Type: Integer

success(externalId)
Creates a delete result indicating the successful completion of a delete request for a given external ID.
Signature

```java
public static DataSource.DeleteResult success(String externalId)
```

Parameters

- `externalId`
  - Type: `String`
  - The unique identifier of the sObject record to delete.

Return Value

- Type: `DataSource.DeleteResult`
  - Status result of the delete operation for the sObject with the given external ID.

Filter Class

Represents a `WHERE` clause in a SOSL or SOQL query.

Namespace

`DataSource`

Usage

Compound types require child filters. Specifically, the `subfilters` property can't be null if the `type` property is `NOT_`, `AND_`, or `OR_`.

IN THIS SECTION:

- Filter Properties

Filter Properties

The following are properties for `Filter`.

IN THIS SECTION:

- `columnName`
  - Name of the column that's being evaluated in a simple comparative type of filter.
- `columnValue`
  - Value that the filter compares records against in a simple comparative type of filter.
- `subfilters`
  - List of subfilters for compound filter types, such as `NOT_`, `AND_`, and `OR_`.
- `tableName`
  - Name of the table whose column is being evaluated in a simple comparative type of filter.
- `type`
  - Type of filter operation that limits the returned data.
**columnName**
Name of the column that’s being evaluated in a simple comparative type of filter.

Signature
```java
public String columnName {get; set;}
```

Property Value
Type: String

**columnValue**
Value that the filter compares records against in a simple comparative type of filter.

Signature
```java
public Object columnValue {get; set;}
```

Property Value
Type: Object

**subfilters**
List of subfilters for compound filter types, such as NOT, AND, and OR.

Signature
```java
public List<DataSource.Filter> subfilters {get; set;}
```

Property Value
Type: List<DataSource.Filter>

**tableName**
Name of the table whose column is being evaluated in a simple comparative type of filter.

Signature
```java
public String tableName {get; set;}
```

Property Value
Type: String

**type**
Type of filter operation that limits the returned data.
Signature

```csharp
public DataSource.FilterType type {get; set;}
```

Property Value

Type: `DataSource.FilterType`

**FilterType Enum**

Referenced by the `type` property on `DataSource.Filter`.

**Usage**

Determines how to limit the returned data.

**Enum Values**

The following are the values of the `DataSource.FilterType` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AND_</td>
<td>This compound filter type returns all rows that match all the subfilters.</td>
</tr>
<tr>
<td>CONTAINS</td>
<td>Simple comparative filter type.</td>
</tr>
<tr>
<td>ENDS_WITH</td>
<td>Simple comparative filter type.</td>
</tr>
<tr>
<td>EQUALS</td>
<td>Simple comparative filter type.</td>
</tr>
<tr>
<td>GREATER_THAN</td>
<td>Simple comparative filter type.</td>
</tr>
<tr>
<td>GREATER_THAN_OR_EQUAL_TO</td>
<td>Simple comparative filter type.</td>
</tr>
<tr>
<td>LESS_THAN</td>
<td>Simple comparative filter type.</td>
</tr>
<tr>
<td>LESS_THAN_OR_EQUAL_TO</td>
<td>Simple comparative filter type.</td>
</tr>
<tr>
<td>LIKE_</td>
<td>Simple comparative filter type.</td>
</tr>
<tr>
<td>NOT_</td>
<td>This compound filter type returns the rows that don’t match the subfilter.</td>
</tr>
<tr>
<td>NOT_EQUALS</td>
<td>Simple comparative filter type.</td>
</tr>
<tr>
<td>OR_</td>
<td>This compound filter type returns all rows that match any of the subfilters.</td>
</tr>
<tr>
<td>STARTS_WITH</td>
<td>Simple comparative filter type.</td>
</tr>
</tbody>
</table>

**IdentityType Enum**

Determines which set of credentials is used to authenticate to the external system.

**Usage**

The relevant credentials are passed to your `DataSource.Connection` class.
Enum Values

The following are the values of the DataSource.IdentityType enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ANONYMOUS</td>
<td>No credentials are used to authenticate to the external system.</td>
</tr>
<tr>
<td>NAMED_USER</td>
<td>The credentials in the external data source definition are used to authenticate to the external system, regardless of which user is accessing the external data from your organization.</td>
</tr>
<tr>
<td>PER_USER</td>
<td>For queries and searches, the credentials are specific to the current user who invokes the query or search. The credentials come from the user's authentication settings for the external system. For administrative connections, such as syncing the external system's schema, the credentials come from the external data source definition.</td>
</tr>
</tbody>
</table>

Order Class

Contains details about how to sort the rows in the result set. Equivalent to an ORDER BY statement in a SOQL query.

Namespace

DataSource

Usage

Used in the order property on the DataSource.TableSelection class.

IN THIS SECTION:

Order Properties

Order Methods

Order Properties

The following are properties for Order.

IN THIS SECTION:

columnName
Name of the column whose values are used to sort the rows in the result set.
direction
Direction for sorting rows based on column values.
tableName
Name of the table whose column values are used to sort the rows in the result set.
**columnName**
Name of the column whose values are used to sort the rows in the result set.

Signature
```java
public String columnName {get; set;}
```

Property Value
Type: String

**direction**
Direction for sorting rows based on column values.

Signature
```java
public DataSource.OrderDirection direction {get; set;}
```

Property Value
Type: DataSource.OrderDirection

**tableName**
Name of the table whose column values are used to sort the rows in the result set.

Signature
```java
public String tableName {get; set;}
```

Property Value
Type: String

**Order Methods**
The following are methods for Order.

IN THIS SECTION:
- `get(tableName, columnName, direction)`
  Creates an instance of the DataSource.Order class.

- `get(tableName, columnName, direction)`
  Creates an instance of the DataSource.Order class.
public static DataSource.Order get(String tableName, String columnName, DataSource.OrderDirection direction)

Parameters

tableName
Type: String
Name of the table whose column values are used to sort the rows in the result set.

columnName
Type: String
Name of the column whose values are used to sort the rows in the result set.

direction
Type: DataSource.OrderDirection
Direction for sorting rows based on column values.

Return Value

Type: DataSource.Order

OrderDirection Enum

Specifies the direction for sorting rows based on column values.

Usage

Used by the direction property on the DataSource.Order class.

Enum Values

The following are the values of the DataSource.OrderDirection enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ASCENDING</td>
<td>Sort rows in ascending order (A–Z).</td>
</tr>
<tr>
<td>DESCENDING</td>
<td>Sort rows in descending order (Z–A).</td>
</tr>
</tbody>
</table>

Provider Class

Extend this base class to create a custom adapter for Salesforce Connect. The class informs Salesforce of the functional and authentication capabilities that are supported by or required to connect to the external system. This class extends the DataSourceUtil class and inherits its methods.

Namespace

DataSource
Usage

Create an Apex class that extends `DataSource.Provider` to specify the following.

- The types of authentication that can be used to access the external system
- The features that are supported for the connection to the external system
- The Apex class that extends `DataSource.Connection` to sync the external system’s schema and to handle the queries and searches of the external data

The values that are returned by the `DataSource.Provider` class determine which settings are available in the external data source definition in Salesforce. To access the external data source definition from Setup, enter `External Data Sources` in the Quick Find box, then select `External Data Sources`.

IN THIS SECTION:

Provider Methods

Provider Methods

The following are methods for `Provider`.

IN THIS SECTION:

- `getAuthenticationCapabilities()`
  Returns the types of authentication that can be used to access the external system.
- `getCapabilities()`
  Returns the functional operations that the external system supports and the required endpoint settings for the external data source definition in Salesforce.
- `getConnection(connectionParams)`
  Returns a connection that points to an instance of the external data source.

`getAuthenticationCapabilities()`

Returns the types of authentication that can be used to access the external system.

Signature

```java
public List<DataSource.AuthenticationCapability> getAuthenticationCapabilities()
```

Return Value

Type: `List<DataSource.AuthenticationCapability>`

`getCapabilities()`

Returns the functional operations that the external system supports and the required endpoint settings for the external data source definition in Salesforce.

Signature

```java
public List<DataSource.Capability> getCapabilities()
```
Return Value
Type: List<DataSource.Capability>

getConnection(connectionParams)

Returns a connection that points to an instance of the external data source.

Signature
public DataSource.Connection getConnection(DataSource.ConnectionParams connectionParams)

Parameters
connectionParams
    Type: DataSource.ConnectionParams
    Credentials for authenticating to the external system.

Return Value
Type: DataSource.Connection

QueryAggregation Enum

Specifies how to aggregate a column in a query.

Usage
Used by the aggregation property on the DataSource.ColumnSelection class.

Enum Values
The following are the values of the DataSource.QueryAggregation enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>AVG</td>
<td>Reserved for future use.</td>
</tr>
<tr>
<td>COUNT</td>
<td>Returns the number of rows that meet the query criteria.</td>
</tr>
<tr>
<td>MAX</td>
<td>Reserved for future use.</td>
</tr>
<tr>
<td>MIN</td>
<td>Reserved for future use.</td>
</tr>
<tr>
<td>NONE</td>
<td>No aggregation.</td>
</tr>
<tr>
<td>SUM</td>
<td>Reserved for future use.</td>
</tr>
</tbody>
</table>

QueryContext Class

An instance of QueryContext is provided to the query method on your DataSource.Connection class. The instance corresponds to a SOQL request.
Namespace

DataSource

IN THIS SECTION:

QueryContext Properties
QueryContext Methods

QueryContext Properties

The following are properties for QueryContext.

IN THIS SECTION:

queryMoreToken
Query token that’s used for server-driven paging to determine and fetch the subsequent batch of results.

tableSelection
Query details that represent the FROM, ORDER BY, SELECT, and WHERE clauses in a SOQL or SOSL query.

queryMoreToken

Query token that’s used for server-driven paging to determine and fetch the subsequent batch of results.

Signature

public String queryMoreToken {get; set;}

Property Value

Type: String

tableSelection

Query details that represent the FROM, ORDER BY, SELECT, and WHERE clauses in a SOQL or SOSL query.

Signature

public DataSource.TableSelection tableSelection {get; set;}

Property Value

Type: DataSource.TableSelection

QueryContext Methods

The following are methods for QueryContext.
IN THIS SECTION:

get(metadata, offset, maxResults, tableSelection)

Creates an instance of the QueryContext class.

**get(metadata, offset, maxResults, tableSelection)**

Creates an instance of the QueryContext class.

**Signature**

```java
public static DataSource.QueryContext get(List<DataSource.Table> metadata, Integer offset, Integer maxResults, DataSource.TableSelection tableSelection)
```

**Parameters**

- **metadata**
  - Type: List<DataSource.Table>
  - List of table metadata that describes the external system’s tables to query.

- **offset**
  - Type: Integer
  - Used for client-driven paging. Specifies the starting row offset into the query’s result set.

- **maxResults**
  - Type: Integer
  - Used for client-driven paging. Specifies the maximum number of rows to return in each batch.

- **tableSelection**
  - Type: DataSource.TableSelection
  - Query details that represent the FROM, ORDER BY, SELECT, and WHERE clauses in a SOQL or SOSL query.

**Return Value**

Type: DataSource.QueryContext

**QueryUtils Class**

Contains helper methods to locally filter, sort, and apply limit and offset clauses to data rows. This helper class is provided for your convenience during early development and tests, but it isn’t supported for use in production environments.

**Namespace**

DataSource

**Usage**

The DataSource.QueryUtils class and its helper methods can process query results locally within your Salesforce org. This class is provided for your convenience to simplify the development of your Salesforce Connect custom adapter for initial tests. However, the DataSource.QueryUtils class and its methods aren’t supported for use in production environments that use callouts to retrieve data from external systems. Complete the filtering and sorting on the external system before sending the query results to Salesforce.
When possible, use server-driven paging or another technique to have the external system determine the appropriate data subsets according to the limit and offset clauses in the query.

IN THIS SECTION:
QueryUtils Methods

QueryUtils Methods

The following are methods for QueryUtils.

IN THIS SECTION:
applyLimitAndOffset(queryContext, rows)
Returns a subset of data rows after locally applying limit and offset clauses from the query. This helper method is provided for your convenience during early development and tests, but it isn’t supported for use in production environments.

filter(queryContext, rows)
Returns a subset of data rows after locally ordering and applying filters from the query. This helper method is provided for your convenience during early development and tests, but it isn’t supported for use in production environments.

process(queryContext, rows)
Returns data rows after locally filtering, sorting, ordering, and applying limit and offset clauses from the query. This helper method is provided for your convenience during early development and tests, but it isn’t supported for use in production environments.

sort(queryContext, rows)
Returns data rows after locally sorting and applying the order from the query. This helper method is provided for your convenience during early development and tests, but it isn’t supported for use in production environments.

applyLimitAndOffset(queryContext, rows)
Returns a subset of data rows after locally applying limit and offset clauses from the query. This helper method is provided for your convenience during early development and tests, but it isn’t supported for use in production environments.

Signature

public static List<Map<String, Object>> applyLimitAndOffset(DataSource.QueryContext queryContext, List<Map<String, Object>> rows)

Parameters

queryContext
Type: DataSource.QueryContext
Represents the query to run against a data table.

rows
Type: List<Map<String, Object>>
Rows of data.

Return Value
Type: List<Map<String, Object>>
**filter(queryContext, rows)**

Returns a subset of data rows after locally ordering and applying filters from the query. This helper method is provided for your convenience during early development and tests, but it isn't supported for use in production environments.

**Signature**

```java
public static List<Map<String, Object>> filter(DataSource.QueryContext queryContext, List<Map<String, Object>> rows)
```

**Parameters**

- `queryContext`  
  Type: `DataSource.QueryContext`  
  Represents the query to run against a data table.

- `rows`  
  Type: `List<Map<String, Object>>`  
  Rows of data.

**Return Value**

Type: `List<Map<String, Object>>`

---

**process(queryContext, rows)**

Returns data rows after locally filtering, sorting, ordering, and applying limit and offset clauses from the query. This helper method is provided for your convenience during early development and tests, but it isn't supported for use in production environments.

**Signature**

```java
public static List<Map<String, Object>> process(DataSource.QueryContext queryContext, List<Map<String, Object>> rows)
```

**Parameters**

- `queryContext`  
  Type: `DataSource.QueryContext`  
  Represents the query to run against a data table.

- `rows`  
  Type: `List<Map<String, Object>>`  
  Rows of data.

**Return Value**

Type: `List<Map<String, Object>>`
sort(queryContext, rows)
Returns data rows after locally sorting and applying the order from the query. This helper method is provided for your convenience during early development and tests, but it isn’t supported for use in production environments.

Signature
public static List<Map<String, Object>> sort(DataSource.QueryContext queryContext, List<Map<String, Object>> rows)

Parameters
queryContext
  Type: DataSource.QueryContext
  Represents the query to run against a data table.
rows
  Type: List<Map<String, Object>>
  Rows of data.

Return Value
Type: List<Map<String, Object>>

ReadContext Class
Abstract base class for the QueryContext and SearchContext classes.

Namespace
DataSource

IN THIS SECTION:
  ReadContext Properties

ReadContext Properties
The following are properties for ReadContext.

IN THIS SECTION:
  maxResults
  Maximum number of rows that the query can return.
  metadata
  Describes the external system's tables to query.
  offset
  The starting row offset into the query's result set. Used for client-driven paging.
**maxResults**
Maximum number of rows that the query can return.

Signature
```java
public Integer maxResults {get; set;}
```

**Property Value**
Type: **Integer**

**metadata**
Describes the external system’s tables to query.

Signature
```java
public List<DataSource.Table> metadata {get; set;}
```

**Property Value**
Type: **List<DataSource.Table>**

**offset**
The starting row offset into the query’s result set. Used for client-driven paging.

Signature
```java
public Integer offset {get; set;}
```

**Property Value**
Type: **Integer**

---

**SearchContext Class**
An instance of `SearchContext` is provided to the `search` method on your `DataSource.Connection` class. The instance corresponds to a search or SOSL request.

**Namespace**
`DataSource`

**IN THIS SECTION:**
- `SearchContext Constructors`
- `SearchContext Properties`
SearchContext Constructors

The following are constructors for SearchContext.

IN THIS SECTION:

SearchContext(metadata, offset, maxResults, tableSelections, searchPhrase)
Creates an instance of the SearchContext class with the specified parameter values.

SearchContext()
Creates an instance of the SearchContext class.

SearchContext (metadata, offset, maxResults, tableSelections, searchPhrase)

Creates an instance of the SearchContext class with the specified parameter values.

Signature

public SearchContext(List<DataSource.Table> metadata, Integer offset, Integer maxResults, List<DataSource.TableSelection> tableSelections, String searchPhrase)

Parameters

metadata
Type: List<DataSource.Table>
List of table metadata that describes the external system's tables to query.

offset
Type: Integer
Specifies the starting row offset into the query's result set.

maxResults
Type: Integer
Specifies the maximum number of rows to return in each batch.

tableSelections
Type: List<DataSource.TableSelection>
List of queries and their details. The details represent the FROM, ORDER BY, SELECT, and WHERE clauses in each SOQL or SOSL query.

searchPhrase
Type: String
The user-entered search string as a case-sensitive single phrase, with all non-alphanumeric characters removed.

SearchContext ()

Creates an instance of the SearchContext class.

Signature

public SearchContext ()
SearchContext Properties

The following are properties for SearchContext.

**IN THIS SECTION:**

*searchPhrase*

The user-entered search string as a case-sensitive single phrase, with all non-alphanumeric characters removed.

*tableSelections*

List of queries and their details. The details represent the FROM, ORDER BY, SELECT, and WHERE clauses in each SOQL or SOSL query.

**searchPhrase**

The user-entered search string as a case-sensitive single phrase, with all non-alphanumeric characters removed.

Signature

```java
public String searchPhrase {get; set;}
```

Property Value

Type: `String`

**tableSelections**

List of queries and their details. The details represent the FROM, ORDER BY, SELECT, and WHERE clauses in each SOQL or SOSL query.

Signature

```java
public List<DataSource.TableSelection> tableSelections {get; set;}
```

Property Value

Type: `List<DataSource.TableSelection>`

**SearchUtils Class**

Helper class for implementing search on a custom adapter for Salesforce Connect.

**Namespace**

`DataSource`

**Usage**

We recommend that you develop your own search implementation that can search columns in addition to the designated name field.

**IN THIS SECTION:**

`SearchUtils Methods`
SearchUtils Methods

The following are methods for SearchUtils.

IN THIS SECTION:

searchByName(searchDetails, connection)
Queries all the tables and returns each row whose designated name field contains the search phrase.

**searchByName(searchDetails, connection)**
Queries all the tables and returns each row whose designated name field contains the search phrase.

**Signature**

```java
public static List<DataSource.TableResult> searchByName(DataSource.SearchContext searchDetails, DataSource.Connection connection)
```

**Parameters**

`searchDetails`
Type: `DataSource.SearchContext`

The `SearchContext` class that specifies which data to search and what to search for.

`connection`
Type: `DataSource.Connection`

The `DataSource.Connection` class that connects to the external system.

**Return Value**

Type: `List<DataSource.TableResult>`

**Table Class**

Describes a table on an external system that the Salesforce Connect custom adapter connects to. This class extends the `DataSourceUtil` class and inherits its methods.

**Namespace**

`DataSource`

**Usage**

A list of table metadata is provided by the `DataSource.Connection` class when the `sync()` method is invoked. Each table can become an external object in Salesforce.

The metadata is stored in Salesforce. Updating the Apex code to return new or updated values for the table metadata doesn’t automatically update the stored metadata in Salesforce.
Table Properties

The following are properties for Table.

columns
List of table columns.
description
Description of what the table represents.
labelPlural
Plural form of the user-friendly name for the table. The `labelPlural` becomes the object's plural label in the Salesforce user interface.
labelSingular
Singular form of the user-friendly name for the table. The `labelSingular` becomes the object label in the Salesforce user interface. We recommend that you make object labels unique across all standard, custom, and external objects in the org.
name
Name of the table on the external system.
nameColumn
Name of the table column that becomes the name field of the external object when the administrator syncs the table.

columns
List of table columns.

Signature

```java
public List<DataSource.Column> columns {get; set;}
```

Property Value

Type: `List<DataSource.Column>`

description
Description of what the table represents.

Signature

```java
public String description {get; set;}
```
Property Value
Type: String

**labelPlural**
Plural form of the user-friendly name for the table. The `labelPlural` becomes the object’s plural label in the Salesforce user interface.

Signature
```java
public String labelPlural {get; set;}
```

Property Value
Type: String

**labelSingular**
Singular form of the user-friendly name for the table. The `labelSingular` becomes the object label in the Salesforce user interface. We recommend that you make object labels unique across all standard, custom, and external objects in the org.

Signature
```java
public String labelSingular {get; set;}
```

Property Value
Type: String

**name**
Name of the table on the external system.

Signature
```java
public String name {get; set;}
```

Property Value
Type: String

**nameColumn**
Name of the table column that becomes the name field of the external object when the administrator syncs the table.

Signature
```java
public String nameColumn {get; set;}
```

Property Value
Type: String
Table Methods
The following are methods for Table.

IN THIS SECTION:

get(name, labelSingular, labelPlural, description, nameColumn, columns)
Returns the table metadata with the specified parameter values.

get(name, nameColumn, columns)
Returns the table metadata with the specified parameter values, using the name for the labels and description.

get(name, labelSingular, labelPlural, description, nameColumn, columns)
Returns the table metadata with the specified parameter values.

Signature

public static DataSource.Table get(String name, String labelSingular, String labelPlural, String description, String nameColumn, List<DataSource.Column> columns)

Parameters

name
Type: String
Name of the external table.

labelSingular
Type: String
Singular form of the user-friendly name for the table. The labelSingular becomes the object label in the Salesforce user interface.

labelPlural
Type: String
Plural form of the user-friendly name for the table. The labelPlural becomes the object’s plural label in the Salesforce user interface.

description
Type: String
Description of the external table.

nameColumn
Type: String
Name of the table column that becomes the name field of the external object when the administrator syncs the table.

columns
Type: List<DataSource.Column>
List of table columns.

Return Value

Type: DataSource.Table
get(name, nameColumn, columns)
Returns the table metadata with the specified parameter values, using the name for the labels and description.

Signature
public static DataSource.Table get(String name, String nameColumn, List<DataSource.Column> columns)

Parameters
name
   Type: String
   Name of the external table.
nameColumn
   Type: String
   Name of the table column that becomes the name field of the external object when the administrator syncs the table.
columns
   Type: List<DataSource.Column>
   List of table columns.

Return Value
Type: DataSource.Table
The returned table metadata has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>name</td>
</tr>
<tr>
<td>labelSingular</td>
<td>name</td>
</tr>
<tr>
<td>labelPlural</td>
<td>name</td>
</tr>
<tr>
<td>description</td>
<td>name</td>
</tr>
<tr>
<td>nameColumn</td>
<td>nameColumn</td>
</tr>
<tr>
<td>columns</td>
<td>columns</td>
</tr>
</tbody>
</table>

TableResult Class
Contains the results of a search or query.

Namespace
DataSource
IN THIS SECTION:

TableResult Properties
TableResult Methods

TableResult Properties

The following are properties for TableResult.

IN THIS SECTION:

errorMessage
Error message to display to the user.

queryMoreToken
Query token that’s used for server-driven paging to determine and fetch the subsequent batch of results. This token is passed back to the Apex data source on subsequent queries in the queryMoreToken property on the QueryContext.

rows
Rows of data.

success
Whether the search or query was successful.

tableName
Name of the table that was queried.

totalSize
The total number of rows that meet the query criteria, even when the external system is requested to return a smaller batch size.

errorMessage
Error message to display to the user.

Signature

public String errorMessage {get; set;}

Property Value
Type: String

queryMoreToken
Query token that’s used for server-driven paging to determine and fetch the subsequent batch of results. This token is passed back to the Apex data source on subsequent queries in the queryMoreToken property on the QueryContext.

Signature

public String queryMoreToken {get; set;}

rows
Rows of data.

Signature
public List<Map<String, Object>> rows {get; set;}

success
Whether the search or query was successful.

Signature
public Boolean success {get; set;}

tableName
Name of the table that was queried.

Signature
public String tableName {get; set;}

totalSize
The total number of rows that meet the query criteria, even when the external system is requested to return a smaller batch size.

Signature
public Integer totalSize {get; set;}

Property Value
Type: String
TableResult Methods

The following are methods for TableResult.

IN THIS SECTION:

- error(errorMessage)
  Returns failed search or query results with the provided error message.

- get(success, errorMessage, tableName, rows, totalSize)
  Returns a subset of data rows in a TableResult with the provided property values and the number of rows in the table.

- get(success, errorMessage, tableName, rows)
  Returns a subset of data rows in a TableResult with the provided property values.

- get(queryContext, rows)
  Returns the subset of data rows that meet the query criteria, and the number of rows in the table, in a TableResult.

- get(tableSelection, rows)
  Returns the subset of data rows that meet the query criteria, and the number of rows in the table, in a TableResult.

**error(errorMessage)**

Returns failed search or query results with the provided error message.

**Signature**

```java
public static DataSource.TableResult error(String errorMessage)
```

**Parameters**

- **errorMessage**
  Type: String
  Error message to display to the user.

**Return Value**

Type: DataSource.TableResult

The returned TableResult has these property values.

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>success</td>
<td>false</td>
</tr>
<tr>
<td>errorMessage</td>
<td>errorMessage</td>
</tr>
<tr>
<td>tableName</td>
<td>null</td>
</tr>
<tr>
<td>rows</td>
<td>null</td>
</tr>
<tr>
<td>rows.size()</td>
<td>0</td>
</tr>
</tbody>
</table>
get(success, errorMessage, tableName, rows, totalSize)

Returns a subset of data rows in a TableResult with the provided property values and the number of rows in the table.

Signature

```java
public static DataSource.TableResult get(Boolean success, String errorMessage, String tableName, List<Map<String, Object>> rows, Integer totalSize)
```

Parameters

- **success**
  - Type: `Boolean`
  - Whether the search or query was successful.

- **errorMessage**
  - Type: `String`
  - Error message to display to the user.

- **tableName**
  - Type: `String`
  - Name of the table that was queried.

- **rows**
  - Type: `List<Map<String, Object>>`
  - Rows of data.

- **totalSize**
  - Type: `Integer`
  - The total number of rows that meet the query criteria, even when the external system is requested to return a smaller batch size.

Return Value

Type: `DataSource.TableResult`

get(success, errorMessage, tableName, rows)

Returns a subset of data rows in a TableResult with the provided property values.

Signature

```java
public static DataSource.TableResult get(Boolean success, String errorMessage, String tableName, List<Map<String, Object>> rows)
```

Parameters

- **success**
  - Type: `Boolean`
  - Whether the search or query was successful.

- **errorMessage**
  - Type: `String`
Error message to display to the user.

**tableName**
Type: String
Name of the table that was queried.

**rows**
Type: List<Map<String, Object>>
Rows of data.

Return Value
Type: DataSource.TableResult

get(queryContext, rows)
Returns the subset of data rows that meet the query criteria, and the number of rows in the table, in a TableResult.

Signature
```
public static DataSource.TableResult get(DataSource.QueryContext queryContext, List<Map<String, Object>> rows)
```

Parameters
queryContext
Type: DataSource.QueryContext
Represents the query to run against a data table.

rows
Type: List<Map<String, Object>>
Rows of data.

Return Value
Type: DataSource.TableResult

get(tableSelection, rows)
Returns the subset of data rows that meet the query criteria, and the number of rows in the table, in a TableResult.

Signature
```
public static DataSource.TableResult get(DataSource.TableSelection tableSelection, List<Map<String, Object>> rows)
```

Parameters
tableSelection
Type: DataSource.TableSelection
Query details that represent the FROM, ORDER BY, SELECT, and WHERE clauses in a SOQL or SOSL query.
**rows**
Type: `List<Map<String, Object>>`
Rows of data.

Return Value
Type: `DataSource.TableResult`

**TableSelection Class**
Contains a breakdown of the SOQL or SOSL query. Its properties represent the FROM, ORDER BY, SELECT, and WHERE clauses in the query.

**Namespace**
`DataSource`

**IN THIS SECTION:**
TableSelection Properties

**TableSelection Properties**
The following are properties for `TableSelection`.

**IN THIS SECTION:**
columnsSelected
- List of columns to query. Corresponds to the `SELECT` clause in a SOQL or SOSL query.

filter
- Identifies the query filter, which can be a compound filter that has a list of subfilters. The filter corresponds to the `WHERE` clause in a SOQL or SOSL query.

order
- Identifies the order for sorting the query results. Corresponds to the `ORDER BY` clause in a SOQL or SOSL query.

tableSelected
- Name of the table to query. Corresponds to the `FROM` clause in a SOQL or SOSL query.

**columnsSelected**
List of columns to query. Corresponds to the `SELECT` clause in a SOQL or SOSL query.

**Signature**
```java
public List<DataSource.ColumnSelection> columnsSelected {get; set;}
```

**Property Value**
Type: `List<DataSource.ColumnSelection>`
**filter**
Identifies the query filter, which can be a compound filter that has a list of subfilters. The filter corresponds to the **WHERE** clause in a SOQL or SOSL query.

Signature
```csharp
public DataSource.Filter filter {get; set;}
```

Property Value
Type: `DataSource.Filter`

**order**
Identifies the order for sorting the query results. Corresponds to the **ORDER BY** clause in a SOQL or SOSL query.

Signature
```csharp
public List<DataSource.Order> order {get; set;}
```

Property Value
Type: `List<DataSource.Order>`

**tableSelected**
Name of the table to query. Corresponds to the **FROM** clause in a SOQL or SOSL query.

Signature
```csharp
public String tableSelected {get; set;}
```

Property Value
Type: `String`

**UpsertContext Class**
An instance of `UpsertContext` is passed to the `upsertRows()` method on your `Datasource.Connection` class. This class provides context information about the upsert request to the implementor of `upsertRows()`.

**Namespace**
`DataSource`

**Usage**
The Apex Connector Framework creates the content for operations. Context is comprised of parameters about the operations, which other methods can use. An instance of the `UpsertContext` class packages these parameters into an object that can be used when an `upsertRows()` operation is initiated.
IN THIS SECTION:

**UpsertContext Properties**

The following are properties for `UpsertContext`.

**IN THIS SECTION:**

- `rows`
  List of rows corresponding to the external object records to upsert.

- `tableSelected`
  The name of the table to upsert rows in.

**rows**

List of rows corresponding to the external object records to upsert.

Signature

`public List<Map<String,ANY>> rows {get; set;}`

Property Value

Type: `List<Map<String, Object>>`

**tableSelected**

The name of the table to upsert rows in.

Signature

`public String tableSelected {get; set;}`

Property Value

Type: `String`

**UpsertResult Class**

Represents the result of an upsert operation on an external object record. The result is returned by the `upsertRows` method of the `DataSource.Connection` class.

**Namespace**

`DataSource`
Usage
An upsert operation on external object records generates an array of objects of type `DataSource.UpsertResult`. Its methods create result records that indicate whether the upsert operation succeeded or failed.

 UPsertResult Properties
The following are properties for `UpsertResult`.

(errorMessage)
The error message that's generated by a failed upsert operation.

(externalId)
The unique identifier of a row that represents an external object record to upsert.

(success)
Indicates whether a delete operation succeeded or failed.

eerrorMessage
The error message that's generated by a failed upsert operation.

Signature
`public String errorMessage {get; set;}`

Property Value
Type: String

eexternalId
The unique identifier of a row that represents an external object record to upsert.

Signature
`public String externalId {get; set;}`

Property Value
Type: String

success
Indicates whether a delete operation succeeded or failed.
Signature

```java
public Boolean success {get; set;}
```

Property Value

Type: Boolean

**UpsertResult Methods**

The following are methods for `UpsertResult`.

**IN THIS SECTION:**

- `equals(obj)`: Maintains the integrity of lists of type `UpsertResult` by determining the equality of external object records in a list. This method is dynamic and is based on the `equals` method in Java.
- `failure(externalId, errorMessage)`: Creates an upsert result that indicates the failure of a delete request for a given external ID.
- `hashCode()`: Maintains the integrity of lists of type `UpserResult` by determining the uniqueness of the external object records in a list.
- `success(externalId)`: Creates a delete result that indicates the successful completion of an upsert request for a given external ID.

**equals(obj)**

Maintains the integrity of lists of type `UpsertResult` by determining the equality of external object records in a list. This method is dynamic and is based on the `equals` method in Java.

Signature

```java
public Boolean equals(Object obj)
```

Parameters

- `obj`
  
    Type: Object
    
    External object whose key is to be validated.

Return Value

Type: Boolean

**failure(externalId, errorMessage)**

Creates an upsert result that indicates the failure of a delete request for a given external ID.
Signature

```java
public static DataSource.UpsertResult failure(String externalId, String errorMessage)
```

Parameters

`externalId`
- Type: `String`
- The unique identifier of the external object record to upsert.

`errorMessage`
- Type: `String`
- The reason the upsert operation failed.

Return Value

Type: `DataSource.UpsertResult`
Status result for the upsert operation.

**hashCode()**

Maintains the integrity of lists of type `UpsertResult` by determining the uniqueness of the external object records in a list.

Signature

```java
public Integer hashCode()
```

Return Value

Type: `Integer`

**success(externalId)**

Creates a delete result that indicates the successful completion of an upsert request for a given external ID.

Signature

```java
public static DataSource.UpsertResult success(String externalId)
```

Parameters

`externalId`
- Type: `String`
- The unique identifier of the external object record to upsert.

Return Value

Type: `DataSource.UpsertResult`
Status result of the upsert operation for the external object record with the given external ID.
**DataSource Exceptions**

The `DataSource` namespace contains exception classes.

All exception classes support built-in methods for returning the error message and exception type. See Exception Class and Built-In Exceptions.

The `DataSource` namespace contains these exceptions.

<table>
<thead>
<tr>
<th>Exception</th>
<th>Description</th>
<th>Methods</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>DataSource.DataSourceException</code></td>
<td>Throw this exception to indicate that an error occurred while communicating with an external data source.</td>
<td>To get the error message and write it to debug log, use the <code>String getMessage()</code></td>
</tr>
<tr>
<td><code>DataSource.OAuthTokenExpiredException</code></td>
<td>Throw this exception to indicate that an OAuth token has expired. The system then attempts to refresh the token automatically and restart the query, search, or sync operation.</td>
<td>To get the error message and write it to debug log, use the <code>String getMessage()</code></td>
</tr>
</tbody>
</table>

**Dom Namespace**

The `Dom` namespace provides classes and methods for parsing and creating XML content.

The following are the classes in the `Dom` namespace.

IN THIS SECTION:

- **Document Class**
  - Use the `Document` class to process XML content. You can parse nested XML content that’s up to 50 nodes deep.

- **XmlNode Class**
  - Use the `XmlNode` class to work with a node in an XML document.

**Document Class**

Use the `Document` class to process XML content. You can parse nested XML content that’s up to 50 nodes deep.

**Namespace**

`Dom`

**Usage**

One common application is to use it to create the body of a request for `HttpRequest` or to parse a response accessed by `HttpResponse`.

IN THIS SECTION:

- **Document Constructors**
Document Methods

SEE ALSO:
Reading and Writing XML Using the DOM

Document Constructors
The following are constructors for Document.

IN THIS SECTION:
Document()

Document()

Signature
public Document()

Document Methods
The following are methods for Document. All are instance methods.

IN THIS SECTION:
createRootElement(name, namespace, prefix)
Creates the top-level root element for a document.

gRootElement()
Returns the top-level root element node in the document. If this method returns null, the root element has not been created yet.

load(xml)
Parse the XML representation of the document specified in the xml argument and load it into a document.

toString()
Returns the XML representation of the document as a String.

createRootElement(name, namespace, prefix)
Creates the top-level root element for a document.

Signature
public Dom.XmlNode createRootElement(String name, String namespace, String prefix)
Parameters

name
  Type: String

namespace
  Type: String

prefix
  Type: String

Return Value
Type: Dom.XmlNode

Usage
For more information about namespaces, see XML Namespaces.
Calling this method more than once on a document generates an error as a document can have only one root element.

**getRootElement()**
Returns the top-level root element node in the document. If this method returns null, the root element has not been created yet.

Signature

```java
public Dom.XmlNode getRootElement()
```

Return Value
Type: Dom.XmlNode

**load(xml)**
Parse the XML representation of the document specified in the xml argument and load it into a document.

Signature

```java
public Void load(String xml)
```

Parameters

xml
  Type: String

Return Value
Type: Void
Example

```java
doc.load(xml);
```

toXmlString()

Returns the XML representation of the document as a String.

Signature

```java
public String toXmlString()
```

Return Value

Type: String

XmlNode Class

Use the XmlNode class to work with a node in an XML document.

Namespace

Dom

XmlNode Methods

The following are methods for XmlNode. All are instance methods.

IN THIS SECTION:

- ```addChildElement(name, namespace, prefix)```  
  Creates a child element node for this node.
- ```addCommentNode(text)```  
  Creates a child comment node for this node.
- ```addTextNode(text)```  
  Creates a child text node for this node.
- ```getAttribute(key, keyNamespace)```  
  Returns `namespacePrefix:attributeValue` for the given key and key namespace.
- ```getAttributeCount()```  
  Returns the number of attributes for this node.
- ```getAttributeKeyAt(index)```  
  Returns the attribute key for the given index. Index values start at 0.
- ```getAttributeKeyNsAt(index)```  
  Returns the attribute key namespace for the given index.
- ```getAttributeValue(key, keyNamespace)```  
  Returns the attribute value for the given key and key namespace.
getAttributeValueNs(key, keyNamespace)
Returns the attribute value namespace for the given key and key namespace.

getChildElement(name, namespace)
Returns the child element node for the node with the given name and namespace.

getChildElements()
Returns the child element nodes for this node. This doesn’t include child text or comment nodes.

getChildren()
Returns the child nodes for this node. This includes all node types.

getName()
Returns the element name.

getNamespace()
Returns the namespace of the element.

getNamespaceFor(prefix)
Returns the namespace of the element for the given prefix.

getNodeType()
Returns the node type.

getParent()
Returns the parent of this element.

getPrefixFor(namespace)
Returns the prefix of the given namespace.

getText()
Returns the text for this node.

insertBefore(newChild, refChild)
Inserts a new child node before the specified node.

removeAttribute(key, keyNamespace)
Removes the attribute with the given key and key namespace. Returns true if successful, false otherwise.

removeChild(childNode)
Removes the given child node.

setAttribute(key, value)
Sets the key attribute value.

setAttributeNs(key, value, keyNamespace, valueNamespace)
Sets the key attribute value.

setNamespace(prefix, namespace)
Sets the namespace for the given prefix.

addChildElement(name, namespace, prefix)
Creates a child element node for this node.

Signature
public Dom.XmlNode addChildElement(String name, String namespace, String prefix)
Parameters

name
  Type: String
  The name argument can't have a null value.

namespace
  Type: String

prefix
  Type: String

Return Value
Type: Dom.XmlNode

Usage

- If the namespace argument has a non-null value and the prefix argument is null, the namespace is set as the default namespace.
- If the prefix argument is null, Salesforce automatically assigns a prefix for the element. The format of the automatic prefix is ns{i}, where i is a number. If the prefix argument is '', the namespace is set as the default namespace.

addCommentNode(text)
Creates a child comment node for this node.

Signature
public Dom.XmlNode addCommentNode(String text)

Parameters
text
  Type: String
  The text argument can't have a null value.

Return Value
Type: Dom.XmlNode

addTextNode(text)
Creates a child text node for this node.

Signature
public Dom.XmlNode addTextNode(String text)
Parameters

text
  Type: String
  The text argument can't have a null value.

Return Value
Type: Dom.XmlNode

**getAttribute(key, keyNamespace)**
Returns namespacePrefix:attributeValue for the given key and key namespace.

Signature
public String getAttribute(String key, String keyNamespace)

Parameters
key
  Type: String
keyNamespace
  Type: String

Return Value
Type: String

Example
For example, for the `<xyz a:b="c:d" />` element:
- `getAttribute` returns `c:d`
- `getAttributeValue` returns `d`

**getAttributeCount()**
Returns the number of attributes for this node.

Signature
public Integer getAttributeCount()

Return Value
Type: Integer

**getAttributeKeyAt(index)**
Returns the attribute key for the given index. Index values start at 0.
getAttributeKeyAt(index)
Returns the attribute key namespace for the given index.

Signature
public String getAttributeKeyAt(Integer index)

Parameters
index
Type: Integer

Return Value
Type: String

getAttributeKeyNsAt(index)
Returns the attribute key namespace for the given index.

Signature
public String getAttributeKeyNsAt(Integer index)

Parameters
index
Type: Integer

Return Value
Type: String

getAttributeValue(key, keyNamespace)
Returns the attribute value for the given key and key namespace.

Signature
public String getAttributeValue(String key, String keyNamespace)

Parameters
key
Type: String
keyNamespace
Type: String

Return Value
Type: String
Example
For example, for the `<xyz a:b="c:d" />` element:
- `getAttribute` returns `c:d`
- `getAttributeValue` returns `d`

**getAttributeValueNs(key, keyNamespace)**
Returns the attribute value namespace for the given key and key namespace.

**Signature**
```
public String getAttributeValueNs(String key, String keyNamespace)
```

**Parameters**
- `key`
  - Type: `String`
- `keyNamespace`
  - Type: `String`

**Return Value**
- Type: `String`

**getChildElement(name, namespace)**
Returns the child element node for the node with the given name and namespace.

**Signature**
```
public Dom.XmlNode getChildElement(String name, String namespace)
```

**Parameters**
- `name`
  - Type: `String`
- `namespace`
  - Type: `String`

**Return Value**
- Type: `Dom.XmlNode`

**getChildElements()**
Returns the child element nodes for this node. This doesn’t include child text or comment nodes.
Signature

```java
public Dom XmlNode[] getChildElements()
```

Return Value
Type: `Dom XmlNode[]`

### getChildElements()
Returns the child nodes for this node. This includes all node types.

**Signature**

```java
public Dom XmlNode[] getChildren()
```

**Return Value**
Type: `Dom XmlNode[]`

### getName()
Returns the element name.

**Signature**

```java
public String getName()
```

**Return Value**
Type: `String`

### getNamespace()
Returns the namespace of the element.

**Signature**

```java
public String getNamespace()
```

**Return Value**
Type: `String`

### getNamespaceFor(prefix)
Returns the namespace of the element for the given prefix.

**Signature**

```java
public String getNamespaceFor(String prefix)
```
Parameters

prefix
Type: String

Return Value
Type: String

**getNodeType()**
Returns the node type.

Signature
```java
public Dom.XmlNodeType getNodeType()
```

Return Value
Type: Dom.XmlNodeType

**getParent()**
Returns the parent of this element.

Signature
```java
public Dom.XmlNode getParent()
```

Return Value
Type: Dom.XmlNode

**getPrefixFor(namespace)**
Returns the prefix of the given namespace.

Signature
```java
public String getPrefixFor(String namespace)
```

Parameters

namespace
Type: String

The namespace argument can’t have a null value.

Return Value
Type: String
**getText()**

Returns the text for this node.

**Signature**

```java
public String getText()
```

**Return Value**

Type: String

**insertBefore(newChild, refChild)**

Inserts a new child node before the specified node.

**Signature**

```java
public Dom.XmlNode insertBefore(Dom.XmlNode newChild, Dom.XmlNode refChild)
```

**Parameters**

- **newChild**
  Type: Dom.XmlNode
  The node to insert.

- **refChild**
  Type: Dom.XmlNode
  The node before the new node.

**Return Value**

Type: Dom.XmlNode

**Usage**

- If `refChild` is `null`, `newChild` is inserted at the end of the list.
- If `refChild` doesn't exist, an exception is thrown.

**removeAttribute(key, keyNamespace)**

Removes the attribute with the given key and key namespace. Returns `true` if successful, `false` otherwise.

**Signature**

```java
public Boolean removeAttribute(String key, String keyNamespace)
```

**Parameters**

- **key**
  Type: String
**keyNamespace**
  Type: `String`

Return Value
Type: `Boolean`

**removeChild(childNode)**
Removes the given child node.

Signature
```
public Boolean removeChild(Dom.XmlNode childNode)
```

Parameters
```
childNode
  Type: `Dom.XmlNode`
```

Return Value
Type: `Boolean`

**setAttribute(key, value)**
Sets the key attribute value.

Signature
```
public Void setAttribute(String key, String value)
```

Parameters
```
key
  Type: `String`
value
  Type: `String`
```

Return Value
Type: `Void`

**setAttributeNs(key, value, keyNamespace, valueNamespace)**
Sets the key attribute value.
**setAttributeNs**

```java
public Void setAttributeNs(String key, String value, String keyNamespace, String valueNamespace)
```

**Parameters**

- `key`
  - Type: `String`

- `value`
  - Type: `String`

- `keyNamespace`
  - Type: `String`

- `valueNamespace`
  - Type: `String`

**Return Value**

- Type: `Void`

---

**setNamespace**

```java
public Void setNamespace(String prefix, String namespace)
```

**Parameters**

- `prefix`
  - Type: `String`

- `namespace`
  - Type: `String`

**Return Value**

- Type: `Void`

---

### EventBus Namespace

The `EventBus` namespace provides classes and methods for platform events and Change Data Capture events.

The following are the classes in the `EventBus` namespace.

**IN THIS SECTION:**

- **ChangeEventHeader Class**
  - Contains header fields of Change Data Capture events.
**TestBroker Class**
Contains a method that delivers platform event or change event messages in an Apex test.

**TriggerContext Class**
Provides information about the platform event or change event trigger that's currently executing, such as how many times the trigger was retried due to the EventBus.RetryableException. Also, provides a method to resume trigger executions.

SEE ALSO:
Platform Events Developer Guide

**ChangeEventHeader Class**
Contains header fields of Change Data Capture events.

**Namespace**
EventBus

IN THIS SECTION:
ChangeEventHeader Properties

SEE ALSO:
Change Data Capture Developer Guide

**ChangeEventHeader Properties**
The following are properties for ChangeEventHeader.

IN THIS SECTION:

- **changedfields**
  A list of the fields that were changed in an update operation, including the LastModifiedDate system field. This field is empty for other operations, including record creation. This property is available in Apex saved using API version 47.0 or later.

- **changeorigin**
  Only populated for changes done by API apps or from Lightning Experience; empty otherwise. The Salesforce API and the API client ID that initiated the change, if set by the client. Use this field to detect whether your app initiated the change to not process the change again and potentially avoid a deep cycle of changes.

- **changetype**
  The operation that caused the change.

- **commitnumber**
  The system change number (SCN) of a committed transaction, which increases sequentially. This field is provided for diagnostic purposes. The field value is not guaranteed to be unique in Salesforce—it is unique only in a single database instance. If your Salesforce org migrates to another database instance, the commit number might not be unique or sequential.

- **committimestamp**
  The date and time when the change occurred, represented as the number of milliseconds since January 1, 1970 00:00:00 GMT.
commituser
The ID of the user that ran the change operation.

difffields
Contains the names of fields whose values are sent as a unified diff because they contain large text values.

transactionkey
A string that uniquely identifies each Salesforce transaction. You can use this key to identify and group all changes that were made in the same transaction.

difffields
Contains the names of fields whose values were sent as a unified diff because they contain large text values.

entityname
The API name of the standard or custom object that the change pertains to. For example, Account or MyObject__c.

nulledfields
Contains the names of fields whose values were changed to null in an update operation. Use this field in Apex change event messages to determine if a field was changed to null in an update and isn’t an unchanged field.

recordids
One or more record IDs for the changed records. Typically, this field contains one record ID. But if the same change occurred in multiple records of the same object type during the same transaction, Salesforce groups the change notifications and sends one change event for all affected records. In this case, the recordids field contains an array of record IDs for all records that have the same change.

sequencenumber
The sequence of the change within a transaction. The sequence number starts from 1.

changedfields
A list of the fields that were changed in an update operation, including the LastModifiedDate system field. This field is empty for other operations, including record creation. This property is available in Apex saved using API version 47.0 or later.

Signature

```java
public List<String> changedfields {get; set;}
```

Property Value
Type: List<String>

changeorigin
Only populated for changes done by API apps or from Lightning Experience; empty otherwise. The Salesforce API and the API client ID that initiated the change, if set by the client. Use this field to detect whether your app initiated the change to not process the change again and potentially avoid a deep cycle of changes.

Signature

```java
public String changeorigin {get; set;}
```

Property Value
Type: String
The format of the `changeOrigin` field value is:

```
com/salesforce/api/<API_Name>/<API_Version>;client=<Client_ID>
```

- `<API_Name>` is the name of the Salesforce API used to make the data change. It can take one of these values: soap, rest, bulkapi, xmlrpc, oldsoap, toolingsoap, toolingrest, apex, apexdebuggerrest.
- `<API_Version>` is the version of the API call that made the change and is in the format `XX.X`.
- `<Client_ID>` is a string that contains the client ID of the app that initiated the change. If the client ID is not set in the API call, `client=<Client_ID>` is not appended to the `changeOrigin` field.

**Example:**

```
com/salesforce/api/soap/48.0;client=Astro
```

The client ID is set in the Call Options header of an API call. For an example on how to set the Call Options header, see:

- REST API: `Sforce-Call-Options` Header. (Bulk API also uses the `Sforce-Call-Options` header.)
- SOAP API: `CallOptions` Header. (Apex API also uses the `CallOptions` element.)

**changetype**

The operation that caused the change.

**Signature**

```java
public String changetype {get; set;}
```

**Property Value**

- **Type**: `String`

Can be one of the following values:

- CREATE
- UPDATE
- DELETE
- UNDELETE

For gap events, the change type starts with the `GAP_` prefix.

- GAP_CREATE
- GAP_UPDATE
- GAP_DELETE
- GAP_UNDELETE

For overflow events, the change type is `GAP_OVERFLOW`.

**commitnumber**

The system change number (SCN) of a committed transaction, which increases sequentially. This field is provided for diagnostic purposes. The field value is not guaranteed to be unique in Salesforce—it is unique only in a single database instance. If your Salesforce org migrates to another database instance, the commit number might not be unique or sequential.
public Long commitnumber {get; set;}

Property Value
Type: Long

committimestamp
The date and time when the change occurred, represented as the number of milliseconds since January 1, 1970 00:00:00 GMT.

Signature
public Long committimestamp {get; set;}

Property Value
Type: Long

commituser
The ID of the user that ran the change operation.

Signature
public String commituser {get; set;}

Property Value
Type: String

difffields
Contains the names of fields whose values are sent as a unified diff because they contain large text values.

Signature
public List<String> difffields {get; set;}

Property Value
Type: List<String>

SEE ALSO:
Change Data Capture Developer Guide: Sending Data Differences for Fields of Updated Records

dentityname
The API name of the standard or custom object that the change pertains to. For example, Account or MyObject__c.
Signature

```java
public String entityname {get; set;}
```

**Property Value**

**Type:** String

### nulledfields

Contains the names of fields whose values were changed to null in an update operation. Use this field in Apex change event messages to determine if a field was changed to null in an update and isn’t an unchanged field.

Signature

```java
public List<String> nulledfields {get; set;}
```

**Property Value**

**Type:** List<String>

### recordids

One or more record IDs for the changed records. Typically, this field contains one record ID. But if the same change occurred in multiple records of the same object type during the same transaction, Salesforce groups the change notifications and sends one change event for all affected records. In this case, the recordIds field contains an array of record IDs for all records that have the same change.

Signature

```java
public List<String> recordids {get; set;}
```

**Property Value**

**Type:** List<String>

Examples of operations with same changes are:

- Update of fieldA to valueA in Account records.
- Deletion of Account records.
- Renaming or replacing a picklist value that results in updating the field value in all affected records.

The recordIds field can contain a wildcard value when a change event message is generated for custom field type conversions that cause data loss. In this case, the recordIds value is the three-character prefix of the object, followed by the wildcard character *.

For example, for accounts, the value is `001*`.

### sequencenumber

The sequence of the change within a transaction. The sequence number starts from 1.

Signature

```java
public Integer sequencenumber {get; set;}
```
A lead conversion is an example of a transaction that can have multiple changes. A lead conversion results in the following sequence of changes, all within the same transaction.

1. Create an account
2. Create a contact
3. Create an opportunity
4. Update a lead

**transactionkey**

A string that uniquely identifies each Salesforce transaction. You can use this key to identify and group all changes that were made in the same transaction.

Signature

```
public String transactionkey {get; set;}
```

TestBroker Class

Contains a method that delivers platform event or change event messages in an Apex test.

**Namespace**

EventBus

**TestBroker Methods**

The following are methods for TestBroker.

**IN THIS SECTION:**

```
deliver()  
Delivers platform event messages to the test event bus. Use this method to deliver test event messages multiple times and verify that event subscribers have processed the test events each step of the way.
```

```
deliver()  
Delivers platform event messages to the test event bus. Use this method to deliver test event messages multiple times and verify that event subscribers have processed the test events each step of the way.
```
Signature

```java
public void deliver()
```

Return Value

Type: void

Usage

Enclose `Test.getEventBus().deliver()` within the `Test.startTest()` and `Test.stopTest()` statement block.

```
Test.startTest();
// Create test events
// ...
// Publish test events with EventBus.publish()
// ...
// Deliver test events
Test.getEventBus().deliver();
// Perform validation
// ...
Test.stopTest();
```

SEE ALSO:

* Platform Events Developer Guide

**TriggerContext Class**

Provides information about the platform event or change event trigger that’s currently executing, such as how many times the trigger was retried due to the `EventBus.RetryableException`. Also, provides a method to resume trigger executions.

**Namespace**

`EventBus`

IN THIS SECTION:

- TriggerContext Properties
- TriggerContext Methods

**TriggerContext Properties**

The following are properties for `TriggerContext`.

IN THIS SECTION:

- `lastError`
  
  Read-only. The error message that the last thrown `EventBus.RetryableException` contains.

- `retries`
  
  Read-only. The number of times the trigger was retried due to throwing the `EventBus.RetryableException`. 
**lastError**
Read-only. The error message that the last thrown `EventBus.RetryableException` contains.

Signature
```
public String lastError {get;}
```

Property Value
Type: `String`

Usage
The error message that this property returns is the message that was passed in when creating the `EventBus.RetryableException` exception, as follows.

```java
throw new EventBus.RetryableException(
    'Condition is not met, so retrying the trigger again.'
);
```

**retries**
Read-only. The number of times the trigger was retried due to throwing the `EventBus.RetryableException`.

Signature
```
public Integer retries {get;}
```

Property Value
Type: `Integer`

**TriggerContext Methods**
The following are methods for `TriggerContext`.

IN THIS SECTION:
- `currentContext()`: Returns an instance of the `EventBus.TriggerContext` class containing information about the currently executing trigger.
- `getResumeCheckpoint()`: Returns the replay ID that was set by `setResumeCheckpoint()`. The returned value is the replay ID of the event message after which trigger processing resumes in a new trigger invocation.
- `setResumeCheckpoint(resumeReplayId)`: Sets a checkpoint in the event stream where the platform event trigger resumes execution in a new invocation. Use this method to recover from limit and uncaught exceptions, or to control the number of events processed in one trigger execution. When calling this method, pass in the replay ID of the last successfully processed event message. When the trigger stops execution before all events in `Trigger.New` are processed, either because of an uncaught exception or intentionally, the trigger is invoked again. The new execution starts with the event message in the stream after the one with the checkpointed Replay ID.
**currentContext()**

Returns an instance of the `EventBus.TriggerContext` class containing information about the currently executing trigger.

**Signature**

```java
public static eventbus.TriggerContext currentContext()
```

**Return Value**

Type: `EventBus.TriggerContext`

Information about the currently executing trigger.

**getResumeCheckpoint()**

Returns the replay ID that was set by `setResumeCheckpoint()`. The returned value is the replay ID of the event message after which trigger processing resumes in a new trigger invocation.

**Signature**

```java
public String getResumeCheckpoint()
```

**Return Value**

Type: `String`

**setResumeCheckpoint(resumeReplayId)**

Sets a checkpoint in the event stream where the platform event trigger resumes execution in a new invocation. Use this method to recover from limit and uncaught exceptions, or to control the number of events processed in one trigger execution. When calling this method, pass in the replay ID of the last successfully processed event message. When the trigger stops execution before all events in `Trigger.New` are processed, either because of an uncaught exception or intentionally, the trigger is invoked again. The new execution starts with the event message in the stream after the one with the checkpointed Replay ID.

**Signature**

```java
public void setResumeCheckpoint(String resumeReplayId)
```

**Parameters**

`resumeReplayId`

Type: `String`

The replay ID of the last successfully processed platform event message, after which to resume processing in a new trigger execution context.

**Return Value**

Type: `void`
Usage
The method throws an `EventBus.InvalidReplayIdException` if the supplied Replay ID is not valid—the replay ID is not in the current trigger batch of events, in the `Trigger.new` list.

Example
This snippet shows how to call the method and pass in the `replayId` property of an event instance.

```java
EventBus.TriggerContext.currentContext().setResumeCheckpoint(event.replayId);
```

Flow Namespace
The Flow namespace provides a class for advanced Visualforce controller access to flows.
The following is the class in the Flow namespace.

IN THIS SECTION:
Interview Class
The Flow.Interview class provides advanced controller access to flows and the ability to start a flow.

Interview Class
The Flow.Interview class provides advanced controller access to flows and the ability to start a flow.

Namespace
Flow

Usage
SOQL and DML limits apply during flow execution. See Per-Transaction Flow Limits in the Salesforce Help.

To create an Interview object, you have two options.

- Create the object directly in your class by using:
  - No namespace: `Flow.Interview.flowName`
  - Namespace: `Flow.Interview.namespace.flowName`

- Create the object dynamically by using `createInterview()`

**Note:** We recommend only using `createInterview()` if you need to reuse your method or class. Using `createInterview()` has these drawbacks.

- If you package a class that uses `createInterview()`, you have to add the associated flow manually.
- If you delete a flow, Salesforce doesn’t check if it’s referenced with `createInterview()`.

Examples: Starting Flow Interviews
The following examples are all sample controllers that start an interview for the flow from the Build a Discount Calculator project on Trailhead. Each shows a different permutation, based on:
• Whether the interview is created statically, with `Flow.Interview.myFlow`, or dynamically, with `createInterview()`.
• Whether the flow is managed or local.

**Interview Created Statically for a Local Flow**

```java
Map<String, Object> inputs = new Map<String, Object>();
inputs.put('AccountID', myAccount);
inputs.put('OpportunityID', myOppty);

Flow.Interview.Calculate_discounts myFlow =
    new Flow.Interview.Calculate_discounts(inputs);
myFlow.start();
```

**Interview Created Dynamically for a Local Flow**

```java
public void callFlow(String flowName, Map<String, Object> inputs) {
    Flow.Interview myFlow = Flow.Interview.createInterview(flowName, inputs);
    myFlow.start();
}
```

**Interview Created Statically for a Managed Flow**

```java
Map<String, Object> inputs = new Map<String, Object>();
inputs.put('AccountID', myAccount);
inputs.put('OpportunityID', myOppty);

Flow.Interview.myNamespace.Calculate_discounts myFlow =
    new Flow.Interview.myNamespace.Calculate_discounts(inputs);
myFlow.start();
```

**Interview Created Dynamically for a Managed Flow**

```java
public void callFlow(String namespace, String flowName, Map<String, Object> inputs) {
    Flow.Interview myFlow = Flow.Interview.createInterview(namespace, flowName, inputs);
    myFlow.start();
}
```

**Example: Getting Variable Values**

This sample uses the `getVariableValue` method to obtain breadcrumb (navigation) information from a flow. If that flow contains subflow elements, and each of the referenced flows also contains a `vaBreadCrumb` variable, you can provide users with breadcrumbs regardless of which flow the interview is running.

```java
public class SampleController {

    //Instance of the flow
    public Flow.Interview.Flow_Template_Gallery myFlow {get; set;}

    public String getBreadCrumb() {
        String aBreadCrumb;
        if (myFlow==null) { return 'Home';}
        else aBreadCrumb = (String) myFlow.getVariableValue('vaBreadCrumb');
    }
}
```
Interview Methods

The following are instance methods for Interview.

`createInterview(namespace, flowName, inputVariables)`

Creates an interview for a namespaced flow.

**Signature**

```
public static Flow.Interview createInterview(String namespace, String flowName, Map<String,ANY> inputVariables)
```

**Parameters**

- `namespace`
  - Type: String
  - The flow's namespace.

- `flowName`
  - Type: String
  - The flow's API name.

- `inputVariables`
  - Type: Map<String, Object>
  - Initial values for the flow's input variables.

**Return Value**

Type: Flow.Interview

**Usage**

Use this method to dynamically create a Flow.Interview object for the `start()` method.

How you get output variable values from an interview depends on the type of the Apex variable where you're storing the interview.

- If the variable is cast to a specific flow, you can use `myFlow.myVar` to access a variable, where `myVar` is the name of the variable.
  ```
  system.debug('My Output Variable: ' + myFlow.varName);
  ```

- If the variable is of type Flow.Interview but not cast to a specific flow, you must use `getVariableValue()` to access the flow's variables.
  ```
  system.debug('My Output Variable: ' + myFlow.getVariableValue('varName'));
  ```

If the flow doesn't exist in the current org, a TypeException is thrown.
**createInterview(flowName, inputVariables)**

Creates an interview for a flow.

**Signature**

```java
public static Flow.Interview createInterview(String flowName, Map<String, Object> inputVariables)
```

**Parameters**

- `flowName`
  - **Type:** String
  - The flow's API name.

- `inputVariables`
  - **Type:** Map<String, Object>
  - Initial values for the flow's input variables.

**Return Value**

**Type:** Flow.Interview

**Usage**

Use this method to dynamically create a Flow.Interview object for the `start()` method.

How you get output variable values from an interview depends on the type of the Apex variable where you're storing the interview.

- If the variable is cast to a specific flow, you can use `myFlow.myVar` to access a variable, where `myVar` is the name of the variable.
  ```java
  system.debug('My Output Variable: ' + myFlow.varName);
  ```

- If the variable is of type `Flow.Interview` but not cast to a specific flow, you must use `getVariableValue()` to access the flow's variables.
  ```java
  system.debug('My Output Variable: ' + myFlow.getVariableValue('varName'));
  ```

If the flow doesn't exist in the current org, a TypeException is thrown.

**getVariableValue(variableName)**

Returns the value of the specified flow variable. The flow variable can be in the flow embedded in the Visualforce page, or in a separate flow that is called by a subflow element.

**Signature**

```java
public Object getVariableValue(String variableName)
```

**Parameters**

- `variableName`
  - **Type:** String
  - Specifies the unique name of the flow variable.
Return Value
Type: Object

Usage
The returned variable value comes from whichever flow the interview is running. If the specified variable can’t be found in that flow, the method returns null.
This method checks for the existence of the variable at run time only, not at compile time.

start()
Starts an instance (interview) for an autolaunched or user provisioning flow.

Signature
public Void start()

Return Value
Type: Void

Usage
This method can be used only with flows that have one of these types.
• Autolaunched Flow
• User Provisioning Flow
For details, see “Flow Types” in Salesforce Help.
When a flow user invokes an autolaunched flow, the active flow version runs. If there’s no active version, the latest version runs. When a flow admin invokes a flow, the latest version always runs.

KbManagement Namespace
The KbManagement namespace provides a class for managing knowledge articles.
The following is the class in the KbManagement namespace.

IN THIS SECTION:
PublishingService Class
Use the methods in the KbManagement.PublishingService class to manage the lifecycle of an article and its translations.

PublishingService Class
Use the methods in the KbManagement.PublishingService class to manage the lifecycle of an article and its translations.

Namespace
KbManagement
Usage

Use the methods in the KbManagement.PublishingService class to manage the following parts of the lifecycle of an article and its translations:

- Publishing
- Updating
- Retrieving
- Deleting
- Submitting for translation
- Setting a translation to complete or incomplete status
- Archiving
- Assigning review tasks for draft articles or translations

**Note:** Date values are based on GMT.

To use the methods in this class, you must enable Salesforce Knowledge. See Salesforce Knowledge Implementation Guide for more information on setting up Salesforce Knowledge.

PublishingService Methods

The following are methods for PublishingService. All methods are static.

IN THIS SECTION:

- `archiveOnlineArticle(articleId, scheduledDate)`
  Archives an online version of an article. If the specified scheduledDate is null, the article is archived immediately. Otherwise, it archives the article on the scheduled date.

- `assignDraftArticleTask(articleId, assigneeId, instructions, dueDate, sendEmailNotification)`
  Assigns a review task related to a draft article.

- `assignDraftTranslationTask(articleVersionId, assigneeId, instructions, dueDate, sendEmailNotification)`
  Assigns a review task related to a draft translation.

- `cancelScheduledArchivingOfArticle(articleId)`
  Cancels the scheduled archiving of an online article.

- `cancelScheduledPublicationOfArticle(articleId)`
  Cancels the scheduled publication of a draft article.

- `completeTranslation(articleVersionId)`
  Puts a translation in a completed state that is ready to publish.

- `deleteArchivedArticle(articleId)`
  Deletes an archived article.

- `deleteArchivedArticleVersion(articleId, versionNumber)`
  Deletes a specific version of an archived article.

- `deleteDraftArticle(articleId)`
  Deletes a draft article.

- `deleteDraftTranslation(articleVersionId)`
  Deletes a draft translation.
editArchivedArticle(articleId)
Creates a draft article from the archived master version and returns the new draft master version ID of the article.

editOnlineArticle(articleId, unpublish)
Creates a draft article from the online version and returns the new draft master version ID of the article. Also, unpublishes the online article, if unpublish is set to true.

editPublishedTranslation(articleId, language, unpublish)
Creates a draft version of the online translation for a specific language and returns the new draft master version ID of the article. Also, unpublishes the article, if set to true.

publishArticle(articleId, flagAsNew)
Publishes an article. If flagAsNew is set to true, the article is published as a major version.

restoreOldVersion(articleId, versionNumber)
Creates a draft article from an existing online article based on the specified archived version of the article and returns the article version ID.

scheduleForPublication(articleId, scheduledDate)
Schedules the article for publication as a major version. If the specified date is null, the article is published immediately.

setTranslationToIncomplete(articleVersionId)
Sets a draft translation that is ready for publication back to “in progress” status.

submitForTranslation(articleId, language, assigneeId, dueDate)
Submits an article for translation to the specified language. Also assigns the specified user and due date to the submittal and returns new ID of the draft translation.

archiveOnlineArticle(articleId, scheduledDate)
Archives an online version of an article. If the specified scheduledDate is null, the article is archived immediately. Otherwise, it archives the article on the scheduled date.

Signature

public static Void archiveOnlineArticle(String articleId, Datetime scheduledDate)

Parameters

articleId
  Type: String

scheduledDate
  Type: Datetime

Return Value

Type: Void

Example

String articleId = 'Insert article ID';
Datetime scheduledDate = Datetime.newInstanceGmt(2012, 12,1,13,30,0);
KbManagement.PublishingService.archiveOnlineArticle(articleId, scheduledDate);
**assignDraftArticleTask(articleId, assigneeId, instructions, dueDate, sendEmailNotification)**

Assigns a review task related to a draft article.

**Signature**

```
public static Void assignDraftArticleTask(String articleId, String assigneeId, String instructions, Datetime dueDate, Boolean sendEmailNotification)
```

**Parameters**

- **articleId**
  Type: String
- **assigneeId**
  Type: String
- **instructions**
  Type: String
- **dueDate**
  Type: Datetime
- **sendEmailNotification**
  Type: Boolean

**Return Value**

Type: Void

**Example**

```
String articleId = 'Insert article ID';
String assigneeId = '';
String instructions = 'Please review this draft.';
Datetime dueDate = Datetime.newInstanceGmt(2012, 12, 1);
KbManagement.PublishingService.assignDraftArticleTask(articleId, assigneeId, instructions, dueDate, true);
```

**assignDraftTranslationTask(articleVersionId, assigneeId, instructions, dueDate, sendEmailNotification)**

Assigns a review task related to a draft translation.

**Signature**

```
public static Void assignDraftTranslationTask(String articleVersionId, String assigneeId, String instructions, Datetime dueDate, Boolean sendEmailNotification)
```
Parameters

- **articleVersionId**
  Type: String

- **assigneeId**
  Type: String

- **instructions**
  Type: String

- **dueDate**
  Type: Datetime

- **sendEmailNotification**
  Type: Boolean

Return Value
Type: Void

Example

```java
String articleId = 'Insert article ID';
String assigneeId = 'Insert assignee ID';
String instructions = 'Please review this draft.';
Datetime dueDate = Datetime.newInstanceGmt(2012, 12, 1);
KbManagement.PublishingService.assignDraftTranslationTask(articleId, assigneeId, instructions, dueDate, true);
```
