  Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

Return Value
Type: void

**setStatus(status)**
Sets the status of the notification sent by the gateway.

**Signature**

```java
global void setStatus(commercepayments.NotificationStatus status)
```

**Parameters**

- `status`
  Type: `commercepayments.NotificationStatus` on page 973
  Shows whether the payments platform successfully received the notification from the gateway.

Return Value
Type: void

**BasePaymentMethodRequest Class**
Abstract class for storing information about payment methods.

**Namespace**
`CommercePayments`
Usage

The `BasePaymentMethodRequest` class contains fields common to `CardPaymentMethodRequest` on page 959.

IN THIS SECTION:

BasePaymentMethodRequest Methods

BasePaymentMethodRequest Methods

The following are methods for `BasePaymentMethodRequest`.

IN THIS SECTION:

equals(obj)
Maintains the integrity of lists of type `BasePaymentMethodRequest` by determining the equality of external objects in a list. This method is dynamic and based on the equals method in Java.

hashCode()
Maintains the integrity of lists of type `BasePaymentMethodRequest` by determining the uniqueness of the external object records in a list.

toString()
Converts a date to a string.

equals(obj)
Maintains the integrity of lists of type `BasePaymentMethodRequest` by determining the equality of external objects in a list. This method is dynamic and based on the equals method in Java.

Signature

global Boolean equals(Object obj)

Parameters

obj
Type: Object
External object whose key is to be validated.

Return Value

Type: Boolean

hashCode()
Maintains the integrity of lists of type `BasePaymentMethodRequest` by determining the uniqueness of the external object records in a list.
Signature

```java
global Integer hashCode()
```

Return Value
Type: Integer

toString()
Converts a date to a string.

Signature

```java
global String toString()
```

Return Value
Type: String

**BaseRequest Class**

BaseRequest is extended by all the request classes.

**Namespace**

CommercePayments

**IN THIS SECTION:**

  BaseRequest Methods

**BaseRequest Methods**

The following are methods for BaseRequest.

**IN THIS SECTION:**

  BaseRequest(AdditionalData, IdempotencyKey)
  Used for testing.

**BaseRequest(AdditionalData, IdempotencyKey)**

Used for testing.

Signature

```java
global Void BaseRequest(String AdditionalData, Map<String, String> IdempotencyKey)
```
Parameters

AdditionalData
Type: String
Contains additional data that may be required for a payment request. The `additionalData` object consists of key-value pairs. You can retrieve the `additionalData` object from the request object: `Map<String, String> additionalData=request.additionalData`

IdempotencyKey
Type: Map<String, String>
Unique value that's generated by a client and sent to the server in the request. The server stores the value and uses it to keep track of the request status.

Return Value
Type: Void

CaptureNotification Class
When a payment gateway sends a notification for a capture transaction, the payment gateway adapter creates the `CaptureNotification` object to store information about the notification.

Namespace
CommercePayments

Usage
`CaptureNotification` is used in asynchronous payment gateway adapters. Specify the `CommercePayments` namespace when creating an instance of this class. The constructor of this class takes no arguments. For example:

```java
CommercePayments.CaptureNotification crn = new CommercePayments.CaptureNotification();
```

Example

```java
commercepayments.BaseNotification notification = null;
if ('CAPTURE'.equals(eventCode)) {
    notification = new commercepayments.CaptureNotification();
} else if ('REFUND'.equals(eventCode)) {
    notification = new commercepayments.ReferencedRefundNotification();
}
```

IN THIS SECTION:
CaptureNotification Methods

CaptureNotification Methods
The following are methods for `CaptureNotification`. 
IN THIS SECTION:

setAmount(amount)
Sets the transaction amount. Must be a non-negative value.

setGatewayDate(gatewayDate)
Sets the date that the transaction occurred. Some gateways don’t send this value.

setGatewayMessages(gatewayMessages)
Sets error messages that the gateway returned for the payment request. Maximum length of 255 characters.

setGatewayReferenceDetails(gatewayReferenceDetails)
Sets additional data that you can use for subsequent transactions. You can use any data that isn’t normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML.

setGatewayReferenceNumber(gatewayReferenceNumber)
Sets the unique gateway reference number for the transaction that the gateway returned. Maximum length of 255 characters.

setGatewayResultCode(gatewayResultCode)
Sets a gateway-specific result code. The code can be mapped to a Salesforce-specific result code. Maximum length of 64 characters.

setGatewayResultCodeDescription(gatewayResultCodeDescription)
Sets a description of the gateway-specific result code that a gateway returned. Maximum length of 1000 characters.

setId(id)
Sets the ID of a notification sent by the payment gateway.

setSalesforceResultCodeInfo(salesforceResultCodeInfo)
Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

setStatus(status)
Sets the notification status to the same value that was sent by the gateway.

**setAmount(amount)**

Sets the transaction amount. Must be a non-negative value.

**Signature**

```java
global void setAmount(Double amount)
```

**Parameters**

*amount*

Type: Double

The amount to be debited or captured.

**Return Value**

Type: void

**setGatewayDate(gatewayDate)**

Sets the date that the transaction occurred. Some gateways don’t send this value.
**setGatewayDate**

Signature:

```java
global void setGatewayDate(Datetime gatewayDate)
```

Parameters:

- **gatewayDate**
  - Type: `Datetime`
  - Date and time of the gateway communication.

Return Value:

Type: `void`

---

**setGatewayMessage**

Sets error messages that the gateway returned for the payment request. Maximum length of 255 characters.

Signature:

```java
global void setGatewayMessage(String gatewayMessage)
```

Parameters:

- **gatewayMessage**
  - Type: `String`
  - Information on error messages sent from the gateway.

Return Value:

Type: `void`

---

**setGatewayReferenceDetails**

Sets additional data that you can use for subsequent transactions. You can use any data that isn’t normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML.

Signature:

```java
global void setGatewayReferenceDetails(String gatewayReferenceDetails)
```

Parameters:

- **gatewayReferenceDetails**
  - Type: `String`

Return Value:

Type: `void`
**setGatewayReferenceNumber (gatewayReferenceNumber)**

Sets the unique gateway reference number for the transaction that the gateway returned. Maximum length of 255 characters.

Signature

global void setGatewayReferenceNumber(String gatewayReferenceNumber)

Parameters

gatewayReferenceNumber
Type: String
Unique transaction ID created by the payment gateway.

Return Value
Type: void

**setGatewayResultCode (gatewayResultCode)**

Sets a gateway-specific result code. The code can be mapped to a Salesforce-specific result code. Maximum length of 64 characters.

Signature

global void setGatewayResultCode(String gatewayResultCode)

Parameters

gatewayResultCode
Type: String
Gateway-specific result code. Map this value to a Salesforce-specific result code.

Return Value
Type: void

**setGatewayResultCodeDescription (gatewayResultCodeDescription)**

Sets a description of the gateway-specific result code that a gateway returned. Maximum length of 1000 characters.

Signature

global void setGatewayResultCodeDescription(String gatewayResultCodeDescription)

Parameters

gatewayResultCodeDescription
Type: String
Description of the gateway’s result code. Use this field to learn more about why the gateway returned a certain result code.
### setId(id)

Sets the ID of a notification sent by the payment gateway.

**Signature**

global void setId(String id)

**Parameters**

* id
  Type: String

**Return Value**

Type: void

### setSalesforceResultCodeInfo(salesforceResultCodeInfo)

Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

**Signature**

**Parameters**

* salesforceResultCodeInfo
  Type: commercepayments.SalesforceResultCodeInfo
  Description of the Salesforce result code value.

**Return Value**

Type: void

### setStatus(status)

Sets the notification status to the same value that was sent by the gateway.

**Signature**

global void setStatus(commercepayments.NotificationStatus status)

Parameters

**status**

Type: `NotificationStatus` on page 973

Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

Return Value

Type: `void`

**CaptureRequest Class**

Represents a capture request. This class extends the `BaseRequest` class and inherits all its methods.

**Namespace**

`CommercePayments` on page 907

**Usage**

The `CaptureRequest` class’s `buildCaptureRequest` method creates a `CaptureRequest` object to store payment information, such as value and currency, as JSON strings.

**Example**

Builds a `CaptureRequest` object for a multicurrency org.

```java
private String buildCaptureRequest(commercepayments.CaptureRequest captureRequest) {
    Boolean IS_MULTICURRENCY_ORG = UserInfo.isMultiCurrencyOrganization();
    QueryUtils qBuilderForAuth = new QueryUtils(PaymentAuthorization.SObjectType);
    // Add required fields
    qBuilderForAuth.getSelectClause().addField('GatewayRefNumber', false);
    if (IS_MULTICURRENCY_ORG) {
        // addField also takes a boolean to enable translation (uses label instead of actual value)
        qBuilderForAuth.getSelectClause().addField('CurrencyIsoCode', false);
    }
    return qBuilderForAuth.getSelectClause().asJsonString();
}
```

IN THIS SECTION:

- CaptureRequest Constructors
- CaptureRequest Properties

**CaptureRequest Constructors**

The following are constructors for `CaptureRequest`. 
IN THIS SECTION:

CaptureRequest(amount, authorizationId)
This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

**CaptureRequest(amount, authorizationId)**
This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

Parameters

- **amount**
  - Type: Double
  - The amount to be debited or captured.

- **authorizationId**
  - Type: String
  - Represents a payment authorization record.

**CaptureRequest Properties**
The following are properties for CaptureRequest.

IN THIS SECTION:

- **accountId**
  - Account ID value. References an account record.

- **amount**
  - Amount of currency that needs to be captured.

- **paymentAuthorizationId**
  - ID value that references a PaymentAuthorization.

**accountId**
Account ID value. References an account record.

Property Value
Type: String

**amount**
Amount of currency that needs to be captured.

Property Value
Type: Double
paymentAuthorizationId
ID value that references a PaymentAuthorization.

Property Value
Type: String

CaptureResponse Class
The payment gateway adapter sends this response for the capture request type. This class extends AbstractResponse and inherits its methods.

Namespace
CommercePayments on page 907

Usage
You must specify the CommercePayments namespace when creating an instance of this class. The constructor of this class takes no arguments. For example:

```java
CommercePayments.CaptureResponse ctr = new CommercePayments.CaptureResponse();
```

IN THIS SECTION:
CaptureResponse Methods

CaptureResponse Methods
The following are methods for CaptureResponse.

IN THIS SECTION:
setAmount(amount)
Sets the transaction amount.

setAsync(async)
Indicates whether the payment gateway adapter used in the payment capture was asynchronous (true) or synchronous (false).

setGatewayAvsCode(gatewayAvsCode)
Sets the payment gateway's AVS (address verification system) code.

setGatewayDate(gatewayDate)
Sets the payment gateway's date.

setGatewayMessage(gatewayMessage)
Sets information or messages that the gateway returned.

setGatewayReferenceDetails(gatewayReferenceDetails)
Sets the payment gateway's reference details.

setGatewayReferenceNumber(gatewayReferenceNumber)
Sets the payment gateway's reference number.
setGatewayResultCode(gatewayResultCode)
Sets the payment gateway’s result code.

setGatewayResultCodeDescription(gatewayResultCodeDescription)
Sets the payment gateway’s result code description.

setSalesforceResultCodeInfo(salesforceResultCodeInfo)
Sets Salesforce result code information.

**setAmount(amount)**
Sets the transaction amount.

**Signature**

```java
global void setAmount(Double amount)
```

**Parameters**

`amount`
- Type: Double
- The amount to be debited or captured.

**Return Value**

Type: void

**setAsync(async)**
Indicates whether the payment gateway adapter used in the payment capture was asynchronous (True) or synchronous (False).

**Signature**

```java
global void setAsync(Boolean async)
```

**Parameters**

`async`
- Type: Boolean

**Return Value**

Type: void

**setGatewayAvsCode(gatewayAvsCode)**
Sets the payment gateway’s AVS (address verification system) code.

**Signature**

```java
global void setGatewayAvsCode(String gatewayAvsCode)
```
Parameters

gatewayAvsCode
  Type: String
  Payment gateways that use an AVS system return this code.

Return Value
Type: void

**setGatewayDate(gatewayDate)**
Sets the payment gateway's date.

Signature

global void setGatewayDate(Datetime gatewayDate)

Parameters

gatewayDate
  Type: Datetime
  The date that communication happened with the gateway.

Return Value
Type: void

**setGatewayMessage(gatewayMessage)**
Sets information or messages that the gateway returned.

Signature

global void setGatewayMessage(String gatewayMessage)

Parameters

gatewayMessage
  Type: String
  Information or error messages returned by the gateway.

Return Value
Type: void

**setGatewayReferenceDetails(gatewayReferenceDetails)**
Sets the payment gateway's reference details.
Signature

```plaintext
global void setGatewayReferenceDetails(String gatewayReferenceDetails)
```

Parameters

gatewayReferenceDetails
  Type: `String`
  Provides information about the gateway communication.

Return Value

Type: `void`

**setGatewayReferenceNumber(gatewayReferenceNumber)**

Sets the payment gateway's reference number.

Signature

```plaintext
global void setGatewayReferenceNumber(String gatewayReferenceNumber)
```

Parameters

gatewayReferenceNumber
  Type: `String`
  Unique transaction ID created by the payment gateway.

Return Value

Type: `void`

**setGatewayResultCode(gatewayResultCode)**

Sets the payment gateway's result code.

Signature

```plaintext
global void setGatewayResultCode(String gatewayResultCode)
```

Parameters

gatewayResultCode
  Type: `String`
  The gateway result code. You must map this to a Salesforce result code.

Return Value

Type: `void`
**setGatewayResultCodeDescription** (gatewayResultCodeDescription)
Sets the payment gateway's result code description.

Signature
```java
global void setGatewayResultCodeDescription(String gatewayResultCodeDescription)
```

Parameters
- **gatewayResultCodeDescription**
  - Type: `String`
  - Description of the GatewayResultCode. Provides additional context about the result code that the gateway returned.

Return Value
- Type: `void`

**setSalesforceResultCodeInfo** (salesforceResultCodeInfo)
Sets Salesforce result code information.

Signature
```java
```

Parameters
- **salesforceResultCodeInfo**
  - Type: `commercepayments.SalesforceResultCodeInfo`
  - Description of the Salesforce result code value.

Return Value
- Type: `void`

**CardCategory Enum**

Defines whether the payment method represents a credit card or a debit card.

**Namespace**

`CommercePayments` on page 907

**Enum Values**

The following are the values of the `commercepayments.CardCategory` enum.
CardPaymentMethodRequest Class

Sends data related to a card payment method to a gateway adapter during a service call.

Namespace

CommercePayments on page 907

Usage

This class contains details about the card used as a payment method for authorization, sale, or tokenization transaction requests. The gateway adapter reads the fields of this class object while constructing a transaction JSON request to send to the payment gateway. The object of this class is available as the cardPaymentMethod field in the SaleApiPaymentMethodRequest Class, AuthApiPaymentMethodRequest Class, and PaymentMethodTokenizationRequest Class.

Example: This code sample retrieves the cardPaymentMethodRequest object from the paymentMethod class.

```java
commercepayments.CardPaymentMethodRequest cardPaymentMethod = paymentMethod.cardPaymentMethod;
```

CardPaymentMethodRequest Constructors

The following are constructors for CardPaymentMethodRequest.

CardPaymentMethodRequest(cardCategory)

Sets the cardCategory value for the card payment method request.

CardPaymentMethodRequest(cardCategory)

Sets the cardCategory value for the card payment method request.

Signature

```java
global CardPaymentMethodRequest(commercepayments.CardCategory cardCategory)
```
Parameters

cardCategory
  Type: CardCategory on page 958
  Defines whether the card payment method is a credit card or a debit card.

CardPaymentMethodRequest Properties

The following are properties for CardPaymentMethodRequest.

IN THIS SECTION:

  accountId
  Customer account for this payment method.
  cardCategory
  Indicates whether a card payment method is for a credit card or debit card.
  cardHolderFirstName
  The first name of the cardholder for the card payment method.
  cardHolderLastName
  The last name of the cardholder for the card payment method.
  cardHolderName
  Full name of the cardholder on the card payment method.
  cardNumber
  System-defined unique ID for the card payment method.
  cardType
  Defines the credit card bank. Possible values are AmericanExpress, DinersClub, JCB, Maestro, MasterCard, and Visa.
  cvv
  The card security code for the credit or debit card on a card payment method.
  email
  Email address of the cardholder for the credit or debit card on a card payment method.
  expiryMonth
  Expiration month for the credit or debit card on a card payment method.
  expiryYear
  Expiration year of the credit or debit card for the card payment method.
  inputCardType
  Input field for the card type. This field doesn’t store the card type directly, but instead populates CardBin, LastFour, and DisplayCardNumber based on the value entered in inputCardType.
  startMonth
  The credit or debit card becomes valid on the first day of the startMonth in the startYear.
  startYear
  Year during which the credit or debit card becomes valid.
accountId
Customer account for this payment method.

Signature
global String accountId {get; set;}

Property Value
Type: String

cardCategory
Indicates whether a card payment method is for a credit card or debit card.

Signature
global commercepayments.CardCategory cardCategory {get; set;}

Property Value
Type: CardCategory on page 958

cardHolderFirstName
The first name of the cardholder for the card payment method.

Signature
global String cardHolderFirstName {get; set;}

Property Value
Type: String

cardHolderLastName
The last name of the cardholder for the card payment method.

Signature
global String cardHolderLastName {get; set;}

Property Value
Type: String

cardHolderName
Full name of the cardholder on the card payment method.
Signature
global String cardHolderName {get; set;}

Property Value
Type: String
cardNumber
System-defined unique ID for the card payment method.

Signature
global String cardNumber {get; set;}

Property Value
Type: String
cardType
Defines the credit card bank. Possible values are AmericanExpress, DinersClub, JCB, Maestro, MasterCard, and Visa.

Signature
global commercepayments.CardType cardType {get; set;}

Property Value
Type: CardType
cvv
The card security code for the credit or debit card on a card payment method.

Signature
global String cvv {get; set;}

Property Value
Type: String
eemail
Email address of the cardholder for the credit or debit card on a card payment method.

Signature
global String email {get; set;}
Property Value
Type: String

**expiryMonth**
Expiration month for the credit or debit card on a card payment method.

Signature
global Integer expiryMonth {get; set;}

Property Value
Type: Integer

**expiryYear**
Expiration year of the credit or debit card for the card payment method.

Signature
global Integer expiryYear {get; set;}

Property Value
Type: Integer

**inputCardType**
Input field for the card type. This field doesn't store the card type directly, but instead populates CardBin, LastFour, and DisplayCardNumber based on the value entered in inputCardType.

Signature
global String inputCardType {get; set;}

Property Value
Type: String

**startMonth**
The credit or debit card becomes valid on the first day of the startMonth in the startYear.

Signature
global Integer startMonth {get; set;}

Property Value
Type: Integer
**startYear**

Year during which the credit or debit card becomes valid.

Signature

```c
global Integer startYear {get; set;}
```

Property Value

Type: **Integer**

### CardPaymentMethodRequest Methods

The following are methods for `CardPaymentMethodRequest`.

**IN THIS SECTION:**

- `equals(obj)`
  Maintains the integrity of lists of type `CardPaymentMethodRequest` by determining the equality of external objects in a list. This method is dynamic and based on the equals method in Java.

- `hashCode()`
  Maintains the integrity of lists of type `CardPaymentMethodRequest`.

- `toString()`
  Converts a date to a string.

#### `equals(obj)`

Maintains the integrity of lists of type `CardPaymentMethodRequest` by determining the equality of external objects in a list. This method is dynamic and based on the equals method in Java.

Signature

```c
global Boolean equals(Object obj)
```

Parameters

`obj`

Type: **Object**

External object whose key is to be validated.

Return Value

Type: **Boolean**

#### `hashCode()`

Maintains the integrity of lists of type `CardPaymentMethodRequest`. 
Signature

```java
public Integer hashCode()
```

Return Value
Type: Integer

**toString()**
Converts a date to a string.

Signature

```java
public String toString()
```

Return Value
Type: String

### CustomMetadataTypeInfo Class

Access information about custom metadata. The `PaymentGatewayAdapter` can send `CustomMetadataTypeInfo` to transaction requests through the response object’s `SalesforceResultCodeInfo`.

### Namespace

CommercePayments on page 907

### IN THIS SECTION:

- CustomMetadataTypeInfo Constructors
- CustomMetadataTypeInfo Methods

### CustomMetadataTypeInfo Constructors

The following are constructors for `CustomMetadataTypeInfo`.

#### CustomMetadataTypeInfo(cmtRecordId, cmtSfResultCodeFieldName)

Constructor for providing custom metadata type information.

Signature

```java
public CustomMetadataTypeInfo(String cmtRecordId, String cmtSfResultCodeFieldName)
```
Parameters

cmtRecordId
Type: String
ID of the matched custom metadata type record

cmtSfResultCodeFieldName
Type: String
Field that contains the Salesforce result code values. Belongs to the custom metadata type.

CustomMetadataTypeInfo Methods

The following are methods for CustomMetadataTypeInfo.

GatewayErrorResponse Class

Use to respond with an error indication following errors from the PaymentGateway adapter, such as request-forbidden responses, custom validation errors, or expired API tokens.

Namespace

CommercePayments on page 907

Usage

Use GatewayErrorResponse to create an object that stores information about error responses sent by the payment gateway adapter.

Example

If GatewayResponse receives an exception rather than a valid request, it calls GatewayErrorResponse to create an error object with information about the exception.

global commercepayments.GatewayResponse processRequest(commercepayments.paymentGatewayContext gatewayContext) {  
  commercepayments.RequestType requestType = gatewayContext.getPaymentRequestType();
  commercepayments.GatewayResponse response;
  try {
    if (requestType == commercepayments.RequestType.Authorize) {
      response =
createAuthResponse((commercepayments.AuthorizationRequest)gatewayContext.getPaymentRequest());
    } else if (requestType == commercepayments.RequestType.Capture) {
      response =
createCaptureResponse((commercepayments.CaptureRequest)gatewayContext.getPaymentRequest());
    } else if (requestType == commercepayments.RequestType.ReferencedRefund) {
      response =
createRefundResponse((commercepayments.ReferencedRefundRequest)gatewayContext.getPaymentRequest());
    }
  }
}

CommercePayments Namespace

Apex Developer Guide
IN THIS SECTION:
GatewayErrorResponse Constructors

GatewayErrorResponse Constructors
The following are constructors for GatewayErrorResponse.

IN THIS SECTION:
GatewayErrorResponse(errorCode, errorMessage)
Constructor to create a GatewayErrorResponse object that accepts errorCode and errorMessage.

GatewayErrorResponse(errorCode, errorMessage)
Constructor to create a GatewayErrorResponse object that accepts errorCode and errorMessage.

Signature
global GatewayErrorResponse(String errorCode, String errorMessage)

Parameters
errorCode
Type: String
Should match with the HTTP status code to be returned to the user. Here are a few examples.
- If the status code is for a bad request, the errorCode should be 400.
- If the status code is for a forbidden request, errorCode should be 403.
- If errorCode isn’t a valid HTTP status code, a 500 internal server error is returned.

Note: errorCode must have a value, otherwise the platform throws an error.

errorMessage
Type: String
The message response to users following an error.

Note: errorMessage must have a value, otherwise the platform throws an error.
GatewayNotificationResponse Class

When the payment gateway sends a notification to the payments platform, the platform responds with a GatewayNotificationResponse indicating whether the platform succeeded or failed at receiving the notification.

Namespace

CommercePayments on page 907

Usage

You must specify the CommercePayments namespace when creating an instance of this class. The constructor of this class takes no arguments. For example:

When an asynchronous payment gateway sends a notification, the gateway requires the platform to acknowledge that it has either succeeded or failed in receiving the notification. Payment gateway adapters use this class to construct the acknowledgment response, which gateways expect for a notification. GatewayNotificationResponse is the return type of the processNotification method.

Example

```apex
commercepayments.GatewayNotificationResponse gnr = new commercepayments.GatewayNotificationResponse();
if (saveResult.isSuccess()) {
    system.debug('Notification accepted by platform');
} else {
    system.debug('Errors in the result ' + Blob.valueOf(saveResult.getErrorMessage()));
}
gnr.setStatusCode(200);
gnr.setResponseBody(Blob.valueOf('[accepted]'));
return gnr;
```

GatewayNotificationResponse Methods

The following are methods for GatewayNotificationResponse.

setResponseBody(responseBody)

Sets the body of the response to the gateway. Some gateways expect the payments platform to acknowledge the notification with a response regardless of whether the notification was accepted.

setStatusCode(statusCode)

Sets the HTTP status code sent to the gateway as part of the payments platform’s response notification.
setResponseBody (responseBody)
Sets the body of the response to the gateway. Some gateways expect the payments platform to acknowledge the notification with a response regardless of whether the notification was accepted.

Signature

global void setResponseBody(Blob responseBody)

Parameters

responseBody
Type: Blob
Common response values include accepted for successfully receiving the response. For example:

```apex
commercepayments.GatewayNotificationResponse gnr = new commercepayments.GatewayNotificationResponse();
if (saveResult.isSuccess()) {
    system.debug('Notification accepted by platform');
} else {
    system.debug('Errors in the result ' + Blob.valueOf(saveResult.getErrorMessage()));
}
gnr.setStatusCode(200);
gnr.setResponseBody(Blob.valueOf('[accepted]'));
return gnr;
```

Return Value
Type: void

setStatusCode (statusCode)
Sets the HTTP status code sent to the gateway as part of the payments platform’s response notification.

Signature

global void setStatusCode(Integer statusCode)

Parameters

statusCode
Type: Integer
The status code will vary based on the type of payments platform response. Users should configure their GatewayNotificationResponse class to account for all values that their payments platform can possibly return. For example:

```apex
commercepayments.GatewayNotificationResponse gnr = new commercepayments.GatewayNotificationResponse();
if (saveResult.isSuccess()) {
    system.debug('Notification accepted by platform');
} else {
    system.debug('Errors in the result ' + Blob.valueOf(saveResult.getErrorMessage()));
}
```
GatewayResponse Interface

Generic payment gateway response interface. It can be referred, but gateway adapters shouldn’t implement this interface.

Namespace

CommercePayments on page 907

IN THIS SECTION:

GatewayResponse Example Implementation

GatewayResponse Example Implementation

This is an example implementation of the commercepayments.GatewayResponse interface.

The following example tests the implementation:

```java
// Add test class
```

NotificationClient Class

Communicates with the payment platform regarding the gateway’s notification.

Namespace

CommercePayments on page 907

Usage

Specify the CommercePayments namespace when creating an instance of this class. The constructor of this class takes no arguments. For example:

```java
CommercePayments.NotificationClient ntc = new CommercePayments.NotificationClient();
```

This class is used in asynchronous payment gateway adapters. The notification client contains API for communicating with the payments platform regarding the gateway’s notification. When the gateway sends a notification, the gateway adapter invokes the record method in NotificationClient to request that the platform updates notification details.
Example
The NotificationSaveResult class creates a saveResult object to store the result of the save request made to the payment gateway.

commercepayments.NotificationSaveResult saveResult =
commercepayments.NotificationClient.record(notification);

IN THIS SECTION:
NotificationClient Methods

NotificationClient Methods
The following are methods for NotificationClient.

IN THIS SECTION:
record(notification)
Stores the results of a notification request.

record(notification)
Stores the results of a notification request.

Signature

```
global static commercepayments.NotificationSaveResult
record(commercepayments.BaseNotification notification)
```

Parameters

notification
Type: BaseNotification on page 940

Return Value

Type: NotificationSaveResult on page 971

NotificationSaveResult Class
Contains the result of the payment platform’s attempt to record data from the gateway’s notification.

Namespace

CommercePayments on page 907

Usage

This class is used with asynchronous payments. It is the return type of the NotificationClient.record operation and contains the result of the payment platform’s attempt to save notification details.
The constructor of this class takes no arguments. For example:

```java
CommercePayments.NotificationSaveResult nsr = new CommercePayments.NotificationSaveResult();
```

**Example**

```java
commercepayments.NotificationSaveResult saveResult = commercepayments.NotificationClient.record(notification);
```

**IN THIS SECTION:**

NotificationSaveResult Methods

The following are methods for NotificationSaveResult.

**IN THIS SECTION:**

getErrorMessage()

Gets the error message, if any, from the payment platform regarding its attempt to save the notification sent from the payment gateway.

getStatusCode()

Gets the status code from the payment platform's attempt to save the notification sent from the payment gateway.

isSuccess()

Gets the status of whether the payment platform successfully saved the notification sent from the payment gateway.

**getErrorMessage()**

Gets the error message, if any, from the payment platform regarding its attempt to save the notification sent from the payment gateway.

**Signature**

```java
global String getErrorMessage()
```

**Return Value**

**Type:** String

**getStatusCode()**

Gets the status code from the payment platform’s attempt to save the notification sent from the payment gateway.

**Signature**

```java
global Integer getStatusCode()
```
Return Value
Type: Integer

isSuccess()
Gets the status of whether the payment platform successfully saved the notification sent from the payment gateway.

Signature
global Boolean isSuccess()

Return Value
Type: Boolean

NotificationStatus Enum
Shows whether the payments platform successfully received the notification from the gateway.

Usage
When the gateway sends a notification for a payment request, the payments platform delegates the notification request to the gateway adapter. First, the adapter evaluates the signature from the notification request. If the signature is valid, the adapter builds a notification object to store information about the notification. During this process, the adapter sets the NotificationStatus to Failed or Success based on information from the notification request.

Enum Values
The following are the values of the commercepayments.NotificationStatus enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Failed</td>
<td>The payments platform couldn’t receive the notification due to an error.</td>
</tr>
<tr>
<td>Success</td>
<td>The payments platform received the notification.</td>
</tr>
</tbody>
</table>

PaymentGatewayAdapter Interface
PaymentGatewayAdapters can implement this interface in order to process requests.

Namespace
CommercePayments on page 907

IN THIS SECTION:
PaymentGatewayAdapter Methods
PaymentGatewayAdapter Methods
The following are methods for PaymentGatewayAdapter.

IN THIS SECTION:

processRequest(var1)
The entry point for processing payment requests. Returns the response from the payment gateway.

processRequest(var1)
The entry point for processing payment requests. Returns the response from the payment gateway.

Signature
global commercepayments.GatewayResponse
processRequest(commercepayments.PaymentGatewayContext var1)

Parameters
var1
Type: commercepayments.PaymentGatewayContext
You can retrieve the request type and the request from the Context object.

Return Value
Type: commercepayments.GatewayResponse
The response from the payment gateway.

PaymentGatewayAsyncAdapter Interface
Implement the interface to allow customers to process payments asynchronously.

Namespace
CommercePayments on page 907

Usage
Implementing an asynchronous adapter also requires the processNotification method from the GatewayNotificationResponse on page 968 class.

Example
global with sharing class SampleAsyncAdapter implements commercepayments.PaymentGatewayAsyncAdapter, commercepayments.PaymentGatewayAdapter {
global SampleAsyncAdapter() {} 

global commercepayments.GatewayResponse
processRequest(commercepayments.paymentGatewayContext gatewayContext) {

IN THIS SECTION:

PaymentGatewayAsyncAdapter Methods

PaymentGatewayAsyncAdapter Example Implementation

PaymentGatewayAsyncAdapter Methods

The following are methods for PaymentGatewayAsyncAdapter.

IN THIS SECTION:

processNotification(paymentGatewayNotificationContext)

Entry point for processing notifications from payment gateways.

processNotification(paymentGatewayNotificationContext)

Entry point for processing notifications from payment gateways.

Signature

global commercepayments.GatewayNotificationResponse
processNotification(commercepayments.PaymentGatewayNotificationContext var1) {
  
}

Parameters

paymentGatewayNotificationContext

Type: PaymentGatewayNotificationContext on page 979

The PaymentGatewayNotificationContext object wraps all the information related to a gateway notification.

Return Value

Type: GatewayNotificationResponse on page 968

When the payment gateway sends a notification to the payments platform, the platform responds with a GatewayNotificationResponse indicating whether the platform succeeded or failed at receiving the notification.

PaymentGatewayAsyncAdapter Example Implementation

This is a sample implementation of the commercepayments.PaymentGatewayAsyncAdapter interface.

global with sharing class AdyenAdapter implements commercepayments.PaymentGatewayAsyncAdapter, commercepayments.PaymentGatewayAdapter {
  global AdyenAdapter() {}
global commercepayments.GatewayResponse
processRequest(commercepayments.paymentGatewayContext gatewayContext) {
}

global commercepayments.GatewayNotificationResponse
processNotification(commercepayments.PaymentGatewayNotificationContext
gatewayNotificationContext) {
}
}

commercepayments.RequestType requestType = gatewayContext.getPaymentRequestType();
if (requestType == commercepayments.RequestType.Capture) {
    req.setEndpoint('/pal/servlet/Payment/v52/capture');
    // Refer to the end of this doc for sample buildCaptureRequest implementation
    body = buildCaptureRequest((commercepayments.CaptureRequest)gatewayContext.getPaymentRequest());
} else if (requestType == commercepayments.RequestType.ReferencedRefund) {
    req.setEndpoint('/pal/servlet/Payment/v52/refund');
    body = buildRefundRequest((commercepayments.ReferencedRefundRequest)gatewayContext.getPaymentRequest());
}

req.setBody(body);
req.setMethod('POST');
commercepayments.PaymentsHttp http = new commercepayments.PaymentsHttp();
HttpResponse res = null;
try {
    res = http.send(req);
} catch(CalloutException ce) {
    commercepayments.GatewayErrorResponse error = new
    commercepayments.GatewayErrorResponse('500', ce.getMessage());
    return error;
}

if (requestType == commercepayments.RequestType.Capture) {
    // Refer to the end of this doc for sample createCaptureResponse implementation
    response = createCaptureResponse(res);
} else if (requestType == commercepayments.RequestType.ReferencedRefund) {
    response = createRefundResponse(res);
}

return response;

commercepayments.PaymentGatewayNotificationRequest notificationRequest =
gatewayNotificationContext.getPaymentGatewayNotificationRequest();
Blob request = notificationRequest.getRequestBody();
Map<String, Object> jsonReq = (Map<String,
Object>)JSON.deserializeUntyped(request.toString());
List<Object> notificationItems = (List<Object>)jsonReq.get('notificationItems');
Map<String, Object> notificationRequestItem =
(Map<String,
Object>)notificationItems[0].get('NotificationRequestItem');
Boolean success = Boolean.valueOf(notificationRequestItem.get('success'));
String pspReference = (String)notificationRequestItem.get('pspReference');
```java
String eventCode = (String)notificationRequestItem.get('eventCode');
Double amount = (Double)((Map<String, Object>)notificationRequestItem.get('amount')).get('value');

commercepayments.NotificationStatus notificationStatus = null;
if (success) {
    notificationStatus = commercepayments.NotificationStatus.Success;
} else {
    notificationStatus = commercepayments.NotificationStatus.Failed;
}
commercepayments.BaseNotification notification = null;
if ('CAPTURE'.equals(eventCode)) {
    notification = new commercepayments.CaptureNotification();
} else if ('REFUND'.equals(eventCode)) {
    notification = new commercepayments.ReferencedRefundNotification();
}
notification.setStatus(notificationStatus);
notification.setGatewayReferenceNumber(pspReference);
notification.setAmount(amount);
commercepayments.NotificationSaveResult saveResult =
commercepayments.NotificationClient.record(notification);

commercepayments.GatewayNotificationResponse gnr = new commercepayments.GatewayNotificationResponse();
if (saveResult.isSuccess()) {
    system.debug('Notification accepted by platform');
} else {
    system.debug('Errors in the result ' + Blob.valueOf(saveResult.getErrorMessage()));
}
gnr.setStatusCode(200);
gnr.setResponseBody(Blob.valueOf('[accepted]'));
return gnr;
```

**PaymentGatewayContext Class**

Wraps the information related to a payment request.

**Namespace**

CommercePayments on page 907

**Usage**

The constructor of this class takes no arguments. For example:

```
CommercePayments.PaymentGatewayContext pgc = new CommercePayments.PaymentGatewayContext();
```
Example

```java
global commercepayments.GatewayResponse processRequest(commercepayments.PaymentGatewayContext gatewayContext) {
    commercepayments.RequestType requestType = gatewayContext.getPaymentRequestType();
    if (requestType == commercepayments.RequestType.Capture) {
        commercepayments.CaptureRequest captureRequest = (commercepayments.CaptureRequest) gatewayContext.getPaymentRequest();
    }
}
```

IN THIS SECTION:
- PaymentGatewayContext Constructors
- PaymentGatewayContext Methods

PaymentGatewayContext Constructors

The following are constructors for PaymentGatewayContext.

IN THIS SECTION:
- PaymentGatewayContext(request, requestType)
  Constructor to enable instance creation. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

PaymentGatewayContext(request, requestType)

Constructor to enable instance creation. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

Signature

```java
global PaymentGatewayContext(commercepayments.PaymentGatewayRequest request, String requestType)
```

Parameters

request
  Type: commercepayments.PaymentGatewayRequest
  Raw payload. Sensitive attributes are masked to ensure PCI compliance.

requestType
  Type: String
  Defines the type of request made to the gateway

PaymentGatewayContext Methods

The following are methods for PaymentGatewayContext.
IN THIS SECTION:
  getPaymentRequest()
  Returns the payment request object.
  getPaymentRequestType()
  Returns the payment request type.

**getPaymentRequest()**

Returns the payment request object.

Signature

```plaintext
global commercepayments.PaymentGatewayRequest getPaymentRequest()
```

Return Value

Type: PaymentGatewayRequest

**getPaymentRequestType()**

Returns the payment request type.

Signature

```plaintext
global String getPaymentRequestType()
```

Return Value

Type: String

**PaymentGatewayNotificationContext Class**

Wraps the information related to a gateway notification.

**Namespace**

`CommercePayments` on page 907

**Usage**

This class is used with asynchronous payments. It wraps all of the information related to a notification from the payment gateway. The payments platform provides its context to the payment gateway adapters.

The constructor of this class takes no arguments. For example:

```plaintext
CommercePayments.PaymentGatewayNotificationContext pgnc = new CommercePayments.PaymentGatewayNotificationContext();
```
Example

```java
global commercepayments.GatewayNotificationResponse
processNotification(commercepayments.PaymentGatewayNotificationContext
gatewayNotificationContext) {
commercepayments.PaymentGatewayNotificationRequest notificationRequest =
gatewayNotificationContext.getPaymentGatewayNotificationRequest();
}
```

IN THIS SECTION:
- PaymentGatewayNotificationContext Methods

PaymentGatewayNotificationContext Methods

The following are methods for PaymentGatewayNotificationContext.

IN THIS SECTION:
- getPaymentGatewayNotificationRequest()
  - Returns the payment gateway’s notification request.

**getPaymentGatewayNotificationRequest()**

Returns the payment gateway’s notification request.

Signature

```java
global commercepayments.PaymentGatewayNotificationRequest
getPaymentGatewayNotificationRequest()
```

Return Value

Type: PaymentGatewayNotificationRequest on page 988

PaymentMethodTokenizationRequest Class

Stores data about a request to tokenize a card payment method.

Namespace

CommercePayments on page 907

Usage

The constructor of this class takes no arguments. For example:

```java
CommercePayments.PaymentMethodTokenizationRequest pmtr = new
CommercePayments.PaymentMethodTokenizationRequest();
```

The tokenization process replaces sensitive customer data, such as a card number or CVV, with unique identification symbols while the data is handled by Salesforce, the payment gateway, and the customer bank.
This class holds all required details about the tokenize request. Gateway adapters read the fields of this class object while constructing a tokenization JSON request, which is sent to the payment gateway.

Example

```java
global commercepayments.GatewayResponse processRequest(commercepayments.PaymentGatewayContext gatewayContext) {
    commercepayments.RequestType requestType = gatewayContext.getPaymentRequestType();
    if (requestType == commercepayments.RequestType.Tokenize) {
        commercepayments.PaymentMethodTokenizationRequest tokenizeRequest = (commercepayments.*PaymentMethodTokenizationRequest*) gatewayContext.getPaymentRequest();
    }
}
```

IN THIS SECTION:
- PaymentMethodTokenizationRequest Constructors
- PaymentMethodTokenizationRequest Properties
- PaymentMethodTokenizationRequest Methods

PaymentMethodTokenizationRequest Constructors

The following are constructors for `PaymentMethodTokenizationRequest`.

IN THIS SECTION:
- `PaymentMethodTokenizationRequest(paymentGatewayId)`

Payment gateway ID constructor used with `paymentMethodTokenizationRequest`. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

PaymentMethodTokenizationRequest()

The following are constructors for `PaymentMethodTokenizationRequest`.

PaymentMethodTokenizationRequest (paymentGatewayId)

Payment gateway ID constructor used with `paymentMethodTokenizationRequest`. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

Signature

```java
global PaymentMethodTokenizationRequest(String paymentGatewayId)
```

Parameters

`paymentGatewayId`

Type: `String`

The payment method’s payment gateway ID that will be tokenized.
**PaymentMethodTokenizationRequest()**
The following are constructors for PaymentMethodTokenizationRequest.

**Signature**
```
global PaymentMethodTokenizationRequest()
```

**PaymentMethodTokenizationRequest Properties**
The following are properties for PaymentMethodTokenizationRequest.

**IN THIS SECTION:**
- **address**
  - The card payment method address to be tokenized.
  ```
  global commercepayments.AddressRequest address {get; set;}
  ```
  Property Value
  Type: `AddressRequest` on page 913

- **cardPaymentMethod**
  - The card payment method containing data to be tokenized.
  ```
  global commercepayments.CardPaymentMethodRequest cardPaymentMethod {get; set;}
  ```
  Property Value
  Type: `CardPaymentMethodRequest` on page 959

**PaymentMethodTokenizationRequest Methods**
The following are methods for PaymentMethodTokenizationRequest.
equals(obj)
Maintains the integrity of lists of type PaymentMethodTokenizationRequest by determining the equality of external objects in a list. This method is dynamic and is based on the equals method in Java.

hashCode()
Maintains the integrity of lists of type PaymentMethodTokenizationRequest by determining the uniqueness of the external object records in a list.

toString()
Converts a date to a string.

equals(obj)
Maintains the integrity of lists of type PaymentMethodTokenizationRequest by determining the equality of external objects in a list. This method is dynamic and is based on the equals method in Java.

Signature

```
global Boolean equals(Object obj)
```

Parameters

```
obj
Type: Object
External object whose key is to be validated.
```

Return Value

Type: Boolean

hashCode()
Maintains the integrity of lists of type PaymentMethodTokenizationRequest by determining the uniqueness of the external object records in a list.

Signature

```
global Integer hashCode()
```

Return Value

Type: Integer

toString()
Converts a date to a string.

Signature

```
global String toString()
```
Return Value
Type: String

PaymentMethodTokenizationResponse Class
Gateway response sent by payment gateway adapters for the payment method tokenization request. The response includes the payment method’s token ID value.

Namespace
CommercePayments on page 907

Usage
The constructor of this class takes no arguments. For example:

```java
CommercePayments.PaymentMethodTokenizationResponse pmtr = new CommercePayments.PaymentMethodTokenizationResponse();
```

This class contains details about a tokenize transaction gateway response. Fields of this class object are populated from the response obtained from the payment gateway. This class is mapped to a response class in the Java layer, which the payments platform uses to construct the Tokenize gateway response shown to the user.

```java
commercepayments.PaymentMethodTokenizationResponse tokenizeResponse = new commercepayments.PaymentMethodTokenizationResponse();
```

Example

```java
commercepayments.PaymentMethodTokenizationResponse tokenizeResponse = new commercepayments.PaymentMethodTokenizationResponse();
```

IN THIS SECTION:
PaymentMethodTokenizationResponse Methods

PaymentMethodTokenizationResponse Methods
The following are methods for PaymentMethodTokenizationResponse.

IN THIS SECTION:
setGatewayAvsCode(gatewayAvsCode)
Sets the AVS (address verification system) result code information that the gateway returned. Maximum length of 64 characters.

setGatewayDate(gatewayDate)
Sets the date that the tokenization occurred. Some gateways don’t send this value.

setGatewayMessage(gatewayMessage)
Sets error messages that the gateway returned for the tokenization request. Maximum length of 255 characters.

setGatewayResultCode(gatewayResultCode)
Sets a gateway-specific result code. The code may be mapped to a Salesforce-specific result code. Maximum length of 64 characters.
setGatewayResultCodeDescription(gatewayResultCodeDescription)
Sets a description of the gateway-specific result code that a payment gateway returned. Maximum length of 1000 characters.

setGatewayToken(gatewayToken)
Sets the gateway token value that the gateway returned.

setGatewayTokenDetails(gatewayTokenDetails)
Sets any additional information that the gateway returned about the payment token.

setSalesforceResultCodeInfo(salesforceResultCodeInfo)
Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

setGatewayAvsCode(gatewayAvsCode)
Sets the AVS (address verification system) result code information that the gateway returned. Maximum length of 64 characters.

Signature
global void setGatewayAvsCode(String gatewayAvsCode)

Parameters

gatewayAvsCode
Type: String
Used to verify the address mapped to a payment method when the payments platform requests tokenization from the payment gateway.

Return Value
Type: void

setGatewayDate(gatewayDate)
Sets the date that the tokenization occurred. Some gateways don’t send this value.

Signature
global void setGatewayDate(Datetime gatewayDate)

Parameters

gatewayDate
Type: Datetime

Return Value
Type: void

setGatewayMessage(gatewayMessage)
Sets error messages that the gateway returned for the tokenization request. Maximum length of 255 characters.
Signature

global void setGatewayMessage(String gatewayMessage)

Parameters

gatewayMessage
Type: String

Return Value
Type: void

setGatewayResultCode (gatewayResultCode)
Sets a gateway-specific result code. The code may be mapped to a Salesforce-specific result code. Maximum length of 64 characters.

Signature

global void setGatewayResultCode(String gatewayResultCode)

Parameters

gatewayResultCode
Type: String
Gateway-specific result code. Must be used to map a Salesforce-specific result code.

Return Value
Type: void

setGatewayResultCodeDescription (gatewayResultCodeDescription)
Sets a description of the gateway-specific result code that a payment gateway returned. Maximum length of 1000 characters.

Signature

global void setGatewayResultCodeDescription(String gatewayResultCodeDescription)

Parameters

gatewayResultCodeDescription
Type: String
Provides additional information about the result code and why the gateway returned the specific code. Descriptions will vary between different gateways.

Return Value
Type: void
setGatewayToken (gatewayToken)
Sets the gateway token value that the gateway returned.

Signature

global void setGatewayToken(String gatewayToken)

Parameters
gatewayToken
  Type: String

Return Value
Type: void

setGatewayTokenDetails (gatewayTokenDetails)
Sets any additional information that the gateway returned about the payment token.

Signature

global void setGatewayTokenDetails(String gatewayTokenDetails)

Parameters
gatewayTokenDetails
  Type: String

Return Value
Type: void

setSalesforceResultCodeInfo (salesforceResultCodeInfo)
Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

Signature

Parameters
salesforceResultCodeInfo
  Type: SalesforceResultCodeInfo on page 1016
  Description of the Salesforce result code value.
Return Value
Type: void

PaymentGatewayNotificationRequest Class
Contains the notification request data from the gateway.

Namespace
CommercePayments on page 907

Usage
When the payment gateway sends a notification for a payment request, the payments platform sends the notification request to the gateway adapter. If the notification payload contains an eventCode of CAPTURE, the adapter constructs a CaptureNotification. If the notification payload contains an eventCode of REFUND, the adapter constructs a ReferencedRefundNotification. If the notification payload contains eventCode of AUTHORISATION, the adapter constructs a GatewayNotificationResponse.

You can obtain a notification request from PaymentGatewayNotificationContext on page 979 by invoking its getPaymentGatewayNotificationRequest method.

Example
```java
global commercepayments.GatewayNotificationResponse
    processNotification(commercepayments.PaymentGatewayNotificationContext
        gatewayNotificationContext) {
        commercepayments.PaymentGatewayNotificationRequest notificationRequest =
            gatewayNotificationContext.getPaymentGatewayNotificationRequest();
    }
```

IN THIS SECTION:
- PaymentGatewayNotificationRequest Properties
- PaymentGatewayNotificationRequest Methods

PaymentGatewayNotificationRequest Properties
The following are properties for PaymentGatewayNotificationRequest.

IN THIS SECTION:
- requestBody
  Body of the notification request sent by the payment gateway.

requestBody
Body of the notification request sent by the payment gateway.
Signature

```java
global Blob requestBody {get; set;}
```

Property Value

Type: Blob

**PaymentGatewayNotificationRequest Methods**

The following are methods for `PaymentGatewayNotificationRequest`.

IN THIS SECTION:

- `getHeaders()`
  Gets HTTP headers from the notification request sent by the payment gateway.

- `getRequestBody()`
  Stores the notification request body information from the payment gateway’s notification request.

`getHeaders()`

Gets HTTP headers from the notification request sent by the payment gateway.

Signature

```java
global Map<String,String> getHeaders()
```

Return Value

Type: `Map<String,String>`

`getRequestBody()`

Stores the notification request body information from the payment gateway’s notification request.

Signature

```java
global Blob getRequestBody()
```

Return Value

Type: `Blob`

**PaymentsHttp Class**

Makes an HTTP request to start the interaction with the payment gateway.

**Namespace**

`CommercePayments` on page 907
**Usage**

You must specify the CommercePayments namespace when creating an instance of this class. The constructor of this class takes no arguments. For example:

```java
CommercePayments.PaymentsHttp payhttp = new CommercePayments.PaymentsHttp();
```

**IN THIS SECTION:**
- PaymentsHttp Methods
- PaymentsHttp Constructors

**PaymentsHttp Methods**

The following are methods for PaymentsHttp. All methods are instance methods.

**IN THIS SECTION:**
- send(Request)
  Sends an HttpRequest and returns the response.

**send(Request)**

Sends an HttpRequest and returns the response.

Signature

```java
global HttpResponse send(HttpRequest request)
```

Parameters

`request`
Type: `System.HttpRequest`

Return Value

Type: `System.HttpResponse`

**PaymentsHttp Constructors**

The following are constructors for PaymentsHttp.

**IN THIS SECTION:**
- PaymentsHttp()
  Initiates an HTTP request and response.

**PaymentsHttp()**

Initiates an HTTP request and response.
Signature
global PaymentsHttp()

RefundRequest Class
Sends data related to a refund to the payment gateway adapter.

Namespace
CommercePayments on page 991

Usage
The constructor of this class takes no arguments. For example:
CommercePayments.RefundRequest rrq = new CommercePayments.RefundRequest();

Example
commercepayments.ReferencedRefundRequest refundRequest = new
commercepayments.ReferencedRefundRequest(80, pmt.id);

IN THIS SECTION:
RefundRequest Methods

RefundRequest Methods
The following are methods for RefundRequest.

IN THIS SECTION:
equals(obj)
Maintains the integrity of lists of type RefundRequest by determining the equality of external objects in a list. This method is dynamic and is based on the equals method in Java.
hashCode()
Maintains the integrity of lists of type RefundRequest by determining the uniqueness of the external object records in a list.

equals (obj)
Maintains the integrity of lists of type RefundRequest by determining the equality of external objects in a list. This method is dynamic and is based on the equals method in Java.

Signature
global Boolean equals(Object obj)
Parameters

\( obj \)
Type: Object

Return Value

Type: Boolean

**hashCode()**

Maintains the integrity of lists of type \( \text{RefundRequest} \) by determining the uniqueness of the external object records in a list.

Signature

global Integer hashCode()

Return Value

Type: Integer

**ReferencedRefundNotification Class**

When a payment gateway sends a notification for a refund transaction, the payment gateway adapter creates the \( \text{ReferencedRefundNotification} \) object to store information about notification.

**Namespace**

*CommercePayments* on page 907

**Usage**

This class is used with asynchronous payments. When a payment gateway sends a notification for a refund transaction, the gateway adapter creates an object of type \( \text{ReferencedRefundNotification} \) to populate the respective values.

The constructor of this class takes no arguments. For example:

```java
CommercePayments.ReferencedRefundNotification rrn = new CommercePayments.ReferencedRefundNotification();
```

**Example**

```java
commercepayments.NotificationStatus notificationStatus = null;
if (success) {
    notificationStatus = commercepayments.NotificationStatus.Success;
} else {
    notificationStatus = commercepayments.NotificationStatus.Failed;
}
commercepayments.BaseNotification notification = null;
if ('CAPTURE'.equals(eventCode)) {
    notification = new commercepayments.CaptureNotification();
} else if ('REFUND'.equals(eventCode)) {
```
notification = new commercepayments.ReferencedRefundNotification();
}

IN THIS SECTION:
ReferencedRefundNotification Methods

ReferencedRefundNotification Methods
The following are methods for ReferencedRefundNotification.

IN THIS SECTION:

setAmount(amount)
Sets the transaction amount. Can be positive, negative, or zero.

setGatewayDate(gatewayDate)
Sets the date that communication for the refund notification occurred with the payment gateway.

setGatewayMessage(gatewayMessage)
Sets information or messages that the gateway returned.

setGatewayReferenceDetails(gatewayReferenceDetails)
Sets the payment gateway’s reference details.

setGatewayReferenceNumber(gatewayReferenceNumber)
Sets the payment gateway’s reference number.

setGatewayResultCode(gatewayResultCode)
Sets the payment gateway’s result code.

setGatewayResultCodeDescription(gatewayResultCodeDescription)
Sets the payment gateway’s result code description.

setId(id)
Sets the ID of a notification sent by the payment gateway.

setSalesforceResultCodeInfo(salesforceResultCodeInfo)
Sets Salesforce result code information.

setStatus(status)
Sets the notification status value on the notification object.

setAmount(amount)
Sets the transaction amount. Can be positive, negative, or zero.

Signature

global void setAmount(Double amount)

Parameters

amount
Type: Double
The amount to be debited or captured.

Return Value
Type: void

`setGatewayDate(gatewayDate)`
Sets the date that communication for the refund notification occurred with the payment gateway.

Signature
`global void setGatewayDate(Datetime gatewayDate)`

Parameters
`gatewayDate`  
 Type: `Datetime`  
  The date that communication happened with the gateway.

Return Value
Type: void

`setGatewayMessage(gatewayMessage)`
Sets information or messages that the gateway returned.

Signature
`global void setGatewayMessage(String gatewayMessage)`

Parameters
`gatewayMessage`  
 Type: `String`

Return Value
Type: void

`setGatewayReferenceDetails(gatewayReferenceDetails)`
Sets the payment gateway's reference details.

Signature
`global void setGatewayReferenceDetails(String gatewayReferenceDetails)`
Parameters

gatewayReferenceDetails
  Type: String
  Provides information about the gateway communication.

Return Value
Type: void

setGatewayReferenceNumber(gatewayReferenceNumber)
Sets the payment gateway's reference number.

Signature

global void setGatewayReferenceNumber(String gatewayReferenceNumber)

Parameters

gatewayReferenceNumber
  Type: String
  Unique transaction ID created by the payment gateway.

Return Value
Type: void

setGatewayResultCode(gatewayResultCode)
Sets the payment gateway's result code.

Signature

global void setGatewayResultCode(String gatewayResultCode)

Parameters

gatewayResultCode
  Type: String
  The gateway result code. You must map this to a Salesforce-specific result code.

Return Value
Type: void

setGatewayResultCodeDescription(gatewayResultCodeDescription)
Sets the payment gateway's result code description.
Signature

global void setGatewayResultCodeDescription(String gatewayResultCodeDescription)

Parameters
gatewayResultCodeDescription
  Type: String
  Description of the gateway result code. Provides additional context about the result code.

Return Value
Type: void

setId(id)

Sets the ID of a notification sent by the payment gateway.

Signature

global void setId(String id)

Parameters
id
  Type: String

Return Value
Type: void

setSalesforceResultCodeInfo(salesforceResultCodeInfo)

Sets Salesforce result code information.

Signature

Parameters
salesforceResultCodeInfo
  Type: SalesforceResultCodeInfo on page 1016
  Description of the Salesforce result code value.

Return Value
Type: void
`setStatus(status)`
Sets the notification status value on the notification object.

Signature
```java
global void setStatus(commercepayments.NotificationStatus status)
```

Parameters
`status`
Type: `NotificationStatus` on page 973
Indicates whether the payments platform successfully received the notification from the payment gateway.

Return Value
Type: void

**ReferencedRefundRequest**
Access information about the referenced refund requests. Extends the `RefundRequest` class.

**Namespace**
`CommercePayments` on page 907

**Example**
```java
global commercepayments.GatewayResponse processRequest(commercepayments.PaymentGatewayContext gatewayContext) {
    commercepayments.RequestType requestType = gatewayContext.getPaymentRequestType();
    if (requestType == commercepayments.RequestType.ReferencedRefund) {
        commercepayments.*ReferencedRefundRequest* refundRequest =
        (commercepayments.*ReferencedRefundRequest*) gatewayContext.getPaymentRequest();
    }
}
```

IN THIS SECTION:
- ReferencedRefundRequest Constructors
- ReferencedRefundRequest Properties
- ReferencedRefundRequest Methods

**ReferencedRefundRequest Constructors**
The following are constructors for `ReferencedRefundRequest`. 
ReferencedRefundRequest(amount, paymentId)
This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

**Parameters**

* amount
  Type: Double
  The amount to be debited or captured.

* paymentId
  Type: String
  The payment record.

ReferencedRefundRequest Properties
The following are properties for ReferencedRefundRequest.

IN THIS SECTION:

**PaymentId**
References a payment object.

**accountId**
References an account.

**amount**
References an amount.

**PaymentId**
References a payment object.

Property Value
Type: String

**accountId**
References an account.

Property Value
Type: String
amount
References an amount.

Property Value
Type: Double

ReferencedRefundRequest Methods
The following are methods for ReferencedRefundRequest.

ReferencedRefundResponse Class
The payment gateway adapter sends this response for the ReferencedRefund request type.

Namespace
CommercePayments on page 907

Usage
The constructor of this class takes no arguments. For example:

```java
CommercePayments.ReferencedRefundResponse refr = new CommercePayments.ReferencedRefundResponse();
```

IN THIS SECTION:
ReferencedRefundResponse Methods

ReferencedRefundResponse Methods
The following are methods for ReferencedRefundResponse.

IN THIS SECTION:
setAmount(amount)
Sets the transaction amount. The value must be a positive number.

setGatewayAvsCode(gatewayAvsCode)
Sets the payment gateway’s address verification system (AVS) code.

setGatewayDate(gatewayDate)
Sets the payment gateway’s date.

setGatewayMessage(gatewayMessage)
Sets information or messages that the gateway returned.

setGatewayReferenceDetails(gatewayReferenceDetails)
Sets the payment gateway’s reference details.

setGatewayReferenceNumber(gatewayReferenceNumber)
Sets the payment gateway’s reference number.
setGatewayResultCode(gatewayResultCode)
Sets the payment gateway's result code.

setGatewayResultCodeDescription(gatewayResultCodeDescription)
Sets the payment gateway's result code description.

setSalesforceResultCodeInfo(salesforceResultCodeInfo)
Set the Salesforce result code info.

setAmount(amount)
Sets the transaction amount. The value must be a positive number.

Signature

global void setAmount(Double amount)

Parameters

amount
Type: Double
The amount to be debited or captured.

Return Value
Type: void

setGatewayAvsCode(gatewayAvsCode)
Sets the payment gateway's address verification system (AVS) code.

Signature

global void setGatewayAvsCode(String gatewayAvsCode)

Parameters

gatewayAvsCode
Type: String
Code sent by gateways that use an address verification system.

Return Value
Type: void

setGatewayDate(gatewayDate)
Sets the payment gateway's date.
**setGatewayDate(gatewayDate)**

Sets the date and time of the gateway communication.

**Signature**

global void setGatewayDate(Datetime gatewayDate)

**Parameters**

gatewayDate
   Type: Datetime
   Date and time of the gateway communication.

**Return Value**

Type: void

**setGatewayMessage(gatewayMessage)**

Sets information or messages that the gateway returned.

**Signature**

global void setGatewayMessage(String gatewayMessage)

**Parameters**

gatewayMessage
   Type: String
   Information or error messages returned by the gateway.

**Return Value**

Type: void

**setGatewayReferenceDetails(gatewayReferenceDetails)**

Sets the payment gateway’s reference details.

**Signature**

global void setGatewayReferenceDetails(String gatewayReferenceDetails)

**Parameters**

gatewayReferenceDetails
   Type: String
   Information about the gateway communication.

**Return Value**

Type: void
**setGatewayReferenceNumber(gatewayReferenceNumber)**
Sets the payment gateway's reference number.

Signature

```
global void setGatewayReferenceNumber(String gatewayReferenceNumber)
```

Parameters

- **gatewayReferenceNumber**
  - Type: String
  - Unique transaction ID created by the payment gateway.

Return Value

Type: void

**setGatewayResultCode(gatewayResultCode)**
Sets the payment gateway's result code.

Signature

```
global void setGatewayResultCode(String gatewayResultCode)
```

Parameters

- **gatewayResultCode**
  - Type: String
  - The gateway result code. Must be mapped to a Salesforce result code.

Return Value

Type: void

**setGatewayResultCodeDescription(gatewayResultCodeDescription)**
Sets the payment gateway's result code description.

Signature

```
global void setGatewayResultCodeDescription(String gatewayResultCodeDescription)
```

Parameters

- **gatewayResultCodeDescription**
  - Type: String
  - Description of the GatewayResultCode. Provides more information about the result code returned by the gateway.
Return Value
Type: void

**setSalesforceResultCodeInfo(salesforceResultCodeInfo)**
Set the Salesforce result code info.

**Signature**

```
global void setSalesforceResultCodeInfo(commercepayments.SalesforceResultCodeInfo
salesforceResultCodeInfo)
```

**Parameters**

`salesforceResultCodeInfo`
Type: `commercepayments.SalesforceResultCodeInfo` on page 1016
Describes the Salesforce result code value.

Return Value
Type: void

**RequestType Enum**

Defines the type of payment transaction request made to the payment gateway.

**Enum Values**

The following are the values of the `commercepayments.RequestType` enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Authorize</td>
<td>Payment authorization request</td>
</tr>
<tr>
<td>Capture</td>
<td>Payment capture request</td>
</tr>
<tr>
<td>ReferencedRefund</td>
<td>Payment refund request</td>
</tr>
<tr>
<td>Sale</td>
<td>Sale request</td>
</tr>
<tr>
<td>CommercePayments.RequestType, Sale</td>
<td></td>
</tr>
<tr>
<td>Tokenization</td>
<td>Payment tokenization request</td>
</tr>
<tr>
<td>CommercePayments.RequestType, Tokenization</td>
<td></td>
</tr>
</tbody>
</table>
SaleApiPaymentMethodRequest Class

Sends data related to a card payment method to a gateway adapter during a sale service call.

Namespace

CommercePayments on page 907

Usage

This class holds information about a payment method that was used for a Sale request. SaleApiPaymentMethodRequest contains all the possible payment methods as fields, but only one value is populated for a given request. Gateway adapters use this class when constructing a sale request. The object of this class is obtained through the paymentMethod field on the SaleRequest object.

Example: This code sample retrieves the SaleApiPaymentMethodRequest object from the SaleRequest class.

```java
commercepayments.SaleApiPaymentMethodRequest paymentMethod = saleRequest.paymentMethod;
```

IN THIS SECTION:

SaleApiPaymentMethodRequest Constructors

SaleApiPaymentMethodRequest Properties

SaleApiPaymentMethodRequest Methods

SaleApiPaymentMethodRequest Constructors

The following are constructors for SaleApiPaymentMethodRequest.

IN THIS SECTION:

SaleApiPaymentMethodRequest(cardPaymentMethodRequest)

Sends data related to a card payment method to a gateway adapter during a sale service call.

SaleApiPaymentMethodRequest()

Constructor for building a sale payment method request. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

SaleApiPaymentMethodRequest (cardPaymentMethodRequest)

Sends data related to a card payment method to a gateway adapter during a sale service call.

Signature

```java
global SaleApiPaymentMethodRequest (commercepayments.CardPaymentMethodRequest cardPaymentMethodRequest)
```

Parameters

```java
cardPaymentMethodRequest
  Type: CardPaymentMethodRequest on page 959
```
SaleApiPaymentMethodRequest()

Constructor for building a sale payment method request. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

Signature

```java
global SaleApiPaymentMethodRequest()
```

SaleApiPaymentMethodRequest Properties

The following are properties for SaleApiPaymentMethodRequest.

IN THIS SECTION:

- **cardPaymentMethod**

  Contains details of the card used in a payment method.

  Signature

  ```java
  global commercepayments.CardPaymentMethodRequest cardPaymentMethod {get; set;}
  ```

  Property Value

  Type: [CardPaymentMethodRequest](#) on page 959

SaleApiPaymentMethodRequest Methods

The following are methods for SaleApiPaymentMethodRequest.

IN THIS SECTION:

- **equals(obj)**

  Maintains the integrity of lists of type SaleApiPaymentMethodRequest by determining the equality of external objects in a list. This method is dynamic and is based on the equals method in Java.

- **hashCode()**

  Maintains the integrity of lists of type SaleApiPaymentMethodRequest by determining the uniqueness of the external object records in a list.

- **toString()**

  Converts a date to a string.

**equals(obj)**

Maintains the integrity of lists of type SaleApiPaymentMethodRequest by determining the equality of external objects in a list. This method is dynamic and is based on the equals method in Java.
Signature

```java
global Boolean equals(Object obj)
```

Parameters

`obj`
Type: Object

Return Value
Type: Boolean

**hashCode()**
Maintains the integrity of lists of type `SaleApiPaymentMethodRequest` by determining the uniqueness of the external object records in a list.

Signature

```java
global Integer hashCode()
```

Return Value
Type: Integer

**toString()**
Converts a date to a string.

Signature

```java
global String toString()
```

Return Value
Type: String

**SaleRequest Class**
Stores information about a sales request.

**Namespace**
`CommercePayments` on page 907

**Usage**
This class holds all the required details about a sale request. Gateway adapters read the fields of this class object while constructing a sale JSON request that is sent to the payment gateway. The object of this class is made available through `commercepayments.paymentGatewayContext` by calling `getPaymentRequest()`.
Example

This code sample retrieves the SaleRequest object from the PaymentGatewayContext class.

```java
commercepayments.SaleRequest = (commercepayments.SaleRequest)gatewayContext.getPaymentRequest()
```

IN THIS SECTION:
- SaleRequest Constructors
- SaleRequest Properties
- SaleRequest Methods

SaleRequest Constructors

The following are constructors for SaleRequest.

IN THIS SECTION:
- SaleRequest(amount)

**SaleRequest(amount)**

Constructor for defining an amount for the sale request. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

Signature

```
global SaleRequest(Double amount)
```

Parameters

- **amount**
  - Type: Double
  - Amount of the sale request.

SaleRequest Properties

The following are properties for SaleRequest.

IN THIS SECTION:
- accountId
- amount

**accountId**

Customer account ID for the sale request.

**amount**

Amount of the sale request. Can be positive only.
comments
Additional information about the sale request.

currencyIsoCode
Currency code for the sale request.

paymentMethod
Payment method used in the sale request.

**accountId**
Customer account ID for the sale request.

Signature
```csharp
global String accountId {get; set;}
```

Property Value
Type: String

**amount**
Amount of the sale request. Can be positive only.

Signature
```csharp
global Double amount {get; set;}
```

Property Value
Type: Double

**comments**
Additional information about the sale request.

Signature
```csharp
global String comments {get; set;}
```

Property Value
Type: String

**currencyIsoCode**
Currency code for the sale request.

Signature
```csharp
global String currencyIsoCode {get; set;}
```
Property Value
Type: String

`paymentMethod`
Payment method used in the sale request.

Signature
```java
global commercepayments.SaleApiPaymentMethodRequest paymentMethod {get; set;}
```

Property Value
Type: `SaleApiPaymentMethodRequest` on page 1004

**SaleRequest Methods**
The following are methods for `SaleRequest`.

**IN THIS SECTION:**
- `equals(obj)`
  Compares this object with the specified object and returns `true` if both objects are equal; otherwise, returns `false`.
- `hashCode()`
  Maintains the integrity of lists of type `SaleRequest` by determining the uniqueness of the external object records in a list.
- `toString()`
  Converts a date to a string.

**equals (obj)**
Compares this object with the specified object and returns `true` if both objects are equal; otherwise, returns `false`.

Signature
```java
global Boolean equals(Object obj)
```

Parameters
- `obj`
  Type: Object

Return Value
Type: Boolean

**hashCode ()**
Maintains the integrity of lists of type `SaleRequest` by determining the uniqueness of the external object records in a list.
Signature

```
global Integer hashCode()
```

Return Value
Type: Integer

`toString()`
Converts a date to a string.

Signature

```
global String toString()
```

Return Value
Type: String

**SaleResponse Class**

Response sent by payment gateway adapters for a sales service.

**Namespace**

[CommercePayments](#) on page 907

**Usage**

The constructor of this class takes no arguments. For example:

```cpp
CommercePayments.SaleResponse slr CommercePayments.SaleResponse();
```

This class contains details about a customer card that was used as a payment method for Authorization, Sale, or Tokenization request. The gateway adapter reads the fields of this class while constructing a transaction JSON request, which it then sends to the payment gateway. The object of this class is made available by the `cardPaymentMethod` field in [SaleApiPaymentMethodRequest](#) on page 1004 and [AuthApiPaymentMethodRequest](#) on page 923.

**Example**

This code sample builds a `SaleResponse` object.

```cpp
commercepayments.SaleResponse saleResponse = new commercepayments.SaleResponse();
saleResponse.setGatewayReferenceDetails("refDetailString");
saleResponse.setGatewayResultCode("res_code");
saleResponse.setGatewayResultCodeDescription("");
saleResponse.setGatewayReferenceNumber(""");
saleResponse.setSalesforceResultCodeInfo(getSalesforceResultCodeInfo(commercepayments.SalesforceResultCode.SUCCESS.name()));
```

IN THIS SECTION:

SaleResponse Methods
SaleResponse Methods

The following are methods for SaleResponse.

IN THIS SECTION:

- `setAmount(amount)`
  Sets the transaction amount. Must be a non-negative value.

- `setGatewayAvsCode(gatewayAvsCode)`
  Sets the AVS (address verification system) result code information that the gateway returned. Maximum length of 64 characters.

- `setGatewayDate(gatewayDate)`
  Sets the date that the sale occurred. Some gateways don’t send this value.

- `setGatewayMessage(gatewayMessage)`
  Sets error messages that the gateway returned for the sale request. Maximum length of 255 characters.

- `setGatewayReferenceDetails(gatewayReferenceDetails)`
  Sets additional data that you can use for subsequent sales. You can use any data that isn’t normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML.

- `setGatewayReferenceNumber(gatewayReferenceNumber)`
  Sets the unique gateway reference number for the transaction that the gateway returned. Maximum length of 255 characters.

- `setGatewayResultCode(gatewayResultCode)`
  Sets a gateway-specific result code. The code may be mapped to a Salesforce-specific result code. Maximum length of 64 characters.

- `setGatewayResultCodeDescription(gatewayResultCodeDescription)`
  Sets a description of the gateway-specific result code that a payment gateway returned. Maximum length of 1000 characters.

- `setPaymentMethodTokenizationResponse(paymentMethodTokenizationResponse)`
  Sets information from the gateway about the tokenized payment method.

- `setSalesforceResultCodeInfo(salesforceResultCodeInfo)`
  Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

### setAmount(amount)

Sets the transaction amount. Must be a non-negative value.

**Signature**

```java
global void setAmount(Double amount)
```

**Parameters**

- `amount`
  Type: `Double`
  The amount of the transaction.

**Return Value**

Type: `void`
**setGatewayAvsCode (gatewayAvsCode)**
Sets the AVS (address verification system) result code information that the gateway returned. Maximum length of 64 characters.

**Signature**
```
global void setGatewayAvsCode(String gatewayAvsCode)
```

**Parameters**
- **gatewayAvsCode**  
  Type: **String**
  Used to verify the address mapped to a payment method when the payments platform requests tokenization from the payment gateway.

**Return Value**
Type: **void**

**setGatewayDate (gatewayDate)**
Sets the date that the sale occurred. Some gateways don't send this value.

**Signature**
```
global void setGatewayDate(Datetime gatewayDate)
```

**Parameters**
- **gatewayDate**  
  Type: **Datetime**

**Return Value**
Type: **void**

**setGatewayMessage (gatewayMessage)**
Sets error messages that the gateway returned for the sale request. Maximum length of 255 characters.

**Signature**
```
global void setGatewayMessage(String gatewayMessage)
```

**Parameters**
- **gatewayMessage**  
  Type: **String**
Return Value
Type: void

**setGatewayReferenceDetails(gatewayReferenceDetails)**
Sets additional data that you can use for subsequent sales. You can use any data that isn’t normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML.

Signature
```java
global void setGatewayReferenceDetails(String gatewayReferenceDetails)
```

Parameters
```
gatewayReferenceDetails
  Type: String
```

Return Value
Type: void

**setGatewayReferenceNumber(gatewayReferenceNumber)**
Sets the unique gateway reference number for the transaction that the gateway returned. Maximum length of 255 characters.

Signature
```java
global void setGatewayReferenceNumber(String gatewayReferenceNumber)
```

Parameters
```
gatewayReferenceNumber
  Type: String

  Unique authorization ID created by the payment gateway.
```

Return Value
Type: void

**setGatewayResultCode(gatewayResultCode)**
Sets a gateway-specific result code. The code may be mapped to a Salesforce-specific result code. Maximum length of 64 characters.

Signature
```java
global void setGatewayResultCode(String gatewayResultCode)
```
Parameters

gatewayResultCode
Type: String
Gateway-specific result code. Must be used to map a Salesforce-specific result code.

Return Value
Type: void

**setGatewayResultCodeDescription(gatewayResultCodeDescription)**
Sets a description of the gateway-specific result code that a payment gateway returned. Maximum length of 1000 characters.

Signature
global void setGatewayResultCodeDescription(String gatewayResultCodeDescription)

Parameters
gatewayResultCodeDescription
Type: String
Description of the gateway’s result code. Use this field to learn more about why the gateway returned a certain result code.

Return Value
Type: void

**setPaymentMethodTokenizationResponse(paymentMethodTokenizationResponse)**
Sets information from the gateway about the tokenized payment method.

Signature
global void setPaymentMethodTokenizationResponse(commercepayments.PaymentMethodTokenizationResponse paymentMethodTokenizationResponse)

Parameters
paymentMethodTokenizationResponse
Type: PaymentMethodTokenizationResponse
Gateway response sent by payment gateway adapters for the payment method tokenization request. The response includes the payment method’s token ID value.

Return Value
Type: void
**setSalesforceResultCodeInfo(salesforceResultCodeInfo)**

Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

**Signature**

**Parameters**

- **salesforceResultCodeInfo**
  Type: SalesforceResultCodeInfo on page 1016

  Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

**Return Value**

Type: void

---

**SalesforceResultCode Enum**

Defines the gateway call status values in Salesforce based on the call status values that the payment gateway returned.

**Usage**

Payment gateways can return many different responses. Salesforce maps these responses into one of seven possible Salesforce response values.

**Enum Values**

The following are the values of the commercepayments.SalesforceResultCode enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Decline</td>
<td>The gateway call failed, but it may still work if you try again. For example, the customer had insufficient funds or briefly lost their connection to the internet. This is also known as a “soft decline.”</td>
</tr>
<tr>
<td>Indeterminate</td>
<td>The gateway didn’t respond to the call and the user has to check the transaction request’s status. Indeterminate responses often occur following server timeouts, system failure, or any action that interrupts the gateway’s ability to process the payment.</td>
</tr>
<tr>
<td>PermanentFail</td>
<td>The customer’s bank recognized the payment account as closed, terminated, or fraudulent. The gateway won’t further calls from the payment method associate with the transaction. After a permanent fail response, the transaction changes its gateway status to Permanent Fail.</td>
</tr>
<tr>
<td>RequiresReview</td>
<td>The gateway call initially failed, but the payment method may still work after further evaluation. This response often happens when the customer bank requires more</td>
</tr>
<tr>
<td><strong>Value</strong></td>
<td><strong>Description</strong></td>
</tr>
<tr>
<td>-----------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Success</td>
<td>The gateway processed the transaction successfully.</td>
</tr>
<tr>
<td>SystemError</td>
<td>Salesforce ended the payment request call before receiving a gateway response. System error responses often occur due to gateway server errors, invalid customer credentials, or anytime the request times out before receiving a gateway response. The failure occurs before the request reaches the gateway, so there’s no risk of an unaccounted payment remaining in the gateway. You can continue with the transaction by manually creating a payment.</td>
</tr>
<tr>
<td>ValidationError</td>
<td>The gateway received incorrect customer payment information, such as misspelled credit card names or a CVV with missing numbers.</td>
</tr>
</tbody>
</table>

**SalesforceResultCodeInfo**

Stores Salesforce result code information from payment gateway adapters.

**Namespace**

*CommercePayments* on page 907

**Usage**

The constructor of this class takes no arguments. For example:

```java
```

Gateways can return the transaction result as either *CustomMetadata* or *SalesforceResultCode*.

**IN THIS SECTION:**

  - *SalesforceResultCodeInfo Constructors*

**SalesforceResultCodeInfo Constructors**

The following are constructors for *SalesforceResultCodeInfo*.

**IN THIS SECTION:**

  - *SalesforceResultCodeInfo(customMetadataTypeInfo)*
    - Constructor for providing the *customMetadataTypeInfo* for the result of the transaction.
  - *SalesforceResultCodeInfo(salesforceResultCode)*
    - Constructor that provides the *salesforceResultCode* for the transaction result.
SalesforceResultCodeInfo(customMetadataTypeInfo)
Constructor for providing the customMetadataTypeInfo for the result of the transaction.

Signature

```
global SalesforceResultCodeInfo(commercepayments.CustomMetadataTypeInfo customMetadataTypeInfo)
```

Parameters

customMetadataTypeInfo
Type: CustomMetadataTypeInfo on page 965
Information about the metadata type.

SalesforceResultCodeInfo(salesforceResultCode)
Constructor that provides the salesforceResultCode for the transaction result.

Signature

```
global SalesforceResultCodeInfo(commercepayments.SalesforceResultCode salesforceResultCode)
```

Parameters

salesforceResultCode
Type: SalesforceResultCode on page 1015
The enum value for the result code.

ConnectApi Namespace

The ConnectApi namespace (also called Connect in Apex) provides classes for accessing the same data available in Connect REST API. Use Connect in Apex to create custom experiences in Salesforce.

For information about working with the ConnectApi classes, see Connect in Apex on page 335.

IN THIS SECTION:

ActionLinks Class
Create, delete, and get information about an action link group definition; get information about an action link group; get action link diagnostic information.

Announcements Class
Access information about announcements and post announcements.

Chatter Class
Access information about followers and subscriptions for records.

ChatterFavorites Class
Chatter favorites give you easy access to topics, list views, and feed searches.
ChatterFeeds Class
Get, post, and delete feed elements, likes, comments, and bookmarks. You can also search feed elements, share feed elements, and vote on polls.

ChatterGroups Class
Information about groups, such as the group's members, photo, and the groups the specified user is a member of. Add members to a group, remove members, and change the group photo.

ChatterMessages Class
Access and modify message and conversation data.

ChatterUsers Class
Access information about users, such as activity, followers, subscriptions, files, and groups.

CommerceCart Class
Get, create, update, and delete carts. Get cart items, add items to carts, update and delete cart items.

CommerceCatalog Class
Get products, product categories, and product category paths.

CommerceStorePricing Class
Get product prices.

CommerceWishlist Class
Get, create, update, and delete wishlists. Add wishlists to carts. Get wishlist items, add items to wishlists, and delete wishlist items.

Communities Class
Access general information about communities in your organization.

CommunityModeration Class
Access information about flagged feed items and comments in a community. Add and remove flags from comments and feed items.

ContentHub Class
Access Files Connect repositories and their files and folders.

Datacloud Class
Purchase Data.com contact or company records, and retrieve purchase information.

EmailMergeFieldService Class
Extract a list of merge fields for an object. A merge field is a field you can put in an email template, mail merge template, custom link, or formula to incorporate values from a record.

ExternalEmailServices Class
Access information about integration with external email services, such as sending email within Salesforce through an external email account.

ExternalManagedAccount Class
Get externally managed accounts.

FulfillmentOrder Class
Fulfill orders in Order Management.

Knowledge Class
Access information about trending articles in communities.

ManagedContent Class
Get managed content versions.
ManagedTopics Class
Access information about managed topics in a community. Create, delete, and reorder managed topics.

Mentions Class
Access information about mentions. A mention is an "@" character followed by a user or group name. When a user or group is mentioned, they receive a notification.

Missions Class
Export and purge mission activity for users. Get a user's mission progress. Update mission activity counts for users.

NextBestAction Class
Execute recommendation strategies, get recommendations, manage recommendation reactions.

OrderPaymentSummary Class
Work with payments in Order Management.

OrderSummary Class
Work with orders in Order Management.

OrderSummaryCreation Class
Create Order Summaries in Order Management.

Organization Class
Access information about an org.

Personalization Class
Get assigned personalization audiences that match the user context. Create, get, update, and delete an audience. Get personalization targets that match the user context, based on the assigned audiences that include the user. Create and update targets. Get and delete a target.

QuestionAndAnswers Class
Access question and answers suggestions.

Recommendations Class
Get and reject Chatter, custom, and static recommendations. Create, get, update, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

Records Class
Access information about record motifs, which are small icons used to distinguish record types in the Salesforce UI.

SalesforceInbox Class
Access information about Automated Activity Capture, which is available in Einstein and Salesforce Inbox.

SmartDataDiscovery Class
Get predictions on Salesforce objects.

SocialEngagement Class
Manage information about social accounts or fan pages for social networks.

Survey Class
Send survey invitations by email.

Topics Class
Access information about topics, such as their descriptions, the number of people talking about them, related topics, and information about groups contributing to the topic. Update a topic’s name or description, merge topics, and add and remove topics from records and feed items.
UserProfiles Class
Access user profile data. The user profile data populates the profile page (also called the Chatter profile page). This data includes user information (such as address, manager, and phone number), some user capabilities (permissions), and a set of subtab apps, which are custom tabs on the profile page.

Zones Class
Access information about Chatter Answers zones in your organization. Zones organize questions into logical groups, with each zone having its own focus and unique questions.

ConnectApi Input Classes
Some ConnectApi methods take arguments that are instances of ConnectApi input classes.

ConnectApi Output Classes
Most ConnectApi methods return instances of ConnectApi output classes.

ConnectApi Enums
 Enums specific to the ConnectApi namespace.

ConnectApi Exceptions
The ConnectApi namespace contains exception classes.

ActionLinks Class
Create, delete, and get information about an action link group definition; get information about an action link group; get action link diagnostic information.

Namespace
ConnectApi

Usage
An action link is a button on a feed element. Clicking an action link can take a user to a Web page, initiate a file download, or invoke an API call to Salesforce or to an external server. An action link includes a URL and an HTTP method, and can include a request body and header information, such as an OAuth token for authentication. Use action links to integrate Salesforce and third-party services into the feed so that users can take action to drive productivity and accelerate innovation.

There are two views of an action link and an action link group: the definition, and the context user’s view. The definition includes potentially sensitive information, such as authentication information. The context user’s view is filtered by visibility options and the values reflect the state of the context user.

Action link definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission. Use these methods to operate on action link group definitions (which contain action link definitions):

• createActionLinkGroupDefinition(communityId, actionLinkGroup)
• deleteActionLinkGroupDefinition(communityId, actionLinkGroupId)
• getActionLinkGroupDefinition(communityId, actionLinkGroupId)

Use these methods to operate on a context user’s view of an action link or an action link group:

• getActionLink(communityId, actionLinkId)
• getActionLinkGroup(communityId, actionLinkGroupId)
• `getActionLinkDiagnosticInfo(communityId, actionLinkId)`

For information about how to use action links, see Working with Action Links.

**ActionLinks Methods**

The following are methods for `ActionLinks`. All methods are static.

**IN THIS SECTION:**

- `createActionLinkGroupDefinition(communityId, actionLinkGroup)`
  
  Create an action link group definition. To associate an action link group with a feed element, first create an action link group definition. Then post a feed element with an associated actions capability.

- `deleteActionLinkGroupDefinition(communityId, actionLinkGroupId)`
  
  Delete an action link group definition. Deleting an action link group definition removes all references to it from feed elements.

- `getActionLink(communityId, actionLinkId)`
  
  Get information about an action link, including state for the context user.

- `getActionLinkDiagnosticInfo(communityId, actionLinkId)`
  
  Get diagnostic information returned when an action link executes. Diagnostic information is given only for users who can access the action link.

- `getActionLinkGroup(communityId, actionLinkGroupId)`
  
  Get information about an action link group including state for the context user.

- `getActionLinkGroupDefinition(communityId, actionLinkGroupId)`
  
  Get information about an action link group definition.

**createActionLinkGroupDefinition(communityId, actionLinkGroup)**

Create an action link group definition. To associate an action link group with a feed element, first create an action link group definition. Then post a feed element with an associated actions capability.

API Version

33.0

Requires Chatter

No

Signature

```java
public static ConnectApi.ActionLinkGroupDefinition createActionLinkGroupDefinition(String communityId, ConnectApi.ActionLinkGroupDefinitionInput actionLinkGroup)
```

Parameters

- `communityId`
  
  Type: `String`

  Use either the ID for a community, `internal`, or `null`.
actionLinkGroup

Type: ConnectApi.ActionLinkGroupDefinitionInput

A ConnectApi.ActionLinkGroupDefinitionInput object that defines the action link group.

Return Value

Type: ConnectApi.ActionLinkGroupDefinition

Usage

An action link is a button on a feed element. Clicking an action link can take a user to a Web page, initiate a file download, or invoke an API call to Salesforce or to an external server. An action link includes a URL and an HTTP method, and can include a request body and header information, such as an OAuth token for authentication. Use action links to integrate Salesforce and third-party services into the feed so that users can take action to drive productivity and accelerate innovation.

All action links must belong to a group. Action links in a group are mutually exclusive and share some properties. Define stand-alone actions in their own action group.

Information in the action link group definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link group definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

- **Note:** Invoking ApiAsync action links from an app requires a call to set the status. However, there isn’t currently a way to set the status of an action link using Apex. To set the status, use Connect REST API. See the Action Link resource in the Connect REST API Developer Guide for more information.

Example for Defining an Action Link and Posting with a Feed Element

For more information about this example, see Define an Action Link and Post with a Feed Element.

```java
ConnectApi.ActionLinkGroupDefinitionInput actionLinkGroupDefinitionInput = new ConnectApi.ActionLinkGroupDefinitionInput();
ConnectApi.ActionLinkDefinitionInput actionLinkDefinitionInput = new ConnectApi.ActionLinkDefinitionInput();
ConnectApi.RequestHeaderInput requestHeaderInput1 = new ConnectApi.RequestHeaderInput();
ConnectApi.RequestHeaderInput requestHeaderInput2 = new ConnectApi.RequestHeaderInput();

// Create the action link group definition.
actionLinkGroupDefinitionInput.actionLinks = new List<ConnectApi.ActionLinkDefinitionInput>();
actionLinkGroupDefinitionInput.executionsAllowed = ConnectApi.ActionLinkExecutionsAllowed.OncePerUser;
actionLinkGroupDefinitionInput.category = ConnectApi.PlatformActionGroupCategory.Primary;
// To Do: Verify that the date is in the future.
// Action link groups are removed from feed elements on the expiration date.
datetime myDate = datetime.newInstance(2016, 3, 1);
actionLinkGroupDefinitionInput.expirationDate = myDate;

// Create the action link definition.
actionLinkDefinitionInput.actionType = ConnectApi.ActionLinkType.Api;
actionLinkDefinitionInput.actionUrl = '/services/data/v33.0/chatter/feed-elements';
actionLinkDefinitionInput.headers = new List<ConnectApi.RequestHeaderInput>();
actionLinkDefinitionInput.labelKey = 'Post';
```
actionLinkDefinitionInput.method = ConnectApi.HttpRequestMethod.HttpPost;
actionLinkDefinitionInput.requestBody = '{"subjectId": "me","feedElementType": "FeedItem","body": {"messageSegments": [{"type": "Text","text": "This is a test post created via an API action link."}]}}';
actionLinkDefinitionInput.requiresConfirmation = true;

// To Do: Substitute an OAuth value for your Salesforce org.
requestHeaderInput1.name = 'Authorization';
requestHeaderInput1.value = 'OAuth 00DD00000007WNP!ARsAQwoeV0zzAV847FT14zF.85w.EwsPbUgXR4SAjsp';
actionLinkDefinitionInput.headers.add(requestHeaderInput1);

requestHeaderInput2.name = 'Content-Type';
requestHeaderInput2.value = 'application/json';
actionLinkDefinitionInput.headers.add(requestHeaderInput2);

// Add the action link definition to the action link group definition.
actionLinkGroupDefinitionInput.actionLinks.add(actionLinkDefinitionInput);

// Instantiate the action link group definition.
ConnectApi.ActionLinkGroupDefinition actionLinkGroupDefinition =
    ConnectApi.ActionLinks.createActionLinkGroupDefinition(Network.getNetworkId(),
        actionLinkGroupDefinitionInput);

ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new ConnectApi.FeedElementCapabilitiesInput();
ConnectApi.AssociatedActionsCapabilityInput associatedActionsCapabilityInput = new ConnectApi.AssociatedActionsCapabilityInput();
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

// Set the properties of the feedItemInput object.
feedItemInput.body = messageBodyInput;
feedItemInput.capabilities = feedElementCapabilitiesInput;
feedItemInput.subjectId = 'me';

// Create the text for the post.
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
textSegmentInput.text = 'Click to post a feed item.';
messageBodyInput.messageSegments.add(textSegmentInput);

// The feedElementCapabilitiesInput object holds the capabilities of the feed item.
// Define an associated actions capability to hold the action link group.
// The action link group ID is returned from the call to create the action link group definition.
feedElementCapabilitiesInput.associatedActions = associatedActionsCapabilityInput;
associatedActionsCapabilityInput.actionLinkGroupId = new List<String>();
associatedActionsCapabilityInput.actionLinkGroupId.add(actionLinkGroupDefinition.id);

// Post the feed item.
ConnectApi.FeedElement feedElement =
    ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);
Example for Defining an Action Link in a Template and Posting with a Feed Element

For more information about this example, see Define an Action Link in a Template and Post with a Feed Element.

```
// Get the action link group template Id.
ActionLinkGroupTemplate template = [SELECT Id FROM ActionLinkGroupTemplate WHERE DeveloperName='Doc_Example'];

// Add binding name-value pairs to a map. 
// The names are defined in the action link template(s) associated with the action link group template. 
// Get them from Setup UI or SOQL.
Map<String, String> bindingMap = new Map<String, String>();
bindingMap.put('ApiVersion', 'v33.0');
bindingMap.put('Text', 'This post was created by an API action link.');
bindingMap.put('SubjectId', 'me');

// Create ActionLinkTemplateBindingInput objects from the map elements.
List<ConnectApi.ActionLinkTemplateBindingInput> bindingInputs = new List<ConnectApi.ActionLinkTemplateBindingInput>();
for (String key : bindingMap.keySet()) {
    ConnectApi.ActionLinkTemplateBindingInput bindingInput = new ConnectApi.ActionLinkTemplateBindingInput();
    bindingInput.key = key;
    bindingInput.value = bindingMap.get(key);
    bindingInputs.add(bindingInput);
}

// Set the template Id and template binding values in the action link group definition.
ConnectApi.ActionLinkGroupDefinitionInput actionLinkGroupDefinitionInput = new ConnectApi.ActionLinkGroupDefinitionInput();
actionLinkGroupDefinitionInput.templateId = template.id;
actionLinkGroupDefinitionInput.templateBindings = bindingInputs;

// Instantiate the action link group definition.
ConnectApi.ActionLinkGroupDefinition actionLinkGroupDefinition = 
    ConnectApi.ActionLinks.createActionLinkGroupDefinition(Network.getNetworkId(),
    actionLinkGroupDefinitionInput);

ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new ConnectApi.FeedElementCapabilitiesInput();
ConnectApi.AssociatedActionsCapabilityInput associatedActionsCapabilityInput = new ConnectApi.AssociatedActionsCapabilityInput();
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

// Define the FeedItemInput object to pass to postFeedElement
feedItemInput.body = messageBodyInput;
feedItemInput.capabilities = feedElementCapabilitiesInput;
feedItemInput.subjectId = 'me';

// The MessageBodyInput object holds the text in the post
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
```
textSegmentInput.text = 'Click to post a feed item.';
messageBodyInput.messageSegments.add(textSegmentInput);

// The FeedElementCapabilitiesInput object holds the capabilities of the feed item.
// For this feed item, we define an associated actions capability to hold the action link group.
// The action link group ID is returned from the call to create the action link group definition.
feedElementCapabilitiesInput.associatedActions = associatedActionsCapabilityInput;
associatedActionsCapabilityInput.actionLinkGroupIds = new List<String>();
associatedActionsCapabilityInput.actionLinkGroupIds.add(actionLinkGroupDefinition.id);

// Post the feed item.
ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);

deleteActionLinkGroupDefinition(communityId, actionLinkGroupId)
Delete an action link group definition. Deleting an action link group definition removes all references to it from feed elements.

API Version
33.0

Requires Chatter
No

Signature
public static void deleteActionLinkGroupDefinition(String communityId, String actionLinkGroupId)

Parameters
communityId
Type: String
Use either the ID for a community, _internal, or _null.

actionLinkGroupId
Type: String
The ID of the action link group.

Return Value
Type: Void
Usage

Information in the action link group definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link group definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

**getActionLink(communityId, actionLinkId)**

Get information about an action link, including state for the context user.

API Version

33.0

Requires Chatter

No

Signature

```java
public static ConnectApi.PlatformAction getActionLink(String communityId, String actionLinkId)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **actionLinkId**
  - Type: String
  - The ID of the action link.

Return Value

Type: `ConnectApi.PlatformAction`

**getActionLinkDiagnosticInfo(communityId, actionLinkId)**

Get diagnostic information returned when an action link executes. Diagnostic information is given only for users who can access the action link.

API Version

33.0

Requires Chatter

No
Signature

```java
public static ConnectApi.ActionLinkDiagnosticInfo getActionLinkDiagnosticInfo(String communityId, String actionLinkId)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `actionLinkId`
  Type: `String`
  The ID of the action link.

Return Value

Type: `ConnectApi.ActionLinkDiagnosticInfo`

**getActionLinkGroup(communityId, actionLinkGroupId)**

Get information about an action link group including state for the context user.

API Version

33.0

Requires Chatter

No

Signature

```java
public static ConnectApi.PlatformActionGroup getActionLinkGroup(String communityId, String actionLinkGroupId)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `actionLinkGroupId`
  Type: `String`
  The ID of the action link group.

Return Value

Type: `ConnectApi.PlatformActionGroup`
Usage

All action links must belong to a group. Action links in a group are mutually exclusive and share some properties. Action link groups are accessible by clients, unlike action link group definitions.

`getActionLinkGroupDefinition(communityId, actionLinkGroupId)`

Get information about an action link group definition.

API Version

33.0

Requires Chatter

No

Signature

```java
public static ConnectApi.ActionLinkGroupDefinition getActionLinkGroupDefinition(String communityId, String actionLinkGroupId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, internal, or null.
- `actionLinkGroupId`
  - Type: `String`
  - The ID of the action link group.

Return Value

Type: `ConnectApi.ActionLinkGroupDefinition`

Usage

Information in the action link group definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link group definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

Announcements Class

Access information about announcements and post announcements.

Namespace

`ConnectApi`
Usage

Use the ConnectApi.Announcements class to get, create, update, and delete announcements. Use an announcement to
highlight information. Users can discuss, like, and post comments on announcements. Deleting the feed post deletes the announcement.

This image shows an announcement displayed in a group. Creating an announcement also creates a feed item with the announcement
text.

An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it's deleted or
replaced by another announcement.

Announcements Methods

The following are methods for Announcements. All methods are static.

IN THIS SECTION:

`deleteAnnouncement(communityId, announcementId)`
Delete an announcement.

`getAnnouncement(communityId, announcementId)`
Get an announcement.

`getAnnouncements(communityId, parentId)`
Get the first page of announcements.

`getAnnouncements(communityId, parentId, pageParam, pageSize)`
Get a page of announcements.

`postAnnouncement(communityId, announcement)`
Post an announcement.

`updateAnnouncement(communityId, announcementId, expirationDate)`
Update the expiration date of an announcement.
**deleteAnnouncement** (communityId, announcementId)
Delete an announcement.

API Version
31.0

Requires Chatter
Yes

Signature

```java
public static void deleteAnnouncement(String communityId, String announcementId)
```

Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, internal, or `null`.

- **announcementId**
  Type: `String`
  An announcement ID, which has a prefix of 0BT.

Return Value
Type: Void

Usage
To get a list of announcements in a group, call `getAnnouncements(communityId, parentId)` or `getAnnouncements(communityId, parentId, pageParam, pageSize)`.
To post an announcement to a group, call `postAnnouncement(communityId, announcement)`.

**getAnnouncement** (communityId, announcementId)
Get an announcement.

API Version
31.0

Requires Chatter
Yes
public static ConnectApi.Announcement getAnnouncement(String communityId, String announcementId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

announcementId
Type: String
An announcement ID, which has a prefix of 0BT.

Return Value

Type: ConnectApi.Announcement

Usage

To get a list of announcements in a group, call getAnnouncements(communityId, parentId) or getAnnouncements(communityId, parentId, pageParam, pageSize).
To post an announcement to a group, call postAnnouncement(communityId, announcement).

getAnnouncements(communityId, parentId)
Get the first page of announcements.

API Version
36.0

Available to Guest Users
38.0

Requires Chatter
Yes

Signature

public static ConnectApi.AnnouncementPage getAnnouncements(String communityId, String parentId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.
**parentId**
Type: **String**
ID of the parent entity for the announcement, that is, a group ID when the announcement appears in a group.

Return Value
Type: **ConnectApi.AnnouncementPage**

**getAnnouncements(communityId, parentId, pageParam, pageSize)**
Get a page of announcements.

API Version
36.0

Available to Guest Users
38.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.AnnouncementPage getAnnouncements(String communityId, String parentId, Integer pageParam, Integer pageSize)
```

Parameters

**communityId**
Type: **String**
Use either the ID for a community, `internal`, or `null`.

**parentId**
Type: **String**
ID of the parent entity for the announcement, that is, a group ID when the announcement appears in a group.

**pageParam**
Type: **Integer**
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**
Type: **Integer**
Specifies the number of announcements per page.

Return Value
Type: **ConnectApi.AnnouncementPage**
postAnnouncement(communityId, announcement)

Post an announcement.

API Version
36.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.Announcement postAnnouncement(String communityId,
ConnectApi.AnnouncementInput announcement)
```

Parameters
- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.
- **announcement**
  Type: ConnectApi.AnnouncementInput
  A ConnectApi.AnnouncementInput object.

Return Value
Type: ConnectApi.Announcement

updateAnnouncement(communityId, announcementId, expirationDate)

Update the expiration date of an announcement.

API Version
31.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.Announcement updateAnnouncement(String communityId,
String announcementId, Datetime expirationDate)
```
Parameters

**communityId**
Type: String
Use either the ID for a community, *internal*, or *null*.

**announcementId**
Type: String
An announcement ID, which has a prefix of 0BT.

**expirationDate**
Type: Datetime
The Salesforce UI displays an announcement until 11:59 p.m. on this date unless another announcement is posted first. The Salesforce UI ignores the time value in the expirationDate. However, you can use the time value to create your own display logic in your own UI.

Return Value
Type: Connected.Announcement

Usage
To get a list of announcements in a group, call `getAnnouncements(communityId, parentId)` or `getAnnouncements(communityId, parentId, pageParam, pageSize)`.
To post an announcement to a group, call `postAnnouncement(communityId, announcement)`.

**Chatter Class**
Access information about followers and subscriptions for records.

**Namespace**
**ConnectApi**

**Chatter Methods**
The following are methods for Chatter. All methods are static.

**IN THIS SECTION:**
- `deleteSubscription(communityId, subscriptionId)`
  Delete a subscription. Use this method to stop following a record, a user, or a file.
- `getFollowers(communityId, recordId)`
  Get the first page of followers for a record.
- `getFollowers(communityId, recordId, pageParam, pageSize)`
  Get a page of followers for a record.
- `getSubscription(communityId, subscriptionId)`
  Get information about a subscription.
submitDigestJob(period)
Submit a daily or weekly Chatter email digest job.

deleteSubscription(communityId, subscriptionId)
Delete a subscription. Use this method to stop following a record, a user, or a file.

API Version
28.0

Requires Chatter
Yes

Signature
public static void deleteSubscription(String communityId, String subscriptionId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

subscriptionId
Type: String
The ID for a subscription.

Return Value
Type: Void

Usage
“Following” a user, group, or record is the same as “subscribing” to a user, group, or record. A “follower” is the user who followed the user, group, or record. A “subscription” is an object describing the relationship between the follower and the user, group, or record they followed.

To leave a group, call deleteMember(communityId, membershipId).
Example

When you follow a user, the call to `ConnectApi.ChatterUsers.follow` returns a `ConnectApi.Subscription` object. To stop following the user, pass the `id` property of that object to this method.

```java
ConnectApi.Chatter.deleteSubscription(null, '0E8RR0000004CnK0AU');
```

SEE ALSO:
- Follow a Record
  - follow(communityId, userId, subjectId)

### getFollowers(communityId, recordId)

Get the first page of followers for a record.

**API Version**
- 28.0

**Requires Chatter**
- Yes

**Signature**

```java
public static ConnectApi.FollowerPage getFollowers(String communityId, String recordId)
```

**Parameters**

- `communityId`
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.

- `recordId`
  - Type: `String`
  - The ID for a record or the keyword `me`.

**Return Value**

- Type: `ConnectApi.FollowerPage`

**Usage**

“Following” a user, group, or record is the same as “subscribing” to a user, group, or record. A “follower” is the user who followed the user, group, or record. A “subscription” is an object describing the relationship between the follower and the user, group, or record they followed.

SEE ALSO:
- Follow a Record
getFollowers(communityId, recordId, pageParam, pageSize)
Get a page of followers for a record.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.FollowerPage getFollowers(String communityId, String recordId, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

recordId
Type: String
The ID for a record or the keyword me.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.FollowerPage

Usage
“Following” a user, group, or record is the same as “subscribing” to a user, group, or record. A “follower” is the user who followed the user, group, or record. A “subscription” is an object describing the relationship between the follower and the user, group, or record they followed.

SEE ALSO:
Follow a Record

getSubscription(communityId, subscriptionId)
Get information about a subscription.
API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.Subscription getSubscription(String communityId, String subscriptionId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

subscriptionId
Type: String
The ID for a subscription.

Return Value
Type: ConnectApi.Subscription

Usage
“Following” a user, group, or record is the same as “subsribing” to a user, group, or record. A “follower” is the user who followed the user, group, or record. A “subscription” is an object describing the relationship between the follower and the user, group, or record they followed.

SEE ALSO:
Follow a Record

submitDigestJob(period)
Submit a daily or weekly Chatter email digest job.

API Version
37.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.DigestJobRepresent submitDigestJob(ConnectApi.DigestPeriod period)
```

Parameters

`period`

Type: `ConnectApi.DigestPeriod`

Time period that’s included in a Chatter email digest. Values are:

- **DailyDigest**—The email includes up to the 50 latest posts from the previous day.
- **WeeklyDigest**—The email includes up to the 50 latest posts from the previous week.

Return Value

Type: `ConnectApi.DigestJob`

Usage

The times when Chatter sends email digests are not configurable in the UI. To control when email digests are sent and to use this method, contact Salesforce to enable API-only Chatter Digests.

⚠️ **Warning:** Enabling API-only Chatter Digests disables the scheduled digests for your org. You must call the API for your users to receive their digests.

We recommend scheduling digest jobs by implementing the Apex `Schedulable` interface with this method. To monitor your digest jobs from Setup, enter **Background Jobs** in the **Quick Find** box, then select **Background Jobs**.

Example

Schedule daily digests:

```java
global class ExampleDigestJob1 implements Schedulable {
    global void execute(SchedulableContext context) {
        ConnectApi.Chatter.submitDigestJob(ConnectApi.DigestPeriod.DailyDigest);
    }
}
```

Schedule weekly digests:

```java
global class ExampleDigestJob2 implements Schedulable {
    global void execute(SchedulableContext context) {
        ConnectApi.Chatter.submitDigestJob(ConnectApi.DigestPeriod.WeeklyDigest);
    }
}
```

SEE ALSO:

### ChatterFavorites Class

Chatter favorites give you easy access to topics, list views, and feed searches.
Namespace

**ConnectApi**

Usage

Use Connect in Apex to get and delete topics, list views, and feed searches that have been added as favorites. Add topics and feed searches as favorites, and update the last view date of a feed search or list view feed to the current system time.

In this image of Salesforce, “Build Issues” is a topic, “All Accounts” is a list view, and “United” is a feed search:

ChatterFavorites Methods

The following are methods for ChatterFavorites. All methods are static.

IN THIS SECTION:

- `addFavorite(communityId, subjectId, searchText)`
  Add a feed search favorite for a user.
- `addRecordFavorite(communityId, subjectId, targetId)`
  Add a topic as a favorite.
- `deleteFavorite(communityId, subjectId, favoriteId)`
  Delete a favorite.
- `getFavorite(communityId, subjectId, favoriteId)`
  Get information about a favorite.
- `getFavorites(communityId, subjectId)`
  Get a list of favorites for a user.
getFeedElements(communityId, subjectId, favoriteId)
Get the first page of feed elements for a favorite.

getFeedElements(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam)
Get a page of sorted feed elements for a favorite.

getFeedElements(communityId, subjectId, favoriteId, recentCommentCount, elementsPerBundle, pageParam, pageSize, sortParam)
Get a page of sorted feed elements for a favorite. Include no more than the specified number of comments per feed element.

updateFavorite(communityId, subjectId, favoriteId, updateLastViewDate)
Update the last view date of the saved search or list view feed to the current system time.

addFavorite(communityId, subjectId, searchText)
Add a feed search favorite for a user.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedFavorite addFavorite(String communityId, String subjectId, String searchText)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

searchText
Type: String
Specify the text of the search to be saved as a favorite. This method can only create a feed search favorite, not a list view favorite or a topic.

Return Value
Type: ConnectApi.FeedFavorite

addRecordFavorite(communityId, subjectId, targetId)
Add a topic as a favorite.
API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedFavorite addRecordFavorite(String communityId, String subjectId, String targetId)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

subjectId
  Type: String
  The ID of the context user or the alias me.

targetId
  Type: String
  The ID of the topic to add as a favorite.

Return Value
Type: ConnectApi.FeedFavorite

deleteFavorite(communityId, subjectId, favoriteId)
Delete a favorite.

API Version
28.0

Requires Chatter
Yes

Signature
public static Void deleteFavorite(String communityId, String subjectId, String favoriteId)

Parameters
communityId
  Type: String
Use either the ID for a community, internal, or null.

**subjectId**
Type: `String`
The ID of the context user or the alias me.

**favoriteId**
Type: `String`
The ID of a favorite.

Return Value
Type: `Void`

**getFavorite(communityId, subjectId, favoriteId)**
Get information about a favorite.

**API Version**
28.0

**Requires Chatter**
Yes

**Signature**
```java
public static ConnectApi.FeedFavorite getFavorite(String communityId, String subjectId, String favoriteId)
```

**Parameters**

**communityId**
Type: `String`
Use either the ID for a community, internal, or null.

**subjectId**
Type: `String`
The ID of the context user or the alias me.

**favoriteId**
Type: `String`
The ID of a favorite.

Return Value
Type: `ConnectApi.FeedFavorite`
**getFavorites(communityId, subjectId)**
Get a list of favorites for a user.

API Version
28.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedFavorites getFavorites(String communityId, String subjectId)
```

Parameters
- `communityId`
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.
- `subjectId`
  - Type: `String`
  - The ID of the context user or the alias `me`.

Return Value
Type: `ConnectApi.FeedFavorites`

**getFeedElements(communityId, subjectId, favoriteId)**
Get the first page of feed elements for a favorite.

API Version
31.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedElementPage getFeedElements(String communityId, String subjectId, String favoriteId)
```

Parameters
- `communityId`
  - Type: `String`
Use either the ID for a community, internal, or null.

**subjectId**
Type: String
The ID of the context user or the alias me.

**favoriteId**
Type: String
The ID of a favorite.

**Return Value**
Type: `ConnectApi.FeedElementPage`

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
- `setTestGetFeedElements(communityId, subjectId, favoriteId, result)`
- Testing ConnectApi Code

**getFeedElements(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam)**
Get a page of sorted feed elements for a favorite.

**API Version**
31.0

**Requires Chatter**
Yes

**Signature**
```java
public static ConnectApi.FeedElementPage getFeedElements(String communityId, String subjectId, String favoriteId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

**Parameters**
- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **subjectId**
  Type: String
  The ID of the context user or the alias me.
**favoriteId**
Type: String
The ID of a favorite.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

**Return Value**
Type: ConnectApi.FeedElementPage

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
setTestGetFeedElements(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam, result)
Testing ConnectApi Code

gGetFeedElements(communityId, subjectId, favoriteId, recentCommentCount, elementsPerBundle, pageParam, pageSize, sortParam)
Get a page of sorted feed elements for a favorite. Include no more than the specified number of comments per feed element.

**API Version**
31.0

1046
Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElements(String communityId, String subjectId, String favoriteId, Integer recentCommentCount, Integer elementsPerBundle, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **subjectId**
  - Type: String
  - The ID of the context user or the alias me.

- **favoriteId**
  - Type: String
  - The ID of a favorite.

- **recentCommentCount**
  - Type: Integer
  - Maximum number of comments to return with each feed element. The default value is 3.

- **elementsPerBundle**
  - Type: Integer
  - Maximum number of feed elements per bundle. The default and maximum value is 10.

- **pageParam**
  - Type: String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

- **sortParam**
  - Type: ConnectApi.FeedSortOrder
  - Values are:
    - CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
    - CreatedDateDesc—Sorts by most recent creation date.
    - LastModifiedDateDesc—Sorts by most recent activity.
    - MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. If you pass in null, the default value CreatedDateDesc is used.

**Return Value**
Type: `ConnectApi.FeedElementPage`

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
- `setTestGetFeedElements(communityId, subjectId, favoriteId, recentCommentCount, elementsPerBundle, pageParam, pageSize, sortParam, result)`
- Testing ConnectApi Code

### `updateFavorite(communityId, subjectId, favoriteId, updateLastViewDate)`
Update the last view date of the saved search or list view feed to the current system time.

**API Version**
28.0

**Requires Chatter**
Yes

**Signature**
```java
public static ConnectApi.FeedFavorite updateFavorite(String communityId, String subjectId, String favoriteId, Boolean updateLastViewDate)
```

**Parameters**
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `subjectId`
  Type: `String`
  The ID of the context user or the alias `me`.
- `favoriteId`
  Type: `String`
  The ID of a favorite.
- `updateLastViewDate`
  Type: `Boolean`
Specify whether to update the last view date of the specified favorite to the current system time (true) or not (false).

Return Value
Type: `ConnectApi.FeedFavorite`

### ChatterFavorites Test Methods
The following are the test methods for ChatterFavorites. All methods are static.
For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

**IN THIS SECTION:**

- `setTestGetFeedElements(communityId, subjectId, favoriteId, result)`
  Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElements` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetFeedElements(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam, result)`
  Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElements` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetFeedElements(communityId, subjectId, favoriteId, recentCommentCount, elementsPerBundle, pageParam, pageSize, sortParam, result)`
  Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElements` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetFeedElements(communityId, subjectId, favoriteId, result)`
  Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElements` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**
31.0

**Signature**
`public static Void setTestGetFeedElements(String communityId, String subjectId, String favoriteId, ConnectApi.FeedElementPage result)`

**Parameters**

- **communityId**
  Type: `String`
  Use either the ID for a community, internal, or null.

- **subjectId**
  Type: `String`
  The ID of the context user or the alias me.
**favoriteId**
Type: **String**
The ID of a favorite.

**result**
Type: **ConnectApi.FeedElementPage**
The object containing test data.

**Return Value**
Type: Void

**SEE ALSO:**
- `getFeedElements(communityId, subjectId, favoriteId)`
- Testing ConnectApi Code

**setTestGetFeedElements(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam, result)**
Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElements` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**
31.0

**Signature**
```java
public static Void setTestGetFeedElements(String communityId, String subjectId, String favoriteId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)
```

**Parameters**

**communityId**
Type: **String**
Use either the ID for a community, `internal`, or `null`.

**subjectId**
Type: **String**
The ID of the context user or the alias `me`.

**favoriteId**
Type: **String**
The ID of a favorite.

**pageParam**
Type: **String**
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`

Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

`result`
Type: `ConnectApi.FeedElementPage`

The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `getFeedElements(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam)`
- `Testing ConnectApi Code`

`setTestGetFeedElements(communityId, subjectId, favoriteId, recentCommentCount, elementsPerBundle, pageParam, pageSize, sortParam, result)`

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElements` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
31.0

Signature
```java
public static Void setTestGetFeedElements(String communityId, String subjectId, String favoriteId, Integer recentCommentCount, Integer elementsPerBundle, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)
```
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or **null**.

**subjectId**
Type: String
The ID of the context user or the alias me.

**favoriteId**
Type: String
The ID of a favorite.

**recentCommentCount**
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

**elementsPerBundle**
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in **null**, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in **null**, the default size is 25.

**sortParam**
Type: **ConnectApi.FeedSortOrder**
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the **ConnectApi.FeedFilter** is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in **null**, the default value CreatedDateDesc is used.

**result**
Type: **ConnectApi.FeedElementPage**
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getFeedElements(communityId, subjectId, favoriteld, recentCommentCount, elementsPerBundle, pageParam, pageSize, sortParam)
Testing ConnectApi Code

Retired ChatterFavorites Methods
The following methods for ChatterFavorites are retired.

IN THIS SECTION:
getFeedItems(communityId, subjectId, favoriteld)
Get the first page of feed items for a favorite.

getFeedItems(communityId, subjectId, favoriteld, pageParam, pageSize, sortParam)
Get a page of sorted feed items for a favorite.

getFeedItems(communityId, subjectId, favoriteld, recentCommentCount, pageParam, pageSize, sortParam)
Get a page of sorted feed items for a favorite. Include no more than the specified number of comments per feed item.

setTestGetFeedItems(communityId, subjectId, favoriteld, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItems is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedItems(communityId, subjectId, favoriteld, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItems is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedItems(communityId, subjectId, favoriteld, recentCommentCount, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItems is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

getFeedItems(communityId, subjectId, favoriteld)
Get the first page of feed items for a favorite.

API Version
28.0–31.0

Important: In version 32.0 and later, use getFeedElements(communityId, subjectId, favoriteld).

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage getFeedItems(String communityId, String subjectId, String favoriteld)
Parameters

*communityId*
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

*subjectId*
  Type: `String`
  The ID of the context user or the alias `me`.

*favoriteId*
  Type: `String`
  The ID of a favorite.

Return Value

Type: `ConnectApi.FeedItemPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  - `setTestGetFeedItems(communityId, subjectId, favoriteId, result)`
  - Testing ConnectApi Code

`getFeedItems(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam)`

Get a page of sorted feed items for a favorite.

API Version

28.0–31.0

⚠️ Important: In version 32.0 and later, use `getFeedElements(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam)`.

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedItemPage getFeedItems(String communityId, String subjectId, String favoriteId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```
Parameters

**communityId**
- Type: String
  - Use either the ID for a community, internal, or null.

**subjectId**
- Type: String
  - The ID of the context user or the alias me.

**favoriteId**
- Type: String
  - The ID of a favorite.

**pageParam**
- Type: String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
- Type: Integer
  - Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
- Type: `ConnectApi.FeedSortOrder`
  - Values are:
    - CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
    - CreatedDateDesc—Sorts by most recent creation date.
    - LastModifiedDateDesc—Sorts by most recent activity.
    - MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is UnansweredQuestions.
    - Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  - Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

Return Value

**Type:** `ConnectApi.FeedItemPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetFeedItems(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam, result)`
- Testing ConnectApi Code
getPageItems(communityId, subjectId, favoriteId, recentCommentCount, pageParam, pageSize, sortParam)

Get a page of sorted feed items for a favorite. Include no more than the specified number of comments per feed item.

API Version
29.0–31.0

Important: In version 32.0 and later, use getPageElements(communityId, subjectId, favoriteId, recentCommentCount, elementsPerBundle, pageParam, pageSize, sortParam).

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage getPageItems(String communityId, String subjectId, String favoriteId, Integer recentCommentCount, String pageParam, Integer pageSize, FeedSortOrder sortParam)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

favoriteId
Type: String
The ID of a favorite.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

Return Value
Type: `ConnectApi.FeedItemPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetFeedItems(communityId, subjectId, favoriteId, recentCommentCount, pageParam, pageSize, sortParam, result)`

Testing ConnectApi Code

**setTestGetFeedItems(communityId, subjectId, favoriteId, result)**

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItems` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
28.0–31.0

Signature
```
public static Void setTestGetFeedItems(String communityId, String subjectId, String favoriteId, ConnectApi.FeedItemPage result)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `subjectId`
  Type: `String`
  The ID of the context user or the alias `me`.
- `favoriteId`
  Type: `String`
The ID of a favorite.

**result**
Type: `ConnectApi.FeedItemPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getFeedItems(communityId, subjectId, favoriteId)`
- Testing ConnectApi Code

### `setTestGetFeedItems(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam, result)`
Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItems` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
28.0–31.0

Signature
```java
def setTestGetFeedItems(String communityId, String subjectId, String favoriteId, String pageParam, Integer pageSize, FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

Parameters
- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- **subjectId**
  Type: `String`
  The ID of the context user or the alias `me`.
- **favoritId**
  Type: `String`
  The ID of a favorite.
- **pageParam**
  Type: `String`
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.
- **pageSize**
  Type: `Integer`
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**result**

Type: `ConnectApi.FeedItemPage`

The object containing test data.

**Return Value**

Type: Void

SEE ALSO:

- `getFeedItems(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam)`
- Testing ConnectApi Code

### setTestGetFeedItems(communityId, subjectId, favoriteId, recentCommentCount, pageParam, pageSize, sortParam, result)

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItems` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**

29.0–31.0

**Signature**

```java
public static Void setTestGetFeedItems(String communityId, String subjectId, String favoriteId, Integer recentCommentCount, String pageParam, Integer pageSize, FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

**Parameters**

- **communityId**
  
  Type: `String`

  Use either the ID for a community, `internal`, or `null`.
subjectId
Type: String
The ID of the context user or the alias me.

favoriteId
Type: String
The ID of a favorite.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedItems(communityId, subjectId, favoriteId, recentCommentCount, pageParam, pageSize, sortParam)
Testing ConnectApi Code
ChatterFeeds Class
Get, post, and delete feed elements, likes, comments, and bookmarks. You can also search feed elements, share feed elements, and vote on polls.

Namespace
ConnectApi

Usage
In API versions 30.0 and earlier, a Chatter feed was a container of feed items. In API version 31.0, the definition of a feed expanded to include new objects that didn’t entirely fit the feed item model. The Chatter feed became a container of feed elements. The abstract class ConnectApi.FeedElement was introduced as a parent class to the existing ConnectApi.FeedItem class. The subset of properties that feed elements share was moved into the ConnectApi.FeedElement class. Because feeds and feed elements are the core of Chatter, understanding them is crucial to developing applications with Connect in Apex. For detailed information, see Feeds and Feed Elements.

⚠️ Important: Feed item methods aren't available in version 32.0. In version 32.0 and later, use feed element methods.

Message segments in a feed item are typed as ConnectApi.MessageSegment. Feed item capabilities are typed as ConnectApi.FeedItemCapability. Record fields are typed as ConnectApi.AbstractRecordField. These classes are all abstract and have several concrete subclasses. At runtime you can use instanceof to check the concrete types of these objects and then safely proceed with the corresponding downcast. When you downcast, you must have a default case that handles unknown subclasses.

⚠️ Important: The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.

ChatterFeeds Methods
The following are methods for ChatterFeeds. All methods are static.

IN THIS SECTION:
createStream(communityId, streamInput)
Create a Chatter feed stream.
deleteComment(communityId, commentId)
Delete a comment.
deleteFeedElement(communityId, feedElementId)
Delete a feed element.
deleteLike(communityId, likeld)
Delete a like on a comment or post.
deleteStream(communityId, streamId)
Delete a Chatter feed stream.
getComment(communityId, commentId)
Get a comment.
getCommentBatch(communityId, commentIds)
Get a list of comments.

getCommentInContext(communityId, commentId, pageSize)
Get a threaded comment in the context of its parent comments and post.

getCommentsForFeedElement(communityId, feedElementId)
Get comments for a feed element.

getCommentsForFeedElement(communityId, feedElementId, threadedCommentsCollapsed)
Get comments in a threaded style for a feed element.

getCommentsForFeedElement(communityId, feedElementId, pageParam, pageSize)
Get a page of comments for a feed element.

getCommentsForFeedElement(communityId, feedElementId, pageParam, pageSize, threadedCommentsCollapsed)
Get a page of comments in a threaded style for a feed element.

getCommentsForFeedElement(communityId, feedElementId, pageParam, pageSize, threadedCommentsCollapsed, sortParam)
Get a page of sorted comments in a threaded style for a feed element.

getCommentsForFeedElement(communityId, feedElementId, sortParam)
Get sorted comments for a feed element.

getCommentsForFeedElement(communityId, feedElementId, sortParam, threadedCommentsCollapsed)
Get sorted comments in a threaded style for a feed element.

getCommentsForFeedElement(communityId, feedElementId, threadCommentsCollapsed, commentSort)
Get a feed element and its sorted comments in a threaded style.

getExtensions(communityId, pageParam, pageSize)
Get extensions.

getFeed(communityId, feedType)
Get a feed.

getFeed(communityId, feedType, sortParam)
Get a sorted feed.

getFeed(communityId, feedType, subjectId)
Get a feed for a record or user.

getFeed(communityId, feedType, subjectId, sortParam)
Get a sorted feed for a record or user.

getFeedDirectory(String)
Get a list of all feeds available to the context user.

getFeedElement(communityId, feedElementId)
Get a feed element.

getFeedElement(communityId, feedElementId, commentSort)
Get a feed element with sorted comments.

getFeedElement(communityId, feedElementId, threadCommentsCollapsed)
Get a feed element and its comments in a threaded style.

getFeedElement(communityId, feedElementId, threadCommentsCollapsed, commentSort)
Get a feed element and its sorted comments in a threaded style.
getFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle)
Get a feed element with the specified number of elements per bundle including no more than the specified number of comments per feed element.

getFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle, threadedCommentsCollapsed)
Get a feed element with its comments in a threaded style with the specified number of elements per bundle and comments per feed element.

getFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle, threadedCommentsCollapsed, commentSort)
Get a feed element with its sorted comments in a threaded style with the specified number of elements per bundle and comments per feed element.

getFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle, commentSort)
Get a feed element with the specified number of elements per bundle including no more than the specified number of sorted comments per feed element.

getFeedElementBatch(communityId, feedElementIds)
Get a list of feed elements.

getFeedElementPoll(communityId, feedElementId)
Get the poll associated with a feed element.

getFeedElementsFromBundle(communityId, feedElementId)
Get feed elements from a bundle.

getFeedElementsFromBundle(communityId, feedElementId, pageParam, pageSize, elementsPerBundle, recentCommentCount)
Get a page of feed elements from a bundle. Specify the number of elements per bundle and include no more than the specified number of comments per feed element.

getFeedElementsFromFeed(communityId, feedType)

getFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)
Get a page of sorted feed elements from the Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview feeds. Each feed element contains no more than the specified number of comments.

getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)
Get a page of sorted feed elements from the Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview feeds. Each feed element contains no more than the specified number of comments.

getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter)
Get a page of sorted and filtered feed elements from the Home feed. Each feed element contains no more than the specified number of comments.

getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed)
Get a page of filtered and sorted feed elements with comments in a threaded style from the Home feed. Each feed element contains no more than the specified number of comments.

getFeedElementsFromFeed(communityId, feedType, subjectId)
Get feed elements from any feed other than Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview for a user or record.
getFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam)
Get a page of sorted feed elements from any feed other than Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam)
Get a page of sorted feed elements from any feed other than Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview. Each feed element includes no more than the specified number of comments.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)
Get a page of sorted feed elements from a record feed. Each feed element includes no more than the specified number of comments. Specify whether to return feed elements posted by internal (non-community) users only.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter)
Get a page of sorted and filtered feed elements from the UserProfile feed.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed)
Get a page of feed elements with comments in a threaded style from the UserProfile feed.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, customFilter)
Get a page of sorted and filtered feed elements from the case feed.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly)
Get a page of sorted feed elements from a record feed. Specify the number of elements per bundle and include no more than the specified number of comments per feed element. Specify whether to return feed elements posted by internal (non-community) users only.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, filter)
Get a page of sorted and filtered feed elements from a record feed. Specify the number of elements per bundle and include no more than the specified number of comments per feed element. Specify whether to return feed elements posted by internal (non-community) users only.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, filter, threadedCommentsCollapsed)
Get a page of sorted and filtered feed elements with comments in a threaded style for a record feed. Specify the number of elements per bundle and include no more than the specified number of comments per feed element. Specify whether to return feed elements posted by internal (non-community) users only.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, customFilter)
Get a page of sorted and filtered feed elements from a case feed.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, customFilter, threadedCommentsCollapsed)
Get a page of filtered and sorted feed elements with comments in a threaded style from a case feed.

getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix)
Get feed elements from a feed filtered by a key prefix for a user.
getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam)
Get a page of sorted feed elements from a feed filtered by a key prefix for a user.

getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam)
Get a page of sorted feed elements from a feed filtered by a key prefix for a user. Each feed element contains no more than the specified number of comments.

getFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince)
Get a page of feed elements from a feed filtered by a key prefix for a user. Include only feed elements that have been updated since the time specified in the `updatedSince` parameter. Each feed element contains no more than the specified number of comments.

getFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)
Get a page of feed elements from the Company, DirectMessageModeration, Home, and Moderation feeds. Include only feed elements that have been updated since the time specified in the `updatedSince` parameter. Each feed element contains no more than the specified number of comments.

getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince)
Get a page of feed elements from the Home feed. Include only feed elements that have been updated since the time specified in the `updatedSince` parameter. Each feed element contains no more than the specified number of comments.

getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince)
Get a page of feed elements from the Files, Groups, News, People, and Record feeds. Include only feed elements that have been updated since the time specified in the `updatedSince` parameter. Each feed element contains no more than the specified number of comments.

getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly)
Get a page of feed elements from a record feed. Include only feed elements that have been updated since the time specified in the `updatedSince` parameter. Specify whether to return feed elements posted by internal (non-community) users only.

getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, filter)
Get a page of filtered feed elements from a User Profile feed. Include only feed elements that have been updated since the time specified in the `updatedSince` parameter.

getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, filter)
Get a page of filtered feed elements from a case feed. Include only feed elements that have been updated since the time specified in the `updatedSince` parameter.
getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, customFilter)
Get a page of filtered feed elements from a case feed. Include only feed elements that have been updated since the time specified in the updatedSince parameter.

getFeedWithFeedElements(communityId, feedType, pageSize)
Get information about a feed and a page of feed elements from the feed.

getFeedWithFeedElements(communityId, feedType, pageSize, recentCommentCount)
Get a page of information about the feed and the feed elements with the specified number of comments per feed element from the feed.

getFilterFeed(communityId, subjectId, keyPrefix)
Get a feed filtered by a key prefix for a user.

getFilterFeed(communityId, subjectId, keyPrefix, sortParam)
Get a sorted feed filtered by a key prefix for a user.

getFilterFeedDirectory(communityId, subjectId)
Get a feed directory of filter feeds available to the context user.

getLike(communityId, likeId)
Get a like on a post or comment.

getLikesForComment(communityId, commentId)
Get likes for a comment.

getLikesForComment(communityId, commentId, pageParam, pageSize)
Get a page of likes for a comment.

getLikesForFeedElement(communityId, feedElementId)
Get likes for a feed element.

getLikesForFeedElement(communityId, feedElementId, pageParam, pageSize)
Get a page of likes for a feed element.

gGetLinkMetadata(communityId, urls)
Get link metadata for URLs.

getPinnedFeedElementsFromFeed(communityId, feedType, subjectId)
Get pinned feed elements from a group or topic feed.

getAddressFeedElement(communityId, feedElementId)
Get information about who read a feed element and when.

getAddressFeedElement(communityId, feedElementId, pageParam, pageSize)
Get a page of information about who read a feed element and when.

getRelatedPosts(communityId, feedElementId, filter, maxResults)
Get posts related to the context feed element.

getStream(communityId, streamId)
Get information about a Chatter feed stream.

getStream(communityId, streamId, globalScope)
Get information about a Chatter feed stream, regardless of community.

getStreams(communityId)
Get the Chatter feed streams for the context user.
getStreams(communityId, sortParam)
Get and sort the Chatter feed streams for the context user.

getStreams(communityId, pageParam, pageSize)
Get a page of Chatter feed streams for the context user.

getStreams(communityId, pageParam, pageSize, sortParam)
Get a sorted page of Chatter feed streams for the context user.

getStreams(communityId, pageParam, pageSize, sortParam, globalScope)
Get a sorted page of Chatter feed streams from all communities for the context user.

getSupportedEmojis()
Get supported emojis for the org.

getThreadsForFeedComment(communityId, commentId)
Get threaded comments for a comment.

getThreadsForFeedComment(communityId, commentId, pageParam, pageSize)
Get a page of threaded comments for a comment.

getThreadsForFeedComment(communityId, commentId, threadedCommentsCollapsed)
Access the comments capability for a comment.

getTopUnansweredQuestions(communityId) (Pilot)
Get top unanswered questions for the context user in a community.

getTopUnansweredQuestions(communityId, filter) (Pilot)
Get filtered top unanswered questions for the context user in a community.

getTopUnansweredQuestions(communityId, pageSize) (Pilot)
Get a page of top unanswered questions for the context user in a community.

getTopUnansweredQuestions(communityId, filter, pageSize) (Pilot)
Get a page of filtered top unanswered questions for the context user in a community.

getVotesForComment(communityId, commentId, vote)
Get the first page of users who upvoted or downvoted a comment.

getVotesForComment(communityId, commentId, vote, pageParam, pageSize)
Get a page of users who upvoted or downvoted a comment.

getVotesForFeedElement(communityId, feedElementId, vote)
Get the first page of users who upvoted or downvoted a feed element.

getVotesForFeedElement(communityId, feedElementId, vote, pageParam, pageSize)
Get a page of users who upvoted or downvoted a feed element.

isCommentEditableByMe(communityId, commentId)
Discover whether the context user can edit a comment.

isFeedElementEditableByMe(communityId, feedElementId)
Discover whether the context user can edit a feed element.

isModified(communityId, feedType, subjectId, since)
Discover whether a news feed has been updated or changed. Use this method to poll a news feed for updates.

likeComment(communityId, commentId)
Like a comment for the context user.
likeFeedElement(communityId, feedElementId)
Like a feed element.

postCommentToFeedElement(communityId, feedElementId, text)
Post a plain-text comment to a feed element.

postCommentToFeedElement(communityId, feedElementId, comment, feedElementFileUpload)
Post a rich-text comment to a feed element. Use this method to include mentions and to attach a file.

postFeedElement(communityId, subjectId, feedElementType, text)
Post a plain-text feed element.

postFeedElement(communityId, feedElement)
Post a rich-text feed element. Include mentions and hashtag topics, attach already uploaded files to a feed element, and associate action link groups with a feed element. You can also use this method to share a feed element and add a comment.

postFeedElementBatch(communityId, feedElements)
Post a list of feed elements.

publishDraftFeedElement(communityId, feedElementId, feedElement)
Publish a draft feed element.

searchFeedElements(communityId, q)
Get the first page of feed elements that match the search criteria.

searchFeedElements(communityId, q, sortParam)
Get the first page of sorted feed elements that match the search criteria.

searchFeedElements(communityId, q, threadedCommentsCollapsed)
Get the feed elements and comments that match the search criteria.

searchFeedElements(communityId, q, pageParam, pageSize)
Get a page of feed elements that match the search criteria.

searchFeedElements(communityId, q, pageParam, pageSize, sortParam)
Get a page of sorted feed elements that match the search criteria.

searchFeedElements(communityId, q, pageParam, pageSize, threadedCommentsCollapsed)
Get a page of feed elements with comments in a threaded style that match the search criteria.

searchFeedElements(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)
Get a page of sorted feed elements that match the search criteria. Each feed element includes no more than the specified number of comments.

searchFeedElementsInFeed(communityId, feedType, q)
Get the feed elements from the Company, DirectMessageModeration, Home, Moderation, and PendingReview feeds that match the search criteria.

searchFeedElementsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)
Get a page of sorted feed elements from the Company, DirectMessageModeration, Home, Moderation, and PendingReview feeds that match the search criteria.

searchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Get a page of sorted feed elements from the Company, DirectMessageModeration, Home, Moderation, and PendingReview feeds that match the search criteria. Each feed element includes no more than the specified number of comments.
searchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter)
Get a page of sorted and filtered feed elements from the Home feed that match the search criteria. Each feed element includes no more than the specified number of comments.

searchFeedElementsInFeed(communityId, feedType, subjectId, q)
Get the feed elements from a feed that match the search criteria.

searchFeedElementsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q)
Get a page of sorted feed elements from a feed for a record or user that match the search criteria.

searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Get a page of sorted feed elements from a feed that match the search criteria. Each feed element includes no more than the specified number of comments.

searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter)
Get a page of sorted and filtered feed elements from a UserProfile feed that match the search criteria.

searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, customFilter)
Get a page of sorted and filtered feed elements from a case feed that match the search criteria.

searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly)
Get a page of sorted feed elements from a feed for a record or user that match the search criteria. Each feed element includes no more than the specified number of comments. Specify whether to return feed elements posted by internal (non-community) users only.

searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, filter)
Get a page of sorted and filtered feed elements from a feed for a record or user that match the search criteria. Each feed element includes no more than the specified number of comments. Specify whether to return feed elements posted by internal (non-community) users only.

searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, customFilter)
Get a page of sorted and filtered feed elements from a case feed that match the search criteria.

searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q)
Get the feed elements from a feed filtered by a key prefix that match the search criteria.

searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q)
Get a page of sorted feed elements from a feed filtered by a key prefix that match the search criteria.

searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Get a page of sorted feed elements from a feed filtered by a key prefix that match the search criteria. Each feed element includes no more than the specified number of comments.

searchStreams(communityId, q)
Search the Chatter feed streams for the context user.

searchStreams(communityId, q, sortParam)
Search and sort the Chatter feed streams for the context user.
searchStreams(communityId, q, pageParam, pageSize)
Search the Chatter feed streams for the context user and return a page of results.

searchStreams(communityId, q, pageParam, pageSize, sortParam)
Search the Chatter feed streams for the context user and return a sorted page of results.

searchStreams(communityId, q, pageParam, pageSize, sortParam, globalScope)
Search the Chatter feed streams from all communities for the context user and return a sorted page of results.

setCommentIsVerified(communityId, commentId, isVerified)
Mark a comment as verified or unverified.

setCommentIsVerifiedByAnonymized(communityId, commentId, isVerified, isVerifiedByAnonymized)
Mark a comment as verified by an anonymous user.

setCommentVote(communityId, commentId, upDownVote)
Upvote or downvote a comment.

setFeedCommentStatus(communityId, commentId, status)
Set the status of a comment.

setFeedElementIsClosed(communityId, feedElementId, isClosed)
Set a feed element to closed.

setFeedElementVote(communityId, feedElementId, upDownVote)
Upvote or downvote a feed element.

setFeedEntityStatus(communityId, feedElementId, status)
Set the status of a feed post.

setIsMutedByMe(communityId, feedElementId, isMutedByMe)
Mute or unmute a feed element.

setIsReadByMe(communityId, feedElementId, readBy)
Mark a feed element as read for the context user using an input class.

setIsReadByMe(communityId, feedElementId, isReadByMe)
Mark a feed element as read for the context user.

updateComment(communityId, commentId, comment)
Edit a comment.

updateDirectMessage(communityId, feedElementId, directMessage)
Update the members of a direct message.

updateFeedElement(communityId, feedElementId, feedElement)
Edit a feed element.

updateFeedElementBookmarks(communityId, feedElementId, bookmarks)
Bookmark a feed element or remove a bookmark from a feed element using an input class.

updateFeedElementBookmarks(communityId, feedElementId, isBookmarkedByCurrentUser)
Bookmark a feed element or remove a bookmark from a feed element.

updateFeedElementReadByCapabilityBatch(communityId, feedElementIds, readBy)
Mark multiple feed elements as read by the context user at the same time using an input class.

updateFeedElementReadByCapabilityBatch(communityId, feedElementIds, isReadByMe)
Mark multiple feed elements as read by the context user at the same time.
updateLikeForComment(communityId, commentId, isLikedByCurrentUser)
Like or unlike a comment.
updateLikeForFeedElement(communityId, feedElementId, isLikedByCurrentUser)
Like or unlike a feed element.
updatePinnedFeedElements(communityId, feedType, subjectId, pin)
Pin or unpin feed elements to a group or topic feed.
updateStream(communityId, streamId, streamInput)
Update a Chatter feed stream.
voteOnFeedElementPoll(communityId, feedElementId, myChoiceId)
Vote on a poll or change your vote on a poll.

createStream(communityId, streamInput)
Create a Chatter feed stream.

API Version
39.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterStream createStream(String communityId, ConnectApi.ChatterStreamInput streamInput)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

streamInput
Type: ConnectApi.ChatterStreamInput
A ConnectApi.ChatterStreamInput body.

Return Value
Type: ConnectApi.ChatterStream

deleteComment(communityId, commentId)
Delete a comment.
API Version
28.0

Requires Chatter
Yes

Signature
`public static Void deleteComment(String communityId, String commentId)`

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `commentId`
  Type: `String`
  The ID for a comment.

Return Value
Type: `Void`

`deleteFeedElement(communityId, feedElementId)`
Delete a feed element.

API Version
31.0

Requires Chatter
Yes

Signature
`public static deleteFeedElement(String communityId, String feedElementId)`

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `feedElementId`
  Type: `String`
  ID of the feed element.
Return Value
Type: Void

**deleteLike(communityId, likeId)**
Delete a like on a comment or post.

API Version
28.0

Requires Chatter
Yes

Signature
```
public static Void deleteLike(String communityId, String likeId)
```

Parameters
```
communityId
  Type: String
  Use either the ID for a community, internal, or null.

likeId
  Type: String
  The ID for a like.
```

Return Value
Type: Void

**deleteStream(communityId, streamId)**
Delete a Chatter feed stream.

API Version
39.0

Requires Chatter
Yes

Signature
```
public static Void deleteStream(String communityId, String streamId)
```
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

streamId
Type: String
ID of the Chatter feed stream.

Return Value
Type: Void

getComment(communityId, commentId)
Get a comment.

API Version
28.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.Comment getComment(String communityId, String commentId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
The ID for a comment.

Return Value
Type: ConnectApi.Comment

getCommentBatch(communityId, commentIds)
Get a list of comments.
API Version
42.0

Requires Chatter
Yes

Signature
public static ConnectApi.BatchResult[] getCommentBatch(String communityId, List<String> commentIds)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.
commentIds
  Type: List<String>
  A list of up to 100 comment IDs.

Return Value
Type: ConnectApi.BatchResult[]

The ConnectApi.BatchResult.getResult() method returns a ConnectApi.Comment object and errors for comments that didn't load.

getCommentInContext(communityId, commentId, pageSize)
Get a threaded comment in the context of its parent comments and post.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElement getCommentInContext(String communityId, String commentId, Integer pageSize)
Parameters

- **communityId**
  - Type: **String**
  - Use either the ID for a community, internal, or **null**.

- **commentId**
  - Type: **String**
  - ID of the comment.

- **pageSize**
  - Type: **Integer**
  - Specifies the number of items per page. Valid values are from 1 through 100. If you don’t specify a value, the default size is 25.

Return Value

- Type: **ConnectApi.FeedElement**
  - If the comment doesn’t support the comments capability, the return value is **ConnectApi.NotFoundException**.

```java
public static ConnectApi.CommentPage getCommentsForFeedElement(String communityId, String feedElementId)
```

Get comments for a feed element.

API Version

- 32.0

Available to Guest Users

- 32.0

Requires Chatter

- Yes

Signature

```java
public static ConnectApi.CommentPage getCommentsForFeedElement(String communityId, String feedElementId)
```

Parameters

- **communityId**
  - Type: **String**
  - Use either the ID for a community, internal, or **null**.

- **feedElementId**
  - Type: **String**
  - ID of the feed element.
Return Value
Type: ConnectApi.CommentPage
If the feed element doesn’t support the Comments capability, the return value is ConnectApi.NotFoundException.

getCommentsForFeedElement(communityId, feedElementId, threadedCommentsCollapsed)
Get comments in a threaded style for a feed element.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.CommentPage getCommentsForFeedElement(String communityId, String feedElementId, Boolean threadedCommentsCollapsed)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value
Type: ConnectApi.CommentPage
If the feed element doesn’t support the Comments capability, the return value is ConnectApi.NotFoundException.

getCommentsForFeedElement(communityId, feedElementId, pageParam, pageSize)
Get a page of comments for a feed element.
API Version
32.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.CommentPage getCommentsForFeedElement(String communityId,
String feedElementId, String pageParam, Integer pageSize)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of comments per page. Valid values are from 1 through 100. If you pass null, the default size is 25.

Return Value
Type: ConnectApi.CommentPage
If the feed element doesn’t support the Comments capability, the return value is ConnectApi.NotFoundException.

getCommentsForFeedElement(communityId, feedElementId, pageParam, pageSize,
threadedCommentsCollapsed)
Get a page of comments in a threaded style for a feed element.
Available to Guest Users
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.CommentPage getCommentsForFeedElement(String communityId, String feedElementId, String pageParam, Integer pageSize, Boolean threadedCommentsCollapsed)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of comments per page. Valid values are from 1 through 100. If you pass null, the default size is 25.

threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value
Type: ConnectApi.CommentPage
If the feed element doesn’t support the Comments capability, the return value is ConnectApiNotFoundException.

getCommentsForFeedElement(communityId, feedElementId, threadedCommentsCollapsed, sortParam)
Get sorted comments in a threaded style for a feed element.

API Version
44.0
Available to Guest Users

44.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.CommentsCapability getCommentsForFeedElement(String communityId, String feedElementId, Boolean threadedCommentsCollapsed, ConnectApi.FeedCommentSortOrder sortParam)
```

Parameters

- `communityId`
  - Type: String
  - Use either the ID for a community, internal, or `null`.

- `feedElementId`
  - Type: String
  - ID of the feed element.

- `threadedCommentsCollapsed`
  - Type: Boolean
  - Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

- `sortParam`
  - Type: `ConnectApi.FeedCommentSortOrder`
  - Order of comments. Values are:
    - `CreateDateLatestAsc`—Sorts by most recently created comments in ascending order.
    - `CreateDateOldestAsc`—Sorts by oldest comments in ascending order.
    - `Relevance`—Sorts by most relevant content.

Return Value

- Type: `ConnectApi.CommentPage`
  - If the feed element doesn’t support the `Comments` capability, the return value is `ConnectApi.NotFoundException`.

```java
getCommentsForFeedElement(communityId, feedElementId, pageParam, pageSize, threadedCommentsCollapsed, sortParam)
```

Get a page of sorted comments in a threaded style for a feed element.

API Version

44.0
Available to Guest Users
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.CommentPage getCommentsForFeedElement(String communityId,
String feedElementId, String pageParam, Integer pageSize, Boolean threadedCommentsCollapsed,
ConnectApi.FeedCommentSortOrder sortParam)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedElementId
  Type: String
  ID of the feed element.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of comments per page. Valid values are from 1 through 100. If you pass null, the default size is 25.

threadedCommentsCollapsed
  Type: Boolean
  Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

sortParam
  Type: ConnectApi.FeedCommentSortOrder
  Order of comments. Values are:
  • CreatedDateLatestAsc—Sorts by most recently created comments in ascending order.
  • CreatedDateOldestAsc—Sorts by oldest comments in ascending order.
  • Relevance—Sorts by most relevant content.

Return Value
Type: ConnectApi.CommentPage
If the feed element doesn't support the Comments capability, the return value is ConnectApi.NotFoundException.
getCommentsForFeedElement(communityId, feedElementId, sortParam)
Get sorted comments for a feed element.

API Version
41.0

Available to Guest Users
41.0

Requires Chatter
Yes

Signature
public static ConnectApi.CommentsCapability getCommentsForFeedElement(String communityId, String feedElementId, ConnectApi.FeedCommentSortOrder sortParam)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

sortParam
Type: ConnectApi.FeedCommentSortOrder
Order of comments. Values are:
• CreatedDateLatestAsc—Sorts by most recently created comments in ascending order.
• CreatedDateOldestAsc—Sorts by oldest comments in ascending order.
• Relevance—Sorts by most relevant content.

Return Value
Type: ConnectApi.CommentsCapability
If the feed element doesn’t support the Comments capability, the return value is ConnectApi.NotFoundException.

getCommentsForFeedElement(communityId, feedElementId, sortParam, threadedCommentsCollapsed)
Get sorted comments in a threaded style for a feed element.
**Signature**

```java
public static ConnectApi.CommentsCapability getCommentsForFeedElement(String communityId, String feedElementId, ConnectApi.FeedCommentSortOrder sortParam, Boolean threadedCommentsCollapsed)
```

**Parameters**

- **communityId**  
  Type: `String`  
  Use either the ID for a community, `internal`, or `null`.

- **feedElementId**  
  Type: `String`  
  ID of the feed element.

- **sortParam**  
  Type: `ConnectApi.FeedCommentSortOrder`  
  Order of comments. Values are:
  - `CreatedDateLatestAsc`—Sorts by most recently created comments in ascending order.
  - `CreatedDateOldestAsc`—Sorts by oldest comments in ascending order.
  - `Relevance`—Sorts by most relevant content.

- **threadedCommentsCollapsed**  
  Type: `Boolean`  
  Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

**Return Value**

Type: `ConnectApi.CommentsCapability`  
If the feed element doesn’t support the Comments capability, the return value is `ConnectApi NotFoundException`.

**getExtensions(communityId, pageParam, pageSize)**

Get extensions.
API Version
40.0

Available to Guest Users
40.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ExtensionDefinitions getExtensions(String communityId, String pageParam, Integer pageSize)`

Parameters
`communityId`
Type: String
Use either the ID for a community, internal, or null.

`pageParam`
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

`pageSize`
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. The default size is 15.

Return Value
Type: `ConnectApi.ExtensionDefinitions`

`getFeed(communityId, feedType)`
Get a feed.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes
public static ConnectApi.Feed getFeed(String communityId, ConnectApi.FeedType feedType)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

Return Value
Type: ConnectApi.Feed

getFeed(communityId, feedType, sortParam)
Get a sorted feed.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.Feed getFeed(String communityId, ConnectApi.FeedType feedType, ConnectApi.FeedSortOrder sortParam)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.
sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.
If feedType is DirectMessage, sortParam must be LastModifiedDateDesc.

Return Value
Type: ConnectApi.Feed

getFeed(communityId, feedType, subjectId)
Get a feed for a record or user.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.Feed getFeed(String communityId, ConnectApi.FeedType feedType, String subjectId)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.
subjectId
Type: String

If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

Return Value
Type: ConnectApi.Feed

gGetFeed(communityId, feedType, subjectId, sortParam)
Get a sorted feed for a record or user.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.Feed getFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, ConnectApi.FeedSortOrder sortParam)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

Return Value

Type: `ConnectApi.Feed`

**getFeedDirectory(String)**

Get a list of all feeds available to the context user.

API Version

30.0

Requires Chatter

Yes

Signature

`public static ConnectApi.FeedDirectory getFeedDirectory(String communityId)`

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

Return Value

Type: `ConnectApi.FeedDirectory`

**getFeedElement(communityId, feedElementId)**

Get a feed element.

API Version

31.0
Available to Guest Users
31.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedElementId`
  - Type: `String`
  - ID of the feed element.

Return Value

Type: `ConnectApi.FeedElement`

```java
getFeedElement(communityId, feedElementId, commentSort)
```

Get a feed element with sorted comments.

API Version

41.0

Available to Guest Users

41.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, ConnectApi.FeedCommentSortOrder commentSort)
```
Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, _internal_, or null.

- **feedElementId**
  - Type: String
  - ID of the feed element.

- **commentSort**
  - Type: `ConnectApi.FeedCommentSortOrder`
  - Order of comments.
    - CreatedDateLatestAsc—Sorts by most recently created comments in ascending order.
    - CreatedDateOldestAsc—Sorts by oldest comments in ascending order.
    - Relevance—Sorts by most relevant content.
  - The default value is CreatedDateLatestAsc.

Return Value

- Type: `ConnectApi.FeedElement`

`getFeedElement(communityId, feedElementId, threadedCommentsCollapsed)`

Get a feed element and its comments in a threaded style.

API Version

44.0

Available to Guest Users

44.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, Boolean threadedCommentsCollapsed)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, _internal_, or null.
feedElementId
  Type: String
  ID of the feed element.

threadedCommentsCollapsed
  Type: Boolean
  Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value
  Type: ConnectApi.FeedElement

getFeedElement(communityId, feedElementId, threadedCommentsCollapsed, commentSort)
Get a feed element and its sorted comments in a threaded style.

API Version
  44.0

Available to Guest Users
  44.0

Requires Chatter
  Yes

Signature
  public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, Boolean threadedCommentsCollapsed, ConnectApi.FeedCommentSortOrder commentSort)

Parameters
  communityId
    Type: String
    Use either the ID for a community, internal, or null.

  feedElementId
    Type: String
    ID of the feed element.

  threadedCommentsCollapsed
    Type: Boolean
    Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.
commentSort
Type: ConnectApi.FeedCommentSortOrder
Order of comments.
• CreatedDateLatestAsc—Sorts by most recently created comments in ascending order.
• CreatedDateOldestAsc—Sorts by oldest comments in ascending order.
• Relevance—Sorts by most relevant content.

Return Value
Type: ConnectApi.FeedElement

getCodeElement(communityId, feedElementId, recentCommentCount, elementsPerBundle)
Get a feed element with the specified number of elements per bundle including no more than the specified number of comments per feed element.

API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, Integer recentCommentCount, Integer elementsPerBundle)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

Return Value
Type: `ConnectApi.FeedElement`

```java
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, Integer recentCommentCount, Integer elementsPerBundle, Boolean threadedCommentsCollapsed)
```

Get a feed element with its comments in a threaded style with the specified number of elements per bundle and comments per feed element.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, Integer recentCommentCount, Integer elementsPerBundle, Boolean threadedCommentsCollapsed)
```

Parameters

- `communityId`  
  Type: `String`  
  Use either the ID for a community, `internal`, or `null`.

- `feedElementId`  
  Type: `String`  
  ID of the feed element.

- `recentCommentCount`  
  Type: `Integer`  
  Maximum number of comments to return with each feed element. The default value is 3.

- `elementsPerBundle`  
  Type: `Integer`  
  Maximum number of feed elements per bundle. The default and maximum value is 10.

- `threadedCommentsCollapsed`  
  Type: `Boolean`
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value
Type: ConnectApi.FeedElement

generateFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle, threadedCommentsCollapsed, commentSort)
Get a feed element with its sorted comments in a threaded style with the specified number of elements per bundle and comments per feed element.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElement generateFeedElement(String communityId, String feedElementId, Integer recentCommentCount, Integer elementsPerBundle, Boolean threadedCommentsCollapsed, ConnectApi.FeedCommentSortOrder commentSort)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

**commentSort**
Type: `ConnectApi.FeedCommentSortOrder`  
Order of comments.  
- **CreatedDateLatestAsc**—Sorts by most recently created comments in ascending order.  
- **CreatedDateOldestAsc**—Sorts by oldest comments in ascending order.  
- **Relevance**—Sorts by most relevant content.

**Return Value**
Type: `ConnectApi.FeedElement`

`getFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle, commentSort)`  
Get a feed element with the specified number of elements per bundle including no more than the specified number of sorted comments per feed element.

**API Version**
41.0

**Available to Guest Users**
41.0

**Requires Chatter**
Yes

**Signature**

```java
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedCommentSortOrder commentSort)
```

**Parameters**

- **communityId**
  Type: `String`  
  Use either the ID for a community, internal, or null.

- **feedElementId**
  Type: `String`  
  ID of the feed element.

- **recentCommentCount**
  Type: `Integer`
Maximum number of comments to return with each feed element. The default value is 3.

**elementsPerBundle**
Type: `Integer`
Maximum number of feed elements per bundle. The default and maximum value is 10.

**commentSort**
Type: `ConnectApi.FeedCommentSortOrder`
Order of comments.
- `CreatedDateLatestAsc`—Sorts by most recently created comments in ascending order.
- `CreatedDateOldestAsc`—Sorts by oldest comments in ascending order.
- `Relevance`—Sorts by most relevant content.
The default value is `CreatedDateLatestAsc`.

Return Value
Type: `ConnectApi.FeedElement`

**getFeedElementBatch**

```java
public static ConnectApi.BatchResult[] getFeedElementBatch(String communityId, List<String> feedElementIds)
```

Get a list of feed elements.

**API Version**
31.0

**Available to Guest Users**
32.0

**Requires Chatter**
Yes

**Signature**

```java
public static ConnectApi.BatchResult[] getFeedElementBatch(String communityId, List<String> feedElementIds)
```

**Parameters**

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **feedElementIds**
  Type: `List<String>`
  A list of up to 500 feed element IDs.
Return Value
Type: `ConnectApi.BatchResult[]`

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.FeedElement` object and errors for feed elements that didn’t load.

### getFeedElementPoll(communityId, feedElementId)

Get the poll associated with a feed element.

**API Version**
32.0

**Available to Guest Users**
32.0

**Requires Chatter**
Yes

**Signature**
```java
public static ConnectApi.PollCapability getFeedElementPoll(String communityId, String feedElementId)
```

**Parameters**
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `feedElementId`
  Type: `String`
  ID of the feed element.

**Return Value**
Type: `ConnectApi.PollCapability`

If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

**Note:** Triggers on FeedItem objects run before their attachment and capabilities information is saved, which means that `ConnectApi.FeedItem.attachment` information and `ConnectApi.FeedElement.capabilities` information may not be available in the trigger.

### getFeedElementsFromBundle(communityId, feedElementId)

Get feed elements from a bundle.
API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromBundle(String communityId, String feedElementId)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedElementId
  Type: String
  ID of the feed element.

Return Value
Type: ConnectApi.FeedElementPage

getFeedElementsFromBundle(communityId, feedElementId, pageParam, pageSize, elementsPerBundle, recentCommentCount)
Get a page of feed elements from a bundle. Specify the number of elements per bundle and include no more than the specified number of comments per feed element.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromBundle(String communityId, String feedElementId, String pageParam, Integer pageSize, Integer elementsPerBundle, Integer recentCommentCount)

Parameters
communityId
  Type: String
Use either the ID for a community, internal, or null.

`feedElementId`
Type: String
ID of the feed element.

`pageParam`
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

`pageSize`
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

`elementsPerBundle`
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

`recentCommentCount`
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

Return Value
Type: `ConnectApi.FeedElementPage`

`getFeedElementsFromFeed(communityId, feedType)`

API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
`public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType)`
Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **feedType**
  - Type: ConnectApi.FeedType
  - The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

Return Value

- Type: ConnectApi.FeedElementPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- setTestGetFeedElementsFromFeed(communityId, feedType, result)
- Testing ConnectApi Code

**getFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)**

API Version

- 31.0

Available to Guest Users

- 31.0

Requires Chatter

- Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId,
                      ConnectApi.FeedType feedType, String pageParam, Integer pageSize,
                      ConnectApi.FeedSortOrder sortParam)
```
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedType**
Type: `ConnectApi.FeedType`
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- `Relevance`—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

If `feedType` is DirectMessages, `sortParam` must be LastModifiedDateDesc.

Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)`
- Testing ConnectApi Code
getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)

Get a page of sorted feed elements from the Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview feeds. Each feed element contains no more than the specified number of comments.

API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
**pageSize**
Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`

Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

If `feedType` is `DirectMessages`, `sortParam` must be `LastModifiedDateDesc`.

Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, result)`
- `Testing ConnectApi Code`

**getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter)**

Get a page of sorted and filtered feed elements from the `Home` feed. Each feed element contains no more than the specified number of comments.

API Version
32.0

Available to Guest Users
32.0

Requires Chatter
Yes
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. The only valid value is Home.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

When the sortParam is MostViewed, you must pass in null for the pageParam.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

When the sortParam is MostViewed, the pageSize must be a value from 1 to 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

  If you pass in null, the default value CreatedDateDesc is used.

**filter**

Type: `ConnectApi.FeedFilter`

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don't have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**Return Value**

Type: `ConnectApi.FeedElementPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

- `setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, result)`

  Testing ConnectApi Code

- `getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed)`

  Get a page of filtered and sorted feed elements with comments in a threaded style from the Home feed. Each feed element contains no more than the specified number of comments.
API Version

Yes

Signature

public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. The only valid value is Home.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

When the sortParam is MostViewed, you must pass in null for the pageParam.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
When the `sortParam` is `MostViewed`, the `pageSize` must be a value from 1 to 25.

**sortParam**

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**filter**

Type: `ConnectApi.FeedFilter`

Specifies the feed filters.

- `AllQuestions`—Feed elements that are questions.
- `AuthoredBy`—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- `CommunityScoped`—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- `QuestionsWithCandidateAnswers`—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- `QuestionsWithCandidateAnswersReviewedPublished`—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- `Read`—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- `SolvedQuestions`—Feed elements that are questions and that have a best answer.
- `UnansweredQuestions`—Feed elements that are questions and that don't have any answers.
- `UnansweredQuestionsWithCandidateAnswers`—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- `Unread`—Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the `Record` feed of a group.
- `UnsolvedQuestions`—Feed elements that are questions and that don't have a best answer.

**threadedCommentsCollapsed**

Type: `Boolean`

Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

**Return Value**

Type: `ConnectApi.FeedElementPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed, result)

Testing ConnectApi Code

**getFeedElementsFromFeed(communityId, feedType, subjectId)**

Get feed elements from any feed other than Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview for a user or record.

API Version

31.0

Available to Guest Users

31.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId)
```

Parameters

**communityId**

Type: String

Use either the ID for a community, internal, or null.

**feedType**

Type: ConnectApi.FeedType

The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

**subjectId**

Type: String

If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.
Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example for Getting the Context User’s News Feed
```java
ConnectApi.FeedElementPage fep =
ConnectApi.ChatterFeeds.getFeedElementsFromFeed(Network.getNetworkId(),
ConnectApi.FeedType.News, 'me');
```

Example for Getting Another User’s Profile Feed
```java
ConnectApi.FeedElementPage fep =
ConnectApi.ChatterFeeds.getFeedElementsFromFeed(Network.getNetworkId(),
ConnectApi.FeedType.UserProfile, '005R0000000HwMA');
```

Example for Getting Another User’s Record Feed
```java
ConnectApi.FeedElementPage fep =
ConnectApi.ChatterFeeds.getFeedElementsFromFeed(Network.getNetworkId(),
ConnectApi.FeedType.Record, '005R0000000HwMA');
```

SEE ALSO:
- `setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, result)`
- Testing ConnectApi Code

```java
getFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize,
sortParam)
```
Get a page of sorted feed elements from any feed other than Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Parameters

`communityId`

Type: `String`

Use either the ID for a community, `internal`, or `null`.

`feedType`

Type: `ConnectApi.FeedType`

The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

`subjectId`

Type: `String`

If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

`pageParam`

Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`

Type: `Integer`

The number of feed elements per page.

`sortParam`

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

Return Value

Type: `ConnectApi.FeedElementPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Testing ConnectApi Code

```java
getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam)
```

Get a page of sorted feed elements from any feed other than Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview. Each feed element includes no more than the specified number of comments.

API Version

31.0

Available to Guest Users

31.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam)
```

Parameters

`communityId`

Type: `String`

Use either the ID for a community, internal, or null.

`feedType`

Type: `ConnectApi.FeedType`

The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

`subjectId`

Type: `String`
If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

**recentCommentCount**
Type: `Integer`

Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value **CreatedDateDesc** is used.

**Return Value**
Type: `ConnectApi.FeedElementPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

```java
getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)
```

Get a page of sorted feed elements from a record feed. Each feed element includes no more than the specified number of comments. Specify whether to return feed elements posted by internal (non-community) users only.

API Version

31.0

Available to Guest Users

31.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly)
```

Parameters

- **communityId**
  
  Type: `String`
  
  Use either the ID for a community, `internal`, or `null`.

- **feedType**
  
  Type: `ConnectApi.FeedType`
  
  Value must be `ConnectApi.FeedType.Record`.

- **subjectId**
  
  Type: `String`
  
  Any record ID, including a group ID.
recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

showInternalOnly
Type: Boolean
Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

Return Value
Type: ConnectApi.FeedElementPage
Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

  Testing ConnectApi Code

`getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter)`
Get a page of sorted and filtered feed elements from the `UserProfile` feed.

API Version
35.0

Available to Guest Users
35.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `feedType`
  Type: `ConnectApi.FeedType`
  Value must be `ConnectApi.FeedType.UserProfile`.
- `subjectId`
  Type: `String`
  The ID of any user. To specify the context user, use the user ID or the alias `me`.
recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

filter
Type: ConnectApi.FeedFilter
Value must be ConnectApi.FeedFilter.CommunityScoped or ConnectApi.FeedFilter.AuthoredBy.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.
Example
This example gets only community-specific feed elements.

```java
ConnectApi.FeedElementPage fep =
    ConnectApi.ChatterFeeds.getFeedElementsFromFeed(Network.getNetworkId(),
            ConnectApi.FeedType.UserProfile, 'me', 3, ConnectApi.FeedDensity.FewerUpdates, null, null,
            ConnectApi.FeedSortOrder.LastModifiedDateDesc, ConnectApi.FeedFilter.CommunityScoped);
```

SEE ALSO:

  sortParam, filter, result)`
- Testing ConnectApi Code

`getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount,
  density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed)`

Get a page of feed elements with comments in a threaded style from the `UserProfile` feed.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId,
            ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
            ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
            ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, Boolean
            threadedCommentsCollapsed)
```

Parameters
- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.UserProfile`.

- **subjectId**
  - Type: `String`
The ID of any user. To specify the context user, use the user ID or the alias me.

`recentCommentCount`
Type: `Integer`
Maximum number of comments to return with each feed element. The default value is 3.

`density`
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreateDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreateDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in `null`, the default value `CreateDateDesc` is used.

`filter`
Type: `ConnectApi.FeedFilter`
Value must be `ConnectApi.FeedFilter.CommunityScoped` or `ConnectApi.FeedFilter.AuthoredBy`.

`threadedCommentsCollapsed`
Type: `Boolean`
Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

Return Value
Type: `ConnectApi.FeedElementPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```

Testing ConnectApi Code

```java
getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount,
  density, pageParam, pageSize, sortParam, customFilter)
```

Get a page of sorted and filtered feed elements from the case feed.

API Version

40.0

Available to Guest Users

40.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId,
  ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
  ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
  ConnectApi.FeedSortOrder sortParam, String customFilter)
```

Parameters

`communityId`

Type: `String`

Use either the ID for a community, `internal`, or `null`.

`feedType`

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.Record`.

`subjectId`

Type: `String`

The ID of a case.

`recentCommentCount`

Type: `Integer`
Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

**customFilter**
Type: `String`
Custom filter that applies only to the case feed. See `customFeedFilter` in the `Metadata API Developer Guide` for supported values.

**Return Value**
Type: `ConnectApi.FeedElementPage`

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

    Type: ConnectApi.FeedDensity
    Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: **String**
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: **Integer**
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: **`ConnectApi.FeedSortOrder`**
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. If you pass in `null`, the default value `CreatedDateDesc` is used.

**showInternalOnly**
Type: **Boolean**
Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

**filter**
Type: **`ConnectApi.FeedFilter`**
Specifies the feed filters.
- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
• UnansweredQuestions—Feed elements that are questions and that don’t have any answers.
• UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
• Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
• UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

`public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize,`
ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  Any record ID, including a group ID.

recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
• **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.

• **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. If you pass in `null`, the default value `CreatedDateDesc` is used.

`showInternalOnly`  
Type: `Boolean`  
Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

`filter`  
Type: `ConnectApi.FeedFilter`  
Specifies the feed filters.

• **AllQuestions**—Feed elements that are questions.

• **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.

• **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.

• **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.

• **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.

• **SolvedQuestions**—Feed elements that are questions and that have a best answer.

• **UnansweredQuestions**—Feed elements that are questions and that don't have any answers.

• **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• **Unread**—Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the Record feed of a group.

• **UnsolvedQuestions**—Feed elements that are questions and that don't have a best answer.

`threadedCommentsCollapsed`  
Type: `Boolean`  
Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

**Return Value**  
Type: `ConnectApi.FeedElementPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, String customFilter)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `feedType`
  Type: `ConnectApi.FeedType`
  Value must be `ConnectApi.FeedType.Record`.

- `subjectId`
  Type: `String`
  The ID of a case.

- `recentCommentCount`
  Type: `Integer`
The maximum number of comments to return with each feed item. The default value is 3.

**elementsPerBundle**
Type: `Integer`
Maximum number of feed elements per bundle. The default and maximum value is 10.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `ModifiedDateDesc` is used.

**showInternalOnly**
Type: `Boolean`
Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

**customFilter**
Type: `String`
Custom filter that applies only to the case feed. See `customFeedFilter` in the `Metadata API Developer Guide` for supported values.

**Return Value**
Type: `ConnectApi.FeedElementPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, String customFilter, Boolean threadedCommentsCollapsed)
```

Parameters

- **communityId**
  
  Type: `String`
  
  Use either the ID for a community, `internal`, or `null`.

- **feedType**
  
  Type: `ConnectApi.FeedType`
  
  Value must be `ConnectApi.FeedType.Record`.

- **subjectId**
  
  Type: `String`
  
  The ID of a case.
recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

showInternalOnly
Type: Boolean
Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.
customFilter
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.
threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Testing ConnectApi Code

getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix)
Get feed elements from a feed filtered by a key prefix for a user.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromFilterFeed(String communityId, String subjectId, String keyPrefix)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.
Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

`getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam)`
Get a page of sorted feed elements from a feed filtered by a key prefix for a user.

API Version
31.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.FeedElementPage getFeedElementsFromFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, internal, or `null`.
- `subjectId`
  Type: `String`
  The ID of the context user or the alias `me`.
- `keyPrefix`
  Type: `String`
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.
- `pageParam`
  Type: `String`
  ```
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

**getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam)**

Get a page of sorted feed elements from a feed filtered by a key prefix for a user. Each feed element contains no more than the specified number of comments.

API Version
31.0

Requires Chatter
Yes
public static ConnectApi.FeedElementPage getFeedElementsFromFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters

**communityId**
- **Type:** String
- Use either the ID for a community, internal, or null.

**subjectId**
- **Type:** String
- The ID of the context user or the alias me.

**keyPrefix**
- **Type:** String
- A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

**recentCommentCount**
- **Type:** Integer
- Maximum number of comments to return with each feed element. The default value is 3.

**elementsPerBundle**
- **Type:** Integer
- Maximum number of feed elements per bundle. The default and maximum value is 10.

**density**
- **Type:** ConnectApi.FeedDensity
- Specify the amount of content in a feed.
  - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
- **Type:** String
- The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
- **Type:** Integer
- Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
- **Type:** ConnectApi.FeedSortOrder
- Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Testing ConnectApi Code

getFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince)
Get a page of feed elements from a feed filtered by a key prefix for a user. Include only feed elements that have been updated since the time specified in the updatedSince parameter.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromFilterFeedUpdatedSince(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 00S and Group objects have a prefix of 0F9.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token defining the modification time stamp of the feed and the sort order.
The updatedSince parameter doesn't return feed elements that are created in the same second as the call.

Return Value
Type: ConnectApi.FeedElementPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

31.0

Requires Chatter
Yes

Signature

public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, Home, and Moderation.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: **String**
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: **Integer**
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
Type: **String**
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Requires Chatter
Yes

Signature

public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density,
String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedFilter filter)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. The only valid value is Home.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

filter
Type: ConnectApi.FeedFilter
Specifies the feed filters.
- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the User Profile feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the User Profile feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**Return Value**

Type: `ConnectApi.FeedElementPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

`setTestGetFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, filter, result)`

**Testing ConnectApi Code**

```typescript
getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince)
```

Get a page of feed elements from the Files, Groups, News, People, and Record feeds. Include only feed elements that have been updated since the time specified in the `updatedSince` parameter. Each feed element contains no more than the specified number of comments.

**API Version**

Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedType`
  - Type: `ConnectApi.FeedType`
  - One of these values:
    - Files
    - Groups
    - News
    - People
    - Record

- `subjectId`
  - Type: `String`
  - If `feedType` is `ConnectApi.Record`, `subjectId` can be any record ID, including a group ID. Otherwise, it must be the context user or the alias `me`.

- `recentCommentCount`
  - Type: `Integer`
  - The maximum number of comments to return with each feed item. The default value is 3.

- `density`
  - Type: `ConnectApi.FeedDensity`
  - Specify the amount of content in a feed.
    - `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    - `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- `pageParam`
  - Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: `Integer`  
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**updatedSince**
Type: `String`  
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.  
The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

Return Value  
Type: `ConnectApi.FeedElementPage`

Usage  
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:  
setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, result)  
Testing ConnectApi Code

**getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly)**  
Get a page of feed elements from a record feed. Include only feed elements that have been updated since the time specified in the `updatedSince` parameter. Specify whether to return feed elements posted by internal (non-community) users only.

API Version  
31.0

Available to Guest Users

Yes

Signature  
```java
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,`
ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.
Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Testing ConnectApi Code

getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, filter)

Get a page of filtered feed elements from a `UserProfile` feed. Include only feed elements that have been updated since the time specified in the `updatedSince` parameter.

API Version
35.0

Available to Guest Users
35.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedFilter filter)
```

Parameters

`communityId`
- Type: `String`
- Use either the ID for a community, `internal`, or `null`.

`feedType`
- Type: `ConnectApi.FeedType`
- Value must be `ConnectApi.FeedType.UserProfile`.

`subjectId`
- Type: `String`
The ID of any user. To specify the context user, use the user ID or the alias `me`.

`recentCommentCount`
Type: `Integer`
Maximum number of comments to return with each feed element. The default value is 3.

`elementsPerBundle`
Type: `Integer`
Maximum number of feed elements per bundle. The default and maximum value is 10.

`density`
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`updatedSince`
Type: `String`
An opaque token defining the modification time stamp of the feed and the sort order.
The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

`filter`
Type: `ConnectApi.FeedFilter`
Value must be `ConnectApi.FeedFilter.CommunityScoped`. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out.

**Return Value**
Type: `ConnectApi.FeedElementPage`

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

}
```

**Parameters**

- `communityId`
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.

- `feedType`
  - Type: `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.Record`.

- `subjectId`
  - Type: `String`
  - The ID of a case.

- `recentCommentCount`
  - Type: `Integer`
  - Maximum number of comments to return with each feed element. The default value is 3.

- `elementsPerBundle`
  - Type: `Integer`
  - Maximum number of feed elements per bundle. The default and maximum value is 10.

- `density`
  - Type: `ConnectApi.FeedDensity`
  - Specify the amount of content in a feed.
• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**updatedSince**
Type: String
An opaque token defining the modification time stamp of the feed and the sort order.
The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

**customFilter**
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

**Return Value**
Type: ConnectApi.FeedElementPage

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

String updatedSince, Boolean showInternalOnly)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedType`
  - Type: `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.Record`.

- `subjectId`
  - Type: `String`
  - Any record ID, including a group ID.

- `recentCommentCount`
  - Type: `Integer`
  - Maximum number of comments to return with each feed element. The default value is 3.

- `elementsPerBundle`
  - Type: `Integer`
  - Maximum number of feed elements per bundle. The default and maximum value is 10.

- `density`
  - Type: `ConnectApi.FeedDensity`
  - Specify the amount of content in a feed.
    - `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    - `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- `pageParam`
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- `pageSize`
  - Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`updatedSince`
Type: `String`
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.
The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

`showInternalOnly`
Type: `Boolean`
Specifies whether to show only feed elements from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.Record`.

- **subjectId**
  - Type: String
  - Any record ID, including a group ID.

- **recentCommentCount**
  - Type: Integer
  - Maximum number of comments to return with each feed element. The default value is 3.

- **elementsPerBundle**
  - Type: Integer
  - Maximum number of feed elements per bundle. The default and maximum value is 10.

- **density**
  - Type: `ConnectApi.FeedDensity`
  - Specify the amount of content in a feed.
    - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- **pageParam**
  - Type: String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in null, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

- **updatedSince**
  - Type: String
  - An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.
  - The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.
showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

filter
Type: ConnectApi.FeedFilter
Specifies the feed filters.
- AllQuestions—Feed elements that are questions.
- AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- CommunityScoped—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.
- QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- SolvedQuestions—Feed elements that are questions and that have a best answer.
- UnansweredQuestions—Feed elements that are questions and that don't have any answers.
- UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- Unread—Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the Record feed of a group.
- UnsolvedQuestions—Feed elements that are questions and that don't have a best answer.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
The ID of a case.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
• **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

• **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**

Type: String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**

Type: Integer

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**updatedSince**

Type: String

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

**showInternalOnly**

Type: Boolean

Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

**customFilter**

Type: String

Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

**Return Value**

Type: ConnectApi.FeedElementPage

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Yes

Signature

```java
public static ConnectApi.Feed getFeedWithFeedElements(String communityId,
ConnectApi.FeedType feedType, Integer pageSize)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Landing`, `Moderation`, and `PendingReview`. `Landing` is valid only when `communityId` is `internal`.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in 0, feed elements aren't returned with the feed.

Return Value

Type: `ConnectApi.Feed`

- **getFeedWithFeedElements(communityId, feedType, pageSize, recentCommentCount)**
  - Get a page of information about the feed and the feed elements with the specified number of comments per feed element from the feed.

API Version

40.0

Requires Chatter

Yes
Signature

```java
public static ConnectApi.Feed getFeedWithFeedElements(String communityId,
ConnectApi.FeedType feedType, Integer pageSize, Integer recentCommentCount)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Landing, Moderation, and PendingReview. Landing is valid only when `communityId` is internal.

- **pageSize**
  - Type: Integer
  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in 0, feed elements aren’t returned with the feed.

- **recentCommentCount**
  - Type: Integer
  - Maximum number of comments to return with each feed element. The default value is 3.

Return Value

- **Type:** `ConnectApi.Feed`

**getFilterFeed(communityId, subjectId, keyPrefix)**

Get a feed filtered by a key prefix for a user.

API Version

- **28.0**

Requires Chatter

- Yes

Signature

```java
public static ConnectApi.Feed getFilterFeed(String communityId, String subjectId, String keyPrefix)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.
subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix is the first three characters of a record ID, which specifies the entity type.

Return Value
Type: ConnectApi.Feed

getFilterFeed(communityId, subjectId, keyPrefix, sortParam)
Get a sorted feed filtered by a key prefix for a user.

Requirements

API Version
28.0

Requires Chatter
Yes

Signature

public static ConnectApi.Feed getFilterFeed(String communityId, String subjectId, String keyPrefix, ConnectApi.FeedType sortParam)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

sortParam
Type: ConnectApi.FeedType
Values are:

• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.Feed

getFilterFeedDirectory(communityId, subjectId)
Get a feed directory of filter feeds available to the context user.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedDirectory getFilterFeedDirectory(String communityId, String subjectId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

Return Value
Type: ConnectApi.FeedDirectory
This feed directory contains a list of filter feeds, which are the news feed filtered to include feed items whose parent is a specific entity type.

Usage
Call this method to return a directory containing a list of ConnectApi.FeedDirectoryItem objects. Each object contains a key prefix associated with an entity type the context user is following. A key prefix is the first three characters of a record ID, which specifies the entity type.
Use key prefixes to filter the news feed so that it contains only feed items whose parent is the entity type associated with the key prefix. For example, get all the feed items whose parent is an Account. To get the feed items, pass a key prefix to the ConnectApi.getFeedItemsFromFilterFeed method.

The information about filter feeds never contains the key prefixes for users (005) or groups (0F9), but all users can use those key prefixes as filters.

The ConnectApi.FeedDirectory.favorites property is always empty when returned by a call to getFilterFeedDirectory because you can’t filter a news feed by favorites.

Example

This example calls getFilterFeedDirectory and loops through the returned FeedDirectoryItem objects to find the key prefixes the context user can use to filter their news feed. It then copies each keyPrefix value to a list. Finally, it passes one of the key prefixes from the list to the getFeedItemsFromFilterFeed method. The returned feed items include every feed item from the news feed whose parent is the entity type specified by the passed key prefix.

```java
String communityId = null;
String subjectId = 'me';

// Create a list to populate with key prefixes.
List<String> keyPrefixList = new List<String>(){

    // Prepopulate with User and Group record types
    // which are available to all users.
    keyPrefixList.add('005');
    keyPrefixList.add('0F9');

    System.debug(keyPrefixList);

    // Get the key prefixes available to the context user.
    ConnectApi.FeedDirectory myFeedDirectory =
        ConnectApi.ChatterFeeds.getFilterFeedDirectory(null, 'me');

    // Loop through the returned feeds list.
    for (ConnectApi.FeedDirectoryItem i : myFeedDirectory.feeds) {
        // Grab each key prefix and add it to the list.
        keyPrefixList.add(i.keyPrefix);
    }
    System.debug(keyPrefixList);

    // Use a key prefix from the list to filter the feed items in the news feed.
    ConnectApi.FeedItemCountPage myFeedItemPage =
        ConnectApi.ChatterFeeds.getFeedItemsFromFilterFeed(communityId, subjectId,
            keyPrefixList[0]);
    System.debug(myFeedItemPage);
```

getLike(communityId, likeId)

Get a like on a post or comment.
public static ConnectApi.ChatterLike getLike(String communityId, String likeId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

likeId
Type: String
The ID for a like.

Return Value
Type: ConnectApi.ChatterLike

public static ConnectApi.ChatterLikePage getLikesForComment(String communityId, String commentId)

getLikesForComment(communityId, commentId)
Get likes for a comment.
Parameters

**communityId**
- Type: String
- Use either the ID for a community, internal, or null.

**commentId**
- Type: String
- The ID for a comment.

Return Value

Type: ConnectApi.ChatterLikePage

**getLikesForComment(communityId, commentId, pageParam, pageSize)**

Get a page of likes for a comment.

API Version

28.0

Available to Guest Users

31.0

Requires Chatter

Yes

Signature

public static ConnectApi.ChatterLikePage getLikesForComment(String communityId, String commentId, Integer pageParam, Integer pageSize)

Parameters

**communityId**
- Type: String
- Use either the ID for a community, internal, or null.

**commentId**
- Type: String
- The ID for a comment.

**pageParam**
- Type: Integer
- Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**
- Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.ChatterLikePage`

**getLikesForFeedElement(communityId, feedElementId)**
Get likes for a feed element.

API Version
32.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterLikePage getLikesForFeedElement(String communityId, String feedElementId)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `feedElementId`
  Type: `String`
  ID of the feed element.

Return Value
Type: `ConnectApi.ChatterLikePage Class`
If the feed element doesn’t support the `ChatterLikes` capability, the return value is `ConnectApi.NotFoundException`.

**getLikesForFeedElement(communityId, feedElementId, pageParam, pageSize)**
Get a page of likes for a feed element.

API Version
32.0
Available to Guest Users
32.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterLikePage getLikesForFeedElement(String communityId, String feedElementId, Integer pageParam, Integer pageSize)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **feedElementId**
  - Type: String
  - ID of the feed element.

- **pageParam**
  - Type: String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value

Type: `ConnectApi.ChatterLikePage` Class

If the feed element doesn't support the ChatterLikes capability, the return value is `ConnectApi.NotFoundException`.

### getLinkMetadata(communityId, urls)

Get link metadata for URLs.

API Version

42.0

Available to Guest Users

42.0
public static ConnectApi.LinkMetadataCollection getLinkMetadata(String communityId, String urls)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

urls
Type: String
Comma-separated list of URL-encoded URLs.

Return Value
Type: ConnectApi.LinkMetadataCollection

getPinnedFeedElementsFromFeed(communityId, feedType, subjectId)
Get pinned feed elements from a group or topic feed.

API Version
41.0

Available to Guest Users
41.0

Requires Chatter
Yes

public static ConnectApi.PinnedFeedElements getPinnedFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Record and Topics.

subjectId
Type: String
If feedType is Record, subjectId must be a group ID. If feedType is Topics, subjectId must be a topic ID.

Return Value
Type: ConnectApi.PinnedFeedElements
If the feed doesn’t support this capability, the return value is ConnectApi.NotFoundException.

getReadByForFeedElement(communityId, feedElementId)
Get information about who read a feed element and when.

API Version
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.ReadByPage getReadByForFeedElement(String communityId, String feedElementId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

Return Value
Type: ConnectApi.ReadByPage
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

getReadByForFeedElement(communityId, feedElementId, pageParam, pageSize)
Get a page of information about who read a feed element and when.

API Version
40.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.ReadByPage getReadByForFeedElement(String communityId, String feedElementId, Integer pageParam, Integer pageSize)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedElementId`
  - Type: `String`
  - ID of the feed element.

- `pageParam`
  - Type: `String`
  - Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- `pageSize`
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

- Type: `ConnectApi.ReadByPage`
  - If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

**getRelatedPosts(communityId, feedElementId, filter, maxResults)**

Get posts related to the context feed element.

API Version

- `37.0`

Available to Guest Users

- `37.0`

Requires Chatter
Yes
public static ConnectApi.RelatedFeedPosts getRelatedPosts(String communityId, String feedElementId, ConnectApi.RelatedFeedPostType filter, Integer maxResults)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element. The feed element must be a question.

filter
Type: ConnectApi.RelatedFeedPostType
Specifies the type of related post. Values are:
- Answered—Related questions that have at least one answer.
- BestAnswer—Related questions that have a best answer.
- Generic—All types of related questions, including answered, with a best answer, and unanswered.
- Unanswered—Related questions that don’t have answers.
Generic is the default value.

maxResults
Type: Integer
The maximum number of results to return. You can return up to 25 results; 5 is the default.

Return Value
Type: ConnectApi.RelatedFeedPosts
In version 37.0 and later, related feed posts are questions.
Each related feed post has a score indicating how closely it’s related to the context feed post. We return related feed posts sorted by score, with the highest score first.

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

getStream(communityId, streamId)
Get information about a Chatter feed stream.

API Version
39.0
Requires Chatter
Yes

Signature
public static ConnectApi.ChatterStream getStream(String communityId, String streamId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

streamId
Type: String
ID of the Chatter feed stream.

Return Value
Type: ConnectApi.ChatterStream

getStream(communityId, streamId, globalScope)
Get information about a Chatter feed stream, regardless of community.

API Version
41.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterStream getStream(String communityId, String streamId, Boolean globalScope)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

streamId
Type: String
ID of the Chatter feed stream.

globalScope
Type: Boolean
Specifies whether to get streams from all the context user’s communities, regardless of the `communityId` value.

Tip: If you know the community ID for the stream, we recommend setting `globalScope` to `false`.

**Return Value**
Type: `ConnectApi.ChatterStream`

**getStreams(communityId)**
Get the Chatter feed streams for the context user.

**API Version**
39.0

**Requires Chatter**
Yes

**Signature**

```java
public static ConnectApi.ChatterStreamPage getStreams(String communityId)
```

**Parameters**

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**Return Value**
Type: `ConnectApi.ChatterStreamPage`

**getStreams(communityId, sortParam)**
Get and sort the Chatter feed streams for the context user.

**API Version**
40.0

**Requires Chatter**
Yes

**Signature**

```java
public static ConnectApi.ChatterStreamPage getStreams(String communityId, ConnectApi.SortOrder sortParam)
```
Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

sortParam
  Type: ConnectApi.SortOrder
  Specifies the sort order. Values are:
  • Ascending—Items are in ascending alphabetical order (A-Z).
  • Descending—Items are in descending alphabetical order (Z-A).
  • MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.
  If not specified, default value is Ascending.

Return Value

Type: ConnectApi.ChatterStreamPage

getStreams(communityId, pageParam, pageSize)
Get a page of Chatter feed streams for the context user.

API Version
39.0

Requires Chatter
Yes

Signature

public static ConnectApi.ChatterStreamPage getStreams(String communityId, Integer pageParam, Integer pageSize)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

pageParam
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.
Return Value
Type: `ConnectApi.ChatterStreamPage`

**getStreams(communityId, pageParam, pageSize, sortParam)**
Get a sorted page of Chatter feed streams for the context user.

API Version
40.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterStreamPage getStreams(String communityId, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam)
```

Parameters

**communityId**
Type: `String`
Use either the ID for a community, internal, or `null`.

**pageParam**
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

**sortParam**
Type: `ConnectApi.SortOrder`
Specifies the sort order. Values are:
- **Ascending**—Items are in ascending alphabetical order (A-Z).
- **Descending**—Items are in descending alphabetical order (Z-A).
- **MostRecentlyViewed**—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.
  If not specified, default value is **Ascending**.

Return Value
Type: `ConnectApi.ChatterStreamPage`
getStreams(communityId, pageParam, pageSize, sortParam, globalScope)

Get a sorted page of Chatter feed streams from all communities for the context user.

API Version
41.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterStreamPage getStreams(String communityId, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam, Boolean globalScope)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

sortParam
Type: ConnectApi.SortOrder
Specifies the sort order. Values are:
• Ascending—Items are in ascending alphabetical order (A-Z).
• Descending—Items are in descending alphabetical order (Z-A).
• MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is Ascending.

globalScope
Type: Boolean
Specifies whether to get streams from all the context user’s communities, regardless of the communityId value.

Tip: If you know the community ID for the streams, we recommend setting globalScope to false.

Return Value
Type: ConnectApi.ChatterStreamPage
getSupportedEmojis()
Get supported emojis for the org.

API Version
39.0

Requires Chatter
Yes

Signature
public static ConnectApi.SupportedEmojis getSupportedEmojis()

Return Value
Type: ConnectApi.SupportedEmojis

Usage
To get the list, emojis must be enabled in your org.

getThreadsForFeedComment(communityId, commentId)
Get threaded comments for a comment.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.CommentPage getThreadsForFeedComment(String communityId, String commentId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.
commentId
Type: String
ID of the comment.

Return Value
Type: ConnectApi.CommentPage
If the comment doesn’t support the comments capability, the return value is ConnectApi.NotFoundException.

getThreadsForFeedComment(communityId, commentId, pageParam, pageSize)
Get a page of threaded comments for a comment.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.CommentPage getThreadsForFeedComment(String communityId, String commentId, String pageParam, Integer pageSize)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
ID of the comment.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
getThreadsForFeedComment(communityId, commentId, threadedCommentsCollapsed)

Access the comments capability for a comment.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature

public static ConnectApi.CommentsCapability getThreadsForFeedComment(String communityId, String commentId, Boolean threadedCommentsCollapsed)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
ID of the comment.

threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value
Type: ConnectApi.CommentsCapability
If the comment doesn’t support the comments capability, the return value is ConnectApi.NotFoundException.

getTopUnansweredQuestions(communityId) {Pilot}

Get top unanswered questions for the context user in a community.
Note: We provided top-five unanswered questions to selected customers through a pilot program that required agreement to specific terms and conditions. This pilot program is closed and not accepting new participants.

API Version
42.0

Requires Chatter
Yes

Signature

public static ConnectApi.FeedElementPage getTopUnansweredQuestions(String communityId)

Parameters

communityId
    Type: String
    ID of the community.

Return Value

Type: ConnectApi.FeedElementPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

setTestGetTopUnansweredQuestions(communityId, result) (Pilot)
Testing ConnectApi Code

getTopUnansweredQuestions(communityId, filter) (Pilot)
Get filtered top unanswered questions for the context user in a community.

Note: We provided top-five unanswered questions to selected customers through a pilot program that required agreement to specific terms and conditions. This pilot program is closed and not accepting new participants.
public static ConnectApi.FeedElementPage getTopUnansweredQuestions(String communityId, ConnectApi.TopUnansweredQuestionsFilterType filter)

Parameters

communityId
Type: String
ID of the community.

filter
Type: ConnectApi.FeedFilter
Specifies the filter for the feed. UnansweredQuestionsWithCandidateAnswers is the only valid value.

Return Value

Type: ConnectApi.FeedElementPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

setTestGetTopUnansweredQuestions(communityId, filter, result) (Pilot)
Testing ConnectApi Code

getTopUnansweredQuestions(communityId, pageSize) (Pilot)
Get a page of top unanswered questions for the context user in a community.

⚠️ Note: We provided top-five unanswered questions to selected customers through a pilot program that required agreement to specific terms and conditions. This pilot program is closed and not accepting new participants.

API Version
42.0

Requires Chatter
Yes

Signature

public static ConnectApi.FeedElementPage getTopUnansweredQuestions(String communityId, Integer pageSize)
Parameters

**communityId**
Type: String
ID of the community.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 0 through 10. If you pass in null, the default size is 5.

Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with **setTest**). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetTopUnansweredQuestions(communityId, pageSize, result)` (Pilot)
- Testing ConnectApi Code

`getTopUnansweredQuestions(communityId, filter, pageSize)` (Pilot)
Get a page of filtered top unanswered questions for the context user in a community.

⚠️ **Note:** We provided top-five unanswered questions to selected customers through a pilot program that required agreement to specific terms and conditions. This pilot program is closed and not accepting new participants.

API Version
42.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedElementPage getTopUnansweredQuestions(String communityId,
ConnectApi.FeedFilter filter, Integer pageSize)
```

Parameters

**communityId**
Type: String
ID of the community.

**filter**
Type: `ConnectApi.FeedFilter`
Specifies the filter for the feed. `UnansweredQuestionsWithCandidateAnswers` is the only valid value.

**pageSize**
Type: `Integer`
Specifies the number of items per page. Valid values are from 0 through 10. If you pass in `null`, the default size is 5.

Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetTopUnansweredQuestions(communityId, filter, pageSize, result)` (Pilot)

### getVotesForComment(communityId, commentId, vote)
Get the first page of users who upvoted or downvoted a comment.

API Version
42.0

Available to Guest Users
42.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.VotePage getVotesForComment(String communityId, String commentId, ConnectApi.UpDownVoteValue vote)
```

Parameters
- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- **commentId**
  Type: `String`
  ID of the comment.
vote
  Type: ConnectApi.UpDownVoteValue
  Specifies the value of the vote for the feed element. Values are:
  • Down
  • Up
  You can’t specify None.

Return Value
Type: ConnectApi.VotePage
If the comment doesn’t support this capability, the return value is ConnectApi.NotFoundException.

gVotesForComment(communityId, commentId, vote, pageParam, pageSize)
Get a page of users who upvoted or downvoted a comment.

API Version
42.0

Available to Guest Users
42.0

Requires Chatter
Yes

Signature
public static ConnectApi.VotePage getVotesForComment(String communityId, String commentId, ConnectApi.UpDownVoteValue vote, Integer pageParam, Integer pageSize)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

commentId
  Type: String
  ID of the comment.

vote
  Type: ConnectApi.UpDownVoteValue
  Specifies the value of the vote for the feed element. Values are:
  • Down
  • Up
You can't specify None.

**pageParam**
- **Type:** Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**
- **Type:** Integer
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
- **Type:** `ConnectApi.VotePage`
  - If the comment doesn't support this capability, the return value is `ConnectApi.NotFoundException`.

**getVotesForFeedElement(communityId, feedElementId, vote)**
Get the first page of users who upvoted or downvoted a feed element.

**API Version**
- 42.0

**Available to Guest Users**
- 42.0

**Requires Chatter**
- Yes

**Signature**
```java
public static ConnectApi.VotePage getVotesForFeedElement(String communityId, String feedElementId, ConnectApi.UpDownVoteValue vote)
```

**Parameters**
- **communityId**
  - **Type:** String
    - Use either the ID for a community, `internal`, or `null`.

- **feedElementId**
  - **Type:** String
    - ID of the feed element.

- **vote**
  - **Type:** `ConnectApi.UpDownVoteValue`
    - Specifies the value of the vote for the feed element. Values are:
      - Down

Return Value
Type: `ConnectApi.VotePage`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

```java
public static ConnectApi.VotePage getVotesForFeedElement(String communityId, String feedElementId, ConnectApi.UpDownVoteValue vote, Integer pageParam, Integer pageSize)
```
Get a page of users who upvoted or downvoted a feed element.

API Version
42.0

Available to Guest Users
42.0

Requires Chatter
Yes

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `feedElementId`
  Type: `String`
  ID of the feed element.

- `vote`
  Type: `ConnectApi.UpDownVoteValue`
  Specifies the value of the vote for the feed element. Values are:
  - `Down`
  - `Up`
  You can’t specify `None`.

- `pageParam`
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.
**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.VotePage
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

**isCommentEditableByMe(communityId, commentId)**
Discover whether the context user can edit a comment.

API Version
34.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedEntityIsEditable isCommentEditableByMe(String communityId, String commentId)

Parameters

*communityId*
Type: String
Use either the ID for a community, internal, or null.

*commentId*
Type: String
ID of the comment.

Return Value
Type: ConnectApi.FeedEntityIsEditable
If the comment doesn’t support the edit capability, the return value is ConnectApi.NotFoundException.

SEE ALSO:
Edit a Comment

**isFeedElementEditableByMe(communityId, feedElementId)**
Discover whether the context user can edit a feed element.
API Version
34.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedEntityIsEditable isFeedElementEditableByMe(String communityId, String feedElementId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedElementId`
  - Type: `String`
  - ID of the feed element. Feed items are the only type of feed element that can be edited.

Return Value

Type: `ConnectApi.FeedEntityIsEditable`

If the feed element doesn’t support the `edit` capability, the return value is `ConnectApi.NotFoundException`.

SEE ALSO:

- Edit a Feed Element
- Edit a Question Title and Post

### `isModified(communityId, feedType, subjectId, since)`

Discover whether a news feed has been updated or changed. Use this method to poll a news feed for updates.

⚠️ **Important:** This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.

API Version
28.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.FeedModifiedInfo isModified(String communityId,
ConnectApi.FeedType feedType, String subjectId, String since)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - Specifies the type of feed. The only supported type is `News`.

- **subjectId**
  - Type: `String`
  - The ID of the context user or the alias `me`.

- **since**
  - Type: `String`
  - An opaque token containing information about the last modified date of the feed. Retrieve this token from the `FeedElementPage.isModifiedToken` property.

Return Value

- Type: `ConnectApi.FeedModifiedInfo`

`likeComment(communityId, commentId)`

Like a comment for the context user.

API Version

28.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ChatterLike likeComment(String communityId, String commentId)
```
The ID for a comment.

Return Value
Type: ConnectApi.ChatterLike
If the context user has already liked the comment, this method is a non-operation and returns the existing like.

likeFeedElement(communityId, feedElementId)
Like a feed element.

API Version
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterLike likeFeedElement(String communityId, String feedElementId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

Return Value
Type: ConnectApi.ChatterLike
If the feed element doesn’t support the ChatterLikes capability, the return value is ConnectApi.NotFoundException.

Example
ConnectApi.ChatterLike chatterLike = ConnectApi.ChatterFeeds.likeFeedElement(null, '0D5D0000000KuGh');

postCommentToFeedElement(communityId, feedElementId, text)
Post a plain-text comment to a feed element.
API Version
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.Comment postCommentToFeedElement(String communityId, String feedElementId, String text)

Parameters

\textit{communityId}
  Type: \texttt{String}
  Use either the ID for a community, internal, or \texttt{null}.

\textit{feedElementId}
  Type: \texttt{String}
  ID of the feed element.

\textit{text}
  Type: \texttt{String}
  Text of the comment. A comment can contain up to 10,000 characters.

Return Value
Type: \texttt{ConnectApi.Comment}

If the feed element doesn’t support the \texttt{Comments} capability, the return value is \texttt{ConnectApi.NotFoundException}.

Example
```java
ConnectApi.Comment comment = ConnectApi.ChatterFeeds.postCommentToFeedElement(null, '0D5D0000000KuGh', 'I agree with the proposal.');
```

\texttt{postCommentToFeedElement(communityId, feedElementId, comment, feedElementFileUpload)}
Post a rich-text comment to a feed element. Use this method to include mentions and to attach a file.

API Version
32.0

Requires Chatter
Yes
public static ConnectApi.Comment postCommentToFeedElement(String communityId, String feedElementId, ConnectApi.CommentInput comment, ConnectApi.BinaryInput feedElementFileUpload)

Parameters

*communityId*
  Type: String
  Use either the ID for a community, internal, or null.

*feedElementId*
  Type: String
  ID of the feed element.

*comment*
  Type: ConnectApi.CommentInput
  The comment body, including text and mentions, and capabilities, such as information about an attached file. A comment can contain up to 10,000 characters.

*feedElementFileUpload*
  Type: ConnectApi.BinaryInput
  A new binary file to attach to the comment, or null. If you specify a binary file, specify the title and description of the file in the *comment* parameter.

Return Value

Type: ConnectApi.Comment

If the feed element doesn’t support the Comments capability, the return value is `ConnectApi.NotFoundException`.

Example for Posting a Comment with Mentions

You can post comments with mentions two ways. Use the ConnectApiHelper repository on GitHub to write a single line of code, or use this method example.

```java
String communityId = null;
String feedElementId = '0DSD0000000KtW3';

ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput();
ConnectApi.MentionSegmentInput mentionSegmentInput = new ConnectApi.MentionSegmentInput();
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

textSegmentInput.text = 'Does anyone in this group have an idea? ';
messageBodyInput.messageSegments.add(textSegmentInput);

mentionSegmentInput.id = '0DSD00000000oOT';
messageBodyInput.messageSegments.add(mentionSegmentInput);
```
Example for Posting a Comment with an Existing File

```java
String feedElementId = '0D5D0000000KtW3';

ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput();
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

textSegmentInput.text = 'I attached this file from Salesforce Files.';
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);
commentInput.body = messageBodyInput;

ConnectApi.CommentCapabilitiesInput commentCapabilitiesInput = new ConnectApi.CommentCapabilitiesInput();
ConnectApi.ContentCapabilityInput contentCapabilityInput = new ConnectApi.ContentCapabilityInput();

commentCapabilitiesInput.content = contentCapabilityInput;
contentCapabilityInput.contentDocumentId = '069D00000001rNJ';

commentInput.capabilities = commentCapabilitiesInput;

ConnectApi.Comment commentRep =
ConnectApi.ChatterFeeds.postCommentToFeedElement(Network.getNetworkId(), feedElementId, commentInput, null);
```

Example for Posting a Comment with a New File

```java
String feedElementId = '0D5D0000000KtW3';

ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput();
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

textSegmentInput.text = 'Enjoy this new file.';
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);
commentInput.body = messageBodyInput;

ConnectApi.CommentCapabilitiesInput commentCapabilitiesInput = new ConnectApi.CommentCapabilitiesInput();
ConnectApi.ContentCapabilityInput contentCapabilityInput = new ConnectApi.ContentCapabilityInput();

commentCapabilitiesInput.content = contentCapabilityInput;
contentCapabilityInput.contentDocumentId = '069D00000001rNJ';

commentInput.capabilities = commentCapabilitiesInput;

ConnectApi.Comment commentRep =
ConnectApi.ChatterFeeds.postCommentToFeedElement(Network.getNetworkId(), feedElementId, commentInput, null);
```
Example for Posting a Rich-Text Comment with an Inline Image

You can post rich-text comments with inline images and mentions two ways. Use the ConnectApiHelper repository on GitHub to write a single line of code, or use this method example. In this example, the image file is existing content that has already been uploaded to Salesforce.

```java
String communityId = null;
String feedElementId = '0DSR0000000SBEr';
String imageId = '069R00000000IgQ';
String mentionedUserId = '005R0000000DiMz';

ConnectApi.CommentInput input = new ConnectApi.CommentInput();
ConnectApi.TextSegmentInput textSegment;
ConnectApi.MentionSegmentInput mentionSegment;
ConnectApi.MarkupBeginSegmentInput markupBeginSegment;
ConnectApi.MarkupEndSegmentInput markupEndSegment;
ConnectApi.InlineImageSegmentInput inlineImageSegment;

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

markupBeginSegment = new ConnectApi.MarkupBeginSegmentInput();
markupBeginSegment.markupType = ConnectApi.MarkupType.Bold;
messageInput.messageSegments.add(markupBeginSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'Hello ';
messageInput.messageSegments.add(textSegment);

mentionSegment = new ConnectApi.MentionSegmentInput();
mentionSegment.id = mentionedUserId;
messageInput.messageSegments.add(mentionSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = '!'i';
messageInput.messageSegments.add(textSegment);
```
Example for Posting a Rich-Text Comment with a Code Block

```java
String communityId = null;
String feedElementId = '0D5R0000000SBEr';
String codeSnippet = '<html>
	<body>
		Hello, world!
	</body>
</html>
';

ConnectApi.CommentInput input = new ConnectApi.CommentInput();
ConnectApi.TextSegmentInput textSegment;
ConnectApi.MarkupBeginSegmentInput markupBeginSegment;
ConnectApi.MarkupEndSegmentInput markupEndSegment;

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

markupBeginSegment = new ConnectApi.MarkupBeginSegmentInput();
markupBeginSegment.markupType = ConnectApi.MarkupType.Code;
messageInput.messageSegments.add(markupBeginSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = codeSnippet;
messageInput.messageSegments.add(textSegment);

markupEndSegment = new ConnectApi.MarkupEndSegmentInput();
markupEndSegment.markupType = ConnectApi.MarkupType.Code;
messageInput.messageSegments.add(markupEndSegment);

input.body = messageInput;
ConnectApi.ChatterFeeds.postCommentToFeedElement(communityId, feedElementId, input, null);
```

**postFeedElement(communityId, subjectId, feedElementType, text)**

Post a plain-text feed element.

**API Version**
31.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedElement postFeedElement(String communityId, String subjectId, ConnectApi.FeedElementType feedElementType, String text)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `subjectId`
  - Type: `String`
  - The ID of the parent this feed element is being posted to. This value can be the ID of a user, group, or record, or the string `me` to indicate the context user.

- `feedElementType`
  - Type: `ConnectApi.FeedElementType`
  - The only possible value is `FeedItem`.

- `text`
  - Type: `String`
  - The text of the feed element. A feed element can contain up to 10,000 characters.

Return Value

Type: `ConnectApi.FeedElement`

Example

```java
ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), '0F9d0000000TreH',
ConnectApi.FeedElementType.FeedItem, 'On vacation this week.');
```

`postFeedElement(communityId, feedElement)`

Post a rich-text feed element. Include mentions and hashtag topics, attach already uploaded files to a feed element, and associate action link groups with a feed element. You can also use this method to share a feed element and add a comment.

API Version

36.0

Requires Chatter
Yes
public static ConnectApi.FeedElement postFeedElement(String communityId, ConnectApi.FeedElementInput feedElement)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElement
Type: ConnectApi.FeedElementInput
Specify rich text, including mentions. Optionally, specify a link, a poll, or up to 10 existing files.

Return Value
Type: ConnectApi.FeedElement

Example for Posting a Feed Element with a Mention
You can post feed elements with mentions two ways. Use the ConnectApiHelper repository on GitHub to write a single line of code, or use this method example.

```java
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
ConnectApi.MentionSegmentInput mentionSegmentInput = new ConnectApi.MentionSegmentInput();
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
mentionSegmentInput.id = '005RR000000Dme9';
messageBodyInput.messageSegments.add(mentionSegmentInput);
textSegmentInput.text = 'Could you take a look?';
messageBodyInput.messageSegments.add(textSegmentInput);
feedItemInput.body = messageBodyInput;
feedItemInput.feedElementType = ConnectApi.FeedElementType.FeedItem;
feedItemInput.subjectId = '0F9RR0000004CPw';
ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);
```

Example for Posting a Feed Element with Existing Content

```
// Define the FeedItemInput object to pass to postFeedElement
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
feedItemInput.subjectId = 'me';

ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
textSegmentInput.text = 'Would you please review these docs?';
```
// The MessageBodyInput object holds the text in the post
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);
feedItemInput.body = messageBodyInput;

// The FeedElementCapabilitiesInput object holds the capabilities of the feed item.
// For this feed item, we define a files capability to hold the file(s).
List<String> fileIds = new List<String>(){
    fileIds.add('069xx00000000QO');
    fileIds.add('069xx00000000QT');
    fileIds.add('069xx00000000Qn');
    fileIds.add('069xx00000000Qi');
    fileIds.add('069xx00000000Qd');
}

ConnectApi.FilesCapabilityInput filesInput = new ConnectApi.FilesCapabilityInput();
filesInput.items = new List<ConnectApi.FileIdInput>();
for (String fileId : fileIds) {
    ConnectApi.FileIdInput idInput = new ConnectApi.FileIdInput();
    idInput.id = fileId;
    filesInput.items.add(idInput);
}

ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new
ConnectApi.FeedElementCapabilitiesInput();
feedElementCapabilitiesInput.files = filesInput;

feedItemInput.capabilities = feedElementCapabilitiesInput;

// Post the feed item.
ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);

Example for Posting a Rich-Text Feed Element with an Inline Image

You can post rich-text feed elements with inline images and mentions two ways. Use the ConnectApiHelper repository on GitHub to write a single line of code, or use this method example. In this example, the image file is existing content that has already been uploaded to Salesforce. The post also includes text and a mention.

String communityId = null;
String imageId = '069D000000001INA';
String mentionedUserId = '005D0000001QNpr';
String targetUserOrGroupOrRecordId = '005D0000001Gif0';
ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
input.subjectId = targetUserOrGroupOrRecordId;
input.feedElementType = ConnectApi.FeedElementType.FeedItem;

ConnectApi.TextSegmentInput textSegment;
ConnectApi.MentionSegmentInput mentionSegment;
ConnectApi.MarkupBeginSegmentInput markupBeginSegment;
ConnectApi.MarkupEndSegmentInput markupEndSegment;
Example for Posting a Rich-Text Feed Element with a Code Block

```java
String communityId = null;
String targetUserOrGroupOrRecordId = 'me';
String codeSnippet = '<html>
	<body>
		Hello, world!
	</body>
</html>';"
Example for Sharing a Feed Element (in Version 39.0 and Later)

```java
// Define the FeedItemInput object to pass to postFeedElement
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
feedItemInput.subjectId = 'me';
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
textSegmentInput.text = 'Look at this post I'm sharing.';
// The MessageBodyInput object holds the text in the post
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);
feedItemInput.body = messageBodyInput;
ConnectApi.FeedEntityShareCapabilityInput shareInput = new ConnectApi.FeedEntityShareCapabilityInput();
shareInput.feedEntityId = '0D5R0000000SEbc';
ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new ConnectApi.FeedElementCapabilitiesInput();
feedElementCapabilitiesInput.feedEntityShare = shareInput;
feedItemInput.capabilities = feedElementCapabilitiesInput;
// Post the feed item.
ConnectApi.FeedElement feedElement = ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);
```

Example for Sending a Direct Message

```java
// Define the FeedItemInput object to pass to postFeedElement
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();

ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
textSegmentInput.text = 'Thanks for attending my presentation test run this morning. Send me any feedback.';
// The MessageBodyInput object holds the text in the post
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);
feedItemInput.body = messageBodyInput;
// The FeedElementCapabilitiesInput object holds the capabilities of the feed item. // For this feed item, we define a direct message capability to hold the member(s) and the subject.
```
List<String> memberIds = new List<String>();
memberIds.add('005B00000016OUQ');
memberIds.add('005B0000001rIN6');

ConnectApi.DirectMessageCapabilityInput dmInput = new ConnectApi.DirectMessageCapabilityInput();
dmInput.subject = 'Thank you!';
dmInput.membersToAdd = memberIds;

ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new ConnectApi.FeedElementCapabilitiesInput();
feedElementCapabilitiesInput.directMessage = dmInput;

feedItemInput.capabilities = feedElementCapabilitiesInput;

// Post the feed item.
ConnectApi.FeedElement feedElement = ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);

SEE ALSO:
Define an Action Link and Post with a Feed Element
Define an Action Link in a Template and Post with a Feed Element

postFeedElementBatch(communityId, feedElements)
Post a list of feed elements.

API Version
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.BatchResult[] postFeedElementBatch(String communityId, List<ConnectApi.BatchInput> feedElements)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElements
Type: List<ConnectApi.BatchInput>
The list can contain up to 500 ConnectApi.BatchInput objects. In the ConnectApi.BatchInput constructor, the input object must be a concrete instance of the abstract ConnectApi.FeedElementInput class.
Return Value

Type: `ConnectApi.BatchResult[]`

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.FeedElement` object. The returned objects correspond to each of the input objects and are returned in the same order as the input objects. The method call fails only if an error occurs that affects the entire operation (such as a parsing failure). If an individual object causes an error, the error is embedded within the `ConnectApi.BatchResult` list.

Usage

Use this method to post a list of feed elements efficiently. Create a list containing up to 500 objects and insert them all for the cost of one DML statement.

In version 36.0 and later, you can attach only one already uploaded file to each post. The `ConnectApi.BatchInput` has three constructors, but the `postFeedElementBatch` method supports only `ConnectApi.BatchInput(Object input)` in version 35.0 and later. This constructor doesn't support a binary input.

In version 32.0–35.0, this method supports both `ConnectApi.BatchInput(Object input)` and `ConnectApi.BatchInput(Object input, ConnectApi.BinaryInput binary)` constructors. The `ConnectApi.BatchInput(Object input, ConnectApi.BinaryInput binary)` constructor allows for a single binary input.

In each constructor, the input object must be an instance of `ConnectApi.FeedElementInput`.

Example

This trigger bulk posts to the feeds of newly inserted accounts.

```java
trigger postFeedItemToAccount on Account (after insert) {
    Account[] accounts = Trigger.new;
    // Bulk post to the account feeds.

    List<ConnectApi.BatchInput> batchInputs = new List<ConnectApi.BatchInput>();

    for (Account a : accounts) {
        ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();

        input.subjectId = a.id;

        body.messageSegments = new List<ConnectApi.MessageSegmentInput>();

        ConnectApi.TextSegmentInput textSegment = new ConnectApi.TextSegmentInput();
        textSegment.text = 'Let\'s win the ' + a.name + ' account.\n';

        body.messageSegments.add(textSegment);
        input.body = body;

        ConnectApi.BatchInput batchInput = new ConnectApi.BatchInput(input);
        batchInputs.add(batchInput);
    }
```
publishDraftFeedElement(communityId, feedElementId, feedElement)

Publish a draft feed element.

API Version
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElement publishDraftFeedElement(String communityId, String feedElementId, ConnectApi.FeedElementInput feedElement)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element to publish.

feedElement
Type: ConnectApi.FeedElementInput
Use this optional parameter to edit your draft before publishing.

Return Value
Type: ConnectApi.FeedElement
The published feed element has a new ID.

searchFeedElements(communityId, q)

Get the first page of feed elements that match the search criteria.

API Version
31.0

Available to Guest Users
31.0
Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

q
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestSearchFeedElements(communityId, q, result)
  Testing ConnectApi Code

searchFeedElements(communityId, q, sortParam)
Get the first page of sorted feed elements that match the search criteria.

API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes
**Signature**

```java
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, ConnectApi.FeedSortOrder sortParam)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`. 

- **q**
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

- **sortParam**
  - Type: `ConnectApi.FeedSortOrder`
  - Values are:
    - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
    - `CreatedDateDesc`—Sorts by most recent creation date.
    - `LastModifiedDateDesc`—Sorts by most recent activity.
    - `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
    - `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

  If you pass in `null`, the default value `CreatedDateDesc` is used.

**Return Value**

- Type: `ConnectApi.FeedElementPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

- `setTestSearchFeedElements(communityId, q, sortParam, result)`
- `Testing ConnectApi Code`

**searchFeedElements (communityId, q, threadedCommentsCollapsed)**

Get the feed elements and comments that match the search criteria.

**API Version**

44.0
Available to Guest Users
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, Boolean threadedCommentsCollapsed)

Parameters
communityId
 Type: String
 Use either the ID for a community, internal, or null.

q
 Type: String
 Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

threadedCommentsCollapsed
 Type: Boolean
 Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestSearchFeedElements(communityId, q, threadedCommentsCollapsed, result)
  Testing ConnectApi Code

searchFeedElements(communityId, q, pageParam, pageSize)
Get a page of feed elements that match the search criteria.

API Version
31.0
Available to Guest Users
31.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, String pageParam, Integer pageSize)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **q**
  - Type: String
  - Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **pageParam**
  - Type: String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value

- Type: ConnectApi.FeedElementPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- setTestSearchFeedElements(communityId, q, pageParam, pageSize, result)

### searchFeedElements(communityId, q, pageParam, pageSize, threadedCommentsCollapsed)
Get a page of feed elements with comments in a threaded style that match the search criteria.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, String pageParam, Integer pageSize, Boolean threadedCommentsCollapsed)
```

Parameters
- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **q**
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **pageParam**
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.
**pageSize**
  Type: `Integer`
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**threadedCommentsCollapsed**
  Type: `Boolean`
  Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

Return Value
  Type: `ConnectApi.FeedElementPage`

Usage
  To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  - `setTestSearchFeedElements(communityId, q, pageParam, pageSize, threadedCommentsCollapsed, result)`
  - `Testing ConnectApi Code`

`searchFeedElements(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)`
Get a page of sorted feed elements that match the search criteria. Each feed element includes no more than the specified number of comments.

API Version
  31.0

Available to Guest Users
  31.0

Requires Chatter
  Yes

Signature
  ```java
  public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, Integer recentCommentCount, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
  ```
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- setTestSearchFeedElements(communityId, q, recentCommentCount, pageParam, pageSize, sortParam, result)

public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String q)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, Home, Moderation, and PendingReview.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Signature
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  The type of feed. Valid values are Company, DirectMessageModeration, Home, Moderation, and PendingReview.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.

- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Yes

Signature
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
Parameters

**communityId**
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**feedType**
Type: `ConnectApi.FeedType`
The type of feed. Valid values are `Company`, `DirectMessageModeration`, `Home`, `Moderation`, and `PendingReview`.

**recentCommentCount**
Type: `Integer`
Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **ToDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **ToDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `ToDateDesc` is used.

**q**
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
Return Value

Type: ConnectApi.FeedElementPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedFilter filter)

Parameters

communityId

Type: String

Use either the ID for a community, internal, or null.

feedType

Type: ConnectApi.FeedType

The type of feed. The only valid value is Home.

recentCommentCount

Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

When the `sortParam` is `MostViewed`, you must pass in `null` for the `pageParam`.

pageSize
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

When the `sortParam` is `MostViewed`, the `pageSize` must be a value from 1 to 25.

sortParam
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

q
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

filter
Type: `ConnectApi.FeedFilter`
Specifies the feed filters.
- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.

Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.

SolvedQuestions—Feed elements that are questions and that have a best answer.

UnansweredQuestions—Feed elements that are questions and that don’t have any answers.

UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.

UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

Return Value

Type: ConnectApi.FeedElementPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Requires Chatter

Yes
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String q)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Signature
```
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `feedType`
  Type: `ConnectApi.FeedType`
  The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessages`, `Filter`, `Landing`, and `Streams`.

- `subjectId`
  Type: `String`
  If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

- `pageParam`
  Type: `String`
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- `pageSize`
  Type: `Integer`
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- `sortParam`
  Type: `ConnectApi.FeedSortOrder`
  Order of feed items in the feed.
  - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
  - `CreatedDateDesc`—Sorts by most recent creation date.
  - `LastModifiedDateDesc`—Sorts by most recent activity.
  - `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
  - `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in null, the default value CreatedDateDesc is used.

**q**

Type: **String**

Search term. Searches keywords in the user or group name. A minimum of one character is required. This parameter does not support wildcards. This parameter is required.

Return Value

Type: **ConnectApi.FeedElementPage**

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters

**communityId**

Type: **String**

Use either the ID for a community, internal, or null.
feedType
Type: `ConnectApi.FeedType`
The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
Type: `String`
If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

recentCommentCount
Type: `Integer`
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

pageSize
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

sortParam
Type: `ConnectApi.FeedSortOrder`
Values are:

- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- Relevance—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

q
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Yes

Signature
```java
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId,
    ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
    ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
    ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedFilter filter)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `feedType`
  Type: `ConnectApi.FeedType`
  Value must be `ConnectApi.FeedType.UserProfile`.
- `subjectId`
  Type: `String`
The ID of any user. To specify the context user, use the user ID or the alias `me`.

**recentCommentCount**
Type: `Integer`
Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**
Type: `String`
One or more keywords to search for in the feed elements visible to the context user. The search string can contain wildcards and must contain at least two characters that aren’t wildcards. See `Wildcards`.

**filter**
Type: `ConnectApi.FeedFilter`
Value must be `ConnectApi.FeedFilter.CommunityScoped`. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out.

**Return Value**
Type: `ConnectApi.FeedElementPage`
Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Parameters
communityId
    Type: String
    Use either the ID for a community, internal, or null.

feedType
    Type: ConnectApi.FeedType
    Value must be ConnectApi.FeedType.Record.

subjectId
    Type: String
    The ID of a case.

recentCommentCount
    Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:

- **CreateDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreateDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreateDateDesc` is used.

**q**
Type: `String`
One or more keywords to search for in the feed elements visible to the context user. The search string can contain wildcards and must contain at least two characters that aren’t wildcards. See Wildcards.

**customFilter**
Type: `String`
Custom filter that applies only to the case feed. See `customFeedFilter` in the Metadata API Developer Guide for supported values.

Return Value
Type: `ConnectApi.FeedElementPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Yes

Signature

public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

Return Value
Type: ConnectApi.FeedElementPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```
setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, result)
```

Testing ConnectApi Code

```
searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, filter)
```

Get a page of sorted and filtered feed elements from a feed for a record or user that match the search criteria. Each feed element includes no more than the specified number of comments. Specify whether to return feed elements posted by internal (non-community) users only.

API Version

32.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, ConnectApi.FeedFilter filter)
```

Parameters

```
communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  Any record ID, including a group ID.
```
recentCommentCount  
Type: Integer  
Maximum number of comments to return with each feed element. The default value is 3.

density  
Type: ConnectApi.FeedDensity  
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam  
Type: String  
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize  
Type: Integer  
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam  
Type: ConnectApi.FeedSortOrder  
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

q  
Type: String  
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

showInternalOnly  
Type: Boolean  
Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

filter  
Type: ConnectApi.FeedFilter  
Specifies the feed filters.
- AllQuestions—Feed elements that are questions.
- AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.

- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.

- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.

- **SolvedQuestions**—Feed elements that are questions and that have a best answer.

- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.

- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.

- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, filter, result)`

Testing ConnectApi Code

`searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, customFilter)`

Get a page of sorted and filtered feed elements from a case feed that match the search criteria.

API Version

40.0

Available to Guest Users

40.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, String customFilter)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.Record`.

- **subjectId**
  - Type: `String`
  - The ID of a case.

- **recentCommentCount**
  - Type: `Integer`
  - Maximum number of comments to return with each feed element. The default value is 3.

- **density**
  - Type: `ConnectApi.FeedDensity`
  - Specify the amount of content in a feed.
    - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- **pageParam**
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **sortParam**
  - Type: `ConnectApi.FeedSortOrder`
  - Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

**q**

Type: String

Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**showInternalOnly**

Type: Boolean

Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

**filter**

Type: String

Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

**Return Value**

Type: ConnectApi.FeedElementPage

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, customFilter, result)

Testing ConnectApi Code

**searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q)**

Get the feed elements from a feed filtered by a key prefix that match the search criteria.

**API Version**

31.0

**Requires Chatter**

Yes
Signature

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, String q)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **subjectId**
  - Type: `String`
  - The ID of the context user or the alias `me`.

- **keyPrefix**
  - Type: `String`
  - A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

- **q**
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q, result)`
- Testing ConnectApi Code

```java
searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q)
```

Get a page of sorted feed elements from a feed filtered by a key prefix that match the search criteria.

API Version

31.0

Requires Chatter

Yes
public static ConnectApi.FeedElementPage searchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedElementPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```java
setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q, result)
```

Testing ConnectApi Code

```java
searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)
```

Get a page of sorted feed elements from a feed filtered by a key prefix that match the search criteria. Each feed element includes no more than the specified number of comments.

API Version

31.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, internal, or `null`.

- **subjectId**
  Type: `String`
  The ID of the context user or the alias `me`.

- **keyPrefix**
  Type: `String`
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of `005` and Group objects have a prefix of `0F9`.

- **recentCommentCount**
  Type: `Integer`
  Maximum number of comments to return with each feed element. The default value is `3`.

- **density**
  Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**

Type: **String**

The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in **null**, the first page is returned.

**pageSize**

Type: **Integer**

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in **null**, the default size is 25.

**sortParam**

Type: **ConnectApi.FeedSortOrder**

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in **null**, the default value CreatedDateDesc is used.

**q**

Type: **String**

Required and cannot be **null**. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See **Wildcards**.

**Return Value**

Type: **ConnectApi.FeedElementPage**

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with **setTest**). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

- **setTestSearchFeedElementsInFilterFeed**
- **Testing ConnectApi Code**
**searchStreams(communityId, q)**
Search the Chatter feed streams for the context user.

API Version
40.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q)
```

Parameters
- `communityId`  
  Type: `String`  
  Use either the ID for a community, internal, or `null`.

- `q`  
  Type: `String`  
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

Return Value
Type: `ConnectApi.ChatterStreamPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestSearchStreams(communityId, q, result)`
- `Testing ConnectApi Code`

**searchStreams(communityId, q, sortParam)**
Search and sort the Chatter feed streams for the context user.

API Version
40.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q,
ConnectApi.SortOrder sortParam)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `q`
  Type: `String`
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- `sortParam`
  Type: `ConnectApi.SortOrder`
  Specifies the sort order. Values are:
  - **Ascending**—Items are in ascending alphabetical order (A-Z).
  - **Descending**—Items are in descending alphabetical order (Z-A).
  - **MostRecentlyViewed**—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.
    If not specified, default value is **Ascending**.

Return Value

Type: `ConnectApi.ChatterStreamPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchStreams(communityId, q, sortParam, result)`
- Testing ConnectApi Code

`searchStreams(communityId, q, pageParam, pageSize)`
Search the Chatter feed streams for the context user and return a page of results.

API Version

40.0
Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q,
Integer pageParam, Integer pageSize)
```

Parameters
```
communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.
```

Return Value
Type: ConnectApi.ChatterStreamPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
```
    setTestSearchStreams(communityId, q, pageParam, pageSize, result)
```
Testing ConnectApi Code

```
searchStreams(communityId, q, pageParam, pageSize, sortParam)
```
Search the Chatter feed streams for the context user and return a sorted page of results.

API Version
40.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q,
Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `q`
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- `pageParam`
  - Type: `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

- `sortParam`
  - Type: `ConnectApi.SortOrder`
  - Specifies the sort order. Values are:
    - **Ascending**—Items are in ascending alphabetical order (A-Z).
    - **Descending**—Items are in descending alphabetical order (Z-A).
    - **MostRecentlyViewed**—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.
  
  If not specified, default value is **Ascending**.

Return Value

- Type: `ConnectApi.ChatterStreamPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchStreams(communityId, q, pageParam, pageSize, sortParam, result)`
- Testing ConnectApi Code
searchStreams(communityId, q, pageParam, pageSize, sortParam, globalScope)

Search the Chatter feed streams from all communities for the context user and return a sorted page of results.

API Version
41.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam, Boolean globalScope)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

sortParam
Type: ConnectApi.SortOrder
Specifies the sort order. Values are:
- Ascending—Items are in ascending alphabetical order (A-Z).
- Descending—Items are in descending alphabetical order (Z-A).
- MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.
If not specified, default value is Ascending.

globalScope
Type: Boolean
Specifies whether to get streams from all the context user’s communities, regardless of the communityId value.

Tip: If you know the community ID for the streams, we recommend setting globalScope to false.
Return Value
Type: `ConnectApi.ChatterStreamPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

```java
setCommentIsVerified(communityId, commentId, isVerified)
```
Mark a comment as verified or unverified.

API Version
41.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.VerifiedCapability setCommentIsVerified(String communityId, String commentId, Boolean isVerified)
```

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`commentId`
Type: `String`
ID of the comment on a question post. Only one comment on a question post can be marked as verified.

`isVerified`
Type: `Boolean`
Specifies whether to mark the comment as verified (`true`) or unverified (`false`).

Only verified comments can be marked as unverified, and only unverified comments can be marked as verified.

Return Value
Type: `ConnectApi.VerifiedCapability`
If the comment doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

```java
setCommentIsVerifiedByAnonymized(communityId, commentId, isVerified, isVerifiedByAnonymized)
```
Mark a comment as verified by an anonymous user.
API Version
43.0

Requires Chatter
Yes

Signature
public static ConnectApi.VerifiedCapability setCommentIsVerifiedByAnonymized(String communityId, String commentId, Boolean isVerified, Boolean isVerifiedByAnonymized)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
ID of the comment on a question post. Only one comment on a question post can be marked as verified.

isVerified
Type: Boolean
Specifies whether to mark the comment as verified (true) or unverified (false).

Only verified comments can be marked as unverified, and only unverified comments can be marked as verified.

isVerifiedByAnonymized
Type: Boolean
Specifies whether to mark the comment as verified by an anonymous user (true).

If a user previously verified a comment and then requested the activity to be deleted, use isVerifiedByAnonymized to maintain the verification and anonymize the value of lastVerifiedByUser.

You can't set isVerified and isVerifiedByAnonymized to true at the same time. isVerifiedByAnonymized can be set to true only if isVerified is already set to true.

You can't set isVerifiedByAnonymized to false. After isVerifiedByAnonymized is set to true, it can be undone only when another user marks the comment as unverified and then re-verifies the comment.

Return Value
Type: ConnectApi.VerifiedCapability
If the comment doesn't support this capability, the return value is ConnectApi.NotFoundException.

setCommentVote(communityId, commentId, upDownVote)
Upvote or downvote a comment.

API Version
41.0
Requires Chatter
Yes

Signature

```java
public static ConnectApiUpDownVoteCapability setCommentVote(String communityId, String commentId, ConnectApiUpDownVoteCapabilityInput upDownVote)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `commentId`
  - Type: `String`
  - ID of the comment.

- `upDownVote`
  - Type: `ConnectApiUpDownVoteCapabilityInput`
  - A `ConnectApiUpDownVoteCapabilityInput` object that includes your vote.

Return Value

- Type: `ConnectApiUpDownVoteCapability`

If the comment doesn't support this capability, the return value is `ConnectApiNotFoundException`.

---

`setFeedCommentStatus(communityId, commentId, status)`

Set the status of a comment.

API Version
38.0

Requires Chatter
Yes

Signature

```java
public static ConnectApiStatusCapability setFeedCommentStatus(String communityId, String commentId, ConnectApiStatusCapabilityInput status)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.
commentId
Type: String
ID of the comment.

status
Type: ConnectApi.StatusCapabilityInput
A ConnectApi.StatusCapabilityInput object that includes the status you want to set.

Return Value
Type: ConnectApi.StatusCapability
If the comment doesn’t support this capability, the return value is ConnectApi.NotFoundException.

Usage
Only users with the Can Approve Feed Post and Comment permission can set the status of a feed post or comment.

`setFeedElementIsClosed(communityId, feedElementId, isClosed)`
Set a feed element to closed.
Users can’t edit (specifically the feed item body or title), comment on, or delete a closed feed element. If the closed feed element is a poll, users can’t vote on it. Users can’t edit (specifically the comment body) or delete a comment on a closed feed element or select or remove it as best answer.
Admins and moderators can edit and delete closed feed elements and comments on closed feed elements. Admins and moderators can select or remove the best answer status on comments on closed feed elements.

API Version
43.0

Requires Chatter
Yes

Signature
`public static ConnectApi.CloseCapability setFeedElementIsClosed(String communityId, String feedElementId, Boolean isClosed)`

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.
**isclosed**
Type: Boolean
Specifies whether to set the feed element to closed (true) or not (false).

Return Value
Type: ConnectApi.CloseCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

**setFeedElementVote(communityId, feedElementId, upDownVote)**
Upvote or downvote a feed element.

API Version
41.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.UpDownVoteCapability setFeedElementVote(String communityId, String feedElementId, ConnectApi.UpDownVoteCapabilityInput upDownVote)
```

Parameters
- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.
- **feedElementId**
  Type: String
  ID of the feed element.
- **upDownVote**
  Type: ConnectApi.UpDownVoteCapabilityInput
  A ConnectApi.UpDownVoteCapabilityInput object that includes your vote.

Return Value
Type: ConnectApi.UpDownVoteCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

**setFeedEntityStatus(communityId, feedElementId, status)**
Set the status of a feed post.
API Version
37.0

Requires Chatter
Yes

Signature
public static ConnectApi.StatusCapability setFeedEntityStatus(String communityId, String feedElementId, ConnectApi.StatusCapabilityInput status)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

status
Type: ConnectApi.StatusCapabilityInput
A ConnectApi.StatusCapabilityInput object that includes the status you want to set.

Return Value
Type: ConnectApi.StatusCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

Usage
Only users with the Can Approve Feed Post and Comment permission can set the status of a feed post or comment.

setIsMutedByMe(communityId, feedElementId, isMutedByMe)
Mute or unmute a feed element.

API Version
35.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.MuteCapability setIsMutedByMe(String communityId, String feedElementId, Boolean isMutedByMe)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedElementId`
  - Type: `String`
  - ID of the feed element.

- `isMutedByMe`
  - Type: `Boolean`
  - Indicates whether the feed element is muted for the context user. Default value is `false`.

Return Value

- Type: `ConnectApi.MuteCapability`
- If the feed element doesn’t support this capability, the return value is `ConnectApiNotFoundException`.

---

**setIsReadByMe(communityId, feedElementId, readBy)**

Mark a feed element as read for the context user using an input class.

API Version

40.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ReadByCapability setIsReadByMe(String communityId, String feedElementId, ConnectApi.ReadByCapabilityInput readBy)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedElementId`
  - Type: `String`
  - ID of the feed element to mark as read.
**setIsReadByMe**(communityId, feedElementId, isReadByMe)

Mark a feed element as read for the context user.

API Version

40.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ReadByCapability setIsReadByMe(String communityId, String feedElementId, Boolean isReadByMe)
```

Parameters

**communityId**

Type: String

Use either the ID for a community, internal, or null.

**feedElementId**

Type: String

ID of the feed element to mark as read.

**isReadByMe**

Type: Boolean

Specifies to mark the feed element as read (true) for the context user.

Return Value

Type: ConnectApi.ReadByCapability

If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

**updateComment**(communityId, commentId, comment)

Edit a comment.
API Version
34.0

Requires Chatter
Yes

Signature
public static ConnectApi.Comment updateComment(String communityId, String commentId, ConnectApi.CommentInput comment)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
ID of the comment to be edited.

comment
Type: ConnectApi.CommentInput
Information about the comment to be edited.

Return Value
Type: ConnectApi.Comment
If the comment doesn't support the edit capability, the return value is ConnectApi.NotFoundException.

Example

String commentId;
String communityId = Network.getNetworkId();

// Get the last feed item created by the context user.
List<FeedItem> feedItems = [SELECT Id FROM FeedItem WHERE CreatedById = :UserInfo.getUserId()
ORDER BY CreatedDate DESC];
if (feedItems.isEmpty()) {
    // Return null within anonymous apex.
    return null;
}
String feedElementId = feedItems[0].id;

ConnectApi.CommentPage commentPage =
ConnectApi.ChatterFeeds.getCommentsForFeedElement(communityId, feedElementId);
if (commentPage.items.isEmpty()) {
    // Return null within anonymous apex.
    return null;
}
commentId = commentPage.items[0].id;
ConnectApi.FeedEntityIsEditable isEditable =
ConnectApi.ChatterFeeds.isCommentEditableByMe(communityId, commentId);

if (isEditable.isEditableByMe == true){
    ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput();
    ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

    messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
    textSegmentInput.text = 'This is my edited comment.';
    messageBodyInput.messageSegments.add(textSegmentInput);

    commentInput.body = messageBodyInput;
    ConnectApi.Comment editedComment = ConnectApi.ChatterFeeds.updateComment(communityId, commentId, commentInput);
}

updateDirectMessage(communityId, feedElementId, directMessage)
Update the members of a direct message.

API Version
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.DirectMessageCapability updateDirectMessage(String communityId, String feedElementId, ConnectApi.DirectMessageCapabilityInput directMessage)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

directMessage
Type: ConnectApi.DirectMessageCapabilityInput
A ConnectApi.DirectMessageCapabilityInput body that includes the members to add and remove.
Return Value
Type: `ConnectApi.DirectMessageCapability`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

`updateFeedElement(communityId, feedElementId, feedElement)`
Edit a feed element.

API Version
34.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.FeedElement updateFeedElement(String communityId, String feedElementId, ConnectApi.FeedElementInput feedElement)
```

Parameters
- `communityId`  
  Type: `String`  
  Use either the ID for a community, internal, or `null`.
- `feedElementId`  
  Type: `String`  
  ID of the feed element to be edited. Feed items are the only type of feed element that can be edited.
- `feedElement`  
  Type: `ConnectApi.FeedElementInput`  
  Information about the feed item to be edited.

Return Value
Type: `ConnectApi.FeedElement`
If the feed element doesn’t support the `edit` capability, the return value is `ConnectApi.NotFoundException`.

Example for Editing a Feed Post
```
String communityId = Network.getNetworkId();

// Get the last feed item created by the context user.
List<FeedItem> feedItems = [SELECT Id FROM FeedItem WHERE CreatedById = :UserInfo.getUserId() ORDER BY CreatedDate DESC];
if (feedItems.isEmpty()) {
    // Return null within anonymous apex.
    return null;
```
Example for Editing a Question Title and Post

```java
String communityId = Network.getNetworkId();

// Get the last feed item created by the context user.
List<FeedItem> feedItems = (SELECT Id FROM FeedItem WHERE CreatedById = :UserInfo.getUserId()
    ORDER BY CreatedDate DESC);
if (feedItems.isEmpty()) {
    // Return null within anonymous apex.
    return null;
}
String feedElementId = feedItems[0].id;

ConnectApi.FeedEntityIsEditable isEditable =
    ConnectApi.ChatterFeeds.isFeedElementEditableByMe(communityId, feedElementId);

if (isEditable.isEditableByMe == true){
    ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
    ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new
        ConnectApi.FeedElementCapabilitiesInput();
    ConnectApi.QuestionAndAnswersCapabilityInput questionAndAnswersCapabilityInput = new
        ConnectApi.QuestionAndAnswersCapabilityInput();
    ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
    messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
    textSegmentInput.text = 'This is my edited question.';
    messageBodyInput.messageSegments.add(textSegmentInput);
    feedItemInput.body = messageBodyInput;
    ConnectApi.FeedElement editedFeedElement =
        ConnectApi.ChatterFeeds.updateFeedElement(communityId, feedElementId, feedItemInput);
}
```
feedItemInput.capabilities = feedElementCapabilitiesInput;
feedElementCapabilitiesInput.questionAndAnswers = questionAndAnswersCapabilityInput;
questionAndAnswersCapabilityInput.questionTitle = 'Where is my edited question?';

ConnectApi.FeedElement editedFeedElement =
ConnectApi.ChatterFeeds.updateFeedElement(communityId, feedElementId, feedItemInput);
}

updateFeedElementBookmarks(communityId, feedElementId, bookmarks)

Bookmark a feed element or remove a bookmark from a feed element using an input class.

API Version
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.BookmarksCapability updateFeedElementBookmarks(String communityId, String feedElementId, ConnectApi.BookmarksCapabilityInput bookmarks)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

bookmarks
Type: ConnectApi.BookmarksCapabilityInput
Information about a bookmark.

Return Value
Type: ConnectApi.BookmarksCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

updateFeedElementBookmarks(communityId, feedElementId, isBookmarkedByCurrentUser)

Bookmark a feed element or remove a bookmark from a feed element.
API Version
32.0

Requires Chatter
Yes

Signature
`public static ConnectApi.BookmarksCapability updateFeedElementBookmarks(String communityId, String feedElementId, Boolean isBookmarkedByCurrentUser)`

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `feedElementId`
  Type: `String`
  ID of the feed element.
- `isBookmarkedByCurrentUser`
  Type: `Boolean`
  Specify whether to bookmark the feed element (`true`) or not (`false`).

Return Value
Type: `ConnectApi.BookmarksCapability`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

Example
```
ConnectApi.BookmarksCapability bookmark =
ConnectApi.ChatterFeeds.updateFeedElementBookmarks(null, '0D5D0000000KuGh', true);
```

`updateFeedElementReadByCapabilityBatch(communityId, feedElementIds, readBy)`
Mark multiple feed elements as read by the context user at the same time using an input class.

API Version
40.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.BatchResult[] updateFeedElementReadByCapabilityBatch(String communityId, List<String> feedElementIds, ConnectApi.ReadByCapabilityInput readBy)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedElementIds`
  - Type: `List<String>`
  - Up to 500 feed element IDs to mark as read.

- `readBy`
  - Type: `ConnectApi.ReadByCapabilityInput`
  - A `ConnectApi.ReadByCapabilityInput` body indicating to mark the feed elements as read.

Return Value

- Type: `ConnectApi.BatchResult[]`
- If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.
- The returned objects correspond to each of the input objects and are returned in the same order as the input objects.
- The method call fails only if an error occurs that affects the entire operation (such as a parsing failure). If an individual object causes an error, the error is embedded within the `ConnectApi.BatchResult` list.

**updateFeedElementReadByCapabilityBatch(communityId, feedElementIds, isReadByMe)**

Mark multiple feed elements as read by the context user at the same time.

API Version

40.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.BatchResult[] updateFeedElementReadByCapabilityBatch(String communityId, List<String> feedElementIds, Boolean isReadByMe)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedElementIds`
  - Type: `List<String>`
  - Up to 500 feed element IDs to mark as read.

- `isReadByMe`
  - Type: `Boolean`
  - Indicates whether the feed elements should be marked as read by the current user.
feedElementIds
Type: List<String>
Up to 500 feed element IDs to mark as read.

isReadByMe
Type: Boolean
Specifies to mark the feed element as read (true) for the context user.

Return Value
Type: ConnectApi.BatchResult[]
If the feed element doesn't support this capability, the return value is ConnectApi.NotFoundException.

updateLikeForComment(communityId, commentId, isLikedByCurrentUser)
Like or unlike a comment.

API Version
39.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterLikePage updateLikeForComment(String communityId, String commentId, Boolean isLikedByCurrentUser)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
ID of the comment.

isLikedByCurrentUser
Type: Boolean
Specifies if the context user likes (true) or unlikes (false) the comment.

Return Value
Type: ConnectApi.ChatterLikePage
updateLikeForFeedElement(communityId, feedElementId, isLikedByCurrentUser)
Like or unlike a feed element.

API Version
39.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterLikePage updateLikeForFeedElement(String communityId, String feedElementId, Boolean isLikedByCurrentUser)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedElementId
  Type: String
  ID of the feed element.

isLikedByCurrentUser
  Type: Boolean
  Specifies if the context user likes (true) or unlikes (false) the feed element.

Return Value
Type: ConnectApi.ChatterLikePage
If the feed element doesn’t support the ChatterLikes capability, the return value is ConnectApi.NotFoundException.

updatePinnedFeedElements(communityId, feedType, subjectId, pin)
Pin or unpin feed elements to a group or topic feed.

API Version
41.0

Available to Guest Users
41.0

Requires Chatter
Yes
public static ConnectApi.PinCapability updatePinnedFeedElements(String communityId, ConnectApi.FeedType feedType, String subjectId, ConnectApi.PinCapabilityInput pin)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Record and Topics.

subjectId
Type: String
If feedType is Record, subjectId must be a group ID. If feedType is Topics, subjectId must be a topic ID.

pin
Type: ConnectApi.PinCapabilityInput
A ConnectApi.PinCapabilityInput object indicating the feed element to pin or unpin.

Return Value
Type: ConnectApi.PinCapability
If the feed doesn’t support this capability, the return value is ConnectApi.NotFoundException.

updateStream(communityId, streamId, streamInput)
Update a Chatter feed stream.

API Version
39.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterStream updateStream(String communityId, String streamId, ConnectApi.ChatterStreamInput streamInput)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.
streamId
   Type: String
   ID of the Chatter feed stream.

streamInput
   Type: ConnectApi.ChatterStreamInput

Return Value
   Type: ConnectApi.ChatterStream

voteOnFeedElementPoll(communityId, feedElementId, myChoiceId)
Vote on a poll or change your vote on a poll.

API Version
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.PollCapability voteOnFeedElementPoll(String communityId, String feedElementId, String myChoiceId)

Parameters
communityId
   Type: String
   Use either the ID for a community, internal, or null.

feedElementId
   Type: String
   ID of the feed element.

myChoiceId
   Type: String
   ID of the poll item you’re voting for. The key prefix for poll items is 09A.

Return Value
   Type: ConnectApi.PollCapability Class
   If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.
Example

```java
ConnectApi.PollCapability poll = ConnectApi.ChatterFeeds.voteOnFeedElementPoll(null, '0D5D0000000XZaUKAW', '09AD000000000TKMAY');
```

ChatterFeeds Test Methods

The following are the test methods for ChatterFeeds. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

IN THIS SECTION:

- `setTestGetFeedElementsFromFeed(communityId, feedType, result)`
  Register a ConnectApi.FeedElementPage object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

- `setTestGetFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)`
  Register a ConnectApi.FeedElementPage object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

- `setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, result)`
  Register a ConnectApi.FeedElementPage object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

- `setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, result)`
  Register a ConnectApi.FeedElementPage object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

- `setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, threadedCommentsCollapsed, result)`
  Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.getFeedElementsFromFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

- `setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, result)`
  Register a ConnectApi.FeedElementPage object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

- `setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, result)`
  Register a ConnectApi.FeedElementPage object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

- `setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, result)`
  Register a ConnectApi.FeedElementPage object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

- `setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly, result)`
  Register a ConnectApi.FeedElementPage object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.
setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, threadedCommentsCollapsed, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.getFeedElementsFromFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestGetFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching getFeedElementsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching getFeedElementsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, customFilter, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching getFeedElementsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, customFilter, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching getFeedElementsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, customFilter, threadedCommentsCollapsed, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching getFeedElementsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.
setTestGetFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, result)

Register a ConnectApi.FeedElementPage object to be returned when the getFeedElementsFromFilterFeedUpdatedSince method is called in a test context.

setTestGetFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, filter, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, customFilter, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, filter, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, customFilter, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetRelatedPosts(communityId, feedElementId, filter, maxResults, result)

Register a ConnectApi.RelatedFeedPosts object to be returned when the matching ConnectApi.getRelatedPosts(communityId, feedElementId, filter, maxResults) method is called in a test context. Use the method with the same parameters or you receive an exception.
setTestGetTopUnansweredQuestions(communityId, result) (Pilot)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.getTopUnansweredQuestions method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestGetTopUnansweredQuestions(communityId, filter, result) (Pilot)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.getTopUnansweredQuestions method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestGetTopUnansweredQuestions(communityId, pageSize, result) (Pilot)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.getTopUnansweredQuestions method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestGetTopUnansweredQuestions(communityId, filter, pageSize, result) (Pilot)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.getTopUnansweredQuestions method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestSearchFeedElements(communityId, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you
receive an exception.

setTestSearchFeedElements(communityId, q, sortParam, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you
receive an exception.

setTestSearchFeedElements(communityId, q, threadedCommentsCollapsed, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you
receive an exception.

setTestSearchFeedElements(communityId, q, pageParam, pageSize, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you
receive an exception.

setTestSearchFeedElements(communityId, q, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you
receive an exception.

setTestSearchFeedElements(communityId, q, recentCommentCount, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you
receive an exception.
setTestSearchFeedElementsInFeed(communityId, feedType, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, customFilter, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.
setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, filter, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchStreams(communityId, q, result)

Register a ConnectApi.ChatterStreamPage object to be returned when the matching ConnectApi.searchStream(communityId, q) method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchStreams(communityId, q, sortParam, result)

Register a ConnectApi.ChatterStreamPage object to be returned when the matching ConnectApi.searchStream(communityId, q, sortParam) method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchStreams(communityId, q, pageParam, pageSize, result)

Register a ConnectApi.ChatterStreamPage object to be returned when the matching ConnectApi.searchStreams(communityId, q, pageParam, pageSize) method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchStreams(communityId, q, pageParam, pageSize, sortParam, result)

Register a ConnectApi.ChatterStreamPage object to be returned when the matching ConnectApi.searchStreams(communityId, q, pageParam, pageSize, sortParam) method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchStreams(communityId, q, pageParam, pageSize, sortParam, globalScope, result)

Register a ConnectApi.ChatterStreamPage object to be returned when the matching ConnectApi.searchStreams(communityId, q, pageParam, pageSize, sortParam, globalScope) method is called in a test context. Use the method with the same parameters or you receive an exception.
**setTestGetFeedElementsFromFeed(communityId, feedType, result)**

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
```java
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, ConnectApi.FeedElementPage result)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.

- `feedType`
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

- `result`
  - Type: `ConnectApi.FeedElementPage`
  - The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `getFeedElementsFromFeed(communityId, feedType)`
- Testing ConnectApi Code

**setTestGetFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)**

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0
Signature

public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The only valid value for this parameter is Company.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)
Testing ConnectApi Code
setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, 
pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrdersortParam, ConnectApi.FeedElementPageresult)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)
Testing ConnectApi Code

setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
32.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. The only valid value is Home.
recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
  • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
     If you pass in null, the default value CreatedDateDesc is used.

filter
Type: ConnectApi.FeedFilter
Specifies the feed filters.
  • AllQuestions—Feed elements that are questions.
  • AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
  • CommunityScoped—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.
  • QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
  • QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**result**

Type: `ConnectApi.FeedElementPage`

The object containing test data.

Return Value

Type: Void

SEE ALSO:

- `getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter)`
- Testing ConnectApi Code

`setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed, result)`

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.getFeedElementsFromFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

44.0

**Signature**

```java
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)
```

**Parameters**

- **communityId**
  Type: `String`
  Use either the ID for a community, internal, or `null`.
**feedType**
Type: `ConnectApi.FeedType`
The type of feed. The only valid value is `Home`.

**recentCommentCount**
Type: `Integer`
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

**filter**
Type: `ConnectApi.FeedFilter`
Specifies the feed filters.
- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.

Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.

SolvedQuestions—Feed elements that are questions and that have a best answer.

UnansweredQuestions—Feed elements that are questions and that don't have any answers.

UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.

UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version

31.0

Signature

public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)

Parameters

private String communityId
    Type: String
    Use either the ID for a community, internal, or null.

private ConnectApi.FeedType feedType
    Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.
API Version
31.0

Signature

public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

**result**

Type: `ConnectApi.FeedElementPage`

The object containing test data.

**Return Value**

Type: Void

**SEE ALSO:**

**Signature**

```java
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedElementPage result)
```

**Parameters**

- **communityId**
  Type: `String`
  Use either the ID for a community, internal, or null.

- **feedType**
  Type: `ConnectApi.FeedType`
  Value must be `ConnectApi.FeedType.Record`.
**subjectId**
Type: **String**
Any record ID, including a group ID.

**recentCommentCount**
Type: **Integer**
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: **ConnectApi.FeedDensity**
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: **String**
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPositionToken or nextPageToken. If you pass in **null**, the first page is returned.

**pageSize**
Type: **Integer**
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in **null**, the default size is 25.

**sortParam**
Type: **ConnectApi.FeedSortOrder**
Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in **null**, the default value CreatedDateDesc is used.

**showInternalOnly**
Type: **Boolean**
Specifies whether to show only feed items from internal (non-community) users (**true**), or not (**false**). The default value is **false**.

**result**
Type: **ConnectApi.FeedElementPage**
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)

Testing ConnectApi Code

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
35.0

Signature

public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.UserProfile.

subjectId
Type: String
The ID of any user. To specify the context user, use the user ID or the alias me.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
  • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

**filter**
  Type: ConnectApi.FeedFilter
  Value must be ConnectApi.FeedFilter.CommunityScoped. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out. Currently, feed elements scoped to communities have a User or a Group parent record. However, other parent record types could be scoped to communities in the future.

**result**
  Type: ConnectApi.FeedElementPage
  The object containing test data.

Return Value
  Type: Void

SEE ALSO:
  getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter)
  Testing ConnectApi Code
Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.getFeedElementsFromFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
44.0

Signature
```java
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `feedType`
  Type: `ConnectApi.FeedType`
  Value must be `ConnectApi.FeedType.UserProfile`.

- `subjectId`
  Type: `String`
  The ID of any user. To specify the context user, use the user ID or the alias `me`.

- `recentCommentCount`
  Type: `Integer`
  Maximum number of comments to return with each feed element. The default value is 3.

- `density`
  Type: `ConnectApi.FeedDensity`
  Specify the amount of content in a feed.
  - `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- `pageParam`
  Type: `String`
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.
**pageSize**  
Type: Integer  
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**  
Type: ConnectApi.FeedSortOrder  
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

**filter**  
Type: ConnectApi.FeedFilter  
Value must be ConnectApi.FeedFilter.CommunityScoped. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out. Currently, feed elements scoped to communities have a User or a Group parent record. However, other parent record types could be scoped to communities in the future.

**threadedCommentsCollapsed**  
Type: Boolean  
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

**result**  
Type: ConnectApi.FeedElementPage  
The object containing test data.

Return Value  
Type: Void

SEE ALSO:

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String customFilter, ConnectApi.FeedElementPage result)

Parameters

**communityId**
Type: String
Use either the ID for a community, `internal`, or `null`.

**feedType**
Type: `ConnectApi.FeedType`
Value must be `ConnectApi.FeedType.Record`.

**subjectId**
Type: String
The ID of a case.

**recentCommentCount**
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value CreatedDateDesc is used.

customFilter
Type: String

Custom filter that applies only to the case feed. See `customFeedFilter` in the Metadata API Developer Guide for supported values.

result
Type: ConnectApi.FeedElementPage

The object containing test data.

Return Value
Type: Void

```

Parameters

`communityId`
Type: String

Use either the ID for a community, internal, or `null`. 

1282
**feedType**
Type: `ConnectApi.FeedType`
Value must be `ConnectApi.FeedType.Record`.

**subjectId**
Type: `String`
Any record ID, including a group ID.

**recentCommentCount**
Type: `Integer`
The maximum number of comments to return with each feed item. The default value is 3.

**elementsPerBundle**
Type: `Integer`
Maximum number of feed elements per bundle. The default and maximum value is 10.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**showInternalOnly**
Type: `Boolean`
Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`. 
result
result
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly)`

Testing ConnectApi Code

```java
setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, filter, result)
```

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
32.0

Signature
```java
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, internal, or null.

- `feedType`
  Type: `ConnectApi.FeedType`
  Value must be `ConnectApi.FeedType.Record`.

- `subjectId`
  Type: `String`
  Any record ID, including a group ID.

- `recentCommentCount`
  Type: `Integer`
  The maximum number of comments to return with each feed item. The default value is 3.
elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

showInternalOnly
Type: Boolean
Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

filter
Type: ConnectApi.FeedFilter
Specifies the feed filters.
- AllQuestions—Feed elements that are questions.
- AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- CommunityScoped—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.
QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.

Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.

SolvedQuestions—Feed elements that are questions and that have a best answer.

UnansweredQuestions—Feed elements that are questions and that don’t have any answers.

UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.

UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  The ID of a case.

recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.
density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.getFeedElementsFromFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
44.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, String customFilter, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  The ID of a case.

recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.
density
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

`showInternalOnly`
Type: `Boolean`
Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

`customFilter`
Type: `String`
Custom filter that applies only to the case feed. See `customFeedFilter` in the Metadata API Developer Guide for supported values.

`threadedCommentsCollapsible`
Type: `Boolean`
Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

`result`
Type: `ConnectApi.FeedElementPage`
The object containing test data.
Return Value
Type: Void

### setTestGetFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, result)

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `getFeedElementsFromFilterFeed` method is called in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**
- 31.0

**Signature**

```java
public static Void setTestGetFeedElementsFromFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)
```

**Parameters**

- **communityId**
  - **Type**: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **subjectId**
  - **Type**: `String`
  - The ID of the context user or the alias `me`.

- **keyPrefix**
  - **Type**: `String`
  - A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of `005` and Group objects have a prefix of `0F9`.

- **recentCommentCount**
  - **Type**: `Integer`
  - Maximum number of comments to return with each feed element. The default value is 3.
`elementsPerBundle`  
Type: `Integer`  
Maximum number of feed elements per bundle. The default and maximum value is 10.

`density`  
Type: `ConnectApi.FeedDensity`  
Specify the amount of content in a feed.  
- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.  
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`  
Type: `String`  
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`  
Type: `Integer`  
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`  
Type: `ConnectApi.FeedSortOrder`  
Values are:  
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.  
- `CreatedDateDesc`—Sorts by most recent creation date.  
- `LastModifiedDateDesc`—Sorts by most recent activity.  
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.  
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.  
If you pass in `null`, the default value `CreatedDateDesc` is used.

`result`  
Type: `ConnectApi.FeedElementPage`  
The object containing test data.

Return Value  
Type: Void

SEE ALSO:  
- `getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam)`  
- Testing `ConnectApi` Code
setTestGetFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, result)

Register a ConnectApi.FeedElementPage object to be returned when the getFeedElementsFromFilterFeedUpdatedSince method is called in a test context.

API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFilterFeedUpdatedSince(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token defining the modification time stamp of the feed and the sort order.
The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
   getFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince)
   Testing ConnectApi Code

setTestGetFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, Home, Moderation, and PendingReview.

**recentCommentCount**
Type: `Integer`
Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
Type: `String`
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.
The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

**result**
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)`
- Testing ConnectApi Code
- `setTestGetFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, filter, result)`

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
32.0
Signature

```java
public static Void setTestGetFeedElementsUpdatedSince(String communityId,
            ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density,
            String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedFilter filter,
            ConnectApi.FeedElementPage result)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

- **recentCommentCount**
  - Type: `Integer`
  - Maximum number of comments to return with each feed element. The default value is 3.

- **density**
  - Type: `ConnectApi.FeedDensity`
  - Specify the amount of content in a feed.
    - `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    - `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- **pageParam**
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **updatedSince**
  - Type: `String`
  - An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.
  - The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

- **filter**
  - Type: `ConnectApi.FeedFilter`
  - Specifies the feed filters.
    - `AllQuestions`—Feed elements that are questions.
    - `AuthoredBy`—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
• CommunityScoped—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the UserProfile feed.

• QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.

• Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.

• SolvedQuestions—Feed elements that are questions and that have a best answer.

• UnansweredQuestions—Feed elements that are questions and that don’t have any answers.

• UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.

• UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

result
  Type: ConnectApi.FeedElementPage
  The object containing test data.

Return Value
Type: Void

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedElementPage result)
Parameters

`communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

`feedType`
  Type: `ConnectApi.FeedType`
  One of these values:
  - Files
  - Groups
  - News
  - People
  - Record

`subjectId`
  Type: `String`
  If `feedType` is `ConnectApi.Record`, `subjectId` can be any record ID, including a group ID. Otherwise, it must be the context user or the alias `me`.

`recentCommentCount`
  Type: `Integer`
  The maximum number of comments to return with each feed item. The default value is 3.

`density`
  Type: `ConnectApi.FeedDensity`
  Specify the amount of content in a feed.
  - `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
  Type: `String`
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
  Type: `Integer`
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`updatedSince`
  Type: `String`
  An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.
  The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

`result`
  Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
  getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince)

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly, ConnectApi.FeedElementPage result)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  Any record ID, including a group ID.

recentCommentCount
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: **String**
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: **Integer**
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
Type: **String**
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

**showInternalOnly**
Type: **Boolean**
Specifies whether to show only feed elements from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

**result**
Type: **ConnectApi.FeedElementPage**
The object containing test data.

Return Value
Type: **Void**

SEE ALSO:
- `getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly)`
- Testing ConnectApi Code

```java
setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, filter, result)
```

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.UserProfile.

subjectId
  Type: String
  The ID of any user. To specify the context user, use the user ID or the alias me.

recentCommentCount
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
  Type: String
  An opaque token defining the modification time stamp of the feed and the sort order.
  The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.
**filter**
Type: `ConnectApi.FeedFilter`
Value must be `ConnectApi.FeedFilter.CommunityScoped`. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out. Currently, feed elements scoped to communities have a User or a Group parent record. However, other parent record types could be scoped to communities in the future.

**result**
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
`getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, filter)`

Testing ConnectApi Code

```

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
40.0

Signature
`public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, String customFilter, ConnectApi.FeedElementPage result)`

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`feedType`
Type: `ConnectApi.FeedType`
Value must be `ConnectApi.FeedType.Record`.
subjectId
  Type: String
  The ID of a case.

recentCommentCount
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
  Type: String
  An opaque token defining the modification time stamp of the feed and the sort order.
  The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

customFilter
  Type: String
  Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

result
  Type: ConnectApi.FeedElementType
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, 
pagination, updatedSince, customFilter)
Testing ConnectApi Code

**setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, 
recentCommentCount, elementsPerBundle, density, pageParam, pagination, updatedSince, 
showInternalOnly, result)**

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called 
with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer 
elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pagination, 
String updatedSince, Boolean showInternalOnly, ConnectApi.FeedElementPage result)
```

Parameters
- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **feedType**
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

- **subjectId**
  Type: String
  Any record ID, including a group ID.

- **recentCommentCount**
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

- **elementsPerBundle**
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

- **density**
  Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedType**
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

**subjectId**
Type: String
Any record ID, including a group ID.

**recentCommentCount**
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

**elementsPerBundle**
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

**density**
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**updatedSince**
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.
The *updatedSince* parameter doesn’t return feed elements that are created in the same second as the call.

**showInternalOnly**
Type: Boolean

Specifies whether to show only feed elements from internal (non-community) users (*true*), or not (*false*). The default value is *false*.

**filter**
Type: `ConnectApi.FeedFilter`

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the *UserProfile* feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the *UserProfile* feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the *Record* feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the *Record* feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**result**
Type: `ConnectApi.FeedElementPage`

The object containing test data.

API Version
40.0

Signature
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly, String customFilter, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
The ID of a case.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**updatedSince**
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

**showInternalOnly**
Type: Boolean
Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

**customFilter**
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

**result**
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, customFilter)

Testing ConnectApi Code

**setTestGetRelatedPosts(communityId, feedElementId, filter, maxResults, result)**
Register a ConnectApi.RelatedFeedPosts object to be returned when the matching ConnectApi.getRelatedPosts(communityId, feedElementId, filter, maxResults) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
37.0

Signature
public static Void setTestGetRelatedPosts(String communityId, String feedElementId, ConnectApi.RelatedFeedPostType filter, Integer maxResults, ConnectApi.RelatedFeedPosts result)
Parameters

`communityId`
- Type: `String`
- Use either the ID for a community, internal, or `null`.

`feedElementId`
- Type: `String`
- ID of the feed element. The feed element must be a question.

`filter`
- Type: `ConnectApi.RelatedFeedPostType`
- Specifies the type of related feed post. Values are:
  - **Answered**—Related questions that have at least one answer.
  - **BestAnswer**—Related questions that have a best answer.
  - **Generic**—All types of related questions, including answered, with a best answer, and unanswered.
  - **Unanswered**—Related questions that don’t have answers.
- `Generic` is the default value.

`maxResults`
- Type: `Integer`
- The maximum number of results to return. You can return up to 25 results; 5 is the default.

`result`
- Type: `ConnectApi.RelatedFeedPosts`
- The object containing test data.
- In version 37.0 and later, related feed posts are questions.

Return Value
- Type: `Void`

**setTestGetTopUnansweredQuestions(communityId, result) (Pilot)**

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.getTopUnansweredQuestions` method is called in a test context. Use the method with the same parameters or you receive an exception.

**Note:** We provided top-five unanswered questions to selected customers through a pilot program that required agreement to specific terms and conditions. This pilot program is closed and not accepting new participants.

**API Version**
- 42.0

**Signature**

```java
public static Void setTestGetTopUnansweredQuestions(String communityId, ConnectApi.FeedElementPage result)
```
Parameters

`communityId`
- Type: `String`
- ID of the community.

`result`
- Type: `ConnectApi.FeedElementPage`
- The object containing test data.

Return Value
Type: Void

SEE ALSO:

- `getTopUnansweredQuestions(communityId)` (Pilot)
- `Testing ConnectApi Code`

**setTestGetTopUnansweredQuestions(communityId, filter, result) (Pilot)**

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.getTopUnansweredQuestions` method is called in a test context. Use the method with the same parameters or you receive an exception.

**Note:** We provided top-five unanswered questions to selected customers through a pilot program that required agreement to specific terms and conditions. This pilot program is closed and not accepting new participants.

API Version
42.0

Signature

```java
public static Void setTestGetTopUnansweredQuestions(String communityId, ConnectApi.TopUnansweredQuestionsFilterType filter, ConnectApi.FeedElementPage result)
```

Parameters

`communityId`
- Type: `String`
- ID of the community.

`filter`
- Type: `ConnectApi.FeedFilter`
- Specifies the filter for the feed. `UnansweredQuestionsWithCandidateAnswers` is the only valid value.

`result`
- Type: `ConnectApi.FeedElementPage`
- The object containing test data.
Return Value
Type: Void

SEE ALSO:
getTopUnansweredQuestions(communityId, filter) (Pilot)
Testing ConnectApi Code

**setTestGetTopUnansweredQuestions** *(communityId, pageSize, result) (Pilot)*

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.getTopUnansweredQuestions method is called in a test context. Use the method with the same parameters or you receive an exception.

**Note:** We provided top-five unanswered questions to selected customers through a pilot program that required agreement to specific terms and conditions. This pilot program is closed and not accepting new participants.

API Version
42.0

Signature
public static Void setTestGetTopUnansweredQuestions(String communityId, Integer pageSize, ConnectApi.FeedElementPage result)

Parameters

**communityId**
Type: String
ID of the community.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 0 through 10. If you pass in null, the default size is 5.

**result**
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getTopUnansweredQuestions(communityId, pageSize) (Pilot)
Testing ConnectApi Code
**setTestGetTopUnansweredQuestions(communityId, filter, pageSize, result)** (Pilot)

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.getTopUnansweredQuestions` method is called in a test context. Use the method with the same parameters or you receive an exception.

**Note:** We provided top-five unanswered questions to selected customers through a pilot program that required agreement to specific terms and conditions. This pilot program is closed and not accepting new participants.

API Version
42.0

Signature

```java
public static Void setTestGetTopUnansweredQuestions(String communityId,
    ConnectApi.FeedFilter filter, Integer pageSize, ConnectApi.FeedElementPage result)
```

Parameters

- **communityId**
  - Type: String
  - ID of the community.

- **filter**
  - Type: `ConnectApi.FeedFilter`
  - Specifies the filter for the feed. `UnansweredQuestionsWithCandidateAnswers` is the only valid value.

- **pageSize**
  - Type: Integer
  - Specifies the number of items per page. Valid values are from 0 through 10. If you pass in `null`, the default size is 5.

- **result**
  - Type: `ConnectApi.FeedElementPage`
  - The object containing test data.

Return Value

Type: Void

SEE ALSO:

- `getTopUnansweredQuestions(communityId, filter, pageSize)` (Pilot)

**setTestSearchFeedElements(communityId, q, result)**

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElements` method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
31.0

Signature

```java
public static Void setTestSearchFeedElements(String communityId, String q,
ConnectApi.FeedElementPage result)
```

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **q**
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **result**
  Type: ConnectApi.FeedElementPage
  The object containing test data.

Return Value

Type: Void

SEE ALSO:

- searchFeedElements(communityId, q)

### setTestSearchFeedElements(communityId, q, sortParam, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature

```java
public static Void setTestSearchFeedElements(String communityId, String q,
ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)
```
Parameters

**communityId**
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**q**
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

**result**
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `searchFeedElements(communityId, q, sortParam)`
  Testing ConnectApi Code

`setTestSearchFeedElements(communityId, q, threadedCommentsCollapsed, result)`
Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElements` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
44.0
public static Void setTestSearchFeedElements(String communityId, String q, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
searchFeedElements(communityId, q, threadedCommentsCollapsed)
Testing ConnectApi Code

setTestSearchFeedElements(communityId, q, pageParam, pageSize, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature

public static Void setTestSearchFeedElements(String communityId, String q, String pageParam, Integer pageSize, ConnectApi.FeedElementPage result)
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or **null**.

**q**
Type: String
Required and cannot be **null**. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in **null**, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in **null**, the default size is 25.

**result**
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:

```

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElements` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature
```java
public static Void setTestSearchFeedElements(String communityId, String q, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)
```
Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or `null`.

`q`
Type: String
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`pageParam`
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

`result`

**setTestSearchFeedElements(communityId, q, recentCommentCount, pageParam, pageSize, sortParam, result)**

Register a [ConnectApi.FeedElementPage](ConnectApi.NamespaceApi) object to be returned when the matching [ConnectApi.searchFeedElements](ConnectApi.NamespaceApi) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature

```java
public static Void setTestSearchFeedElements(String communityId, String q, Integer recentCommentCount, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)
```

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, `internal`, or `null`.

- **q**
  Type: String
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](wildcards).

- **recentCommentCount**
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

- **pageParam**
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **sortParam**
  Type: [ConnectApi.FeedSortOrder](ConnectApi.NamespaceApi)
Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value CreatedDateDesc is used.

**result**
- Type: `ConnectApi.FeedElementPage`
  - The object containing test data.

**Return Value**
- Type: Void

**SEE ALSO:**
- `searchFeedElements(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)`
- Testing ConnectApi Code

**setTestSearchFeedElementsInFeed(communityId, feedType, q, result)**

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**
- 31.0

**Signature**

```java
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String q, ConnectApi.FeedElementPage result)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values are Company, DirectMessageModeration, Home, Moderation, and PendingReview.
setTestSearchFeedElementsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, Home, Moderation, and PendingReview.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
searchFeedElementsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)

setTestSearchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, Home, Moderation, and PendingReview.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.
q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

searchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q)

Testing ConnectApi Code

setTestSearchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
32.0

Signature

public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. The only valid value is Home.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.
density
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

pageSize
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

sortParam
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

q
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

filter
Type: `ConnectApi.FeedFilter`
Specifies the feed filters.
- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
• **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.

• **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the **Record** feed of a group.

• **SolvedQuestions**—Feed elements that are questions and that have a best answer.

• **UnansweredQuestions**—Feed elements that are questions and that don't have any answers.

• **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the **Record** feed of a group.

• **UnsolvedQuestions**—Feed elements that are questions and that don't have a best answer.

```java
result
Type: ConnectApi.FeedElementPage
The object containing test data.
```

Return Value
Type: Void

`searchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter)`
`Testing ConnectApi Code`

**setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, q, result)**
Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature
```java
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String q, ConnectApi.FeedElementPage result)
```

Parameters

* **communityId**
  Type: String
  Use either the ID for a community, `internal`, or `null`. 
**feedType**

Type: `ConnectApi.FeedType`

The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessages`, `Filter`, `Landing`, and `Streams`.

**subjectId**

Type: `String`

If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

**q**

Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

**result**

Type: `ConnectApi.FeedElementPage`

The object containing test data.

**Return Value**

Type: `Void`

**SEE ALSO:**

- `searchFeedElementsInFeed(communityId, feedType, subjectId, q)`

**setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q, result)**

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

31.0

**Signature**

```java
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)
```

**Parameters**

**communityId**

Type: `String`

Use either the ID for a community, `internal`, or `null`. 

1332
**feedType**

Type: `ConnectApi.FeedType`

The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessages, Filter, Landing, and Streams.

**subjectId**

Type: `String`

If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

**pageParam**

Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**

Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**

Type: `ConnectApi.FeedSortOrder`

Order of feed items in the feed.

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**

Type: `String`

Search term. Searches keywords in the user or group name. A minimum of one character is required. This parameter does not support wildcards. This parameter is required.

**result**

Type: `ConnectApi.FeedElementPage`

The object containing test data.

**Return Value**

Type: Void

**SEE ALSO:**

- `searchFeedElementsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q)`
- Testing ConnectApi Code
setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedByAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedByDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedByDesc` is used.

**q**
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**result**
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q)`
Testing ConnectApi Code

`setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter, result)`
Register a `ConnectApi.FeedElementPage` object to be returned when `searchFeedElementsInFeed` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
35.0
public static Void setTestSearchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedFilter filter,
ConnectApi.FeedElementPage result)

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or **null**.

**feedType**
Type: **ConnectApi.FeedType**
Value must be ConnectApi.FeedType.UserProfile.

**subjectId**
Type: String
The ID of any user. To specify the context user, use the user ID or the alias me.

**recentCommentCount**
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: **ConnectApi.FeedDensity**
The amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in **null**, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in **null**, the default size is 25.

**sortParam**
Type: **ConnectApi.FeedSortOrder**
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
• **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.

• **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

q

Type: `String`

One or more keywords to search for in the feed elements visible to the context user. The search string can contain wildcards and must contain at least two characters that aren't wildcards. See [Wildcards](#).

**filter**

Type: `ConnectApi.FeedFilter`

Value must be `ConnectApi.FeedFilter.CommunityScoped`. Filters the feed to include only feed elements that are scoped to communities. Feed elements that are always visible in all communities are filtered out. Currently, feed elements scoped to communities have a User or a Group parent record. However, other parent record types could be scoped to communities in the future.

**result**

Type: `ConnectApi.FeedElementPage`

The object containing test data.

Return Value

Type: `Void`

SEE ALSO:

- `searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter)`
- **Testing ConnectApi Code**

```java
setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, customFilter, result)
```

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```java
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, String customFilter, ConnectApi.FeedElementPage result)
```
Parameters

**communityId**
- Type: String
- Use either the ID for a community, internal, or null.

**feedType**
- Type: ConnectApi.FeedType
- Value must be ConnectApi.FeedType.Record.

**subjectId**
- Type: String
- The ID of a case.

**recentCommentCount**
- Type: Integer
- Maximum number of comments to return with each feed element. The default value is 3.

**density**
- Type: ConnectApi.FeedDensity
- The amount of content in a feed.
  - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
- Type: String
- Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
- Type: Integer
- Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
- Type: ConnectApi.FeedSortOrder
- Values are:
  - CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  - CreatedDateDesc—Sorts by most recent creation date.
  - LastModifiedDateDesc—Sorts by most recent activity.
  - MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  - Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
- If you pass in null, the default value CreatedDateDesc is used.

**q**
- Type: String
One or more keywords to search for in the feed elements visible to the context user. The search string can contain wildcards and must contain at least two characters that aren’t wildcards. See Wildcards.

customFilter
  Type: String
  Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

result
  Type: ConnectApi.FeedElementPage
  The object containing test data.

Return Value
Type: Void

SEE ALSO:

  Testing ConnectApi Code

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, ConnectApi.FeedElementPage result)

Parameters
  communityId
    Type: String
    Use either the ID for a community, internal, or null.
  feedType
    Type: ConnectApi.FeedType
    Value must be ConnectApi.FeedType.Record.
subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-community) users (true), or not (false). The default value is false.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly)
Testing ConnectApi Code

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, filter, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
32.0

Signature
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: **String**
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: **Integer**
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: **ConnectApi.FeedSortOrder**
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**
Type: **String**
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**showInternalOnly**
Type: **Boolean**
Specifies whether to show only feed elements from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

**filter**
Type: **ConnectApi.FeedFilter**
Specifies the feed filters.
- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- **CommunityScoped**—Feed elements that are scoped to communities. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to communities in the future. Feed elements that are always visible in all communities are filtered out. This value is valid only for the `UserProfile` feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.

- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.

- **SolvedQuestions**—Feed elements that are questions and that have a best answer.

- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.

- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.

- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

result
Type: `ConnectApi.FeedElementPage`

The object containing test data.

Return Value
Type: Void

```
Parameters

**communityId**
Type: String
Use either the ID for a community, `internal`, or `null`.

**feedType**
Type: `ConnectApi.FeedType`
Value must be `ConnectApi.FeedType.Record`.

**subjectId**
Type: String
The ID of a case.

**recentCommentCount**
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

**setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q, result)**

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature
public static Void setTestSearchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, String q, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.
**keyPrefix**

Type: `String`

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

**q**

Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**result**

Type: `ConnectApi.FeedElementPage`

The object containing test data.

**Return Value**

Type: `Void`

**SEE ALSO:**

**Signature**

```java
public static Void setTestSearchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)
```

**Parameters**

**communityId**

Type: `String`

Use either the ID for a community, `internal`, or `null`.

**subjectId**

Type: `String`

The ID of the context user or the alias `me`.

---

1346
keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature
public static Void setTestSearchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

API Version
40.0

Signature
public static Void setTestSearchStreams(String communityId, String q, ConnectApi.ChatterStreamPage result)
Parameters

`communityId`
Type: String
Use either the ID for a community, `internal`, or `null`.

`q`
Type: String
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`result`
Type: `ConnectApi.ChatterStreamPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `searchStreams(communityId, q)`
- Testing ConnectApi Code

`setTestSearchStreams(communityId, q, sortParam, result)`
Register a `ConnectApi.ChatterStreamPage` object to be returned when the matching `ConnectApi.searchStream(communityId, q, sortParam)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

```java
public static Void setTestSearchStreams(String communityId, String q,
ConnectApi.SortOrder sortParam, ConnectApi.ChatterStreamPage result)
```

Parameters

`communityId`
Type: String
Use either the ID for a community, `internal`, or `null`.

`q`
Type: String
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`sortParam`
Type: `ConnectApi.SortOrder`
Specifies the sort order. Values are:

- **Ascending**—Items are in ascending alphabetical order (A-Z).
- **Descending**—Items are in descending alphabetical order (Z-A).
- **MostRecentlyViewed**—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is **Ascending**.

**result**

Type: `ConnectApi.ChatterStreamPage`

The object containing test data.

Return Value

Type: Void

SEE ALSO:

- `searchStreams(communityId, q, sortParam)`
- Testing ConnectApi Code

### `setTestSearchStreams(communityId, q, pageParam, pageSize, result)`

Register a `ConnectApi.ChatterStreamPage` object to be returned when the matching `ConnectApi.searchStreams(communityId, q, pageParam, pageSize)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```
public static Void setTestSearchStreams(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.ChatterStreamPage result)
```

Parameters

- **communityId**
  
  Type: `String`

  Use either the ID for a community, internal, or null.

- **q**
  
  Type: `String`

  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **pageParam**
  
  Type: `Integer`

  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.
**pageSize**
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

**result**
Type: `ConnectApi.ChatterStreamPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `searchStreams(communityId, q, pageParam, pageSize)`
  Testing ConnectApi Code

**setTestSearchStreams(communityId, q, pageParam, pageSize, sortParam, result)**
Register a `ConnectApi.ChatterStreamPage` object to be returned when the matching `ConnectApi.searchStreams(communityId, q, pageParam, pageSize, sortParam)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

```java
public static Void setTestSearchStreams(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam, ConnectApi.ChatterStreamPage result)
```

Parameters

**communityId**
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**q**
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**pageParam**
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.
sortParam
Type: `ConnectApi.SortOrder`
Specifies the sort order. Values are:
- **Ascending**—Items are in ascending alphabetical order (A-Z).
- **Descending**—Items are in descending alphabetical order (Z-A).
- **MostRecentlyViewed**—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is **Ascending**.

result
Type: `ConnectApi.ChatterStreamPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `searchStreams(communityId, q, pageParam, pageSize, sortParam)`
- Testing ConnectApi Code

```java
public static Void setTestSearchStreams(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam, Boolean globalScope, ConnectApi.ChatterStreamPage result)
```

Register a `ConnectApi.ChatterStreamPage` object to be returned when the matching `ConnectApi.searchStreams(communityId, q, pageParam, pageSize, sortParam, globalScope)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
41.0

Signature
```java
public static Void setTestSearchStreams(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam, Boolean globalScope, ConnectApi.ChatterStreamPage result)
```
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**pageParam**  
Type: Integer  
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**  
Type: Integer  
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

**sortParam**  
Type: ConnectApi.SortOrder  
Specifies the sort order. Values are:

- Ascending—Items are in ascending alphabetical order (A-Z).
- Descending—Items are in descending alphabetical order (Z-A).
- MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is Ascending.

**globalScope**  
Type: Boolean  
Specifies whether to get streams from all the context user’s communities, regardless of the communityId value.

**result**  
Type: ConnectApi.ChatterStreamPage  
The object containing test data.

Return Value  
Type: Void

**Retired ChatterFeeds Methods**

The following methods for ChatterFeeds are retired.

IN THIS SECTION:

- **deleteFeedItem(communityId, feedItemId)**  
Delete a feed item.

- **getCommentsForFeedItem(communityId, feedItemId)**  
Get comments for a feed item.

- **getCommentsForFeedItem(communityId, feedItemId, pageParam, pageSize)**  
Get a page of comments for a feed item.

- **getFeedItem(communityId, feedItemId)**  
Get a feed item.

- **getFeedItemBatch(communityId, feedItemIds)**  
Get a list of feed items.
getFeedItemsFromFeed(communityId, feedType)
Get feed items from the Company, Home, and Moderation feeds.

getFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)
Get a page of sorted feed items from the Company, Home, and Moderation feeds.

getFeedItemsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)
Get a page of sorted feed items from the Company, Home, and Moderation feeds. Each feed item contains no more than the specified number of comments.

getFeedItemsFromFeed(communityId, feedType, subjectId)
Get feed items from a feed for a user or record.

getFeedItemsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam)
Get a page of sorted feed items from a feed for a user or record.

getFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam)
Get a page of sorted feed items from a feed for a user or record. Each feed item includes no more than the specified number of comments.

getFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)
Get a page of sorted feed items from a record feed for a user or record. Each feed item includes no more than the specified number of comments. Specify whether to return feed items posted by internal (non-community) users only.

getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix)
Get feed items from a feed filtered by a key prefix for a user.

getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam)
Get a page of sorted feed items from a feed filtered by a key prefix for a user.

getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam)
Get a page of sorted feed items from a feed filtered by a key prefix for a user. Each feed item contains no more than the specified number of comments.

getFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, updatedSince)
Get a page of feed items from a feed filtered by a key prefix for a user. Include only feed items that have been updated since the time specified in the updatedSince parameter.

getFeedItemsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)
Get a page of feed items from the Company, Home, and Moderation feeds. Include only feed items that have been updated since the time specified in the updatedSince parameter. Each feed item contains no more than the specified number of comments.

getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince)
Get a page of feed items from the Files, Groups, News, People, and Record feeds. Include only feed items that have been updated since the time specified in the updatedSince parameter. Each feed item contains no more than the specified number of comments.

getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly)
Get a page of feed items from a record feed. Include only feed items that have been updated since the time specified in the updatedSince parameter. Specify whether to return feed items posted by internal (non-community) users only.

getFeedPoll(communityId, feedItemId)
Get the poll associated with a feed item.
getLikesForFeedItem(communityId, feedItemId)
Get likes for a feed item.

getLikesForFeedItem(communityId, feedItemId, pageParam, pageSize)
Get a page of likes for a feed item.

likeFeedItem(communityId, feedItemId)
Like a feed item for the context user.

postComment(communityId, feedItemId, text)
Post a plain-text comment to a feed item.

postComment(communityId, feedItemId, comment, feedItemFileUpload)
Post a rich-text comment to a feed item. Use this method to include mentions and to attach a file to a comment.

postFeedElement(communityId, feedElement, feedElementFileUpload)
Post a rich-text feed element. Include mentions and hashtag topics, attach a file to a feed element, and associate action link groups with a feed element. You can also use this method to share a feed element and add a comment.

postFeedItem(communityId, feedType, subjectId, text)
Post a plain-text feed item.

postFeedItem(communityId, feedType, subjectId, feedItemInput, feedItemFileUpload)
Post a rich-text feed item to a feed. Use this method to include mentions and hashtag topics and to attach a file to a feed item. You can also use this method to share a feed item and add a comment.

searchFeedItems(communityId, q)
Get the feed items that match the search criteria.

searchFeedItems(communityId, q, sortParam)
Get the sorted feed items that match the search criteria.

searchFeedItems(communityId, q, pageParam, pageSize)
Get a page of feed items that match the search criteria.

searchFeedItems(communityId, q, pageParam, pageSize, sortParam)
Get a page of sorted feed items that match the search criteria.

searchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)
Get a page of sorted feed items that match the search criteria. Each feed item includes no more than the specified number of comments.

searchFeedItemsInFeed(communityId, feedType, q)
Get the feed items from the Company, Home, and Moderation feeds that match the search criteria.

searchFeedItemsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items from the Company, Home, and Moderation feeds that match the search criteria.

searchFeedItemsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items from the Company, Home, and Moderation feeds that match the search criteria. Each feed item includes no more than the specified number of comments.
searchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items from a feed that match the search criteria. Each feed item includes no more than the specified number of comments.

searchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly)
Get a page of sorted feed items from a feed for a user or record that match the search criteria. Each feed item includes no more than the specified number of comments. Specify whether to return feed items posted by internal (non-community) users only.

searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q)
Get the feed items that match the search criteria from a feed filtered by a key prefix for a user.

searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items that match the search criteria from a feed filtered by a key prefix for a user.

searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items that match the search criteria from a feed filtered by a key prefix for a user. Each feed item includes no more than the specified number of comments.

shareFeedElement(communityId, subjectId, feedElementType, originalFeedElementId)
Share the originalFeedElementId as the context user.

shareFeedItem(communityId, feedType, subjectId, originalFeedItemId)
Share the originalFeedItemId to the feed specified by the feedType.

updateBookmark(communityId, feedItemId, isBookmarkedByCurrentUser)
Bookmark a feed item or remove a bookmark from a feed item.

voteOnFeedPoll(communityId, feedItemId, myChoiceId)
Vote or change your vote on a feed poll.

setTestGetFeedItemsFromFeed(communityId, feedType, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

setTestGetFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

setTestGetFeedItemsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.
setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching getFeedItemsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching getFeedItemsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching getFeedItemsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, updatedSince, result)
Register a ConnectApi.FeedItemPage object to be returned when the getFeedItemsFromFilterFeedUpdatedSince method is called in a test context.

setTestGetFeedItemsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, result)
Register a ConnectApi.FeedItemPage object to be returned when the getFeedItemsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, result)
Register a ConnectApi.FeedItemPage object to be returned when the getFeedItemsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly, result)
Register a ConnectApi.FeedItemPage object to be returned when the getFeedItemsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestSearchFeedItems(communityId, q, result)
Register a test feed item page to be returned when searchFeedItems (communityId, q) is called during a test.

setTestSearchFeedItems(communityId, q, sortParam, result)
Register a test feed item page to be returned when searchFeedItems (String, String, ConnectApi.FeedSortOrder) is called during a test.

setTestSearchFeedItems(communityId, q, pageParam, pageSize, result)
Register a test feed item page to be returned when searchFeedItems (String, String, Integer) is called during a test.

setTestSearchFeedItems(communityId, q, pageParam, pageSize, sortParam, result)
Register a test feed item page to be returned when searchFeedItems (String, String, String, Integer, ConnectApi.FeedSortOrder) is called during a test.

setTestSearchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam, result)
Register a test feed item page to be returned when searchFeedItems (communityId, q, recentCommentCount, pageParam, pageSize, sortParam) is called during a test.
Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.
deleteFeedItem(communityId, feedItemId)
Delete a feed item.

API Version
28.0–31.0

⚠️ Important: In version 32.0 and later, use deleteFeedElement(communityId, feedElementId).

Requires Chatter
Yes

Signature
public static Void deleteFeedItem(String communityId, String feedItemId)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedItemId
  Type: String
  The ID for a feed item.

Return Value
Type: Void

getCommentsForFeedItem(communityId, feedItemId)
Get comments for a feed item.

API Version
28.0–31.0

⚠️ Important: In version 32.0 and later, use getCommentsForFeedElement(communityId, feedElementId).

Available to Guest Users
31.0 only

Requires Chatter
Yes
Signature

```java
public static ConnectApi.CommentPage getCommentsForFeedItem(String communityId, String feedItemId)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- **feedItemId**
  - Type: String
  - The ID for a feed item.

Return Value

Type: `ConnectApi.CommentPage`

```java
getCommentsForFeedItem(communityId, feedItemId, pageParam, pageSize)
```

Get a page of comments for a feed item.

**API Version**

28.0–31.0

**Important:** In version 32.0 and later, use `getCommentsForFeedElement(communityId, feedElementId, pageParam, pageSize)`.

Available to Guest Users

31.0 only

Requires Chatter

Yes

Signature

```java
public static ConnectApi.CommentPage getCommentsForFeedItem(String communityId, String feedItemId, String pageParam, Integer pageSize)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- **feedItemId**
  - Type: String
  - The ID for a feed item.
pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
  Type: ConnectApi.CommentPage

getFeedItem(communityId, feedItemId)
Get a feed item.

API Version
28.0–31.0

⚠ Important: In version 32.0 and later, use getFeedElement(communityId, feedElementId).

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItem getFeedItem(String communityId, String feedItemId)

Parameters
  communityId
    Type: String
    Use either the ID for a community, internal, or null.

  feedItemId
    Type: String
    The ID for a feed item.

Return Value
  Type: ConnectApi.FeedItem
Note: Triggers on FeedItem objects run before their attachment and capabilities information is saved, which means that ConnectApi.FeedItem.attachment information and ConnectApi.FeedElement.capabilities information may not be available in the trigger.

getFeedItemBatch(communityId, feedItemIds)
Get a list of feed items.

API Version
31.0–31.0

Important: In version 32.0 and later, use getFeedElementBatch(communityId, feedElementIds).

Requires Chatter
Yes

Signature
public static ConnectApi.BatchResult[] getFeedItemBatch(String communityId, List<String> feedItemIds)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.
feedItemIds
Type: List<String>
A list of up to 500 feed item IDs.

Return Value
Type: ConnectApi.BatchResult[]
The ConnectApi.BatchResult.getResult() method returns a ConnectApi.FeedItem object and errors for feed items that didn’t load.

Example

// Create a list of feed items.
ConnectApi.FeedItemPage feedItemPage = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(null, ConnectApi.FeedType.Company);
System.debug(feedItemPage);

// Create a list of feed item IDs.
List<String> feedItemIds = new List<String>();
for (ConnectApi.FeedItem aFeedItem : feedItemPage.items){
    feedItemIds.add(aFeedItem.id);
// Get info about the feed items in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterFeeds.getFeedItemBatch(null,
feedItemIds);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the header for each feed item.
        ConnectApi.FeedItem aFeedItem;
        if (batchResult.getResult() instanceof ConnectApi.FeedItem) {
            aFeedItem = (ConnectApi.FeedItem) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(aFeedItem.header.text);
    } else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}

getFeedItemsFromFeed(communityId, feedType)

Get feed items from the Company, Home, and Moderation feeds.

API Version
28.0–31.0

⚠️ Important: In version 32.0 and later, use getFeedElementsFromFeed(communityId, feedType).

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId,
ConnectApi.FeedType feedType)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.
**FeedType**

Type: `ConnectApi.FeedType`

The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

**Return Value**

Type: `ConnectApi.FeedItemPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetFeedItemsFromFeed(communityId, feedType, result)`
- Testing ConnectApi Code

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Get a page of sorted feed items from the `Company`, `Home`, and `Moderation` feeds.

**API Version**

28.0–31.0

⚠️ **Important:** In version 32.0 and later, use `getFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)`.

**Available to Guest Users**

31.0 only

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

**Parameters**

`communityId`

Type: `String`

Use either the ID for a community, `internal`, or `null`. 1365
**feedType**
Type: `ConnectApi.FeedType`

The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

**pageParam**
Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`

Values are:
- `ModifiedDateAsc`—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- `ModifiedDateDesc`—Sorts by most recent creation date.
- `MostViewed`—Sorts by most recently modified feed item, or by the most recently modified feed item. If you pass in `null`, the default value `ModifiedDateDesc` is used.

**Return Value**
Type: `ConnectApi.FeedItemPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
- `setTestGetFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)`
- Testing ConnectApi Code
API Version
29.0–31.0

⚠️ Important: In version 32.0 and later, use `getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)`.

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Parameters

```java
communityId
```
Type: `String`

Use either the ID for a community, `internal`, or `null`.

```java
feedType
```
Type: `ConnectApi.FeedType`

The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

```java
recentCommentCount
```
Type: `Integer`

The maximum number of comments to return with each feed item. The default value is 3.

```java
density
```
Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

```java
pageParam
```
Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

```java
pageSize
```
Type: `Integer`
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**

Type: `ConnectApi.FeedSortOrder`

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**Return Value**

Type: `ConnectApi.FeedItemPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

`setTestGetFeedItemsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, result)`

Testing ConnectApi Code

**getFeedItemsFromFeed(communityId, feedType, subjectId)**

Get feed items from a feed for a user or record.

**API Version**

28.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsFromFeed(communityId, feedType, subjectId)`.

Available to Guest Users

31.0 only

Requires Chatter

Yes
Signature

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.

- `feedType`
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

- `subjectId`
  - Type: `String`
  - If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

Return Value

- Type: `ConnectApi.FeedItemPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, result)`
- Testing ConnectApi Code

```java
getFeedItemsFromFeed(communityId, feedType, subjectId, pageParam, pageSize,
sortParam)
```

Get a page of sorted feed items from a feed for a user or record.

API Version

- 28.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize,
sortParam)`. Available to Guest Users

- 31.0 only
Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId,
    ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize,
    ConnectApi.FeedSortOrder sortParam)
```

Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or null.

`feedType`
Type: `ConnectApi.FeedType`
The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

`subjectId`
Type: String
If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

`pageParam`
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.
Return Value
Type: `ConnectApi.FeedItemPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Testing ConnectApi Code

```java
getFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam)
```

Get a page of sorted feed items from a feed for a user or record. Each feed item includes no more than the specified number of comments.

API Version
29.0–31.0

**Important**: In version 32.0 and later, use `getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam)`.

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `feedType`
  Type: `ConnectApi.FeedType`
  The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`. 
subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedItemPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, result)`

Testing ConnectApi Code

```java
getFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)
```

Get a page of sorted feed items from a record feed for a user or record. Each feed item includes no more than the specified number of comments. Specify whether to return feed items posted by internal (non-community) users only.

API Version

30.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)`.

Available to Guest Users

31.0 only

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly)
```

Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **feedType**
  Type: `ConnectApi.FeedType`
  Value must be `ConnectApi.FeedType.Record`.

- **subjectId**
  Type: `String`
Any record ID, including a group ID.

**recentCommentCount**
Type: **Integer**
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: **ConnectApi.FeedDensity**
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: **String**
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in `null`, the first page is returned.

**pageSize**
Type: **Integer**
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: **ConnectApi.FeedSortOrder**
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value CreatedDateDesc is used.

**showInternalOnly**
Type: **Boolean**
Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

**Return Value**
Type: **ConnectApi.FeedItemPage**
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetFeeditemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly, result)`
- `Testing ConnectApi Code`

`getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix)`

Get feed items from a feed filtered by a key prefix for a user.

API Version

28.0–31.0

⚠️ Important: In version 32.0 and later, use `getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix)`.

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix)
```

Parameters

`communityId`

Type: String

Use either the ID for a community, `internal`, or `null`.

`subjectId`

Type: String

The ID of the context user or the alias `me`.

`keyPrefix`

Type: String

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of `005` and Group objects have a prefix of `0F9`.

Return Value

Type: `ConnectApi.FeedItemPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with \texttt{setTest}). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

\begin{verbatim}
setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, result)
\end{verbatim}

Testing ConnectApi Code

\textbf{getFeedItemsFromFilterFeed}(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam)

Get a page of sorted feed items from a feed filtered by a key prefix for a user.

API Version

28.0–31.0

\textbf{Important}: In version 32.0 and later, use \textbf{getFeedElementsFromFilterFeed}(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam).

Requires Chatter

Yes

Signature

\begin{verbatim}
public static ConnectApi.FeedItemPage getFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
\end{verbatim}

Parameters

\textit{communityId}

Type: String

Use either the ID for a community, \texttt{internal}, or \texttt{null}.

\textit{subjectId}

Type: String

The ID of the context user or the alias \texttt{me}.

\textit{keyPrefix}

Type: String

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

\textit{pageParam}

Type: String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, \texttt{currentPageToken} or \texttt{nextPageToken}. If you pass in \texttt{null}, the first page is returned.
**pageSize**
Type: `Integer`

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`

Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**Return Value**
Type: `ConnectApi.FeedItemPage`

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam)**

Get a page of sorted feed items from a feed filtered by a key prefix for a user. Each feed item contains no more than the specified number of comments.

**API Version**
29.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam)`.

**Requires Chatter**
Yes
public static ConnectApi.FeedItemPage getFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

subjectId
  Type: String
  The ID of the context user or the alias me.

keyPrefix
  Type: String
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 00S and Group objects have a prefix of 0F9.

recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, result)
Testing ConnectApi Code

getFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, updatedSince)
Get a page of feed items from a feed filtered by a key prefix for a user. Include only feed items that have been updated since the time specified in the updatedSince parameter.

API Version
30.0–31.0

Important: In version 32.0 and later, use getFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince).

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage getFeedItemsFromFilterFeedUpdatedSince(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.
subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 00S and Group objects have a prefix of 0F9.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. To retrieve this token, call getFeedItemsFromFilterFeed and take the value from the updatesToken property of the ConnectApi.FeedItemPage response body.

Return Value
Type: ConnectApi.FeedItemPage

Usage
This method returns only feed items that have been updated since the time specified in the updatedSince argument. A feed item is considered to be updated if it was created since the last feed request, or if sort=LastModifiedDateDesc and a comment was added to the feed item since the last feed request. Adding likes and topics doesn’t update a feed item.
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```java
setTestGetFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, updatedSince, result)
```

Testing ConnectApi Code

```java
getFeedItemsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)
```

Get a page of feed items from the Company, Home, and Moderation feeds. Include only feed items that have been updated since the time specified in the `updatedSince` parameter. Each feed item contains no more than the specified number of comments.

API Version

30.0–31.0

⚠️ Important: In version 32.0 and later, use `getFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)`.

Available to Guest Users

31.0 only

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedItemPage getFeedItemsUpdatedSince(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)
```

Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **feedType**
  Type: `ConnectApi.FeedType`
  The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

- **recentCommentCount**
  Type: `Integer`
  The maximum number of comments to return with each feed item. The default value is 3.
Density
Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
Type: `String`

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

Return Value
Type: `ConnectApi.FeedItemPage`

Usage
This method returns only feed items that have been updated since the time specified in the `updatedSince` argument. A feed item is considered to be updated if it was created since the last feed request, or if `sort=LastModifiedDateDesc` and a comment was added to the feed item since the last feed request. Adding likes and topics doesn’t update a feed item.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example
This example gets the feed items in the company feed and grabs the `updatesToken` property from the returned object. It then passes the value of `updatesToken` to the `getFeedItemsUpdatedSince` method to get the feed items updated since the first call:

```java
// Get the feed items in the company feed and return the updatesToken
String communityId = null;

// Get the feed and extract the update token
ConnectApi.FeedItemPage page = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(communityId,
ConnectApi.FeedType.Company);

// page.updatesToken is opaque and has a value like '2:1384549034000'

// Get the feed items that changed since the provided updatesToken
```
ConnectApi.FeedItemPage feedItems= ConnectApi.ChatterFeeds.getFeedItemsUpdatedSince
    (communityId, ConnectApi.FeedType.Company, 1, ConnectApi.FeedDensity.AllUpdates, null, 1, page.updatesToken);

SEE ALSO:
    setTestGetFeedItemsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, ConnectApi.FeedItemPage, results)
    Testing ConnectApi Code

getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince)

Get a page of feed items from the Files, Groups, News, People, and Record feeds. Include only feed items that have been updated since the time specified in the updatedSince parameter. Each feed item contains no more than the specified number of comments.

API Version
30.0–31.0

❗ Important: In version 32.0 and later, use getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince).

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage getFeedItemsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)

Parameters
communityId
    Type: String
    Use either the ID for a community, internal, or null.

feedType
    Type: ConnectApi.FeedType
    One of these values:
    • Files
    • Groups
    • News
People

Record

subjectId
Type: String
If feedType is ConnectApi.Record, subjectId can be any record ID, including a group ID. Otherwise, it must be the context user or the alias me.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedItemPage response body.

Return Value
Type: ConnectApi.FeedItemPage

Usage
This method returns only feed items that have been updated since the time specified in the updatedSince argument. A feed item is considered to be updated if it was created since the last feed request, or if sort=LastModifiedDateDesc and a comment was added to the feed item since the last feed request. Adding likes and topics doesn’t update a feed item.

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.
Example
This example gets the feed items in the news feed and grabs the `updatesToken` property from the returned object. It then passes the value of `updatesToken` to the `getFeedItemsUpdatedSince` method to get the feed items updated since the first call:

```java
// Get the feed items in the news feed and return the updatesToken
String communityId = null;
String subjectId = 'me';

// Get the feed and extract the update token
ConnectApi.FeedItemPage page = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(communityId, ConnectApi.FeedType.News, subjectId);

// page.updatesToken is opaque and has a value like '2:1384549034000'

// Get the feed items that changed since the provided updatesToken
ConnectApi.FeedItemPage feedItems= ConnectApi.ChatterFeeds.getFeedItemsUpdatedSince
    (communityId, ConnectApi.FeedType.News, subjectId, 1, ConnectApi.FeedDensity.AllUpdates, null, 1, page.updatesToken);
```

SEE ALSO:
- `setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, result)`
- `Testing ConnectApi Code`

**getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly)**
Get a page of feed items from a record feed. Include only feed items that have been updated since the time specified in the `updatedSince` parameter. Specify whether to return feed items posted by internal (non-community) users only.

**API Version**
30.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly)`.

**Available to Guest Users**
31.0 only

**Requires Chatter**
Yes

**Signature**
```java
public static ConnectApi.FeedItemPage getFeedItemsUpdatedSince(String communityId,
    ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
    ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince,
    Boolean showInternalOnly)
```
Parameters

communityId
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

feedType
  Type: `ConnectApi.FeedType`
  Value must be `ConnectApi.FeedType.Record`.

subjectId
  Type: `String`
  Any record ID, including a group ID.

recentCommentCount
  Type: `Integer`
  The maximum number of comments to return with each feed item. The default value is 3.

density
  Type: `ConnectApi.FeedDensity`
  Specify the amount of content in a feed.
  - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: `String`
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

pageSize
  Type: `Integer`
  Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

updatedSince
  Type: `String`
  An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

showInternalOnly
  Type: `Boolean`
  Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

Return Value

Type: `ConnectApi.FeedItemPage`
Usage

This method returns only feed items that have been updated since the time specified in the `updatedSince` argument. A feed item is considered to be updated if it was created since the last feed request, or if `sort=LastModifiedDateDesc` and a comment was added to the feed item since the last feed request. Adding likes and topics doesn’t update a feed item.

If `showInternalOnly` is `true` and Salesforce Communities is enabled, feed items from communities are included. Otherwise, only feed items from the internal community are included.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example gets the feed items in the news feed and grabs the `updatesToken` property from the returned object. It then passes the value of `updatesToken` to the `getFeedItemsUpdatedSince` method to get the feed items updated since the first call:

```java
// Get the feed items in the news feed and return the updatesToken
String communityId = null;
String subjectId = 'me';

// Get the feed and extract the update token
ConnectApi.FeedItemPage page = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(communityId,
ConnectApi.FeedType.News, subjectId);

// page.updatesToken is opaque and has a value like '2:1384549034000'

// Get the feed items that changed since the provided updatesToken
ConnectApi.FeedItemPage feedItems= ConnectApi.ChatterFeeds.getFeedItemsUpdatedSince
(communityId, ConnectApi.FeedType.News, subjectId, 1, ConnectApi.FeedDensity.AllUpdates,
null, 1, page.updatesToken, true);
```

SEE ALSO:

- `setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize,
updatedSince, showInternalOnly, result)`
- Testing ConnectApi Code

`getFeedPoll(communityId, feedItemId)`

Get the poll associated with a feed item.

API Version

28.0–31.0

Important: In version 32.0 and later, use `getElementPoll(communityId, feedElementId)`. 

Requires Chatter

Yes
public static ConnectApi.FeedPoll getFeedPoll(String communityId, String feedItemId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedItemId
Type: String
The ID for a feed item.

Return Value
Type: ConnectApi.FeedPoll

Note: Triggers on FeedItem objects run before their attachment and capabilities information is saved, which means that ConnectApi.FeedItem.attachment information and ConnectApi.FeedElement.capabilities information may not be available in the trigger.

public static ConnectApi.ChatterLikePage getLikesForFeedItem(String communityId, String feedItemId)

Get likes for a feed item.

API Version
28.0–31.0

Important: In version 32.0 and later, use getLikesForFeedElement(communityId, feedElementId).

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature

public static ConnectApi.ChatterLikePage getLikesForFeedItem(String communityId, String feedItemId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.
**feedItemId**
  Type: **String**
  The ID for a feed item.

**Return Value**
Type: **ConnectApi.ChatterLikePage**

**getLikesForFeedItem(communityId, feedItemId, pageParam, pageSize)**
Get a page of likes for a feed item.

**API Version**
28.0–31.0

⚠️ **Important:** In version 32.0 and later, use `getLikesForFeedElement(communityId, feedElementId, pageParam, pageSize)`.

**Available to Guest Users**
31.0 only

**Requires Chatter**
Yes

**Signature**
`public static ConnectApi.ChatterLikePage getLikesForFeedItem(String communityId, String feedItemId, Integer pageParam, Integer pageSize)`

**Parameters**

- **communityId**
  Type: **String**
  Use either the ID for a community, `internal`, or `null`.

- **feedItemId**
  Type: **String**
  The ID for a feed item.

- **pageParam**
  Type: **Integer**
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  Type: **Integer**
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
likeFeedItem(communityId, feedItemId)
Like a feed item for the context user.

API Version
28.0–31.0

Usage: In version 32.0 and later, use likeFeedElement(communityId, feedElementId).

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterLike likeFeedItem(String communityId, String feedItemId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedItemId
Type: String
The ID for a feed item.

Return Value
Type: ConnectApi.ChatterLike
If the context user already liked the feed item, this method is a non-operation and returns the existing like.

postComment(communityId, feedItemId, text)
Post a plain-text comment to a feed item.

API Version
28.0–31.0

Usage: In version 32.0 and later, use postCommentToFeedElement(communityId, feedElementId, text).

Requires Chatter
Yes
public static ConnectApi.Comment postComment(String communityId, String feedItemId, String text)

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **feedItemId**
  - Type: String
  - The ID for a feed item.

- **text**
  - Type: String
  - The text of the comment. Mentions are downgraded to plain text. To include a mention that links to a user, call `postComment(communityId, feedItemId, comment, feedItemFileUpload)` and pass the mention in a ConnectApi.CommentInput object.

Return Value

Type: ConnectApi.Comment

Usage

If hashtags or links are detected in *text*, they are included in the comment as hashtag and link segments. Mentions are not detected in *text* and are not separated out of the text.

Feed items and comments can contain up to 10,000 characters.

**postComment(communityId, feedItemId, comment, feedItemFileUpload)**

Post a rich-text comment to a feed item. Use this method to include mentions and to attach a file to a comment.

API Version

28.0–31.0

**Important:** In version 32.0 and later, use `postCommentToFeedElement(communityId, feedElementId, comment, feedElementFileUpload)`.

Requires Chatter

Yes

Signature

public static ConnectApi.Comment postComment(String communityId, String feedItemId, ConnectApi.CommentInput comment, ConnectApi.BinaryInput feedItemFileUpload)
Parameters

**communityId**
- Type: String
- Use either the ID for a community, internal, or null.

**feedItemId**
- Type: String
- The ID for a feed item.

**comment**
- Type: ConnectApi.CommentInput
  - In the CommentInput object, specify rich text, including @mentions. Optionally, in the CommentInput.attachment property, specify an existing file or a new file.

**feedItemFileUpload**
- Type: ConnectApi.BinaryInput
  - If you specify a NewFileAttachmentInput object in the CommentInput.attachment property, specify the new binary file to attach in this argument. Otherwise, do not specify a value.

Return Value
- Type: ConnectApi.Comment

Usage

Feed items and comments can contain up to 10,000 characters.

Sample: Posting a Comment with a New File Attachment

To post a comment and upload and attach a new file to the comment, create a ConnectApi.CommentInput object and a ConnectApi.BinaryInput object to pass to the ConnectApi.ChatterFeeds.postComment method.

```java
String communityId = null;
String feedItemId = '0D5D0000000Kcd1';

ConnectApi.CommentInput input = new ConnectApi.CommentInput();
ConnectApi.TextSegmentInput textSegment;

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'Comment Text Body';

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageInput.messageSegments.add(textSegment);

input.body = messageInput;

ConnectApi.NewFileAttachmentInput attachmentInput = new ConnectApi.NewFileAttachmentInput();
attachmentInput.description = 'The description of the file';
attachmentInput.title = 'contentFile.txt';
input.attachment = attachmentInput;
```
String fileContents = 'This is the content of the file.';
Blob fileBlob = Blob.valueOf(fileContents);

ConnectApi.Comment commentRep = ConnectApi.ChatterFeeds.postComment(communityId, feedItemId, input, binaryInput);

**postFeedElement(communityId, feedElement, feedElementFileUpload)**

Post a rich-text feed element. Include mentions and hashtag topics, attach a file to a feed element, and associate action link groups with a feed element. You can also use this method to share a feed element and add a comment.

API Version
31.0–35.0

**Important:** In version 36.0 and later, this method is no longer available because you can’t create a feed post and upload a binary file in the same call. Upload files to Salesforce first, and then use **postFeedElement(communityId, feedElement)** to create the feed post and attach the files.

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedElement postFeedElement(String communityId,
ConnectApi.FeedElementInput feedElement, ConnectApi.BinaryInput feedElementFileUpload)
```

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElement
Type: ConnectApi.FeedElementInput
Specify rich text, including mentions. Optionally, specify a link, a poll, an existing file, or a new file.

feedElementFileUpload
Type: ConnectApi.BinaryInput
Specify the new binary file to attach to the post only if you also specify a `NewFileAttachmentInput` object in the `feedElement` parameter. Otherwise, pass null.

Return Value
Type: ConnectApi.FeedElement
Example for Posting a Feed Element with a New (Binary) File

```java
ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
input.subjectId = 'me';

ConnectApi.ContentCapabilityInput contentInput = new ConnectApi.ContentCapabilityInput();
contentInput.title = 'Title';

ConnectApi.FeedElementCapabilitiesInput capabilities = new
ConnectApi.FeedElementCapabilitiesInput();
capabilities.content = contentInput;

capabilities.content = contentInput;

input.capabilities = capabilities;

String text = 'These are the contents of the new file.';
Blob myBlob = Blob.valueOf(text);
ConnectApi.BinaryInput binInput = new ConnectApi.BinaryInput(myBlob, 'text/plain',
'fileName');

ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), input, binInput);
```

`postFeedItem(communityId, feedType, subjectId, text)`

Post a plain-text feed item.

API Version
28.0–31.0

⚠️ **Important:** In version 32.0 and later, use `postFeedElement(communityId, subjectId, feedElementType, text)`. Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedItem postFeedItem(String communityId, ConnectApi.FeedType feedType, String subjectId, String text)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - One of the following:
    - `News`
    - `Record`
• **UserProfile**
  Use **Record** to post to a group.

**subjectId**
Type: **String**
The value depends on the **feedType**:  
• **News**—ID of the context user or the keyword `me`.  
• **Record**—ID of any record with a feed, including groups.  
• **UserProfile**—ID of any user.

**text**
Type: **String**
Text of the feed item. Mentions are downgraded to plain text. To include a mention that links to the user, call the `postFeedItem(communityId, feedType, subjectId, feedItemInput, feedItemFileUpload)` method and pass the mention in a `ConnectApi.FeedItemInput` object.

**Return Value**
Type: **ConnectApi.FeedItem**

**Note:** Triggers on FeedItem objects run before their attachment and capabilities information is saved, which means that `ConnectApi.FeedItem.attachment` information and `ConnectApi.FeedElement.capabilities` information may not be available in the trigger.

**Usage**
Feed items and comments can contain up to 10,000 characters.

Posts to `ConnectApi.FeedType.UserProfile` in API versions 23.0 and 24.0 created user status updates, not feed items. For posts to the User Profile Feed in those API versions, the character limit is 1,000 characters.

```java
postFeedItem(communityId, feedType, subjectId, feedItemInput, feedItemFileUpload)
```
Post a rich-text feed item to a feed. Use this method to include mentions and hashtag topics and to attach a file to a feed item. You can also use this method to share a feed item and add a comment.

**API Version**
28.0–31.0

**Important:** In version 32.0 and later, use `postFeedElement(communityId, feedElement, feedElementFileUpload)`.

**Requires Chatter**
Yes

**Signature**
```java
public static ConnectApi.FeedItem postFeedItem(String communityId, ConnectApi.FeedType feedType, String subjectId, ConnectApi.FeedItemInput feedItemInput, ConnectApi.BinaryInput feedItemFileUpload)
```
Parameters

- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **feedType**
  Type: `ConnectApi.FeedType`
  One of the following:
  - News
  - Record
  - UserProfile
  To post a feed item to a group, use Record and use a group ID as the `subjectId`.

- **subjectId**
  Type: String
  If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

- **feedItemInput**
  Type: `ConnectApi.FeedItemInput`
  In the `FeedItemInput` object, specify rich text. Optionally, in the `FeedItemInput.attachment` property, specify a link, a poll, an existing file, or a new file.

- **feedItemFileUpload**
  Type: `ConnectApi.BinaryInput`
  If you specify a `NewFileAttachmentInput` object in the `FeedItemInput.attachment` property, specify the new binary file to attach in this argument. Otherwise, do not specify a value.

Return Value

Type: `ConnectApi.FeedItem`

Note: Triggers on `FeedItem` objects run before their attachment and capabilities information is saved, which means that `ConnectApi.FeedItem.attachment` information and `ConnectApi.FeedElement.capabilities` information may not be available in the trigger.

Usage

Feed items and comments can contain up to 10,000 characters. Posts to `ConnectApi.FeedType.UserProfile` in API versions 23.0 and 24.0 created user status updates, not feed items. For posts to the User Profile Feed in those API versions, the character limit is 1,000 characters.
Example for Sharing a Feed Item and Adding a Comment

To share a feed item and add a comment, create a `ConnectApi.FeedItemInput` object containing the comment and the feed item to share. Then pass the object to `ConnectApi.ChatterFeeds.postFeedItem` in the `feedItemInput` argument. The message segments in the message body input are used as the comment.

```java
ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
input.originalFeedItemId = '0D5D0000000JuAG';

List<ConnectApi.MessageSegmentInput> segmentList = new List<ConnectApi.MessageSegmentInput>();
ConnectApi.TextSegmentInput textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'I hope you enjoy this post I found in another group.';
segmentList.add((ConnectApi.MessageSegmentInput)textSegment);
body.messageSegments = segmentList;
input.body = body;

ConnectApi.ChatterFeeds.postFeedItem(null, ConnectApi.FeedType.UserProfile, 'me', input, null);
```

Example for Posting a Mention to a User Profile Feed

To post to a user profile feed and include an @mention, call the `ConnectApi.ChatterFeeds.postFeedItem` method.

```java
String communityId = null;
ConnectApi.FeedType feedType = ConnectApi.FeedType.UserProfile;

ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
ConnectApi.TextSegmentInput textSegment;
ConnectApi.MentionSegmentInput mentionSegment = new ConnectApi.MentionSegmentInput();
messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'Hey there ';
messageInput.messageSegments.add(textSegment);

mentionSegment.id = '005D0000001LLO1';
messageInput.messageSegments.add(mentionSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = '. How are you?';
messageInput.messageSegments.add(textSegment);

input.body = messageInput;

ConnectApi.FeedItem feedItemRep = ConnectApi.ChatterFeeds.postFeedItem(communityId, feedType, 'me', input, null);

searchFeedItems(communityId, q)
```

Get the feed items that match the search criteria.
Important: In version 32.0 and later, use searchFeedElements(communityId, q).

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage searchFeedItems(String communityId, String q)

Parameters

communityId
type: String
Use either the ID for a community, internal, or null.

q
type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchFeedItems(communityId, q, result)
Testing ConnectApi Code

searchFeedItems(communityId, q, sortParam)
Get the sorted feed items that match the search criteria.
**Important:** In version 32.0 and later, use `searchFeedElements(communityId, q, sortParam)`.

Available to Guest Users

31.0 only

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedItemPage searchFeedItems(String communityId, String q,
ConnectApi.FeedSortOrder sortParam)
```

Parameters

`communityId`

Type: `String`

Use either the ID for a community, `internal`, or `null`.

`q`

Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

`sortParam`

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

Return Value

Type: `ConnectApi.FeedItemPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- setTestSearchFeedItems(communityId, q, sortParam, result)
- Testing ConnectApi Code

searchFeedItems(communityId, q, pageParam, pageSize)

Get a page of feed items that match the search criteria.

API Version
28.0–31.0

Important: In version 32.0 and later, use searchFeedElements(communityId, q, pageParam, pageSize).

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature

public static ConnectApi.FeedItemPage searchFeedItems(String communityId, String q, String pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
Return Value

Type: `ConnectApi.FeedItemPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchFeedItems(communityId, q, pageParam, pageSize, result)`
- Testing ConnectApi Code

**searchFeedItems** *(communityId, q, pageParam, pageSize, sortParam)*

Get a page of sorted feed items that match the search criteria.

API Version

28.0–31.0

**Important**: In version 32.0 and later, use `searchFeedElements(communityId, q, pageParam, pageSize, sortParam)`.

Available to Guest Users

31.0 only

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedItemPage searchFeedItems(String communityId, String q, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **q**
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **pageParam**
  - Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**Return Value**
Type: ConnectApi.FeedItemPage

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
- setTestSearchFeedItems(communityId, q, pageParam, pageSize, sortParam, result)

Get a page of sorted feed items that match the search criteria.

**searchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)**

API Version
29.0–31.0

**Important:** In version 32.0 and later, use searchFeedElements(communityId, q, recentCommentCount, pageParam, pageSize, sortParam).

Available to Guest Users
31.0 only
Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedItemPage searchFeedItems(String communityId, String q,
Integer recentCommentCount, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder
sortParam)
```

Parameters

```java
communityId
  Type: String
  Use either the ID for a community, internal, or null.
```

```java
q
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
```

```java
recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.
```

```java
pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
```

```java
pageSize
  Type: Integer
  Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
```

```java
sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
  • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
```

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

Return Value

```java
Type: ConnectApi.FeedItemPage
```
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam, result)`
- Testing ConnectApi Code

**searchFeedItemsInFeed(communityId, feedType, q)**

Get the feed items from the Company, Home, and Moderation feeds that match the search criteria.

API Version

28.0–31.0

**Important:** In version 32.0 and later, use `searchFeedElementsInFeed(communityId, feedType, q)`.

Available to Guest Users

31.0 only

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId,
    ConnectApi.FeedType feedType, String q)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

- **q**
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
Return Value
Type: `ConnectApi.FeedItemPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- Testing ConnectApi Code

`searchFeedItemsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)`
Get a page of sorted feed items from the Company, Home, and Moderation feeds that match the search criteria.

API Version
28.0–31.0

⚠️ Important: In version 32.0 and later, use `searchFeedElementsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)`.

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId,
              ConnectApi.FeedType feedType, String pageParam, Integer pageSize,
              ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `feedType`
  Type: `ConnectApi.FeedType`
  The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

- `pageParam`
  Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in `null`, the first page is returned.

`pageSize`  
Type: Integer  
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortBy`  
Type: `ConnectApi.FeedSortOrder`  
Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

`q`  
Type: String  
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value  
Type: `ConnectApi.FeedItemPage`

Usage  
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Testing ConnectApi Code

`searchFeedItemsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortBy, q)`  
Get a page of sorted feed items from the `Company`, `Home`, and `Moderation` feeds that match the search criteria. Each feed item includes no more than the specified number of comments.

API Version  
29.0–31.0
Important: In version 32.0 and later, use `searchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q)`.

Available to Guest Users

31.0 only

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId,
ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density,
String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters

`communityId`

Type: `String`

Use either the ID for a community, `internal`, or `null`.

`feedType`

Type: `ConnectApi.FeedType`

The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

`recentCommentCount`

Type: `Integer`

The maximum number of comments to return with each feed item. The default value is 3.

`density`

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`

Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`

Type: `Integer`

 Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`

Type: `ConnectApi.FeedSortOrder`
Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in **null**, the default value CreatedDateDesc is used.

**q**

Type: **String**

Required and cannot be **null**. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

Type: **ConnectApi.FeedItemPage**

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Available to Guest Users

31.0 only

Requires Chatter

Yes
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String q)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is UserProfile, subjectId can be any user ID. If feedType is any other value, subjectId must be the ID of the context user or the alias me.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Yes

Signature
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter,
Landing, and Streams.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId
must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId
can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example,
currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Order of feed items in the feed.
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration,
  Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the
  ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
searchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q)

Get a page of sorted feed items from a feed that match the search criteria. Each feed item includes no more than the specified number of comments.

API Version
29.0–31.0

Important: In version 32.0 and later, use searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q).

Available to Guest Users
31.0 only

Yes

Signature
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
Parameters

communityId
Type: String

Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType

The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
Type: String

If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

recentCommentCount
Type: Integer

The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity

Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

dpageSize
Type: Integer

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder

Values are:

- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

```
q
```

Type: String

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

Type: `ConnectApi.FeedItemPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)`
- `Testing ConnectApi Code`

```java
searchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly)
```

Get a page of sorted feed items from a feed for a user or record that match the search criteria. Each feed item includes no more than the specified number of comments. Specify whether to return feed items posted by internal (non-community) users only.

API Version

30.0–31.0

**Important:** In version 32.0 and later, use `searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly)`.

Available to Guest Users

31.0 only

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly)
```
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**feedType**
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

**subjectId**
Type: String
Any record ID, including a group ID.

**recentCommentCount**
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`showInternalOnly`
Type: Boolean
Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

Return Value
Type: `ConnectApi.FeedItemPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, result)

`searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q)`
Get the feed items that match the search criteria from a feed filtered by a key prefix for a user.

API Version
28.0–31.0

**Important:** In version 32.0 and later, use `searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q)`.

Requires Chatter
Yes

Signature
public static `ConnectApi.FeedItemPage` `searchFeedItemsInFilterFeed(String communityId, String subjectId, String keyPrefix, String q)`

Parameters
- `communityId`
  Type: String
  Use either the ID for a community, internal, or null.
- `subjectId`
  Type: String
  The ID of the context user or the alias me.
keyPrefix
   Type: String
   A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

q
   Type: String
   Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
   Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items that match the search criteria from a feed filtered by a key prefix for a user.

API Version
28.0–31.0

Important: In version 32.0 and later, use searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q).

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage searchFeedItemsInFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)

Parameters
communityId
   Type: String
Use either the ID for a community, internal, or null.

**subjectId**
Type: String
The ID of the context user or the alias me.

**keyPrefix**
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedItemPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

```

Testing ConnectApi Code

```
searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)
```

Get a page of sorted feed items that match the search criteria from a feed filtered by a key prefix for a user. Each feed item includes no more than the specified number of comments.

API Version

29.0–31.0

⚠️ **Important:** In version 32.0 and later, use `searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)`.

Requires Chatter

Yes

Signature

```
public static ConnectApi.FeedItemPage searchFeedItemsInFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters

- `communityId`  
  Type: `String`  
  Use either the ID for a community, `internal` or `null`.

- `subjectId`  
  Type: `String`  
  The ID of the context user or the alias `me`.

- `keyPrefix`  
  Type: `String`  
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of `005` and Group objects have a prefix of `0F9`.

- `recentCommentCount`  
  Type: `Integer`  
  The maximum number of comments to return with each feed item. The default value is 3.
density
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

`q`
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

Return Value
Type: `ConnectApi.FeedItemPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

setTestSearchFeedItemsInFilterFeed(communityId, feedType, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)
Testing ConnectApi Code

shareFeedElement(communityId, subjectId, feedElementType, originalFeedElementId)

Share the originalFeedElementId as the context user.

API Version

31.0–38.0

⚠️ Important: In version 39.0 and later, use postFeedElement(communityId, feedElement) or updateFeedElement(communityId, feedElementId, feedElement) with the ConnectApi. FeedEntityShareCapabilityInput to share a feed entity with a feed element.

Requires Chatter

Yes

Signature

public static ConnectApi.FeedElement shareFeedElement(String communityId, String subjectId, ConnectApi.FeedElementType feedElementType, String originalFeedElementId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the user or group with whom to share the feed element.

feedElementType
Type: ConnectApi.FeedElementType
Values are:

- Bundle—A container of feed elements. A bundle also has a body made up of message segments that can always be gracefully degraded to text-only values.
- FeedItem—A feed item has a single parent and is scoped to one community or across all communities. A feed item can have capabilities such as bookmarks, canvas, content, comment, link, poll. Feed items have a body made up of message segments that can always be gracefully degraded to text-only values.
• Recommendation—A recommendation is a feed element with a recommendations capability. A recommendation suggests records to follow, groups to join, or applications that are helpful to the context user.

originalFeedElementId
Type: String
The ID of the feed element to share.

Return Value
Type: ConnectApi.FeedElement

Example
ConnectApi.ChatterFeeds.shareFeedElement(null, '0F9RR0000004CPw',
ConnectApi.FeedElementScopeType.Item, '0D5RR0000004Gxc');

shareFeedItem(communityId, feedType, subjectId, originalFeedItemId)
Share the originalFeedItem to the feed specified by the feedType.

API Version
28.0–31.0

Important:
• In version 32.0–38.0, use shareFeedElement(communityId, subjectId, feedElementType,
originalFeedElementId).
• In version 39.0 and later, use postFeedElement(communityId, feedElement) or
updateFeedElement(communityId, feedElementId, feedElement) with the ConnectApi.
FeedEntityShareCapabilityInput.

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItem shareFeedItem(String communityId, ConnectApi.FeedType feedType, String subjectId, String originalFeedItem)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
One of the following:
To share a feed item with a group, use `Record` and use a group ID as the `subjectId`.

**subjectId**

Type: `String`

The value depends on the value of `feedType`:

- **News**—`subjectId` must be the ID of the context user or the keyword `me`.
- **Record**—`subjectId` can be a group ID or the ID of the context user (or `me`).
- **UserProfile**—`subjectId` can be any user ID.

**originalFeedItemId**

Type: `String`

The ID of the feed item to share.

**Example**

To share a feed item with a group, pass in the community ID (or `null`), the feed type `Record`, the group ID, and the ID of the feed item to share.

```java
ConnectApi.ChatterFeeds.shareFeedItem(null, ConnectApi.FeedType.Record, '0F9D00000000izf', '0D5D0000000JuAG');
```

**updateBookmark(communityId, feedItemId, isBookmarkedByCurrentUser)**

Bookmark a feed item or remove a bookmark from a feed item.

**API Version**

28.0–31.0

**Important:** In version 32.0 and later, use `updateFeedElementBookmarks(communityId, feedElementId, bookmarks)` or `updateFeedElementBookmarks(communityId, feedElementId, isBookmarkedByCurrentUser)`.

**Requires Chatter**

Yes
Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedItemId
  Type: String
  The ID for a feed item.

isBookmarkedByCurrentUser
  Type: Boolean
  —Specifying true adds the feed item to the list of bookmarks for the context user. Specify false to remove a bookmark.

Return Value

Type: ConnectApi.FeedItem

voteOnFeedPoll(communityId, feedItemId, myChoiceId)
Vote or change your vote on a feed poll.

API Version

28.0–31.0

⚠ Important: In version 32.0 and later, use voteOnFeedElementPoll(communityId, feedElementId, myChoiceId).

Requires Chatter

Yes

Signature

public static ConnectApi.FeedPoll voteOnFeedPoll(String communityId, String feedItemId, String myChoiceId)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedItemId
  Type: String
  ID of the feed item that is associated with the poll.

myChoiceId
  Type: String
  ID of the item in the poll you’re voting for.
Return Value
Type: `ConnectApi.FeedPoll`

```java
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, ConnectApi.FeedItemPage result)
```

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
28.0–31.0

Signature
```
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, ConnectApi.FeedItemPage result)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `feedType`
  Type: `ConnectApi.FeedType`
  The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.
- `result`
  Type: `ConnectApi.FeedItemPage`
  The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `getFeedItemsFromFeed(communityId, feedType)`
- Testing ConnectApi Code

```java
setTestGetFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)
```

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
28.0–31.0
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedItemPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)
Testing ConnectApi Code

setTestGetFeedItemsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
29.0–31.0

Signature
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**result**
Type: ConnectApi.FeedItemPage
The object containing test data.

**Return Value**
Type: Void

SEE ALSO:
- getFeedItemsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)
- Testing ConnectApi Code

**setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, result)**
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

**API Version**
28.0–31.0

**Signature**
```java
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, ConnectApi.FeedItemPage result)
```
Parameters

**communityId**
Type: *String*
Use either the ID for a community, internal, or *null*.

**feedType**
Type: *ConnectApi.FeedType*
The type of feed. Valid values include every *ConnectApi.FeedType* except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

**subjectId**
Type: *String*
If *feedType* is Record, *subjectId* can be any record ID, including a group ID. If *feedType* is Streams, *subjectId* must be a stream ID. If *feedType* is Topics, *subjectId* must be a topic ID. If *feedType* is UserProfile, *subjectId* can be any user ID. If the *feedType* is any other value, *subjectId* must be the ID of the context user or the alias me.

**result**
Type: *ConnectApi.FeedItemPage*
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getFeedItemsFromFeed(communityId, feedType, subjectId)`
- Testing ConnectApi Code

**setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, result)**
Register a *ConnectApi.FeedItemPage* object to be returned when `getFeedItemsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

**API Version**
28.0–31.0

**Signature**
```java
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

**Parameters**

**communityId**
Type: *String*
Use either the ID for a community, internal, or *null*. 
FeedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

SubjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

PageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

PageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

SortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

Result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

See Also:

Testing ConnectApi Code
setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
29.0–31.0

Signature

public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
pageSize
  Type: Integer
  Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
  • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

result
  Type: ConnectApi.FeedItemPage
  The object containing test data.

Return Value
  Type: Void

setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly, result)

Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
  30.0–31.0

Signature
  public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedItemPage result)
Parameters

**communityId**
Type: **String**

Use either the ID for a community, internal, or **null**.

**feedType**
Type: **ConnectApi.FeedType**

The type of feed. Valid values include every **ConnectApi.FeedType** except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

**subjectId**
Type: **String**

If **feedType** is Record, **subjectId** can be any record ID, including a group ID. If **feedType** is Streams, **subjectId** must be a stream ID. If **feedType** is Topics, **subjectId** must be a topic ID. If **feedType** is UserProfile, **subjectId** can be any user ID. If the **feedType** is any other value, **subjectId** must be the ID of the context user or the alias me.

**recentCommentCount**
Type: **Integer**

The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: **ConnectApi.FeedDensity**

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: **String**

The page token to use to view the page. Page tokens are returned as part of the response class, for example, **currentPageToken** or **nextPageToken**. If you pass in **null**, the first page is returned.

**pageSize**
Type: **Integer**

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in **null**, the default size is 25.

**sortParam**
Type: **ConnectApi.FeedSortOrder**

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**showInternalOnly**
Type: Boolean
Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

**result**
Type: `ConnectApi.FeedItemPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)`
- Testing ConnectApi Code

**setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, result)**
Register a `ConnectApi.FeedItemPage` object to be returned when the matching `getFeedItemsFromFilterFeed` method is called in a test context. Use the method with the same parameters or the code throws an exception.

API Version
28.0–31.0

Signature
```java
public static Void setTestGetFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix, ConnectApi.FeedItemPage result)
```

Parameters
- **communityId**
  Type: String
  Use either the ID for a community, `internal`, or `null`.

- **subjectId**
  Type: String
  The ID of the context user or the alias `me`.

- **keyPrefix**
  Type: String
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.
result
  Type: ConnectApi.FeedItemPage
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
  getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix)
  Testing ConnectApi Code

setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching getFeedItemsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

API Version
28.0–31.0

Signature
public static Void setTestGetFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

subjectId
  Type: String
  The ID of the context user or the alias me.

keyPrefix
  Type: String
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

`result`

Type: `ConnectApi.FeedItemPage`

The object containing test data.

Return Value

Type: Void

SEE ALSO:

- `getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam)`
- `Testing ConnectApi Code`

### setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, result)

Register a `ConnectApi.FeedItemPage` object to be returned when the matching `getFeedItemsFromFilterFeed` method is called in a test context. Use the method with the same parameters or the code throws an exception.

API Version

29.0–31.0

Signature

```java
public static Void setTestGetFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

Parameters

- `communityId`
  Type: `String`
Use either the ID for a community, internal, or null.

**subjectId**
Type: String
The ID of the context user or the alias me.

**keyPrefix**
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

**recentCommentCount**
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**result**
Type: ConnectApi.FeedItemPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam)
Testing ConnectApi Code

setTestGetFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, updatedSince, result)
Register a ConnectApi.FeedItemPage object to be returned when the getFeedItemsFromFilterFeedUpdatedSince method is called in a test context.

API Version
30.0–31.0

Signature
public static Void setTestGetFeedItemsFromFilterFeedUpdatedSince(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String updatedSince, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
• `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
• `CreatedDateDesc`—Sorts by most recent creation date.
• `LastModifiedDateDesc`—Sorts by most recent activity.
• `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
• `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

`updatedSince`
Type: `String`
An opaque token containing information about the last modified date of the feed. Do not construct this token. To retrieve this token, call `getFeedItemsFromFilterFeed` and take the value from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

`result`
Type: `ConnectApi.FeedItemPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
`getFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, updatedSince)`
`Testing ConnectApi Code`
setTestGetFeedItemsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, ConnectApi.FeedItemPage, results)

Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
30.0–31.0

Signature
public static Void setTestGetFeedItemsUpdatedSince(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedItemPage results)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedItemPage response body.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedItemsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)
Testing ConnectApi Code

setTestGetFeedItemsUpdatedSince (communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
30.0–31.0

Signature
public static Void setTestGetFeedItemsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
One of these values:
- Files
- Groups
- News
- People
- Record

subjectId
Type: String
If `feedType` is `ConnectApi.Record`, `subjectId` can be any record ID, including a group ID. Otherwise, it must be the context user or the alias `me`.

**recentCommentCount**
Type: `Integer`

The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
Type: `String`

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

**result**
Type: `ConnectApi.FeedItemPage`

The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince)`
- `setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly, result)`

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**
30.0–31.0
public static Void setTestGetFeedItemsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly, ConnectApi.FeedItemPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
One of these values:
• Files
• Groups
• News
• People
• Record

subjectId
Type: String
If feedType is ConnectApi.Record, subjectId can be any record ID, including a group ID. Otherwise, it must be the context user or the alias me.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

**showInternalOnly**
Type: `Boolean`
Specifies whether to show only feed items from internal (non-community) users (`true`), or not (`false`). The default value is `false`.

**result**
Type: `ConnectApi.FeedItemPage`
The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly)`
- Testing ConnectApi Code

### setTestSearchFeedItems(communityId, q, result)
Register a test feed item page to be returned when `searchFeedItems(communityId, q)` is called during a test.

**API Version**
28.0–31.0

**Signature**

```
public static Void searchFeedItems(String communityId, String q, ConnectApi.FeedItemPage result)
```

**Parameters**

**communityId**
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**q**
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**result**
Type: `ConnectApi.FeedItemPage`
The object containing test data.
Return Value
Type: Void

SEE ALSO:
searchFeedItems(communityId, q)
Testing ConnectApi Code

**setTestSearchFeedItems(communityId, q, sortParam, result)**

Register a test feed item page to be returned when searchFeedItems(String, String, ConnectApi.FeedSortOrder) is called during a test.

API Version
28.0–31.0

Signature
```java
public static Void setTestSearchFeedItems(String communityId, String q, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**result**
Type: ConnectApi.FeedItemPage
The feed item test page.

Return Value
Type: Void

SEE ALSO:
searchFeedItems(communityId, q, sortParam)
Testing ConnectApi Code

setTestSearchFeedItems(communityId, q, pageParam, pageSize, result)
Register a test feed item page to be returned when searchFeedItems(String, String, String, Integer) is called during a test.

API Version
28.0–31.0

Signature
public static Void setTestSearchFeedItems(String communityId, String q, String pageParam, Integer pageSize, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

result
Type: ConnectApi.FeedItemPage
The test feed item page.
Return Value
Type: Void

SEE ALSO:
searchFeedItems(communityId, q, pageParam, pageSize)
Testing ConnectApi Code

**setTestSearchFeedItems(communityId, q, pageParam, pageSize, sortParam, result)**
Register a test feed item page to be returned when searchFeedItems(String, String, String, Integer, ConnectApi.FeedSortOrder) is called during a test.

API Version
28.0–31.0

Signature
```java
public static Void setTestSearchFeedItems(String communityId, String q, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

Parameters

* **communityId**  
  Type: String  
  Use either the ID for a community, internal, or null.

* **q**  
  Type: String  
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

* **pageParam**  
  Type: String  
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

* **pageSize**  
  Type: Integer  
  Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

* **sortParam**  
  Type: ConnectApi.FeedSortOrder  
  Values are:
  - CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  - CreatedDateDesc—Sorts by most recent creation date.
  - LastModifiedDateDesc—Sorts by most recent activity.
• **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.

• **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

result
  Type: ConnectApi.FeedItemPage
  The test feed item page.

Return Value
Type: Void

SEE ALSO:
  searchFeedItems(communityId, q, pageParam, pageSize, sortParam)
  Testing ConnectApi Code

**setTestSearchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam, result)**

Register a test feed item page to be returned when searchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam) is called during a test.

API Version
29.0–31.0

Signature
public static Void setTestSearchFeedItems(String communityId, String q, Integer recentCommentCount, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters

**communityId**
  Type: String
  Use either the ID for a community, internal, or null.

**q**
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**recentCommentCount**
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.
**pageParam**
Type: String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in null, the first page is returned.

**pageSize**
Type: Integer

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder

Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value `CreatedDateDesc` is used.

**result**
Type: ConnectApi.FeedItemPage

The test feed item page.

Return Value
Type: Void

SEE ALSO:
- `searchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)`
- Testing ConnectApi Code

**setTestSearchFeedItemsInFeed(communityId, feedType, q, result)**

Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0–31.0
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String q, ConnectApi.FeedItemPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
  searchFeedItemsInFeed(communityId, feedType, q)
  Testing ConnectApi Code

setTestSearchFeedItemsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0–31.0

Signature
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
searchFeedItemsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)
Testing ConnectApi Code
setTestSearchFeedItemsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0–31.0

Signature
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
searchFeedItemsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Testing ConnectApi Code

setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, q, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0–31.0

Signature
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String q, ConnectApi.FeedItemPage result)
Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

feedType
  Type: `ConnectApi.FeedType`
  The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
  Type: String
  If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

q
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
  Type: `ConnectApi.FeedItemPage`
  The object containing test data.

Return Value

Type: Void

SEE ALSO:

- `searchFeedItemsInFeed(communityId, feedType, subjectId, q)`
- Testing ConnectApi Code

**setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q, result)**

Register a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

28.0–31.0

Signature

```java
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)
```
Parameters

`communityId`  
Type: `String`  
Use either the ID for a community, `internal`, or `null`.

`feedType`  
Type: `ConnectApi.FeedType`  
The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessages`, `Filter`, `Landing`, and `Streams`.

`subjectId`  
Type: `String`  
If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

`pageParam`  
Type: `String`  
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`  
Type: `Integer`  
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`  
Type: `ConnectApi.FeedSortOrder`  
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

`q`  
Type: `String`  
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

`result`  
Type: `ConnectApi.FeedItemPage`  
The object containing test data.
Return Value
Type: Void

SEE ALSO:
searchFeedItemsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q)
Testing ConnectApi Code

setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0–31.0

Signature
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
• **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

• **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: Integer

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`

Values are:

• **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.

• **CreatedDateDesc**—Sorts by most recent creation date.

• **LastModifiedDateDesc**—Sorts by most recent activity.

• **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.

• **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

`q`
Type: String

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`result`
Type: `ConnectApi.FeedItemPage`

The object containing test data.

**Return Value**
Type: Void

**SEE ALSO:**
`searchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q)`

Testing ConnectApi Code
setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, result)

API Version
29.0–31.0

Signature
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, ConnectApi.FeedItemPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
**PageSize**
Type: Integer

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**SortParam**
Type: ConnectApi.FeedSortOrder

Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**q**
Type: String

Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**ShowInternalOnly**
Type: Boolean

Specifies whether to show only feed items from internal (non-community) users (true), or not (false). The default value is false.

**Result**
Type: ConnectApi.FeedItemPage

The object containing test data.

**Return Value**
Type: Void

**SEE ALSO:**
- searchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly)
- Testing ConnectApi Code

**setTestSearchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q, result)**

Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.
Signature

```
public static Void setTestSearchFeedItemsInFilterFeed(String communityId, String subjectId, String keyPrefix, String q, ConnectApi.FeedItemPage result)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **subjectId**
  - Type: String
  - The ID of the context user or the alias me.

- **keyPrefix**
  - Type: String
  - A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

- **q**
  - Type: String
  - Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **result**
  - Type: ConnectApi.FeedItemPage
  - Specify the test feed item page.

Return Value

Type: Void

SEE ALSO:

- `searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q)`
- Testing ConnectApi Code

```
setTestSearchFeedItemsInFilterFeed(communityId, feedType, subjectId, keyPrefix, pageParam, pageSize, sortParam, q, result)
```

Register a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFilterFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
28.0–31.0

Signature
public static Void setTestSearchFeedItemsInFilterFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

$q$
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

`result`
Type: `ConnectApi.FeedItemPage`
Specify the test feed item page.

Return Value
Type: `Void`

SEE ALSO:
- `searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q)`
- `Testing ConnectApi Code`

```java
public static Void setTestSearchFeedItemsInFilterFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)
```

Register a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFilterFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

29.0–31.0

**Signature**

```java
public static Void setTestSearchFeedItemsInFilterFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)
```

**Parameters**

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`feedType`
Type: `ConnectApi.FeedType`
The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.  

subjectId
   Type: String
   The ID of the context user or the alias me.

keyPrefix
   Type: String
   A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
   Type: Integer
   The maximum number of comments to return with each feed item. The default value is 3.

density
   Type: ConnectApi.FeedDensity
   Specify the amount of content in a feed.
   - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
   - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
   Type: String
   The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
   Type: Integer
   Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
   Type: ConnectApi.FeedSortOrder
   Values are:
   - CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
   - CreatedDateDesc—Sorts by most recent creation date.
   - LastModifiedDateDesc—Sorts by most recent activity.
   - MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
   - Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
   Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

q
   Type: String
   Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
result
   Type: ConnectApi.FeedItemPage
   Specify the test feed item page.

Return Value
Type: Void

SEE ALSO:
   searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)
   Testing ConnectApi Code

ChatterGroups Class
Information about groups, such as the group’s members, photo, and the groups the specified user is a member of. Add members to a group, remove members, and change the group photo.

Namespace
ConnectApi

ChatterGroups Methods
The following are methods for ChatterGroups. All methods are static.

IN THIS SECTION:
   addMember(communityId, groupId, userId)
   Add a user to a group as a standard member.
   addMemberWithRole(communityId, groupId, userId, role)
   Add a user with a role to a group.
   addRecord(communityId, groupId, recordId)
   Associate a record with a group.
   createGroup(communityId, groupInput)
   Create a group.
   deleteBannerPhoto(communityId, groupId)
   Delete the group banner photo.
   deleteGroup(communityId, groupId)
   Delete a group.
   deleteMember(communityId, membershipId)
   Remove a member from a group.
   deletePhoto(communityId, groupId)
   Delete the group photo.
getAnnouncements(communityId, groupId)
Get the first page of announcements in a group.

getAnnouncements(communityId, groupId, pageParam, pageSize)
Get a page of announcements in a group.

getBannerPhoto(communityId, groupId)
Get the group banner photo.

group(communityId, groupId)
Get information about a group.

groupBatch(communityId, groupIds)
Get information about a list of groups.

groupMembershipRequest(communityId, requestId)
Get information about a request to join a private group.

groupMembershipRequests(communityId, groupId)
Get information about every request to join a private group.

groupMembershipRequests(communityId, groupId, status)
Get information about every request to join a private group that has a specified status.

groups(communityId)
Get the first page of groups.

groups(communityId, pageParam, pageSize)
Get a page of groups.

groups(communityId, pageParam, pageSize, archiveStatus)
Get a page of groups with an archive status.

member(communityId, membershipId)
Get information about a group member.

members(communityId, groupId)
Get the first page of information about the members of a group.

members(communityId, groupId, pageParam, pageSize)
Get a page of information about the members of a group.

membershipBatch(communityId, membershipIds)
Get information about a list of group memberships.

myChatterSettings(communityId, groupId)
Get the context user’s Chatter settings for a group.

photo(communityId, groupId)
Get the photo for a group.

record(communityId, groupRecordId)
Get a record associated with a group.

records(communityId, groupId)
Get the first page of records associated with a group.

records(communityId, groupId, pageParam, pageSize)
Get a page of records associated with a group.
inviteUsers(groupId, invite)
Invite internal and external users to join a group.

postAnnouncement(communityId, groupId, announcement)
Post an announcement to a group.

removeRecord(communityId, groupRecordId)
Remove the association of a record with a group.

requestGroupMembership(communityId, groupId)
Request membership in a private group.

searchGroups(communityId, q)
Get the first page of groups that match the search criteria.

searchGroups(communityId, q, pageParam, pageSize)
Get a page of groups that match the search criteria.

searchGroups(communityId, q, archiveStatus, pageParam, pageSize)
Get a page of groups with the archive status that match the search criteria.

setBannerPhoto(communityId, groupId, fileId, versionNumber)
Set an uploaded file as the group banner photo.

setBannerPhoto(communityId, groupId, fileUpload)
Set a file that hasn't been uploaded as the group banner photo.

setBannerPhotoWithAttributes(communityId, groupId, bannerPhoto)
Set and crop an uploaded file as the group banner photo.

setBannerPhotoWithAttributes(communityId, groupId, bannerPhoto, fileUpload)
Set and crop a file that hasn't been uploaded as the group banner photo.

setPhoto(communityId, groupId, fileId, versionNumber)
Set an uploaded file as the group photo.

setPhoto(communityId, groupId, fileUpload)
Set a file that hasn't been uploaded as the group photo.

setPhotoWithAttributes(communityId, groupId, photo)
Set and crop an uploaded file as the group photo.

setPhotoWithAttributes(communityId, groupId, photo, fileUpload)
Set and crop a file that hasn't been uploaded as the group photo.

updateGroup(communityId, groupId, groupInput)
Update the settings of a group.

updateGroupMember(communityId, membershipId, role)
Update the role of a group member.

updateMyChatterSettings(communityId, groupId, emailFrequency)
Update the context user's email frequency for a group.

updateRequestStatus(communityId, requestId, status)
Update a request to join a private group.

updateRequestStatus(communityId, requestId, status, responseMessage)
Update a request to join a private group and optionally provide a message when the request is denied.
**addMember(communityId, groupId, userId)**

Add a user to a group as a standard member.

API Version
28.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.GroupMember addMember(String communityId, String groupId, String userId)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- **groupId**
  - Type: String
  - The ID for a group.

- **userId**
  - Type: String
  - The ID for a user.

Return Value

Type: `ConnectApi.GroupMember`

Usage

To execute this method, the context user must be the group owner or moderator.

**addMemberWithRole(communityId, groupId, userId, role)**

Add a user with a role to a group.

API Version
29.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.GroupMember addMemberWithRole(String communityId, String groupId, String userId, ConnectApi.GroupMembershipType role)
```

Parameters

- `communityId`
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- `groupId`
  - Type: String
  - The ID for a group.

- `userId`
  - Type: String
  - The ID for a user.

- `role`
  - Type: `ConnectApi.GroupMembershipType`
  - The group membership type. One of these values:
    - `GroupManager`
    - `StandardMember`

Return Value

Type: `ConnectApi.GroupMember`

Usage

To execute this method, the context user must be the group owner or moderator.

```java
addRecord(communityId, groupId, recordId)
```

Associate a record with a group.

API Version

34.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.GroupRecord addRecord(String communityId, String groupId, String recordId)
```
Parameters

*communityId*
  Type: *String*
  Use either the ID for a community, *internal*, or *null*.

*groupId*
  Type: *String*
  ID of the group with which to associate the record.

*recordId*
  Type: *String*
  ID of the record to associate with the group.

Return Value

Type: *ConnectApi.GroupRecord*

```java
public static ConnectApi.ChatterGroupDetail createGroup(String communityId, ConnectApi.ChatterGroupInput groupInput)
```

Create a group.

API Version

29.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ChatterGroupDetail createGroup(String, communityId, ConnectApi.ChatterGroupInput groupInput)
```

Parameters

*communityId*
  Type: *String*,
  Use either the ID for a community, *internal*, or *null*.

*groupInput*
  Type: *ConnectApi.ChatterGroupInput*
  The properties of the group.

Return Value

Type: *ConnectApi.ChatterGroupDetail*
deleteBannerPhoto(communityId, groupId)
Delete the group banner photo.

API Version
36.0

Requires Chatter
Yes

Signature
public static Void deleteBannerPhoto(String communityId, String groupId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
ID of the group.

Return Value
Type: Void

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

deleteGroup(communityId, groupId)
Delete a group.

API Version
29.0

Requires Chatter
Yes

Signature
public static Void deleteGroup(String communityId, String groupId)
Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`groupId`
Type: `String`
The ID for a group.

Return Value
Type: `Void`

`deleteMember(communityId, membershipId)`
Remove a member from a group.

API Version
28.0

Requires Chatter
Yes

Signature
`public static Void deleteMember(String communityId, String membershipId)`

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`membershipId`
Type: `String`
The ID for a membership.

Return Value
Type: `Void`

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

`deletePhoto(communityId, groupId)`
Delete the group photo.
API Version
28.0

Requires Chatter
Yes

Signature
public static Void deletePhoto(String communityId, String groupId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

Return Value
Type: Void

Usage
This method is only successful when the context user is the group manager or owner, or has Modify All Data permission.

getAnnouncements(communityId, groupId)
Get the first page of announcements in a group.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.AnnouncementPage getAnnouncements(String communityId, String groupId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

**groupId**
Type: String
The ID for a group.

Return Value
Type: `ConnectApi.AnnouncementPage`

Usage
To post an announcement, get information about an announcement, update the expiration date of an announcement, or delete an announcement, use the methods of the `ConnectApi.Announcements` class.

```java
public static ConnectApi.AnnouncementPage getAnnouncements(String communityId, String groupId, Integer pageParam, Integer pageSize)
```
Get a page of announcements in a group.

API Version
31.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.AnnouncementPage getAnnouncements(String communityId, String groupId, Integer pageParam, Integer pageSize)
```

Parameters
- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **groupId**
  Type: String
  The ID for a group.

- **pageParam**
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

- **pageSize**
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
Return Value
Type: ConnectApi.AnnouncementPage

Usage
To post an announcement, get information about an announcement, update the expiration date of an announcement, or delete an announcement, use the methods of the ConnectApi.Announcements class.

getBannerPhoto(communityId, groupId)
Get the group banner photo.

API Version
36.0

Requires Chatter
Yes

Signature
public static ConnectApi.BannerPhoto getBannerPhoto(String communityId, String groupId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID of the group.

Return Value
Type: ConnectApi.BannerPhoto

getGroup(communityId, groupId)
Get information about a group.

API Version
28.0

Available to Guest Users
31.0
Requires Chatter
Yes

Signature
public static ConnectApi.ChatterGroupDetail getGroup(String communityId, String groupId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

Return Value
Type: ConnectApi.ChatterGroupDetail

getGroupBatch(communityId, groupIds)
Get information about a list of groups.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.BatchResult[] getGroupBatch(String communityId, List<String> groupIds)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

groupIds
Type: List<String>
A list of up to 500 group IDs.
Return Value

Type: `ConnectApi.BatchResult[]`

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.ChatterGroup` object and errors embedded in the results for groups that didn't load.

Example

```java
// Create a list of groups.
ConnectApi.ChatterGroupPage groupPage = ConnectApi.ChatterGroups.getGroups(null);

// Create a list of group IDs.
List<String> groupIds = new List<String>();
for (ConnectApi.ChatterGroup aGroup : groupPage.groups){
    groupIds.add(aGroup.id);
}

// Get info about all the groups in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterGroups.getGroupBatch(null, groupIds);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the number of members in each group.
        ConnectApi.ChatterGroup aGroup;
        if(batchResult.getResult() instanceof ConnectApi.ChatterGroup) {
            aGroup = (ConnectApi.ChatterGroup) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(aGroup.memberCount);
    } else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
```

SEE ALSO:

- `getMembershipBatch(communityId, membershipIds)`
- `getGroupMembershipRequest(communityId, requestId)`

Get information about a request to join a private group.

API Version

28.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.GroupMembershipRequest getGroupMembershipRequest(String communityId, String requestId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.
- `requestId`
  - Type: `String`
  - The ID of a request to join a private group.

Return Value

Type: `ConnectApi.GroupMembershipRequest`

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

```java
getGroupMembershipRequests(communityId, groupId)
```

Get information about every request to join a private group.

API Version

28.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.GroupMembershipRequests getGroupMembershipRequests(String communityId, String groupId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.
- `groupId`
  - Type: `String`
The ID for a group.

Return Value
Type: ConnectApi.GroupMembershipRequests

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

getGroupMembershipRequests(communityId, groupId, status)
Get information about every request to join a private group that has a specified status.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.GroupMembershipRequests getGroupMembershipRequests(String communityId, String groupId, ConnectApi.GroupMembershipRequestStatus status)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

status
Type: ConnectApi.GroupMembershipRequestStatus
status—Status of a request to join a private group.
  • Accepted
  • Declined
  • Pending

Return Value
Type: ConnectApi.GroupMembershipRequests
Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

**getGroups(communityId)**
Get the first page of groups.

API Version
28.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterGroupPage getGroups(String communityId)

Parameters

*communityId*
Type: String

  Use either the ID for a community, internal, or null.

Return Value
Type: ConnectApi.ChatterGroupPage

**getGroups(communityId, pageParam, pageSize)**
Get a page of groups.

API Version
28.0

Available to Guest Users
31.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.ChatterGroupPage getGroups(String communityId, Integer pageParam, Integer pageSize)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **pageParam**
  - Type: `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: `ConnectApi.ChatterGroupPage`

```java
getGroups(communityId, pageParam, pageSize, archiveStatus)
```

Get a page of groups with an archive status.

API Version

- 29.0

Available to Guest Users

- 31.0

Requires Chatter

- Yes

Signature

```java
public static ConnectApi.ChatterGroupPage getGroups(String communityId, Integer pageParam, Integer pageSize, ConnectApi.GroupArchiveStatus archiveStatus)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **pageParam**
  - Type: `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**
Type: `Integer`

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**archiveStatus**
Type: `ConnectApi.GroupArchiveStatus`

Archive status of groups.
- **All**—All groups, including groups that are archived and groups that aren’t archived.
- **Archived**—Groups that are archived.
- **NotArchived**—Groups that aren’t archived.

If you pass in `null`, the default value is `All`.

Return Value
Type: `ConnectApi.ChatterGroupPage`

**getMember(communityId, membershipId)**
Get information about a group member.

API Version
28.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.GroupMember getMember(String communityId, String membershipId)
```

Parameters
- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- **membershipId**
  Type: `String`
  The ID for a membership.

Return Value
Type: `ConnectApi.GroupMember`
**getMembers(communityId, groupId)**
Get the first page of information about the members of a group.

API Version
28.0

Available to Guest Users
36.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.GroupMemberPage getMembers(String communityId, String groupId)
```

Parameters
- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.
- **groupId**
  - Type: String
  - The ID for a group.

Return Value
Type: **ConnectApi.GroupMemberPage**

**getMembers(communityId, groupId, pageParam, pageSize)**
Get a page of information about the members of a group.

API Version
28.0

Available to Guest Users
36.0

Requires Chatter
Yes

Yes
public static ConnectApi.GroupMemberPage getMembers(String communityId, String groupId, Integer pageParam, Integer pageSize)

Parameters

  communityId
    Type: String
    Use either the ID for a community, internal, or null.

  groupId
    Type: String
    The ID for a group.

  pageParam
    Type: Integer
    Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

  pageSize
    Type: Integer
    Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value

Type: ConnectApi.GroupMemberPage

getMembershipBatch(communityId, membershipIds)

Get information about a list of group memberships.

API Version

31.0

Requires Chatter

Yes

Signature

public static ConnectApi.BatchResult[] getMembershipBatch(String communityId, List<String> membershipIds)

Parameters

  communityId
    Type: String
    Use either the ID for a community, internal, or null.

  membershipIds
    Type: List<String>
A list of up to 500 group membership IDs.

Return Value

Type: `ConnectApi.BatchResult[]`

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.GroupMember` object and errors embedded in the results for group memberships that didn’t load.

Example

```java
// Get members of a group.
ConnectApi.GroupMemberPage membersPage = ConnectApi.ChatterGroups.getMembers(null, '0F9D00000000oOT');

// Create a list of membership IDs.
List<String> membersList = new List<String>();
for (ConnectApi.GroupMember groupMember : membersPage.members){
    membersList.add(groupMember.id);
}

// Get info about all group memberships in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterGroups.getMembershipBatch(null, membersList);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the first name of each member.
        ConnectApi.GroupMember groupMember;
        if(batchResult.getResult() instanceof ConnectApi.GroupMember) {
            groupMember = (ConnectApi.GroupMember) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(groupMember.user.firstName);
    } else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
```

SEE ALSO:

- `getGroupBatch(communityId, groupIds)`
- `getMyChatterSettings(communityId, groupId)`

Get the context user’s Chatter settings for a group.

API Version

28.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.GroupChatterSettings getMyChatterSettings(String communityId, String groupId)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- **groupId**
  - Type: String
  - The ID for a group.

Return Value

Type: ConnectApi.GroupChatterSettings

---

**getPhoto(communityId, groupId)**

Get the photo for a group.

API Version

28.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.Photo getPhoto(String communityId, String groupId)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- **groupId**
  - Type: String
  - The ID for a group.
Return Value
Type: ConnectApi.Photo

getRecord(communityId, groupRecordId)
Get a record associated with a group.

API Version
34.0

Requires Chatter
Yes

Signature
public static ConnectApi.GroupRecord getRecord(String communityId, String groupRecordId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

groupRecordId
Type: String
ID of the group record.

Return Value
Type: ConnectApi.GroupRecord

getRecords(communityId, groupId)
Get the first page of records associated with a group.

API Version
33.0

Requires Chatter
Yes

Signature
public static ConnectApi.GroupRecordPage getRecords(String communityId, String groupId)
Parameters

`communityId`
- Type: `String`
- Use either the ID for a community, `internal`, or `null`.

`groupId`
- Type: `String`
- The ID for a group.

Return Value

Type: `ConnectApi.GroupRecordPage`

`getRecords(communityId, groupId, pageParam, pageSize)`

Get a page of records associated with a group.

API Version

33.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.GroupRecordPage getRecords(String communityId, String groupId, Integer pageParam, Integer pageSize)
```

Parameters

`communityId`
- Type: `String`
- Use either the ID for a community, `internal`, or `null`.

`groupId`
- Type: `String`
- The ID for a group.

`pageParam`
- Type: `Integer`
- Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
- Type: `Integer`
- Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
Return Value
Type: `ConnectApi.GroupRecordPage`

**inviteUsers(groupId, invite)**
Invite internal and external users to join a group.

API Version
39.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.Invitations inviteUsers(String groupId, ConnectApi.InviteInput invite)
```

Parameters

`groupId`
Type: `String`
ID of the group.

`invite`
Type: `ConnectApi.InviteInput`
A `ConnectApi.InviteInput` body.

Return Value
Type: `ConnectApi.Invitations`

**postAnnouncement(communityId, groupId, announcement)**
Post an announcement to a group.

API Version
31.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.Announcement postAnnouncement(String communityId, String groupId, ConnectApi.AnnouncementInput announcement)
```
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

announcement
Type: ConnectApi.AnnouncementInput
A ConnectApi.AnnouncementInput object.

Return Value
Type: ConnectApi.Announcement

Usage
Use an announcement to highlight information. Users can discuss, like, and post comments on announcements. Deleting the feed post deletes the announcement.

To post an announcement, get information about an announcement, update the expiration date of an announcement, or delete an announcement, use the methods of the ConnectApi.Announcements class.

removeRecord(communityId, groupRecordId)
Remove the association of a record with a group.

API Version
34.0

Requires Chatter
Yes

Signature
public static Void removeRecord(String communityId, String groupRecordId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

groupRecordId
Type: String
ID of the group record.
Return Value
Type: Void

`requestGroupMembership(communityId, groupId)`
Request membership in a private group.

API Version
28.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.GroupMembershipRequest requestGroupMembership(String communityId, String groupId)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `groupId`
  Type: `String`
  The ID for a group.

Return Value
Type: `ConnectApi.GroupMembershipRequest`

Sample: Requesting to Join a Private Group
This sample code calls `ConnectApi.ChatterGroups.requestGroupMembership` to request to join a private group.
```java
String communityId = null;
ID groupId = '0F9x00000000hAZ';

ConnectApi.GroupMembershipRequest membershipRequest =
ConnectApi.ChatterGroups.requestGroupMembership(communityId, groupId);
```

`searchGroups(communityId, q)`
Get the first page of groups that match the search criteria.

API Version
28.0
Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterGroupPage searchGroups(String communityId, String q)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as null.

Return Value
Type: ConnectApi.ChatterGroupPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchGroups(communityId, q, result)
Testing ConnectApi Code

searchGroups(communityId, q, pageParam, pageSize)
Get a page of groups that match the search criteria.

API Version
28.0

Available to Guest Users
31.0
Requires Chatter
Yes

Signature
public static ConnectApi.ChatterGroupPage searchGroups(String communityId, String q, Integer pageParam, Integer pageSize)

Parameters
communityId
- Type: String
  - Use either the ID for a community, internal, or null.

q
- Type: String
  - Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as null.

pageParam
- Type: Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
- Type: Integer
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ChatterGroupPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestSearchGroups(communityId, q, pageParam, pageSize, result)
Testing ConnectApi Code

searchGroups(communityId, q, archiveStatus, pageParam, pageSize)
Get a page of groups with the archive status that match the search criteria.

API Version
29.0
Available to Guest Users
31.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterGroupPage searchGroups(String communityId, String q,
ConnectApi.GroupArchiveStatus archiveStatus, Integer pageParam, Integer pageSize)
```

Parameters

- `communityId`  
  Type: `String`  
  Use either the ID for a community, internal, or `null`.

- `q`  
  Type: `String`  
  Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as `null`.

- `archiveStatus`  
  Type: `ConnectApi.GroupArchiveStatus`  
  Archive status of groups.  
  - `All`—All groups, including groups that are archived and groups that aren’t archived.  
  - `Archived`—Groups that are archived.  
  - `NotArchived`—Groups that aren’t archived.

- `pageParam`  
  Type: `Integer`  
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`  
  Type: `Integer`  
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: `ConnectApi.ChatterGroupPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestSearchGroups(communityId, q, archiveStatus, pageParam, pageSize, result)`
- Testing ConnectApi Code

`setBannerPhoto(communityId, groupId, fileId, versionNumber)`

Set an uploaded file as the group banner photo.

API Version
36.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String groupId, String fileId, Integer versionNumber)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`groupId`
Type: `String`
The ID of the group.

`fileId`
Type: `String`
The ID of the already uploaded file. The key prefix must be 069, and the image must be smaller than 8 MB.

`versionNumber`
Type: `Integer`
Version number of the existing file. Specify either an existing version number or, to get the latest version, specify `null`.

Return Value

Type: `ConnectApi.BannerPhoto`

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.
Photos are processed asynchronously and may not be visible right away.

**setBannerPhoto(communityId, groupId, fileUpload)**

Set a file that hasn’t been uploaded as the group banner photo.

**API Version**

36.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String groupId, ConnectApi.BinaryInput fileUpload)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, *internal*, or *null*.

- **groupId**
  - Type: `String`
  - The ID of the group.

- **fileUpload**
  - Type: `ConnectApi.BinaryInput`
  - A file to use as the photo. The content type must be usable as an image.

**Return Value**

Type: `ConnectApi.BannerPhoto`

**Usage**

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

**setBannerPhotoWithAttributes(communityId, groupId, bannerPhoto)**

Set and crop an uploaded file as the group banner photo.

**API Version**

36.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId,
String groupId, ConnectApi.BannerPhotoInput bannerPhoto)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `groupId`
  - Type: `String`
  - The ID of the group.

- `bannerPhoto`
  - Type: `ConnectApi.BannerPhotoInput`
  - A `ConnectApi.BannerPhotoInput` object that specifies the ID and version of the file, and how to crop the file.

Return Value

Type: `ConnectApi.BannerPhoto`

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

`setBannerPhotoWithAttributes(communityId, groupId, bannerPhoto, fileUpload)`

Set and crop a file that hasn’t been uploaded as the group banner photo.

API Version

36.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId,
String groupId, ConnectApi.BannerPhotoInput bannerPhoto, ConnectApi.BinaryInput
fileUpload)
```
Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

groupId
  Type: String
  The ID of the group.

bannerPhoto
  Type: ConnectApi.BannerPhotoInput
  A ConnectApi.BannerPhotoInput object specifying the cropping parameters.

fileUpload
  Type: ConnectApi.BinaryInput
  A file to use as the photo. The content type must be usable as an image.

Return Value

Type: ConnectApi.BannerPhoto

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

setPhoto(communityId, groupId, fileId, versionNumber)
Set an uploaded file as the group photo.

API Version

28.0

Requires Chatter

Yes

Signature

public static ConnectApi.Photo setPhoto(String communityId, String groupId, String fileId, Integer versionNumber)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.
**groupId**
Type: **String**
The ID for a group.

**fileId**
Type: **String**
ID of a file already uploaded. The key prefix must be 069, and the file must be an image that is smaller than 2 GB.

**versionNumber**
Type: **Integer**
Version number of the existing file. Specify either an existing version number or, to get the latest version, specify `null`.

Return Value
Type: `ConnectApi.Photo`

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.
Photos are processed asynchronously and may not be visible right away.

Sample: Updating a Group Photo with an Existing File
When a group is created, it doesn’t have a group photo. You can set an existing photo that has already been uploaded to Salesforce as the group photo. The key prefix must be 069 and the file size must be less than 2 GB.

```java
String communityId = null;
ID groupId = '0F9x00000000hAK';
ID fileId = '069x00000001Ion';

// Set photo
ConnectApi.Photo photo = ConnectApi.ChatterGroups.setPhoto(communityId, groupId, fileId, null);
```

**setPhoto(communityId, groupId, fileId)**
Set a file that hasn’t been uploaded as the group photo.

API Version
28.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.Photo setPhoto(String communityId, String groupId,
ConnectApi.BinaryInput fileUpload)
```
Parameters

*communityId*
  Type: String
  Use either the ID for a community, internal, or null.

*groupId*
  Type: String
  The ID for a group.

*fileUpload*
  Type: ConnectApi.BinaryInput
  A file to use as the photo. The content type must be usable as an image.

Return Value

Type: ConnectApi.Photo

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

Sample: Uploading a New File and Using It as a Group Photo

When a group is created, it doesn't have a group photo. You can upload a photo and set it as the group photo.

```java
String communityId = null;
ID groupId = '0F9x00000000hAP';
ID photoId = '069x00000001Ioo';

// Set photo
List<ContentVersion> groupPhoto = [Select c.VersionData From ContentVersion c where ContentDocumentId=:photoId];
ConnectApi.BinaryInput binary = new ConnectApi.BinaryInput(groupPhoto.get(0).VersionData, 'image/png', 'image.png');
ConnectApi.Photo photo = ConnectApi.ChatterGroups.setPhoto(communityId, groupId, binary);

setPhotoWithAttributes(communityId, groupId, photo)
```

Set and crop an uploaded file as the group photo.

API Version

29.0

Requires Chatter

Yes
Signature

```
public static ConnectApi.PhotosetPhotoWithAttributes(String communityId, String groupId,
ConnectApi.PhotoInput photo)
```

Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **groupId**
  Type: `String`
  The ID for a group.

- **photo**
  Type: `ConnectApi.PhotoInput`
  A `ConnectApi.PhotoInput` object that specifies the ID and version of the file, and how to crop the file.

Return Value

- Type: `ConnectApi.Photo`

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

**setPhotoWithAttributes(communityId, groupId, photo, fileUpload)**

Set and crop a file that hasn’t been uploaded as the group photo.

API Version

29.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.PhotosetPhotoWithAttributes(String communityId, String groupId,
ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)
```

Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

**groupId**
  Type: `String`
  The ID for a group.

**photo**
  Type: `ConnectApi.PhotoInput`
  A `ConnectApi.PhotoInput` object that specifies how to crop the file specified in `fileUpload`.

**fileUpload**
  Type: `ConnectApi.BinaryInput`
  A file to use as the photo. The content type must be usable as an image.

**Return Value**
Type: `ConnectApi.Photo`

**Usage**
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

**updateGroup(communityId, groupId, groupInput)**
Update the settings of a group.

**API Version**
28.0

**Requires Chatter**
Yes

**Signature**

```java
public static ConnectApi.ChatterGroup updateGroup(String communityId, String groupId,
                                                  ConnectApi.ChatterGroupInput groupInput)
```

**Parameters**

* **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

* **groupId**
  Type: `String`
  The ID for a group.

* **groupInput**
  Type: `ConnectApi.ChatterGroupInput`
A `ConnectApi.ChatterGroupInput` object.

Return Value
Type: `ConnectApi.ChatterGroup`

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Use this method to update any settings in the `ConnectApi.ChatterGroupInput` class. These settings include the group title and text in the “Information” section, whether the group is public or private, and whether the group is archived.

Example
This example archives a group.

```java
String groupId = '0F9D00000000qSz';
String communityId = null;
ConnectApi.ChatterGroupInput groupInput = new ConnectApi.ChatterGroupInput();
groupInput.isArchived = true;
ConnectApi.ChatterGroups.updateGroup(communityId, groupId, groupInput);
```

`updateGroupMember(communityId, membershipId, role)`
Update the role of a group member.

API Version
29.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ChatterGroup updateGroupMember(String communityId, String membershipId, ConnectApi.GroupMembershipType role)`

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`membershipId`
Type: `String`
The ID for a membership.
role
  Type: ConnectApi.GroupMembershipType
  The group membership type. One of these values:
  • GroupManager
  • StandardMember

Return Value
Type: ConnectApi.ChatterGroup

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

updateMyChatterSettings(communityId, groupId, emailFrequency)
Update the context user’s email frequency for a group.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.GroupChatterSettings updateMyChatterSettings(String communityId, String groupId, ConnectApi.GroupEmailFrequency emailFrequency)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

groupId
  Type: String
  The ID for a group.

emailFrequency
  Type: ConnectApi.GroupEmailFrequency
  Frequency with which a user receives email.
  • EachPost
  • DailyDigest
  • WeeklyDigest
  • Never
The value UseDefault uses the value set in a call to `updateChatterSettings(communityId, userId, defaultGroupEmailFrequency)`.

Return Value
Type: `ConnectApi.GroupChatterSettings`

`updateRequestStatus(communityId, requestId, status)`
Update a request to join a private group.

API Version
28.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.GroupMembershipRequest updateRequestStatus(String communityId, String requestId, ConnectApi.GroupMembershipRequestStatus status)
```

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`requestId`
Type: `String`
ID for a request to join a private group.

`status`
Type: `ConnectApi.GroupMembershipRequestStatus`
Status of the request:
- Accepted
- Declined
  The `Pending` value of the enum is not valid in this method.

Return Value
Type: `ConnectApi.GroupMembershipRequest`

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.
Sample: Accepting or Declining a Request to Join a Private Group

This sample code calls `ConnectApi.ChatterGroups.updateRequestStatus` and passes it the membership request ID and an `ConnectApi.GroupMembershipRequestStatus.Accepted` status. You can also pass `ConnectApi.GroupMembershipRequestStatus.Declined`.

```java
String communityId = null;
ID groupId = '0F9x00000000hAZ';
String requestId = '0I5x000000001snCAA';

ConnectApi.GroupMembershipRequest membershipRequestRep =
    ConnectApi.ChatterGroups.updateRequestStatus(communityId, requestId, ConnectApi.GroupMembershipRequestStatus.Accepted);
```

`updateRequestStatus(communityId, requestId, status, responseMessage)`

Update a request to join a private group and optionally provide a message when the request is denied.

API Version
35.0

Requires Chatter
Yes

Signature

```
public static ConnectApi.GroupMembershipRequest updateRequestStatus(String communityId, 
String requestId, ConnectApi.GroupMembershipRequestStatus status, String responseMessage)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `requestId`
  Type: `String`
  ID for a request to join a private group.

- `status`
  Type: `ConnectApi.GroupMembershipRequestStatus`
  Status of the request:
  - `Accepted`
  - `Declined`
  The `Pending` value of the enum is not valid in this method.

- `responseMessage`
  Type: `String`
Provide a message to the user if their membership request is declined. The value of this property is used only when the value of the status property is Declined.

The maximum length is 756 characters.

Return Value
Type: `ConnectApi.GroupMembershipRequest`

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

**ChatterGroups Test Methods**

The following are the test methods for `ChatterGroups`. All methods are static.

For information about using these methods to test your `ConnectApi` code, see [Testing ConnectApi Code](#).

**setTestSearchGroups**(communityId, q, result)

Register a `ConnectApi.ChatterGroupPage` object to be returned when the matching `ConnectApi.searchGroups` method is called in a test context. Use the test method with the same parameters or you receive an exception.

**API Version**
29.0

**Signature**

```java
public static Void setTestSearchGroups(String communityId, String q, ConnectApi.ChatterGroupPage result)
```

**Parameters**

**communityId**
Type: `String`
Use either the ID for a community, internal, or `null`.

**q**
Type: `String`
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#). Can be specified as `null`.

**result**
Type: `ConnectApi.ChatterGroupPage`
The test `ConnectApi.ChatterGroupPage` object.
Return Value
Type: Void

SEE ALSO:
searchGroups(communityId, q)
Testing ConnectApi Code

setTestSearchGroups(communityId, q, pageParam, pageSize, result)
Register a ConnectApi.ChatterGroupPage object to be returned when the matching ConnectApi.searchGroups method is called in a test context. Use the test method with the same parameters or you receive an exception.

API Version
28.0

Signature
public static Void setTestSearchGroups(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.ChatterGroupPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

result
Type: ConnectApi.ChatterGroupPage
The test ConnectApi.ChatterGroupPage object.
Return Value
Type: Void

SEE ALSO:
searchGroups(communityId, q, pageParam, pageSize)
Testing ConnectApi Code

**setTestSearchGroups(communityId, q, archiveStatus, pageParam, pageSize, result)**

Register a ConnectApi.ChatterGroupPage object to be returned when the matching ConnectApi.searchGroups method is called in a test context. Use the test method with the same parameters or you receive an exception.

API Version
29.0

Signature

```java
public static Void setTestSearchGroups(String communityId, String q,
ConnectApi.GroupArchiveStatus, archiveStatus, Integer pageParam, Integer pageSize,
ConnectApi.ChatterGroupPage result)
```

Parameters

c**ommunityId**
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as null.

archiveStatus
Type: ConnectApi.GroupArchiveStatus
Archive status of groups.
- All—All groups, including groups that are archived and groups that aren’t archived.
- Archived—Groups that are archived.
- NotArchived—Groups that aren’t archived.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
result
   Type: ConnectApi.ChatterGroupPage
   The test ConnectApi.ChatterGroupPage object.

Return Value
Type: Void

SEE ALSO:

ChatterMessages Class
Access and modify message and conversation data.

Namespace
ConnectApi

Usage
Use Connect in Apex to get, send, search, and reply to messages. You can also get and search conversations, mark conversations as read, and get a count of unread messages.

ChatterMessages Methods
The following are methods for ChatterMessages. All methods are static.

IN THIS SECTION:
   getConversation(conversationId)
   Get a conversation.
   getConversation(conversationId, pageParam, pageSize)
   Get a page of a conversation.
   getConversation(communityId, conversationId)
   Get a conversation from a community.
   getConversation(communityId, conversationId, pageParam, pageSize)
   Get a page of a conversation from a community.
   getConversations()
   Get the most recent conversations.
   getConversations(pageParam, pageSize)
   Get a page of conversations.
   getConversations(communityId)
   Get the most recent conversations from a community.
getConversations(communityId, pageParam, pageSize)
Get a page of conversations from a community.

getMessage(messageId)
Get a message.

getMessage(communityId, messageId)
Get a message from a community.

getMessages()
Get the most recent messages.

getMessages(pageParam, pageSize)
Get a page of messages.

getMessages(communityId)
Get the most recent messages from a community.

getMessages(communityId, pageParam, pageSize)
Get a page of messages from a community.

getUnreadCount()
Get the number of conversations that are marked unread.

getUnreadCount(communityId)
Get the number of conversations that are marked unread in a community.

markConversationRead(conversationId, read)
Mark a conversation as read or unread.

markConversationRead(communityId, conversationId, read)
Mark a conversation as read or unread in a community.

replyToMessage(text, inReplyTo)
Reply to a message.

replyToMessage(communityId, text, inReplyTo)
Reply to a message in a community.

searchConversation(conversationId, q)
Get a conversation that matches the search criteria.

searchConversation(conversationId, pageParam, pageSize, q)
Get a conversation with a page of messages that match the search criteria.

searchConversation(communityId, conversationId, q)
Get a conversation with messages that match the search criteria in a community.

searchConversation(communityId, conversationId, pageParam, pageSize, q)
Get a conversation with a page of messages that match the search criteria in a community.

searchConversations(q)
Get conversations in which member names and messages match the search criteria.

searchConversations(pageParam, pageSize, q)
Get a page of conversations in which member names and messages match the search criteria.

searchConversations(communityId, q)
Get conversations in which member names and messages match the search criteria in a community.
getConversation(conversationId)
Get a conversation.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversation getConversation(String conversationId)

Parameters
conversationId
Type: String
Specify the ID for the conversation.

Return Value
Type: ConnectApi.ChatterConversation

getConversation(conversationId, pageParam, pageSize)
Get a page of a conversation.
API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversation getConversation(String conversationId, String pageParam, Integer pageSize)

Parameters
conversationId
Type: String
Specify the ID for the conversation.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ChatterConversation

getConversation(communityId, conversationId)
Get a conversation from a community.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversation getConversation(String communityId, String conversationId)
Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **conversationId**
  - Type: `String`
  - Specify the ID for the conversation.

Return Value

- Type: `ConnectApi.ChatterConversation`

**getConversation(communityId, conversationId, pageParam, pageSize)**

Get a page of a conversation from a community.

API Version

30.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ChatterConversation getConversation(String communityId, String conversationId, String pageParam, String pageSize)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **conversationId**
  - Type: `String`
  - Specify the ID for the conversation.

- **pageParam**
  - Type: `String`
  - Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
Return Value
Type: `ConnectApi.ChatterConversation`

`getConversations()`
Get the most recent conversations.

API Version
29.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ChatterConversationPage getConversations()`

Return Value
Type: `ConnectApi.ChatterConversationPage`

`getConversations(pageParam, pageSize)`
Get a page of conversations.

API Version
29.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ChatterConversationPage getConversations(String pageParam, Integer pageSize)`

Parameters
`pageParam`  
Type: `String`  
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`  
Type: `Integer`  
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
Return Value
Type: `ConnectApi.ChatterConversationPage`

**getConversations(communityId)**
Get the most recent conversations from a community.

API Version
30.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterConversationPage getConversations(String communityId)
```

Parameters
```java
communityId
Type: String
```
Use either the ID for a community, `internal`, or `null`.

Return Value
Type: `ConnectApi.ChatterConversationPage`

**getConversations(communityId, pageParam, pageSize)**
Get a page of conversations from a community.

API Version
30.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterConversationPage getConversations(String communityId, String pageParam, Integer pageSize)
```

Parameters
```java
communityId
Type: String
```
Use either the ID for a community, internal, or null.

**pageParam**
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ChatterConversationPage

**getMessage(messageId)**
Get a message.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessage getMessage(String messageId)

Parameters
messageId
Type: String
ID for the message.

Return Value
Type: ConnectApi.ChatterMessage

**getMessage(communityId, messageId)**
Get a message from a community.

API Version
30.0
Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessage getMessage(String communityId, String messageId)

Parameters
communityId
   Type: String
   Use either the ID for a community, internal, or null.

messageId
   Type: String
   ID for the message.

Return Value
Type: ConnectApi.ChatterMessage

getMessages()
Get the most recent messages.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessagePage getMessages()

Return Value
Type: ConnectApi.ChatterMessagePage

getMessages(pageParam, pageSize)
Get a page of messages.

API Version
29.0
Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterMessagePage getMessages(String pageParam, Integer pageSize)
```

Parameters

- `pageParam`
  Type: `String`
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- `pageSize`
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.ChatterMessagePage`

**getMessages(communityId)**
Get the most recent messages from a community.

API Version
30.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterMessagePage getMessages(String communityId)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

Return Value
Type: `ConnectApi.ChatterMessagePage`
getMessages(communityId, pageParam, pageSize)
Get a page of messages from a community.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessagePage getMessages(String communityId, String pageParam, Integer pageSize)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ChatterMessagePage

getUnreadCount()
Get the number of conversations that are marked unread.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.UnreadConversationCount getUnreadCount()
Return Value
Type: `ConnectApi.UnreadConversationCount`
If there are fewer than 50 unread conversations, `ConnectApi.UnreadConversationCount` returns the exact number of unread conversations and the `hasMore` property is `false`. If there are more than 50 unread conversations, `ConnectApi.UnreadConversationCount` returns 50 unread conversations and the `hasMore` property is `true`.

Example
```
ConnectApi.UnreadConversationCount unread = ConnectApi.ChatterMessages.getUnreadCount();
```

getUnreadCount(communityId)
Get the number of conversations that are marked unread in a community.

API Version
30.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.UnreadConversationCount getUnreadCount(String communityId)
```

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

Return Value
Type: `ConnectApi.UnreadConversationCount`
If there are fewer than 50 unread conversations, `ConnectApi.UnreadConversationCount` returns the exact number of unread conversations and the `hasMore` property is `false`. If there are more than 50 unread conversations, `ConnectApi.UnreadConversationCount` returns 50 unread conversations and the `hasMore` property is `true`.

markConversationRead(conversationId, read)
Mark a conversation as read or unread.

API Version
29.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterConversationSummary markConversationRead(String conversationId, Boolean read)
```

Parameters

- **conversationId**
  - Type: `String`
  - Specify the ID for the conversation.

- **read**
  - Type: `Boolean`
  - Specify whether the conversation is read (`true`) or not (`false`).

Return Value

Type: `ConnectApi.ChatterConversationSummary`

```java
markConversationRead(communityId, conversationID, read)
```

Mark a conversation as read or unread in a community.

API Version

30.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterConversationSummary markConversationRead(String communityId, String conversationID, Boolean read)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **conversationId**
  - Type: `String`
  - Specify the ID for the conversation.

- **read**
  - Type: `Boolean`
Specify whether the conversation is read (true) or not (false).

Return Value
Type: ConnectApi.ChatterConversationSummary

replyToMessage(text, inReplyTo)
Reply to a message.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessage replyToMessage(String text, String inReplyTo)

Parameters
text
  Type: String
  The text of the message. Cannot be empty or over 10,000 characters.
inReplyTo
  Type: String
  ID of the message that is being responded to.

Return Value
Type: ConnectApi.ChatterMessage

replyToMessage(communityId, text, inReplyTo)
Reply to a message in a community.

API Version
30.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.ChatterMessage replyToMessage(String communityId, String text, String inReplyTo)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **text**
  - Type: String
  - The text of the message. Cannot be empty or over 10,000 characters.

- **inReplyTo**
  - Type: String
  - ID of the message that is being responded to.

Return Value

Type: `ConnectApi.ChatterMessage`

#### searchConversation(conversationId, q)

Get a conversation that matches the search criteria.

API Version

29.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ChatterConversation searchConversation(String conversationId, String q)
```

Parameters

- **conversationId**
  - Type: String
  - Specify the ID for the conversation.

- **q**
  - Type: String
  - Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
Return Value
Type: `ConnectApi.ChatterConversation`

`searchConversation(conversationId, pageParam, pageSize, q)`
Get a conversation with a page of messages that match the search criteria.

API Version
29.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterConversation searchConversation(String conversationId,
String pageParam, Integer pageSize, String q)
```

Parameters

- `conversationId`
  Type: `String`
  Specify the ID for the conversation.

- `pageParam`
  Type: `String`
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- `pageSize`
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- `q`
  Type: `String`
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

Return Value
Type: `ConnectApi.ChatterConversation`

`searchConversation(communityId, conversationId, q)`
Get a conversation with messages that match the search criteria in a community.

API Version
30.0
The `searchConversation` method allows you to search for conversations in a community based on specific criteria. The method is defined as follows:

```java
public static ConnectApi.ChatterConversation searchConversation(String communityId, String conversationId, String q)
```

### Parameters

- **communityId**
  - **Type:** String
  - Use either the ID for a community, `internal`, or `null`.

- **conversationId**
  - **Type:** String
  - Specify the ID for the conversation.

- **q**
  - **Type:** String
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

### Return Value

- **Type:** `ConnectApi.ChatterConversation`

The `ConnectApi.ChatterConversation` type contains information about the conversation, such as its ID, creation date, and messages.

The `searchConversation` method is used to get a conversation with a page of messages that match the search criteria in a community.

### API Version

- **30.0**

### Requires Chatter

- **Yes**

---

The method signature is defined as:

```java
public static ConnectApi.ChatterConversation searchConversation(String communityId, String conversationId, String pageParam, Integer pageSize, String q)
```

### Parameters

- **communityId**
  - **Type:** String
  - Use either the ID for a community, `internal`, or `null`.

- **conversationId**
  - **Type:** String
  - Specify the ID for the conversation.

- **pageParam**
  - **Type:** String
  - Specify the page parameter for pagination.

- **pageSize**
  - **Type:** Integer
  - Specify the page size for pagination.

- **q**
  - **Type:** String
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

The `searchConversation` method with pagination is used to get a conversation with a page of messages that match the search criteria in a community.
**conversationId**
Type: String
Specify the ID for the conversation.

**pageParam**
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterConversation

**searchConversations(q)**
Get conversations in which member names and messages match the search criteria.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversationPage searchConversations(String q)

Parameters
q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterConversationPage
**searchConversations(pageParam, pageSize, q)**

Get a page of conversations in which member names and messages match the search criteria.

**API Version**

29.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.ChatterConversationPage searchConversations(String pageParam, Integer pageSize, String q)
```

**Parameters**

- **pageParam**
  - Type: `String`
  - Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **q**
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

**Return Value**

Type: `ConnectApi.ChatterConversationPage`

**searchConversations(communityId, q)**

Get conversations in which member names and messages match the search criteria in a community.

**API Version**

30.0

**Requires Chatter**

Yes
Signature

public static ConnectApi.ChatterConversationPage searchConversations(String communityId, String q)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

Type: ConnectApi.ChatterConversationPage

searchConversations(communityId, pageParam, pageSize, q)
Get a page of conversations in which member names and messages match the search criteria in a community.

API Version

30.0

Requires Chatter

Yes

Signature

public static ConnectApi.ChatterConversationPage searchConversations(String communityId, String pageParam, Integer pageSize, String q)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
q
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterConversationPage

searchMessages(q)
Get messages that match the search criteria.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessagePage searchMessages(String q)

Parameters
q
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterMessagePage

searchMessages(pageParam, pageSize, q)
Get a page of messages that match the search criteria.

API Version
29.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.ChatterMessagePage searchMessages(String pageParam, Integer pageSize, String q)
```

Parameters

`pageParam`
Type: String

Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: Integer

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`q`
Type: String

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

Type: `ConnectApi.ChatterMessagePage`

```java
searchMessages(communityId, q)
```

Get messages that match the search criteria in a community.

API Version

30.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ChatterMessagePage searchMessages(String communityId, String q)
```

Parameters

`communityId`
Type: String

Use either the ID for a community, `internal`, or `null`.

`q`
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterMessagePage

searchMessages(communityId, pageParam, pageSize, q)
Get a page of messages that match the search criteria in a community.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessagePage searchMessages(String communityId, String pageParam, Integer pageSize, String q)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterMessagePage

sendMessage(text, recipients)
Send a message to a list of recipients.
API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessage sendMessage(String text, String recipients)

Parameters
text
  Type: String
  The text of the message. Cannot be empty or over 10,000 characters.

recipients
  Type: String
  Up to nine comma-separated IDs of the users receiving the message.

Return Value
Type: ConnectApi.ChatterMessage

sendMessage(communityId, text, recipients)
Send a message to a list of recipients in a community.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessage sendMessage(String communityId, String text, String recipients)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

text
  Type: String
The text of the message. Cannot be empty or over 10,000 characters.

`recipients`
Type: `String`
Up to nine comma-separated IDs of users to receive the message.

Return Value
Type: `ConnectApi.ChatterMessage`

**ChatterUsers Class**
Access information about users, such as activity, followers, subscriptions, files, and groups.

**Namespace**
`ConnectApi`

**ChatterUsers Methods**
The following are methods for `ChatterUsers`. All methods are static.

**IN THIS SECTION:**
- `exportUserActivities(communityId, userId)`
  Export Chatter-related user activity, such as bookmarks, topic endorsements, and votes.
- `follow(communityId, userId, subjectId)`
  Follow a user or record.
- `getChatterSettings(communityId, userId)`
  Get the default Chatter settings for a user.
- `getFollowers(communityId, userId)`
  Get the first page of followers for a user.
- `getFollowers(communityId, userId, pageParam, pageSize)`
  Get a page of followers for a user.
- `getFollowings(communityId, userId)`
  Get the first page of users and records that a user follows.
- `getFollowings(communityId, userId, pageParam)`
  Get a page of users and records that a user follows.
- `getFollowings(communityId, userId, pageParam, pageSize)`
  Get a page with the specified number of users and records that a user follows.
- `getFollowings(communityId, userId, filterType)`
  Get the first page of records, filtered by key prefix, that a user follows.
- `getFollowings(communityId, userId, filterType, pageParam)`
  Get a page of records, filtered by key prefix, that a user follows.
getFollowings(communityId, userId, filterType, pageParam, pageSize)
Get a page with the specified number of records, filtered by key prefix, that a user follows.

getReputation(communityId, userId)
Get a user’s reputation.

getUser(communityId, userId)
Get information about a user.

getUserBatch(communityId, userIds)
Get information about a list of users.

getUserGroups(communityId, userId)
Get a user’s groups.

getUserGroups(communityId, userId, pageParam, pageSize)
Get a page of a user’s groups.

getUsers(communityId)
Get the first page of users.

getUsers(communityId, pageParam, pageSize)
Get a page of users.

purgeUserActivities(communityId, userId)
Start a job to purge Chatter-related user activity, such as bookmarks, topic endorsements, and votes.

searchUserGroupDetails(communityId, userId, q)
Get the user’s groups that match the search criteria.

searchUserGroupDetails(communityId, userId, q, pageParam, pageSize)
Get a page of a user’s groups that match the search criteria.

searchUsers(communityId, q)
Get the first page of users that match the search criteria.

searchUsers(communityId, q, pageParam, pageSize)
Get a page of users that match the search criteria.

searchUsers(communityId, q, searchContextId, pageParam, pageSize)
Get a page of users that match the search criteria.

updateChatterSettings(communityId, userId, defaultGroupEmailFrequency)
Update the default Chatter settings for a user.

updateUser(communityId, userId, userInput)
Update the About Me section for a user.

exportUserActivities(communityId, userId)
Export Chatter-related user activity, such as bookmarks, topic endorsements, and votes.

API Version
42.0
Requires Chatter
Yes

Signature
public static ConnectApi.UserActivitiesJob exportUserActivities(String communityId,
String userId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
ID of the user.

Return Value
Type: ConnectApi.UserActivitiesJob

Usage
The following activities can be exported.

- Bookmark—User bookmarked a post.
- ChatterActivity—Total counts of posts and comments made and likes and comments received for a user.
- ChatterLike—User liked a post or comment.
- Comment—User commented on a post.
- CompanyVerify—User verified comment.
- DownVote—User downvoted a post or comment.
- FeedEntityRead—User read a post.
- FeedRead—User read a feed.
- Mute—User muted a post.
- Post—User made a post.
- TopicEndorsement—User endorsed another user on a topic or received endorsement on a topic.
- UpVote—User upvoted a post or comment.

follow(communityId, userId, subjectId)
Follow a user or record.

API Version
28.0
Requires Chatter
Yes

Signature
public static ConnectApi.Subscription follow(String communityId, String userId, String subjectId)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

userId
  Type: String
  The ID for the context user or the keyword me.

subjectId
  Type: String
  ID of the user or record to follow.

Return Value
Type: ConnectApi.Subscription

Example

ChatterUsers.ConnectApi.Subscription subscriptionToRecord = ConnectApi.ChatterUsers.follow(null, 'me', '001RR000002G4Y0');

SEE ALSO:
  Unfollow a Record

getchatterSettings(communityId, userId)

Get the default Chatter settings for a user.

API Version
28.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.UserChatterSettings getChatterSettings(String communityId, String userId)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **userId**
  - Type: String
  - The ID for the context user or the keyword me.

Return Value

Type: `ConnectApi.UserChatterSettings`

**getFollowers(communityId, userId)**

Get the first page of followers for a user.

API Version

28.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FollowerPage getFollowers(String communityId, String userId)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **userId**
  - Type: String
  - The ID for a user.
Return Value
Type: `ConnectApi.FollowerPage`

`getFollowers(communityId, userId, pageParam, pageSize)`
Get a page of followers for a user.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FollowerPage getFollowers(String communityId, String userId, Integer pageParam, Integer pageSize)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`userId`
Type: `String`
The ID for a user.

`pageParam`
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.FollowerPage`

`getFollowings(communityId, userId)`
Get the first page of users and records that a user follows.
API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for a user.

Return Value
Type: ConnectApi.FollowingPage

getFollowings(communityId, userId, pageParam)
Get a page of users and records that a user follows.
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for a user.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

Return Value
Type: ConnectApi.FollowingPage

getFollowings(communityId, userId, pageParam, pageSize)
Get a page with the specified number of users and records that a user follows.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for a user.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: `Integer`

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.FollowingPage`

`getFollowings(communityId, userId, filterType)`
Get the first page of records, filtered by key prefix, that a user follows.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId, String filterType)
```

Parameters
`communityId`
Type: `String`

Use either the ID for a community, `internal`, or `null`.

`userId`
Type: `String`

The ID for a user.

`filterType`
Type: `String`

Specifies the key prefix to filter the type of objects returned. A key prefix is the first three characters of the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

Return Value
Type: `ConnectApi.FollowingPage`
getFollowings(communityId, userId, filterType, pageParam)
Get a page of records, filtered by key prefix, that a user follows.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId, String filterType, Integer pageParam)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for a user.

filterType
Type: String
Specifies the key prefix to filter the type of objects returned. A key prefix is the first three characters of the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

Return Value
Type: ConnectApi.FollowingPage

getFollowings(communityId, userId, filterType, pageParam, pageSize)
Get a page with the specified number of records, filtered by key prefix, that a user follows.

API Version
28.0
Available to Guest Users
32.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId, String filterType, Integer pageParam, Integer pageSize)
```

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

userId
  Type: String
  The ID for a user.

filterType
  Type: String
  Specifies the key prefix to filter the type of objects returned. A key prefix is the first three characters of the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

pageParam
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value

Type: ConnectApi.FollowingPage

getReputation(communityId, userId)

Get a user's reputation.

API Version
32.0

Available to Guest Users
32.0
Requires Chatter
Yes

Signature
public static ConnectApi.Reputation getReputation(String communityId, String userId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
ID of the user.

Return Value
Type: ConnectApi.Reputation

getUser(communityId, userId)
Get information about a user.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserSummary getUser(String communityId, String userId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for a user.
### Return Value

Type: `ConnectApi.UserDetail`

### Usage

If the user is external, the properties that the `ConnectApi.UserDetail` output class shares with the `ConnectApi.UserSummary` output class can have non-null values. Other properties are always `null`.

#### getUserBatch(communityId, userIds)

Get information about a list of users.

**API Version**

31.0

**Available to Guest Users**

32.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.BatchResult[] getUserBatch(String communityId, List<String> userIds)
```

**Parameters**

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `userIds`
  - Type: `List<String>`
  - A list of up to 500 user IDs.

**Return Value**

Type: `ConnectApi.BatchResult[]`

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.User` object and errors for users that didn’t load.

**Example**

```java
// Get users in an organization.
ConnectApi.UserPage userPage = ConnectApi.ChatterUsers.getUsers(null);
```
// Create a list of user IDs.
List<String> userList = new List<String>();
for (ConnectApi.User user : userPage.users){
    userList.add(user.id);
}

// Get info about all users in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterUsers.getUserBatch(null, userList);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print each user's username.
        ConnectApi.UserDetail user;
        if(batchResult.getResult() instanceof ConnectApi.UserDetail) {
            user = (ConnectApi.UserDetail) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(user.username);
    } else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}

getUserGroups(communityId, userId)
Get a user's groups.

API Version
45.0

Available to Guest Users
45.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserGroupDetailPage getUserGroups(String communityId, String userId)

Parameters
communityId
    Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for a user.

Return Value
Type: ConnectApi.UserGroupDetailPage

getUserGroups(communityId, userId, pageParam, pageSize)
Get a page of a user’s groups.

API Version
45.0

Available to Guest Users
45.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserGroupDetailPage getUserGroups(String communityId, String userId, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for a user.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
Return Value
Type: `ConnectApi.UserGroupDetailPage`

```java
getUsers(communityId)
```
Get the first page of users.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.UserPage getUsers(String communityId)
```

Parameters
```java
communityId
```
Type: `String`
Use either the ID for a community, `internal`, or `null`.

Return Value
Type: `ConnectApi.UserPage`

```java
getUsers(communityId, pageParam, pageSize)
```
Get a page of users.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes
public static ConnectApi.UserPage getUsers(String communityId, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.UserPage

purgeUserActivities(communityId, userId)
Start a job to purge Chatter-related user activity, such as bookmarks, topic endorsements, and votes.

API Version
42.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserActivitiesJob purgeUserActivities(String communityId, String userId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
ID of the user.
Return Value
Type: `ConnectApi.UserActivitiesJob`

Usage
The following activities can be purged with this method.

- **Bookmark** — User bookmarked a post.
- **ChatterActivity** — Total counts of posts and comments made and likes and comments received for a user.
- **ChatterLike** — User liked a post or comment.
- **CompanyVerify** — User verified comment.
- **DownVote** — User downvoted a post or comment.
- **FeedEntityRead** — User read a post.
- **FeedRead** — User read a feed.
- **Mute** — User muted a post.
- **TopicEndorsement** — User endorsed another user on a topic or received endorsement on a topic.
- **UpVote** — User upvoted a post or comment.

To delete a user's posts and comments, use these methods, respectively.

- `deleteFeedElement(communityId, feedElementId)`
- `deleteComment(communityId, commentId)`

### `searchUserGroupDetails(communityId, userId, q)`
Get the user’s groups that match the search criteria.

API Version
45.0

Available to Guest Users
45.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.UserGroupDetailPage searchUserGroupDetails(String communityId, String userId, String q)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.
userId
Type: String
The ID for a user.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.UserGroupDetailPage

searchUserGroupDetails(communityId, userId, q, pageParam, pageSize)
Get a page of a user’s groups that match the search criteria.

API Version
45.0

Available to Guest Users
45.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserGroupDetailPage searchUserGroupDetails(String communityId, String userId, String q, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for a user.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**
Type: `Integer`

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.UserGroupDetailPage`

**searchUsers(communityId, q)**
Get the first page of users that match the search criteria.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.UserPage searchUsers(String communityId, String q)
```

Parameters

**communityId**
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**q**
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: `ConnectApi.UserPage`
Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestSearchUsers(communityId, q, result)
  Testing ConnectApi Code

searchUsers(communityId, q, pageParam, pageSize)
Get a page of users that match the search criteria.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserPage searchUsers(String communityId, String q, Integer pageParam, Integer pageSize)

Parameters

  communityId
    Type: String
    Use either the ID for a community, internal, or null.

  q
    Type: String
    Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

  pageParam
    Type: Integer
    Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

  pageSize
    Type: Integer
    Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
Return Value
Type: `ConnectApi.UserPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestSearchUsers(communityId, q, pageParam, pageSize, result)`
- Testing ConnectApi Code

**searchUsers(communityId, q, searchContextId, pageParam, pageSize)**
Get a page of users that match the search criteria.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.UserPage searchUsers(String communityId, String q, String searchContextId, Integer pageParam, Integer pageSize)
```

Parameters
- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **q**
  Type: `String`
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **searchContextId**
  Type: `String`
  A feed item ID that filters search results for feed @mentions. More useful results are listed first. When you specify this argument, you cannot query more than 500 results and you cannot use wildcards in the search term.
pagetParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.UserPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
   setTestSearchUsers(communityId, q, searchContextId, pageParam, pageSize, result)
   Testing ConnectApi Code

updateChatterSettings(communityId, userId, defaultGroupEmailFrequency)
Update the default Chatter settings for a user.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserChatterSettings updateChatterSettings(String communityId, String userId, ConnectApi.GroupEmailFrequency defaultGroupEmailFrequency)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

defaultGroupEmailFrequency
Type: ConnectApi.GroupEmailFrequency
Frequency with which a user receives email. Values are:

- EachPost
- DailyDigest
- WeeklyDigest
- Never
- UseDefault

Don’t pass the value UseDefault for the defaultGroupEmailFrequency parameter because calling updateChatterSettings sets the default value.

Return Value
Type: ConnectApi.UserChatterSettings

**updateUser(communityId, userId, userInput)**
Update the About Me section for a user.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserDetail updateUser(String communityId, String userId, ConnectApi.UserInput userInput)

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **userId**
  Type: String
  The ID for the context user or the keyword me.

- **userInput**
  Type: ConnectApi.UserInput
  Specifies the updated information.

Return Value
Type: ConnectApi.UserDetail
ChatterUsers Test Methods

The following are the test methods for ChatterUsers. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

IN THIS SECTION:

- `setTestSearchUsers(communityId, q, result)`
  Register a ConnectApi.UserPage object to be returned when the matching ConnectApi.searchUsers method is called in a test context. Use the method with the same parameters or you receive an exception.

- `setTestSearchUsers(communityId, q, pageParam, pageSize, result)`
  Register a ConnectApi.UserPage object to be returned when the matching ConnectApi.searchUsers method is called in a test context. Use the method with the same parameters or you receive an exception.

- `setTestSearchUsers(communityId, q, searchContextId, pageParam, pageSize, result)`
  Register a ConnectApi.UserPage object to be returned when the matching ConnectApi.searchUsers method is called in a test context. Use the method with the same parameters or you receive an exception.

- `setTestSearchUsers(communityId, q, result)`
  Register a ConnectApi.UserPage object to be returned when the matching ConnectApi.searchUsers method is called in a test context. Use the method with the same parameters or you receive an exception.

**setTestSearchUsers(communityId, q, result)**

Register a ConnectApi.UserPage object to be returned when the matching ConnectApi.searchUsers method is called in a test context. Use the method with the same parameters or you receive an exception.

APIVersion

28.0

Signature

```java
public static Void setTestSearchUsers(String communityId, String q, ConnectApi.UserPage result)
```

Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **q**
  Type: `String`
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **result**
  Type: `ConnectApi.UserPage`
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
searchUsers(communityId, q)
Testing ConnectApi Code

**setTestSearchUsers(communityId, q, pageParam, pageSize, result)**

Register a `ConnectApi.UserPage` object to be returned when the matching `ConnectApi.searchUsers` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0

Signature
```
public static Void setTestSearchUsers(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.UserPage result)
```

Parameters

**communityId**
Type: `String`
Use either the ID for a community, `internal`, or `null`.

**q**
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**pageParam**
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**result**
Type: `ConnectApi.UserPage`
The object containing test data.
Return Value
Type: Void

SEE ALSO:
  searchUsers(communityId, q, pageParam, pageSize)
  Testing ConnectApi Code

**setTestSearchUsers(communityId, q, searchContextId, pageParam, pageSize, result)**

Register a ConnectApi.UserPage object to be returned when the matching ConnectApi.searchUsers method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0

Signature
```java
public static Void setTestSearchUsers(String communityId, String q, String searchContextId, Integer pageParam, Integer pageSize, ConnectApi.UserPage result)
```

Parameters

* **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

* **q**
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

* **searchContextId**
  Type: String
  A feed item ID that filters search results for feed @mentions. More useful results are listed first. When you specify this argument, you cannot query more than 500 results and you cannot use wildcards in the search term.

* **pageParam**
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

* **pageSize**
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

* **result**
  Type: ConnectApi.UserPage
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
searchUsers(communityId, q, searchContextId, pageParam, pageSize)

Retired ChatterUsers Methods
The following methods for ChatterUsers are retired.

IN THIS SECTION:
deletePhoto(communityId, userId)
Delete a user’s photo.
getGroups(communityId, userId)
Get the groups that a user is a member of.
getGroups(communityId, userId, pageParam, pageSize)
Get a page of groups that a user is a member of.
getPhoto(communityId, userId)
Get a user’s photo.
searchUserGroups(communityId, userId, q)
Get the user’s groups that match the search criteria.
searchUserGroups(communityId, userId, q, pageParam, pageSize)
Get a page of a user’s groups that match the search criteria.
setPhoto(communityId, userId, fileId, versionNumber)
Set an uploaded file as a user’s photo.
setPhoto(communityId, userId, fileUpload)
Set a file that hasn’t been uploaded as the user’s photo.
setPhotoWithAttributes(communityId, userId, photo)
Set and crop an uploaded file as a user’s photo.
setPhotoWithAttributes(communityId, userId, photo, fileUpload)
Set and crop a file that hasn’t been uploaded as a user’s photo.

**deletePhoto(communityId, userId)**
Delete a user’s photo.

API Version
28.0–34.0

⚠️ Important: In version 35.0 and later, use `ConnectApi.UserProfiles.deletePhoto(communityId, userId)`
Signature

```java
public static Void deletePhoto(String communityId, String userId)
```

Parameters

- `communityId`  
  Type: `String`  
  Use either the ID for a community, `internal`, or `null`.

- `userId`  
  Type: `String`  
  The ID for the context user or the keyword `me`.

Return Value

Type: `Void`

**getGroups(communityId, userId)**

Get the groups that a user is a member of.

API Version

28.0–44.0

⚠️ **Important:** In version 45.0 and later, use `getUserGroups(communityId, userId)`.

Available to Guest Users

32.0–44.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.UserGroupPage getGroups(String communityId, String userId)
```

Parameters

- `communityId`  
  Type: `String`  
  Use either the ID for a community, `internal`, or `null`.

- `userId`  
  Type: `String`  
  The ID for a user.
Return Value
Type: `ConnectApi.UserGroupPage`

`getGroups(communityId, userId, pageParam, pageSize)`
Get a page of groups that a user is a member of.

API Version
28.0–44.0

*Important:* In version 45.0 and later, use `getUserGroups(communityId, userId, pageParam, pageSize)`.

Available to Guest Users
32.0–44.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.UserGroupPage getGroups(String communityId, String userId,
        Integer pageParam, Integer pageSize)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, internal, or `null`.

`userId`
Type: `String`
The ID for a user.

`pageParam`
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.UserGroupPage`

`getPhoto(communityId, userId)`
Get a user’s photo.
API Version
28.0–34.0

⚠️ Important: In version 35.0 and later, use `ConnectApi.UserProfiles.getPhoto(communityId, userId)`.

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.Photo getPhoto(String communityId, String userId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.

- `userId`
  - Type: `String`
  - The ID for a user.

Return Value

Type: `ConnectApi.Photo`

`searchUserGroups(communityId, userId, q)`

Get the user’s groups that match the search criteria.

API Version
30.0–44.0

⚠️ Important: In version 45.0 and later, use `searchUserGroupDetails(communityId, userId, q)`.

Available to Guest Users
32.0–44.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.UserGroupPage searchUserGroups(String communityId, String userId, String q)
```

Parameters

- **communityId**
  - Type: **String**
  - Use either the ID for a community, `internal`, or `null`.

- **userId**
  - Type: **String**
  - The ID for a user.

- **q**
  - Type: **String**
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

- Type: `ConnectApi.UserGroupPage`

```java
searchUserGroups(communityId, userId, q, pageParam, pageSize)
```

Get a page of a user’s groups that match the search criteria.

API Version

- 30.0–44.0

**Important:** In version 45.0 and later, use `searchUserGroupDetails(communityId, userId, q, pageParam, pageSize)`.

Available to Guest Users

- 32.0–44.0

Requires Chatter

- Yes

Signature

```java
public static ConnectApi.UserGroupPage searchUserGroups(String communityId, String userId, String q, Integer pageParam, Integer pageSize)
```

Parameters

- **communityId**
  - Type: **String**
Use either the ID for a community, internal, or null.

**userId**
- Type: String
- The ID for a user.

**q**
- Type: String
- Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**pageParam**
- Type: Integer
- Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**
- Type: Integer
- Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**Return Value**
- Type: ConnectApi.UserGroupPage

**setPhoto(communityId, userId, fileId, versionNumber)**

Set an uploaded file as a user's photo.

**API Version**
- 28.0–34.0

**Important:** In version 35.0 and later, use `ConnectApi.UserProfiles.setPhoto(communityId, userId, fileId, versionNumber)`

**Requires Chatter**
- Yes

**Signature**
- `public static ConnectApi.Photo setPhoto(String communityId, String userId, String fileId, Integer versionNumber)`

**Parameters**
- **communityId**
  - Type: String
    - Use either the ID for a community, internal, or null.

- **userId**
  - Type: String
    - The ID for the context user or the keyword `me`.
**fileId**
Type: **String**
ID of a file already uploaded. The file must be an image, and be smaller than 2 GB.

**versionNumber**
Type: **Integer**
Version number of the existing file. Specify either an existing version number, or **null** to get the latest version.

Return Value
Type: **ConnectApi.Photo**

Usage
Photos are processed asynchronously and may not be visible right away.

**setPhoto(communityId, userId, fileUpload)**
Set a file that hasn’t been uploaded as the user’s photo.

API Version
28.0–34.0

⚠️ **Important:** In version 35.0 and later, use **ConnectApi.UserProfiles.setPhoto(communityId, userId, fileUpload)**

Requires Chatter
Yes

Signature
```
public static ConnectApi.Photo setPhoto(String communityId, String userId,
ConnectApi.BinaryInput fileUpload)
```

Parameters

**communityId**
Type: **String**
Use either the ID for a community, internal, or **null**.

**userId**
Type: **String**
The ID for the context user or the keyword **me**.

**fileUpload**
Type: **ConnectApi.BinaryInput**
A file to use as the photo. The content type must be usable as an image.
Return Value
Type: ConnectApi.Photo

Usage
Photos are processed asynchronously and may not be visible right away.

setPhotoWithAttributes(communityId, userId, photo)
Set and crop an uploaded file as a user’s photo.

API Version
29.0–34.0

Important: In version 35.0 and later, use
ConnectApi.UserProfiles.setPhotoWithAttributes(communityId, userId, photo)

Requires Chatter
Yes

Signature
public static ConnectApi.Photo setPhotoWithAttributes(String communityId, String userId,
ConnectApi.PhotoInput photo)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

photo
Type: ConnectApi.PhotoInput
A ConnectApi.PhotoInput object specifying the file ID, version number, and cropping parameters.

Return Value
Type: ConnectApi.Photo

Usage
Photos are processed asynchronously and may not be visible right away.
setPhotoWithAttributes(communityId, userId, photo, fileUpload)
Set and crop a file that hasn't been uploaded as a user's photo.

API Version
29.0–34.0

Important: In version 35.0 and later, use

ConnectApi.UserProfiles.setPhotoWithAttributes(communityId, userId, photo, fileUpload)

Requires Chatter
Yes

Signature
public static ConnectApi.PhotosetPhotoWithAttributes(String communityId, String userId, ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

photo
Type: ConnectApi.PhotoInput
A ConnectApi.PhotoInput object specifying the cropping parameters.

fileUpload
Type: ConnectApi.BinaryInput
A file to use as the photo. The content type must be usable as an image.

Return Value
Type: ConnectApi.Photo

Usage
Photos are processed asynchronously and may not be visible right away.

CommerceCart Class
Get, create, update, and delete carts. Get cart items, add items to carts, update and delete cart items.
Namespace

ConnectApi

CommerceCart Methods

These methods are for CommerceCart. All methods are static.

IN THIS SECTION:

- `addItemsToCart(webstoreId, effectiveAccountId, activeCartOrId, cartItems)`
  Add a batch of up to 100 items to a cart.

- `addItemToCart(webstoreId, effectiveAccountId, activeCartOrId, cartItemInput)`
  Add an item to a cart.

- `copyCartToWishlist(webstoreId, effectiveAccountId, activeCartOrId, cartToWishlistInput)`
  Copy the products from a cart to a wishlist.

- `createCart(webstoreId, cart)`
  Create a cart.

- `deleteCart(webstoreId, effectiveAccountId, activeCartOrId)`
  Delete a cart.

- `deleteCartItem(webstoreId, effectiveAccountId, activeCartOrId, cartItemId)`
  Delete an item from a cart.

- `getCartItems(webstoreId, effectiveAccountId, activeCartOrId)`
  Get items in a cart.

- `getCartItems(webstoreId, effectiveAccountId, activeCartOrId, pageParam)`
  Get a page of items in a cart.

- `getCartItems(webstoreId, effectiveAccountId, activeCartOrId, pageParam, sortParam)`
  Get a sorted page of items in a cart.

- `getCartItems(webstoreId, effectiveAccountId, activeCartOrId, pageParam, pageSize)`
  Get a specified size page of items in a cart.

- `getCartItems(webstoreId, effectiveAccountId, activeCartOrId, pageParam, pageSize, sortParam)`
  Get a specified size, sorted page of items in a cart.

- `getCartItems(webstoreId, effectiveAccountId, activeCartOrId, productFields, pageParam, pageSize, sortParam)`
  Get a specified size, sorted page of items filtered by product fields in a cart.

- `getCartSummary(webstoreId, effectiveAccountId, activeCartOrId)`
  Get a cart.

- `getOrCreateActiveCartSummary(webstoreId, effectiveAccountId, activeCartOrId)`
  Get a cart or create an active cart if one doesn’t exist.

- `setCartMessagesVisibility(webstoreId, activeCartOrId, effectiveAccountId, messageVisibility)`
  Set the visibility for cart messages.

- `updateCartItem(webstoreId, effectiveAccountId, activeCartOrId, cartItemId, cartItem)`
  Update an item in a cart.
addItemsToCart(webstoreId, effectiveAccountId, activeCartOrId, cartItems)

Add a batch of up to 100 items to a cart.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.BatchResult[] addItemsToCart(String webstoreId, String effectiveAccountId, String activeCartOrId, List<ConnectApi.BatchInput> cartItems)

Parameters
webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

activeCartOrId
Type: String
ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete.

cartItems
Type: List<ConnectApi.BatchInput>
The list can contain up to 100 ConnectApi.BatchInput objects. In the ConnectApi.BatchInput constructor, the input object must be ConnectApi.CartItemInput.

Return Value
Type: ConnectApi.BatchResult[]
The returned objects correspond to each of the input objects and are returned in the same order as the input objects.
The method call fails only if an error occurs that affects the entire operation (such as a parsing failure). If an individual object causes an error, the error is embedded within the ConnectApi.BatchResult list.

Usage
Buyers with read access to carts can add, update, and delete items in carts.
This method respects buyer View Product entitlements and only users entitled to view product data can access it.
addItemToCart(webstoreId, effectiveAccountId, activeCartOrId, cartItemInput)

Add an item to a cart.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.CartItem addItemToCart(String webstoreId, String effectiveAccountId, String activeCartOrId, ConnectApi.CartItemInput cartItemInput)

Parameters
webstoreId
  Type: String
  ID of the webstore.

effectiveAccountId
  Type: String
  ID of the account for which the request is made. If null, defaults to the account ID for the context user.

activeCartOrId
  Type: String
  ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete.

cartItemInput
  Type: ConnectApi.CartItemInput
  A ConnectApi.CartItemInput object representing an item to add to the cart.

Return Value
Type: ConnectApi.CartItem

Usage
Buyers with read access to carts can add, update, and delete items in carts.
This method respects buyer View Product entitlements and only users entitled to view product data can access it.

copyCartToWishlist(webstoreId, effectiveAccountId, activeCartOrId, cartToWishlistInput)

Copy the products from a cart to a wishlist.
API Version
50.0

Requires Chatter
No

Signature
public static ConnectApi.CartToWishlistResult copyCartToWishlist(String webstoreId,
String effectiveAccountId, String activeCartOrId, ConnectApi.CartToWishlistInput
cartToWishlistInput)

Parameters
webstoreId
  Type: String
  ID of the webstore.
effectiveAccountId
  Type: String
  ID of the account for which the request is made. If null, defaults to the account ID for the context user.
activeCartOrId
  Type: String
  ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn't Closed or PendingDelete.
cartToWishlistInput
  Type: ConnectApi.CartToWishlistInput
  A ConnectApi.CartToWishlistInput object indicating the wishlist to copy products to.

Return Value
Type: ConnectApi.CartToWishlistResult

createCart(webstoreId, cart)
Create a cart.

API Version
49.0

Requires Chatter
No
Signature

```java
public static ConnectApi.CartSummary createCart(String webstoreId, ConnectApi.CartInput cart)
```

Parameters

- `webstoreId`
  - Type: `String`
  - ID of the webstore.

- `cart`
  - Type: `ConnectApi.CartInput`
  - A `ConnectApi.CartInput` object representing a cart.

Return Value

Type: `ConnectApi.CartSummary`

Usage

Buyers with read access to carts can create and delete carts.

```java
deleteCart(webstoreId, effectiveAccountId, activeCartOrId)
```

Delete a cart.

API Version

49.0

Requires Chatter

No

Signature

```java
public static Void deleteCart(String webstoreId, String effectiveAccountId, String activeCartOrId)
```

Parameters

- `webstoreId`
  - Type: `String`
  - ID of the webstore.

- `effectiveAccountId`
  - Type: `String`
  - ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

- `activeCartOrId`
  - Type: `String`
ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn't Closed or PendingDelete.

Return Value
Type: Void

Usage
Buyers with read access to carts can create and delete carts.

deleteCartItem(webstoreId, effectiveAccountId, activeCartOrId, cartItemId)
Delete an item from a cart.

API Version
49.0

Requires Chatter
No

Signature
public static Void deleteCartItem(String webstoreId, String effectiveAccountId, String activeCartOrId, String cartItemId)

Parameters
webstoreId
Type: String
ID of the webstore.
effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.
activeCartOrId
Type: String
ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn't Closed or PendingDelete.
cartItemId
Type: String
ID of the cart item.

Return Value
Type: Void
Usage
Buyers with read access to carts can add, update, and delete items in carts.

`getCartItems(webstoreId, effectiveAccountId, activeCartOrId)`
Get items in a cart.

API Version
49.0

Requires Chatter
No

Signature
```
public static ConnectApi.CartItemCollection getCartItems(String webstoreId, String effectiveAccountId, String activeCartOrId)
```

Parameters
- **webstoreId**
  - Type: `String`
  - ID of the webstore.
- **effectiveAccountId**
  - Type: `String`
  - ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.
- **activeCartOrId**
  - Type: `String`
  - ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete.

Return Value
Type: `ConnectApi.CartItemCollection`

`getCartItems(webstoreId, effectiveAccountId, activeCartOrId, pageParam)`
Get a page of items in a cart.

API Version
49.0

Requires Chatter
No
public static ConnectApi.CartItemCollection getCartItems(String webstoreId, String effectiveAccountId, String activeCartOrId, String pageParam)

Parameters

webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

activeCartOrId
Type: String
ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn't Closed or PendingDelete.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

Return Value
Type: ConnectApi.CartItemCollection

getCartItems(webstoreId, effectiveAccountId, activeCartOrId, pageParam, sortParam)
Get a sorted page of items in a cart.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.CartItemCollection getCartItems(String webstoreId, String effectiveAccountId, String activeCartOrId, String pageParam, ConnectApi.CartItemSortOrder sortParam)

Parameters

webstoreId
Type: String
ID of the webstore.

**effectiveAccountId**
- **Type:** String
  - ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

**activeCartOrId**
- **Type:** String
  - ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete.

**pageParam**
- **Type:** String
  - Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**sortParam**
- **Type:** `ConnectApi.CartItemSortOrder`
  - Sort order for items in a cart. Values are:
    - `CreatedDateAsc`—Sorts by oldest creation date.
    - `CreatedDateDesc`—Sorts by most recent creation date.
    - `NameAsc`—Sorts by name in ascending alphabetical order (A–Z).
    - `NameDesc`—Sorts by name in descending alphabetical order (Z–A).
    - `SalesPriceAsc`—Sorts from lowest to highest negotiated price.
    - `SalesPriceDesc`—Sorts from highest to lowest negotiated price.
  - If `null`, the default is `CreatedDateDesc`.

Return Value
- **Type:** `ConnectApi.CartItemCollection`

**getCartItems(webstoreId, effectiveAccountId, activeCartOrId, pageParam, pageSize)**
- Get a specified size page of items in a cart.

API Version
- 49.0

Requires Chatter
- No

Signature
- `public static ConnectApi.CartItemCollection getCartItems(String webstoreId, String effectiveAccountId, String activeCartOrId, String pageParam, Integer pageSize)`
Parameters

`webstoreId`
Type: String
ID of the webstore.

`effectiveAccountId`
Type: String
ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

`activeCartOrId`
Type: String
ID of the cart, active, or current. The `current` value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete.

`pageParam`
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.CartItemCollection`

`getCartItems(webstoreId, effectiveAccountId, activeCartOrId, pageParam, pageSize, sortParam)`
Get a specified size, sorted page of items in a cart.

API Version
49.0

Requires Chatter
No

Signature
`public static ConnectApi.CartItemCollection getCartItems(String webstoreId, String effectiveAccountId, String activeCartOrId, String pageParam, Integer pageSize, ConnectApi.CartItemSortOrder sortParam)`

Parameters

`webstoreId`
Type: String
ID of the webstore.

**effectiveAccountId**

Type: String

ID of the account for which the request is made. If null, defaults to the account ID for the context user.

**activeCartOrId**

Type: String

ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn't Closed or PendingDelete.

**pageParam**

Type: String

Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**

Type: Integer

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**

Type: ConnectApi.CartItemSortOrder

Sort order for items in a cart. Values are:

- CreatedDateAsc—Sorts by oldest creation date.
- CreatedDateDesc—Sorts by most recent creation date.
- NameAsc—Sorts by name in ascending alphabetical order (A–Z).
- NameDesc—Sorts by name in descending alphabetical order (Z–A).
- SalesPriceAsc—Sorts from lowest to highest negotiated price.
- SalesPriceDesc—Sorts from highest to lowest negotiated price.

If null, the default is CreatedDateDesc.

Return Value

Type: ConnectApi.CartItemCollection

**getCartItems(webstoreId, effectiveAccountId, activeCartOrId, productFields, pageParam, pageSize, sortParam)**

Get a specified size, sorted page of items filtered by product fields in a cart.

API Version

49.0

Requires Chatter

No
public static ConnectApi.CartItemCollection getCartItems(String webstoreId, String effectiveAccountId, String activeCartOrId, String productFields, String pageParam, Integer pageSize, ConnectApi.CartItemSortOrder sortParam)

Parameters

webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

activeCartOrId
Type: String
ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete.

productFields
Type: String
Comma-separated list of up to five product fields. Results include fields that you have access to. Some product fields (such as productName and sku) are returned even when not included in the productFields parameter.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.CartItemSortOrder
Sort order for items in a cart. Values are:
• CreatedDateAsc—Sorts by oldest creation date.
• CreatedDateDesc—Sorts by most recent creation date.
• NameAsc—Sorts by name in ascending alphabetical order (A–Z).
• NameDesc—Sorts by name in descending alphabetical order (Z–A).
• SalesPriceAsc—Sorts from lowest to highest negotiated price.
• SalesPriceDesc—Sorts from highest to lowest negotiated price.
If null, the default is CreatedDateDesc.

Return Value
Type: ConnectApi.CartItemCollection
getCartSummary(webstoreId, effectiveAccountId, activeCartOrId)

Get a cart.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.CartSummary getCartSummary(String webstoreId, String effectiveAccountId, String activeCartOrId)

Parameters
webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

activeCartOrId
Type: String
ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete. If you specify active and there isn’t an active cart, you get an error.

Return Value
Type: ConnectApi.CartSummary

getOrCreateActiveCartSummary(webstoreId, effectiveAccountId, activeCartOrId)

Get a cart or create an active cart if one doesn’t exist.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.CartSummary getOrCreateActiveCartSummary(String webstoreId, String effectiveAccountId, String activeCartOrId)
Parameters

webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

activeCartOrId
Type: String
ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete. If you specify active and there isn’t an active cart, one is created.

Return Value
Type: ConnectApi.CartSummary

Usage
Buyers with read access to carts can create and delete carts.

setCartMessagesVisibility(webstoreId, activeCartOrId, effectiveAccountId, messageVisibility)
Set the visibility for cart messages.

API Version
50.0

Requires Chatter
No

Signature
public static ConnectApi.CartMessagesVisibilityResult setCartMessagesVisibility(String webstoreId, String activeCartOrId, String effectiveAccountId, ConnectApi.CartMessagesVisibilityInput messageVisibility)

Parameters

webstoreId
Type: String
ID of the webstore.

activeCartOrId
Type: String
ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete.

**effectiveAccountId**
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

**messageVisibility**
Type: ConnectApi.CartMessagesVisibilityInput
A ConnectApi.CartMessagesVisibilityInput object specifying the visibility setting.

Return Value
Type: ConnectApi.CartMessagesVisibilityResult

**updateCartItem(webstoreId, effectiveAccountId, activeCartOrId, cartItemId, cartItem)**
Update an item in a cart.

API Version
49.0

Requires Chatter
No

Signature
```java
public static ConnectApi.CartItem updateCartItem(String webstoreId, String effectiveAccountId, String activeCartOrId, String cartItemId, ConnectApi.CartItemInput cartItem)
```

Parameters

**webstoreId**
Type: String
ID of the webstore.

**effectiveAccountId**
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

**activeCartOrId**
Type: String
ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete.

**cartItemId**
Type: String
ID of the cart item.
cartItem
    Type: ConnectApi.CartItemInput
    A ConnectApi.CartItemInput object representing a cart item to update.

Return Value
    Type: ConnectApi.CartItem

Usage
    Buyers with read access to carts can add, update, and delete items in carts.
    This method respects buyer View Product entitlements and only users entitled to view product data can access it.

CommerceCatalog Class
    Get products, product categories, and product category paths.

Namespace
    ConnectApi

CommerceCatalog Methods
    These methods are for CommerceCatalog. All methods are static.

IN THIS SECTION:
    getProduct(webstoreId, productId, effectiveAccountId, fields, excludeFields, mediaGroups, excludeMedia, excludeEntitlementDetails, excludePrimaryProductCategory)
    Get a product.
    getProductCategory(webstoreId, productCategoryId, effectiveAccountId, fields, excludeFields, mediaGroups, excludeMedia)
    Get a product category.
    getProductCategoryPath(webstoreId, productCategoryId)
    Get the product category path from the root category to the current category.

getProduct(webstoreId, productId, effectiveAccountId, fields, excludeFields, mediaGroups, excludeMedia, excludeEntitlementDetails, excludePrimaryProductCategory)
    Get a product.

API Version
    49.0

Requires Chatter
    No
Signature

```java
public static ConnectApi.ProductDetail getProduct(String webstoreId, String productId,
String effectiveAccountId, List<String> fields, Boolean excludeFields, List<String>
mediaGroups, Boolean excludeMedia, Boolean excludeEntitlementDetails, Boolean
excludePrimaryProductCategory)
```

Parameters

- **webstoreId**
  - Type: String
  - ID of the webstore.

- **productId**
  - Type: String
  - ID of the product.

- **effectiveAccountId**
  - Type: String
  - ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

- **fields**
  - Type: List<String>
  - Comma-separated list of field names.
  - If this list is empty or unspecified, all fields are returned. There is no limit to the number of fields you can specify. The number of fields and number of characters in the field name may affect the URL size limit. If `excludeFields` and `fields` are specified, the `excludeFields` parameter takes precedence.

- **excludeFields**
  - Type: Boolean
  - Specifies whether the fields are returned (false) or not (true). If unspecified, defaults to false.

- **mediaGroups**
  - Type: List<String>
  - Comma-separated list of developer names of media group records.
  - If this list is empty or unspecified, all media groups are returned. If `excludeMedia` and `mediaGroups` are specified, the `excludeMedia` parameter takes precedence.

- **excludeMedia**
  - Type: Boolean
  - Specifies whether the media groups and default images of the product are returned (false) or not (true). If unspecified, defaults to false.

- **excludeEntitlementDetails**
  - Type: Boolean
  - Specifies whether the entitlement details of the product are returned (false) or not (true). If unspecified, defaults to false.

- **excludePrimaryProductCategory**
  - Type: Boolean
  - Specifies whether the primary category path of the product is returned (false) or not (true). If unspecified, defaults to false.
Return Value
Type: `ConnectApi.ProductDetail`

Usage
This method respects buyer View Product entitlements and only users entitled to view product data can access it.

```java
getProductCategory(String webstoreId, String productCategoryId, String effectiveAccountId, List<String> fields, Boolean excludeFields, List<String> mediaGroups, Boolean excludeMedia)
```
Get a product category.

API Version
49.0

Requires Chatter
No

Signature
```java
public static ConnectApi.ProductCategoryDetail getProductCategory(String webstoreId, String productCategoryId, String effectiveAccountId, List<String> fields, Boolean excludeFields, List<String> mediaGroups, Boolean excludeMedia)
```

Parameters
- `webstoreId`
  Type: `String`
  ID of the webstore.
- `productCategoryId`
  Type: `String`
  ID of the product category.
- `effectiveAccountId`
  Type: `String`
  ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.
- `fields`
  Type: `List<String>`
  Comma-separated list of field names. If this list is empty or unspecified, all fields are returned. There is no limit to the number of fields you can specify. The number of fields and number of characters in the field name may affect the URL size limit. If `excludeFields` and `fields` are specified, the `excludeFields` parameter takes precedence.
- `excludeFields`
  Type: `Boolean`
  Specifies whether the fields are returned (`false`) or not (`true`). If unspecified, defaults to `false`. 
**mediaGroups**

Type: `List<String>`

Comma-separated list of developer names of media group records.

If this list is empty or unspecified, all media groups are returned. If `excludeMedia` and `mediaGroups` are specified, the `excludeMedia` parameter takes precedence.

**excludeMedia**

Type: `Boolean`

Specifies whether the media groups and default images of the product are returned (`false`) or not (`true`). If unspecified, defaults to `false`.

Return Value

Type: `ConnectApi.ProductCategoryDetail`

**getProductCategoryPath(webstoreId, productCategoryId)**

Get the product category path from the root category to the current category.

API Version

49.0

Requires Chatter

No

Signature

`public static ConnectApi.ProductCategoryPath getProductCategoryPath(String webstoreId, String productCategoryId)`

Parameters

**webstoreId**

Type: `String`

ID of the webstore.

**productCategoryId**

Type: `String`

ID of the product category.

Return Value

Type: `ConnectApi.ProductCategoryPath`

Usage

This method respects buyer View Product entitlements and only users entitled to view product data can access it.
Payments Methods

Namespace
ConnectApi

Payments Methods
The following are methods for Payments. All methods are static.

IN THIS SECTION:
  capture(AuthCaptureInput, authorizationId)
  Capture an authorized payment.
  refund(ReferencedRefundInput, paymentId)
  Refund an authorized payment.

capture(AuthCaptureInput, authorizationId)
Capture an authorized payment.
To access Payments methods, you need the following permissions.
• Salesforce Order Management License
• PaymentsAPIUser user permission. This permission is available with the Salesforce Order Management License. Your Salesforce admin assigns it to your profile.

API Version
50.0

Requires Chatter
No

Signature
global static ConnectApi.CaptureResponse capture(ConnectApi.CaptureRequest AuthCaptureInput, String authorizationId)

Parameters
  AuthCaptureInput
  Type: ConnectApi.CaptureRequest
  A ConnectApi.CaptureRequest object with information about the payment capture.
  authorizationId
  Type: String
  ID of the payment authorization. Required.
Return Value

Type: `ConnectApi.CaptureResponse`

`refund(ReferencedRefundInput, paymentId)`

Refund an authorized payment.

To access Payments methods, you need the following permissions.

- Salesforce Order Management License
- PaymentsAPIUser user permission. This permission is available with the Salesforce Order Management License. Your Salesforce admin assigns it to your profile.

API Version

50.0

Requires Chatter

No

Signature

```java
global static ConnectApi.ReferencedRefundResponse
refund(ConnectApi.ReferencedRefundRequest ReferencedRefundInput, String paymentId)
```

Parameters

- `ReferencedRefundInput`
  
  Type: `ConnectApi.ReferencedRefundRequest`
  
  A `ConnectApi.ReferencedRefundRequest` object with information about the refund.

- `paymentId`
  
  Type: `String`
  
  ID of the payment to be refunded. Required.

Return Value

Type: `ConnectApi.ReferencedRefundResponse`

**CommerceStorePricing Class**

Get product prices.

**Namespace**

`ConnectApi`

**CommerceStorePricing Methods**

These methods are for `CommerceStorePricing`. All methods are static.
IN THIS SECTION:

- getProductPrice(webstoreId, productId, effectiveAccountId)
  Get the list and buyer price for a product.
- getProductPrices(webstoreId, effectiveAccountId, pricingInput)
  Get the price for multiple products.

**getProductPrice(webstoreId, productId, effectiveAccountId)**
Get the list and buyer price for a product.

API Version
49.0

Requires Chatter
No

Signature
```
public static ConnectApi.ProductPrice getProductPrice(String webstoreId, String productId, String effectiveAccountId)
```

Parameters
- **webstoreId**
  Type: String
  ID of the webstore.
- **productId**
  Type: String
  ID of the product.
- **effectiveAccountId**
  Type: String
  ID of the active account associated with the product.

Return Value
Type: ConnectApi.ProductPrice

Usage
This method respects buyer entitlements and only users entitled to view product and price data can access it.

**getProductPrices(webstoreId, effectiveAccountId, pricingInput)**
Get the price for multiple products.
API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.PricingResult getProductPrices(String webstoreId, String effectiveAccountId, ConnectApi.PricingInput pricingInput)

Parameters
webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

pricingInput
Type: ConnectApi.PricingInput
A ConnectApi.PricingInput body with the list of line items to price.

Return Value
Type: ConnectApi.PricingResult

Usage
This method respects buyer entitlements and only users entitled to view product and price data can access it.

CommerceWishlist Class
Get, create, update, and delete wishlists. Add wishlists to carts. Get wishlist items, add items to wishlists, and delete wishlist items.

Namespace
ConnectApi

CommerceWishlist Methods
These methods are for CommerceWishlist. All methods are static.

IN THIS SECTION:
addItemToWishlist(webstoreId, wishlistId, wishlistItemInput)
Add an item to a wishlist for the context user.
addItemToWishlist(webstoreId, effectiveAccountId, wishlistId, wishlistItemInput)
Add an item to a wishlist.

addWishlistToCart(webstoreId, wishlistId)
Add a wishlist to the active cart for the context user.

addWishlistToCart(webstoreId, wishlistId, effectiveAccountId)
Add a wishlist to the active cart.

addWishlistToCartWithCartId(webstoreId, wishlistId, cartId)
Add a wishlist to a cart.

addWishlistToCartWithCartId(webstoreId, wishlistId, cartId, effectiveAccountId)
Add a wishlist to a cart.

createWishlist(webstoreId, wishlistInput)
Create a wishlist for the context user.

createWishlist(webstoreId, effectiveAccountId, wishlistInput)
Create a wishlist.

deleteWishlist(webstoreId, wishlistId)
Delete a wishlist.

getWishlist(webstoreId, wishlistId)
Get a wishlist for the context user.

getWishlist(webstoreId, effectiveAccountId, wishlistId)
Get a wishlist.

getWishlistItems(webstoreId, effectiveAccountId, wishlistId)
Get wishlist items.

getWishlistItems(webstoreId, effectiveAccountId, wishlistId, pageParam)
Get a page of wishlist items.

getWishlistItems(webstoreId, effectiveAccountId, wishlistId, pageParam, pageSize)
Get a page of specified size of wishlist items.

getWishlistSummaries(webstoreId)
Get wishlist summaries for the context user.

getWishlistSummaries(webstoreId, effectiveAccountId, wishlistId, includeDisplayedList)
Get wishlist summaries or get a specific wishlist summary.

getWishlistSummaries(webstoreId, effectiveAccountId, includeDisplayedList)
Get wishlist summaries.

removeWishlistItem(webstoreId, effectiveAccountId, wishlistId, wishlistItemId)
Remove an item from a wishlist.

updateWishlist(webstoreId, wishlistId, wishlistUpdateInput)
Update the name of a wishlist for the context user.

updateWishlist(webstoreId, effectiveAccountId, wishlistId, wishlistUpdateInput)
Update the name of a wishlist.
**addItemToWishlist(webstoreId, wishlistId, wishlistItemInput)**

Add an item to a wishlist for the context user.

**API Version**
49.0

**Requires Chatter**
No

**Signature**

```java
public static ConnectApi.WishlistItem addItemToWishlist(String webstoreId, String wishlistId, ConnectApi.WishlistItemInput wishlistItemInput)
```

**Parameters**

- `webstoreId`
  - Type: `String`
  - ID of the webstore.

- `wishlistId`
  - Type: `String`
  - ID of the wishlist.

- `wishlistItemInput`
  - Type: `ConnectApi.WishlistItemInput`
  - A `ConnectApi.WishlistItemInput` body with the item to add to the wishlist.

**Return Value**

- Type: `ConnectApi.WishlistItem`

**Usage**

This method respects buyer View Product entitlements and only users entitled to view product data can access it.

**addItemToWishlist(webstoreId, effectiveAccountId, wishlistId, wishlistItemInput)**

Add an item to a wishlist.

**API Version**
49.0

**Requires Chatter**
No
Signature

```
public static ConnectApi.WishlistItem addItemToWishlist(String webstoreId, String
effectiveAccountId, String wishlistId, ConnectApi.WishlistItemInput wishlistItemInput)
```

Parameters

**webstoreId**
Type: String
ID of the webstore.

**effectiveAccountId**
Type: String
ID of the account for which the request is made. If **null**, defaults to the account ID for the context user.

**wishlistId**
Type: String
ID of the wishlist.

**wishlistItemInput**
Type: ConnectApi.WishlistItemInput
A ConnectApi.WishlistItemInput body with the item to add to the wishlist.

Return Value

Type: ConnectApi.WishlistItem

Usage

This method respects buyer View Product entitlements and only users entitled to view product data can access it.

```
addWishlistToCart(webstoreId, wishlistId)
```

Add a wishlist to the active cart for the context user.

API Version

49.0

Requires Chatter

No

Signature

```
public static ConnectApi.WishlistToCartResult addWishlistToCart(String webstore, String
wishlistId)
```

Parameters

**webstoreId**
Type: String
ID of the webstore.

wishlistId
Type: String
ID of the wishlist.

Return Value
Type: ConnectApi.WishlistToCartResult

Usage
This method respects buyer View Product entitlements and only users entitled to view product data can access it.

**addWishlistToCart(webstoreId, wishlistId, effectiveAccountId)**
Add a wishlist to the active cart.

API Version
49.0

Requires Chatter
No

Signature
```java
public static ConnectApi.WishlistToCartResult addWishlistToCart(String webstoreId, String wishlistId, String effectiveAccountId)
```

Parameters
- **webstoreId**
  Type: String
  ID of the webstore.
- **wishlistId**
  Type: String
  ID of the wishlist.
- **effectiveAccountId**
  Type: String
  ID of the account for which the request is made. If null, defaults to the account ID for the context user.

Return Value
Type: ConnectApi.WishlistToCartResult
Usage
This method respects buyer View Product entitlements and only users entitled to view product data can access it.

`addWishlistToCartWithCartId(webstoreId, wishlistId, cartId)`
Add a wishlist to a cart.

API Version
49.0

Requires Chatter
No

Signature
`public static ConnectApi.WishlistToCartResult addWishlistToCartWithCartId(String webstoreId, String wishlistId, String cartId)`

Parameters
`webstoreId`
Type: `String`
ID of the webstore.

`wishlistId`
Type: `String`
ID of the wishlist.

`cartId`
Type: `String`
ID of the cart. If `null`, wishlist items are added to the active cart.

Return Value
Type: `ConnectApi.WishlistToCartResult`
Requires Chatter
No

Signature

```java
public static ConnectApi.WishlistToCartResult addWishlistToCartWithCartId(String webstoreId, String wishlistId, String cartId, String effectiveAccountId)
```

Parameters

`webstoreId`
Type: `String`
ID of the webstore.

`wishlistId`
Type: `String`
ID of the wishlist.

`cartId`
Type: `String`
ID of the cart. If `null`, wishlist items are added to the active cart.

`effectiveAccountId`
Type: `String`
ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

Return Value

Type: `ConnectApi.WishlistToCartResult`

Usage
This method respects buyer View Product entitlements and only users entitled to view product data can access it.

`createWishlist(webstoreId, wishlistInput)`
Create a wishlist for the context user.

API Version
49.0

Requires Chatter
No

Signature

```java
public static ConnectApi.Wishlist createWishList(String webstoreId, ConnectApi.WishlistInput wishlistInput)
```
Parameters

webstoreId
  Type: String
  ID of the webstore.

wishlistInput
  Type: ConnectApi.WishlistInput
  A ConnectApi.WishlistInput body that includes the wishlist name and items.

Return Value
Type: ConnectApi.Wishlist

createWishlist(webstoreId, effectiveAccountId, wishlistInput)
Create a wishlist.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.Wishlist createWishlist(String webstoreId, String
  effectiveAccountId, ConnectApi.WishlistInput wishlistInput)

Parameters

webstoreId
  Type: String
  ID of the webstore.

effectiveAccountId
  Type: String
  ID of the account for which the request is made. If null, defaults to the account ID for the context user.

wishlistInput
  Type: ConnectApi.WishlistInput
  A ConnectApi.WishlistInput body that includes the wishlist name and items.

Return Value
Type: ConnectApi.Wishlist
deleteWishlist(webstoreId, wishlistId)
Delete a wishlist.

API Version
49.0

Requires Chatter
No

Signature
public static Void deleteWishlist(String webstoreId, String wishlistId)

Parameters
webstoreId
Type: String
ID of the webstore.

wishlistId
Type: String
ID of the wishlist.

Return Value
Type: Void

getWishlist(webstoreId, wishlistId)
Get a wishlist for the context user.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.Wishlist getWishlist(String webstoreId, String wishlistId)

Parameters
webstoreId
Type: String
ID of the webstore.
wishlistId
   Type: String
   ID of the wishlist.

Return Value
Type: ConnectApi.Wishlist

getWishlist(webstoreId, effectiveAccountId, wishlistId)
Get a wishlist.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.Wishlist getWishlist(String webstoreId, String effectiveAccountId, String wishlistId)

Parameters
webstoreId
   Type: String
   ID of the webstore.

effectiveAccountId
   Type: String
   ID of the account for which the request is made. If null, defaults to the account ID for the context user.

wishlistId
   Type: String
   ID of the wishlist.

Return Value
Type: ConnectApi.Wishlist

getWishlistItems(webstoreId, effectiveAccountId, wishlistId)
Get wishlist items.

API Version
49.0
Requires Chatter
No

Signature

public static ConnectApi.WishlistItemCollection getWishlistItems(String webstoreId, String effectiveAccountId, String wishlistId)

Parameters

webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

wishlistId
Type: String
ID of the wishlist.

Return Value
Type: ConnectApi.WishlistItemCollection

**getWishlistItems(webstoreId, effectiveAccountId, wishlistId, pageParam)**

Get a page of wishlist items.

API Version
49.0

Requires Chatter
No

Signature

public static ConnectApi.WishlistItemCollection getWishlistItems(String webstoreId, String effectiveAccountId, String wishlistId, String pageParam)

Parameters

webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

wishlistId
Type: String
ID of the wishlist.

pageParam
Type: String

pageParam
ID of the account for which the request is made. If **null**, defaults to the account ID for the context user.

**wishlistId**
Type: **String**
ID of the wishlist.

**pageParam**
Type: **String**
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in **null**, the first page is returned.

Return Value
Type: **ConnectApi.WishlistItemCollection**

**getWishlistItems(webstoreId, effectiveAccountId, wishlistId, pageParam, pageSize)**
Get a page of specified size of wishlist items.

API Version
49.0

Requires Chatter
No

Signature
```
public static ConnectApi.WishlistItemCollection getWishlistItems(String webstoreId, 
String effectiveAccountId, String wishlistId, String pageParam, Integer pageSize)
```

Parameters

**webstoreId**
Type: **String**
ID of the webstore.

**effectiveAccountId**
Type: **String**
ID of the account for which the request is made. If **null**, defaults to the account ID for the context user.

**wishlistId**
Type: **String**
ID of the wishlist.

**pageParam**
Type: **String**
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in **null**, the first page is returned.
pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 200. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.WishlistItemCollection

getWishlistSummaries(webstoreId)
Get wishlist summaries for the context user.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.WishlistsSummary getWishlistSummaries(String webstoreId)

Parameters
webstoreId
Type: String
ID of the webstore.

Return Value
Type: ConnectApi.WishlistsSummary

getWishlistSummaries(webstoreId, effectiveAccountId, wishlistId, includeDisplayedList)
Get wishlist summaries or get a specific wishlist summary.

API Version
49.0

Requires Chatter
No
Signature

```java
public static ConnectApi.WishlistsSummary getWishlistSummaries(String webstoreId, String effectiveAccountId, String wishlistId, Boolean includeDisplayedList)
```

Parameters

**webstoreId**
- **Type:** String
- ID of the webstore.

**effectiveAccountId**
- **Type:** String
- ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

**wishlistId**
- **Type:** String
- ID of the wishlist. If `null`, all the wishlist summaries are returned.

**includeDisplayedList**
- **Type:** Boolean
- Specifies whether to include the displayed list (`true`) or not (`false`). If `null`, defaults to `false`.

Return Value

**Type:** `ConnectApi.WishlistsSummary`

**getWishlistSummaries(webstoreId, effectiveAccountId, includeDisplayedList)**

Get wishlist summaries.

API Version

49.0

Requires Chatter

No

Signature

```java
public static ConnectApi.WishlistsSummary getWishlistSummaries(String webstoreId, String effectiveAccountId, Boolean includeDisplayedList)
```
ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

`includeDisplayedList`
Type: `Boolean`
Specifies whether to include the displayed list (`true`) or not (`false`). If `null`, defaults to `false`.

Return Value
Type: `ConnectApi.WishlistsSummary`

`removeWishlistItem(webstoreId, effectiveAccountId, wishlistId, wishlistItemId)`
Remove an item from a wishlist.

API Version
49.0

Requires Chatter
No

Signature
`public static Void removeWishlistItem(String webstoreId, String effectiveAccountId, String wishlistId, String wishlistItemId)`

Parameters
`webstoreId`
Type: `String`
ID of the webstore.

`effectiveAccountId`
Type: `String`
ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

`wishlistId`
Type: `String`
ID of the wishlist.

`wishlistItemId`
Type: `String`
ID of the wishlist item to remove.

Return Value
Type: `Void`
**updateWishlist(webstoreId, wishlistId, wishlistUpdateInput)**

Update the name of a wishlist for the context user.

**API Version**

50.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.WishlistSummary updateWishlist(String webstoreId, String wishlistId, ConnectApi.WishlistUpdateInput wishlistUpdateInput)
```

**Parameters**

- **webstoreId**
  
  Type: `String`
  
  ID of the webstore.

- **wishlistId**
  
  Type: `String`
  
  ID of the wishlist.

- **wishlistUpdateInput**
  
  Type: `ConnectApi.WishlistUpdateInput`
  
  A `ConnectApi.WishlistUpdateInput` body with the wishlist name to update.

**Return Value**

Type: `ConnectApi.WishlistSummary`

**updateWishlist(webstoreId, effectiveAccountId, wishlistId, wishlistUpdateInput)**

Update the name of a wishlist.

**API Version**

50.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.WishlistSummary updateWishlist(String webstoreId, String effectiveAccountId, String wishlistId, ConnectApi.WishlistUpdateInput wishlistUpdateInput)
```
Parameters

**webstoreId**
Type: `String`
ID of the webstore.

**effectiveAccountId**
Type: `String`
ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

**wishlistId**
Type: `String`
ID of the wishlist.

**wishlistUpdateInput**
Type: `ConnectApi.WishlistUpdateInput`
A `ConnectApi.WishlistUpdateInput` body with the wishlist name to update.

Return Value
Type: `ConnectApi.WishlistSummary`

**Communities Class**
Access general information about communities in your organization.

**Namespace**
`ConnectApi`

**Communities Methods**
The following are methods for `Communities`. All methods are static.

IN THIS SECTION:

- `getCommunities()`
  Get a list of communities that the context user has access to.

- `getCommunities(communityStatus)`
  Get a list of communities with the specified status that the context user has access to.

- `getCommunity(communityId)`
  Get information about a community.

**getCommunities()**
Get a list of communities that the context user has access to.

API Version
28.0
getCommunities(communityStatus)
Get a list of communities with the specified status that the context user has access to.

API Version
28.0

Requires Chatter
No

Signature
public static ConnectApi.CommunityPage getCommunities(ConnectApi.CommunityStatus communityStatus)

Parameters
communityStatus
Type: ConnectApi.CommunityStatus

communityStatus—Status of the community. Values are:
- Live
- Inactive
- UnderConstruction

Return Value
Type: ConnectApi.CommunityPage

gGetCommunity(communityId)
Get information about a community.

API Version
28.0
Available to Guest Users
35.0

Requires Chatter
No

Signature
public static ConnectApi.Community getCommunity(String communityId)

Parameters
communityId
Type: String
ID of a community. You can’t specify null or internal.

Return Value
Type: ConnectApi.Community

CommunityModeration Class
Access information about flagged feed items and comments in a community. Add and remove flags from comments and feed items.

Namespace
ConnectApi

CommunityModeration Methods
The following are methods for CommunityModeration. All methods are static.

IN THIS SECTION:
addFlagToComment(communityId, commentId)
Add a moderation flag to a comment.
addFlagToComment(communityId, commentId, visibility)
Add a moderation flag of the specified visibility to a comment.
addFlagToComment(communityId, commentId, type)
Add a moderation flag of the specified type to a comment.
addFlagToComment(communityId, commentId, note)
Add a moderation flag with a note to a comment.
addFlagToComment(communityId, commentId, type, note)
Add a moderation flag of the specified type with a note to a comment.
addFlagToComment(communityId, commentId, type, visibility)
Add a moderation flag of the specified type and visibility to a comment.
addFlagToComment(communityId, commentId, visibility, note)
Add a moderation flag of the specified visibility with a note to a comment.

addFlagToComment(communityId, commentId, type, visibility, note)
Add a moderation flag of the specified type and visibility with a note to a comment.

addFlagToFeedElement(communityId, feedElementId)
Add a moderation flag to a feed element.

addFlagToFeedElement(communityId, feedElementId, visibility)
Add a moderation flag of the specified visibility to a feed element.

addFlagToFeedElement(communityId, feedElementId, type)
Add a moderation flag of the specified type to a feed element.

addFlagToFeedElement(communityId, feedElementId, note)
Add a moderation flag with a note to a feed element.

addFlagToFeedElement(communityId, feedElementId, type, note)
Add a moderation flag of the specified type with a note to a feed element.

addFlagToFeedElement(communityId, feedElementId, type, visibility)
Add a moderation flag of the specified type and visibility to a feed element.

addFlagToFeedElement(communityId, feedElementId, visibility, note)
Add a moderation flag of the specified visibility with a note to a feed element.

addFlagToFeedElement(communityId, feedElementId, type, visibility, note)
Add a moderation flag of the specified type and visibility with a note to a feed element.

getFlagsOnComment(communityId, commentId)
Get the moderation flags on a comment.

getFlagsOnComment(communityId, commentId, visibility)
Get the moderation flags with specified visibility on a comment.

getFlagsOnComment(communityId, commentId, pageSize, pageParam)
Get a page of moderation flags on a comment.

getFlagsOnComment(communityId, commentId, visibility, pageSize, pageParam)
Get a page of moderation flags with specified visibility on a comment.

getFlagsOnFeedElement(communityId, feedElementId)
Get the moderation flags on a feed element.

getFlagsOnFeedElement(communityId, feedElementId, visibility)
Get the moderation flags with specified visibility on a feed element.

getFlagsOnFeedElement(communityId, feedElementId, pageParam, pageSize)
Get a page of moderation flags on a feed element.

getFlagsOnFeedElement(communityId, feedElementId, visibility, pageParam, pageSize)
Get a page of moderation flags with specified visibility on a feed element.

removeFlagFromComment(communityId, commentId, userId)
Remove a moderation flag from a comment.

removeFlagFromFeedElement(communityId, feedElementId, userId)
Remove a moderation flag from a feed element.
addFlagToComment(communityId, commentId)

Add a moderation flag to a comment.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId)

Parameters

- communityId
  Type: String
  Use either the ID for a community, internal, or null.

- commentId
  Type: String
  The ID for a comment.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To add a flag to a comment, Allow members to flag content must be selected for a community.

addFlagToComment(communityId, commentId, visibility)

Add a moderation flag of the specified visibility to a comment.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagVisibility visibility)
Parameters

`communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

`commentId`
  Type: `String`
  The ID for a comment.

`visibility`
  Type: `ConnectApi.CommunityFlagVisibility`
  Visibility behavior of a flag for various user types.
  - `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
  - `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value

Type: `ConnectApi.ModerationFlags`

Usage

To add a flag to a comment, Allow members to flag content must be selected for a community.

```java
addFlagToComment(communityId, commentId, type)
```

Add a moderation flag of the specified type to a comment.

API Version

38.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagType type)
```

Parameters

`communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

`commentId`
  Type: `String`
  The ID for a comment.
type
  Type: ConnectApi.CommunityFlagType
  Type of moderation flag.
  • FlagAsInappropriate—Flag for inappropriate content.
  • FlagAsSpam—Flag for spam.
  If a type isn’t specified, it defaults to FlagAsInappropriate.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To add a flag to a comment, Allow members to flag content must be selected for a community.

addFlagToComment(communityId, commentId, note)
Add a moderation flag with a note to a comment.

API Version
38.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, String note)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

commentId
  Type: String
  The ID for a comment.

note
  Type: String
  A note of up to 4,000 characters about the flag.

Return Value
Type: ConnectApi.ModerationFlags
Usage
To add a flag to a comment, Allow members to flag content must be selected for a community.

`addFlagToComment(communityId, commentId, type, note)`
Add a moderation flag of the specified type with a note to a comment.

API Version
38.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagType type, String note)`

Parameters
`communityId`
Type: String
Use either the ID for a community, internal, or null.

`commentId`
Type: String
The ID for a comment.

`type`
Type: ConnectApi.CommunityFlagType
Type of moderation flag.
- FlagAsInappropriate—Flag for inappropriate content.
- FlagAsSpam—Flag for spam.
If a type isn’t specified, it defaults to FlagAsInappropriate.

`note`
Type: String
A note of up to 4,000 characters about the flag.

Return Value
Type: ConnectApi.ModerationFlags
addFlagToComment(communityId, commentId, type, visibility)

Add a moderation flag of the specified type and visibility to a comment.

API Version
38.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagType type, ConnectApi.CommunityFlagVisibility visibility)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
The ID for a comment.

type
Type: ConnectApi.CommunityFlagType
Type of moderation flag.
• FlagAsInappropriate—Flag for inappropriate content.
• FlagAsSpam—Flag for spam.
If a type isn’t specified, it defaults to FlagAsInappropriate.

visibility
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types.
• ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
• SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To add a flag to a comment, Allow members to flag content must be selected for a community.
addFlagToComment(communityId, commentId, visibility, note)

Add a moderation flag of the specified visibility with a note to a comment.

API Version
38.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagVisibility visibility, String note)

Parameters
communityId
Type: String
Use either the ID for a community, internal or null.

commentId
Type: String
The ID for a comment.

visibility
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types.
• ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
• SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

note
Type: String
A note of up to 4,000 characters about the flag.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To add a flag to a comment, Allow members to flag content must be selected for a community.

addFlagToComment(communityId, commentId, type, visibility, note)

Add a moderation flag of the specified type and visibility with a note to a comment.
API Version
38.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagType type, ConnectApi.CommunityFlagVisibility visibility, String note)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
The ID for a comment.

type
Type: ConnectApi.CommunityFlagType
Type of moderation flag.
• FlagAsInappropriate—Flag for inappropriate content.
• FlagAsSpam—Flag for spam.
If a type isn’t specified, it defaults to FlagAsInappropriate.

visibility
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types.
• ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
• SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

note
Type: String
A note of up to 4,000 characters about the flag.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To add a flag to a comment, Allow members to flag content must be selected for a community.
addFlagToFeedElement(communityId, feedElementId)

Add a moderation flag to a feed element.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId)

Parameters

  communityId
    Type: String
    Use either the ID for a community, internal, or null.

  feedElementId
    Type: String
    ID of the feed element.

Return Value

Type: ConnectApi.ModerationCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

Usage
To add a flag to a feed element, Allow members to flag content must be selected for a community.

addFlagToFeedElement(communityId, feedElementId, visibility)

Add a moderation flag of the specified visibility to a feed element.

API Version
31.0

Requires Chatter
Yes
Signature

```
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId,
                      String feedElementId, ConnectApi.CommunityFlagVisibility visibility)
```

Parameters

- `communityId`
  
  Type: `String`
  
  Use either the ID for a community, `internal`, or `null`.

- `feedElementId`
  
  Type: `String`
  
  ID of the feed element.

- `visibility`
  
  Type: `ConnectApi.CommunityFlagVisibility`
  
  Visibility behavior of a flag for various user types. One of these values:
  
  - `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
  - `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value

Type: `ConnectApi.ModerationCapability`

If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

Usage

To add a flag to a feed element, Allow members to flag content must be selected for a community.

```
addFlagToFeedElement(communityId, feedElementId, type)
```

Add a moderation flag of the specified type to a feed element.

API Version

38.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId,
                      String feedElementId, ConnectApi.CommunityFlagType type)
```
Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`feedElementId`
Type: `String`
ID of the feed element.

`type`
Type: `ConnectApi.CommunityFlagType`
Type of moderation flag.
- `FlagAsInappropriate`—Flag for inappropriate content.
- `FlagAsSpam`—Flag for spam.
If a type isn’t specified, it defaults to `FlagAsInappropriate`.

Return Value
Type: `ConnectApi.ModerationCapability`

Usage
To add a flag to a feed element, Allow members to flag content must be selected for a community.

`addFlagToFeedElement(communityId, feedElementId, note)`
Add a moderation flag with a note to a feed element.

API Version
38.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, String note)`

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`feedElementId`
Type: `String`
ID of the feed element.

(note

Type: String

A note of up to 4,000 characters about the flag.

Return Value

Type: ConnectApi.ModerationCapability

Usage

To add a flag to a feed element, Allow members to flag content must be selected for a community.

addFlagToFeedElement(communityId, feedElementId, type, note)

Add a moderation flag of the specified type with a note to a feed element.

API Version

38.0

Requires Chatter

Yes

Signature

public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagType type, String note)

Parameters

communityId

Type: String

Use either the ID for a community, internal, or null.

feedElementId

Type: String

ID of the feed element.

type

Type: ConnectApi.CommunityFlagType

Type of moderation flag.

• FlagAsInappropriate—Flag for inappropriate content.
• FlagAsSpam—Flag for spam.

If a type isn’t specified, it defaults to FlagAsInappropriate.

note

Type: String
A note of up to 4,000 characters about the flag.

Return Value
Type: ConnectApi.ModerationCapability

Usage
To add a flag to a feed element, Allow members to flag content must be selected for a community.

`addFlagToFeedElement(communityId, feedElementId, type, visibility)`
Add a moderation flag of the specified type and visibility to a feed element.

API Version
38.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagType type, ConnectApi.CommunityFlagVisibility visibility)`

Parameters
`communityId`  
Type: String  
Use either the ID for a community, internal, or null.

`feedElementId`  
Type: String  
ID of the feed element.

`type`  
Type: ConnectApi.CommunityFlagType  
Type of moderation flag.
- FlagAsInappropriate—Flag for inappropriate content.
- FlagAsSpam—Flag for spam.
If a type isn’t specified, it defaults to FlagAsInappropriate.

`visibility`  
Type: ConnectApi.CommunityFlagVisibility  
Visibility behavior of a flag for various user types. One of these values:
- ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
- **SelfAndModerators**—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: `ConnectApi.ModerationCapability`

Usage
To add a flag to a feed element, Allow members to flag content must be selected for a community.

`addFlagToFeedElement(communityId, feedElementId, visibility, note)`
Add a moderation flag of the specified visibility with a note to a feed element.

API Version
38.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagVisibility visibility, String note)`

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, internal, or `null`.

- `feedElementId`
  Type: `String`
  ID of the feed element.

- `visibility`
  Type: `ConnectApi.CommunityFlagVisibility`
  Visibility behavior of a flag for various user types. One of these values:
  - `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
  - `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

- `note`
  Type: `String`
  A note of up to 4,000 characters about the flag.
Return Value
Type: `ConnectApi.ModerationCapability`

Usage
To add a flag to a feed element, Allow members to flag content must be selected for a community.

`addFlagToFeedElement(communityId, feedElementId, type, visibility, note)`
Add a moderation flag of the specified type and visibility with a note to a feed element.

API Version
38.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagType type, ConnectApi.CommunityFlagVisibility visibility, String note)`

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`feedElementId`
Type: `String`
ID of the feed element.

`type`
Type: `ConnectApi.CommunityFlagType`
Type of moderation flag.
- `FlagAsInappropriate`—Flag for inappropriate content.
- `FlagAsSpam`—Flag for spam.
If a type isn’t specified, it defaults to `FlagAsInappropriate`.

`visibility`
Type: `ConnectApi.CommunityFlagVisibility`
Visibility behavior of a flag for various user types. One of these values:
- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.
note
Type: String
A note of up to 4,000 characters about the flag.

Return Value
Type: ConnectApi.ModerationCapability

Usage
To add a flag to a feed element, Allow members to flag content must be selected for a community.

**getFlagsOnComment(communityId, commentId)**
Get the moderation flags on a comment.

API Version
29.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId)
```

Parameters

* **communityId**
  Type: String
  Use either the ID for a community, `internal`, or `null`.

* **commentId**
  Type: String
  The ID for a comment.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To get moderation flags, the context user must have the Moderate Communities Feeds permission.

**getFlagsOnComment(communityId, commentId, visibility)**
Get the moderation flags with specified visibility on a comment.
API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId, ConnectApi.CommunityFlagVisibility visibility)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

commentId
  Type: String
  The ID for a comment.

visibility
  Type: ConnectApi.CommunityFlagVisibility
  Visibility behavior of a flag for various user types.
  • ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
  • SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To get moderation flags, the context user must have the Moderate Communities Feeds permission.

getFlagsOnComment(communityId, commentId, pageSize, pageParam)
Get a page of moderation flags on a comment.

API Version
40.0

Requires Chatter
Yes
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId, Integer pageSize, String pageParam)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

commentId
Type: String
The ID for a comment.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To get moderation flags, the context user must have the Moderate Communities Feeds permission.

getFlagsOnComment(communityId, commentId, visibility, pageSize, pageParam)
Get a page of moderation flags with specified visibility on a comment.

API Version
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId, ConnectApi.CommunityFlagVisibility visibility, Integer pageSize, String pageParam)
Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`commentId`
Type: `String`
The ID for a comment.

`visibility`
Type: `ConnectApi.CommunityFlagVisibility`
Visibility behavior of a flag for various user types.
- ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
- SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

Return Value
Type: `ConnectApi.ModerationFlags`

Usage
To get moderation flags, the context user must have the Moderate Communities Feeds permission.

`getFlagsOnFeedElement(communityId, feedElementId)`
Get the moderation flags on a feed element.

API Version
31.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId, String feedElementId)`
Parameters

*communityId*
  Type: *String*
  Use either the ID for a community, *internal*, or *null*.

*feedElementId*
  Type: *String*
  ID of the feed element.

Return Value

Type: *ConnectApi.ModerationCapability Class*

If the feed element doesn’t support this capability, the return value is *ConnectApi.NotFoundException*.

Usage

To get moderation flags, the context user must have the Moderate Communities Feeds permission.

**getFlagsOnFeedElement(communityId, feedElementId, visibility)**

Get the moderation flags with specified visibility on a feed element.

API Version

31.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagVisibility visibility)
```

Parameters

*communityId*
  Type: *String*
  Use either the ID for a community, *internal*, or *null*.

*feedElementId*
  Type: *String*
  ID of the feed element.

*visibility*
  Type: *ConnectApi.CommunityFlagVisibility*

Visibility behavior of a flag for various user types. One of these values:

- *ModeratorsOnly*—The flag is visible only to users with moderation permissions on the flagged element or item.
• SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: ConnectApi.ModerationCapability Class

If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

Usage
To get moderation flags, the context user must have the Moderate Communities Feeds permission.

getFlagsOnFeedElement(communityId, feedElementId, pageParam, pageSize)
Get a page of moderation flags on a feed element.

API Version
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId, String feedElementId, String pageParam, Integer pageSize)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

Return Value
Type: ConnectApi.ModerationCapability Class
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

Usage

To get moderation flags, the context user must have the Moderate Communities Feeds permission.

`getFlagsOnFeedElement(communityId, feedElementId, visibility, pageSize, pageParam)`

Get a page of moderation flags with specified visibility on a feed element.

API Version

40.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId,
String feedElementId, ConnectApi.CommunityFlagVisibility visibility, Integer pageSize,
String pageParam)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedElementId**
  - Type: `String`
  - ID of the feed element.

- **visibility**
  - Type: `ConnectApi.CommunityFlagVisibility`
  - Visibility behavior of a flag for various user types.
    - ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
    - SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

- **pageParam**
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.
Return Value
Type: `ConnectApi.ModerationCapability Class`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

Usage
To get moderation flags, the context user must have the Moderate Communities Feeds permission.

`removeFlagFromComment(communityId, commentId, userId)`
Remove a moderation flag from a comment.

API Version
29.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ModerationFlags removeFlagFromComment(String communityId, String commentId, String userId)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `commentId`
  Type: `String`
  The ID for a comment.
- `userId`
  Type: `String`
  The ID for a user.

Return Value
Type: `Void`

Usage
To remove a moderation flag, the context user must have added the flag or must have the Moderate Communities Feeds permission.

`removeFlagFromFeedElement(communityId, feedElementId, userId)`
Remove a moderation flag from a feed element.
API Version
31.0

Requires Chatter
Yes

Signature
public static void removeFlagFromFeedElement(String communityId, String feedElementId, String userId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedElementId
Type: String
ID of the feed element.

userId
Type: String
The ID for a user.

Return Value
Type: ConnectApi.ModerationCapability Class
If the feed element doesn't support this capability, the return value is ConnectApi.NotFoundException.

Usage
To remove a moderation flag, the context user must have added the flag or must have the Moderate Communities Feeds permission.

Retired CommunityModeration Methods
The following methods for CommunityModeration are retired.

IN THIS SECTION:

  addFlagToFeedItem(communityId, feedItemId)
  Add a moderation flag to a feed item.

  addFlagToFeedItem(communityId, feedItemId, visibility)
  Add a moderation flag with specified visibility to a feed item.

  getFlagsOnFeedItem(communityId, feedItemId)
  Get the moderation flags on a feed item.
getFlagsOnFeedItem(communityId, feedItemId, visibility)
Get the moderation flags with specified visibility on a feed item.

removeFlagsOnFeedItem(communityId, feedItemId, userId)
Remove a moderation flag from a feed item.

addFlagToFeedItem(communityId, feedItemId)
Add a moderation flag to a feed item.

API Version
29.0–31.0

Important: In version 32.0 and later, use addFlagToFeedElement(communityId, feedElementId).

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags addFlagToFeedItem(String communityId, String feedItemId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

feedItemId
Type: String
The ID for a feed item.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To add a flag to a feed item, Allow members to flag content must be selected for a community.

addFlagToFeedItem(communityId, feedItemId, visibility)
Add a moderation flag with specified visibility to a feed item.

API Version
30.0–31.0
Important: In version 32.0 and later, use `addFlagToFeedElement(communityId, feedElementId, visibility)`.

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ModerationFlags addFlagToFeedItem(String communityId, String feedItemId, ConnectApi.CommunityFlagVisibility visibility)
```

Parameters

- `communityId`
  Type: String
  Use either the ID for a community, internal, or null.

- `feedItemId`
  Type: String
  The ID for a feed item.

- `visibility`
  Type: `ConnectApi.CommunityFlagVisibility`
  Visibility behavior of a flag for various user types.
  - `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
  - `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value

Type: `ConnectApi.ModerationFlags`

Usage

To add a flag to a feed item, Allow members to flag content must be selected for a community.

```java
getFlagsOnFeedItem(communityId, feedItemid)
```

Get the moderation flags on a feed item.

API Version
29.0–31.0

Important: In version 32.0 and later, use `getFlagsOnFeedElement(communityId, feedElementId)`.

Requires Chatter
Yes
Signature

```java
public static ConnectApi.ModerationFlags getFlagsOnFeedItem(String communityId, String feedItemId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedItemId`
  - Type: `String`
  - The ID for a feed item.

Return Value

Type: `ConnectApi.ModerationFlags`

Usage

To get moderation flags, the context user must have the Moderate Communities Feeds permission.

```java
getFlagsOnFeedItem(communityId, feedItemId, visibility)
```

Get the moderation flags with specified visibility on a feed item.

API Version

30.0–31.0

⚠️ Important: In version 32.0 and later, use `getFlagsOnFeedElement(communityId, feedElementId, visibility)`.

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ModerationFlags getFlagsOnFeedItem(String communityId, String feedItemId, ConnectApi.CommunityFlagVisibility visibility)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `feedItemId`
  - Type: `String`
  - The ID for a feed item.
visibility
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types.
- ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
- SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To get moderation flags, the context user must have the Moderate Communities Feeds permission.

removeFlagsOnFeedItem(communityId, feedItemId, userId)
Remove a moderation flag from a feed item.

API Version
29.0–31.0

⚠️ Important: In version 32.0 and later, use removeFlagFromFeedElement(communityId, feedElementId, userId).

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags removeFlagsOnFeedItem(String communityId, String feedItemId, String userId)

Parameters

- communityId
  Type: String
  Use either the ID for a community, internal, or null.

- feedItemId
  Type: String
  The ID for a feed item.

- userId
  Type: String
  The ID for a user.
Return Value
Type: Void

Usage
To remove a moderation flag, the context user must have added the flag or must have the Moderate Communities Feeds permission.

ContentHub Class
Access Files Connect repositories and their files and folders.

Namespace
ConnectApi

ContentHub Methods
The following are methods for ContentHub. All methods are static.
Use ContentHub methods to work with Files Connect repositories.

IN THIS SECTION:

addRepositoryItem(repositoryId, repositoryFolderId, file)
Add a repository item.

addRepositoryItem(communityId, repositoryId, repositoryFolderId, file)
Add a repository item in a community.

addRepositoryItem(repositoryId, repositoryFolderId, file, fileData)
Add a repository item, including the binary file.

addRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData)
Add a repository item, including the binary file, in a community.

getAllowedItemTypes(repositoryId, repositoryFolderId)
Get the item types that the context user is allowed to create in the repository folder.

getAllowedItemTypes(repositoryId, repositoryFolderId, filter)
Get the item types, filtered by type, that the context user is allowed to create in the repository folder.

getAllowedItemTypes(communityId, repositoryId, repositoryFolderId)
Get the item types that the context user is allowed to create in the repository folder in a community.

getAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter)
Get the item types, filtered by type, that the context user is allowed to create in the repository folder in a community.

getFilePreview(repositoryId, repositoryFileId, formatType)
Get a repository file preview.

getFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)
Get a page or page range of a repository file preview.

getFilePreview(communityId, repositoryId, repositoryFileId, formatType)
Get a repository file preview in a community.
getFilePreview(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)
Get a page or page range of a repository file preview in a community.

getItemType(repositoryId, repositoryItemTypeId)
Get information about an item type associated with a repository.

getItemType(communityId, repositoryId, repositoryItemTypeId)
Get information about an item type associated with a repository in a community.

getPreviews(repositoryId, repositoryFileId)
Get information about a repository file’s supported previews.

getPreviews(communityId, repositoryId, repositoryFileId)
Get information about a repository file’s supported previews in a community.

getRepositories()
Get a list of repositories.

getRepositories(communityId)
Get a list of repositories in a community.

getRepositories(pageParam, pageSize)
Get a page of repositories.

getRepositories(communityId, pageParam, pageSize)
Get a page of repositories in a community.

getRepository(repositoryId)
Get a repository.

getRepository(communityId, repositoryId)
Get a repository in a community.

getRepositoryFile(repositoryId, repositoryFileId)
Get a repository file.

getRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)
Get a repository file with or without permissions information.

getRepositoryFile(communityId, repositoryId, repositoryFileId)
Get a repository file in a community.

getRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)
Get a repository file with or without permissions information in a community.

getRepositoryFolder(repositoryId, repositoryFolderId)
Get a repository folder.

getRepositoryFolder(communityId, repositoryId, repositoryFolderId)
Get a repository folder in a community.

getRepositoryFolderItems(repositoryId, repositoryFolderId)
Get repository folder items.

getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId)
Get repository folder items in a community.

getRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize)
Get a page of repository folder items.
getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize)
Get a page of repository folder items in a community.

updateRepositoryFile(repositoryId, repositoryFileId, file)
Update the name of a repository file.

updateRepositoryFile(repositoryId, repositoryFileId, file, fileData)
Update the content of a repository file.

updateRepositoryFile(communityId, repositoryId, repositoryFileId, file)
Update the name of a repository file in a community.

updateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData)
Update the content of a repository file in a community.

addRepositoryItem(repositoryId, repositoryFolderId, file)
Add a repository item.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file)

Parameters

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.

Return Value
Type: ConnectApi.RepositoryFolderItem
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example creates a file without binary content (metadata only) in a Google Drive repository folder. After the file is created, we show the file’s ID, name, description, external URL, and download URL.

```java
final String gDriveRepositoryId = '0xCxx000000000OOGAY', gDriveFolderId = 'folder:OB01Tys1KmM3sSVJ2b6j1zTGFqSWs';

final ConnectApi.ContentHubItemInput newItem = new ConnectApi.ContentHubItemInput();
newItem.itemTypeId = 'document'; //see getAllowedTypes for any file item types available for creation/update
newItem.fields = new List<ConnectApi.ContentHubFieldValueInput>();

//Metadata: name field
final ConnectApi.ContentHubFieldValueInput fieldValueInput = new ConnectApi.ContentHubFieldValueInput();
fieldValueInput.name = 'name';
fieldValueInput.value = 'new folder item name.txt';
newItem.fields.add(fieldValueInput);

//Metadata: description field
final ConnectApi.ContentHubFieldValueInput fieldValueInputDesc = new ConnectApi.ContentHubFieldValueInput();
fieldValueInputDesc.name = 'description';
fieldValueInputDesc.value = 'It does describe it';
newItem.fields.add(fieldValueInputDesc);

final ConnectApi.RepositoryFolderItem newFolderItem =
ConnectApi.ContentHub.addRepositoryItem(gDriveRepositoryId, gDriveFolderId, newItem);
final ConnectApi.RepositoryFileSummary newFile = newFolderItem.file;
System.debug(String.format('New file - id: \''{0}\'', name: \''{1}\'', description: \''{2}\'',
\'\'external URL: \''{3}\'',
download URL: \''{4}\''

{new String[]{
newFile.id, newFile.name, newFile.description, newFile.externalDocumentUrl,
newFile.downloadUrl}}));
```

SEE ALSO:

- `setTestAddRepositoryItem(repositoryId, repositoryFolderId, file, result)`

Testing ConnectApi Code

`addRepositoryItem(communityId, repositoryId, repositoryFolderId, file)`

Add a repository item in a community.

API Version

39.0
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

repositoryId
  Type: String
  The ID of the repository.

repositoryFolderId
  Type: String
  The ID of the repository folder.

file
  Type: ConnectApi.ContentHubItemInput
  The item type ID and fields of the item type.

Return Value

Type: ConnectApi.RepositoryFolderItem

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestAddRepositoryItem(communityId, repositoryId, repositoryFolderId, file, result)
  Testing ConnectApi Code

addRepositoryItem(repositoryId, repositoryFolderId, file, fileData)

Add a repository item, including the binary file.

API Version

39.0

Requires Chatter

No
Signature

```java
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData)
```

Parameters

- `repositoryId`
  - Type: `String`
  - The ID of the repository.

- `repositoryFolderId`
  - Type: `String`
  - The ID of the repository folder.

- `file`
  - Type: `ConnectApi.ContentHubItemInput`
  - The item type ID and fields of the item type.

- `fileData`
  - Type: `ConnectApi.BinaryInput`
  - The binary file.

Return Value

- Type: `ConnectApi.RepositoryFolderItem`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example creates a file with binary content and metadata in a Google Drive repository folder. After the file is created, we show the file's ID, name, description, external URL, and download URL.

```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFolderId = 'folder:0B0lTys1KmM3sSVJ2bjIzTGFqSWs';

final ConnectApi.ContentHubItemInput newItem = new ConnectApi.ContentHubItemInput();
newItem.itemTypeId = 'document'; //see getAllowedTypes for any file item types available for creation/update
newItem.fields = new List<ConnectApi.ContentHubFieldValueInput>();

//Metadata: name field
final String newFileName = 'new folder item name.txt';
final ConnectApi.ContentHubFieldValueInput fieldValueInput = new ConnectApi.ContentHubFieldValueInput();
fieldValueInput.name = 'name';
fieldValueInput.value = newFileName;
newItem.fields.add(fieldValueInput);
```
final ConnectApi.ContentHubFieldValueInput fieldValueInputDesc = new
ConnectApi.ContentHubFieldValueInput();
fieldValueInputDesc.name = 'description';
fieldValueInputDesc.value = 'It does describe it';
newItem.fields.add(fieldValueInputDesc);

// Binary content
final Blob newFileBlob = Blob.valueOf('awesome content for brand new file');
final String newFileMimeType = 'text/plain';
final ConnectApi.BinaryInput fileBinaryInput = new ConnectApi.BinaryInput(newFileBlob,
newFileMimeType, newFileName);

final ConnectApi.RepositoryFolderItem newFolderItem =
ConnectApi.ContentHub.addRepositoryItem(gDriveRepositoryId, gDriveFolderId, newItem,
fileBinaryInput);
final ConnectApi.RepositoryFileSummary newFile = newFolderItem.file;
System.debug(String.format('New file - id: \''{0}''
, name: \''{1}''
, description:
\''{2}''
, external URL: \''{3}''
, download URL: \''{4}''
, new String[]
newFile.id, newFile.name, newFile.description, newFile.externalDocumentUrl,
newFile.downloadUrl)));

SEE ALSO:
setTestAddRepositoryItem(repositoryId, repositoryFolderId, file, fileData, result)
Testing ConnectApi Code

**addRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData)**
Add a repository item, including the binary file, in a community.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String communityId,
String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file,
ConnectApi.BinaryInput fileData)

Parameters
**communityId**
Type: String
Use either the ID for a community, internal, or null.
repositoryId
  Type: String
  The ID of the repository.

repositoryFolderId
  Type: String
  The ID of the repository folder.

file
  Type: ConnectApi.ContentHubItemInput
  The item type ID and fields of the item type.

fileData
  Type: ConnectApi.BinaryInput
  The binary file.

Return Value
  Type: ConnectApi.RepositoryFolderItem

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestAddRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData, result)
  Testing ConnectApi Code

getAllowedItemTypes(repositoryId, repositoryFolderId)
Get the item types that the context user is allowed to create in the repository folder.

API Version
  39.0

Requires Chatter
  No

Signature
  public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes(String repositoryId, String repositoryFolderId)

Parameters
  repositoryId
    Type: String
The ID of the repository.

(repositoryFolderId)
Type: String
The ID of the repository folder.

Return Value
Type: ConnectApi.ContentHubAllowedItemTypeCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetAllowedItemTypes(repositoryId, repositoryFolderId, result)
Testing ConnectApi Code

getAllowedItemTypes(repositoryId, repositoryFolderId, filter)
Get the item types, filtered by type, that the context user is allowed to create in the repository folder.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes(String repositoryId, String repositoryFolderId, ConnectApi.ConnectContentHubItemType filter)

Parameters
repositoryId
Type: String
The ID of the repository.

(repositoryFolderId)
Type: String
The ID of the repository folder.

filter
Type: ConnectApi.ContentHubItemType
Item types. Values are:
• Any—Includes files and folders.
• FilesOnly—Includes files only.
• FoldersOnly—Includes folders only.

Return Value
Type: ConnectApi.ContentHubAllowedItemTypeCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example
This example calls `getAllowedItemTypes(repositoryId, repositoryFolderId, ConnectApi.ContentHubItemType.FilesOnly)` to get the first `ConnectApi.ContentHubItemTypeSummary.id` of a file. The context user can create allowed files in a repository folder in the external system.

```java
final ConnectApi.ContentHubAllowedItemTypeCollection allowedItemTypesColl = ConnectApi.ContentHub.getAllowedItemTypes(repositoryId, repositoryFolderId, ConnectApi.ContentHubItemType.FilesOnly);
final List<ConnectApi.ContentHubItemTypeSummary> allowedItemTypes = allowedItemTypesColl.allowedItemTypes;
string allowedFileItemTypeSummaryId = null;
if (allowedItemTypes.size() > 0)
{
    ConnectApi.ContentHubItemTypeSummary allowedItemTypeSummary = allowedItemTypes.get(0);

    allowedFileItemTypeSummaryId = allowedItemTypeSummary.id;
}
```

SEE ALSO:
setTestGetAllowedItemTypes(repositoryId, repositoryFolderId, filter, result)

Testing ConnectApi Code

`getAllowedItemTypes(communityId, repositoryId, repositoryFolderId)`
Get the item types that the context user is allowed to create in the repository folder in a community.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes(String communityId, String repositoryId, String repositoryFolderId)
Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `repositoryId`
  Type: `String`
  The ID of the repository.

- `repositoryFolderId`
  Type: `String`
  The ID of the repository folder.

Return Value

Type: `ConnectApi.ContentHubAllowedItemTypeCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetAllowedItemTypes(communityId, repositoryId, repositoryFolderId, result)`
- Testing `ConnectApi Code`

### `getAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter)`

Get the item types, filtered by type, that the context user is allowed to create in the repository folder in a community.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ConnectContentHubItemType filter)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`. 
repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

filter
Type: ConnectApi.ContentHubItemType
Item types. Values are:
- Any—Includes files and folders.
- FilesOnly—Includes files only.
- FoldersOnly—Includes folders only.

Return Value
Type: ConnectApi.ContentHubAllowedItemTypeCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter, result)
Testing ConnectApi Code

getFilePreview(repositoryId, repositoryFileId, formatType)
Get a repository file preview.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.FilePreview getFilePreview(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType)

Parameters
repositoryId
Type: String
The ID of the repository.
repositoryFileId
Type: String
The ID of the repository file.

formatType
Type: ConnectApi.FilePreviewFormat
Specifies the format of the file preview. Values are:
- Jpg—Preview format is JPG.
- Pdf—Preview format is PDF.
- Svg—Preview format is compressed SVG.
- Thumbnail—Preview format is 240 x 180 PNG.
- ThumbnailBig—Preview format is 720 x 480 PNG.
- ThumbnailTiny—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter general in the Quick Find box in Setup. Select General Settings, and then select Display alternative file previews.

Return Value
Type: ConnectApi.FilePreview

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example
This example calls `getFilePreview(repositoryId, repositoryFileId, ConnectApi.FilePreviewFormat.Thumbnail)` to get the thumbnail format preview along with its respective URL and number of thumbnail renditions. For each thumbnail format, we show every rendition URL available.

```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFileId = 'document:1-zcAllBaeoQbo2_yNFiHClcK6QJTPmOke-kHFC4TYg3rk';final ConnectApi.FilePreview filePreview = ConnectApi.ContentHub.getFilePreview(gDriveRepositoryId, gDriveFileId, ConnectApi.FilePreviewFormat.Thumbnail);System.debug(String.format('Preview - URL: `{0}`, format: `{1}`, nbr of renditions for this format: {2}''
, filePreview.url, filePreview.format.name(),String.valueOf(filePreview.previewUrls.size())));for (ConnectApi.FilePreviewUrl filePreviewUrl : filePreview.previewUrls){
```
SEE ALSO:

setTestGetFilePreview(repositoryId, repositoryFileId, formatType, result)

Testing ConnectApi Code

**getFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)**

Get a page or page range of a repository file preview.

**API Version**

39.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.FilePreview getFilePreview(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, Integer startPageNumber, Integer endPageNumber)
```

**Parameters**

- **repositoryId**
  Type: String
  The ID of the repository.

- **repositoryFileId**
  Type: String
  The ID of the repository file.

- **formatType**
  Type: `ConnectApi.FilePreviewFormat`
  Specifies the format of the file preview. Values are:
  - Jpg—Preview format is JPG.
  - Pdf—Preview format is PDF.
  - Svg—Preview format is compressed SVG.
  - Thumbnail—Preview format is 240 x 180 PNG.
  - ThumbnailBig—Preview format is 720 x 480 PNG.
  - ThumbnailTiny—Preview format is 120 x 90 PNG.

  PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.
If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter general in the Quick Find box in Setup. Select General Settings, and then select Display alternative file previews.

$startPageNumber
Type: Integer
The starting page number in the range of file preview URLs.

$endPageNumber
Type: Integer
The ending page number in the range of file preview URLs.

Return Value
Type: ConnectApi.FilePreview

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber, result)
Testing ConnectApi Code

getFilePreview(communityId, repositoryId, repositoryFileId, formatType)
Get a repository file preview in a community.

API Version
39.0

Requires Chatter
No

Signature

public static ConnectApi.FilePreview getFilePreview(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.
**repositoryFileId**
Type: String
The ID of the repository file.

**formatType**
Type: `ConnectApi.FilePreviewFormat`
Specifies the format of the file preview. Values are:
- Jpg—Preview format is JPG.
- Pdf—Preview format is PDF.
-Svg—Preview format is compressed SVG.
-Thumbnail—Preview format is 240 x 180 PNG.
-ThumbnailBig—Preview format is 720 x 480 PNG.
-ThumbnailTiny—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter `general` in the Quick Find box in Setup. Select General Settings, and then select **Display alternative file previews**.

**Return Value**
Type: `ConnectApi.FilePreview`

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
- `setTestGetFilePreview(communityId, repositoryId, repositoryFileId, formatType, result)`
- Testing ConnectApi Code

**getFilePreview(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)**
Get a page or page range of a repository file preview in a community.

**API Version**
39.0

**Requires Chatter**
No
Signature

```java
public static ConnectApi.FilePreview getFilePreview(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, Integer startPageNumber, Integer endPageNumber)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **repositoryId**
  - Type: `String`
  - The ID of the repository.

- **repositoryFileId**
  - Type: `String`
  - The ID of the repository file.

- **formatType**
  - Type: `ConnectApi.FilePreviewFormat`
  - Specifies the format of the file preview. Values are:
    - `Jpg`—Preview format is JPG.
    - `Pdf`—Preview format is PDF.
    - `Svg`—Preview format is compressed SVG.
    - `Thumbnail`—Preview format is 240 x 180 PNG.
    - `ThumbnailBig`—Preview format is 720 x 480 PNG.
    - `ThumbnailTiny`—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter `general` in the Quick Find box in Setup. Select General Settings, and then select Display alternative file previews.

- **startPageNumber**
  - Type: `Integer`
  - The starting page number in the range of file preview URLs.

- **endPageNumber**
  - Type: `Integer`
  - The ending page number in the range of file preview URLs.

Return Value

- **Type**: `ConnectApi.FilePreview`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

setTestGetFilePreview(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber, result)

Testing ConnectApi Code

**getItemType(repositoryId, repositoryItemTypeId)**

Get information about an item type associated with a repository.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.ContentHubItemTypeDetail getItemType(String repositoryId, String repositoryItemTypeId)
```

Parameters

**repositoryId**

Type: String

The ID of the repository.

**repositoryItemTypeId**

Type: String

The ID of the repository item type.

Return Value

Type: ConnectApi.ContentHubItemTypeDetail

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

setTestGetItemType(repositoryId, repositoryItemTypeId, result)

Testing ConnectApi Code
**getItemType(communityId, repositoryId, repositoryItemTypeId)**

Get information about an item type associated with a repository in a community.

**API Version**
39.0

**Requires Chatter**
No

**Signature**
```java
public static ConnectApi.ContentHubItemTypeDetail getItemType(String communityId, String repositoryId, String repositoryItemTypeId)
```

**Parameters**
- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **repositoryId**
  - Type: String
  - The ID of the repository.

- **repositoryItemTypeId**
  - Type: String
  - The ID of the repository item type.

**Return Value**
Type: `ConnectApi.ContentHubItemTypeDetail`

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
- `setTestGetItemType(communityId, repositoryId, repositoryItemTypeId, result)`
- Testing ConnectApi Code

**getPreviews(repositoryId, repositoryFileId)**

Get information about a repository file's supported previews.

**API Version**
39.0
Requires Chatter
No

Signature
public static ConnectApi.FilePreviewCollection getPreviews(String repositoryId, String repositoryFileId)

Parameters
repositoryId
   Type: String
   The ID of the repository.
repositoryFileId
   Type: String
   The ID of the repository file.

Return Value
Type: ConnectApi.FilePreviewCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example
This example gets all supported preview formats and their respective URLs and number of renditions. For each supported preview format, we show every rendition URL available.

```java
final String gDriveRepositoryId = '0XCxx00000000GDGAY', gDriveFileId = 'document:1-zcA1BaeoQbo2_yNF1HCCk6QJTPmOke-kHFC4TYg3rk';
final ConnectApi.FilePreviewCollection previewsCollection = ConnectApi.ContentHub.getPreviews(gDriveRepositoryId, gDriveFileId);
for(ConnectApi.FilePreview filePreview : previewsCollection.previews){
   System.debug(String.format('Preview - URL: ' + filePreview.url, filePreview.format.name(), String.valueOf(filePreview.previewUrls.size())));
   for(ConnectApi.FilePreviewUrl filePreviewUrl : filePreview.previewUrls){
      System.debug('-----> Rendition URL: ' + filePreviewUrl.previewUrl);
   }
}
```

SEE ALSO:
setTestGetPreviews(repositoryId, repositoryFileId, result)
Testing ConnectApi Code
**getPreviews(communityId, repositoryId, repositoryFileId)**
Get information about a repository file’s supported previews in a community.

API Version
39.0

Requires Chatter
No

Signature
```java
public static ConnectApi.FilePreviewCollection getPreviews(String communityId, String repositoryId, String repositoryFileId)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal or null.

- **repositoryId**
  - Type: String
  - The ID of the repository.

- **repositoryFileId**
  - Type: String
  - The ID of the repository file.

Return Value
Type: `ConnectApi.FilePreviewCollection`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetPreviews(communityId, repositoryId, repositoryFileId, result)`
- Testing ConnectApi Code

**getRepositories()**
Get a list of repositories.

API Version
39.0
Requires Chatter
No

Signature

\[
\text{public static ConnectApi.ContentHubRepositoryCollection getRepositories()}
\]

Return Value

Type: `ConnectApi.ContentHubRepositoryCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example gets all repositories and gets the first SharePoint online repository found.

```java
final string sharePointOnlineProviderType = 'ContentHubSharepointOffice365';
final ConnectApi.ContentHubRepositoryCollection repositoryCollection = ConnectApi.ContentHub.getRepositories();
ConnectApi.ContentHubRepository sharePointOnlineRepository = null;
for (ConnectApi.ContentHubRepository repository : repositoryCollection.repositories) {
    if (sharePointOnlineProviderType.equalsIgnoreCase(repository.providerType.type)) {
        sharePointOnlineRepository = repository;
        break;
    }
}
```

SEE ALSO:

- `setTestGetRepositories(result)`
- Testing ConnectApi Code

### getRepositories(communityId)

Get a list of repositories in a community.

API Version

39.0

Requires Chatter

No
public static ConnectApi.ContentHubRepositoryCollection getRepositories(String communityId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

Return Value

Type: ConnectApi.ContentHubRepositoryCollection

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRepositories(communityId, result)
Testing ConnectApi Code

getRepositories (pageParam, pageSize)
Get a page of repositories.

API Version
39.0

Requires Chatter
No

Signature

public static ConnectApi.ContentHubRepositoryCollection getRepositories(Integer pageParam, Integer pageSize)

Parameters

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default page size is 25.
getRepositories(communityId, pageParam, pageSize)

Get a page of repositories in a community.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.ContentHubRepositoryCollection getRepositories(String communityId, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default page size is 25.

Return Value
Type: ConnectApi.ContentHubRepositoryCollection
Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRepositories(communityId, pageParam, pageSize, result)
Testing ConnectApi Code

getRepository(repositoryId)
Get a repository.

API Version
369.0

Requires Chatter
No

Signature
public static ConnectApi.ContentHubRepository getRepository(String repositoryId)

Parameters
repositoryId
Type: String
The ID of the repository.

Return Value
Type: ConnectApi.ContentHubRepository

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example
final string repositoryId = '0XCxx0000000123GAA';
final ConnectApi.ContentHubRepository repository = ConnectApi.ContentHub.getRepository(repositoryId);

SEE ALSO:
setTestGetRepository(repositoryId, result)
Testing ConnectApi Code
getRepository(communityId, repositoryId)
Get a repository in a community.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.ContentHubRepository getRepository(String communityId, String repositoryId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

Return Value
Type: ConnectApi.ContentHubRepository

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRepository(communityId, repositoryId, result)
Testing ConnectApi Code

getRepositoryFile(repositoryId, repositoryFileId)
Get a repository file.

API Version
39.0
Requires Chatter
No

Signature

```java
public static ConnectApi.RepositoryFileDetail getRepositoryFile(String repositoryId,
String repositoryFileId)
```

Parameters

repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

Return Value
Type: `ConnectApi.RepositoryFileDetail`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

```java
final String gDriveRepositoryId = '0xCxx000000000DGay', gDriveFileId =
'file:OB0lTys1KmM3sTmxKNjVJbWZjaD0';
final ConnectApi.RepositoryFileDetail file =
ConnectApi.ContentHub.getRepositoryFile(gDriveRepositoryId, gDriveFileId);
System.debug(String.format('File - name: %1$s, size: %2$s, external URL: %3$s,
download URL: %4$s,
   new String[]{ file.name, String.valueOf(file.contentSize), file.externalDocumentUrl,
file.downloadUrl});
```

SEE ALSO:

`setTestGetRepositoryFile(repositoryId, repositoryFileId, result)`

Testing ConnectApi Code

```java
getRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)
```
Get a repository file with or without permissions information.

API Version
39.0
public static ConnectApi.RepositoryFileDetail getRepositoryFile(String repositoryId, String repositoryFileId, Boolean includeExternalFilePermissionsInfo)

Parameters

repositoryId
  Type: String
  The ID of the repository.

repositoryFileId
  Type: String
  The ID of the repository file.

includeExternalFilePermissionsInfo
  Type: Boolean
  Specifies whether to include permission information, such as whether the file is shared and what are the available permission types.

Managing external file permissions is supported for Google Drive, SharePoint Online, and OneDrive for Business.

Return Value

Type: ConnectApi.RepositoryFileDetail

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example

```
final String gDriveRepositoryId = '0XCxx00000000000DGAY', gDriveFileId = 'file:OB0lTys1KmM3sTmxKNjVJbWZja00';

final ConnectApi.RepositoryFileDetail file = ConnectApi.ContentHub.getRepositoryFile(gDriveRepositoryId, gDriveFileId, true);
System.debug(String.format('File - name: \'\'{0}\'\', size: {1}, external URL: \'\'{2}\'\', download URL: \'\'{3}\'\'', new String[]{ file.name, String.valueOf(file.contentSize), file.externalDocumentUrl, file.downloadUrl}));
final ConnectApi.ExternalFilePermissionInformation externalFilePermInfo = file.externalFilePermissionInformation;

//permission types
final List<ConnectApi.ContentHubPermissionType> permissionTypes = externalFilePermInfo.externalFilePermissionTypes;
for(ConnectApi.ContentHubPermissionType permissionType : permissionTypes){
  System.debug(String.format('Permission type - id: \'\'{0}\'\', label: \'\'{1}\'\'', new String[]{ permissionType.id, permissionType.label}));
```
permission groups

```java
final List<ConnectApi.RepositoryGroupSummary> groups =
    externalFilePermInfo.repositoryPublicGroups;
for (ConnectApi.RepositoryGroupSummary ggroup : groups) {
    System.debug(String.format('Group - id: "{0}", name: "{1}", type: "{2}"',
        ggroup.id, ggroup.name, ggroup.type.name()));
}
```

Testing ConnectApi Code

### getRepositoryFile(communityId, repositoryId, repositoryFileId)

Get a repository file in a community.

**API Version**

39.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.RepositoryFileDetail getRepositoryFile(String communityId, String repositoryId, String repositoryFileId)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **repositoryId**
  - Type: `String`
  - The ID of the repository.

- **repositoryFileId**
  - Type: `String`
  - The ID of the repository file.

**Return Value**

Type: `ConnectApi.RepositoryFileDetail`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

setTestGetRepositoryFile(communityId, repositoryId, repositoryFileId, result)

Testing ConnectApi Code

getRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)

Get a repository file with or without permissions information in a community.

API Version

39.0

Requires Chatter

No

Signature

public static ConnectApi.RepositoryFileDetail getRepositoryFile(String communityId, String repositoryId, String repositoryFileId, Boolean includeExternalFilePermissionsInfo)

Parameters

communityId

Type: String

Use either the ID for a community, internal, or null.

repositoryId

Type: String

The ID of the repository.

repositoryFileId

Type: String

The ID of the repository file.

includeExternalFilePermissionsInfo

Type: Boolean

Specifies whether to include permission information, such as whether the file is shared and what are the available permission types. Managing external file permissions is supported for Google Drive, SharePoint Online, and OneDrive for Business.

Return Value

Type: ConnectApi.RepositoryFileDetail
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo, result)`
- `Testing ConnectApi Code`

`getRepositoryFolder(repositoryId, repositoryFolderId)`

Get a repository folder.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.RepositoryFolderDetail getRepositoryFolder(String repositoryId, String repositoryFolderId)
```

Parameters

- `repositoryId`
  - Type: `String`
  - The ID of the repository.

- `repositoryFolderId`
  - Type: `String`
  - The ID of the repository folder.

Return Value

Type: `ConnectApi.RepositoryFolderDetail`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFolderId = 'folder:0B0lTys1KmM3sSVJ2bjIzTGFqSWs';
final ConnectApi.RepositoryFolderDetail folder =
```
ConnectApi.ContentHub.getRepositoryFolder(gDriveRepositoryId, gDriveFolderId);
System.debug(String.format('Folder - name: \'{0}\', description: \'{1}\', external URL: \'{2}\', folder items URL: \'{3}\',
    new String[]{ folder.name, folder.description, folder.externalFolderUrl, folder.folderItemsUrl})));

SEE ALSO:
   setTestGetRepositoryFolder(repositoryId, repositoryFolderId, result)
   Testing ConnectApi Code

getRepositoryFolder(communityId, repositoryId, repositoryFolderId)
Get a repository folder in a community.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFolderDetail getRepositoryFolder(String communityId, String repositoryId, String repositoryFolderId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.
repositoryId
Type: String
The ID of the repository.
repositoryFolderId
Type: String
The ID of the repository folder.

Return Value
Type: ConnectApi.RepositoryFolderDetail
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```
setTestGetRepositoryFolder(communityId, repositoryId, repositoryFolderId, result)
Testing ConnectApi Code
```

**getRepositoryFolderItems(repositoryId, repositoryFolderId)**

Get repository folder items.

API Version

39.0

Requires Chatter

No

Signature

```
public static ConnectApi.RepositoryFolderItemsCollection getRepositoryFolderItems(String repositoryId, String repositoryFolderId)
```

Parameters

- **repositoryId**
  - Type: `String`
  - The ID of the repository.

- **repositoryFolderId**
  - Type: `String`
  - The ID of the repository folder.

Return Value

Type: `ConnectApi.RepositoryFolderItemsCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.
Example

This example gets the collection of items in a repository folder. For files, we show the file’s name, size, external URL, and download URL. For folders, we show the folder’s name, description, and external URL.

```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFolderId = 'folder:0B01Tys1KmM3sSVJ2bj1zTGFqSWs';
final ConnectApi.RepositoryFolderItemsCollection folderItemsColl = ConnectApi.ContentHub.getRepositoryFolderItems(gDriveRepositoryId, gDriveFolderId);
final List<ConnectApi.RepositoryFolderItem> folderItems = folderItemsColl.items;
System.debug('Number of items in repository folder: ' + folderItems.size());
for (ConnectApi.RepositoryFolderItem item : folderItems){
    if(item.file != null){
        System.debug(String.format('File item - name: \'{0}\', size: \'{1}\', external URL: \'{2}\', download URL: \'{3}\', new String[]{ item.file.name, String.valueOf(item.file.contentSize), item.file.externalDocumentUrl, item.file.downloadUrl}));
    }else{
        ConnectApi.RepositoryFolderSummary folderSummary = item.folder;
        System.debug(String.format('Folder item - name: \'{0}\', description: \'{1}\', new String[]{ folderSummary.name, folderSummary.description}));
    }
}
```

SEE ALSO:
- `setTestGetRepositoryFolderItems(repositoryId, repositoryFolderId, result)`
- Testing ConnectApi Code

`getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId)`

Get repository folder items in a community.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.RepositoryFolderItemsCollection getRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, internal, or `null`. 

1670
**getRepositoryFolderItems**

Get a page of repository folder items.

API Version
39.0

Requires Chatter
No

**Signature**

```java
public static ConnectApi.RepositoryFolderItemsCollection getRepositoryFolderItems(String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize)
```

**Parameters**

- `repositoryId`  
  Type: *String*  
  The ID of the repository.

- `repositoryFolderId`  
  Type: *String*  
  The ID of the repository folder.

- `pageParam`  
  Type: *Integer*  
  
- `pageSize`  
  Type: *Integer*  
  

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

`setTestGetRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, result)`

Testing ConnectApi Code

**getRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize)**

Get a page of repository folder items.
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**
Type: Integer

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default page size is 25.

Return Value
Type: ConnectApi.RepositoryFolderItemsCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- setTestGetRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize, result)
- Testing ConnectApi Code

**getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize)**
Get a page of repository folder items in a community.

API Version
39.0

Requires Chatter
No

Signature
```java
public static ConnectApi.RepositoryFolderItemsCollection getRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize)
```

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **repositoryId**
  Type: String
  The ID of the repository.

- **repositoryFolderId**
  Type: String
The ID of the repository folder.

_pageParam_
Type: **Integer**

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

_pageSize_
Type: **Integer**

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.

Return Value
Type: **ConnectApi.RepositoryFolderItemsCollection**

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize, result)`
- Testing ConnectApi Code

**updateRepositoryFile(repositoryId, repositoryFileId, file)**
Update the name of a repository file.

API Version
39.0

Requires Chatter
No

Signature
```java
public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file)
```

Parameters
- **repositoryId**
  Type: **String**
  The ID of the repository.
- **repositoryFileId**
  Type: **String**
  The ID of the repository file.
**file**

Type: `ConnectApi.ContentHubItemInput`

The item type ID and fields of the item type.

When updating the metadata of a repository file, only the name field can be updated.

**Return Value**

Type: `ConnectApi.RepositoryFileDetail`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**Example**

This example updates the name of a file in a Google Drive repository. After the file is updated, we show the file’s ID, name, description, external URL, download URL.

```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFolderId = 'folder:OB0lTys1KmM3sSVJ2bji7eTGfQSws', gDriveFileId = 'document:1q9atVpcyYBK-JWzp_PHR75ulQgwFP15zhkamKrRcQ';

final ConnectApi.ContentHubItemInput updatedItem = new ConnectApi.ContentHubItemInput();
updatedItem.itemTypeId = 'document'; // see getAllowedTypes for any file item types available for creation/update
updatedItem.fields = new List<ConnectApi.ContentHubFieldValueInput>();

// Metadata: name field
final ConnectApi.ContentHubFieldInput fieldValueInputName = new ConnectApi.ContentHubFieldInput();
fieldValueInputName.name = 'name';
fieldValueInputName.value = 'updated file name.txt';
updatedItem.fields.add(fieldValueInputName);

final ConnectApi.RepositoryFileDetail updatedFile = ConnectApi.ContentHub.updateRepositoryFile(gDriveRepositoryId, gDriveFolderId, gDriveFileId, updatedItem);
System.debug(String.format('Updated file - id: %s, name: %s, description: %s, in external URL: %s, download URL: %s', new String[] {updatedFile.id, updatedFile.name, updatedFile.description, updatedFile.externalDocumentUrl, updatedFile.downloadUrl}));
```

**SEE ALSO:**

`setTestUpdateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData, result)`

**Testing ConnectApi Code**

`updateRepositoryFile(repositoryId, repositoryFileId, file, fileData)`

Update the content of a repository file.
public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData)

Parameters
repositoryId
- Type: String
- The ID of the repository.

repositoryFileId
- Type: String
- The ID of the repository file.

file
- Type: ConnectApi.ContentHubItemInput
- The item type ID and fields of the item type.
- When updating the metadata of a repository file, only the name field can be updated.

fileData
- Type: ConnectApi.BinaryInput
- The binary file.

Return Value
Type: ConnectApi.RepositoryFileDetail

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example
This example updates the content and name of a file in a Google Drive repository. After the file is updated, we show the file’s ID, name, description, external URL, and download URL.

```java
final String gDriveRepositoryId = '0Xcxx0000000000DGAY', gDriveFolderId = 'folder:0B0lTys1KmM3sSVJ2bjIzTGFqSws', gDriveFileId = 'document:1q9OatVpcyYBK-JWzp_PhR75ulQghwFP15zhkamKrRcQ';
final ConnectApi.ContentHubItemInput updatedItem = new ConnectApi.ContentHubItemInput();
```
updatedItem.itemTypeId = 'document'; // see getAllowedTypes for any file item types available for creation/update
updatedItem.fields = new List<ConnectApi.ContentHubFieldValueInput>();

// Metadata: name field
final ConnectApi.ContentHubFieldValueInput fieldValueInputName = new ConnectApi.ContentHubFieldValueInput();
fieldValueInputName.name = 'name';
fieldValueInputName.value = 'updated file name.txt';
updatedItem.fields.add(fieldValueInputName);

// Binary content
final Blob updatedFileBlob = Blob.valueOf('even more awesome content for updated file');
final String updatedFileMimeType = 'text/plain';
final ConnectApi.BinaryInput fileBinaryInput = new ConnectApi.BinaryInput(updatedFileBlob, updatedFileMimeType, updatedFileName);

final ConnectApi.RepositoryFileDetail updatedFile =
ConnectApi.ContentHub.updateRepositoryFile(gDriveRepositoryId, gDriveFileId, updatedItem);
System.debug(String.format('Updated file - id: \"{0}\", name: \"{1}\", description: \"{2}\",

SEE ALSO:

setTestUpdateRepositoryFile(repositoryId, repositoryFileId, file, result)

Testing ConnectApi Code

updateRepositoryFile(communityId, repositoryId, repositoryFileId, file)
Update the name of a repository file in a community.

API Version
39.0

Requires Chatter
No

Signature

public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String communityId, String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.
repositoryId
  Type: String
  The ID of the repository.
repositoryFileId
  Type: String
  The ID of the repository file.
file
  Type: ConnectApi.ContentHubItemInput
  The item type ID and fields of the item type.
  When updating the metadata of a repository file, only the name field can be updated.

Return Value
Type: ConnectApi.RepositoryFileDetail

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestUpdateRepositoryFile(repositoryId, repositoryFileId, file, fileData, result)
  Testing ConnectApi Code

updateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData)
Update the content of a repository file in a community.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String communityId, String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.
repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.
When updating the metadata of a repository file, only the name field can be updated.

fileData
Type: ConnectApi.BinaryInput
The binary file.

Return Value
Type: ConnectApi.RepositoryFileDetail

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

ContentHub Test Methods
The following are the test methods for ContentHub. All methods are static.
For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

setTestAddRepositoryItem(repositoryId, repositoryFolderId, file, result)
Register a ConnectApi.RepositoryFolderItem object to be returned when the matching addRepositoryItem(repositoryId, repositoryFolderId, file) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0
public static Void setTestAddRepositoryItem(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.RepositoryFolderItem result)

Parameters

repositoryId
 Type: String
 The ID of the repository.

repositoryFolderId
 Type: String
 The ID of the repository folder.

file
 Type: ConnectApi.ContentHubItemInput
 The item type ID and fields of the item type.

result
 Type: ConnectApi.RepositoryFolderItem
 The object containing test data.

Return Value

Type: Void

SEE ALSO:

addRepositoryItem(repositoryId, repositoryFolderId, file)
Testing ConnectApi Code

setTestAddRepositoryItem(communityId, repositoryId, repositoryFolderId, file, result)

Register a ConnectApi.RepositoryFolderItem object to be returned when the matching addRepositoryItem(communityId, repositoryId, repositoryFolderId, file) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

public static Void setTestAddRepositoryItem(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.RepositoryFolderItem result)
Parameters

* communityId
  Type: String
  Use either the ID for a community, internal, or null.

* repositoryId
  Type: String
  The ID of the repository.

* repositoryFolderId
  Type: String
  The ID of the repository folder.

* file
  Type: `ConnectApi.ContentHubItemInput`
  The item type ID and fields of the item type.

* result
  Type: `ConnectApi.RepositoryFolderItem`
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
- addRepositoryItem(communityId, repositoryId, repositoryFolderId, file)
- Testing ConnectApi Code

**setTestAddRepositoryItem**(repositoryId, repositoryFolderId, file, fileData, result)

Register a `ConnectApi.RepositoryFolderItem` object to be returned when the matching
addRepositoryItem(repositoryId, repositoryFolderId, file, fileData) method is called in a test
context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

```java
public static Void setTestAddRepositoryItem(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData, ConnectApi.RepositoryFolderItem result)
```

Parameters

* repositoryId
  Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.

fileData
Type: ConnectApi.BinaryInput
The binary file.

result
Type: ConnectApi.RepositoryFolderItem
The object containing test data.

Return Value
Type: Void

SEE ALSO:
addRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData)

Testing ConnectApi Code

setTestAddRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData, result)

Register a ConnectApi.RepositoryFolderItem object to be returned when the matching addRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestAddRepositoryItem(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData, ConnectApi.RepositoryFolderItem result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.
repositoryFolderId
  Type: String
  The ID of the repository folder.
file
  Type: ConnectApi.ContentHubItemInput
  The item type ID and fields of the item type.
fileData
  Type: ConnectApi.BinaryInput
  The binary file.
result
  Type: ConnectApi.RepositoryFolderItem
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
addRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData)
Testing ConnectApi Code

setTestGetAllowedItemTypes(repositoryId, repositoryFolderId, result)

Register a ConnectApi.ContentHubAllowedItemTypeCollection object to be returned when the matching
getAllowedItemTypes(repositoryId, repositoryFolderId) method is called in a test context. Use the method
with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetAllowedItemTypes(String repositoryId, String
  repositoryFolderId, ConnectApi.ContentHubAllowedItemTypeCollection result)

Parameters
repositoryId
  Type: String
  The ID of the repository.
repositoryFolderId
  Type: String
  The ID of the repository folder.
result
Type: ConnectApi.ContentHubAllowedItemTypeCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getAllowedItemTypes(repositoryId, repositoryFolderId)
Testing ConnectApi Code

setTestGetAllowedItemTypes(repositoryId, repositoryFolderId, filter, result)
Register a ConnectApi.ContentHubAllowedItemTypeCollection object to be returned when the matching
getAllowedItemTypes (repositoryId, repositoryFolderId, filter) method is called in a test context. Use
the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetAllowedItemTypes(String repositoryId, String
repositoryFolderId, ConnectApi.ContentHubItemType filter,
ConnectApi.ContentHubAllowedItemTypeCollection result)

Parameters
repositoryId
Type: String
The ID of the repository.
repositoryFolderId
Type: String
The ID of the repository folder.
filter
Type: ConnectApi.ContentHubItemType
Item types. Values are:
• Any—Includes files and folders.
• FilesOnly—Includes files only.
• FoldersOnly—Includes folders only.
result
Type: ConnectApi.ContentHubAllowedItemTypeCollection
The object containing test data.
setTestGetAllowedItemTypes(communityId, repositoryId, repositoryFolderId, result)

Register a ConnectApi.ContentHubAllowedItemTypeCollection object to be returned when the matching getAllowedItemTypes(communityId, repositoryId, repositoryFolderId) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetAllowedItemTypes(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ContentHubAllowedItemTypeCollection result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

result
Type: ConnectApi.ContentHubAllowedItemTypeCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getAllowedItemTypes(communityId, repositoryId, repositoryFolderId)
Testing ConnectApi Code
setTestGetAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter, result)

Register a ConnectApi.ContentHubAllowedItemTypeCollection object to be returned when the matching getAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetAllowedItemTypes(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemType filter, ConnectApi.ContentHubAllowedItemTypeCollection result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

filter
Type: ConnectApi.ContentHubItemType
Item types. Values are:
- Any—Includes files and folders.
- FilesOnly—Includes files only.
- FoldersOnly—Includes folders only.

result
Type: ConnectApi.ContentHubAllowedItemTypeCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter)
Testing ConnectApi Code
setTestGetFilePreview(repositoryId, repositoryFileId, formatType, result)

Register a ConnectApi.FilePreview object to be returned when the matching `getStatusCode(repositoryId, repositoryFileId, formatType)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestGetFilePreview(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, ConnectApi.FilePreview result)
```

**Parameters**

- `repositoryId`
  - **Type:** `String`
  - The ID of the repository.

- `repositoryFileId`
  - **Type:** `String`
  - The ID of the repository file.

- `formatType`
  - **Type:** `ConnectApi.FilePreviewFormat`
  - Specifies the format of the file preview. Values are:
    - `Jpg`—Preview format is JPG.
    - `Pdf`—Preview format is PDF.
    - `Svg`—Preview format is compressed SVG.
    - `Thumbnail`—Preview format is 240 x 180 PNG.
    - `ThumbnailBig`—Preview format is 720 x 480 PNG.
    - `ThumbnailTiny`—Preview format is 120 x 90 PNG.
  
  PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

  If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter `general` in the Quick Find box in Setup. Select General Settings, and then select Display alternative file previews.

- `result`
  - **Type:** `ConnectApi.FilePreview`
  - The object containing test data.
Return Value
Type: Void

SEE ALSO:
getFilePreview(repositoryId, repositoryFileId, formatType)
Testing ConnectApi Code

setTestGetFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber, result)

Register a ConnectApi.FilePreview object to be returned when the matching getFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetFilePreview(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, Integer startPageNumber, Integer endPageNumber, ConnectApi.FilePreview result)

Parameters
repositoryId
Type: String
The ID of the repository.
repositoryFileId
Type: String
The ID of the repository file.
formatType
Type: ConnectApi.FilePreviewFormat
Specifies the format of the file preview. Values are:
- Jpg—Preview format is JPG.
- Pdf—Preview format is PDF.
- Svg—Preview format is compressed SVG.
- Thumbnail—Preview format is 240 x 180 PNG.
- ThumbnailBig—Preview format is 720 x 480 PNG.
- ThumbnailTiny—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand. If you're concerned that feature-rich SVG previews don't work in your org, choose alternative file previews. To use JPG file previews, enter general in the Quick Find box in Setup. Select General Settings, and then select Display alternative file previews.

**setTestGetFilePreview**(communityId, repositoryId, repositoryFileId, formatType, result)

Register a ConnectApi.FilePreview object to be returned when the matching getFilePreview(communityId, repositoryId, repositoryFileId, formatType) method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestGetFilePreview(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, ConnectApi.FilePreview result)
```

**Parameters**

- **communityId**
  - Type: **String**
  - Use either the ID for a community, internal, or null.

- **repositoryId**
  - Type: **String**
  - The ID of the repository.

- **repositoryFileId**
  - Type: **String**
The ID of the repository file.

**formatType**

Type: `ConnectApi.FilePreviewFormat`

Specifies the format of the file preview. Values are:

- **Jpg**—Preview format is JPG.
- **Pdf**—Preview format is PDF.
- **Svg**—Preview format is compressed SVG.
- **Thumbnail**—Preview format is 240 x 180 PNG.
- **ThumbnailBig**—Preview format is 720 x 480 PNG.
- **ThumbnailTiny**—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand. If you're concerned that feature-rich SVG previews don't work in your org, choose alternative file previews. To use JPG file previews, enter `general` in the Quick Find box in Setup. Select General Settings, and then select Display alternative file previews.

**result**

Type: `ConnectApi.FilePreview`

The object containing test data.

Return Value

Type: Void

See Also:

- `getFilePreview(communityId, repositoryId, repositoryFileId, formatType)`
- Testing ConnectApi Code

**setTestGetFilePreview(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber, result)**

Register a `ConnectApi.FilePreview` object to be returned when the matching `getFilePreview(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestGetFilePreview(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, Integer startPageNumber, Integer endPageNumber, ConnectApi.FilePreview result)
```
Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`repositoryId`
Type: `String`
The ID of the repository.

`repositoryFileId`
Type: `String`
The ID of the repository file.

`formatType`
Type: `ConnectApi.FilePreviewFormat`
Specifies the format of the file preview. Values are:
- `Jpg`—Preview format is JPG.
- `Pdf`—Preview format is PDF.
- `Svg`—Preview format is compressed SVG.
- `Thumbnail`—Preview format is 240 x 180 PNG.
- `ThumbnailBig`—Preview format is 720 x 480 PNG.
- `ThumbnailTiny`—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand. If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter `general` in the Quick Find box in Setup. Select General Settings, and then select Display alternative file previews.

`startPageNumber`
Type: `Integer`
The starting page number in the range of file preview URLs.

`endPageNumber`
Type: `Integer`
The ending page number in the range of file preview URLs.

`result`
Type: `ConnectApi.FilePreview`
The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `getFilePreview(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)`

Testing ConnectApi Code
**setTestGetItemType(repositoryId, repositoryItemTypeId, result)**

Register a `ConnectApi.ContentHubItemTypeDetail` object to be returned when the matching `getItemType(repositoryId, repositoryItemTypeId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestGetItemType(String repositoryId, String repositoryItemTypeId, ConnectApi.ContentHubItemTypeDetail result)
```

**Parameters**

- `repositoryId`
  - Type: `String`
  - The ID of the repository.

- `repositoryItemTypeId`
  - Type: `String`
  - The ID of the repository item type.

- `result`
  - Type: `ConnectApi.ContentHubItemTypeDetail`
  - The object containing test data.

**Return Value**

Type: Void

**SEE ALSO:**

- `getItemType(repositoryId, repositoryItemTypeId)`
- Testing ConnectApi Code

**setTestGetItemType(communityId, repositoryId, repositoryItemTypeId, result)**

Register a `ConnectApi.ContentHubItemTypeDetail` object to be returned when the matching `getItemType(communityId, repositoryId, repositoryItemTypeId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0
**Signature**

```java
public static Void setTestGetItemType(String communityId, String repositoryId, String repositoryItemTypeId, ConnectApi.ContentHubItemTypeDetail result)
```

**Parameters**

- `communityId`  
  Type: `String`  
  Use either the ID for a community, `internal`, or `null`.

- `repositoryId`  
  Type: `String`  
  The ID of the repository.

- `repositoryItemTypeId`  
  Type: `String`  
  The ID of the repository item type.

- `result`  
  Type: `ConnectApi.ContentHubItemTypeDetail`  
  The object containing test data.

**Return Value**

Type: Void

**SEE ALSO:**

- `getItemType(communityId, repositoryId, repositoryItemTypeId)`
- `Testing ConnectApi Code`

**setTestGetPreviews(repositoryId, repositoryFileId, result)**

Register a `ConnectApi.FilePreviewCollection` object to be returned when the matching `getPreviews(repositoryId, repositoryFileId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestGetPreviews(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewCollection result)
```

**Parameters**

- `repositoryId`  
  Type: `String`
The ID of the repository.

(repositoryFileId
    Type: String
    The ID of the repository file.

result
    Type: ConnectApi.FilePreviewCollection
    The object containing test data.

Return Value
Type: Void

SEE ALSO:
    getPreviews(repositoryId, repositoryFileId)
    Testing ConnectApi Code

setTestGetPreviews(communityId, repositoryId, repositoryFileId, result)

Register a ConnectApi.FilePreviewCollection object to be returned when the matching
getPreviews(communityId, repositoryId, repositoryFileId) method is called in a test context. Use the
method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetPreviews(String communityId, String repositoryId, String
repositoryFileId, ConnectApi.FilePreviewCollection result)

Parameters
communityId
    Type: String
    Use either the ID for a community, internal, or null.
repositoryId
    Type: String
    The ID of the repository.
repositoryFileId
    Type: String
    The ID of the repository file.
result
    Type: ConnectApi.FilePreviewCollection
    The object containing test data.
Return Value
Type: Void

SEE ALSO:
- `getPreviews(communityId, repositoryId, repositoryFileId)`
- Testing ConnectApi Code

`setTestGetRepositories(result)`
Register a `ConnectApi.ContentHubRepositoryCollection` object to be returned when the matching `getRepositories()` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
`public static Void setTestGetRepositories(ConnectApi.ContentHubRepositoryCollection result)`

Parameters
- `result`
  Type: `ConnectApi.ContentHubRepositoryCollection`
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getRepositories()`
- Testing ConnectApi Code

`setTestGetRepositories(communityId, result)`
Register a `getRepository(communityId)` object to be returned when the matching `ConnectApi.ContentHubRepositoryCollection` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0
public static Void setTestGetRepositories(String communityId, ConnectApi.ContentHubRepositoryCollection result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

result
Type: ConnectApi.ContentHubRepositoryCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepositories(communityId)
Testing ConnectApi Code

setTestGetRepositories(pageParam, pageSize, result)

Register a ConnectApi.ContentHubRepositoryCollection object to be returned when the matching getRepositories(pageParam, pageSize) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

gpublic static Void setTestGetRepositories(Integer pageParam, Integer pageSize, ConnectApi.ContentHubRepositoryCollection result)

Parameters

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default page size is 25.

result
Type: ConnectApi.ContentHubRepositoryCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- getRepositories(pageParam, pageSize)

Testing ConnectApi Code

setTestGetRepositories(communityId, pageParam, pageSize, result)

Register a ConnectApi.ContentHubRepositoryCollection object to be returned when the matching getRepositories(communityId, pageParam, pageSize) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetRepositories(String communityId, Integer pageParam, Integer pageSize, ConnectApi.ContentHubRepositoryCollection result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default page size is 25.

result
Type: ConnectApi.ContentHubRepositoryCollection
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getRepositories(communityId, pageParam, pageSize)

Testing ConnectApi Code

**setTestGetRepository(repositoryId, result)**

Register a ConnectApi.ContentHubRepository object to be returned when the matching
getRepository(repositoryId) method is called in a test context. Use the method with the same parameters or you receive
an exception.

API Version
40.0

Signature
public static Void setTestGetRepository(String repositoryId,
ConnectApi.ContentHubRepository result)

Parameters
repositoryId
  Type: String
  The ID of the repository.

result
  Type: ConnectApi.ContentHubRepository
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepository(repositoryId)

Testing ConnectApi Code

**setTestGetRepository(communityId, repositoryId, result)**

Register a ConnectApi.ContentHubRepository object to be returned when the matching
getRepository(communityId, repositoryId) method is called in a test context. Use the method with the same
parameters or you receive an exception.
API Version
40.0

Signature
public static Void setTestGetRepository(String communityId, String repositoryId,
ConnectApi.ContentHubRepository result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.
repositoryId
Type: String
The ID of the repository.
result
Type: ConnectApi.ContentHubRepository
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepository(communityId, repositoryId)
Testing ConnectApi Code

setTestGetRepositoryFile(repositoryId, repositoryFileId, result)
Register a ConnectApi.RepositoryFileDetail object to be returned when the matching
getRepositoryFile(repositoryId, repositoryFileId) method is called in a test context. Use the method with
the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetRepositoryFile(String repositoryId, String repositoryFileId,
ConnectApi.RepositoryFileDetail result)

Parameters
repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

result
Type: ConnectApi.RepositoryFileDetail
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepositoryFile(repositoryId, repositoryFileId)

Testing ConnectApi Code

**setTestGetRepositoryFile** (repositoryId, repositoryFileId, includeExternalFilePermissionsInfo, result)

Register a ConnectApi.RepositoryFileDetail object to be returned when the matching getRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
```
public static Void setTestGetRepositoryFile(String repositoryId, String repositoryFileId, Boolean includeExternalFilePermissionsInfo, ConnectApi.RepositoryFileDetail result)
```

Parameters
repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

includeExternalFilePermissionsInfo
Type: Boolean
Specifies whether to include permission information, such as whether the file is shared and what are the available permission types.
Managing external file permissions is supported for Google Drive, SharePoint Online, and OneDrive for Business.
**setTestGetRepositoryFile** (communityId, repositoryId, repositoryFileId, result)

Register a `ConnectApi.RepositoryFileDetail` object to be returned when the matching `getRepositoryFile` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestGetRepositoryFile(String communityId, String repositoryId, String repositoryFileId, ConnectApi.RepositoryFileDetail result)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **repositoryId**
  - Type: `String`
  - The ID of the repository.

- **repositoryFileId**
  - Type: `String`
  - The ID of the repository file.

- **result**
  - Type: `ConnectApi.RepositoryFileDetail`
  - The object containing test data.
Return Value
Type: Void

SEE ALSO:
getRepositoryFile(communityId, repositoryId, repositoryFileId)
Testing ConnectApi Code

setTestGetRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo, result)

Register a ConnectApi.RepositoryFileDetail object to be returned when the matching getRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetRepositoryFile(String communityId, String repositoryId, String repositoryFileId, Boolean includeExternalFilePermissionsInfo, ConnectApi.RepositoryFileDetail result)

Parameters
communityId
type: String
Use either the ID for a community, internal, or null.

repositoryId
type: String
The ID of the repository.

repositoryFileId
type: String
The ID of the repository file.

includeExternalFilePermissionsInfo
type: Boolean
Specifies whether to include permission information, such as whether the file is shared and what are the available permission types. Managing external file permissions is supported for Google Drive, SharePoint Online, and OneDrive for Business.

result
type: ConnectApi.RepositoryFileDetail
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)

Testing ConnectApi Code

setTestGetRepositoryFolder(String repositoryId, repositoryFolderId, result)

Register a ConnectApi.RepositoryFolderDetail object to be returned when the matching getRepositoryFolder(String repositoryId, repositoryFolderId) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

public static Void setTestGetRepositoryFolder(String repositoryId, String repositoryFolderId, ConnectApi.RepositoryFolderDetail result)

Parameters

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

result
Type: ConnectApi.RepositoryFolderDetail
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepositoryFolder(repositoryId, repositoryFolderId)

setTestGetRepositoryFolder(communityId, repositoryId, repositoryFolderId, result)

Register a ConnectApi.RepositoryFolderDetail object to be returned when the matching getRepositoryFolder(communityId, repositoryId, repositoryFolderId) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetRepositoryFolder(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.RepositoryFolderDetail result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

result
Type: ConnectApi.RepositoryFolderDetail
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepositoryFolder(communityId, repositoryId, repositoryFolderId)
Testing ConnectApi Code

setTestGetRepositoryFolderItems(repositoryId, repositoryFolderId, result)

Register a ConnectApi.RepositoryFolderItemsCollection object to be returned when the matching getRepositoryFolderItems(repositoryId, repositoryFolderId) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0
Signature
public static Void setTestGetRepositoryFolderItems(String repositoryId, String repositoryFolderId, ConnectApi.RepositoryFolderItemsCollection result)

Parameters
repositoryId
  Type: String
  The ID of the repository.
repositoryFolderId
  Type: String
  The ID of the repository folder.
result
  Type: ConnectApi.RepositoryFolderItemsCollection
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
  getRepositoryFolderItems(repositoryId, repositoryFolderId)
  Testing ConnectApi Code

setTestGetRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, result)

Register a ConnectApi.RepositoryFolderItemsCollection object to be returned when the matching getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.RepositoryFolderItemsCollection result)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.
repositoryId
  Type: String
  The ID of the repository.

repositoryFolderId
  Type: String
  The ID of the repository folder.

result
  Type: ConnectApi.RepositoryFolderItemsCollection
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
  getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId)
  Testing ConnectApi Code

setTestGetRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize, result)

Register a ConnectApi.RepositoryFolderItemsCollection object to be returned when the matching
getRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize) method
is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

public static Void setTestGetRepositoryFolderItems(String repositoryId, String
  repositoryFolderId, Integer pageParam, Integer pageSize,
  ConnectApi.RepositoryFolderItemsCollection result)

Parameters
repositoryId
  Type: String
  The ID of the repository.

repositoryFolderId
  Type: String
  The ID of the repository folder.

pageParam
  Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default page size is 25.

**result**
Type: `ConnectApi.RepositoryFolderItemsCollection`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize)`
- Testing ConnectApi Code

`setTestGetRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize, result)`

Register a `ConnectApi.RepositoryFolderItemsCollection` object to be returned when the matching `getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
```java
public static Void setTestGetRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize, ConnectApi.RepositoryFolderItemsCollection result)
```

Parameters
- **communityId**
  Type: String
  Use either the ID for a community, `internal`, or null.
- **repositoryId**
  Type: String
  The ID of the repository.
- **repositoryFolderId**
  Type: String
  The ID of the repository folder.
- **pageParam**
  Type: Integer

1706
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.

**result**
Type: `ConnectApi.RepositoryFolderItemsCollection`  
The object containing test data.

Return Value  
Type: Void

SEE ALSO:  
`getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize)`  
Testing ConnectApi Code

**setTestUpdateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData, result)**
Register a `ConnectApi.RepositoryFileDetail` object to be returned when the matching `updateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version  
40.0

Signature  
`public static Void setTestUpdateRepositoryFile(String communityId, String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData, ConnectApi.RepositoryFileDetail result)`

Parameters  
**communityId**  
Type: `String`  
Use either the ID for a community, `internal`, or `null`.

**repositoryId**  
Type: `String`  
The ID of the repository.

**repositoryFileId**  
Type: `String`  
The ID of the repository file.

**file**  
Type: `ConnectApi.ContentHubItemInput`
The item type ID and fields of the item type.

fileData
Type: ConnectApi.BinaryInput
The binary file.

result
Type: ConnectApi.RepositoryFileDetail
The object containing test data.

Return Value
Type: Void

SEE ALSO:
updateRepositoryFile(repositoryId, repositoryFileId, file)
Testing ConnectApi Code

setTestUpdateRepositoryFile(repositoryId, repositoryFileId, file, result)
Register a ConnectApi.RepositoryFileDetail object to be returned when the matching updateRepositoryFile(repositoryId, repositoryFileId, file) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestUpdateRepositoryFile(String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.RepositoryFileDetail result)

Parameters
repositoryId
Type: String
The ID of the repository.
repositoryFileId
Type: String
The ID of the repository file.
file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.
result
Type: ConnectApi.RepositoryFileDetail
The object containing test data.

Return Value
Type: Void

SEE ALSO:
updateRepositoryFile(repositoryId, repositoryFileId, file, fileData)

Testing ConnectApi Code

setTestUpdateRepositoryFile(repositoryId, repositoryFileId, file, fileData, result)

Register a ConnectApi.RepositoryFileDetail object to be returned when the matching
updateRepositoryFile(repositoryId, repositoryFileId, file, fileData) method is called in a test
context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestUpdateRepositoryFile(String repositoryId, String
repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData,
ConnectApi.RepositoryFileDetail result)

Parameters
repositoryId
  Type: String
  The ID of the repository.
repositoryFileId
  Type: String
  The ID of the repository file.
file
  Type: ConnectApi.ContentHubItemInput
  The item type ID and fields of the item type.
fileData
  Type: ConnectApi.BinaryInput
  The binary file.
result
  Type: ConnectApi.RepositoryFileDetail
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
updateRepositoryFile(communityId, repositoryId, repositoryFileId, file)
Testing ConnectApi Code

setTestUpdateRepositoryFile(communityId, repositoryId, repositoryFileId, file, result)
Register a ConnectApi.RepositoryFileDetail object to be returned when the matching
updateRepositoryFile(communityId, repositoryId, repositoryFileId, file) method is called in a
test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestUpdateRepositoryFile(String communityId, String repositoryId,
String repositoryFileId, ConnectApi.ContentHubItemInput file,
ConnectApi.RepositoryFileDetail result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.

result
Type: ConnectApi.RepositoryFileDetail
The object containing test data.
Return Value
Type: Void

SEE ALSO:
updateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData)

Datacloud Class
Purchase Data.com contact or company records, and retrieve purchase information.

Namespace
ConnectApi

Note: When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields will be removed from your org. For more information, see Data.com Prospector and Clean Retirement.

IN THIS SECTION:
Datacloud Methods

Datacloud Methods
The following are methods for Datacloud. All methods are static.

IN THIS SECTION:
getCompaniesFromOrder(orderId, pageSize, page)
Get a list of purchased company records for an order.
getCompany(companyId)
Get a company record.
getContact(contactId)
Get a contact.
getContactsFromOrder(orderId, page, pageSize)
Get a list of purchased contacts for an order.
getOrder(orderId)
Get an order.
getUsage(userId)
Get purchase usage information for a user.
postOrder(orderInput)
Purchase records that are listed in an input file.

getCompaniesFromOrder(orderId, pageSize, page)
Get a list of purchased company records for an order.
API Version
32.0

Requires Chatter
No

Signature
public static ConnectApi.DatacloudCompanies getCompaniesFromOrder(String orderId, String pageSize, String page)

Parameters
orderId
  Type: String
  ID of an order.

page
  Type: Integer
  Number of the page that you want returned.

pageSize
  Type: Integer
  Number of companies to show on a page. The default pageSize is 25.

Return Value
Type: ConnectApi.DatacloudCompanies

getCompany(companyId)
Get a company record.

API Version
32.0

Requires Chatter
No

Signature
public static ConnectApi.DatacloudCompany getCompany(String companyId)

Parameters
companyId
  Type: String
ID of a company in the Data.com database.

Return Value
Type: ConnectApi.DatacloudCompany

**getContact(contactId)**
Get a contact.

API Version
32.0

Requires Chatter
No

Signature
public static ConnectApi.DatacloudContact getContact(String contactId)

Parameters

`contactId`  
Type: String  
ID of a contact in the Data.com database.

Return Value
Type: ConnectApi.DatacloudContact

**getContactsFromOrder(orderId, page, pageSize)**
Get a list of purchased contacts for an order.

API Version
32.0

Requires Chatter
No

Signature
public static ConnectApi.DatacloudContacts getContactsFromOrder(String orderId, String page, String pageSize)
Parameters

orderId
Type: String
ID of an order.

page
Type: Integer
Number of the page that you want returned.

pageSize
Type: Integer
Number of contacts to show on a page. The default pageSize is 25.

Return Value
Type: ConnectApi.DatacloudContacts

getOrder(orderId)
Get an order.

API Version
32.0

Requires Chatter
No

Signature
public static ConnectApi.DatacloudOrder getOrder(String orderId)

Parameters

orderId
Type: String
ID of an order.

Return Value
Type: ConnectApi.DatacloudOrder

getUsage(userId)
Get purchase usage information for a user.

API Version
32.0
Requires Chatter
No

Signature
public static ConnectApi.DatacloudPurchaseUsage getUsage(String userId)

Parameters
userId
Type: String
ID of a user.

Return Value
Type: ConnectApi.DatacloudPurchaseUsage

**postOrder(orderInput)**
Purchase records that are listed in an input file.

API Version
32.0

Requires Chatter
No

Signature
public static ConnectApi.DatacloudOrder postOrder(ConnectApi.DatacloudOrderInput orderInput)

Parameters
orderInput
Type: ConnectApi.DatacloudOrderInput
A list that contains IDs for the contacts or companies that you want to see.

Return Value
Type: ConnectApi.DatacloudOrder

Example
```java
ConnectApi.DatacloudOrderInput inputOrder=new ConnectApi.DatacloudOrderInput();
List<String> ids=new List<String>();
ids.add('1234');
```
inputOrder.companyIds=ids;
ConnectApi.DatacloudOrder datacloudOrderRep = ConnectApi.Datacloud.postOrder(inputOrder);

EmailMergeFieldService Class
Extract a list of merge fields for an object. A merge field is a field you can put in an email template, mail merge template, custom link, or formula to incorporate values from a record.

Namespace
ConnectApi

EmailMergeFieldService Methods
The following are methods for EmailMergeFieldService. All methods are static.

IN THIS SECTION:
- getMergeFields(objectApiNames)
  Extract the merge fields for a specific object.

getMergeFields(objectApiNames)
Extract the merge fields for a specific object.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.EmailMergeFieldInfo getMergeFields(List<String> objectApiNames)

Parameters
objectApiNames
  Type: List<String>
  The API names for the objects being referenced.

Return Value
Type: ConnectApi.EmailMergeFieldInfo
ExternalEmailServices Class
Access information about integration with external email services, such as sending email within Salesforce through an external email account.

Namespace
ConnectApi

External Email Services Methods
The following are methods for ExternalEmailService. All methods are static.

IN THIS SECTION:
getUserOauthInfo(landingPage)
Get information about whether an external email service has been authorized to send email on behalf of a user.

getUserOauthInfo(landingPage)
Get information about whether an external email service has been authorized to send email on behalf of a user.

API Version
37.0

Requires Chatter
No

Signature
public static getUserOauthInfo(String landingPage)

Parameters
landingPage
Type: String
The landing page that the user starts on when they are finished with the OAuth authorization process.

Return Value
Type: ConnectApi.UserOauthInfo

SEE ALSO:
Testing ConnectApi Code

ExternalManagedAccount Class
Get externally managed accounts.
Namespace

ConnectApi

ExternalManagedAccount Methods

These methods are for ExternalManagedAccount. All methods are static.

IN THIS SECTION:

getCommunitiesExternalManagedAccounts(communityId)
Get externally managed accounts available to the context user across all communities.

t.getExternalManagedAccounts(webstoreId)
Get externally managed accounts for a store.

getCommunitiesExternalManagedAccounts (communityId)
Get externally managed accounts available to the context user across all communities.

API Version
50.0

Requires Chatter
No

Signature
public static ConnectApi.ExternalManagedAccountCollectionOutput getCommunitiesExternalManagedAccounts(String communityId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

Note: Regardless of the ID specified, this method returns externally managed accounts available to the context user across all communities.

Return Value
Type: ConnectApi.ExternalManagedAccountCollectionOutput

t.getExternalManagedAccounts (webstoreId)
Get externally managed accounts for a store.
API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.ExternalManagedAccountCollectionOutput getExternalManagedAccounts(String webstoreId)

Parameters
webstoreId
  Type: String
  ID of the webstore.

Return Value
Type: ConnectApi.ExternalManagedAccountCollectionOutput

**FulfillmentOrder Class**
Fulfill orders in Order Management.

**Namespace**
ConnectApi

**FulfillmentOrder Methods**
The following are methods for FulfillmentOrder. All methods are static.

IN THIS SECTION:
- cancelFulfillmentOrderLineItems(fulfillmentOrderId, cancelFulfillmentOrderLineItemsInput)
  Cancel FulfillmentOrderLineItems from a FulfillmentOrder. This action doesn’t cancel the associated OrderItemSummaries, so reallocate the canceled quantities to a new FulfillmentOrder.
- createFulfillmentOrders(fulfillmentOrderId, fulfillmentOrderInput)
  Create one or more FulfillmentOrders and FulfillmentOrderLineItems for an OrderDeliveryGroupSummary, which defines a delivery method and recipient for an OrderSummary. You specify the OrderItemSummaries to allocate, which can be fulfilled from different locations. Specifying multiple fulfillment groups creates one FulfillmentOrder for each location. For each OrderItemSummary, a FulfillmentOrderLineItem is created and assigned to the corresponding FulfillmentOrder.
- createInvoice(fulfillmentOrderId, invoiceInput)
  Create an invoice for a FulfillmentOrder that doesn’t have one.
**cancelFulfillmentOrderLineItems**(*fulfillmentOrderId*, *
cancelFulfillmentOrderLineItemsInput*)

Cancel FulfillmentOrderLineItems from a FulfillmentOrder. This action doesn't cancel the associated OrderItemSummaries, so reallocate the canceled quantities to a new FulfillmentOrder.

**API Version**
48.0

**Requires Chatter**
No

**Signature**
```
public static ConnectApi.FulfillmentOrderCancelLineItemsOutputRepresentation
cancelFulfillmentOrderLineItems(String fulfillmentOrderId,
ConnectApi.FulfillmentOrderLineItemsToCancelInputRepresentation
cancelFulfillmentOrderLineItemsInput)
```

**Parameters**
- **fulfillmentOrderId**
  Type: String
  ID of the FulfillmentOrder.

- **cancelFulfillmentOrderLineItemsInput**
  Type: ConnectApi.FulfillmentOrderLineItemsToCancelInputRepresentation
  List of FulfillmentOrderLineItems to cancel.

**Return Value**
Type: ConnectApi.FulfillmentOrderCancelLineItemsOutputRepresentation

**Example**
```java
String fulfillmentOrderId = '0a3xx0000000085AAA';
List<ConnectApi.FulfillmentOrderLineItemInputRepresentation> itemToCancelList = new
List<ConnectApi.FulfillmentOrderLineItemInputRepresentation>{};

for (FulfillmentOrderLineItem fulfillmentOrderLineItem :
fulfillmentOrder.FulfillmentOrderLineItems)
    ConnectApi.FulfillmentOrderLineItemInputRepresentation itemToCancel = new
ConnectApi.FulfillmentOrderLineItemInputRepresentation();
    itemToCancel.fulfillmentOrderLineItemId = fulfillmentOrderLineItem.Id;
    itemToCancel.quantity = 1;
    itemToCancelList.add(itemToCancel);

ConnectAPI.FulfillmentOrderLineItemsToCancelInputRepresentation input = new
ConnectAPI.FulfillmentOrderLineItemsToCancelInputRepresentation();
```
createFulfillmentOrders(fulfillmentOrderInput)

Create one or more FulfillmentOrders and FulfillmentOrderLineItems for an OrderDeliveryGroupSummary, which defines a delivery method and recipient for an OrderSummary. You specify the OrderItemSummaries to allocate, which can be fulfilled from different locations. Specifying multiple fulfillment groups creates one FulfillmentOrder for each location. For each OrderItemSummary, a FulfillmentOrderLineItem is created and assigned to the corresponding FulfillmentOrder.

API Version
48.0

Requires Chatter
No

Signature
public static ConnectApi.FulfillmentOrderOutputRepresentation createFulfillmentOrders(ConnectApi.FulfillmentOrderInputRepresentation fulfillmentOrderInput)

Parameters
fulfillmentOrderInput
   Type: ConnectApi.FulfillmentOrderInputRepresentation
   OrderItemSummaries to allocate, with location and delivery information.

Return Value
Type: ConnectApi.FulfillmentOrderOutputRepresentation

Example

String orderSummaryId = '1Osxx0000004CCG';
String fulfillmentType = 'warehouse';
String warehouseFromLocationId = [SELECT Id from Location WHERE LocationType='Warehouse' LIMIT 1].Id;
ConnectApi.FulfillmentOrderInputRepresentation fulfillmentOrderInput = new ConnectApi.FulfillmentOrderInputRepresentation();
fulfillmentOrderInput.orderSummaryId = orderSummaryId;
List<OrderDeliveryGroupSummary> orderDeliveryGroupSummaryList = [SELECT Id FROM OrderDeliveryGroupSummary WHERE OrderSummaryId =: orderSummaryId];
for (OrderDeliveryGroupSummary orderDeliveryGroupSummary: orderDeliveryGroupSummaryList)
{
    fulfillmentOrderInput.orderDeliveryGroupSummaryId = orderDeliveryGroupSummary.Id;
    List<ConnectApi.FulfillmentGroupInputRepresentation> fulfillmentGroups = new
    List<ConnectApi.FulfillmentGroupInputRepresentation>();
    ConnectApi.FulfillmentGroupInputRepresentation fulfillmentGroup = new
    ConnectApi.FulfillmentGroupInputRepresentation();
    fulfillmentGroup.fulfilledFromLocationId = warehouseFromLocationId;
    fulfillmentGroup.fulfillmentType = fulfillmentType;
    List<ConnectApi.OrderItemSummaryInputRepresentation> orderItemSummaries = new
    List<ConnectApi.OrderItemSummaryInputRepresentation>();
    List<OrderItemSummary> orderItemSummaryList = [Select Id, quantity FROM OrderItemSummary
WHERE OrderSummaryId =: orderSummaryId AND OrderDeliveryGroupSummaryId =:
orderDeliveryGroupSummary.Id];
    for(OrderItemSummary orderItemSummary : orderItemSummaryList)
    {
        ConnectApi.OrderItemSummaryInputRepresentation oisInputRepresentation = new
        ConnectApi.OrderItemSummaryInputRepresentation();
        oisInputRepresentation.orderItemSummaryId = orderItemSummary.Id;
        oisInputRepresentation.quantity = orderItemSummary.quantity;
        orderItemSummaries.add(oisInputRepresentation);
    }
    fulfillmentGroup.orderItemSummaries = orderItemSummaries;
    fulfillmentGroups.add(fulfillmentGroup);
    fulfillmentOrderInput.fulfillmentGroups = fulfillmentGroups;
}

ConnectApi.FulfillmentOrderOutputRepresentation result =
ConnectAPI.FulfillmentOrder.createFulfillmentOrders(fulfillmentOrderInput);

createInvoice(fulfillmentOrderId, invoiceInput)
Create an invoice for a FulfillmentOrder that doesn’t have one.

API Version
48.0

Requires Chatter
No

Signature
public static ConnectApi.FulfillmentOrderInvoiceOutputRepresentation createInvoice(String
fulfillmentOrderId, ConnectApi.FulfillmentOrderInvoiceInputRepresentation invoiceInput)
Parameters

- **fulfillmentOrderId**
  - Type: String
  - ID of the FulfillmentOrder.

- **invoiceInput**
  - Type: ConnectApi.FulfillmentOrderInvoiceInputRepresentation
  - Required input with no data.

Return Value

- Type: ConnectApi.FulfillmentOrderInvoiceOutputRepresentation

Example

```java
String fulfillmentOrderId = '0a3xx0000000085AAA';

ConnectApi.FulfillmentOrderInvoiceInputRepresentation input = new ConnectApi.FulfillmentOrderInvoiceInputRepresentation();
ConnectAPI.FulfillmentOrderInvoiceOutputRepresentation result = ConnectApi.FulfillmentOrder.createInvoice(fulfillmentOrderId, input);
```

Knowledge Class

Access information about trending articles in communities.

Namespace

ConnectApi

Knowledge Methods

The following are methods for Knowledge. All methods are static.

IN THIS SECTION:

- getMaxViewedArticlesForTopic(communityId, topicId, maxResults)
  - Get the top viewed articles for a topic.
- getTrendingArticles(communityId, maxResults)
  - Get trending articles for a community.
- getTrendingArticlesForTopic(communityId, topicId, maxResults)
  - Get the trending articles for a topic in a community.

**getTopViewedArticlesForTopic(communityId, topicId, maxResults)**

Get the top viewed articles for a topic.
API Version
41.0

Available to Guest Users
41.0

Requires Chatter
No

Signature

public static ConnectApi.KnowledgeArticleVersionCollection
getTopViewedArticlesForTopic(String communityId, String topicId, Integer maxResults)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

topicId
Type: String
ID of the topic.

maxResults
Type: Integer
The maximum number of articles returned for each topic ID. Values can be from 1 to 25. The default value is 5.

Return Value
Type: ConnectApi.KnowledgeArticleVersionCollection

getTrendingArticles(communityId, maxResults)
Get trending articles for a community.

API Version
36.0

Available to Guest Users
36.0

Requires Chatter
No
Signature

public static ConnectApi.KnowledgeArticleVersionCollection getTrendingArticles(String communityId, Integer maxResults)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

maxResults
Type: Integer
The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

Return Value

Type: ConnectApi.KnowledgeArticleVersionCollection

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

setTestGetTrendingArticles(communityId, maxResults, result)
Testing ConnectApi Code

getTrendingArticlesForTopic(String communityId, String topicId, Integer maxResults)
Get the trending articles for a topic in a community.

API Version
36.0

Available to Guest Users
36.0

Requires Chatter
No

Signature

public static ConnectApi.KnowledgeArticleVersionCollection getTrendingArticlesForTopic(String communityId, String topicId, Integer maxResults)
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

topicId
Type: String
ID of the topic.

maxResults
Type: Integer
The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

Return Value
Type: ConnectApi.KnowledgeArticleVersionCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetTrendingArticlesForTopic(communityId, topicId, maxResults, result)
Testing ConnectApi Code

Knowledge Test Methods

The following are the test methods for Knowledge. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

setTestGetTrendingArticles(communityId, maxResults, result)
Register a ConnectApi.KnowledgeVersionArticleCollection object to be returned when the matching ConnectApi.getTrendingArticles method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
36.0

Signature
public static Void setTestGetTrendingArticles(String communityId, Integer maxResults, ConnectApi.KnowledgeArticleVersionCollection result)
Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`maxResults`
Type: `Integer`
The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

`result`
Type: `ConnectApi.KnowledgeArticleVersionCollection`
The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `getTrendingArticles(communityId, maxResults)`
- Testing ConnectApi Code

**setTestGetTrendingArticlesForTopic(communityId, topicId, maxResults, result)**
Register a `ConnectApi.KnowledgeVersionArticleCollection` object to be returned when the matching `ConnectApi.getTrendingArticlesForTopic` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
36.0

Signature

```java
public static Void setTestGetTrendingArticlesForTopic(String communityId, String topicId, Integer maxResults, ConnectApi.KnowledgeArticleVersionCollection result)
```

Parameters

`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`topicId`
Type: `String`
ID of the topic.

`maxResults`
Type: `Integer`
The maximum number of articles returned. Values can be from 0 to 25. Default is 5.
result

Type: ConnectApi.KnowledgeArticleVersionCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getTrendingArticlesForTopic(communityId, topicId, maxResults)
Testing ConnectApi Code

ManagedContent Class
Get managed content versions.

Namespace
ConnectApi

ManagedContent Methods
The following are methods for ManagedContent. All methods are static.

IN THIS SECTION:
getAllContent(channelId, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate)
Get all managed content versions for a channel.
getAllContent(channelId, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate, showAbsoluteUrl)
Get all managed content versions for a channel with absolute URLs.
getAllDeliveryChannels(pageParam, pageSize)
Get managed content delivery channels for the context user.
getAllManagedContent(communityId, pageParam, pageSize, language, managedContentType)
Get all managed content versions for a community.
getAllManagedContent(communityId, pageParam, pageSize, language, managedContentType, showAbsoluteUrl)
Get all managed content versions for a community with absolute URLs.
getContentByIds(channelId, managedContentIds, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate)
Get managed content versions for a channel using a list of managed content IDs.
getContentByIds(channelId, managedContentIds, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate, showAbsoluteUrl)
Get managed content versions for a channel with absolute URLs using a list of managed content IDs.
getManagedContentByIds(communityId, managedContentIds, pageParam, pageSize, language, managedContentType)
Get managed content versions for a community using a list of managed content IDs.
getManagedContentByIds(communityId, managedContentIds, pageParam, pageSize, language, managedContentType, showAbsoluteUrl)
Get managed content versions for a community with absolute URLs using a list of managed content IDs.

getManagedContentByTopics(communityId, topics, pageParam, pageSize, language, managedContentType)
Get managed content versions using a list of content topic names.

getManagedContentByTopics(communityId, topics, pageParam, pageSize, language, managedContentType, showAbsoluteUrl)
Get managed content versions with absolute URLs using a list of content topic names.

getManagedContentByTopicsAndIds(communityId, managedContentIds, topics, pageParam, pageSize, language, managedContentType)
Get managed content versions using a list of managed content IDs and content topic names.

getManagedContentByTopicsAndIds(communityId, managedContentIds, topics, pageParam, pageSize, language, managedContentType, showAbsoluteUrl)
Get managed content versions with absolute URLs using a list of managed content IDs and content topic names.

getAllContent(channelId, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate)
Get all managed content versions for a channel.

API Version
48.0

Available to Guest Users
48.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedContentVersionCollection getAllContent(String channelId, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean includeMetadata, String startDate, String endDate)

Parameters

channelId
Type: String
ID of the channel.

topic
Type: String

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 250. If you pass in `null`, the default size is 25.

language
Type: `String`
Language locale for the managed content, for example, `en_US`. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

managedContentType
Type: `String`
The developer name of the content version.

includeMetadata
Type: `Boolean`
Specifies whether to include metadata in the response (`true`) or not (`false`). The default value is `false`.

startDate
Type: `String`
Publish start date in ISO 8601 format, for example, `2011-02-25T18:24:31.000Z`.

date
Type: `String`
Publish end date in ISO 8601 format, for example, `2011-02-25T18:24:31.000Z`.

Return Value
Type: `ConnectApi.ManagedContentVersionCollection`

`getAllContent(channelId, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate, showAbsoluteUrl)`
Get all managed content versions for a channel with absolute URLs.

API Version
50.0

Available to Guest Users
50.0

Requires Chatter
No

Signature

```java
public static ConnectApi.ManagedContentVersionCollection getAllContent(String channelId, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean includeMetadata, String startDate, String endDate, Boolean showAbsoluteUrl)
```
Parameters

`channelId`
Type: `String`
ID of the channel.

`pageParam`
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 250. If you pass in `null`, the default size is 25.

`language`
Type: `String`
Language locale for the managed content, for example, `en_US`. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

`managedContentType`
Type: `String`
The developer name of the content version.

`includeMetadata`
Type: `Boolean`
Specifies whether to include metadata in the response (`true`) or not (`false`). The default value is `false`.

`startDate`
Type: `String`
Publish start date in ISO 8601 format, for example, `2011-02-25T18:24:31.000Z`.

`endDate`
Type: `String`
Publish end date in ISO 8601 format, for example, `2011-02-25T18:24:31.000Z`.

`showAbsoluteUrl`
Type: `Boolean`
Specifies whether to show absolute URLs in the output class (`true`) or not (`false`). The default value is `false`.

Return Value

Type: `ConnectApi.ManagedContentVersionCollection`

`getAllDeliveryChannels(pageParam, pageSize)`
Get managed content delivery channels for the context user.

API Version

48.0
Available to Guest Users
48.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedContentChannelCollection getAllDeliveryChannels(Integer pageParam, Integer pageSize)

Parameters
pageParam
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 250. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ManagedContentChannelCollection

getAllManagedContent(communityId, pageParam, pageSize, language, managedContentType)
Get all managed content versions for a community.

No

Signature
public static ConnectApi.ManagedContentVersionCollection getAllManagedContent(String communityId, Integer pageParam, Integer pageSize, String language, String managedContentType)
Parameters

*communityId*
  Type: String
  ID of the community.

*pageParam*
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

*pageSize*
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 250. If you pass in `null`, the default size is 25.

*language*
  Type: String
  Language locale for the managed content, for example, `en_US`. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

*managedContentType*
  Type: String
  The developer name of the content version.

Return Value

Type: `ConnectApi.ManagedContentVersionCollection`

`getAllManagedContent(communityId, pageParam, pageSize, language, managedContentType, showAbsoluteUrl)`

Get all managed content versions for a community with absolute URLs.

No

Signature

```java
public static ConnectApi.ManagedContentVersionCollection getAllManagedContent(String communityId, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean showAbsoluteUrl)
```
Parameters

`communityId`
Type: String
ID of the community.

`pageParam`
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 250. If you pass in `null`, the default size is 25.

`language`
Type: String
Language locale for the managed content, for example, `en_US`. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

`managedContentType`
Type: String
The developer name of the content version.

`showAbsoluteUrl`
Type: Boolean
Specifies whether to show absolute URLs in the output class (`true`) or not (`false`). The default value is `false`.

Return Value
Type: `ConnectApi.ManagedContentVersionCollection`

`getContentByIds(channelId, managedContentIds, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate)`
Get managed content versions for a channel using a list of managed content IDs.

API Version
48.0

Available to Guest Users
48.0

Requires Chatter
No
Signature

```java
public static ConnectApi.ManagedContentVersionCollection getContentByIds(String channelId, List<String> managedContentIds, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean includeMetadata, String startDate, String endDate)
```

Parameters

**channelId**
Type: String
ID of the channel.

**managedContentIds**
Type: List<String>
Comma-separated list of managed content IDs.

**pageParam**
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 250. If you pass in `null`, the default size is 25.

**language**
Type: String
Language locale for the managed content, for example, `en_US`. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

**managedContentType**
Type: String
The developer name of the content version.

**includeMetadata**
Type: Boolean
Specifies whether to include metadata in the response (`true`) or not (`false`). The default value is `false`.

**startDate**
Type: String
Publish start date in ISO 8601 format, for example, `2011-02-25T18:24:31.000Z`.

**endDate**
Type: String
Publish end date in ISO 8601 format, for example, `2011-02-25T18:24:31.000Z`.

Return Value

Type: ConnectApi.ManagedContentVersionCollection
**getContentByIds**

```java
public static ConnectApi.ManagedContentVersionCollection getContentByIds(String channelId, List<String> managedContentIds, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean includeMetadata, String startDate, String endDate, Boolean showAbsoluteUrl)
```

Get managed content versions for a channel with absolute URLs using a list of managed content IDs.

**Signature**

```java
public static ConnectApi.ManagedContentVersionCollection getContentByIds(String channelId, List<String> managedContentIds, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean includeMetadata, String startDate, String endDate, Boolean showAbsoluteUrl)
```

**Parameters**

- **channelId**
  - Type: String
  - ID of the channel.

- **managedContentIds**
  - Type: List<String>
  - Comma-separated list of managed content IDs.

- **pageParam**
  - Type: Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of items per page. Valid values are from 1 through 250. If you pass in `null`, the default size is 25.

- **language**
  - Type: String
  - Language locale for the managed content, for example, `en_US`. If the requested translation isn't available, the language defaults to the context user's language. If the context user's language isn't available, the language defaults to the content type's original language.

- **managedContentType**
  - Type: String
  - The developer name of the content version.
includeMetadata
Type: Boolean
Specifies whether to include metadata in the response (true) or not (false). The default value is false.

startDate
Type: String
Publish start date in ISO 8601 format, for example, 2011-02-25T18:24:31.000Z.

endDate
Type: String
Publish end date in ISO 8601 format, for example, 2011-02-25T18:24:31.000Z.

showAbsoluteUrl
Type: Boolean
Specifies whether to show absolute URLs in the output class (true) or not (false). The default value is false.

Return Value
Type: ConnectApi.ManagedContentVersionCollection

getManagedContentByIds(communityId, managedContentIds, pageParam, pageSize, language, managedContentType)
Get managed content versions for a community using a list of managed content IDs.

Signature
public static ConnectApi.ManagedContentVersionCollection getManagedContentByIds(String communityId, List<String> managedContentIds, Integer pageParam, Integer pageSize, String language, String managedContentType)

Parameters

communityId
Type: String
ID of the community.

managedContentIds
Type: List<String>
Comma-separated list of managed content IDs.

**pageParam**
Type: Integer

Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**
Type: Integer

Specifies the number of items per page. Valid values are from 1 through 250. If you pass in null, the default size is 25.

**language**
Type: String

Language locale for the managed content, for example, en_US. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

**managedContentType**
Type: String

The developer name of the content version.

**Return Value**
Type: ConnectApi.ManagedContentVersionCollection

**getManagedContentByIds(communityId, managedContentIds, pageParam, pageSize, language, managedContentType, showAbsoluteUrl)**

`public static ConnectApi.ManagedContentVersionCollection getManagedContentByTopics(String communityId, List<String> topics, Integer pageParam, Integer pageSize, String language, String managedContentType)`

Parameters

- **communityId**
  - Type: String
  - ID of the community.

- **topics**
  - Type: List<String>
  - Comma-separated list of up to 15 content topic names.

- **pageParam**
  - Type: Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of items per page. Valid values are from 1 through 250. If you pass in `null`, the default size is 25.

- **language**
  - Type: String
  - Language locale for the managed content, for example, `en_US`. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

- **managedContentType**
  - Type: String
  - The developer name of the content version.

Return Value

Type: `ConnectApi.ManagedContentVersionCollection`

`getManagedContentByTopics(communityId, topics, pageParam, pageSize, language, managedContentType, showAbsoluteUrl)`

Get managed content versions with absolute URLs using a list of content topic names.

API Version

50.0
public static ConnectApi.ManagedContentVersionCollection getManagedContentByTopics(String communityId, List<String> topics, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean showAbsoluteUrl)

Parameters

communityId
Type: String
ID of the community.

topics
Type: List<String>
Comma-separated list of up to 15 content topic names.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 250. If you pass in null, the default size is 25.

language
Type: String
Language locale for the managed content, for example, en_US. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

managedContentType
Type: String
The developer name of the content version.

showAbsoluteUrl
Type: Boolean
Specifies whether to show absolute URLs in the output class (true) or not (false). The default value is false.

Return Value
Type: ConnectApi.ManagedContentVersionCollection

getManagedContentByTopicsAndIds(communityId, managedContentIds, topics, pageParam, pageSize, language, managedContentType)
Get managed content versions using a list of managed content IDs and content topic names.

managedContentType)
```

Parameters

- **communityId**
  - Type: `String`
  - ID of the community.

- **managedContentIds**
  - Type: `List<String>`
  - Comma-separated list of managed content IDs.

- **topics**
  - Type: `List<String>`
  - Comma-separated list of up to 15 content topic names.

- **pageParam**
  - Type: `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 250. If you pass in `null`, the default size is 25.

- **language**
  - Type: `String`
  - Language locale for the managed content, for example, `en_US`. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

- **managedContentType**
  - Type: `String`
  - The developer name of the content version.
Return Value
Type: `ConnectApi.ManagedContentVersionCollection`

```java
getManagedContentByTopicsAndIds(String communityId, List<String> managedContentIds, List<String> topics, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean showAbsoluteUrl)
```
Get managed content versions with absolute URLs using a list of managed content IDs and content topic names.

getManagedContentByTopicsAndIds(String communityId, List<String> managedContentIds, List<String> topics, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean showAbsoluteUrl)
```

Parameters
- **communityId**
  Type: `String`
  ID of the community.
- **managedContentIds**
  Type: `List<String>`
  Comma-separated list of managed content IDs.
- **topics**
  Type: `List<String>`
  Comma-separated list of up to 15 content topic names.
- **pageParam**
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.
- **pageSize**
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 250. If you pass in `null`, the default size is 25.
- **language**
  Type: `String`
Language locale for the managed content, for example, `en_US`. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

`managedContentType`
Type: `String`
The developer name of the content version.

`showAbsoluteUrl`
Type: `Boolean`
Specifies whether to show absolute URLs in the output class (`true`) or not (`false`). The default value is `false`.

Return Value
Type: `ConnectApi.ManagedContentVersionCollection`

**ManagedTopics Class**
Access information about managed topics in a community. Create, delete, and reorder managed topics.

**Namespace**
`ConnectApi`

**ManagedTopics Methods**
The following are methods for `ManagedTopics`. All methods are static.

**IN THIS SECTION:**
- `createManagedTopic(communityId, recordId, managedTopicType)`
  Create a managed topic of a specific type for a community.
- `createManagedTopic(communityId, recordId, managedTopicType, parentId)`
  Create a child managed topic for a community.
- `createManagedTopicByName(communityId, name, managedTopicType)`
  Create a managed topic of a specific type by name for a community.
- `createManagedTopicByName(communityId, name, managedTopicType, parentId)`
  Create a child managed topic by name for a community.
- `deleteManagedTopic(communityId, managedTopicId)`
  Delete a managed topic from a community.
- `getManagedTopic(communityId, managedTopicId)`
  Get a managed topic in a community.
- `getManagedTopic(communityId, managedTopicId, depth)`
  Get a managed topic, including its parent and children managed topics, in a community.
- `getManagedTopics(communityId)`
  Get the featured and navigational managed topics for the community.
getManagedTopics(communityId, managedTopicType)
Get managed topics of the specified type for a community.

getManagedTopics(communityId, managedTopicType, depth)
Get managed topics of the specified type, including their parent and children managed topics, in a community.

getManagedTopics(communityId, managedTopicType, recordIds, depth)
Get managed topics of the specified type, including their parent and children managed topics, that are associated with topics in a community.

getManagedTopics(communityId, managedTopicType, pageParam, pageSize)
Get a page of managed topics.

reorderManagedTopics(communityId, managedTopicPositionCollection)
Reorder the relative positions of managed topics in a community.

createManagedTopic(communityId, recordId, managedTopicType)
Create a managed topic of a specific type for a community.

API Version
32.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedTopic createManagedTopic(String communityId, String recordId, ConnectApi.ManagedTopicType managedTopicType)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

recordId
Type: String
ID of the topic.

managedTopicType
Type: ConnectApi.ManagedTopicType
Specify the type of managed topic.
- Content—Topics that are associated with native content.
- Featured—Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
- Navigational—Topics that display in a navigational menu in the community.

A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.
You can create up to 25 Featured and 5,000 Content topics. You can create up to eight levels of Navigational managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 Navigational topics.

Return Value
Type: ConnectApi.ManagedTopic

Usage
Only community managers (users with the Create and Set Up Communities or Manage Communities permission) can create managed topics.

createManagedTopic(communityId, recordId, managedTopicType, parentId)
Create a child managed topic for a community.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedTopic createManagedTopic(String communityId, String recordId, ConnectApi.ManagedTopicType managedTopicType, String parentId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

recordId
Type: String
ID of the topic.

managedTopicType
Type: ConnectApi.ManagedTopicType
Specify Navigational for the type of managed topic to create a child managed topic.

You can create up to 25 Featured and 5,000 Content topics. You can create up to eight levels of Navigational managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 Navigational topics.

parentId
Type: String
ID of the parent managed topic.

You can create up to eight levels (parent, direct children, their children, etc.) of managed topics and up to 10 children managed topics per managed topic.
Create a managed topic of a specific type by name for a community.

API Version
32.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedTopic createManagedTopicByName(String communityId, String name, ConnectApi.ManagedTopicType managedTopicType)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

ame
Type: String
Name of the topic.

managedTopicType
Type: ConnectApi.ManagedTopicType
Specify the type of managed topic.
• Content—Topics that are associated with native content.
• Featured—Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
• Navigational—Topics that display in a navigational menu in the community.

A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.

You can create up to 25 Featured and 5,000 Content topics. You can create up to eight levels of Navigational managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 Navigational topics.

Return Value
Type: ConnectApi.ManagedTopic
Usage

Only community managers (users with the Create and Set Up Communities or Manage Communities permission) can create managed topics.

`createManagedTopicByName(communityId, name, managedTopicType, parentId)`

Create a child managed topic by name for a community.

API Version

35.0

Requires Chatter

No

Signature

```java
public static ConnectApi.ManagedTopic createManagedTopicByName(String communityId,
                   String name, ConnectApi.ManagedTopicType managedTopicType, String parentId)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `name`
  Type: `String`
  Name of the topic.

- `managedTopicType`
  Type: `ConnectApi.ManagedTopicType`
  Specify `Navigational` for the type of managed topic to create a child managed topic.

  You can create up to 25 `Featured` and 5,000 `Content` topics. You can create up to eight levels of `Navigational` managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 `Navigational` topics.

- `parentId`
  Type: `String`
  ID of the parent managed topic.

  You can create up to eight levels (parent, direct children, their children, etc.) of managed topics and up to 10 children managed topics per managed topic.

Return Value

Type: `ConnectApi.ManagedTopic`
Usage

Only community managers (users with the Create and Set Up Communities or Manage Communities permission) can create managed topics.

deleteManagedTopic(communityId, managedTopicId)

Delete a managed topic from a community.

API Version

32.0

Requires Chatter

No

Signature

public static deleteManagedTopic(String communityId, String managedTopicId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

managedTopicId
Type: String
ID of managed topic.

Return Value

Type: Void

Usage

Only community managers (users with the Create and Set Up Communities or Manage Communities permission) can delete managed topics.

getManagedTopic(communityId, managedTopicId)

Get a managed topic in a community.

API Version

Signature
public static ConnectApi.ManagedTopic getManagedTopic(String communityId, String managedTopicId)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.
managedTopicId
  Type: String
  ID of managed topic.

Return Value
Type: ConnectApi.ManagedTopic

getManagedTopic(communityId, managedTopicId, depth)
Get a managed topic, including its parent and children managed topics, in a community.

API Version
35.0

Available to Guest Users
35.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedTopic getManagedTopic(String communityId, String managedTopicId, Integer depth)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.
managedTopicId
  Type: String
ID of managed topic.

depth
Type: Integer
Specify an integer 1–8. If you specify 1, the children property of the ConnectApi.ManagedTopic output class is null. If you specify 2, the children property of the ConnectApi.ManagedTopic output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If depth isn't specified, it defaults to 1.

Return Value
Type: ConnectApi.ManagedTopic

getManagedTopics(communityId)
Get the featured and navigational managed topics for the community.
To get the content topics for the community, use getManagedTopics(communityId, managedTopicType).

API Version
32.0

Available to Guest Users

Signature
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

Return Value
Type: ConnectApi.ManagedTopicCollection

getManagedTopics(communityId, managedTopicType)
Get managed topics of the specified type for a community.

API Version
32.0
Available to Guest Users
32.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId,
ConnectApi.ManagedTopicType managedTopicType)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

managedTopicType
Type: ConnectApi.ManagedTopicType
Type of managed topic.
- Content—Topics that are associated with native content.
- Featured—Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
- Navigational—Topics that display in a navigational menu in the community.

A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.

If you specify Content, up to 50 topics are returned. If you want more than 50 Content topics, use
getManagedTopics(communityId, managedTopicType, pageParam, pageSize).

Return Value
Type: ConnectApi.ManagedTopicCollection

getManagedTopics(communityId, managedTopicType, depth)
Get managed topics of the specified type, including their parent and children managed topics, in a community.

API Version

Signature

```java
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId, ConnectApi.ManagedTopicType managedTopicType, Integer depth)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **managedTopicType**
  - Type: `ConnectApi.ManagedTopicType`
  - Type of managed topic.
    - `Content`—Topics that are associated with native content.
    - `Featured`—Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
    - `Navigational`—Topics that display in a navigational menu in the community.
  - A topic can be associated with all three managed topic types, so a topic can be a `Featured`, `Navigational`, and `Content` topic.

- **depth**
  - Type: `Integer`
  - Specify an integer 1–8. If you specify 1, the `children` property of the `ConnectApi.ManagedTopic` output class is `null`. If you specify 2, the `children` property of the `ConnectApi.ManagedTopic` output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If depth isn’t specified, it defaults to 1.

Return Value

- Type: `ConnectApi.ManagedTopicCollection`

```java
getManagedTopics(communityId, managedTopicType, recordIds, depth)
```

Get managed topics of the specified type, including their parent and children managed topics, that are associated with topics in a community.

API Version

Signature

```java
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId,
ConnectApi.ManagedTopicType managedTopicType, List<String> recordIds, Integer depth)
```

Parameters

**communityId**
- Type: String
- Use either the ID for a community, internal, or null.

**managedTopicType**
- Type: ConnectApi.ManagedTopicType
- Type of managed topic.
  - Content—Topics that are associated with native content.
  - Featured—Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
  - Navigational—Topics that display in a navigational menu in the community.
- A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.

**recordIds**
- Type: List<String>
- A list of up to 100 topic IDs associated with the managed topics.
- If you list more than 10 topic IDs, you can’t specify 2–8 for `depth`.

**depth**
- Type: Integer
- Specify an integer 1–8. If you specify 1, the `children` property of the `ConnectApi.ManagedTopic` output class is null.
- If you specify 2, the `children` property of the `ConnectApi.ManagedTopic` output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If `depth` isn’t specified, it defaults to 1.

Return Value

**Type:** ConnectApi.ManagedTopicCollection

```java
getManagedTopics(communityId, managedTopicType, pageParam, pageSize)
```

Get a page of managed topics.

ConnectApi.ManagedTopicType managedTopicType, Integer pageParam, Integer pageSize)
```

Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **managedTopicType**
  Type: `ConnectApi.ManagedTopicType`
  Type of managed topic.
  - `Content`—Topics that are associated with native content.
  - `Featured`—Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
  - `Navigational`—Topics that display in a navigational menu in the community.

  A topic can be associated with all three managed topic types, so a topic can be a `Featured`, `Navigational`, and `Content` topic.

- **pageParam**
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 50.

Return Value

Type: `ConnectApi.ManagedTopicCollection`

```java
reorderManagedTopics(communityId, managedTopicPositionCollection)
```

Reorder the relative positions of managed topics in a community.

API Version

32.0

Requires Chatter
No
Signature

```java
public static ConnectApi.ManagedTopicCollection reorderManagedTopics(String communityId,
ConnectApi.ManagedTopicPositionCollectionInput managedTopicPositionCollection)
```

Parameters

**communityId**
Type: **String**
Use either the ID for a community, *internal*, or **null**.

**managedTopicPositionCollection**
Type: **ConnectApi.ManagedTopicPositionCollectionInput**
A collection of relative positions of managed topics. This collection can include only *Featured* and *Navigational* topics and doesn’t have to include all managed topics.

Return Value

Type: **ConnectApi.ManagedTopicCollection**

Usage

Only community managers (users with the Create and Set Up Communities or Manage Communities permission) can reorder managed topics.

You can reorder parent managed topics or children managed topics with the same parent. If you don’t include all managed topics in the **ConnectApi.ManagedTopicPositionCollectionInput**, the managed topics are reordered by respecting the positions indicated in the **ConnectApi.ManagedTopicPositionCollectionInput** and then by pushing down any managed topics that aren’t included in the **ConnectApi.ManagedTopicPositionCollectionInput** to the next available position.

Example

If you have these managed topics:

<table>
<thead>
<tr>
<th>Managed Topic</th>
<th>Position</th>
</tr>
</thead>
<tbody>
<tr>
<td>ManagedTopicA</td>
<td>0</td>
</tr>
<tr>
<td>ManagedTopicB</td>
<td>1</td>
</tr>
<tr>
<td>ManagedTopicC</td>
<td>2</td>
</tr>
<tr>
<td>ManagedTopicD</td>
<td>3</td>
</tr>
<tr>
<td>ManagedTopicE</td>
<td>4</td>
</tr>
</tbody>
</table>

And you reorder managed topics by including this information in **ConnectApi.ManagedTopicPositionCollectionInput**:

<table>
<thead>
<tr>
<th>Managed Topic</th>
<th>Position</th>
</tr>
</thead>
<tbody>
<tr>
<td>ManagedTopicD</td>
<td>0</td>
</tr>
</tbody>
</table>
The result is:

<table>
<thead>
<tr>
<th>Managed Topic</th>
<th>Position</th>
</tr>
</thead>
<tbody>
<tr>
<td>ManagedTopicD</td>
<td>0</td>
</tr>
<tr>
<td>ManagedTopicA</td>
<td>1</td>
</tr>
<tr>
<td>ManagedTopicE</td>
<td>2</td>
</tr>
<tr>
<td>ManagedTopicB</td>
<td>3</td>
</tr>
<tr>
<td>ManagedTopicC</td>
<td>4</td>
</tr>
</tbody>
</table>

**Retired ManagedTopics Methods**

The following methods for ManagedTopics are retired.

**IN THIS SECTION:**

```getManagedTopics(communityId, managedTopicType, recordId, depth)```

Get managed topics of the specified type, including their parent and children managed topics, that are associated with a given topic in a community.

```getManagedTopics(communityId, managedTopicType, recordIds, depth)```

Get managed topics of the specified type, including their parent and children managed topics, that are associated with a given topic in a community.

**API Version**

35.0–37.0

**Important:** In version 38.0 and later, use `getManagedTopics(communityId, managedTopicType, recordIds, depth)`.

**Available to Guest Users**

35.0

**Requires Chatter**

No
Signature

```
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId,
                    ConnectApi.ManagedTopicType managedTopicType, String recordId, Integer depth)
```

Parameters

**communityId**
- Type: String
- Use either the ID for a community, internal, or null.

**managedTopicType**
- Type: ConnectApi.ManagedTopicType
- Type of managed topic.
  - Content—Topics that are associated with native content.
  - Featured—Topics that are featured, for example, on the community home page, but don’t provide overall navigation.
  - Navigational—Topics that display in a navigational menu in the community.

A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.

**recordId**
- Type: String
- ID of the topic associated with the managed topics.

**depth**
- Type: Integer
- Specify an integer 1–8. If you specify 1, the children property of the ConnectApi.ManagedTopic output class is null. If you specify 2, the children property of the ConnectApi.ManagedTopic output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If depth isn’t specified, it defaults to 1.

Return Value

Type: ConnectApi.ManagedTopicCollection

**Mentions Class**

Access information about mentions. A mention is an "@" character followed by a user or group name. When a user or group is mentioned, they receive a notification.

**Namespace**

ConnectApi

**Mentions Methods**

The following are methods for Mentions. All methods are static.
IN THIS SECTION:

- `getMentionCompletions(communityId, q, contextId)`: Get the first page of possible users and groups to mention in a feed item body or comment body.
- `getMentionCompletions(communityId, q, contextId, type, pageParam, pageSize)`: Get a page of possible mention proposals of the specified type.
- `getMentionValidations(communityId, parentId, recordIds, visibility)`: Get information about whether the mentions are valid for the context user.

### `getMentionCompletions(communityId, q, contextId)`

Get the first page of possible users and groups to mention in a feed item body or comment body.

**API Version**

29.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.MentionCompletionPage getMentionCompletions(String communityId, String q, String contextId)
```

**Parameters**

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `q`
  - Type: `String`
  - A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn’t require a minimum number of characters. This parameter does not support wildcards.

- `contextId`
  - Type: `String`
  - A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

**Return Value**

Type: `ConnectApi.MentionCompletionPage`

**Usage**

Call this method to generate a page of proposed mentions that a user can choose from when they enter characters after @ in a feed item body or a comment body.
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetMentionCompletions(communityId, q, contextId, result)`
- Testing ConnectApi Code

**getMentionCompletions(communityId, q, contextId, type, pageParam, pageSize)**
Get a page of possible mention proposals of the specified type.

**API Version**
29.0

**Requires Chatter**
Yes

**Signature**
```java
public static ConnectApi.Mentions getMentionCompletions(String communityId, String q, String contextId, ConnectApi.MentionCompletionType type, Integer pageParam, Integer pageSize)
```

**Parameters**

**communityId**
Type: `String`
- Use either the ID for a community, internal, or `null`.

**q**
Type: `String`
- A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn’t require a minimum number of characters. This parameter does not support wildcards.

**contextId**
Type: `String`
- A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

**type**
Type: `ConnectApi.MentionCompletionType`
- Type of mention completion.
  - **All**—All mention completions, regardless of the type of record to which the mention refers.
  - **Group**—Mention completions for groups.
  - **User**—Mention completions for users.

**pageParam**
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.MentionCompletionPage`

Usage
Call this method to generate a page of proposed mentions that a user can choose from when they enter characters after `@` in a feed item body or a comment body.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetMentionCompletions(communityId, q, contextId, type, pageParam, pageSize, result)`

Testing ConnectApi Code

`getMentionValidations(communityId, parentId, recordIds, visibility)`
Get information about whether the mentions are valid for the context user.

API Version
29.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.Mentions getMentionValidations(String communityId, String parentId, List<String> recordIds, ConnectApi.FeedItemVisibilityType visibility)
```

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`parentId`
Type: `String`
The feed item parent ID.

`recordIds`
Type: `List<String>`
A comma separated list of IDs to be mentioned. The maximum value is 25.

visibility
Type: ConnectApi.FeedItemVisibilityType
Type of users who can see a feed item.
- AllUsers—Visibility is not limited to internal users.
- InternalUsers—Visibility is limited to internal users.

Return Value
Type: ConnectApi.MentionValidations

Usage
Call this method to check whether the record IDs returned from a call to ConnectApi.Mentions.getMentionCompletions are valid for the context user. For example, the context users can’t mention private groups they don’t belong to. If such a group were included in the list of mention validations, the ConnectApi.MentionValidations.hasErrors property would be true and the group would have a ConnectApi.MentionValidation.validationStatus of Disallowed.

Mentions Test Methods
The following are the test methods for Mentions. All methods are static.
For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

setTestGetMentionCompletions(communityId, q, contextId, result)
Register a ConnectApi.MentionCompletionPage object to be returned when getMentionCompletions(String, String, String) is called in a test context.

API Version
29.0

Signature
public static Void setTestGetMentionCompletions (String communityId, String q, String contextId, ConnectApi.MentionCompletionPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

q
Type: String
A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn’t require a minimum number of characters. This parameter does not support wildcards.
contextId
  Type: String
  A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

result
  Type: ConnectApi.MentionCompletionPage
  A ConnectApi.MentionCompletionPage object containing test data.

Return Value
  Type: Void

SEE ALSO:
  getMentionCompletions(communityId, q, contextId)
  Testing ConnectApi Code

setTestGetMentionCompletions(communityId, q, contextId, type, pageParam, pageSize, result)

Register a ConnectApi.MentionCompletionPage object to be returned when getMentionCompletions(String, String, String, ConnectApi.MentionCompletionType, Integer, Integer) is called in a test context.

API Version
  29.0

Signature
  public static Void setTestGetMentionCompletions (String communityId, String q, String contextId, ConnectApi.MentionCompletionType type, Integer pageParam, Integer pageSize, ConnectApi.MentionCompletionPage result)

Parameters
  communityId
    Type: String
    Use either the ID for a community, internal, or null.

  q
    Type: String
    A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn't require a minimum number of characters. This parameter does not support wildcards.

  contextId
    Type: String
    A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.
**Type**

Type: `ConnectApi.MentionCompletionType`

Type of mention completion.

- **All**—All mention completions, regardless of the type of record to which the mention refers.
- **Group**—Mention completions for groups.
- **User**—Mention completions for users.

**pageParam**

Type: `Integer`

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**

Type: `Integer`

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**result**

Type: `ConnectApi.MentionCompletionPage`

A `ConnectApi.MentionCompletionPage` object containing test data.

**Return Value**

Type: `Void`

**SEE ALSO:**

- `getMentionCompletions(communityId, q, contextId, type, pageParam, pageSize)`
- Testing ConnectApi Code

## Missions Class

Export and purge mission activity for users. Get a user’s mission progress. Update mission activity counts for users.

**Namespace**

`ConnectApi`

**Missions Methods**

The following are methods for Missions. All methods are static.

**IN THIS SECTION:**

- `exportUserMissionsActivities(communityId, userId)`
  Export mission activity for a user.
- `getUserMissionsProgress(communityId, userId)`
  Get mission activity progress for a user.
- `purgeUserMissionsActivities(communityId, userId)`
  Start a job to purge mission activity for a user.
purgeUserMissionsActivities(communityId)
Start a job to purge mission activity for all users.

updateUserMissionActivityCount(activityType, activityCount, communityId, userId)
Update the mission activity count for a user.

exportUserMissionsActivities(communityId, userId)
Export mission activity for a user.

API Version
45.0

Requires Chatter
No

Signature
public static ConnectApi.UserMissionActivitiesJob exportUserMissionsActivities(String communityId, String userId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
ID of the user.

Return Value
Type: ConnectApi.UserMissionActivitiesJob

Usage
You can export these activities with this method.

- FeedItemAnswerAQuestion—User answered a question.
- FeedItemLikeSomething—User liked a post or comment.
- FeedItemMarkAnswerAsBest—User marked an answer as the best answer.
- FeedItemPostQuestion—User posted a question.
- FeedItemReceiveAComment—User received a comment on a post.
- FeedItemReceiveALike—User received a like on a post or comment.
- FeedItemReceiveAnAnswer—User received an answer to a question.
- FeedItemWriteAComment—User commented on a post.
- FeedItemWriteAPost—User made a post.
- FeedItemYourAnswerMarkedBest—User's answer was marked as the best answer.

getUserMissionsProgress(communityId, userId)

Get mission activity progress for a user.

API Version
46.0

Requires Chatter
No

Signature
public static ConnectApi.UserMissionActivityCollection getUserMissionsProgress(String communityId, String userId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
ID of the user.

Return Value
Type: ConnectApi.UserMissionActivityCollection

purgeUserMissionsActivities(communityId, userId)

Start a job to purge mission activity for a user.

API Version
45.0

Requires Chatter
No

Signature
public static ConnectApi.UserMissionActivitiesJob purgeUserMissionsActivities(String communityId, String userId)
Parameters

* communityId
  Type: String
  Use either the ID for a community, internal, or null.

* userId
  Type: String
  ID of the user.

Return Value

Type: `ConnectApi.UserMissionActivitiesJob`

Usage

This method purges these activities.

- FeedItemAnswerAQuestion—User answered a question.
- FeedItemLikeSomething—User liked a post or comment.
- FeedItemMarkAnswerAsBest—User marked an answer as the best answer.
- FeedItemPostQuestion—User posted a question.
- FeedItemReceiveAComment—User received a comment on a post.
- FeedItemReceiveALike—User received a like on a post or comment.
- FeedItemReceiveAnAnswer—User received an answer to a question.
- FeedItemWriteAComment—User commented on a post.
- FeedItemWriteAPost—User made a post.
- FeedItemYourAnswerMarkedBest—User’s answer was marked as the best answer.

`purgeUserMissionsActivities(communityId)`

Start a job to purge mission activity for all users.

API Version

49.0

Requires Chatter

No

Signature

```java
public static ConnectApi.UserMissionActivitiesJob purgeUserMissionsActivities(String communityId)
```
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

Return Value
Type: `ConnectApi.UserMissionActivitiesJob`

Usage
This method purges these activities.

- `FeedItemAnswerAQuestion`—User answered a question.
- `FeedItemLikeSomething`—User liked a post or comment.
- `FeedItemMarkAnswerAsBest`—User marked an answer as the best answer.
- `FeedItemPostQuestion`—User posted a question.
- `FeedItemReceiveAComment`—User received a comment on a post.
- `FeedItemReceiveALike`—User received a like on a post or comment.
- `FeedItemReceiveAnAnswer`—User received an answer to a question.
- `FeedItemWriteAComment`—User commented on a post.
- `FeedItemWriteAPost`—User made a post.
- `FeedItemYourAnswerMarkedBest`—User's answer was marked as the best answer.

`updateUserMissionActivityCount(activityType, activityCount, communityId, userId)`

Update the mission activity count for a user.

API Version
45.0

Requires Chatter
No

Signature

```java
public static ConnectApi.UserMissionActivityStatus updateUserMissionActivityCount(ConnectApi.UserMissionActivityType activityType, Integer activityCount, String communityId, String userId)
```

Parameters

**activityType**
Type: `ConnectApi.UserMissionActivityType`
Type of mission activity for a user. Values are:
• FeedItemAnswerAQuestion—User answered a question.
• FeedItemLikeSomething—User liked a post or comment.
• FeedItemMarkAnswerAsBest—User marked an answer as the best answer.
• FeedItemPostQuestion—User posted a question.
• FeedItemReceiveAComment—User received a comment on a post.
• FeedItemReceiveALike—User received a like on a post or comment.
• FeedItemReceiveAnAnswer—User received an answer to a question.
• FeedItemWriteAComment—User commented on a post.
• FeedItemWriteAPost—User made a post.
• FeedItemYourAnswerMarkedBest—User’s answer was marked as the best answer.

activityCount
   Type: Integer
   Number of mission activities of the specified type for the user.

communityId
   Type: String
   Use either the ID for a community, internal, or null.

userId
   Type: String
   ID of the user.

Return Value
Type: ConnectApi.UserMissionActivityStatus

NextBestAction Class
Execute recommendation strategies, get recommendations, manage recommendation reactions.

Namespace
ConnectApi

NextBestAction Methods
The following are methods for NextBestAction. All methods are static.

IN THIS SECTION:
   deleteRecommendationReaction(reactionId)
   Delete a recommendation reaction.
   executeStrategy(strategyName, maxResults, contextRecordId)
   Execute a strategy.
   executeStrategy(strategyName, maxResults, contextRecordId, debugTrace)
   Execute a strategy and request a trace.
executeStrategy(strategyName, strategyInput)
Execute a strategy using an input class.

getRecommendation(recommendationId)
Get a recommendation.

getRecommendationReaction(reactionId)
Get a recommendation reaction.

getRecommendationReactions(onBehalfOfId, createdBy, targetId, contextRecordId, pageParam, pageSize)
Get recommendation reactions.

setRecommendationReaction(reaction)
Record user reactions to recommendations.

deleteRecommendationReaction(reactionId)
Delete a recommendation reaction.

API Version
45.0

Requires Chatter
No

Signature
public static Void deleteRecommendationReaction(String reactionId)

Parameters
reactionId
Type: String
ID of the recommendation reaction.

Return Value
Type: Void

Usage
Users with the Manage Next Best Action Recommendations or Modify All Data permission can delete recommendation reactions.

executeStrategy(strategyName, maxResults, contextRecordId)
Execute a strategy.

API Version
45.0
Available to Guest Users
45.0

Requires Chatter
No

Signature

```java
public static ConnectApi.NBARecommendations executeStrategy(String strategyName, Integer maxResults, String contextRecordId)
```

Parameters

`strategyName`
- Type: `String`
- Name of the strategy.

`maxResults`
- Type: `Integer`
- Maximum number of results. Valid values are from 1 to 25. The default is 3.

`contextRecordId`
- Type: `String`
- ID of the context record. For example, if the next best action is on a case detail page, the ID of the case.

Return Value

Type: `ConnectApi.NBARecommendations`

```java
executeStrategy(strategyName, maxResults, contextRecordId, debugTrace)
```

Execute a strategy and request a trace.

API Version

45.0

Available to Guest Users

45.0

Requires Chatter

No

Signature

```java
public static ConnectApi.NBARecommendations executeStrategy(String strategyName, Integer maxResults, String contextRecordId, Boolean debugTrace)
```
Parameters

strategyName
  Type: String
  Name of the strategy.

maxResults
  Type: Integer
  Maximum number of results. Valid values are from 1 to 25. The default is 3.

customRecordId
  Type: String
  ID of the context record. For example, if the next best action is on a case detail page, the ID of the case.

debugTrace
  Type: Boolean
  Specifies whether to return trace and debug information in the response (true) or not (false).

Return Value

Type: ConnectApi.NBARecommendations

executeStrategy(strategyName, strategyInput)

Execute a strategy using an input class.

API Version

45.0

Available to Guest Users

45.0

Requires Chatter

No

Signature

public static ConnectApi.NBARecommendations executeStrategy(String strategyName, ConnectApi.NBAStrategyInput strategyInput)

Parameters

strategyName
  Type: String
  Name of the strategy.

strategyInput
  Type: ConnectApi.NBAStrategyInput
A ConnectApi.NBAStrategyInput body.

Return Value
Type: ConnectApi.NBARecommendations

getRecommendation(recommendationId)
Get a recommendation.

API Version
45.0

Requires Chatter
No

Signature
public static ConnectApi.Recommendation getRecommendation(String recommendationId)

Parameters
recommendationId
Type: String
ID of the recommendation.

Return Value
Type: ConnectApi.Recommendation

getRecommendationReaction(reactionId)
Get a recommendation reaction.

API Version
45.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationReaction getRecommendationReaction(String reactionId)
Parameters

reactionId
Type: String
ID of the recommendation reaction.

Return Value
Type: ConnectApi.RecommendationReaction

Usage
Users with the Manage Next Best Action Recommendations or Modify All Data permission can get recommendation reactions.

getRecommendationReactions(onBehalfOfId, createdById, targetId, contextRecordId, pageParam, pageSize)
Get recommendation reactions.

API Version
45.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationReactions getRecommendationReactions(String onBehalfOfId, String createdById, String targetId, String contextRecordId, Integer pageParam, Integer pageSize)

Parameters

onBehalfOfId
Type: String
Use the ID of the user who is indirectly reacting to the recommendation to filter the results.

createdById
Type: String
Use the ID of the user or record that created the recommendation reaction to filter the results.

targetId
Type: String
Use the ID of the target to filter the results.

contextRecordId
Type: String
Use the ID of a context record to filter the results.
**pageParam**
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.RecommendationReactions`

Usage
Users with the Manage Next Best Action Recommendations or Modify All Data permission can get recommendation reactions.

**setRecommendationReaction(reaction)**
Record user reactions to recommendations.

API Version
45.0

Available to Guest Users
48.0

Requires Chatter
No

Signature
```java
public static ConnectApi.RecommendationReaction setRecommendationReaction(ConnectApi.RecommendationReactionInput reaction)
```

Parameters

**reaction**
Type: `ConnectApi.RecommendationReactionInput`
A `ConnectApi.RecommendationReactionInput` object representing a reaction to a recommendation produced by a recommendation strategy.

Return Value
Type: `ConnectApi.RecommendationReaction`
OrderPaymentSummary Class

Work with payments in Order Management.

Namespace

ConnectApi

OrderPaymentSummary Methods

The following are methods for OrderPaymentSummary. All methods are static.

IN THIS SECTION:

createOrderPaymentSummary(orderPaymentSummaryInput)
Create an OrderPaymentSummary for an OrderSummary. Specify a payment authorization or payments that share the same payment method. In an org with the multicurrency feature enabled, the OrderPaymentSummary inherits the CurrencyIsoCode value from the OrderSummary.

API Version
48.0

Requires Chatter
No

Signature

public static ConnectApi.CreateOrderPaymentSummaryOutputRepresentation createOrderPaymentSummary(ConnectApi.CreateOrderPaymentSummaryInputRepresentation orderPaymentSummaryInput)

Parameters

orderPaymentSummaryInput
Type: ConnectApi.CreateOrderPaymentSummaryInputRepresentation
The OrderSummary and payment authorization or payments.

Return Value

Type: ConnectApi.CreateOrderPaymentSummaryOutputRepresentation
Example

```java
String orderSummaryId = '1Osxx0000004CCG';
String paymentId1 = '0a3xx0000000085AAA';
String paymentId2 = '0a3xx0000000085BBB';

ConnectApi.CreateOrderPaymentSummaryInputRepresentation orderPaymentSummaryInput = new
ConnectApi.CreateOrderPaymentSummaryInputRepresentation();
orderPaymentSummaryInput.orderSummaryId = orderSummaryId;
List<String> paymentList = new List<String>();
paymentList.add(paymentId1);
paymentList.add(paymentId2);
orderPaymentSummaryInput.paymentIds = paymentList;

ConnectApi.CreateOrderPaymentSummaryOutputRepresentation result =
ConnectAPI.OrderPaymentSummary.createOrderPaymentSummary(orderPaymentSummaryInput);
```

OrderSummary Class

Work with orders in Order Management.

Namespace

ConnectApi

OrderSummary Methods

The following are methods for OrderSummary. All methods are static.

IN THIS SECTION:

- adjustPreview(orderSummaryId, adjustInput)
  Retrieve the expected results of adjusting the price of one or more OrderItemSummaries from an OrderSummary, without actually executing the adjustment. The response data contains the financial changes that would result from submitting the proposed adjustment.

- adjustSubmit(orderSummaryId, adjustInput)
  Adjust the price of one or more OrderItemSummaries from an OrderSummary, and create one or two corresponding change orders.

- createCreditMemo(orderSummaryId, creditMemoInput)
  Create a credit memo to represent the refund for one or more change orders associated with an OrderSummary.

- ensureFundsAsync(orderSummaryId, ensureFundsInput)
  Ensure funds for an invoice and apply them to it. If needed, capture authorized funds by sending a request to a payment provider. This method inserts a background operation into an asynchronous job queue and returns the ID of that operation so you can track its status. Payment gateway responses appear in the payment gateway log and do not affect the background operation status.

- ensureRefundsAsync(orderSummaryId, ensureRefundsInput)
  Ensure refunds for a credit memo or excess funds by sending a request to a payment provider. This method inserts a background operation into an asynchronous job queue and returns the ID of that operation so you can track its status. Payment gateway responses appear in the payment gateway log and do not affect the background operation status.
previewCancel(orderSummaryId, changeInput)
Retrieve the expected change order values for canceling one or more OrderItemSummaries from an OrderSummary, without actually executing the cancel.

previewReturn(orderSummaryId, changeInput)
Retrieve the expected change order values for returning one or more OrderItemSummaries from an OrderSummary, without actually executing the return.

submitCancel(orderSummaryId, changeInput)
Cancel one or more OrderItemSummaries from an OrderSummary, and create a corresponding change order.

submitReturn(orderSummaryId, changeInput)
Return one or more OrderItemSummaries from an OrderSummary, and create a corresponding change order.

**adjustPreview(orderSummaryId, adjustInput)**
Retrieve the expected results of adjusting the price of one or more OrderItemSummaries from an OrderSummary, without actually executing the adjustment. The response data contains the financial changes that would result from submitting the proposed adjustment.

**API Version**
49.0

**Requires Chatter**
No

**Signature**

```java
public static ConnectApi.AdjustOrderSummaryOutputRepresentation adjustPreview(String orderSummaryId, ConnectApi.AdjustOrderItemSummaryInputRepresentation adjustInput)
```

**Parameters**

- `orderSummaryId`
  Type: `String`
  ID of the OrderSummary.

- `adjustInput`
  Type: `ConnectApi.AdjustOrderItemSummaryInputRepresentation`
  A list of price adjustments to OrderItemSummaries that make up a price adjustment to an order.

**Return Value**

Type: `ConnectApi.AdjustOrderSummaryOutputRepresentation`

**SEE ALSO:**
- `createCreditMemo(orderSummaryId, creditMemoInput)`
- `ensureRefundsAsync(orderSummaryId, ensureRefundsInput)`
- `adjustSubmit(orderSummaryId, adjustInput)`
**adjustSubmit(orderSummaryId, adjustInput)**

Adjust the price of one or more OrderItemSummaries from an OrderSummary, and create one or two corresponding change orders.

### API Version

49.0

### Requires Chatter

No

### Signature

```java
public static ConnectApi.AdjustOrderSummaryOutputRepresentation adjustSubmit(String orderSummaryId, ConnectApi.AdjustOrderItemSummaryInputRepresentation adjustInput)
```

### Parameters

- **orderSummaryId**
  - Type: `String`
  - ID of the OrderSummary.

- **adjustInput**
  - Type: `ConnectApi.AdjustOrderItemSummaryInputRepresentation`
  - A list of price adjustments to OrderItemSummaries that make up a price adjustment to an order.

### Return Value

Type: `ConnectApi.AdjustOrderSummaryOutputRepresentation` on page 2021

### Usage

After submitting a price adjustment, process refunds as appropriate:

- If the discount only applied to OrderItemSummaries for which payment has not been captured, it does not require a refund. This situation normally applies to OrderItemSummaries in the US that have not been fulfilled.

- If the discount applied to OrderItemSummaries that have not been fulfilled and for which payment has been captured, process a refund. In this case, pass the `totalExcessFundsAmount` from the output representation to the `ensureRefundsAsync()` on page 1781 method.

- If the discount applied to OrderItemSummaries that have been fulfilled, process a refund. Pass the `postFulfillmentChangeOrderId` from the output representation to the `createCreditMemo()` on page 1780 method, then pass the CreditMemo to the `ensureRefundsAsync()` method.

- If the discount applied to both fulfilled and unfulfilled OrderItemSummaries for which payment has been captured, process both refunds. Pass the `postFulfillmentChangeOrderId` from the output representation to the `createCreditMemo()`
method, then pass the credit memo and the `totalExcessFundsAmount` from the output representation to the `ensureRefundsAsync()` method.

SEE ALSO:
- `createCreditMemo(orderSummaryId, creditMemoInput)`
- `ensureRefundsAsync(orderSummaryId, ensureRefundsInput)`
- `adjustPreview(orderSummaryId, adjustInput)`

**createCreditMemo(orderSummaryId, creditMemoInput)**

Create a credit memo to represent the refund for one or more change orders associated with an OrderSummary.

**API Version**

48.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.CreateCreditMemoOutputRepresentation createCreditMemo(String orderSummaryId, ConnectApi.CreateCreditMemoInputRepresentation creditMemoInput)
```

**Parameters**

- `orderSummaryId`  
  Type: `String`  
  ID of the OrderSummary.

- `creditMemoInput`  
  Type: `ConnectApi.CreateCreditMemoInputRepresentation`  
  The list of change order IDs.

**Return Value**

Type: `ConnectApi.CreateCreditMemoOutputRepresentation`

**ensureFundsAsync(orderSummaryId, ensureFundsInput)**

Ensure funds for an invoice and apply them to it. If needed, capture authorized funds by sending a request to a payment provider. This method inserts a background operation into an asynchronous job queue and returns the ID of that operation so you can track its status. Payment gateway responses appear in the payment gateway log and do not affect the background operation status.

**API Version**

48.0
Requires Chatter
No

Signature

```java
public static ConnectApi.EnsureFundsAsyncOutputRepresentation ensureFundsAsync(String orderSummaryId, ConnectApi.EnsureFundsAsyncInputRepresentation ensureFundsInput)
```

Parameters

- `orderSummaryId`
  - Type: `String`
  - ID of the OrderSummary.

- `ensureFundsInput`
  - Type: `ConnectApi.EnsureFundsAsyncInputRepresentation`
  - The ID of the invoice.

Return Value

- Type: `ConnectApi.EnsureFundsAsyncOutputRepresentation`

Usage

This method checks the OrderPaymentSummaries associated with the specified OrderSummary for funds to apply to the invoice balance as follows:

- **Note:** If multiple OrderPaymentSummaries have the same amount, their order of selection is random.

1. Verify that the invoice balance doesn’t exceed the total amount of all the OrderPaymentSummaries.
2. If an OrderPaymentSummary exists with an amount that matches the invoice balance, use it.
3. Otherwise, if any OrderPaymentSummaries exist with an amount greater than the invoice balance, use the one with the smallest amount greater than the invoice balance.
4. Otherwise, select OrderPaymentSummaries in order from largest amount to smallest until their amounts meet or exceed the invoice balance.
5. If any selected funds are authorized, capture them.
6. Apply the selected funds to the invoice.

```java
ensureRefundsAsync(orderSummaryId, ensureRefundsInput)
```

Ensure refunds for a credit memo or excess funds by sending a request to a payment provider. This method inserts a background operation into an asynchronous job queue and returns the ID of that operation so you can track its status. Payment gateway responses appear in the payment gateway log and do not affect the background operation status.

API Version

48.0
Requires Chatter
No

Signature

```java
public static ConnectApi.EnsureRefundsAsyncOutputRepresentation ensureRefundsAsync(String orderSummaryId, ConnectApi.EnsureRefundsAsyncInputRepresentation ensureRefundsInput)
```

Parameters

- `orderSummaryId`
  Type: `String`
  ID of the OrderSummary.

- `ensureRefundsInput`
  Type: `ConnectApi.EnsureRefundsAsyncInputRepresentation`
  Object that wraps the ID of the credit memo and the excess funds amount.

Return Value

Type: `ConnectApi.EnsureRefundsAsyncOutputRepresentation`

**previewCancel(orderSummaryId, changeInput)**

Retrieve the expected change order values for canceling one or more OrderItemSummaries from an OrderSummary, without actually executing the cancel.

API Version

48.0

Requires Chatter
No

Signature

```java
public static ConnectApi.PreviewCancelOutputRepresentation previewCancel(String orderSummaryId, ConnectApi.ChangeInputRepresentation changeInput)
```

Parameters

- `orderSummaryId`
  Type: `String`
  ID of the OrderSummary.

- `changeInput`
  Type: `ConnectApi.ChangeInputRepresentation`
  A list of changes to OrderItemSummaries that make up an order change, such as a cancel or return.
PreviewReturn(orderSummaryId, changeInput)

Retrieve the expected change order values for returning one or more OrderItemSummaries from an OrderSummary, without actually executing the return.

API Version
48.0

Requires Chatter
No

Signature
public static ConnectApi.PreviewReturnOutputRepresentation previewReturn(String orderSummaryId, ConnectApi.ChangeInputRepresentation changeInput)

Parameters
orderSummaryId
  Type: String
  ID of the OrderSummary.

changeInput
  Type: ConnectApi.ChangeInputRepresentation
  A list of changes to OrderItemSummaries that make up an order change, such as a cancel or return.

Return Value
Type: ConnectApi.PreviewReturnOutputRepresentation

SEE ALSO:
  createCreditMemo(orderSummaryId, creditMemoInput)
  ensureRefundsAsync(orderSummaryId, ensureRefundsInput)
  submitCancel(orderSummaryId, changeInput)

submitCancel(orderSummaryId, changeInput)

Cancel one or more OrderItemSummaries from an OrderSummary, and create a corresponding change order.
API Version
48.0

Requires Chatter
No

Signature
public static ConnectApi.SubmitCancelOutputRepresentation submitCancel(String orderSummaryId, ConnectApi.ChangeInputRepresentation changeInput)

Parameters

orderSummaryId
 Type: String
 ID of the OrderSummary.

changeInput
 Type: ConnectApi.ChangeInputRepresentation
 A list of changes to OrderItemSummaries that make up an order change, such as a cancel or return.

Return Value
Type: ConnectApi.SubmitCancelOutputRepresentation

SEE ALSO:
createCreditMemo(orderSummaryId, creditMemoInput)
ensureRefundsAsync(orderSummaryId, ensureRefundsInput)
previewCancel(orderSummaryId, changeInput)

submitReturn(orderSummaryId, changeInput)
Return one or more OrderItemSummaries from an OrderSummary, and create a corresponding change order.

API Version
48.0

Requires Chatter
No

Signature
public static ConnectApi.SubmitReturnOutputRepresentation submitReturn(String orderSummaryId, ConnectApi.ChangeInputRepresentation changeInput)
Parameters

`orderSummaryId`  
Type: String  
ID of the OrderSummary.

`changeInput`  
Type: `ConnectApi.ChangeInputRepresentation`  
A list of changes to OrderItemSummaries that make up an order change, such as a cancel or return.

Return Value

Type: `ConnectApi.SubmitReturnOutputRepresentation`

Usage

After submitting a return, process a refund. Pass the `changeOrderId` from the output representation to the `createCreditMemo()` method, then pass the credit memo to the `ensureRefundsAsync()` method on page 1781 method.

SEE ALSO:  
`createCreditMemo(orderSummaryId, creditMemoInput)`  
`ensureRefundsAsync(orderSummaryId, ensureRefundsInput)`  
`previewReturn(orderSummaryId, changeInput)`

**OrderSummaryCreation Class**

Create Order Summaries in Order Management.

**Namespace**

`ConnectApi`

**OrderSummaryCreation Methods**

The following are methods for `OrderSummaryCreation`. All methods are static.

IN THIS SECTION:

`createOrderSummary(orderSummaryInput)`  
Create an OrderSummary based on an order. That order is considered the original order for the OrderSummary. Subsequent change orders that apply to the OrderSummary are also represented as orders. You can specify whether the order is managed in Salesforce Order Management or by an external system. Most Salesforce Order Management APIs can run only on orders that it manages.

`createOrderSummary(orderSummaryInput)`  
Create an OrderSummary based on an order. That order is considered the original order for the OrderSummary. Subsequent change orders that apply to the OrderSummary are also represented as orders. You can specify whether the order is managed in Salesforce Order Management or by an external system. Most Salesforce Order Management APIs can run only on orders that it manages.
API Version
48.0

Requires Chatter
No

Signature
public static ConnectApi.OrderSummaryOutputRepresentation
createOrderSummary(ConnectApi.OrderSummaryInputRepresentation orderSummaryInput)

Parameters
orderSummaryInput
  Type: ConnectApi.OrderSummaryInputRepresentation
  Input object that wraps the ID of the source order.

Return Value
Type: ConnectApi.OrderSummaryOutputRepresentation

Organization Class
Access information about an org.

Namespace
ConnectApi

Organization Methods
The following are methods for Organization. All methods are static.

IN THIS SECTION:
  getSettings()
  Get information about the context user and the org, including which features are enabled.

getSettings()
Get information about the context user and the org, including which features are enabled.

API Version
28.0

Requires Chatter
No
Signature

```java
public static ConnectApi.OrganizationSettings getSettings()
```

Return Value

Type: `ConnectApi.OrganizationSettings`

### Personalization Class

Get assigned personalization audiences that match the user context. Create, get, update, and delete an audience. Get personalization targets that match the user context, based on the assigned audiences that include the user. Create and update targets. Get and delete a target.

### Namespace

`ConnectApi`

**Note:** Personalization varies what the user can see in the browser but doesn’t secure data in any way. To prevent users accessing sensitive data, use standard Salesforce security features, such as sharing rules and permission sets.

### Personalization Methods

The following are methods for `Personalization`. All methods are static.

**IN THIS SECTION:**

- `createAudience(communityId, audience)`
  Create an audience.
- `createTargets(communityId, target)`
  Create targets.
- `deleteAudience(communityId, audienceId)`
  Delete an audience.
- `deleteTarget(communityId, targetId)`
  Delete a target.
- `getAudience(communityId, audienceId, includeAudienceCriteria)`
  Get an audience.
- `getAudienceBatch(communityId, audienceIds)`
  Get audience information for a comma-separated list of audience IDs.
- `getAudiences(communityId, ipAddress, domain, userId, publishStatus, includeAudienceCriteria, targetTypes)`
  Get a list of assigned audiences that match the user context.
- `getTarget(communityId, targetId)`
  Get a target.
- `getTargetBatch(communityId, targetIds)`
  Get target information for a comma-separated list of target IDs.
getTargets(communityId, ipAddress, domain, userId, publishStatus, recordId, targetTypes, includeAudience, includeAllMatchingTargetsWithinGroup, groupNames)

Get a list of targets that match the user context, based on the assigned audiences that include the user.

updateAudience(communityId, audienceId, audience)

Update an audience.

updateTargets(communityId, target)

Update targets.

createAudience(communityId, audience)

Create an audience.

API Version
48.0

Requires Chatter
No

Signature

public static ConnectApi.Audience createAudience(String communityId, ConnectApi.AudienceInput audience)

Parameters

communityId
Type: String
ID of the community.

Audience
Type: ConnectApi.AudienceInput
A ConnectApi.AudienceInput object that defines the audience.

Return Value
Type: ConnectApi.Audience

createTargets(communityId, target)

Create targets.

API Version
48.0

Requires Chatter
No
public static ConnectApi.TargetCollection createTargets(String communityId, ConnectApi.TargetCollectionInput target)

Parameters

communityId
Type: String
ID of the community.

target
Type: ConnectApi.TargetCollectionInput
A ConnectApi.TargetCollectionInput object that defines the targets.

Return Value
Type: ConnectApi.TargetCollection

deleteAudience(communityId, audienceId)
Delete an audience.

API Version
48.0

Requires Chatter
No

public static Void deleteAudience(String communityId, String audienceId)

Parameters

communityId
Type: String
ID of the community.

audienceId
Type: String
ID of the audience.

Return Value
Type: Void
**deleteTarget(communityId, targetId)**

Delete a target.

API Version
48.0

Requires Chatter
No

Signature
```
public static Void deleteTarget(String communityId, String targetId)
```

Parameters
- **communityId**
  - Type: String
  - ID of the community.
- **targetId**
  - Type: String
  - ID of the target.

Return Value
Type: Void

**getAudience(communityId, audienceId, includeAudienceCriteria)**

Get an audience.

API Version
48.0

Available to Guest Users
48.0

Requires Chatter
No

Signature
```
public static ConnectApi.Audience getAudience(String communityId, String audienceId,
    Boolean includeAudienceCriteria)
```
Parameters

communityId
  Type: String
  ID of the community.

audienceId
  Type: String
  ID of the audience.

includeAudienceCriteria
  Type: Boolean
  Specifies whether to include audience criteria (true) or not (false). If unspecified, defaults to false.

Return Value
Type: ConnectApi.Audience

getAudienceBatch(communityId, audienceIds)
Get audience information for a comma-separated list of audience IDs.

API Version
48.0

Available to Guest Users
48.0

Requires Chatter
No

Signature

public static ConnectApi.BatchResult[] getAudienceBatch(String communityId, List<String> audienceIds)

Parameters

communityId
  Type: String
  ID of the community.

audienceIds
  Type: List<String>
  Comma-separated list of audience IDs.
Return Value

Type: `ConnectApi.BatchResult[]`

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.Audience` object and errors for audiences that didn't load.

`getAudiences(communityId, ipAddress, domain, userId, publishStatus, includeAudienceCriteria, targetTypes)`

Get a list of assigned audiences that match the user context.

API Version

48.0

Available to Guest Users

48.0

Requires Chatter

No

Signature

```java
public static ConnectApi.AudienceCollection getAudiences(String communityId, String ipAddress, String domain, String userId, ConnectApi.PublishStatus publishStatus, Boolean includeAudienceCriteria, List<String> targetTypes)
```

Parameters

- `communityId` 
  Type: `String`
  ID of the community.

- `ipAddress` 
  Type: `String`
  IP address of the user. If `null`, no audiences with location criteria are returned.

- `domain` 
  Type: `String`
  Name of the user's Salesforce custom domain. If `null`, no audiences with domain criteria are returned.

- `userId` 
  Type: `String`
  ID of the user. If `null`, defaults to the ID of the context user.

- `publishStatus` 
  Type: `ConnectApi.PublishStatus`
  Publish status of the audience. Values are:
  - `Draft`
- Live
  If null, defaults to Live.

**includeAudienceCriteria**
Type: Boolean
Specifies whether to include audience criteria (true) or not (false). If unspecified, defaults to false.

**targetTypes**
Type: List<String>
Comma-separated list of target types to filter the results. Supported values include:
- ExperienceVariation (version 48.0 and later)
- Custom object API names, such as `CustomObjectName__c` (version 48.0 and later)
- NavigationLinkSet (version 49.0 and later)
- Topic (version 49.0 and later)
- CollaborationGroup (version 49.0 and later)
- KnowledgeArticle (version 49.0 and later)
- ContentDocument (version 49.0 and later)
- ManagedContent (version 49.0 and later)
- Report (version 49.0 and later)
- Dashboard (version 49.0 and later)
If null, all target types are returned.

Return Value
Type: `ConnectApi.AudienceCollection`

**getTarget(communityId, targetId)**
Get a target.

API Version
48.0

Available to Guest Users
48.0

Requires Chatter
No

Signature
```java
public static ConnectApi.Target getTarget(String communityId, String targetId)
```
Parameters

communityId
Type: String
ID of the community.

targetId
Type: String
ID of the target.

Return Value
Type: ConnectApi.Target

getTargetBatch(communityId, targetIds)
Get target information for a comma-separated list of target IDs.

API Version
48.0

Available to Guest Users
48.0

Requires Chatter
No

Signature
public static ConnectApi.BatchResult[] getTargetBatch(String communityId, List<String> targetIds)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

targetIds
Type: List<String>
Comma-separated list of target IDs.

Return Value
Type: ConnectApi.BatchResult

The ConnectApi.BatchResult.getResult() method returns a ConnectApi.Target object and errors for targets that didn't load.
getTargets(communityId, ipAddress, domain, userId, publishStatus, recordId, targetTypes, includeAudience, includeAllMatchingTargetsWithinGroup, groupNames)

Get a list of targets that match the user context, based on the assigned audiences that include the user.

API Version
48.0

Available to Guest Users
48.0

Requires Chatter
No

Signature
public static ConnectApi.TargetCollection getTargets(String communityId, String ipAddress, String domain, String userId, ConnectApi.PublishStatus publishStatus, String recordId, List<String> targetTypes, Boolean includeAudience, Boolean includeAllMatchingTargetsWithinGroup, List<String> groupNames)

Parameters

- **communityId**
  Type: String
  ID of the community.

- **ipAddress**
  Type: String
  IP address of the user. If null, no audiences with location criteria are returned.

- **domain**
  Type: String
  Name of the user's Salesforce custom domain. If null, no audiences with domain criteria are returned.

- **userId**
  Type: String
  ID of the user. If null, the default is the ID of the context user.

- **publishStatus**
  Type: ConnectApi.PublishStatus
  Publish status of the target. Values are:
  - Draft
  - Live

- **recordId**
  Type: String
  ID of the record, if you want to specify field based criteria in audiences.
targetTypes
  Type: List<String>
  Comma-separated list of target types to filter the results. Supported values include:
  
  • ExperienceVariation (version 48.0 and later)
  • Custom object API names, such as CustomObjectName__c (version 48.0 and later)
  • NavigationLinkSet (version 49.0 and later)
  • Topic (version 49.0 and later)
  • CollaborationGroup (version 49.0 and later)
  • KnowledgeArticle (version 49.0 and later)
  • ContentDocument (version 49.0 and later)
  • ManagedContent (version 49.0 and later)
  • Report (version 49.0 and later)
  • Dashboard (version 49.0 and later)

  If null, all target types are returned.

includeAudience
  Type: Boolean
  Specifies whether to include the matching audience (true) or not (false). If null, the default is false.

includeAllMatchingTargetsWithinGroup
  Type: Boolean
  Specifies whether to include all the matching targets within a target group (true) or not (false). If null, the default is false.

  If false, the first matching target within each group, based on priority within the group, is returned.

groupNames
  Type: List<String>
  A comma-separated list of group names. Groups bundle related target and audience pairs.

Return Value
  Type: ConnectApi.TargetCollection

updateAudience(communityId, audienceId, audience)
Update an audience.

API Version
48.0

Requires Chatter
No
Signature

```java
public static ConnectApi.Audience updateAudience(String communityId, String audienceId,
ConnectApi.AudienceInput audience)
```

Parameters

- `communityId`  
  - Type: `String`  
  - ID of the community.
- `audienceId`  
  - Type: `String`  
  - ID of the audience.
- `audience`  
  - Type: `ConnectApi.AudienceInput`  
  - A `ConnectApi.AudienceInput` object that defines the updates to the audience.

Return Value

Type: `ConnectApi.Audience`

`updateTargets(communityId, target)`

Update targets.

API Version

48.0

Requires Chatter

No

Signature

```java
public static ConnectApi.TargetCollection updateTargets(String communityId,
ConnectApi.TargetCollectionUpdateInput target)
```

Parameters

- `communityId`  
  - Type: `String`  
  - ID of the community.
- `target`  
  - Type: `ConnectApi.TargetCollectionUpdateInput`  
  - A `ConnectApi.TargetCollectionUpdateInput` object that defines the updates for the targets.
Get question and answers suggestions.

API Version
32.0

Requires Chatter
No

Signature
public static ConnectApi.QuestionAndAnswersSuggestions getSuggestions(String communityId, String q, String subjectId, Boolean includeArticles, Integer maxResults)
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**subjectId**
Type: String
Specify a subject ID to search only questions on that object. If the ID is a topic or a user, the ID is ignored.

**includeArticles**
Type: Boolean
Specify true to include knowledge articles in the search results. To return only questions, specify false.

**maxResults**
Type: Integer
The maximum number of results to return for each type of item. Possible values are 1–10. The default value is 5.

Return Value
Type: ConnectApi.QuestionAndAnswersSuggestions

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetSuggestions(communityId, q, subjectId, includeArticles, maxResults, result)`

*Testing ConnectApi Code*

**setTestGetSuggestions(communityId, q, subjectId, includeArticles, maxResults, result)**
Register a ConnectApi.QuestionAndAnswersSuggestions object to be returned when `getSuggestions` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
32.0

Signature

```java
public static Void setTestGetSuggestions(String communityId, String q, String subjectId, Boolean includeArticles, Integer maxResults, ConnectApi.QuestionAndAnswersSuggestions result)
```
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**subjectId**
Type: String
Specify a subject ID to search only questions on that object. If the ID is a topic or a user, the ID is ignored.

**includeArticles**
Type: Boolean
Specify true to include knowledge articles in the search results. To return only questions, specify false.

**maxResults**
Type: Integer
The maximum number of results to return for each type of item. Possible values are 1–10. The default value is 5.

**result**
Type: ConnectApi.QuestionAndAnswersSuggestions
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getSuggestions(communityId, q, subjectId, includeArticles, maxResults)`
- Testing ConnectApi Code

**updateQuestionAndAnswers(communityId, feedElementId, questionAndAnswersCapability)**
Choose or change the best answer for a question.

API Version
32.0

Requires Chatter
Yes
**Signature**

```java
public static ConnectApi.QuestionAndAnswersCapability updateQuestionAndAnswers(String communityId, String feedElementId, ConnectApi.QuestionAndAnswersCapabilityInput questionAndAnswersCapability)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **feedElementId**
  - Type: `String`
  - ID of the feed element.

- **questionAndAnswersCapability**
  - Type: `ConnectApi.QuestionAndAnswersCapabilityInput`
  - Specify the best answer (comment ID) for the question.

**Return Value**

- Type: `ConnectApi.QuestionAndAnswersCapability`
  - If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

**Example**

```java
ConnectApi.QuestionAndAnswersCapabilityInput qaInput = new ConnectApi.QuestionAndAnswersCapabilityInput();
qaInput.bestAnswerId = '0D7D00000000lMAKAY';

ConnectApi.QuestionAndAnswersCapability qa = ConnectApi.QuestionAndAnswers.updateQuestionAndAnswers(null, '0D5D00000000XZjJ', qaInput);
```

**Recommendations Class**

Get and reject Chatter, custom, and static recommendations. Create, get, update, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

For Next Best Action recommendations, see [NextBestAction Class](#).

**Namespace**

`ConnectApi`

**Recommendations Methods**

The following are methods for `Recommendations`. All methods are static.
IN THIS SECTION:

- `createRecommendationAudience(communityId, recommendationAudience)`
  Create an audience for a custom recommendation.

- `createRecommendationAudience(communityId, name)`
  Create an audience for a custom recommendation.

- `createRecommendationDefinition(communityId, recommendationDefinition)`
  Create a custom recommendation definition.

- `createRecommendationDefinition(communityId, name, title, actionUrl, actionUrlName, explanation)`
  Create a custom recommendation definition with the specified parameters.

- `createScheduledRecommendation(communityId, scheduledRecommendation)`
  Create a scheduled custom recommendation.

- `createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId, channel)`
  Create a scheduled custom recommendation with the specified parameters.

- `deleteRecommendationAudience(communityId, recommendationAudienceId)`
  Delete a custom recommendation audience.

- `deleteRecommendationDefinition(communityId, recommendationDefinitionId)`
  Delete a custom recommendation definition.

- `deleteRecommendationDefinitionPhoto(communityId, recommendationDefinitionId)`
  Delete a custom recommendation definition photo.

- `deleteScheduledRecommendation(communityId, scheduledRecommendationId, deleteDefinitionIfLast)`
  Delete a scheduled custom recommendation.

- `getRecommendationAudience(communityId, recommendationAudienceId)`
  Get information about a custom recommendation audience.

- `getRecommendationAudienceMembership(communityId, recommendationAudienceId)`
  Get the members of a custom recommendation audience.

- `getRecommendationAudienceMembership(communityId, recommendationAudienceId, pageParam, pageSize)`
  Get a page of custom recommendation audience members.

- `getRecommendationAudiences(communityId)`
  Get custom recommendation audiences.

- `getRecommendationAudiences(communityId, pageParam, pageSize)`
  Get a page of custom recommendation audiences.

- `getRecommendationDefinition(communityId, recommendationDefinitionId)`
  Get a custom recommendation definition.

- `getRecommendationDefinitionPhoto(communityId, recommendationDefinitionId)`
  Get a custom recommendation definition photo.

- `getRecommendationDefinitions(communityId)`
  Get custom recommendation definitions.

- `getRecommendationForUser(communityId, userId, action, objectId)`
  Get the Chatter, custom, or static recommendation for the context user for the specified action and object ID.
getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults)
Get the Chatter recommendations, such as user, group, file, article, record, and topic recommendations for the context user. Get the custom and static recommendations for the context user.

getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults)
Get the Chatter, custom, and static recommendations for the context user for the specified action.

getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults)
Get the Chatter, custom, and static recommendations for the context user for the specified action and object category.

getScheduledRecommendation(communityId, scheduledRecommendationId)
Get a scheduled custom recommendation.

generatedScheduledRecommendations(communityId, channel)
Get scheduled custom recommendations.

rejectRecommendationForUser(communityId, userId, action, objectId)
Reject a Chatter, custom, or static recommendation for the context user for the specified action and object ID.

rejectRecommendationForUser(communityId, userId, action, objectEnum)
Reject a static recommendation for the context user.

updateRecommendationAudience(communityId, recommendationAudienceId, recommendationAudience)
Update a custom recommendation audience.

updateRecommendationDefinition(communityId, recommendationDefinitionId, name, title, actionUrl, actionUrlName, explanation)
Update a custom recommendation definition with the specified parameters.

updateRecommendationDefinition(communityId, recommendationDefinitionId, recommendationDefinition)
Update a custom recommendation definition.

updateRecommendationDefinitionPhoto(communityId, recommendationDefinitionId, fileUpload)
Update a custom recommendation definition photo with a file that hasn’t been uploaded.

updateRecommendationDefinitionPhoto(communityId, recommendationDefinitionId, fileId, versionNumber)
Update a custom recommendation definition photo with an uploaded file.

updateRecommendationDefinitionPhotoWithAttributes(communityId, recommendationDefinitionId, photo)
Update a custom recommendation definition photo with an uploaded file that requires cropping.

updateRecommendationDefinitionPhotoWithAttributes(communityId, recommendationDefinitionId, photo, fileUpload)
Update a custom recommendation definition photo with a file that hasn’t been uploaded and requires cropping.

updateScheduledRecommendation(communityId, scheduledRecommendationId, scheduledRecommendation)
Update a scheduled custom recommendation.

updateScheduledRecommendation(communityId, scheduledRecommendationId, rank, enabled, recommendationAudienceId)
Update a scheduled custom recommendation with the specified parameters.

createRecommendationAudience(communityId, recommendationAudience)
Create an audience for a custom recommendation.

API Version
35.0
Requires Chatter
No

Signature
```
public static ConnectApi.RecommendationAudience createRecommendationAudience(String communityId, ConnectApi.RecommendationAudienceInput recommendationAudience)
```

Parameters
```
communityId
  Type: String
  Use either the ID for a community, internal, or null.
recommendationAudience
  Type: ConnectApi.RecommendationAudienceInput
  A ConnectApi.RecommendationAudienceInput object.
```

Return Value
```
Type: ConnectApi.RecommendationAudience
```

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

```
createRecommendationAudience(communityId, name)
```
Create an audience for a custom recommendation.

API Version
35.0

Requires Chatter
No

Signature
```
public static ConnectApi.RecommendationAudience createRecommendationAudience(String communityId, String name)
```

Parameters
```
communityId
  Type: String
```
Use either the ID for a community, internal, or null.

name
Type: String
Name of the audience.

Return Value
Type: ConnectApi.RecommendationAudience

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

createRecommendationDefinition(communityId, recommendationDefinition)
Create a custom recommendation definition.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationDefinition createRecommendationDefinition(String communityId, ConnectApi.RecommendationDefinitionInput recommendationDefinition)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

recommendationDefinition
Type: ConnectApi.RecommendationDefinitionInput
A ConnectApi.RecommendationDefinitionInput object.

Return Value
Type: ConnectApi.RecommendationDefinition
Usage
Recommendation definitions allow you to create custom recommendations that appear in communities, encouraging users to watch videos, take training and more.

Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

These recommendations appear by default on the Customer Service template. They appear on the community home and question detail pages and in the feed in communities in Salesforce mobile web. They also appear anywhere community managers add recommendations using Experience Builder in communities using the Customer Service template.

`createRecommendationDefinition(communityId, name, title, actionUrl, actionUrlName, explanation)`
Create a custom recommendation definition with the specified parameters.

API Version
35.0

Requires Chatter
No

Signature
`public static ConnectApi.RecommendationDefinition createRecommendationDefinition(String communityId, String name, String title, String actionUrl, String actionUrlName, String explanation)`

Parameters
`communityId`
- Type: String
  - Use either the ID for a community, internal, or null.

`name`
- Type: String
  - Name of the custom recommendation definition. The name is displayed in Setup.

`title`
- Type: String
  - Title of the custom recommendation definition.

`actionUrl`
- Type: String
  - URL for acting on the custom recommendation, for example, the URL to join a group.

`actionUrlName`
- Type: String
Text label for the action URL in the user interface, for example, “Launch.”

**explanation**

Type: **String**

Explanation, or body, of the custom recommendation.

**Return Value**

Type: **ConnectApi.RecommendationDefinition**

**Usage**

Recommendation definitions allow you to create custom recommendations that appear in communities, encouraging users to watch videos, take training and more.

Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

These recommendations appear by default on the Customer Service template. They appear on the community home and question detail pages and in the feed in communities in Salesforce mobile web. They also appear anywhere community managers add recommendations using Experience Builder in communities using the Customer Service template.

### `createScheduledRecommendation(communityId, scheduledRecommendation)`

Create a scheduled custom recommendation.

**API Version**

35.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.ScheduledRecommendation createScheduledRecommendation(String communityId, ConnectApi.ScheduledRecommendationInput scheduledRecommendation)
```

**Parameters**

- **communityId**
  
  Type: **String**
  
  Use either the ID for a community, `internal`, or null.

- **scheduledRecommendation**
  
  Type: **ConnectApi.ScheduledRecommendationInput**
  
  A `ConnectApi.ScheduledRecommendationInput` object.
Return Value

Type: `ConnectApi.ScheduledRecommendation`

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

`createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId, channel)`

Create a scheduled custom recommendation with the specified parameters.

API Version

36.0

Requires Chatter

No

Signature

```java
public static ConnectApi.ScheduledRecommendation createScheduledRecommendation(String communityId, String recommendationDefinitionId, Integer rank, Boolean enabled, String recommendationAudienceId, ConnectApi.RecommendationChannel channel)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `recommendationDefinitionId`
  - Type: `String`
  - ID of the custom recommendation definition.

- `rank`
  - Type: `Integer`
  - Relative rank of the scheduled custom recommendation indicated by ascending whole numbers starting with 1.

Setting the rank is comparable to an insertion into an ordered list. The scheduled custom recommendation is inserted into the position specified by the `rank`. The `rank` of all the scheduled custom recommendations after it is pushed down. See Ranking scheduled custom recommendations example.

If the specified `rank` is larger than the size of the list, the scheduled custom recommendation is put at the end of the list. The `rank` of the scheduled custom recommendation is the size of the list, instead of the one specified.

If a `rank` is not specified, the scheduled custom recommendation is put at the end of the list.
enabled
Type: Boolean
Indicates whether scheduling is enabled. If true, the custom recommendation is enabled and appears in communities. If false, custom recommendations in feeds in Salesforce mobile web aren’t removed, but no new custom recommendations appear. In Customer Service and Partner Central communities, disabled custom recommendations no longer appear.

recommendationAudienceId
Type: String
ID of the custom recommendation definition that this scheduled recommendation schedules.

channel
Type: ConnectApi.RecommendationChannel
A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:

- CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.

Use these channel values; you can’t rename or create other channels.

Return Value
Type: ConnectApi.ScheduledRecommendation

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

Ranking scheduled custom recommendations example
If you have these scheduled custom recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendations</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
</tbody>
</table>
And you include this information in the Scheduled Custom Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>

**deleteRecommendationAudience(communityId, recommendationAudienceId)**

Delete a custom recommendation audience.

**API Version**

35.0

**Requires Chatter**

No

**Signature**

```java
public static Void deleteRecommendationAudience(String communityId, String recommendationAudienceId)
```

**Parameters**

- **communityId**
  
  Type: String
  
  Use either the ID for a community, internal, or null.

- **recommendationAudienceId**
  
  Type: String
  
  ID of the custom recommendation audience.
Return Value
Type: Void

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

deleterecommendationdefinition(communityId, recommendationDefinitionId)
Delete a custom recommendation definition.

API Version
35.0

Requires Chatter
No

Signature
public static Void deleterecommendationdefinition(String communityId, String recommendationDefinitionId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.
recommendationDefinitionId
Type: String
ID of the custom recommendation definition.

Return Value
Type: Void

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.
deleteRecommendationDefinitionPhoto(communityId, recommendationDefinitionId)

Delete a custom recommendation definition photo.

API Version
35.0

Requires Chatter
Yes

Signature
public static Void deleteRecommendationDefinitionPhoto(String communityId, String recommendationDefinitionId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

recommendationDefinitionId
Type: String
ID of the custom recommendation definition.

Return Value
Type: Void

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

deleteScheduledRecommendation(communityId, scheduledRecommendationId, deleteDefinitionIfLast)

Delete a scheduled custom recommendation.

API Version
35.0

Requires Chatter
No
Signature

```java
public static Void deleteScheduledRecommendation(String communityId, String scheduledRecommendationId, Boolean deleteDefinitionIfLast)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **scheduledRecommendationId**
  - Type: String
  - ID of the scheduled custom recommendation.

- **deleteDefinitionIfLast**
  - Type: Boolean
  - If true and if this is the last scheduled custom recommendation of a custom recommendation definition, deletes the custom recommendation definition. Default is false.

Return Value

Type: Void

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

Deleting a scheduled custom recommendation is comparable to a deletion in an ordered list. All scheduled custom recommendations after the deleted scheduled custom recommendation receive a new, higher rank automatically.

**getRecommendationAudience(communityId, recommendationAudienceId)**

Get information about a custom recommendation audience.

API Version

35.0

Requires Chatter

No

Signature

```java
public static ConnectApi.RecommendationAudience getRecommendationAudience(String communityId, String recommendationAudienceId)
```
Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or null.

`recommendationAudienceId`
Type: String
ID of the custom recommendation audience.

Return Value
Type: `ConnectApi.RecommendationAudience`

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

`getRecommendationAudienceMembership(communityId, recommendationAudienceId)`
Get the members of a custom recommendation audience.

API Version
35.0

Requires Chatter
No

Signature

```java
public static ConnectApi.UserReferencePage getRecommendationAudienceMembership(String communityId, String recommendationAudienceId)
```

Parameters

`communityId`
Type: String
Use either the ID for a community, internal, or null.

`recommendationAudienceId`
Type: String
ID of the custom recommendation audience.

Return Value
Type: `ConnectApi.UserReferencePage`
Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

\texttt{getRecommendationAudienceMembership(communityId, recommendationAudienceId, pageParam, pageSize)}

Get a page of custom recommendation audience members.

API Version

35.0

Requires Chatter

No

Signature

\texttt{public static ConnectApi.UserReferencePage getRecommendationAudienceMembership(String communityId, String recommendationAudienceId, Integer pageParam, Integer pageSize)}

Parameters

\texttt{communityId}  
Type: \texttt{String}  
Use either the ID for a community, internal, or \texttt{null}.

\texttt{recommendationAudienceId}  
Type: \texttt{String}  
ID of the custom recommendation audience.

\texttt{pageParam}  
Type: \texttt{Integer}  
Specifies the number of the page you want returned. Starts at 0. If you pass in \texttt{null} or 0, the first page is returned.

\texttt{pageSize}  
Type: \texttt{Integer}  
Specifies the number of members per page.

Return Value

Type: \texttt{ConnectApi.UserReferencePage}

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify
All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**getRecommendationAudiences (communityId)**
Get custom recommendation audiences.

API Version
35.0

Requires Chatter
No

Signature
```java
public static ConnectApi.RecommendationAudiencePage getRecommendationAudiences(String communityId)
```

Parameters
```
communityId
```
Type: String
Use either the ID for a community, internal, or null.

Return Value
Type: ConnectApi.RecommendationAudiencePage

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**getRecommendationAudiences (communityId, pageParam, pageSize)**
Get a page of custom recommendation audiences.

API Version
35.0

Requires Chatter
No
Signature

public static ConnectApi.RecommendationAudiencePage getRecommendationAudiences(String communityId, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of audiences per page.

Return Value
Type: ConnectApi.RecommendationAudiencePage

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

getRecommendationDefinition(communityId, recommendationDefinitionId)
Get a custom recommendation definition.

API Version
35.0

Requires Chatter
No

Signature

public static ConnectApi.RecommendationDefinition getRecommendationDefinition(String communityId, String recommendationDefinitionId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

**recommendationDefinitionId**
Type: String
ID of the custom recommendation definition.

Return Value
Type: ConnectApi.RecommendationDefinition

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**getRecommendationDefinitionPhoto(communityId, recommendationDefinitionId)**
Get a custom recommendation definition photo.

API Version
35.0

Requires Chatter
Yes

Signature
public static ConnectApi.Photo getRecommendationDefinitionPhoto(String communityId, String recommendationDefinitionId)

Parameters
**communityId**
Type: String
Use either the ID for a community, internal, or null.

**recommendationDefinitionId**
Type: String
ID of the custom recommendation definition.

Return Value
Type: ConnectApi.Photo
Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

getRecommendationDefinitions(communityId)
Get custom recommendation definitions.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationDefinitionPage getRecommendationDefinitions(String communityId)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

Return Value
Type: ConnectApi.RecommendationDefinitionPage

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

getRecommendationForUser(communityId, userId, action, objectId)
Get the Chatter, custom, or static recommendation for the context user for the specified action and object ID.

API Version
33.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.RecommendationCollection getRecommendationForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectId)
```

Parameters

- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.

- **userId**
  - Type: String
  - The ID for the context user or the keyword me.

- **action**
  - Type: ConnectApi.RecommendationActionType
  - Specifies the action to take on a recommendation.
  - follow—Follow a file, record, topic, or user.
  - join—Join a group.
  - view—View a file, group, article, record, user, custom, or static recommendation.

- **objectId**
  - Type: String
  - Specifies the object to act on.
  - If action is follow, objectId is a user ID, file ID, record ID, or topic ID (version 36.0 and later).
  - If action is join, objectId is a group ID.
  - If action is view, objectId is a user ID, file ID, group ID, record ID, custom recommendation ID (version 34.0 and later), the enum Today for static recommendations (version 35.0 and later), or an article ID (version 37.0 and later).

Return Value

- Type: ConnectApi.RecommendationCollection

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- setTestGetRecommendationForUser(communityId, userId, action, objectId, result)
- Testing ConnectApi Code
getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults)

Get the Chatter recommendations, such as user, group, file, article, record, and topic recommendations for the context user. Get the custom and static recommendations for the context user.

API Version
36.0

Available to Guest Users
38.0

Note: Only article and file recommendations are available to guest users.

Requires Chatter
Yes

Signature
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

contextAction
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
• follow
• view

Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

contextObjectId
Type: String
ID of the object that the context user just performed an action on.
• If contextAction is follow, contextObjectId is a user ID, file ID, record ID, or topic ID.
• If contextAction is view, contextObjectId is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).
Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**channel**

Type: `ConnectApi.RecommendationChannel`

A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:

- CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.

**maxResults**

Type: `Integer`

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

**Return Value**

Type: `ConnectApi.RecommendationCollection`

**Usage**

If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam’s user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults, result)
```

Testing ConnectApi Code

```
getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults)
```

Get the Chatter, custom, and static recommendations for the context user for the specified action.

API Version

36.0

Available to Guest Users

38.0

Note: Only article and file recommendations are available to guest users.

Requires Chatter

Yes

Signature

```
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults)
```
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**userId**
Type: String
The ID for the context user or the keyword me.

**action**
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
- follow—Follow a file, record, topic, or user.
- join—Join a group.
- view—View a file, group, article, record, user, custom, or static recommendation.

**contextAction**
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
- follow
- view
Use **contextAction** and **contextObjectId** together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

**contextObjectId**
Type: String
ID of the object that the context user just performed an action on.
- If **contextAction** is follow, **contextObjectId** is a user ID, file ID, record ID, or topic ID.
- If **contextAction** is view, **contextObjectId** is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).
Use **contextAction** and **contextObjectId** together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

**channel**
Type: ConnectApi.RecommendationChannel
A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:
- CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.

**maxResults**
Type: Integer

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

**Return Value**
Type: `ConnectApi.RecommendationCollection`

**Usage**
If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam’s user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Testing ConnectApi Code
`getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults)`

Get the Chatter, custom, and static recommendations for the context user for the specified action and object category.

API Version
36.0

Available to Guest Users
38.0

⚠️ **Note:** Only article and file recommendations are available to guest users.

Requires Chatter
Yes

**Signature**

```java
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectCategory, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults)
```

**Parameters**

- `communityId`
  - **Type:** String
  - Use either the ID for a community, `internal`, or `null`.

- `userId`
  - **Type:** String
  - The ID for the context user or the keyword `me`.

- `action`
  - **Type:** ConnectApi.RecommendationActionType
  - Specifies the action to take on a recommendation.
  - • **follow**—Follow a file, record, topic, or user.
  - • **join**—Join a group.
  - • **view**—View a file, group, article, record, user, custom, or static recommendation.

- `objectCategory`
  - **Type:** String
  - • If `action` is `follow`, `objectCategory` is `users`, `files`, `topics`, or `records`.
  - • If `action` is `join`, `objectCategory` is `groups`.
  - • If `action` is `view`, `objectCategory` is `users`, `files`, `groups`, `records`, `custom`, `apps`, or `articles` (version 37.0 and later).
You can also specify a key prefix, the first three characters of the object ID, as the `objectCategory`. Valid values are:

- If `action` is `follow`, `objectCategory` is `005` (users), `069` (files), `0TO` (topics), or `001` (accounts), for example.
- If `action` is `join`, `objectCategory` is `0F9` (groups).
- If `action` is `view`, `objectCategory` is `005` (users), `069` (files), `0F9` (groups), `0RD` (custom recommendations), `T` (static recommendations), `001` (accounts), or `kA0` (articles), for example, (version 370 and later).

`contextAction`
Type: `ConnectApi.RecommendationActionType`

Action that the context user just performed. Supported values are:

- `follow`
- `view`

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

`contextObjectId`
Type: `String`

ID of the object that the context user just performed an action on.

- If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, record ID, or topic ID.
- If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

`channel`
Type: `ConnectApi.RecommendationChannel`

A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:

- `CustomChannel1`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- `CustomChannel2`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel3`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel4`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel5`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.

`maxResults`
Type: `Integer`

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.
Return Value

Type: `ConnectApi.RecommendationCollection`

Usage

If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam’s user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

`setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults, result)`

Testing ConnectApi Code

`getScheduledRecommendation(communityId, scheduledRecommendationId)`

Get a scheduled custom recommendation.

API Version

35.0

Requires Chatter

No
Signature

```java
public static ConnectApi.ScheduledRecommendation getScheduledRecommendation(String communityId, String scheduledRecommendationId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `scheduledRecommendationId`
  - Type: `String`
  - ID of the scheduled custom recommendation.

Return Value

Type: `ConnectApi.ScheduledRecommendation`

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

```
getScheduledRecommendations(communityId, channel)
```
Get scheduled custom recommendations.

API Version

36.0

Requires Chatter

No

Signature

```java
public static ConnectApi.ScheduledRecommendationPage getScheduledRecommendations(String communityId, ConnectApi.RecommendationChannel channel)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `channel`
  - Type: `ConnectApi.RecommendationChannel`
A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:

- **CustomChannel1**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- **CustomChannel2**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel3**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel4**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel5**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **DefaultChannel**—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.

**Return Value**

Type: `ConnectApi.ScheduledRecommendationPage`

**Usage**

Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

```java
public static rejectRecommendationForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectId)
```

Reject a Chatter, custom, or static recommendation for the context user for the specified action and object ID.

**API Version**

33.0

**Requires Chatter**

Yes

**Signature**

`public static rejectRecommendationForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectId)`

**Parameters**

`communityId`

Type: `String`

Use either the ID for a community, `internal`, or `null`.
userId
   Type: String
   The ID for the context user or the keyword me.

action
   Type: ConnectApi.RecommendationActionType
   Specifies the action to take on a recommendation. Supported values are:
   • follow—Follow a file, record, topic, or user.
   • join—Join a group.
   • view—View a file, group, article, record, user, custom, or static recommendation.

objectId
   Type: String
   Specifies the object to take action on.
   • If action is follow, objectId is a user ID, file ID, record ID, or topic ID (version 36.0 and later).
   • If action is join, objectId is a group ID.
   • If action is view, objectId is a custom recommendation ID, the enum Today for static recommendations, or an article ID (version 37.0 and later).

Return Value
   Type: Void

rejectRecommendationForUser(communityId, userId, action, objectEnum)
Reject a static recommendation for the context user.

API Version
34.0

Requires Chatter
Yes

Signature
public static rejectRecommendationForUser(String communityId, String userId,
ConnectApi.RecommendationActionType action, ConnectApi.RecommendedObjectType objectEnum)

Parameters

communityId
   Type: String
   Use either the ID for a community, internal, or null.

userId
   Type: String
The ID for the context user or the keyword me.

`action`  
Type: `ConnectApi.RecommendationActionType`  
Specifies the action to take on a recommendation. Supported values are:
- `view`—View a static recommendation.

`objectEnum`  
Type: `ConnectApi.RecommendedObjectType`  
Specifies the object type to take action on.
- `Today`—Static recommendations that don’t have an ID, for example, the Today app recommendation.

**Return Value**  
Type: `Void`

### `updateRecommendationAudience(communityId, recommendationAudienceId, recommendationAudience)`  
Update a custom recommendation audience.

**API Version**  
35.0

**Requires Chatter**  
No

**Signature**

```java
public static ConnectApi.RecommendationAudience updateRecommendationAudience(String communityId, String recommendationAudienceId, ConnectApi.RecommendationAudienceInput recommendationAudience)
```

**Parameters**

- `communityId`  
  Type: `String`  
  Use either the ID for a community, internal, or `null`.

- `recommendationAudienceId`  
  Type: `String`  
  ID of the custom recommendation audience.

- `recommendationAudience`  
  Type: `ConnectApi.RecommendationAudienceInput`  
  A `ConnectApi.RecommendationAudienceInput` object.
Return Value
Type: ConnectApi.RecommendationAudience

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

updateRecommendationDefinition(communityId, recommendationDefinitionId, name, title, actionUrl, actionUrlName, explanation)
Update a custom recommendation definition with the specified parameters.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationDefinition updateRecommendationDefinition(String communityId, String recommendationDefinitionId, String name, String title, String actionUrl, String actionUrlName, String explanation recommendationDefinition)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

recommendationDefinitionId
Type: String
ID of the custom recommendation definition.

name
Type: String
Name of the custom recommendation definition. The name is displayed in Setup.

title
Type: String
Title of the custom recommendation definition.

actionUrl
Type: String
URL for acting on the custom recommendation, for example, the URL to join a group.
actionUrlName
   Type: String
   Text label for the action URL in the user interface, for example, “Launch.”

explanation
   Type: String
   Explanation, or body, of the custom recommendation.

Return Value
Type: ConnectApi.RecommendationDefinition

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

updateRecommendationDefinition(communityId, recommendationDefinitionId, recommendationDefinition)
Update a custom recommendation definition.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationDefinition updateRecommendationDefinition(String communityId, String recommendationDefinitionId, ConnectApi.RecommendationDefinitionInput recommendationDefinition)

Parameters
communityId
   Type: String
   Use either the ID for a community, internal, or null.

recommendationDefinitionId
   Type: String
   ID of the custom recommendation definition.

recommendationDefinition
   Type: ConnectApi.RecommendationDefinitionInput
A `ConnectApi.RecommendationDefinitionInput` object containing the properties to update.

Return Value
Type: `ConnectApi.RecommendationDefinition`

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

`updateRecommendationDefinitionPhoto(communityId, recommendationDefinitionId, fileUpload)`
Update a custom recommendation definition photo with a file that hasn’t been uploaded.

API Version
35.0

Requires Chatter
Yes

Signature
`public static ConnectApi.Photo updateRecommendationDefinitionPhoto(String communityId, String recommendationDefinitionId, ConnectApi.BinaryInput fileUpload)`

Parameters

`communityId`
Type: `String`
Use either the ID for a community, internal, or null.

`recommendationDefinitionId`
Type: `String`
ID of the custom recommendation definition.

`fileUpload`
Type: `ConnectApi.BinaryInput`
A file to use as the photo. The content type must be usable as an image.

Return Value
Type: `ConnectApi.Photo`
Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

updateRecommendationDefinitionPhoto(communityId, recommendationDefinitionId, fileId, versionNumber)

Update a custom recommendation definition photo with an uploaded file.

API Version
35.0

Requires Chatter
Yes

Signature
public static ConnectApi.Photo updateRecommendationDefinitionPhoto(String communityId, String recommendationDefinitionId, String fileId, Integer versionNumber)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

recommendationDefinitionId
  Type: String
  ID of the custom recommendation definition.

fileId
  Type: String
  ID of a file already uploaded. The file must be an image, and be smaller than 2 GB.

versionNumber
  Type: Integer
  Version number of the existing file. Specify either an existing version number, or null to get the latest version.

Return Value
Type: ConnectApi.Photo

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.
All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

`updateRecommendationDefinitionPhotoWithAttributes(communityId, recommendationDefinitionId, photo)`

Update a custom recommendation definition photo with an uploaded file that requires cropping.

API Version
35.0

Requires Chatter
Yes

Signature
`public static ConnectApi.Photo updateRecommendationDefinitionPhotoWithAttributes(String communityId, String recommendationDefinitionId, ConnectApi.PhotoInput photo)`

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, internal, or `null`.
- `recommendationDefinitionId`
  Type: `String`
  ID of the custom recommendation definition.
- `photo`
  Type: `ConnectApi.PhotoInput`
  A `ConnectApi.PhotoInput` object specifying the file ID, version number, and cropping parameters.

Return Value
Type: `ConnectApi.Photo`

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

`updateRecommendationDefinitionPhotoWithAttributes(communityId, recommendationDefinitionId, photo, fileUpload)`

Update a custom recommendation definition photo with a file that hasn’t been uploaded and requires cropping.
API Version
35.0

Requires Chatter
Yes

Signature
public static ConnectApi.Photo updateRecommendationDefinitionPhotoWithAttributes(String communityId, String recommendationDefinitionId, ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)

Parameters
- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **recommendationDefinitionId**
  Type: String
  ID of the custom recommendation definition.

- **photo**
  Type: ConnectApi.PhotoInput
  A ConnectApi.PhotoInput object specifying the cropping parameters.

- **fileUpload**
  Type: ConnectApi.BinaryInput
  A file to use as the photo. The content type must be usable as an image.

Return Value
Type: ConnectApi.Photo

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

updateScheduled Recommendation(communityId, scheduledRecommendationId, scheduledRecommendation)

Update a scheduled custom recommendation.

API Version
35.0
Requires Chatter
No

Signature

```java
public static ConnectApi.ScheduledRecommendation updateScheduledRecommendation(String communityId, String scheduledRecommendationId, ConnectApi.ScheduledRecommendationInput scheduledRecommendation)
```

Parameters

- `communityId`
  Type: String
  Use either the ID for a community, internal, or null.

- `scheduledRecommendationId`
  Type: String
  ID of the scheduled custom recommendation.

- `scheduledRecommendation`
  Type: ConnectApi.ScheduledRecommendationInput
  A ConnectApi.ScheduledRecommendationInput object containing the properties to update.

Return Value

Type: ConnectApi.ScheduledRecommendation

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**Ranking scheduled custom recommendations example**

If you have these scheduled custom recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendations</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>3</td>
</tr>
</tbody>
</table>

And you include this information in the Scheduled Custom Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>
The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>

\[
\text{updateScheduledRecommendation}(\text{communityId}, \text{scheduledRecommendationId}, \text{rank}, \text{enabled}, \text{recommendationAudienceId})
\]

Update a scheduled custom recommendation with the specified parameters.

API Version
35.0

Requires Chatter
No

Signature

\[
\text{public static ConnectApi.ScheduledRecommendation updateScheduledRecommendation(String communityId, String scheduledRecommendationId, Integer rank, Boolean enabled, String recommendationAudienceId)}
\]

Parameters

\[\text{communityId}\]

Type: String
Use either the ID for a community, internal, or null.

\[\text{scheduledRecommendationId}\]

Type: String
ID of the scheduled custom recommendation.

\[\text{rank}\]

Type: Integer
Relative rank of the scheduled custom recommendation indicated by ascending whole numbers starting with 1.

Setting the rank is comparable to an insertion into an ordered list. The scheduled custom recommendation is inserted into the position specified by the \text{rank}. The \text{rank} of all the scheduled custom recommendations after it is pushed down. See Ranking scheduled custom recommendations example.

If the specified rank is larger than the size of the list, the scheduled custom recommendation is put at the end of the list. The \text{rank} of the scheduled custom recommendation is the size of the list, instead of the one specified.

If a rank is not specified, the scheduled custom recommendation is put at the end of the list.
**enabled**
Type: Boolean
Indicates whether scheduling is enabled. If true, the custom recommendation is enabled and appears in communities. If false, custom recommendations in feeds in Salesforce mobile web aren’t removed, but no new custom recommendations appear. In Customer Service and Partner Central communities, disabled custom recommendations no longer appear.

**recommendationAudienceId**
Type: String
ID of the custom recommendation definition that this scheduled recommendation schedules.

**Return Value**
Type: `ConnectApi.ScheduledRecommendation`

**Usage**
Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**Ranking scheduled custom recommendations example**
If you have these scheduled custom recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendations</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>3</td>
</tr>
</tbody>
</table>

And you include this information in the Scheduled Custom Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>
Recommendations Test Methods

The following are the test methods for Recommendations. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

IN THIS SECTION:

- `setTestGetRecommendationForUser(communityId, userId, action, objectId, result)`
  Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults, result)`
  Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults, result)`
  Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults, result)`
  Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetRecommendationForUser(communityId, userId, action, objectId, result)`
  Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

`setTestGetRecommendationForUser(communityId, userId, action, objectId, result)`

Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
33.0

Requires Chatter
Yes

Signature

```java
public static Void setTestGetRecommendationForUser(String communityId, String userId,
ConnectApi.RecommendationActionType action, String objectId,
ConnectApi.RecommendationCollection result)
```

Parameters

- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- `userId`
  Type: `String`
  The ID for the context user or the keyword `me`.
**action**

Type: `ConnectApi.RecommendationActionType`

Specifies the action to take on a recommendation.

- **follow**—Follow a file, record, topic, or user.
- **join**—Join a group.
- **view**—View a file, group, article, record, user, custom, or static recommendation.

**objectId**

Type: `String`

Specifies the object to take action on.

- If `action` is **follow**, `objectId` is a user ID, file ID, record ID, or topic ID (version 36.0 and later).
- If `action` is **join**, `objectId` is a group ID.
- If `action` is **view**, `objectId` is a user ID, file ID, group ID, record ID, custom recommendation ID, the enum `Today` for static recommendations, or an article ID (version 37.0 and later).

**result**

Type: `ConnectApi.RecommendationCollection`

The object containing test data.

Return Value

Type: `Void`

SEE ALSO:

- `getRecommendationForUser(communityId, userId, action, objectId)`
- Testing ConnectApi Code

**setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults, result)**

Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

36.0

Requires Chatter

Yes

Signature

```java
public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults, ConnectApi.RecommendationCollection result)
```
Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or null.

**userId**
Type: String
The ID for the context user or the keyword me.

**contextAction**
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
- follow
- view

Use **contextAction** and **contextObjectId** together to get new recommendations based on the action just performed.
If you don’t want recommendations based on a recent action, specify null.

**contextObjectId**
Type: String
ID of the object that the context user just performed an action on.
- If **contextAction** is follow, **contextObjectId** is a user ID, file ID, record ID, or topic ID.
- If **contextAction** is view, **contextObjectId** is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use **contextAction** and **contextObjectId** together to get new recommendations based on the action just performed.
If you don’t want recommendations based on a recent action, specify null.

**channel**
Type: ConnectApi.RecommendationChannel
A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show
recommendations based on time of day or geographic locations. Values are:
- CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define
  custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define
  custom channels.
- CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define
  custom channels.
- CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define
  custom channels.
- CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define
  custom channels.
- DefaultChannel—Default recommendation channel. Recommendations appear by default on the Home and Question
  Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce
  mobile web and anywhere community managers add recommendations using Experience Builder.

**maxResults**
Type: Integer
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

result
Type: ConnectApi.RecommendationCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults)
Testing ConnectApi Code

setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults, result)
Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
36.0

Requires Chatter
Yes

Signature
public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults, ConnectApi.RecommendationCollection result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
• follow—Follow a file, record, topic, or user.
• join—Join a group.
• view—View a file, group, article, record, user, custom, or static recommendation.

contextAction
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
• follow
• view

Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

calendar
Type: ConnectApi.RecommendationCollection

contextObjectId
Type: String
ID of the object that the context user just performed an action on.
• If contextAction is follow, contextObjectId is a user ID, file ID, record ID, or topic ID.
• If contextAction is view, contextObjectId is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

channel
Type: ConnectApi.RecommendationChannel
A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:
• CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
• CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• DefaultChannel—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.

maxResults
Type: Integer
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

result
Type: ConnectApi.RecommendationCollection
The object containing test data.
Return Value
Type: Void

SEE ALSO:
  getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults)

Testing ConnectApi Code

setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults, result)

Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
36.0

Requires Chatter
Yes

Signature
public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectCategory, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults, ConnectApi.RecommendationCollection result)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

userId
  Type: String
  The ID for the context user or the keyword me.

action
  Type: ConnectApi.RecommendationActionType
  Specifies the action to take on a recommendation.
  • follow—Follow a file, record, topic, or user.
  • join—Join a group.
  • view—View a file, group, article, record, user, custom, or static recommendation.

objectCategory
  Type: String
• If action is follow, objectCategory is users, files, records, or topics.
• If action is join, objectCategory is groups.
• If action is view, objectCategory is users, files, groups, records, custom, apps, or articles (version 37.0 and later).

You can also specify a key prefix, the first three characters of the object ID, as the objectCategory. Valid values are:
• If action is follow, objectCategory is 005 (users), 069 (files), 0TO (topics), or 001 (accounts), for example.
• If action is join, objectCategory is 0F9 (groups).
• If action is view, objectCategory is 005 (users), 069 (files), 0F9 (groups), 0RD (custom recommendations), T (static recommendations), 001 (accounts), or kA0 (articles), for example, (version 37.0 and later).

countextAction
   Type: ConnectApi.RecommendationActionType
   Action that the context user just performed. Supported values are:
   • follow
   • view

Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

countextObjectId
   Type: String
   ID of the object that the context user just performed an action on.
   • If contextAction is follow, contextObjectId is a user ID, file ID, record ID, or topic ID.
   • If contextAction is view, contextObjectId is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

countchannel
   Type: ConnectApi.RecommendationChannel
   A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:
   • CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
   • CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
   • CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
   • CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
   • CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
   • DefaultChannel—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.
**maxResults**
Type: **Integer**
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

**result**
Type: **ConnectApi.RecommendationCollection**
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults)
Testing ConnectApi Code

**Retired Recommendations Methods**
The following methods for Recommendations are retired.

IN THIS SECTION:
createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId)
Create a scheduled custom recommendation with the specified parameters.

getRecommendationsForUser(communityId, userId, action, objectCategory, contextObjectId, maxResults)
Get the Chatter recommendations, such as user, group, file, and record recommendations for the context user. Get the custom and static recommendations for the context user.

getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults)
Get the Chatter, custom, and static recommendations for the context user for the specified action.

getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults)
Get the Chatter, custom, and static recommendations for the context user for the specified action and object category.

getscheduledRecommendations(communityId)
Get scheduled custom recommendations.

setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults, result)
Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults, result)
Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults, result)
Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.
createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId)

Create a scheduled custom recommendation with the specified parameters.

API Version
35.0 only

⚠️ Important: In version 36.0 and later, use `createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId, channel)`.

Requires Chatter
No

Signature
`public static ConnectApi.ScheduledRecommendation createScheduledRecommendation(String communityId, String recommendationDefinitionId, Integer rank, Boolean enabled, String recommendationAudienceId)`

Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **recommendationDefinitionId**
  Type: `String`
  ID of the custom recommendation definition.

- **rank**
  Type: `Integer`
  Relative rank of the scheduled custom recommendation indicated by ascending whole numbers starting with 1.
  Setting the rank is comparable to an insertion into an ordered list. The scheduled custom recommendation is inserted into the position specified by the `rank`. The `rank` of all the scheduled custom recommendations after it is pushed down. See Ranking scheduled custom recommendations example.
  If the specified `rank` is larger than the size of the list, the scheduled custom recommendation is put at the end of the list. The `rank` of the scheduled custom recommendation is the size of the list, instead of the one specified.
  If a `rank` is not specified, the scheduled custom recommendation is put at the end of the list.

- **enabled**
  Type: `Boolean`
  Indicates whether scheduling is enabled. If `true`, the custom recommendation is enabled and appears in communities. If `false`, custom recommendations in feeds in Salesforce mobile web aren’t removed, but no new custom recommendations appear. In Customer Service and Partner Central communities, disabled custom recommendations no longer appear.

- **recommendationAudienceId**
  Type: `String`
  ID of the custom recommendation definition that this scheduled recommendation schedules.
Return Value

Type: `ConnectApi.ScheduledRecommendation`

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**Ranking scheduled custom recommendations example**

If you have these scheduled custom recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendations</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>3</td>
</tr>
</tbody>
</table>

And you include this information in the Scheduled Custom Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>

**getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults)**

Get the Chatter recommendations, such as user, group, file, and record recommendations for the context user. Get the custom and static recommendations for the context user.

API Version

33.0–35.0

**Important:** In version 36.0 and later, use `getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults).`
Requires Chatter
Yes

Signature

```java
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults)
```

Parameters

**communityId**
Type: String
Use either the ID for a community, internal, or `null`.

**userId**
Type: String
The ID for the context user or the keyword `me`.

**contextAction**
Type: `ConnectApi.RecommendationActionType`
Action that the context user just performed. Supported values are:
- `follow`
- `view`

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**contextObjectId**
Type: String
ID of the object that the context user just performed an action on.
- If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, or record ID.
- If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, or record ID.

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**maxResults**
Type: Integer
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

Return Value

Type: `ConnectApi.RecommendationCollection`

Usage

If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam’s user ID for `contextObjectId`. 
This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults, result)`
- Testing ConnectApi Code

`getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults)`

Get the Chatter, custom, and static recommendations for the context user for the specified action.

API Version

33.0–35.0

Important: In version 36.0 and later, use `getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults)`.

Requires Chatter

Yes

Signature

```java
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults)
```
Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

userId
  Type: String
  The ID for the context user or the keyword me.

action
  Type: ConnectApi.RecommendationActionType
  Specifies the action to take on a recommendation.
  • follow—Follow a file, record, topic, or user.
  • join—Join a group.
  • view—View a file, group, article, record, user, custom, or static recommendation.

categoryAction
  Type: ConnectApi.RecommendationActionType
  Action that the context user just performed. Supported values are:
  • follow
  • view

  Use categoryAction and categoryId to get new recommendations based on the action just performed.
  If you don’t want recommendations based on a recent action, specify null.

categoryObjectId
  Type: String
  ID of the object that the context user just performed an action on.
  • If categoryAction is follow, categoryId is a user ID, file ID, or record ID.
  • If categoryAction is view, categoryId is a user ID, file ID, group ID, or record ID.

  Use categoryAction and categoryId to get new recommendations based on the action just performed.
  If you don’t want recommendations based on a recent action, specify null.

maxResults
  Type: Integer
  Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

Return Value

Type: ConnectApi.RecommendationCollection

Usage

If you want to get recommendations based on a recent action performed, such as following a user, use categoryAction and categoryId together. For example, if you just followed Pam, you specify follow for categoryAction and Pam’s user ID for categoryId.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults, result)

Testing ConnectApi Code

getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults)

Get the Chatter, custom, and static recommendations for the context user for the specified action and object category.

API Version
33.0–35.0

⚠️ Important: In version 36.0 and later, use getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults).

Requires Chatter
Yes

Signature

public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectCategory, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults)
Parameters

`communityId`  
Type: String  
Use either the ID for a community, internal, or `null`.

`userId`  
Type: String  
The ID for the context user or the keyword `me`.

`action`  
Type: `ConnectApi.RecommendationActionType`  
Specifies the action to take on a recommendation.
  • `follow`—Follow a file, record, topic, or user.
  • `join`—Join a group.
  • `view`—View a file, group, article, record, user, custom, or static recommendation.

`objectCategory`  
Type: String  
• If `action` is `follow`, `objectCategory` is `users`, `files`, or `records`.
• If `action` is `join`, `objectCategory` is `groups`.
• If `action` is `view`, `objectCategory` is `users`, `files`, `groups`, `records`, `custom`, or `apps`.
  You can also specify a key prefix, the first three characters of the object ID, as the `objectCategory`. Valid values are:
  • If `action` is `follow`, `objectCategory` is `005` (users), `069` (files), or `001` (accounts), for example.
  • If `action` is `join`, `objectCategory` is `0F9` (groups).
  • If `action` is `view`, `objectCategory` is `005` (users), `069` (files), `0F9` (groups), `0RD` (custom recommendations), `T` (static recommendations), or `001` (accounts), for example.

`contextAction`  
Type: `ConnectApi.RecommendationActionType`  
Action that the context user just performed. Supported values are:
  • `follow`
  • `view`
  
  Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed.
  If you don’t want recommendations based on a recent action, specify `null`.

`contextObjectId`  
Type: String  
ID of the object that the context user just performed an action on.
  • If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, or record ID.
  • If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, or record ID.
  
  Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed.
  If you don’t want recommendations based on a recent action, specify `null`.

`maxResults`  
Type: `Integer`  
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.
Return Value
Type: `ConnectApi.RecommendationCollection`

Usage
If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam’s user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults, result)`

Testing ConnectApi Code

`getScheduledRecommendations(communityId)`
Get scheduled custom recommendations.

API Version
35.0 only

⚠️ Important: In version 36.0 and later, use `getScheduledRecommendations(communityId, channel)`.

Requires Chatter
No
**getScheduledRecommendations**

Signature

```java
public static ConnectApi.ScheduledRecommendationPage getScheduledRecommendations(String communityId)
```

Parameters

`communityId`
- Type: `String`
- Use either the ID for a community, `internal`, or `null`.

Return Value

Type: `ConnectApi.ScheduledRecommendationPage`

**Usage**

Community managers can access, create, and delete audiences, definitions, and schedules for custom community recommendations. (Community managers are users with the Create and Set Up Communities or Manage Communities permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**setTestGetRecommendationsForUser**

Signature

```java
public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults, ConnectApi.RecommendationCollection result)
```

Parameters

`communityId`
- Type: `String`
- Use either the ID for a community, `internal`, or `null`.

`userId`
- Type: `String`
- The ID for the context user or the keyword `me`.

API Version

33.0–35.0

Requires Chatter

Yes

**Usage**

Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.
contextAction
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
- follow
- view

Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

contextObjectId
Type: String
ID of the object that the context user just performed an action on.
- If contextAction is follow, contextObjectId is a user ID, file ID, or record ID.
- If contextAction is view, contextObjectId is a user ID, file ID, group ID, or record ID.

Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

maxResults
Type: Integer
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

result
Type: ConnectApi.RecommendationCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults)
Testing ConnectApi Code

setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults, result)
Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
33.0–35.0

Requires Chatter
Yes
Signature

```java
public static Void setTestGetRecommendationsForUser(String communityId, String userId,
ConnectApi.RecommendationActionType action, ConnectApi.RecommendationActionType
contextAction, String contextObjectId, Integer maxResults,
ConnectApi.RecommendationCollection result)
```

Parameters

**communityId**
- **Type:** String
  - Use either the ID for a community, internal, or null.

**userId**
- **Type:** String
  - The ID for the context user or the keyword me.

**action**
- **Type:** ConnectApi.RecommendationActionType
  - Specifies the action to take on a recommendation.
  - • follow—Follow a file, record, topic, or user.
  - • join—Join a group.
  - • view—View a file, group, article, record, user, custom, or static recommendation.

**contextAction**
- **Type:** ConnectApi.RecommendationActionType
  - Action that the context user just performed. Supported values are:
  - • follow
  - • view

  Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed.
  - If you don’t want recommendations based on a recent action, specify null.

**contextObjectId**
- **Type:** String
  - ID of the object that the context user just performed an action on.
  - • If `contextAction` is follow, `contextObjectId` is a user ID, file ID, or record ID.
  - • If `contextAction` is view, `contextObjectId` is a user ID, file ID, group ID, or record ID.

  Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed.
  - If you don’t want recommendations based on a recent action, specify null.

**maxResults**
- **Type:** Integer
  - Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

**result**
- **Type:** ConnectApi.RecommendationCollection
  - The object containing test data.
Return Value
Type: Void

SEE ALSO:
getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults)

Testing ConnectApi Code

setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults, result)

Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
33.0–35.0

Requires Chatter
Yes

Signature
public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectCategory, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults, ConnectApi.RecommendationCollection result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
  • follow—Follow a file, record, topic, or user.
  • join—Join a group.
  • view—View a file, group, article, record, user, custom, or static recommendation.

objectCategory
Type: String
  • If action is follow, objectCategory is users, files, or records.
- If `action` is `join`, `objectCategory` is `groups`.
- If `action` is `view`, `objectCategory` is `users`, `files`, `groups`, `records`, `custom`, or `apps`.

You can also specify a key prefix, the first three characters of the object ID, as the `objectCategory`. Valid values are:

- If `action` is `follow`, `objectCategory` is `005` (users), `069` (files), or `001` (accounts), for example.
- If `action` is `join`, `objectCategory` is `0F9` (groups).
- If `action` is `view`, `objectCategory` is `005` (users), `069` (files), `0F9` (groups), `0RD` (custom recommendations), `T` (static recommendations), or `001` (accounts), for example.

`contextAction`

*Type:* `ConnectApi.RecommendationActionType`

Action that the context user just performed. Supported values are:

- `follow`
- `view`

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

`contextObjectId`

*Type:* `String`

ID of the object that the context user just performed an action on.

- If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, or record ID.
- If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, or record ID.

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

`maxResults`

*Type:* `Integer`

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

`result`

*Type:* `ConnectApi.RecommendationCollection`

The object containing test data.

Return Value

*Type:* Void

SEE ALSO:

- `getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults)`
- Testing ConnectApi Code

**Records Class**

Access information about record motifs, which are small icons used to distinguish record types in the Salesforce UI.
Namespace
ConnectApi

Records Methods
The following are methods for Records. All methods are static.

IN THIS SECTION:
- **getMotif(communityId, idOrPrefix)**
  Get a motif that contains the URLs for a set of small, medium, and large motif icons for a record. It can also contain a base color for the record.
- **getMotifBatch(communityId, idOrPrefixList)**
  Get a motif for a list of objects.

**getMotif(communityId, idOrPrefix)**
Get a motif that contains the URLs for a set of small, medium, and large motif icons for a record. It can also contain a base color for the record.

API Version
28.0

Requires Chatter
No

Signature
```java
public static ConnectApi.Motif getMotif(String communityId, String idOrPrefix)
```

Parameters
- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **idOrPrefix**
  Type: String
  An ID or key prefix.

Return Value
Type: ConnectApi.Motif

Usage
Each Salesforce record type has its own set of motif icons.
getMotifBatch(communityId, idOrPrefixList)

Get a motif for a list of objects.

API Version
31.0

Requires Chatter
No

Signature
public static ConnectApi.BatchResult[] getMotifBatch(String communityId, List<String> idOrPrefixList)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

idOrPrefixList
  Type: List<String>
  A list of object IDs or prefixes.

Return Value
Type: ConnectApi.BatchResult[]

Example

```
String communityId = null;
List<String> prefixIds = new List<String> { '001', '012', '069' };

// Get info about the motifs of all records in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.Records.getMotifBatch(communityId, prefixIds);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the color of each motif.
        ConnectApi.Motif motif;
        if (batchResult.getResult() instanceof ConnectApi.Motif) {
            motif = (ConnectApi.Motif) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(motif.color);
    }
```
else {
    // Operation failed. Print errors.
    System.debug('FAILURE');
    System.debug(batchResult.getErrorMessage());
}

### SalesforceInbox Class
Access information about Automated Activity Capture, which is available in Einstein and Salesforce Inbox.

### Namespace
**ConnectApi**

### SalesforceInbox Methods
The following are methods for `SalesforceInbox`. All methods are static.

#### IN THIS SECTION:
- `shareActivity(activityId, sharingInfo)`
  - Share emails or events with certain groups of users.

#### shareActivity(activityId, sharingInfo)
Share emails or events with certain groups of users.

**API Version**
39.0

**Requires Chatter**
No

**Signature**
```java
public static ConnectApi.ActivitySharingResult shareActivity(String activityId,
                                                            ConnectApi.ActivitySharingInput sharingInfo)
```

**Parameters**
- **activityId**
  - Type: `String`
  - The ID of the activity.
- **sharingInfo**
  - Type: `ConnectApi.ActivitySharingInput`
A `ConnectApi.ActivitySharingInput` object.

Return Value

Type: `ConnectApi.ActivitySharingResult`

Usage

This method is a feature of both Sales Cloud Einstein and Inbox. It lets users connect their email and calendar to Salesforce. Then, their emails and events are automatically added to related Salesforce records. Users can specify who their individual emails and events are shared with.

**SmartDataDiscovery Class**

Get predictions on Salesforce objects.

Use the `ConnectApi.SmartDataDiscovery.predict` method to get predictions on Salesforce objects. For more information, see [Get Predictions in Apex](#).

**SocialEngagement Class**

Manage information about social accounts or fan pages for social networks.

**Namespace**

`ConnectApi`

**SocialEngagement Methods**

The following are methods for `SocialEngagement`. All methods are static.

**IN THIS SECTION:**

- `deleteSocialPost(socialPostId, socialAccountId)`
  Delete a social post from its social network.

- `followSocialPersona(socialPersonaId, socialAccountId)`
  Follow a social persona in its social network.

- `followSocialPostPersona(socialPostId, socialAccountId)`
  Follow a social persona on a social post in its social network.

- `getIntents(socialPostId)`
  Get available intents for a social post.

- `getManagedSocialAccount(id)`
  Get a managed social account that is in the org and assigned to the user.

- `getManagedSocialAccounts()`
  Gets a list of managed social accounts that are in the org and assigned to the user.

- `getManagedSocialAccounts(socialNetwork)`
  Get a list of managed social accounts that are in the org and assigned to the user.
getRelationship(id, socialPersonaId)
Get the follow relationship between a managed social account and a social persona.

hideSocialPost(socialPostId, socialAccountId)
Hide a social post in its social network.

likeSocialPost(socialPostId, socialAccountId)
Like a social post in its social network.

massApprove(massApproval)
Approve or reject the publishing of a large number of social posts.

recallApproval(socialPostId)
Recall an approval request to publish a social post.

unfollowSocialPersona(socialPersonaId, socialAccountId)
Stop following a social persona in its social network.

unfollowSocialPostPersona(socialPostId, socialAccountId)
Stop following a social persona of a social post in its social network.

unhideSocialPost(socialPostId, socialAccountId)
Unhide a social post in its social network.

unlikeSocialPost(socialPostId, socialAccountId)
Unlike a social post in its social network.

deleteSocialPost(socialPostId, socialAccountId)
Delete a social post from its social network.

Note: Deleting a social post from its social network doesn't delete the record from Salesforce.

API Version
46.0

Requires Chatter
No

Signature
public static ConnectApi.DeleteSocialPostIntent deleteSocialPost(String socialPostId, String socialAccountId)

Parameters
socialPostId
Type: String
ID of the social post to delete.

socialAccountId
Type: String
Follow a social persona in its social network.

API Version
45.0

Requires Chatter
No

Signature
public static ConnectApi.FollowSocialPersonaIntent followSocialPersona(String socialPersonaId, String socialAccountId)

Parameters
socialPersonaId
  Type: String
  ID of the social persona to follow.
socialAccountId
  Type: String
  ID of the social account that follows the social persona.

Return Value
Type: ConnectApi.FollowSocialPersonaIntent

Follow a social persona on a social post in its social network.

API Version
45.0

Requires Chatter
No
public static ConnectApi.FollowSocialPersonaIntent followSocialPostPersona(String socialPostId, String socialAccountId)

Parameters

socialPostId
Type: String
ID of the social post authored by the social persona to follow.

socialAccountId
Type: String
ID of the social account that follows the social persona.

Return Value
Type: ConnectApi.FollowSocialPersonaIntent

getIntents(socialPostId)
Get available intents for a social post.

API Version
45.0

Requires Chatter
No

Signature
public static ConnectApi.SocialPostIntents getIntents(String socialPostId)

Parameters

socialPostId
Type: String
ID of a social post.

Return Value
Type: ConnectApi.SocialPostIntents

getManagedSocialAccount(id)
Get a managed social account that is in the org and assigned to the user.
API Version
44.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedSocialAccount getManagedSocialAccount(String id)

Parameters
id
Type: String
Description: Internal SFDC ID for this managed social account.

Return Value
Type: ConnectApi.ManagedSocialAccount

getManagedSocialAccounts()
Gets a list of managed social accounts that are in the org and assigned to the user.

API Version
44.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedSocialAccounts getManagedSocialAccounts()

Return Value
Type: ConnectApi.ManagedSocialAccounts

getManagedSocialAccounts(socialNetwork)
Get a list of managed social accounts that are in the org and assigned to the user.

API Version
44.0
Requires Chatter

No

Signature

```java
public static ConnectApi.ManagedSocialAccounts
getManagedSocialAccounts(ConnectApi.SocialNetworkProvider socialNetwork)
```

Parameters

socialNetwork

- **Type:** `ConnectApi.SocialNetworkProvider`
- **Description:** Filters results based on the social network. Values are:
  - Facebook
  - GooglePlus
  - Instagram
  - InstagramBusiness
  - KakaoTalk
  - Kik
  - Line
  - LinkedIn
  - Messenger
  - Other
  - Pinterest
  - QQ
  - Rypple
  - SinaWeibo
  - SMS
  - Snapchat
  - Telegram
  - Twitter
  - VKontakte
  - WeChat
  - WhatsApp
  - YouTube

Return Value

- **Type:** `ConnectApi.ManagedSocialAccounts`

```java
getRelationship(id, socialPersonaId)
```

Get the follow relationship between a managed social account and a social persona.
**getRelationship(id, socialPersonaId)**

API Version
46.0

Requires Chatter
No

Signature
public static ConnectApi.SocialAccountRelationship getRelationship(String id, String socialPersonaId)

Parameters

*id*
  Type: String
  ID of the managed social account.

*socialPersonaId*
  Type: String
  ID of the social persona.

Return Value
Type: ConnectApi.SocialAccountRelationship

**hideSocialPost(socialPostId, socialAccountId)**

Hide a social post in its social network.

API Version
46.0

Requires Chatter
No

Signature
public static ConnectApi.HideSocialPostIntent hideSocialPost(String socialPostId, String socialAccountId)

Parameters

*socialPostId*
  Type: String
  ID of the social post to hide.

*socialAccountId*
  Type: String
ID of the social account that hides the post.

Return Value
Type: `ConnectApi.HideSocialPostIntent`

`likeSocialPost(socialPostId, socialAccountId)`
Like a social post in its social network.

API Version
46.0

Requires Chatter
No

Signature
`public static ConnectApi.LikeSocialPostIntent likeSocialPost(String socialPostId, String socialAccountId)`

Parameters
`socialPostId`
Type: `String`
ID of the social post to like.

`socialAccountId`
Type: `String`
ID of the social account that likes the post.

Return Value
Type: `ConnectApi.LikeSocialPostIntent`

`massApprove(massApproval)`
Approve or reject the publishing of a large number of social posts.

API Version
46.0

Requires Chatter
No
Signature

```java
public static ConnectApi.SocialPostMassApprovalOutput
massApprove(ConnectApi.SocialPostMassApprovalInput massApproval)
```

Parameters

`massApproval`
Type: `ConnectApi.SocialPostMassApprovalInput`
A `ConnectApi.SocialPostMassApprovalInput` body that includes a list of social post IDs and the action to approve or reject publishing them.

Return Value

Type: `ConnectApi.SocialPostMassApprovalOutput`

`recallApproval(socialPostId)`
Recall an approval request to publish a social post.

API Version

46.0

Requires Chatter

No

Signature

```java
public static Void recallApproval(String socialPostId)
```

Parameters

`socialPostId`
Type: `String`
ID of the social post.

Return Value

Type: Void

`unfollowSocialPersona(socialPersonaId, socialAccountId)`
Stop following a social persona in its social network.

API Version

45.0
Requires Chatter
No

Signature

```java
public static Void unfollowSocialPersona(String socialPersonaId, String socialAccountId)
```

Parameters

- `socialPersonaId`
  
  Type: String
  
  ID of the social persona to stop following.

- `socialAccountId`
  
  Type: String
  
  ID of the social account that stops following the social persona.

Return Value

Type: Void

---

`unfollowSocialPostPersona(socialPostId, socialAccountId)`

Stop following a social persona of a social post in its social network.

API Version

45.0

Requires Chatter
No

Signature

```java
public static Void unfollowSocialPostPersona(String socialPostId, String socialAccountId)
```

Parameters

- `socialPostId`
  
  Type: String
  
  ID of the social post authored by the social persona to stop following.

- `socialAccountId`
  
  Type: String
  
  ID of the social account that stops following the social persona.

Return Value

Type: Void
unhideSocialPost(socialPostId, socialAccountId)
Unhide a social post in its social network.

API Version
46.0

Requires Chatter
No

Signature
public static Void unhideSocialPost(String socialPostId, String socialAccountId)

Parameters
socialPostId
Type: String
ID of the social post to unhide.
socialAccountId
Type: String
ID of the social account that unhides the post.

Return Value
Type: Void

unlikeSocialPost(socialPostId, socialAccountId)
Unlike a social post in its social network.

API Version
46.0

Requires Chatter
No

Signature
public static Void unlikeSocialPost(String socialPostId, String socialAccountId)

Parameters
socialPostId
Type: String
ID of the social post to unlike.
**socialAccountId**
Type: String
ID of the social account that unlikes the post.

**Return Value**
Type: Void

**Survey Class**
Send survey invitations by email.

**Namespace**
ConnectApi

**Survey Methods**
These methods are for Survey. All methods are static.

IN THIS SECTION:

sendSurveyInvitationEmail(surveyID, SurveyEmailInput)
Email survey invitations to up to 300 participants. You can email either leads, contacts, or users in your org. Either a link to launch the survey or a question can be embedded in the email invitations.

**sendSurveyInvitationEmail(surveyID, SurveyEmailInput)**
Email survey invitations to up to 300 participants. You can email either leads, contacts, or users in your org. Either a link to launch the survey or a question can be embedded in the email invitations.

**API Version**
50.0

**Requires Chatter**
No

**Signature**

```
public static ConnectApi.SurveyInvitationEmailOutput sendSurveyInvitationEmail(String surveyID, ConnectApi.SurveyInvitationEmailInput SurveyEmailInput)
```

**Parameters**

- **surveyID**
  Type: String
  ID of the survey.
SurveyEmailInput

Type: ConnectApi.SurveyInvitationEmailInput
A ConnectApi.SurveyInvitationEmailInput object.

Return Value
Type: ConnectApi.SurveyInvitationEmailOutput

Topics Class
Access information about topics, such as their descriptions, the number of people talking about them, related topics, and information about groups contributing to the topic. Update a topic’s name or description, merge topics, and add and remove topics from records and feed items.

Namespace
ConnectApi

Topics Methods
The following are methods for Topics. All methods are static.

IN THIS SECTION:
  assignTopic(communityId, recordId, topicId)
  Assign a topic to a record or feed item.
  assignTopicByName(communityId, recordId, topicName)
  Assign a topic to a record or feed item.
  createTopic(communityId, name, description)
  Create a topic.
  createTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory, topicNames)
  Create topic and article assignment rules by data category.
  deleteTopic(communityId, topicId)
  Delete a topic.
  getGroupsRecentlyTalkingAboutTopic(communityId, topicId)
  Get information about the five groups that most recently contributed to a topic.
  getRecentlyTalkingAboutTopicsForGroup(communityId, groupId)
  Get up to five topics most recently used in a group.
  getRecentlyTalkingAboutTopicsForUser(communityId, userId)
  Get up to five topics most recently used by a user.
  getRelatedTopics(communityId, topicId)
  Get up to five topics most closely related to a topic.
  getTopic(communityId, topicId)
  Get a topic.
getTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory)
Get topic and article assignment rules by data category.

getTopics(communityId, recordId)
Get the first page of topics assigned to a record or feed item.

getTopics(communityId)
Get the first page of topics for the org or community.

getTopics(communityId, sortParam)
Get the first page of sorted topics for the org or community.

getTopics(communityId, pageParam, pageSize)
Get a page of topics.

getTopics(communityId, pageParam, pageSize, sortParam)
Get a page of sorted topics.

getTopics(communityId, q, sortParam)
Get the sorted topics that match the search criteria.

getTopics(communityId, q, pageParam, pageSize)
Get a page of topics that match the search criteria.

getTopics(communityId, q, pageParam, pageSize, sortParam)
Get a page of sorted topics that match the search criteria.

getTopics(communityId, q, exactMatch)
Get the topic that matches the exact, case-insensitive name.

getTopicsOrFallBackToRenamedTopics(communityId, q, exactMatch, fallBackToRenamedTopics)
Get the most recent renamed topic match, if there isn't an exact match.

getTopicSuggestions(communityId, recordId, maxResults)
Get up to a specified number of suggested topics for a record or feed item.

getTopicSuggestions(communityId, recordId)
Get suggested topics for a record or feed item.

getTopicSuggestionsForText(communityId, text, maxResults)
Get up to a specified number of suggested topics for a string of text.

getTopicSuggestionsForText(communityId, text)
Get suggested topics for a string of text.

getTrendingTopics(communityId)
Get trending topics for the org or community.

getTrendingTopics(communityId, maxResults)
Get up to a specified number of trending topics for the org or community.

mergeTopics(communityId, topicId, idsToMerge)
Merge up to five secondary topics with a primary topic.

reassignTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory, topicNames)
Reassign topic and article assignment rules by data category by deleting the existing rules and creating new rules.

reassignTopicsByName(communityId, recordId, topicNames)
Reassign all the topics on a record or feed item, that is, remove all the assigned topics on a record or feed item and add topics. Optionally, provide a list of suggested topics to assign to a record or feed item to improve future topic suggestions.
unassignTopic(communityId, recordId, topicId)
Remove a topic from a record or feed item.

updateTopic(communityId, topicId, topic)
Update the description or name of a topic or merge up to five secondary topics with a primary topic.

updateTopicsForArticlesInDataCategory(communityId, dataCategoryGroup, dataCategory, articleTopicAssignmentJob)
Assign topics to articles and unassign topics from articles in a data category.

assignTopic(communityId, recordId, topicId)
Assign a topic to a record or feed item.

API Version
29.0

Requires Chatter
No

Signature
public static ConnectApi.Topic assignTopic(String communityId, String recordId, String topicId)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

recordId
  Type: String
  The ID for a record or feed item.

topicId
  Type: String
  The ID for a topic.

Return Value
Type: ConnectApi.Topic

Usage
Only users with the Assign Topics permission can add existing topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

assignTopicByName(communityId, recordId, topicName)
Assign a topic to a record or feed item.
API Version
29.0

Requires Chatter
No

Signature
public static ConnectApi.Topic assignTopicByName(String communityId, String recordId, String topicName)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

recordId
  Type: String
  The ID of the record or feed item to which to assign the topic.

topicName
  Type: String
  The name of a new or existing topic.

Return Value
Type: ConnectApi.Topic

Usage
Only users with the Assign Topics permission can add existing topics to records or feed items. Only users with the Create Topics permission can add new topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

createTopic(communityId, name, description)
Create a topic.

API Version
36.0

Requires Chatter
No
Signature

public static ConnectApi.Topic createTopic(String communityId, String name, String description)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

name
Type: String
The name of the topic.

description
Type: String
The description of the topic.

Return Value

Type: ConnectApi.Topic

Usage

Only users with the Create Topics permission can create a topic.

createTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory, topicNames)
Create topic and article assignment rules by data category.

API Version

40.0

Requires Chatter

No

Signature

public static ConnectApi.TopicPage createTopicDataCategoryRules(String communityId, String dataCategoryGroup, String dataCategory, ConnectApi.TopicNamesInput topicNames)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.
dataCategoryGroup
Type: String
The data category group used by articles.

dataCategory
Type: String
The data category used by articles.

topicNames
Type: ConnectApi.TopicNamesInput
A ConnectApi.TopicNamesInput object with the names of topics to assign to articles in a data category.

Return Value
Type: ConnectApi.TopicPage

deleteTopic(communityId, topicId)
Delete a topic.

API Version
29.0

Requires Chatter
No

Signature
public static Void deleteTopic(String communityId, String topicId)

Parameters
communityId
Type: String,
Use either the ID for a community, internal, or null.
topicId
Type: String
The ID for a topic.

Return Value
Type: Void

Usage
Only users with the Delete Topics or Modify All Data permission can delete topics.
Topic deletion is asynchronous. If a topic is requested before the deletion completes, the response is successful and the `isBeingDeleted` property of `ConnectApi.Topic` is `true` in version 33.0 and later. If a topic is requested after the deletion completes, the response is `ConnectApi.NotFoundException`.

**getGroupsRecentlyTalkingAboutTopic(communityId, topicId)**

Get information about the five groups that most recently contributed to a topic.

API Version

29.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ChatterGroupSummaryPage
getGroupsRecentlyTalkingAboutTopic(String communityId, String topicId)
```

Parameters

- `communityId`
  - Type: String
  - Use either the ID for a community, `internal`, or `null`.

- `topicId`
  - Type: String
  - The ID for a topic.

Return Value

Type: `ConnectApi.ChatterGroupSummaryPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetGroupsRecentlyTalkingAboutTopic(communityId, topicId, result)`
- Testing ConnectApi Code
getRecentlyTalkingAboutTopicsForGroup(communityId, groupId)

Get up to five topics most recently used in a group.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.TopicPage getRecentlyTalkingAboutTopicsForGroup(String communityId, String groupId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

Return Value
Type: ConnectApi.TopicPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
    setTestGetRecentlyTalkingAboutTopicsForGroup(communityId, groupId, result)
    Testing ConnectApi Code

getRecentlyTalkingAboutTopicsForUser(communityId, userId)

Get up to five topics most recently used by a user.
API Version
29.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.TopicPage getRecentlyTalkingAboutTopicsForUser(String communityId, String userId)

Parameters
communityId
    Type: String
    Use either the ID for a community, internal, or null.

userId
    Type: String
    The ID for a user.

Return Value
Type: ConnectApi.TopicPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
    setTestGetRecentlyTalkingAboutTopicsForUser(communityId, userId, result)
Testing ConnectApi Code

getRelatedTopics(communityId, topicId)
Get up to five topics most closely related to a topic.
Two topics that are assigned to the same feed item at least three times are related.

API Version
29.0
Available to Guest Users
32.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage getRelatedTopics(String communityId, String topicId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

topicId
Type: String
The ID for a topic.

Return Value
Type: ConnectApi.TopicPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRelatedTopics(communityId, topicId, result)
Testing ConnectApi Code

getTopic(communityId, topicId)
Get a topic.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No
public static ConnectApi.Topic getTopic(String communityId, String topicId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

topicId
Type: String
The ID for a topic.

Return Value
Type: ConnectApi.Topic

getTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory)
Get topic and article assignment rules by data category.

API Version
40.0

Requires Chatter
No

public static ConnectApi.TopicPage getTopicDataCategoryRules(String communityId, String dataCategoryGroup, String dataCategory)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

dataCategoryGroup
Type: String
The data category group used by articles.

dataCategory
Type: String
The data category used by articles.
Return Value
Type: `ConnectApi.TopicPage`

`getTopics(communityId, recordId)`
Get the first page of topics assigned to a record or feed item.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
```
public static ConnectApi.TopicPage getTopics(String communityId, String recordId)
```

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.

`recordId`
Type: `String`
The ID for a record or feed item.

Return Value
Type: `ConnectApi.TopicPage`

Usage
Administrators must enable topics for objects before users can add topics to records of that object type.

`getTopics(communityId)`
Get the first page of topics for the org or community.

API Version
29.0
Available to Guest Users
32.0

Requires Chatter
No

Signature
`public static ConnectApi.TopicPage getTopics(String communityId)`

Parameters

- `communityId`  
  Type: `String`  
  Use either the ID for a community, `internal`, or `null`.

Return Value
Type: `ConnectApi.TopicPage`

**getTopics(communityId, sortParam)**
Get the first page of sorted topics for the org or community.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
`public static ConnectApi.TopicPage getTopics(String communityId, ConnectApi.TopicSort sortParam)`

Parameters

- `communityId`  
  Type: `String`  
  Use either the ID for a community, `internal`, or `null`.

- `sortParam`  
  Type: `ConnectApi.TopicSort`
Values are:

- **popularDesc**—Sorts topics by popularity with the most popular first. This value is the default.
- **alphaAsc**—Sorts topics alphabetically.

Return Value
Type: `ConnectApi.TopicPage`

```java
getTopics(communityId, pageParam, pageSize)
```

Get a page of topics.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
```java
public static ConnectApi.TopicPage getTopics(String communityId, Integer pageParam,
Integer pageSize)
```

Parameters

- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.

- **pageParam**
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.TopicPage`

```java
getTopics(communityId, pageParam, pageSize, sortParam)
```

Get a page of sorted topics.
API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage getTopics(String communityId, Integer pageParam, Integer pageSize, ConnectApi.TopicSort sortParam)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.TopicSort
Values are:
• popularDesc—Sorts topics by popularity with the most popular first. This value is the default.
• alphaAsc—Sorts topics alphabetically.

Return Value
Type: ConnectApi.TopicPage

getTopics(communityId, q, sortParam)
Get the sorted topics that match the search criteria.
Available to Guest Users
32.0

Requires Chatter
No

Signature

```java
public static ConnectApi.TopicPage getTopics(String communityId, String q,
ConnectApi.TopicSort sortParam)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `q`
  - Type: `String`
  - Specifies the string to search. The string must contain at least two characters, not including wildcards.

- `sortParam`
  - Type: `ConnectApi.TopicSort`
  - Values are:
    - `popularDesc`—Sorts topics by popularity with the most popular first. This value is the default.
    - `alphaAsc`—Sorts topics alphabetically.

Return Value

- Type: `ConnectApi.TopicPage`

```java
getTopics(communityId, q, pageParam, pageSize)
```

Get a page of topics that match the search criteria.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No
Signature

```java
public static ConnectApi.TopicPage getTopics(String communityId, String q, Integer pageParam, Integer pageSize)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **q**
  - Type: `String`
  - Specifies the string to search. The string must contain at least two characters, not including wildcards.

- **pageParam**
  - Type: `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: `ConnectApi.TopicPage`

```java
getTopics(communityId, q, pageParam, pageSize, sortParam)
```

Get a page of sorted topics that match the search criteria.

29.0

Available to Guest Users

32.0

Requires Chatter

No

Signature

```java
public static ConnectApi.TopicPage getTopics(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.TopicSort sortParam)
```

Parameters

- **communityId**
  - Type: `String`
Use either the ID for a community, `internal`, or `null`.

`q`
Type: `String`
Specifies the string to search. The string must contain at least two characters, not including wildcards.

`pageParam`
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.TopicSort`
Values are:
- `popularDesc`—Sorts topics by popularity with the most popular first. This value is the default.
- `alphaAsc`—Sorts topics alphabetically.

Return Value
Type: `ConnectApi.TopicPage`

**getTopics(communityId, q, exactMatch)**
Get the topic that matches the exact, case-insensitive name.

API Version
33.0

Available to Guest Users
33.0

Requires Chatter
No

Signature
```
public static ConnectApi.TopicPage getTopics(String communityId, String q, Boolean exactMatch)
```

Parameters
`communityId`
Type: `String`
Use either the ID for a community, `internal`, or `null`.
q
  Type: String
  Specifies the string to search. The string must contain at least two characters, not including wildcards.

exactMatch
  Type: Boolean
  Specify true to find a topic by its exact, case-insensitive name.

Return Value
  Type: ConnectApi.TopicPage

getTopicsOrFallBackToRenamedTopics(communityId, q, exactMatch, fallBackToRenamedTopics)
Get the most recent renamed topic match, if there isn’t an exact match.

API Version
35.0

Available to Guest Users
35.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage getTopicsOrFallBackToRenamedTopics(String communityId, String q, Boolean exactMatch, Boolean fallBackToRenamedTopics)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

q
  Type: String
  Specifies the string to search. The string must contain at least two characters, not including wildcards.

exactMatch
  Type: Boolean
  Specify true to find a topic by its exact, case-insensitive name or to find the most recent renamed topic match if there isn’t an exact match.

fallBackToRenamedTopics
  Type: Boolean
Specify `true` and if there isn’t an exact match, the most recent renamed topic match is returned. If there are multiple renamed topic matches, only the most recent is returned. If there are no renamed topic matches, an empty collection is returned.

**Return Value**

Type: `ConnectApi.TopicPage`

**getTopicSuggestions(communityId, recordId, maxResults)**

Get up to a specified number of suggested topics for a record or feed item.

**API Version**

29.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.TopicSuggestionPage getTopicSuggestions(String communityId, String recordId, Integer maxResults)
```

**Parameters**

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `recordId`
  - Type: `String`
  - The ID for a record or feed item.

- `maxResults`
  - Type: `Integer`
  - Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

**Return Value**

Type: `ConnectApi.TopicSuggestionPage`

**Usage**

Administrators must enable topics for objects before users can see suggested topics for records of that object type.
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetTopicSuggestions(communityId, recordId, maxResults, result)`
- Testing ConnectApi Code

### getTopicSuggestions(communityId, recordId)

Get suggested topics for a record or feed item.

**API Version**

29.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.TopicSuggestionPage getTopicSuggestions(String communityId, String recordId)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **recordId**
  - Type: `String`
  - The ID for a record or feed item.

**Return Value**

Type: `ConnectApi.TopicSuggestionPage`

**Usage**

Administrators must enable topics for objects before users can see suggested topics for records of that object type.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetTopicSuggestions(communityId, recordId, result)`
- Testing ConnectApi Code
getTopicSuggestionsForText(communityId, text, maxResults)
Get up to a specified number of suggested topics for a string of text.

API Version
29.0

Requires Chatter
No

Signature
public static ConnectApi.TopicSuggestionPage getTopicSuggestionsForText(String communityId, String text, Integer maxResults)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

text
Type: String
String of text.

maxResults
Type: Integer
Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

Return Value
Type: ConnectApi.TopicSuggestionPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetTopicSuggestionsForText(communityId, text, maxResults, result)
Testing ConnectApi Code

getTopicSuggestionsForText(communityId, text)
Get suggested topics for a string of text.
API Version
29.0

Requires Chatter
No

Signature
public static ConnectApi.TopicSuggestionPage getTopicSuggestionsForText(String communityId, String text)

Parameters
communityId
  Type: String
  Use either the ID for a community, internal, or null.

text
  Type: String
  String of text.

Return Value
Type: ConnectApi.TopicSuggestionPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestGetTopicSuggestionsForText(communityId, text, result)
  Testing ConnectApi Code

getTrendingTopics(communityId)
Get trending topics for the org or community.

API Version
29.0

Available to Guest Users
32.0
Requires Chatter
No

Signature

```java
public static ConnectApi.TopicPage getTrendingTopics(String communityId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

Return Value

- Type: `ConnectApi.TopicPage`

Usage

The more frequently people add a specific topic to their posts and comments and comment on or like posts with the same topic over a short period, the more likely it is to become a trending topic. For example, if your coworkers are attending the upcoming Dreamforce conference and have started discussing it in Chatter, you might see a trending topic for Dreamforce. A trending topic is not solely based on popularity and usually relates to a one-time or infrequent event that has a spike in activity, such as a conference or a project deadline.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetTrendingTopics(communityId, result)`
- Testing ConnectApi Code

**getTrendingTopics(communityId, maxResults)**

Get up to a specified number of trending topics for the org or community.

API Version

- 29.0

Available to Guest Users

- 32.0

Requires Chatter
No
Signature

```java
public static ConnectApi.TopicPage getTrendingTopics(String communityId, Integer maxResults)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **maxResults**
  - Type: `Integer`
  - Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

Return Value

- Type: `ConnectApi.TopicPage`

Usage

The more frequently people add a specific topic to their posts and comments and comment on or like posts with the same topic over a short period, the more likely it is to become a trending topic. For example, if your coworkers are attending the upcoming Dreamforce conference and have started discussing it in Chatter, you might see a trending topic for Dreamforce. A trending topic is not solely based on popularity and usually relates to a one-time or infrequent event that has a spike in activity, such as a conference or a project deadline.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetTrendingTopics(communityId, maxResults, result)`
- Testing ConnectApi Code

**mergeTopics(String communityId, String topicId, List<String> idsToMerge)**

Merge up to five secondary topics with a primary topic.

API Version

- `33.0`

Requires Chatter

- `No`

Signature

```java
public static ConnectApi.Topic mergeTopics(String communityId, String topicId, List<String> idsToMerge)
```
Parameters

\[\text{communityId}\]
  Type: String
  Use either the ID for a community, internal, or null.

\[\text{topicId}\]
  Type: String
  The ID for the primary topic for the merge. If this topic is a managed topic, it retains its topic type, topic images, and children topics.

\[\text{idsToMerge}\]
  Type: List<String>
  A list of up to five comma-separated secondary topic IDs to merge with the primary topic. If any of these secondary topics are managed topics, they lose their topic type, topic images, and children topics. Their feed items are reassigned to the primary topic.

Return Value

Type: ConnectApi.Topic

Usage

Only users with the Delete Topics or Modify All Data permission can merge topics.

\[\text{reassignTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory, topicNames)}\]

Reassign topic and article assignment rules by data category by deleting the existing rules and creating new rules.

API Version

40.0

Requires Chatter

No

Signature

public static ConnectApi.TopicPage reassignTopicDataCategoryRules(String communityId, String dataCategoryGroup, String dataCategory, ConnectApi.TopicNamesInput topicNames)

Parameters

\[\text{communityId}\]
  Type: String
  Use either the ID for a community, internal, or null.

\[\text{dataCategoryGroup}\]
  Type: String
  The data category group used by articles.
dataCategory
Type: String
The data category used by articles.

topicNames
Type: ConnectApi.TopicNamesInput
A ConnectApi.TopicNamesInput object with the names of topics to reassign to articles in a data category.

Return Value
Type: ConnectApi.TopicPage

reassignTopicsByName(communityId, recordId, topicNames)
Reassign all the topics on a record or feed item, that is, remove all the assigned topics on a record or feed item and add topics. Optionally, provide a list of suggested topics to assign to a record or feed item to improve future topic suggestions.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage reassignTopicsByName(String communityId, String recordId, ConnectApi.TopicNamesInput topicNames)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

recordId
Type: String
The ID of the record or feed item to which to assign the topic.

topicNames
Type: ConnectApi.TopicNamesInput
A list of topics to replace the currently assigned topics. Optionally, a list of suggested topics to assign to improve future topic suggestions.

Return Value
Type: ConnectApi.TopicPage
Usage
Only users with the Assign Topics permission can remove topics from records or feed items and add existing topics to records or feed items. Only users with the Create Topics permission can add new topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

**unassignTopic(communityId, recordId, topicId)**
Remove a topic from a record or feed item.

API Version
29.0

Requires Chatter
No

Signature
```
public static Void unassignTopic(String communityId, String recordId, String topicId)
```

Parameters
- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.
- **recordId**
  - Type: String
  - The ID for a record or feed item.
- **topicId**
  - Type: String
  - The ID for a topic.

Return Value
Type: Void

Usage
Only users with the Assign Topics permission can remove topics from feed items or records. Administrators must enable topics for objects before users can add topics to records of that object type.

**updateTopic(communityId, topicId, topic)**
Update the description or name of a topic or merge up to five secondary topics with a primary topic.

API Version
29.0
Requires Chatter
No

Signature

```java
public static ConnectApi.Topic updateTopic(String communityId, String topicId, ConnectApi.TopicInput topic)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **topicId**
  - Type: `String`
  - The ID for a topic.

- **topic**
  - Type: `ConnectApi.TopicInput`
  - A `ConnectApi.TopicInput` object containing the name and description of the topic or up to five comma-separated secondary topic IDs to merge with the primary topic.

Return Value

- Type: `ConnectApi.Topic`

Usage

Only users with the Edit Topics or Modify All Data permission can update topic names and descriptions. Only users with the Delete Topics or Modify All Data permission can merge topics.

`updateTopicsForArticlesInDataCategory(communityId, dataCategoryGroup, dataCategory, articleTopicAssignmentJob)`

Assign topics to articles and unassign topics from articles in a data category.

API Version

40.0

Requires Chatter
No

Signature

```java
public static ConnectApi.TopicPage updateTopicsForArticlesInDataCategory(String communityId, String dataCategoryGroup, String dataCategory, ConnectApi.ArticleTopicAssignmentJobInput articleTopicAssignmentJob)
```
Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

dataCategoryGroup
  Type: String
  The data category group used by articles.

dataCategory
  Type: String
  The data category used by articles.

articleTopicAssignmentJob
  Type: ConnectApi.ArticleTopicAssignmentJobInput
  A ConnectApi.ArticleTopicAssignmentJobInput object that indicates the operation to take on which topics.

Return Value
Type: ConnectApi.TopicPage

Topics Test Methods

The following are the test methods for Topics. All methods are static.
For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

setTestGetGroupsRecentlyTalkingAboutTopic(communityId, topicId, result)

Register a ConnectApi.ChatterGroupSummaryPage object to be returned when the matching ConnectApi.getGroupsRecentlyTalkingAboutTopic method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature
public static Void setTestGetGroupsRecentlyTalkingAboutTopic(String communityId, String topicId, ConnectApi.ChatterGroupSummaryPage result)

Parameters

communityId
  Type: String
  Use either the ID for a community, internal, or null.

topicId
  Type: String
  The ID for a topic.
result
Type: ConnectApi.ChatterGroupSummaryPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getGroupsRecentlyTalkingAboutTopic(communityId, topicId)
Testing ConnectApi Code

setTestGetRecentlyTalkingAboutTopicsForGroup(communityId, groupId, result)

Register a ConnectApi.TopicPage object to be returned when the matching
ConnectApi.getRecentlyTalkingAboutTopicsForGroup method is called in a test context. Use the method with
the same parameters or you receive an exception.

API Version
29.0

Signature
public static Void setTestGetRecentlyTalkingAboutTopicsForGroup(String communityId,
String groupId, ConnectApi.TopicPage result)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

groupId
Type: String
The ID for a group.

result
Type: ConnectApi.TopicPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRecentlyTalkingAboutTopicsForGroup(communityId, groupId)
Testing ConnectApi Code
**setTestGetRecentlyTalkingAboutTopicsForUser(communityId, userId, result)**

Register a `ConnectApi.TopicPage` object to be returned when the matching `ConnectApi.getRecentlyTalkingAboutTopicsForUser` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

29.0

**Signature**

```java
public static Void setTestGetRecentlyTalkingAboutTopicsForUser(String communityId, String userId, ConnectApi.TopicPage result)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **userId**
  - Type: `String`
  - The ID for a user.

- **result**
  - Type: `ConnectApi.TopicPage`
  - Specify the test topics page.

**Return Value**

Type: `Void`

**SEE ALSO:**
- `getRecentlyTalkingAboutTopicsForUser(communityId, userId)`
- Testing `ConnectApi` Code

**setTestGetRelatedTopics(communityId, topicId, result)**

Register a `ConnectApi.TopicPage` object to be returned when the matching `ConnectApi.getRelatedTopics` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

29.0

**Signature**

```java
public static Void setTestGetRelatedTopics(String communityId, String topicId, ConnectApi.TopicPage result)
```
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

topicId
Type: String
The ID for a topic.

result
Type: ConnectApi.TopicPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRelatedTopics(communityId, topicId)
Testing ConnectApi Code

setTestGetTopicSuggestions(communityId, recordId, maxResults, result)

Register a ConnectApi.TopicSuggestionPage object to be returned when the matching ConnectApi.getTopicSuggestions method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature
public static Void setTestGetTopicSuggestions(String communityId, String recordId,
Integer maxResults, ConnectApi.TopicSuggestionPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

recordId
Type: String
The ID for a record or feed item.

maxResults
Type: Integer
Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

**result**
Type: `ConnectApi.TopicSuggestionPage`
Specify the test topic suggestions page.

Return Value
Type: Void

SEE ALSO:
- `getTopicSuggestions(communityId, recordId, maxResults)`
- Testing ConnectApi Code

**setTestGetTopicSuggestions(communityId, recordId, result)**
Register a `ConnectApi.TopicSuggestionPage` object to be returned when the matching `ConnectApi.getTopicSuggestions` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature
```
public static Void setTestGetTopicSuggestions(String communityId, String recordId, ConnectApi.TopicSuggestionPage result)
```

Parameters
- **communityId**
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- **recordId**
  Type: `String`
  The ID for a record or feed item.
- **result**
  Type: `ConnectApi.TopicSuggestionPage`
  The object containing test data.
setTestGetTopicSuggestionsForText(communityId, text, maxResults, result)

Register a `ConnectApi.TopicSuggestionPage` object to be returned when the matching `ConnectApi.getTopicSuggestionsForText` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature

```java
public static Void setTestGetTopicSuggestionsForText(String communityId, String text, Integer maxResults, ConnectApi.TopicSuggestionPage result)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `text`
  - Type: `String`
  - String of text.

- `maxResults`
  - Type: `Integer`
  - Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

- `result`
  - Type: `ConnectApi.TopicSuggestionPage`
  - The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getTopicSuggestionsForText(communityId, text, maxResults)`
- Testing ConnectApi Code
**setTestGetTopicSuggestionsForText(communityId, text, result)**

Register a `ConnectApi.TopicSuggestionPage` object to be returned when the matching `ConnectApi.getTopicSuggestionsForText` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

29.0

**Signature**

```java
public static Void setTestGetTopicSuggestionsForText(String communityId, String text, ConnectApi.TopicSuggestionPage result)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, internal, or null.

- **text**
  - Type: `String`
  - String of text.

- **result**
  - Type: `ConnectApi.TopicSuggestionPage`
  - The object containing test data.

**Return Value**

Type: Void

**SEE ALSO:**

- `getTopicSuggestionsForText(communityId, text)`
- `Testing ConnectApi Code`

**setTestGetTrendingTopics(communityId, result)**

Register a `ConnectApi.TopicPage` object to be returned when the matching `ConnectApi.getTrendingTopics` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

29.0

**Signature**

```java
public static Void setTestGetTrendingTopics(String communityId, ConnectApi.TopicPage result)
```

**SEE ALSO:**

- `getTrendingTopics(communityId)`
- `Testing ConnectApi Code`
Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

result
Type: ConnectApi.TopicPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getTrendingTopics(communityId)
Testing ConnectApi Code

setTestGetTrendingTopics(communityId, maxResults, result)
Register a ConnectApi.TopicPage object to be returned when the matching ConnectApi.getTrendingTopics method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature
public static Void setTestGetTrendingTopics(String communityId, Integer maxResults, ConnectApi.TopicPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

maxResults
Type: Integer
Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

result
Type: ConnectApi.TopicPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
  getTrendingTopics(communityId, maxResults)
  Testing ConnectApi Code

UserProfiles Class
Access user profile data. The user profile data populates the profile page (also called the Chatter profile page). This data includes user information (such as address, manager, and phone number), some user capabilities (permissions), and a set of subtab apps, which are custom tabs on the profile page.

Namespace
ConnectApi

UserProfiles Methods
The following are methods for UserProfiles. All methods are static.

IN THIS SECTION:
  deleteBannerPhoto(communityId, userId)
  Delete a user’s banner photo.
  deletePhoto(communityId, userId)
  Delete a user’s photo.
  getBannerPhoto(communityId, userId)
  Get a user’s banner photo.
  getPhoto(communityId, userId)
  Get a user’s photo.
  getUserProfile(communityId, userId)
  Get the user profile of the context user.
  setBannerPhoto(communityId, userId, fileId, versionNumber)
  Set an uploaded file as a user’s banner photo.
  setBannerPhoto(communityId, userId, fileUpload)
  Set a file that hasn’t been uploaded as a user’s banner photo.
  setBannerPhotoWithAttributes(communityId, userId, bannerPhoto)
  Set and crop an uploaded file as a user’s banner photo.
  setBannerPhotoWithAttributes(communityId, userId, bannerPhoto, fileUpload)
  Set and crop a file that hasn’t been uploaded as a user’s banner photo.
  setPhoto(communityId, userId, fileId, versionNumber)
  Set an uploaded file as a user’s photo.
setPhoto(communityId, userId, fileUpload)
Set a file that hasn’t been uploaded as a user’s photo.

setPhotoWithAttributes(communityId, userId, photo)
Set and crop an uploaded file as a user’s photo.

setPhotoWithAttributes(communityId, userId, photo, fileUpload)
Set and crop a file that hasn’t been uploaded as a user’s photo.

deleteBannerPhoto(communityId, userId)
Delete a user’s banner photo.

API Version
36.0

Requires Chatter
No

Signature
public static Void deleteBannerPhoto(String communityId, String userId)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
ID of the user.

Return Value
Type: Void

deletePhoto(communityId, userId)
Delete a user’s photo.

API Version
35.0

Requires Chatter
No
Signature

```java
public static Void deletePhoto(String communityId, String userId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `userId`
  - Type: `String`
  - The ID for the context user or the keyword `me`.

Return Value

Type: `Void`

---

```java
getBannerPhoto(communityId, userId)
```

Get a user's banner photo.

API Version

36.0

Requires Chatter

No

Signature

```java
public static ConnectApi.BannerPhoto getBannerPhoto(String communityId, String userId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- `userId`
  - Type: `String`
  - ID of the user.

Return Value

Type: `ConnectApi.BannerPhoto`

---

```java
getPhoto(communityId, userId)
```

Get a user's photo.
API Version
35.0

Available to Guest Users
35.0

Requires Chatter
No

Signature
public static ConnectApi.Photo getPhoto(String communityId, String userId)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

userId
Type: String
The ID for a user.

Return Value
Type: ConnectApi.Photo

SEE ALSO:
Methods Available to Communities Guest Users

getUserProfile(communityId, userId)
Get the user profile of the context user.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserProfile getUserProfile(String communityId, String userId)
Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **userId**
  - Type: `String`
  - The ID for a user.

Return Value

Type: `ConnectApi.UserProfile`

```java
setQueryPhoto(communityId, userId, fileId, versionNumber)
```

Set an uploaded file as a user’s banner photo.

### API Version

36.0

### Requires Chatter

No

### Signature

```java
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String userId, String fileId, Integer versionNumber)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **userId**
  - Type: `String`
  - ID of the user.

- **fileId**
  - Type: `String`
  - ID of the uploaded file to use as the user banner. The key prefix must be 069, and the image must be smaller than 8 MB.

- **versionNumber**
  - Type: `Integer`
  - Version number of the file. Specify an existing version number or, to get the latest version, specify `null`.
Return Value
Type: `ConnectApi.BannerPhoto`

Usage
Photos are processed asynchronously and may not be visible right away.

**setBannerPhoto(communityId, userId, fileUpload)**
Set a file that hasn’t been uploaded as a user’s banner photo.

API Version
36.0

Requires Chatter
No

Signature
```java
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String userId, ConnectApi.BinaryInput fileUpload)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `userId`
  Type: `String`
  ID of the user.
- `fileUpload`
  Type: `ConnectApi.BinaryInput`
  A file to use as the photo. The content type must be usable as an image.

Return Value
Type: `ConnectApi.BannerPhoto`

Usage
Photos are processed asynchronously and may not be visible right away.

**setBannerPhotoWithAttributes(communityId, userId, bannerPhoto)**
Set and crop an uploaded file as a user’s banner photo.
API Version
36.0

Requires Chatter
No

Signature
```
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId, String userId, ConnectApi.BannerPhotoInput bannerPhoto)
```

Parameters
- **communityId**
  - Type: String
  - Use either the ID for a community, internal, or null.
- **userId**
  - Type: String
  - ID of the user.
- **bannerPhoto**
  - Type: ConnectApi.BannerPhotoInput
  - A ConnectApi.BannerPhotoInput object that specifies the ID and version of the file, and how to crop the file.

Return Value
Type: ConnectApi.BannerPhoto

Usage
Photos are processed asynchronously and may not be visible right away.

```
setBannerPhotoWithAttributes(communityId, userId, bannerPhoto, fileUpload)
```
Set and crop a file that hasn't been uploaded as a user's banner photo.

API Version
36.0

Requires Chatter
No

Signature
```
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId, String userId, ConnectApi.BannerPhotoInput bannerPhoto, ConnectApi.BinaryInput fileUpload)
```
Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.

- **userId**
  - Type: `String`
  - ID of the user.

- **bannerPhoto**
  - Type: `ConnectApi.BannerPhotoInput`
  - A `ConnectApi.BannerPhotoInput` object specifying the cropping parameters.

- **fileUpload**
  - Type: `ConnectApi.BinaryInput`
  - A file to use as the photo. The content type must be usable as an image.

Return Value

Type: `ConnectApi.BannerPhoto`

Usage

Photos are processed asynchronously and may not be visible right away.

**setPhoto(communityId, userId, fileId, versionNumber)**

Set an uploaded file as a user's photo.

API Version

35.0

Requires Chatter

No

Signature

```java
public static ConnectApi.Photo setPhoto(String communityId, String userId, String fileId, Integer versionNumber)
```

Parameters

- **communityId**
  - Type: `String`
  - Use either the ID for a community, internal, or `null`.

- **userId**
  - Type: `String`
The ID for the context user or the keyword me.

**fileId**
Type: String
ID of an uploaded file. The file must be an image, and be smaller than 2 GB.

**versionNumber**
Type: Integer
Version number of the existing file. Specify either an existing version number, or null to get the latest version.

Return Value
Type: ConnectApi.Photo

Usage
Photos are processed asynchronously and may not be visible right away.

**setPhoto(communityId, userId, fileUpload)**
Set a file that hasn’t been uploaded as a user’s photo.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.Photo setPhoto(String communityId, String userId, ConnectApi.BinaryInput fileUpload)

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, internal, or null.

- **userId**
  Type: String
  The ID for the context user or the keyword me.

- **fileUpload**
  Type: ConnectApi.BinaryInput
  A file to use as the photo. The content type must be usable as an image.
Return Value
Type: `ConnectApi.Photo`

Usage
Photos are processed asynchronously and may not be visible right away.

```java
setPhotoWithAttributes(communityId, userId, photo)
```
Set and crop an uploaded file as a user’s photo.

API Version
35.0

Requires Chatter
No

Signature
```java
public static ConnectApi.Photo setPhotoWithAttributes(String communityId, String userId, ConnectApi.PhotoInput photo)
```

Parameters
- `communityId`
  Type: `String`
  Use either the ID for a community, `internal`, or `null`.
- `userId`
  Type: `String`
  The ID for the context user or the keyword `me`.
- `photo`
  Type: `ConnectApi.PhotoInput`
  A `ConnectApi.PhotoInput` object specifying the file ID, version number, and cropping parameters.

Return Value
Type: `ConnectApi.Photo`

Usage
Photos are processed asynchronously and may not be visible right away.

```java
setPhotoWithAttributes(communityId, userId, photo, fileUpload)
```
Set and crop a file that hasn’t been uploaded as a user’s photo.
API Version
35.0

Requires Chatter
No

Signature
`public static ConnectApi.PhotosetPhotoWithAttributes(String communityId, String userId, ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)`

Parameters
- `communityId`
  Type: String
  Use either the ID for a community, `internal`, or `null`.
- `userId`
  Type: String
  The ID for the context user or the keyword `me`.
- `photo`
  Type: `ConnectApi.PhotoInput`
  A `ConnectApi.PhotoInput` object specifying the cropping parameters.
- `fileUpload`
  Type: `ConnectApi.BinaryInput`
  A file to use as the photo. The content type must be usable as an image.

Return Value
Type: `ConnectApi(Photo`

Usage
Photos are processed asynchronously and may not be visible right away.

Zones Class
Access information about Chatter Answers zones in your organization. Zones organize questions into logical groups, with each zone having its own focus and unique questions.

Note: With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18.

Namespace
`ConnectApi`
Zones Methods

The following are methods for Zones. All methods are static.

IN THIS SECTION:

- `getZone(communityId, zoneId)`
  Get a zone.
- `getZones(communityId)`
  Get a list of zones.
- `getZones(communityId, pageParam, pageSize)`
  Get a page of zones.
- `searchInZone(communityId, zoneId, q, filter)`
  Search articles or questions in a zone.
- `searchInZone(communityId, zoneId, q, filter, pageParam, pageSize)`
  Search a page of articles or questions in a zone.
- `searchInZone(communityId, zoneId, q, filter, language)`
  Search articles or questions in a zone, and specify the language of the results.

**getZone(communityId, zoneId)**

Get a zone.

**Note:** With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18.

API Version

29.0

Requires Chatter

No

Signature

```
public static ConnectApi.Zone getZone(String communityId, String zoneId)
```

Parameters

- `communityId`
  Type: String
  Use either the ID for a community, `internal`, or `null`.

- `zoneId`
  Type: String
  The ID of a zone.
Return Value
Type: `ConnectApi.Zone`

`getZones(communityId)`
Get a list of zones.

⚠️ **Note:** With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18.

API Version
29.0

Requires Chatter
No

Signature
```
public static ConnectApi.ZonePage getZones(String communityId)
```

Parameters
`communityId`
Type: String
Use either the ID for a community, `internal`, or `null`.

Return Value
Type: `ConnectApi.ZonePage Class`

`getZones(communityId, pageParam, pageSize)`
Get a page of zones.

⚠️ **Note:** With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18.

API Version
29.0

Requires Chatter
No
**Signature**

```java
public static ConnectApi.Zone getZones(String communityId, Integer pageParam, Integer pageSize)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use either the ID for a community, `internal`, or `null`.

- **pageParam**
  - Type: `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**Return Value**

- Type: `ConnectApi.ZonePage`

**searchInZone(communityId, zoneId, q, filter)**

Search articles or questions in a zone.

⚠️ **Note:** With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see [End of Support for Chatter Answers in Spring ’18](#).

**API Version**

29.0

**Available to Guest Users**

37.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.ZoneSearchPage searchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter)
```

**Parameters**

- **communityId**
  - Type: `String`
Use either the ID for a community, internal, or null.

**zoneId**
Type: String
The ID of a zone.

**q**
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**filter**
Type: ConnectApi.ZoneSearchResultType
A ZoneSearchResultType enum value. One of the following:
- Article—Search results contain only articles.
- Question—Search results contain only questions.

**Return Value**
Type: ConnectApi.ZoneSearchPage

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- setTestSearchInZone(communityId, zoneId, q, filter, result)
- Testing ConnectApi Code

**searchInZone(communityId, zoneId, q, filter, pageParam, pageSize)**
Search a page of articles or questions in a zone.

**Note:** With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring '18.

**API Version**

**Available to Guest Users**
37.0

**Requires Chatter**
No
public static ConnectApi.ZoneSearchPage searchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, String pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

zoneId
Type: String
The ID of a zone.

q
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

filter
Type: ConnectApi.ZoneSearchResultType
A ZoneSearchResultType enum value. One of the following:
- Article—Search results contain only articles.
- Question—Search results contain only questions.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ZoneSearchPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchInZone(communityId, zoneId, q, filter, pageParam, pageSize, result)
Testing ConnectApi Code

searchInZone(communityId, zoneId, q, filter, language)
Search articles or questions in a zone, and specify the language of the results.
Note: With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring '18.

API Version
36.0

Available to Guest Users
37.0

Requires Chatter
No

Signature
public static ConnectApi.ZoneSearchPage searchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, String language)

Parameters
communityId
Type: String
Use either the ID for a community, internal, or null.

zoneId
Type: String
The ID of a zone.

q
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

filter
Type: ConnectApi.ZoneSearchResultType
• Article—Search results contain only articles.
• Question—Search results contain only questions.

language
Type: String
The language of the articles or questions. The value must be a Salesforce supported locale code.

Return Value
Type: ConnectApi.ZoneSearchPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO: 

- `setTestSearchInZone(communityId, zoneId, q, filter, language, result)`

Zones Test Methods

The following are the test methods for `Zones`. All methods are static.

For information about using these methods to test your `ConnectApi` code, see Testing `ConnectApi` Code.

`setTestSearchInZone(communityId, zoneId, q, filter, result)`

Register a `ConnectApi.ZoneSearchPage` object to be returned when `searchInZone(communityId, zoneId, q, filter)` is called in a test context. Use the method with the same parameters or you receive an exception.

⚠️ **Note:** With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18.

API Version

29.0

Signature

```
public static Void setTestSearchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, ConnectApi.ZoneSearchPage result)
```

Parameters

- **communityId**
  Type: String
  Use either the ID for a community, `internal`, or `null`.

- **zoneId**
  Type: String
  The ID of a zone.

- **q**
  Type: String
  Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **filter**
  Type: `ConnectApi.ZoneSearchResultType`
  A `ZoneSearchResultType` enum value. One of the following:
  - **Article**—Search results contain only articles.
  - **Question**—Search results contain only questions.
result

Type: ConnectApi.ZoneSearchPage

The object containing test data.

Return Value

Type: Void

SEE ALSO:

searchInZone(communityId, zoneId, q, filter)

Testing ConnectApi Code

setTestSearchInZone(communityId, zoneId, q, filter, pageParam, pageSize, result)

Register a ConnectApi.ZoneSearchPage object to be returned when searchInZone(communityId, zoneId, q, filter, pageParam, pageSize) is called in a test context. Use the method with the same parameters or you receive an exception.

Note: With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. API Version

29.0

Signature

public static Void setTestSearchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, String pageParam, Integer pageSize, ConnectApi.ZoneSearchPage result)

Parameters

communityId

Type: String

Use either the ID for a community, internal, or null.

zoneId

Type: String

The ID of a zone.

q

Type: String

Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

filter

Type: ConnectApi.ZoneSearchResultType

A ZoneSearchResultType enum value. One of the following:
• Article—Search results contain only articles.
• Question—Search results contain only questions.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

result
Type: ConnectApi.ZoneSearchPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

searchInZone(communityId, zoneId, q, filter, pageParam, pageSize)
Testing ConnectApi Code

setTestSearchInZone(communityId, zoneId, q, filter, language, result)
Register a ConnectApi.ZoneSearchPage object to be returned when searchInZone(communityId, zoneId, q, filter, language) is called in a test context. Use the method with the same parameters or you receive an exception.

Note: With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. API Version
36.0

Signature

public static Void setTestSearchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, String language, ConnectApi.ZoneSearchPage result)

Parameters

communityId
Type: String
Use either the ID for a community, internal, or null.

zoneId
Type: String
The ID of a zone.

`q`
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`filter`
Type: `ConnectApi.ZoneSearchResultType`
- **Article**—Search results contain only articles.
- **Question**—Search results contain only questions.

`language`
Type: String
The language of the articles or questions. The value must be a Salesforce supported locale code. In an `<apex:page>`, the default value is the language of the page. Otherwise, the default value is the user’s locale.

`result`
Type: `ConnectApi.ZoneSearchPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `searchInZone(communityId, zoneId, q, filter, language)`
- Testing ConnectApi Code

**ConnectApi Input Classes**
Some `ConnectApi` methods take arguments that are instances of `ConnectApi` input classes.

Input classes are concrete unless marked abstract in this documentation. Concrete input classes have public constructors that have no parameters.

Some methods have parameters that are typed with an abstract class. You must pass in an instance of a concrete child class for these parameters.

Most input class properties can be set. Read-only properties are noted in this documentation.

**ConnectApi.ActionLinkDefinitionInput Class**
The definition of an action link. An action link is a button on a feed element. Clicking an action link can take a user to a Web page, initiate a file download, or invoke an API call to Salesforce or to an external server. An action link includes a URL and an HTTP method, and can include a request body and header information, such as an OAuth token for authentication. Use action links to integrate Salesforce and third-party services into the feed so that users can take action to drive productivity and accelerate innovation.

**Usage**
You can use context variables in the `actionUrl`, `headers`, and `requestBody` properties. Use context variables to pass information about the user who executed the action link to your server-side code. Salesforce substitutes the value when the action link is executed.
These are the available context variables:

<table>
<thead>
<tr>
<th>Context Variable</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>{!actionLinkId}</td>
<td>The ID of the action link the user executed.</td>
</tr>
<tr>
<td>{!actionLinkGroupId}</td>
<td>The ID of the action link group containing the action link the user executed.</td>
</tr>
<tr>
<td>{!communityId}</td>
<td>The ID of the community in which the user executed the action link. The value for your internal organization is the empty key &quot;000000000000000000&quot;.</td>
</tr>
<tr>
<td>{!communityUrl}</td>
<td>The URL of the community in which the user executed the action link. The value for your internal organization is empty string &quot;&quot;.</td>
</tr>
<tr>
<td>{!orgId}</td>
<td>The ID of the organization in which the user executed the action link.</td>
</tr>
<tr>
<td>{!userId}</td>
<td>The ID of the user that executed the action link.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| actionType    | ConnectApi.ActionLinkType | Defines the type of action link. Values are:  
  - API—The action link calls a synchronous API at the action URL. Salesforce sets the status to SuccessfulStatus or FailedStatus based on the HTTP status code returned by your server.  
  - APIAsync—The action link calls an asynchronous API at the action URL. The action remains in a PendingStatus state until a third party makes a request to /connect/action-links/{actionLinkId} to set the status to SuccessfulStatus or FailedStatus when the asynchronous operation is complete.  
  - Download—The action link downloads a file from the action URL.  
  - UI—The action link takes the user to a web page at the action URL.  
Use UI if you need to load a page before the user performs an action, for example, to have the user provide input or view something before the action happens. | Required | 33.0 |
Note: Invoking ApiAsync action links from an app requires a call to set the status. However, there isn’t currently a way to set the status of an action link using Apex. To set the status, use Connect REST API. See the Action Link resource in the Connect REST API Developer Guide for more information.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionUrl</td>
<td>String</td>
<td>The action link URL. For example, a Ui action link URL is a Web page. A Download action link URL is a link to the file to download. Ui and Download action link URLs are provided to clients. An Api or ApiAsync action link URL is a REST resource. Api and ApiAsync action link URLs aren’t provided to clients. Links to Salesforce can be relative. All other links must be absolute and start with https://.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>Tip:</strong> To avoid issues due to upgrades or changing functionality in your API, we recommend using a versioned API for actionUrl, for example, <a href="https://www.example.com/api/v1/exampleResource">https://www.example.com/api/v1/exampleResource</a>. If your API isn’t versioned, you can use the expirationDate property of the ConnectApi.ActionLinkGroup DefinitionInput class to avoid issues due to upgrades or changing functionality in your API.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>excludedUserId</td>
<td>String</td>
<td>ID of a single user to exclude from performing the action. If you specify an excludedUserId, you can’t specify a userId.</td>
<td>Optional</td>
<td>33.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Can be defined in an action link template using the User Visibility and Custom User Alias fields.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Required or Optional</td>
<td>Available Version</td>
</tr>
<tr>
<td>--------------</td>
<td>---------------------------</td>
<td>--------------------------------------------------------------------------------------------------</td>
<td>----------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>groupDefault</td>
<td>Boolean</td>
<td>true if this action is the default action link in the action link group; false otherwise. There can be only one default action link per action link group. The default action link gets distinct styling in the Salesforce UI.</td>
<td>Optional</td>
<td>33.0</td>
</tr>
<tr>
<td>headers</td>
<td>List&lt;ConnectApi.RequestHeaderInput&gt;</td>
<td>The request headers for the Api and ApiAsync action link types. See Action Links Overview, Authentication, and Security.</td>
<td>Optional</td>
<td>33.0</td>
</tr>
<tr>
<td>labelKey</td>
<td>String</td>
<td>Key for the set of labels to show in the user interface. A set includes labels for these states: NewStatus, PendingStatus, SuccessStatus, FailedStatus. For example, if you use the Approve key, you get these labels: Approve, Pending, Approved, Failed. For a complete list of keys and labels, see Action Links Labels. If none of the predefined labels work for your action link, use a custom label. To use a custom label, create an action link template. See Create Action Link Templates.</td>
<td>Required</td>
<td>33.0</td>
</tr>
<tr>
<td>method</td>
<td>ConnectApi.HttpRequestMethod</td>
<td>One of these HTTP methods:  • HttpDelete — Returns HTTP 204 on success. Response body or output class is empty.  • HttpGet — Returns HTTP 200 on success.  • HttpHead — Returns HTTP 200 on success. Response body or output class is empty.  • HttpPatch — Returns HTTP 200 on success or HTTP 204 if the response body or output class is empty.  • HttpPost — Returns HTTP 201 on success or HTTP 204 if the response body or output class is empty. Exceptions are the batch posting resources and methods, which return HTTP 200 on success.</td>
<td>Required</td>
<td>33.0</td>
</tr>
</tbody>
</table>
### Property | Type | Description | Required or Optional | Available Version
---|---|---|---|---
requestBody | String | The request body for Api action links. **Note:** Escape quotation mark characters in the requestBody value. | Optional | 33.0
requires Confirmation | Boolean | true to require the user to confirm the action; false otherwise. | Required | 33.0
userId | String | The ID of the user who can execute the action. If not specified or null, any user can execute the action. If you specify a userId, you can’t specify an excludedUserId. | Optional | 33.0

SEE ALSO:

ConnectApi.ActionLinkGroupDefinitionInput Class

**ConnectApi.ActionLinkGroupDefinitionInput Class**

The definition of an action link group. All action links must belong to a group. Action links in a group are mutually exclusive and share some properties. Define stand-alone actions in their own action group.

Action link definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

### Property | Type | Description | Required or Optional | Available Version
---|---|---|---|---
actionLinks | List<ConnectApi.ActionLinkDefinitionInput> | The action links that make up this group. Within an action link group, action links are displayed in the order listed in the actionLinks property of the ConnectApi.ActionLinkGroupDefinitionInput class. Within a feed item, action link groups are displayed in the order specified in the | Required to instantiate this action link group without a template. To instantiate from a template, don’t specify a value. | 33.0
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionLinkGroupId</td>
<td>ConnectApi.AssociatedActions CapabilityInput</td>
<td>actionLinkGroupId property of the ConnectApi.AssociatedActions CapabilityInput class. You can create up to three action links in a Primary group and up to four in an Overflow group.</td>
<td>Optional</td>
<td></td>
</tr>
<tr>
<td>category</td>
<td>ConnectApi.PlatformActionGroupCategory</td>
<td>Indicates the priority and relative locations of action links in an associated feed item. Values are: • Primary—The action link group is displayed in the body of the feed element. • Overflow—The action link group is displayed in the overflow menu of the feed element.</td>
<td>Required to instantiate this action link group without a template. To instantiate from a template, don’t specify a value.</td>
<td>33.0</td>
</tr>
<tr>
<td>executionsAllowed</td>
<td>ConnectApi.ActionLinkExecutionsAllowed</td>
<td>Defines the number of times an action link can be executed. Values are: • Once—An action link can be executed only once across all users. • OncePerUser—An action link can be executed only once for each user. • Unlimited—An action link can be executed an unlimited number of times by each user. If the action link’s actionType is Api or ApiAsync, you can’t use this value.</td>
<td>Required to instantiate this action link group without a template. To instantiate from a template, don’t specify a value.</td>
<td>33.0</td>
</tr>
<tr>
<td>expirationDate</td>
<td>Datetime</td>
<td>ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z, that represents the date and time this action link group is removed from associated feed items and can no longer be executed. The expirationDate must be within one year of the creation date. If the action link group definition includes an OAuth token, it is a good idea to set the expiration date of the action link group to the same value as the expiration date of the OAuth token so that users can’t execute the action link and get an OAuth error.</td>
<td>Required to instantiate this action link group without a template. Optional to instantiate from a template.</td>
<td>33.0</td>
</tr>
</tbody>
</table>
### templateId

**Type:** String

**Description:** The ID of the action link group template from which to instantiate this action link group.

**Available Version:** 33.0

**Required or Optional:** To instantiate without a template, don't specify a value. Required to instantiate this action link group from a template.

### templateBindings

**Description:** A collection of key-value pairs to fill in binding variable values or a custom user alias from an action link template. To instantiate this action link group from an action link template that uses binding variables, you must provide values for all the variables. See Define Binding Variables.

**Available Version:** 33.0

**Required or Optional:** To instantiate without a template, don't specify a value. Required to instantiate this action link group from a template.

### ConnectApi.ActionLinkTemplateBindingInput

A key-value pair to fill in a binding variable value from an action link template.

ConnectApi.ActionLinkGroupDefinitionInput Class

**ConnectApi.ActivitySharingInput**

Defines who a captured email or event is shared with.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>groupsToShareWith</td>
<td>List&lt;String&gt;</td>
<td>List of IDs for the groups that you share the activity with. Valid only if sharingType is MyGroups.</td>
<td>Optional</td>
<td>39.0</td>
</tr>
</tbody>
</table>
| sharingType       | ConnectApi.ActivitySharingType | Type of sharing operation. Values are:
|                   |                   | • Everyone—The activity is shared with everyone.                           | Required             | 39.0              |
|                   |                   | • MyGroups—The activity is shared only with a selection of the context user’s groups. |                      |                   |
|                   |                   | • OnlyMe—The activity is private.                                           |                      |                   |

**ConnectApi.AdjustItemInputRepresentation**

A price adjustment to an OrderItemSummary. It only supports discounts, not increases.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>adjustmentType</td>
<td>String</td>
<td>Describes how the amount is calculated. It can have one of these values:</td>
<td>Required</td>
<td>49.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• AmountWithTax—Value of amount is the adjustment, including tax.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• AmountWithoutTax—Value of amount is the adjustment, not including tax. Tax is calculated on the value and added.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Percentage—Value of amount is a percentage discount. It is divided by 100, and then multiplied by the</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>

<td>Available Version</td>
</tr>
<tr>
<td>----------------------</td>
<td>----------</td>
<td>-----------------------------------------------------------------------------</td>
<td>----------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>amount</td>
<td>Double</td>
<td>Value used to calculate the adjustment amount, as described by the adjustmentType. It must be a negative value.</td>
<td>Required</td>
<td>49.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the adjustment.</td>
<td>Optional</td>
<td>49.0</td>
</tr>
<tr>
<td>orderItemSummaryId</td>
<td>String</td>
<td>ID of the OrderItemSummary.</td>
<td>Required</td>
<td>49.0</td>
</tr>
<tr>
<td>reason</td>
<td>String</td>
<td>Reason for the adjustment. The value must match one of the picklist values on the Reason field of the OrderItemSummaryChange object.</td>
<td>Required</td>
<td>49.0</td>
</tr>
</tbody>
</table>

**ConnectApi.AdjustOrderItemSummaryInputRepresentation**

A list of price adjustments to OrderItemSummaries that make up a price adjustment to an order.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>adjustItems</td>
<td>List&lt;ConnectApi.AdjustItemInputRepresentation&gt;</td>
<td>List of price adjustments to OrderItemSummaries.</td>
<td>Required</td>
<td>49.0</td>
</tr>
</tbody>
</table>

**ConnectApi.AlternativeInput**

Alternative representation for an extension on a feed element.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>text</td>
<td>String</td>
<td>Text representation of the extension.</td>
<td>Required</td>
<td>40.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>Thumbnail URL for the extension.</td>
<td>Optional</td>
<td>40.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the extension.</td>
<td>Optional</td>
<td>40.0</td>
</tr>
</tbody>
</table>

**ConnectApi.AnnouncementInput Class**

An announcement.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available</th>
</tr>
</thead>
<tbody>
<tr>
<td>body</td>
<td><strong>ConnectApi.Message</strong> <strong>BodyInput Class</strong></td>
<td>Text of the announcement.</td>
<td>Required for creating an announcement if <code>feedItemId</code> isn't specified. Don't specify for updating an announcement.</td>
<td>31.0</td>
</tr>
<tr>
<td>expirationDate</td>
<td>Datetime</td>
<td>The Salesforce UI displays an announcement until 11:59 p.m. on this date unless another announcement is posted first. The Salesforce UI ignores the time value in the <code>expirationDate</code>. However, you can use the time value to create your own display logic in your own UI.</td>
<td>Required for creating an announcement. Optional for updating an announcement.</td>
<td>31.0</td>
</tr>
<tr>
<td>feedItemId</td>
<td>String</td>
<td>ID of an <code>AdvancedTextPost</code> feed item that is the body of the announcement.</td>
<td>Required for creating an announcement if <code>body</code> isn't specified. Don't specify for updating an announcement.</td>
<td>36.0</td>
</tr>
<tr>
<td>isArchived</td>
<td>Boolean</td>
<td>Specifies whether the announcement is archived.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td>parentId</td>
<td>String</td>
<td>ID of the parent entity for the announcement, that is, a group ID when the announcement appears in a group.</td>
<td>Required for creating an announcement if <code>feedItemId</code> isn't specified. Don't specify for updating an announcement.</td>
<td>36.0</td>
</tr>
</tbody>
</table>
### sendEmails

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>sendEmails</td>
<td>Boolean</td>
<td>Specifies whether the announcement is sent as an email to all group members regardless of their email setting for the group. If Chatter emails aren’t enabled for the organization, announcement emails aren’t sent. Default value is false.</td>
<td>Optional for creating an announcement Don’t specify for updating an announcement</td>
<td>36.0</td>
</tr>
</tbody>
</table>

postAnnouncement(communityId, groupId, announcement)

### ConnectApi.ArticleTopicAssignmentJobInput

An article and topic assignment job.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>operation</td>
<td>ConnectApi.ArticleTopicJobType</td>
<td>Type of operation to perform on articles and topics. Values are:</td>
<td>Required</td>
<td>40.0</td>
</tr>
<tr>
<td></td>
<td>AssignTopicsToArticle—Assign topics to articles in a data category.</td>
<td>AssignTopicsToArticle—Assign topics to articles in a data category.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>UnassignTopicsFromArticle—Unassign topics from articles.</td>
<td>UnassignTopicsFromArticle—Unassign topics from articles.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>topicNames</td>
<td>ConnectApi.TopicNamesInput</td>
<td>List of topic names to assign to or unassign from articles.</td>
<td>Required</td>
<td>40.0</td>
</tr>
</tbody>
</table>

### ConnectApi.AssociatedActionsCapabilityInput Class

A list of action link groups to associate with a feed element. To associate an action link group with a feed element, the call must be made from the Apex namespace that created the action link definition. In addition, the user making the call must have created the definition or have View All Data permission.

An action link is a button on a feed element. Clicking an action link can take a user to a Web page, initiate a file download, or invoke an API call to Salesforce or to an external server. An action link includes a URL and an HTTP method, and can include a request body and header information, such as an OAuth token for authentication. Use action links to integrate Salesforce and third-party services into the feed so that users can take action to drive productivity and accelerate innovation.
### ConnectApi.Namespace

#### ConnectApi.FeedElementCapabilitiesInput

Records associated with the survey invitation.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionLinkGroupIds</td>
<td>List&lt;String&gt;</td>
<td>The action link group IDs to associate with the feed element. Associate one Primary and up to 10 total action link groups to a feed item. Action link groups are returned in the order specified in this property. An action link group ID is returned from a call to <code>ConnectApi.ActionLinks.createActionLinkGroupDefinition(communityId, actionLinkGroup)</code>.</td>
<td>Required</td>
<td>33.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- `ConnectApi.FeedElementCapabilitiesInput`

**ConnectApi.AssociateRecordsWithRecipientInput**

Records associated with the survey invitation.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>associateRecordIds</td>
<td>List&lt;String&gt;</td>
<td>ID of the associated records.</td>
<td>Required</td>
<td>50.0</td>
</tr>
<tr>
<td>recipientId</td>
<td>String</td>
<td>Participant ID with whose invitation the record should be associated.</td>
<td>Required</td>
<td>50.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- `ConnectApi.SurveyInvitationEmailInput`

**ConnectApi.AudienceCriteriaInput**

Custom recommendation audience criteria type.

This class is abstract and has no public constructor. You can make an instance only of a subclass. Superclass for:
- `ConnectApi.CustomListAudienceCriteriaInput`
- `ConnectApi.NewUserAudienceCriteriaInput`
### ConnectApi.RecommendationAudienceCriteriaType

Specifies the custom recommendation audience criteria type. One of these values:
- **CustomList**—A custom list of users makes up the audience.
- **MaxDaysInCommunity**—New community members make up the audience.

**SEE ALSO:**
- ConnectApi.RecommendationAudienceInput
- ConnectApi.AudienceCriterionInput

### ConnectApi.AudienceCriterionInput

Personalization audience criterion.

**Property** | **Type** | **Description** | **Required or Optional** | **Available Version**
--- | --- | --- | --- | ---

criterion | List<ConnectApi.AudienceCriterionValueInput> | List of mappings of audience criteria fields and values. | Required when creating an audience, Optional when updating an audience | 48.0

criterionNumber | Integer | Number associated with the audience criterion in a formula. For example, (1 AND 2) OR 3. If unspecified, criteria are assigned numbers in the order that they’re added. | Optional | 48.0

criterionOperator | ConnectApi.AudienceCriteriaOperator | Operator used in the personalization audience criterion. Values are:
- Contains
- Equal
- GreaterThan
- GreaterThanOrEqual
- Includes
- LessThan
- LessThanOrEqual
- NotEqual
- NotIncludes
- StartsWith | Required when creating an audience, Optional when updating an audience | 48.0
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>criterionType</td>
<td>ConnectApi.AudienceCriteriaType</td>
<td>Type of personalization audience criterion. Values are:</td>

### ConnectApi.AuditParamsRequest

Audit Parameters input.

This class is abstract.

Superclass of [ConnectApi.BaseRequest](#).

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>email</td>
<td>String</td>
<td>Email of the client that made the request.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>ipAddress</td>
<td>String</td>
<td>IP address of the client that made the request.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Required or Optional</td>
<td>Available Version</td>
</tr>
<tr>
<td>-------------</td>
<td>---------</td>
<td>------------------------------------------------------------------------------</td>
<td>----------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>macAddress</td>
<td>String</td>
<td>Mac address of the client that made the request.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>phone</td>
<td>String</td>
<td>Phone number of the client that made the request.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
</tbody>
</table>

**ConnectApi.BannerPhotoInput**

A banner photo.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>cropHeight</td>
<td>Integer</td>
<td>Height of the crop rectangle in pixels.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td>cropWidth</td>
<td>Integer</td>
<td>Width of the crop rectangle in pixels.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td>cropX</td>
<td>Integer</td>
<td>X position of the crop rectangle from the left edge of the image in pixels.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td>cropY</td>
<td>Integer</td>
<td>Y position of the crop rectangle from the top edge of the image in pixels.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td>fileId</td>
<td>String</td>
<td>ID of an existing file. The key prefix must be 069, and the file size must be less than 8 MB.</td>
<td>Required</td>
<td>36.0</td>
</tr>
<tr>
<td>versionNumber</td>
<td>Integer</td>
<td>Version number of an existing file. If not provided, the latest version is used.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
</tbody>
</table>

**ConnectApi.BinaryInput Class**

Create a `ConnectApi.BinaryInput` object to attach files to feed items and comments and to add repository files.

The constructor is:

```
ConnectApi.BinaryInput(blob, contentType, filename)
```

The constructor takes these arguments:

<table>
<thead>
<tr>
<th>Argument</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>blob</td>
<td>Blob</td>
<td>Contents of the file to be used for input</td>
<td>28.0</td>
</tr>
<tr>
<td>contentType</td>
<td>String</td>
<td>MIME type description of the content, such as image/jpg</td>
<td>28.0</td>
</tr>
</tbody>
</table>
### ConnectApi.BatchInput

Construct a set of inputs to be passed into a method at the same time.

Use this constructor when there isn’t a binary input:

```java
ConnectApi.BatchInput(Object input)
```

Use this constructor to pass one binary input:

```java
ConnectApi.BatchInput(Object input, ConnectApi.BinaryInput binary)
```

Use this constructor to pass multiple binary inputs:

```java
ConnectApi.BatchInput(Object input, List<ConnectApi.BinaryInput> binaries)
```

The constructors takes these parameters:

<table>
<thead>
<tr>
<th>Argument</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>input</td>
<td>Object</td>
<td>An individual input object to be used in the batch operation. For example, for postFeedElementBatch(), this should be ConnectApi.FeedElementInput.</td>
<td>32.0</td>
</tr>
<tr>
<td>binary</td>
<td>ConnectApi.BinaryInput</td>
<td>A binary file to associate with the input object.</td>
<td>32.0</td>
</tr>
<tr>
<td>binaries</td>
<td>List&lt;ConnectApi.BinaryInput&gt;</td>
<td>A list of binary files to associate with the input object.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

### ConnectApi.BookmarksCapabilityInput

Create or update a bookmark on a feed element.

This class is a subclass of ConnectApi.FeedElementCapabilityInput Class.

SEE ALSO:

- Post a Feed Element with a New File (Binary) Attachment
- Post a Comment with a New File
- ConnectApi.BatchInput
- Post a Batch of Feed Elements
- Post a Batch of Feed Elements with a New (Binary) File

### ConnectApi.Namespace

Apex Developer Guide
### isBookmarked

**Type:** Boolean  
**Description:** Specifies if the feed element should be bookmarked for the user (true) or not (false).  
**Required or Optional:** No  
**Available Version:** 32.0

**SEE ALSO:**  
[ConnectApi.FeedElementCapabilitiesInput](#)

### ConnectApi.CartInput

**Description:** A cart.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>effectiveAccountId</td>
<td>String</td>
<td>ID of the account for which the request is made. If unspecified, defaults to the account ID for the context user.</td>
<td>Optional</td>
<td>49.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the cart. The name can have up to 250 Unicode characters. If unspecified, defaults to the generated name.</td>
<td>Optional</td>
<td>49.0</td>
</tr>
<tr>
<td>type</td>
<td>ConnectApi.CartType</td>
<td>Type of cart. Value is Cart. If unspecified, defaults to Cart.</td>
<td>Optional</td>
<td>49.0</td>
</tr>
</tbody>
</table>

### ConnectApi.CartItemInput

**Description:** An item in a cart.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| productId  | String                        | ID of the product.                                                         | Required when adding an item to a cart  
Not supported when updating a cart item | 49.0              |
| quantity   | String                        | Quantity of the cart item. Use a value that can be converted to BigDecimal. | Required             | 49.0              |
| type       | ConnectApi.CartItemType      | Type of item in a cart. Value is Product.                                  | Required when adding an item to a cart  
Not supported when updating a cart item | 49.0              |
ConnectApi.CartMessagesVisibilityInput

Set the visibility for cart messages.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>visibility</td>
<td>Boolean</td>
<td>Specifies whether to set cart messages as visible (true) or not (false).</td>
<td>Required</td>
<td>50.0</td>
</tr>
</tbody>
</table>

ConnectApi.CartToWishlistInput

Copy products from a cart to a wishlist.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>wishlistId</td>
<td>String</td>
<td>ID of the wishlist to copy cart products to.</td>
<td>Required</td>
<td>50.0</td>
</tr>
</tbody>
</table>

ConnectApi.CanvasCapabilityInput

Create or update a canvas app associated with a feed element.

This class is a subclass of ConnectApi.FeedElementCapabilityInput Class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>A description of the canvas app. The maximum size is 255 characters.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>developerName</td>
<td>String</td>
<td>The API name (developer name) of the connected app.</td>
<td>Required</td>
<td>32.0</td>
</tr>
<tr>
<td>height</td>
<td>String</td>
<td>The height of the canvas app in pixels.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>namespacePrefix</td>
<td>String</td>
<td>A unique namespace prefix for the canvas app.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>parameters</td>
<td>String</td>
<td>JSON parameters passed to the canvas app.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>A thumbnail URL to a preview image. The maximum thumbnail size is 120 pixels by 120 pixels.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>A title for the canvas link.</td>
<td>Required</td>
<td>32.0</td>
</tr>
</tbody>
</table>

ConnectApi.FeedElementCapabilitiesInput
**ConnectApi.CaptureRequest**

Payment capture input consumed by the payment capture service.

Subclass of `ConnectApi.BaseRequest`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>accountId</td>
<td>String</td>
<td>ID of the account linked to the capture request.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>amount</td>
<td>Double</td>
<td>Amount captured from the previous authorization.</td>
<td>Required</td>
<td>50.0</td>
</tr>
<tr>
<td>clientContext</td>
<td>String</td>
<td>Context for payment APIs. Used for a payment caller to re-establish context.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>comments</td>
<td>String</td>
<td>Comments for the payment capture.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>effectiveDate</td>
<td>Datetime</td>
<td>Date when the payment becomes effective.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>paymentGroup</td>
<td><code>ConnectApi.PaymentGroupRequest</code></td>
<td>Details about the payment group record associated with the payment request.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
</tbody>
</table>

**ConnectApi.ChangeInputRepresentation**

A list of changes to `OrderItemSummaries` that make up an order change, such as a cancel or return.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>changeItems</td>
<td><code>List&lt;ConnectApi.ChangeItemInputRepresentation&gt;</code></td>
<td>List of changes to <code>OrderItemSummaries</code>.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

- `previewCancel(orderSummaryId, changeInput)`
- `previewReturn(orderSummaryId, changeInput)`
- `submitCancel(orderSummaryId, changeInput)`
- `submitReturn(orderSummaryId, changeInput)`

**ConnectApi.ChangeElementInputRepresentation**

Change to an `OrderItemSummary`, such as a return or cancel. You specify whether to prorate the associated shipping charge based on the price change. The `OrderItemSummary` can’t be a shipping charge.
### Available Version

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>orderItemSummaryId</td>
<td>String</td>
<td>ID of the OrderItemSummary.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>quantity</td>
<td>Double</td>
<td>Quantity to change. Use a positive value. For example, a value of 2 means “cancel or return 2 units.”</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>reason</td>
<td>String</td>
<td>Reason for the change. The value must match one of the picklist values on the Reason field of the OrderItemSummaryChange object.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>shippingReductionFlag</td>
<td>Boolean</td>
<td>Specifies whether to prorate the shipping charge.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ChatterStreamInput

A Chatter feed stream.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the stream, up to 1,000 characters.</td>
<td>Optional</td>
<td>39.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the stream, up to 120 characters.</td>
<td>Required when creating a stream</td>
<td>39.0</td>
</tr>
<tr>
<td>subscriptionsToAdd</td>
<td><code>List&lt;ConnectApi.StreamSubscriptionInput&gt;</code></td>
<td>List of up to 25 entities whose feeds are included in the stream. Adding an entity that is already added results in no operation. Including the same entity in <code>subscriptionsToAdd</code> and <code>subscriptionsToRemove</code> results in no operation.</td>
<td>Optional</td>
<td>39.0</td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
<td></td>
</tr>
<tr>
<td>-----------------------</td>
<td>-------------------------------------------</td>
<td>------------------------------------------------------------------------------------------------</td>
<td>-------------------</td>
<td></td>
</tr>
<tr>
<td>subscriptionsToRemove</td>
<td>List&lt;ConnectApi.StreamSubscriptionInput&gt;</td>
<td>List of entities whose feeds are removed from the stream. Removing an entity that is already removed results in no operation. Including the same entity in <code>subscriptionsToAdd</code> and <code>subscriptionsToRemove</code> results in no operation.</td>
<td>39.0</td>
<td></td>
</tr>
</tbody>
</table>

**ConnectApi.ChatterGroupInput Class**

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>announcement</td>
<td>String</td>
<td>The 18-character ID of an announcement. An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it’s deleted or replaced by another announcement.</td>
<td>31.0</td>
</tr>
<tr>
<td>canHaveChatterGuests</td>
<td>Boolean</td>
<td><strong>true</strong> if this group allows Chatter customers, <strong>false</strong> otherwise. <strong>After this property is set to true, it cannot be set to false.</strong></td>
<td>29.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>The “Description” section of the group.</td>
<td>29.0</td>
</tr>
<tr>
<td>information</td>
<td>ConnectApi.GroupInformationInput</td>
<td>The “Information” section of a group. If the group is private, this section is visible only to members.</td>
<td>28.0</td>
</tr>
<tr>
<td>isArchived</td>
<td>Boolean</td>
<td><strong>true</strong> if the group is archived, <strong>false</strong> otherwise. Defaults to <strong>false</strong>.</td>
<td>29.0</td>
</tr>
<tr>
<td>isAutoArchiveDisabled</td>
<td>Boolean</td>
<td><strong>true</strong> if automatic archiving is turned off for the group, <strong>false</strong> otherwise. Defaults to <strong>false</strong>.</td>
<td>29.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>The name of the group.</td>
<td>29.0</td>
</tr>
<tr>
<td>owner</td>
<td>String</td>
<td>The ID of the group owner. This property is available for PATCH requests only.</td>
<td>29.0</td>
</tr>
</tbody>
</table>
### Available Description Type Property

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available</th>
</tr>
</thead>
<tbody>
<tr>
<td>visibility</td>
<td><code>ConnectApi.GroupVisibilityType</code></td>
<td>Group visibility type.</td>

### ConnectApi.CommentInput

A comment.

Used to add rich comments, for example, comments that include mentions or file attachments.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>attachment</td>
<td><code>ConnectApi.FeedItemAttachmentInput Class</code></td>
<td>Specifies an attachment for the comment. Valid values are:</td>
<td>Optional</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td></td>
<td>• ContentAttachmentInput</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• NewFileAttachmentInput</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>LinkAttachmentInput</td>
<td></td>
<td></td>
<td>Important:</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>As of version 32.0, use the capabilities property.</td>
</tr>
<tr>
<td>body</td>
<td><code>ConnectApi.MessageBodyInput Class</code></td>
<td>Description of message body. The body can contain up to 10,000 characters and 25 mentions. Because the character limit can change, clients should make a describeSObjects() call on the FeedItem or FeedComment object and look at the length of the Body or CommentBody field to determine the maximum number of allowed characters. To edit this property in a comment, use <code>updateComment(communityId, commentId, comment)</code>. Editing comments is supported in version 34.0 and later.</td>
<td>Required</td>
<td>28.0</td>
</tr>
</tbody>
</table>
Rich text and inline images are supported in comment bodies in version 35.0 and later. Entity links are supported in version 43.0 and later.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>capabilities</td>
<td>ConnectApi.</td>
<td>Specifies any capabilities for the comment, such as a file attachment.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>threadParentId</td>
<td>String</td>
<td>ID of the parent comment for a threaded comment.</td>
<td>Optional</td>
<td>44.0</td>
</tr>
</tbody>
</table>

**ConnectApi.CommentCapabilitiesInput**

A container for all capabilities that can be included with a comment.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>content</td>
<td>ConnectApi.</td>
<td>Content to attach to the comment.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>feedEntityShare</td>
<td>ConnectApi.</td>
<td>Feed entity to share to the comment.</td>
<td>Optional</td>
<td>42.0</td>
</tr>
<tr>
<td>record</td>
<td>ConnectApi.</td>
<td>Existing knowledge article to attach to the comment.</td>
<td>Optional</td>
<td>42.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.CommentInput
ConnectApi.ContentCapabilityInput

Attach or update a file on a comment. Use this class to attach a new file or update a file that has already been uploaded to Salesforce.

This class is a subclass of ConnectApi.FeedElementCapabilityInput Class.

To attach or remove files from a feed post (instead of a comment) in version 36.0 and later, use ConnectApi.FilesCapabilityInput.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>contentDocumentId</td>
<td>String</td>
<td>ID of the existing content.</td>
<td>Required for existing content</td>
<td>32.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the file to be uploaded.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>sharingOption</td>
<td>ConnectApi.FileSharingOption</td>
<td>Sharing option of the file. Values are:</td>
<td>Optional</td>
<td>35.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Allowed—Resharing of the file is allowed.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Restricted—Resharing of the file is restricted.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the file. This value is used as the file name for new content. For example, if the title is My Title, and the file is a .txt file, the file name is My Title.txt.</td>
<td>Required for new content</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.FeedElementCapabilitiesInput

ConnectApi.ContentHubFieldValuInput

The fields of the item type.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the item field.</td>
<td>Required</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>When updating the metadata of a repository file, only the name field can be updated.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>value</td>
<td>String</td>
<td>Value of the item field.</td>
<td>Required</td>
<td>39.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.ContentHubItemInput

ConnectApi.ContentHubItemInput

The item type ID and fields of the item type.
### ConnectApi Namespace

#### Available Version

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fields</td>
<td>List&lt;ConnectApi.ContentHub.FieldValue.Input&gt;</td>
<td>List of fields for the item.</td>
<td>Required</td>

</tr>
<tr>
<td>itemTypeId</td>
<td>String</td>
<td>ID of the item type.</td>
<td>Required</td>
<td>39.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.CreateCreditMemoInputRepresentation

A list of change orders used to create a credit memo.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>changeOrderIds</td>
<td>List&lt;String&gt;</td>
<td>List of IDs of the change orders.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

- `createCreditMemo(orderSummaryId, creditMemoInput)`

#### ConnectApi.CreateOrderPaymentSummaryInputRepresentation

An OrderSummary for which to create an OrderPaymentSummary, with the payment authorization or payments to include in it.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>orderSummaryId</td>
<td>String</td>
<td>ID of the OrderSummary.</td>
<td>Required</td>
<td>48.0</td>

</tr>
<tr>
<td>paymentIds</td>
<td>List&lt;String&gt;</td>
<td>List of IDs of the payments.</td>
<td>Either a payment authorization or at least one payment is required.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

- `createOrderPaymentSummary(orderPaymentSummaryInput)`
ConnectApi.CustomListAudienceCriteriaInput

Criteria for the custom list type of custom recommendation audience.

Subclass of ConnectApi.AudienceCriteriaInput.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>member OperationType</td>
<td>ConnectApi.Recommendation AudienceMember OperationType</td>
<td>The operation to carry out on the audience members. Values are:</td>
<td>Required to update a recommendation audience Don’t use or specify null to create a recommendation audience</td>
<td>36.0</td>
</tr>
<tr>
<td>• Add</td>
<td></td>
<td>Adds specified members to the audience.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>• Remove</td>
<td></td>
<td>Removes specified members from the audience.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>members</td>
<td>List&lt;String&gt;</td>
<td>A collection of user IDs. When updating an audience, you can include up to 100 members. An audience can have up to 100,000 members, and each community can have up to 100 audiences.</td>
<td>Required to update a recommendation audience Don’t use or specify null to create a recommendation audience</td>
<td>36.0</td>
</tr>
</tbody>
</table>

ConnectApi.DatacloudOrderInput Class

Input representation for a Datacloud order to purchase contacts or companies and retrieve purchase information.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>companyIds</td>
<td>String</td>
<td>A comma-separated list of identification numbers for the companies to be purchased. You can’t include any contact IDs or your purchase fails.</td>
<td>Required to purchase companies</td>
<td>32.0</td>
</tr>
<tr>
<td>contactIds</td>
<td>String</td>
<td>A comma-separated list of identification numbers for the contacts to be purchased. You can’t include any company IDs or your purchase fails.</td>
<td>Required to purchase contacts</td>
<td>32.0</td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Required or Optional</td>
<td>Available Version</td>
</tr>
<tr>
<td>---------------</td>
<td>-----------------------</td>
<td>------------------------------------------------------------------------------</td>
<td>----------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>userType</td>
<td><code>ConnectDatacloudUserTypeEnum</code></td>
<td>Indicates the Data.com user type to be used. There are two user types.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Monthly (default)</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Listpool</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

SEE ALSO:
postOrder(orderInput)

**ConnectApi.DirectMessageCapabilityInput**
Create or update the members of a direct message.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>membersToAdd</td>
<td><code>List&lt;String&gt;</code></td>
<td>List of user IDs for members to include in the direct message.</td>
<td>Required when creating a direct message (POST)</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>Optional when updating a direct message (PATCH)</td>
<td></td>
</tr>
</tbody>
</table>

| membersToRemove | `List<String>` | List of user IDs for members to remove from the direct message. | Optional when updating a direct message (PATCH) | 40.0          |
|                 |                |                                                               | Not supported when creating a direct message (POST) |               |

| subject   | `String` | Subject of the direct message. | Optional when creating a direct message (POST) | 39.0 |
|           |          |                                 | Not supported when updating a direct message (PATCH) |       |

ConnectApi.FeedElementCapabilitiesInput

**ConnectApi.EnsureFundsAsyncInputRepresentation**
ID of an invoice to ensure funds for and apply them to.
### ConnectApi.EnsureRefundsAsyncInputRepresentation

ID of a credit memo to ensure refunds for, an amount of excess funds to refund, or both. At least one is required.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>creditMemoId</td>
<td>String</td>
<td>ID of the credit memo that represents a refund amount.</td>
<td>Optional, but at least one input property is required</td>
<td>48.0</td>
</tr>
<tr>
<td>excessFundsAmount</td>
<td>Double</td>
<td>Amount of excess funds to refund.</td>
<td>Optional, but at least one input property is required</td>
<td>49.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
`ensureRefundsAsync(orderSummaryId, ensureRefundsInput)`

### ConnectApi.EntityLinkSegmentInput

An entity link segment.

Subclass of `ConnectApi.MessageSegmentInput`

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>entityId</td>
<td>String</td>
<td>ID of the entity to link to. Only users with access to the entity see it. It’s hidden for users without access.</td>
<td>Required</td>
<td>43.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ExtensionInput

An extension.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>alternative</td>
<td><code>ConnectApi.AlternativeInput</code></td>
<td>Alternative representation of the extension.</td>
<td>Required</td>
<td>40.0</td>
</tr>
</tbody>
</table>
### ConnectApi.ExtensionsCapabilityInput

Create or update extensions associated with a feed element.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>extensionId</td>
<td>String</td>
<td>ID of the extension.</td>
<td>Required</td>
<td>40.0</td>
</tr>
<tr>

<td>ConnectApi. TopicsCapability Input</td>
<td>Describes topics assigned to the feed element.</td>
<td>Optional</td>
<td>38.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.FeedElementInput Class

**ConnectApi.FeedElementCapabilityInput Class**

A feed element capability.

In API version 30.0 and earlier, most feed items can have comments, likes, topics, and so on. In version 31.0 and later, every feed item (and feed element) can have a unique set of capabilities. If a capability property exists on a feed element, that capability is available, even if the capability property doesn’t have a value. For example, if the ChatterLikes capability property exists on a feed element (with or without a value), the context user can like that feed element. If the capability property doesn’t exist, it isn’t possible to like that feed element. A capability can also contain associated data. For example, the Moderation capability contains data about moderation flags.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

This class is a superclass of:
- ConnectApi.AssociatedActionsCapabilityInput
- ConnectApi.BookmarksCapabilityInput
- ConnectApi.CanvasCapabilityInput
- ConnectApi.ContentCapabilityInput
- ConnectApi.DirectMessageCapabilityInput
- ConnectApi.ExtensionsCapabilityInput
- ConnectApi.FeedEntityShareCapabilityInput
- ConnectApi.FilesCapabilityInput
- ConnectApi.LinkCapabilityInput
- ConnectApi.MuteCapabilityInput
- ConnectApi.PollCapabilityInput
- ConnectApi.QuestionAndAnswersCapabilityInput
- ConnectApi.ReadByCapabilityInput
- ConnectApi.RecordCapabilityInput
- ConnectApi.StatusCapabilityInput
- ConnectApi.TopicsCapabilityInput

**ConnectApi.FeedElementInput Class**

Feed elements are the top-level items that a feed contains. Feeds are feed element containers.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

Superclass of ConnectApi.FeedItemInput Class.
<table>

- Define an Action Link in a Template and Post with a Feed Element
- Share a Feed Element (in Version 39.0 and Later)
- Edit a Feed Element
- Edit a Question Title and Post
- Post a Rich-Text Feed Element with Inline Image

**ConnectApi.FeedEntityShareCapabilityInput**

Share a feed entity with a feed post or comment.

This class is a subclass of **ConnectApi.FeedElementCapabilityInput Class**.
### ConnectApi.FeedItemInput Class

Used to create rich feed items, for example, feed items that include @mentions or files.

Subclass of `ConnectApi.FeedElementInput Class` as of version 31.0.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>feedEntityId</td>
<td>String</td>
<td>ID of the feed entity to share with the feed post or comment.</td>
<td>Required</td>
<td>39.0</td>
</tr>
<tr>
<td>attachment</td>
<td><code>ConnectApi.FeedItemAttachmentInput Class</code></td>
<td>Specifies the attachment for the feed item. The feed item type is inferred based on the provided attachment. As of API version 3.0, use the inherited <code>capabilities</code> property.</td>
<td>Optional</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>body</td>
<td><code>ConnectApi.MessageBodyInput Class</code></td>
<td>Message body. The body can contain up to 10,000 characters and 25 mentions. Because the character limit can change, clients should make a <code>describeSObjects()</code> call on the <code>FeedItem</code> or <code>FeedComment</code> object and look at the length of the <code>Body</code> or <code>CommentBody</code> field to determine the maximum number of allowed characters. If you specify <code>originalFeedElementId</code> to share a feed item, use the <code>body</code> property to add the first comment to the feed item. To edit this property in a feed item, use <code>updateFeedElement(communityId, feedElementId, feedElement)</code>. Editing feed posts is supported in version 34.0 and later.</td>
<td>Required unless the feed item has a link capability or a content capability.</td>
<td>28.0</td>
</tr>
<tr>
<td>isBookmarked</td>
<td>Boolean</td>
<td>Specifies if the new feed item should be bookmarked for the user (true) or not (false). As of API version 3.0, use the <code>capabilities.bookmarks.isBookmarkedByCurrentUser</code> property.</td>
<td>Optional</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>
### original FeedElementId
- **Property:** `original FeedElementId`
- **Type:** `String`
- **Description:** To share a feed element, specify its 18-character ID.
  - **Important:** As of API version 39.0, use the `capabilities.feedEntity Share.feedEntityId` property.
- **Required or Optional:** Optional
- **Available Version:** 31.0–38.0

### original FeedItemId
- **Property:** `original FeedItemId`
- **Type:** `String`
- **Description:** To share a feed item, specify its 18-character ID.
  - **Important:** In API version 32.0–38.0, use the `originalFeedElementId` property. In API version 39.0 and later, use the `capabilities.feedEntity Share.feedEntityId` property.
- **Required or Optional:** Optional
- **Available Version:** 28.0–31.0

### visibility
- **Property:** `visibility`
- **Type:** `ConnectApi. FeedItem VisibilityType Enum`
- **Description:** Type of users who can see a feed item.
  - **AllUsers**—Visibility is not limited to internal users.
  - **InternalUsers**—Visibility is limited to internal users.
- **Default values:**
  - For external users, the default value is `AllUsers`. External users must use this value to see their posts.
  - For internal users, the default value is `InternalUsers`. Internal users can accept this value or use the value `AllUsers` to allow external users to see their posts.
- **Required or Optional:** Optional
- **Available Version:** 28.0

### ConnectApi.FileIdInput
Attach a file that has already been uploaded or remove a file from a feed element.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>ID of a file that has already been uploaded.</td>
<td>Required</td>
<td>36.0</td>
</tr>
</tbody>
</table>
### operationType

**Type**: `ConnectApi.OperationType`

**Description**: Operation to carry out on the file. Values are:
- **Add**—Adds the file to the feed element.
- **Remove**—Removes the file from the feed element.

Remove operations are processed before Add operations. Adding content that is already added and removing content that is already removed result in no operation.

**Available Version**: 36.0

**Required or Optional**: Optional

If not specified, defaults to Add.

---

### ConnectApi.FilesCapabilityInput

Attach up to 10 files that have already been uploaded or remove one or more files from a feed element.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput` class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>items</td>
<td><code>List&lt;ConnectApi.FileIdInput&gt;</code></td>
<td>List of file IDs and operations to be carried out on those files.</td>
<td>Required</td>
<td>36.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

- `ConnectApi.FileIdInput`

---

### ConnectApi.FulfillmentGroupInputRepresentation

A list of `OrderItemSummaries` to be fulfilled together, and the fulfillment location that will handle them. The fulfillment type is one of the values defined for the Type field on the `FulfillmentOrder` object, such as “Warehouse” or “Retail Store.” The specified type is assigned to the `FulfillmentOrder` for this fulfillment group.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fulfilledFrom</td>
<td><code>String</code></td>
<td>ID of the fulfillment location.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>fulfillmentType</td>
<td><code>String</code></td>
<td>Fulfillment type. One of the Type field values defined for <code>FulfillmentOrders</code>.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>
**Available Version**

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>orderItemSummaries</td>
<td>List&lt;ConnectApi.OrderItemSummaryInputRepresentation&gt;</td>
<td>List of OrderItemSummaries.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.FulfillmentOrderInputRepresentation
- createFulfillmentOrders(fulfillmentOrderInput)

**ConnectApi.FulfillmentOrderInputRepresentation**

An OrderDeliveryGroupSummary that defines a delivery method and recipient, and a list of fulfillment groups to assign to FulfillmentOrders. Each fulfillment group is a set of OrderItemSummaries that match the OrderDeliveryGroupSummary and share the same fulfillment location. The method creates a FulfillmentOrder for each fulfillment group and a FulfillmentOrderLineItem for each OrderItemSummary.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fulfillmentGroups</td>
<td>List&lt;ConnectApi.FulfillmentGroupInputRepresentation&gt;</td>
<td>List of fulfillment groups that specify the OrderItemSummaries and fulfillment locations.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>orderDeliveryGroupSummaryId</td>
<td>String</td>
<td>ID of the OrderDeliveryGroupSummary.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>orderSummaryId</td>
<td>String</td>
<td>ID of the OrderSummary.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- createFulfillmentOrders(fulfillmentOrderInput)

**ConnectApi.FulfillmentOrderInvoiceInputRepresentation**

Instantiate and include this object with no properties when creating an invoice. This input class has no properties.

**SEE ALSO:**
- createInvoice(fulfillmentOrderId, invoiceInput)

**ConnectApi.FulfillmentOrderLineItemInputRepresentation**

A FulfillmentOrderLineItem and quantity to cancel. You can cancel less than the full quantity, in which case you reallocate the canceled quantity to a different FulfillmentOrder.
### ConnectApi.FulfillmentOrderLineItemsToCancelInputRepresentation

A list of FulfillmentOrderLineItems and quantities to cancel.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fulfillmentOrderLineItemsToCancel</td>
<td>List&lt;ConnectApi.FulfillmentOrderLineItemInput Representation&gt;</td>
<td>List of FulfillmentOrderLineItems and quantities.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `cancelFulfillmentOrderLineItems(fulfillmentOrderId, cancelFulfillmentOrderLineItemsInput)`

### ConnectApi.BaseRequest

Base parameters for making a request to the payment gateway.

This class is abstract.

Subclass of `ConnectApi.AuditParamsRequest`.

Superclass of:
- `ConnectApi.CaptureRequest`
- `ConnectApi.RefundRequest`

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>additionalData</td>
<td>Map&lt;String, String&gt;</td>
<td>An optional map of additional parameters to be sent to the payment gateway.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>idempotencyKey</td>
<td>String</td>
<td>Idempotency key.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
</tbody>
</table>
**ConnectApi.GroupInformationInput Class**

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>text</td>
<td>String</td>
<td>The text in the “Information” section of a group.</td>
<td>28.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>The title of the “Information” section of a group.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.ChatterGroupInput Class

**ConnectApi.HashtagSegmentInput Class**

Used to include a hashtag in a feed item or comment.
Subclass of ConnectApi.MessageSegmentInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>tag</td>
<td>String</td>
<td>Text of the hash tag without the # (hash tag) prefix</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**Note:** Closing square brackets (]) are not supported in hash tag text. If the text contains a closing square bracket (]), the hash tag ends at the bracket.

SEE ALSO:
ConnectApi.MessageBodyInput Class

**ConnectApi.InlineImageSegmentInput**

An inline image segment.
Subclass of ConnectApi.MessageSegmentInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>altText</td>
<td>String</td>
<td>Alt text for the inline image.</td>
<td>Optional</td>
<td>35.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>If not specified, the title of the inline image file is used as the alt text.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>fileId</td>
<td>String</td>
<td>ID of the inline image file.</td>
<td>Required</td>
<td>35.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
Post a Rich-Text Feed Element with Inline Image
ConnectApi.MessageBodyInput Class
ConnectApi.InviteInput
An invitation.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>invitees</td>
<td>List&lt;String&gt;</td>
<td>List of email addresses to send the invitation to.</td>
<td>Required</td>
<td>39.0</td>
</tr>
<tr>
<td>message</td>
<td>String</td>
<td>Message to include in the invitation.</td>
<td>Optional</td>
<td>39.0</td>
</tr>
</tbody>
</table>

ConnectApi.LinkCapabilityInput
Create or update a link on a feed element.
This class is a subclass of ConnectApi.FeedElementCapabilityInput Class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>Link URL. The URL can be to an external site.</td>
<td>Required</td>
<td>32.0</td>
</tr>
<tr>
<td>urlName</td>
<td>String</td>
<td>Description of the link.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.FeedElementCapabilitiesInput

ConnectApi.LinkSegmentInput Class
Used to include a link segment in a feed item or comment.
Subclass of ConnectApi.MessageSegmentInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>URL to be used for the link</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.MessageBodyInput Class

ConnectApi.ManagedTopicPositionCollectionInput Class
A collection of relative positions of managed topics.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>managedTopicPositions</td>
<td>List&lt;ConnectApi.ManagedTopicPositionInput&gt;</td>
<td>List of relative positions of managed topics. This list can include Featured and</td>
<td>Required</td>
<td>32.0</td>
</tr>
</tbody>
</table>
Navigational managed topics and doesn’t need to include all managed topics. For more information about reordering managed topics, see the example in reorderManagedTopics(communityId, managedTopicPositionCollection).

**ConnectApi.ManagedTopicPositionInput Class**

Relative position of a managed topic.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>managedTopicId</td>
<td>String</td>
<td>ID of existing managed topic.</td>
<td>Required</td>
<td>32.0</td>
</tr>
<tr>
<td>position</td>
<td>Integer</td>
<td>Relative position of the managed topic, indicated by zero-indexed, ascending whole numbers.</td>
<td>Required</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.ManagedTopicPositionCollectionInput Class

**ConnectApi.MarkupBeginSegmentInput**

The beginning tag for rich text markup.
Subclass of ConnectApi.MessageSegmentInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>altText</td>
<td>String</td>
<td>Alternative text for the Hyperlink segment.</td>
<td>Optional</td>
<td>45.0</td>
</tr>
<tr>
<td>markupType</td>
<td>ConnectApi.MarkupType</td>
<td>Type of rich text markup.</td>
<td>Required</td>
<td>35.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Bold—Bold tag.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Code—Code tag.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Hyperlink—Hyperlink anchor tag.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Italic—Italic tag.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ListItem—List item tag.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• OrderedList—Ordered list tag.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Paragraph—Paragraph tag.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
### Property Description

- **Strikethrough**—Strikethrough tag.
- **Underline**—Underline tag.
- **UnorderedList**—Unordered list tag.

Markup segments with a `markupType` of `Code` can include only text segments.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>url</code></td>
<td><code>String</code></td>
<td>URL for the Hyperlink segment. Supported hyperlink URLs start with <code>http://</code> or <code>https://</code>.</td>
<td>Required for Hyperlink</td>
<td>45.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

### ConnectApi.MentionSegmentInput Class

Include an @mention of a user or group in a feed post or comment. When creating a feed post or comment, you can include up to 25 mentions.

Subclass of [ConnectApi.MessageSegmentInput](#)

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the user or group to mention.</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>To mention a user, use either id or username. You can't include both.</td>
<td>Groups are available in 29.0.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>To mention a group, you must use id.</td>
<td></td>
</tr>
<tr>
<td>username</td>
<td>String</td>
<td>User name of the user to mention.</td>
<td>38.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>To mention a user, use either id or username. You can't include both.</td>
<td></td>
</tr>
</tbody>
</table>

ConnectApi.MessageSegmentInput

Used to add rich message segments to feed items and comments.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

Superclass for:

- ConnectApi.EntityLinkSegmentInput
- ConnectApi.HashtagSegmentInput Class
- ConnectApi.InlineImageSegmentInput
- ConnectApi.LinkSegmentInput Class
- ConnectApi.MarkupBeginSegmentInput
- ConnectApi.MarkupEndSegmentInput
- ConnectApi.MentionSegmentInput Class
- ConnectApi.TextSegmentInput Class

Use the ConnectApiHelper repository on GitHub to simplify many of the tasks accomplished with ConnectApi.MessageSegmentInput, such as posting with inline images, rich text, and mentions.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>type</td>
<td>ConnectApi.MessageSegmentType</td>
<td>The type of message segment. Values are: • EntityLink • FieldChange • FieldChangeName • FieldChangeValue • Hashtag • InlineImage • Link • MarkupBegin • MarkupEnd • Mention • MoreChanges • ResourceLink • Text</td>
<td>Required</td>
<td>23.0</td>
</tr>
</tbody>
</table>

**ConnectApi.MuteCapabilityInput**

Mute or unmute a feed element.

This class is a subclass of ConnectApi.FeedElementCapabilityInput Class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isMutedByMe</td>
<td>Boolean</td>
<td>Indicates whether the feed element is muted for the context user. Default value is false.</td>
<td>Required</td>
<td>35.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- setIsMutedByMe(communityId, feedElementId, isMutedByMe)

**ConnectApi.NBAStrategyInput**

A recommendation strategy.
### ConnectApi.NewUserAudienceCriteriaInput

Criteria for the new members type of custom recommendation audience.

Subclass of ConnectApi.AudienceCriteriaInput.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>value</td>
<td>Double</td>
<td>The maximum number of days since a user became a community member. For example, if you specify 30, anyone who became a community member in the last 30 days is included in the new members audience.</td>
<td>Required</td>
<td>36.0</td>
</tr>
</tbody>
</table>

### ConnectApi.OrderItemSummaryInputRepresentation

An OrderItemSummary and quantity.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>orderItemSummaryId</td>
<td>String</td>
<td>ID of the OrderItemSummary.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>quantity</td>
<td>Double</td>
<td>Quantity to include.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

ConnectApi.OrderSummaryInputRepresentation

An order from which to create an OrderSummary, and whether it is managed in Salesforce Order Management. Optionally, you can specify an OrderNumber or Status.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>Specifies an OrderNumber to assign to the order summary.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>orderId</td>
<td>String</td>
<td>ID of the original order.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>
| orderLifeCycleType     | String   | Specifies whether the order is managed in Salesforce Order Management or by an external system. It can have one of these values:
  - MANAGED—Managed in Salesforce Order Management.
  - UNMANAGED—Managed by an external system.
  If no value is specified, the default is MANAGED. | Optional             | 49.0              |
| status                 | String   | Specifies a status to assign to the order summary. The value must match one of the picklist values on the Status field of the OrderSummary object. | Optional             | 50.0              |

SEE ALSO:
createOrderSummary(orderSummaryInput)

ConnectApi.PaymentGroupRequest

Payment group input consumed by a payment group service.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>createPaymentGroup</td>
<td>Boolean</td>
<td>Specifies whether Salesforce needs to create a payment group (true) or not (false).</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>currencyIsoCode</td>
<td>String</td>
<td>Three-letter ISO 4217 currency code associated with the payment group record.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the payment group record.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>sourceObjectId</td>
<td>String</td>
<td>Source object ID of the payment group record. Supports only OrderId.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
</tbody>
</table>
### ConnectApi.PhotoInput Class

Use to specify how crop a photo. Use to specify an existing file (a file that has already been uploaded).

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available version</th>
</tr>
</thead>
<tbody>
<tr>
<td>cropSize</td>
<td>Integer</td>
<td>The length, in pixels, of any edge of the crop square.</td>
<td>29.0</td>
</tr>
<tr>
<td>cropX</td>
<td>Integer</td>
<td>The position X, in pixels, from the left edge of the image to the start of</td>
<td>29.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>the crop square. Top left is position (0,0).</td>
<td></td>
</tr>
<tr>
<td>cropY</td>
<td>Integer</td>
<td>The position Y, in pixels, from the top edge of the image to the start of</td>
<td>29.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>the crop square. Top left is position (0,0).</td>
<td></td>
</tr>
<tr>
<td>fileId</td>
<td>String</td>
<td>18 character ID of an existing file. The key prefix must be 069 and the file</td>
<td>25.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>size must be less than 2 GB.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>Note:</strong> Images uploaded on the Group page and on the User page don’t</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>have file IDs and therefore can’t be used.</td>
<td></td>
</tr>
<tr>
<td>versionNumber</td>
<td>Integer</td>
<td>Version number of the existing content. If not provided, the latest version</td>
<td>25.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>is used.</td>
<td></td>
</tr>
</tbody>
</table>

### ConnectApi.PinCapabilityInput

Pin or unpin a feed element to a feed.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>entityId</td>
<td>String</td>
<td>ID of the entity to pin or unpin. In version 41.0 and later, <code>entityId</code> must</td>
<td>Required</td>
<td>41.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>be a feed item ID. In version 41.0–42.0, only one feed item can be pinned</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>per feed. In version 43.0 and later, three feed items can be pinned per feed.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>isPinned</td>
<td>Boolean</td>
<td>Specifies whether to pin (<code>true</code>) or unpin (<code>false</code>) the entity.</td>
<td>Required</td>
<td>41.0</td>
</tr>
</tbody>
</table>
**ConnectApi.PollCapabilityInput**

Create, update, or vote on a poll on a feed element.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput` Class.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>choices</td>
<td>List&lt;String&gt;</td>
<td>The choices used to create a new poll. You must specify 2–10 poll choices for each poll.</td>
<td>Required for creating a poll</td>
<td>32.0</td>
</tr>
<tr>
<td>myChoiceId</td>
<td>String</td>
<td>ID of an existing choice on the feed poll. Used to vote on an existing poll.</td>
<td>Required for voting on a poll</td>
<td>32.0</td>
</tr>
</tbody>
</table>

**ConnectApi.PricingInput**

Pricing for multiple products.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>pricingLineItems</td>
<td>List&lt;ConnectApi.PricingLineItemInput&gt;</td>
<td>Up to 500 line items for pricing.</td>
<td>Required</td>
<td>49.0</td>
</tr>
</tbody>
</table>

**ConnectApi.PricingLineItemInput**

Pricing line item.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>productId</td>
<td>String</td>
<td>ID of the product to price.</td>
<td>Required</td>
<td>49.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.PricingInput`

**ConnectApi.QuestionAndAnswersCapabilityInput**

Create or edit a question feed element or set the best answer of the existing question feed element.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput` Class.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>bestAnswerId</td>
<td>String</td>
<td>A comment ID to use as a best answer for a question feed element. The best answer comment must already exist on the question feed element.</td>
<td>Required to update a feed element. Not supported when posting a feed element.</td>
<td>32.0</td>
</tr>
<tr>
<td>questionTitle</td>
<td>String</td>
<td>Title for a question feed element. To edit the title of a question, use <code>updateFeedElement(communityId, feedElementId, feedElement)</code>. Editing question titles is supported in version 34.0 and later.</td>
<td>Required to post a feed element. Not supported when updating a feed element.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- **Edit a Question Title and Post**
- **ConnectApi.FeedElementCapabilitiesInput**

**ConnectApi.ReadByCapabilityInput**
Mark feed elements as read by the context user.

This class is a subclass of **ConnectApi.FeedElementCapabilityInput Class**.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isReadByMe</td>
<td>Boolean</td>
<td>Specifies to mark the feed element as read (true) for the context user.</td>
<td>Required</td>
<td>40.0</td>
</tr>
<tr>
<td>lastReadDateByMe</td>
<td>Datetime</td>
<td>Specifies the last date, in ISO 8601 format, when the feed element is marked as read for the context user. If you don’t specify a date or you specify a future date, the current system date is used.</td>
<td>Optional</td>
<td>40.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- **ConnectApi.FeedElementCapabilitiesInput**

**ConnectApi.RecipientEngagementContextInput**
Context based on which the survey invitation is sent to a participant.
### ConnectApi.SurveyInvitationEmailInput

A custom recommendation audience.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recipient</td>
<td><code>Map&lt;String, String&gt;</code></td>
<td>Map each recipient with the context based on which the survey invitation is emailed.</td>
<td>Required</td>
<td>50.0</td>
</tr>
<tr>
<td>recipientId</td>
<td><code>String</code></td>
<td>Participant ID with whom the engagement context should be associated.</td>
<td>Required</td>
<td>50.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:** [ConnectApi.SurveyInvitationEmailInput](https://example.com)

### ConnectApi.RecommendationAudienceInput

A custom recommendation audience.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>criteria</td>
<td><code>ConnectApi.AudienceCriteriaInput</code></td>
<td>The criteria for the custom recommendation audience type. If not specified when creating a recommendation audience, the audience criteria type defaults to custom list.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
</tbody>
</table>

**Important:** This property is available only in version 35.0. In version 36.0 and later, use `ConnectApi.CustomListAudienceCriteriaInput`. The operation to carry out on the audience members.

- **Add**—Adds specified members to the audience.
- **Remove**—Removes specified members from the audience.

<table>
<thead>
<tr>
<th>memberOperationType</th>
<th><code>ConnectApi.RecommendationAudienceMemberOperationType</code></th>
<th>Required to update a recommendation audience</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>members</td>
<td><code>List&lt;String&gt;</code></td>
<td>Important: Don’t use or specify <code>null</code> to create a recommendation audience</td>
<td>Required</td>
<td>35.0 only</td>
</tr>
</tbody>
</table>

**Important:** This property is available only in version 35.0. In version 36.0 and later, use `ConnectApi.CustomListAudienceCriteriaInput`. The operation to carry out on the audience members.
A collection of user IDs. When updating an audience, you can include up to 100 members. An audience can have up to 100,000 members, and each community can have up to 100 audiences.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>The unique name of the custom recommendation audience.</td>
<td>Optional to update a recommendation audience</td>
<td>35.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `createRecommendationAudience(communityId, recommendationAudience)`

**ConnectApi.RecommendationDefinitionInput**

A custom recommendation definition.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionUrl</td>
<td>String</td>
<td>URL for acting on the custom recommendation, for example, the URL to join a group.</td>
<td>Required to create a recommendation definition</td>
<td>35.0</td>
</tr>
<tr>
<td>actionUrlName</td>
<td>String</td>
<td>Text label for the action URL in the user interface, for example, “Launch.”</td>
<td>Required to create a recommendation definition</td>
<td>35.0</td>
</tr>
<tr>
<td>explanation</td>
<td>String</td>
<td>Explanation, or body, of the custom recommendation.</td>
<td>Required to create a recommendation definition</td>
<td>35.0</td>
</tr>
</tbody>
</table>
### ConnectApi.RecommendationReactionInput

A reaction to a recommendation produced by a recommendation strategy.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>aiModel</td>
<td>String</td>
<td>Reserved for future use.</td>
<td>Optional</td>
<td>47.0</td>
</tr>
<tr>
<td>contextRecordId</td>
<td>String</td>
<td>ID of the context record. For example, if the next best action is on a case detail page, the ID of the case.</td>
<td>Optional</td>
<td>45.0</td>
</tr>
<tr>
<td>executionId</td>
<td>String</td>
<td>ID of the original recommendation strategy execution.</td>
<td>Optional</td>
<td>45.0</td>
</tr>
<tr>
<td>externalId</td>
<td>String</td>
<td>External ID of the recommendation. This ID doesn’t need to be a Salesforce 18-character ID. For example, it can be a product number from an external system.</td>
<td>Optional</td>
<td>46.0</td>
</tr>
<tr>
<td>onBehalfOfId</td>
<td>String</td>
<td>ID of the user or entity for which the reaction took place.</td>
<td>Optional</td>
<td>45.0</td>
</tr>
</tbody>
</table>
| reactionType     | ConnectApi.RecommendationReactionType | Type of reaction to a recommendation. Values are:  
|                  |                           | • Accepted  
|                  |                           | • Rejected | Required          | 45.0              |
| recommendationMode | String                   | Reserved for future use.                                                    | Optional             | 46.0              |
| recommendationScore | Double                  | Reserved for future use.                                                    | Optional             | 46.0              |

`createRecommendationDefinition(communityId, recommendationDefinition)`
### ConnectApi.RecordCapabilityInput

Attach an existing knowledge article to a comment.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recordId</td>
<td>String</td>
<td>ID of the existing knowledge article to attach.</td>
<td>Required</td>
<td>42.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ReferencedRefundRequest

Referenced refund input.

Subclass of `ConnectApi.RefundRequest`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>accountId</td>
<td>String</td>
<td>ID of the account linked to the referenced refund request.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>amount</td>
<td>Double</td>
<td>Amount refunded.</td>
<td>Required</td>
<td>50.0</td>
</tr>
<tr>
<td>clientContext</td>
<td>String</td>
<td>Context for payment APIs. Used for a payment caller to re-establish context.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>comments</td>
<td>String</td>
<td>Optional comments for the refund.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>effectiveDate</td>
<td>Datetime</td>
<td>Date when the refund becomes effective.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>paymentGroup</td>
<td>ConnectApi.PaymentGroupRequest</td>
<td>Payment group details associated with the refund request.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
</tbody>
</table>

### ConnectApi.RefundRequest

Refund input.

This class is abstract.

Subclass of `ConnectApi.BaseRequest`. 
No additional properties.
Superclass of ConnectApi.ReferencedRefundRequest.

ConnectApi.RequestHeaderInput Class
An HTTP request header name and value pair.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>The name of the request header.</td>
<td>Required</td>
<td>33.0</td>
</tr>
<tr>
<td>value</td>
<td>String</td>
<td>The value of the request header.</td>
<td>Required</td>
<td>33.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
Define an Action Link and Post with a Feed Element

ConnectApi.ScheduledRecommendationInput
A scheduled custom recommendation.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| channel  | ConnectApi.Recommendation.Channel         | A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:  
  • CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.  
  • CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.  
  • CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.  
  • CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. | Optional for creating a scheduled recommendation If not specified, defaults to DefaultChannel. Don’t use when updating a scheduled recommendation | 36.0              |
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>CustomChannel5</td>
<td>CustomChannel5</td>
<td>Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.</td>
<td>Optional</td>
<td></td>
</tr>
<tr>
<td>DefaultChannel</td>
<td>DefaultChannel</td>
<td>Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder. Use these channel values; you can't rename or create other channels.</td>
<td>Optional</td>
<td></td>
</tr>
<tr>
<td>enabled</td>
<td>Boolean</td>
<td>Indicates whether scheduling is enabled. If true, the custom recommendation is enabled and appears in communities. If false, custom recommendations in feeds in Salesforce mobile web aren't removed, but no new custom recommendations appear. In Customer Service and Partner Central communities, disabled custom recommendations no longer appear.</td>
<td>Optional</td>
<td>35.0</td>
</tr>
<tr>
<td>rank</td>
<td>Integer</td>
<td>Relative rank of the scheduled custom recommendation indicated by ascending whole numbers starting with 1. Setting the rank is comparable to an insertion into an ordered list. The scheduled custom recommendation is inserted into the position specified by the rank. The rank of all the scheduled custom recommendations after it is pushed down. See Ranking scheduled custom recommendations example. If the specified rank is larger than the size of the list, the scheduled custom recommendation is put at the end of the list. The rank of the scheduled custom recommendation is the size of the list, instead of the one specified.</td>
<td>Optional</td>
<td>35.0</td>
</tr>
</tbody>
</table>

ConnectApi Namespace

Apex Developer Guide
If a rank is not specified, the scheduled custom recommendation is put at the end of the list.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recommendation</td>
<td>String</td>
<td>ID of the audience for this scheduled custom recommendation. When updating a scheduled custom recommendation, specify ALL to remove the association between a custom recommendation audience and a scheduled custom recommendation.</td>
<td>Optional</td>
<td>35.0</td>
</tr>
<tr>
<td>AudienceId</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>recommendation</td>
<td>String</td>
<td>ID of the custom recommendation definition that this scheduled recommendation schedules.</td>
<td>Required to create a scheduled recommendation</td>
<td>35.0</td>
</tr>
<tr>
<td>DefinitionId</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Ranking scheduled custom recommendations example**

If you have these scheduled custom recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendations</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>3</td>
</tr>
</tbody>
</table>

And you include this information in the Scheduled Custom Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>
### Scheduled Recommendation

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>

SEE ALSO:
```
createScheduledRecommendation(communityId, scheduledRecommendation)
```

#### ConnectApi.SocialPostMassApprovalInput

List of social post ids and the action to approve or reject publishing them.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isApproved</td>
<td>Boolean</td>
<td>Specifies whether to approve (true) or reject (false) publishing the social posts. If unspecified, defaults to false.</td>
<td>Optional</td>
<td>46.0</td>
</tr>
<tr>
<td>socialPostIdList</td>
<td>List&lt;String&gt;</td>
<td>A list of up to 200 social post IDs.</td>
<td>Required</td>
<td>46.0</td>
</tr>
</tbody>
</table>

---

#### ConnectApi.StatusCapabilityInput

Change the status of a feed post or comment.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput` Class.
### Property Table

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>feedEntityStatus</td>
<td>ConnectApi. FeedEntityStatus</td>
<td>Status of the feed post or comment. Values are:</td>
<td>Required</td>
<td>37.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Draft—The feed post isn’t published but is visible to the author and users with Modify All Data or View All Data permission. Comments can’t be drafts.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• PendingReview—The feed post or comment isn’t approved yet and therefore isn’t published or visible.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Published—The feed post or comment is approved and visible. Posts that have a status of PendingReview or Published can’t be changed to a status of Draft and vice versa.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### ConnectApi.StreamSubscriptionInput

An entity to subscribe to for a Chatter feed stream.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>entityId</td>
<td>String</td>
<td>The ID of any feed-enabled entity, such as a group, record, or user, that the context user can access. When subscribed, the entity’s feed is included in the feed stream.</td>
<td>Required</td>
<td>39.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

ConnectApi.ChatterStreamInput

---

### ConnectApi.SurveyInvitationEmailInput

Survey invitation email.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>allowGuestUserResponse</td>
<td>Boolean</td>
<td>Specifies whether participants who don’t have a Salesforce account can respond (true) or not (false).</td>
<td>Required</td>
<td>50.0</td>
</tr>
<tr>
<td>allowParticipantsAccessTheirResponse</td>
<td>Boolean</td>
<td>Specifies whether participants can see their responses (true) or not (false).</td>
<td>Required</td>
<td>50.0</td>
</tr>
<tr>
<td>associateRecordsWithRecipients</td>
<td>List&lt;ConnectApi.AssociateRecordWithRecipientInput&gt;</td>
<td>Maps each recipient with another record that must be associated with the recipient’s survey invitation.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>body</td>
<td>String</td>
<td>Content of the email. Specify the email body in case you don’t specify an email template. The email body must contain one of the following merge fields:</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• To embed a link to launch the survey: [[SURVEY_INVITATION_URL]]</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• To embed a survey question: {{SurveyQuestion.QuestionName}} and {{SurveyQuestion.QuestionHtmlContent}}</td>
<td></td>
<td></td>
</tr>
<tr>
<td>collectAnonymousResponse</td>
<td>Boolean</td>
<td>Specifies whether participants can respond anonymously (true) or not (false).</td>
<td>Required</td>
<td>50.0</td>
</tr>
<tr>
<td>communityId</td>
<td>String</td>
<td>ID of the community that’s used to open the survey for users outside your org.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>emailTemplateId</td>
<td>String</td>
<td>ID of the email template that’s used to send the survey invitation. The template must contain the required merge fields that embed either the survey link or a question in the email.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>fromEmailAddress</td>
<td>String</td>
<td>Email ID of the user or the org-wide email address associated with the user’s profile.</td>
<td>Required</td>
<td>50.0</td>
</tr>
<tr>
<td>invitationExpirationDate</td>
<td>Datetime</td>
<td>Date on which the survey invitation expires.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>invitationOwner</td>
<td>String</td>
<td>ID of the owner of the survey invitation records.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>isPersonalInvitation</td>
<td>Boolean</td>
<td>Specifies whether an unique invitation is created for each participant (true) or not (false). When a participant responds using a personal invitation, the response record is associated with the participant’s Salesforce record.</td>
<td>Required</td>
<td>50.0</td>
</tr>
</tbody>
</table>
### ConnectApi.TargetInput

Target to create.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>audienceId</td>
<td>String</td>
<td>ID of the audience to assign to the target.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>groupName</td>
<td>String</td>
<td>Group name of the target. Groups bundle related target and audience pairs. You can have up to 2,000 groups and 500 targets per group. To determine the group name for targets of type ExperienceVariation, see Personalization Target Developer and Group Names in the Lightning Communities Developer Guide.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>priority</td>
<td>Integer</td>
<td>Priority of the target. Within a group, priority determines which target is returned if the user matches more than one audience.</td>
<td>Optional</td>
<td>48.0</td>
</tr>
<tr>
<td>publishStatus</td>
<td>ConnectApi.PublishStatus</td>
<td>The publish status of the target. Values are: Draft, Live</td>
<td>Optional</td>
<td>48.0</td>
</tr>
</tbody>
</table>
We recommend setting the publish status to Draft. If you specify Live, your changes revert after you publish the community.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>targetType</td>
<td>String</td>
<td>Type of target, indicating the nature of the data being targeted. Supported values include:</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ExperienceVariation (version 48.0 and later)</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Custom object API names, such as CustomObjectName__c (version 48.0 and later)</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• NavigationLinkSet (version 49.0 and later)</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Topic (version 49.0 and later)</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• CollaborationGroup (version 49.0 and later)</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• KnowledgeArticle (version 49.0 and later)</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ContentDocument (version 49.0 and later)</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ManagedContent (version 49.0 and later)</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Report (version 49.0 and later)</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Dashboard (version 49.0 and later)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

You can have up to 2,500 ExperienceVariation targets and 25,000 record targets.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>targetValue</code></td>
<td><code>String</code></td>
<td>Value of the target. If <code>targetType</code> is <code>ExperienceVariation</code>, <code>targetValue</code> is the developer name of the experience variation. If <code>targetType</code> is <code>CustomObjectName__c</code>, <code>targetValue</code> is the ID of the custom object. To determine the developer name for targets of type <code>ExperienceVariation</code>, see Personalization Target Developer and Group Names in the Lightning Communities Developer Guide.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

<td>48.0</td>
</tr>
</tbody>
</table>

### ConnectApi.TargetUpdateInput

Target to update.
Available Version | Description | Type | Property
--- | --- | --- | ---
48.0 | Required if priority isn’t specified. Otherwise, Optional | String | audienceId
48.0 | Required if audienceId isn’t specified. Otherwise, Optional | Integer | priority
48.0 | Required | String | targetId

SEE ALSO:
ConnectApi.TargetCollectionUpdateInput

ConnectApi.TextSegmentInput Class
Used to include a text segment in a feed item or comment.
Subclass of ConnectApi.MessageSegmentInput

| Property | Type | Description | Available Version
--- | --- | --- | ---
text | String | Plain text for this segment. If hashtags or links are detected in text, they are included in the comment as hashtag and link segments. Mentions are not detected in text and are not separated out of the text. Mentions require ConnectApi.MentionSegmentInput Class. | 28.0

SEE ALSO:
Edit a Comment
Edit a Feed Element
Edit a Question Title and Post
Post a Rich-Text Feed Element with Inline Image
ConnectApi.MessageBodyInput Class

ConnectApi.TopicInput Class
Update a topic's name or description or merge topics.

| Property | Type | Description | Available Version
--- | --- | --- | ---
description | String | Description of the topic | 29.0
**Available Version** | **Description** | **Type** | **Property**
--- | --- | --- | ---
33.0 | List of up to five secondary topic IDs to merge with the primary topic. If any of these secondary topics are managed topics, they lose their topic type, topic images, and children topics. Their feed items are reassigned to the primary topic. | List<String> | idsToMerge
29.0 | Name of the topic. Use this property to change only the capitalization and spacing of the topic name. | String | name

SEE ALSO:
updateTopic(communityId, topicId, topic)

### ConnectApi.TopicNamesInput
A list of topic names to replace currently assigned topics. Also a list of suggested topics to assign.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>topicNames</td>
<td>List&lt;String&gt;</td>
<td>A list of up to 10 topic names for a feed item or 100 topic names for a record.</td>
<td>Required</td>
<td>35.0</td>
</tr>
<tr>
<td>topicSuggestions</td>
<td>List&lt;String&gt;</td>
<td>A list of suggested topics to assign to a record or feed item to improve future topic suggestions.</td>
<td>Optional</td>
<td>37.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
reassignTopicsByName(communityId, recordId, topicNames)
ConnectApi.ArticleTopicAssignmentJobInput

### ConnectApi.TopicsCapabilityInput
Assign topics to a feed element.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>contextTopicName</td>
<td>String</td>
<td>Name of the parent topic in the community to which the feed element belongs.</td>
<td>Optional</td>
<td>38.0</td>
</tr>
<tr>
<td>topics</td>
<td>List&lt;String&gt;</td>
<td>List of topics to assign to the feed element.</td>
<td>Required</td>
<td>38.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.FeedElementCapabilitiesInput
**ConnectApi.UpDownVoteCapabilityInput**

Upvote or downvote a feed element or a comment.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>vote</td>
<td>ConnectApi.UpDownVoteValue</td>
<td>Type of vote for a feed element or comment. Values are: Down, None, Up</td>
<td>Required</td>
<td>41.0</td>
</tr>
</tbody>
</table>

**ConnectApi.UserInput Class**

Used to update a user.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>aboutMe</td>
<td>String</td>
<td>The <code>aboutMe</code> property of a <code>ConnectApi.UserDetail</code> output object. This property populates the “About Me” section of the user profile, which is visible to all members of a community or organization.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

`updateUser(communityId, userId, userInput)`

**ConnectApi.WishlistInput**

Wishlist to create.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the wishlist.</td>
<td>Required</td>
<td>49.0</td>
</tr>
<tr>
<td>products</td>
<td>List&lt;ConnectApi.WishlistItemInput&gt;</td>
<td>List of products to add to the wishlist.</td>
<td>Optional</td>
<td>49.0</td>
</tr>
</tbody>
</table>

**ConnectApi.WishlistItemInput**

Item to update or add to a wishlist.
### ConnectApi.WishlistInput

Wishlist name to update.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>Wishlist name to update.</td>
<td>Required</td>
<td>50.0</td>
</tr>
</tbody>
</table>

### Retired ConnectApi Input Classes

These ConnectApi input classes are retired.

**IN THIS SECTION:**

- ConnectApi.CanvasAttachmentInput Class
- ConnectApi.ContentAttachmentInput Class
- ConnectApi.FeedItemAttachmentInput Class
- ConnectApi.LinkAttachmentInput Class
- ConnectApi.NewFileAttachmentInput Class
- ConnectApi.PollAttachmentInput Class

### ConnectApi.CanvasAttachmentInput Class

⚠ **Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, use ConnectApi.CanvasCapabilityInput.

Used to attach a canvas app to a feed item.

Subclass of ConnectApi.FeedItemAttachmentInput Class

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Optional. The description of the canvas app.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>developerName</td>
<td>String</td>
<td>The developer name (API name) of the canvas app</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>height</td>
<td>String</td>
<td>Optional. The height of the canvas app in pixels. Default height is 200 pixels.</td>
<td>29.0–31.0</td>
</tr>
</tbody>
</table>
ConnectApi.ContentAttachmentInput Class

Important: This class isn’t available in version 32.0 and later. In version 32.0 and later, use ConnectApi.ContentCapabilityInput.

Used to attach existing content to a comment or feed item.

Subclass of ConnectApi.FeedItemAttachmentInput Class

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>namespacePrefix</td>
<td>String</td>
<td>Optional. The namespace prefix of the Developer Edition organization in which the canvas app was created.</td>
<td>29.0–31.0</td>
</tr>
</tbody>
</table>
| parameters      | String | Optional. Parameters passed to the canvas app in JSON format. Example: 
{'isUpdated': 'true'} | 29.0–31.0         |
| thumbnailUrl    | String | Optional. A URL to a thumbnail image for the canvas app. Maximum dimensions are 120x120 pixels. | 29.0–31.0         |
| title           | String | The title of the link used to call the canvas app.                         | 29.0–31.0         |

ConnectApi.FeedItemAttachmentInput Class

Important: This class isn’t available in version 32.0 and later. In version 32.0 and later, use ConnectApi.FeedElementCapabilityInput Class.

Used to attach a file to a feed item.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

Superclass for:
- ConnectApi.CanvasAttachmentInput Class
- ConnectApi.ContentAttachmentInput Class
- ConnectApi.LinkAttachmentInput Class
- ConnectApi.NewFileAttachmentInput Class
- ConnectApi.PollAttachmentInput Class

ConnectApi.LinkAttachmentInput Class

Important: This class isn’t available in version 32.0 and later. In version 32.0 and later, use ConnectApi.LinkCapabilityInput.

Used as part of a feed item attachment, to add links.

Subclass of ConnectApi.FeedItemAttachmentInput Class
### ConnectApi.NewFileAttachmentInput Class

**Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, use `ConnectApi.ContentCapabilityInput`.

Describes a new file to be attached to a feed item. The actual binary file, that is the attachment, is provided as part of the `BinaryInput` in the method that takes this attachment input, such as `postFeedItem` or `postComment`.

Subclass of `ConnectApi.FeedItemAttachmentInput Class`

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>URL to be used for the link</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>urlName</td>
<td>String</td>
<td>Title of the link</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

### ConnectApi.PollAttachmentInput Class

**Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, use `ConnectApi.PollCapabilityInput`.

Used to attach a poll to a feed item.

Subclass of `ConnectApi.FeedItemAttachmentInput Class`

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>pollChoices</td>
<td>List&lt;String&gt;</td>
<td>The text labels for the poll items. Polls must contain between 2 to 10 poll choices.</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

### ConnectApi Output Classes

Most `ConnectApi` methods return instances of `ConnectApi` output classes.

All properties are read-only, except for instances of output classes created within test code.

All output classes are concrete unless marked abstract in this documentation.

All concrete output classes have no-argument constructors that you can invoke only from test code. See Testing `ConnectApi` Code.

#### ConnectApi.AbstractContentHubItemType

An item type associated with a repository folder.

This class is abstract.

Superclass of:

- `ConnectApi.ContentHubItemTypeDetail`
• ConnectApi.ContentHubItemTypeSummary

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>contentStream Support</td>
<td>ConnectApi.ContentHubStreamSupport</td>
<td>Support for content streaming. Values are:</td>
<td>39.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the item type.</td>
<td>39.0</td>
</tr>
<tr>
<td>displayName</td>
<td>String</td>
<td>Display name of the item type.</td>
<td>39.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the item type.</td>
<td>39.0</td>
</tr>
<tr>
<td>isVersionable</td>
<td>Boolean</td>
<td>Indicates whether the item type can have versions.</td>
<td>39.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the detailed information of the item type.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

ConnectApi.AbstractDirectoryEntrySummary

A directory entry with summary information.

This class is abstract.

Superclass of:
• ConnectApi.RepositoryGroupSummary
  • ConnectApi.RepositoryUserSummary

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>domain</td>
<td>String</td>
<td>Domain of the directory entry.</td>
<td>39.0</td>
</tr>
<tr>
<td>email</td>
<td>String</td>
<td>Email of the directory entry.</td>
<td>39.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the directory entry.</td>
<td>39.0</td>
</tr>
<tr>
<td>type</td>
<td>ConnectApi.ContentHubDirectoryEntryType</td>
<td>Type of directory entry. Values are:</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• GroupEntry</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• UserEntry</td>
<td></td>
</tr>
</tbody>
</table>

ConnectApi.AbstractExtensionInformation

Extension information.

This class is abstract.

Superclass of .ConnectApi.LightningExtensionInformation
### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>extension</td>
<td>ConnectApi. ExtensionInformationType</td>
<td>Information type of the extension. Values are: Lightning</td>
<td>40.0</td>
</tr>
</tbody>
</table>

### ConnectApi.AbstractGatewayCommonResponse

Payment gateway response fields commonly used in payment services.

This class is abstract.

Superclass of [ConnectApi.AbstractGatewayResponse](#).

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>gatewayAvsCode</td>
<td>String</td>
<td>Used to verify the address mapped to a payment method when the payments platform requests tokenization from the payment gateway.</td>
<td>50.0</td>
</tr>
<tr>
<td>gatewayDate</td>
<td>Datetime</td>
<td>Date when the notification occurred. Some gateways don’t send this value.</td>
<td>50.0</td>
</tr>
<tr>
<td>gatewayMessage</td>
<td>String</td>
<td>Error messages that the gateway returned for the notification request. Maximum length of 255 characters.</td>
<td>50.0</td>
</tr>
<tr>
<td>gatewayResultCode</td>
<td>String</td>
<td>Gateway-specific result code. You can map the result code to a Salesforce-specific result code. Maximum length of 64 characters.</td>
<td>50.0</td>
</tr>
<tr>
<td>gatewayResultCodeDescription</td>
<td>String</td>
<td>A description of the gateway-specific result code that a payment gateway returned. Maximum length of 1,000 characters.</td>
<td>50.0</td>
</tr>
<tr>
<td>salesforceResultCode</td>
<td>String</td>
<td>The Salesforce result code for the gateway result code.</td>
<td>50.0</td>
</tr>
</tbody>
</table>

### ConnectApi.AbstractGatewayResponse

Payment gateway response fields used in sale, authorization, and capture services.

This class is abstract.

Subclass of [ConnectApi.AbstractGatewayCommonResponse](#).

Super class of:
- [ConnectApi.CaptureGatewayResponse](#)
- [ConnectApi.RefundGatewayResponse](#)

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>gatewayReferenceDetails</td>
<td>String</td>
<td>Provides information about the gateway communication.</td>
<td>50.0</td>
</tr>
</tbody>
</table>
### ConnectApi.AbstractMessageBody Class

This class is abstract.

Superclass of:
- ConnectApi.FeedBody Class
- ConnectApi.MessageBody Class

#### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isRichText</td>
<td>Boolean</td>
<td>Indicates whether the body is rich text.</td>
<td>35.0</td>
</tr>
<tr>
<td>messageSegments</td>
<td>List&lt;ConnectApi. MessageSegment&gt;</td>
<td>List of message segments</td>
<td>28.0</td>
</tr>
<tr>
<td>text</td>
<td>String</td>
<td>Display-ready text. Use this text if you don’t want to process the message segments.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

### ConnectApi.AbstractNBAAction

A recommended action of recommendation strategy.

This class is abstract.

Superclass of ConnectApi.NBAFlowAction.

#### Properties

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>parameters</td>
<td>List&lt;ConnectApi. NBAAction Parameter&gt;</td>
<td>List of parameters to pass to the action.</td>
<td>45.0</td>
</tr>
<tr>
<td>type</td>
<td>ConnectApi. NBAActionType</td>
<td>Type of action. Values are:</td>
<td>45.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Flow—Automated process tool with multiple subtypes.</td>
<td></td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.NBARecommendation

### ConnectApi.AbstractNBATarget

A recommendation target of a recommendation strategy.

This class is abstract.
Superclass of `ConnectApi.NBANativeRecommendation`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>type</td>
<td><code>ConnectApi.NBATargetType</code></td>
<td>Type of target. Values are:</td>
<td>45.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Recommendation</td>
<td></td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.NBARecommendation`

`ConnectApi.AbstractRecommendation`

A Chatter, custom, or static recommendation.
This class is abstract.
Superclass of:
- `ConnectApi.EntityRecommendation`
- `ConnectApi.NonEntityRecommendation`

ConnectApi.NonEntityRecommendation isn’t used in version 34.0 and later. In version 34.0 and later, `ConnectApi.EntityRecommendation` is used for all recommendations.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>explanation</td>
<td><code>ConnectApi.RecommendationExplanation</code></td>
<td>The Chatter, custom, or static recommendation explanation.</td>
<td>32.0</td>
</tr>
<tr>
<td>platformActionGroup</td>
<td><code>ConnectApi.PlatformActionGroup</code></td>
<td>A platform action group instance with state appropriate for the context user.</td>
<td>34.0</td>
</tr>
<tr>
<td>recommendationType</td>
<td><code>ConnectApi.RecommendationType</code></td>
<td>Specifies the type of record being recommended.</td>
<td>32.0</td>
</tr>
<tr>
<td>url</td>
<td><code>String</code></td>
<td>URL for the Chatter, custom, or static recommendation.</td>
<td>34.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.RecommendationsCapability`
- `ConnectApi.RecommendationCollection`

`ConnectApi.AbstractRecommendationExplanation`

Explanation for a Chatter recommendation.
This class is abstract.
Superclass of `ConnectApi.RecommendationExplanation`
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>summary</td>
<td>String</td>
<td>Summary explanation for the Chatter recommendation.</td>
<td>32.0</td>
</tr>
</tbody>
</table>
| type          | `ConnectApi.RecommendationExplanationType` | Indicates the reason for the Chatter recommendation.  
  • ArticleHasRelatedContent—Articles with related content to a context article.  
  • ArticleViewedTogether—Articles often viewed together with the article that the context user just viewed.  
  • ArticleViewedTogetherWithViewers—Articles often viewed together with other records that the context user views.  
  • Custom—Custom recommendations.  
  • FilePopular—Files with many followers or views.  
  • FileViewedTogether—Files often viewed at the same time as other files that the context user views.  
  • FollowedTogetherWithFollowees—Users often followed together with other records that the context user follows.  
  • GroupMembersFollowed—Groups with members that the context user follows.  
  • GroupNew—Recently created groups.  
  • GroupPopular—Groups with many active members.  
  • ItemViewedTogether—Records often viewed at the same time as other records that the context user views.  
  • PopularApp—Applications that are popular.  
  • RecordOwned—Records that the context user owns.  
  • RecordParentOfFollowed—Parent records of records that the context user follows.  
  • RecordViewed—Records that the context user recently viewed.  
  • TopicFollowedTogether—Topics often followed together with the record that the context user just followed.  
  • TopicFollowedTogetherWithFollowees—Topics often followed together with other records that the context user follows. | 32.0 |
### Property Name | Type | Description
--- | --- | ---
| TopicPopularFollowed |  | Topics with many followers.
| TopicPopularLiked |  | Topics on posts that have many likes.
| UserDirectReport |  | Users who report to the context user.
| UserFollowedTogether |  | Users often followed together with the record that the context user just followed.
| UserFollowsSameUsers |  | Users who follow the same users as the context user.
| UserManager |  | The context user’s manager.
| UserNew |  | Recently created users.
| UserPeer |  | Users who report to the same manager as the context user.
| UserPopular |  | Users with many followers.
| UserViewingSameRecords |  | Users who view the same records as the context user.

#### ConnectApi.AbstractRecordField Class
This class is abstract.

Superclass of:
- ConnectApi.BlankRecordField Class
- ConnectApi.LabeledRecordField Class

A field on a record object.

Message segments in a feed item are typed as ConnectApi.MessageSegment. Feed item capabilities are typed as ConnectApi.FeedItemCapability. Record fields are typed as ConnectApi.AbstractRecordField. These classes are all abstract and have several concrete subclasses. At runtime you can use `instanceof` to check the concrete types of these objects and then safely proceed with the corresponding downcast. When you downcast, you must have a default case that handles unknown subclasses.

⚠️ **Important:** The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.
### ConnectApi.RecordViewSection Class

This class is abstract.

Subclass of **ConnectApi.ActorWithId Class**

Superclass of:
- **ConnectApi.RecordSummary Class**
- **ConnectApi.RecordView Class**

A view of any record in the organization, including a custom object record. This object is used if a specialized object, such as User or ChatterGroup, is not available for the record type.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>The localized name of the record.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

### ConnectApi.AbstractRepositoryFile

A repository file.
This class is abstract.
Subclass of `ConnectApi.AbstractRepositoryItem`.
Superclass of:
- `ConnectApi.RepositoryFileDetail`
- `ConnectApi.RepositoryFileSummary`

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>checkinComment</td>
<td>String</td>
<td>Checkin comment of the file.</td>
<td>39.0</td>
</tr>
<tr>
<td>contentBody</td>
<td>String</td>
<td>Text of the file's content if available, otherwise <code>null</code>.</td>
<td>43.0</td>
</tr>
<tr>
<td>contentSize</td>
<td>Integer</td>
<td>Length in bytes of the content of the file.</td>
<td>39.0</td>
</tr>
<tr>
<td>downloadUrl</td>
<td>String</td>
<td>URL to the repository file content.</td>
<td>39.0</td>
</tr>
<tr>
<td>externalContentUrl</td>
<td>String</td>
<td>URL of this file's content in the external system.</td>
<td>39.0</td>
</tr>
<tr>
<td>externalDocumentUrl</td>
<td>String</td>
<td>URL of this file in the external system.</td>
<td>39.0</td>
</tr>
<tr>
<td>externalFilePermissionInfo</td>
<td><code>ConnectApi.ExternalFilePermissionInfo</code></td>
<td>External file permission information, such as available groups, available permission types, and current sharing status, or <code>null</code> if <code>includeExternalFilePermissionsInfo</code> is <code>false</code>.</td>
<td>39.0</td>
</tr>
<tr>
<td>mimeType</td>
<td>String</td>
<td>Mime type of the file.</td>
<td>39.0</td>
</tr>
<tr>
<td>previewUrlThumbnail</td>
<td>String</td>
<td>URL to the thumbnail preview (240 x 180 PNG).</td>
<td>39.0</td>
</tr>
<tr>
<td>previewUrlThumbnailBig</td>
<td>String</td>
<td>URL to the big thumbnail preview (720 x 480 PNG).</td>
<td>39.0</td>
</tr>
<tr>
<td>previewUrlThumbnailTiny</td>
<td>String</td>
<td>URL to the tiny thumbnail preview (120 x 90 PNG).</td>
<td>39.0</td>
</tr>
<tr>
<td>previewsUrl</td>
<td>String</td>
<td>URL to the previews.</td>
<td>39.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the file.</td>
<td>39.0</td>
</tr>
<tr>
<td>versionId</td>
<td>String</td>
<td>ID of the file version in the external system.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

**ConnectApi.AbstractRepositoryFolder**

A repository folder.

This class is abstract.
Subclass of `ConnectApi.AbstractRepositoryItem`.
Superclass of:
- `ConnectApi.RepositoryFolderDetail`
### ConnectApi.RepositoryFolderSummary

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>externalFolderUrl</td>
<td>String</td>
<td>URL of this folder in the external system.</td>
<td>39.0</td>
</tr>
<tr>
<td>folderItemsUrl</td>
<td>String</td>
<td>URL that lists the files and folders in this folder.</td>
<td>39.0</td>
</tr>
<tr>
<td>path</td>
<td>String</td>
<td>Absolute path of the folder in the external system.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

### ConnectApi.AbstractRepositoryItem

A repository item.

This class is abstract.

Superclass of:
- ConnectApi.AbstractRepositoryFile
- ConnectApi.AbstractRepositoryFolder

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>createdBy</td>
<td>String</td>
<td>Name of the user who created the item.</td>
<td>39.0</td>
</tr>
<tr>
<td>createdDate</td>
<td>Datetime</td>
<td>Date the item was created.</td>
<td>39.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the item.</td>
<td>39.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the item.</td>
<td>39.0</td>
</tr>
<tr>
<td>itemTypeUrl</td>
<td>String</td>
<td>URL to the item type information.</td>
<td>39.0</td>
</tr>
<tr>
<td>modifiedBy</td>
<td>String</td>
<td>Name of the user who last modified the item.</td>
<td>39.0</td>
</tr>
<tr>
<td>modifiedDate</td>
<td>Datetime</td>
<td>Date the item was last modified.</td>
<td>39.0</td>
</tr>
<tr>
<td>motif</td>
<td>ConnectApi.Motif</td>
<td>Motif of the item.</td>
<td>39.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the item.</td>
<td>39.0</td>
</tr>
<tr>
<td>repository</td>
<td>ConnectApi.Reference</td>
<td>Item external repository.</td>
<td>39.0</td>
</tr>
<tr>
<td>type</td>
<td>String</td>
<td>Item type, file or folder.</td>
<td>39.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The URL to the item.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

### ConnectApi.AbstractUserMissionActivity

User activity associated with missions.

This class is abstract.

Superclass of:
- ConnectApi.UserMission
- ConnectApi.UserMissionActivity
### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>activityCount</td>
<td>Integer</td>
<td>Number of mission activities of the specified type for the user.</td>
<td>45.0</td>
</tr>
<tr>
<td>activityType</td>
<td>String</td>
<td>Type of mission activity for a user. Values are:</td>
<td>45.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• FeedItemAnswerAQuestion—User answered a question.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• FeedItemLikeSomething—User liked a post or comment.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• FeedItemMarkAnswerAsBest—User marked an answer as the best answer.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• FeedItemPostQuestion—User posted a question.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• FeedItemReceiveAComment—User received a comment on a post.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• FeedItemReceiveALike—User received a like on a post or comment.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• FeedItemReceiveAnAnswer—User received an answer to a question.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• FeedItemWriteAComment—User commented on a post.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• FeedItemWriteAPost—User made a post.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• FeedItemYourAnswerMarkedBest—User’s answer was marked as the best answer.</td>
<td></td>
</tr>
</tbody>
</table>

[ConnectApi.UserMissionActivityCollection](#)

### ConnectApi.ActionLinkDefinition Class

The definition of an action link. Action link definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionUrl</td>
<td>String</td>
<td>The action link URL. For example, a Ui action link URL is a Web page. A Download action link URL is a link to the file to download. Ui and Download action link URLs are provided to clients. An Api or ApiAsync action link URL is a REST resource. Api and ApiAsync action link URLs aren't provided to clients. Links to Salesforce can be relative. All other links must be absolute and start with <code>https://</code>.</td>
<td>33.0</td>
</tr>
<tr>
<td>Property Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>------------------</td>
<td>-----------</td>

</tbody>
</table>

#### ConnectApi.ActionLinkGroupDefinition Class

The definition of an action link group. Information in the action link group definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link group definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

ConnectApi.ActorWithId Class
This class is abstract.
Subclass of: ConnectApi.Actor Class
Superclass of:
- ConnectApi.AbstractRecordView Class
### ConnectApi.ArticleSummary

- **id**: String
  - Actor's 18-character ID
  - Available Version: 28.0

- **motif**: [ConnectApi.Motif](#)
  - An icon that identifies the actor as a user, group, file, or custom object. The icon isn't the user or group photo, and it isn't a preview of the file. The motif can also contain the object's base color.
  - Available Version: 28.0

- **mySubscription**: [ConnectApi.Reference](#)
  - If the context user is following the item, this contains information about the subscription, else returns `null`.
  - Available Version: 28.0

- **url**: String
  - Connect REST API URL for the resource
  - Available Version: 28.0

**ConnectApi.AdjustOrderSummaryOutputRepresentation**

Output representation of the financial changes for an adjust items action. For a preview action, these values are the expected output. For a submit action, these values are the actual output.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>changeBalances</td>
<td>ConnectApi.</td>
<td>Expected (for preview) or actual (for submit) financial values for the price adjustment action. Most of the values match the change order values. If two change orders are returned, then these values combine them. The sign of a value in this output is the opposite of the corresponding value on a change order record. For example, a discount is a positive value in changeBalances and a negative value on a change order record.</td>
<td>49.0</td>
</tr>
<tr>
<td></td>
<td>ChangeItemOutputRepresentation</td>
<td></td>
<td></td>
</tr>
<tr>
<td>orderSummaryId</td>
<td>String</td>
<td>ID of the OrderSummary.</td>
<td>49.0</td>
</tr>
<tr>
<td>postFulfillmentChangeOrderId</td>
<td>String</td>
<td>ID of the change Order that holds the financial changes applicable to order products that have been fulfilled. For an adjustPreview call, this value is always null.</td>
<td>49.0</td>
</tr>
<tr>
<td>preFulfillmentChangeOrderId</td>
<td>String</td>
<td>ID of the change Order that holds the financial changes applicable to order products that have not been fulfilled. For an adjustPreview call, this value is always null.</td>
<td>49.0</td>
</tr>
</tbody>
</table>

**ConnectApi.Alternative**

Alternative representation for an extension on a feed element.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>text</td>
<td>String</td>
<td>Text representation of the extension.</td>
<td>40.0</td>

### ConnectApi.BannerCapability Class

If a feed element has this capability, it has a banner motif and style.

Subclass of ConnectApi.FeedElementCapability Class.
Available Version| Description | Type | Property Name
--- | --- | --- | ---
31.0 | A banner motif. | ConnectApi.Motif | motif

Style | Decorates a feed item with a color and set of icons. Possible value:
--- | --- | --- | ---
Announcement—An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it's deleted or replaced by another announcement.

SEE ALSO:
ConnectApi.FeedElementCapabilities Class

ConnectApi.BannerPhoto
A banner photo.

Available Version| Property Name | Type | Description
--- | --- | --- | ---
36.0 | bannerPhotoUrl | String | URL to the banner photo in a large format. This URL is available only to authenticated users.
36.0 | bannerPhotoVersionId | String | 18-character version ID of the banner photo.
36.0 | url | String | URL to the banner photo.

<tr>
<td>success</td>
<td>Boolean</td>
<td>Indicates whether the transaction was successful.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**ConnectApi.BatchResult**

The result of an operation returned by a batch method.

**Namespace**

ConnectApi

**Usage**

Calls to batch methods return a list of `BatchResult` objects. Each element in the `BatchResult` list corresponds to the strings in the list parameter passed to the batch method. The first element in the `BatchResult` list matches the first string passed in the list parameter, the second element corresponds with the second string, and so on. If only one string is passed, the `BatchResult` list contains a single element.

**Example**

The following example shows how to obtain and iterate through the returned `ConnectApi.BatchResult` objects. The code adds two group IDs to a list. One of group IDs is incorrect, which causes a failure when the code calls the batch method. After it calls the batch method, it iterates through the results to determine whether the operation was successful or not for each group ID in the list. The code writes the ID of every group that was processed successfully to the debug log. The code writes an error message for every failed group.

This example generates one successful operation and one failure.

```java
List<String> myList = new List<String>();
// Add one correct group ID.
myList.add('0F9D00000000oOT');
// Add one incorrect group ID.
myList.add('0F9D00000000izf');
```
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterGroups.getGroupBatch(null, myList);

// Iterate through each returned result.
for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the group ID.
        ConnectApi.ChatterGroupSummary groupSummary;
        if (batchResult.getResult() instanceof ConnectApi.ChatterGroupSummary) {
            groupSummary = (ConnectApi.ChatterGroupSummary) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(groupSummary.id);
    } else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}

IN THIS SECTION:
 BatchResult Methods

BatchResult Methods
The following are instance methods for BatchResult.

IN THIS SECTION:
 getError()
 If an error occurred, returns a ConnectApi.ConnectApiException object providing the error code and description.
 getErrorMessage()
 Returns a String that contains an error message.
 getErrorTypeName()
 Returns a String that contains the name of the error type.
 getResult()
 Returns an object that contains the results of the batch operation. The object is typed according to the batch method. For example, if you call getMembershipBatch(), a successful call to BatchResult getResult() returns a ConnectApi.GroupMembership object.
 isSuccess()
 Returns a Boolean that is set to true if the batch operation was successful for this object, false otherwise.

getError()
If an error occurred, returns a ConnectApi.ConnectApiException object providing the error code and description.
**Signature**

```java
public ConnectApi.ConnectApiException getError()
```

**Return Value**

Type: `ConnectApi.ConnectApiException`

**getErrorMessage()**

Returns a String that contains an error message.

**Signature**

```java
public String getErrorMessage()
```

**Return Value**

Type: `String`

**Usage**

The error message doesn’t make a round trip through a Visualforce view state, because exceptions can’t be serialized.

**getErrorTypeName()**

Returns a String that contains the name of the error type.

**Signature**

```java
public String getErrorTypeName()
```

**Return Value**

Type: `String`

**getResult()**

Returns an object that contains the results of the batch operation. The object is typed according to the batch method. For example, if you call `getMembershipBatch()`, a successful call to `BatchResult getResult()` returns a `ConnectApi.GroupMembership` object.

**Signature**

```java
public Object getResult()
```

**Return Value**

Type: `Object`
isSuccess()

Returns a Boolean that is set to true if the batch operation was successful for this object, false otherwise.

**Signature**

```java
public Boolean isSuccess()
```

**Return Value**

Type: Boolean

**ConnectApi.BlankRecordField Class**

Subclass of ConnectApi.AbstractRecordField Class

A record field displayed as a placeholder in a grid of fields.

**ConnectApi.BookmarkSummary**

Summary of a bookmark.

Subclass of ConnectApi.UserFeedEntityActivitySummary

No additional properties.

**ConnectApi.BookmarksCapability Class**

If a feed element has this capability, the context user can bookmark it.

Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isBookmarkedByCurrentUser</td>
<td>Boolean</td>
<td>Indicates whether the feed element has been bookmarked by the context user (true) or not (false).</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

- ConnectApi.FeedElementCapabilities Class

**ConnectApi.BundleCapability Class**

If a feed element has this capability, it has a container of feed elements called a bundle.

This class is abstract.

Subclass of ConnectApi.FeedElementCapability Class.

Superclass of:
- ConnectApi.GenericBundleCapability Class
- ConnectApi.TrackedChangeBundleCapability
### ConnectApi.BundleType

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>bundleType</td>
<td>ConnectApi.BundleType</td>
<td>Defines this feed element's bundle type. The bundle type determines what additional information appears in the bundle.</td>
<td>31.0</td>
</tr>
</tbody>
</table>

### ConnectApi.FeedElementPage

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>

### ConnectApi.AbstractCartItem

A cart item.

This class is abstract.

Superclass of:
- ConnectApiCartItem
- ConnectApiCartItemWithoutPrice

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>cartId</td>
<td>String</td>
<td>ID of the cart.</td>
<td>49.0</td>
</tr>
<tr>
<td>cartItemId</td>
<td>String</td>
<td>ID of the item.</td>
<td>49.0</td>
</tr>
<tr>
<td>messagesSummary</td>
<td>ConnectApi.CartMessagesSummary</td>
<td>Messages summary for the item.</td>
<td>49.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the item.</td>
<td>49.0</td>
</tr>
<tr>
<td>productDetails</td>
<td>ConnectApi.CartItemProduct</td>
<td>Summary of the product details.</td>
<td>49.0</td>
</tr>
<tr>
<td>productId</td>
<td>String</td>
<td>ID of the product.</td>
<td>49.0</td>
</tr>
<tr>
<td>quantity</td>
<td>String</td>
<td>Quantity of the item.</td>
<td>49.0</td>
</tr>
<tr>
<td>type</td>
<td>ConnectApi.CartItemType</td>
<td>Type of item in a cart. Values are:</td>
<td>49.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- DeliveryCharge</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Product</td>
<td></td>
</tr>
</tbody>
</table>

**See Also:**
- ConnectApiCartItemResult
ConnectApi.CandidateAnswersStatus
The status of candidate answers on a feed element.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>hasCandidateAnswers</td>
<td>Boolean</td>
<td>Indicates whether candidate answers are available for a question.</td>
<td>41.0</td>
</tr>
<tr>
<td>hasCandidateAnswersPublished</td>
<td>Boolean</td>
<td>Indicates whether any candidate answers are published.</td>
<td>41.0</td>
</tr>
<tr>
<td>hasCandidateAnswersRated</td>
<td>Boolean</td>
<td>Indicates whether any candidate answers are rated.</td>
<td>41.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.QuestionAndAnswersCapability Class

ConnectApi.CanvasCapability Class
If a feed element has this capability, it renders a canvas app.
Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>A description of the canvas app. The maximum size is 255 characters.</td>
<td>32.0</td>
</tr>
<tr>
<td>developerName</td>
<td>String</td>
<td>The API name (developer name) of the connected app.</td>
<td>32.0</td>
</tr>
<tr>
<td>height</td>
<td>String</td>
<td>The height of the canvas app in pixels.</td>
<td>32.0</td>
</tr>
<tr>
<td>icon</td>
<td>ConnectApi.Icon</td>
<td>The icon for the canvas app.</td>
<td>32.0</td>
</tr>
<tr>
<td>namespacePrefix</td>
<td>String</td>
<td>A unique namespace prefix for the canvas app.</td>
<td>32.0</td>
</tr>
<tr>
<td>parameters</td>
<td>String</td>
<td>JSON parameters passed to the canvas app.</td>
<td>32.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>A thumbnail URL to a preview image. The maximum thumbnail size is 120 pixels by 120 pixels.</td>
<td>32.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>A title for the canvas link.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.FeedElementCapabilities Class

ConnectApi.CaptureGatewayResponse
Gateway capture response.
No additional properties.

**ConnectApi.CaptureResponse**
Capture output.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>error</td>
<td>ConnectApiErrorResponse</td>
<td>Error response representation for an authorization capture.</td>
<td>50.0</td>
</tr>
<tr>
<td>gatewayResponse</td>
<td>ConnectApi.CaptureGatewayResponse</td>
<td>Gateway log response containing details about gateway logs created during the process of the capture request.</td>
<td>50.0</td>
</tr>
<tr>
<td>payment</td>
<td>ConnectApi.PaymentResponse</td>
<td>Payment response object for the capture request. Contains the information related to a payment object created during request processing.</td>
<td>50.0</td>
</tr>
<tr>
<td>paymentGatewayLogs</td>
<td>List&lt;ConnectApi.GatewayLogResponse&gt;</td>
<td>Gateway log collection for an authorization capture.</td>
<td>50.0</td>
</tr>
<tr>
<td>paymentGroup</td>
<td>ConnectApi.PaymentGroupResponse</td>
<td>Payment group associated with the capture request.</td>
<td>50.0</td>
</tr>
</tbody>
</table>

**ConnectApi.CartItem**
An item in a cart.
Subclass of `ConnectApi.AbstractCartItem`

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>listPrice</td>
<td>String</td>
<td>List price for the item.</td>
<td>49.0</td>
</tr>
<tr>
<td>salesPrice</td>
<td>String</td>
<td>Sales price for the item.</td>
<td>49.0</td>
</tr>
<tr>
<td>totalAdjustment</td>
<td>String</td>
<td>Total adjustment amount for the item.</td>
<td>50.0</td>
</tr>
<tr>
<td>totalAmount</td>
<td>String</td>
<td>Total amount for the item.</td>
<td>49.0</td>
</tr>
<tr>
<td>totalListPrice</td>
<td>String</td>
<td>Total list price for the item.</td>
<td>49.0</td>
</tr>
<tr>
<td>totalPrice</td>
<td>String</td>
<td>Total price for the item including adjustments but excluding taxes.</td>
<td>49.0</td>
</tr>
<tr>
<td>totalTax</td>
<td>String</td>
<td>Total tax for the item.</td>
<td>49.0</td>
</tr>
<tr>
<td>unitAdjustedPrice</td>
<td>String</td>
<td>Unit price, including adjustments, for the item. This value is informational only and isn’t used in pricing calculations.</td>
<td>50.0</td>
</tr>
</tbody>
</table>
### ConnectApi.CartItemCollection

Cart item collection.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>cartItems</td>
<td>List&lt;ConnectApi.CartItemResult&gt;</td>
<td>Collection of cart item results.</td>
<td>49.0</td>
</tr>
<tr>
<td>cartSummary</td>
<td>ConnectApi.CartSummary</td>
<td>Summary of the cart.</td>
<td>49.0</td>
</tr>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>49.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the current page.</td>
<td>49.0</td>
</tr>
<tr>
<td>hasErrors</td>
<td>Boolean</td>
<td>Specifies whether at least one of the results contains an error.</td>
<td>49.0</td>
</tr>
<tr>
<td>nextPageToken</td>
<td>String</td>
<td>Token identifying the next page, or null if there isn’t a next page.</td>
<td>49.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the next page, or null if there isn’t a next page.</td>
<td>49.0</td>
</tr>
<tr>
<td>previousPageToken</td>
<td>String</td>
<td>Token identifying the previous page, or null if there isn’t a previous page.</td>
<td>49.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the previous page, or null if there isn’t a previous page.</td>
<td>49.0</td>
</tr>
</tbody>
</table>

### ConnectApi.CartItemProduct

Product summary for a cart item.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fields</td>
<td>Map&lt;String, String&gt;</td>
<td>Map of product fields and values.</td>
<td>49.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the product.</td>
<td>49.0</td>
</tr>
<tr>
<td>productId</td>
<td>String</td>
<td>ID of the product.</td>
<td>49.0</td>
</tr>
<tr>
<td>sku</td>
<td>String</td>
<td>SKU of the product.</td>
<td>49.0</td>
</tr>
<tr>
<td>thumbnailImage</td>
<td>ConnectApi.ProductMedia</td>
<td>Thumbnail image of the product.</td>
<td>49.0</td>
</tr>
</tbody>
</table>
### ConnectApi.CartItemResult

Result after requesting a cart item.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>cartItem</td>
<td>ConnectApi.AbstractCartItem</td>
<td>Cart item.</td>
<td>49.0</td>
</tr>
<tr>
<td>message</td>
<td>String</td>
<td>Message when the request isn’t successful.</td>
<td>49.0</td>
</tr>
<tr>
<td>status</td>
<td>String</td>
<td>Status for the request.</td>
<td>49.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.CartItemCollection
- ConnectApi.WishlistToCartResult

### ConnectApi.CartItemWithoutPrice

An item without price information in a cart.

Subclass of ConnectApi.AbstractCartItem

No additional properties.

### ConnectApi.CartMessage

Cart message.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>message</td>
<td>String</td>
<td>Cart message.</td>
<td>49.0</td>
</tr>
<tr>
<td>messageId</td>
<td>String</td>
<td>ID of the object supplying the message.</td>
<td>49.0</td>
</tr>
<tr>
<td>relatedEntityId</td>
<td>String</td>
<td>ID of the entity, for example, cart, cart item, or cart tax, associated with the message.</td>
<td>49.0</td>
</tr>
<tr>
<td>severity</td>
<td>ConnectApi.CartMessageSeverity</td>
<td>Severity of cart message. Values are:</td>
<td>49.0</td>
</tr>
</tbody>
</table>
### ConnectApi.CartMessagesSummary

Cart messages summary.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>errorCount</td>
<td>Integer</td>
<td>In <code>ConnectApi.CartItemResult</code>, the count of messages with the Error severity level.</td>
<td>49.0</td>
</tr>
<tr>
<td>hasErrors</td>
<td>Boolean</td>
<td>Specifies whether there are messages related to the entity (true) or not (false).</td>
<td>49.0</td>
</tr>
<tr>
<td>limitedMessages</td>
<td>List&lt;ConnectApi.CartMessage&gt;</td>
<td>In <code>ConnectApi.CartItemResult</code>, a limited list of messages related to the cart item. In <code>ConnectApi.CartSummary</code>, each message can be related to the cart or to another cart-related entity.</td>
<td>49.0</td>
</tr>
<tr>
<td>relatedEntityId</td>
<td>String</td>
<td>In <code>ConnectApi.CartItemResult</code>, the ID of the related cart item. In <code>ConnectApi.CartSummary</code>, each message can be related to the cart or to another cart-related entity.</td>
<td>49.0</td>
</tr>
<tr>
<td>totalLineItemsWithErrors</td>
<td>Integer</td>
<td>In <code>ConnectApi.CartItemResult</code>, either null if the cart item has no errors or 1 if the cart item has errors. In <code>ConnectApi.CartSummary</code>, the total number of product line items that contain errors.</td>
<td>50.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.AbstractCartItem`
ConnectApi.CartMessagesVisibilityResult

Result of setting the visibility for cart messages.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>visibility</td>
<td>Boolean</td>
<td>Specifies whether cart messages are set to visible (true) or not (false).</td>
<td>50.0</td>
</tr>
</tbody>
</table>

ConnectApi.CartProductAttribute (Pilot)

Product attribute for a cart item.

**Note:** We provide product variations and attributes to selected customers through a pilot program that requires agreement to specific terms and conditions. Product variations and attributes are subject to change and aren’t generally available unless or until Salesforce announces their general availability in documentation or in press releases or public statements. We can’t guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>label</td>
<td>String</td>
<td>Label or display name of the attribute</td>
<td>50.0</td>
</tr>
<tr>
<td>sequence</td>
<td>Integer</td>
<td>Sequence of the attribute within the attribute set.</td>
<td>50.0</td>
</tr>
<tr>
<td>value</td>
<td>String</td>

ConnectApi.CartSummary

A cart summary.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>accountId</td>
<td>String</td>
<td>ID of the account for the cart.</td>
<td>49.0</td>
</tr>
<tr>
<td>cartId</td>
<td>String</td>
<td>ID of the cart.</td>
<td>49.0</td>
</tr>
<tr>
<td>currencyIsoCode</td>
<td>String</td>
<td>Three-letter ISO 4217 currency code associated with the cart.</td>
<td>49.0</td>
</tr>
<tr>
<td>grandTotalAmount</td>
<td>String</td>
<td>Grand total amount including shipping and tax for items in the cart, in the currency of the cart.</td>
<td>49.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the cart.</td>
<td>49.0</td>
</tr>
<tr>
<td>ownerId</td>
<td>String</td>
<td>ID of the owner of the cart.</td>
<td>49.0</td>
</tr>
<tr>
<td>purchaseOrderNumber</td>
<td>String</td>
<td>Purchase order for the cart.</td>
<td>50.0</td>
</tr>
</tbody>
</table>
### ConnectApi.Cart

#### Property Name

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| status        | `ConnectApi.CartStatus` | Status of the cart. Values are:  
  - Active—Cart is active.  
  - Checkout—Cart is in checkout.  
  - Closed—Cart is closed.  
  - PendingDelete—Cart is pending delete, for example, a user deleted the cart but the job hasn't completed yet.  
  - Processing—Cart is processing. | 49.0 |
| totalChargeAmount | `String` | Total amount for shipping and other charges in the currency of the cart. | 49.0 |
| totalListPrice | `String` | Total list price for the cart. | 49.0 |
| totalProductAmount | `String` | Total amount including discounts, but excluding shipping and tax, for product items in the cart. | 49.0 |
| totalProductCount | `String` | Total count of items in the cart. | 49.0 |
| totalTaxAmount | `String` | Total tax amount for the cart, including tax on shipping, if applicable. | 49.0 |
| type | `ConnectApi.CartType` | Type of cart. Value is Cart. | 49.0 |
| uniqueProductCount | `Integer` | Total count of unique items, or SKUs, in the cart. | 49.0 |
| webstoreId | `String` | ID of the webstore of the cart. | 49.0 |

#### ConnectApi.CartToWishlistResult

Result of copying products from a cart to a wishlist.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>productsAddedCount</td>
<td><code>Integer</code></td>
<td>Number of products copied from the cart to the wishlist.</td>
<td>50.0</td>
</tr>
<tr>
<td>wishlistId</td>
<td><code>String</code></td>
<td>ID of the wishlist that cart products were copied to.</td>
<td>50.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.CaseCommentCapability Class

If a feed element has this capability, it has a case comment on the case feed.

Subclass of `ConnectApi.FeedElementCapability Class`. 

---

SEE ALSO:

- `ConnectApi.CartItemCollection`
### ConnectApi Namespace

**Description**

The financial changes resulting from a change to one or more OrderItemSummaries. Most of the values represent the deltas of the values on the associated OrderSummary. The sign of each value is the opposite of the corresponding value on a change order record. For example, a discount is a positive value here and a negative value on a change order record.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>grandTotalAmount</td>
<td>Double</td>
<td>Change to the GrandTotalAmount field.</td>
<td>48.0</td>
</tr>
<tr>
<td>totalAdjDeliveryAmtWithTax</td>
<td>Double</td>
<td>Change to the TotalAdjDeliveryAmtWithTax field.</td>
<td>49.0</td>
</tr>
<tr>
<td>totalAdjDistAmountWithTax</td>
<td>Double</td>
<td>Change to the TotalAdjDistAmountWithTax field.</td>
<td>49.0</td>

</tr>
<tr>
<td>applicationUrl</td>
<td>String</td>
<td>Value from the <code>Info</code> URL field of the connected app used for authentication</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**ConnectApi.CloseCapability**

If a feed element has this capability, users with permission can close it.

Users can't edit (specifically the feed item body or title), comment on, or delete a closed feed element. If the closed feed element is a poll, users can't vote on it. Users can't edit (specifically the comment body) or delete a comment on a closed feed element or select or remove it as best answer.

Admins and moderators can edit and delete closed feed elements and comments on closed feed elements. Admins and moderators can select or remove the best answer status on comments on closed feed elements.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>

  • Processing—Image is being rendered.  
  • Failed—Rendering process failed.  
  • Success—Rendering process was successful. | 36.0              |
### ConnectApi.ContentCapability

If a comment has this capability, it has a file attachment.

Subclass of `ConnectApi.FeedElementCapability` class.

For files attached to a feed post (instead of a comment) in version 36.0 and later, use `ConnectApi.FilesCapability`.

If content is deleted from a feed element after it's posted or if the access to the content is changed to private, the `ConnectApi.ContentCapability` exists, however most of its properties are null.

ConnectApi.DashboardComponentSnapshot

Represents both dashboard component snapshots and alerts you receive when a dashboard component value crosses a threshold.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>componentId</td>
<td>String</td>
<td>18-character ID of the dashboard component.</td>
<td>32.0</td>
</tr>
<tr>
<td>componentName</td>
<td>String</td>
<td>The dashboard component name.</td>
<td>32.0</td>
</tr>
<tr>
<td>dashboardBodyText</td>
<td>String</td>
<td>Display this text next to the actor in the feed element. Use this text in place of the default body text.</td>
<td>32.0</td>
</tr>
<tr>
<td>dashboardId</td>
<td>String</td>
<td>18-character ID of the dashboard.</td>
<td>32.0</td>
</tr>
<tr>
<td>dashboardName</td>
<td>String</td>
<td>The name of the dashboard.</td>
<td>32.0</td>
</tr>
<tr>
<td>fullSizeImageUrl</td>
<td>String</td>
<td>The source URL to retrieve the full-size image of a snapshot. Access this URL with OAuth credentials.</td>
<td>32.0</td>
</tr>
<tr>
<td>lastRefreshDate</td>
<td>Datetime</td>
<td>ISO 8601 date specifying when this dashboard component was last refreshed.</td>
<td>32.0</td>
</tr>
<tr>
<td>lastRefreshDateDisplayText</td>
<td>String</td>
<td>Display text for the last refresh date, for example, “Last Refreshed on October 31, 2013.”</td>
<td>32.0</td>
</tr>
<tr>
<td>runningUser</td>
<td>ConnectApi.UserSummary</td>
<td>The running user of the dashboard at the time the snapshot was posted. This value may be null. Each dashboard has a running user, whose security settings determine which data to display in a dashboard.</td>
<td>32.0</td>
</tr>
</tbody>
</table>
### ConnectApi.DatacloudCompany Class

Information about a Data.com company.

All company information is visible for companies that you purchased and own. If you haven’t purchased a company, some of the fields are hidden. Hidden fields are fully or partially hidden by asterisks “***.”

<table>
<thead>
<tr>

### ConnectApi.DatacloudOrder Class

Represents a Datacloud order.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>entityUrl</td>
<td>String</td>
<td>URL to a list of contacts or companies that were purchased with this order.</td>
<td>32.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>Unique number that's used to track your order information.</td>
<td>32.0</td>
</tr>
<tr>
<td>purchaseCount</td>
<td>Integer</td>
<td>Number of contacts or companies that were purchased for this order.</td>
<td>32.0</td>
</tr>
<tr>
<td>purchaseDate</td>
<td>Datetime</td>
<td>Purchase date for this order.</td>
<td>32.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>GET request URL for this order.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

### ConnectApi.DatacloudPurchaseUsage Class

Information about Data.com point usage for monthly and list pool users.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>listpoolCreditsAvailable</td>
<td>Integer</td>
<td>The points or credits that are available in a pool of credits for your organization. This pool of credits can be used by any List Pool User in your organization.</td>
<td>32.0</td>
</tr>
<tr>
<td>listpoolCreditsUsed</td>
<td>Integer</td>
<td>The points or credits that have been used from a pool of credits that are used by List Pool Users to purchase records.</td>
<td>32.0</td>
</tr>
</tbody>
</table>
### ConnectApi.DateRecordField Class

Subclass of ConnectApi.LabeledRecordField Class

A record field containing a date.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>dateValue</td>
<td>Datetime</td>
<td>A date that a machine can read. Ignore the trailing 00:00:00.000Z characters.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

### ConnectApi.DeleteIntent

Delete intent for a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>managedSocialAccount</td>
<td>ConnectApi.ManagedSocialAccount</td>
<td>Managed social account that deletes the social post.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

- ConnectApi.DeleteIntents

### ConnectApi.DeleteIntents

List of delete intents for a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>deletes</td>
<td>List&lt;ConnectApi.DeleteIntent&gt;</td>
<td>List of delete intents for the social post.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

- ConnectApi.SocialPostIntents

### ConnectApi.DeleteSocialPostIntent

Delete intent for the social post.
### Available Version Description Type Property Name

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>socialAccountId</td>
<td>String</td>
<td>ID of the social account that deletes the social post.</td>
<td>46.0</td>
</tr>
<tr>
<td>socialPostId</td>
<td>String</td>
<td>ID of the social post to delete.</td>
<td>46.0</td>
</tr>
</tbody>
</table>

### ConnectApi.DigestJob

Represents a successfully enqueued API digest job request.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>period</td>
<td>ConnectApi.DigestPeriod</td>
<td>Time period that’s included in a Chatter email digest. Values are:</td>
<td>37.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• DailyDigest—The email includes up to the 50 latest posts from the previous day.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• WeeklyDigest—The email includes up to the 50 latest posts from the previous week.</td>
<td></td>
</tr>
</tbody>
</table>

### ConnectApi.DirectMessageCapability

If a feed element has this capability, it’s a direct message.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>memberChanges</td>
<td>ConnectApi.DirectMessage</td>
<td>Member activities of the direct message, with the most recent activity first.</td>
<td>40.0</td>
</tr>
<tr>
<td></td>
<td>MemberActivityPage</td>
<td></td>
<td></td>
</tr>
<tr>
<td>members</td>
<td>ConnectApi.DirectMessage</td>
<td>Members included in the direct message.</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td>MemberPage</td>
<td></td>
<td></td>
</tr>
<tr>
<td>originalMembers</td>
<td>ConnectApi.DirectMessage</td>
<td>Original members of the direct message.</td>
<td>40.0</td>
</tr>
<tr>
<td></td>
<td>MemberPage</td>
<td></td>
<td></td>
</tr>
<tr>
<td>subject</td>
<td>String</td>
<td>Subject of the direct message.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

ConnectApi.FeedElementCapabilities Class

### ConnectApi.DirectMessageMemberActivity

Direct message member activity.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>activityDate</td>
<td>Datetime</td>
<td>Direct message member activity date.</td>
<td>40.0</td>
</tr>
</tbody>
</table>
### ConnectApi Namespace

#### Apex Developer Guide

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actor</td>
<td>ConnectApi.UserSummary</td>
<td>User who changed the direct message membership.</td>
<td>40.0</td>
</tr>
<tr>
<td>membersAdded</td>
<td>ConnectApi.DirectMessageMemberPage</td>
<td>Members added to the direct message as part of the activity.</td>
<td>40.0</td>
</tr>
<tr>
<td>membersRemoved</td>
<td>ConnectApi.DirectMessageMemberPage</td>
<td>Members removed from the direct message as part of the activity.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

### ConnectApi.DirectMessageMemberActivityPage

A page of direct message member activities.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>activities</td>
<td>List&lt;ConnectApi.DirectMessageMemberActivity&gt;</td>
<td>Collection of direct message member activities.</td>
<td>40.0</td>
</tr>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>40.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the current page.</td>
<td>40.0</td>
</tr>
<tr>
<td>nextPageToken</td>
<td>String</td>
<td>Token identifying the next page, or <code>null</code> if there isn’t a next page.</td>
<td>40.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the next page, or <code>null</code> if there isn’t a next page.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

### ConnectApi.DirectMessageMemberPage

A collection of direct message members.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Page token to access the current page of direct message members.</td>
<td>39.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>URL to the current page of direct message members.</td>
<td>39.0</td>
</tr>
</tbody>
</table>
### ConnectApi.Namespace

**Available Version**

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>nextPageToken</td>
<td>String</td>
<td>Page token to access the next page of direct message members.</td>
<td>39.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>URL to the next page of direct message members.</td>
<td>39.0</td>
</tr>
<tr>
<td>users</td>
<td>List</td>
<td>Collection of direct message members.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

- ConnectApi.DirectMessageCapability
- ConnectApi.DirectMessageCapability
- ConnectApi.DirectMessageMemberActivity

### ConnectApi.DownVoteSummary

Summary of a downvote.

Subclass of ConnectApi.UserFeedEntityActivitySummary

No additional properties.

### ConnectApi.EditCapability

If a feed element or comment has this capability, users who have permission can edit it.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isEditRestricted</td>
<td>Boolean</td>
<td>Specifies whether editing this feed element or comment is restricted. If true, the context user can't edit this feed element or comment. If false, the context user may or may not have permission to edit this feed element or comment. To determine if the context user can edit a feed element or comment, use the isFeedElementEditableByMe(communityId, feedElementId) or isCommentEditableByMe(communityId, commentId) method.</td>
<td>34.0</td>
</tr>
<tr>
<td>isEditableByMeUrl</td>
<td>String</td>
<td>The URL to check if the context user is able to edit this feed element or comment.</td>
<td>34.0</td>
</tr>
<tr>
<td>lastEditedBy</td>
<td>ConnectApi.Actor</td>
<td>Who last edited this feed element or comment.</td>
<td>34.0</td>
</tr>
<tr>
<td>lastEditedDate</td>
<td>Datetime</td>
<td>The most recent edit date of this feed element or comment.</td>
<td>34.0</td>
</tr>
<tr>
<td>latestRevision</td>
<td>Integer</td>
<td>The most recent revision of this feed element or comment.</td>
<td>34.0</td>
</tr>
</tbody>
</table>
### ConnectApi.EmailAddress

An email address.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>displayName</td>
<td>String</td>
<td>The display name for the email address.</td>
<td>29.0</td>
</tr>
<tr>
<td>emailAddress</td>
<td>String</td>
<td>The email address.</td>
<td>29.0</td>
</tr>
<tr>
<td>relatedRecord</td>
<td>ConnectApi.</td>
<td>The summary of a related record, for example, a contact or user</td>
<td>36.0</td>
</tr>
<tr>
<td>RecordSummary</td>
<td>Class</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.EmailMessageCapability

### ConnectApi.EmailAttachment

An email attachment in an email message.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>attachment</td>
<td>ConnectApi. RecordSummary</td>
<td>Record summary of the attachment.</td>
<td>36.0</td>
</tr>
<tr>
<td>contentType</td>
<td>String</td>
<td>Type of attachment.</td>
<td>36.0</td>
</tr>
<tr>
<td>fileName</td>
<td>String</td>
<td>Name of the attachment.</td>
<td>36.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.EmailMessageCapability

### ConnectApi.EmailMergeFieldInfo

The map for objects and their merge fields.
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>entityToMergeFieldsMap</td>
<td><code>Map&lt;String, ConnectApi.EmailMergeFieldCollectionInfo&gt;</code></td>
<td>Map for multiple objects and their merge field collections.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

**ConnectApi.EmailMergeFieldCollectionInfo**

The merge fields for an object.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>mergeFields</td>
<td><code>List&lt;String&gt;</code></td>
<td>List of merge fields for a single object.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

- `ConnectApi.EmailMergeFieldInfo`

**ConnectApi.EmailMessageCapability**

If a feed element has this capability, it has an email message from a case.

Subclass of `ConnectApi.FeedElementCapability Class`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>attachments</td>
<td><code>List&lt;ConnectApi.EmailAttachment&gt;</code></td>
<td>Attachments in the email message.</td>
<td>36.0</td>
</tr>
<tr>
<td>bccAddresses</td>
<td><code>List&lt;ConnectApi.EmailAddress&gt;</code></td>
<td>BCC addresses for the email message.</td>
<td>36.0</td>
</tr>
<tr>
<td>body</td>
<td>String</td>
<td>Body of the email message.</td>
<td>36.0</td>
</tr>
<tr>
<td>ccAddresses</td>
<td><code>List&lt;ConnectApi.EmailAddress&gt;</code></td>
<td>CC addresses for the email message.</td>
<td>36.0</td>
</tr>
<tr>
<td>direction</td>
<td><code>ConnectApi.EmailMessageDirection</code></td>
<td>Direction of the email message. Values are:</td>
<td>32.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Inbound—An inbound message (sent by a customer).</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Outbound—An outbound message (sent to a customer by a support agent).</td>
<td></td>
</tr>
<tr>
<td>emailMessageId</td>
<td>String</td>
<td>ID of the email message.</td>
<td>32.0</td>
</tr>
<tr>
<td>fromAddress</td>
<td><code>ConnectApi.EmailAddress</code></td>
<td>From address for the email message.</td>
<td>36.0</td>
</tr>
<tr>
<td>htmlExpandEmailThread</td>
<td>Integer</td>
<td>Start location of previous email thread.</td>
<td>47.0</td>
</tr>
</tbody>
</table>
### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isRichText</td>
<td>Boolean</td>
<td>Indicates whether the body of the email message is in rich text format.</td>
<td>36.0</td>
</tr>
<tr>
<td>status</td>
<td>ConnectApi.EmailMessageStatus</td>
<td>Status of an email message on a case. Values are:</td>
<td>47.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• DraftStatus</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ForwardedStatus</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• NewStatus</td>
<td></td>
</tr>
<tr>
<td></td>

### ConnectApi.Emoji

An emoji.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>category</td>
<td>String</td>
<td>Emoji category.</td>
<td>39.0</td>
</tr>
<tr>
<td>shortcut</td>
<td>String</td>
<td>Emoji shortcut.</td>
<td>39.0</td>
</tr>
<tr>
<td>unicodeCharacter</td>
<td>String</td>
<td>Emoji's unicode character.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

- ConnectApi.EmojiCollection

### ConnectApi.EmojiCollection

A collection of emojis.
### ConnectApi.Namespace

#### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>emojis</td>
<td><code>List&lt;ConnectApi.Emoji&gt;</code></td>
<td>A collection of emojis.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

### ConnectApi.EnhancedLinkCapability

If a feed element has this capability, it has a link that may contain supplemental information like an icon, a title, and a description. Subclass of `ConnectApi.FeedElementCapability` Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td><code>String</code></td>
<td>A description with a 500 character limit.</td>
<td>32.0</td>
</tr>
<tr>
<td>icon</td>
<td><code>ConnectApi.Icon</code></td>
<td>A icon.</td>
<td>32.0</td>
</tr>
<tr>
<td>linkRecordId</td>
<td><code>String</code></td>
<td>A ID associated with the link if the link URL refers to a Salesforce record.</td>
<td>32.0</td>
</tr>
<tr>
<td>linkUrl</td>
<td><code>String</code></td>
<td>A link URL to a detail page if available content can’t display inline.</td>
<td>32.0</td>
</tr>
<tr>
<td>title</td>
<td><code>String</code></td>
<td>A title to a detail page.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

- `ConnectApi.FeedElementCapabilities` Class

### ConnectApi.EnsureFundsAsyncOutputRepresentation

ID of the background operation. Subclass of `ConnectApi.BaseOutputRepresentation`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>background</td>
<td><code>String</code></td>
<td>ID of the background operation.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

### ConnectApi.EnsureRefundsAsyncOutputRepresentation

ID of the background operation. Subclass of `ConnectApi.BaseOutputRepresentation`.
### `Property Name` | `Type` | `Description` | `Available Version`
---|---|---|---
background OperationId | String | ID of the background operation. | 48.0

**ConnectApi.EntityLabel**

An entity's label.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>label</td>
<td>String</td>
<td>Localized singular label of the entity.</td>
<td>40.0</td>
</tr>
<tr>
<td>labelPlural</td>
<td>String</td>
<td>Localized plural label of the entity.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

- [ConnectApi.RecordSummary Class](#)

**ConnectApi.EntityLinkSegment Class**

Subclass of [ConnectApi.MessageSegment Class](#)

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>motif</td>
<td><code>ConnectApi.Motif Class</code></td>
<td>A set of small, medium, and large icons that indicate whether the entity is a file, group, record, or user. The motif can also contain the object’s base color.</td>
<td>28.0</td>
</tr>
<tr>
<td>reference</td>
<td><code>ConnectApi.Reference</code></td>
<td>A reference to the link object if applicable, otherwise, <code>null</code>.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**ConnectApi.EntityRecommendation**

A Chatter, custom, or static recommendation.

Subclass of [ConnectApi.AbstractRecommendation](#)

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actOnUrl</td>
<td>String</td>
<td>For user, file, group, topic, and record entity types, use this Connect REST URL with a POST request to take action on the recommendation. For <code>ConnectApi.RecommendedObject</code> entity types, such as custom recommendations, use the <code>actionUrl</code> property of the <code>ConnectApi.PlatformAction Class</code> to take action on the recommendation.</td>
<td>32.0</td>
</tr>
</tbody>
</table>
### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| action        | `ConnectApi.RecommendationActionType` | Specifies the action to take on a recommendation.  
- follow—Follow a file, record, topic, or user.  
- join—Join a group.  
- view—View a file, group, article, record, user, custom, or static recommendation. | 32.0 |
| entity        | `ConnectApi.Actor` | The entity with which the receiver is recommended to take action. | 32.0 |

### ConnectApi.ErrorResponse

Base error response.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>errorCode</td>
<td><code>String</code></td>
<td>Error code.</td>
<td>48.0</td>
</tr>
<tr>
<td>message</td>
<td><code>String</code></td>
<td>More error detail, if available.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

### ConnectApi.Extension

An extension.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>alternative Representation</td>
<td><code>ConnectApi.Alternative</code></td>
<td>Alternative representation of the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>attachmentId</td>
<td><code>String</code></td>
<td>Attachment ID of the extension.</td>
<td>41.0</td>
</tr>
<tr>
<td>extensionId</td>
<td><code>String</code></td>
<td>ID of the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>payload</td>
<td><code>String</code></td>
<td>Payload associated with the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>payloadVersion</td>
<td><code>String</code></td>
<td>Payload version that identifies the structure of the payload associated with the extension.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

- `ConnectApi.ExtensionsCapability`

### ConnectApi.ExtensionDefinition

An extension’s definition.
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>canAccess</td>
<td>Boolean</td>
<td>Indicates whether users can access the extension when it’s associated with a feed element.</td>
<td>40.0</td>
</tr>
<tr>
<td>canCreate</td>
<td>Boolean</td>
<td>Indicates whether users can create a feed element with the extension in the org.</td>
<td>40.0</td>
</tr>
<tr>
<td>createdDate</td>
<td>Datetime</td>
<td>Date when the extension was created.</td>
<td>40.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>iconUrl</td>
<td>String</td>
<td>URL to the icon for the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>information</td>
<td>Collection</td>
<td>Collection of extension information.</td>
<td>40.0</td>
</tr>
<tr>
<td>isEnabled</td>
<td>Boolean</td>
<td>Indicates whether the extension is enabled in communities.</td>
<td>40.0 only</td>
</tr>
<tr>
<td>InCommunity</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>isEnabled</td>
<td>Boolean</td>
<td>Indicates whether the extension is enabled in the Lightning publisher.</td>
<td>40.0 only</td>
</tr>
<tr>
<td>InLightningPublisher</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>position</td>
<td>Integer</td>
<td>Position in which the extension is displayed in the publisher.</td>
<td>41.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.ExtensionDefinitions

**ConnectApi.ExtensionDefinitions**

A collection of extension definitions.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>40.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the current page.</td>
<td>40.0</td>
</tr>
<tr>
<td>extension</td>
<td>Collection</td>
<td>Collection of extension definitions.</td>

**ConnectApi.ExternalFilePermissionInformation**

External file permission information.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>external FilePermission Types</td>
<td><code>List&lt;ConnectApi.ContentHub.PermissionType&gt;</code></td>
<td>Available permission types for the parent folder of the external file, or null for non-external files or when <code>includeExternalFilePermissionsInfo</code> is false.</td>
<td>39.0</td>
</tr>
<tr>
<td>external FilePermissions Failure</td>
<td><code>Boolean</code></td>
<td>true if the retrieval of external file information failed or if <code>includeExternalFilePermissionsInfo</code> is false; false otherwise.</td>
<td>39.0</td>
</tr>
<tr>
<td>external FilePermissions InfoFailureReason</td>
<td><code>String</code></td>
<td>Explanation of the failure if a failure occurred and <code>includeExternalFilePermissionsInfo</code> is true; null otherwise.</td>
<td>39.0</td>
</tr>
</tbody>
</table>
| external FileSharing Status   | `ConnectApi.ContentHub.ExternalItemSharingType` | Sharing status for the external file. Values are:  
  - DomainSharing—File is shared with the domain.  
  - PrivateSharing—File is private or shared only with individuals.  
  - PublicSharing—File is publicly shared.  
  Value is null for non-external files or when `includeExternalFilePermissionsInfo` is false. | 39.0              |
### ConnectApi.AbstractRepositoryFile

**repository PublicGroups**
- **Type**: List<ConnectApi.RepositoryGroupSummary>
- **Description**: Available public groups in the external repository or null for non-external files or when includeExternalFilePermissionsInfo is false.

**Available Version**: 39.0

**SEE ALSO**:
- ConnectApi.AbstractRepositoryFile

### ConnectApi.ExternalManagedAccountCollectionOutput

Collection of externally managed accounts.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>externalManagedAccounts</td>
<td>List&lt;ConnectApi.ExternalManagedAccountOutput&gt;</td>
<td>Collection of externally managed accounts.</td>
<td>49.0</td>
</tr>
<tr>
<td>totalExternalManagedAccounts</td>
<td>Integer</td>
<td>Total number of externally managed accounts.</td>
<td>49.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ExternalManagedAccountOutput

Externally managed account.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>accountId</td>
<td>String</td>
<td>ID of the account managed by another account.</td>
<td>49.0</td>
</tr>
<tr>
<td>externalManagedAccountId</td>

#### ConnectApi.FeedDirectory Class

A directory of feeds and favorites.
### ConnectApi Namespace

#### ConnectApi.FeedDirectoryItem Class

The definition of a feed.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>feedElementsUrl</td>
<td>String</td>
<td>Connect REST API resource URL for the feed elements.</td>
<td>30.0–31.0</td>
</tr>
<tr>
<td>feedItemsUrl</td>
<td>String</td>
<td>Connect REST API resource URL for the feed items of a specific feed.</td>
<td></td>
</tr>
<tr>
<td>feedType</td>
<td>ConnectApi.FeedType Enum</td>
<td>The feed type. One of these values:</td>
<td>30.0</td>
</tr>
<tr>
<td></td>
<td>• Bookmarks — Contains all feed items saved as bookmarks by the context user.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Company — Contains all feed items except feed items of type TrackedChange. To see the feed item, the user must have sharing access to its parent.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• DirectMessageModeration — Contains all direct messages that are flagged for moderation. The Direct Message Moderation feed is available only to users with Moderate Communities Chatter Messages permissions.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• DirectMessages — Contains all feed items of the context user’s direct messages.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Draft — Contains all the feed items that the context user drafted.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Files — Contains all feed items that contain files posted by people or groups that the context user follows.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Filter — Contains the news feed filtered to contain feed items whose parent is a specified object type.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Groups — Contains all feed items from all groups the context user either owns or is a member of.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Home — Contains all feed items associated with any managed topic in a community.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Landing — Contains all feed items that best drive user engagement when the feed is requested. Allows clients to avoid an empty feed when there aren’t many personalized feed items.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Moderation — Contains all feed items that are flagged for moderation, except direct messages. The Communities Moderation feed is available only to users with Moderate Community Feeds permissions.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
- **Mute**—Contains all feed items that the context user muted.
- **News**—Contains all updates for people the context user follows, groups the user is a member of, and files and records the user is following. Contains all updates for records whose parent is the context user. Contains every feed item and comment that mentions the context user or that mentions a group the context user is a member of.
- **PendingReview**—Contains all feed items and comments that are pending review.
- **People**—Contains all feed items posted by all people the context user follows.
- **Record**—Contains all feed items whose parent is a specified record, which could be a group, user, object, file, or any other standard or custom object. When the record is a group, the feed also contains feed items that mention the group. When the record is a user, the feed contains only feed items on that user. You can get another user’s record feed.
- **Streams**—Contains all feed items for any combination of up to 25 feed-enabled entities that the context user subscribes to in a stream. Examples of feed-enabled entities include people, groups, and records.
- **To**—Contains all feed items with mentions of the context user. Contains feed items the context user commented on and feed items created by the context user that are commented on.
- **Topics**—Contains all feed items that include the specified topic.
- **UserProfile**—Contains feed items created when a user changes records that can be tracked in a feed. Contains feed items whose parent is the user and feed items that @mention the user. This feed is different than the news feed, which returns more feed items, including group updates. You can get another user’s user profile feed.

</tbody>
</table>
| feedElementType     | ConnectApi.FeedElementType                    | Feed elements are the top-level objects that a feed contains. The feed element type describes the characteristics of that feed element. One of these values:

- **Bundle**—A container of feed elements. A bundle also has a body made up of message segments that can always be gracefully degraded to text-only values.

- **FeedItem**—A feed item has a single parent and is scoped to one community or across all communities. A feed item can have capabilities such as bookmarks, canvas, content, comment, link, poll. Feed items have a body made up of message segments that can always be gracefully degraded to text-only values.
• Recommendation—A recommendation is a feed element with a recommendations capability. A recommendation suggests records to follow, groups to join, or applications that are helpful to the context user.

**ConnectApi.FeedElementCapability Class**

A feed element capability, which defines the characteristics of a feed element.

In API version 30.0 and earlier, most feed items can have comments, likes, topics, and so on. In version 31.0 and later, every feed item (and feed element) can have a unique set of capabilities. If a capability property exists on a feed element, that capability is available, even if the capability property doesn’t have a value. For example, if the ChatterLikes capability property exists on a feed element (with or without a value), the context user can like that feed element. If the capability property doesn’t exist, it isn’t possible to like that feed element. A capability can also contain associated data. For example, the Moderation capability contains data about moderation flags.

This class is abstract.

This class is a superclass of:

This class doesn’t have any properties.

ConnectApi.FeedElementPage
A paged collection of ConnectApi.FeedElement objects.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>31.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the current page.</td>
<td>31.0</td>
</tr>
<tr>
<td>elements</td>
<td>List&lt;ConnectApi.FeedElement Class&gt;</td>
<td>Collection of feed elements.</td>
<td>31.0</td>
</tr>
</tbody>
</table>
### ConnectApi Namespace

**Available Version**

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isModifiedToken</td>
<td>String</td>
<td>An opaque polling token to use in the <em>since</em> parameter of the <code>ChatterFeeds.isModified</code> method. The token describes when the feed was last modified.</td>
<td>31.0</td>
</tr>
<tr>
<td>isModifiedUrl</td>
<td>String</td>
<td>A Connect REST API URL with a <em>since</em> request parameter that contains an opaque token that describes when the feed was last modified. Returns <code>null</code> if the feed isn’t a news feed. Use this URL to poll a news feed for updates.</td>
<td>31.0</td>
</tr>
<tr>
<td>nextPageToken</td>
<td>String</td>
<td>Token identifying the next page, or <code>null</code> if there isn’t a next page.</td>
<td>31.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the next page, or <code>null</code> if there isn’t a next page.</td>
<td>31.0</td>
</tr>
<tr>
<td>updatesToken</td>
<td>String</td>
<td>A token to use in a request to the <code>ConnectApi.ChatterFeeds.getFeedElementsUpdatedSince</code> method.</td>
<td>31.0</td>
</tr>
<tr>
<td>updatesUrl</td>
<td>String</td>
<td>A Connect REST API feed resource containing the feed elements that have been updated since the feed was refreshed. If the feed doesn’t support this feature, the value is <code>null</code>.</td>
<td>31.0</td>
</tr>
</tbody>
</table>

### ConnectApi.FeedEnabledEntity

An entity that can have feeds associated with it.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>The 18-character ID of the record.</td>
<td>39.0</td>
</tr>
<tr>
<td>Property Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>---------------</td>
<td>--------------</td>
<td>-----------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>motif</td>
<td>ConnectApi.Motif</td>
<td>Small, medium, and large icons indicating the record’s type.</td>
<td>39.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>The localized name of the record.</td>
<td>39.0</td>
</tr>
<tr>
<td>type</td>
<td>String</td>
<td>The type of the record.</td>
<td>39.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the record.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.ChatterStream

### ConnectApi.FeedEntityIsEditable
Indicates if the context user can edit a feed element or comment.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>areAttachmentsEditableByMe</td>
<td>Boolean</td>
<td><strong>true</strong> if the context user can add and remove attachments on the feed element or comment, <strong>false</strong> otherwise.</td>
<td>36.0</td>
</tr>
<tr>
<td>feedEntityUrl</td>
<td>String</td>
<td>URL of the feed element or comment.</td>
<td>34.0</td>
</tr>
<tr>
<td>isEditableByMe</td>
<td>Boolean</td>
<td><strong>true</strong> if the context user can edit the feed element or comment, <strong>false</strong> otherwise.</td>
<td>34.0</td>
</tr>
</tbody>
</table>

### ConnectApi.FeedEntityNotAvailableSummary
A summary when the feed entity isn’t available.
This output class is a subclass of ConnectApi.FeedEntitySummary and has no properties.

### ConnectApi.FeedEntityReadSummary
Summary of the feed post or comment that was read.
Subclass of ConnectApi.UserFeedEntityActivitySummary
No additional properties.

### ConnectApi.FeedEntityShareCapability
If a feed element or comment has this capability, a feed entity is shared with it.
Subclass of ConnectApi.FeedElementCapability Class.
### ConnectApi FeedEntity Summary

The summary of a feed entity that is shared with a feed element.

This class is abstract.

**Superclass of:**
- ConnectApi.FeedItemSummary
- ConnectApi.FeedEntityNotAvailableSummary

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>feedEntity</td>
<td>ConnectApi. FeedEntity</td>
<td>The summary of the feed entity that is shared with the feed element or comment.</td>
<td>39.0</td>
</tr>
<tr>
<td>actor</td>
<td>ConnectApi.Actor</td>
<td>Entity that created the feed entity.</td>
<td>39.0</td>
</tr>
<tr>
<td>body</td>
<td>ConnectApi. FeedBody</td>
<td>Information about the feed entity.</td>
<td>39.0</td>
</tr>
<tr>
<td>createdDate</td>
<td>Datetime</td>
<td>ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z, when the entity was created.</td>
<td>39.0</td>
</tr>
<tr>
<td>feedElementType</td>
<td>ConnectApi. FeedElementType</td>
<td>Type of feed entity.</td>
<td>39.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>18-character ID of the feed entity.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

### ConnectApi.FeedFavorite Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>community</td>
<td>ConnectApi.Reference</td>
<td>Information about the community that contains the favorite</td>
<td>28.0</td>
</tr>
<tr>
<td>createdBy</td>
<td>ConnectApi.UserSummary</td>
<td>Favorite’s creator</td>
<td>28.0</td>
</tr>
<tr>
<td>feedUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the feed item for this favorite</td>
<td>28.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>Favorite’s 18–character ID</td>
<td>28.0</td>
</tr>
<tr>
<td>lastViewDate</td>
<td>Datetime</td>
<td>ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z</td>
<td>28.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Favorite’s name</td>
<td>28.0</td>
</tr>
<tr>
<td>searchText</td>
<td>String</td>
<td>If the favorite is from a search, contains the search text, otherwise, an empty string</td>
<td>28.0</td>
</tr>
<tr>
<td>target</td>
<td>ConnectApi.Reference</td>
<td>A reference to the topic if applicable, null otherwise</td>
<td>28.0</td>
</tr>
<tr>
<td>type</td>
<td>ConnectApi.FeedFavoriteType Enum</td>
<td>An empty string or one of the following values:</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- ListView</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Search</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Topic</td>
<td></td>

<td></td>
<td><strong>Important</strong>: As of API version 32.0, use the capabilities property to determine.</td>
<td></td>
</tr>
</tbody>
</table>
what can be done with a feed item. See Capabilities.

One of these values:

- **ActivityEvent**—Feed item generated in Case Feed when an event or task associated with a parent record with a feed enabled is created or updated.
- **AdvancedTextPost**—A feed item with advanced text formatting, such as a group announcement post.
- **ApprovalPost**—Feed item with an approval capability. Approvers can act on the feed item parent.
- **AttachArticleEvent**—Feed item generated when an article is attached to a case in Case Feed.
- **BasicTemplateFeedItem**—Feed item with an enhanced link capability.
- **CallLogPost**—Feed item generated when a call log is saved to a case in Case Feed.
- **CanvasPost**—Feed item generated by a canvas app in the publisher or from Connect REST API or Connect in Apex. The post itself is a link to a canvas app.
- **CaseCommentPost**—Feed item generated when a case comment is saved in Case Feed.
- **ChangeStatusPost**—Feed item generated when the status of a case is changed in Case Feed.
- **ChatTranscriptionPost**—Feed item generated in Case Feed when a Live Agent chat transcript is saved to a case.
- **CollaborationGroupCreated**—Feed item generated when a new public group is created. Contains a link to the new group.
- **CollaborationGroupUnarchived**—Deprecated. Feed item generated when an archived group is activated.
- **ContentPost**—Feed item with a content capability.
- **CreateRecordEvent**—Feed item that describes a record created in the publisher.
### Description

- **DashboardComponentAlert**—Feed item with a dashboard alert.
- **DashboardComponentSnapshot**—Feed item with a dashboard component snapshot capability.
- **EmailMessageEvent**—Feed item generated when an email is sent from a case in Case Feed.
- **FacebookPost**—Deprecated. Feed item generated when a Facebook post is created from a case in Case Feed.
- **LinkPost**—Feed item with a link capability.
- **MilestoneEvent**—Feed item generated when a case milestone is either completed or reaches a violation status. Contains a link to the case milestone.
- **PollPost**—Feed item with a poll capability. Viewers of the feed item are allowed to vote on the options in the poll.
- **ProfileSkillPost**—Feed item generated when a skill is added to a user’s profile.
- **QuestionPost**—Feed item generated when a question is asked.
  
  As of API version 33.0, a feed item of this type can have a content capability and a link capability.
- **ReplyPost**—Feed item generated by a Chatter Answers reply.
- **RypplePost**—Feed item generated when a user posts thanks.
- **SocialPost**—Feed item generated when a social post is created from a case in Case Feed.
- **TextPost**—Feed item containing text only.
- **TrackedChange**—Feed item created when one or more fields on a record have been changed.
- **UserStatus**—Deprecated. A user’s post to their own profile.

ConnectApi.FeedModifiedInfo Class

⚠️ Important: This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isModified</td>
<td>Boolean</td>
<td>true if the news feed has been modified since the last time it was polled; false otherwise. Returns null if the feed is not a news feed.</td>
<td>28.0</td>
</tr>
<tr>
<td>isModifiedToken</td>
<td>String</td>
<td>An opaque polling token to use in the since parameter of the ChatterFeeds.isModified method. The token describes when the feed was last modified.</td>
<td>28.0</td>
</tr>
</tbody>
</table>
nextPollUrl  String  A Connect REST API URL with a since request parameter that contains an opaque token that describes when the feed was last modified. Returns null if the feed isn’t a news feed. Use this URL to poll a news feed for updates.  28.0

**ConnectApi.FeedPollChoice Class**

<table>
<thead>
<tr>
<th>Name</th>

ConnectApi.PollCapability Class

**ConnectApi.FeedPostSummary**

Summary of the post.
Subclass of ConnectApi.UserActivitySummary

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>feedItemId</td>
<td>String</td>
<td>ID of the post.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

**ConnectApi.FeedReadSummary**

Summary of the feed that was read.
Subclass of ConnectApi.UserActivitySummary.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>containerId</td>
<td>String</td>
<td>ID of the parent of the feed.</td>

</tr>
<tr>
<td>feedType</td>
<td>ConnectApi.FeedType</td>
<td>Type of feed.</td>
<td>42.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Bookmarks—Contains all feed items saved as bookmarks by the context user.</td>
<td></td>
</tr>
</tbody>
</table>
• **Company**—Contains all feed items except feed items of type `TrackedChange`. To see the feed item, the user must have sharing access to its parent.

• **DirectMessageModeration**—Contains all direct messages that are flagged for moderation. The Direct Message Moderation feed is available only to users with Moderate Communities Chatter Messages permissions.

• **DirectMessages**—Contains all feed items of the context user’s direct messages.

• **Draft**—Contains all the feed items that the context user drafted.

• **Files**—Contains all feed items that contain files posted by people or groups that the context user follows.

• **Filter**—Contains the news feed filtered to contain feed items whose parent is a specified object type.

• **Groups**—Contains all feed items from all groups the context user either owns or is a member of.

• **Home**—Contains all feed items associated with any managed topic in a community.

• **Landing**—Contains all feed items that best drive user engagement when the feed is requested. Allows clients to avoid an empty feed when there aren’t many personalized feed items.

• **Moderation**—Contains all feed items that are flagged for moderation, except direct messages. The Communities Moderation feed is available only to users with Moderate Community Feeds permissions.

• **Mute**—Contains all feed items that the context user muted.

• **News**—Contains all updates for people the context user follows, groups the user is a member of, and files and records the user is following. Contains all updates for records whose parent is the context user. Contains every feed item and comment that mentions the context user or that mentions a group the context user is a member of.
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>PendingReview</td>
<td></td>
<td>Contains all feed items and comments that are pending review.</td>
<td></td>
</tr>
<tr>
<td>People</td>
<td></td>
<td>Contains all feed items posted by all people the context user follows.</td>
<td></td>
</tr>
<tr>
<td>Record</td>
<td></td>
<td>Contains all feed items whose parent is a specified record, which could be a group, user, object, file, or any other standard or custom object. When the record is a group, the feed also contains feed items that mention the group. When the record is a user, the feed contains only feed items on that user. You can get another user’s record feed.</td>
<td></td>
</tr>
<tr>
<td>Streams</td>
<td></td>
<td>Contains all feed items for any combination of up to 25 feed-enabled entities that the context user subscribes to in a stream. Examples of feed-enabled entities include people, groups, and records.</td>
<td></td>
</tr>
<tr>
<td>To</td>
<td></td>
<td>Contains all feed items with mentions of the context user. Contains feed items the context user commented on and feed items created by the context user that are commented on.</td>
<td></td>
</tr>
<tr>
<td>Topics</td>
<td></td>
<td>Contains all feed items that include the specified topic.</td>
<td></td>
</tr>
<tr>
<td>UserProfile</td>
<td></td>
<td>Contains feed items created when a user changes records that can be tracked in a feed. Contains feed items whose parent is the user and feed items that @mention the user. This feed is different than the news feed, which returns more feed items, including group updates. You can get another user’s user profile feed.</td>
<td></td>
</tr>
</tbody>

### ConnectApi.FilePreview

A file preview.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| format        | ConnectApi.FilePreviewFormat | The format of the preview. Values are:  
  • Jpg—Preview format is JPG.  
  • Pdf—Preview format is PDF.  
  • Svg—Preview format is compressed SVG.  
  • Thumbnail—Preview format is 240 x 180 PNG.  
  • ThumbnailBig—Preview format is 720 x 480 PNG.  
  • ThumbnailTiny—Preview format is 120 x 90 PNG. | 39.0 |
| previewUrlCount | Integer | The total number of preview URLs for this preview format. | 39.0 |
| previewUrls | List<ConnectApi.FilePreviewUrl> | A list of file preview URLs. | 39.0 |
| status | ConnectApi.FilePreviewStatus | The availability status of the preview. Values are:  
  • Available—Preview is available.  
  • InProgress—Preview is being processed.  
  • NotAvailable—Preview is unavailable.  
  • NotScheduled—Generation of the preview isn’t scheduled yet. | 39.0 |
| url | String | The URL for the file preview. | 39.0 |

</tr>
<tr>
<td>baseUnauthenticatedAssetUrl</td>
<td>String</td>
<td>Base download URL of the asset for unauthenticated users if isVisibleByExternalUsers is true, otherwise null.</td>
<td>45.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the asset.</td>
<td>45.0</td>
</tr>
</tbody>
</table>
### ConnectApi Namespace

#### ConnectApi.Asset

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isVisibleByExternalUsers</td>
<td>Boolean</td>
<td>Indicates whether unauthenticated users can see the asset file (true) or not (false).</td>
<td>45.0</td>
</tr>
<tr>
<td>masterLabel</td>
<td>String</td>
<td>Master label of the asset.</td>
<td>45.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Unique name of the asset.</td>
<td>45.0</td>
</tr>
<tr>
<td>namespacePrefix</td>
<td>String</td>
<td>Namespace prefix of the package containing the asset.</td>
<td>45.0</td>
</tr>
<tr>
<td>type</td>
<td>String</td>
<td>Type of asset.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.FilePreviewCollection

A collection of file previews.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fileId</td>
<td>String</td>
<td>ID of the file.</td>
<td>39.0</td>
</tr>
<tr>
<td>previews</td>
<td>List&lt;ConnectApi.FilePreview&gt;</td>
<td>Previews supported for the file.</td>
<td>39.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the current page of file previews.</td>
<td>39.0</td>
</tr>
<tr>
<td>versionNumber</td>
<td>String</td>
<td>Version number of the file.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- `ConnectApi.InlineImageSegment`

#### ConnectApi.FilePreviewUrl

A URL to a file preview.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>pageNumber</td>
<td>Integer</td>
<td>Preview page number starting from zero, or null for PDF files.</td>
<td>39.0</td>
</tr>
<tr>
<td>previewUrl</td>
<td>String</td>
<td>File preview URL.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

<tr>
<td>interactionStatus</td>
<td>String</td>
<td>Gateway interaction status. It can be SUCCESS, FAILED, or TIMEOUT.</td>
<td>50.0</td>
</tr>
</tbody>
</table>

**ConnectApi.GenericBundleCapability Class**

If a feed element has this capability, the feed element has a group of other feed elements condensed into one feed element. This group is called a **bundle**.

Subclass of **ConnectApi.BundleCapability Class**.

**ConnectApi.GenericFeedElement Class**

A concrete implementation of the abstract **ConnectApi.FeedElement class**.

Subclass of **ConnectApi.FeedElement Class**

**ConnectApi.GlobalInfluence Class**

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>percentile</td>
<td>String</td>
<td>Percentile value for the user’s influence rank within the organization or community</td>
<td>28.0</td>
</tr>
<tr>
<td>rank</td>
<td>Integer</td>
<td>Number indicating the user’s influence rank, relative to all other users within the organization or community</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**ConnectApi.GroupChatterSettings Class**

A user’s Chatter settings for a specific group.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>emailFrequency</td>
<td>ConnectApi.GroupEmail</td>
<td>The frequency with which a group member receives email from a group.</td>

<td>myMembership</td>
<td><code>ConnectApi.Reference</code></td>
<td>If the context user is a member of this group, returns information about that membership, otherwise, null.</td>
<td>28.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td><code>String</code></td>
<td>Connect REST API URL identifying the next page, or null if there isn’t a next page.</td>
<td>28.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td><code>String</code></td>
<td>Connect REST API URL identifying the previous page, or null if there isn’t a previous page.</td>
<td>28.0</td>
</tr>
<tr>
<td>totalMemberCount</td>
<td><code>Integer</code></td>
<td>Total number of group members across all pages</td>
<td>28.0</td>
</tr>
</tbody>
</table>

### ConnectApi.GroupMembershipRequest Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>createdDate</td>
<td><code>Datetime</code></td>
<td>ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z</td>
<td>28.0</td>
</tr>
<tr>
<td>id</td>
<td><code>String</code></td>
<td>ID for the group membership request object</td>
<td>28.0</td>
</tr>
<tr>
<td>lastUpdateDate</td>
<td><code>Datetime</code></td>
<td>ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z</td>
<td>28.0</td>
</tr>
<tr>
<td>requestedGroup</td>
<td><code>ConnectApi.Reference</code></td>
<td>Information about the group the context user is requesting to join.</td>
<td>28.0</td>
</tr>
<tr>
<td>responseMessage</td>
<td><code>String</code></td>
<td>A message for the user if their membership request is declined. The value of this property is used only when the value of the status property is Declined. The maximum length is 756 characters.</td>
<td>28.0</td>
</tr>
<tr>
<td>status</td>
<td><code>ConnectApi.GroupMembershipRequestResponseStatus Enum</code></td>
<td>Status of a request to join a private group. Values are:</td>
<td>28.0</td>
</tr>
<tr>
<td>url</td>
<td><code>String</code></td>
<td>URL of the group membership request object.</td>
<td>28.0</td>
</tr>
<tr>
<td>user</td>
<td><code>ConnectApi.User Summary</code></td>
<td>Information about the user requesting membership in a group.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

</table>

**ConnectApi.HashtagSegment Class**

Subclass of ConnectApi.MessageSegment Class
### ConnectApi.Namespace

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>tag</td>
<td>String</td>
<td>Text of the topic without the hash symbol (#)</td>
<td>28.0</td>
</tr>
<tr>
<td>topicUrl</td>
<td>String</td>
<td>Connect REST API Topics resource that searches for the topic:</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td><code>/services/data/v50.0/chatter/topics?exactMatch=true&amp;q=topic</code></td>
<td></td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>Connect REST API Feed Items resource URL that searches for the topic in all</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>feed items in an organization:</td>

ConnectApi.InlineImageSegment
An inline image in the feed body.
Subclass of ConnectApi.MessageSegment Class

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>altText</td>
<td>String</td>
<td>Alt text for the inline image.</td>
<td>35.0</td>
</tr>
<tr>
<td>contentSize</td>
<td>Integer</td>
<td>Size of the file in bytes.</td>
<td>35.0</td>
</tr>
<tr>
<td>fileExtension</td>
<td>String</td>
<td>Extension of the file, such as gif.</td>
<td>37.0</td>
</tr>
<tr>
<td>thumbnails</td>
<td>ConnectApi.FilePreviewCollection</td>
<td>Information about the available thumbnails for the image.</td>
<td>35.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the latest version of the inline image.</td>
<td>35.0</td>
</tr>
</tbody>
</table>

ConnectApi.InteractionsCapability
If a feed element has this capability, it has information about user interactions.
Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>count</td>
<td>Long</td>
<td>The number of individual views, likes, and comments on a feed post.</td>
<td>37.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.FeedElementCapabilities Class
ConnectApi.RelatedQuestion

ConnectApi.Invitation
An invitation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>email</td>
<td>String</td>
<td>Email address of the user.</td>
<td>39.0</td>
</tr>
<tr>
<td>status</td>
<td>ConnectApi.GroupViralInvitationsStatus</td>
<td>Specifies the status of an invitation to join a group. Values are:</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- ActedUponUser—The user was added to the group. An email was sent asking the user to visit the group.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Invited—An email was sent asking the user to sign up for the org.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- MaxedOutUsers—The group has the maximum allowed members.</td>
<td></td>
</tr>
</tbody>
</table>
### ConnectApi Invitations
A collection of invitations.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>invitations</td>
<td>List&lt;ConnectApi.Invitation&gt;</td>
<td>Collection of invitations.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

### ConnectApi.KnowledgeArticleVersion
A knowledge article version.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>articleType</td>
<td>String</td>
<td>Type of the knowledge article.</td>
<td>36.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the knowledge article version.</td>
<td>36.0</td>
</tr>
<tr>
<td>knowledgeArticleId</td>
<td>String</td>
<td>ID of the corresponding knowledge article.</td>
<td>36.0</td>
</tr>
<tr>
<td>lastPublishedDate</td>
<td>Datetime</td>
<td>Last published date of the knowledge article.</td>
<td>36.0</td>
</tr>
<tr>
<td>summary</td>
<td>String</td>
<td>Summary of the knowledge article contents.</td>
<td>36.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the knowledge article.</td>
<td>36.0</td>
</tr>
<tr>
<td>urlName</td>
<td>String</td>
<td>URL name of the knowledge article.</td>
<td>36.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.KnowledgeArticleVersionCollection
ConnectApi.KnowledgeArticleVersionCollection

A collection of knowledge article versions.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>items</td>
<td>List&lt;ConnectApi.KnowledgeArticleVersion&gt;</td>
<td>A collection of knowledge article versions.</td>
<td>36.0</td>
</tr>
</tbody>
</table>

ConnectApi.LabeledRecordField Class

This class is abstract.

Subclass of ConnectApi.AbstractRecordField Class

Superclass of:
- ConnectApi.CompoundRecordField Class
- ConnectApi.CurrencyRecordField Class
- ConnectApi.DateRecordField Class
- ConnectApi.PercentRecordField Class
- ConnectApi.PicklistRecordField Class
- ConnectApi.RecordField Class
- ConnectApi.ReferenceRecordField Class
- ConnectApi.ReferenceWithDateRecordField Class

A record field containing a label and a text value.

⚠️ Important: The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>label</td>
<td>String</td>
<td>A localized string describing the record field.</td>
<td>29.0</td>
</tr>
<tr>
<td>text</td>
<td>String</td>
<td>The text value of the record field. All record fields have a text value.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

To ensure that all clients can consume new content, inspect the record field’s type property. If it isn’t recognized, render the text value as the default case.

ConnectApi.LightningExtensionInformation

Lightning extension information.

Subclass of ConnectApi.AbstractExtensionInformation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>compositionComponent</td>
<td>String</td>
<td>Component to use in compose state.</td>
<td>40.0</td>
</tr>
<tr>
<td>headerTextLabel</td>
<td>String</td>
<td>Label for the extension’s header.</td>
<td>40.0</td>
</tr>
</tbody>
</table>
**Available Version** | **Description** | **Type** | **Property Name**
--- | --- | --- | ---
40.0 | Label for hovering over the extension. | String | hoverTextLabel
40.0 | Component to use in render or preview state. | String | renderComponent

**SEE ALSO:**
- ConnectApi.ExtensionDefinition

**ConnectApi.LikeIntent**

Like intent for a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isLiked</td>
<td>Boolean</td>
<td>Specifies whether the managed social account liked the social post (true) or not (false).</td>
<td>45.0</td>
</tr>
<tr>
<td>managedSocialAccount</td>
<td>ConnectApi.ManagedSocialAccount</td>
<td>Managed social account that likes the social post.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.LikeIntents

**ConnectApi.LikeIntents**

List of like intents for a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>likes</td>
<td>List&lt;ConnectApi.LikeIntent&gt;</td>
<td>List of like intents for the social post.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.SocialPostIntents

**ConnectApi.LikeSocialPostIntent**

Like intent on a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>socialAccountId</td>
<td>String</td>
<td>ID of the social account that likes the social post.</td>
<td>46.0</td>
</tr>
<tr>
<td>socialPostId</td>
<td>String</td>
<td>ID of the social post to like.</td>
<td>46.0</td>
</tr>
</tbody>
</table>
ConnectApi.LikeSummary
Summary of a like.
Subclass of ConnectApi.UserFeedEntityActivitySummary

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>likeId</td>
<td>String</td>
<td>ID of the like.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

ConnectApi.LinkCapability
If a feed element has this capability, it has a link.
Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>Link URL. The URL can be to an external site.</td>
<td>32.0</td>
</tr>
<tr>
<td>urlName</td>
<td>String</td>
<td>Description of the link.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.FeedElementCapabilities Class

ConnectApi.LinkSegment Class
Subclass of ConnectApi.MessageSegment Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>The link URL</td>
<td>28.0</td>
</tr>
</tbody>
</table>

ConnectApi.LinkMetadata
Metadata for a link.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the link.</td>
<td>42.0</td>
</tr>
<tr>
<td>frameSource</td>
<td>String</td>
<td>HTML required to display the resource.</td>
<td>42.0</td>
</tr>
<tr>
<td>height</td>
<td>Integer</td>
<td>Height required to display the HTML.</td>
<td>42.0</td>
</tr>
<tr>
<td>originalUrl</td>
<td>String</td>
<td>Original URL that was used to request the metadata.</td>
<td>42.0</td>
</tr>
<tr>
<td>providerUrl</td>
<td>String</td>
<td>URL of the provider that the information is retrieved from.</td>
<td>42.0</td>
</tr>
</tbody>
</table>
| source          | ConnectApi.LinkMetadataSource | Source of the link metadata. Values are:  
|                 |                    | • None—Link metadata wasn't retrieved.         | 42.0              |
### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>Thumbnail of the resource.</td>
<td>42.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the link.</td>
<td>42.0</td>
</tr>
<tr>
<td>type</td>
<td>ConnectApi. LinkMetadataType</td>
<td>Type of link that the metadata represents. Values are:</td>
<td>42.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Sfdc—Salesforce is the source.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Error—Link metadata couldn’t be retrieved.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Link—Represents a link.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• None—Link metadata wasn’t retrieved because the link isn’t an allowed domain.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Photo—Represents a photo.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Rich—Represents rich content, typically HTML content.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Unknown—Link metadata was retrieved, but the type is unknown.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Video—Represents a video.</td>
<td></td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL of the image to display, if one is available.</td>
<td>42.0</td>
</tr>
<tr>
<td>width</td>
<td>Integer</td>
<td>Width required to display the HTML.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.LinkMetadataCollection

#### ConnectApi.LinkMetadataCollection

Collection of link metadata.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>linkMetadataList</td>
<td>List&lt;ConnectApi. LinkMetadata&gt;</td>
<td>List of metadata for links.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.MaintenanceInfo

Information about the upcoming scheduled maintenance for the organization.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the maintenance.</td>
<td>34.0</td>
</tr>
<tr>
<td>maintenanceTitle</td>
<td>String</td>
<td>Title of the maintenance.</td>
<td>34.0</td>
</tr>
<tr>
<td>maintenanceType</td>
<td>ConnectApi. MaintenanceType</td>
<td>Type of maintenance. Values are:</td>
<td>34.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Downtime—Downtime maintenance.</td>
<td></td>
</tr>
</tbody>
</table>
### Available Version

<table>
<thead>
<tr>

### ConnectApi.ManagedContentAssociations

Content topics associated with managed content.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>topics</td>
<td>List&lt;ConnectApi.TopicSummary&gt;</td>
<td>A collection of topics associated with the managed content.</td>
<td>47.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.ManagedContentVersion

### ConnectApi.ManagedContentChannel

Managed content channel.
### ConnectApi.ManagedContentChannelCollection

Collection of managed content channels.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>channels</td>
<td>List&lt;ConnectApi.ManagedContentChannel&gt;</td>
<td>List of managed content channels.</td>
<td>48.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the current page.</td>
<td>48.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the next page, or null if there isn't a next page.</td>
<td>48.0</td>

<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the previous page, or null if there isn't a previous page.</td>
<td>48.0</td>
</tr>
<tr>
<td>totalChannels</td>
<td>Integer</td>
<td>Total number of managed content channels.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ManagedContentDateAndTimeNodeValue

Managed content node of date and time type.

Subclass of ConnectApi.ManagedContentNodeValue
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>dateTimeValue</td>
<td>Datetime</td>
<td>UTC date and time value of the managed content node.</td>
<td>48.0</td>
</tr>
<tr>
<td>timeZone</td>
<td>String</td>
<td>Time zone in which the date and time is authored.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**ConnectApi.ManagedContentDateNodeValue**

Managed content node of date type.

Subclass of `ConnectApi.ManagedContentNodeValue`

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>value</td>
<td>Datetime</td>
<td>Date value of the managed content node.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**ConnectApi.ManagedContentMediaNodeValue**

Managed content node of media type.

Subclass of `ConnectApi.ManagedContentNodeValue`

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>altText</td>
<td>String</td>
<td>Alternative text for the managed content node.</td>
<td>47.0</td>
</tr>
<tr>
<td>altUrl</td>
<td>String</td>
<td>Alternative URL for the managed content node.</td>
<td>47.0–48.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>In version 49.0 and later, this information is returned in the thumbnailUrl property.</td>
<td></td>
</tr>
<tr>
<td>fileName</td>
<td>String</td>
<td>File name of the managed content node.</td>
<td>48.0</td>
</tr>
<tr>
<td>mediaType</td>
<td><code>ConnectApi.ManagedContentMediaType</code></td>
<td>Type of managed content media. Value is <code>Image</code>.</td>
<td>47.0</td>
</tr>
<tr>
<td>mimeType</td>
<td>String</td>
<td>MIME type of the managed content node.</td>
<td>47.0</td>
</tr>
<tr>
<td>resourceUrl</td>
<td>String</td>
<td>Resource URL of the image.</td>
<td>48.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>In version 48.0, the resource URL is available if referencing asset files and is <code>null</code> if referencing media. In version 49.0 and later, the resource URL is available if referencing asset files or media.</td>
<td></td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>URL to the thumbnail of the media.</td>
<td>49.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the managed content node.</td>
<td>47.0</td>
</tr>
<tr>
<td>unauthenticatedUrl</td>
<td>String</td>
<td>Unauthenticated URL of the image or <code>null</code> if the image isn’t visible to external users.</td>
<td>48.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL of the image.</td>
<td>47.0</td>
</tr>
</tbody>
</table>
### ConnectApi.ManagedContentMediaSourceNodeValue

Source of managed content media.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fileName</td>
<td>String</td>
<td>File name of the media source.</td>
<td>49.0</td>
</tr>
<tr>
<td>isExternal</td>
<td>Boolean</td>
<td>Specifies whether the media source is referenced via an external URL (true) or uploaded (false).</td>
<td>49.0</td>
</tr>
<tr>
<td>mediaType</td>
<td>ConnectApi.</td>
<td>Type of managed content media. Values are:</td>
<td>49.0</td>
</tr>
<tr>
<td></td>
<td>ManagedContent</td>
<td>• Document</td>
<td></td>
</tr>
<tr>
<td></td>
<td>MediaType</td>
<td>• Image</td>
<td></td>
</tr>
<tr>
<td>mimeType</td>
<td>String</td>
<td>MIME type of the media source.</td>
<td>49.0</td>
</tr>
<tr>
<td>referenceId</td>
<td>String</td>
<td>Reference ID of the uploaded media source.</td>
<td>49.0</td>
</tr>
<tr>
<td>resourceUrl</td>
<td>String</td>
<td>Resource URL of the media source.</td>
<td>49.0</td>
</tr>
<tr>
<td>unauthenticatedUrl</td>
<td>String</td>
<td>URL to the media source for unauthenticated users, or null if the media source isn’t available to external users.</td>
<td>49.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the media source for authenticated users.</td>
<td>49.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ManagedContentNodeType

Managed content node type.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>label</td>
<td>String</td>
<td>Label of the managed content node type.</td>
<td>47.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>

### ConnectApi.ManagedContentNodeValue

Managed content node.

This class is abstract.

Superclass of:

- `ConnectApi.ManagedContentDateAndTimeNodeValue`
- `ConnectApi.ManagedContentDateNodeValue`
- `ConnectApi.ManagedContentMediaNodeValue`
- `ConnectApi.ManagedContentMediaSourceNodeValue`
- `ConnectApi.ManagedContentTextNodeValue`
### Property Name: `nodeType`  
**Type:** `ConnectApi.ManagedContentNodeType`  
**Description:** Type of managed content node. Values are:  
- Date  
- DateTime  
- Media  
- MediaSource  
- MultilineText  
- NameField  
- RichText  
- Text  
- Url  

**Available Version:** 47.0

SEE ALSO:  
`ConnectApi.ManagedContentVersion`  

### ConnectApi.ManagedContentTextNodeValue

**Description:** Managed content node of text type.  
Subclass of `ConnectApi.ManagedContentNodeValue`

<table>
<thead>

<td>29.0</td>
</tr>
</tbody>
</table>

### ConnectApi.MentionSegment Class
Subclass of ConnectApi.MessageSegment Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>accessible</td>
<td>Boolean</td>
<td>Specifies whether the mentioned user or group can see the post in which they are mentioned (true) or not (false).</td>
<td>28.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the mentioned user or group</td>
<td>28.0</td>
</tr>
<tr>
<td>record</td>
<td>ConnectApi.ActorWithId</td>
<td>Information about the mentioned user or group</td>
<td>29.0</td>
</tr>
<tr>
<td>user</td>
<td>ConnectApi.UserSummary</td>
<td>Information about the mentioned user. Important: In versions 29.0 and later, use the record property.</td>
<td>28.0 only In versions before 29.0, if the mention is not a user, the mention is in a ConnectApi.TextSegment object.</td>
</tr>
</tbody>
</table>

### ConnectApi.MentionValidation Class
Information about whether a proposed mention is valid for the context user.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recordId</td>
<td>String</td>
<td>The ID of the mentioned record.</td>
<td>29.0</td>
</tr>
</tbody>
</table>
validationStatus: ConnectApi.MentionValidationStatus Enum

- **Disallowed**—The proposed mention is invalid and is rejected because the context user is trying to mention something that is not allowed. For example, a user who is not a member of a private group is trying to mention the private group.
- **Inaccessible**—The proposed mention is allowed, but the user or record being mentioned isn't notified. They don't have access to the parent record that's being discussed.
- **Ok**—There is no validation error for this proposed mention.

**SEE ALSO:**
ConnectApi.MentionValidations Class

### ConnectApi.MentionValidations Class

Information about whether a set of mentions is valid for the context user.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>hasErrors</td>
<td>Boolean</td>
<td>Indicates whether at least one of the proposed mentions has an error (true), or not (false). For example, context users can't mention private groups they don't belong to. If such a group is included in the list of mention validations, hasErrors is true and the group has a validationStatus of Disallowed in its mention validation.</td>
<td>29.0</td>
</tr>
<tr>
<td>mentionValidations</td>
<td>List&lt;ConnectApi.MentionValidation&gt;</td>
<td>A list of mention validation information in the same order as the provided record IDs.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

### ConnectApi.MessageBody Class

Subclass of ConnectApi.AbstractMessageBody Class
No additional properties.

SEE ALSO:
- ConnectApi.ChatterLikesCapability Class
- ConnectApi.ChatterMessage Class
- ConnectApi.Comment
- ConnectApi.FeedElement Class
- ConnectApi.FeedItemSummary

**ConnectApi.MessageSegment Class**

This class is abstract.

Superclass of:
- ConnectApi.ComplexSegment Class
- ConnectApi.EntityLinkSegment Class
- ConnectApi.FieldChangeSegment Class
- ConnectApi.FieldChangeNameSegment Class
- ConnectApi.FieldChangeValueSegment Class
- ConnectApi.HashtagSegment Class
- ConnectApi.InlineImageSegment
- ConnectApi.LinkSegment Class
- ConnectApi.MentionSegment Class
- ConnectApi.MoreChangesSegment Class
- ConnectApi.ResourceLinkSegment Class
- ConnectApi.TextSegment Class

Message segments in a feed item are typed as `ConnectApi.MessageSegment`. Feed item capabilities are typed as `ConnectApi.FeedItemCapability`. Record fields are typed as `ConnectApi.AbstractRecordField`. These classes are all abstract and have several concrete subclasses. At runtime you can use `instanceof` to check the concrete types of these objects and then safely proceed with the corresponding downcast. When you downcast, you must have a default case that handles unknown subclasses.

**Important:** The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>text</td>
<td>String</td>
<td>Text-only rendition of this segment. If a client encounters an unknown message segment type, it can render this value.</td>
<td>28.0</td>
</tr>
</tbody>
</table>
**Available Version** | **Description** | **Type** | **Property Name**
--- | --- | --- | ---
28.0 | The message segment type. One of these values: | ConnectApi. MessageSegment Type Enum | type

- EntityLink
- FieldChange
- FieldChangeName
- FieldChangeValue
- Hashtag
- InlineImage
- Link
- MarkupBegin
- MarkupEnd
- Mention
- MoreChanges
- ResourceLink
- Text

</thead>
<tbody>
<tr>
<td>flagCount</td>
<td>Integer</td>
<td>Number of moderation flags on this feed item, comment, or file. If the context user is not a community moderator, the property is null.</td>
<td>29.0</td>
</tr>
<tr>
<td>flagCountByReason</td>
<td>Map&lt;ConnectApi. CommunityFlagReasonType, Integer&gt;</td>
<td>Number of moderation flags categorized by reason. Values for ConnectApi.CommunityFlagReasonType are:</td>
<td>40.0</td>
</tr>
<tr>
<td>flaggedByMe</td>
<td>Boolean</td>
<td>true if the context user flagged the feed item, comment, or file for moderation; false otherwise.</td>
<td>29.0</td>
</tr>
</tbody>
</table>
**ConnectApi.ModerationFlagsCollection**

A collection of flags on a feed item, comment, or file.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>40.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the current page.</td>
<td>40.0</td>
</tr>
<tr>
<td>flags</td>
<td>List&lt;ConnectApi.</td>
<td>List of flag details.</td>
<td>40.0</td>
</tr>
<tr>
<td></td>
<td>ModerationFlag ItemDetail&gt;</td>
<td></td>
<td></td>
</tr>
<tr>
<td>nextPageToken</td>
<td>String</td>
<td>Token identifying the next page, or <strong>null</strong> if there isn’t a next page.</td>
<td>40.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the next page, or <strong>null</strong> if there isn’t a next page.</td>
<td>40.0</td>
</tr>
<tr>
<td>pageSize</td>
<td>Integer</td>
<td>Number of items per page.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

**ConnectApi.MoreChangesSegment Class**

Subclass of **ConnectApi.MessageSegment Class**

In feed items with a large number of tracked changes, the message is formatted as: “changed A, B, and made X more changes.” The `MoreChangesSegment` contains the “X more changes.”

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>moreChanges</td>
<td>List&lt;ConnectApi.FieldChange Segment&gt;</td>
<td>Complete list of tracked changes.</td>
<td>29.0</td>
</tr>
<tr>
<td>moreChangesCount</td>
<td>Integer</td>
<td>Number of additional changes</td>
<td>28.0</td>
</tr>
</tbody>
</table>
ConnectApi.Motif Class

The motif properties contain URLs for small, medium, and large icons that indicate the Salesforce record type. Common record types are files, users, and groups, but all record types have a set of motif icons. Custom object records use their tab style icon. All icons are available to unauthenticated users so that, for example, you can display the motif icons in an email. The motif can also contain the record type's base color.

Note: The motif images are icons, not user uploaded images or photos. For example, every user has the same set of motif icons.

Custom object records use their tab style icon, for example, the following custom object uses the "boat" tab style:

```json
"motif": {
  "color": "8C004C",
  "largeIconUrl": "/img/icon/custom51_100/boat64.png",
  "mediumIconUrl": "/img/icon/custom51_100/boat32.png",
  "smallIconUrl": "/img/icon/custom51_100/boat16.png",
  "svgIconUrl": null
},
```

Users use the following icons:

```json
"motif": {
  "color": "1797C0",
  "largeIconUrl": "/img/icon/profile64.png",
  "mediumIconUrl": "/img/icon/profile32.png",
  "smallIconUrl": "/img/icon/profile16.png",
  "svgIconUrl": null
},
```

Groups use the following icons:

```json
"motif": {
  "color": "1797C0",
  "largeIconUrl": "/img/icon/groups64.png",
  "mediumIconUrl": "/img/icon/groups32.png",
  "smallIconUrl": "/img/icon/groups16.png",
  "svgIconUrl": null
},
```

Files use the following icons:

```json
"motif": {
  "color": "1797C0",
  "largeIconUrl": "/img/content/content64.png",
  "mediumIconUrl": "/img/content/content32.png",
  "smallIconUrl": "/img/icon/files16.png",
  "svgIconUrl": null
},
```

Note: To view the icons in the previous examples, preface the URL with `https://instance_name`. For example, `https://instance_name/img/icon/profile64.png`.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>color</td>
<td>String</td>
<td>A hex value representing the base color of the record type, or null.</td>
<td>29.0</td>
</tr>
</tbody>
</table>
ConnectApi.MuteCapability

If a feed element has this capability, users can mute it. Muted feed elements are visible in the muted feed, and invisible in all other feeds that respect mute.

Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isMutedByMe</td>
<td>Boolean</td>
<td>Indicates whether the context user muted the feed element.</td>
<td>35.0</td>
</tr>
</tbody>
</table>

SEE ALSO:  
ConnectApi.FeedElementCapabilities Class

ConnectApi.MuteSummary

Summary of a mute.

Subclass of ConnectApi.UserFeedEntityActivitySummary

No additional properties.

ConnectApi.NBAActionParameter

A parameter for an action.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the parameter.</td>
<td>45.0</td>

**ConnectApi.PaymentGroupResponse**

Payment group.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currencyIsoCode</td>
<td>String</td>
<td>Three-letter ISO 4217 currency code associated with the payment group record.</td>
<td>50.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the payment group record.</td>
<td>50.0</td>
</tr>
<tr>
<td>sourceObjectId</td>
<td>String</td>
<td>Source object ID of the payment group record. Supports only OrderId.</td>
<td>50.0</td>
</tr>
</tbody>
</table>

**ConnectApi.PaymentResponse**

Payment output.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>accountId</td>
<td>String</td>
<td>ID of the account related the payment record.</td>
<td>50.0</td>
</tr>
<tr>
<td>amount</td>
<td>Double</td>
<td>Total amount of the payment transaction performed in the payment request.</td>
<td>50.0</td>
</tr>
<tr>
<td>currencyIsoCode</td>
<td>String</td>
<td>Three-letter ISO 4217 currency code associated with the payment output.</td>
<td>50.0</td>
</tr>
<tr>
<td>effectiveDate</td>
<td>Datetime</td>
<td>Date that the payment becomes effective.</td>
<td>50.0</td>
</tr>
</tbody>
</table>
### ConnectApi.PercentRecordField Class
Subclass of ConnectApi.LabeledRecordField Class
A record field containing a percentage value.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>value</td>
<td>Double</td>
<td>The value of the percentage.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

### ConnectApi.PhoneNumber Class
A phone number.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>label</td>
<td>String</td>
<td>A localized string indicating the phone type</td>
<td>30.0</td>
</tr>
<tr>
<td>phoneNumber</td>
<td>String</td>
<td>Phone number</td>
<td>28.0</td>
</tr>
<tr>
<td>phoneType</td>
<td>String</td>
<td>Phone type. Values are:</td>
<td>30.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Fax</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Mobile</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Work</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>These values are not localized.</td>
<td></td>
</tr>
</tbody>
</table>
### ConnectApi Namespace

#### ConnectApi.DatacloudCompany Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| type | String | Note: This property is not available after version 29.0. Use the phoneType property instead.  
Values are:  
- Fax  
- Mobile  
- Work  
These values are not localized. | 28.0–29.0 |

#### ConnectApi.DatacloudContact

#### ConnectApi.UserDetail Class

#### ConnectApi.Photo Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fullEmailPhotoUrl</td>
<td>String</td>
<td>A temporary URL to the large profile picture. The URL expires after 30 days and is available to unauthenticated users.</td>
<td>28.0</td>
</tr>
</tbody>
</table>
| largePhotoUrl | String | URL to the large profile picture. The default width is 200 pixels, and the height is scaled so the original image proportions are maintained.  
If a user hasn’t uploaded a photo, this URL points to a default photo.  
If the user hasn’t uploaded a photo and the request header included X-Connect-Theme: Salesforce1, this URL points to a default photo based on a theme that the admin selected for the org. | 28.0 |
| mediumPhotoUrl | String | URL to the medium profile picture. The default width is 160 pixels, and the height is scaled so the original image proportions are maintained.  
If a user hasn’t uploaded a photo, this URL points to a default photo.  
If the user hasn’t uploaded a photo and the request header included X-Connect-Theme: Salesforce1, this URL points to a default photo based on a theme that the admin selected for the org. | 37.0 |
| photoVersionId | String | 18–character ID to that version of the photo | 28.0 |
| smallPhotoUrl | String | URL to the small profile picture. The default size is 64x64 pixels.  
If a user hasn’t uploaded a photo, this URL points to a default photo.  
If the user hasn’t uploaded a photo and the request header included | 28.0 |
### X-Connect-Theme: Salesforce

**Available Version**: 28.0

**Description**: This URL points to a default photo based on a theme that the admin selected for the org.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>standardEmail</td>
<td>String</td>
<td>A temporary URL to the small profile. The URL expires after 30 days and is available to unauthenticated users.</td>
</tr>
<tr>
<td>PhotoUrl</td>
<td>String</td>
<td>A resource that returns a Photo object: for example, /services/data/v50.0/chatter/users/005D0000001LL8OIAW/photo</td>
</tr>
</tbody>
</table>

### url

**Available Version**: 28.0

**Description**: A resource that returns a Photo object: for example, /services/data/v50.0/chatter/users/005D0000001LL8OIAW/photo.

### ConnectApi.PicklistRecordField Class

Subclass of ConnectApi.LabeledRecordField Class

A record field containing an enumerated value.

### ConnectApi.PinCapability

If a feed element has this capability, users who have permission can pin it to a feed.

Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>isPinnableByMe</td>
<td>Boolean</td>
<td>Specifies whether the context user can pin or unpin the entity to the feed (true) or not (false).</td>
</tr>
<tr>
<td>isPinned</td>
<td>Boolean</td>
<td>Specifies whether the entity is pinned (true) or not pinned (false) to the feed.</td>
</tr>
</tbody>
</table>

### ConnectApi.PinnedFeedElements

List of pinned feed elements for a feed.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>elements</td>
<td>List&lt;ConnectApi.FeedElement&gt;</td>
<td>List of pinned feed elements.</td>
</tr>
</tbody>
</table>
**ConnectApi.PlatformAction Class**

A platform action instance with state information for the context user.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionUrl</td>
<td>String</td>
<td>For action links of subtype Ui or Download, direct the user to download or visit the UI from this link. Salesforce issues a Javascript redirect for the link in this format: <code>/action-link-redirect/communityId/actionLinkId?_bearer=bearerToken</code> For Api action links and for all platform actions, this value is null and Salesforce handles the call.</td>
<td>33.0</td>
</tr>
<tr>
<td>apiName</td>
<td>String</td>
<td>The API name. The value may be null.</td>
<td>33.0</td>
</tr>
<tr>
<td>confirmationMessage</td>
<td>String</td>
<td>If this action requires a confirmation and has a status of NewStatus, this is a default localized message that should be shown to an end user prior to invoking the action. Otherwise, this is null.</td>
<td>33.0</td>
</tr>
<tr>
<td>executingUser</td>
<td>ConnectApi.User Summary Class</td>
<td>The user who initiated execution of this platform action.</td>
<td>33.0</td>
</tr>
<tr>
<td>groupDefault</td>
<td>Boolean</td>
<td>true if this platform action is the default or primary platform action in the platform action group; false otherwise. There can be only one default platform action per platform action group.</td>
<td>33.0</td>
</tr>
<tr>
<td>iconUrl</td>
<td>String</td>
<td>The URL of the icon for the platform action. This value may be null.</td>
<td>33.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>The ID for the platform action. If the type is QuickAction and the subtype is Create, this value is null.</td>
<td>33.0</td>
</tr>
<tr>
<td>label</td>
<td>String</td>
<td>The localized label for this platform action.</td>
<td>33.0</td>
</tr>
<tr>
<td>modifiedDate</td>
<td>Datetime</td>
<td>An ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z.</td>
<td>33.0</td>
</tr>
<tr>
<td>platformActionGroup</td>
<td>ConnectApi. Reference Class</td>
<td>A reference to the platform action group containing this platform action.</td>
<td>33.0</td>
</tr>
</tbody>
</table>
| status              | ConnectApi. PlatformAction Status | The execution status of the platform action. Values are:  
  * FailedStatus—The action link execution failed.  
  * NewStatus—The action link is ready to be executed. Available for Download and Ui action links only. | 33.0              |
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>subtype</td>
<td>String</td>
<td>The subtype of a platform action or null.</td>
<td>33.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>If the type property is ActionLink, possible values are:</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>Api</strong>—The action link calls a synchronous API at the action URL. Salesforce sets the status to SuccessfulStatus or FailedStatus based on the HTTP status code returned by your server.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>ApiAsync</strong>—The action link calls an asynchronous API at the action URL. The action remains in a PendingStatus state until a third party makes a request to /connect/action-links/<code>actionLinkId</code> to set the status to SuccessfulStatus or FailedStatus when the asynchronous operation is complete.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>Download</strong>—The action link downloads a file from the action URL.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>Ui</strong>—The action link takes the user to a web page at the action URL.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>Note:</strong> Invoking ApiAsync action links from an app requires a call to set the status. However, there isn’t currently a way to set the status of an action link using Apex. To set the status, use Connect REST API. See the Action Link resource in the Connect REST API Developer Guide for more information.</td>
<td></td>
</tr>
<tr>
<td>type</td>
<td><code>ConnectApi.PlatformActionType</code></td>
<td>The type of platform action. Values are:</td>
<td>33.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>ActionLink</strong>—An indicator on a feed element that targets an API, a web page, or a file, represented by a button in the Salesforce UI.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>CustomButton</strong>—When clicked, opens a URL or a Visualforce page in a window or executes JavaScript.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>ProductivityAction</strong>—Productivity actions are predefined and attached to a limited set of objects. Productivity actions include Send</td>
<td></td>
</tr>

</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The URL for this platform action. If the type is QuickAction and the subtype is Create, this value is null.</td>
<td>33.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

ConnectApi.PlatformActionGroup Class

A platform action group instance with state appropriate for the context user.

Action link groups are one type of platform action group and are therefore represented as ConnectApi.PlatformActionGroup output classes.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| category      | ConnectApi.PlatformActionGroupCategory | Indicates the priority and relative locations of platform actions. Values are:  
  • Primary—The action link group is displayed in the body of the feed element.  
  • Overflow—The action link group is displayed in the overflow menu of the feed element. | 33.0 |
| id            | String           | The 18-character ID or an opaque string ID of the platform action group. If the ConnectApi.PlatformAction type is QuickAction and the subtype is Create, this value is null. | 33.0 |
| modifiedDate  | Datetime         | ISO 8601 date string, for example, 2014-02-25T18:24:31.000Z. | 33.0 |
| platformActions| List<ConnectApi.PlatformAction> | The platform action instances for this group. Within an action link group, action links are displayed in the order listed in the actionLinks property of the ConnectApi.ActionLinkGroupDefinitionInput class. Within a feed item, | 33.0 |
**ConnectApi Namespace**

**ConnectApi.AssociatedActions Capability Input**

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>

### ConnectApi.ProductAttributeInfo (Pilot)

Product attribute metadata.
We provide product variations and attributes to selected customers through a pilot program that requires agreement to specific terms and conditions. Product variations and attributes are subject to change and aren’t generally available unless or until Salesforce announces their general availability in documentation or in press releases or public statements. We can’t guarantee general availability within any particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features.

<td>String</td>
<td>Name of the custom recommendation audience.</td>
<td>35.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL for the custom recommendation audience.</td>
<td>35.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.RecommendationAudiencePage

## ConnectApi.RecommendationAudiencePage

A list of custom recommendation audiences.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>audienceCount</td>
<td>Integer</td>
<td>The total number of custom recommendation audiences.</td>
<td>35.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>URL to the current page.</td>
<td>35.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>URL to the next page.</td>
<td>35.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>URL to the previous page.</td>
<td>35.0</td>
</tr>
</tbody>
</table>
### ConnectApi.RecommendationAudiences

A list of custom recommendation audiences.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recommendationAudiences</td>
<td>List&lt;ConnectApi.RecommendationAudience&gt;</td>
<td>A list of custom recommendation audiences.</td>
<td>35.0</td>
</tr>
</tbody>
</table>

### ConnectApi.RecommendationCollection

A list of Chatter, custom, and static recommendations.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recommendations</td>
<td>List&lt;ConnectApi.AbstractRecommendation&gt;</td>
<td>Collection of Chatter, custom, and static recommendations.</td>
<td>33.0</td>
</tr>
</tbody>
</table>

### ConnectApi.RecommendationDefinition

Represents a custom recommendation definition.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionUrl</td>
<td>String</td>
<td>The URL for acting on this custom recommendation.</td>
<td>35.0</td>
</tr>
<tr>
<td>actionUrlName</td>
<td>String</td>
<td>The text label for the action URL in the user interface.</td>
<td>35.0</td>
</tr>
<tr>
<td>explanation</td>
<td>String</td>
<td>Explanation of the custom recommendation definition.</td>
<td>35.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>18-character ID of the custom recommendation definition.</td>
<td>35.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the custom recommendation definition. The name is displayed in Setup.</td>
<td>35.0</td>
</tr>
<tr>
<td>photo</td>
<td>ConnectApi.Photo</td>
<td>Photo of the custom recommendation definition.</td>
<td>35.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the custom recommendation definition.</td>
<td>35.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the Connect REST API resource for the custom recommendation definition.</td>
<td>35.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.RecommendationDefinitionPage
- ConnectApi.ScheduledRecommendation

### ConnectApi.RecommendationDefinitionPage

A list of custom recommendation definitions.
### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recommendation Definitions</td>
<td>List&lt;ConnectApi.Recommendation Definition&gt;</td>
<td>A list of custom recommendation definitions.</td>
<td>35.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the Connect REST API resource for the recommendation definition collection.</td>
<td>35.0</td>
</tr>
</tbody>
</table>

### ConnectApi.RecommendationExplanation

Explanation for a Chatter recommendation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>detailsUrl</td>
<td>String</td>
<td>URL to explanation details or null if the Chatter recommendation doesn’t have a detailed explanation.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

ConnectApi.AbstractRecommendation

### ConnectApi.RecommendationReaction

A reaction to a recommendation produced by a recommendation strategy.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>aiModel</td>
<td>String</td>
<td>Reserved for future use.</td>
<td>47.0</td>
</tr>
<tr>
<td>contextRecord</td>
<td>ConnectApi.Reference</td>
<td>Reference to the context record.</td>
<td>45.0</td>
</tr>
<tr>
<td>createdBy</td>
<td>ConnectApi.Reference</td>
<td>Reference to the reaction creator.</td>
<td>45.0</td>
</tr>
<tr>
<td>createdDate</td>
<td>Datetime</td>
<td>Reaction creation date.</td>
<td>45.0</td>
</tr>
<tr>
<td>externalId</td>
<td>String</td>
<td>External target ID of the recommendation reacted on. This ID doesn’t need to be a Salesforce 18-character ID. For example, it can be a product number from an external system.</td>
<td>46.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>Reaction record ID.</td>
<td>45.0</td>
</tr>
<tr>
<td>onBehalfOf</td>
<td>ConnectApi.Reference</td>
<td>Reference to the user or record that is indirectly reacting to the recommendation.</td>
<td>45.0</td>
</tr>
<tr>
<td>reactionType</td>
<td>ConnectApi.RecommendationReactionType</td>
<td>Type of reaction to a recommendation. Values are:</td>
<td>45.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Accepted</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Rejected</td>
<td></td>
</tr>
</tbody>
</table>
### ConnectApi.RecommendationReactions

A list of recommendation reactions.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>URL to the current page of reactions in the collection.</td>
<td>45.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>URL to the next page of reactions in the collection.</td>
<td>45.0</td>
</tr>
<tr>
<td>reactions</td>
<td>List&lt;ConnectApi.RecommendationReaction&gt;</td>
<td>Collection of recommendation reactions.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

### ConnectApi.RecommendationsCapability

If a feed element has this capability, it has a recommendation.

Subclass of `ConnectApi.FeedElementCapabilities Class`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>items</td>
<td>List&lt;ConnectApi.AbstractRecommendation&gt;</td>
<td>A list of recommendations.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.RecommendationReactions`
- `ConnectApi.FeedElementCapabilities Class`
**ConnectApi.RecommendedObject**

A recommended object, such as a custom or static recommendation.

Subclass of *ConnectApi.Actor Class*

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>idOrEnum</td>
<td>String</td>
<td>ID of a recommendation definition for a custom recommendation or the enum value <em>Today</em> for static recommendations that don’t have an ID (version 35.0 and later).</td>
<td>34.0</td>
</tr>
<tr>
<td>motif</td>
<td>ConnectApi.Motif</td>
<td>Motif of the recommended object.</td>
<td>34.0</td>
</tr>
</tbody>
</table>

**ConnectApi.RecordCapability**

If a comment has this capability, it has a record attachment.

Subclass of *ConnectApi.FeedElementCapability Class.*

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recordId</td>
<td>String</td>
<td>ID of the record.</td>
<td>42.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the record.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

**ConnectApi.RecordField Class**

Subclass of *ConnectApi.LabeledRecordField Class*

A generic record field containing a label and text value.

SEE ALSO:

*ConnectApi.CompoundRecordField Class*

**ConnectApi.RecordSnapshot**

A record snapshot in a recommendation reaction.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the record.</td>
<td>45.0</td>
</tr>
<tr>
<td>nameAtSnapshot</td>
<td>String</td>
<td>Name of the record when the ID was recorded.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

*ConnectApi.RecommendationReaction*
**ConnectApi.RecordSnapshotCapability**

If a feed element has this capability, it contains all the snapshotted fields of a record for a single create record event.

Subclass of `ConnectApi.FeedElementCapability Class`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recordView</td>
<td><code>ConnectApi.RecordView</code></td>
<td>A record representation that includes metadata and data so you can display the record easily.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- `ConnectApi.FeedElementCapabilities Class`

**ConnectApi.RecordSummary Class**

Subclass of `ConnectApi.AbstractRecordView Class`

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>entityLabel</td>
<td><code>ConnectApi.EntityLabel</code></td>
<td>Label of the record’s entity.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- `ConnectApi.EmailAddress`
- `ConnectApi.EmailAttachment`
- `ConnectApi.ReferenceRecordField Class`
- `ConnectApi.ReferenceWithDateRecordField Class`

**ConnectApi.RecordSummaryList Class**

Summary information about a list of records in the organization including custom objects.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>records</td>
<td><code>List&lt;ConnectApi.ActorWithId&gt;</code></td>
<td>A list of records.</td>
<td>30.0</td>
</tr>
<tr>
<td>url</td>
<td><code>String</code></td>
<td>The URL to this list of records.</td>
<td>30.0</td>
</tr>
</tbody>
</table>

**ConnectApi.RecordView Class**

Subclass of `ConnectApi.AbstractRecordView Class`

A view of any record in the organization, including a custom object record. This object is used if a specialized object, such as User or ChatterGroup, is not available for the record type. Contains data and metadata so you can render a record with one response.
### ConnectApi.RecordViewSection Class

A section of record fields and values on a record detail.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>sections</td>
<td>List&lt;ConnectApi.</td>
<td>A list of record view sections.</td>
<td>29.0</td>
</tr>
<tr>
<td></td>
<td>RecordViewSection&gt;</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**SEE ALSO:**

ConnectApi.RecordSnapshotCapability

### ConnectApi.RecordViewClass

A section of record fields and values on a record detail.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>columnCount</td>
<td>Integer</td>
<td>The number of columns to use to lay out the fields in a record section.</td>
<td>29.0</td>
</tr>
<tr>
<td>columnOrder</td>
<td>ConnectApi.</td>
<td>The order of the fields to use in the fields property to lay out the fields in a record section.</td>
<td>29.0</td>
</tr>
<tr>
<td></td>
<td>RecordColumnOrderEnum</td>
<td></td>
<td></td>
</tr>
<tr>
<td>fields</td>
<td>ConnectApi.</td>
<td>The fields and values for the record contained in this section.</td>
<td>29.0</td>
</tr>
<tr>
<td></td>
<td>AbstractRecordField</td>
<td></td>
<td></td>
</tr>
<tr>
<td>heading</td>
<td>String</td>
<td>A localized label to display when rendering this section of fields.</td>
<td>29.0</td>
</tr>
<tr>
<td>isCollapsible</td>
<td>Boolean</td>
<td>Indicates whether the section can be collapsed to hide all the fields (true) or not (false).</td>
<td>29.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

ConnectApi.RecordView Class

### ConnectApi.Reference Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>The ID of the record being referenced, which could be an 18-character ID or some other string identifier.</td>
<td>28.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The URL to the resource endpoint.</td>
<td>28.0</td>
</tr>
</tbody>
</table>
### ConnectApi.ReferenceRecordField Class

Subclass of `ConnectApi.LabeledRecordField Class`

A record field with a label and text value.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>reference</td>
<td><code>ConnectApi.RecordSummary</code></td>
<td>The object referenced by the record field.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ReferenceWithDateRecordField Class

Subclass of `ConnectApi.LabeledRecordField Class`

A record field containing a referenced object that acted at a specific time, for example, “Created By...”.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>dateValue</td>
<td><code>Datetime</code></td>
<td>A time at which the referenced object acted.</td>
<td>29.0</td>
</tr>
<tr>
<td>reference</td>
<td><code>ConnectApi.RecordSummary</code></td>
<td>The object referenced by the record field.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

### ConnectApi.RefundGatewayResponse

Refund gateway response.

No additional properties.

### ConnectApi.RefundResponse

Refund output.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>accountId</td>
<td><code>String</code></td>
<td>ID of the account related to the refund record.</td>
<td>50.0</td>
</tr>
<tr>
<td>amount</td>
<td><code>Double</code></td>
<td>Total amount of the refund transaction performed in the payment request.</td>
<td>50.0</td>
</tr>
<tr>
<td>currencyIsoCode</td>
<td><code>String</code></td>
<td>Three-letter ISO 4217 currency code associated with the payment group record.</td>
<td>50.0</td>
</tr>
<tr>
<td>effectiveDate</td>
<td><code>Datetime</code></td>
<td>Date that the refund becomes effective.</td>
<td>50.0</td>
</tr>
<tr>
<td>id</td>
<td><code>String</code></td>
<td>ID of the refund record.</td>
<td>50.0</td>
</tr>
<tr>
<td>refundNumber</td>
<td><code>String</code></td>
<td>Number of the refund record that was created as a result of the request processing.</td>
<td>50.0</td>
</tr>
<tr>
<td>requestDate</td>
<td><code>Datetime</code></td>
<td>Date when the refund occurred.</td>
<td>50.0</td>
</tr>
</tbody>
</table>
**Available Version**

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>status</td>
<td>String</td>
<td>Indicates the results of processing the refund transaction in the gateway. Can be DRAFT, PROCESSED or CANCELLED.</td>
<td>50.0</td>
</tr>
</tbody>
</table>

**ConnectApi.ReferencedRefundResponse**

Refund comprehensive output.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>error</td>
<td>ConnectApi.ErrorResponse</td>
<td>Error response representation for the refund.</td>
<td>50.0</td>
</tr>
<tr>
<td>gatewayResponse</td>
<td>ConnectApi.RefundGatewayResponse</td>
<td>Gateway response received for the processed refund request.</td>
<td>50.0</td>
</tr>
<tr>
<td>paymentGatewayLogs</td>
<td>List&lt;ConnectApi.GatewayLogResponse&gt;</td>
<td>Gateway log collection representation for the refund.</td>
<td>50.0</td>
</tr>
<tr>
<td>paymentGroup</td>
<td>ConnectApi.PaymentGroupResponse</td>
<td>Payment group associated with the refund.</td>
<td>50.0</td>
</tr>
<tr>
<td>refund</td>
<td>ConnectApi.RefundResponse</td>
<td>Refund response representation.</td>
<td>50.0</td>
</tr>
</tbody>
</table>

**ConnectApi.RelatedFeedPost**

This class is abstract.

Subclass of: ConnectApi.ActorWithId Class

Superclass of: ConnectApi.RelatedQuestion

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>score</td>
<td>Double</td>
<td>Score of the related feed post that indicates how closely related it is to the context feed post.</td>
<td>37.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the related feed post.</td>
<td>37.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

  ConnectApi.RelatedFeedPosts

**ConnectApi.RelatedFeedPosts**

A collection of related feed posts.
ConnectApi.RelatedQuestion
A related question.
Subclass of: ConnectApi.RelatedFeedPost

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>hasBestAnswer</td>
<td>Boolean</td>
<td>Indicates whether the question has a best answer.</td>
<td>37.0</td>
</tr>
<tr>
<td>interactions</td>
<td>ConnectApi.InteractionsCapability</td>
<td>The number of individual views, likes, and comments on a question.</td>
<td>38.0</td>
</tr>
</tbody>
</table>

ConnectApi.ReplyIntent
Reply intent for a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>managedSocialAccount</td>
<td>ConnectApi.ManagedSocialAccount</td>
<td>Managed social account that replies to the social post.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.ReplyIntents

ConnectApi.ReplyIntents
List of reply intents for a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>replies</td>
<td>List&lt;ConnectApi.ReplyIntent&gt;</td>
<td>List of reply intents for the social post.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.SocialPostIntents

ConnectApi.RepositoryFileDetail
A detailed description of a repository file.
Subclass of ConnectApi.AbstractRepositoryFile
No additional properties.

**ConnectApi.RepositoryFileSummary**

A summary of a repository file.
Subclass of `ConnectApi.AbstractRepositoryFile`
No additional properties.

SEE ALSO:
- `ConnectApi.RepositoryFolderItem`

**ConnectApi.RepositoryFolderDetail**

A detailed description of a repository folder.
Subclass of `ConnectApi.AbstractRepositoryFolder`
No additional properties.

**ConnectApi.RepositoryFolderItem**

A folder item.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>file</td>
<td><code>ConnectApi.RepositoryFileSummary</code></td>
<td>If the folder item is a file, the file summary. If the folder item is a folder, null.</td>
<td>39.0</td>
</tr>
<tr>
<td>folder</td>
<td><code>ConnectApi.RepositoryFolderSummary</code></td>
<td>If the folder item is a folder, the folder summary. If the folder item is a file, null.</td>
<td>39.0</td>
</tr>
<tr>
<td>type</td>
<td><code>ConnectApi.FolderItemType</code></td>
<td>Type of item in a folder. Values are:</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• file</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• folder</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>39.0</td>
<td></td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.RepositoryFolderItemsCollection`

**ConnectApi.RepositoryFolderItemsCollection**

A collection of repository folder items.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>URL to the current page.</td>
<td>39.0</td>
</tr>
</tbody>
</table>
### ConnectApi.RepositoryFolderSummary

A summary of a repository folder.
Subclass of ConnectApi.AbstractRepositoryFolder
No additional properties.

**SEE ALSO:**
- ConnectApi.RepositoryFolderItem

### ConnectApi.RepositoryGroupSummary

A group summary.
Subclass of ConnectApi.AbstractDirectoryEntrySummary

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| groupType     | ConnectApi.ContentHub.GroupType | Type of group. Values are:
- Everybody—Group is public to everybody.
- EverybodyInDomain—Group is public to everybody in the same domain.
- Unknown—Group type is unknown. | 39.0 |
| name          | String | Name of the group. | 39.0 |

**SEE ALSO:**
- ConnectApi.ExternalFilePermissionInformation

### ConnectApi.RepositoryUserSummary

A user summary.
Subclass of ConnectApi.AbstractDirectoryEntrySummary

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>firstName</td>
<td>String</td>
<td>First name of the user.</td>
<td>39.0</td>
</tr>
<tr>
<td>lastName</td>
<td>String</td>
<td>Last name of the user.</td>
<td>39.0</td>
</tr>
</tbody>
</table>
### ConnectApi.Reputation Class

Reputation for a user.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>reputationLevel</td>
<td>ConnectApi.ReputationLevel</td>
<td>User’s reputation level.</td>
<td>32.0</td>
</tr>
<tr>
<td>reputationPoints</td>
<td>Double</td>
<td>User’s reputation points, which can be earned by performing different activities in the community.</td>
<td>32.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>Connect REST API URL to the reputation.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:  
- ConnectApi.User Class

### ConnectApi.ReputationLevel Class

Reputation level for a user.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>levelImageUrl</td>
<td>String</td>
<td>URL to the reputation level image.</td>
<td>32.0</td>
</tr>
<tr>
<td>levelName</td>
<td>String</td>
<td>Name of the reputation level.</td>
<td>32.0</td>
</tr>
<tr>
<td>levelNumber</td>
<td>Integer</td>
<td>Reputation level number, which is the numerical rank of the level, with the lowest level at 1. Administrators define the reputation level point ranges.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:  
- ConnectApi.Reputation Class

### ConnectApi.RequestHeader Class

An HTTP request header name and value pair.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>The name of the request header.</td>
<td>33.0</td>
</tr>
<tr>
<td>value</td>
<td>String</td>
<td>The value of the request header.</td>
<td>33.0</td>
</tr>
</tbody>
</table>

SEE ALSO:  
- ConnectApi.ActionLinkDefinition Class
### ConnectApi.ResourceLinkSegment Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>URL to a resource not otherwise identified by an ID field, for example, a link to a list of users.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ScheduledRecommendation

Represents a scheduled custom recommendation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| channel       | ConnectApi.RecommendationChannel  | A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:  
  - CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.  
  - CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.  
  - CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.  
  - CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.  
  - CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.  
  - DefaultChannel—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central communities. They also appear in the feed in communities in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder. | 36.0              |
### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>enabled</td>
<td>Boolean</td>
<td>Indicates whether scheduling is enabled. If true, the custom recommendation is enabled and appears in communities. If false, custom recommendations in feeds in Salesforce mobile web aren't removed, but no new custom recommendations appear. In Customer Service and Partner Central communities, disabled custom recommendations no longer appear.</td>
<td>35.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>18-character ID of the scheduled custom recommendation.</td>
<td>35.0</td>
</tr>
<tr>
<td>rank</td>
<td>Integer</td>
<td>The rank determining the order of this scheduled custom recommendation.</td>
<td>35.0</td>
</tr>
<tr>
<td>recommendationId</td>
<td>String</td>
<td>ID of the audience for the scheduled custom recommendation.</td>
<td>35.0</td>
</tr>
<tr>
<td>recommendation</td>
<td>ConnectApi.RecommendationDefinition</td>
<td>Custom recommendation definition that this scheduled recommendation schedules.</td>
<td>35.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the Connect REST API resource for the scheduled custom recommendation.</td>
<td>35.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.ScheduledRecommendationPage

**ConnectApi.ScheduledRecommendationPage**

A list of scheduled custom recommendations.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>scheduledRecommendations</td>
<td>List&lt;ConnectApi.ScheduledRecommendation&gt;</td>
<td>A list of scheduled custom recommendations.</td>
<td>35.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the Connect REST API resource for the scheduled custom recommendation collection.</td>
<td>35.0</td>
</tr>
</tbody>
</table>

**ConnectApi.Scope**

Scope information for a target.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the scope for the target.</td>
<td>48.0–49.0</td>
</tr>
</tbody>
</table>
**Property Name** | **Type** | **Description** | **Available Version**
--- | --- | --- | ---
value | String | Value of the scope for the target. | 48.0–49.0

**SEE ALSO:**
- `ConnectApi.Target`

**ConnectApi.SocialAccount**
A social account on a social network.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>externalSocialAccountId</td>
<td>String</td>
<td>ID of the external social account, if available.</td>
<td>38.0</td>
</tr>
<tr>
<td>handle</td>
<td>String</td>
<td>Social handle, screen name, or alias that identifies this account.</td>

### ConnectApi.Stamp

A user stamp.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the stamp.</td>
<td>39.0–43.0</td>
</tr>
<tr>
<td>Property Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>---------------</td>
<td>--------</td>
<td>------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the stamp.</td>
<td>39.0–43.0</td>
</tr>
<tr>
<td>imageUrl</td>
<td>String</td>
<td>Image URL of the stamp.</td>
<td>39.0–43.0</td>
</tr>
<tr>
<td>label</td>
<td>String</td>
<td>Label of the stamp.</td>
<td>39.0–43.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.User Class

**ConnectApi.StatusCapability**

If a feed post or comment has this capability, it has a status that determines its visibility.

Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| feedEntityStatus         | ConnectApi.FeedEntityStatus | Status of the feed post or comment. Values are:  
  - Draft—The feed post isn’t published but is visible to the author and users with Modify All Data or View All Data permission. Comments can’t be drafts.  
  - PendingReview—The feed post or comment isn’t approved yet and therefore isn’t published or visible.  
  - Published—The feed post or comment is approved and visible. | 37.0               |
| isApprovableByMe         | Boolean               | Specifies whether the context user can change the status of the feed post or comment. | 37.0               |

**ConnectApi.StrategyTrace**

Messages and trace nodes for a recommendation strategy execution.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>messages</td>
<td>List&lt;String&gt;</td>
<td>Messages and errors from the strategy execution.</td>
<td>45.0</td>
</tr>
</tbody>
</table>
**ConnectApi.StrategyTraceNode**

A trace node for a recommendation strategy execution.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>inputCount</td>
<td>Integer</td>
<td>Number of items put into the node.</td>
<td>45.0</td>
</tr>
<tr>
<td>messages</td>
<td>List&lt;String&gt;</td>
<td>Messages that occurred during node execution.</td>
<td>45.0</td>
</tr>
<tr>
<td>nodeName</td>
<td>String</td>
<td>Name of the node.</td>
<td>45.0</td>
</tr>
<tr>
<td>nodeTime</td>
<td>Long</td>
<td>Time spent processing inside the node.</td>
<td>45.0</td>
</tr>
<tr>
<td>nodeType</td>
<td>String</td>
<td>Type of node.</td>
<td>45.0</td>
</tr>
<tr>
<td>outputCount</td>
<td>Integer</td>
<td>Number of items returned from the node.</td>
<td>45.0</td>
</tr>
<tr>
<td>outputs</td>
<td>List&lt;String&gt;</td>
<td>Recommendations that are returned from the node.</td>
<td>45.0</td>
</tr>
<tr>
<td>totalTime</td>
<td>Long</td>
<td>Total time spent processing.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

**ConnectApi.SubmitCancelOutputRepresentation**

ID of the change order created for a cancel action, and a set of its financial values.

Subclass of `ConnectApi.BaseOutputRepresentation`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>changeBalances</td>
<td>ConnectApi.ChangeItem</td>
<td>Financial values resulting from the cancel.</td>
<td>48.0</td>
</tr>
<tr>
<td>changeOrderId</td>
<td>String</td>
<td>ID of the created change order.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**ConnectApi.SubmitReturnOutputRepresentation**

ID of the change order created for a return action, and a set of its financial values.

Subclass of `ConnectApi.BaseOutputRepresentation`.

---

2195
### ConnectApi.Namespace

### ConnectApi.ChangeItem

<table>
<thead>
<tr>

</tbody>
</table>
| status        | `ConnectApi.SurveyEmailStatus Enum` | Status of a survey invitation email. Values are:  
  • Failed—The survey invitation email wasn’t sent.  
  • Queued—The survey invitation email is queued for sending. | 50.0              |

**ConnectApi.Target**

Personalization target information.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>audience</td>
<td><code>ConnectApi.AudienceTarget</code></td>
<td>Audience assigned to the target.</td>
<td>48.0</td>
</tr>
<tr>
<td>formulaScope</td>
<td><code>ConnectApi.FormulaScope</code></td>
<td>Formula scope of the target.</td>
<td>50.0</td>
</tr>
<tr>
<td>groupName</td>
<td><code>String</code></td>
<td>Group name of the target. Groups bundle related target and audience pairs.</td>
<td>48.0</td>
</tr>
<tr>
<td>id</td>
<td><code>String</code></td>
<td>ID of the target.</td>
<td>48.0</td>
</tr>
<tr>
<td>priority</td>
<td><code>Integer</code></td>
<td>Priority of the target. Within a group, priority determines which target is returned if the user matches more than one audience.</td>
<td>48.0</td>
</tr>
</tbody>
</table>
| publishStatus | `ConnectApi.PublishStatus`  | Publish status of the target. Values are:  
  • Draft  
  • Live |
| scope         | `List<ConnectApi.Scope>`     | List of scopes for the target.                                               | 48.0–49.0         |

In version 50.0 and later, the `formulaScope` property returns this information.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>targetType</td>
<td><code>String</code></td>
<td>Type of target, indicating the nature of the data being targeted.</td>
</tr>
<tr>
<td>targetValue</td>
<td><code>String</code></td>
<td>Value of the target.</td>
</tr>
<tr>
<td>url</td>
<td><code>String</code></td>
<td>URL to the target.</td>

### ConnectApi.TopicEndorsement Class

Represents one user endorsing another user for a single topic.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>endorsee</td>
<td>ConnectApi.User Summary</td>
<td>User being endorsed</td>
<td>30.0</td>
</tr>
<tr>
<td>endorsementId</td>
<td>String</td>
<td>18-character ID of the endorsement record</td>
<td>30.0</td>
</tr>
<tr>
<td>endorser</td>
<td>ConnectApi.User Summary</td>
<td>User performing the endorsement</td>
<td>30.0</td>
</tr>
<tr>
<td>topic</td>
<td>ConnectApi.Topic</td>
<td>Topic the user is being endorsed for</td>
<td>30.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the resource for the endorsement record</td>
<td>30.0</td>
</tr>
</tbody>
</table>

### ConnectApi.TopicEndorsementCollection Class

A collection of topic endorsement response bodies.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the current page.</td>
<td>30.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the next page, or null if there isn't a next page.</td>
<td>30.0</td>

<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the previous page, or null if there isn't a previous page.</td>
<td>30.0</td>
</tr>
<tr>
<td>topicEndorsements</td>
<td>List&lt;ConnectApi.Topic&gt;</td>
<td>List of topic endorsements</td>
<td>30.0</td>
</tr>
</tbody>
</table>
ConnectApi.TopicEndorsementSummary

Topic endorsement summary.
Subclass of ConnectApi.UserActivitySummary.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>endorsementId</td>
<td>ID</td>
<td>ID of the topic endorsement.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

ConnectApi.TopicImages Class

Images associated with a topic.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>coverImageUrl</td>
<td>String</td>
<td>URL to a topic's cover image, which appears on the topic page. Both topics and managed topics can have cover images.</td>
<td>32.0</td>
</tr>
<tr>
<td>featuredImageUrl</td>
<td>String</td>
<td>URL to a managed topic's featured image, which appears wherever you feature it, for example, on the communities home page.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

ConnectApi.ManagedContentAssociations

### ConnectApi.TrackedChangeBundleCapability

If a feed element has this capability, it has a group of other feed elements aggregated into one feed element called a bundle. This type of bundle aggregates feed tracked changes. Subclass of ConnectApi.BundleCapability Class.
### ConnectApi.TrackedChangeItem Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fieldName</td>
<td>String</td>
<td>The name of the field that was updated.</td>
<td>28.0</td>
</tr>
<tr>
<td>newValue</td>
<td>String</td>
<td>The new value of the field or null if the field length is long.</td>
<td>28.0</td>
</tr>
<tr>
<td>oldValue</td>
<td>String</td>
<td>The old value of the field or null if the field length is long.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.TrackedChangesCapability
- ConnectApi.TrackedChangeBundleCapability

### ConnectApi.TrackedChangesCapability

If a feed element has this capability, it contains all changes to a record for a single tracked change event.
Subclass of ConnectApi.FeedElementCapability Class.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>changes</td>
<td>List&lt;ConnectApi.TrackedChangeItem&gt;</td>

### ConnectApi.UserCapabilities Class
The capabilities associated with a user profile.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>canChat</td>
<td>Boolean</td>
<td>Specifies if the context user can use Chatter Messenger with the subject user (true) or not (false)</td>
<td>29.0</td>
</tr>
<tr>
<td>canDirectMessage</td>
<td>Boolean</td>
<td>Specifies if the context user can direct message the subject user (true) or not (false)</td>
<td>29.0</td>
</tr>
<tr>
<td>canEdit</td>
<td>Boolean</td>
<td>Specifies if the context user can edit the subject user's account (true) or not (false)</td>
<td>29.0</td>
</tr>
<tr>
<td>canFollow</td>
<td>Boolean</td>
<td>Specifies if the context user can follow the subject user's feed (true) or not (false)</td>
<td>29.0</td>
</tr>
<tr>
<td>canViewFeed</td>
<td>Boolean</td>
<td>Specifies if the context user can view the feed of the subject user (true) or not (false)</td>
<td>29.0</td>
</tr>
<tr>
<td>canViewFullProfile</td>
<td>Boolean</td>
<td>Specifies if the context user can view the full profile of the subject user (true) or only the limited profile (false)</td>
<td>29.0</td>
</tr>
</tbody>
</table>
Available Version | Description | TypeName |
---|---|---|
29.0 | Specifies if the subject user is a Chatter moderator or admin (true) or not (false) | Boolean isModerator |

SEE ALSO: [ConnectApi.UserProfile Class](#)

**ConnectApi.UserChatterSettings Class**

A user’s global Chatter settings.

Available Version | Description | TypeName |
---|---|---|
28.0 | The default frequency with which a user receives email from a group when they join it. | ConnectApi.GroupEmail EmailFrequency |

**ConnectApi.UserDetail Class**

Subclass of [ConnectApi.User Class](#)

Details about a user in an organization.

If the context user doesn’t have permission to see a property, its value is set to `null`.

Available Version | Description | TypeName |
---|---|---|
28.0 | Text from user's profile | String aboutMe |
28.0 | User’s address | ConnectApi.Address address |
36.0 | User’s banner photo | ConnectApi.BannerPhoto bannerPhoto |
28.0 | Chatter activity statistics | ConnectApi.ChatterActivity chatterActivity |
28.0 | User’s influence rank | ConnectApi.GlobalInfluence chatterInfluence |
28.0 | User’s email address | String email |
28.0 | Number of users following this user | Integer followersCount |
28.0 | Information about items the user is following | ConnectApi.FollowingCounts followingCounts |
28.0 | Number of groups user is following | Integer groupCount |
31.0 | true if user has access to Chatter; false otherwise | Boolean hasChatter |
### ConnectApi.UserFeedEntityActivitySummary

User feed entity activity summary.

This class is abstract.

Subclass of [ConnectApi.UserActivitySummary](#).

Superclass of:

- [ConnectApi.BookmarkSummary](#)
- [ConnectApi.ChatterActivitySummary](#)
- [ConnectApi.CompanyVerifySummary](#)
- [ConnectApi.DownVoteSummary](#)
- [ConnectApi.FeedEntityReadSummary](#)
- [ConnectApi.LikeSummary](#)
- [ConnectApi.MuteSummary](#)
- [ConnectApi.UpVoteSummary](#)

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>feedEntityId</td>
<td>String</td>
<td>ID of the feed entity.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

### ConnectApi.UserGroupDetailPage

A page of groups that a user is a member of.
### ConnectApi.UserGroupPage Class

A paginated list of groups the context user is a member of.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the current page.</td>
<td>28.0</td>
</tr>
<tr>
<td>groups</td>
<td>List&lt;ConnectApi.ChatterGroupDetail&gt;</td>
<td>List of groups</td>
<td>28.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the next page, or null if there’s not a next page.</td>
<td>28.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the previous page, or null if there’s not a previous page.</td>
<td>28.0</td>
</tr>
<tr>
<td>total</td>
<td>Integer</td>
<td>Total number of groups across all pages</td>
<td>28.0</td>
</tr>
</tbody>
</table>

### ConnectApi.UserMission

Mission details for a user.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>missionName</td>
<td>String</td>
<td>Name of the mission.</td>
<td>46.0</td>
</tr>
<tr>
<td>missionThreshold</td>
<td>Integer</td>
<td>Threshold of the mission. When a user reaches this activity count, the mission is achieved.</td>
<td>46.0</td>
</tr>
</tbody>
</table>

### ConnectApi.UserMissionActivitiesJob

User mission activities job.
ConnectApi.UserMissionActivity

User activity associated with missions.
No additional properties.

ConnectApi.UserMissionActivityCollection

List of mission activities for a user.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>community</td>
<td>ConnectApi.CommunitySummary</td>
<td>Community in which the user performed activities.</td>

<td>ID of the user.</td>
<td>45.0</td>
</tr>
<tr>
<td>userMissionActivities</td>
<td>List&lt;ConnectApi.AbstractUserMissionActivity&gt;</td>
<td>List of mission activities performed by the user.</td>
<td>45.0</td>
</tr>
<tr>
<td>userName</td>
<td>String</td>
<td>Name of the user.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

ConnectApi.UserMissionActivitiesJob

ConnectApi.UserMissionActivityStatus

Status of mission activity for a user.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>message</td>
<td>String</td>
<td>Success or error message.</td>
<td>45.0</td>
</tr>
<tr>
<td>status</td>
<td>String</td>
<td>Status of mission activity for a user.</td>
<td>45.0</td>
</tr>
</tbody>
</table>
### ConnectApi.UserOauthInfo

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>availableExternal</td>
<td>Connect.Oauth.ProviderInfo</td>
<td>The available OAuth service provider.</td>
<td>37.0</td>
</tr>
<tr>
<td>EmailService</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>isAuthenticated</td>
<td>Boolean</td>
<td>Specifies whether the user is authenticated (true) or not (false).</td>
<td>37.0</td>
</tr>
</tbody>
</table>

### ConnectApi.UserPage Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>Integer</td>
<td>Token identifying the current page.</td>

<tr>
<td>users</td>
<td>List&lt;ConnectApi.UserDetail&gt;</td>
<td>List of user detail information. If the context user doesn’t have permission to see a property, the property is set to null.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

### ConnectApi.UserProfile Class

Details necessary to render a view of a user profile.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>capabilities</td>
<td>ConnectApi.UserCapabilities</td>
<td>The context user’s capabilities specific to the subject user’s profile</td>
<td>29.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>The ID of the user attached to the profile</td>
<td>29.0</td>
</tr>
<tr>
<td>tabs</td>
<td>List&lt;ConnectApi.UserProfileTab&gt;</td>
<td>The tabs visible to the context user specific to the subject user’s profile</td>
<td>29.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The URL of the user’s profile</td>
<td>29.0</td>
</tr>
<tr>
<td>userDetail</td>
<td>ConnectApi.UserDetail</td>
<td>The details about the user attached to the profile</td>
<td>29.0</td>
</tr>
</tbody>
</table>
ConnectApi.UserProfileTab Class

Information about a profile tab.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>The tab’s unique identifier or 18–character ID</td>
<td>29.0</td>
</tr>
<tr>
<td>isDefault</td>
<td>Boolean</td>
<td>Specifies if the tab appears first when clicking the user profile (true) or not (false)</td>
<td>29.0</td>

### ConnectApi.VotePage

A page of upvotes or downvotes on a feed element or comment.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>Integer</td>
<td>Token identifying the current page.</td>
<td>42.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the current page.</td>
<td>42.0</td>
</tr>
<tr>
<td>Property Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>---------------</td>
<td>------</td>
<td>-------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>items</td>
<td>List&lt;ConnectApi.Vote&gt;</td>
<td>Collection of users and their upvotes or downvotes. Upvotes include likes and upvotes. For example, if a post receives five likes and three upvotes, the number of upvotes is eight. For this reason, the collection of users and their upvotes also includes users who liked the post or comment. If a user both liked and upvoted a post, they appear only once in the collection.</td>
<td>42.0</td>
</tr>
<tr>
<td>nextPageToken</td>
<td>Integer</td>
<td>Token identifying the next page, or null if there isn’t a next page.</td>
<td>42.0</td>

Retired ConnectApi Output Classes

These ConnectApi output classes are retired.

IN THIS SECTION:
  ConnectApi.ApprovalAttachment Class
  ConnectApi.BasicTemplateAttachment Class
  ConnectApi.CanvasTemplateAttachment Class
  ConnectApi.CaseComment Class
  ConnectApi.ContentAttachment Class
  ConnectApi.DashboardComponentAttachment Class
  ConnectApi.EmailMessage Class
  ConnectApi.FeedItemAttachment Class
  ConnectApi.FeedItemPage Class
  ConnectApi.FeedItemTopicPage Class
  ConnectApi.FeedPoll Class
  ConnectApi.LinkAttachment Class
  ConnectApi.NonEntityRecommendation
  A recommendation for a non-Salesforce entity, such as an application.
  ConnectApi.RecordSnapshotAttachment Class
  ConnectApi.TrackedChangeAttachment Class

ConnectApi.ApprovalAttachment Class

⚠️ Important: This class isn’t available in version 32.0 and later. In version 32.0 and later, ConnectApi.ApprovalCapability Class is used.

Subclass of ConnectApi.FeedItemAttachment Class

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>voteCount</td>
<td>String</td>
<td>Number of votes given to the search result</td>

<td><code>String</code></td>
<td></td>
<td></td>
</tr>
<tr>
<td>status</td>
<td><code>ConnectApi.WorkflowProcessStatusEnum</code></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**ConnectApi.BasicTemplateAttachment Class**

- **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, `ConnectApi.EnhancedLinkCapability` is used.

  Subclass of `ConnectApi.FeedItemAttachment Class`

  Attachments in feed items with type `BasicTemplate` return objects of this type.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td><code>String</code></td>
<td>An optional description with a 500 character limit.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>icon</td>
<td><code>ConnectApi.Icon</code></td>
<td>An optional icon.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>linkRecordId</td>
<td><code>String</code></td>
<td>If <code>linkURL</code> refers to a Salesforce record, <code>linkRecordId</code> contains the ID of the record.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>linkUrl</td>
<td><code>String</code></td>
<td>An optional URL to a detail page if there is more content that can't be displayed inline. Do not specify <code>linkUrl</code> unless you specify a <code>title</code>.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>title</td>
<td><code>String</code></td>
<td>An optional title to the detail page. If <code>linkUrl</code> is specified, the title links to <code>linkUrl</code>.</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

**ConnectApi.CanvasTemplateAttachment Class**

- **Important:** This class isn't available in version 32.0 and later. In version 32.0 and later, `ConnectApi.CanvasCapability Class` is used.

  Subclass of `ConnectApi.FeedItemAttachment Class`
Objects of this type are returned by attachments in feed items with type CanvasPost.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Optional. Description of the canvas app. The maximum length of this field is 500 characters.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>developerName</td>
<td>String</td>
<td>Specifies the developer name (API name) of the canvas app.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>height</td>
<td>String</td>
<td>Optional. The height of the canvas app in pixels. Default height is 200 pixels.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>icon</td>
<td>ConnectApi.Icon</td>
<td>The canvas app icon.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>namespacePrefix</td>
<td>String</td>
<td>Optional. The namespace prefix of the Developer Edition organization in which the canvas app was created.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>parameters</td>
<td>String</td>
<td>Optional. Parameters passed to the canvas app in JSON format. Example:</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>{'isUpdated': 'true'}</td>
<td></td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>Optional. A URL to a thumbnail image for the canvas app. Maximum dimensions are 120x120 pixels.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Specifies the title of the link used to call the canvas app.</td>
<td>29.0–31.0</td>
</tr>
</tbody>
</table>

**ConnectApi.CaseComment Class**

⚠️ **Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, ConnectApi.CaseCommentCapability Class is used.

Subclass of ConnectApi.FeedItemAttachment Class

Objects of this type are returned by attachments in feed items with type CaseCommentPost.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actorType</td>
<td>ConnectApi.CaseActorTypeEnum</td>
<td>Type of user who made the comment.</td>

| subject | String | The subject of the email message. | 29.0–31.0 |
| textBody | String | The body of the email message. | 29.0–31.0 |
| toAddresses | List<ConnectApi.EmailAddress> | A list of email addresses to send the message to. | 29.0–31.0 |

### ConnectApi.FeedItemAttachment Class

**Important:** This class isn’t available in version 32.0 and later. In version 32.0 and later, ConnectApi.FeedElementCapability Class is used.

This class is abstract.

Subclasses:
- ConnectApi.ApprovalAttachment Class
- ConnectApi.BasicTemplateAttachment Class
- ConnectApi.CanvasTemplateAttachment Class
- ConnectApi.EmailMessage Class
- ConnectApi.CaseComment Class
- ConnectApi.ContentAttachment Class
- ConnectApi.DashboardComponentAttachment Class
ConnectApi.FeedPoll Class
ConnectApi.LinkAttachment Class
ConnectApi.RecordSnapshotAttachment Class
ConnectApi.TrackedChangeAttachment Class

Message segments in a feed item are typed as ConnectApi.MessageSegment. Feed item capabilities are typed as ConnectApi.FeedItemCapability. Record fields are typed as ConnectApi.AbstractRecordField. These classes are all abstract and have several concrete subclasses. At runtime you can use instanceof to check the concrete types of these objects and then safely proceed with the corresponding downcast. When you downcast, you must have a default case that handles unknown subclasses.

**Important**: The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.

ConnectApi.FeedItemPage Class

**Important**: This class isn’t available in version 32.0 and later. In version 32.0 and later, ConnectApi.FeedElementPage is used.

A paged collection of ConnectApi.FeedItem objects.
