
setGatewayReferenceDetails(gatewayReferenceDetails)
Sets the payment gateway’s reference details.

setGatewayReferenceNumber(gatewayReferenceNumber)
Sets the payment gateway’s reference number.

setGatewayResultCode(gatewayResultCode)
Sets a gateway-specific result code. You can map the result code to a Salesforce-specific result code. Maximum length of 64 characters.

setGatewayResultCodeDescription(gatewayResultCodeDescription)
Sets a description of the gateway-specific result code that a payment gateway returned. Maximum length of 1000 characters.

setSalesforceResultCodeInfo(salesforceResultCodeInfo)
Sets the Salesforce-specific result code information.

setAmount(amount)
Sets the transaction amount. Must be a non-negative value.

Signature

global void setAmount(Double amount)

Parameters

amount
Type: Double
The amount of the transaction.

Return Value

Type: void

setGatewayAvsCode(gatewayAvsCode)
Sets the AVS (address verification system) result code that the gateway returned. Maximum length of 64 characters.

Signature

global void setGatewayAvsCode(String gatewayAvsCode)

Parameters

gatewayAvsCode
Type: String
Used to verify the address mapped to a payment method when the payments platform requests tokenization from the payment gateway.
setGatewayDate(gatewayDate)
Sets the date that the notification occurred. Some gateways don’t send this value.

Signature
```plaintext
global void setGatewayDate(Datetime gatewayDate)
```

Parameters
gatewayDate
  Type: Datetime
  The date that the transaction occurred.

Return Value
Type: void

setGatewayMessage(gatewayMessage)
Sets error messages that the gateway returned for the notification request. Maximum length of 255 characters.

Signature
```plaintext
global void setGatewayMessage(String gatewayMessage)
```

Parameters
gatewayMessage
  Type: String
  The message that the gateway returned with the transaction request. Contains additional information about the transaction.

Return Value
Type: void

setGatewayReferenceDetails(gatewayReferenceDetails)
Sets the payment gateway’s reference details.

Signature
```plaintext
global void setGatewayReferenceDetails(String gatewayReferenceDetails)
```
Parameters

`gatewayReferenceDetails`
Type: String
Provides information about the gateway communication.

Return Value
Type: void

`setGatewayReferenceNumber(gatewayReferenceNumber)`
Sets the payment gateway’s reference number.

Signature

`global void setGatewayReferenceNumber(String gatewayReferenceNumber)`

Parameters

`gatewayReferenceNumber`
Type: String
Unique transaction ID created by the payment gateway.

Return Value
Type: void

`setGatewayResultCode(gatewayResultCode)`
Sets a gateway-specific result code. You can map the result code to a Salesforce-specific result code. Maximum length of 64 characters.

Signature

`global void setGatewayResultCode(String gatewayResultCode)`

Parameters

`gatewayResultCode`
Type: String
Gateway-specific result code. Must be mapped to a Salesforce-specific result code.

Return Value
Type: void

`setGatewayResultCodeDescription(gatewayResultCodeDescription)`
Sets a description of the gateway-specific result code that a payment gateway returned. Maximum length of 1000 characters.
Signature

`global void setGatewayResultCodeDescription(String gatewayResultCodeDescription)`

Parameters

`gatewayResultCodeDescription`  
Type: String  
Provides additional information about the result code and why the gateway returned the specific code. Descriptions vary between different gateways.

Return Value

Type: void

`setSalesforceResultCodeInfo(salesforceResultCodeInfo)`  
Sets the Salesforce-specific result code information.

Signature

Parameters

`salesforceResultCodeInfo`  
Type: `commercepayments.SalesforceResultCodeInfo` on page 1036  
Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

Return Value

Type: void

**AuthApiPaymentMethodRequest Class**

Sends information about a payment method to a gateway adapter during an authorization service call.

**Namespace**

`CommercePayments`

**Usage**

Contains information about the payment method that is used for an authorization request. It contains all available payment methods as fields, but populates only one field for each request. The gateway adapter uses this class when constructing an authorization request. An object of this class is available through the `paymentMethod` field on the `AuthorizationRequest Class` object.
**AuthApiPaymentMethodRequest Constructors**

The following are constructors for `AuthApiPaymentMethodRequest`.

**IN THIS SECTION:**
- `AuthApiPaymentMethodRequest(cardPaymentMethodRequest)`
- `AuthApiPaymentMethodRequest()`

**AuthApiPaymentMethodRequest(cardPaymentMethodRequest)**

Constructs a sample `cardPaymentMethodRequest`. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

**Signature**

```java
global AuthApiPaymentMethodRequest(commercepayments.CardPaymentMethodRequest cardPaymentMethodRequest)
```

**Parameters**

- `cardPaymentMethodRequest`
  
  Type: `commercepayments.CardPaymentMethodRequest` on page 978
  
  Contains information about the card payment method. Used to send information to a gateway adapter during a service call.

**AuthApiPaymentMethodRequest()**

Constructor for `AuthApiPaymentMethodRequest`.

**Signature**

```java
global AuthApiPaymentMethodRequest()
```

**AuthApiPaymentMethodRequest Properties**

The following are properties for `AuthApiPaymentMethodRequest`.

**IN THIS SECTION:**
- `cardPaymentMethod`
  
  The card payment method object used in a payment method request.
**cardPaymentMethod**

The card payment method object used in a payment method request.

**Signature**

```java
global commercepayments.CardPaymentMethodRequest cardPaymentMethod {get; set;}
```

**Property Value**

Type: `commercepayments.CardPaymentMethodRequest` on page 978

**AuthorizationReversalRequest Class**

Sends information about an authorization reversal request to a gateway adapter during a service call.

**Namespace**

`CommercePayments` on page 918

**Example**

Add your reversal classes to your payment gateway adapter. We recommend adding `AuthorizationReversal` as a possible `requestType` value when calling `processRequest` on the gateway’s response.

```java
global commercepayments.GatewayResponse processRequest(commercepayments.paymentGatewayContext gatewayContext) {
    commercepayments.RequestType requestType = gatewayContext.getPaymentRequestType();

    commercepayments.GatewayResponse response;

    try {
        //add other requestType values here
        //..
        else if (requestType == commercepayments.RequestType.AuthorizationReversal) {
            response = createAuthReversalResponse((commercepayments.AuthorizationReversalRequest)gatewayContext.getPaymentRequest());
        }
        return response;
    }
}
```

Then, add a class that sets the amount of the authorization reversal request, as well as gateway information and the Salesforce result code.

```java
    if(authReversalRequest.amount!=null) {
        authReversalResponse.setAmount(authReversalRequest.amount);
    }
}
```
else {
    throw new SalesforceValidationException('Required Field Missing : Amount');
}

system.debug('Response - success');
authReversalResponse.setGatewayDate(system.now());
authReversalResponse.setGatewayResultCode('00');
authReversalResponse.setGatewayResultCodeDescription('Transaction Normal');
authReversalResponse.setGatewayReferenceNumber('SF'+getRandomNumber(6));
authReversalResponse.setSalesforceResultCodeInfo(SUCCESS_SALESFORCE_RESULT_CODE_INFO);
return authReversalResponse;

IN THIS SECTION:
AuthorizationReversalRequest Constructors
AuthorizationReversalRequest Properties
AuthorizationReversalRequest Methods

AuthorizationReversalRequest Constructors
The following are constructors for AuthorizationReversalRequest.

IN THIS SECTION:
AuthorizationReversalRequest(amount, authorizationId)

Constructor for building the amount in an authorization reversal request. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

AuthorizationReversalRequest(amount, authorizationId)

Constructor for building the amount in an authorization reversal request. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

Signature

```
global AuthorizationReversalRequest(Double amount, String authorizationId)
```

Parameters

- `amount`
  - Type: `Double`
  - The amount of the authorization reversal request.

- `authorizationId`
  - Type: `String`
  - The authorization request to be reversed.
AuthorizationReversalRequest Properties

The following are properties for AuthorizationReversalRequest.

IN THIS SECTION:

    accountId
    References the customer account for the transaction where the authorization reversal was performed.

    amount
    The total amount of the authorization reversal request. Can be positive or negative.

    paymentAuthorizationId
    References the payment authorization to be reversed.

accountId

References the customer account for the transaction where the authorization reversal was performed.

Signature

global String accountId {get; set;}

Property Value
Type: String

amount

The total amount of the authorization reversal request. Can be positive or negative.

Signature

global Double amount {get; set;}

Property Value
Type: Double

paymentAuthorizationId

References the payment authorization to be reversed.

Signature

global String paymentAuthorizationId {get; set;}

Property Value
Type: String
AuthorizationReversalRequest Methods

The following are methods for AuthorizationReversalRequest.

IN THIS SECTION:

equals(obj)
Maintains the integrity of lists of type AuthorizationReversalRequest by determining the equality of external objects in a list. This method is dynamic and based on the equals method in Java.

hashCode()
Maintains the integrity of lists of type AuthorizationReversalRequest by determining the uniqueness of the external object in a list.

toString()
Converts a date to a string.

equals(obj)
Maintains the integrity of lists of type AuthorizationReversalRequest by determining the equality of external objects in a list. This method is dynamic and based on the equals method in Java.

Signature

global Boolean equals(Object obj)

Parameters

obj
Type: Object
External object whose key is to be validated.

Return Value
Type: Boolean

hashCode()
Maintains the integrity of lists of type AuthorizationReversalRequest by determining the uniqueness of the external object in a list.

Signature

global Integer hashCode()

Return Value
Type: Integer

toString()
Converts a date to a string.
AuthorizationReversalResponse Class

Response sent by the payment gateway following a payment authorization reversal service.

Namespace
CommercePayments

Usage
The constructor of this class takes no arguments. For example:

```java
```

Contains information about the payment gateway’s response following an authorization reversal transaction. The gateway adapter uses the payment gateway’s response to populate the AuthorizationReversalResponse fields. The payments platform uses the information from this class to construct the authorization gateway response shown to the user.

Example

This class builds an authorization reversal response that contains the amount of the original reversal request, gateway information, and the Salesforce result code.

```java
{
    if(authReversalRequest.amount!=null )
    {
        authReversalResponse.setAmount(authReversalRequest.amount);
    }
    else
    {
        throw new SalesforceValidationException('Required Field Missing : Amount');
    }

    system.debug('Response - success');
    authReversalResponse.setGatewayDate(system.now());
    authReversalResponse.setGatewayResultCode('00');
    authReversalResponse.setGatewayResultCodeDescription('Transaction Normal');
    authReversalResponse.setGatewayReferenceNumber('SF'+getRandomNumber(6));
    authReversalResponse.setSalesforceResultCodeInfo(SUCCESS_SALESFORCE_RESULT_CODE_INFO);
}
```
return authReversalResponse;
}

IN THIS SECTION:
AuthorizationReversalResponse Methods

AuthorizationReversalResponse Methods
The following are methods for AuthorizationReversalResponse.

IN THIS SECTION:
setAmount(amount)
Contains the amount of the authorization reversal. Must be a non-zero value.

setGatewayAvsCode(gatewayAvsCode)
Sets the AVS (Address Verification System) result code that the gateway returned. Maximum length of 64 characters.

setGatewayDate(gatewayDate)
Sets the date that the authorization reversal request occurred in the payment gateway. Some gateways don’t send this value.

setGatewayMessage(gatewayMessage)
Sets error messages that the gateway returned for the authorization reversal request. Maximum length of 255 characters.

setGatewayReferenceDetails(gatewayReferenceDetails)
Stores data that you can use for subsequent authorizations. You can use any data that isn’t normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML.

setGatewayReferenceNumber(gatewayReferenceNumber)
Sets a unique gateway reference number for the transaction that the gateway returned. Maximum length of 255 characters.

setGatewayResultCode(gatewayResultCode)
Sets a gateway-specific result code. The code can be mapped to a Salesforce-specific result code. Maximum length of 64 characters.

setGatewayResultCodeDescription(gatewayResultCodeDescription)
Sets a description of the gateway-specific result code that a payment gateway returned. Maximum length of 1000 characters.

setSalesforceResultCodeInfo(salesforceResultCodeInfo)
Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

**setAmount (amount)**
Contains the amount of the authorization reversal. Must be a non-zero value.

**Signature**

global void setAmount(Double amount)

**Parameters**

amount
Type: Double
Return Value
Type: void

setGatewayAvsCode(gatewayAvsCode)
Sets the AVS (Address Verification System) result code that the gateway returned. Maximum length of 64 characters.

Signature
global void setGatewayAvsCode(String gatewayAvsCode)

Parameters
gatewayAvsCode
  Type: String
  Used to verify the address mapped to a payment method when the payments platform requests tokenization from the payment gateway.

Return Value
Type: void

setGatewayDate(gatewayDate)
Sets the date that the authorization reversal request occurred in the payment gateway. Some gateways don’t send this value.

Signature
global void setGatewayDate(Datetime gatewayDate)

Parameters
gatewayDate
  Type: Datetime

Return Value
Type: void

setGatewayMessage(gatewayMessage)
Sets error messages that the gateway returned for the authorization reversal request. Maximum length of 255 characters.

Signature
global void setGatewayMessage(String gatewayMessage)
Parameters

gatewayMessage
Type: String

Return Value
Type: void

setGatewayReferenceDetails (gatewayReferenceDetails)
Stores data that you can use for subsequent authorizations. You can use any data that isn't normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML.

Signature

global void setGatewayReferenceDetails(String gatewayReferenceDetails)

Parameters

gatewayReferenceDetails
Type: String

Return Value
Type: void

setGatewayReferenceNumber (gatewayReferenceNumber)
Sets a unique gateway reference number for the transaction that the gateway returned. Maximum length of 255 characters.

Signature

global void setGatewayReferenceNumber(String gatewayReferenceNumber)

Parameters

gatewayReferenceNumber
Type: String

Unique reference ID created by the payment gateway.

Return Value
Type: void

setGatewayResultCode (gatewayResultCode)
Sets a gateway-specific result code. The code can be mapped to a Salesforce-specific result code. Maximum length of 64 characters.
Signature

```java
global void setGatewayResultCode(String gatewayResultCode)
```

Parameters

gatewayResultCode
  Type: String
  Gateway-specific result code. Must be used to map a Salesforce-specific result code.

Return Value

Type: void

setGatewayResultCodeDescription(gatewayResultCodeDescription)

Sets a description of the gateway-specific result code that a payment gateway returned. Maximum length of 1000 characters.

Signature

```java
global void setGatewayResultCodeDescription(String gatewayResultCodeDescription)
```

Parameters

gatewayResultCodeDescription
  Type: String
  Description of the gateway’s result code. Use this field to learn more about why the gateway returned a certain result code.

Return Value

Type: void

setSalesforceResultCodeInfo(salesforceResultCodeInfo)

Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

Signature

```java
```

Parameters

salesforceResultCodeInfo
  Type: SalesforceResultCodeInfo
  Description of the Salesforce result code value.
AuthorizationRequest Class
Sends information about an authorization request to a gateway adapter during a service call.

Namespace
CommercePayments

Usage
This class contains information about a transaction authorization request. The gateway adapter reads fields from this class while constructing an authorization JSON request to send to the payment gateway. An object of this class is available by calling getPaymentRequest() in the PaymentGatewayContext Class.

Example
Creating a buildAuthRequest class to store information about the authorization request.

```java
private String buildAuthRequest(commercepayments.AuthorizationRequest authRequest) {
    // Multiply amount by 100.0 to convert to cents
    String requestBody = createRequestBody(String.valueOf((authRequest.amount*100.0).intValue()), authRequest);
    return requestBody;
}

private String createRequestBody(String amount, commercepayments.AuthorizationRequest authRequest) {
    JSONGenerator jsonGeneratorInstance = JSON.createGenerator(true);
    String currencyIso = authRequest.currencyIsoCode;
    commercepayments.AuthApiPaymentMethodRequest paymentMethod = authRequest.paymentMethod;
    commercepayments.GatewayErrorResponse error;
    // Write data to the JSON string.
    jsonGeneratorInstance.writeStartObject();
    jsonGeneratorInstance.writeStringField('merchantAccount', '{!$Credential.Username}');
    jsonGeneratorInstance.writeStringField('reference', authRequest.comments == null ? 'randomstring' : authRequest.comments);
    if(currencyIso == null) {
        currencyIso = UserInfo.getDefaultCurrency();
    }
    jsonGeneratorInstance.writeFieldName('amount');
    jsonGeneratorInstance.writeStartObject();
    jsonGeneratorInstance.writeStringField('value', amount);
    jsonGeneratorInstance.writeStringField('currency', currencyIso);
    jsonGeneratorInstance.writeEndObject();
    commercepayments.CardPaymentMethodRequest cardPaymentMethod;
```
if (paymentMethod != null) {
    cardPaymentMethod = paymentMethod.cardPaymentMethod;
    if (cardPaymentMethod != null) {
        if (cardPaymentMethod.CardCategory != null) {
            if (commercepayments.CardCategory.CreditCard ==
                cardPaymentMethod.CardCategory) {
                jsonGeneratorInstance.writeFieldName('card');
                jsonGeneratorInstance.writeStartObject();
                if (cardPaymentMethod.cvv != null)
                    jsonGeneratorInstance.writeStringField('cvc',
                        String.ValueOf(cardPaymentMethod.cvv));
                if (cardPaymentMethod.cardholdername != null)
                    jsonGeneratorInstance.writeStringField('holderName',
                        cardPaymentMethod.cardholdername);
                if (cardPaymentMethod.cardnumber != null)
                    jsonGeneratorInstance.writeStringField('number',
                        cardPaymentMethod.cardnumber);
                if (cardPaymentMethod.expiryMonth != null &&
                    cardPaymentMethod.expiryYear != null ) {
                    String expMonth =
                        ((String.ValueOf(cardPaymentMethod.expiryMonth)).length() == 1 ? '0' : '') +
                        String.ValueOf(cardPaymentMethod.expiryMonth);
                    jsonGeneratorInstance.writeStringField('expiryMonth', expMonth);
                }
                jsonGeneratorInstance.writeEndObject();
            } else {
                //Support for other card type
            }
        } else {
            throw new SampleValidationException('Required Field Missing :
                CardCategory');
        }
    } else {
        throw new SampleValidationException('Required Field Missing :
            CardPaymentMethod');
    }
} else {
    throw new SampleValidationException('Required Field Missing :
        PaymentMethod');
}
jsonGeneratorInstance.writeEndObject();
return jsonGeneratorInstance.getAsString();}
AuthorizationRequest Constructors

The following are constructors for AuthorizationRequest.

IN THIS SECTION:

AuthorizationRequest(amount)

Constructor for building the amount in an authorization request. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

AuthorizationRequest(amount)

Constructor for building the amount in an authorization request. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

Signature

global AuthorizationRequest(Double amount)

Parameters

amount

Type: Double

The amount of the authorization.

AuthorizationRequest Properties

The following are properties for AuthorizationRequest.

IN THIS SECTION:

accountId

The customer account where the authorization is performed.

amount

The total amount of the authorization. Can be positive or negative.

comments

Comments about the authorization. Users can enter comments to provide additional information.

currencyIsoCode

The ISO currency code for the authorization request.

paymentMethod

The payment method used to process the authorization in the authorization request.

accountId

The customer account where the authorization is performed.

Signature

global String accountId {get; set;}

Property Value
Type: String

**amount**
The total amount of the authorization. Can be positive or negative.

Signature
`global Double amount {get; set;}`

Property Value
Type: Double

**comments**
Comments about the authorization. Users can enter comments to provide additional information.

Signature
`global String comments {get; set;}`

Property Value
Type: String

**currencyIsoCode**
The ISO currency code for the authorization request.

Signature
`global String currencyIsoCode {get; set;}`

Property Value
Type: String

**paymentMethod**
The payment method used to process the authorization in the authorization request.

Signature
`global AuthApiPaymentMethodRequest paymentMethod {get; set;}`

Property Value
Type: `AuthApiPaymentMethodRequest` on page 934
AuthorizationRequest Methods

The following are methods for AuthorizationRequest.

IN THIS SECTION:

equals(obj)
Maintains the integrity of lists of type AuthorizationRequest by determining the equality of external objects in a list. This method is dynamic and based on the equals method in Java.

hashCode()
Maintains the integrity of lists of type AuthorizationRequest by determining the uniqueness of the external object in a list.

toString()
Converts a date to a string.

equals(obj)
Maintains the integrity of lists of type AuthorizationRequest by determining the equality of external objects in a list. This method is dynamic and based on the equals method in Java.

Signature

```
global Boolean equals(Object obj)
```

Parameters

```
obj
Type: Object
External object whose key is to be validated.
```

Return Value

Type: Boolean

hashCode()
Maintains the integrity of lists of type AuthorizationRequest by determining the uniqueness of the external object in a list.

Signature

```
global Integer hashCode()
```

Return Value

Type: Integer

toString()
Converts a date to a string.
Signature

```java
public String toString()
```

Return Value

Type: String

**AuthorizationResponse Class**

Response sent by the payment gateway adapter for an authorization service.

**Namespace**

CommercePayments

**Usage**

The constructor of this class takes no arguments. For example:

```java
```

Contains information about the payment gateway’s response following an authorization transaction. The gateway adapter uses the payment gateway’s response to populate the AuthorizationResponse fields. The payments platform uses the information from this class to construct the authorization gateway response shown to the user.

**Example**

```java
private commercepayments.GatewayResponse createAuthResponse(HttpResponse response, Double amount) {
    Map<String, Object> mapOfResponseValues = (Map<String, Object>) JSON.deserializeUntyped(response.getBody());

    String resultCode = (String)mapOfResponseValues.get('resultCode');
    if(resultCode != null){
        system.debug('Response - success');
        if(resultCode.equals('Authorised')){
            system.debug('status - authorised');
            authResponse.setGatewayAuthCode((String)mapOfResponseValues.get('authCode'));
        } else {
            //Sample returns 200 with refused status in some cases
            system.debug('status - refused');
        }
    }
}
```
authResponse.setGatewayResultCodeDescription((String)mapOfResponseValues.get('refusalReason'));
}

authResponse.setGatewayReferenceNumber((String)mapOfResponseValues.get('pspReference'));
    authResponse.setAmount(amount);
    authResponse.setGatewayDate(system.now());
    return authResponse;
} else {
    system.debug('Response - failed');
    system.debug('Validation error');
    String statusCode = (String)mapOfResponseValues.get('errorType');
    String message = (String)mapOfResponseValues.get('message');
    commercepayments.GatewayErrorResponse error = new commercepayments.GatewayErrorResponse(statusCode, message);
    return error;
}
setGatewayReferenceNumber(gatewayReferenceNumber)
Sets the unique gateway reference number for the transaction that the gateway returned. Maximum length of 255 characters.

setGatewayResultCode(gatewayResultCode)
Sets a gateway-specific result code. The code can be mapped to a Salesforce-specific result code. Maximum length of 64 characters.

setGatewayResultCodeDescription(gatewayResultCodeDescription)
Sets a description of the gateway-specific result code that a payment gateway returned. Maximum length of 1000 characters.

setPaymentMethodTokenizationResponse(paymentMethodTokenizationResponse)
Sets information from the gateway about the tokenized payment method.

setSalesforceResultCodeInfo(salesforceResultCodeInfo)
Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

setAmount(amount)
Sets the amount of the authorization. Must be a non-zero value.

Signature
global void setAmount(Double amount)

Parameters
amount
  Type: Double

Return Value
Type: void

setAuthorizationExpirationDate(authExpDate)
Sets the expiration date of the authorization request.

Signature
global void setAuthorizationExpirationDate(Datetime authExpDate)

Parameters
authExpDate
  Type: Datetime

Return Value
Type: void

setGatewayAuthCode(gatewayAuthCode)
Sets the authorization code that the gateway returned. Maximum length of 64 characters.
global void setGatewayAuthCode(String gatewayAuthCode)

Parameters

gatewayAuthCode
Type: String

The authorization code returned by the gateway.

Return Value
Type: void

setGatewayAvsCode(gatewayAvsCode)
Sets the AVS (address verification system) result code information that the gateway returned. Maximum length of 64 characters.

Signature

global void setGatewayAvsCode(String gatewayAvsCode)

Parameters

gatewayAvsCode
Type: String

Used to verify the address mapped to a payment method when the payments platform requests tokenization from the payment gateway.

Return Value
Type: void

setGatewayDate(gatewayDate)
Sets the date that the authorization occurred. Some gateways don't send this value.

Signature

global void setGatewayDate(Datetime gatewayDate)

Parameters

gatewayDate
Type: Datetime
**setGatewayMessage** *(gatewayMessage)*

Sets error messages that the gateway returned for the authorization request. Maximum length of 255 characters.

**Signature**

```
global void setGatewayMessage(String gatewayMessage)
```

**Parameters**

*gatewayMessage*

Type: *String*

**Return Value**

Type: *void*

**setGatewayReferenceDetails** *(gatewayReferenceDetails)*

Stores data that you can use for subsequent authorizations. You can use any data that isn’t normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML.

**Signature**

```
global void setGatewayReferenceDetails(String gatewayReferenceDetails)
```

**Parameters**

*gatewayReferenceDetails*

Type: *String*

**Return Value**

Type: *void*

**setGatewayReferenceNumber** *(gatewayReferenceNumber)*

Sets the unique gateway reference number for the transaction that the gateway returned. Maximum length of 255 characters.

**Signature**

```
global void setGatewayReferenceNumber(String gatewayReferenceNumber)
```

**Parameters**

*gatewayReferenceNumber*

Type: *String*

Unique authorization ID created by the payment gateway.
Return Value
Type: void

**setGatewayResultCode(gatewayResultCode)**
Sets a gateway-specific result code. The code can be mapped to a Salesforce-specific result code. Maximum length of 64 characters.

Signature
```
global void setGatewayResultCode(String gatewayResultCode)
```

Parameters
```
gatewayResultCode
    Type: String
    Gateway-specific result code. Must be used to map a Salesforce-specific result code.
```

Return Value
Type: void

**setGatewayResultCodeDescription(gatewayResultCodeDescription)**
Sets a description of the gateway-specific result code that a payment gateway returned. Maximum length of 1000 characters.

Signature
```
global void setGatewayResultCodeDescription(String gatewayResultCodeDescription)
```

Parameters
```
gatewayResultCodeDescription
    Type: String
    Description of the gateway's result code. Use this field to learn more about why the gateway returned a certain result code.
```

Return Value
Type: void

**setPaymentMethodTokenizationResponse(paymentMethodTokenizationResponse)**
Sets information from the gateway about the tokenized payment method.

Signature
```
global void setPaymentMethodTokenizationResponse(commercepayments.PaymentMethodTokenizationResponse paymentMethodTokenizationResponse)
```
Parameters

gatewayResponse

Gateway response sent by payment gateway adapters for the payment method tokenization request.

Return Value

Type: void

setSalesforceResultCodeInfo

Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

Signature

Parameters

salesforceResultCodeInfo

Type: SalesforceResultCodeInfo on page 1036

Description of the Salesforce result code value.

Return Value

Type: void

BaseApiPaymentMethodRequest Class

Abstract class used to send information about a payment method to a gateway adapter during a service call.

Namespace

CommercePayments

Usage

BaseApiPaymentMethodRequest is the base class for SaleApiPaymentMethodRequest and AuthApiPaymentMethodRequest.
BaseApiResponseConstructors

The following are constructors for BaseApiResponse.

IN THIS SECTION:

BaseApiResponse(address, id, saveForFuture)

Constructs a payment method. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

BaseApiResponse(address, id, saveForFuture)

Constructs a payment method. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

Signature

global BaseApiResponse(commercepayments.AddressRequest address, String id, Boolean saveForFuture)

Parameters

address

Type: commercepayments.AddressRequest on page 924

Sends data related on address request to a gateway adapter during a service call.

id

Type: String

saveForFuture

Type: Boolean

Indicates whether Salesforce saves the payment method for future use.

BaseApiResponseProperties

The following are properties for BaseApiResponse.

IN THIS SECTION:

address

The payment method’s address.

id

ID of the payment method request.

saveForFuture

Indicates whether the payment method is saved as a record in Salesforce for future use.

address

The payment method’s address.
Signature

global commercepayments.AddressRequest address {get; set;}

Property Value
Type: AddressRequest on page 924

id
ID of the payment method request.

Signature

global String id {get; set;}

Property Value
Type: String

saveForFuture
Indicates whether the payment method is saved as a record in Salesforce for future use.

Signature

global Boolean saveForFuture {get; set;}

Property Value
Type: Boolean

BaseApiPaymentMethodRequest Methods
The following are methods for BaseApiPaymentMethodRequest.

IN THIS SECTION:

equals(obj)
Maintains the integrity of lists of type BaseApiPaymentMethodRequest by determining the equality of external objects in a list. This method is dynamic and is based on the equals method in Java.

hashCode()
Maintains the integrity of lists of type BaseApiPaymentMethodRequest by determining the uniqueness of the external object records in a list.

toString()
Converts a date to a string.
equals(obj)
Maintains the integrity of lists of type BaseApiPaymentMethodRequest by determining the equality of external objects in a list. This method is dynamic and is based on the equals method in Java.

Signature
```
global Boolean equals(Object obj)
```

Parameters
```
obj
  Type: Object
  External object whose key is to be validated.
```

Return Value
Type: Boolean

hashCode()
Maintains the integrity of lists of type BaseApiPaymentMethodRequest by determining the uniqueness of the external object records in a list.

Signature
```
global Integer hashCode()
```

Return Value
Type: Integer

toString()
Converts a date to a string.

Signature
```
global String toString()
```

Return Value
Type: String

BaseNotification Class
Abstract class for storing notification information sent from payment gateways.

Namespace
CommercePayments
Usage

An abstract class that contains the common fields from payment gateways. `BaseNotification` can’t be instantiated on its own. The constructor of this class takes no arguments. For example:

```java
CommercePayments.BaseNotification bnt = new CommercePayments.BaseNotification();
```

Example

```java
commercepayments.BaseNotification notification = null;
if ('CAPTURE'.equals(eventCode)) {
    notification = new commercepayments.CaptureNotification();
} else if ('REFUND'.equals(eventCode)) {
    notification = new commercepayments.ReferencedRefundNotification();
}
```

BaseNotification Methods

The following are methods for `BaseNotification`.

IN THIS SECTION:

- `setAmount(amount)`
  - Sets the transaction amount. Must be a non-negative value.
- `setGatewayDate(gatewayDate)`
  - Sets the date that the notification occurred. Some gateways don’t send this value.
- `setGatewayMessage(gatewayMessage)`
  - Sets error messages that the gateway returned for the notification request. Maximum length of 255 characters.
- `setGatewayReferenceDetails(gatewayReferenceDetails)`
  - Sets the payment gateway’s reference details.
- `setGatewayReferenceNumber(gatewayReferenceNumber)`
  - Sets the payment gateway’s reference number.
- `setGatewayResultCode(gatewayResultCode)`
  - Sets a gateway-specific result code. The code can be mapped to a Salesforce-specific result code. Maximum length of 64 characters.
- `setGatewayResultCodeDescription(gatewayResultCodeDescription)`
  - Sets a description of the gateway-specific result code that a payment gateway returned. Maximum length of 1000 characters.
- `setId(id)`
  - Sets the ID of the notification sent by the gateway.
- `setSalesforceResultCodeInfo(salesforceResultCodeInfo)`
  - Sets the information about the Salesforce-specific result code used to match a result code from a payment gateway.
- `setStatus(status)`
  - Sets the status of the notification sent by the gateway.
**setAmount(amount)**
Sets the transaction amount. Must be a non-negative value.

Signature

```plaintext
global void setAmount(Double amount)
```

Parameters

- **amount**
  - Type: `Double`
  - The amount of the transaction.

Return Value

Type: `void`

**setGatewayDate(gatewayDate)**
Sets the date that the notification occurred. Some gateways don’t send this value.

Signature

```plaintext
global void setGatewayDate(Datetime gatewayDate)
```

Parameters

- **gatewayDate**
  - Type: `Datetime`
  - The date that the notification occurred.

Return Value

Type: `void`

**setGatewayMessage(gatewayMessage)**
Sets error messages that the gateway returned for the notification request. Maximum length of 255 characters.

Signature

```plaintext
global void setGatewayMessage(String gatewayMessage)
```

Parameters

- **gatewayMessage**
  - Type: `String`
  - The message that the gateway returned with the notification request. Contains additional information about the notification.
Return Value
Type: void

`setGatewayReferenceDetails(gatewayReferenceDetails)`
Sets the payment gateway's reference details.

Signature
`global void setGatewayReferenceDetails(String gatewayReferenceDetails)`

Parameters
`gatewayReferenceDetails`
Type: String
Provides information about the gateway communication.

Return Value
Type: void

`setGatewayReferenceNumber(gatewayReferenceNumber)`
Sets the payment gateway's reference number.

Signature
`global void setGatewayReferenceNumber(String gatewayReferenceNumber)`

Parameters
`gatewayReferenceNumber`
Type: String
Unique transaction ID created by the payment gateway.

Return Value
Type: void

`setGatewayResultCode(gatewayResultCode)`
Sets a gateway-specific result code. The code can be mapped to a Salesforce-specific result code. Maximum length of 64 characters.

Signature
`global void setGatewayResultCode(String gatewayResultCode)`
Parameters

gatewayResultCode
Type: String
Gateway-specific result code. Must be used to map a Salesforce-specific result code.

Return Value
Type: void

setGatewayResultCodeDescription (gatewayResultCodeDescription)
Sets a description of the gateway-specific result code that a payment gateway returned. Maximum length of 1000 characters.

Signature

global void setGatewayResultCodeDescription(String gatewayResultCodeDescription)

Parameters

gatewayResultCodeDescription
Type: String
Provides additional information about the result code and why the gateway returned the code. Descriptions vary between different gateways.

Return Value
Type: void

setId(id)
Sets the ID of the notification sent by the gateway.

Signature

global void setId(String id)

Parameters

id
Type: String

Return Value
Type: void

setSalesforceResultCodeInfo(salesforceResultCodeInfo)
Sets the information about the Salesforce-specific result code used to match a result code from a payment gateway.
Signature

```java
```

Parameters

- `salesforceResultCodeInfo`
  
  Type: `commercepayments.SalesforceResultCodeInfo` on page 1036
  
  Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

Return Value

Type: void

```java
setStatus(status)
```

Sets the status of the notification sent by the gateway.

Signature

```java
global void setStatus(commercepayments.NotificationStatus status)
```

Parameters

- `status`
  
  Type: `commercepayments.NotificationStatus` on page 993
  
  Shows whether the payments platform successfully received the notification from the gateway.

Return Value

Type: void

**BasePaymentMethodRequest Class**

Abstract class for storing information about payment methods.

**Namespace**

`CommercePayments`

**Usage**

The `BasePaymentMethodRequest` class contains fields common to `CardPaymentMethodRequest` on page 978.

IN THIS SECTION:

- BasePaymentMethodRequest Methods
**BasePaymentMethodRequest Methods**

The following are methods for `BasePaymentMethodRequest`.

**IN THIS SECTION:**

- `equals(obj)`
  - Maintains the integrity of lists of type `BasePaymentMethodRequest` by determining the equality of external objects in a list. This method is dynamic and based on the `equals` method in Java.

- `hashCode()`
  - Maintains the integrity of lists of type `BasePaymentMethodRequest` by determining the uniqueness of the external object records in a list.

- `toString()`
  - Converts a date to a string.

**equals (obj)**

Maintains the integrity of lists of type `BasePaymentMethodRequest` by determining the equality of external objects in a list. This method is dynamic and based on the `equals` method in Java.

**Signature**

```java
global Boolean equals(Object obj)
```

**Parameters**

- `obj`
  - Type: Object
  - External object whose key is to be validated.

**Return Value**

Type: `Boolean`

**hashCode ()**

Maintains the integrity of lists of type `BasePaymentMethodRequest` by determining the uniqueness of the external object records in a list.

**Signature**

```java
global Integer hashCode()
```

**Return Value**

Type: `Integer`

**toString ()**

Converts a date to a string.
Signature

global String toString()

Return Value
Type: String

BaseRequest Class

BaseRequest is extended by all the request classes.

Namespace

CommercePayments

IN THIS SECTION:

BaseRequest Methods

BaseRequest Methods

The following are methods for BaseRequest.

IN THIS SECTION:

BaseRequest(AdditionalData, IdempotencyKey)

Used for testing.

BaseRequest(AdditionalData, IdempotencyKey)

Used for testing.

Signature

global Void BaseRequest(String AdditionalData, Map<String, String> IdempotencyKey)

Parameters

AdditionalData
Type: String

Contains additional data that may be required for a payment request. The additionalData object consists of key-value pairs. You can retrieve the additionalData object from the request object: Map<String, String> additionalData=request.additionalData

IdempotencyKey
Type: Map<String, String>

Unique value that’s generated by a client and sent to the server in the request. The server stores the value and uses the it to keep track of the request status.
CaptureNotification Class

When a payment gateway sends a notification for a capture transaction, the payment gateway adapter creates the CaptureNotification object to store information about the notification.

Namespace

CommercePayments

Usage

CaptureNotification is used in asynchronous payment gateway adapters.

Specify the CommercePayments namespace when creating an instance of this class. The constructor of this class takes no arguments.

For example:

```java
CommercePayments.CaptureNotification crn = new CommercePayments.CaptureNotification();
```

Example

```java
commercepayments.BaseNotification notification = null;
if ('CAPTURE'.equals(eventCode)) {
    notification = new commercepayments.CaptureNotification();
} else if ('REFUND'.equals(eventCode)) {
    notification = new commercepayments.ReferencedRefundNotification();
}
```

IN THIS SECTION:

- CaptureNotification Methods

CaptureNotification Methods

The following are methods for CaptureNotification.

IN THIS SECTION:

- `setAmount(amount)`
  Sets the transaction amount. Must be a non-negative value.

- `setGatewayDate(gatewayDate)`
  Sets the date that the transaction occurred. Some gateways don’t send this value.

- `setGatewayMessage(gatewayMessage)`
  Sets error messages that the gateway returned for the payment request. Maximum length of 255 characters.

- `setGatewayReferenceDetails(gatewayReferenceDetails)`
  Sets additional data that you can use for subsequent transactions. You can use any data that isn’t normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML.
setGatewayReferenceNumber(gatewayReferenceNumber)
Sets the unique gateway reference number for the transaction that the gateway returned. Maximum length of 255 characters.

setGatewayResultCode(gatewayResultCode)
Sets a gateway-specific result code. The code can be mapped to a Salesforce-specific result code. Maximum length of 64 characters.

setGatewayResultCodeDescription(gatewayResultCodeDescription)
Sets a description of the gateway-specific result code that a gateway returned. Maximum length of 1000 characters.

setId(id)
Sets the ID of a notification sent by the payment gateway.

setSalesforceResultCodeInfo(salesforceResultCodeInfo)
Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

setStatus(status)
Sets the notification status to the same value that was sent by the gateway.

**setAmount(amount)**

Sets the transaction amount. Must be a non-negative value.

Signature

```plaintext
global void setAmount(Double amount)
```

Parameters

`amount`
Type: `Double`
The amount to be debited or captured.

Return Value
Type: void

**setGatewayDate(gatewayDate)**

Sets the date that the transaction occurred. Some gateways don’t send this value.

Signature

```plaintext
global void setGatewayDate(Datetime gatewayDate)
```

Parameters

`gatewayDate`
Type: `Datetime`
Date and time of the gateway communication.
Return Value
Type: void

**setGatewayMessage***(gatewayMessage)***
Sets error messages that the gateway returned for the payment request. Maximum length of 255 characters.

Signature
```java
global void setGatewayMessage(String gatewayMessage)
```

Parameters
```java
gatewayMessage
    Type: String
    Information on error messages sent from the gateway.
```

Return Value
Type: void

**setGatewayReferenceDetails***(gatewayReferenceDetails)***
Sets additional data that you can use for subsequent transactions. You can use any data that isn’t normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML.

Signature
```java
global void setGatewayReferenceDetails(String gatewayReferenceDetails)
```

Parameters
```java
gatewayReferenceDetails
    Type: String
```

Return Value
Type: void

**setGatewayReferenceNumber***(gatewayReferenceNumber)***
Sets the unique gateway reference number for the transaction that the gateway returned. Maximum length of 255 characters.

Signature
```java
global void setGatewayReferenceNumber(String gatewayReferenceNumber)
```
Parameters

gatewayReferenceNumber
Type: String
  Unique transaction ID created by the payment gateway.

Return Value
Type: void

setGatewayResultCode(gatewayResultCode)
Sets a gateway-specific result code. The code can be mapped to a Salesforce-specific result code. Maximum length of 64 characters.

Signature

global void setGatewayResultCode(String gatewayResultCode)

Parameters

gatewayResultCode
Type: String
  Gateway-specific result code. Map this value to a Salesforce-specific result code.

Return Value
Type: void

setId(id)
Sets the ID of a notification sent by the payment gateway.
**setId(String id)**

- **Parameters**
  - `id`
    - Type: `String`

- **Return Value**
  - Type: `void`

**setSalesforceResultCodeInfo(salesforceResultCodeInfo)**

Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

- **Signature**

- **Parameters**
  - `salesforceResultCodeInfo`
    - Type: `commercepayments.SalesforceResultCodeInfo` on page 1036
    - Description of the Salesforce result code value.

- **Return Value**
  - Type: `void`

**setStatus(NotificationStatus status)**

Sets the notification status to the same value that was sent by the gateway.

- **Signature**
  - `global void setStatus(commercepayments.NotificationStatus status)`

- **Parameters**
  - `status`
    - Type: `NotificationStatus` on page 993
    - Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

- **Return Value**
  - Type: `void`
CaptureRequest Class

Represents a capture request. This class extends the BaseRequest class and inherits all its methods.

Namespace

CommercePayments on page 918

Usage

The CaptureRequest class’s buildCaptureRequest method creates a CaptureRequest object to store payment information, such as value and currency, as JSON strings.

Example

Builds a CaptureRequest object for a multicurrency org.

```java
private String buildCaptureRequest(commercepayments.CaptureRequest captureRequest) {
    Boolean IS_MULTICURRENCY_ORG = UserInfo.isMultiCurrencyOrganization();
    QueryUtils qBuilderForAuth = new QueryUtils(PaymentAuthorization.SObjectType);
    // Add required fields
    qBuilderForAuth.getSelectClause().addField('GatewayRefNumber', false);
    if (IS_MULTICURRENCY_ORG) {
        // addField also takes a boolean to enable translation (uses label instead of actual value)
        qBuilderForAuth.getSelectClause().addField('CurrencyIsoCode', false);
    }
}
```

IN THIS SECTION:

CaptureRequest Constructors

CaptureRequest Properties

CaptureRequest Constructors

The following are constructors for CaptureRequest.

IN THIS SECTION:

CaptureRequest(amount, authorizationId)

This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

CaptureRequest(amount, authorizationId)

This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

Parameters

amount

Type: Double

The amount to be debited or captured.
authorizationId
Type: String
Represents a payment authorization record.

**CaptureRequest Properties**
The following are properties for CaptureRequest.

**IN THIS SECTION:**
- accountId
  Account ID value. References an account record.
- amount
  Amount of currency that needs to be captured.
- paymentAuthorizationId
  ID value that references a PaymentAuthorization.

**accountId**
Account ID value. References an account record.

Property Value
Type: String

**amount**
Amount of currency that needs to be captured.

Property Value
Type: Double

**paymentAuthorizationId**
ID value that references a PaymentAuthorization.

Property Value
Type: String

**CaptureResponse Class**
The payment gateway adapter sends this response for the capture request type. This class extends AbstractResponse and inherits its methods.

**Namespace**
CommercePayments on page 918
Usage

You must specify the CommercePayments namespace when creating an instance of this class. The constructor of this class takes no arguments. For example:

```java
CommercePayments.CaptureResponse ctr = new CommercePayments.CaptureResponse();
```

IN THIS SECTION:

CaptureResponse Methods

The following are methods for CaptureResponse.

IN THIS SECTION:

- `setAmount(amount)`
  - Sets the transaction amount.
- `setAsync(async)`
  - Indicates whether the payment gateway adapter used in the payment capture was asynchronous (true) or synchronous (false).
- `setGatewayAvsCode(gatewayAvsCode)`
  - Sets the payment gateway's AVS (address verification system) code.
- `setGatewayDate(gatewayDate)`
  - Sets the payment gateway's date.
- `setGatewayMessage(gatewayMessage)`
  - Sets information or messages that the gateway returned.
- `setGatewayReferenceDetails(gatewayReferenceDetails)`
  - Sets the payment gateway's reference details.
- `setGatewayReferenceNumber(gatewayReferenceNumber)`
  - Sets the payment gateway's reference number.
- `setGatewayResultCode(gatewayResultCode)`
  - Sets the payment gateway's result code.
- `setGatewayResultCodeDescription(gatewayResultCodeDescription)`
  - Sets the payment gateway's result code description.
- `setSalesforceResultCodeInfo(salesforceResultCodeInfo)`
  - Sets Salesforce result code information.

**setAmount(amount)**

Sets the transaction amount.

**Signature**

```java
global void setAmount(Double amount)
```
Parameters

\textit{amount}

\hspace{1em} \textbf{Type: Double}

The amount to be debited or captured.

Return Value

Type: void

\textbf{setAsync (async)}

Indicates whether the payment gateway adapter used in the payment capture was asynchronous (\texttt{True}) or synchronous (\texttt{False}).

Signature

\texttt{global void setAsync(Boolean async)}

Parameters

\textit{async}

\hspace{1em} \textbf{Type: Boolean}

Return Value

Type: void

\textbf{setGatewayAvsCode (gatewayAvsCode)}

Sets the payment gateway's AVS (address verification system) code.

Signature

\texttt{global void setGatewayAvsCode(String gatewayAvsCode)}

Parameters

\textit{gatewayAvsCode}

\hspace{1em} \textbf{Type: String}

Payment gateways that use an AVS system return this code.

Return Value

Type: void

\textbf{setGatewayDate (gatewayDate)}

Sets the payment gateway's date.
Signature

```plaintext
global void setGatewayDate(Datetime gatewayDate)
```

Parameters

gatewayDate
  Type: Datetime
  The date that communication happened with the gateway.

Return Value
Type: void

**setGatewayMessage(gatewayMessage)**
Sets information or messages that the gateway returned.

Signature

```plaintext
global void setGatewayMessage(String gatewayMessage)
```

Parameters

gatewayMessage
  Type: String
  Information or error messages returned by the gateway.

Return Value
Type: void

**setGatewayReferenceDetails(gatewayReferenceDetails)**
Sets the payment gateway’s reference details.

Signature

```plaintext
global void setGatewayReferenceDetails(String gatewayReferenceDetails)
```

Parameters

gatewayReferenceDetails
  Type: String
  Provides information about the gateway communication.

Return Value
Type: void
**setGatewayReferenceNumber(gatewayReferenceNumber)**
Sets the payment gateway's reference number.

Signature

```
global void setGatewayReferenceNumber(String gatewayReferenceNumber)
```

Parameters

`gatewayReferenceNumber`
Type: `String`
Unique transaction ID created by the payment gateway.

Return Value
Type: `void`

**setGatewayResultCode(gatewayResultCode)**
Sets the payment gateway's result code.

Signature

```
global void setGatewayResultCode(String gatewayResultCode)
```

Parameters

`gatewayResultCode`
Type: `String`
The gateway result code. You must map this to a Salesforce result code.

Return Value
Type: `void`

**setGatewayResultCodeDescription(gatewayResultCodeDescription)**
Sets the payment gateway's result code description.

Signature

```
global void setGatewayResultCodeDescription(String gatewayResultCodeDescription)
```

Parameters

`gatewayResultCodeDescription`
Type: `String`
Description of the GatewayResultCode. Provides additional context about the result code that the gateway returned.
Return Value
Type: void

setSalesforceResultCodeInfo(salesforceResultCodeInfo)
Sets Salesforce result code information.

Signature

Parameters
salesforceResultCodeInfo
  SalesforceResultCodeInfoType: commercepayments.SalesforceResultCodeInfo
  Description of the Salesforce result code value.

Return Value
Type: void

CardCategory Enum
Defines whether the payment method represents a credit card or a debit card.

Namespace
CommercePayments on page 918

Enum Values
The following are the values of the commercepayments.CardCategory enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CreditCard</td>
<td>Shows that the payment method is a credit card.</td>
</tr>
<tr>
<td>DebitCard</td>
<td>Shows that the payment method is a debit card.</td>
</tr>
</tbody>
</table>

CardPaymentMethodRequest Class
Sends data related to a card payment method to a gateway adapter during a service call.

Namespace
CommercePayments on page 918
Usage
This class contains details about the card used as a payment method for authorization, sale, or tokenization transaction requests. The gateway adapter reads the fields of this class object while constructing a transaction JSON request to send to the payment gateway. The object of this class is available as the cardPaymentMethod field in the SaleApiPaymentMethodRequest Class, AuthApiPaymentMethodRequest Class, and PaymentMethodTokenizationRequest Class.

Example: This code sample retrieves the cardPaymentMethodRequest object from the paymentMethod class.

commercepayments.CardPaymentMethodRequest cardPaymentMethod = paymentMethod.cardPaymentMethod;

IN THIS SECTION:
CardPaymentMethodRequest Constructors
CardPaymentMethodRequest Properties
CardPaymentMethodRequest Methods

CardPaymentMethodRequest Constructors
The following are constructors for CardPaymentMethodRequest.

IN THIS SECTION:
CardPaymentMethodRequest(cardCategory)
Sets the cardCategory value for the card payment method request.

CardPaymentMethodRequest(cardCategory)
Sets the cardCategory value for the card payment method request.

Signature

global CardPaymentMethodRequest (commercepayments.CardCategory cardCategory)

Parameters

cardCategory
Type: CardCategory on page 978
Defines whether the card payment method is a credit card or a debit card.

CardPaymentMethodRequest Properties
The following are properties for CardPaymentMethodRequest.

IN THIS SECTION:
accountId
Customer account for this payment method.
cardCategory
Indicates whether a card payment method is for a credit card or debit card.

cardHolderFirstName
The first name of the cardholder for the card payment method.

cardHolderLastName
The last name of the cardholder for the card payment method.

cardHolderName
Full name of the cardholder on the card payment method.

cardNumber
System-defined unique ID for the card payment method.

cardType
Defines the credit card bank. Possible values are AmericanExpress, DinersClub, JCB, Maestro, MasterCard, and Visa.

cvv
The card security code for the credit or debit card on a card payment method.

eemail
Email address of the cardholder for the credit or debit card on a card payment method.
expiryMonth
Expiration month for the credit or debit card on a card payment method.
expiryYear
Expiration year of the credit or debit card for the card payment method.

inputCardType
Input field for the card type. This field doesn’t store the card type directly, but instead populates CardBin, LastFour, and DisplayCardNumber based on the value entered in inputCardType.

startMonth
The credit or debit card becomes valid on the first day of the startMonth in the startYear

startYear
Year during which the credit or debit card becomes valid.

accountId
Customer account for this payment method.

Signature

global String accountId { get; set; }

Property Value
Type: String

cardCategory
Indicates whether a card payment method is for a credit card or debit card.
Signature

```csharp
global commercepayments.CardCategory cardCategory {get; set;}
```

Property Value
Type: `CardCategory` on page 978

cardHolderFirstName
The first name of the cardholder for the card payment method.

Signature

```csharp
global String cardHolderFirstName {get; set;}
```

Property Value
Type: `String`

cardHolderLastName
The last name of the cardholder for the card payment method.

Signature

```csharp
global String cardHolderLastName {get; set;}
```

Property Value
Type: `String`

cardHolderName
Full name of the cardholder on the card payment method.

Signature

```csharp
global String cardHolderName {get; set;}
```

Property Value
Type: `String`

cardNumber
System-defined unique ID for the card payment method.

Signature

```csharp
global String cardNumber {get; set;}
```
Property Value
Type: String

cardType
Defines the credit card bank. Possible values are AmericanExpress, DinersClub, JCB, Maestro, MasterCard, and Visa.

Signature
global commercepayments.CardType cardType {get; set;}

Property Value
Type: CardType
cvv
The card security code for the credit or debit card on a card payment method.

Signature
global String cvv {get; set;}

Property Value
Type: String
e-mail
Email address of the cardholder for the credit or debit card on a card payment method.

Signature
global String email {get; set;}

Property Value
Type: String
expiryMonth
Expiration month for the credit or debit card on a card payment method.

Signature
global Integer expiryMonth {get; set;}

Property Value
Type: Integer
**expiryYear**
Expiration year of the credit or debit card for the card payment method.

Signature
```
global Integer expiryYear {get; set;}
```

Property Value
Type: Integer

**inputCardType**
Input field for the card type. This field doesn’t store the card type directly, but instead populates CardBin, LastFour, and DisplayCardNumber based on the value entered in `inputCardType`.

Signature
```
global String inputCardType {get; set;}
```

Property Value
Type: String

**startMonth**
The credit or debit card becomes valid on the first day of the `startMonth` in the `startYear`.

Signature
```
global Integer startMonth {get; set;}
```

Property Value
Type: Integer

**startYear**
Year during which the credit or debit card becomes valid.

Signature
```
global Integer startYear {get; set;}
```

Property Value
Type: Integer

**CardPaymentMethodRequest Methods**
The following are methods for `CardPaymentMethodRequest`.
IN THIS SECTION:

equals(obj)
Maintains the integrity of lists of type CardPaymentMethodRequest by determining the equality of external objects in a list. This method is dynamic and based on the equals method in Java.

hashCode()
Maintains the integrity of lists of type CardPaymentMethodRequest.

toString()
Converts a date to a string.

equals (obj)
Maintains the integrity of lists of type CardPaymentMethodRequest by determining the equality of external objects in a list. This method is dynamic and based on the equals method in Java.

Signature
global Boolean equals(Object obj)

Parameters
obj
Type: Object
External object whose key is to be validated.

Return Value
Type: Boolean

hashCode ()
Maintains the integrity of lists of type CardPaymentMethodRequest.

Signature
global Integer hashCode()

Return Value
Type: Integer

toString ()
Converts a date to a string.

Signature
global String toString()
Return Value
Type: String

CustomMetadataTypeInfo Class
Access information about custom metadata. The PaymentGatewayAdapter can send CustomMetadataTypeInfo to transaction requests through the response object's SalesforceResultCodeInfo.

Namespace
CommercePayments on page 918

IN THIS SECTION:
- CustomMetadataTypeInfo Constructors
- CustomMetadataTypeInfo Methods

CustomMetadataTypeInfo Constructors
The following are constructors for CustomMetadataTypeInfo.

IN THIS SECTION:
- CustomMetadataTypeInfo(cmtRecordId, cmtSfResultCodeFieldName)
  Constructor for providing custom metadata type information.

CustomMetadataTypeInfo(cmtRecordId, cmtSfResultCodeFieldName)
Constructor for providing custom metadata type information.

Signature
```java
global CustomMetadataTypeInfo(String cmtRecordId, String cmtSfResultCodeFieldName)
```

Parameters
- `cmtRecordId`
  Type: String
  ID of the matched custom metadata type record
- `cmtSfResultCodeFieldName`
  Type: String
  Field that contains the Salesforce result code values. Belongs to the custom metadata type.

CustomMetadataTypeInfo Methods
The following are methods for CustomMetadataTypeInfo.
GatewayErrorResponse Class

Use to respond with an error indication following errors from the PaymentGateway adapter, such as request-forbidden responses, custom validation errors, or expired API tokens.

Namespace

CommercePayments on page 918

Usage

Use GatewayErrorResponse to create an object that stores information about error responses sent by the payment gateway adapter.

Example

If GatewayResponse receives an exception rather than a valid request, it calls GatewayErrorResponse to create an error object with information about the exception.

```apex
global commercepayments.GatewayResponse processRequest(commercepayments.paymentGatewayContext gatewayContext) {
    commercepayments.RequestType requestType = gatewayContext.getPaymentRequestType();
    commercepayments.GatewayResponse response;
    try {
        if (requestType == commercepayments.RequestType.Authorize) {
            response = createAuthResponse((commercepayments.AuthorizationRequest)gatewayContext.getPaymentRequest());
        } else if (requestType == commercepayments.RequestType.Capture) {
            response = createCaptureResponse((commercepayments.CaptureRequest)gatewayContext.getPaymentRequest());
        } else if (requestType == commercepayments.RequestType.ReferencedRefund) {
            response = createRefundResponse((commercepayments.ReferencedRefundRequest)gatewayContext.getPaymentRequest());
        }
        return response;
    } catch(SalesforceValidationException e) {
        commercepayments.GatewayErrorResponse error = new commercepayments.GatewayErrorResponse('400', e.getMessage());
        return error;
    }
}
```

IN THIS SECTION:

GatewayErrorResponse Constructors

GatewayErrorResponse Constructors

The following are constructors for GatewayErrorResponse.
IN THIS SECTION:

GatewayErrorResponse(errorCode, errorMessage)
Constructor to create a GatewayErrorResponse object that accepts errorCode and errorMessage.

GatewayErrorResponse(errorCode, errorMessage)
Constructor to create a GatewayErrorResponse object that accepts errorCode and errorMessage.

Signature

global GatewayErrorResponse(String errorCode, String errorMessage)

Parameters

errorCode
Type: String
Should match with the HTTP status code to be returned to the user. Here are a few examples.

- If the status code is for a bad request, the errorCode should be 400.
- If the status code is for a forbidden request, errorCode should be 403.
- If errorCode isn’t a valid HTTP status code, a 500 internal server error is returned.

Note: errorCode must have a value, otherwise the platform throws an error.

errorMessage
Type: String
The message response to users following an error.

Note: errorMessage must have a value, otherwise the platform throws an error.

GatewayNotificationResponse Class

When the payment gateway sends a notification to the payments platform, the platform responds with a GatewayNotificationResponse indicating whether the platform succeeded or failed at receiving the notification.

Namespace

CommercePayments on page 918

Usage

You must specify the CommercePayments namespace when creating an instance of this class. The constructor of this class takes no arguments. For example:

When an asynchronous payment gateway sends a notification, the gateway requires the platform to acknowledge that it has either succeeded or failed in receiving the notification. Payment gateway adapters use this class to construct the acknowledgment response, which gateways expect for a notification. GatewayNotificationResponse is the return type of the processNotification method.
Example

```java
commercepayments.GatewayNotificationResponse gnr = new commercepayments.GatewayNotificationResponse();
if (saveResult.isSuccess()) {
    system.debug('Notification accepted by platform');
} else {
    system.debug('Errors in the result ' + Blob.valueOf(saveResult.getErrorMessage()));
}
gnr.setStatusCode(200);
gnr.setResponseBody(Blob.valueOf('[accepted]'));
return gnr;
```

IN THIS SECTION:

GatewayNotificationResponse Methods

The following are methods for GatewayNotificationResponse.

IN THIS SECTION:

- **setResponseBody(responseBody)**
  Sets the body of the response to the gateway. Some gateways expect the payments platform to acknowledge the notification with a response regardless of whether the notification was accepted.

- **setStatusCode(statusCode)**
  Sets the HTTP status code sent to the gateway as part of the payments platform’s response notification.

**setResponseBody (responseBody)**

Sets the body of the response to the gateway. Some gateways expect the payments platform to acknowledge the notification with a response regardless of whether the notification was accepted.

Signature

```java
global void setResponseBody(Blob responseBody)
```

Parameters

- **responseBody**
  Type: Blob
  
  Common response values include accepted for successfully receiving the response. For example:

```java
commercepayments.GatewayNotificationResponse gnr = new commercepayments.GatewayNotificationResponse();
if (saveResult.isSuccess()) {
    system.debug('Notification accepted by platform');
} else {
    system.debug('Errors in the result ' + Blob.valueOf(saveResult.getErrorMessage()));
}
```
gnrgetStatusCode(200);
gnr.setResponseBody(Blob.valueOf('accepted'));
return gnr;

Return Value
Type: void

setStatusCode(statusCode)

Sets the HTTP status code sent to the gateway as part of the payments platform’s response notification.

Signature

global void setStatusCode(Integer statusCode)

Parameters

statusCode
Type: Integer

The status code will vary based on the type of payments platform response. Users should configure their GatewayNotificationResponse class to account for all values that their payments platform can possibly return. For example:

commercepayments.GatewayNotificationResponse gnr = new commercepayments.GatewayNotificationResponse();
if (saveResult.isSuccess()) {
    system.debug('Notification accepted by platform');
} else {
    system.debug('Errors in the result ' + Blob.valueOf(saveResult.getErrorMessage()));
}
gnr.getStatusCode(200);
gnr.setResponseBody(Blob.valueOf('accepted'));
return gnr;

Return Value
Type: void

GatewayResponse Interface

Generic payment gateway response interface. This class extends the CaptureResponse on page 973, AbstractTransactionResponse on page 930, and AbstractResponse on page 920 classes and inherits all their properties. It has no unique methods or parameters.

Namespace

CommercePayments on page 918
GatewayResponse Example Implementation

This is an example implementation of the `commercepayments.GatewayResponse` interface.

```java
/**
 * Abstract function to build gateway response for a Transaction
 * The input is the response from gateway
 * It creates and returns GatewayResponse from the HttpResponse
 */
public abstract commercepayments.GatewayResponse buildResponse(HttpResponse response);

/**
 * Function to process transaction requests
 * Steps involved are:
 * 1. Build HttpRequest with the input Request from gateway context
 * 2. Send request and get the response from gateway
 * 3. Parse the response from gateway and return GatewayResponse
 */
public commercepayments.GatewayResponse execute(){
    HttpRequest req;
    try{
        //Building a new request
        req = buildRequest();
    } catch(PayeezeValidationException e) {
        return getValidationExceptionError(e);
    }
    commercepayments.PaymentsHttp http = new commercepayments.PaymentsHttp();
    HttpResponse res = null;
    try{
        //Sending the request
        res = http.send(req);
    } catch(CalloutException ce) {
        return getCalloutExceptionError(ce);
    }
    try{
        //Parsing the response from gateway
        return buildResponse(res);
    } catch(Exception e) {
        return getParseExceptionError(e);
    }
}
```

For additional context, review the complete Sample Gateway Adapter in the CommercePayments Gateway Reference Implementation.

**NotificationClient Class**

Communicates with the payment platform regarding the gateway’s notification.
Namespace

CommercePayments on page 918

Usage

Specify the CommercePayments namespace when creating an instance of this class. The constructor of this class takes no arguments. For example:

CommercePayments.NotificationClient ntc = new CommercePayments.NotificationClient();

This class is used in asynchronous payment gateway adapters. The notification client contains API for communicating with the payments platform regarding the gateway's notification. When the gateway sends a notification, the gateway adapter invokes the record method in NotificationClient to request that the platform updates notification details.

Example

The NotificationSaveResult class creates a saveResult object to store the result of the save request made to the payment gateway.

commercepayments.NotificationSaveResult saveResult = commercepayments.NotificationClient.record(notification);

IN THIS SECTION:

NotificationClient Methods

Certificate

The following are methods for NotificationClient.

IN THIS SECTION:

record(notification)

Stores the results of a notification request.

record(notification)

Stores the results of a notification request.

Signature

global static commercepayments.NotificationSaveResult record(commercepayments.BaseNotification notification)

Parameters

notification

Type: BaseNotification on page 959

Return Value

Type: NotificationSaveResult on page 992
NotificationSaveResult Class
Contains the result of the payment platform’s attempt to record data from the gateway’s notification.

Namespace
CommercePayments on page 918

Usage
This class is used with asynchronous payments. It is the return type of the NotificationClient.record operation and contains the result of the payment platform’s attempt to save notification details.

The constructor of this class takes no arguments. For example:
```java
CommercePayments.NotificationSaveResult nsr = new CommercePayments.NotificationSaveResult();
```

Example
```java
commercepayments.NotificationSaveResult saveResult = commercepayments.NotificationClient.record(notification);
```

IN THIS SECTION:
  NotificationSaveResult Methods

NotificationSaveResult Methods
The following are methods for NotificationSaveResult.

IN THIS SECTION:
  getErrorMessage()
  getStatusCode()
  isSuccess()

getErrorMessage()
Gets the error message, if any, from the payment platform regarding its attempt to save the notification sent from the payment gateway.

getStatusCode()
Gets the status code from the payment platform’s attempt to save the notification sent from the payment gateway.

isSuccess()
Gets the status of whether the payment platform successfully saved the notification sent from the payment gateway.

getErrorMessage()
Gets the error message, if any, from the payment platform regarding its attempt to save the notification sent from the payment gateway.

Signature
```java
global String getErrorMessage()
```
Return Value
Type: String

getStatusCode()
Gets the status code from the payment platform’s attempt to save the notification sent from the payment gateway.

Signature
global Integer getStatusCode()

Return Value
Type: Integer

isSuccess()
Gets the status of whether the payment platform successfully saved the notification sent from the payment gateway.

Signature
global Boolean isSuccess()

Return Value
Type: Boolean

NotificationStatus Enum
Shows whether the payments platform successfully received the notification from the gateway.

Usage
When the gateway sends a notification for a payment request, the payments platform delegates the notification request to the gateway adapter. First, the adapter evaluates the signature from the notification request. If the signature is valid, the adapter builds a notification object to store information about the notification. During this process, the adapter sets the NotificationStatus to Failed or Success based on information from the notification request.

Enum Values
The following are the values of the commercepayments.NotificationStatus enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Failed</td>
<td>The payments platform couldn’t receive the notification due to an error.</td>
</tr>
<tr>
<td>Success</td>
<td>The payments platform received the notification.</td>
</tr>
</tbody>
</table>
PaymentGatewayAdapter Interface

PaymentGatewayAdapters can implement this interface in order to process requests.

Namespace

CommercePayments on page 918

IN THIS SECTION:

PaymentGatewayAdapter Methods

PaymentGatewayAdapter Methods

The following are methods for PaymentGatewayAdapter.

IN THIS SECTION:

processRequest(var1)

The entry point for processing payment requests. Returns the response from the payment gateway.

processRequest(var1)

The entry point for processing payment requests. Returns the response from the payment gateway.

Signature

global commercepayments.GatewayResponse
processRequest(commercepayments.PaymentGatewayContext var1)

Parameters

var1

Type: commercepayments.PaymentGatewayContext
You can retrieve the request type and the request from the Context object.

Return Value

Type: commercepayments.GatewayResponse
The response from the payment gateway.

PaymentGatewayAsyncAdapter Interface

Implement the interface to allow customers to process payments asynchronously.

Namespace

CommercePayments on page 918
Usage

Implementing an asynchronous adapter also requires the `processNotification` method from the `GatewayNotificationResponse` on page 987 class.

Example

```apex
global with sharing class SampleAsyncAdapter implements commercepayments.PaymentGatewayAsyncAdapter, commercepayments.PaymentGatewayAdapter {
    global SampleAsyncAdapter() {}

    global commercepayments.GatewayResponse processRequest(commercepayments.paymentGatewayContext gatewayContext) {
    }

    global commercepayments.GatewayNotificationResponse processNotification(commercepayments.PaymentGatewayNotificationContext gatewayNotificationContext) {
    }
}
```

**IN THIS SECTION:**
- PaymentGatewayAsyncAdapter Methods
- PaymentGatewayAsyncAdapter Example Implementation

**PaymentGatewayAsyncAdapter Methods**

The following are methods for `PaymentGatewayAsyncAdapter`.

**IN THIS SECTION:**
- `processNotification(paymentGatewayNotificationContext)`
  
  Entry point for processing notifications from payment gateways.

**processNotification(paymentGatewayNotificationContext)**

Entry point for processing notifications from payment gateways.

**Signature**

```apex
global commercepayments.GatewayNotificationResponse processNotification(commercepayments.PaymentGatewayNotificationContext var1)
```

**Parameters**

- `paymentGatewayNotificationContext`
  
  Type: `PaymentGatewayNotificationContext` on page 999
  
  The `PaymentGatewayNotificationContext` object wraps all the information related to a gateway notification.
Return Value

Type: GatewayNotificationResponse on page 987

When the payment gateway sends a notification to the payments platform, the platform responds with a GatewayNotificationResponse indicating whether the platform succeeded or failed at receiving the notification.

**PaymentGatewayAsyncAdapter Example Implementation**

This is a sample implementation of the commercepayments.PaymentGatewayAsyncAdapter interface.

```java
global with sharing class AdyenAdapter implements commercepayments.PaymentGatewayAsyncAdapter, commercepayments.PaymentGatewayAdapter {

    global AdyenAdapter() {} 

    global commercepayments.GatewayResponse processRequest(commercepayments.paymentGatewayContext gatewayContext) {
    }

    global commercepayments.GatewayNotificationResponse processNotification(commercepayments.PaymentGatewayNotificationContext gatewayNotificationContext) {
    }

    commercepayments.RequestType requestType = gatewayContext.getPaymentRequestType();
    if (requestType == commercepayments.RequestType.Capture) {
        req.setEndpoint('/pal/servlet/Payment/v52/capture');
        // Refer to the end of this doc for sample buildCaptureRequest implementation
        body = buildCaptureRequest((commercepayments.CaptureRequest)gatewayContext.getPaymentRequest());
    } else if (requestType == commercepayments.RequestType.ReferencedRefund) {
        req.setEndpoint('/pal/servlet/Payment/v52/refund');
        body = buildRefundRequest((commercepayments.ReferencedRefundRequest)gatewayContext.getPaymentRequest());
    }

    req.setBody(body);
    req.setMethod('POST');
    commercepayments.PaymentsHttp http = new commercepayments.PaymentsHttp();
    HttpResponse res = null;
    try {
        res = http.send(req);
    } catch(CalloutException ce) {
        commercepayments.GatewayErrorResponse error = new commercepayments.GatewayErrorResponse('500', ce.getMessage());
        return error;
    }

    if (requestType == commercepayments.RequestType.Capture) {
        // Refer to the end of this doc for sample createCaptureResponse implementation
        response = createCaptureResponse(res);
    } else if (requestType == commercepayments.RequestType.ReferencedRefund) {
        response = createRefundResponse(res);
    }
}
```
return response;

commercepayments.PaymentGatewayNotificationRequest notificationRequest =
gatewayNotificationContext.getPaymentGatewayNotificationRequest();
Blob request = notificationRequest.getRequestBody();
Map<String, Object> jsonReq = (Map<String,
Object>)JSON.deserializeUntyped(request.toString());
List<Object> notificationItems = (List<Object>)jsonReq.get('notificationItems');
Map<String, Object> notificationRequestItem =
  (Map<String, Object>)((Map<String,
Object>)notificationItems[0]).get('NotificationRequestItem');
Boolean success = Boolean.valueOf(notificationRequestItem.get('success'));
String pspReference = (String)notificationRequestItem.get('pspReference');
String eventCode = (String)notificationRequestItem.get('eventCode');
Double amount = (Double)((Map<String,
Object>)notificationRequestItem.get('amount')).get('value');

commercepayments.NotificationStatus notificationStatus = null;
if (success) {
  notificationStatus = commercepayments.NotificationStatus.Success;
} else {
  notificationStatus = commercepayments.NotificationStatus.Failed;
}
commercepayments.BaseNotification notification = null;
if ('CAPTURE'.equals(eventCode)) {
  notification = new commercepayments.CaptureNotification();
} else if ('REFUND'.equals(eventCode)) {
  notification = new commercepayments.ReferencedRefundNotification();
}
notification.setStatus(notificationStatus);
notification.setGatewayReferenceNumber(pspReference);
notification.setAmount(amount);
commercepayments.NotificationSaveResult saveResult =
commercepayments.NotificationClient.record(notification);
commercepayments.GatewayNotificationResponse gnr = new
commercepayments.GatewayNotificationResponse();
if (saveResult.isSuccess()) {
  system.debug('Notification accepted by platform');
} else {
  system.debug('Errors in the result ' + Blob.valueOf(saveResult.getErrorMessage()));
}
gnr.setStatusCode(200);
gnr.setResponseBody(Blob.valueOf('[accepted]'));
return gnr;

PaymentGatewayContext Class

Wraps the information related to a payment request.
Namespace

CommercePayments on page 918

Usage

The constructor of this class takes no arguments. For example:

```java
CommercePayments.PaymentGatewayContext pgc = new CommercePayments.PaymentGatewayContext();
```

Example

```java
global commercepayments.GatewayResponse processRequest(commercepayments.PaymentGatewayContext gatewayContext) {
    commercepayments.RequestType requestType = gatewayContext.getPaymentRequestType();
    if (requestType == commercepayments.RequestType.Capture) {
        commercepayments.CaptureRequest captureRequest = (commercepayments.CaptureRequest) gatewayContext.getPaymentRequest();
    }
}
```

IN THIS SECTION:

PaymentGatewayContext Constructors

PaymentGatewayContext Methods

PaymentGatewayContext Constructors

The following are constructors for PaymentGatewayContext.

IN THIS SECTION:

PaymentGatewayContext(request, requestType)

Constructor to enable instance creation. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

PaymentGatewayContext(request, requestType)

Constructor to enable instance creation. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

Signature

```java
global PaymentGatewayContext(commercepayments.PaymentGatewayRequest request, String requestType)
```

Parameters

- `request`
  - Type: commercepayments.PaymentGatewayRequest
Raw payload. Sensitive attributes are masked to ensure PCI compliance.

**requestType**
Type: String
Defines the type of request made to the gateway

**PaymentGatewayContext Methods**
The following are methods for PaymentGatewayContext.

**IN THIS SECTION:**
- **getPaymentRequest()**
  Returns the payment request object.
- **getPaymentRequestType()**
  Returns the payment request type.

**getPaymentRequest()**
Returns the payment request object.

Signature

```java
getPaymentRequest()
```

Return Value
Type: PaymentGatewayRequest

**getPaymentRequestType()**
Returns the payment request type.

Signature

```java
getPaymentRequestType()
```

Return Value
Type: String

**PaymentGatewayNotificationContext Class**
Wraps the information related to a gateway notification.

**Namespace**
CommercePayments on page 918
Usage
This class is used with asynchronous payments. It wraps all of the information related to a notification from the payment gateway. The payments platform provides its context to the payment gateway adapters.

The constructor of this class takes no arguments. For example:

```java
CommercePayments.PaymentGatewayNotificationContext pgnc = new CommercePayments.PaymentGatewayNotificationContext();
```

Example

```java
global commercepayments.GatewayNotificationResponse
processNotification(commercepayments.PaymentGatewayNotificationContext gatewayNotificationContext) {
    commercepayments.PaymentGatewayNotificationRequest notificationRequest =
        gatewayNotificationContext.getPaymentGatewayNotificationRequest();
}
```

PaymentGatewayNotificationContext Methods
The following are methods for `PaymentGatewayNotificationContext`.

getPaymentGatewayNotificationRequest() Returns the payment gateway’s notification request.

Signature

```java
global commercepayments.PaymentGatewayNotificationRequest
getPaymentGatewayNotificationRequest()
```

Return Value

Type: `PaymentGatewayNotificationRequest` on page 1008

PaymentMethodTokenizationRequest Class
Stores data about a request to tokenize a card payment method.

Namespace

`CommercePayments` on page 918
Usage

The constructor of this class takes no arguments. For example:

```
CommercePayments.PaymentMethodTokenizationRequest pmtr = new
CommercePayments.PaymentMethodTokenizationRequest();
```

The tokenization process replaces sensitive customer data, such as a card number or CVV, with unique identification symbols while the data is handled by Salesforce, the payment gateway, and the customer bank.

This class holds all required details about the tokenize request. Gateway adapters read the fields of this class object while constructing a tokenization JSON request, which is sent to the payment gateway.

Example

```
global commercepayments.GatewayResponse processRequest(commercepayments.PaymentGatewayContext
gatewayContext) {
    commercepayments.RequestType requestType = gatewayContext.getPaymentRequestType();
    if (requestType == commercepayments.RequestType.Tokenize) {
        commercepayments.PaymentMethodTokenizationRequestRequest tokenizeRequest =
        (commercepayments.*PaymentMethodTokenizationRequestRequest*) gatewayContext.getPaymentRequest();
    }
}
```

PaymentMethodTokenizationRequest Constructors

The following are constructors for PaymentMethodTokenizationRequest.

PaymentMethodTokenizationRequest (paymentGatewayId)

Payment gateway ID constructor used with PaymentMethodTokenizationRequest. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

Signature

```
global PaymentMethodTokenizationRequest (String paymentGatewayId)
```
Parameters

*paymentGatewayId*

**Type:** String

The payment method’s payment gateway ID that will be tokenized.

**PaymentMethodTokenizationRequest()**

The following are constructors for PaymentMethodTokenizationRequest.

**Signature**

```csharp
global PaymentMethodTokenizationRequest()
```

**PaymentMethodTokenizationRequest Properties**

The following are properties for PaymentMethodTokenizationRequest.

**IN THIS SECTION:**

- **address**
  
  The card payment method address to be tokenized.

- **cardPaymentMethod**
  
  The card payment method containing data to be tokenized.

**address**

The card payment method address to be tokenized.

**Signature**

```csharp
global commercepayments.AddressRequest address {get; set;}
```

**Property Value**

**Type:** AddressRequest on page 924

**cardPaymentMethod**

The card payment method containing data to be tokenized.

**Signature**

```csharp
global commercepayments.CardPaymentMethodRequest cardPaymentMethod {get; set;}
```

**Property Value**

**Type:** CardPaymentMethodRequest on page 978
**PaymentMethodTokenizationRequest Methods**

The following are methods for `PaymentMethodTokenizationRequest`.

**IN THIS SECTION:**

- `equals(obj)`
  Maintains the integrity of lists of type `PaymentMethodTokenizationRequest` by determining the equality of external objects in a list. This method is dynamic and is based on the equals method in Java.

- `hashCode()`
  Maintains the integrity of lists of type `PaymentMethodTokenizationRequest` by determining the uniqueness of the external object records in a list.

- `toString()`
  Converts a date to a string.

**equals (obj)**

Maintains the integrity of lists of type `PaymentMethodTokenizationRequest` by determining the equality of external objects in a list. This method is dynamic and is based on the equals method in Java.

**Signature**

```java
global Boolean equals(Object obj)
```

**Parameters**

- `obj`
  Type: Object
  External object whose key is to be validated.

**Return Value**

Type: `Boolean`

**hashCode ()**

Maintains the integrity of lists of type `PaymentMethodTokenizationRequest` by determining the uniqueness of the external object records in a list.

**Signature**

```java
global Integer hashCode()
```

**Return Value**

Type: `Integer`

**toString ()**

Converts a date to a string.
Signature

\[ \text{global String} \quad \text{toString()} \]

Return Value
Type: String

**PaymentMethodTokenizationResponse Class**

Gateway response sent by payment gateway adapters for the payment method tokenization request. The response includes the payment method’s token ID value.

**Namespace**

[CommercePayments](#) on page 918

**Usage**

The constructor of this class takes no arguments. For example:

```java
CommercePayments.PaymentMethodTokenizationResponse pmtr = new CommercePayments.PaymentMethodTokenizationResponse();
```

This class contains details about a tokenize transaction gateway response. Fields of this class object are populated from the response obtained from the payment gateway. This class is mapped to a response class in the Java layer, which the payments platform uses to construct the Tokenize gateway response shown to the user.

```java
commercepayments.PaymentMethodTokenizationResponse tokenizeResponse = new commercepayments.PaymentMethodTokenizationResponse();
```

**Example**

```java
commercepayments.PaymentMethodTokenizationResponse tokenizeResponse = new commercepayments.PaymentMethodTokenizationResponse();
```

**IN THIS SECTION:**
- PaymentMethodTokenizationResponse Methods

**PaymentMethodTokenizationResponse Methods**

The following are methods for PaymentMethodTokenizationResponse.

**IN THIS SECTION:**
- setGatewayAvsCode(gatewayAvsCode)
  Sets the AVS (address verification system) result code information that the gateway returned. Maximum length of 64 characters.
- setGatewayDate(gatewayDate)
  Sets the date that the tokenization occurred. Some gateways don’t send this value.
setGatewayMessage(gatewayMessage)
Sets error messages that the gateway returned for the tokenization request. Maximum length of 255 characters.

setGatewayResultCode(gatewayResultCode)
Sets a gateway-specific result code. The code may be mapped to a Salesforce-specific result code. Maximum length of 64 characters.

setGatewayResultCodeDescription(gatewayResultCodeDescription)
Sets a description of the gateway-specific result code that a payment gateway returned. Maximum length of 1000 characters.

setGatewayToken(gatewayToken)
Sets the gateway token value that the gateway returned.

setGatewayTokenDetails(gatewayTokenDetails)
Sets any additional information that the gateway returned about the payment token.

setSalesforceResultCodeInfo(salesforceResultCodeInfo)
Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

setGatewayAvsCode (gatewayAvsCode)
Sets the AVS (address verification system) result code information that the gateway returned. Maximum length of 64 characters.

Signature

global void setGatewayAvsCode(String gatewayAvsCode)

Parameters

gatewayAvsCode
Type: String
Used to verify the address mapped to a payment method when the payments platform requests tokenization from the payment gateway.

Return Value
Type: void

setGatewayDate (gatewayDate)
Sets the date that the tokenization occurred. Some gateways don’t send this value.

Signature

global void setGatewayDate(Datetime gatewayDate)

Parameters

gatewayDate
Type: Datetime
Return Value
Type: void

**setGatewayMessage (gatewayMessage)**
Sets error messages that the gateway returned for the tokenization request. Maximum length of 255 characters.

**Signature**
global void setGatewayMessage(String gatewayMessage)

**Parameters**
gatewayMessage
  Type: String

Return Value
Type: void

**setGatewayResultCode (gatewayResultCode)**
Sets a gateway-specific result code. The code may be mapped to a Salesforce-specific result code. Maximum length of 64 characters.

**Signature**
global void setGatewayResultCode(String gatewayResultCode)

**Parameters**
gatewayResultCode
  Type: String
  Gateway-specific result code. Must be used to map a Salesforce-specific result code.

Return Value
Type: void

**setGatewayResultCodeDescription (gatewayResultCodeDescription)**
Sets a description of the gateway-specific result code that a payment gateway returned. Maximum length of 1000 characters.

**Signature**
global void setGatewayResultCodeDescription(String gatewayResultCodeDescription)

**Parameters**
gatewayResultCodeDescription
  Type: String
Provides additional information about the result code and why the gateway returned the specific code. Descriptions will vary between different gateways.

Return Value
Type: void

**setGatewayToken(gatewayToken)**
Sets the gateway token value that the gateway returned.

Signature
```java
global void setGatewayToken(String gatewayToken)
```

Parameters
- `gatewayToken`
  Type: String

Return Value
Type: void

**setGatewayTokenDetails(gatewayTokenDetails)**
Sets any additional information that the gateway returned about the payment token.

Signature
```java
global void setGatewayTokenDetails(String gatewayTokenDetails)
```

Parameters
- `gatewayTokenDetails`
  Type: String

Return Value
Type: void

**setSalesforceResultCodeInfo(salesforceResultCodeInfo)**
Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

Signature
```java
```
Parameters

salesforceResultCodeInfo
  Type: SalesforceResultCodeInfo on page 1036
  Description of the Salesforce result code value.

Return Value
Type: void

PaymentGatewayNotificationRequest Class
Contains the notification request data from the gateway.

Namespace
CommercePayments on page 918

Usage
When the payment gateway sends a notification for a payment request, the payments platform sends the notification request to the gateway adapter. If the notification payload contains an eventCode of CAPTURE, the adapter constructs a CaptureNotification. If the notification payload contains an eventCode of REFUND, the adapter constructs a ReferencedRefundNotification. If the notification payload contains eventCode of AUTHORISATION, the adapter constructs a GatewayNotificationResponse.

You can obtain a notification request from PaymentGatewayNotificationContext on page 999 by invoking its getPaymentGatewayNotificationRequest method.

Example

```java
global commercepayments.GatewayNotificationResponse
processNotification(commercepayments.PaymentGatewayNotificationContext gatewayNotificationContext) {
    commercepayments.PaymentGatewayNotificationRequest notificationRequest =
        gatewayNotificationContext.getPaymentGatewayNotificationRequest();
}
```

IN THIS SECTION:
  PaymentGatewayNotificationRequest Properties
  PaymentGatewayNotificationRequest Methods

PaymentGatewayNotificationRequest Properties
The following are properties for PaymentGatewayNotificationRequest.
IN THIS SECTION:

**requestBody**

Body of the notification request sent by the payment gateway.

**requestBody**

Body of the notification request sent by the payment gateway.

Signature

```java
global Blob requestBody {get; set;}
```

Property Value

Type: Blob

**PaymentGatewayNotificationRequest Methods**

The following are methods for PaymentGatewayNotificationRequest.

IN THIS SECTION:

**getHeaders()**

Gets HTTP headers from the notification request sent by the payment gateway.

**getRequestBody()**

Stores the notification request body information from the payment gateway's notification request.

**getHeaders()**

Gets HTTP headers from the notification request sent by the payment gateway.

Signature

```java
global Map<String,String> getHeaders()
```

Return Value

Type: Map<String,String>

**getRequestBody()**

Stores the notification request body information from the payment gateway's notification request.

Signature

```java
global Blob getRequestBody()
```

Return Value

Type: Blob
PaymentsHttp Class

Makes an HTTP request to start the interaction with the payment gateway.

Namespace

CommercePayments on page 918

Usage

You must specify the CommercePayments namespace when creating an instance of this class. The constructor of this class takes no arguments. For example:

```
CommercePayments.PaymentsHttp payhttp = new CommercePayments.PaymentsHttp();
```

IN THIS SECTION:
  PaymentsHttp Methods
  PaymentsHttp Constructors

PaymentsHttp Methods

The following are methods for PaymentsHttp. All methods are instance methods.

IN THIS SECTION:
  send(Request)
    Sends an HttpRequest and returns the response.

**send(Request)**

Sends an HttpRequest and returns the response.

Signature

```
global HttpResponse send(HttpRequest request)
```

Parameters

- **request**
  Type: System.HttpRequest

Return Value

Type: System.HttpResponse

PaymentsHttp Constructors

The following are constructors for PaymentsHttp.
IN THIS SECTION:

PaymentsHttp()

Initiates an HTTP request and response.

PaymentsHttp()

Initiates an HTTP request and response.

Signature
global PaymentsHttp()

RefundRequest Class

Sends data related to a refund to the payment gateway adapter.

Namespace

CommercePayments on page 1011

Usage

The constructor of this class takes no arguments. For example:

CommercePayments.RefundRequest rrq = new CommercePayments.RefundRequest();

Example

commercepayments.ReferencedRefundRequest refundRequest = new commercepayments.ReferencedRefundRequest(80, pmt.id);

IN THIS SECTION:

RefundRequest Methods

RefundRequest Methods

The following are methods for RefundRequest.

IN THIS SECTION:

equals(obj)

Maintains the integrity of lists of type RefundRequest by determining the equality of external objects in a list. This method is dynamic and is based on the equals method in Java.

hashCode()

Maintains the integrity of lists of type RefundRequest by determining the uniqueness of the external object records in a list.
equals(obj)
Maintains the integrity of lists of type RefundRequest by determining the equality of external objects in a list. This method is dynamic and is based on the equals method in Java.

Signature

```
global Boolean equals(Object obj)
```

Parameters

`obj`
Type: Object

Return Value

Type: Boolean

hashCode()
Maintains the integrity of lists of type RefundRequest by determining the uniqueness of the external object records in a list.

Signature

```
global Integer hashCode()
```

Return Value

Type: Integer

ReferencedRefundNotification Class

When a payment gateway sends a notification for a refund transaction, the payment gateway adapter creates the ReferencedRefundNotification object to store information about notification.

Namespace

CommercePayments on page 918

Usage

This class is used with asynchronous payments. When a payment gateway sends a notification for a refund transaction, the gateway adapter creates an object of type ReferencedRefundNotification to populate the respective values.

The constructor of this class takes no arguments. For example:

```
CommercePayments.ReferencedRefundNotification rrn = new CommercePayments.ReferencedRefundNotification();
```
Example

commercepayments.NotificationStatus notificationStatus = null;
if (success) {
    notificationStatus = commercepayments.NotificationStatus.Success;
} else {
    notificationStatus = commercepayments.NotificationStatus.Failed;
}
commercepayments.BaseNotification notification = null;
if ('CAPTURE'.equals(eventCode)) {
    notification = new commercepayments.CaptureNotification();
} else if ('REFUND'.equals(eventCode)) {
    notification = new commercepayments.ReferencedRefundNotification();
}

IN THIS SECTION:
ReferencedRefundNotification Methods

ReferencedRefundNotification Methods
The following are methods for ReferencedRefundNotification.

IN THIS SECTION:
setAmount(amount)
Sets the transaction amount. Can be positive, negative, or zero.

setGatewayDate(gatewayDate)
Sets the date that communication for the refund notification occurred with the payment gateway.

setGatewayMessage(gatewayMessage)
Sets information or messages that the gateway returned.

setGatewayReferenceDetails(gatewayReferenceDetails)
Sets the payment gateway’s reference details.

setGatewayReferenceNumber(gatewayReferenceNumber)
Sets the payment gateway’s reference number.

setGatewayResultCode(gatewayResultCode)
Sets the payment gateway’s result code.

setGatewayResultCodeDescription(gatewayResultCodeDescription)
Sets the payment gateway’s result code description.

setId(id)
Sets the ID of a notification sent by the payment gateway.

setSalesforceResultCodeInfo(salesforceResultCodeInfo)
Sets Salesforce result code information.

setStatus(status)
Sets the notification status value on the notification object.
**setAmount(amount)**
Sets the transaction amount. Can be positive, negative, or zero.

Signature

global void setAmount(Double amount)

Parameters

amount
Type: Double
The amount to be debited or captured.

Return Value
Type: void

**setGatewayDate(gatewayDate)**
Sets the date that communication for the refund notification occurred with the payment gateway.

Signature

global void setGatewayDate(Datetime gatewayDate)

Parameters

gatewayDate
Type: Datetime
The date that communication happened with the gateway.

Return Value
Type: void

**setGatewayMessage(gatewayMessage)**
Sets information or messages that the gateway returned.

Signature

global void setGatewayMessage(String gatewayMessage)

Parameters

gatewayMessage
Type: String
setGatewayReferenceDetails(gatewayReferenceDetails)
Sets the payment gateway's reference details.

Signature

```
global void setGatewayReferenceDetails(String gatewayReferenceDetails)
```

Parameters

gatewayReferenceDetails
Type: String
Provides information about the gateway communication.

Return Value
Type: void

setGatewayReferenceNumber(gatewayReferenceNumber)
Sets the payment gateway's reference number.

Signature

```
global void setGatewayReferenceNumber(String gatewayReferenceNumber)
```

Parameters

gatewayReferenceNumber
Type: String
Unique transaction ID created by the payment gateway.

Return Value
Type: void

setGatewayResultCode(gatewayResultCode)
Sets the payment gateway's result code.

Signature

```
global void setGatewayResultCode(String gatewayResultCode)
```
Parameters

.gatewayResultCode
Type: String

The gateway result code. You must map this to a Salesforce-specific result code.

Return Value
Type: void

.setGatewayResultCodeDescription(gatewayResultCodeDescription)
Sets the payment gateway's result code description.

Signature
.global void setGatewayResultCodeDescription(String gatewayResultCodeDescription)

Parameters

gatewayResultCodeDescription
Type: String

Description of the gateway result code. Provides additional context about the result code.

Return Value
Type: void

.setId(id)
Sets the ID of a notification sent by the payment gateway.

Signature
.global void setId(String id)

Parameters

id
Type: String

Return Value
Type: void

.setSalesforceResultCodeInfo(salesforceResultCodeInfo)
Sets Salesforce result code information.
setSalesforceResultCodeInfo

Signature

Parameters

salesforceResultCodeInfo
Type: SalesforceResultCodeInfo on page 1036
Description of the Salesforce result code value.

Return Value
Type: void

setStatus(status)

Sets the notification status value on the notification object.

Signature

global void setStatus(commercepayments.NotificationStatus status)

Parameters

status
Type: NotificationStatus on page 993
Indicates whether the payments platform successfully received the notification from the payment gateway.

Return Value
Type: void

ReferencedRefundRequest

Access information about the referenced refund requests. Extends the RefundRequest class.

Namespace

CommercePayments on page 918

Example

global commercepayments.GatewayResponse processRequest(commercepayments.PaymentGatewayContext gatewayContext) {
    commercepayments.RequestType requestType = gatewayContext.getPaymentRequestType();
    if (requestType == commercepayments.RequestType.ReferencedRefund) {
        commercepayments.*ReferencedRefundRequest* refundRequest =
            (commercepayments.*ReferencedRefundRequest*) gatewayContext.getPaymentRequest();
    }
}
ReferencedRefundRequest Constructors

The following are constructors for ReferencedRefundRequest.

ReferencedRefundRequest(amount, paymentId)

This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

Parameters

amount
  Type: Double
  The amount to be debited or captured.

paymentId
  Type: String
  The payment record.

ReferencedRefundRequest Properties

The following are properties for ReferencedRefundRequest.

PaymentId
  References a payment object.

accountId
  References an account.

amount
  References an amount.

PaymentId
  References a payment object.
Property Value
Type: String

**accountId**
References an account.

Property Value
Type: String

**amount**
References an amount.

Property Value
Type: Double

### ReferencedRefundRequest Methods
The following are methods for `ReferencedRefundRequest`.

### ReferencedRefundResponse Class
The payment gateway adapter sends this response for the `ReferencedRefund` request type.

### Namespace
`CommercePayments` on page 918

### Usage
The constructor of this class takes no arguments. For example:

```java
CommercePayments.ReferencedRefundResponse refr = new CommercePayments.ReferencedRefundResponse();
```

IN THIS SECTION:
- ReferencedRefundResponse Methods

### ReferencedRefundResponse Methods
The following are methods for `ReferencedRefundResponse`.

IN THIS SECTION:
- `setAmount(amount)`
  Sets the transaction amount. The value must be a positive number.
setGatewayAvsCode(gatewayAvsCode)
Sets the payment gateway’s address verification system (AVS) code.

setGatewayDate(gatewayDate)
Sets the payment gateway’s date.

setGatewayMessage(gatewayMessage)
Sets information or messages that the gateway returned.

setGatewayReferenceDetails(gatewayReferenceDetails)
Sets the payment gateway’s reference details.

setGatewayReferenceNumber(gatewayReferenceNumber)
Sets the payment gateway’s reference number.

setGatewayResultCode(gatewayResultCode)
Sets the payment gateway’s result code.

setGatewayResultCodeDescription(gatewayResultCodeDescription)
Sets the payment gateway’s result code description.

setSalesforceResultCodeInfo(salesforceResultCodeInfo)
Set the Salesforce result code info.

setAmount(amount)
Sets the transaction amount. The value must be a positive number.

Signature

global void setAmount(Double amount)

Parameters

amount
Type: Double
The amount to be debited or captured.

Return Value
Type: void

setGatewayAvsCode(gatewayAvsCode)
Sets the payment gateway’s address verification system (AVS) code.

Signature

global void setGatewayAvsCode(String gatewayAvsCode)

Parameters

gatewayAvsCode
Type: String
Code sent by gateways that use an address verification system.

Return Value
Type: void

**setGatewayDate(gatewayDate)**
Sets the payment gateway’s date.

Signature
`global void setGatewayDate(Datetime gatewayDate)`

Parameters
`gatewayDate`  
Type: Datetime  
Date and time of the gateway communication.

Return Value
Type: void

**setGatewayMessage(gatewayMessage)**
Sets information or messages that the gateway returned.

Signature
`global void setGatewayMessage(String gatewayMessage)`

Parameters
`gatewayMessage`  
Type: String  
Information or error messages returned by the gateway.

Return Value
Type: void

**setGatewayReferenceDetails(gatewayReferenceDetails)**
Sets the payment gateway’s reference details.

Signature
`global void setGatewayReferenceDetails(String gatewayReferenceDetails)`
Parameters

gatewayReferenceDetails
  Type: String
  Information about the gateway communication.

Return Value
Type: void

setGatewayReferenceNumber(gatewayReferenceNumber)
Sets the payment gateway's reference number.

Signature
global void setGatewayReferenceNumber(String gatewayReferenceNumber)

Parameters
gatewayReferenceNumber
  Type: String
  Unique transaction ID created by the payment gateway.

Return Value
Type: void

setGatewayResultCode(gatewayResultCode)
Sets the payment gateway's result code.

Signature
global void setGatewayResultCode(String gatewayResultCode)

Parameters
gatewayResultCode
  Type: String
  The gateway result code. Must be mapped to a Salesforce result code.

Return Value
Type: void

setGatewayResultCodeDescription(gatewayResultCodeDescription)
Sets the payment gateway's result code description.
Signature
```
global void setGatewayResultCodeDescription(String gatewayResultCodeDescription)
```

Parameters
```
gatewayResultCodeDescription
  Type: String
  Description of the GatewayResultCode. Provides more information about the result code returned by the gateway.
```

Return Value
Type: void

**setSalesforceResultCodeInfo(salesforceResultCodeInfo)**
Set the Salesforce result code info.

Signature
```
```

Parameters
```
salesforceResultCodeInfo
  Type: commercepayments.SalesforceResultCodeInfo on page 1036
  Describes the Salesforce result code value.
```

Return Value
Type: void

**RequestType Enum**
Defines the type of payment transaction request made to the payment gateway.

**Enum Values**
The following are the values of the commercepayments.RequestType enum.

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Authorize</td>
<td>Payment authorization request</td>
</tr>
<tr>
<td>Capture</td>
<td>Payment capture request</td>
</tr>
<tr>
<td>ReferencedRefund</td>
<td>Payment refund request</td>
</tr>
</tbody>
</table>
## SaleApiPaymentMethodRequest Class

Sends data related to a card payment method to a gateway adapter during a sale service call.

### Namespace

[CommercePayments](#) on page 918

### Usage

This class holds information about a payment method that was used for a Sale request. `SaleApiPaymentMethodRequest` contains all the possible payment methods as fields, but only one value is populated for a given request. Gateway adapters use this class when constructing a sale request. The object of this class is obtained through the `paymentMethod` field on the `SaleRequest` object.

**Example:** This code sample retrieves the `SaleApiPaymentMethodRequest` object from the `SaleRequest` class.

```apex
commercepayments.SaleApiPaymentMethodRequest paymentMethod = saleRequest.paymentMethod;
```

### SaleApiPaymentMethodRequest Constructors

The following are constructors for `SaleApiPaymentMethodRequest`.

**IN THIS SECTION:**

- [SaleApiPaymentMethodRequest(cardPaymentMethodRequest)](#)
- [SaleApiPaymentMethodRequest()](#)

**SaleApiPaymentMethodRequest(cardPaymentMethodRequest)**

Sends data related to a card payment method to a gateway adapter during a sale service call.

**SaleApiPaymentMethodRequest()**

Constructor for building a sale payment method request. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.
SaleApiPaymentMethodRequest(cardPaymentMethodRequest)
Sends data related to a card payment method to a gateway adapter during a sale service call.

Signature
global SaleApiPaymentMethodRequest(commercepayments.CardPaymentMethodRequest cardPaymentMethodRequest)

Parameters

cardPaymentMethodRequest
Type: CardPaymentMethodRequest on page 978

SaleApiPaymentMethodRequest()
Constructor for building a sale payment method request. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

Signature
global SaleApiPaymentMethodRequest()

SaleApiPaymentMethodRequest Properties
The following are properties for SaleApiPaymentMethodRequest.

IN THIS SECTION:

cardPaymentMethod
Contains details of the card used in a payment method.

cardPaymentMethod
Contains details of the card used in a payment method.

Signature
global commercepayments.CardPaymentMethodRequest cardPaymentMethod {get; set;}

Property Value
Type: CardPaymentMethodRequest on page 978

SaleApiPaymentMethodRequest Methods
The following are methods for SaleApiPaymentMethodRequest.
equals(obj)
Maintains the integrity of lists of type SaleApiPaymentMethodRequest by determining the equality of external objects in a list. This method is dynamic and is based on the equals method in Java.

hashCode()
Maintains the integrity of lists of type SaleApiPaymentMethodRequest by determining the uniqueness of the external object records in a list.

toString()
Converts a date to a string.

equals (obj)
Maintains the integrity of lists of type SaleApiPaymentMethodRequest by determining the equality of external objects in a list. This method is dynamic and is based on the equals method in Java.

Signature

```java
global Boolean equals(Object obj)
```

Parameters

- `obj` Type: Object

Return Value

Type: Boolean

hashCode()
Maintains the integrity of lists of type SaleApiPaymentMethodRequest by determining the uniqueness of the external object records in a list.

Signature

```java
global Integer hashCode()
```

Return Value

Type: Integer

toString()
Converts a date to a string.

Signature

```java
global String toString()
```
Return Value
Type: String

SaleRequest Class
Stores information about a sales request.

Namespace
CommercePayments on page 918

Usage
This class holds all the required details about a sale request. Gateway adapters read the fields of this class object while constructing a sale JSON request that is sent to the payment gateway. The object of this class is made available through commercepayments.paymentGatewayContext by calling getPaymentRequest().

Example
This code sample retrieves the SaleRequest object from the PaymentGatewayContext class.

```java
commercepayments.SaleRequest =
(commercepayments.SaleRequest)gatewayContext.getPaymentRequest()
```

IN THIS SECTION:
  - SaleRequest Constructors
  - SaleRequest Properties
  - SaleRequest Methods

SaleRequest Constructors
The following are constructors for SaleRequest.

IN THIS SECTION:
  - SaleRequest(amount)

`SaleRequest(amount)`
Constructor for defining an amount for the sale request. This constructor is intended for test usage and throws an exception if used outside of the Apex test context.

Signature
```
global SaleRequest(Double amount)
```
Parameters

*amount*
  Type: **Double**
  Amount of the sale request.

**SaleRequest Properties**

The following are properties for **SaleRequest**.

IN THIS SECTION:

  * **accountId**
    Customer account ID for the sale request.
  * **amount**
    Amount of the sale request. Can be positive only.
  * **comments**
    Additional information about the sale request.
  * **currencyIsoCode**
    Currency code for the sale request.
  * **paymentMethod**
    Payment method used in the sale request.

**accountId**

Customer account ID for the sale request.

Signature

`global String accountId {get; set;}`

Property Value

Type: **String**

**amount**

Amount of the sale request. Can be positive only.

Signature

`global Double amount {get; set;}`

Property Value

Type: **Double**
**comments**
Additional information about the sale request.

Signature
```
global String comments {get; set;}
```

Property Value
Type: String

**currencyIsoCode**
Currency code for the sale request.

Signature
```
global String currencyIsoCode {get; set;}
```

Property Value
Type: String

**paymentMethod**
Payment method used in the sale request.

Signature
```
global commercepayments.SaleApiPaymentMethodRequest paymentMethod {get; set;}
```

Property Value
Type: `SaleApiPaymentMethodRequest` on page 1024

**SaleRequest Methods**
The following are methods for `SaleRequest`.

IN THIS SECTION:
- `equals(obj)`
  Compares this object with the specified object and returns `true` if both objects are equal; otherwise, returns `false`.
- `hashCode()`
  Maintains the integrity of lists of type `SaleRequest` by determining the uniqueness of the external object records in a list.
- `toString()`
  Converts a date to a string.
equals(obj)
Comparés this object with the specified object and returns `true` if both objects are equal; otherwise, returns `false`.

Signature
```plaintext
global Boolean equals(Object obj)
```

Parameters
- `obj`
  - Type: Object

Return Value
- Type: Boolean

hashCode()
Maintains the integrity of lists of type `SaleRequest` by determining the uniqueness of the external object records in a list.

Signature
```plaintext
global Integer hashCode()
```

Return Value
- Type: Integer

toString()
Converts a date to a string.

Signature
```plaintext
global String toString()
```

Return Value
- Type: String

**SaleResponse Class**
Response sent by payment gateway adapters for a sales service.

**Namespace**
`CommercePayments` on page 918
Usage

The constructor of this class takes no arguments. For example:

```
CommercePayments.SaleResponse slr CommercePayments.SaleResponse();
```

This class contains details about a customer card that was used as a payment method for Authorization, Sale, or Tokenization request. The gateway adapter reads the fields of this class while constructing a transaction JSON request, which it then sends to the payment gateway. The object of this class is made available by the `cardPaymentMethod` field in `SaleApiPaymentMethodRequest` on page 1024 and `AuthApiPaymentMethodRequest` on page 934.

Example

This code sample builds a `SaleResponse` object.

```
commercepayments.SaleResponse saleResponse = new commercepayments.SaleResponse();
saleResponse.setGatewayReferenceDetails("refDetailString");
saleResponse.setGatewayResultCode("res_code");
saleResponse.setGatewayResultCodeDescription("";
saleResponse.setGatewayReferenceNumber("";
saleResponse.setSalesforceResultCodeInfo(getSalesforceResultCodeInfo(commercepayments.SalesforceResultCode.SUCCESS.name()));
```

IN THIS SECTION:

**SaleResponse Methods**

The following are methods for `SaleResponse`.

IN THIS SECTION:

- `setAmount(amount)`
  - Sets the transaction amount. Must be a non-negative value.
- `setGatewayAvsCode(gatewayAvsCode)`
  - Sets the AVS (address verification system) result code information that the gateway returned. Maximum length of 64 characters.
- `setGatewayDate(gatewayDate)`
  - Sets the date that the sale occurred. Some gateways don’t send this value.
- `setGatewayMessage(gatewayMessage)`
  - Sets error messages that the gateway returned for the sale request. Maximum length of 255 characters.
- `setGatewayReferenceDetails(gatewayReferenceDetails)`
  - Sets additional data that you can use for subsequent sales. You can use any data that isn’t normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML.
- `setGatewayReferenceNumber(gatewayReferenceNumber)`
  - Sets the unique gateway reference number for the transaction that the gateway returned. Maximum length of 255 characters.
- `setGatewayResultCode(gatewayResultCode)`
  - Sets a gateway-specific result code. The code may be mapped to a Salesforce-specific result code. Maximum length of 64 characters.
- `setGatewayResultCodeDescription(gatewayResultCodeDescription)`
  - Sets a description of the gateway-specific result code that a payment gateway returned. Maximum length of 1000 characters.
setPaymentMethodTokenizationResponse(paymentMethodTokenizationResponse)
Sets information from the gateway about the tokenized payment method.

setSalesforceResultCodeInfo(salesforceResultCodeInfo)
Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

**setAmount(amount)**
Sets the transaction amount. Must be a non-negative value.

**Signature**

```
global void setAmount(Double amount)
```

**Parameters**

- `amount`: Type: `Double`
  - The amount of the transaction.

**Return Value**

Type: `void`

**setGatewayAvsCode(gatewayAvsCode)**
Sets the AVS (address verification system) result code information that the gateway returned. Maximum length of 64 characters.

**Signature**

```
global void setGatewayAvsCode(String gatewayAvsCode)
```

**Parameters**

- `gatewayAvsCode`: Type: `String`
  - Used to verify the address mapped to a payment method when the payments platform requests tokenization from the payment gateway.

**Return Value**

Type: `void`

**setGatewayDate(gatewayDate)**
Sets the date that the sale occurred. Some gateways don’t send this value.

**Signature**

```
global void setGatewayDate(Datetime gatewayDate)
```
Parameters

*gatewayDate*
  
  Type: Datetime

Return Value

Type: void

**setGatewayMessage(gatewayMessage)**

Sets error messages that the gateway returned for the sale request. Maximum length of 255 characters.

Signature

```
global void setGatewayMessage(String gatewayMessage)
```

Parameters

*gatewayMessage*
  
  Type: String

Return Value

Type: void

**setGatewayReferenceDetails(gatewayReferenceDetails)**

Sets additional data that you can use for subsequent sales. You can use any data that isn't normalized in financial entities. This field has a maximum length of 1000 characters and can store data as JSON or XML.

Signature

```
global void setGatewayReferenceDetails(String gatewayReferenceDetails)
```

Parameters

*gatewayReferenceDetails*
  
  Type: String

Return Value

Type: void

**setGatewayReferenceNumber(gatewayReferenceNumber)**

Sets the unique gateway reference number for the transaction that the gateway returned. Maximum length of 255 characters.

Signature

```
global void setGatewayReferenceNumber(String gatewayReferenceNumber)
```
Parameters

gatewayReferenceNumber
  Type: String
  Unique authorization ID created by the payment gateway.

Return Value
Type: void

setGatewayResultCode(gatewayResultCode)
Sets a gateway-specific result code. The code may be mapped to a Salesforce-specific result code. Maximum length of 64 characters.

Signature

global void setGatewayResultCode(String gatewayResultCode)

Parameters

gatewayResultCode
  Type: String
  Gateway-specific result code. Must be used to map a Salesforce-specific result code.

Return Value
Type: void

setGatewayResultCodeDescription(gatewayResultCodeDescription)
Sets a description of the gateway-specific result code that a payment gateway returned. Maximum length of 1000 characters.

Signature

global void setGatewayResultCodeDescription(String gatewayResultCodeDescription)

Parameters

gatewayResultCodeDescription
  Type: String
  Description of the gateway’s result code. Use this field to learn more about why the gateway returned a certain result code.

Return Value
Type: void

setPaymentMethodTokenizationResponse(paymentMethodTokenizationResponse)
Sets information from the gateway about the tokenized payment method.
Signature

global void
setPaymentMethodTokenizationResponse(commercepayments.PaymentMethodTokenizationResponse
paymentMethodTokenizationResponse)

Parameters

paymentMethodTokenizationResponse
Type: PaymentMethodTokenizationResponse on page 1004
Gateway response sent by payment gateway adapters for the payment method tokenization request. The response includes the payment method’s token ID value.

Return Value
Type: void

setSalesforceResultCodeInfo(salesforceResultCodeInfo)

Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

Signature

global void setSalesforceResultCodeInfo(commercepayments.SalesforceResultCodeInfo
salesforceResultCodeInfo)

Parameters

salesforceResultCodeInfo
Type: SalesforceResultCodeInfo on page 1036
Sets the Salesforce-specific result code information. Payment gateways have many response codes for payment calls. Salesforce uses the result code information to map payment gateway codes to a predefined set of standard Salesforce result codes.

Return Value
Type: void

SalesforceResultCode Enum

Defines the gateway call status values in Salesforce based on the call status values that the payment gateway returned.

Usage

Payment gateways can return many different responses. Salesforce maps these responses into one of seven possible Salesforce response values.

Enum Values

The following are the values of the commercepayments.SalesforceResultCode enum.
The gateway call failed, but it may still work if you try again. For example, the customer had insufficient funds or briefly lost their connection to the internet. This is also known as a “soft decline.”

Indeterminate
The gateway didn’t respond to the call and the user has to check the transaction request’s status. Indeterminate responses often occur following server timeouts, system failure, or any action that interrupts the gateway’s ability to process the payment.

PermanentFail
The customer’s bank recognized the payment account as closed, terminated, or fraudulent. The gateway won’t further calls from the payment method associate with the transaction. After a permanent fail response, the transaction changes its gateway status to Permanent Fail.

RequiresReview
The gateway call initially failed, but the payment method may still work after further evaluation. This response often happens when the customer bank requires more information about the payment request. In this case, the bank provides an authorization code manually when the payment manager calls the processor.

Success
The gateway processed the transaction successfully.

SystemError
Salesforce ended the payment request call before receiving a gateway response. System error responses often occur due to gateway server errors, invalid customer credentials, or anytime the request times out before receiving a gateway response. The failure occurs before the request reaches the gateway, so there’s no risk of an unaccounted payment remaining in the gateway. You can continue with the transaction by manually creating a payment.

ValidationErr
The gateway received incorrect customer payment information, such as misspelled credit card names or a CVV with missing numbers.

SalesforceResultCodeInfo
Stores Salesforce result code information from payment gateway adapters.

Namespace
CommercePayments on page 918

Usage
The constructor of this class takes no arguments. For example:

Gateways can return the transaction result as either CustomMetadata or SalesforceResultCode.
SalesforceResultCodeInfo Constructors

The following are constructors for SalesforceResultCodeInfo.

IN THIS SECTION:
- SalesforceResultCodeInfo(customMetadataTypeInfo)
  - Constructor for providing the customMetadataTypeInfo for the result of the transaction.
- SalesforceResultCodeInfo(salesforceResultCode)
  - Constructor that provides the salesforceResultCode for the transaction result.

SalesforceResultCodeInfo (customMetadataTypeInfo)

Constructor for providing the customMetadataTypeInfo for the result of the transaction.

Signature

```
global SalesforceResultCodeInfo(commercepayments.CustomMetadataTypeInfo customMetadataTypeInfo)
```

Parameters

- `customMetadataTypeInfo`
  - Type: CustomMetadataTypeInfo on page 985
  - Information about the metadata type.

SalesforceResultCodeInfo (salesforceResultCode)

Constructor that provides the salesforceResultCode for the transaction result.

Signature

```
global SalesforceResultCodeInfo(commercepayments.SalesforceResultCode salesforceResultCode)
```

Parameters

- `salesforceResultCode`
  - Type: SalesforceResultCode on page 1035
  - The enum value for the result code.

ConnectApi Namespace

The ConnectApi namespace (also called Connect in Apex) provides classes for accessing the same data available in Connect REST API. Use Connect in Apex to create custom experiences in Salesforce.

For information about working with the ConnectApi classes, see Connect in Apex on page 346.
IN THIS SECTION:

**ActionLinks Class**
Create, delete, and get information about an action link group definition; get information about an action link group; get action link diagnostic information.

**Announcements Class**
Access information about announcements and post announcements.

**Chatter Class**
Access information about followers and subscriptions for records.

**ChatterFavorites Class**
Chatter favorites give you easy access to topics, list views, and feed searches.

**ChatterFeeds Class**
Get, post, and delete feed elements, likes, comments, and bookmarks. You can also search feed elements, share feed elements, and vote on polls.

**ChatterGroups Class**
Information about groups, such as the group's members, photo, and the groups the specified user is a member of. Add members to a group, remove members, and change the group photo.

**ChatterMessages Class**
Get, send, search, and reply to private messages. You can also get and search private conversations, mark conversations as read, and get a count of unread private messages.

**ChatterUsers Class**
Access information about users, such as activity, followers, subscriptions, files, and groups.

**CommerceBuyerExperience Class**
Get order delivery group, order item, and order summaries.

**CommerceCart Class**
Get, create, update, and delete carts. Get cart items, add items to carts, update and delete cart items.

**CommerceCatalog Class**
Get products, product categories, and product category paths.

**CommerceStorePricing Class**
Get product prices.

**CommerceWishlist Class**
Get, create, update, and delete wishlists. Add wishlists to carts. Get wishlist items, add items to wishlists, and delete wishlist items.

**Communities Class**
Access general information about Experience Cloud sites in your org.

**CommunityModeration Class**
Access information about flagged feed items and comments in an Experience Cloud site. Add and remove flags from comments and feed items.

**ContentHub Class**
Access Files Connect repositories and their files and folders.

**Datacloud Class**
Purchase Data.com contact or company records, and retrieve purchase information.
EmailMergeFieldService Class
Extract a list of merge fields for an object. A merge field is a field you can put in an email template, mail merge template, custom link, or formula to incorporate values from a record.

ExternalEmailServices Class
Access information about integration with external email services, such as sending email within Salesforce through an external email account.

ExternalManagedAccount Class
Get externally managed accounts.

FieldService Class
Preview and create shifts from a pattern.

FulfillmentOrder Class
Fulfill orders in Order Management.

Knowledge Class
Access information about trending articles in Experience Cloud sites.

ManagedContent Class
Get managed content versions.

ManagedTopics Class
Access information about managed topics in an Experience Cloud site. Create, delete, and reorder managed topics.

Mentions Class
Access information about mentions. A mention is an "@" character followed by a user or group name. When a user or group is mentioned, they receive a notification.

Missions Class
Export and purge mission activity for users. Get a user’s mission progress. Update mission activity counts for users.

NextBestAction Class
Execute recommendation strategies, get recommendations, manage recommendation reactions.

OmnichannelInventoryService Class
Route orders to inventory locations in Order Management.

OrderPaymentSummary Class
Work with payments in Order Management.

OrderSummary Class
Work with orders in Order Management.

OrderSummaryCreation Class
Create Order Summaries in Order Management.

Organization Class
Access information about an org.

Payments Methods
Authorize a payment, capture an authorized payment, and refund an authorized payment.

Personalization Class
Get assigned personalization audiences that match the user context. Create, get, update, and delete an audience. Get personalization targets that match the user context, based on the assigned audiences that include the user. Create and update targets. Get and delete a target.
QuestionAndAnswers Class
Access question and answers suggestions.

Recommendations Class
Get and reject Chatter, custom, and static recommendations. Create, get, update, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

Records Class
Access information about record motifs, which are small icons used to distinguish record types in the Salesforce UI.

Routing Class
Route orders to inventory locations in Order Management.

SalesforceInbox Class
Access information about Automated Activity Capture, which is available in Einstein and Salesforce Inbox.

SmartDataDiscovery Class
Get predictions on Salesforce objects.

SocialEngagement Class
Manage information about social accounts or fan pages for social networks.

Survey Class
Send survey invitations by email.

Topics Class
Access information about topics, such as their descriptions, the number of people talking about them, related topics, and information about groups contributing to the topic. Update a topic’s name or description, merge topics, and add and remove topics from records and feed items.

UserProfiles Class
Access user profile data. The user profile data populates the profile page (also called the Chatter profile page). This data includes user information (such as address, manager, and phone number), some user capabilities (permissions), and a set of subtab apps, which are custom tabs on the profile page.

Zones Class
Access information about Chatter Answers zones in your organization. Zones organize questions into logical groups, with each zone having its own focus and unique questions.

ConnectApi Input Classes
Some ConnectApi methods take arguments that are instances of ConnectApi input classes.

ConnectApi Output Classes
Most ConnectApi methods return instances of ConnectApi output classes.

ConnectApi Enums
Enums specific to the ConnectApi namespace.

ConnectApi Exceptions
The ConnectApi namespace contains exception classes.

ActionLinks Class
Create, delete, and get information about an action link group definition; get information about an action link group; get action link diagnostic information.
Namespace

ConnectApi

Usage

An action link is a button on a feed element. Clicking an action link can take a user to a Web page, initiate a file download, or invoke an API call to Salesforce or to an external server. An action link includes a URL and an HTTP method, and can include a request body and header information, such as an OAuth token for authentication. Use action links to integrate Salesforce and third-party services into the feed so that users can take action to drive productivity and accelerate innovation.

There are two views of an action link and an action link group: the definition, and the context user’s view. The definition includes potentially sensitive information, such as authentication information. The context user’s view is filtered by visibility options and the values reflect the state of the context user.

Action link definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission. Use these methods to operate on action link group definitions (which contain action link definitions):

- `createActionLinkGroupDefinition(communityId, actionLinkGroup)`
- `deleteActionLinkGroupDefinition(communityId, actionLinkGroupId)`
- `getActionLinkGroupDefinition(communityId, actionLinkGroupId)`

Use these methods to operate on a context user’s view of an action link or an action link group:

- `getActionLink(communityId, actionLinkId)`
- `getActionLinkGroup(communityId, actionLinkGroupId)`
- `getActionLinkDiagnosticInfo(communityId, actionLinkId)`

For information about how to use action links, see Working with Action Links.

ActionLinks Methods

The following are methods for `ActionLinks`. All methods are static.

IN THIS SECTION:

- `createActionLinkGroupDefinition(communityId, actionLinkGroup)`
  Create an action link group definition. To associate an action link group with a feed element, first create an action link group definition. Then post a feed element with an associated actions capability.

- `deleteActionLinkGroupDefinition(communityId, actionLinkGroupId)`
  Delete an action link group definition. Deleting an action link group definition removes all references to it from feed elements.

- `getActionLink(communityId, actionLinkId)`
  Get information about an action link, including state for the context user.

- `getActionLinkGroup(communityId, actionLinkGroupId)`
  Get information about an action link group including state for the context user.

- `getActionLinkDiagnosticInfo(communityId, actionLinkId)`
  Get diagnostic information returned when an action link executes. Diagnostic information is given only for users who can access the action link.
getActionLinkGroupDefinition(communityId, actionLinkGroupId)
Get information about an action link group definition.

createActionLinkGroupDefinition(communityId, actionLinkGroup)
Create an action link group definition. To associate an action link group with a feed element, first create an action link group definition. Then post a feed element with an associated actions capability.

API Version
33.0

Requires Chatter
No

Signature
public static ConnectApi.ActionLinkGroupDefinition createActionLinkGroupDefinition(String communityId, ConnectApi.ActionLinkGroupDefinitionInput actionLinkGroup)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

actionLinkGroup
Type: ConnectApi.ActionLinkGroupDefinitionInput
A ConnectApi.ActionLinkGroupDefinitionInput object that defines the action link group.

Return Value
Type: ConnectApi.ActionLinkGroupDefinition

Usage
An action link is a button on a feed element. Clicking an action link can take a user to a Web page, initiate a file download, or invoke an API call to Salesforce or to an external server. An action link includes a URL and an HTTP method, and can include a request body and header information, such as an OAuth token for authentication. Use action links to integrate Salesforce and third-party services into the feed so that users can take action to drive productivity and accelerate innovation.

All action links must belong to a group. Action links in a group are mutually exclusive and share some properties. Define stand-alone actions in their own action group.

Information in the action link group definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link group definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

Note: Invoking ApiAsync action links from an app requires a call to set the status. However, there isn’t currently a way to set the status of an action link using Apex. To set the status, use Connect REST API. See the Action Link resource in the Connect REST API Developer Guide for more information.
Example for Defining an Action Link and Posting with a Feed Element

For more information about this example, see Define an Action Link and Post with a Feed Element.

```
ConnectApi.ActionLinkGroupDefinitionInput actionLinkGroupDefinitionInput = new 
ConnectApi.ActionLinkGroupDefinitionInput();
ConnectApi.ActionLinkDefinitionInput actionLinkDefinitionInput = new 
ConnectApi.ActionLinkDefinitionInput();
ConnectApi.RequestHeaderInput requestHeaderInput1 = new ConnectApi.RequestHeaderInput();
ConnectApi.RequestHeaderInput requestHeaderInput2 = new ConnectApi.RequestHeaderInput();

// Create the action link group definition.
actionLinkGroupDefinitionInput.actionLinks = New
List<ConnectApi.ActionLinkDefinitionInput>();
actionLinkGroupDefinitionInput.executionsAllowed =
ConnectApi.ActionLinkExecutionsAllowed.OncePerUser;
actionLinkGroupDefinitionInput.category = ConnectApi.PlatformActionGroupCategory.Primary;

// To Do: Verify that the date is in the future.
// Action link groups are removed from feed elements on the expiration date.
datetime myDate = datetime.newInstance(2016, 3, 1);
actionLinkGroupDefinitionInput.expirationDate = myDate;

// Create the action link definition.
actionLinkDefinitionInput.actionType = ConnectApi.ActionLinkType.Api;
actionLinkDefinitionInput.actionUrl = '/services/data/v33.0/chatter/feed-elements';
actionLinkDefinitionInput.headers = new List<ConnectApi.RequestHeaderInput>();
actionLinkDefinitionInput.labelKey = 'Post';
actionLinkDefinitionInput.method = ConnectApi.HttpRequestMethod.HttpPost;
actionLinkDefinitionInput.requestBody = '{"subjectId": "me","feedElementType":
"FeedItem","body": [{"type": "Text","text": "This is a
test post created via an API action link.\"}}]}';
actionLinkDefinitionInput.requiresConfirmation = true;

// To Do: Substitute an OAuth value for your Salesforce org.
requestHeaderInput1.name = 'Authorization';
requestHeaderInput1.value = 'OAuth
00DD00000007WNP!ARsAQCwoeV0zzAV847FT14zF.85w.EwsPbUgLr4SAb';
actionLinkDefinitionInput.headers.add(requestHeaderInput1);

requestHeaderInput2.name = 'Content-Type';
requestHeaderInput2.value = 'application/json';
actionLinkDefinitionInput.headers.add(requestHeaderInput2);

// Add the action link definition to the action link group definition.
actionLinkGroupDefinitionInput.actionLinks.add(actionLinkDefinitionInput);

// Instantiate the action link group definition.
ConnectApi.ActionLinkGroupDefinition actionLinkGroupDefinition =
ConnectApi.ActionLinks.createActionLinkGroupDefinition(Network.getNetworkId(),
actionLinkGroupDefinitionInput);

ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new 
ConnectApi.FeedElementCapabilitiesInput();
ConnectApi.AssociatedActionsCapabilityInput associatedActionsCapabilityInput = new
```

1043
ConnectApi.AssociatedActionsCapabilityInput();
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

// Set the properties of the feedItemInput object.
feedItemInput.body = messageBodyInput;
feedItemInput.capabilities = feedElementCapabilitiesInput;
feedItemInput.subjectId = 'me';

// Create the text for the post.
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
textSegmentInput.text = 'Click to post a feed item.';
messageBodyInput.messageSegments.add(textSegmentInput);

// The feedElementCapabilitiesInput object holds the capabilities of the feed item.
// Define an associated actions capability to hold the action link group.
// The action link group ID is returned from the call to create the action link group
definition.
feedElementCapabilitiesInput.associatedActions = associatedActionsCapabilityInput;
associatedActionsCapabilityInput.actionLinkGroupIds = new List<String>();
associatedActionsCapabilityInput.actionLinkGroupIds.add(actionLinkGroupDefinition.id);

// Post the feed item.
ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);

Example for Defining an Action Link in a Template and Posting with a Feed Element

For more information about this example, see Define an Action Link in a Template and Post with a Feed Element.

// Get the action link group template Id.
ActionLinkGroupTemplate template = [SELECT Id FROM ActionLinkGroupTemplate WHERE DeveloperName='Doc_Example'];

// Add binding name-value pairs to a map.
// The names are defined in the action link template(s) associated with the action link
group template.
// Get them from Setup UI or SOQL.
Map<String, String> bindingMap = new Map<String, String>();
bindingMap.put('ApiVersion', 'v33.0');
bindingMap.put('Text', 'This post was created by an API action link.');
bindingMap.put('SubjectId', 'me');

// Create ActionLinkTemplateBindingInput objects from the map elements.
List<ConnectApi.ActionLinkTemplateBindingInput> bindingInputs = new
List<ConnectApi.ActionLinkTemplateBindingInput>();
for (String key : bindingMap.keySet()) {
    ConnectApi.ActionLinkTemplateBindingInput bindingInput = new
    ConnectApi.ActionLinkTemplateBindingInput();
    bindingInput.key = key;
    bindingInput.value = bindingMap.get(key);
    bindingInputs.add(bindingInput);
Set the template Id and template binding values in the action link group definition.
ConnectApi.ActionLinkGroupDefinitionInput actionLinkGroupDefinitionInput = new
ConnectApi.ActionLinkGroupDefinitionInput();
actionLinkGroupDefinitionInput.templateId = template.id;
actionLinkGroupDefinitionInput.templateBindings = bindingInputs;

// Instantiate the action link group definition.
ConnectApi.ActionLinkGroupDefinition actionLinkGroupDefinition =
    ConnectApi.ActionLinks.createActionLinkGroupDefinition(Network.getNetworkId(),
    actionLinkGroupDefinitionInput);

ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new
ConnectApi.FeedElementCapabilitiesInput();
ConnectApi.AssociatedActionsCapabilityInput associatedActionsCapabilityInput = new
ConnectApi.AssociatedActionsCapabilityInput();
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

// Define the FeedItemInput object to pass to postFeedElement
feedItemInput.body = messageBodyInput;
feedItemInput.capabilities = feedElementCapabilitiesInput;
feedItemInput.subjectId = 'me';

// The MessageBodyInput object holds the text in the post
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
textSegmentInput.text = 'Click to post a feed item.';
messageBodyInput.messageSegments.add(textSegmentInput);

// The FeedElementCapabilitiesInput object holds the capabilities of the feed item.
// For this feed item, we define an associated actions capability to hold the action link
group.
// The action link group ID is returned from the call to create the action link group
definition.
feedElementCapabilitiesInput.associatedActions = associatedActionsCapabilityInput;
associatedActionsCapabilityInput.actionLinkGroupIds = new List<String>();
associatedActionsCapabilityInput.actionLinkGroupIds.add(actionLinkGroupDefinition.id);

// Post the feed item.
ConnectApi.FeedElement feedElement =
    ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);

deleteActionLinkGroupDefinition(communityId, actionLinkGroupId)
Delete an action link group definition. Deleting an action link group definition removes all references to it from feed elements.

API Version
33.0
Requires Chatter
No

Signature

```java
public static void deleteActionLinkGroupDefinition(String communityId, String actionLinkGroupId)
```

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `actionLinkGroupId`
  Type: `String`
  The ID of the action link group.

Return Value
Type: `Void`

Usage
Information in the action link group definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link group definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

```java
getActionLink(communityId, actionLinkId)
```

Get information about an action link, including state for the context user.

API Version
33.0

Requires Chatter
No

Signature

```java
public static ConnectApi.PlatformAction getActionLink(String communityId, String actionLinkId)
```

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.
**actionLinkId**
Type: **String**
The ID of the action link.

Return Value
Type: **ConnectApi.PlatformAction**

**getActionLinkDiagnosticInfo(communityId, actionLinkId)**
Get diagnostic information returned when an action link executes. Diagnostic information is given only for users who can access the action link.

API Version
33.0

Requires Chatter
No

Signature

```java
public static ConnectApi.ActionLinkDiagnosticInfo getActionLinkDiagnosticInfo(String communityId, String actionLinkId)
```

Parameters

**communityId**
Type: **String**
Use the ID for an Experience Cloud site, internal, or null.

**actionLinkId**
Type: **String**
The ID of the action link.

Return Value
Type: **ConnectApi.ActionLinkDiagnosticInfo**

**getActionLinkGroup(communityId, actionLinkGroupId)**
Get information about an action link group including state for the context user.

API Version
33.0
Requires Chatter
No

Signature

```java
public static ConnectApi.PlatformActionGroup getActionLinkGroup(String communityId,
String actionLinkGroupId)
```

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `actionLinkGroupId`
  Type: `String`
  The ID of the action link group.

Return Value

Type: `ConnectApi.PlatformActionGroup`

Usage

All action links must belong to a group. Action links in a group are mutually exclusive and share some properties. Action link groups are accessible by clients, unlike action link group definitions.

```java
getActionLinkGroupDefinition(communityId, actionLinkGroupId)
```
Get information about an action link group definition.

API Version
33.0

Requires Chatter
No

Signature

```java
public static ConnectApi.ActionLinkGroupDefinition getActionLinkGroupDefinition(String
communityId, String actionLinkGroupId)
```

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.
**actionLinkGroupId**

Type: `String`

The ID of the action link group.

---

Return Value

Type: `ConnectApi.ActionLinkGroupDefinition`

Usage

Information in the action link group definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link group definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

---

**Announcements Class**

Access information about announcements and post announcements.

**Namespace**

`ConnectApi`

**Usage**

Use the `ConnectApi.Announcements` class to get, create, update, and delete announcements. Use an announcement to highlight information. Users can discuss, like, and post comments on announcements. Deleting the feed post deletes the announcement.

This image shows an announcement displayed in a group. Creating an announcement also creates a feed item with the announcement text.
An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it’s deleted or replaced by another announcement.

**Announcements Methods**

The following are methods for Announcements. All methods are static.

**IN THIS SECTION:**

- `deleteAnnouncement(communityId, announcementId)`
  Delete an announcement.
- `getAnnouncement(communityId, announcementId)`
  Get an announcement.
- `getAnnouncements(communityId, parentId)`
  Get the first page of announcements.
- `getAnnouncements(communityId, parentId, pageParam, pageSize)`
  Get a page of announcements.
- `postAnnouncement(communityId, announcement)`
  Post an announcement.
- `updateAnnouncement(communityId, announcementId, expirationDate)`
  Update the expiration date of an announcement.

### deleteAnnouncement(communityId, announcementId)

Delete an announcement.

**API Version**

31.0

**Requires Chatter**

Yes

**Signature**

```java
public static void deleteAnnouncement(String communityId, String announcementId)
```

**Parameters**

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `announcementId`
  Type: `String`
  An announcement ID, which has a prefix of `0BT`. 
Return Value
Type: Void

Usage
To get a list of announcements in a group, call `getAnnouncements(communityId, parentId)` or `getAnnouncements(communityId, parentId, pageParam, pageSize)`.
To post an announcement to a group, call `postAnnouncement(communityId, announcement)`.

`getAnnouncement(communityId, announcementId)`
Get an announcement.

API Version
31.0

Requires Chatter
Yes

Signature
`public static ConnectApi.Announcement getAnnouncement(String communityId, String announcementId)`

Parameters
`communityId`
Type: String
Use the ID for an Experience Cloud site, internal, or null.
`announcementId`
Type: String
An announcement ID, which has a prefix of 0BT.

Return Value
Type: `ConnectApi.Announcement`

Usage
To get a list of announcements in a group, call `getAnnouncements(communityId,parentId)` or `getAnnouncements(communityId, parentId, pageParam, pageSize)`.
To post an announcement to a group, call `postAnnouncement(communityId, announcement)`.

`getAnnouncements(communityId, parentId)`
Get the first page of announcements.
public static ConnectApi.AnnouncementPage getAnnouncements(String communityId, String parentId)

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**parentId**
Type: String
ID of the parent entity for the announcement, that is, a group ID when the announcement appears in a group.

Return Value
Type: ConnectApi.AnnouncementPage

**getAnnouncements(communityId, parentId, pageParam, pageSize)**
Get a page of announcements.

public static ConnectApi.AnnouncementPage getAnnouncements(String communityId, String parentId, Integer pageParam, Integer pageSize)
Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**parentId**
Type: String
ID of the parent entity for the announcement, that is, a group ID when the announcement appears in a group.

**pageParam**
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of announcements per page.

Return Value
Type: ConnectApi.AnnouncementPage

**postAnnouncement** (communityId, announcement)
Post an announcement.

API Version
36.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.Announcement postAnnouncement(String communityId,
ConnectApi.AnnouncementInput announcement)
```

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**announcement**
Type: ConnectApi.AnnouncementInput
A ConnectApi.AnnouncementInput object.
Return Value
Type: `ConnectApi.Announcement`

`updateAnnouncement(communityId, announcementId, expirationDate)`
Update the expiration date of an announcement.

API Version
31.0

Requires Chatter
Yes

Signature
`public static ConnectApi.Announcement updateAnnouncement(String communityId, String announcementId, Datetime expirationDate)`

Parameters
`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

`announcementId`
Type: `String`
An announcement ID, which has a prefix of 0BT.

`expirationDate`
Type: `Datetime`
The Salesforce UI displays an announcement until 11:59 p.m. on this date unless another announcement is posted first. The Salesforce UI ignores the time value in the `expirationDate`. However, you can use the time value to create your own display logic in your own UI.

Return Value
Type: `ConnectApi.Announcement`

Usage
To get a list of announcements in a group, call `getAnnouncements(communityId, parentId)` or `getAnnouncements(communityId, parentId, pageParam, pageSize)`.
To post an announcement to a group, call `postAnnouncement(communityId, announcement)`.

**Chatter Class**
Access information about followers and subscriptions for records.
Namespace

ConnectApi

Chatter Methods
The following are methods for Chatter. All methods are static.

IN THIS SECTION:

- `deleteSubscription(communityId, subscriptionId)`
  Delete a subscription. Use this method to stop following a record, a user, or a file.

- `getFollowers(communityId, recordId)`
  Get the first page of followers for a record.

- `getFollowers(communityId, recordId, pageParam, pageSize)`
  Get a page of followers for a record.

- `getSubscription(communityId, subscriptionId)`
  Get information about a subscription.

- `submitDigestJob(period)`
  Submit a daily or weekly Chatter email digest job.

### `deleteSubscription(communityId, subscriptionId)`
Delete a subscription. Use this method to stop following a record, a user, or a file.

**API Version**

28.0

**Requires Chatter**

Yes

**Signature**

```java
public static void deleteSubscription(String communityId, String subscriptionId)
```

**Parameters**

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.

- `subscriptionId`
  Type: `String`
  The ID for a subscription.
Return Value
Type: Void

Usage
“Following” a user, group, or record is the same as “subscribing” to a user, group, or record. A “follower” is the user who followed the user, group, or record. A “subscription” is an object describing the relationship between the follower and the user, group, or record they followed.

To leave a group, call `deleteMember(communityId, membershipId)`.

Example
When you follow a user, the call to `ConnectApi.ChatterUsers.follow` returns a `ConnectApi.Subscription` object. To stop following the user, pass the `id` property of that object to this method.

```
ConnectApi.Chatter.deleteSubscription(null, '0E8RR0000004CnK0AU');
```

SEE ALSO:
- Follow a Record
- `follow(communityId, userId, subjectId)`

### `getFollowers(communityId, recordId)`
Get the first page of followers for a record.

API Version
28.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.FollowerPage getFollowers(String communityId, String recordId)
```

Parameters
- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `recordId`
  Type: `String`
  The ID for a record or the keyword `me`. 
Return Value
Type: `ConnectApi.FollowerPage`

Usage
“Following” a user, group, or record is the same as “subscribing” to a user, group, or record. A “follower” is the user who followed the user, group, or record. A “subscription” is an object describing the relationship between the follower and the user, group, or record they followed.

SEE ALSO:
  Follow a Record

`getFollowers(communityId, recordId, pageParam, pageSize)`
Get a page of followers for a record.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.FollowerPage getFollowers(String communityId, String recordId, Integer pageParam, Integer pageSize)

Parameters
`communityId`
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`.

`recordId`
Type: `String`
The ID for a record or the keyword `me`.

`pageParam`
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.FollowerPage`
Usage
“Following” a user, group, or record is the same as “subscribing” to a user, group, or record. A “follower” is the user who followed the user, group, or record. A “subscription” is an object describing the relationship between the follower and the user, group, or record they followed.

SEE ALSO:
Follow a Record

getSubscription(communityId, subscriptionId)
Get information about a subscription.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.Subscription getSubscription(String communityId, String subscriptionId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subscriptionId
Type: String
The ID for a subscription.

Return Value
Type: ConnectApi.Subscription

Usage
“Following” a user, group, or record is the same as “subscribing” to a user, group, or record. A “follower” is the user who followed the user, group, or record. A “subscription” is an object describing the relationship between the follower and the user, group, or record they followed.

SEE ALSO:
Follow a Record
**submitDigestJob(period)**
Submit a daily or weekly Chatter email digest job.

**API Version**
37.0

**Requires Chatter**
Yes

**Signature**
```java
public static ConnectApi.DigestJobRepresentation submitDigestJob(ConnectApi.DigestPeriod period)
```

**Parameters**

**period**
- **Type**: `ConnectApi.DigestPeriod`
- Time period that's included in a Chatter email digest. Values are:
  - `DailyDigest`—The email includes up to the 50 latest posts from the previous day.
  - `WeeklyDigest`—The email includes up to the 50 latest posts from the previous week.

**Return Value**
- **Type**: `ConnectApi.DigestJob`

**Usage**
The times when Chatter sends email digests are not configurable in the UI. To control when email digests are sent and to use this method, contact Salesforce to enable API-only Chatter Digests.

⚠️ **Warning**: Enabling API-only Chatter Digests disables the scheduled digests for your org. You must call the API for your users to receive their digests.

We recommend scheduling digest jobs by implementing the Apex `Scheduleable` interface with this method. To monitor your digest jobs from Setup, enter *Background Jobs* in the Quick Find box, then select *Background Jobs*.

**Example**
Schedule daily digests:
```java
global class ExampleDigestJob1 implements Scheduleable {
    global void execute(SchedulableContext context) {
        ConnectApi.Chatter.submitDigestJob(ConnectApi.DigestPeriod.DailyDigest);
    }
}
```
Schedule weekly digests:

```java
global class ExampleDigestJob2 implements Schedulable {
    global void execute(SchedulableContext context) {
        ConnectApi.Chatter.submitDigestJob(ConnectApi.DigestPeriod.WeeklyDigest);
    }
}
```

SEE ALSO:
Apex Scheduler

ChatterFavorites Class
Chatter favorites give you easy access to topics, list views, and feed searches.

Namespace
ConnectApi

Usage
Use Connect in Apex to get and delete topics, list views, and feed searches that have been added as favorites. Add topics and feed searches as favorites, and update the last view date of a feed search or list view feed to the current system time.

In this image of Salesforce, “Build Issues” is a topic, “All Accounts” is a list view, and “United” is a feed search:

ChatterFavorites Methods
The following are methods for ChatterFavorites. All methods are static.
IN THIS SECTION:

- addFavorite(communityId, subjectId, searchText)
  Add a feed search favorite for a user.
- addRecordFavorite(communityId, subjectId, targetId)
  Add a topic as a favorite.
- deleteFavorite(communityId, subjectId, favoriteId)
  Delete a favorite.
- getFavorite(communityId, subjectId, favoriteId)
  Get information about a favorite.
- getFavorites(communityId, subjectId)
  Get a list of favorites for a user.
- getFeedElements(communityId, subjectId, favoriteId)
  Get the first page of feed elements for a favorite.
- getFeedElements(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam)
  Get a page of feed elements for a favorite.
- getFeedElements(communityId, subjectId, favoriteId, recentCommentCount, elementsPerBundle, pageParam, pageSize, sortParam)
  Get a page of sorted feed elements for a favorite. Include no more than the specified number of comments per feed element.
- updateFavorite(communityId, subjectId, favoriteId, updateLastViewDate)
  Update the last view date of the saved search or list view feed to the current system time.

### addFavorite(communityId, subjectId, searchText)

Add a feed search favorite for a user.

**API Version**

28.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.FeedFavorite addFavorite(String communityId, String subjectId, String searchText)
```

**Parameters**

- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- **subjectId**
  Type: `String`
  The ID of the context user or the alias `me`.
searchText
    Type: String
    Specify the text of the search to be saved as a favorite. This method can only create a feed search favorite, not a list view favorite or a topic.

Return Value
Type: ConnectApi.FeedFavorite

addRecordFavorite(communityId, subjectId, targetId)
Add a topic as a favorite.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedFavorite addRecordFavorite(String communityId, String subjectId, String targetId)

Parameters

communityId
    Type: String
    Use the ID for an Experience Cloud site, internal, or null.

subjectId
    Type: String
    The ID of the context user or the alias me.

targetId
    Type: String
    The ID of the topic to add as a favorite.

Return Value
Type: ConnectApi.FeedFavorite

deleteFavorite(communityId, subjectId, favoriteId)
Delete a favorite.
API Version
28.0

Requires Chatter
Yes

Signature
public static Void deleteFavorite(String communityId, String subjectId, String favoriteId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

favoriteId
Type: String
The ID of a favorite.

Return Value
Type: Void

getFavorite(communityId, subjectId, favoriteId)
Get information about a favorite.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedFavorite getFavorite(String communityId, String subjectId, String favoriteId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

favoriteId
Type: String
The ID of a favorite.

Return Value
Type: ConnectApi.FeedFavorite

getFavorites(communityId, subjectId)
Get a list of favorites for a user.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedFavorite getFavorites(String communityId, String subjectId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

Return Value
Type: ConnectApi.FeedFavorite

getFeedElements(communityId, subjectId, favoriteId)
Get the first page of feed elements for a favorite.

API Version
31.0
Requires Chatter

Yes

Signature

public static ConnectApi.FeedElementPage getFeedElements(String communityId, String subjectId, String favoriteId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

favoriteId
Type: String
The ID of a favorite.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

setTestGetFeedElements(communityId, subjectId, favoriteld, result)
Testing ConnectApi Code

getFeedElements(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam)
Get a page of sorted feed elements for a favorite.

API Version
31.0

Requires Chatter
Yes
public static ConnectApi.FeedElementPage getFeedElements(String communityId, String subjectId, String favoriteId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

favoriteId
Type: String
The ID of a favorite.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

Return Value

Type: ConnectApi.FeedElementPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

  setTestGetFeedElements(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam, result)

Testing ConnectApi Code

getFeedElements(communityId, subjectId, favoriteId, recentCommentCount, elementsPerBundle, pageParam, pageSize, sortParam)

Get a page of sorted feed elements for a favorite. Include no more than the specified number of comments per feed element.

API Version

31.0

Requires Chatter

Yes

Signature

public static ConnectApi.FeedElementPage getFeedElements(String communityId, String subjectId, String favoriteId, Integer recentCommentCount, Integer elementsPerBundle, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

subjectId
  Type: String
  The ID of the context user or the alias me.

favoriteId
  Type: String
  The ID of a favorite.

recentCommentCount
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.
pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetFeedElements(communityId, subjectId, favoriteId, recentCommentCount, elementsPerBundle, pageParam, pageSize, sortParam, result)
Testing ConnectApi Code

updateFavorite(communityId, subjectId, favoriteId, updateLastViewDate)
Update the last view date of the saved search or list view feed to the current system time.

API Version
28.0

Requires Chatter
Yes
Signature

public static ConnectApi.FeedFavorite updateFavorite(String communityId, String subjectId, String favoriteId, Boolean updateLastViewDate)

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**subjectId**
Type: String
The ID of the context user or the alias me.

**favoriteId**
Type: String
The ID of a favorite.

**updateLastViewDate**
Type: Boolean
Specify whether to update the last view date of the specified favorite to the current system time (true) or not (false).

Return Value

Type: ConnectApi.FeedFavorite

ChatterFavorites Test Methods

The following are the test methods for ChatterFavorites. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

IN THIS SECTION:

- **setTestGetFeedElements(communityId, subjectId, favoritelId, result)**
  Register a ConnectApi.FeedElementPage object to be returned when getFeedElements is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- **setTestGetFeedElements(communityId, subjectId, favoritelId, pageParam, pageSize, sortParam, result)**
  Register a ConnectApi.FeedElementPage object to be returned when getFeedElements is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- **setTestGetFeedElements(communityId, subjectId, favoritelId, recentCommentCount, elementsPerBundle, pageParam, pageSize, sortParam, result)**
  Register a ConnectApi.FeedElementPage object to be returned when getFeedElements is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- **setTestGetFeedElements(communityId, subjectId, favoritelId, result)**
  Register a ConnectApi.FeedElementPage object to be returned when getFeedElements is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.
public static Void setTestGetFeedElements(String communityId, String subjectId, String favoriteId, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

favoriteId
Type: String
The ID of a favorite.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedElements(communityId, subjectId, favoriteId)
Testing ConnectApi Code

setTestGetFeedElements(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElements is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.
Parameters

communityId
   Type: String
   Use the ID for an Experience Cloud site, internal, or null.

subjectId
   Type: String
   The ID of the context user or the alias me.

favoriteId
   Type: String
   The ID of a favorite.

pageParam
   Type: String
   The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
   Type: Integer
   Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
   Type: ConnectApi.FeedSortOrder
   Values are:
   • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
   • CreatedDateDesc—Sorts by most recent creation date.
   • LastModifiedDateDesc—Sorts by most recent activity.
   • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
   • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

result
   Type: ConnectApi.FeedElementPage
   The object containing test data.

Return Value

Type: Void

SEE ALSO:

getFeedElements(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam)
Testing ConnectApi Code
setTestGetFeedElements(communityId, subjectId, favoriteId, recentCommentCount, elementsPerBundle, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElements is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElements(String communityId, String subjectId, String favoriteId, Integer recentCommentCount, Integer elementsPerBundle, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

favoriteId
Type: String
The ID of a favorite.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedElements(communityId, subjectId, favoriteId, recentCommentCount, elementsPerBundle, pageParam, pageSize, sortParam)

Retired ChatterFavorites Methods

The following methods for ChatterFavorites are retired.

IN THIS SECTION:
getFeedItems(communityId, subjectId, favoriteId)
Get the first page of feed items for a favorite.
getFeedItems(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam)
Get a page of sorted feed items for a favorite.
getFeedItems(communityId, subjectId, favoriteId, recentCommentCount, pageParam, pageSize, sortParam)
Get a page of sorted feed items for a favorite. Include no more than the specified number of comments per feed item.
setTestGetFeedItems(communityId, subjectId, favoriteId, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItems is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.
setTestGetFeedItems(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItems is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.
setTestGetFeedItems(communityId, subjectId, favoriteId, recentCommentCount, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItems is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

getFeedItems(communityId, subjectId, favoriteId)
Get the first page of feed items for a favorite.
API Version
28.0–31.0

⚠️ Important: In version 32.0 and later, use `getFeedElements(communityId, subjectId, favoriteId)`.

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedItemPage getFeedItems(String communityId, String subjectId, String favoriteId)
```

Parameters
- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.
- **subjectId**
  - Type: `String`
  - The ID of the context user or the alias `me`.
- **favoriteId**
  - Type: `String`
  - The ID of a favorite.

Return Value
- Type: `ConnectApi.FeedItemPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetFeedItems(communityId, subjectId, favoriteId, result)`
- Testing ConnectApi Code

```java
getFeedItems(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam)
```
Get a page of sorted feed items for a favorite.

API Version
28.0–31.0
**Important:** In version 32.0 and later, use `getFeedElements(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam)`.

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedItemPage getFeedItems(String communityId, String subjectId, String favoriteId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `subjectId`
  - Type: `String`
  - The ID of the context user or the alias `me`.

- `favoriteId`
  - Type: `String`
  - The ID of a favorite.

- `pageParam`
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- `pageSize`
  - Type: `Integer`
  - Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- `sortParam`
  - Type: `ConnectApi.FeedSortOrder`
  - Values are:
    - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
    - `CreatedDateDesc`—Sorts by most recent creation date.
    - `LastModifiedDateDesc`—Sorts by most recent activity.
    - `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
    - `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
  - Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.
Return Value

Type: `ConnectApi.FeedItemPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetFeedItems(communityId, subjectId, favoriteld, pageParam, pageSize, sortParam, result)`
- Testing ConnectApi Code

```java
getFeedItems(communityId, subjectId, favoriteId, recentCommentCount, pageParam, pageSize, sortParam)
```

Get a page of sorted feed items for a favorite. Include no more than the specified number of comments per feed item.

API Version

29.0–31.0

**Important:** In version 32.0 and later, use `getFeedElements(communityId, subjectId, favoriteld, recentCommentCount, elementsPerBundle, pageParam, pageSize, sortParam)`.

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedItemPage getFeedItems(String communityId, String subjectId, String favoriteId, Integer recentCommentCount, String pageParam, Integer pageSize, FeedSortOrder sortParam)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or null.

- `subjectId`
  - Type: `String`
  - The ID of the context user or the alias me.

- `favoriteId`
  - Type: `String`
  - The ID of a favorite.

- `recentCommentCount`
  - Type: `Integer`
The maximum number of comments to return with each feed item. The default value is 3.

**pageParam**

Type: *String*

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**

Type: *Integer*

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**

Type: `ConnectApi.FeedSortOrder`

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**Return Value**

Type: `ConnectApi.FeedItemPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

- `setTestGetFeedItems(communityId, subjectId, favoriteId, recentCommentCount, pageParam, pageSize, sortParam, result)`

Testing ConnectApi Code

**setTestGetFeedItems(communityId, subjectId, favoriteId, result)**

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItems` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**

28.0–31.0
Signature

```java
public static Void setTestGetFeedItems(String communityId, String subjectId, String favoriteId, ConnectApi.FeedItemPage result)
```

Parameters

- `communityId`
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- `subjectId`
  - Type: String
  - The ID of the context user or the alias me.

- `favoriteId`
  - Type: String
  - The ID of a favorite.

- `result`
  - Type: `ConnectApi.FeedItemPage`
  - The object containing test data.

Return Value

- Type: Void

SEE ALSO:

- `getFeedItems(communityId, subjectId, favoriteId)`
- Testing ConnectApi Code

**setTestGetFeedItems(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam, result)**

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItems` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

- 28.0–31.0

Signature

```java
public static Void setTestGetFeedItems(String communityId, String subjectId, String favoriteId, String pageParam, Integer pageSize, FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```
Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**subjectId**
Type: String
The ID of the context user or the alias me.

**favoriteId**
Type: String
The ID of a favorite.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**result**
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- getFeedItems(communityId, subjectId, favoriteId, pageParam, pageSize, sortParam)
- Testing ConnectApi Code
setTestGetFeedItems(communityId, subjectId, favoriteId, recentCommentCount, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedItemPage object to be returned when getFeedItems is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
29.0–31.0

Signature
public static Void setTestGetFeedItems(String communityId, String subjectId, String favoriteId, Integer recentCommentCount, String pageParam, Integer pageSize, FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

favoriteId
Type: String
The ID of a favorite.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.

- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

```
result
  Type: `ConnectApi.FeedItemPage`
  The object containing test data.
```

**Return Value**
Type: `Void`

**SEE ALSO:**
- `getFeedItems(communityId, subjectId, favoritedId, recentCommentCount, pageParam, pageSize, sortParam)`
- Testing `ConnectApi` Code

### ChatterFeeds Class

Get, post, and delete feed elements, likes, comments, and bookmarks. You can also search feed elements, share feed elements, and vote on polls.

**Namespace**
`ConnectApi`

**Usage**

In API versions 30.0 and earlier, a Chatter feed was a container of feed items. In API version 31.0, the definition of a feed expanded to include new objects that didn’t entirely fit the feed item model. The Chatter feed became a container of `feed elements`. The abstract class `ConnectApi.FeedElement` was introduced as a parent class to the existing `ConnectApi.FeedItem` class. The subset of properties that feed elements share was moved into the `ConnectApi.FeedElement` class. Because feeds and feed elements are the core of Chatter, understanding them is crucial to developing applications with Connect in Apex. For detailed information, see Feeds and Feed Elements.

**Important:** Feed item methods aren’t available in version 32.0. In version 32.0 and later, use feed element methods.

Message segments in a feed item are typed as `ConnectApi.MessageSegment`. Feed item capabilities are typed as `ConnectApi.FeedItemCapability`. Record fields are typed as `ConnectApi.AbstractRecordField`. These classes are all abstract and have several concrete subclasses. At runtime you can use `instanceof` to check the concrete types of these objects and then safely proceed with the corresponding downcast. When you downcast, you must have a default case that handles unknown subclasses.

**Important:** The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.
ChatterFeeds Methods

The following are methods for ChatterFeeds. All methods are static.

IN THIS SECTION:
  createStream(communityId, streamInput)
  Create a Chatter feed stream.
  deleteComment(communityId, commentId)
  Delete a comment.
  deleteFeedElement(communityId, feedElementId)
  Delete a feed element.
  deleteLike(communityId, likeId)
  Delete a like on a comment or post.
  deleteStream(communityId, streamId)
  Delete a Chatter feed stream.
  getComment(communityId, commentId)
  Get a comment.
  getCommentBatch(communityId, commentIds)
  Get a list of comments.
  getCommentInContext(communityId, commentId, pageSize)
  Get a threaded comment in the context of its parent comments and post.
  getCommentsForFeedElement(communityId, feedElementId)
  Get comments for a feed element.
  getCommentsForFeedElement(communityId, feedElementId, threadedCommentsCollapsed)
  Get comments in a threaded style for a feed element.
  getCommentsForFeedElement(communityId, feedElementId, pageParam, pageSize)
  Get a page of comments for a feed element.
  getCommentsForFeedElement(communityId, feedElementId, pageParam, pageSize, threadedCommentsCollapsed)
  Get a page of comments in a threaded style for a feed element.
  getCommentsForFeedElement(communityId, feedElementId, threadedCommentsCollapsed, sortParam)
  Get sorted comments in a threaded style for a feed element.
  getCommentsForFeedElement(communityId, feedElementId, pageParam, pageSize, threadedCommentsCollapsed, sortParam)
  Get a page of sorted comments in a threaded style for a feed element.
  getCommentsForFeedElement(communityId, feedElementId, sortParam)
  Get sorted comments for a feed element.
  getCommentsForFeedElement(communityId, feedElementId, sortParam, threadedCommentsCollapsed)
  Get sorted comments in a threaded style for a feed element.
  getExtensions(communityId, pageParam, pageSize)
  Get extensions.
  getFeed(communityId, feedType)
  Get a feed.
getFeed(communityId, feedType, sortParam)
Get a sorted feed.

gerFeed(communityId, feedType, subjectId)
Get a feed for a record or user.

gerFeed(communityId, feedType, subjectId, sortParam)
Get a sorted feed for a record or user.

gerFeedDirectory(String)
Get a list of all feeds available to the context user.

gerFeedElement(communityId, feedElementId)
Get a feed element.

gerFeedElement(communityId, feedElementId, commentSort)
Get a feed element with sorted comments.

gerFeedElement(communityId, feedElementId, threadedCommentsCollapsed)
Get a feed element and its comments in a threaded style.

gerFeedElement(communityId, feedElementId, threadedCommentsCollapsed, commentSort)
Get a feed element and its sorted comments in a threaded style.

gerFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle)
Get a feed element with the specified number of elements per bundle including no more than the specified number of comments per feed element.

gerFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle, threadedCommentsCollapsed)
Get a feed element with its comments in a threaded style with the specified number of elements per bundle and comments per feed element.

gerFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle, threadedCommentsCollapsed, commentSort)
Get a feed element with its sorted comments in a threaded style with the specified number of elements per bundle and comments per feed element.

gerFeedElementBatch(communityId, feedElementIds)
Get a list of feed elements.

gerFeedElementPoll(communityId, feedElementId)
Get the poll associated with a feed element.

gerFeedElementsFromBundle(communityId, feedElementId)
Get feed elements from a bundle.

gerFeedElementsFromBundle(communityId, feedElementId, pageParam, pageSize, elementsPerBundle, recentCommentCount)
Get a page of feed elements from a bundle. Specify the number of elements per bundle and include no more than the specified number of comments per feed element.

gerFeedElementsFromFeed(communityId, feedType)
getFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)

getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)
Get a page of sorted feed elements from the Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview feeds. Each feed element contains no more than the specified number of comments.

getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter)
Get a page of sorted and filtered feed elements from the Home feed. Each feed element contains no more than the specified number of comments.

getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, threadedCommentsCollapsed)
Get a page of filtered and sorted feed elements with comments in a threaded style from the Home feed. Each feed element contains no more than the specified number of comments.

getFeedElementsFromFeed(communityId, feedType, subjectId)
Get feed elements from any feed other than Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview for a user or record.

getFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam)
Get a page of sorted feed elements from any feed other than Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam)
Get a page of sorted feed elements from any feed other than Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview. Each feed element includes no more than the specified number of comments.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)
Get a page of sorted feed elements from a record feed. Each feed element includes no more than the specified number of comments. Specify whether to return feed elements posted by internal (non-Experience Cloud site) users only.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter)
Get a page of sorted and filtered feed elements from the UserProfile feed.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed)
Get a page of feed elements with comments in a threaded style from the UserProfile feed.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, customFilter)
Get a page of sorted and filtered feed elements from the case feed.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly)
Get a page of sorted feed elements from a record feed. Specify the number of elements per bundle and include no more than the specified number of comments per feed element. Specify whether to return feed elements posted by internal (non-Experience Cloud site) users only.
getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, filter)

Get a page of sorted and filtered feed elements from a record feed. Specify the number of elements per bundle and include no more than the specified number of comments per feed element. Specify whether to return feed elements posted by internal (non-Experience Cloud site) users only.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, filter, threadedCommentsCollapsed)

Get a page of sorted and filtered feed elements with comments in a threaded style for a record feed. Specify the number of elements per bundle and include no more than the specified number of comments per feed element. Specify whether to return feed elements posted by internal (non-Experience Cloud site) users only.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, customFilter)

Get a page of sorted and filtered feed elements from a case feed.

getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, customFilter, threadedCommentsCollapsed)

Get a page of filtered and sorted feed elements with comments in a threaded style from a case feed.

getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix)

Get feed elements from a feed filtered by a key prefix for a user.

getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam)

Get a page of sorted feed elements from a feed filtered by a key prefix for a user.

getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam)

Get a page of sorted feed elements from a feed filtered by a key prefix for a user. Each feed element contains no more than the specified number of comments.

getFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince)

Get a page of feed elements from a feed filtered by a key prefix for a user. Include only feed elements that have been updated since the time specified in the updatedSince parameter.

getFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)

Get a page of feed elements from the Company, DirectMessageModeration, Home, and Moderation feeds. Include only feed elements that have been updated since the time specified in the updatedSince parameter. Each feed element contains no more than the specified number of comments.

getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince)

Get a page of feed elements from the Home feed. Include only feed elements that have been updated since the time specified in the updatedSince parameter. Each feed element contains no more than the specified number of comments.

getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly)

Get a page of feed elements from a record feed. Include only feed elements that have been updated since the time specified in the updatedSince parameter. Specify whether to return feed elements posted by internal (non-Experience Cloud site) users only.
getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, filter)
Get a page of filtered feed elements from a UserProfile feed. Include only feed elements that have been updated since the time specified in the updatedSince parameter.

getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, customFilter)
Get a page of filtered feed elements from a case feed. Include only feed elements that have been updated since the time specified in the updatedSince parameter.

getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly)
Get a page of feed elements from a record feed. Include only feed elements that have been updated since the time specified in the updatedSince parameter. Specify the maximum number of feed elements in a bundle and whether to return feed elements posted by internal (non-Experience Cloud site) users only.

getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, filter)
Get a page of filtered feed elements from a record feed. Include only feed elements that have been updated since the time specified in the updatedSince parameter. Specify the maximum number of feed elements in a bundle and whether to return feed elements posted by internal (non-Experience Cloud site) users only.

getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly)
Get a page of filtered feed elements from a case feed. Include only feed elements that have been updated since the time specified in the updatedSince parameter.

getFeedWithFeedElements(communityId, feedType, pageSize)
Get information about a feed and a page of feed elements from the feed.

getFeedWithFeedElements(communityId, feedType, pageSize, recentCommentCount)
Get a page of information about the feed and the feed elements with the specified number of comments per feed element from the feed.

getFilterFeed(communityId, subjectId, keyPrefix)
Get a feed filtered by a key prefix for a user.

getFilterFeed(communityId, subjectId, keyPrefix, sortParam)
Get a sorted feed filtered by a key prefix for a user.

getFilterFeedDirectory(communityId, subjectId)
Get a feed directory of filter feeds available to the context user.

getLike(communityId, likeId)
Get a like on a post or comment.

getLikesForComment(communityId, commentId)
Get likes for a comment.

getLikesForComment(communityId, commentId, pageParam, pageSize)
Get a page of likes for a comment.

getLikesForFeedElement(communityId, feedElementId)
Get likes for a feed element.

getLikesForFeedElement(communityId, feedElementId, pageParam, pageSize)
Get a page of likes for a feed element.
getLinkMetadata(communityId, urls)
Get link metadata for URLs.

getPinnedFeedElementsFromFeed(communityId, feedType, subjectId)
Get pinned feed elements from a group or topic feed.

getReadByForFeedElement(communityId, feedElementId)
Get information about who read a feed element and when.

getReadByForFeedElement(communityId, feedElementId, pageParam, pageSize)
Get a page of information about who read a feed element and when.

getRelatedPosts(communityId, feedElementId, filter, maxResults)
Get posts related to the context feed element.

getStream(communityId, streamId)
Get information about a Chatter feed stream.

getStream(communityId, streamId, globalScope)
Get information about a Chatter feed stream, regardless of Experience Cloud site.

getStreams(communityId)
Get the Chatter feed streams for the context user.

getStreams(communityId, sortParam)
Get and sort the Chatter feed streams for the context user.

getStreams(communityId, pageParam, pageSize)
Get a page of Chatter feed streams for the context user.

getStreams(communityId, pageParam, pageSize, sortParam)
Get a sorted page of Chatter feed streams for the context user.

getStreams(communityId, pageParam, pageSize, sortParam, globalScope)
Get a sorted page of Chatter feed streams from all Enterprise Cloud sites for the context user.

getSupportedEmojis()
Get supported emojis for the org.

getThreadsForFeedComment(communityId, commentId)
Get threaded comments for a comment.

getThreadsForFeedComment(communityId, commentId, pageParam, pageSize)
Get a page of threaded comments for a comment.

getThreadsForFeedComment(communityId, commentId, threadedCommentsCollapsed)
Access the comments capability for a comment.

getTopUnansweredQuestions(communityId) (Pilot)
Get top unanswered questions for the context user in an Experience Cloud site.

getTopUnansweredQuestions(communityId, filter) (Pilot)
Get filtered top unanswered questions for the context user in an Experience Cloud site.

getTopUnansweredQuestions(communityId, pageSize) (Pilot)
Get a page of top unanswered questions for the context user in an Experience Cloud site.

getTopUnansweredQuestions(communityId, filter, pageSize) (Pilot)
Get a page of filtered top unanswered questions for the context user in an Experience Cloud site.
getVotesForComment(communityId, commentId, vote)
Get the first page of users who upvoted or downvoted a comment.
getVotesForComment(communityId, commentId, vote, pageParam, pageSize)
Get a page of users who upvoted or downvoted a comment.
getVotesForFeedElement(communityId, feedElementId, vote)
Get the first page of users who upvoted or downvoted a feed element.
getVotesForFeedElement(communityId, feedElementId, vote, pageParam, pageSize)
Get a page of users who upvoted or downvoted a feed element.

isCommentEditableByMe(communityId, commentId)
Discover whether the context user can edit a comment.
isFeedElementEditableByMe(communityId, feedElementId)
Discover whether the context user can edit a feed element.
isModified(communityId, feedType, subjectId, since)
Discover whether a news feed has been updated or changed. Use this method to poll a news feed for updates.

likeComment(communityId, commentId)
Like a comment for the context user.
likeFeedElement(communityId, feedElementId)
Like a feed element.
postCommentToFeedElement(communityId, feedElementId, text)
Post a plain-text comment to a feed element.
postCommentToFeedElement(communityId, feedElementId, comment, feedElementFileUpload)
Post a rich-text comment to a feed element. Use this method to include mentions and to attach a file.
postFeedElement(communityId, subjectId, feedElementType, text)
Post a plain-text feed element.
postFeedElement(communityId, feedElement)
Post a rich-text feed element. Include mentions and hashtag topics, attach already uploaded files to a feed element, and associate action link groups with a feed element. You can also use this method to share a feed element and add a comment.
postFeedElementBatch(communityId, feedElements)
Post a list of feed elements.
publishDraftFeedElement(communityId, feedElementId, feedElement)
Publish a draft feed element.
searchFeedElements(communityId, q)
Get the first page of feed elements that match the search criteria.
searchFeedElements(communityId, q, sortParam)
Get the first page of sorted feed elements that match the search criteria.
searchFeedElements(communityId, q, threadedCommentsCollapsed)
Get the feed elements and comments that match the search criteria.
searchFeedElements(communityId, q, pageParam, pageSize)
Get a page of feed elements that match the search criteria.
searchFeedElements(communityId, q, pageParam, pageSize, sortParam)
Get a page of sorted feed elements that match the search criteria.
searchFeedElements(communityId, q, pageParam, pageSize, threadedCommentsCollapsed)
Get a page of feed elements with comments in a threaded style that match the search criteria.

searchFeedElements(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)
Get a page of sorted feed elements that match the search criteria. Each feed element includes no more than the specified number of comments.

searchFeedElementsInFeed(communityId, feedType, q)
Get the feed elements from the Company, DirectMessageModeration, Home, Moderation, and PendingReview feeds that match the search criteria.

searchFeedElementsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)
Get a page of sorted feed elements from the Company, DirectMessageModeration, Home, Moderation, and PendingReview feeds that match the search criteria.

searchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Get a page of sorted feed elements from the Company, DirectMessageModeration, Home, Moderation, and PendingReview feeds that match the search criteria. Each feed element includes no more than the specified number of comments.

searchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter)
Get a page of sorted and filtered feed elements from the Home feed that match the search criteria. Each feed element includes no more than the specified number of comments.

searchFeedElementsInFeed(communityId, feedType, subjectId, q)
Get the feed elements from a feed that match the search criteria.

searchFeedElementsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q)
Get a page of sorted feed elements from a feed for a record or user that match the search criteria.

searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Get a page of sorted feed elements from a feed that match the search criteria. Each feed element includes no more than the specified number of comments.

searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter)
Get a page of sorted and filtered feed elements from a UserProfile feed that match the search criteria.

searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, customFilter)
Get a page of sorted and filtered feed elements from a case feed that match the search criteria.

searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly)
Get a page of sorted feed elements from a feed for a record or user that match the search criteria. Each feed element includes no more than the specified number of comments. Specify whether to return feed elements posted by internal (non-Experience Cloud site) users only.

searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, filter)
Get a page of sorted and filtered feed elements from a feed for a record or user that match the search criteria. Each feed element includes no more than the specified number of comments. Specify whether to return feed elements posted by internal (non-Experience Cloud site) users only.
searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, customFilter)
Get a page of sorted and filtered feed elements from a case feed that match the search criteria.

searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q)
Get the feed elements from a feed filtered by a key prefix that match the search criteria.

searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q)
Get a page of sorted feed elements from a feed filtered by a key prefix that match the search criteria.

searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Get a page of sorted feed elements from a feed filtered by a key prefix that match the search criteria. Each feed element includes no more than the specified number of comments.

searchStreams(communityId, q)
Search the Chatter feed streams for the context user.

searchStreams(communityId, q, sortParam)
Search and sort the Chatter feed streams for the context user.

searchStreams(communityId, q, pageParam, pageSize)
Search the Chatter feed streams for the context user and return a page of results.

searchStreams(communityId, q, pageParam, pageSize, sortParam)
Search the Chatter feed streams for the context user and return a sorted page of results.

searchStreams(communityId, q, pageParam, pageSize, sortParam, globalScope)
Search the Chatter feed streams from all Experience Cloud sites for the context user and return a sorted page of results.

setCommentIsVerified(communityId, commentId, isVerified)
Mark a comment as verified or unverified.

setCommentIsVerifiedByAnonymized(communityId, commentId, isVerified, isVerifiedByAnonymized)
Mark a comment as verified by an anonymous user.

setCommentVote(communityId, commentId, upDownVote)
Upvote or downvote a comment.

setFeedCommentStatus(communityId, commentId, status)
Set the status of a comment.

setFeedElementIsClosed(communityId, feedElementId, isClosed)
Set a feed element to closed.

setFeedElementVote(communityId, feedElementId, upDownVote)
Upvote or downvote a feed element.

setFeedEntityStatus(communityId, feedElementId, status)
Set the status of a feed post.

setIsMutedByMe(communityId, feedElementId, isMutedByMe)
Mute or unmute a feed element.

setIsReadByMe(communityId, feedElementId, readBy)
Mark a feed element as read for the context user using an input class.

setIsReadByMe(communityId, feedElementId, isReadByMe)
Mark a feed element as read for the context user.
updateComment(communityId, commentId, comment)
Edit a comment.

updateDirectMessage(communityId, feedElementId, directMessage)
Update the members of a direct message.

updateFeedElement(communityId, feedElementId, feedElement)
Edit a feed element.

updateFeedElementBookmarks(communityId, feedElementId, bookmarks)
Bookmark a feed element or remove a bookmark from a feed element using an input class.

updateFeedElementBookmarks(communityId, feedElementId, isBookmarkedByCurrentUser)
Bookmark a feed element or remove a bookmark from a feed element.

updateFeedElementReadByCapabilityBatch(communityId, feedElementIds, readBy)
Mark multiple feed elements as read by the context user at the same time using an input class.

updateFeedElementReadByCapabilityBatch(communityId, feedElementIds, isReadByMe)
Mark multiple feed elements as read by the context user at the same time.

updateLikeForComment(communityId, commentId, isLikedByCurrentUser)
Like or unlike a comment.

updateLikeForFeedElement(communityId, feedElementId, isLikedByCurrentUser)
Like or unlike a feed element.

updatePinnedFeedElements(communityId, feedType, subjectId, pin)
Pin or unpin feed elements to a group or topic feed.

updateStream(communityId, streamId, streamInput)
Update a Chatter feed stream.

voteOnFeedElementPoll(communityId, feedElementId, myChoiceId)
Vote on a poll or change your vote on a poll.

createStream(communityId, streamInput)
Create a Chatter feed stream.

API Version
39.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterStream createStream(String communityId, ConnectApi.ChatterStreamInput streamInput)
Parameters

```java
constructorName(String constructorName)
```

Type: `String`

The name of a constructor.

Return Value

Type: `null`

constructorSave(communityId)

Delete a constructor.

API Version

28.0

Requires Chatter

Yes

Signature

```java
public constructorSave(String communityId)
```

Parameters

```java
communityId(String communityId)
```

Type: `String`

The ID for an Experience Cloud site, internal, or null.

deleteComment(communityId, commentId)

Delete a comment.

API Version

28.0

Requires Chatter

Yes

Signature

```java
public static Void deleteComment(String communityId, String commentId)
```

Parameters

```java
communityId(String communityId)
```

Type: `String`

Use the ID for an Experience Cloud site, internal, or null.

```java
commentId(String commentId)
```

Type: `String`

The ID for a comment.

Return Value

Type: `Void`

deleteFeedElement(communityId, feedElementId)

Delete a feed element.

API Version

31.0
Requires Chatter
Yes

Signature
public static deleteFeedElement(String communityId, String feedElementId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

Return Value
Type: Void

deleteLike(communityId, likeId)
Delete a like on a comment or post.

API Version
28.0

Requires Chatter
Yes

Signature
public static Void deleteLike(String communityId, String likeId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

likeId
Type: String
The ID for a like.

Return Value
Type: Void
**deleteStream(communityId, streamId)**
Delete a Chatter feed stream.

API Version
39.0

Requires Chatter
Yes

Signature
```java
public static Void deleteStream(String communityId, String streamId)
```

Parameters
- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
- **streamId**
  Type: String
  ID of the Chatter feed stream.

Return Value
Type: Void

**getComment(communityId, commentId)**
Get a comment.

API Version
28.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.Comment getComment(String communityId, String commentId)
```
Parameters

`communityId`
Type: String
Use the ID for an Experience Cloud site, `internal`, or `null`.

`commentId`
Type: String
The ID for a comment.

Return Value
Type: `ConnectApi.Comment`

`getCommentBatch(communityId, commentIds)`
Get a list of comments.

API Version
42.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.BatchResult[] getCommentBatch(String communityId, List<String> commentIds)
```

Parameters

`communityId`
Type: String
Use the ID for an Experience Cloud site, `internal`, or `null`.

`commentIds`
Type: `List<String>`
A list of up to 100 comment IDs.

Return Value
Type: `ConnectApi.BatchResult[]`

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.Comment` object and errors for comments that didn't load.

`getCommentInContext(communityId, commentId, pageSize)`
Get a threaded comment in the context of its parent comments and post.
public static ConnectApi.FeedElement getCommentInContext(String communityId, String commentId, Integer pageSize)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

commentId
Type: String
ID of the comment.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you don’t specify a value, the default size is 25.

Return Value

Type: ConnectApi.FeedElement
If the comment doesn’t support the comments capability, the return value is ConnectApi.NotFoundException.

commentInContext(communityId, commentId, pageSize)
Get comments for a feed element.

getCommentsForFeedElement(communityId, feedElementId)
Get comments for a feed element.
Signature

```java
public static ConnectApi.CommentPage getCommentsForFeedElement(String communityId,
String feedElementId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `feedElementId`
  - Type: `String`
  - ID of the feed element.

Return Value

Type: `ConnectApi.CommentPage`

If the feed element doesn’t support the Comments capability, the return value is `ConnectApi.NotFoundException`.

**getCommentsForFeedElement(communityId, feedElementId, threadedCommentsCollapsed)**

Get comments in a threaded style for a feed element.

API Version

44.0

Available to Guest Users

44.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.CommentPage getCommentsForFeedElement(String communityId,
String feedElementId, Boolean threadedCommentsCollapsed)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `feedElementId`
  - Type: `String`
  - ID of the feed element.
threadedCommentsCollapsed
  Type: Boolean
  Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value
Type: ConnectApi.CommentPage
If the feed element doesn’t support the Comments capability, the return value is ConnectApi.NotFoundException.

getCommentsForFeedElement(communityId, feedElementId, pageParam, pageSize)
Get a page of comments for a feed element.

API Version
32.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.CommentPage getCommentsForFeedElement(String communityId, String feedElementId, String pageParam, Integer pageSize)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

feedElementId
  Type: String
  ID of the feed element.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of comments per page. Valid values are from 1 through 100. If you pass null, the default size is 25.
Return Value
Type: `ConnectApi.CommentPage`
If the feed element doesn't support the Comments capability, the return value is `ConnectApi.NotFoundException`.

```java
public static ConnectApi.CommentPage getCommentsForFeedElement(String communityId, String feedElementId, String pageParam, Integer pageSize, Boolean threadedCommentsCollapsed)
```
Get a page of comments in a threaded style for a feed element.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.CommentPage getCommentsForFeedElement(String communityId, String feedElementId, String pageParam, Integer pageSize, Boolean threadedCommentsCollapsed)
```

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `feedElementId`
  Type: `String`
  ID of the feed element.

- `pageParam`
  Type: `String`
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- `pageSize`
  Type: `Integer`
  Specifies the number of comments per page. Valid values are from 1 through 100. If you pass `null`, the default size is 25.

- `threadedCommentsCollapsed`
  Type: `Boolean`
  Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

1099
Return Value
Type: `ConnectApi.CommentPage`
If the feed element doesn’t support the Comments capability, the return value is `ConnectApi.NotFoundException`.

`getCommentsForFeedElement(communityId, feedElementId, threadedCommentsCollapsed, sortParam)`
Get sorted comments in a threaded style for a feed element.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.CommentsCapability getCommentsForFeedElement(String communityId, String feedElementId, Boolean threadedCommentsCollapsed, ConnectApi.FeedCommentSortOrder sortParam)
```

Parameters
```
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

feedElementId
  Type: String
  ID of the feed element.

threadedCommentsCollapsed
  Type: Boolean
  Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

sortParam
  Type: `ConnectApi.FeedCommentSortOrder`
```

Order of comments. Values are:
- `CreatedDateLatestAsc`—Sorts by most recently created comments in ascending order.
- `CreatedDateOldestAsc`—Sorts by oldest comments in ascending order.
- `Relevance`—Sorts by most relevant content.
Return Value

Type: ConnectApi.CommentPage

If the feed element doesn't support the Comments capability, the return value is ConnectApi.NotFoundException.

**getCommentsForFeedElement(communityId, feedElementId, pageParam, pageSize, threadedCommentsCollapsed, sortParam)**

Get a page of sorted comments in a threaded style for a feed element.

**API Version**

44.0

**Available to Guest Users**

44.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.CommentPage getCommentsForFeedElement(String communityId, String feedElementId, String pageParam, Integer pageSize, Boolean threadedCommentsCollapsed, ConnectApi.FeedCommentSortOrder sortParam)
```

**Parameters**

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **feedElementId**
  - Type: String
  - ID of the feed element.

- **pageParam**
  - Type: String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of comments per page. Valid values are from 1 through 100. If you pass null, the default size is 25.

- **threadedCommentsCollapsed**
  - Type: Boolean
  - Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.
sortParam
Type: ConnectApi.FeedCommentSortOrder
Order of comments. Values are:
• CreatedDateLatestAsc—Sorts by most recently created comments in ascending order.
• CreatedDateOldestAsc—Sorts by oldest comments in ascending order.
• Relevance—Sorts by most relevant content.

Return Value
Type: ConnectApi.CommentPage
If the feed element doesn’t support the Comments capability, the return value is ConnectApi.NotFoundException.

getCommentsForFeedElement(communityId, feedElementId, sortParam)
Get sorted comments for a feed element.

API Version
41.0

Available to Guest Users
41.0

Requires Chatter
Yes

Signature
public static ConnectApi.CommentsCapability getCommentsForFeedElement(String communityId, String feedElementId, ConnectApi.FeedCommentSortOrder sortParam)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

sortParam
Type: ConnectApi.FeedCommentSortOrder
Order of comments. Values are:
• CreatedDateLatestAsc—Sorts by most recently created comments in ascending order.
• CreatedDateOldestAsc—Sorts by oldest comments in ascending order.
• Relevance—Sorts by most relevant content.

Return Value
Type: ConnectApi.CommentsCapability
If the feed element doesn’t support the Comments capability, the return value is ConnectApi.NotFoundException.

getCommentsForFeedElement(communityId, feedElementId, sortParam, threadedCommentsCollapsed)
Get sorted comments in a threaded style for a feed element.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.CommentsCapability getCommentsForFeedElement(String communityId, String feedElementId, ConnectApi.FeedCommentSortOrder sortParam, Boolean threadedCommentsCollapsed)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

sortParam
Type: ConnectApi.FeedCommentSortOrder
Order of comments. Values are:
• CreatedDateLatestAsc—Sorts by most recently created comments in ascending order.
• CreatedDateOldestAsc—Sorts by oldest comments in ascending order.
• Relevance—Sorts by most relevant content.

threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value
Type: ConnectApi.CommentsCapability
If the feed element doesn’t support the Comments capability, the return value is ConnectApi.NotFoundException.

getExtensions(communityId, pageParam, pageSize)
Get extensions.

API Version
40.0

Available to Guest Users
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.ExtensionDefinitions getExtensions(String communityId, String pageParam, Integer pageSize)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. The default size is 15.

Return Value
Type: ConnectApi.ExtensionDefinitions

getFeed(communityId, feedType)
Get a feed.
public static ConnectApi.Feed getFeed(String communityId, ConnectApi.FeedType feedType)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

Return Value
Type: ConnectApi.Feed

getFeed(communityId, feedType, sortParam)
Get a sorted feed.
Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`.

`feedType`
Type: `ConnectApi.FeedType`
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.
If `feedType` is `DirectMessages`, `sortParam` must be `LastModifiedDateDesc`.

Return Value
Type: `ConnectApi.Feed`

`getFeed(communityId, feedType, subjectId)`
Get a feed for a record or user.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
`public static ConnectApi.Feed getFeed(String communityId, ConnectApi.FeedType feedType, String subjectId)`
Parameters

`communityId`
- Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

`feedType`
- Type: `ConnectApi.FeedType`
  - The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

`subjectId`
- Type: String
  - If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

Return Value
- Type: `ConnectApi.Feed`

`getFeed(communityId, feedType, subjectId, sortParam)`

Get a sorted feed for a record or user.

API Version
- 28.0

Available to Guest Users
- 32.0

Requires Chatter
- Yes

Signature

```java
public static ConnectApi.Feed getFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, ConnectApi.FeedSortOrder sortParam)
```

Parameters

`communityId`
- Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

`feedType`
- Type: `ConnectApi.FeedType`
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.Feed

getFeedDirectory(String)
Get a list of all feeds available to the context user.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedDirectory getFeedDirectory(String communityId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.
Return Value
Type: ConnectApi.FeedDirectory

getFeedElement(communityId, feedElementId)
Get a feed element.

API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

Return Value
Type: ConnectApi.FeedElement

getFeedElement(communityId, feedElementId, commentSort)
Get a feed element with sorted comments.

API Version
41.0

Available to Guest Users
41.0
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, ConnectApi.FeedCommentSortOrder commentSort)

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**feedElementId**
Type: String
ID of the feed element.

**commentSort**
Type: ConnectApi.FeedCommentSortOrder
Order of comments.
- CreatedDateLatestAsc—Sorts by most recently created comments in ascending order.
- CreatedDateOldestAsc—Sorts by oldest comments in ascending order.
- Relevance—Sorts by most relevant content.
The default value is CreatedDateLatestAsc.

Return Value

Type: ConnectApi.FeedElement

**getFeedElement(communityId, feedElementId, threadedCommentsCollapsed)**
Get a feed element and its comments in a threaded style.

API Version

44.0

Available to Guest Users

44.0

Requires Chatter

Yes
Signature

```java
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, Boolean threadedCommentsCollapsed)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **feedElementId**
  - Type: `String`
  - ID of the feed element.

- **threadedCommentsCollapsed**
  - Type: `Boolean`
  - Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

Return Value

- Type: `ConnectApi.FeedElement`

**getFeedElement(communityId, feedElementId, threadedCommentsCollapsed, commentSort)**

Get a feed element and its sorted comments in a threaded style.

API Version

- 44.0

Available to Guest Users

- 44.0

Requires Chatter

- Yes

Signature

```java
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, Boolean threadedCommentsCollapsed, ConnectApi.FeedCommentSortOrder commentSort)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`. 

feedElementId
Type: String
ID of the feed element.
threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.
commentSort
Type: ConnectApi.FeedCommentSortOrder
Order of comments.
- CreatedDateLatestAsc—Sorts by most recently created comments in ascending order.
- CreatedDateOldestAsc—Sorts by oldest comments in ascending order.
- Relevance—Sorts by most relevant content.

Return Value
Type: ConnectApi.FeedElement

getFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle)
Get a feed element with the specified number of elements per bundle including no more than the specified number of comments per feed element.

API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, Integer recentCommentCount, Integer elementsPerBundle)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.
feedElementId
Type: String
ID of the feed element.

**recentCommentCount**
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

**elementsPerBundle**
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

Return Value
Type: `ConnectApi.FeedElement`

### getFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle, threadedCommentsCollapsed)

Get a feed element with its comments in a threaded style with the specified number of elements per bundle and comments per feed element.

**API Version**
44.0

**Available to Guest Users**
44.0

**Requires Chatter**
Yes

**Signature**

```java
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, Integer recentCommentCount, Integer elementsPerBundle, Boolean threadedCommentsCollapsed)
```

**Parameters**

- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- **feedElementId**
  Type: String
  ID of the feed element.

- **recentCommentCount**
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.
elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value
Type: ConnectApi.FeedElement

getFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle, threadedCommentsCollapsed, commentSort)
Get a feed element with its sorted comments in a threaded style with the specified number of elements per bundle and comments per feed element.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, Integer recentCommentCount, Integer elementsPerBundle, Boolean threadedCommentsCollapsed, ConnectApi.FeedCommentSortOrder commentSort)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.
elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

commentSort
Type: ConnectApi.FeedCommentSortOrder
Order of comments.
- CreatedDateLatestAsc—Sorts by most recently created comments in ascending order.
- CreatedDateOldestAsc—Sorts by oldest comments in ascending order.
- Relevance—Sorts by most relevant content.

Return Value
Type: ConnectApi.FeedElement

getFeedElement(communityId, feedElementId, recentCommentCount, elementsPerBundle, commentSort)
Get a feed element with the specified number of elements per bundle including no more than the specified number of sorted comments per feed element.

API Version
41.0

Available to Guest Users
41.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElement getFeedElement(String communityId, String feedElementId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedCommentSortOrder commentSort)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.
FeedElementId
Type: String
ID of the feed element.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

commentSort
Type: ConnectApi.FeedCommentSortOrder
Order of comments.
- CreatedDateLatestAsc—Sorts by most recently created comments in ascending order.
- CreatedDateOldestAsc—Sorts by oldest comments in ascending order.
- Relevance—Sorts by most relevant content.
The default value is CreatedDateLatestAsc.

Return Value
Type: ConnectApi.FeedElement

getFeedElementBatch(communityId, feedElementIds)
Get a list of feed elements.

API Version
31.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.BatchResult[] getFeedElementBatch(String communityId, List<String> feedElementIds)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, `internal`, or `null`.

`feedElementIds`  
Type: `List<String>`  
A list of up to 500 feed element IDs.

Return Value  
Type: `ConnectApi.BatchResult[]`  
The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.FeedElement` object and errors for feed elements that didn’t load.

`getFeedElementPoll(communityId, feedElementId)`  
Get the poll associated with a feed element.

API Version  
32.0

Available to Guest Users  
32.0

Requires Chatter  
Yes

Signature  
```java  
public static ConnectApi.PollCapability getFeedElementPoll(String communityId, String feedElementId)  
```  

Parameters  
`communityId`  
Type: `String`  
Use the ID for an Experience Cloud site, `internal`, or `null`.

`feedElementId`  
Type: `String`  
ID of the feed element.

Return Value  
Type: `ConnectApi.PollCapability`  
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

**Note:** Triggers on `FeedItem` objects run before their attachment and capabilities information is saved, which means that `ConnectApi.FeedItem.attachment` information and `ConnectApi.FeedElement.capabilities` information may not be available in the trigger.
getFeedElementsFromBundle(communityId, feedElementId)
Get feed elements from a bundle.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromBundle(String communityId, String feedElementId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

Return Value
Type: ConnectApi.FeedElementPage

getFeedElementsFromBundle(communityId, feedElementId, pageParam, pageSize, elementsPerBundle, recentCommentCount)
Get a page of feed elements from a bundle. Specify the number of elements per bundle and include no more than the specified number of comments per feed element.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromBundle(String communityId, String feedElementId, String pageParam, Integer pageSize, Integer elementsPerBundle, Integer recentCommentCount)
Parameters

`communityId`
Type: String
Use the ID for an Experience Cloud site, internal, or null.

`feedElementId`
Type: String
ID of the feed element.

`pageParam`
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in null, the first page is returned.

`pageSize`
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

`elementsPerBundle`
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

`recentCommentCount`
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

Return Value
Type: `ConnectApi.FeedElementPage`

`getFeedElementsFromFeed(communityId, feedType)`

API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType)
```
Parameters

`communityId`  
Type: `String`  
Use the ID for an Experience Cloud site, internal, or null.

`feedType`  
Type: `ConnectApi.FeedType`  
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

`setTestGetFeedElementsFromFeed(communityId, feedType, result)`  
Testing ConnectApi Code

`getFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)`  

API Version

31.0

Available to Guest Users

31.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId,  
ConnectApi.FeedType feedType, String pageParam, Integer pageSize,  
ConnectApi.FeedSortOrder sortParam)
```
Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

If feedType is DirectMessages, sortParam must be LastModifiedDateDesc.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- setTestGetFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)
- Testing ConnectApi Code
getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)

Get a page of sorted feed elements from the Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview feeds. Each feed element contains no more than the specified number of comments.

API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.
If feedType is DirectMessages, sortParam must be LastModifiedDateDesc.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

  Testing ConnectApi Code

getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter)
Get a page of sorted and filtered feed elements from the Home feed. Each feed element contains no more than the specified number of comments.

API Version
32.0

Available to Guest Users
32.0

Requires Chatter
Yes
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. The only valid value is Home.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

When the sortParam is MostViewed, you must pass in null for the pageParam.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

When the sortParam is MostViewed, the pageSize must be a value from 1 to 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. If you pass in `null`, the default value `CreatedDateDesc` is used.

### filter

Type: `ConnectApi.FeedFilter`

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- **CommunityScoped**—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the `UserProfile` feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the `Record` feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

### Return Value

Type: `ConnectApi.FeedElementPage`

### Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

### SEE ALSO:

public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId,
ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density,
String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam,
ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. The only valid value is Home.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

When the sortParam is MostViewed, you must pass in null for the pageParam.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
When the `sortParam` is `MostViewed`, the `pageSize` must be a value from 1 to 25.

**sortParam**

Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**filter**

Type: `ConnectApi.FeedFilter`

Specifies the feed filters.

- `AllQuestions`—Feed elements that are questions.
- `AuthoredBy`—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- `CommunityScoped`—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the `UserProfile` feed.
- `QuestionsWithCandidateAnswers`—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- `QuestionsWithCandidateAnswersReviewedPublished`—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- `Read`—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the `Record` feed of a group.
- `SolvedQuestions`—Feed elements that are questions and that have a best answer.
- `UnansweredQuestions`—Feed elements that are questions and that don’t have any answers.
- `UnansweredQuestionsWithCandidateAnswers`—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the `Access Einstein-Generated Answers` permission.
- `Unread`—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the `Record` feed of a group.
- `UnsolvedQuestions`—Feed elements that are questions and that don’t have a best answer.

**threadedCommentsCollapsed**

Type: `Boolean`

Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

**Return Value**

Type: `ConnectApi.FeedElementPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Testing ConnectApi Code

generateFeedElementsFromFeed(communityId, feedType, subjectId)

Get feed elements from any feed other than Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview for a user or record.

API Version

31.0

Available to Guest Users

31.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId)
```

Parameters

communityId

Type: `String`

Use the ID for an Experience Cloud site, internal, or `null`.

feedType

Type: `ConnectApi.FeedType`

The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId

Type: `String`

If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.
Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example for Getting the Context User’s News Feed

```java
ConnectApi.FeedElementPage fep =
ConnectApi.ChatterFeeds.getFeedElementsFromFeed(Network.getNetworkId(),
ConnectApi.FeedType.News, 'me');
```

Example for Getting Another User’s Profile Feed

```java
ConnectApi.FeedElementPage fep =
ConnectApi.ChatterFeeds.getFeedElementsFromFeed(Network.getNetworkId(),
ConnectApi.FeedType.UserProfile, '005R0000000HwMA');
```

Example for Getting Another User’s Record Feed

```java
ConnectApi.FeedElementPage fep =
ConnectApi.ChatterFeeds.getFeedElementsFromFeed(Network.getNetworkId(),
ConnectApi.FeedType.Record, '005R0000000HwMA');
```

SEE ALSO:

- `setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, result)`
- Testing ConnectApi Code

`getFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam)`

Get a page of sorted feed elements from any feed other than `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

API Version

                      ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize,
                      ConnectApi.FeedSortOrder sortParam)
```

Parameters

**communityId**
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`.

**feedType**
Type: `ConnectApi.FeedType`
The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

**subjectId**
Type: `String`
If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
The number of feed elements per page.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

```

Parameters

- `communityId`
  - Type: `String`  
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `feedType`
  - Type: `ConnectApi.FeedType`  
  - Value must be `ConnectApi.FeedType.Record`.

- `subjectId`
  - Type: `String`  
  - Any record ID, including a group ID.
**recentCommentCount**  
Type: `Integer`  
The maximum number of comments to return with each feed item. The default value is 3.

**density**  
Type: `ConnectApi.FeedDensity`  
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**  
Type: `Integer`  
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**  
Type: `ConnectApi.FeedSortOrder`  
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**showInternalOnly**  
Type: `Boolean`  
Specifies whether to show only feed items from internal (non-Experience Cloud site) users (`true`), or not (`false`). The default value is `false`.

**Return Value**  
Type: `ConnectApi.FeedElementPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Signature

public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter)

Parameters

communityId

Type: String

Use the ID for an Experience Cloud site, internal, or null.

feedType

Type: ConnectApi.FeedType

Value must be ConnectApi.FeedType.UserProfile.

subjectId

Type: String

The ID of any user. To specify the context user, use the user ID or the alias me.
recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

filter
Type: ConnectApi.FeedFilter
Value must be ConnectApi.FeedFilter.CommunityScoped or ConnectApi.FeedFilter.AuthoredBy.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.
Example

This example gets only community-specific feed elements.

```java
ConnectApi.FeedElementPage fep = 
    ConnectApi.ChatterFeeds.getFeedElementsFromFeed(Network.getNetworkId(),
    ConnectApi.FeedType.UserProfile, 'me', 3, ConnectApi.FeedDensity.FewerUpdates, null, null,
    ConnectApi.FeedSortOrder.LastModifiedDateDesc, ConnectApi.FeedFilter.CommunityScoped);
```

SEE ALSO:

`setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, result)`

Testing ConnectApi Code

`getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed)`

Get a page of feed elements with comments in a threaded style from the `UserProfile` feed.

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId,
    ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
    ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
    ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, Boolean
    threadedCommentsCollapsed)
```

Parameters

`communityId`

Type: `String`

Use the ID for an Experience Cloud site, internal, or `null`.

`feedType`

Type: `ConnectApi.FeedType`

Value must be `ConnectApi.FeedType.UserProfile`.

`subjectId`

Type: `String`
The ID of any user. To specify the context user, use the user ID or the alias me.

recentCommentCount
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
  • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  If you pass in null, the default value CreatedDateDesc is used.

filter
  Type: ConnectApi.FeedFilter
  Value must be ConnectApi.FeedFilter.CommunityScoped or ConnectApi.FeedFilter.AuthoredBy.

threadedCommentsCollapsed
  Type: Boolean
  Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value
  Type: ConnectApi.FeedElementPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```java
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String customFilter)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.
- **feedType**
  - Type: `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.Record`.
- **subjectId**
  - Type: `String`
  - The ID of a case.
- **recentCommentCount**
  - Type: `Integer`
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

customFilter
Type: String
Custom filter that applies only to the case feed. See `customFeedFilter` in the Metadata API Developer Guide for supported values.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  Any record ID, including a group ID.

recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
• **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

• **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**  
_Type: String_  
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in **null**, the first page is returned.

**pageSize**  
_Type: Integer_  
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in **null**, the default size is 25.

**sortParam**  
_Type: ConnectApi.FeedSortOrder_  
Values are:

• **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.

• **CreatedDateDesc**—Sorts by most recent creation date.

• **LastModifiedDateDesc**—Sorts by most recent activity.

• **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.

• **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in **null**, the default value CreatedDateDesc is used.

**showInternalOnly**  
_Type: Boolean_  
Specifies whether to show only feed items from internal (non-Experience Cloud site) users (**true**), or not (**false**). The default value is **false**.

Return Value  
_Type: ConnectApi.FeedElementPage_  

Usage  
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

public static ConnectApi.FeedElementPage getFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedFilter filter)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
  • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  If you pass in null, the default value CreatedDateDesc is used.

showInternalOnly
  Type: Boolean
  Specifies whether to show only feed items from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

filter
  Type: ConnectApi.FeedFilter
  Specifies the feed filters.
  • AllQuestions—Feed elements that are questions.
  • AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
  • CommunityScoped—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the UserProfile feed.
  • QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
  • QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
  • Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
  • SolvedQuestions—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don't have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the Record feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don't have a best answer.

Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```
ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed)

Parameters

```
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  Any record ID, including a group ID.

recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
```
MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.

Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. If you pass in `null`, the default value `CreatedDateDesc` is used.

`showInternalOnly`
Type: Boolean
Specifies whether to show only feed items from internal (non-Experience Cloud site) users (`true`), or not (`false`). The default value is `false`.

`filter`
Type: `ConnectApi.FeedFilter`
Specifies the feed filters.

- AllQuestions—Feed elements that are questions.
- AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- CommunityScoped—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the UserProfile feed.
- QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- SolvedQuestions—Feed elements that are questions and that have a best answer.
- UnansweredQuestions—Feed elements that are questions and that don’t have any answers.
- UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
- UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

`threadedCommentsCollapsed`
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

Return Value
Type: `ConnectApi.FeedElementPage`
Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.Record`.

- **subjectId**
  - Type: `String`
  - The ID of a case.

- **recentCommentCount**
  - Type: `Integer`

- **elementsPerBundle**
  - Type: `Integer`

- **density**
  - Type: `ConnectApi.FeedDensity`

- **pageParam**
  - Type: `String`

- **pageSize**
  - Type: `Integer`

- **sortParam**
  - Type: `ConnectApi.FeedSortOrder`

- **showInternalOnly**
  - Type: `Boolean`

- **customFilter**
  - Type: `String`
The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

showInternalOnly
Type: Boolean
Specifies whether to show only feed items from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

customFilter
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

Return Value
Type: ConnectApi.FeedElementPage
Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Testing ConnectApi Code

getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam)
Get a page of sorted feed elements from a feed filtered by a key prefix for a user. Each feed element contains no more than the specified number of comments.

API Version
31.0

Requires Chatter
Yes
Signature

```
public static ConnectApi.FeedElementPage getFeedElementsFromFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Parameters

**communityId**
- **Type:** String
- Use the ID for an Experience Cloud site, internal, or null.

**subjectId**
- **Type:** String
- The ID of the context user or the alias me.

**keyPrefix**
- **Type:** String
- A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

**recentCommentCount**
- **Type:** Integer
- Maximum number of comments to return with each feed element. The default value is 3.

**elementsPerBundle**
- **Type:** Integer
- Maximum number of feed elements per bundle. The default and maximum value is 10.

**density**
- **Type:** ConnectApi.FeedDensity
- Specify the amount of content in a feed.
  - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
- **Type:** String
- The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
- **Type:** Integer
- Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
- **Type:** ConnectApi.FeedSortOrder
- Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsFromFilterFeedUpdatedSince(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)

Parameters
  communityId
  Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 00S and Group objects have a prefix of 0F9.

recentCommentCount
Type: Integer
 Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token defining the modification time stamp of the feed and the sort order.
The updatedSince parameter doesn't return feed elements that are created in the same second as the call.

Return Value
Type: ConnectApi.FeedElementPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with \texttt{setTest}). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Signature

\texttt{public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)}

Parameters

\texttt{communityId}

\begin{itemize}
\item Type: String
\item Use the ID for an Experience Cloud site, internal, or null.
\end{itemize}

\texttt{feedType}

\begin{itemize}
\item Type: \texttt{ConnectApi.FeedType}
\item The type of feed. Valid values are Company, DirectMessageModeration, Home, and Moderation.
\end{itemize}

\texttt{recentCommentCount}

\begin{itemize}
\item Type: Integer
\item Maximum number of comments to return with each feed element. The default value is 3.
\end{itemize}

\texttt{density}

\begin{itemize}
\item Type: \texttt{ConnectApi.FeedDensity}
\end{itemize}
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
Type: `String`

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

**Return Value**
Type: `ConnectApi.FeedElementPage`

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density,
String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedFilter filter)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or `null`.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - The type of feed. The only valid value is `Home`.

- **recentCommentCount**
  - Type: `Integer`
  - Maximum number of comments to return with each feed element. The default value is 3.

- **density**
  - Type: `ConnectApi.FeedDensity`
  - Specify the amount of content in a feed.
    - `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    - `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- **pageParam**
  - Type: String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **updatedSince**
  - Type: String
  - An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

  The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

- **filter**
  - Type: `ConnectApi.FeedFilter`
  - Specifies the feed filters.
- AllQuestions—Feed elements that are questions.
- AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- CommunityScoped—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the UserProfile feed.
- QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- SolvedQuestions—Feed elements that are questions and that have a best answer.
- UnansweredQuestions—Feed elements that are questions and that don’t have any answers.
- UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
- UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
One of these values:
• Files
• Groups
• News
• People
• Record

subjectId
Type: String
If feedType is ConnectApi.Record, subjectId can be any record ID, including a group ID. Otherwise, it must be the context user or the alias me.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

`pageSize`  
Type: Integer  
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

`updatedSince`  
Type: String  
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

Return Value  
Type: ConnectApi.FeedElementPage

Usage  
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

Yes

Signature  
```java
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
```
ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.
Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Yes

Signature

```java
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedFilter filter)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.
- `feedType`
  - Type: `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.UserProfile`.
- `subjectId`
  - Type: `String`
The ID of any user. To specify the context user, use the user ID or the alias \texttt{me}.

\texttt{recentCommentCount}
\begin{itemize}
\item Type: \texttt{Integer}
\item Maximum number of comments to return with each feed element. The default value is 3.
\end{itemize}

\texttt{elementsPerBundle}
\begin{itemize}
\item Type: \texttt{Integer}
\item Maximum number of feed elements per bundle. The default and maximum value is 10.
\end{itemize}

\texttt{density}
\begin{itemize}
\item Type: \texttt{ConnectApi.FeedDensity}
\item Specify the amount of content in a feed.
\begin{itemize}
\item \texttt{AllUpdates}—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
\item \texttt{FewerUpdates}—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.
\end{itemize}
\end{itemize}

\texttt{pageParam}
\begin{itemize}
\item Type: \texttt{String}
\item The page token to use to view the page. Page tokens are returned as part of the response class, for example, \texttt{currentPageToken} or \texttt{nextPageToken}. If you pass in \texttt{null}, the first page is returned.
\end{itemize}

\texttt{pageSize}
\begin{itemize}
\item Type: \texttt{Integer}
\item Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in \texttt{null}, the default size is 25.
\end{itemize}

\texttt{updatedSince}
\begin{itemize}
\item Type: \texttt{String}
\item An opaque token defining the modification time stamp of the feed and the sort order.
\item The \texttt{updatedSince} parameter doesn’t return feed elements that are created in the same second as the call.
\end{itemize}

\texttt{filter}
\begin{itemize}
\item Type: \texttt{ConnectApi.FeedFilter}
\item Value must be \texttt{ConnectApi.FeedFilter.CommunityScoped}. Filters the feed to include only feed elements that are scoped to Experience Cloud sites. Feed elements that are always visible in all sites are filtered out.
\end{itemize}

Return Value
\begin{itemize}
\item Type: \texttt{ConnectApi.FeedElementPage}
\end{itemize}

Usage
To test code that uses this method, use the matching set test method (prefix the method name with \texttt{setTest}). Use the set test method with the same parameters or the code throws an exception.

Yes

Signature
public static ConnectApi.FeedElementPage getFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, String customFilter)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
The ID of a case.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token defining the modification time stamp of the feed and the sort order. The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

customFilter
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
String updatedSince, Boolean showInternalOnly)
```

Parameters

- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- **feedType**
  Type: `ConnectApi.FeedType`
  Value must be `ConnectApi.FeedType.Record`.

- **subjectId**
  Type: String
  Any record ID, including a group ID.

- **recentCommentCount**
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

- **elementsPerBundle**
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

- **density**
  Type: `ConnectApi.FeedDensity`
  Specify the amount of content in a feed.
  - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- **pageParam**
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

- **pageSize**
  Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
  Type: String
  An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.
  The updatedSince parameter doesn't return feed elements that are created in the same second as the call.

showInternalOnly
  Type: Boolean
  Specifies whether to show only feed elements from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

Return Value
  Type: ConnectApi.FeedElementPage

Usage
  To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

**pageParam**
- **Type:** String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
- **Type:** Integer
  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
- **Type:** String
  - An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.
  - The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

**showInternalOnly**
- **Type:** Boolean
  - Specifies whether to show only feed elements from internal (non-Experience Cloud site) users (`true`), or not (`false`). The default value is `false`.

**customFilter**
- **Type:** String
  - Custom filter that applies only to the case feed. See `customFeedFilter` in the Metadata API Developer Guide for supported values.

**Return Value**
- **Type:** `ConnectApi.FeedElementPage`

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
- `setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, customFilter, result)`
- Testing ConnectApi Code

**getFeedWithFeedElements(communityId, feedType, pageSize)**
Get information about a feed and a page of feed elements from the feed.

**API Version**
- 40.0
Available to Guest Users
4.0

Requires Chatter
Yes

Signature

public static ConnectApi.Feed getFeedWithFeedElements(String communityId, ConnectApi.FeedType feedType, Integer pageSize)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

feedType
  Type: ConnectApi.FeedType
  The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Landing, Moderation, and PendingReview. Landing is valid only when communityId is internal.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in 0, feed elements aren't returned with the feed.

Return Value

Type: ConnectApi.Feed

getFeedWithFeedElements(communityId, feedType, pageSize, recentCommentCount)

Get a page of information about the feed and the feed elements with the specified number of comments per feed element from the feed.

API Version
40.0

Available to Guest Users
40.0

Requires Chatter
Yes
public static ConnectApi.Feed getFeedWithFeedElements(String communityId, ConnectApi.FeedType feedType, Integer pageSize, Integer recentCommentCount)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Landing, Moderation, and PendingReview. Landing is valid only when communityId is internal.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in 0, feed elements aren’t returned with the feed.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

Return Value
Type: ConnectApi.Feed

getFilterFeed(communityId, subjectId, keyPrefix)
Get a feed filtered by a key prefix for a user.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.Feed getFilterFeed(String communityId, String subjectId, String keyPrefix)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.
subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix is the first three characters of a record ID, which specifies the object type.

Return Value
Type: ConnectApi.Feed

getFilterFeed(communityId, subjectId, keyPrefix, sortParam)
Get a sorted feed filtered by a key prefix for a user.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.Feed getFilterFeed(String communityId, String subjectId, String keyPrefix, ConnectApi.FeedType sortParam)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

sortParam
Type: ConnectApi.FeedType
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.Feed

getFilterFeedDirectory(communityId, subjectId)
Get a feed directory of filter feeds available to the context user.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedDirectory getFilterFeedDirectory(String communityId, String subjectId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

Return Value
Type: ConnectApi.FeedDirectory
This feed directory contains a list of filter feeds, which are the news feed filtered to include feed items whose parent is a specific entity type.

Usage
Call this method to return a directory containing a list of ConnectApi.FeedDirectoryItem objects. Each object contains a key prefix associated with an entity type the context user is following. A key prefix is the first three characters of a record ID, which specifies the object type.
Use key prefixes to filter the news feed so that it contains only feed items whose parent is the entity type associated with the key prefix. For example, get all the feed items whose parent is an Account. To get the feed items, pass a key prefix to the ConnectApi.getFeedItemsFromFilterFeed method.

The information about filter feeds never contains the key prefixes for users (005) or groups (0F9), but all users can use those key prefixes as filters.

The ConnectApi.FeedDirectory.favorites property is always empty when returned by a call to getFilterFeedDirectory because you can’t filter a news feed by favorites.

Example

This example calls getFilterFeedDirectory and loops through the returned FeedDirectoryItem objects to find the key prefixes the context user can use to filter their news feed. It then copies each keyPrefix value to a list. Finally, it passes one of the key prefixes from the list to the getFeedItemsFromFilterFeed method. The returned feed items include every feed item from the news feed whose parent is the entity type specified by the passed key prefix.

```java
String communityId = null;
String subjectId = 'me';

// Create a list to populate with key prefixes.
List<String> keyPrefixList = new List<String>();

// Prepopulate with User and Group record types
// which are available to all users.
keyPrefixList.add('005');
keyPrefixList.add('0F9');

System.debug(keyPrefixList);

// Get the key prefixes available to the context user.
ConnectApi.FeedDirectory myFeedDirectory =
    ConnectApi.ChatterFeeds.getFilterFeedDirectory(null, 'me');

// Loop through the returned feeds list.
for (ConnectApi.FeedDirectoryItem i : myFeedDirectory.feeds) {
    // Grab each key prefix and add it to the list.
    keyPrefixList.add(i.keyPrefix);
}
System.debug(keyPrefixList);

// Use a key prefix from the list to filter the feed items in the news feed.
ConnectApi.FeedItemPage myFeedItemPage =
    ConnectApi.ChatterFeeds.getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefixList[0]);
System.debug(myFeedItemPage);
```

getLike(communityId, likeId)

Get a like on a post or comment.
API Version
28.0

Available toGuest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterLike getLike(String communityId, String likeId)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

likeId
  Type: String
  The ID for a like.

Return Value
Type: ConnectApi.ChatterLike

getLikesForComment(communityId, commentId)
Get likes for a comment.

API Version
28.0

Available toGuest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterLikePage getLikesForComment(String communityId, String commentId)
Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or null.

- **commentId**
  - Type: `String`
  - The ID for a comment.

Return Value

Type: `ConnectApi.ChatterLikePage`

```java
getLikesForComment(communityId, commentId, pageParam, pageSize)
```

Get a page of likes for a comment.

API Version

28.0

Available to Guest Users

31.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ChatterLikePage getLikesForComment(String communityId, String commentId, Integer pageParam, Integer pageSize)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or null.

- **commentId**
  - Type: `String`
  - The ID for a comment.

- **pageParam**
  - Type: `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

- **pageSize**
  - Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.ChatterLikePage`

`getLikesForFeedElement(communityId, feedElementId)`
Get likes for a feed element.

API Version
32.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ChatterLikePage getLikesForFeedElement(String communityId, String feedElementId)`

Parameters
- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.
- `feedElementId`
  Type: `String`
  ID of the feed element.

Return Value
Type: `ConnectApi.ChatterLikePage`
If the feed element doesn’t support the `ChatterLikes` capability, the return value is `ConnectApi.NotFoundException`.

`getLikesForFeedElement(communityId, feedElementId, pageParam, pageSize)`
Get a page of likes for a feed element.

API Version
32.0
Available to Guest Users
32.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterLikePage getLikesForFeedElement(String communityId,
                        String feedElementId, Integer pageParam, Integer pageSize)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **feedElementId**
  - Type: String
  - ID of the feed element.

- **pageParam**
  - Type: String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value

Type: `ConnectApi.ChatterLikePage`

If the feed element doesn’t support the ChatterLikes capability, the return value is `ConnectApi.NotFoundException`.

`getLinkMetadata(communityId, urls)`

Get link metadata for URLs.

API Version
42.0

Available to Guest Users
42.0
Requires Chatter
No

Signature
public static ConnectApi.LinkMetadataCollection getLinkMetadata(String communityId, String urls)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
urls
  Type: String
  Comma-separated list of URL-encoded URLs.

Return Value
Type: ConnectApi.LinkMetadataCollection

getPinnedFeedElementsFromFeed(communityId, feedType, subjectId)
Get pinned feed elements from a group or topic feed.

API Version
41.0

Available to Guest Users
41.0

Requires Chatter
Yes

Signature
public static ConnectApi.PinnedFeedElements getPinnedFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
feedType
  Type: ConnectApi.FeedType
The type of feed. Valid values are Record and Topics.

subjectId
Type: String
If feedType is Record, subjectId must be a group ID. If feedType is Topics, subjectId must be a topic ID.

Return Value
Type: ConnectApi.PinnedFeedElements
If the feed doesn’t support this capability, the return value is ConnectApi.NotFoundException.

getReadByForFeedElement(communityId, feedElementId)
Get information about who read a feed element and when.

API Version
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.ReadByPage getReadByForFeedElement(String communityId, String feedElementId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

Return Value
Type: ConnectApi.ReadByPage
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

getReadByForFeedElement(communityId, feedElementId, pageParam, pageSize)
Get a page of information about who read a feed element and when.

API Version
40.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.ReadByPage getReadByForFeedElement(String communityId, String feedElementId, Integer pageParam, Integer pageSize)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **feedElementId**
  - Type: `String`
  - ID of the feed element.

- **pageParam**
  - Type: `String`
  - Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

- Type: `ConnectApi.ReadByPage`
  - If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

getRelatedPosts(communityId, feedElementId, filter, maxResults)

Get posts related to the context feed element.

API Version

37.0

Available to Guest Users

37.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.RelatedFeedPosts getRelatedPosts(String communityId, String feedElementId, ConnectApi.RelatedFeedPostType filter, Integer maxResults)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- **feedElementId**
  - Type: `String`
  - ID of the feed element. The feed element must be a question.

- **filter**
  - Type: `ConnectApi.RelatedFeedPostType`
  - Specifies the type of related post. Values are:
    - **Answered**—Related questions that have at least one answer.
    - **BestAnswer**—Related questions that have a best answer.
    - **Generic**—All types of related questions, including answered, with a best answer, and unanswered.
    - **Unanswered**—Related questions that don’t have answers.
  - `Generic` is the default value.

- **maxResults**
  - Type: `Integer`
  - The maximum number of results to return. You can return up to 25 results; 5 is the default.

Return Value

- Type: `ConnectApi.RelatedFeedPosts`

In version 37.0 and later, related feed posts are questions.

Each related feed post has a score indicating how closely it’s related to the context feed post. We return related feed posts sorted by score, with the highest score first.

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

```java
getStream(communityId, streamId)
```

Get information about a Chatter feed stream.

API Version

- 39.0
Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterStream getStream(String communityId, String streamId)
```

Parameters

**communityId**
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

**streamId**
Type: `String`
ID of the Chatter feed stream.

Return Value
Type: `ConnectApi.ChatterStream`

**getStream(communityId, streamId, globalScope)**
Get information about a Chatter feed stream, regardless of Experience Cloud site.

API Version
41.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterStream getStream(String communityId, String streamId, Boolean globalScope)
```

Parameters

**communityId**
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

**streamId**
Type: `String`
ID of the Chatter feed stream.

**globalScope**
Type: `Boolean`
Specifies whether to get streams from all the context user’s Experience Cloud sites, regardless of the communityId value.

Tip: If you know the communityId for the stream, we recommend setting globalScope to false.

Return Value
Type: `ConnectApi.ChatterStream` 

`getStreams(communityId)`
Get the Chatter feed streams for the context user.

API Version
39.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ChatterStreamPage getStreams(String communityId)`

Parameters
`communityId`
Type: `String`
Use the ID for an Experience Cloud site, internal, or null.

Return Value
Type: `ConnectApi.ChatterStreamPage`

`getStreams(communityId, sortParam)`
Get and sort the Chatter feed streams for the context user.

API Version
40.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ChatterStreamPage getStreams(String communityId, ConnectApi.SortOrder sortParam)`
Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`.

`sortParam`
Type: `ConnectApi.SortOrder`
Specifies the sort order. Values are:
- **Ascending**—Items are in ascending alphabetical order (A-Z).
- **Descending**—Items are in descending alphabetical order (Z-A).
- **MostRecentlyViewed**—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is **Ascending**.

Return Value
Type: `ConnectApi.ChatterStreamPage`

```java
getStreams(communityId, pageParam, pageSize)
```
Get a page of Chatter feed streams for the context user.

API Version
39.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterStreamPage getStreams(String communityId, Integer pageParam, Integer pageSize)
```

Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`.

`pageParam`
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.
Return Value

Type: `ConnectApi.ChatterStreamPage`

**getStreams(communityId, pageParam, pageSize, sortParam)**

Get a sorted page of Chatter feed streams for the context user.

API Version

40.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ChatterStreamPage getStreams(String communityId, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam)
```

Parameters

**communityId**

Type: `String`

Use the ID for an Experience Cloud site, internal, or `null`.

**pageParam**

Type: `Integer`

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**

Type: `Integer`

Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

**sortParam**

Type: `ConnectApi.SortOrder`

Specifies the sort order. Values are:

- **Ascending**—Items are in ascending alphabetical order (A-Z).
- **Descending**—Items are in descending alphabetical order (Z-A).
- **MostRecentlyViewed**—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is **Ascending**.

Return Value

Type: `ConnectApi.ChatterStreamPage`
**getStreams(communityId, pageParam, pageSize, sortParam, globalScope)**

Get a sorted page of Chatter feed streams from all Enterprise Cloud sites for the context user.

**API Version**

41.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.ChatterStreamPage getStreams(String communityId, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam, Boolean globalScope)
```

**Parameters**

- **communityId**
  - **Type:** String
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **pageParam**
  - **Type:** Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  - **Type:** Integer
  - Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

- **sortParam**
  - **Type:** ConnectApi.SortOrder
  - Specifies the sort order. Values are:
    - *Ascending*—Items are in ascending alphabetical order (A-Z).
    - *Descending*—Items are in descending alphabetical order (Z-A).
    - *MostRecentlyViewed*—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.
      - If not specified, default value is *Ascending*.

- **globalScope**
  - **Type:** Boolean
  - Specifies whether to get streams from all the context user's Experience Cloud sites, regardless of the `communityId` value.

  **Tip:** If you know the `communityId` for the streams, we recommend setting `globalScope` to `false`.

**Return Value**

- **Type:** ConnectApi.ChatterStreamPage
getSupportedEmojis()
Get supported emojis for the org.

API Version
39.0

Requires Chatter
Yes

Signature
public static ConnectApi.SupportedEmojis getSupportedEmojis()

Return Value
Type: ConnectApi.SupportedEmojis

Usage
To get the list, emojis must be enabled in your org.

getThreadsForFeedComment(communityId, commentId)
Get threaded comments for a comment.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.CommentPage getThreadsForFeedComment(String communityId, String commentId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.
**getThreadsForFeedComment(communityId, commentId, pageParam, pageSize)**

Get a page of threaded comments for a comment.

**API Version**

44.0

**Available to Guest Users**

44.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.CommentPage getThreadsForFeedComment(String communityId, String commentId, String pageParam, Integer pageSize)
```

**Parameters**

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **commentId**
  - Type: String
  - ID of the comment.

- **pageParam**
  - Type: String
  - Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
Return Value
Type: `ConnectApi.CommentPage`
If the comment doesn’t support the `comment` capability, the return value is `ConnectApi.NotFoundException`.

`getThreadsForFeedComment(communityId, commentId, threadedCommentsCollapsed)`
Access the comments capability for a comment.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.CommentsCapability getThreadsForFeedComment(String communityId, String commentId, Boolean threadedCommentsCollapsed)
```

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `commentId`
  Type: `String`
  ID of the comment.

- `threadedCommentsCollapsed`
  Type: `Boolean`
  Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

Return Value
Type: `ConnectApi.CommentsCapability`
If the comment doesn’t support the `comment` capability, the return value is `ConnectApi.NotFoundException`.

`getTopUnansweredQuestions(communityId)` (Pilot)
Get top unanswered questions for the context user in an Experience Cloud site.
Note: We provided top-five unanswered questions to selected customers through a pilot program that required agreement to specific terms and conditions. This pilot program is closed and not accepting new participants.

API Version
42.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getTopUnansweredQuestions(String communityId)

Parameters
communityId
Type: String
ID of the Experience Cloud site.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetTopUnansweredQuestions(communityId, result) (Pilot)
Testing ConnectApi Code

getTopUnansweredQuestions(communityId, filter) (Pilot)
Get filtered top unanswered questions for the context user in an Experience Cloud site.

Note: We provided top-five unanswered questions to selected customers through a pilot program that required agreement to specific terms and conditions. This pilot program is closed and not accepting new participants.

API Version
42.0

Requires Chatter
Yes
public static ConnectApi.FeedElementPage getTopUnansweredQuestions(String communityId, ConnectApi.TopUnansweredQuestionsFilterType filter)

Parameters

communityId
Type: String
ID of the Experience Cloud site.

filter
Type: ConnectApi.FeedFilter
Specifies the filter for the feed. UnansweredQuestionsWithCandidateAnswers is the only valid value.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetTopUnansweredQuestions(communityId, filter, result) (Pilot)
Testing ConnectApi Code

getTopUnansweredQuestions(communityId, pageSize) (Pilot)
Get a page of top unanswered questions for the context user in an Experience Cloud site.

Note: We provided top-five unanswered questions to selected customers through a pilot program that required agreement to specific terms and conditions. This pilot program is closed and not accepting new participants.

API Version
42.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage getTopUnansweredQuestions(String communityId, Integer pageSize)
Parameters

*communityId*
  Type: `String`
  ID of the Experience Cloud site.

*pageSize*
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 0 through 10. If you pass in `null`, the default size is 5.

Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetTopUnansweredQuestions(communityId, pageSize, result)` (Pilot)
- Testing ConnectApi Code

```java
public static ConnectApi.FeedElementPage getTopUnansweredQuestions(String communityId, ConnectApi.FeedFilter filter, Integer pageSize)
```

Get a page of filtered top unanswered questions for the context user in an Experience Cloud site.

⚠️ **Note:** We provided top-five unanswered questions to selected customers through a pilot program that required agreement to specific terms and conditions. This pilot program is closed and not accepting new participants.
Specifies the filter for the feed. UnansweredQuestionsWithCandidateAnswers is the only valid value.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 0 through 10. If you pass in `null`, the default size is 5.

Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetTopUnansweredQuestions(communityId, filter, pageSize, result)` (Pilot)
- Testing ConnectApi Code

`getVotesForComment(communityId, commentId, vote)`
Get the first page of users who upvoted or downvoted a comment.

API Version
42.0

Available to Guest Users
42.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.VotePage getVotesForComment(String communityId, String commentId, ConnectApi.UpDownVoteValue vote)
```

Parameters
- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.
- `commentId`
  Type: `String`
  ID of the comment.
vote
  Type: ConnectApi.UpDownVoteValue
  Specifies the value of the vote for the feed element. Values are:
  ● Down
  ● Up
  You can't specify None.

Return Value
Type: ConnectApi.VotePage
If the comment doesn't support this capability, the return value is ConnectApi.NotFoundException.

getVotesForComment(communityId, commentId, vote, pageParam, pageSize)
Get a page of users who upvoted or downvoted a comment.

API Version
42.0

Available to Guest Users
42.0

Requires Chatter
Yes

Signature
public static ConnectApi.VotePage getVotesForComment(String communityId, String commentId, ConnectApi.UpDownVoteValue vote, Integer pageParam, Integer pageSize)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

commentId
  Type: String
  ID of the comment.

vote
  Type: ConnectApi.UpDownVoteValue
  Specifies the value of the vote for the feed element. Values are:
  ● Down
  ● Up
You can’t specify None.

**pageParam**
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**Return Value**
Type: ConnectApi.VotePage
If the comment doesn’t support this capability, the return value is ConnectApi.NotFoundException.

**getVotesForFeedElement(communityId, feedElementId, vote)**
Get the first page of users who upvoted or downvoted a feed element.

**API Version**
42.0

**Available to Guest Users**
42.0

**Requires Chatter**
Yes

**Signature**
public static ConnectApi.VotePage getVotesForFeedElement(String communityId, String feedElementId, ConnectApi.UpDownVoteValue vote)

**Parameters**

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**feedElementId**
Type: String
ID of the feed element.

**vote**
Type: ConnectApi.UpDownVoteValue
Specifies the value of the vote for the feed element. Values are:

- Down
getVotesForFeedElement(communityId, feedElementId, vote, pageParam, pageSize)

Get a page of users who upvoted or downvoted a feed element.

API Version
42.0

Available to Guest Users
42.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.VotePage getVotesForFeedElement(String communityId, String feedElementId, ConnectApi.UpDownVoteValue vote, Integer pageParam, Integer pageSize)
```

Parameters

- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- **feedElementId**
  Type: String
  ID of the feed element.

- **vote**
  Type: ConnectApi.UpDownVoteValue
  Specifies the value of the vote for the feed element. Values are:
  - Down
  - Up
  You can't specify None.

- **pageParam**
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.
**pageSize**
Type: `Integer`
Specifications the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.VotePage`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

**isCommentEditableByMe(communityId, commentId)**
Discover whether the context user can edit a comment.

API Version
34.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.FeedEntityIsEditable isCommentEditableByMe(String communityId, String commentId)
```

Parameters
**communityId**
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

**commentId**
Type: `String`
ID of the comment.

Return Value
Type: `ConnectApi.FeedEntityIsEditable`
If the comment doesn’t support the edit capability, the return value is `ConnectApi.NotFoundException`.

SEE ALSO:
- Edit a Comment

**isFeedElementEditableByMe(communityId, feedElementId)**
Discover whether the context user can edit a feed element.
API Version
34.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedEntityIsEditable isFeedElementEditableByMe(String communityId, String feedElementId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element. Feed items are the only type of feed element that can be edited.

Return Value
Type: ConnectApi.FeedEntityIsEditable
If the feed element doesn’t support the edit capability, the return value is ConnectApiNotFoundException.

SEE ALSO:
Edit a Feed Element
Edit a Question Title and Post

isModified(communityId, feedType, subjectId, since)
Discover whether a news feed has been updated or changed. Use this method to poll a news feed for updates.

⚠️ Important: This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.

API Version
28.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.FeedModifiedInfo isModified(String communityId,
ConnectApi.FeedType feedType, String subjectId, String since)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - Specifies the type of feed. The only supported type is `News`.

- **subjectId**
  - Type: `String`
  - The ID of the context user or the alias `me`.

- **since**
  - Type: `String`
  - An opaque token containing information about the last modified date of the feed. Retrieve this token from the `FeedElementPage.isModifiedToken` property.

Return Value

Type: `ConnectApi.FeedModifiedInfo`

**likeComment(communityId, commentId)**

Like a comment for the context user.

API Version

28.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ChatterLike likeComment(String communityId, String commentId)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **commentId**
  - Type: `String`
The ID for a comment.

Return Value
Type: `ConnectApi.ChatterLike`
If the context user has already liked the comment, this method is a non-operation and returns the existing like.

### `likeFeedElement(communityId, feedElementId)`
Like a feed element.

API Version
32.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterLike likeFeedElement(String communityId, String feedElementId)
```

Parameters
- `communityId`  
  Type: `String`  
  Use the ID for an Experience Cloud site, `internal`, or `null`.
- `feedElementId`  
  Type: `String`  
  ID of the feed element.

Return Value
Type: `ConnectApi.ChatterLike`
If the feed element doesn’t support the ChatterLikes capability, the return value is `ConnectApi.NotFoundException`.

Example
```java
ConnectApi.ChatterLike chatterLike = ConnectApi.ChatterFeeds.likeFeedElement(null, '0D5D0000000KuGh');
```

### `postCommentToFeedElement(communityId, feedElementId, text)`
Post a plain-text comment to a feed element.
API Version
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.Comment postCommentToFeedElement(String communityId, String feedElementId, String text)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

feedElementId
  Type: String
  ID of the feed element.

text
  Type: String
  Text of the comment. A comment can contain up to 10,000 characters.

Return Value
Type: ConnectApi.Comment
If the feed element doesn’t support the Comments capability, the return value is ConnectApi.NotFoundException.

Example
ConnectApi.Comment comment = ConnectApi.ChatterFeeds.postCommentToFeedElement(null, '0D5D0000000KuGh', 'I agree with the proposal.');

postCommentToFeedElement(communityId, feedElementId, comment, feedElementFileUpload)
Post a rich-text comment to a feed element. Use this method to include mentions and to attach a file.

API Version
32.0

Requires Chatter
Yes
public static ConnectApi.Comment postCommentToFeedElement(String communityId, String feedElementId, ConnectApi.CommentInput comment, ConnectApi.BinaryInput feedElementFileUpload)

Parameters

**communityId**
- Type: String
- Use the ID for an Experience Cloud site, internal, or null.

**feedElementId**
- Type: String
- ID of the feed element.

**comment**
- Type: ConnectApi.CommentInput
- The comment body, including text and mentions, and capabilities, such as information about an attached file. A comment can contain up to 10,000 characters.

**feedElementFileUpload**
- Type: ConnectApi.BinaryInput
- A new binary file to attach to the comment, or null. If you specify a binary file, specify the title and description of the file in the comment parameter.

Return Value

**Type:** ConnectApi.Comment

If the feed element doesn’t support the Comments capability, the return value is ConnectApi.NotFoundException.

Example for Posting a Comment with Mentions

You can post comments with mentions two ways. Use the ConnectApiHelper repository on GitHub to write a single line of code, or use this method example.

```java
String communityId = null;
String feedElementId = '0D5D0000000KtW3';

ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput();
ConnectApi.MentionSegmentInput mentionSegmentInput = new ConnectApi.MentionSegmentInput();
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

textSegmentInput.text = 'Does anyone in this group have an idea? ';
messageBodyInput.messageSegments.add(textSegmentInput);

mentionSegmentInput.id = '005D00000000oOT';
messageBodyInput.messageSegments.add(mentionSegmentInput);
```
Example for Posting a Comment with an Existing File

```
String feedElementId = '0D5D0000000KtW3';
ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput();
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
textSegmentInput.text = 'I attached this file from Salesforce Files.';
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);
commentInput.body = messageBodyInput;

ConnectApi.CommentCapabilitiesInput commentCapabilitiesInput = new
ConnectApi.CommentCapabilitiesInput();
ConnectApi.ContentCapabilityInput contentCapabilityInput = new
ConnectApi.ContentCapabilityInput();
contentCapabilityInput.contentDocumentId = '069D00000001rNJ';
commentInput.capabilities = commentCapabilitiesInput;

ConnectApi.Comment commentRep =
ConnectApi.ChatterFeeds.postCommentToFeedElement(Network.getNetworkId(), feedElementId, commentInput, null);
```

Example for Posting a Comment with a New File

```
String feedElementId = '0D5D0000000KtW3';
ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput();
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
textSegmentInput.text = 'Enjoy this new file.';
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);
commentInput.body = messageBodyInput;

ConnectApi.CommentCapabilitiesInput commentCapabilitiesInput = new
ConnectApi.CommentCapabilitiesInput();
ConnectApi.ContentCapabilityInput contentCapabilityInput = new
ConnectApi.ContentCapabilityInput();
contentCapabilityInput.contentDocumentId = '069D00000001rNJ';
commentInput.capabilities = commentCapabilitiesInput;

ConnectApi.Comment commentRep =
ConnectApi.ChatterFeeds.postCommentToFeedElement(Network.getNetworkId(), feedElementId, commentInput, null);
```
ConnectApi.ContentCapabilityInput();

commentCapabilitiesInput.content = contentCapabilityInput;
contentCapabilityInput.title = 'Title';

commentInput.capabilities = commentCapabilitiesInput;

String text = 'These are the contents of the new file.';
Blob myBlob = Blob.valueOf(text);
ConnectApi.BinaryInput binInput = new ConnectApi.BinaryInput(myBlob, 'text/plain', 'fileName');

ConnectApi.Comment commentRep = ConnectApi.ChatterFeeds.postCommentToFeedElement(Network.getNetworkId(), feedElementId, commentInput, binInput);

Example for Posting a Rich-Text Comment with an Inline Image

You can post rich-text comments with inline images and mentions two ways. Use the ConnectApiHelper repository on GitHub to write a single line of code, or use this method example. In this example, the image file is existing content that has already been uploaded to Salesforce.

String communityId = null;
String feedElementId = '0D5R0000000SBEr';
String imageId = '069R00000000IgQ';
String mentionedUserId = '005R0000000DiMz';

ConnectApi.CommentInput input = new ConnectApi.CommentInput();
ConnectApi.TextSegmentInput textSegment;
ConnectApi.MentionSegmentInput mentionSegment;
ConnectApi.MarkupBeginSegmentInput markupBeginSegment;
ConnectApi.MarkupEndSegmentInput markupEndSegment;
ConnectApi.InlineImageSegmentInput inlineImageSegment;

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>(){
    markupBeginSegment = new ConnectApi.MarkupBeginSegmentInput();
    markupBeginSegment.markupType = ConnectApi.MarkupType.Bold;
    messageInput.messageSegments.add(markupBeginSegment);

    textSegment = new ConnectApi.TextSegmentInput();
    textSegment.text = 'Hello ';
    messageInput.messageSegments.add(textSegment);

    mentionSegment = new ConnectApi.MentionSegmentInput();
    mentionSegment.id = mentionedUserId;
    messageInput.messageSegments.add(mentionSegment);

    textSegment = new ConnectApi.TextSegmentInput();
    textSegment.text = '!' ;
    messageInput.messageSegments.add(textSegment);

};
Example for Posting a Rich-Text Comment with a Code Block

```java
String communityId = null;
String feedElementId = '0D5R0000000SBEr';
String codeSnippet = '<html>
	<body>
		Hello, world!
	</body>
</html>

ConnectApi.CommentInput input = new ConnectApi.CommentInput();
ConnectApi.TextSegmentInput textSegment;
ConnectApi.MarkupBeginSegmentInput markupBeginSegment;
ConnectApi.MarkupEndSegmentInput markupEndSegment;

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

markupBeginSegment = new ConnectApi.MarkupBeginSegmentInput();
markupBeginSegment.markupType = ConnectApi.MarkupType.Code;
messageInput.messageSegments.add(markupBeginSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = codeSnippet;
messageInput.messageSegments.add(textSegment);

markupEndSegment = new ConnectApi.MarkupEndSegmentInput();
markupEndSegment.markupType = ConnectApi.MarkupType.Code;
messageInput.messageSegments.add(markupEndSegment);

input.body = messageInput;

ConnectApi.ChatterFeeds.postCommentToFeedElement(communityId, feedElementId, input, null);
```

`postFeedElement(communityId, subjectId, feedElementType, text)`

Post a plain-text feed element.

API Version

31.0
Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElement postFeedElement(String communityId, String subjectId, ConnectApi.FeedElementType feedElementType, String text)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **subjectId**
  - Type: String
  - The ID of the parent this feed element is being posted to. This value can be the ID of a user, group, or record, or the string me to indicate the context user.

- **feedElementType**
  - Type: `ConnectApi.FeedElementType`
  - The only possible value is FeedItem.

- **text**
  - Type: String
  - The text of the feed element. A feed element can contain up to 10,000 characters.

Return Value

Type: `ConnectApi.FeedElement`

Example

```java
ConnectApi.FeedElement feedElement =
    ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), '0F9d0000000TreH',
    ConnectApi.FeedElementType.FeedItem, 'On vacation this week.');
```

**postFeedElement(communityId, feedElement)**

Post a rich-text feed element. Include mentions and hashtag topics, attach already uploaded files to a feed element, and associate action link groups with a feed element. You can also use this method to share a feed element and add a comment.

API Version

36.0

Requires Chatter

Yes
public static ConnectApi.FeedElement postFeedElement(String communityId, ConnectApi.FeedElementInput feedElement)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

feedElement
  Type: ConnectApi.FeedElementInput
  Specify rich text, including mentions. Optionally, specify a link, a poll, or up to 10 existing files.

Return Value

Type: ConnectApi.FeedElement

Example for Posting a Feed Element with a Mention

You can post feed elements with mentions two ways. Use the ConnectApiHelper repository on GitHub to write a single line of code, or use this method example.

```java
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
ConnectApi.MentionSegmentInput mentionSegmentInput = new ConnectApi.MentionSegmentInput();
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
mentionSegmentInput.id = '005RR000000Dme9';
messageBodyInput.messageSegments.add(mentionSegmentInput);
textSegmentInput.text = 'Could you take a look?';
messageBodyInput.messageSegments.add(textSegmentInput);

feedItemInput.body = messageBodyInput;
feedItemInput.feedElementType = ConnectApi.FeedElementType.FeedItem;
feedItemInput.subjectId = '0F9RR0000004CPw';

ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);
```

Example for Posting a Feed Element with Existing Content

```java
// Define the FeedItemInput object to pass to postFeedElement
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
feedItemInput.subjectId = 'me';

ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
textSegmentInput.text = 'Would you please review these docs?';
```
// The MessageBodyInput object holds the text in the post
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);
feedItemInput.body = messageBodyInput;

// The FeedElementCapabilitiesInput object holds the capabilities of the feed item.
// For this feed item, we define a files capability to hold the file(s).
List<String> fileIds = new List<String>();
fileIds.add('069xx00000000QO');
fileIds.add('069xx00000000QT');
fileIds.add('069xx00000000Qn');
fileIds.add('069xx00000000Qi');
fileIds.add('069xx00000000Qd');

ConnectApi.FilesCapabilityInput filesInput = new ConnectApi.FilesCapabilityInput();
filesInput.items = new List<ConnectApi.FileIdInput>();
for (String fileId : fileIds) {
    ConnectApi.FileIdInput idInput = new ConnectApi.FileIdInput();
    idInput.id = fileId;
    filesInput.items.add(idInput);
}

ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new
ConnectApi.FeedElementCapabilitiesInput();
feedElementCapabilitiesInput.files = filesInput;
feedItemInput.capabilities = feedElementCapabilitiesInput;

// Post the feed item.
ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);

---

Example for Posting a Rich-Text Feed Element with an Inline Image

You can post rich-text feed elements with inline images and mentions two ways. Use the ConnectApiHelper repository on GitHub to write a single line of code, or use this method example. In this example, the image file is existing content that has already been uploaded to Salesforce. The post also includes text and a mention.

String communityId = null;
String imageId = '069D0000000001INA';
String mentionedUserId = '005D0000001QNpr';
String targetUserOrGroupOrRecordId = '005D0000001Gif0';
ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
input.subjectId = targetUserOrGroupOrRecordId;
input.feedElementType = ConnectApi.FeedElementType.FeedItem;
input.messageInput = new ConnectApi.MessageBodyInput();
input.textSegment = new ConnectApi.TextSegmentInput();
input.mentionSegment = new ConnectApi.MentionSegmentInput();
input.markupBeginSegment = new ConnectApi.MarkupBeginSegmentInput();
input.markupEndSegment = new ConnectApi.MarkupEndSegmentInput();

ConnectApi.TextSegmentInput textSegment;
ConnectApi.MentionSegmentInput mentionSegment;
ConnectApi.MarkupBeginSegmentInput markupBeginSegment;
ConnectApi.MarkupEndSegmentInput markupEndSegment;
ConnectApi.InlineImageSegmentInput inlineImageSegment;

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

markupBeginSegment = new ConnectApi.MarkupBeginSegmentInput();
markupBeginSegment.markupType = ConnectApi.MarkupType.Bold;
messageInput.messageSegments.add(markupBeginSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'Hello ';
messageInput.messageSegments.add(textSegment);

mentionSegment = new ConnectApi.MentionSegmentInput();
mentionSegment.id = mentionedUserId;
messageInput.messageSegments.add(mentionSegment);

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = '!' ;
messageInput.messageSegments.add(textSegment);

markupEndSegment = new ConnectApi.MarkupEndSegmentInput();
markupEndSegment.markupType = ConnectApi.MarkupType.Bold;
messageInput.messageSegments.add(markupEndSegment);

inlineImageSegment = new ConnectApi.InlineImageSegmentInput();
inlineImageSegment.altText = 'image one';
inlineImageSegment.fileId = imageId;
messageInput.messageSegments.add(inlineImageSegment);

input.body = messageInput;
ConnectApi.ChatterFeeds.postFeedElement(communityId, input);

Example for Posting a Rich-Text Feed Element with a Code Block

String communityId = null;
String targetUserOrGroupOrRecordId = 'me';
String codeSnippet = '<html>
	<body>
		Hello, world!
	</body>
</html>';
ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
input.subjectId = targetUserOrGroupOrRecordId;
input.feedElementType = ConnectApi.FeedElementType.FeedItem;

ConnectApi.TextSegmentInput textSegment;
ConnectApi.MarkupBeginSegmentInput markupBeginSegment;
ConnectApi.MarkupEndSegmentInput markupEndSegment;

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

markupBeginSegment = new ConnectApi.MarkupBeginSegmentInput();
markupBeginSegment.markupType = ConnectApi.MarkupType.Code;
messageInput.messageSegments.add(markupBeginSegment);

textSegment = new ConnectApi.TextSegmentInput();
Example for Sharing a Feed Element (in Version 39.0 and Later)

```java
// Define the FeedItemInput object to pass to postFeedElement
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
feedItemInput.subjectId = 'me';
ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
textSegmentInput.text = 'Look at this post I’m sharing.';
// The MessageBodyInput object holds the text in the post
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);
feedItemInput.body = messageBodyInput;
ConnectApi.FeedEntityShareCapabilityInput shareInput = new ConnectApi.FeedEntityShareCapabilityInput();
shareInput.feedEntityId = '0D5R0000000SEbc';
ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new ConnectApi.FeedElementCapabilitiesInput();
feedElementCapabilitiesInput.feedEntityShare = shareInput;
feedItemInput.capabilities = feedElementCapabilitiesInput;
// Post the feed item.
ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);
```

Example for Sending a Direct Message

```java
// Define the FeedItemInput object to pass to postFeedElement
ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();

ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();
textSegmentInput.text = 'Thanks for attending my presentation test run this morning. Send me any feedback.';
// The MessageBodyInput object holds the text in the post
messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageBodyInput.messageSegments.add(textSegmentInput);
feedItemInput.body = messageBodyInput;
// The FeedElementCapabilitiesInput object holds the capabilities of the feed item.
// For this feed item, we define a direct message capability to hold the member(s) and the subject.
```
```java
List<String> memberIds = new List<String>();
memberIds.add('005B00000016OUQ');
memberIds.add('005B0000001rIN6');

ConnectApi.DirectMessageCapabilityInput dmInput = new ConnectApi.DirectMessageCapabilityInput();
dmInput.subject = 'Thank you!';
dmInput.membersToAdd = memberIds;

ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new ConnectApi.FeedElementCapabilitiesInput();
feedElementCapabilitiesInput.directMessage = dmInput;

feedItemInput.capabilities = feedElementCapabilitiesInput;

// Post the feed item.
ConnectApi.FeedElement feedElement =
ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), feedItemInput);
```

SEE ALSO:

- Define an Action Link in a Template and Post with a Feed Element

---

### postFeedElementBatch(communityId, feedElements)

Post a list of feed elements.

**API Version**

32.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.BatchResult[] postFeedElementBatch(String communityId,
List<ConnectApi.BatchInput> feedElements)
```

**Parameters**

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- `feedElements`
  - Type: `List<ConnectApi.BatchInput>`
  - The list can contain up to 500 `ConnectApi.BatchInput` objects. In the `ConnectApi.BatchInput` constructor, the input object must be a concrete instance of the abstract `ConnectApi.FeedElementInput` class.
Return Value

Type: `ConnectApi.BatchResult[]`

The returned objects correspond to each of the input objects and are returned in the same order as the input objects.

The method call fails only if an error occurs that affects the entire operation (such as a parsing failure). If an individual object causes an error, the error is embedded within the `ConnectApi.BatchResult` list.

Usage

Use this method to post a list of feed elements efficiently. Create a list containing up to 500 objects and insert them all for the cost of one DML statement.

In version 36.0 and later, you can attach only one already uploaded file to each post. The `ConnectApi.BatchInput` has three constructors, but the `postFeedElementBatch` method supports only `ConnectApi.BatchInput(Object input)` in version 35.0 and later. This constructor doesn't support a binary input.

In version 32.0–35.0, this method supports both `ConnectApi.BatchInput(Object input)` and `ConnectApi.BatchInput(Object input, ConnectApi.BinaryInput binary)` constructors. The `ConnectApi.BatchInput(Object input, ConnectApi.BinaryInput binary)` constructor allows for a single binary input.

In each constructor, the input object must be an instance of `ConnectApi.FeedElementInput`.

Example

This trigger bulk posts to the feeds of newly inserted accounts.

```apex
trigger postFeedItemToAccount on Account (after insert) {
    Account[] accounts = Trigger.new;
    // Bulk post to the account feeds.

    List<ConnectApi.BatchInput> batchInputs = new List<ConnectApi.BatchInput>();
    for (Account a : accounts) {
        ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
        input.subjectId = a.id;
        body.messageSegments = new List<ConnectApi.MessageSegmentInput>();
        ConnectApi.TextSegmentInput textSegment = new ConnectApi.TextSegmentInput();
        textSegment.text = 'Let''s win the ' + a.name + ' account.';
        body.messageSegments.add(textSegment);
        input.body = body;
        ConnectApi.BatchInput batchInput = new ConnectApi.BatchInput(input);
        batchInputs.add(batchInput);
    }
}
```
publishDraftFeedElement(communityId, feedElementId, feedElement)

Publish a draft feed element.

API Version
44.0

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElement publishDraftFeedElement(String communityId, String feedElementId, ConnectApi.FeedElementInput feedElement)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element to publish.

feedElement
Type: ConnectApi.FeedElementInput
Use this optional parameter to edit your draft before publishing.

Return Value
Type: ConnectApi.FeedElement
The published feed element has a new ID.

searchFeedElements(communityId, q)

Get the first page of feed elements that match the search criteria.

API Version
31.0

Available to Guest Users
31.0
Requires Chatter
Yes

Signature
```
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q)
```

Parameters
- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- **q**
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestSearchFeedElements(communityId, q, result)`
- Testing ConnectApi Code

**searchFeedElements(communityId, q, sortParam)**
Get the first page of sorted feed elements that match the search criteria.

API Version
31.0

Available to Guest Users
31.0

Requires Chatter
Yes
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, ConnectApi.FeedSortOrder sortParam)

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- setTestSearchFeedElements(communityId, q, sortParam, result)
- Testing ConnectApi Code

**searchFeedElements**(communityId, q, threadedCommentsCollapsed)
Get the feed elements and comments that match the search criteria.

API Version
44.0
Available to Guest Users
44.0

Requires Chatter
Yes

Signature

public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, Boolean threadedCommentsCollapsed)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

setTestSearchFeedElements(communityId, q, threadedCommentsCollapsed, result)

Yes

Signature

\[
\text{public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, String pageParam, Integer pageSize)}
\]

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **q**
  - Type: String
  - Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **pageParam**
  - Type: String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value

- Type: ConnectApi.FeedElementPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Yes

Signature
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.
Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

`searchFeedElements(communityId, q, pageParam, pageSize, threadedCommentsCollapsed)`
Get a page of feed elements with comments in a threaded style that match the search criteria.

API Version
44.0

Available to Guest Users
44.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, String pageParam, Integer pageSize, Boolean threadedCommentsCollapsed)
```

Parameters
- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `q`
  Type: `String`
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See **Wildcards**.

- `pageParam`
  Type: `String`
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.
**pageSize**
  
  Type: Integer

  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**threadedCommentsCollapsed**

  Type: Boolean

  Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElementPage searchFeedElements(String communityId, String q, Integer recentCommentCount, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```
Parameters

`communityId`
Type: String
Use the ID for an Experience Cloud site, internal, or null.

`q`
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`recentCommentCount`
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

`pageParam`
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

`pageSize`
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, Home, Moderation, and PendingReview.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.

• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedElementPage

Usage

Yes

Signature
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, Home, Moderation, and PendingReview.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
Return Value
Type: `ConnectApi.FeedElementPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Testing ConnectApi Code

`searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedFilter filter)`

Get a page of sorted and filtered feed elements from the Home feed that match the search criteria. Each feed element includes no more than the specified number of comments.

API Version
32.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
`public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedFilter filter)`

Parameters
communityId
Type: `String`  
Use the ID for an Experience Cloud site, `internal`, or `null`.

feedType
Type: `ConnectApi.FeedType`  
The type of feed. The only valid value is `Home`.

recentCommentCount
Type: `Integer`

pageParam
Type: `String`  

pageSize
Type: `Integer`  

sortParam
Type: `ConnectApi.FeedSortOrder`

q
Type: `String`  

filter
Type: `ConnectApi.FeedFilter`
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

When the sortParam is MostViewed, you must pass in null for the pageParam.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

When the sortParam is MostViewed, the pageSize must be a value from 1 to 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

filter
Type: ConnectApi.FeedFilter
Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- **CommunityScoped**—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the UserProfile feed.
• QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.

• Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.

• SolvedQuestions—Feed elements that are questions and that have a best answer.

• UnansweredQuestions—Feed elements that are questions and that don’t have any answers.

• UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.

• UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter, result)

Testing ConnectApi Code

searchFeedElementsInFeed(communityId, feedType, subjectId, q)

Get the feed elements from a feed that match the search criteria.
Signature

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, String q)
```

Parameters

**communityId**

Type: **String**

Use the ID for an Experience Cloud site, internal, or `null`.

**feedType**

Type: `ConnectApi.FeedType`

The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessages`, `Filter`, `Landing`, and `Streams`.

**subjectId**

Type: **String**

If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

**q**

Type: **String**

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, q, result)`
- Testing `ConnectApi` Code

```java
searchFeedElementsInFeed(communityId, feedType, subjectId, pageParam, pageSize,
sortParam, q)
```

Get a page of sorted feed elements from a feed for a record or user that match the search criteria.

API Version

Requires Chatter
Yes

Signature
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Order of feed items in the feed.

- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

$q$

Type: `String`

Search term. Searches keywords in the user or group name. A minimum of one character is required. This parameter does not support wildcards. This parameter is required.

Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

`setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q, result)`

Testing ConnectApi Code

```java
searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q)
```

Get a page of sorted feed elements from a feed that match the search criteria. Each feed element includes no more than the specified number of comments.

API Version

Yes

Signature

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters

`communityId`

Type: `String`

Use the ID for an Experience Cloud site, `internal`, or `null`.
**feedType**
Type: `ConnectApi.FeedType`

The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessages`, `Filter`, `Landing`, and `Streams`.

**subjectId**
Type: `String`

If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

**recentCommentCount**
Type: `Integer`

Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**
Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`. 

1238
Return Value

Type: `ConnectApi.FeedElementPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)`
- `Testing ConnectApi Code`

`searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter)`

Get a page of sorted and filtered feed elements from a `UserProfile` feed that match the search criteria.

API Version

35.0

Available to Guest Users

35.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedFilter filter)
```

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `feedType`
  Type: `ConnectApi.FeedType`
  Value must be `ConnectApi.FeedType.UserProfile`.

- `subjectId`
  Type: `String`
The ID of any user. To specify the context user, use the user ID or the alias me.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
One or more keywords to search for in the feed elements visible to the context user. The search string can contain wildcards and must contain at least two characters that aren’t wildcards. See Wildcards.

filter
Type: ConnectApi.FeedFilter
Value must be ConnectApi.FeedFilter.CommunityScoped. Filters the feed to include only feed elements that are scoped to Experience Cloud sites. Feed elements that are always visible in all sites are filtered out.

Return Value
Type: ConnectApi.FeedElementPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```

**Parameters**

- `communityId`
  
  Type: `String`
  
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `feedType`
  
  Type: `ConnectApi.FeedType`
  
  Value must be `ConnectApi.FeedType.Record`.

- `subjectId`
  
  Type: `String`
  
  The ID of a case.

- `recentCommentCount`
  
  Type: `Integer`
  
  The number of recent comments to include.
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

- **ModifiedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **ModifiedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
One or more keywords to search for in the feed elements visible to the context user. The search string can contain wildcards and must contain at least two characters that aren’t wildcards. See Wildcards.

customFilter
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

Return Value
Type: ConnectApi.FeedElementPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```java

Yes

Signature

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - Value must be `ConnectApi.FeedType.Record`.

- **subjectId**
  - Type: `String`
  - Any record ID, including a group ID.
recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is unansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

Return Value
Type: ConnectApi.FeedElementPage
Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, ConnectApi.FeedFilter filter)
```

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `feedType`
  Type: `ConnectApi.FeedType`
  Value must be `ConnectApi.FeedType.Record`.

- `subjectId`
  Type: `String`
  Any record ID, including a group ID.
recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

filter
Type: ConnectApi.FeedFilter
Specifies the feed filters.
- AllQuestions—Feed elements that are questions.
- AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
• CommunityScoped—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the UserProfile feed.

• QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.

• Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.

• SolvedQuestions—Feed elements that are questions and that have a best answer.

• UnansweredQuestions—Feed elements that are questions and that don’t have any answers.

• UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.

• UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, filter, result)

Testing ConnectApi Code

searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, customFilter)

Get a page of sorted and filtered feed elements from a case feed that match the search criteria.
Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedElementPage searchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, String
customFilter)
```

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**feedType**
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

**subjectId**
Type: String
The ID of a case.

**recentCommentCount**
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.

• CreatedDateDesc—Sorts by most recent creation date.

• LastModifiedDateDesc—Sorts by most recent activity.

• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.

• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

$q$
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

$filter$
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, customFilter, result)

Testing ConnectApi Code

searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q)
Get the feed elements from a feed filtered by a key prefix that match the search criteria.

API Version
31.0

Requires Chatter
Yes
public static ConnectApi.FeedElementPage searchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, String q)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedElementPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q, result)

```

Testing ConnectApi Code

`searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)`

Get a page of sorted feed elements from a feed filtered by a key prefix that match the search criteria. Each feed element includes no more than the specified number of comments.

API Version

31.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElementPage searchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters

`communityId`

- **Type:** String
  
  Use the ID for an Experience Cloud site, `internal`, or `null`.

`subjectId`

- **Type:** String
  
  The ID of the context user or the alias `me`.

`keyPrefix`

- **Type:** String
  
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

`recentCommentCount`

- **Type:** Integer
  
  Maximum number of comments to return with each feed element. The default value is 3.

`density`

- **Type:** ConnectApi.FeedDensity
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**

Type: **String**

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**

Type: **Integer**

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**

Type: **ConnectApi.FeedSortOrder**

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**

Type: **String**

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See **Wildcards**.

**Return Value**

Type: **ConnectApi.FeedElementPage**

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

- `setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)`
- **Testing ConnectApi Code**
searchStreams(communityId, q)
Search the Chatter feed streams for the context user.

API Version
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterStreamPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchStreams(communityId, q, result)
Testing ConnectApi Code

searchStreams(communityId, q, sortParam)
Search and sort the Chatter feed streams for the context user.

API Version
40.0
Public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q, ConnectApi.SortOrder sortParam)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

sortParam
Type: ConnectApi.SortOrder
Specifies the sort order. Values are:
- Ascending—Items are in ascending alphabetical order (A-Z).
- Descending—Items are in descending alphabetical order (Z-A).
- MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.
If not specified, default value is Ascending.

Return Value
Type: ConnectApi.ChatterStreamPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  - setTestSearchStreams(communityId, q, sortParam, result)
  - Testing ConnectApi Code

searchStreams(communityId, q, pageParam, pageSize)
Search the Chatter feed streams for the context user and return a page of results.

API Version
40.0
Requires Chatter
Yes

Signature

public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

Return Value

Type: ConnectApi.ChatterStreamPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

setTestSearchStreams(communityId, q, pageParam, pageSize, result)

Testing ConnectApi Code

searchStreams(communityId, q, pageParam, pageSize, sortParam)

Search the Chatter feed streams for the context user and return a sorted page of results.

API Version

40.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **q**
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **pageParam**
  - Type: `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

- **sortParam**
  - Type: `ConnectApi.SortOrder`
  - Specifies the sort order. Values are:
    - **Ascending**—Items are in ascending alphabetical order (A-Z).
    - **Descending**—Items are in descending alphabetical order (Z-A).
    - **MostRecentlyViewed**—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.
      - If not specified, default value is **Ascending**.

Return Value

- Type: `ConnectApi.ChatterStreamPage`  

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchStreams(communityId, q, pageParam, pageSize, sortParam, result)`
- Testing ConnectApi Code
searchStreams(communityId, q, pageParam, pageSize, sortParam, globalScope)

Search the Chatter feed streams from all Experience Cloud sites for the context user and return a sorted page of results.

API Version
41.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterStreamPage searchStreams(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam, Boolean globalScope)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

sortParam
Type: ConnectApi.SortOrder
Specifies the sort order. Values are:
- Ascending—Items are in ascending alphabetical order (A-Z).
- Descending—Items are in descending alphabetical order (Z-A).
- MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is Ascending.

globalScope
Type: Boolean
Specifies whether to get streams from all the context user’s Experience Cloud sites, regardless of the communityId value.

Tip: If you know the communityId for the streams, we recommend setting globalScope to false.
Return Value
Type: **ConnectApi.ChatterStreamPage**

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

```java
setCommentIsVerified(communityId, commentId, isVerified)
```
Mark a comment as verified or unverified.

API Version
41.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.VerifiedCapability setCommentIsVerified(String communityId,
String commentId, Boolean isVerified)
```

Parameters
- **communityId**
  Type: **String**
  Use the ID for an Experience Cloud site, internal, or null.
- **commentId**
  Type: **String**
  ID of the comment on a question post. Only one comment on a question post can be marked as verified.
- **isVerified**
  Type: **Boolean**
  Specifies whether to mark the comment as verified (`true`) or unverified (`false`).
  Only verified comments can be marked as unverified, and only unverified comments can be marked as verified.

Return Value
Type: **ConnectApi.VerifiedCapability**
If the comment doesn’t support this capability, the return value is **ConnectApi.NotFoundException**.

```java
setCommentIsVerifiedByAnonymized(communityId, commentId, isVerified,
isVerifiedByAnonymized)
```
Mark a comment as verified by an anonymous user.
API Version
43.0

Requires Chatter
Yes

Signature
public static ConnectApi.VerifiedCapability setCommentIsVerifiedByAnonymized(String communityId, String commentId, Boolean isVerified, Boolean isVerifiedByAnonymized)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

commentId
Type: String
ID of the comment on a question post. Only one comment on a question post can be marked as verified.

isVerified
Type: Boolean
Specifies whether to mark the comment as verified (true) or unverified (false).
Only verified comments can be marked as unverified, and only unverified comments can be marked as verified.

isVerifiedByAnonymized
Type: Boolean
Specifies whether to mark the comment as verified by an anonymous user (true).
If a user previously verified a comment and then requested the activity to be deleted, use isVerifiedByAnonymized to maintain the verification and anonymize the value of lastVerifiedByUser.
You can't set isVerified and isVerifiedByAnonymized to true at the same time. isVerifiedByAnonymized can be set to true only if isVerified is already set to true.
You can't set isVerifiedByAnonymized to false. After isVerifiedByAnonymized is set to true, it can be undone only when another user marks the comment as unverified and then reverifies the comment.

Return Value
Type: ConnectApi.VerifiedCapability
If the comment doesn’t support this capability, the return value is ConnectApi.NotFoundException.

setCommentVote(communityId, commentId, upDownVote)
Upvote or downvote a comment.

API Version
41.0
Requires Chatter
Yes

Signature
public static ConnectApi.UpDownVoteCapability setCommentVote(String communityId, String commentId, ConnectApi.UpDownVoteCapabilityInput upDownVote)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

commentId
  Type: String
  ID of the comment.

upDownVote
  Type: ConnectApi.UpDownVoteCapabilityInput
  A ConnectApi.UpDownVoteCapabilityInput object that includes your vote.

Return Value
Type: ConnectApi.UpDownVoteCapability
If the comment doesn’t support this capability, the return value is ConnectApi.NotFoundException.

setFeedCommentStatus(communityId, commentId, status)
Set the status of a comment.

API Version
38.0

Requires Chatter
Yes

Signature
public static ConnectApi.StatusCapability setFeedCommentStatus(String communityId, String commentId, ConnectApi.StatusCapabilityInput status)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
commentId
   Type: String
   ID of the comment.

status
   Type: ConnectApi.StatusCapabilityInput
   A ConnectApi.StatusCapabilityInput object that includes the status you want to set.

Return Value
   Type: ConnectApi.StatusCapability
   If the comment doesn't support this capability, the return value is ConnectApi.NotFoundException.

Usage
   Only users with the Can Approve Feed Post and Comment permission can set the status of a feed post or comment.

setFeedElementIsClosed(communityId, feedElementId, isClosed)
   Set a feed element to closed.
   Users can't edit (specifically the feed item body or title), comment on, or delete a closed feed element. If the closed feed element is a poll, users can't vote on it. Users can't edit (specifically the comment body) or delete a comment on a closed feed element or select or remove it as best answer.
   Admins and moderators can edit and delete closed feed elements and comments on closed feed elements. Admins and moderators can select or remove the best answer status on comments on closed feed elements.

API Version
   43.0

Requires Chatter
   Yes

Signature
   public static ConnectApi.CloseCapability setFeedElementIsClosed(String communityId, String feedElementId, Boolean isClosed)

Parameters
   communityId
      Type: String
      Use the ID for an Experience Cloud site, internal, or null.

   feedElementId
      Type: String
      ID of the feed element.
**isclosed**

Type: Boolean

Specifies whether to set the feed element to closed (true) or not (false).

Return Value

Type: ConnectApi.CloseCapability

If the feed element doesn't support this capability, the return value is ConnectApi.NotFoundException.

**setFeedElementVote(communityId, feedElementId, upDownVote)**

Upvote or downvote a feed element.

**API Version**

41.0

**Requires Chatter**

Yes

**Signature**

public static ConnectApi.UpDownVoteCapability setFeedElementVote(String communityId, String feedElementId, ConnectApi.UpDownVoteCapabilityInput upDownVote)

**Parameters**

**communityId**

Type: String

Use the ID for an Experience Cloud site, internal, or null.

**feedElementId**

Type: String

ID of the feed element.

**upDownVote**

Type: ConnectApi.UpDownVoteCapabilityInput

A ConnectApi.UpDownVoteCapabilityInput object that includes your vote.

**Return Value**

Type: ConnectApi.UpDownVoteCapability

If the feed element doesn't support this capability, the return value is ConnectApi.NotFoundException.

**setFeedEntityStatus(communityId, feedElementId, status)**

Set the status of a feed post.
API Version
37.0

Requires Chatter
Yes

Signature
public static ConnectApi.StatusCapability setFeedEntityStatus(String communityId, String feedElementId, ConnectApi.StatusCapabilityInput status)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

status
Type: ConnectApi.StatusCapabilityInput
A ConnectApi.StatusCapabilityInput object that includes the status you want to set.

Return Value
Type: ConnectApi.StatusCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

Usage
Only users with the Can Approve Feed Post and Comment permission can set the status of a feed post or comment.

setIsMutedByMe(communityId, feedElementId, isMutedByMe)
Mute or unmute a feed element.

API Version
35.0

Requires Chatter
Yes
public static ConnectApi.MuteCapability setIsMutedByMe(String communityId, String feedElementId, Boolean isMutedByMe)

Parameters:

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **feedElementId**
  - Type: String
  - ID of the feed element.

- **isMutedByMe**
  - Type: Boolean
  - Indicates whether the feed element is muted for the context user. Default value is false.

Return Value:

- Type: ConnectApi.MuteCapability
- If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

**setIsReadByMe(communityId, feedElementId, readBy)**

Mark a feed element as read for the context user using an input class.

API Version

40.0

Requires Chatter

Yes

Signature:

public static ConnectApi.ReadByCapability setIsReadByMe(String communityId, String feedElementId, ConnectApi.ReadByCapabilityInput readBy)

Parameters:

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **feedElementId**
  - Type: String
  - ID of the feed element to mark as read.
**setIsReadByMe(communityId, feedElementId, isReadByMe)**

Mark a feed element as read for the context user.

**API Version**

40.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.ReadByCapability setIsReadByMe(String communityId, String feedElementId, Boolean isReadByMe)
```

**Parameters**

**communityId**

Type: String

Use the ID for an Experience Cloud site, internal, or null.

**feedElementId**

Type: String

ID of the feed element to mark as read.

**isReadByMe**

Type: Boolean

Specifies to mark the feed element as read (true) for the context user.

**Return Value**

Type: ConnectApi.ReadByCapability

If the feed element doesn't support this capability, the return value is ConnectApi.NotFoundException.
API Version
34.0

Requires Chatter
Yes

Signature
public static ConnectApi.Comment updateComment(String communityId, String commentId, ConnectApi.CommentInput comment)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

commentId
Type: String
ID of the comment to be edited.

comment
Type: ConnectApi.CommentInput
Information about the comment to be edited.

Return Value
Type: ConnectApi.Comment
If the comment doesn’t support the edit capability, the return value is ConnectApi.NotFoundException.

Example

String commentId;
String communityId = Network.getNetworkId();

// Get the last feed item created by the context user.
List<FeedItem> feedItems = [SELECT Id FROM FeedItem WHERE CreatedById = :UserInfo.getUserId()
ORDER BY CreatedDate DESC];
if (feedItems.isEmpty()) {
    // Return null within anonymous apex.
    return null;
}
String feedElementId = feedItems[0].id;

ConnectApi.CommentPage commentPage =
ConnectApi.ChatterFeeds.getCommentsForFeedElement(communityId, feedElementId);
if (commentPage.items.isEmpty()) {
    // Return null within anonymous apex.
    return null;
}
commentId = commentPage.items[0].id;

ConnectApi.FeedEntityIsEditable isEditable =
ConnectApi.ChatterFeeds.isCommentEditableByMe(communityId, commentId);

if (isEditable.isEditableByMe == true){
    ConnectApi.CommentInput commentInput = new ConnectApi.CommentInput();
    ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

    messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();

    textSegmentInput.text = 'This is my edited comment.'; 
    messageBodyInput.messageSegments.add(textSegmentInput);

    commentInput.body = messageBodyInput;

    ConnectApi.Comment editedComment = ConnectApi.ChatterFeeds.updateComment(communityId,
    commentId, commentInput); 
}

updateDirectMessage(communityId, feedElementId, directMessage)

Update the members of a direct message.

API Version
40.0

Requires Chatter
Yes

Signature
public static ConnectApi.DirectMessageCapability updateDirectMessage(String communityId, 
String feedElementId, ConnectApi.DirectMessageCapabilityInput directMessage)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

directMessage
Type: ConnectApi.DirectMessageCapabilityInput
A ConnectApi.DirectMessageCapabilityInput body that includes the members to add and remove.
Return Value
Type: `ConnectApi.DirectMessageCapability`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

```java
updateFeedElement(communityId, feedElementId, feedElement)
```
Edit a feed element.

API Version
34.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedElement updateFeedElement(String communityId, String feedElementId, ConnectApi.FeedElementInput feedElement)
```

Parameters
`communityId`
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`.

`feedElementId`
Type: `String`
ID of the feed element to be edited. Feed items are the only type of feed element that can be edited.

`feedElement`
Type: `ConnectApi.FeedElementInput`
Information about the feed item to be edited.

Return Value
Type: `ConnectApi.FeedElement`
If the feed element doesn’t support the edit capability, the return value is `ConnectApi.NotFoundException`.

Example for Editing a Feed Post
```java
String communityId = Network.getNetworkId();

// Get the last feed item created by the context user.
List<FeedItem> feedItems = [SELECT Id FROM FeedItem WHERE CreatedById = :UserInfo.getUserId() ORDER BY CreatedDate DESC];
if (feedItems.isEmpty()) {
    // Return null within anonymous apex.
    return null;
}...
Example for Editing a Question Title and Post

```java
String communityId = Network.getNetworkId();

// Get the last feed item created by the context user.
List<FeedItem> feedItems = [SELECT Id FROM FeedItem WHERE CreatedById = :UserInfo.getUserId()
ORDER BY CreatedDate DESC];
if (feedItems.isEmpty()) {
   // Return null within anonymous apex.
   return null;
}
String feedElementId = feedItems[0].id;

ConnectApi.FeedEntityIsEditable isEditable =
ConnectApi.ChatterFeeds.isFeedElementEditableByMe(communityId, feedElementId);

if (isEditable.isEditableByMe == true){
   ConnectApi.FeedItemInput feedItemInput = new ConnectApi.FeedItemInput();
   ConnectApi.FeedElementCapabilitiesInput feedElementCapabilitiesInput = new
   ConnectApi.FeedElementCapabilitiesInput();
   ConnectApi.QuestionAndAnswersCapabilityInput questionAndAnswersCapabilityInput = new
   ConnectApi.QuestionAndAnswersCapabilityInput();
   ConnectApi.TextSegmentInput textSegmentInput = new ConnectApi.TextSegmentInput();

   messageBodyInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
   textSegmentInput.text = 'This is my edited question.';
   messageBodyInput.messageSegments.add(textSegmentInput);

   feedItemInput.body = messageBodyInput;
   
   ConnectApi.FeedElement editedFeedElement =
   ConnectApi.ChatterFeeds.updateFeedElement(communityId, feedElementId, feedItemInput);
}
```
```java
feedItemInput.capabilities = feedElementCapabilitiesInput;
feedElementCapabilitiesInput.questionAndAnswers = questionAndAnswersCapabilityInput;
questionAndAnswersCapabilityInput.questionTitle = 'Where is my edited question?';

ConnectApi.FeedElement editedFeedElement =
    ConnectApi.ChatterFeeds.updateFeedElement(communityId, feedElementId, feedItemInput);
}
```

**updateFeedElementBookmarks(communityId, feedElementId, bookmarks)**

Bookmark a feed element or remove a bookmark from a feed element using an input class.

**API Version**

32.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.BookmarksCapability updateFeedElementBookmarks(String communityId, String feedElementId, ConnectApi.BookmarksCapabilityInput bookmarks)
```

**Parameters**

- `communityId`  
  Type: `String`  
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `feedElementId`  
  Type: `String`  
  ID of the feed element.

- `bookmarks`  
  Type: `ConnectApi.BookmarksCapabilityInput`  
  Information about a bookmark.

**Return Value**

Type: `ConnectApi.BookmarksCapability`  
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

**updateFeedElementBookmarks(communityId, feedElementId, isBookmarkedByCurrentUser)**

Bookmark a feed element or remove a bookmark from a feed element.
API Version
32.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.BookmarksCapability updateFeedElementBookmarks(String communityId, String feedElementId, Boolean isBookmarkedByCurrentUser)
```

Parameters

- `communityId`  
  Type: String
  Use the ID for an Experience Cloud site, internal, or `null`.

- `feedElementId`  
  Type: String
  ID of the feed element.

- `isBookmarkedByCurrentUser`  
  Type: Boolean
  Specify whether to bookmark the feed element (`true`) or not (`false`).

Return Value

Type: `ConnectApi.BookmarksCapability`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

Example

```java
ConnectApi.BookmarksCapability bookmark =
ConnectApi.ChatterFeeds.updateFeedElementBookmarks(null, '0D5D0000000KuGh', true);
```

`updateFeedElementReadByCapabilityBatch(communityId, feedElementIds, readBy)`

Mark multiple feed elements as read by the context user at the same time using an input class.

API Version
40.0

Requires Chatter
Yes
public static ConnectApi.BatchResult[] updateFeedElementReadByCapabilityBatch(String communityId, List<String> feedElementIds, ConnectApi.ReadByCapabilityInput readBy)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

feedElementIds
  Type: List<String>
  Up to 500 feed element IDs to mark as read.

readBy
  Type: ConnectApi.ReadByCapabilityInput
  A ConnectApi.ReadByCapabilityInput body indicating to mark the feed elements as read.

Return Value

Type: ConnectApi.BatchResult[]

If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

The returned objects correspond to each of the input objects and are returned in the same order as the input objects.

The method call fails only if an error occurs that affects the entire operation (such as a parsing failure). If an individual object causes an error, the error is embedded within the ConnectApi.BatchResult list.

updateFeedElementReadByCapabilityBatch(communityId, feedElementIds, isReadByMe)
Mark multiple feed elements as read by the context user at the same time.

API Version

40.0

Requires Chatter

Yes

Signature

public static ConnectApi.BatchResult[] updateFeedElementReadByCapabilityBatch(String communityId, List<String> feedElementIds, Boolean isReadByMe)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
feedElementIds
Type: List<String>
Up to 500 feed element IDs to mark as read.

isReadByMe
Type: Boolean
Specifies to mark the feed element as read (true) for the context user.

Return Value
Type: ConnectApi.BatchResult[]
If the feed element doesn't support this capability, the return value is ConnectApi.NotFoundException.

updateLikeForComment(communityId, commentId, isLikedByCurrentUser)
Like or unlike a comment.

API Version
39.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterLikePage updateLikeForComment(String communityId, String commentId, Boolean isLikedByCurrentUser)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

commentId
Type: String
ID of the comment.

isLikedByCurrentUser
Type: Boolean
Specifies if the context user likes (true) or unlikes (false) the comment.

Return Value
Type: ConnectApi.ChatterLikePage
updateLikeForFeedElement(communityId, feedElementId, isLikedByCurrentUser)
Like or unlike a feed element.

API Version
39.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterLikePage updateLikeForFeedElement(String communityId,
String feedElementId, Boolean isLikedByCurrentUser)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

isLikedByCurrentUser
Type: Boolean
Specifies if the context user likes (true) or unlikes (false) the feed element.

Return Value
Type: ConnectApi.ChatterLikePage
If the feed element doesn’t support the ChatterLikes capability, the return value is ConnectApi.NotFoundException.

updatePinnedFeedElements(communityId, feedType, subjectId, pin)
Pin or unpin feed elements to a group or topic feed.

API Version
41.0

Available to Guest Users
41.0

Requires Chatter
Yes
**updatePinnedFeedElements**

**Signature**

```java
public static ConnectApi.PinCapability updatePinnedFeedElements(String communityId, ConnectApi.FeedType feedType, String subjectId, ConnectApi.PinCapabilityInput pin)
```

**Parameters**

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values are Record and Topics.

- **subjectId**
  - Type: String
  - If `feedType` is Record, `subjectId` must be a group ID. If `feedType` is Topics, `subjectId` must be a topic ID.

- **pin**
  - Type: `ConnectApi.PinCapabilityInput`
  - A `ConnectApi.PinCapabilityInput` object indicating the feed element to pin or unpin.

**Return Value**

- Type: `ConnectApi.PinCapability`

If the feed doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

---

**updateStream**

**Signature**

```java
public static ConnectApi.ChatterStream updateStream(String communityId, String streamId, ConnectApi.ChatterStreamInput streamInput)
```

**Parameters**

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

**API Version**

39.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.ChatterStream updateStream(String communityId, String streamId, ConnectApi.ChatterStreamInput streamInput)
```
**streamId**
Type: `String`
ID of the Chatter feed stream.

**streamInput**
Type: `ConnectApi.ChatterStreamInput`

Return Value
Type: `ConnectApi.ChatterStream`

**voteOnFeedElementPoll(communityId, feedElementId, myChoiceId)**
Vote on a poll or change your vote on a poll.

API Version
32.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.PollCapability voteOnFeedElementPoll(String communityId, String feedElementId, String myChoiceId)
```

Parameters

**communityId**
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`.

**feedElementId**
Type: `String`
ID of the feed element.

**myChoiceId**
Type: `String`
ID of the poll item you’re voting for. The key prefix for poll items is 09A.

Return Value
Type: `ConnectApi.PollCapability`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`. 
Example

```java
ConnectApi.PollCapability poll = ConnectApi.ChatterFeeds.voteOnFeedElementPoll(null, '0D5D0000000XZaUKAW', '09AD000000000TKMAY');
```

**ChatterFeeds Test Methods**

The following are the test methods for ChatterFeeds. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

**IN THIS SECTION:**

- `setTestGetFeedElementsFromFeed(communityId, feedType, result)`
  Register a ConnectApi.FeedElementPage object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

- `setTestGetFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)`
  Register a ConnectApi.FeedElementPage object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

- `setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, result)`
  Register a ConnectApi.FeedElementPage object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

- `setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, result)`
  Register a ConnectApi.FeedElementPage object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

- `setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, threadedCommentsCollapsed, result)`
  Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.getFeedElementsFromFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

- `setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, result)`
  Register a ConnectApi.FeedElementPage object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

- `setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, result)`
  Register a ConnectApi.FeedElementPage object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

- `setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, result)`
  Register a ConnectApi.FeedElementPage object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

- `setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly, result)`
  Register a ConnectApi.FeedElementPage object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.
setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, threadedCommentsCollapsed, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.getFeedElementsFromFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestGetFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching getFeedElementsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching getFeedElementsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, customFilter, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching getFeedElementsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, customFilter, threadedCommentsCollapsed, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching getFeedElementsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.
setTestGetFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, result)

Register a ConnectApi.FeedElementPage object to be returned when the getFeedElementsFromFilterFeedUpdatedSince method is called in a test context.

setTestGetFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, customFilter, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, customFilter, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, filter, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, customFilter, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, filter, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetRelatedPosts(communityId, feedElementId, filter, maxResults, result)

Register a ConnectApi.RelatedFeedPosts object to be returned when the matching ConnectApi.getRelatedPosts(communityId, feedElementId, filter, maxResults) method is called in a test context. Use the method with the same parameters or you receive an exception.
setTestGetTopUnansweredQuestions(communityId, result) (Pilot)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.getTopUnansweredQuestions method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestGetTopUnansweredQuestions(communityId, filter, result) (Pilot)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.getTopUnansweredQuestions method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestGetTopUnansweredQuestions(communityId, pageSize, result) (Pilot)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.getTopUnansweredQuestions method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestGetTopUnansweredQuestions(communityId, filter, pageSize, result) (Pilot)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.getTopUnansweredQuestions method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestSearchFeedElements(communityId, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you
receive an exception.

setTestSearchFeedElements(communityId, q, sortParam, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you
receive an exception.

setTestSearchFeedElements(communityId, q, threadedCommentsCollapsed, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you
receive an exception.

setTestSearchFeedElements(communityId, q, pageParam, pageSize, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you
receive an exception.

setTestSearchFeedElements(communityId, q, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you
receive an exception.

setTestSearchFeedElements(communityId, q, recentCommentCount, pageParam, pageSize, sortParam, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you
receive an exception.
setTestSearchFeedElementsInFeed(communityId, feedType, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, customFilter, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.
setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, filter, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchStreams(communityId, q, result)
Register a ConnectApi.ChatterStreamPage object to be returned when the matching
ConnectApi.searchStream(communityId, q) method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchStreams(communityId, q, sortParam, result)
Register a ConnectApi.ChatterStreamPage object to be returned when the matching
ConnectApi.searchStream(communityId, q, sortParam) method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchStreams(communityId, q, pageParam, pageSize, result)
Register a ConnectApi.ChatterStreamPage object to be returned when the matching
ConnectApi.searchStreams(communityId, q, pageParam, pageSize) method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchStreams(communityId, q, pageParam, pageSize, sortParam, result)
Register a ConnectApi.ChatterStreamPage object to be returned when the matching
ConnectApi.searchStreams(communityId, q, pageParam, pageSize, sortParam) method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchStreams(communityId, q, pageParam, pageSize, sortParam, globalScope, result)
Register a ConnectApi.ChatterStreamPage object to be returned when the matching
ConnectApi.searchStreams(communityId, q, pageParam, pageSize, sortParam, globalScope) method is called in a test context. Use the method with the same parameters or you receive an exception.
**setTestGetFeedElementsFromFeed(communityId, feedType, result)**

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

**API Version**

31.0

**Signature**

```java
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, ConnectApi.FeedElementPage result)
```

**Parameters**

- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- **feedType**
  Type: `ConnectApi.FeedType`
  The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

- **result**
  Type: `ConnectApi.FeedElementPage`
  The object containing test data.

**Return Value**

Type: `Void`

**SEE ALSO:**
- `getFeedElementsFromFeed(communityId, feedType)`
- `Testing ConnectApi Code`

**setTestGetFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)**

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

**API Version**

31.0
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)

Parameters

**communityId**
Type: **String**
Use the ID for an Experience Cloud site, internal, or **null**.

**feedType**
Type: **ConnectApi.FeedType**
The only valid value for this parameter is **Company**.

**pageParam**
Type: **String**
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in **null**, the first page is returned.

**pageSize**
Type: **Integer**
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in **null**, the default size is 25.

**sortParam**
Type: **ConnectApi.FeedSortOrder**
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is **UnansweredQuestions**.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in **null**, the default value **CreatedDateDesc** is used.

**result**
Type: **ConnectApi.FeedElementPage**
The object containing test data.

Return Value
Type: **Void**

SEE ALSO:
- getFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)
- Testing ConnectApi Code
setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrdersortParam, ConnectApi.FeedElementPageresult)

Parameters
communityId
    Type: String
    Use the ID for an Experience Cloud site, internal, or null.

feedType
    Type: ConnectApi.FeedType
    The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

recentCommentCount
    Type: Integer
    Maximum number of comments to return with each feed element. The default value is 3.

density
    Type: ConnectApi.FeedDensity
    Specify the amount of content in a feed.
    - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
    Type: String
    The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
    Type: Integer
    Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
    Type: ConnectApi.FeedSortOrder
    Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value CreatedDateDesc is used.

```java
result
Type: ConnectApi.FeedElementPage
The object containing test data.
```

Return Value
Type: Void

SEE ALSO:
- `getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)`
- Testing ConnectApi Code

```java
setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, result)
```

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
32.0

Signature
```java
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)
```

Parameters
- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.
- **feedType**
  Type: `ConnectApi.FeedType`
  The type of feed. The only valid value is `Home`.  
recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is unansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

filter
Type: ConnectApi.FeedFilter
Specifies the feed filters.
• AllQuestions—Feed elements that are questions.
• AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
• CommunityScoped—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the UserProfile feed.
• QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
• QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
• **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.

• **SolvedQuestions**—Feed elements that are questions and that have a best answer.

• **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.

• **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.

• **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

```
result
Type: ConnectApi.FeedElementPage

The object containing test data.
```

**Return Value**
Type: Void

**SEE ALSO:**
- `getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter)`
- **Testing ConnectApi Code**

```
setTestGetFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed, result)
```

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.getFeedElementsFromFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**
44.0

**Signature**
```
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)
```

**Parameters**

- **communityId**
  Type: String  
  Use the ID for an Experience Cloud site, internal, or null.
**feedType**
Type: `ConnectApi.FeedType`
The type of feed. The only valid value is `Home`.

**recentCommentCount**
Type: `Integer`
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**filter**
Type: `ConnectApi.FeedFilter`
Specifies the feed filters.
- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- **CommunityScoped**—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the `UserProfile` feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- SolvedQuestions—Feed elements that are questions and that have a best answer.
- UnansweredQuestions—Feed elements that are questions and that don't have any answers.
- UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- Unread—Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the Record feed of a group.
- UnsolvedQuestions—Feed elements that are questions and that don't have a best answer.

threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- Testing ConnectApi Code
  - getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed)

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, result)
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, ConnectApi.FeedElementPage result)
Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The feed type.

subjectId
Type: String
The ID of the context user or the alias me.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
\- getFeedElementsFromFeed(communityId, feedType, subjectId)
\- Testing ConnectApi Code

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
31.0

Signature

public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

**subjectId**

Type: String

If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

**pageParam**

Type: String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**

Type: Integer

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**

Type: ConnectApi.FeedSortOrder

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value CreatedDateDesc is used.

**result**

Type: ConnectApi.FeedElementPage

The object containing test data.

Return Value

Type: Void

SEE ALSO:

- `getFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam)`

Testing ConnectApi Code

```
setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, result)
```

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.
API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

**result**
- Type: `ConnectApi.FeedElementPage`
  - The object containing test data.

**Return Value**
- Type: Void

**SEE ALSO**
  - `getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam)`
  - `Testing ConnectApi Code`

```java
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedElementPage result)
```

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

**API Version**

**Parameters**
- `communityId`
  - Type: `String`
    - Use the ID for an Experience Cloud site, `internal`, or `null`.
- `feedType`
  - Type: `ConnectApi.FeedType`
    - Value must be `ConnectApi.FeedType.Record`. 

1295
subjectId
  Type: String
  Any record ID, including a group ID.

recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
  • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  If you pass in null, the default value CreatedDateDesc is used.

showInternalOnly
  Type: Boolean
  Specifies whether to show only feed items from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

result
  Type: ConnectApi.FeedElementPage
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)
Testing ConnectApi Code

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
35.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.UserProfile.

subjectId
Type: String
The ID of any user. To specify the context user, use the user ID or the alias me.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
• `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
• `CreatedDateDesc`—Sorts by most recent creation date.
• `LastModifiedDateDesc`—Sorts by most recent activity.
• `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
• `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

If you pass in `null`, the default value `CreatedDateDesc` is used.

`filter`
Type: `ConnectApi.FeedFilter`
Value must be `ConnectApi.FeedFilter.CommunityScoped`. Filters the feed to include only feed elements that are scoped to Experience Cloud sites. Feed elements that are always visible in all sites are filtered out. Currently, feed elements scoped to sites have a User or a Group parent record. However, other parent record types could be scoped to sites in the future.

`result`
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
`getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter)`

Testing ConnectApi Code
setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, filter, threadedCommentsCollapsed, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.getFeedElementsFromFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
44.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedTypeUserProfile.

subjectId
Type: String
The ID of any user. To specify the context user, use the user ID or the alias me.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
pageSize
Type: Integer
 Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
 Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
 If you pass in null, the default value CreatedDateDesc is used.

filter
Type: ConnectApi.FeedFilter
 Value must be ConnectApi.FeedFilter.CommunityScoped. Filters the feed to include only feed elements that are scoped to Experience Cloud sites. Feed elements that are always visible in all sites are filtered out. Currently, feed elements scoped to sites have a User or a Group parent record. However, other parent record types could be scoped to sites in the future.

threadedCommentsCollapsed
Type: Boolean
 Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

result
Type: ConnectApi.FeedElementPage
 The object containing test data.

Return Value
Type: Void

SEE ALSO:

```

**Parameters**

- `communityId`
  
  Type: `String`
  
  Use the ID for an Experience Cloud site, internal, or `null`.

- `feedType`
  
  Type: `ConnectApi.FeedType`
  
  Value must be `ConnectApi.FeedType.Record`.

- `subjectId`
  
  Type: `String`
  
  The ID of a case.

- `recentCommentCount`
  
  Type: `Integer`
  
  Maximum number of comments to return with each feed element. The default value is 3.

- `density`
  
  Type: `ConnectApi.FeedDensity`
  
  Specify the amount of content in a feed.
  
  - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  
  - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- `pageParam`
  
  Type: `String`
  
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- `pageSize`
  
  Type: `Integer`
  
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- `sortParam`
  
  Type: `ConnectApi.FeedSortOrder`
  
  Values are:
  
  - **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

customFilter
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.
feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  Any record ID, including a group ID.

recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
    • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
    • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
    • CreatedDateDesc—Sorts by most recent creation date.
    • LastModifiedDateDesc—Sorts by most recent activity.
    • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
    • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  If you pass in null, the default value CreatedDateDesc is used.

showInternalOnly
  Type: Boolean
  Specifies whether to show only feed items from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.
result
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: Void

`setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, filter, result)`

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
32.0

Signature
```java
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)
```

Parameters
- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `feedType`
  Type: `ConnectApi.FeedType`
  Value must be `ConnectApi.FeedType.Record`.

- `subjectId`
  Type: `String`
  Any record ID, including a group ID.

- `recentCommentCount`
  Type: `Integer`
  The maximum number of comments to return with each feed item. The default value is 3.
elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  - CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  - CreatedDateDesc—Sorts by most recent creation date.
  - LastModifiedDateDesc—Sorts by most recent activity.
  - MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is unansweredQuestions.
  - Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. If you pass in null, the default value CreatedDateDesc is used.

showInternalOnly
  Type: Boolean
  Specifies whether to show only feed items from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

filter
  Type: ConnectApi.FeedFilter
  Specifies the feed filters.
  - AllQuestions—Feed elements that are questions.
  - AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
  - CommunityScoped—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the UserProfile feed.
• QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.

• Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.

• SolvedQuestions—Feed elements that are questions and that have a best answer.

• UnansweredQuestions—Feed elements that are questions and that don’t have any answers.

• UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

• Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.

• UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
44.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedFilter filter, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)
Parameters

**communityId**
- Type: String
- Use the ID for an Experience Cloud site, `internal`, or `null`.

**feedType**
- Type: `ConnectApi.FeedType`
- Value must be `ConnectApi.FeedType.Record`.

**subjectId**
- Type: String
- Any record ID, including a group ID.

**recentCommentCount**
- Type: Integer
- The maximum number of comments to return with each feed item. The default value is 3.

**elementsPerBundle**
- Type: Integer
- Maximum number of feed elements per bundle. The default and maximum value is 10.

**density**
- Type: `ConnectApi.FeedDensity`
- Specify the amount of content in a feed.
  - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
- Type: String
- The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
- Type: Integer
- Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
- Type: `ConnectApi.FeedSortOrder`
- Values are:
  - **CreatedDateAsc**—sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
  - **CreatedDateDesc**—sorts by most recent creation date.
  - **LastModifiedDateDesc**—sorts by most recent activity.
  - **MostViewed**—sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
  - **Relevance**—sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in null, the default value CreatedDateDesc is used.

showInternalOnly
Type: Boolean
Specifies whether to show only feed items from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

filter
Type: ConnectApi.FeedFilter
Specifies the feed filters.
- AllQuestions—Feed elements that are questions.
- AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- CommunityScoped—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the UserProfile feed.
- QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- SolvedQuestions—Feed elements that are questions and that have a best answer.
- UnansweredQuestions—Feed elements that are questions and that don’t have any answers.
- UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- Unread—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
- UnsolvedQuestions—Feed elements that are questions and that don’t have a best answer.

threadedCommentsCollapsed
Type: Boolean
Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
40.0

Signature
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, String customFilter, ConnectApi.FeedElementPage result)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  The ID of a case.

recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

elementsPerBundle
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.
density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
  • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  If you pass in null, the default value CreatedDateDesc is used.

showInternalOnly
  Type: Boolean
  Specifies whether to show only feed items from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

customFilter
  Type: String
  Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

result
  Type: ConnectApi.FeedElementPage
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, customFilter)

Testing ConnectApi Code

setTestGetFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam, showInternalOnly, customFilter, threadedCommentsCollapsed, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.getFeedElementsFromFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
44.0

Signature

```
public static Void setTestGetFeedElementsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, String customFilter, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)
```

Parameters

- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- **feedType**
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

- **subjectId**
  Type: String
  The ID of a case.

- **recentCommentCount**
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

- **elementsPerBundle**
  Type: Integer
  Maximum number of feed elements per bundle. The default and maximum value is 10.
**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedAtAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedAtDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in `null`, the default value `CreatedAtDesc` is used.

**showInternalOnly**
Type: `Boolean`
Specifies whether to show only feed items from internal (non-Experience Cloud site) users (`true`), or not (`false`). The default value is `false`.

**customFilter**
Type: `String`
Custom filter that applies only to the case feed. See `customFeedFilter` in the Metadata API Developer Guide for supported values.

**threadedCommentsCollapsed**
Type: `Boolean`
Specifies whether to return threaded comments in a collapsed style (`true`) or not (`false`). If you pass in `null`, the default is `false`.

**result**
Type: `ConnectApi.FeedElementPage`
The object containing test data.
Return Value
Type: Void

SEE ALSO:

setTestGetFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, result)

Register a ConnectApi.FeedElementPage object to be returned when the getFeedElementsFromFilterFeedUpdatedSince method is called in a test context.

API Version
31.0

Signature
public static Void setTestGetFeedElementsFromFilterFeedUpdatedSince(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**updatedSince**
Type: String

An opaque token defining the modification time stamp of the feed and the sort order.

The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

**result**
Type: `ConnectApi.FeedElementPage`

The object containing test data.

Return Value
Type: Void

SEE ALSO:

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**
31.0

**Signature**

```java
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedElementPage result)
```

**Parameters**

- `communityId`
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- `feedType`
  Type: `ConnectApi.FeedType`
The type of feed. Valid values are Company, DirectMessageModeration, Home, Moderation, and PendingReview.

**recentCommentCount**
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

**density**
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- **AllUpdates** — Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates** — Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**updatedSince**
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

**result**
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- *getFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)*
- *Testing ConnectApi Code*

**setTestGetFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, filter, result)**
Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
32.0
Signature

```java
public static Void setTestGetFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density,
String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedFilter filter,
ConnectApi.FeedElementPage result)
```

Parameters

**communityId**
- Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

**feedType**
- Type: `ConnectApi.FeedType`
  - The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

**recentCommentCount**
- Type: `Integer`
  - Maximum number of comments to return with each feed element. The default value is 3.

**density**
- Type: `ConnectApi.FeedDensity`
  - Specify the amount of content in a feed.
    - `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    - `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
- Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
- Type: `Integer`
  - Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
- Type: `String`
  - An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.
  - The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

**filter**
- Type: `ConnectApi.FeedFilter`
  - Specifies the feed filters.
    - `AllQuestions`—Feed elements that are questions.
    - `AuthoredBy`—Feed elements authored by the user profile owner. This value is valid only for the `UserProfile` feed.
- **CommunityScoped**—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the UserProfile feed.

- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.

- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.

- **SolvedQuestions**—Feed elements that are questions and that have a best answer.

- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.

- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.

- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.

- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

```java
result
  Type: ConnectApi.FeedElementPage
  The object containing test data.
```

**Return Value**

Type: Void

**API Version**

31.0

**Signature**

```java
public static Void setTestGetFeedElementsUpdatedSince(String communityId,
  ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
  ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince,
  ConnectApi.FeedElementPage result)
```
Parameters

**communityId**
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`.

**feedType**
Type: `ConnectApi.FeedType`
One of these values:
- Files
- Groups
- News
- People
- Record

**subjectId**
Type: `String`
If `feedType` is `ConnectApi.Record`, `subjectId` can be any record ID, including a group ID. Otherwise, it must be the context user or the alias `me`.

**recentCommentCount**
Type: `Integer`
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**
Type: `String`
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

**result**
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince)`

Testing ConnectApi Code

```
setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly, result)
```

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
31.0

Signature
```
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly, ConnectApi.FeedElementPage result)
```

Parameters

- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- **feedType**
  Type: `ConnectApi.FeedType`
  Value must be `ConnectApi.FeedType.Record`.

- **subjectId**
  Type: `String`
  Any record ID, including a group ID.

- **recentCommentCount**
  Type: `Integer`
  Maximum number of comments to return with each feed element. The default value is 3.

- **density**
  Type: `ConnectApi.FeedDensity`
  Specify the amount of content in a feed.
• **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

• **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**

Type: **String**

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**

Type: **Integer**

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**

Type: **String**

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedElementPage` response body.

The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

**showInternalOnly**

Type: **Boolean**

Specifies whether to show only feed elements from internal (non-Experience Cloud site) users (`true`), or not (`false`). The default value is `false`.

**result**

Type: **ConnectApi.FeedElementPage**

The object containing test data.

Return Value

Type: **Void**

SEE ALSO:

- `getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly)`

Testing ConnectApi Code

```
setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, filter, result)
```

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**

35.0
public static Void setTestGetFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer
elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
String updatedSince, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.UserProfile.

subjectId
Type: String
The ID of any user. To specify the context user, use the user ID or the alias me.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token defining the modification time stamp of the feed and the sort order.
The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.
filter:
Type: `ConnectApi.FeedFilter`
Value must be `ConnectApi.FeedFilter.CommunityScoped`. Filters the feed to include only feed elements that are scoped to Experience Cloud sites. Feed elements that are always visible in all sites are filtered out. Currently, feed elements scoped to sites have a User or a Group parent record. However, other parent record types could be scoped to sites in the future.

result:
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: Void

- `Testing ConnectApi Code`

**setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, customFilter, result)**

Register a `ConnectApi.FeedElementPage` object to be returned when `getFeedElementsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
40.0

Signature
```java
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, String customFilter, ConnectApi.FeedElementPage result)
```

Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`. 

`feedType`
Type: `ConnectApi.FeedType`
Value must be `ConnectApi.FeedType.Record`. 

`subjectId`
Type: `String`
The ID of a case.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token defining the modification time stamp of the feed and the sort order.

The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

customFilter
Type: String
Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, customFilter)
Testing ConnectApi Code
setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
31.0

Signature
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**updatedSince**
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

**showInternalOnly**
Type: Boolean
Specifies whether to show only feed elements from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

**result**
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

**setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, filter, result)**

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**
32.0

**Signature**

```java
public static Void setTestGetFeedElementsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)
```
Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

elementsPerBundle
Type: Integer
Maximum number of feed elements per bundle. The default and maximum value is 10.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.

The updatedSince parameter doesn’t return feed elements that are created in the same second as the call.

showInternalOnly
Type: Boolean
Specifies whether to show only feed elements from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

filter
Type: ConnectApi.FeedFilter
Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
- **CommunityScoped**—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the UserProfile feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the Record feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, filter)

Testing ConnectApi Code

setTestGetFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince, showInternalOnly, customFilter, result)

Register a ConnectApi.FeedElementPage object to be returned when getFeedElementsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
40.0
Signature

```java
public static Void setTestGetFeedElementsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, Integer
elementsPerBundle, ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
String updatedSince, Boolean showInternalOnly, String customFilter,
ConnectApi.FeedElementPage result)
```

Parameters

**communityId**
- **Type:** String
- Use the ID for an Experience Cloud site, internal, or null.

**feedType**
- **Type:** ConnectApi.FeedType
- Value must be ConnectApi.FeedType.Record.

**subjectId**
- **Type:** String
- The ID of a case.

**recentCommentCount**
- **Type:** Integer
- Maximum number of comments to return with each feed element. The default value is 3.

**elementsPerBundle**
- **Type:** Integer
- Maximum number of feed elements per bundle. The default and maximum value is 10.

**density**
- **Type:** ConnectApi.FeedDensity
- Specify the amount of content in a feed.
  - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
- **Type:** String
- The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
- **Type:** Integer
- Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**updatedSince**
- **Type:** String
- An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedElementPage response body.
The `updatedSince` parameter doesn’t return feed elements that are created in the same second as the call.

`showInternalOnly`
- **Type:** Boolean
- Specifies whether to show only feed elements from internal (non-Experience Cloud site) users ([true](#)), or not ([false](#)). The default value is `false`.

`customFilter`
- **Type:** String
- Custom filter that applies only to the case feed. See `customFeedFilter` in the Metadata API Developer Guide for supported values.

`result`
- **Type:** [ConnectApi.FeedElementPage](#)
- The object containing test data.

Return Value
- **Type:** Void

SEE ALSO:

- Testing ConnectApi Code

### setTestGetRelatedPosts(communityId, feedElementId, filter, maxResults, result)

Register a `ConnectApi.RelatedFeedPosts` object to be returned when the matching `ConnectApi.getRelatedPosts(communityId, feedElementId, filter, maxResults)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**
- 37.0

**Signature**
```
public static Void setTestGetRelatedPosts(String communityId, String feedElementId,
ConnectApi.RelatedFeedPostType filter, Integer maxResults, ConnectApi.RelatedFeedPosts
result)
```

**Parameters**

- `communityId`
  - **Type:** String
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `feedElementId`
  - **Type:** String
  - ID of the feed element. The feed element must be a question.
**filter**

Type: `ConnectApi.RelatedFeedPostType`

Specifies the type of related feed post. Values are:

- **Answered**—Related questions that have at least one answer.
- **BestAnswer**—Related questions that have a best answer.
- **Generic**—All types of related questions, including answered, with a best answer, and unanswered.
- **Unanswered**—Related questions that don’t have answers.

**Generic** is the default value.

**maxResults**

Type: `Integer`

The maximum number of results to return. You can return up to 25 results; 5 is the default.

**result**

Type: `ConnectApi.RelatedFeedPosts`

The object containing test data.

In version 37.0 and later, related feed posts are questions.

### Return Value

Type: Void

**setTestGetTopUnansweredQuestions** *(communityId, result)* *(Pilot)*

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.getTopUnansweredQuestions` method is called in a test context. Use the method with the same parameters or you receive an exception.

**Note:** We provided top-five unanswered questions to selected customers through a pilot program that required agreement to specific terms and conditions. This pilot program is closed and not accepting new participants.

API Version

42.0

Signature

```java
public static Void setTestGetTopUnansweredQuestions(String communityId, 
ConnectApi.FeedElementPage result)
```

Parameters

**communityId**

Type: `String`

ID of the Experience Cloud site.

**result**

Type: `ConnectApi.FeedElementPage`

The object containing test data.
Return Value
Type: Void

SEE ALSO:
- `getTopUnansweredQuestions(communityId)` (Pilot)
- `Testing ConnectApi Code`

`setTestGetTopUnansweredQuestions(communityId, filter, result)` (Pilot)
Register a `ConnectApi.FeedElementPage` object to be returned when the matching
`ConnectApi.getTopUnansweredQuestions` method is called in a test context. Use the method with the same parameters
or you receive an exception.

⚠️ **Note:** We provided top-five unanswered questions to selected customers through a pilot program that required agreement to specific terms and conditions. This pilot program is closed and not accepting new participants.

API Version
42.0

Signature
```java
public static Void setTestGetTopUnansweredQuestions(String communityId, ConnectApi.TopUnansweredQuestionsFilterType filter, ConnectApi.FeedElementPage result)
```

Parameters
- `communityId`  
  Type: `String`
  ID of the Experience Cloud site.
- `filter`  
  Type: `ConnectApi.FeedFilter`
  Specifies the filter for the feed. `UnansweredQuestionsWithCandidateAnswers` is the only valid value.
- `result`  
  Type: `ConnectApi.FeedElementPage`
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getTopUnansweredQuestions(communityId, filter)` (Pilot)
- `Testing ConnectApi Code`
setTestGetTopUnansweredQuestions(communityId, pageSize, result) (Pilot)

Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.getTopUnansweredQuestions method is called in a test context. Use the method with the same parameters
or you receive an exception.

Note: We provided top-five unanswered questions to selected customers through a pilot program that required agreement to
specific terms and conditions. This pilot program is closed and not accepting new participants.

API Version
42.0

Signature
public static Void setTestGetTopUnansweredQuestions(String communityId, Integer pageSize,
ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
ID of the Experience Cloud site.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 0 through 10. If you pass in null, the default size is 5.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

gTopUnansweredQuestions(communityId, pageSize) (Pilot)
Testing ConnectApi Code

setTestGetTopUnansweredQuestions(communityId, filter, pageSize, result) (Pilot)

Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.getTopUnansweredQuestions method is called in a test context. Use the method with the same parameters
or you receive an exception.

Note: We provided top-five unanswered questions to selected customers through a pilot program that required agreement to
specific terms and conditions. This pilot program is closed and not accepting new participants.
API Version
42.0

Signature
public static Void setTestGetTopUnansweredQuestions(String communityId,
ConnectApi.FeedFilter filter, Integer pageSize, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
ID of the Experience Cloud site.

filter
Type: ConnectApi.FeedFilter
Specifies the filter for the feed. UnansweredQuestionsWithCandidateAnswers is the only valid value.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 0 through 10. If you pass in null, the default size is 5.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

getTopUnansweredQuestions(communityId, filter, pageSize) (Pilot)
Testing ConnectApi Code

setTestSearchFeedElements(communityId, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature
public static Void setTestSearchFeedElements(String communityId, String q,
ConnectApi.FeedElementPage result)
Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**result**
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- searchFeedElements(communityId, q)
- Testing ConnectApi Code

**setTestSearchFeedElements(communityId, q, sortParam, result)**

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature

```
public static Void setTestSearchFeedElements(String communityId, String q,
ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedElementPage result)
```

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in **null**, the default value CreatedDateDesc is used.

**result**

Type: `ConnectApi.FeedElementPage`

The object containing test data.

Return Value

Type: Void

SEE ALSO:

- `searchFeedElements(communityId, q, sortParam)`
- Testing ConnectApi Code

**setTestSearchFeedElements(communityId, q, threadedCommentsCollapsed, result)**

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElements` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

44.0

Signature

```
public static Void setTestSearchFeedElements(String communityId, String q, Boolean threadedCommentsCollapsed, ConnectApi.FeedElementPage result)
```

Parameters

**communityId**

Type: String

Use the ID for an Experience Cloud site, internal, or null.

**q**

Type: String

Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
threadedCommentsCollapsed
  Type: Boolean
  Specifies whether to return threaded comments in a collapsed style (true) or not (false). If you pass in null, the default is false.

result
  Type: ConnectApi.FeedElementPage
  The object containing test data.

Return Value
  Type: Void

SEE ALSO:

setParameterFeedElements(communityId, q, pageParam, pageSize, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElements method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
  31.0

Signature
  public static Void setParameterFeedElements(String communityId, String q, String pageParam, Integer pageSize, ConnectApi.FeedElementPage result)

Parameters
  communityId
    Type: String
    Use the ID for an Experience Cloud site, internal, or null.

  q
    Type: String
    Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

  pageParam
    Type: String
    The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

  pageSize
    Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value

### **setTestSearchFeedElements**
```java
public static void setTestSearchFeedElements(String communityId, String q, Integer recentCommentCount, String pageParam, Integer pageSize, String sortParam, ConnectApi.FeedElementPage result)
```

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElements` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**
31.0

**Signature**
```java
public static void setTestSearchFeedElements(String communityId, String q, Integer recentCommentCount, String pageParam, Integer pageSize, String sortParam, ConnectApi.FeedElementPage result)
```
Parameters

**communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

**q**
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**recentCommentCount**
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

**pageParam**
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
  Type: ConnectApi.FeedSortOrder
  Values are:
  - CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  - CreatedDateDesc—Sorts by most recent creation date.
  - LastModifiedDateDesc—Sorts by most recent activity.
  - MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  - Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  If you pass in null, the default value CreatedDateDesc is used.

**result**
  Type: ConnectApi.FeedElementPage
  The object containing test data.

Return Value
  Type: Void

SEE ALSO:

searchFeedElements(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)
Testing ConnectApi Code
setTestSearchFeedElementsInFeed(communityId, feedType, q, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching
ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters
or you receive an exception.

API Version
31.0

Signature
public static Void setTestSearchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String q, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, Home, Moderation, and PendingReview.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including
wildcards. See Wildcards.

ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)
```

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**feedType**
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, Home, Moderation, and PendingReview.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**result**
Type: ConnectApi.FeedElementPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
searchFeedElementsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)
Testing ConnectApi Code

setTestSearchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, Home, Moderation, and PendingReview.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- `createdDateAsc`—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- `createdDateDesc`—Sorts by most recent creation date.
- `lastModifiedDateDesc`—Sorts by most recent activity.
- `mostViewed`—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `relevance`—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in `null`, the default value `createdDateDesc` is used.

`q`
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`result`
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `searchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q)`
- Testing ConnectApi Code

```java
setTestSearchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter, result)
```

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
32.0
Signature

```java
public static Void setTestSearchFeedElementsInFeed(String communityId,
    ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density,
    String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q,
    ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)
```

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. The only valid value is Home.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.
required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

filter
Type: ConnectApi.FeedFilter
Specifies the feed filters.

• AllQuestions—Feed elements that are questions.
• AuthoredBy—Feed elements authored by the user profile owner. This value is valid only for the UserProfile feed.
• CommunityScoped—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the UserProfile feed.
• QuestionsWithCandidateAnswers—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
• QuestionsWithCandidateAnswersReviewedPublished—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
• Read—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the Record feed of a group.
• SolvedQuestions—Feed elements that are questions and that have a best answer.
• UnansweredQuestions—Feed elements that are questions and that don't have any answers.
• UnansweredQuestionsWithCandidateAnswers—Feed elements that are questions that don't have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
• Unread—Feed elements that are created in the past 30 days and aren't marked as read for the context user. This value is valid only for the Record feed of a group.
• UnsolvedQuestions—Feed elements that are questions and that don't have a best answer.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, q, result)
Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
31.0

Signature

public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String q, ConnectApi.FeedElementPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is UserProfile, subjectId can be any user ID. If feedType is any other value, subjectId must be the ID of the context user or the alias me.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

searchFeedElementsInFeed(communityId, feedType, subjectId, q)
Testing ConnectApi Code

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
31.0

Signature

```java
public static Void setTestSearchFeedElementsInFeed(String communityId,
        ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize,
        ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)
```

Parameters

- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- **feedType**
  Type: `ConnectApi.FeedType`
  The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessages`, `Filter`, `Landing`, and `Streams`.

- **subjectId**
  Type: String
  If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

- **pageParam**
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  Type: Integer
  Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **sortParam**
  Type: `ConnectApi.FeedSortOrder`
  Order of feed items in the feed.
  - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
  - `CreatedDateDesc`—Sorts by most recent creation date.
  - `LastModifiedDateDesc`—Sorts by most recent activity.
  - `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
  - `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
  If you pass in `null`, the default value `CreatedDateDesc` is used.

- **q**
  Type: String
Search term. Searches keywords in the user or group name. A minimum of one character is required. This parameter does not support wildcards. This parameter is required.

**result**
Type: `ConnectApi.FeedElementPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `searchFeedElementsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q)`

**setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)**
Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
31.0

Signature
```java
public static Void setTestSearchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)
```

Parameters
- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.
- **feedType**
  Type: `ConnectApi.FeedType`
  The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessages`, `Filter`, `Landing`, and `Streams`.
- **subjectId**
  Type: `String`
  If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`. 
recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
Type: ConnectApi.FeedElementPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q)

Testing ConnectApi Code

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, filter, result)

Register a ConnectApi.FeedElementPage object to be returned when searchFeedElementsInFeed is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
35.0

Signature
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.UserProfile.

subjectId
  Type: String
  The ID of any user. To specify the context user, use the user ID or the alias me.

recentCommentCount
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

density
  Type: ConnectApi.FeedDensity
  The amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: **String**
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: **Integer**
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**
Type: **String**
One or more keywords to search for in the feed elements visible to the context user. The search string can contain wildcards and must contain at least two characters that aren't wildcards. See [Wildcards](#).

**filter**
Type: `ConnectApi.FeedFilter`
Value must be `ConnectApi.FeedFilter.CommunityScoped`. Filters the feed to include only feed elements that are scoped to Experience Cloud sites. Feed elements that are always visible in all sites are filtered out. Currently, feed elements scoped to sites have a User or a Group parent record. However, other parent record types could be scoped to sites in the future.

**result**
Type: `ConnectApi.FeedElementPage`
The object containing test data.

**Return Value**
Type: **Void**

**SEE ALSO:**

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
The ID of a case.

recentCommentCount
Type: Integer
Maximum number of comments to return with each feed element. The default value is 3.

density
Type: ConnectApi.FeedDensity
The amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.
**pageSize**
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**
Type: `String`
One or more keywords to search for in the feed elements visible to the context user. The search string can contain wildcards and must contain at least two characters that aren’t wildcards. See Wildcards.

**customFilter**
Type: `String`
Custom filter that applies only to the case feed. See `customFeedFilter` in the Metadata API Developer Guide for supported values.

**result**
Type: `ConnectApi.FeedElementPage`
The object containing test data.

**Return Value**
Type: Void

**setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, result)**
Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**
31.0
Signature

```java
public static Void setTestSearchFeedElementsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly,
ConnectApi.FeedElementPage result)
```

Parameters

**communityId**
- **Type:** String
- Use the ID for an Experience Cloud site, internal, or null.

**feedType**
- **Type:** ConnectApi.FeedType
- Value must be ConnectApi.FeedType.Record.

**subjectId**
- **Type:** String
- Any record ID, including a group ID.

**recentCommentCount**
- **Type:** Integer
- Maximum number of comments to return with each feed element. The default value is 3.

**density**
- **Type:** ConnectApi.FeedDensity
- Specify the amount of content in a feed.
  - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
- **Type:** String
- The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
- **Type:** Integer
- Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
- **Type:** ConnectApi.FeedSortOrder
- Values are:
  - **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  - **CreatedDateDesc**—Sorts by most recent creation date.
  - **LastModifiedDateDesc**—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.

• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

q
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

showInternalOnly
  Type: Boolean
  Specifies whether to show only feed elements from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

result
  Type: ConnectApi.FeedElementPage
  The object containing test data.

Return Value
  Type: Void

SEE ALSO:
  searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly)
  Testing ConnectApi Code

setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, filter, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
  32.0

Signature
  public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, ConnectApi.FeedFilter filter, ConnectApi.FeedElementPage result)
Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

`feedType`
Type: `ConnectApi.FeedType`
Value must be `ConnectApi.FeedType.Record`.

`subjectId`
Type: `String`
Any record ID, including a group ID.

`recentCommentCount`
Type: `Integer`
Maximum number of comments to return with each feed element. The default value is 3.

`density`
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
If you pass in `null`, the default value `CreatedDateDesc` is used.

`q`
Type: `String`
Required and cannot be **null**. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See *Wildcards*.

**showInternalOnly**

Type: Boolean

Specifies whether to show only feed elements from internal (non-Experience Cloud site) users (**true**), or not (**false**). The default value is **false**.

**filter**

Type: `ConnectApi.FeedFilter`

Specifies the feed filters.

- **AllQuestions**—Feed elements that are questions.
- **AuthoredBy**—Feed elements authored by the user profile owner. This value is valid only for the *UserProfile* feed.
- **CommunityScoped**—Feed elements that are scoped to Experience Cloud sites. Currently, these feed elements have a User or a Group parent record. However, other parent record types could be scoped to sites in the future. Feed elements that are always visible in all sites are filtered out. This value is valid only for the *UserProfile* feed.
- **QuestionsWithCandidateAnswers**—Feed elements that are questions that have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **QuestionsWithCandidateAnswersReviewedPublished**—Feed elements that are questions that have candidate answers that have been reviewed or published. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Read**—Feed elements that are older than 30 days or are marked as read for the context user. Includes existing feed elements when the context user joined the group. This value is valid only for the *Record* feed of a group.
- **SolvedQuestions**—Feed elements that are questions and that have a best answer.
- **UnansweredQuestions**—Feed elements that are questions and that don’t have any answers.
- **UnansweredQuestionsWithCandidateAnswers**—Feed elements that are questions that don’t have answers but have candidate answers associated with them. This value is valid only for users with the Access Einstein-Generated Answers permission.
- **Unread**—Feed elements that are created in the past 30 days and aren’t marked as read for the context user. This value is valid only for the *Record* feed of a group.
- **UnsolvedQuestions**—Feed elements that are questions and that don’t have a best answer.

**result**

Type: `ConnectApi.FeedElementPage`

The object containing test data.

**Return Value**

Type: Void

**SEE ALSO:**

`searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, filter)`

Testing ConnectApi Code
setTestSearchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, customFilter, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestSearchFeedElementsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, String customFilter, ConnectApi.FeedElementPage result)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  The ID of a case.

recentCommentCount
  Type: Integer
  Maximum number of comments to return with each feed element. The default value is 3.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
**pageSize**
Type: Integer

Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: ConnectApi.FeedSortOrder

Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

**q**
Type: String

Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**showInternalOnly**
Type: Boolean

Specifies whether to show only feed elements from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

**customFilter**
Type: String

Custom filter that applies only to the case feed. See customFeedFilter in the Metadata API Developer Guide for supported values.

**result**
Type: ConnectApi.FeedElementPage

The object containing test data.

**Return Value**
Type: Void

**SEE ALSO:**
- searchFeedElementsInFilterFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, customFilter)
- Testing ConnectApi Code

**setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q, result)**

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
31.0

Signature

```java
public static Void setTestSearchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, String q, ConnectApi.FeedElementPage result)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **subjectId**
  - Type: String
  - The ID of the context user or the alias me.

- **keyPrefix**
  - Type: String
  - A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

- **q**
  - Type: String
  - Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **result**
  - Type: `ConnectApi.FeedElementPage`
  - The object containing test data.

Return Value

Type: Void

SEE ALSO:

- `searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q)`
- Testing ConnectApi Code

```java
setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q, result)
```

Register a `ConnectApi.FeedElementPage` object to be returned when the matching `ConnectApi.searchFeedElementsInFilterFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
31.0

Signature
public static Void setTestSearchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
result

Type: ConnectApi.FeedElementPage

The object containing test data.

Return Value

Type: Void

SEE ALSO:

searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q)

Testing ConnectApi Code

setTestSearchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedElementPage object to be returned when the matching ConnectApi.searchFeedElementsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

31.0

Signature

public static Void setTestSearchFeedElementsInFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedElementPage result)

Parameters

communityId

Type: String

Use the ID for an Experience Cloud site, internal, or null.

subjectId

Type: String

The ID of the context user or the alias me.

keyPrefix

Type: String

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 00S and Group objects have a prefix of 0F9.

recentCommentCount

Type: Integer

Maximum number of comments to return with each feed element. The default value is 3.
density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed elements per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
Type: ConnectApi.FeedElementPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
  - searchFeedElementsInFilterFeed(communityld, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)
  - Testing ConnectApi Code
**setTestSearchStreams(communityId, q, result)**

Register a `ConnectApi.ChatterStreamPage` object to be returned when the matching `ConnectApi.searchStream(communityId, q)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestSearchStreams(String communityId, String q,
ConnectApi.ChatterStreamPage result)
```

**Parameters**

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `q`
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- `result`
  - Type: `ConnectApi.ChatterStreamPage`
  - The object containing test data.

**Return Value**

Type: Void

**SEE ALSO:**

- `searchStreams(communityId, q)`
- Testing `ConnectApi` Code

**setTestSearchStreams(communityId, q, sortParam, result)**

Register a `ConnectApi.ChatterStreamPage` object to be returned when the matching `ConnectApi.searchStream(communityId, q, sortParam)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0
Signature

```java
public static Void setTestSearchStreams(String communityId, String q,
ConnectApi.SortOrder sortParam, ConnectApi.ChatterStreamPage result)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- **q**
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **sortParam**
  - Type: `ConnectApi.SortOrder`
  - Specifies the sort order. Values are:
    - **Ascending**—Items are in ascending alphabetical order (A-Z).
    - **Descending**—Items are in descending alphabetical order (Z-A).
    - **MostRecentlyViewed**—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.
  - If not specified, default value is **Ascending**.

- **result**
  - Type: `ConnectApi.ChatterStreamPage`
  - The object containing test data.

Return Value

- Type: Void

SEE ALSO:

- `searchStreams(communityId, q, sortParam)`
- Testing ConnectApi Code

### setTestSearchStreams(communityId, q, pageParam, pageSize, result)

Register a `ConnectApi.ChatterStreamPage` object to be returned when the matching `ConnectApi.searchStreams(communityId, q, pageParam, pageSize)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0
public static Void setTestSearchStreams(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.ChatterStreamPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

result
Type: ConnectApi.ChatterStreamPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
searchStreams(communityId, q, pageParam, pageSize)
Testing ConnectApi Code

setTestSearchStreams(communityId, q, pageParam, pageSize, sortParam, result)

Register a ConnectApi.ChatterStreamPage object to be returned when the matching ConnectApi.searchStreams(communityId, q, pageParam, pageSize, sortParam) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestSearchStreams(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.SortOrder sortParam, ConnectApi.ChatterStreamPage result)
Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.

sortParam
Type: ConnectApi.SortOrder
Specifies the sort order. Values are:
- Ascending—Items are in ascending alphabetical order (A-Z).
- Descending—Items are in descending alphabetical order (Z-A).
- MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.

If not specified, default value is Ascending.

result
Type: ConnectApi.ChatterStreamPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
searchStreams(communityId, q, pageParam, pageSize, sortParam)
Testing ConnectApi Code

setTestSearchStreams(communityId, q, pageParam, pageSize, sortParam, globalScope, result)

Register a ConnectApi.ChatterStreamPage object to be returned when the matching ConnectApi.searchStreams(communityId, q, pageParam, pageSize, sortParam, globalScope) method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
41.0

Signature

```java
public static Void setTestSearchStreams(String communityId, String q, Integer pageParam,
Integer pageSize, ConnectApi.SortOrder sortParam, Boolean globalScope,
ConnectApi.ChatterStreamPage result)
```

Parameters

```java
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
```

```java
q
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.
```

```java
pageParam
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.
```

```java
pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 to 250. The default size is 25.
```

```java
sortParam
  Type: ConnectApi.SortOrder
  Specifies the sort order. Values are:
  • Ascending—Items are in ascending alphabetical order (A-Z).
  • Descending—Items are in descending alphabetical order (Z-A).
  • MostRecentlyViewed—Items are in descending chronological order by view. This sort order is valid only for Chatter feed streams.
  If not specified, default value is Ascending.
```

```java
globalScope
  Type: Boolean
  Specifies whether to get streams from all the context user’s Experience Cloud sites, regardless of the communityId value.
```

```java
result
  Type: ConnectApi.ChatterStreamPage
  The object containing test data.
```

Return Value
Type: Void
Retired ChatterFeeds Methods

The following methods for ChatterFeeds are retired.

IN THIS SECTION:

- deleteFeedItem(communityId, feedItemId)
  Delete a feed item.
- getCommentsForFeedItem(communityId, feedItemId)
  Get comments for a feed item.
- getFeedItem(communityId, feedItemId)
  Get a feed item.
- getFeedItemBatch(communityId, feedItemIds)
  Get a list of feed items.
- getFeedItemsFromFeed(communityId, feedType)
  Get feed items from the Company, Home, and Moderation feeds.
- getFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)
  Get a page of sorted feed items from the Company, Home, and Moderation feeds.
- getFeedItemsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)
  Get a page of sorted feed items from the Company, Home, and Moderation feeds. Each feed item contains no more than the specified number of comments.
- getFeedItemsFromFeed(communityId, feedType, subjectId)
  Get feed items from a feed for a user or record.
- getFeedItemsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam)
  Get a page of sorted feed items from a feed for a user or record.
- getFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam)
  Get a page of sorted feed items from a feed for a user or record. Each feed item includes no more than the specified number of comments.
- getFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)
  Get a page of sorted feed items from a record feed for a user or record. Each feed item includes no more than the specified number of comments. Specify whether to return feed items posted by internal (non-Experience Cloud site) users only.
- getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix)
  Get feed items from a feed filtered by a key prefix for a user.
- getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam)
  Get a page of sorted feed items from a feed filtered by a key prefix for a user.
- getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam)
  Get a page of sorted feed items from a feed filtered by a key prefix for a user. Each feed item contains no more than the specified number of comments.
getFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, updatedSince)
Get a page of feed items from a feed filtered by a key prefix for a user. Include only feed items that have been updated since the time specified in the `updatedSince` parameter.

getFeedItemsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)
Get a page of feed items from the Company, Home, and Moderation feeds. Include only feed items that have been updated since the time specified in the `updatedSince` parameter. Each feed item contains no more than the specified number of comments.

getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince)
Get a page of feed items from the Files, Groups, News, People, and Record feeds. Include only feed items that have been updated since the time specified in the `updatedSince` parameter. Each feed item contains no more than the specified number of comments.

getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly)
Get a page of feed items from a record feed. Include only feed items that have been updated since the time specified in the `updatedSince` parameter. Specify whether to return feed items posted by internal (non-Experience Cloud site) users only.

getFeedPoll(communityId, feedItemId)
Get the poll associated with a feed item.

getLikesForFeedItem(communityId, feedItemId)
Get likes for a feed item.

getLikesForFeedItem(communityId, feedItemId, pageParam, pageSize)
Get a page of likes for a feed item.

likeFeedItem(communityId, feedItemId)
Like a feed item for the context user.

postComment(communityId, feedItemId, text)
Post a plain-text comment to a feed item.

postComment(communityId, feedItemId, comment, feedItemFileUpload)
Post a rich-text comment to a feed item. Use this method to include mentions and to attach a file to a comment.

postFeedElement(communityId, feedElement, feedElementFileUpload)
Post a rich-text feed element. Include mentions and hashtag topics, attach a file to a feed element, and associate action link groups with a feed element. You can also use this method to share a feed element and add a comment.

postFeedItem(communityId, feedType, subjectId, text)
Post a plain-text feed item.

postFeedItem(communityId, feedType, subjectId, feedItemInput, feedItemFileUpload)
Post a rich-text feed item to a feed. Use this method to include mentions and hashtag topics and to attach a file to a feed item. You can also use this method to share a feed item and add a comment.

searchFeedItems(communityId, q)
Get the feed items that match the search criteria.

searchFeedItems(communityId, q, sortParam)
Get the sorted feed items that match the search criteria.

searchFeedItems(communityId, q, pageParam, pageSize)
Get a page of feed items that match the search criteria.
searchFeedItems(communityId, q, pageParam, pageSize, sortParam)
Get a page of sorted feed items that match the search criteria.

searchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)
Get a page of sorted feed items that match the search criteria.

searchFeedItemsInFeed(communityId, feedType, q)
Get the feed items from the Company, Home, and Moderation feeds that match the search criteria.

searchFeedItemsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items from the Company, Home, and Moderation feeds that match the search criteria.

searchFeedItemsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items from the Company, Home, and Moderation feeds that match the search criteria. Each feed item includes no more than the specified number of comments.

searchFeedItemsInFeed(communityId, feedType, subjectId, q)
Get the feed items from a feed that match the search criteria.

searchFeedItemsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items from a feed for a user or record that match the search criteria.

searchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items from a feed that match the search criteria. Each feed item includes no more than the specified number of comments.

searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q)
Get the feed items that match the search criteria from a feed filtered by a key prefix for a user.

searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items that match the search criteria from a feed filtered by a key prefix for a user.

searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items that match the search criteria from a feed filtered by a key prefix for a user. Each feed item includes no more than the specified number of comments.

shareFeedElement(communityId, subjectId, feedElementType, originalFeedElementId)
Share the originalFeedElementId as the context user.

shareFeedItem(communityId, feedType, subjectId, originalFeedItemId)
Share the originalFeedItemId to the feed specified by the feedType.

updateBookmark(communityId, feedItemId, isBookmarkedByCurrentUser)
Bookmark a feed item or remove a bookmark from a feed item.

voteOnFeedPoll(communityId, feedItemId, myChoiceId)
Vote or change your vote on a feed poll.

setTestGetFeedItemsFromFeed(communityId, feedType, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

Register a ConnectApi.FeedItemPage object to be returned when the getFeedItemsFromFilterFeedUpdatedSince method is called in a test context. Use the method with the same parameters or the code throws an exception.

Register a ConnectApi.FeedItemPage object to be returned when the getFeedItemsUpdatedSince method is called in a test context. Use the method with the same parameters or the code throws an exception.
setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly, result)
Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestSearchFeedItems(communityId, q, result)
Register a test feed item page to be returned when searchFeedItems(communityId, q) is called during a test.

setTestSearchFeedItems(communityId, q, sortParam, result)
Register a test feed item page to be returned when searchFeedItems(String, String, ConnectApi.FeedSortOrder) is called during a test.

setTestSearchFeedItemsInFeed(communityId, q, pageParam, pageSize, result)
Register a test feed item page to be returned when searchFeedItemsInFeed(communityId, q, pageParam, pageSize, sortParam) is called during a test.

setTestSearchFeedItemsInFeed(communityId, q, pageParam, pageSize, sortParam, result)
Register a test feed item page to be returned when searchFeedItemsInFeed(String, String, String, Integer, ConnectApi.FeedSortOrder) is called during a test.

setTestSearchFeedItems(communityId, q, recentCommentCount, density, pageParam, pageSize, sortParam, result)
Register a test feed item page to be returned when searchFeedItemsInFeed(communityId, q, recentCommentCount, density, pageParam, pageSize, sortParam) is called during a test.

setTestSearchFeedItemsInFeed(communityId, feedType, q, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedItemsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedItemsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, q, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.
setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, result)

Register a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q, result)

Register a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFilterFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedItemsInFilterFeed(communityId, feedType, subjectId, keyPrefix, pageParam, pageSize, sortParam, q, result)

Register a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFilterFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

setTestSearchFeedItemsInFilterFeed(communityId, feedType, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)

Register a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFilterFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

```
deleteFeedItem(communityId, feedItemId)
```

Delete a feed item.

**API Version**

28.0–31.0

⚠️ Important: In version 32.0 and later, use `deleteFeedElement(communityId, feedElementId)`.

**Requires Chatter**

Yes

**Signature**

```
public static Void deleteFeedItem(String communityId, String feedItemId)
```

**Parameters**

- `communityId`<br>  
  Type: `String`<br>  
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `feedItemId`<br>  
  Type: `String`<br>  
  The ID for a feed item.
Return Value
Type: Void

**getCommentsForFeedItem(communityId, feedItemId)**
Get comments for a feed item.

API Version
28.0–31.0

⚠️ **Important:** In version 32.0 and later, use `getCommentsForFeedElement(communityId, feedElementId)`.

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
```java
public static ConnectApi.CommentPage getCommentsForFeedItem(String communityId, String feedItemId)
```

Parameters
- `communityId`  
  Type: String  
  Use the ID for an Experience Cloud site, `internal`, or `null`.
- `feedItemId`  
  Type: String  
  The ID for a feed item.

Return Value
Type: `ConnectApi.CommentPage`

**getCommentsForFeedItem(communityId, feedItemId, pageParam, pageSize)**
Get a page of comments for a feed item.

API Version
28.0–31.0

⚠️ **Important:** In version 32.0 and later, use `getCommentsForFeedElement(communityId, feedElementId, pageParam, pageSize)`.
Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature

```java
public static ConnectApi.CommentPage getCommentsForFeedItem(String communityId, String feedItemId, String pageParam, Integer pageSize)
```

Parameters

- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.

- **feedItemId**
  Type: `String`
  The ID for a feed item.

- **pageParam**
  Type: `String`
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: `ConnectApi.CommentPage`

```java
getFeedItem(communityId, feedItemId)
```

Get a feed item.

API Version
28.0–31.0

**Important:** In version 32.0 and later, use `getFeedElement(communityId, feedElementId)`.

Available to Guest Users
31.0 only
Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedItem getFeedItem(String communityId, String feedItemId)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- **feedItemId**
  - Type: `String`
  - The ID for a feed item.

Return Value

Type: `ConnectApi.FeedItem`

⚠️ **Note:** Triggers on FeedItem objects run before their attachment and capabilities information is saved, which means that `ConnectApi.FeedItem.attachment` information and `ConnectApi.FeedElement.capabilities` information may not be available in the trigger.

### getFeedItemBatch(communityId, feedItemIds)

Get a list of feed items.

**API Version**
31.0–31.0

⚠️ **Important:** In version 32.0 and later, use `getFeedElementBatch(communityId, feedElementIds)`.

Requires Chatter
Yes

Signature

```java
public static ConnectApi.BatchResult[] getFeedItemBatch(String communityId, List<String> feedItemIds)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`. 
feedItemIds

Type: List<String>

A list of up to 500 feed item IDs.

Return Value

Type: ConnectApi.BatchResult[]

The ConnectApi.BatchResult.getResult() method returns a ConnectApi.FeedItem object and errors for feed items that didn’t load.

Example

```java
// Create a list of feed items.
ConnectApi.FeedItemPage feedItemPage = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(null,
 ConnectApi.FeedType.Company);
System.debug(feedItemPage);

// Create a list of feed item IDs.
List<String> feedItemIds = new List<String>();
for (ConnectApi.FeedItem aFeedItem : feedItemPage.items){
    feedItemIds.add(aFeedItem.id);
}

// Get info about the feed items in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterFeeds.getFeedItemBatch(null,
feedItemIds);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the header for each feed item.
        ConnectApi.FeedItem aFeedItem;
        if (batchResult.getResult() instanceof ConnectApi.FeedItem) {
            aFeedItem = (ConnectApi.FeedItem) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(aFeedItem.header.text);
    } else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getMessage());
    }
}
```

getFeedItemsFromFeed(communityId, feedType)

Get feed items from the Company, Home, and Moderation feeds.

API Version

28.0–31.0
Important: In version 32.0 and later, use getFeedElementsFromFeed(communityId, feedType).

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

feedType
  Type: ConnectApi.FeedType
  The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestGetFeedItemsFromFeed(communityId, feedType, result)
  Testing ConnectApi Code

getFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)
Get a page of sorted feed items from the Company, Home, and Moderation feeds.

API Version
28.0–31.0

Important: In version 32.0 and later, use getFeedElementsFromFeed(communityId, feedType, pageParam, pageSize, sortParam).
Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId,
    ConnectApi.FeedType feedType, String pageParam, Integer pageSize,
    ConnectApi.FeedSortOrder sortParam)
```

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.  

- `feedType`
  Type: `ConnectApi.FeedType`
  The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.  

- `pageParam`
  Type: `String`
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- `pageSize`
  Type: `Integer`
  Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- `sortParam`
  Type: `ConnectApi.FeedSortOrder`
  Values are:
  - `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
  - `CreatedDateDesc`—Sorts by most recent creation date.
  - `LastModifiedDateDesc`—Sorts by most recent activity.
  - `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
  - `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

Return Value

Type: `ConnectApi.FeedItemPage`
Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)`
- Testing ConnectApi Code

`getFeedItemsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)`
Get a page of sorted feed items from the Company, Home, and Moderation feeds. Each feed item contains no more than the specified number of comments.

API Version
29.0–31.0

⚠️ **Important**: In version 32.0 and later, use `getFeedElementsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)`.

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
```
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Parameters
- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.

- **feedType**
  Type: `ConnectApi.FeedType`
  The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

- **recentCommentCount**
  Type: `Integer`
  The maximum number of comments to return with each feed item. The default value is 3.
density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.FeedSortOrder
  Values are:
  • CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  • CreatedDateDesc—Sorts by most recent creation date.
  • LastModifiedDateDesc—Sorts by most recent activity.
  • MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  • Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

Return Value
  Type: ConnectApi.FeedItemPage

Usage
  To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestGetFeedItemsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, result)
  Testing ConnectApi Code

getFeedItemsFromFeed(communityId, feedType, subjectId)
  Get feed items from a feed for a user or record.
API Version
28.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsFromFeed(communityId, feedType, subjectId)`.

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId)
```

Parameters
- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or null.

- `feedType`
  Type: `ConnectApi.FeedType`
  The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

- `subjectId`
  Type: `String`
  If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

Return Value
Type: `ConnectApi.FeedItemPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, result)`
- Testing ConnectApi Code
getFeedItemsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam)

Get a page of sorted feed items from a feed for a user or record.

API Version
28.0–31.0

⚠️ Important: In version 32.0 and later, use getFeedElementsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam).

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
**sortParam**

Type: `ConnectApi.FeedSortOrder`

Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value CreatedDateDesc is used.

**Return Value**

Type: `ConnectApi.FeedItemPage`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Yes
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
  Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

  Testing ConnectApi Code

getFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)

Get a page of sorted feed items from a record feed for a user or record. Each feed item includes no more than the specified number of comments. Specify whether to return feed items posted by internal (non-Experience Cloud site) users only.

API Version
30.0–31.0

Important: In version 32.0 and later, use getFeedElementsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly).

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage getFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly)
Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

showInternalOnly
Type: Boolean
Specifies whether to show only feed items from internal (non-Experience Cloud site) users \texttt{(true)}, or not \texttt{(false)}. The default value is \texttt{false}.

Return Value

Type: \texttt{ConnectApi.FeedItemPage}

Usage

To test code that uses this method, use the matching set test method (prefix the method name with \texttt{setTest}). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- \texttt{setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly, result)}
- \texttt{Testing ConnectApi Code}

\texttt{getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix)}

Get feed items from a feed filtered by a key prefix for a user.

API Version

28.0–31.0

\textbf{Important}: In version 32.0 and later, use \texttt{getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix)}.

Requires Chatter

Yes

Signature

\texttt{public static ConnectApi.FeedItemPage getFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix)}

Parameters

\textit{communityId}

Type: \texttt{String}

Use the ID for an Experience Cloud site, \texttt{internal}, or \texttt{null}.

\textit{subjectId}

Type: \texttt{String}

The ID of the context user or the alias \texttt{me}.

\textit{keyPrefix}

Type: \texttt{String}

A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.
Return Value
Type: `ConnectApi.FeedItemPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, result)`
- Testing ConnectApi Code

`getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam)`
Get a page of sorted feed items from a feed filtered by a key prefix for a user.

API Version
28.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam)`.

Requires Chatter
Yes

Signature
```
public static ConnectApi.FeedItemPage getFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Parameters
- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.
- `subjectId`
  Type: `String`
  The ID of the context user or the alias `me`.
- `keyPrefix`
  Type: `String`
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.
pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Testing ConnectApi Code

getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam)
Get a page of sorted feed items from a feed filtered by a key prefix for a user. Each feed item contains no more than the specified number of comments.

API Version
29.0–31.0

Important: In version 32.0 and later, use getFeedElementsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, sortParam).
Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedItemPage getFeedItemsFromFilterFeed(String communityId,
String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity
density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **subjectId**
  - Type: String
  - The ID of the context user or the alias me.

- **keyPrefix**
  - Type: String
  - A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 00S and Group objects have a prefix of 0F9.

- **recentCommentCount**
  - Type: Integer
  - The maximum number of comments to return with each feed item. The default value is 3.

- **density**
  - Type: ConnectApi.FeedDensity
  - Specify the amount of content in a feed.
    - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
    - **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

- **pageParam**
  - Type: String
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

- **sortParam**
  - Type: ConnectApi.FeedSortOrder
  - Values are:
    - **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, result)
Testing ConnectApi Code

getFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, updatedSince)
Get a page of feed items from a feed filtered by a key prefix for a user. Include only feed items that have been updated since the time specified in the updatedSince parameter.

API Version
30.0–31.0

Important: In version 32.0 and later, use getFeedElementsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, elementsPerBundle, density, pageParam, pageSize, updatedSince).

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage getFeedItemsFromFilterFeedUpdatedSince(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**subjectId**
Type: String
The ID of the context user or the alias me.

**keyPrefix**
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

**recentCommentCount**
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**updatedSince**
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. To retrieve this token, call `getFeedItemsFromFilterFeed` and take the value from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

Return Value
Type: `ConnectApi.FeedItemPage`

Usage
This method returns only feed items that have been updated since the time specified in the `updatedSince` argument. A feed item is considered to be updated if it was created since the last feed request, or if `sort=LastModifiedDateDesc` and a comment was added to the feed item since the last feed request. Adding likes and topics doesn’t update a feed item.
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  
  setTestGetFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, updatedSince, result)
  
  Testing ConnectApi Code

getFeedItemsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince)

Get a page of feed items from the Company, Home, and Moderation feeds. Include only feed items that have been updated since the time specified in the updatedSince parameter. Each feed item contains no more than the specified number of comments.

API Version
30.0–31.0

⚠️ Important: In version 32.0 and later, use getFeedElementsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince).

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedItemPage getFeedItemsUpdatedSince(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)
```

Parameters

communityId
  
  Type: String
  
  Use the ID for an Experience Cloud site, internal, or null.

feedType
  
  Type: ConnectApi.FeedType
  
  The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

recentCommentCount
  
  Type: Integer
  
  The maximum number of comments to return with each feed item. The default value is 3.
density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedItemPage response body.

Return Value
Type: ConnectApi.FeedItemPage

Usage
This method returns only feed items that have been updated since the time specified in the updatedSince argument. A feed item is considered to be updated if it was created since the last feed request, or if sort=LastModifiedDateDesc and a comment was added to the feed item since the last feed request. Adding likes and topics doesn’t update a feed item.

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example
This example gets the feed items in the company feed and grabs the updatesToken property from the returned object. It then passes the value of updatesToken to the getFeedItemsUpdatedSince method to get the feed items updated since the first call:

```java
// Get the feed items in the company feed and return the updatesToken
String communityId = null;

// Get the feed and extract the update token
ConnectApi.FeedItemPage page = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(communityId, ConnectApi.FeedType.Company);

// page.updatesToken is opaque and has a value like '2:1384549034000'

// Get the feed items that changed since the provided updatesToken
```
ConnectApi.FeedItemPage feedItems= ConnectApi.ChatterFeeds.getFeedItemsUpdatedSince
(communityId, ConnectApi.FeedType.Company, 1, ConnectApi.FeedDensity.AllUpdates, null,
1, page.updatesToken);

SEE ALSO:
  
  setTestGetFeedItemsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince,
  ConnectApi.FeedItemPage, results)
  Testing ConnectApi Code

getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount,
density, pageParam, pageSize, updatedSince)

Get a page of feed items from the Files, Groups, News, People, and Record feeds. Include only feed items that have been updated since the time specified in the updatedSince parameter. Each feed item contains no more than the specified number of comments.

API Version
30.0–31.0

Important: In version 32.0 and later, use getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount,

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage getFeedItemsUpdatedSince(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

feedType
  Type: ConnectApi.FeedType
  One of these values:
  • Files
  • Groups
  • News
People

Record

subjectId
Type: String

If feedType is ConnectApi.Record, subjectId can be any record ID, including a group ID. Otherwise, it must be the context user or the alias me.

recentCommentCount
Type: Integer

The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity

Specify the amount of content in a feed.

- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String

The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
Type: String

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedItemPage response body.

Return Value
Type: ConnectApi.FeedItemPage

Usage
This method returns only feed items that have been updated since the time specified in the updatedSince argument. A feed item is considered to be updated if it was created since the last feed request, or if sort=LastModifiedDateDesc and a comment was added to the feed item since the last feed request. Adding likes and topics doesn’t update a feed item.

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.
Example

This example gets the feed items in the news feed and grabs the `updatesToken` property from the returned object. It then passes the value of `updatesToken` to the `getFeedItemsUpdatedSince` method to get the feed items updated since the first call:

```java
// Get the feed items in the news feed and return the updatesToken
String communityId = null;
String subjectId = 'me';

// Get the feed and extract the update token
ConnectApi.FeedItemPage page = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(communityId, ConnectApi.FeedType.News, subjectId);

// page.updatesToken is opaque and has a value like '2:1384549034000'

// Get the feed items that changed since the provided updatesToken
ConnectApi.FeedItemPage feedItems = ConnectApi.ChatterFeeds.getFeedItemsUpdatedSince
    (communityId, ConnectApi.FeedType.News, subjectId, 1, ConnectApi.FeedDensity.AllUpdates, null, 1, page.updatesToken);
```

SEE ALSO:

- `setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, result)`
- Testing ConnectApi Code

### `getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly)`

Get a page of feed items from a record feed. Include only feed items that have been updated since the time specified in the `updatedSince` parameter. Specify whether to return feed items posted by internal (non-Experience Cloud site) users only.

**API Version**

30.0–31.0

**Important:** In version 32.0 and later, use `getFeedElementsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly)`.

**Available to Guest Users**

31.0 only

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.FeedItemPage getFeedItemsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly)
```
Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

feedType
  Type: ConnectApi.FeedType
  Value must be ConnectApi.FeedType.Record.

subjectId
  Type: String
  Any record ID, including a group ID.

recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
  Type: String
  An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedItemPage response body.

showInternalOnly
  Type: Boolean
  Specifies whether to show only feed items from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

Return Value

Type: ConnectApi.FeedItemPage
Usage

This method returns only feed items that have been updated since the time specified in the `updatedSince` argument. A feed item is considered to be updated if it was created since the last feed request, or if `sort=LastModifiedDateDesc` and a comment was added to the feed item since the last feed request. Adding likes and topics doesn't update a feed item.

If `showInternalOnly` is `true` and digital experiences is enabled, feed items from Experience Cloud sites are included. Otherwise, only feed items from the internal site are included.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example gets the feed items in the news feed and grabs the `updatesToken` property from the returned object. It then passes the value of `updatesToken` to the `getFeedItemsUpdatedSince` method to get the feed items updated since the first call:

```java
// Get the feed items in the news feed and return the updatesToken
String communityId = null;
String subjectId = 'me';

// Get the feed and extract the update token
ConnectApi.FeedItemPage page = ConnectApi.ChatterFeeds.getFeedItemsFromFeed(communityId,
        ConnectApi.FeedType.News, subjectId);

// page.updatesToken is opaque and has a value like '2:1384549034000'

// Get the feed items that changed since the provided updatesToken
ConnectApi.FeedItemPage feedItems= ConnectApi.ChatterFeeds.getFeedItemsUpdatedSince
        (communityId, ConnectApi.FeedType.News, subjectId, 1, ConnectApi.FeedDensity.AllUpdates,
        null, 1, page.updatesToken, true);
```

SEE ALSO:

- `setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize,
  updatedSince, showInternalOnly, result)`
- Testing `ConnectApi Code`

`getFeedPoll(communityId, feedItemId)`

Get the poll associated with a feed item.

API Version

28.0–31.0

**Important:** In version 32.0 and later, use `getElementPoll(communityId, feedElementId)`.

Requires Chatter

Yes
public static ConnectApi.FeedPoll getFeedPoll(String communityId, String feedItemId)

Parameters
- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.
- **feedItemId**
  - Type: String
  - The ID for a feed item.

Return Value
- Type: ConnectApi.FeedPoll

**Note:** Triggers on FeedItem objects run before their attachment and capabilities information is saved, which means that ConnectApi.FeedItem.attachment information and ConnectApi.FeedElement.capabilities information may not be available in the trigger.

getLikesForFeedItem(communityId, feedItemId)
Get likes for a feed item.

API Version
- 28.0–31.0

**Important:** In version 32.0 and later, use getLikesForFeedElement(communityId, feedElementId).

Available to Guest Users
- 31.0 only

Requires Chatter
- Yes

Signature
public static ConnectApi.ChatterLikePage getLikesForFeedItem(String communityId, String feedItemId)

Parameters
- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.
**feedItemId**

Type: **String**

The ID for a feed item.

Return Value

Type: **ConnectApi.ChatterLikePage**

**getLikesForFeedItem(communityId, feedItemId, pageParam, pageSize)**

Get a page of likes for a feed item.

API Version

28.0–31.0

**Important:** In version 32.0 and later, use `getLikesForFeedElement(communityId, feedElementId, pageParam, pageSize)`.

Available to Guest Users

31.0 only

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ChatterLikePage getLikesForFeedItem(String communityId, String feedItemId, Integer pageParam, Integer pageSize)
```

Parameters

**communityId**

Type: **String**

Use the ID for an Experience Cloud site, `internal`, or **null**.

**feedItemId**

Type: **String**

The ID for a feed item.

**pageParam**

Type: **Integer**

Specifies the number of the page you want returned. Starts at 0. If you pass in **null** or 0, the first page is returned.

**pageSize**

Type: **Integer**

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in **null**, the default size is 25.
Return Value
Type: `ConnectApi.ChatterLikePage`

`likeFeedItem(communityId, feedItemId)`
Like a feed item for the context user.

API Version
28.0–31.0

⚠️ **Important:** In version 32.0 and later, use `likeFeedElement(communityId, feedElementId)`.

Requires Chatter
Yes

Signature
`public static ConnectApi.ChatterLike likeFeedItem(String communityId, String feedItemId)`

Parameters
- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or null.

- `feedItemId`
  Type: `String`
  The ID for a feed item.

Return Value
Type: `ConnectApi.ChatterLike`
If the context user already liked the feed item, this method is a non-operation and returns the existing like.

`postComment(communityId, feedItemId, text)`
Post a plain-text comment to a feed item.

API Version
28.0–31.0

⚠️ **Important:** In version 32.0 and later, use `postCommentToFeedElement(communityId, feedElementId, text)`.

Requires Chatter
Yes
Signature

```java
public static ConnectApi.Comment postComment(String communityId, String feedItemId, String text)
```

Parameters

**communityId**
- Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

**feedItemId**
- Type: `String`
  - The ID for a feed item.

**text**
- Type: `String`
  - The text of the comment. Mentions are downgraded to plain text. To include a mention that links to a user, call `postComment(communityId, feedItemId, comment, feedItemFileUpload)` and pass the mention in a `ConnectApi.CommentInput` object.

Return Value

- Type: `ConnectApi.Comment`

Usage

If hashtags or links are detected in `text`, they are included in the comment as hashtag and link segments. Mentions are not detected in `text` and are not separated out of the text.

Feed items and comments can contain up to 10,000 characters.

`postComment(communityId, feedItemId, comment, feedItemFileUpload)`

Post a rich-text comment to a feed item. Use this method to include mentions and to attach a file to a comment.

API Version

28.0–31.0

⚠️ **Important:** In version 32.0 and later, use `postCommentToFeedElement(communityId, feedElementId, comment, feedElementFileUpload)`.

Requires Chatter

Yes

Signature

```java
public static ConnectApi.Comment postComment(String communityId, String feedItemId, ConnectApi.CommentInput comment, ConnectApi.BinaryInput feedItemFileUpload)
```
Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

`feedItemId`
Type: `String`
The ID for a feed item.

`comment`
Type: `ConnectApi.CommentInput`
In the `CommentInput` object, specify rich text, including @mentions. Optionally, in the `CommentInput.attachment` property, specify an existing file or a new file.

`feedItemFileUpload`
Type: `ConnectApi.BinaryInput`
If you specify a `NewFileAttachmentInput` object in the `CommentInput.attachment` property, specify the new binary file to attach in this argument. Otherwise, do not specify a value.

Return Value
Type: `ConnectApi.Comment`

Usage
Feed items and comments can contain up to 10,000 characters.

Sample: Posting a Comment with a New File Attachment
To post a comment and upload and attach a new file to the comment, create a `ConnectApi.CommentInput` object and a `ConnectApi.BinaryInput` object to pass to the `ConnectApi.ChatterFeeds.postComment` method.

```java
String communityId = null;
String feedItemId = '0D5D0000000Kcd1';

ConnectApi.CommentInput input = new ConnectApi.CommentInput();
ConnectApi.TextSegmentInput textSegment;

textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'Comment Text Body';

messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
messageInput.messageSegments.add(textSegment);

input.body = messageInput;

ConnectApi.NewFileAttachmentInput attachmentInput = new ConnectApi.NewFileAttachmentInput();
attachmentInput.description = 'The description of the file';
attachmentInput.title = 'contentFile.txt';
input.attachment = attachmentInput;
```
```java
String fileContents = 'This is the content of the file.';
Blob fileBlob = Blob.valueOf(fileContents);

ConnectApi.Comment commentRep = ConnectApi.ChatterFeeds.postComment(communityId, feedItemId, input, binaryInput);
```

### `postFeedElement(communityId, feedElement, feedElementFileUpload)`

Post a rich-text feed element. Include mentions and hashtag topics, attach a file to a feed element, and associate action link groups with a feed element. You can also use this method to share a feed element and add a comment.

#### API Version

31.0–35.0

⚠️ **Important:** In version 36.0 and later, this method is no longer available because you can’t create a feed post and upload a binary file in the same call. Upload files to Salesforce first, and then use `postFeedElement(communityId, feedElement)` to create the feed post and attach the files.

#### Requires Chatter

Yes

#### Signature

```java
public static ConnectApi.FeedElement postFeedElement(String communityId, ConnectApi.FeedElementInput feedElement, ConnectApi.BinaryInput feedElementFileUpload)
```

#### Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **feedElement**
  - Type: `ConnectApi.FeedElementInput`
  - Specify rich text, including mentions. Optionally, specify a link, a poll, an existing file, or a new file.

- **feedElementFileUpload**
  - Type: `ConnectApi.BinaryInput`
  - Specify the new binary file to attach to the post only if you also specify a `NewFileAttachmentInput` object in the `feedElement` parameter. Otherwise, pass null.

#### Return Value

- Type: `ConnectApi.FeedElement`
Example for Posting a Feed Element with a New (Binary) File

```java
ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
input.subjectId = 'me';

ConnectApi.ContentCapabilityInput contentInput = new ConnectApi.ContentCapabilityInput();
contentInput.title = 'Title';

ConnectApi.FeedElementCapabilitiesInput capabilities = new ConnectApi.FeedElementCapabilitiesInput();
capabilities.content = contentInput;
input.capabilities = capabilities;

String text = 'These are the contents of the new file.';
Blob myBlob = Blob.valueOf(text);
ConnectApi.BinaryInput binInput = new ConnectApi.BinaryInput(myBlob, 'text/plain', 'fileName');

ConnectApi.ChatterFeeds.postFeedElement(Network.getNetworkId(), input, binInput);
```

**postFeedItem(communityId, feedType, subjectId, text)**

Post a plain-text feed item.

**API Version**

28.0–31.0

**Important:** In version 32.0 and later, use `postFeedElement(communityId, subjectId, feedElementType, text)`.

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.FeedItem postFeedItem(String communityId, ConnectApi.FeedType feedType, String subjectId, String text)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - One of the following:
    - News
    - Record
• **UserProfile**
  Use **Record** to post to a group.

**subjectId**
Type: **String**
The value depends on the **feedType**:
• **News**—ID of the context user or the keyword *me*.
• **Record**—ID of any record with a feed, including groups.
• **UserProfile**—ID of any user.

**text**
Type: **String**
Text of the feed item. Mentions are downgraded to plain text. To include a mention that links to the user, call the
`postFeedItem(communityId, feedType, subjectId, feedItemInput, feedItemFileUpload)` method and pass the mention in a `ConnectApi.FeedItemInput` object.

**Return Value**
Type: `ConnectApi.FeedItem`

**Note:** Triggers on `FeedItem` objects run before their attachment and capabilities information is saved, which means that `ConnectApi.FeedItem.attachment` information and `ConnectApi.FeedElement.capabilities` information may not be available in the trigger.

**Usage**
Feed items and comments can contain up to 10,000 characters.

Posts to `ConnectApi.FeedType.UserProfile` in API versions 23.0 and 24.0 created user status updates, not feed items. For posts to the User Profile Feed in those API versions, the character limit is 1,000 characters.

**postFeedItem(communityId, feedType, subjectId, feedItemInput, feedItemFileUpload)**
Post a rich-text feed item to a feed. Use this method to include mentions and hashtag topics and to attach a file to a feed item. You can also use this method to share a feed item and add a comment.

**API Version**
28.0–31.0

**Important:** In version 32.0 and later, use `postFeedElement(communityId, feedElement, feedElementFileUpload)`.

**Requires Chatter**
Yes

**Signature**
```
public static ConnectApi.FeedItem postFeedItem(String communityId, ConnectApi.FeedType feedType, String subjectId, ConnectApi.FeedItemInput feedItemInput, ConnectApi.BinaryInput feedItemFileUpload)
```
Parameters

* **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or null.

* **feedType**
  Type: `ConnectApi.FeedType`
  One of the following:
  - News
  - Record
  - UserProfile
  To post a feed item to a group, use Record and use a group ID as the `subjectId`.

* **subjectId**
  Type: `String`
  If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

* **feedItemInput**
  Type: `ConnectApi.FeedItemInput`
  In the FeedItemInput object, specify rich text. Optionally, in the FeedItemInput.attachment property, specify a link, a poll, an existing file, or a new file.

* **feedItemFileUpload**
  Type: `ConnectApi.BinaryInput`
  If you specify a `NewFileAttachmentInput` object in the FeedItemInput.attachment property, specify the new binary file to attach in this argument. Otherwise, do not specify a value.

Return Value

Type: `ConnectApi.FeedItem`

**Note:** Triggers on FeedItem objects run before their attachment and capabilities information is saved, which means that `ConnectApi.FeedItem.attachment` information and `ConnectApi.FeedElement.capabilities` information may not be available in the trigger.

Usage

Feed items and comments can contain up to 10,000 characters. Posts to `ConnectApi.FeedType.UserProfile` in API versions 23.0 and 24.0 created user status updates, not feed items. For posts to the User Profile Feed in those API versions, the character limit is 1,000 characters.
Example for Sharing a Feed Item and Adding a Comment

To share a feed item and add a comment, create a `ConnectApi.FeedItemInput` object containing the comment and the feed item to share. Then pass the object to `ConnectApi.ChatterFeeds.postFeedItem` in the `feedItemInput` argument. The message segments in the message body input are used as the comment.

```java
ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
input.originalFeedItemId = '0DSD000000JuAG';

List<ConnectApi.MessageSegmentInput> segmentList = new List<ConnectApi.MessageSegmentInput>();
ConnectApi.TextSegmentInput textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'I hope you enjoy this post I found in another group.';
segmentList.add(textSegment);
body.messageSegments = segmentList;
input.body = body;

ConnectApi.ChatterFeeds.postFeedItem(null, ConnectApi.FeedType.UserProfile, 'me', input, null);
```

Example for Posting a Mention to a User Profile Feed

To post to a user profile feed and include an @mention, call the `ConnectApi.ChatterFeeds.postFeedItem` method.

```java
String communityId = null;
ConnectApi.FeedType feedType = ConnectApi.FeedType.UserProfile;

ConnectApi.FeedItemInput input = new ConnectApi.FeedItemInput();
ConnectApi.TextSegmentInput textSegment;
ConnectApi.MentionSegmentInput mentionSegment = new ConnectApi.MentionSegmentInput();
messageInput.messageSegments = new List<ConnectApi.MessageSegmentInput>();
textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'Hey there ';
messageInput.messageSegments.add(textSegment);
mentionSegment.id = '005D0000001LLO1';
messageInput.messageSegments.add(mentionSegment);
textSegment = new ConnectApi.TextSegmentInput();
textSegment.text = 'How are you?';
messageInput.messageSegments.add(textSegment);

input.body = messageInput;

ConnectApi.FeedItem feedItemRep = ConnectApi.ChatterFeeds.postFeedItem(communityId, feedType, 'me', input, null);
```

`searchFeedItems(communityId, q)`

Get the feed items that match the search criteria.
API Version
28.0–31.0

⚠️ **Important:** In version 32.0 and later, use `searchFeedElements(communityId, q).

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FeedItemPage searchFeedItems(String communityId, String q)
```

Parameters

`communityId`
- Type: `String`
- Use the ID for an Experience Cloud site, `internal`, or `null`

`q`
- Type: `String`
- Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: `ConnectApi.FeedItemPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestSearchFeedItems(communityId, q, result)`
- Testing ConnectApi Code

**searchFeedItems(communityId, q, sortParam)**

Get the sorted feed items that match the search criteria.

API Version
28.0–31.0
Important: In version 32.0 and later, use `searchFeedElements(communityId, q, sortParam)`.

Available to Guest Users
31.0 only

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedItemPage searchFeedItems(String communityId, String q,
ConnectApi.FeedSortOrder sortParam)
```

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or `null`.

**q**
Type: String
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDeac` is used.

Return Value

Type: `ConnectApi.FeedItemPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchFeedItems(communityId, q, sortParam, result)`
- Testing ConnectApi Code

**searchFeedItems(communityId, q, pageParam, pageSize)**

Get a page of feed items that match the search criteria.

API Version

28.0–31.0

⚠️ Important: In version 32.0 and later, use `searchFeedElements(communityId, q, pageParam, pageSize)`.

Available to Guest Users

31.0 only

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedItemPage searchFeedItems(String communityId, String q, String pageParam, Integer pageSize)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `q`
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- `pageParam`
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- `pageSize`
  - Type: `Integer`
  - Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
Return Value
Type: `ConnectApi.FeedItemPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestSearchFeedItems(communityId, q, pageParam, pageSize, result)`
- Testing ConnectApi Code

```
searchFeedItems(communityId, q, pageParam, pageSize, sortParam)
```

**Requires Chatter**
Yes

**Signature**
```
public static ConnectApi.FeedItemPage searchFeedItems(String communityId, String q, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam)
```

**Parameters**
- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `q`
  Type: `String`
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- `pageParam`
  Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedAtDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedAtDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedAtDateDesc` is used.

**Return Value**
Type: `ConnectApi.FeedItemPage`

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

  Testing ConnectApi Code

**searchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)**
Get a page of sorted feed items that match the search criteria.

**API Version**
29.0–31.0

**Important:** In version 32.0 and later, use `searchFeedElements(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)`.

**Available to Guest Users**
31.0 only
Requires Chatter
Yes

Signature

```java
public static ConnectApi.FeedItemPage searchFeedItems(String communityId, String q,
Integer recentCommentCount, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder
sortParam)
```

Parameters

`communityId`
Type: String
Use the ID for an Experience Cloud site, internal, or null.

`q`
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`recentCommentCount`
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

`pageParam`
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

`pageSize`
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

`sortParam`
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

Return Value

Type: ConnectApi.FeedItemPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Yes

Signature

```java
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)
```

Parameters

`communityId`

Type: `String`

Use the ID for an Experience Cloud site, `internal`, or `null`.

`feedType`

Type: `ConnectApi.FeedType`

The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

`pageParam`

Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`  
Type: Integer  
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`  
Type: `ConnectApi.FeedSortOrder`  
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreateDateDesc` is used.

`q`  
Type: String  
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value  
Type: `ConnectApi.FeedItemPage`

Usage  
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

`searchFeedItemsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q)`  
Get a page of sorted feed items from the `Company`, `Home`, and `Moderation` feeds that match the search criteria. Each feed item includes no more than the specified number of comments.

API Version  
29.0–31.0
**Important:** In version 32.0 and later, use `searchFeedElementsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q).

Available to Guest Users

31.0 only

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId,
                                                             ConnectApi.FeedType feedType,
                                                             Integer recentCommentCount,
                                                             ConnectApi.FeedDensity density,
                                                             String pageParam,
                                                             Integer pageSize,
                                                             ConnectApi.FeedSortOrder sortParam,
                                                             String q)
```

Parameters

**communityId**
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`.

**feedType**
Type: `ConnectApi.FeedType`
The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

**recentCommentCount**
Type: `Integer`
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:

- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value CreatedDateDesc is used.

**q**

Type: **String**

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

Type: **ConnectApi.FeedItemPage**

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Yes
Signature

```java
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, String q)
```

Parameters

- **communityId**
  - **Type:** String
  - Use the ID for an Experience Cloud site, internal, or null.

- **feedType**
  - **Type:** ConnectApi.FeedType
  - The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

- **subjectId**
  - **Type:** String
  - If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

- **q**
  - **Type:** String
  - Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

- **Type:** ConnectApi.FeedItemPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Yes

Signature
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Order of feed items in the feed.

- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

`q`
Type: `String`
Search term. Searches keywords in the user or group name. A minimum of one character is required. This parameter does not support wildcards. This parameter is required.

Return Value
Type: `ConnectApi.FeedItemPage`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Yes

Signature
```
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q)
```
Parameters

`communityId`
Type: `String`

Use the ID for an Experience Cloud site, `internal`, or `null`.

`feedType`
Type: `ConnectApi.FeedType`

The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessages`, `Filter`, `Landing`, and `Streams`.

`subjectId`
Type: `String`

If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

`recentCommentCount`
Type: `Integer`

The maximum number of comments to return with each feed item. The default value is 3.

`density`
Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- `AllUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- `FewerUpdates`—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`

Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

`q`
- **Type:** `String`
- **Required and cannot be** `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

**Return Value**
- **Type:** `ConnectApi.FeedItemPage`

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
- `setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)`
- Testing `ConnectApi Code`

`searchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly)`

Get a page of sorted feed items from a feed for a user or record that match the search criteria. Each feed item includes no more than the specified number of comments. Specify whether to return feed items posted by internal (non-Experience Cloud site) users only.

**API Version**
- 30.0–31.0
- **Important:** In version 32.0 and later, use `searchFeedElementsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly)`.

**Available to Guest Users**
- 31.0 only

**Requires Chatter**
- Yes

**Signature**

```java
public static ConnectApi.FeedItemPage searchFeedItemsInFeed(String communityId,
ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount,
ConnectApi.FeedDensity density, String pageParam, Integer pageSize,
ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly)
```
Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
Value must be ConnectApi.FeedType.Record.

subjectId
Type: String
Any record ID, including a group ID.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.

• AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

showInternalOnly
Type: Boolean
Specifies whether to show only feed items from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, result)
Testing ConnectApi Code

searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q)
Get the feed items that match the search criteria from a feed filtered by a key prefix for a user.

API Version
28.0–31.0

Important: In version 32.0 and later, use searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, q).

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage searchFeedItemsInFilterFeed(String communityId, String subjectId, String keyPrefix, String q)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.
keyPrefix
  Type: String
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

q
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedItemPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestSearchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q, result)
  Testing ConnectApi Code

searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q)
Get a page of sorted feed items that match the search criteria from a feed filtered by a key prefix for a user.

API Version
28.0–31.0

⚠️ Important: In version 32.0 and later, use searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, q).

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItemPage searchFeedItemsInFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)

Parameters

communityId
  Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:

- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

sortParam sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.FeedItemPage
Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

  setTestSearchFeedItemsInFilterFeed(communityId, feedType, subjectId, keyPrefix, pageParam, pageSize, sortParam, q, result)

  Testing ConnectApi Code

searchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q)

Get a page of sorted feed items that match the search criteria from a feed filtered by a key prefix for a user. Each feed item includes no more than the specified number of comments.

API Version

29.0–31.0

Important: In version 32.0 and later, use searchFeedElementsInFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q).

Requires Chatter

Yes

Signature

public static ConnectApi.FeedItemPage searchFeedItemsInFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

subjectId
  Type: String
  The ID of the context user or the alias me.

keyPrefix
  Type: String
  A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.
density
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

`q`
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

Return Value
Type: `ConnectApi.FeedItemPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchFeedItemsInFilterFeed(communityId, feedType, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)`
- Testing ConnectApi Code

`shareFeedElement(communityId, subjectId, feedElementType, originalFeedElementId)`

Share the `originalFeedElementId` as the context user.

API Version

31.0–38.0

⚠️ Important: In version 39.0 and later, use `postFeedElement(communityId, feedElement)` or `updateFeedElement(communityId, feedElementId, feedElement)` with the `ConnectApi`. `FeedEntityShareCapabilityInput` to share a feed entity with a feed element.

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FeedElement shareFeedElement(String communityId, String subjectId, ConnectApi.FeedElementType feedElementType, String originalFeedElementId)
```

Parameters

- `communityId`
  Type: String
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `subjectId`
  Type: String
  The ID of the user or group with whom to share the feed element.

- `feedElementType`
  Type: `ConnectApi.FeedElementType`
  Values are:
  - Bundle—A container of feed elements. A bundle also has a body made up of message segments that can always be gracefully degraded to text-only values.
  - FeedItem—A feed item has a single parent and is scoped to one Experience Cloud site or across all Experience Cloud sites. A feed item can have capabilities such as bookmarks, canvas, content, comment, link, poll. Feed items have a body made up of message segments that can always be gracefully degraded to text-only values.
• Recommendation—A recommendation is a feed element with a recommendations capability. A recommendation suggests records to follow, groups to join, or applications that are helpful to the context user.

originalFeedElementId
Type: String
The ID of the feed element to share.

Return Value
Type: ConnectApi.FeedElement

Example
ConnectApi.ChatterFeeds.shareFeedElement(null, '0F9RR0000004CPw',
ConnectApi.FeedElementType.FeedItem, '0D5RR0000004Gxc');

shareFeedItem(communityId, feedType, subjectId, originalFeedItemId)
Share the originalFeedItemId to the feed specified by the feedType.

API Version
28.0–31.0

Important:
• In version 32.0–38.0, use shareFeedElement(communityId, subjectId, feedElementType, originalFeedElementId).
• In version 39.0 and later, use postFeedElement(communityId, feedElement) or updateFeedElement(communityId, feedElementId, feedElement) with the ConnectApi. FeedEntityShareCapabilityInput.

Requires Chatter
Yes

Signature
public static ConnectApi.FeedItem shareFeedItem(String communityId, ConnectApi.FeedType feedType, String subjectId, String originalFeedItemId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
One of the following:
To share a feed item with a group, use `Record` and use a group ID as the `subjectId`.

**subjectId**
- **Type:** String
- The value depends on the value of `feedType`:
  - **News**—`subjectId` must be the ID of the context user or the keyword `me`.
  - **Record**—`subjectId` can be a group ID or the ID of the context user (or `me`).
  - **UserProfile**—`subjectId` can be any user ID.

**originalFeedItemId**
- **Type:** String
- The ID of the feed item to share.

**Return Value**
- **Type:** `ConnectApi.FeedItem`

**Example**
To share a feed item with a group, pass in the Experience Cloud site ID (or `null`), the feed type `Record`, the group ID, and the ID of the feed item to share.

```java
ConnectApi.ChatterFeeds.shareFeedItem(null, ConnectApi.FeedType.Record, '0F9D00000000izf', '0D5D0000000JuAG');
```

**updateBookmark(communityId, feedItemId, isBookmarkedByCurrentUser)**
Bookmark a feed item or remove a bookmark from a feed item.

**API Version**
- 28.0–31.0

**Important:** In version 32.0 and later, use `updateFeedElementBookmarks(communityId, feedElementId, bookmarks)` or `updateFeedElementBookmarks(communityId, feedElementId, isBookmarkedByCurrentUser)`.

**Requires Chatter**
- Yes

**Signature**
```java
public static ConnectApi.FeedItem updateBookmark(String communityId, String feedItemId, Boolean isBookmarkedByCurrentUser)
```
Parameters

`communityId`
Type: String
Use the ID for an Experience Cloud site, `internal`, or `null`.

`feedItemId`
Type: String
The ID for a feed item.

`isBookmarkedByCurrentUser`
Type: Boolean
— Specifying `true` adds the feed item to the list of bookmarks for the context user. Specify `false` to remove a bookmark.

Return Value
Type: `ConnectApi.FeedItem`

`voteOnFeedPoll(communityId, feedItemId, myChoiceId)`
Vote or change your vote on a feed poll.

API Version
28.0–31.0

⚠️ **Important:** In version 32.0 and later, use `voteOnFeedElementPoll(communityId, feedElementId, myChoiceId)`.

Requires Chatter
Yes

Signature

```
public static ConnectApi.FeedPoll voteOnFeedPoll(String communityId, String feedItemId, String myChoiceId)
```

Parameters

`communityId`
Type: String
Use the ID for an Experience Cloud site, `internal`, or `null`.

`feedItemId`
Type: String
ID of the feed item that is associated with the poll.

`myChoiceId`
Type: String
ID of the item in the poll you’re voting for.
Return Value
Type: `ConnectApi.FeedPoll`

`setTestGetFeedItemsFromFeed(communityId, feedType, result)`

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
28.0–31.0

Signature
```java
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, ConnectApi.FeedItemPage result)
```

Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`.

`feedType`
Type: `ConnectApi.FeedType`
The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

`result`
Type: `ConnectApi.FeedItemPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getFeedItemsFromFeed(communityId, feedType)`
- Testing ConnectApi Code

`setTestGetFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam, result)`

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
28.0–31.0
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedItemPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
  getFeedItemsFromFeed(communityId, feedType, pageParam, pageSize, sortParam)
  Testing ConnectApi Code

setTestGetFeedItemsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
29.0–31.0

Signature
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`  
Type: `Integer`  
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`sortParam`  
Type: `ConnectApi.FeedSortOrder`  
Values are:

- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

`result`  
Type: `ConnectApi.FeedItemPage`  
The object containing test data.

Return Value  
Type: `Void`  

SEE ALSO:  
- `getFeedItemsFromFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam)`  
  - Testing ConnectApi Code

`setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, result)`  
Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version  
28.0–31.0

Signature  
```java
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, ConnectApi.FeedItemPage result)
```
Parameters

**communityId**
- Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

**feedType**
- Type: `ConnectApi.FeedType`
  - The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

**subjectId**
- Type: `String`
  - If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias `me`.

**result**
- Type: `ConnectApi.FeedItemPage`
  - The object containing test data.

Return Value
- Type: `Void`

SEE ALSO:
- `getFeedItemsFromFeed(communityId, feedType, subjectId)`
- Testing `ConnectApi Code`

```java
setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, result)
```

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
- 28.0–31.0

Signature

```java
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

Parameters

**communityId**
- Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.
feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

subjectId
Type: String
If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedItemsFromFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam)
Testing ConnectApi Code
**setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, result)**

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsFromFeed` is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

**API Version**

29.0–31.0

**Signature**

```java
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

**Parameters**

**communityId**

*Type: String*

Use the ID for an Experience Cloud site, internal, or null.

**feedType**

*Type: `ConnectApi.FeedType`*

The type of feed. Valid values include every `ConnectApi.FeedType` except `Company`, `DirectMessageModeration`, `DirectMessages`, `Filter`, `Home`, `Landing`, `Moderation`, and `PendingReview`.

**subjectId**

*Type: String*

If `feedType` is `Record`, `subjectId` can be any record ID, including a group ID. If `feedType` is `Streams`, `subjectId` must be a stream ID. If `feedType` is `Topics`, `subjectId` must be a topic ID. If `feedType` is `UserProfile`, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

**recentCommentCount**

*Type: Integer*

The maximum number of comments to return with each feed item. The default value is 3.

**density**

*Type: `ConnectApi_FEEDDensity`*

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**

*Type: String*

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in null, the first page is returned.
pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- getFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam)
- Testing ConnectApi Code

setTestGetFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly, result)

Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsFromFeed is called with matching parameters in a test context. Use the get feed method with the same parameters or the code throws an exception.

API Version
30.0–31.0

Signature
public static Void setTestGetFeedItemsFromFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, Boolean showInternalOnly, ConnectApi.FeedItemPage result)
Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**feedType**
Type: `ConnectApi.FeedType`
The type of feed. Valid values include every `ConnectApi.FeedType` except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

**subjectId**
Type: String
If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

**recentCommentCount**
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: `ConnectApi.FeedDensity`
Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the `ConnectApi.FeedFilter` is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

showInternalOnly
Type: Boolean
Specifies whether to show only feed items from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedItemsFromFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, showInternalOnly)
Testing ConnectApi Code

setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching getFeedItemsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

API Version
28.0–31.0

Signature
public static Void setTestGetFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.
result

Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

setTestGetFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, pageParam, pageSize, sortParam, result)

Register a ConnectApi.FeedItemPage object to be returned when the matching getFeedItemsFromFilterFeed method is called in a test context. Use the method with the same parameters or the code throws an exception.

API Version
28.0–31.0

Signature
public static Void setTestGetFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**result**
Type: `ConnectApi.FeedItemPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:

- Testing ConnectApi Code

```java
public static Void setTestGetFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

Register a `ConnectApi.FeedItemPage` object to be returned when the matching `getFeedItemsFromFilterFeed` method is called in a test context. Use the method with the same parameters or the code throws an exception.

API Version
29.0–31.0

Signature
```java
public static Void setTestGetFeedItemsFromFilterFeed(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

Parameters

```java
communityId
Type: String
```
Use the ID for an Experience Cloud site, internal, or null.

**subjectId**
- **Type:** String
- The ID of the context user or the alias me.

**keyPrefix**
- **Type:** String
- A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

**recentCommentCount**
- **Type:** Integer
- The maximum number of comments to return with each feed item. The default value is 3.

**density**
- **Type:** ConnectApi.FeedDensity
- Specify the amount of content in a feed.
  - **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - ** FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
- **Type:** String
- The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
- **Type:** Integer
- Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**sortParam**
- **Type:** ConnectApi.FeedSortOrder
- Values are:
  - **CreateDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  - **CreateDateDesc**—Sorts by most recent creation date.
  - **LastModifiedDateDesc**—Sorts by most recent activity.
  - **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
  - **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
- Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**result**
- **Type:** ConnectApi.FeedItemPage
- The object containing test data.
Return Value
Type: Void

SEE ALSO:
getFeedItemsFromFilterFeed(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam)
Testing ConnectApi Code

setTestGetFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, sortParam, updatedSince, result)
Register a ConnectApi.FeedItemPage object to be returned when the getFeedItemsFromFilterFeedUpdatedSince method is called in a test context.

API Version
30.0–31.0

Signature
public static Void setTestGetFeedItemsFromFilterFeedUpdatedSince(String communityId, String subjectId, String keyPrefix, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String updatedSince, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
• FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
• CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
• CreatedDateDesc—Sorts by most recent creation date.
• LastModifiedDateDesc—Sorts by most recent activity.
• MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
• Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

updatedSince
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. To retrieve this token, call getFeedItemsFromFilterFeed and take the value from the updatesToken property of the ConnectApi.FeedItemPage response body.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFeedItemsFromFilterFeedUpdatedSince(communityId, subjectId, keyPrefix, recentCommentCount, density, pageParam, pageSize, updatedSince)
Testing ConnectApi Code
setTestGetFeedItemsUpdatedSince(communityId, feedType, recentCommentCount, density, pageParam, pageSize, updatedSince, ConnectApi.FeedItemPage, results)

Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
30.0–31.0

Signature
public static Void setTestGetFeedItemsUpdatedSince(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedItemPage results)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

feedType
  Type: ConnectApi.FeedType
  The type of feed. Valid values are Company, DirectMessageModeration, DirectMessages, Home, Moderation, and PendingReview.

recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.

  - AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  - FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

updatedSince
  Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the updatesToken property of the ConnectApi.FeedItemPage response body.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, result)

Register a ConnectApi.FeedItemPage object to be returned when getFeedItemsUpdatedSince is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
30.0–31.0

Signature
public static Void setTestGetFeedItemsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
One of these values:
- Files
- Groups
- News
- People
- Record

subjectId
Type: String
If `feedType` is `ConnectApi.Record`, `subjectId` can be any record ID, including a group ID. Otherwise, it must be the context user or the alias `me`.

**recentCommentCount**

Type: `Integer`

The maximum number of comments to return with each feed item. The default value is 3.

**density**

Type: `ConnectApi.FeedDensity`

Specify the amount of content in a feed.

- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**

Type: `String`

The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**

Type: `Integer`

Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**updatedSince**

Type: `String`

An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

**result**

Type: `ConnectApi.FeedItemPage`

The object containing test data.

Return Value

Type: `Void`

SEE ALSO:

- Testing ConnectApi Code

```java
setTestGetFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly, result)
```

Register a `ConnectApi.FeedItemPage` object to be returned when `getFeedItemsUpdatedSince` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version

30.0–31.0
public static Void setTestGetFeedItemsUpdatedSince(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, String updatedSince, Boolean showInternalOnly, ConnectApi.FeedItemPage result)

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**feedType**
Type: ConnectApi.FeedType
One of these values:
- Files
- Groups
- News
- People
- Record

**subjectId**
Type: String
If feedType is ConnectApi.Record, subjectId can be any record ID, including a group ID. Otherwise, it must be the context user or the alias me.

**recentCommentCount**
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

**density**
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**updatedSince**
Type: String
An opaque token containing information about the last modified date of the feed. Do not construct this token. Retrieve this token from the `updatesToken` property of the `ConnectApi.FeedItemPage` response body.

`showInternalOnly`
Type: Boolean
Specifies whether to show only feed items from internal (non-Experience Cloud site) users (`true`), or not (`false`). The default value is `false`.

`result`
Type: `ConnectApi.FeedItemPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getFeedItemsUpdatedSince(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, updatedSince, showInternalOnly)`
- Testing ConnectApi Code

`setTestSearchFeedItems(communityId, q, result)`
Register a test feed item page to be returned when `searchFeedItems(communityId, q)` is called during a test.

API Version
28.0–31.0

Signature
```
public static Void searchFeedItems(String communityId, String q, ConnectApi.FeedItemPage result)
```

Parameters

`communityId`
Type: String
Use the ID for an Experience Cloud site, `internal`, or `null`.

`q`
Type: String
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

`result`
Type: `ConnectApi.FeedItemPage`
The object containing test data.
Return Value
Type: Void

SEE ALSO:
- searchFeedItems(communityId, q)
  Testing ConnectApi Code

setTestSearchFeedItems(communityId, q, sortParam, result)
Register a test feed item page to be returned when searchFeedItems(String, String, ConnectApi.FeedSortOrder) is called during a test.

API Version
28.0–31.0

Signature
public static Void setTestSearchFeedItems(String communityId, String q, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

result
Type: ConnectApi.FeedItemPage
The feed item test page.

Return Value
Type: Void

SEE ALSO:
searchFeedItems(communityId, q, sortParam)

**setTestSearchFeedItems(communityId, q, pageParam, pageSize, sortParam, result)**

Register a test feed item page to be returned when searchFeedItems (String, String, String, Integer, ConnectApi.FeedSortOrder) is called during a test.

API Version
28.0–31.0

Signature
public static Void setTestSearchFeedItems(String communityId, String q, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)

Parameters

*communityId*
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

*q*
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

*pageParam*
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

*pageSize*
  Type: Integer
  Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

*sortParam*
  Type: ConnectApi.FeedSortOrder
  Values are:
  - CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
  - CreatedDateDesc—Sorts by most recent creation date.
  - LastModifiedDateDesc—Sorts by most recent activity.
• **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.

• **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

**result**

Type: `ConnectApi.FeedItemPage`

The test feed item page.

**Return Value**

Type: Void

SEE ALSO:

`searchFeedItems(communityId, q, pageParam, pageSize, sortParam)`

Testing ConnectApi Code

**setTestSearchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam, result)**

Register a test feed item page to be returned when `searchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)` is called during a test.

**API Version**

29.0–31.0

**Signature**

```java
public static Void setTestSearchFeedItems(String communityId, String q, Integer recentCommentCount, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, ConnectApi.FeedItemPage result)
```

**Parameters**

**communityId**

Type: `String`

Use the ID for an Experience Cloud site, internal, or null.

**q**

Type: `String`

Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**recentCommentCount**

Type: `Integer`

The maximum number of comments to return with each feed item. The default value is 3.
**pageParam**
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDateDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**result**
Type: `ConnectApi.FeedItemPage`
The test feed item page.

Return Value
Type: Void

SEE ALSO:
- `searchFeedItems(communityId, q, recentCommentCount, pageParam, pageSize, sortParam)`
- Testing ConnectApi Code

**setTestSearchFeedItemsInFeed(communityId, feedType, q, result)**
Register a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0–31.0
Signature

```java
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String q, ConnectApi.FeedItemPage result)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- **feedType**
  - Type: `ConnectApi.FeedType`
  - The type of feed. Valid values are `Company`, `DirectMessageModeration`, `DirectMessages`, `Home`, `Moderation`, and `PendingReview`.

- **q**
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

- **result**
  - Type: `ConnectApi.FeedItemPage`
  - The object containing test data.

Return Value

Type: `Void`

SEE ALSO:

- `searchFeedItemsInFeed(communityId, feedType, q)`
- Testing ConnectApi Code

```java
setTestSearchFeedItemsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q, result)
```

Register a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

28.0–31.0

Signature

```java
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String pageParam, Integer pageSize, ConnectApi.FeedSortOrders sortParam, String q, ConnectApi.FeedItemPage result)
```
Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds. Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- searchFeedItemsInFeed(communityId, feedType, pageParam, pageSize, sortParam, q)
- Testing ConnectApi Code
setTestSearchFeedItemsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q, result)

Register a ConnectApi.FeedItemPage object to be returned when the matching
ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0–31.0

Signature
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedType
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessageModeration, DirectMessages, Filter, Home, Landing, Moderation, and PendingReview.

recentCommentCount
Type: Integer
The maximum number of comments to return with each feed item. The default value is 3.

density
Type: ConnectApi.FeedDensity
Specify the amount of content in a feed.
- AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
- FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
sortParam
Type: `ConnectApi.FeedSortOrder`
Values are:
- `CreatedDateAsc`—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `LastModifiedDesc`—Sorts by most recent activity.
- `MostViewed`—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- `Relevance`—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

q
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

result
Type: `ConnectApi.FeedItemPage`
The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `searchFeedItemsInFeed(communityId, feedType, recentCommentCount, density, pageParam, pageSize, sortParam, q)`
- `Testing ConnectApi Code`

**setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, q, result)**

Register a `ConnectApi.FeedItemPage` object to be returned when the matching `ConnectApi.searchFeedItemsInFeed` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0–31.0

Signature
```java
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String q, ConnectApi.FeedItemPage result)
```
Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**feedType**
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

**subjectId**
Type: String
If `feedType` is Record, `subjectId` can be any record ID, including a group ID. If `feedType` is Streams, `subjectId` must be a stream ID. If `feedType` is Topics, `subjectId` must be a topic ID. If `feedType` is UserProfile, `subjectId` can be any user ID. If the `feedType` is any other value, `subjectId` must be the ID of the context user or the alias me.

**q**
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

**result**
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- searchFeedItemsInFeed(communityId, feedType, subjectId, q)
- Testing ConnectApi Code

**setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, pageParam, pageSize, sortParam, q, result)**
Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0–31.0

Signature
```java
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)
```
Parameters

*communityId*
Type: String
Use the ID for an Experience Cloud site, internal, or null.

*feedType*
Type: ConnectApi.FeedType
The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

*subjectId*
Type: String
If *feedType* is Record, *subjectId* can be any record ID, including a group ID. If *feedType* is Streams, *subjectId* must be a stream ID. If *feedType* is Topics, *subjectId* must be a topic ID. If *feedType* is UserProfile, *subjectId* can be any user ID. If the *feedType* is any other value, *subjectId* must be the ID of the context user or the alias *me*.

*pageParam*
Type: String
The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.

*pageSize*
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

*sortParam*
Type: ConnectApi.FeedSortOrder
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- **Relevance**—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

*q*
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

*result*
Type: ConnectApi.FeedItemPage
The object containing test data.
Return Value
Type: Void

Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0–31.0

Signature
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, ConnectApi.FeedItemPage result)

Parameters
communityId
    Type: String
    Use the ID for an Experience Cloud site, internal, or null.

feedType
    Type: ConnectApi.FeedType
    The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
    Type: String
    If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

recentCommentCount
    Type: Integer
    The maximum number of comments to return with each feed item. The default value is 3.

density
    Type: ConnectApi.FeedDensity
    Specify the amount of content in a feed.
- **AllUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.

- **FewerUpdates**—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

**pageParam**
Type: **String**
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: **Integer**
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: **ConnectApi.FeedSortOrder**
Values are:
- **CreatedDateAsc**—Sorts by oldest creation date. This sort order is available only for `DirectMessageModeration`, `Draft`, `Moderation`, and `PendingReview` feeds.
- **CreatedDateDesc**—Sorts by most recent creation date.
- **LastModifiedDateDesc**—Sorts by most recent activity.
- **MostViewed**—Sorts by most viewed content. This sort order is available only for `Home` feeds when the `ConnectApi.FeedFilter` is `UnansweredQuestions`.
- **Relevance**—Sorts by most relevant content. This sort order is available only for `Company`, `Home`, and `Topics` feeds.

Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in `null`, the default value `CreatedDateDesc` is used.

**q**
Type: **String**
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

**result**
Type: **ConnectApi.FeedItemPage**
The object containing test data.

**Return Value**
Type: **Void**

setTestSearchFeedItemsInFeed(communityId, feedType, subjectId, recentCommentCount, density, pageParam, pageSize, sortParam, q, showInternalOnly, result)

Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFeed method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0–31.0

Signature
public static Void setTestSearchFeedItemsInFeed(String communityId, ConnectApi.FeedType feedType, String subjectId, Integer recentCommentCount, ConnectApi.FeedDensity density, String pageParam, Integer pageSize, ConnectApi.FeedSortOrder sortParam, String q, Boolean showInternalOnly, ConnectApi.FeedItemPage result)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

feedType
  Type: ConnectApi.FeedType
  The type of feed. Valid values include every ConnectApi.FeedType except Company, DirectMessages, Filter, Landing, and Streams.

subjectId
  Type: String
  If feedType is Record, subjectId can be any record ID, including a group ID. If feedType is Streams, subjectId must be a stream ID. If feedType is Topics, subjectId must be a topic ID. If feedType is UserProfile, subjectId can be any user ID. If the feedType is any other value, subjectId must be the ID of the context user or the alias me.

recentCommentCount
  Type: Integer
  The maximum number of comments to return with each feed item. The default value is 3.

density
  Type: ConnectApi.FeedDensity
  Specify the amount of content in a feed.
  • AllUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations.
  • FewerUpdates—Displays all updates from people and records the user follows and groups the user is a member of. Also displays custom recommendations, but hides some system-generated updates from records.

pageParam
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, currentPageToken or nextPageToken. If you pass in null, the first page is returned.
pageSize
Type: Integer
Specifies the number of feed items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.FeedSortOrder
Values are:
- CreatedDateAsc—Sorts by oldest creation date. This sort order is available only for DirectMessageModeration, Draft, Moderation, and PendingReview feeds.
- CreatedDateDesc—Sorts by most recent creation date.
- LastModifiedDateDesc—Sorts by most recent activity.
- MostViewed—Sorts by most viewed content. This sort order is available only for Home feeds when the ConnectApi.FeedFilter is UnansweredQuestions.
- Relevance—Sorts by most relevant content. This sort order is available only for Company, Home, and Topics feeds.
Sorts the returned feed by the most recently created feed item, or by the most recently modified feed item. If you pass in null, the default value CreatedDateDesc is used.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

showInternalOnly
Type: Boolean
Specifies whether to show only feed items from internal (non-Experience Cloud site) users (true), or not (false). The default value is false.

result
Type: ConnectApi.FeedItemPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:

- Testing ConnectApi Code

setTestSearchFeedItemsInFilterFeed(communityId, subjectId, keyPrefix, q, result)
Register a ConnectApi.FeedItemPage object to be returned when the matching ConnectApi.searchFeedItemsInFilterFeed method is called in a test context. Use the method with the same parameters or you receive an exception.
Signature

public static Void setTestSearchFeedItemsInFilterFeed(String communityId, String subjectId, String keyPrefix, String q, ConnectApi.FeedItemPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

subjectId
Type: String
The ID of the context user or the alias me.

keyPrefix
Type: String
A key prefix that specifies record type. A key prefix is the first three characters in the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

result
Type: ConnectApi.FeedItemPage
Specify the test feed item page.

Return Value
Type: Void

  Testing ConnectApi Code

**ChatterGroups Class**

Information about groups, such as the group's members, photo, and the groups the specified user is a member of. Add members to a group, remove members, and change the group photo.

**Namespace**

ConnectApi

**ChatterGroups Methods**

The following are methods for ChatterGroups. All methods are static.

IN THIS SECTION:
  addMember(communityId, groupId, userId)
  Add a user to a group as a standard member.
  addMemberWithRole(communityId, groupId, userId, role)
  Add a user with a role to a group.
  addRecord(communityId, groupId, recordId)
  Associate a record with a group.
  createGroup(communityId, groupInput)
  Create a group.
  deleteBannerPhoto(communityId, groupId)
  Delete the group banner photo.
  deleteGroup(communityId, groupId)
  Delete a group.
  deleteMember(communityId, membershipId)
  Remove a member from a group.
  deletePhoto(communityId, groupId)
  Delete the group photo.
getAnnouncements(communityId, groupId)
Get the first page of announcements in a group.

getAnnouncements(communityId, groupId, pageParam, pageSize)
Get a page of announcements in a group.

getBannerPhoto(communityId, groupId)
Get the group banner photo.

group(communityId, groupId)
Get information about a group.

groupBatch(communityId, groupIds)
Get information about a list of groups.

groupMembershipRequest(communityId, requestId)
Get information about a request to join a private group.

groupMembershipRequests(communityId, groupId)
Get information about every request to join a private group.

groupMembershipRequests(communityId, groupId, status)
Get information about every request to join a private group that has a specified status.

groups(communityId)
Get the first page of groups.

groups(communityId, pageParam, pageSize)
Get a page of groups.

groups(communityId, pageParam, pageSize, archiveStatus)
Get a page of groups with an archive status.

getMember(communityId, membershipId)
Get information about a group member.

getMembers(communityId, groupId)
Get the first page of information about the members of a group.

getMembers(communityId, groupId, pageParam, pageSize)
Get a page of information about the members of a group.

getMembershipBatch(communityId, membershipIds)
Get information about a list of group memberships.

getMyChatterSettings(communityId, groupId)
Get the context user’s Chatter settings for a group.

getPhoto(communityId, groupId)
Get the photo for a group.

getRecord(communityId, groupRecordId)
Get a record associated with a group.

getRecords(communityId, groupId)
Get the first page of records associated with a group.

getRecords(communityId, groupId, pageParam, pageSize)
Get a page of records associated with a group.
inviteUsers(groupId, invite)
Invite internal and external users to join a group.

postAnnouncement(communityId, groupId, announcement)
Post an announcement to a group.

removeRecord(communityId, groupRecordId)
Remove the association of a record with a group.

requestGroupMembership(communityId, groupId)
Request membership in a private group.

searchGroups(communityId, q)
Get the first page of groups that match the search criteria.

searchGroups(communityId, q, pageParam, pageSize)
Get a page of groups that match the search criteria.

searchGroups(communityId, q, archiveStatus, pageParam, pageSize)
Get a page of groups with the archive status that match the search criteria.

setBannerPhoto(communityId, groupId, fileId, versionNumber)
Set an uploaded file as the group banner photo.

setBannerPhoto(communityId, groupId, fileUpload)
Set a file that hasn’t been uploaded as the group banner photo.

setBannerPhotoWithAttributes(communityId, groupId, bannerPhoto)
Set and crop an uploaded file as the group banner photo.

setBannerPhotoWithAttributes(communityId, groupId, bannerPhoto, fileUpload)
Set and crop a file that hasn’t been uploaded as the group banner photo.

setPhoto(communityId, groupId, fileId, versionNumber)
Set an uploaded file as the group photo.

setPhoto(communityId, groupId, fileUpload)
Set a file that hasn’t been uploaded as the group photo.

setPhotoWithAttributes(communityId, groupId, photo)
Set and crop an uploaded file as the group photo.

setPhotoWithAttributes(communityId, groupId, photo, fileUpload)
Set and crop a file that hasn’t been uploaded as the group photo.

updateGroup(communityId, groupId, groupInput)
Update the settings of a group.

updateGroupMember(communityId, membershipId, role)
Update the role of a group member.

updateMyChatterSettings(communityId, groupId, emailFrequency)
Update the context user’s email frequency for a group.

updateRequestStatus(communityId, requestId, status)
Update a request to join a private group.

updateRequestStatus(communityId, requestId, status, responseMessage)
Update a request to join a private group and optionally provide a message when the request is denied.
addMember(communityId, groupId, userId)
Add a user to a group as a standard member.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.GroupMember addMember(String communityId, String groupId, String userId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

groupId
Type: String
The ID for a group.

userId
Type: String
The ID for a user.

Return Value
Type: ConnectApi.GroupMember

Usage
To execute this method, the context user must be the group owner or moderator.

addMemberWithRole(communityId, groupId, userId, role)
Add a user with a role to a group.

API Version
29.0

Requires Chatter
Yes
public static ConnectApi.GroupMember addMemberWithRole(String communityId, String groupId, String userId, ConnectApi.GroupMembershipType role)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

groupId
  Type: String
  The ID for a group.

userId
  Type: String
  The ID for a user.

role
  Type: ConnectApi.GroupMembershipType
  The group membership type. One of these values:
  • GroupManager
  • StandardMember

Return Value

Type: ConnectApi.GroupMember

Usage

To execute this method, the context user must be the group owner or moderator.

addRecord(communityId, groupId, recordId)
Associate a record with a group.

API Version
34.0

Requires Chatter
Yes

Signature

public static ConnectApi.GroupRecord addRecord(String communityId, String groupId, String recordId)
Parameters

**communityId**
Type: **String**
Use the ID for an Experience Cloud site, internal, or **null**.

**groupId**
Type: **String**
ID of the group with which to associate the record.

**recordId**
Type: **String**
ID of the record to associate with the group.

Return Value
Type: **ConnectApi.GroupRecord**

```java
public static ConnectApi.ChatterGroupDetail createGroup(String communityId, ConnectApi.ChatterGroupInput groupInput)
```

Create a group.

API Version
29.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ChatterGroupDetail createGroup(String, communityId, ConnectApi.ChatterGroupInput groupInput)
```

Parameters

**communityId**
Type: **String**
Use the ID for an Experience Cloud site, internal, or **null**.

**groupInput**
Type: **ConnectApi.ChatterGroupInput**
The properties of the group.

Return Value
Type: **ConnectApi.ChatterGroupDetail**
**deleteBannerPhoto(communityId, groupId)**
Delete the group banner photo.

API Version
36.0

Requires Chatter
Yes

Signature
```java
public static Void deleteBannerPhoto(String communityId, String groupId)
```

Parameters
- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
- **groupId**
  Type: String
  ID of the group.

Return Value
Type: Void

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

**deleteGroup(communityId, groupId)**
Delete a group.

API Version
29.0

Requires Chatter
Yes

Signature
```java
public static Void deleteGroup(String communityId, String groupId)
```
Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**groupId**
Type: String
The ID for a group.

Return Value
Type: Void

**deleteMember(communityId, membershipId)**
Remove a member from a group.

API Version
28.0

Requires Chatter
Yes

Signature

```
public static Void deleteMember(String communityId, String membershipId)
```

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**membershipId**
Type: String
The ID for a membership.

Return Value
Type: Void

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

**deletePhoto(communityId, groupId)**
Delete the group photo.
API Version
28.0

Requires Chatter
Yes

Signature
public static Void deletePhoto(String communityId, String groupId)

Parameters

  - **communityId**
    - Type: String
    - Use the ID for an Experience Cloud site, internal, or null.

  - **groupId**
    - Type: String
    - The ID for a group.

Return Value
Type: Void

Usage
This method is only successful when the context user is the group manager or owner, or has Modify All Data permission.

getAnnouncements(communityId, groupId)
Get the first page of announcements in a group.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.AnnouncementPage getAnnouncements(String communityId, String groupId)

Parameters

  - **communityId**
    - Type: String
Use the ID for an Experience Cloud site, `internal`, or `null`.

**groupId**
Type: `String`
The ID for a group.

Return Value
Type: `ConnectApi.AnnouncementPage`

Usage
To post an announcement, get information about an announcement, update the expiration date of an announcement, or delete an announcement, use the methods of the `ConnectApi.Announcements` class.

```java
getAnnouncements(communityId, groupId, pageParam, pageSize)
```
Get a page of announcements in a group.

API Version
31.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.AnnouncementPage getAnnouncements(String communityId, String groupId, Integer pageParam, Integer pageSize)
```

Parameters

- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- **groupId**
  Type: `String`
  The ID for a group.

- **pageParam**
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
Return Value
Type: `ConnectApi.AnnouncementPage`

Usage
To post an announcement, get information about an announcement, update the expiration date of an announcement, or delete an announcement, use the methods of the `ConnectApi.Announcements` class.

```java
getBannerPhoto(communityId, groupId)
```
Get the group banner photo.

### API Version
36.0

### Requires Chatter
Yes

### Signature
```java
public static ConnectApi.BannerPhoto getBannerPhoto(String communityId, String groupId)
```

### Parameters
- `communityId`  
  **Type:** `String`  
  Use the ID for an Experience Cloud site, `internal`, or `null`.
- `groupId`  
  **Type:** `String`  
  The ID of the group.

### Return Value
Type: `ConnectApi.BannerPhoto`

```java
group(communityId, groupId)
```
Get information about a group.

### API Version
28.0

### Available to Guest Users
- 31.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterGroupDetail getGroup(String communityId, String groupId)
```

Parameters

- `communityId`
  - Type: String
  - Use the ID for an Experience Cloud site, `internal`, or `null`.
- `groupId`
  - Type: String
  - The ID for a group.

Return Value

Type: `ConnectApi.ChatterGroupDetail`

**getGroupBatch(communityId, groupIds)**

Get information about a list of groups.

API Version

31.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.BatchResult[] getGroupBatch(String communityId, List<String> groupIds)
```

Parameters

- `communityId`
  - Type: String
  - Use the ID for an Experience Cloud site, `internal`, or `null`.
- `groupIds`
  - Type: `List<String>`
  - A list of up to 500 group IDs.
Return Value

Type: `ConnectApi.BatchResult[]`

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.ChatterGroup` object and errors embedded in the results for groups that didn’t load.

Example

```java
// Create a list of groups.
ConnectApi.ChatterGroupPage groupPage = ConnectApi.ChatterGroups.getGroups(null);

// Create a list of group IDs.
List<String> groupIds = new List<String>();
for (ConnectApi.ChatterGroup aGroup : groupPage.groups){
    groupIds.add(aGroup.id);
}

// Get info about all the groups in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterGroups.getGroupBatch(null, groupIds);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the number of members in each group.
        ConnectApi.ChatterGroup aGroup;
        if(batchResult.getResult() instanceof ConnectApi.ChatterGroup) {
            aGroup = (ConnectApi.ChatterGroup) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(aGroup.memberCount);
    } else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
```

SEE ALSO:

- `getMembershipBatch(communityId, membershipIds)`
- `getGroupMembershipRequest(communityId, requestId)`

Get information about a request to join a private group.

API Version

28.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.GroupMembershipRequest getGroupMembershipRequest(String communityId, String requestId)
```

Parameters

- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.

- **requestId**
  Type: `String`
  The ID of a request to join a private group.

Return Value

Type: `ConnectApi.GroupMembershipRequest`

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

```java
getGroupMembershipRequests(communityId, groupId)
```

Get information about every request to join a private group.

API Version

28.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.GroupMembershipRequests getGroupMembershipRequests(String communityId, String groupId)
```

Parameters

- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.

- **groupId**
  Type: `String`
The ID for a group.

Return Value
Type: `ConnectApi.GroupMembershipRequests`

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

`getGroupMembershipRequests(communityId, groupId, status)`
Get information about every request to join a private group that has a specified status.

API Version
28.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.GroupMembershipRequests getGroupMembershipRequests(String communityId, String groupId, ConnectApi.GroupMembershipRequestStatus status)
```

Parameters
- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.
- `groupId`
  Type: `String`
  The ID for a group.
- `status`
  Type: `ConnectApi.GroupMembershipRequestStatus`
  `status`—Status of a request to join a private group.
  - Accepted
  - Declined
  - Pending

Return Value
Type: `ConnectApi.GroupMembershipRequests`
Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

`getGroups(communityId)`
Get the first page of groups.

API Version
28.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ChatterGroupPage getGroups(String communityId)`

Parameters
`communityId`
Type: String
Use the ID for an Experience Cloud site, internal, or null.

Return Value
Type: `ConnectApi.ChatterGroupPage`

`getGroups(communityId, pageParam, pageSize)`
Get a page of groups.

API Version
28.0

Available to Guest Users
31.0

Requires Chatter
Yes
public static ConnectApi.ChatterGroupPage getGroups(String communityId, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ChatterGroupPage

groups(communityId, pageParam, pageSize, archiveStatus)
Get a page of groups with an archive status.

API Version
29.0

Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterGroupPage getGroups(String communityId, Integer pageParam, Integer pageSize, ConnectApi.GroupArchiveStatus archiveStatus)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`archiveStatus`
Type: `ConnectApi.GroupArchiveStatus`
Archive status of groups.

- `All`—All groups, including groups that are archived and groups that aren’t archived.
- `Archived`—Groups that are archived.
- `NotArchived`—Groups that aren’t archived.

If you pass in `null`, the default value is `All`.

Return Value
Type: `ConnectApi.ChatterGroupPage`

`getMember(communityId, membershipId)`
Get information about a group member.

API Version
28.0

Requires Chatter
Yes

Signature
`public static ConnectApi.GroupMember getMember(String communityId, String membershipId)`

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `membershipId`
  Type: `String`
  The ID for a membership.

Return Value
Type: `ConnectApi.GroupMember`
**getMembers(communityId, groupId)**
Get the first page of information about the members of a group.

API Version
28.0

Available to Guest Users
36.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.GroupMemberPage getMembers(String communityId, String groupId)
```

Parameters
- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- **groupId**
  Type: String
  The ID for a group.

Return Value
Type: ConnectApi.GroupMemberPage

**getMembers(communityId, groupId, pageParam, pageSize)**
Get a page of information about the members of a group.

API Version
28.0

Available to Guest Users
36.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.GroupMemberPage getMembers(String communityId, String groupId, Integer pageParam, Integer pageSize)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **groupId**
  - Type: String
  - The ID for a group.

- **pageParam**
  - Type: Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value

Type: `ConnectApi.GroupMemberPage`

**getMembershipBatch(communityId, membershipIds)**

Get information about a list of group memberships.

API Version

31.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.BatchResult[] getMembershipBatch(String communityId, List<String> membershipIds)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **membershipIds**
  - Type: List<String>
A list of up to 500 group membership IDs.

Return Value

Type: `ConnectApi.BatchResult[]`

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.GroupMember` object and errors embedded in the results for group memberships that didn’t load.

Example

```java
// Get members of a group.
ConnectApi.GroupMemberPage membersPage = ConnectApi.ChatterGroups.getMembers(null, '0F9D0000000oOT');

// Create a list of membership IDs.
List<String> membersList = new List<String>();
for (ConnectApi.GroupMember groupMember : membersPage.members){
    membersList.add(groupMember.id);
}

// Get info about all group memberships in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterGroups.getMembershipBatch(null, membersList);
for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the first name of each member.
        ConnectApi.GroupMember groupMember;
        if(batchResult.getResult() instanceof ConnectApi.GroupMember) {
            groupMember = (ConnectApi.GroupMember) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(groupMember.user.firstName);
    }
    else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
```

SEE ALSO:

- `getGroupBatch(communityId, groupIds)`
- `getMyChatterSettings(communityId, groupId)`

Get the context user’s Chatter settings for a group.

API Version

28.0
Requires Chatter
Yes

Signature
public static ConnectApi.GroupChatterSettings getMyChatterSettings(String communityId, String groupId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

groupId
Type: String
The ID for a group.

Return Value
Type: ConnectApi.GroupChatterSettings

getPhoto(communityId, groupId)
Get the photo for a group.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.Photo getPhoto(String communityId, String groupId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

groupId
Type: String
The ID for a group.
Return Value
Type: `ConnectApi.Photo`

`getRecord(communityId, groupRecordId)`
Get a record associated with a group.

API Version
34.0

Requires Chatter
Yes

Signature
`public static ConnectApi.GroupRecord getRecord(String communityId, String groupRecordId)`

Parameters
`communityId`
Type: `String`
Use the ID for an Experience Cloud site, internal, or null.

`groupRecordId`
Type: `String`
ID of the group record.

Return Value
Type: `ConnectApi.GroupRecord`

`getRecords(communityId, groupId)`
Get the first page of records associated with a group.

API Version
33.0

Requires Chatter
Yes

Signature
`public static ConnectApi.GroupRecordPage getRecords(String communityId, String groupId)`
Parameters

**communityId**
- Type: String
  - Use the ID for an Experience Cloud site, internal, or **null**.

**groupId**
- Type: String
  - The ID for a group.

Return Value

Type: `ConnectApi.GroupRecordPage`

```java
getRecords(communityId, groupId, pageParam, pageSize)
```

Get a page of records associated with a group.

API Version

33.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.GroupRecordPage getRecords(String communityId, String groupId,
                                              Integer pageParam, Integer pageSize)
```

Parameters

**communityId**
- Type: String
  - Use the ID for an Experience Cloud site, internal, or **null**.

**groupId**
- Type: String
  - The ID for a group.

**pageParam**
- Type: Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in **null** or 0, the first page is returned.

**pageSize**
- Type: Integer
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in **null**, the default size is 25.
**inviteUsers(groupId, invite)**
Invite internal and external users to join a group.

API Version
39.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.Invitations inviteUsers(String groupId, ConnectApi.InviteInput invite)
```

Parameters
- **groupId**
  Type: `String`
  ID of the group.
- **invite**
  Type: `ConnectApi.InviteInput`
  A `ConnectApi.InviteInput` body.

**postAnnouncement(communityId, groupId, announcement)**
Post an announcement to a group.

API Version
31.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.Announcement postAnnouncement(String communityId, String groupId, ConnectApi.AnnouncementInput announcement)
```
Parameters

**communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

**groupId**
  Type: `String`
  The ID for a group.

**announcement**
  Type: `ConnectApi.AnnouncementInput`
  A `ConnectApi.AnnouncementInput` object.

Return Value
Type: `ConnectApi.Announcement`

Usage
Use an announcement to highlight information. Users can discuss, like, and post comments on announcements. Deleting the feed post deletes the announcement.

To post an announcement, get information about an announcement, update the expiration date of an announcement, or delete an announcement, use the methods of the `ConnectApi.Announcements` class.

**removeRecord(communityId, groupRecordId)**
Remove the association of a record with a group.

API Version
34.0

Requires Chatter
Yes

Signature
```java
public static Void removeRecord(String communityId, String groupRecordId)
```

Parameters

**communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

**groupRecordId**
  Type: `String`
  ID of the group record.
**requestGroupMembership(communityId, groupId)**

Request membership in a private group.

**API Version**

28.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.GroupMembershipRequest requestGroupMembership(String communityId, String groupId)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- **groupId**
  - Type: `String`
  - The ID for a group.

**Return Value**

Type: `ConnectApi.GroupMembershipRequest`

**Sample: Requesting to Join a Private Group**

This sample code calls `ConnectApi.ChatterGroups.requestGroupMembership` to request to join a private group.

```java
String communityId = null;
ID groupId = '0F9x00000000hAZ';

ConnectApi.GroupMembershipRequest membershipRequest =
ConnectApi.ChatterGroups.requestGroupMembership(communityId, groupId);
```

**searchGroups(communityId, q)**

Get the first page of groups that match the search criteria.

**API Version**

28.0
Available to Guest Users
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterGroupPage searchGroups(String communityId, String q)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

q
  Type: String
  Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as null.

Return Value
Type: ConnectApi.ChatterGroupPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestSearchGroups(communityId, q, result)
  Testing ConnectApi Code

searchGroups(communityId, q, pageParam, pageSize)
Get a page of groups that match the search criteria.

API Version
28.0

Available to Guest Users
31.0
Requires Chatter
Yes

Signature
public static ConnectApi.ChatterGroupPage searchGroups(String communityId, String q, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ChatterGroupPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchGroups(communityId, q, pageParam, pageSize, result)
Testing ConnectApi Code

searchGroups(communityId, q, archiveStatus, pageParam, pageSize)
Get a page of groups with the archive status that match the search criteria.

API Version
29.0
Available to Guest Users
31.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterGroupPage searchGroups(String communityId, String q,
ConnectApi.GroupArchiveStatus archiveStatus, Integer pageParam, Integer pageSize)
```

Parameters

- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.  

- **q**
  Type: `String`
  Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as `null`.  

- **archiveStatus**
  Type: `ConnectApi.GroupArchiveStatus`
  Archive status of groups.
  - **All**—All groups, including groups that are archived and groups that aren’t archived.
  - **Archived**—Groups that are archived.
  - **NotArchived**—Groups that aren’t archived.

- **pageParam**
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value

Type: `ConnectApi.ChatterGroupPage`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestSearchGroups(communityId, q, archiveStatus, pageParam, pageSize, result)`
- Testing ConnectApi Code

`setBannerPhoto(communityId, groupId, fileId, versionNumber)`

Set an uploaded file as the group banner photo.

API Version

36.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String groupId, String fileId, Integer versionNumber)
```

Parameters

`communityId`

Type: `String`

Use the ID for an Experience Cloud site, `internal`, or `null`.

`groupId`

Type: `String`

The ID of the group.

`fileId`

Type: `String`

The ID of the already uploaded file. The key prefix must be 069, and the image must be smaller than 8 MB.

`versionNumber`

Type: `Integer`

Version number of the existing file. Specify either an existing version number or, to get the latest version, specify `null`.

Return Value

Type: `ConnectApi.BannerPhoto`

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.
Photos are processed asynchronously and may not be visible right away.

`setBannerPhoto(communityId, groupId, fileUpload)`
Set a file that hasn’t been uploaded as the group banner photo.

API Version
36.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String groupId, 
ConnectApi.BinaryInput fileUpload)
```

Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`.

`groupId`
Type: `String`
The ID of the group.

`fileUpload`
Type: `ConnectApi.BinaryInput`
A file to use as the photo. The content type must be usable as an image.

Return Value
Type: `ConnectApi.BannerPhoto`

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

`setBannerPhotoWithAttributes(communityId, groupId, bannerPhoto)`
Set and crop an uploaded file as the group banner photo.

API Version
36.0
Requires Chatter

Yes

Signature

```java
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId,
String groupId, ConnectApi.BannerPhotoInput bannerPhoto)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **groupId**
  - Type: String
  - The ID of the group.

- **bannerPhoto**
  - Type: ConnectApi.BannerPhotoInput
  - A ConnectApi.BannerPhotoInput object that specifies the ID and version of the file, and how to crop the file.

Return Value

- Type: ConnectApi.BannerPhoto

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

```java
setBannerPhotoWithAttributes(communityId, groupId, bannerPhoto, fileUpload)
```

Set and crop a file that hasn’t been uploaded as the group banner photo.

API Version

36.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId,
String groupId, ConnectApi.BannerPhotoInput bannerPhoto, ConnectApi.BinaryInput
fileUpload)
```
Parameters

*communityId*
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

*groupId*
  Type: `String`
  The ID of the group.

*bannerPhoto*
  Type: `ConnectApi.BannerPhotoInput`
  A `ConnectApi.BannerPhotoInput` object specifying the cropping parameters.

*fileUpload*
  Type: `ConnectApi.BinaryInput`
  A file to use as the photo. The content type must be usable as an image.

Return Value

Type: `ConnectApi.BannerPhoto`

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

**setPhoto(communityId, groupId, fileId, versionNumber)**

Set an uploaded file as the group photo.

API Version

28.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.Photo setPhoto(String communityId, String groupId, String fileId, Integer versionNumber)
```

Parameters

*communityId*
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.
groupId
Type: String
The ID for a group.

fileId
Type: String
ID of a file already uploaded. The key prefix must be 069, and the file must be an image that is smaller than 2 GB.

versionNumber
Type: Integer
Version number of the existing file. Specify either an existing version number or, to get the latest version, specify null.

Return Value
Type: ConnectApi.Photo

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

Sample: Updating a Group Photo with an Existing File
When a group is created, it doesn’t have a group photo. You can set an existing photo that has already been uploaded to Salesforce as the group photo. The key prefix must be 069 and the file size must be less than 2 GB.

```java
String communityId = null;
ID groupId = '0F9x00000000hAK';
ID fileId = '069x00000001Ion';

// Set photo
ConnectApi.Photo photo = ConnectApi.ChatterGroups.setPhoto(communityId, groupId, fileId, null);
```

**setPhoto(communityId, groupId, fileIdUpload)**
Set a file that hasn’t been uploaded as the group photo.

API Version
28.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.Photo setPhoto(String communityId, String groupId,
ConnectApi.BinaryInput fileIdUpload)
```
Parameters

`communityId`
Type: String
Use the ID for an Experience Cloud site, internal, or null.

`groupId`
Type: String
The ID for a group.

`fileUpload`
Type: ConnectApi.BinaryInput
A file to use as the photo. The content type must be usable as an image.

Return Value
Type: ConnectApi.Photo

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

Sample: Uploading a New File and Using It as a Group Photo
When a group is created, it doesn’t have a group photo. You can upload a photo and set it as the group photo.

```java
String communityId = null;
ID groupId = '0F9x00000000hAP';
ID photoId = '069x000000001Ioo';

// Set photo
List<ContentVersion> groupPhoto = [Select c.VersionData From ContentVersion c where ContentDocumentId=:photoId];
ConnectApi.BinaryInput binary = new ConnectApi.BinaryInput(groupPhoto.get(0).VersionData, 'image/png', 'image.png');
ConnectApi.Photo photo = ConnectApi.ChatterGroups.setPhoto(communityId, groupId, binary);
```

`setPhotoWithAttributes(communityId, groupId, photo)`
Set and crop an uploaded file as the group photo.

API Version
29.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.Photo setPhotoWithAttributes(String communityId, String groupId,
                                                         ConnectApi.PhotoInput photo)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `groupId`
  - Type: `String`
  - The ID for a group.

- `photo`
  - Type: `ConnectApi.PhotoInput`
  - A `ConnectApi.PhotoInput` object that specifies the ID and version of the file, and how to crop the file.

Return Value

- Type: `ConnectApi.Photo`

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

**setPhotoWithAttributes(communityId, groupId, photo, fileUpload)**

Set and crop a file that hasn’t been uploaded as the group photo.

API Version

29.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.Photo setPhotoWithAttributes(String communityId, String groupId,
                                                         ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.  

- `groupId`
  - Type: `String`
  - The ID for a group.

- `photo`
  - Type: `ConnectApi.PhotoInput`
  - A `ConnectApi.PhotoInput` object that specifies the ID and version of the file, and how to crop the file.

- `fileUpload`
  - Type: `ConnectApi.BinaryInput`
  - A `ConnectApi.BinaryInput` object that specifies the file to upload.
**groupId**
Type: **String**
The ID for a group.

**photo**
Type: **ConnectApi.PhotoInput**
A ConnectApi.PhotoInput object that specifies how to crop the file specified in fileUpload.

**fileUpload**
Type: **ConnectApi.BinaryInput**
A file to use as the photo. The content type must be usable as an image.

Return Value
Type: **ConnectApi.Photo**

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Photos are processed asynchronously and may not be visible right away.

**updateGroup(communityId, groupId, groupInput)**
Update the settings of a group.

API Version
28.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterGroup updateGroup(String communityId, String groupId, ConnectApi.ChatterGroupInput groupInput)

Parameters
**communityId**
Type: **String**
Use the ID for an Experience Cloud site, internal, or null.

**groupId**
Type: **String**
The ID for a group.

**groupInput**
Type: **ConnectApi.ChatterGroupInput**
A ConnectApi.ChatterGroupInput object.

Return Value
Type: ConnectApi.ChatterGroup

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission. Use this method to update any settings in the ConnectApi.ChatterGroupInput class. These settings include the group title and text in the “Information” section, whether the group is public or private, and whether the group is archived.

Example
This example archives a group.

```java
String groupId = '0F9D00000000qSz';
String communityId = null;

ConnectApi.ChatterGroupInput groupInput = new ConnectApi.ChatterGroupInput();
groupInput.isArchived = true;

ConnectApi.ChatterGroups.updateGroup(communityId, groupId, groupInput);
```

updateGroupMember(communityId, membershipId, role)
Update the role of a group member.

API Version
29.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterGroup updateGroupMember(String communityId, String membershipId, ConnectApi.GroupMembershipType role)
```

Parameters

`communityId`
Type: String
Use the ID for an Experience Cloud site, internal, or null.

`membershipId`
Type: String
The ID for a membership.
role
Type: `ConnectApi.GroupMembershipType`
The group membership type. One of these values:
- GroupManager
- StandardMember

Return Value
Type: `ConnectApi.ChatterGroup`

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

`updateMyChatterSettings(String communityId, String groupId, ConnectApi.GroupEmailFrequency emailFrequency)`
Update the context user’s email frequency for a group.

API Version
28.0

Requires Chatter
Yes

Signature
`public static ConnectApi.GroupChatterSettings updateMyChatterSettings(String communityId, String groupId, ConnectApi.GroupEmailFrequency emailFrequency)`

Parameters
`communityId`
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`.

`groupId`
Type: `String`
The ID for a group.

`emailFrequency`
Type: `ConnectApi.GroupEmailFrequency`
Frequency with which a user receives email.
- EachPost
- DailyDigest
- WeeklyDigest
- Never
• UseDefault

The value UseDefault uses the value set in a call to `updateChatterSettings(communityId, userId, defaultGroupEmailFrequency)`.

Return Value

Type: `ConnectApi.GroupChatterSettings`

`updateRequestStatus(communityId, requestId, status)`

Update a request to join a private group.

API Version

28.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.GroupMembershipRequest updateRequestStatus(String communityId, String requestId, ConnectApi.GroupMembershipRequestStatus status)
```

Parameters

`communityId`

Type: `String`

Use the ID for an Experience Cloud site, internal, or `null`.

`requestId`

Type: `String`

ID for a request to join a private group.

`status`

Type: `ConnectApi.GroupMembershipRequestStatus`

Status of the request:

• Accepted
• Declined

The `Pending` value of the enum is not valid in this method.

Return Value

Type: `ConnectApi.GroupMembershipRequest`

Usage

This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.
Sample: Accepting or Declining a Request to Join a Private Group

This sample code calls `ConnectApi.ChatterGroups.updateRequestStatus` and passes it the membership request ID and an `ConnectApi.GroupMembershipRequestStatus.Accepted` status. You can also pass `ConnectApi.GroupMembershipRequestStatus.Declined`.

```java
String communityId = null;
ID groupId = '0F9x00000000hAZ';
String requestId = '0I5x000000001snCAA';

ConnectApi.GroupMembershipRequest membershipRequestRep =
ConnectApi.ChatterGroups.updateRequestStatus(communityId, requestId,
ConnectApi.GroupMembershipRequestStatus.Accepted);
```

**updateRequestStatus(communityId, requestId, status, responseMessage)**

Update a request to join a private group and optionally provide a message when the request is denied.

API Version
35.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.GroupMembershipRequest updateRequestStatus(String communityId,
String requestId, ConnectApi.GroupMembershipRequestStatus status, String responseMessage)
```

Parameters

- `communityId`  
  Type: `String`  
  Use the ID for an Experience Cloud site, `internal`, or `null`.
- `requestId`  
  Type: `String`  
  ID for a request to join a private group.
- `status`  
  Type: `ConnectApi.GroupMembershipRequestStatus`  
  Status of the request:
  - `Accepted`
  - `Declined`
  The `Pending` value of the enum is not valid in this method.
- `responseMessage`  
  Type: `String`
Provide a message to the user if their membership request is declined. The value of this property is used only when the value of the status property is Declined.

The maximum length is 756 characters.

Return Value
Type: `ConnectApi.GroupMembershipRequest`

Usage
This method is successful only when the context user is the group manager or owner, or has Modify All Data permission.

**ChatterGroups Test Methods**
The following are the test methods for ChatterGroups. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

`setTestSearchGroups(communityId, q, result)`
Register a `ConnectApi.ChatterGroupPage` object to be returned when the matching `ConnectApi.searchGroups` method is called in a test context. Use the test method with the same parameters or you receive an exception.

**API Version**
29.0

**Signature**
```
public static Void setTestSearchGroups(String communityId, String q,
ConnectApi.ChatterGroupPage result)
```

**Parameters**

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`.

`q`
Type: `String`
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as `null`.

`result`
Type: `ConnectApi.ChatterGroupPage`
The test `ConnectApi.ChatterGroupPage` object.
Return Value
Type: Void

SEE ALSO:
searchGroups(communityId, q)
Testing ConnectApi Code

setTestSearchGroups(communityId, q, pageParam, pageSize, result)
Register a ConnectApi.ChatterGroupPage object to be returned when the matching ConnectApi.searchGroups method is called in a test context. Use the test method with the same parameters or you receive an exception.

API Version
28.0

Signature
public static Void setTestSearchGroups(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.ChatterGroupPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

result
Type: ConnectApi.ChatterGroupPage
The test ConnectApi.ChatterGroupPage object.
Return Value
Type: Void

SEE ALSO:
searchGroups(communityId, q, pageParam, pageSize)
Testing ConnectApi Code

setTestSearchGroups(communityId, q, archiveStatus, pageParam, pageSize, result)
Register a ConnectApi.ChatterGroupPage object to be returned when the matching ConnectApi.searchGroups method is called in a test context. Use the test method with the same parameters or you receive an exception.

API Version
29.0

Signature
public static Void setTestSearchGroups(String communityId, String q, ConnectApi.GroupArchiveStatus, archiveStatus, Integer pageParam, Integer pageSize, ConnectApi.ChatterGroupPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards. Can be specified as null.

archiveStatus
Type: ConnectApi.GroupArchiveStatus
Archive status of groups.
- All—All groups, including groups that are archived and groups that aren’t archived.
- Archived—Groups that are archived.
- NotArchived—Groups that aren’t archived.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
**result**

Type: `ConnectApi.ChatterGroupPage`

The test `ConnectApi.ChatterGroupPage` object.

**Return Value**

Type: Void

**SEE ALSO:**

- `searchGroups(communityId, q, archiveStatus, pageParam, pageSize)`
- Testing `ConnectApi` Code

### ChatterMessages Class

Get, send, search, and reply to private messages. You can also get and search private conversations, mark conversations as read, and get a count of unread private messages.

### Namespace

`ConnectApi`

### Usage

Private messages and direct messages are different features. Direct messages are newer and offer a richer feature set for private communication in Experience Cloud sites. Direct messages are a capability within Chatter feeds. To work with direct messages, use the `ChatterFeeds Class`.

### ChatterMessages Methods

The following are methods for `ChatterMessages`. All methods are static.

**IN THIS SECTION:**

- `getConversation(conversationId)`
  - Get a conversation.
- `getConversation(conversationId, pageParam, pageSize)`
  - Get a page of a conversation.
- `getConversation(communityId, conversationId)`
  - Get a conversation from an Experience Cloud site.
- `getConversation(communityId, conversationId, pageParam, pageSize)`
  - Get a page of a conversation from an Experience Cloud site.
- `getConversations()`
  - Get the most recent conversations.
- `getConversations(pageParam, pageSize)`
  - Get a page of conversations.
getConversations(communityId)
Get the most recent conversations from an Experience Cloud site.

getConversations(communityId, pageParam, pageSize)
Get a page of conversations from an Experience Cloud site.

getMessage(messageId)
Get a message.

getMessage(communityId, messageId)
Get a message from an Experience Cloud site.

getMessages()
Get the most recent messages.

getMessages(pageParam, pageSize)
Get a page of messages.

getMessages(communityId)
Get the most recent messages from an Experience Cloud site.

getMessages(communityId, pageParam, pageSize)
Get a page of messages from an Experience Cloud site.

getUnreadCount()
Get the number of conversations that are marked unread.

getUnreadCount(communityId)
Get the number of conversations that are marked unread in an Experience Cloud site.

markConversationRead(conversationId, read)
Mark a conversation as read or unread.

markConversationRead(communityId, conversationID, read)
Mark a conversation as read or unread in an Experience Cloud site.

replyToMessage(text, inReplyTo)
Reply to a message.

replyToMessage(communityId, text, inReplyTo)
Reply to a message in an Experience Cloud site.

searchConversation(conversationId, q)
Get a conversation that matches the search criteria.

searchConversation(conversationId, pageParam, pageSize, q)
Get a conversation with a page of messages that match the search criteria.

searchConversation(communityId, conversationId, q)
Get a conversation with messages that match the search criteria in an Experience Cloud site.

searchConversation(communityId, conversationId, pageParam, pageSize, q)
Get a conversation with a page of messages that match the search criteria in an Experience Cloud site.

searchConversations(q)
Get conversations in which member names and messages match the search criteria.

searchConversations(pageParam, pageSize, q)
Get a page of conversations in which member names and messages match the search criteria.
searchConversations(communityId, q)
Get conversations in which member names and messages match the search criteria in an Experience Cloud site.

searchConversations(communityId, pageParam, pageSize, q)
Get a page of conversations in which member names and messages match the search criteria in an Experience Cloud site.

searchMessages(q)
Get messages that match the search criteria.

searchMessages(pageParam, pageSize, q)
Get a page of messages that match the search criteria.

searchMessages(communityId, q)
Get messages that match the search criteria in an Experience Cloud site.

searchMessages(communityId, pageParam, pageSize, q)
Get a page of messages that match the search criteria in an Experience Cloud site.

sendMessage(text, recipients)
Send a message to a list of recipients.

sendMessage(communityId, text, recipients)
Send a message to a list of recipients in an Experience Cloud site.

getConversation(conversationId)
Get a conversation.

**API Version**
29.0

**Requires Chatter**
Yes

**Signature**

```java
public static ConnectApi.ChatterConversation getConversation(String conversationId)
```

**Parameters**

- **conversationId**
  Type: String
  Specify the ID for the conversation.

**Return Value**

Type: ConnectApi.ChatterConversation

**getConversation(conversationId, pageParam, pageSize)**
Get a page of a conversation.
API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversation getConversation(String conversationId, String pageParam, Integer pageSize)

Parameters

conversationId
Type: String
Specify the ID for the conversation.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ChatterConversation

getConversation(communityId, conversationId)
Get a conversation from an Experience Cloud site.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversation getConversation(String communityId, String conversationId)
Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **conversationId**
  - Type: `String`
  - Specify the ID for the conversation.

Return Value

Type: `ConnectApi.ChatterConversation`

```java
public static ConnectApi.ChatterConversation getConversation(String communityId, String conversationId, String pageParam, String pageSize)
```

Get a page of a conversation from an Experience Cloud site.

API Version

30.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ChatterConversation getConversation(String communityId, String conversationId, String pageParam, String pageSize)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **conversationId**
  - Type: `String`
  - Specify the ID for the conversation.

- **pageParam**
  - Type: `String`
  - Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
Return Value
Type: `ConnectApi.ChatterConversation`

**getConversations()**
Get the most recent conversations.

API Version
29.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterConversationPage getConversations()
```

Return Value
Type: `ConnectApi.ChatterConversationPage`

**getConversations(pageParam, pageSize)**
Get a page of conversations.

API Version
29.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterConversationPage getConversations(String pageParam,
   Integer pageSize)
```

Parameters
`pageParam`
Type: `String`
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.
getConversations(communityId)
Get the most recent conversations from an Experience Cloud site.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversationPage getConversations(String communityId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

Return Value
Type: ConnectApi.ChatterConversationPage

getConversations(communityId, pageParam, pageSize)
Get a page of conversations from an Experience Cloud site.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversationPage getConversations(String communityId, String pageParam, Integer pageSize)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, `internal`, or `null`.

`pageParam`
Type: `String`
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.ChatterConversationPage`

**getMessage(messageId)**
Get a message.

API Version
29.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ChatterMessage getMessage(String messageId)`

Parameters
`messageId`
Type: `String`
ID for the message.

Return Value
Type: `ConnectApi.ChatterMessage`

**getMessage(communityId, messageId)**
Get a message from an Experience Cloud site.

API Version
30.0
Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessage getMessage(String communityId, String messageId)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
messageId
  Type: String
  ID for the message.

Return Value
Type: ConnectApi.ChatterMessage

getMessages()
Get the most recent messages.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessagePage getMessages()

Return Value
Type: ConnectApi.ChatterMessagePage

getMessages(pageParam, pageSize)
Get a page of messages.

API Version
29.0
Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessagePage getMessages(String pageParam, Integer pageSize)

Parameters
pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ChatterMessagePage

getMessages(communityId)
Get the most recent messages from an Experience Cloud site.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessagePage getMessages(String communityId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

Return Value
Type: ConnectApi.ChatterMessagePage
getMessages(communityId, pageParam, pageSize)
Get a page of messages from an Experience Cloud site.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessagePage getMessages(String communityId, String pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.ChatterMessagePage

getUnreadCount()
Get the number of conversations that are marked unread.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.UnreadConversationCount getUnreadCount()
Return Value
Type: ConnectApi.UnreadConversationCount
If there are fewer than 50 unread conversations, ConnectApi.UnreadConversationCount returns the exact number of unread conversations and the hasMore property is false. If there are more than 50 unread conversations, ConnectApi.UnreadConversationCount returns 50 unread conversations and the hasMore property is true.

Example
ConnectApi.UnreadConversationCount unread = ConnectApi.ChatterMessages.getUnreadCount();

getUnreadCount(communityId)
Get the number of conversations that are marked unread in an Experience Cloud site.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.UnreadConversationCount getUnreadCount(String communityId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

Return Value
Type: ConnectApi.UnreadConversationCount
If there are fewer than 50 unread conversations, ConnectApi.UnreadConversationCount returns the exact number of unread conversations and the hasMore property is false. If there are more than 50 unread conversations, ConnectApi.UnreadConversationCount returns 50 unread conversations and the hasMore property is true.

markConversationRead(conversationId, read)
Mark a conversation as read or unread.

API Version
29.0
Requires Chatter
Yes

Signature

```
public static ConnectApi.ChatterConversationSummary markConversationRead(String conversationId, Boolean read)
```

Parameters

- **conversationId**
  - Type: String
  - Specify the ID for the conversation.

- **read**
  - Type: Boolean
  - Specify whether the conversation is read (true) or not (false).

Return Value

Type: `ConnectApi.ChatterConversationSummary`

```
markConversationRead(communityId, conversationID, read)
```

Mark a conversation as read or unread in an Experience Cloud site.

API Version

30.0

Requires Chatter
Yes

Signature

```
public static ConnectApi.ChatterConversationSummary markConversationRead(String communityId, String conversationID, Boolean read)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **conversationId**
  - Type: String
  - Specify the ID for the conversation.

- **read**
  - Type: Boolean
Specify whether the conversation is read (true) or not (false).

Return Value
Type: ConnectApi.ChatterConversationSummary

replyToMessage(text, inReplyTo)
Reply to a message.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessage replyToMessage(String text, String inReplyTo)

Parameters
text
  Type: String
  The text of the message. Cannot be empty or over 10,000 characters.
inReplyTo
  Type: String
  ID of the message that is being responded to.

Return Value
Type: ConnectApi.ChatterMessage

replyToMessage(communityId, text, inReplyTo)
Reply to a message in an Experience Cloud site.

API Version
30.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.ChatterMessage replyToMessage(String communityId, String text, String inReplyTo)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `text`
  - Type: `String`
  - The text of the message. Cannot be empty or over 10,000 characters.

- `inReplyTo`
  - Type: `String`
  - ID of the message that is being responded to.

Return Value

Type: `ConnectApi.ChatterMessage`

**searchConversation(conversationId, q)**

Get a conversation that matches the search criteria.

API Version

29.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ChatterConversation searchConversation(String conversationId, String q)
```

Parameters

- `conversationId`
  - Type: `String`
  - Specify the ID for the conversation.

- `q`
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).
Return Value
Type: `ConnectApi.ChatterConversation`

`searchConversation(conversationId, pageParam, pageSize, q)`
Get a conversation with a page of messages that match the search criteria.

API Version
29.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ChatterConversation searchConversation(String conversationId, String pageParam, Integer pageSize, String q)`

Parameters

`conversationId`
Type: `String`
Specify the ID for the conversation.

`pageParam`
Type: `String`
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`q`
Type: `String`
Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

Return Value
Type: `ConnectApi.ChatterConversation`

`searchConversation(communityId, conversationId, q)`
Get a conversation with messages that match the search criteria in an Experience Cloud site.

API Version
30.0
Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterConversation searchConversation(String communityId,
String conversationId, String q)
```

Parameters

- `communityId`
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- `conversationId`
  - Type: String
  - Specify the ID for the conversation.

- `q`
  - Type: String
  - Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

Type: `ConnectApi.ChatterConversation`

**searchConversation(communityId, conversationId, pageParam, pageSize, q)**

Get a conversation with a page of messages that match the search criteria in an Experience Cloud site.

API Version

30.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.ChatterConversation searchConversation(String communityId,
String conversationId, String pageParam, Integer pageSize, String q)
```

Parameters

- `communityId`
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.
conversationId
    Type: String
    Specify the ID for the conversation.

pageParam
    Type: String
    Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
    Type: Integer
    Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

q
    Type: String
    Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterConversation

searchConversations(q)
Get conversations in which member names and messages match the search criteria.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversationPage searchConversations(String q)

Parameters
q
    Type: String
    Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterConversationPage
**searchConversations** (pageParam, pageSize, q)

Get a page of conversations in which member names and messages match the search criteria.

**API Version**

29.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.ChatterConversationPage searchConversations(String pageParam, Integer pageSize, String q)
```

**Parameters**

- **pageParam**
  - **Type:** `String`
  - Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

- **pageSize**
  - **Type:** `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **q**
  - **Type:** `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See `Wildcards`.

**Return Value**

**Type:** `ConnectApi.ChatterConversationPage`

**searchConversations** (communityId, q)

Get conversations in which member names and messages match the search criteria in an Experience Cloud site.

**API Version**

30.0

**Requires Chatter**

Yes
public static ConnectApi.ChatterConversationPage searchConversations(String communityId, String q)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterConversationPage

searchConversations(communityId, pageParam, pageSize, q)
Get a page of conversations in which member names and messages match the search criteria in an Experience Cloud site.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterConversationPage searchConversations(String communityId, String pageParam, Integer pageSize, String q)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
searchMessages(q)
Get messages that match the search criteria.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterMessagePage searchMessages(String q)

Parameters
q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterMessagePage

searchMessages(pageParam, pageSize, q)
Get a page of messages that match the search criteria.

API Version
29.0

Requires Chatter
Yes
Signature

```
public static ConnectApi.ChatterMessagePage searchMessages(String pageParam, Integer pageSize, String q)
```

Parameters

**pageParam**
- **Type:** String
  - Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in `null`, the first page is returned.

**pageSize**
- **Type:** Integer
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**q**
- **Type:** String
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value

**Type:** ConnectApi.ChatterMessagePage

```
searchMessages(communityId, q)
```

Get messages that match the search criteria in an Experience Cloud site.

API Version

30.0

Requires Chatter

Yes

Signature

```
public static ConnectApi.ChatterMessagePage searchMessages(String communityId, String q)
```

Parameters

**communityId**
- **Type:** String
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

**q**
- **Type:** String

...
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterMessagePage

**searchMessages** *(communityId, pageParam, pageSize, q)*
Get a page of messages that match the search criteria in an Experience Cloud site.

API Version
30.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ChatterMessagePage searchMessages(String communityId, String pageParam, Integer pageSize, String q)
```

Parameters
- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- **pageParam**
  Type: String
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

- **pageSize**
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

- **q**
  Type: String
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.ChatterMessagePage

**sendMessage** *(text, recipients)*
Send a message to a list of recipients.
public static ConnectApi.ChatterMessage sendMessage(String text, String recipients)

Parameters

text
  Type: String
  The text of the message. Cannot be empty or over 10,000 characters.

recipients
  Type: String
  Up to nine comma-separated IDs of the users receiving the message.

Return Value

Type: ConnectApi.ChatterMessage

sendMessage(communityId, text, recipients)
Send a message to a list of recipients in an Experience Cloud site.

public static ConnectApi.ChatterMessage sendMessage(String communityId, String text, String recipients)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

text
  Type: String
The text of the message. Cannot be empty or over 10,000 characters.

recipients
Type: String
Up to nine comma-separated IDs of users to receive the message.

Return Value
Type: ConnectApi.ChatterMessage

ChatterUsers Class
Access information about users, such as activity, followers, subscriptions, files, and groups.

Namespace
ConnectApi

ChatterUsers Methods
The following are methods for ChatterUsers. All methods are static.

IN THIS SECTION:

```
exprotUserActivities(communityId, userId)
Export Chatter-related user activity, such as bookmarks, topic endorsements, and votes.
follow(communityId, userId, subjectId)
Follow a user or record.
getChatterSettings(communityId, userId)
Get the default Chatter settings for a user.
getFollowers(communityId, userId)
Get the first page of followers for a user.
getFollowers(communityId, userId, pageParam, pageSize)
Get a page of followers for a user.
getFollowings(communityId, userId)
Get the first page of users and records that a user follows.
getFollowings(communityId, userId, pageParam)
Get a page of users and records that a user follows.
getFollowings(communityId, userId, pageParam, pageSize)
Get a page with the specified number of users and records that a user follows.
getFollowings(communityId, userId, filterType)
Get the first page of records, filtered by key prefix, that a user follows.
getFollowings(communityId, userId, filterType, pageParam)
Get a page of records, filtered by key prefix, that a user follows.
```
getFollowings(communityId, userId, filterType, pageParam, pageSize)
Get a page with the specified number of records, filtered by key prefix, that a user follows.

getReputation(communityId, userId)
Get a user’s reputation.

getUser(communityId, userId)
Get information about a user.

getUserBatch(communityId, userIds)
Get information about a list of users.

getUserGroups(communityId, userId)
Get a user’s groups.

getUserGroups(communityId, userId, pageParam, pageSize)
Get a page of a user’s groups.

getUsers(communityId)
Get the first page of users.

getUsers(communityId, pageParam, pageSize)
Get a page of users.

purgeUserActivities(communityId, userId)
Start a job to purge Chatter-related user activity, such as bookmarks, topic endorsements, and votes.

searchUserGroupDetails(communityId, userId, q)
Get the user’s groups that match the search criteria.

searchUserGroupDetails(communityId, userId, q, pageParam, pageSize)
Get a page of a user’s groups that match the search criteria.

searchUsers(communityId, q)
Get the first page of users that match the search criteria.

searchUsers(communityId, q, pageParam, pageSize)
Get a page of users that match the search criteria.

searchUsers(communityId, q, searchContextId, pageParam, pageSize)
Get a page of users that match the search criteria.

updateChatterSettings(communityId, userId, defaultGroupEmailFrequency)
Update the default Chatter settings for a user.

updateUser(communityId, userId, userInput)
Update the About Me section for a user.

exportUserActivities(communityId, userId)
Export Chatter-related user activity, such as bookmarks, topic endorsements, and votes.

API Version
42.0
Requires Chatter
Yes

Signature
public static ConnectApi.UserActivitiesJob exportUserActivities(String communityId, String userId)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

userId
  Type: String
  ID of the user.

Return Value
Type: ConnectApi.UserActivitiesJob

Usage
The following activities can be exported.

- Bookmark—User bookmarked a post.
- ChatterActivity—Total counts of posts and comments made and likes and comments received for a user.
- ChatterLike—User liked a post or comment.
- Comment—User commented on a post.
- CompanyVerify—User verified comment.
- DownVote—User downvoted a post or comment.
- FeedEntityRead—User read a post.
- FeedRead—User read a feed.
- Mute—User muted a post.
- Post—User made a post.
- TopicEndorsement—User endorsed another user on a topic or received endorsement on a topic.
- UpVote—User upvoted a post or comment.

follow(communityId, userId, subjectId)
Follow a user or record.

API Version
28.0
Requires Chatter
Yes

Signature
public static ConnectApi.Subscription follow(String communityId, String userId, String subjectId)

Parameters

  communityId
    Type: String
    Use the ID for an Experience Cloud site, internal, or null.

  userId
    Type: String
    The ID for the context user or the keyword me.

  subjectId
    Type: String
    ID of the user or record to follow.

Return Value
Type: ConnectApi.Subscription

Example

    ChatterUsers.ConnectApi.Subscription subscriptionToRecord =
    ConnectApi.ChatterUsers.follow(null, 'me', '001RR000002G4Y0');

SEE ALSO:
    Unfollow a Record

**getChatterSettings(communityId, userId)**
Get the default Chatter settings for a user.

API Version
28.0

Requires Chatter
Yes
Signature

```java
public static ConnectApi.UserChatterSettings getChatterSettings(String communityId,
    String userId)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **userId**
  - Type: String
  - The ID for the context user or the keyword `me`.

Return Value

Type: `ConnectApi.UserChatterSettings`

**getFollowers(communityId, userId)**

Get the first page of followers for a user.

API Version

28.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FollowerPage getFollowers(String communityId, String userId)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **userId**
  - Type: String
  - The ID for a user.
Return Value
Type: `ConnectApi.FollowerPage`

```java
getFollowers(communityId, userId, pageParam, pageSize)
```
Get a page of followers for a user.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.FollowerPage getFollowers(String communityId, String userId,
    Integer pageParam, Integer pageSize)
```

Parameters

- `communityId`  
  Type: `String`  
  Use the ID for an Experience Cloud site, internal, or null.

- `userId`  
  Type: `String`  
  The ID for a user.

- `pageParam`  
  Type: `Integer`  
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

- `pageSize`  
  Type: `Integer`  
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: `ConnectApi.FollowerPage`

```java
getFollowings(communityId, userId)
```
Get the first page of users and records that a user follows.
API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
The ID for a user.

Return Value
Type: ConnectApi.FollowingPage

getFollowings(communityId, userId, pageParam)
Get a page of users and records that a user follows.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId, Integer pageParam)
Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

`userId`
Type: `String`
The ID for a user.

`pageParam`
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

Return Value
Type: `ConnectApi.FollowingPage`

`getFollowings(communityId, userId, pageParam, pageSize)`
Get a page with the specified number of users and records that a user follows.

API Version

28.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId, Integer pageParam, Integer pageSize)
```

Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

`userId`
Type: `String`
The ID for a user.

`pageParam`
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**
Type: `Integer`

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.FollowingPage`

**getFollowings(communityId, userId, filterType)**
Get the first page of records, filtered by key prefix, that a user follows.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId, String filterType)
```

Parameters

**communityId**
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

**userId**
Type: `String`
The ID for a user.

**filterType**
Type: `String`
Specifies the key prefix to filter the type of objects returned. A key prefix is the first three characters of the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

Return Value
Type: `ConnectApi.FollowingPage`
**getFollowings(communityId, userId, filterType, pageParam)**

Get a page of records, filtered by key prefix, that a user follows.

**API Version**

28.0

**Available to Guest Users**

32.0

**Requires Chatter**

Yes

**Signature**

```java
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId,
String filterType, Integer pageParam)
```

**Parameters**

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `userId`
  - Type: `String`
  - The ID for a user.

- `filterType`
  - Type: `String`
  - Specifies the key prefix to filter the type of objects returned. A key prefix is the first three characters of the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

- `pageParam`
  - Type: `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**Return Value**

Type: `ConnectApi.FollowingPage`

---

**getFollowings(communityId, userId, filterType, pageParam, pageSize)**

Get a page with the specified number of records, filtered by key prefix, that a user follows.

**API Version**

28.0
Available to Guest Users
32.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.FollowingPage getFollowings(String communityId, String userId, String filterType, Integer pageParam, Integer pageSize)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **userId**
  - Type: String
  - The ID for a user.

- **filterType**
  - Type: String
  - Specifies the key prefix to filter the type of objects returned. A key prefix is the first three characters of the object ID, which specifies the object type. For example, User objects have a prefix of 005 and Group objects have a prefix of 0F9.

- **pageParam**
  - Type: Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value

- Type: ConnectApi.FollowingPage

```java
getReputation(communityId, userId)
```

Get a user’s reputation.

API Version
32.0

Available to Guest Users
32.0
Requires Chatter
Yes

Signature
```
public static ConnectApi.Reputation getReputation(String communityId, String userId)
```

Parameters
- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.
- **userId**
  - Type: `String`
  - ID of the user.

Return Value
Type: `ConnectApi.Reputation`

**getReputation(communityId, userId)**
Get information about a user.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.UserSummary getUser(String communityId, String userId)
```

Parameters
- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.
- **userId**
  - Type: `String`
  - The ID for a user.
Return Value
Type: `ConnectApi.UserDetail`

Usage
If the user is external, the properties that the `ConnectApi.UserDetail` output class shares with the `ConnectApi.UserSummary` output class can have non-null values. Other properties are always `null`.

`getUserBatch(communityId, userIds)`
Get information about a list of users.

API Version
31.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.BatchResult[] getUserBatch(String communityId, List<String> userIds)
```

Parameters
- `communityId`  
  Type: `String`  
  Use the ID for an Experience Cloud site, `internal`, or `null`.
- `userIds`  
  Type: `List<String>`  
  A list of up to 500 user IDs.

Return Value
Type: `ConnectApi.BatchResult[]`

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.User` object and errors for users that didn’t load.

Example
```
// Get users in an organization.
ConnectApi.UserPage userPage = ConnectApi.ChatterUsers.getUsers(null);
```
// Create a list of user IDs.
List<String> userList = new List<String>();
for (ConnectApi.User user : userPage.users){
    userList.add(user.id);
}

// Get info about all users in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterUsers.getUserBatch(null, userList);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print each user's username.
        ConnectApi.UserDetail user;
        if(batchResult.getResult() instanceof ConnectApi.UserDetail) {
            user = (ConnectApi.UserDetail) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(user.username);
    } else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}

getUserGroups(communityId, userId)
Get a user's groups.

API Version
45.0

Available to Guest Users
45.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserGroupDetailPage getUserGroups(String communityId, String userId)

Parameters

  communityId
    Type: String
userId
Type: String
The ID for a user.

Return Value
Type: ConnectApi.UserGroupDetailPage

**getUserGroups** (communityId, userId, pageParam, pageSize)
Get a page of a user's groups.

API Version
45.0

Available to Guest Users
45.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.UserGroupDetailPage getUserGroups(String communityId, String userId, Integer pageParam, Integer pageSize)
```

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**userId**
Type: String
The ID for a user.

**pageParam**
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
**Return Value**
Type: `ConnectApi.UserGroupDetailPage`

**getUsers(communityId)**
Get the first page of users.

**API Version**
28.0

**Available to Guest Users**
32.0

**Requires Chatter**
Yes

**Signature**
```java
public static ConnectApi.UserPage getUsers(String communityId)
```

**Parameters**
```
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
```

**Return Value**
Type: `ConnectApi.UserPage`

**getUsers(communityId, pageParam, pageSize)**
Get a page of users.

**API Version**
28.0

**Available to Guest Users**
32.0

**Requires Chatter**
Yes
Signature

```java
public static ConnectApi.UserPage getUsers(String communityId, Integer pageParam, Integer pageSize)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **pageParam**
  - Type: Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value

Type: ConnectApi.UserPage

```java
purgeUserActivities(String communityId, String userId)
```

Start a job to purge Chatter-related user activity, such as bookmarks, topic endorsements, and votes.

API Version

42.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.UserActivitiesJob purgeUserActivities(String communityId, String userId)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **userId**
  - Type: String
  - ID of the user.
Return Value

Type: `ConnectApi.UserActivitiesJob`

Usage

The following activities can be purged with this method.

- **Bookmark**—User bookmarked a post.
- **ChatterActivity**—Total counts of posts and comments made and likes and comments received for a user.
- **ChatterLike**—User liked a post or comment.
- **CompanyVerify**—User verified comment.
- **DownVote**—User downvoted a post or comment.
- **FeedEntityRead**—User read a post.
- **FeedRead**—User read a feed.
- **Mute**—User muted a post.
- **TopicEndorsement**—User endorsed another user on a topic or received endorsement on a topic.
- **UpVote**—User upvoted a post or comment.

To delete a user’s posts and comments, use these methods, respectively.

- `deleteFeedElement(communityId, feedElementId)`
- `deleteComment(communityId, commentId)`

`searchUserGroupDetails(communityId, userId, q)`

Get the user’s groups that match the search criteria.

API Version

45.0

Available to Guest Users

45.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.UserGroupDetailPage searchUserGroupDetails(String communityId, String userId, String q)
```

Parameters

- **communityId**
  
  Type: `String`
  
  Use the ID for an Experience Cloud site, internal, or null.
userId
Type: String
The ID for a user.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.UserGroupDetailPage

searchUserGroupDetails(communityId, userId, q, pageParam, pageSize)
Get a page of a user’s groups that match the search criteria.

API Version
45.0

Available to Guest Users
45.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserGroupDetailPage searchUserGroupDetails(String communityId,
String userId, String q, Integer pageParam, Integer pageSize)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
The ID for a user.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

`pageSize`
Type: Integer

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: `ConnectApi.UserGroupDetailPage`

`searchUsers(communityId, q)`
Get the first page of users that match the search criteria.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
`public static ConnectApi.UserPage searchUsers(String communityId, String q)`

Parameters
`communityId`
Type: String

Use the ID for an Experience Cloud site, internal, or null.

`q`
Type: String

Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: `ConnectApi.UserPage`
Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestSearchUsers(communityId, q, result)
Testing ConnectApi Code

searchUsers(communityId, q, pageParam, pageSize)
Get a page of users that match the search criteria.

API Version
28.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserPage searchUsers(String communityId, String q, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
Return Value

Type: `ConnectApi.UserPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

`setTestSearchUsers(communityId, q, pageParam, pageSize, result)`

Testing ConnectApi Code

```java
searchUsers(communityId, q, searchContextId, pageParam, pageSize)
```

Get a page of users that match the search criteria.

API Version

28.0

Available to Guest Users

32.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.UserPage searchUsers(String communityId, String q, String searchContextId, Integer pageParam, Integer pageSize)
```

Parameters

`communityId`

Type: `String`

Use the ID for an Experience Cloud site, `internal`, or `null`.

`q`

Type: `String`

Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

`searchContextId`

Type: `String`

A feed item ID that filters search results for feed @mentions. More useful results are listed first. When you specify this argument, you cannot query more than 500 results and you cannot use wildcards in the search term.
**pageParam**  
Type: Integer  
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**  
Type: Integer  
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value  
Type: `ConnectApi.UserPage`

**Usage**  
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**  
`setTestSearchUsers(communityId, q, searchContextId, pageParam, pageSize, result)`  
`updateChatterSettings(communityId, userId, defaultGroupEmailFrequency)`

**updateChatterSettings(communityId, userId, defaultGroupEmailFrequency)**  
Update the default Chatter settings for a user.

**API Version**  
28.0

**Requires Chatter**  
Yes

**Signature**  
```java  
public static ConnectApi.UserChatterSettings updateChatterSettings(String communityId,  
String userId, ConnectApi.GroupEmailFrequency defaultGroupEmailFrequency)  
```

**Parameters**  
**communityId**  
Type: String  
Use the ID for an Experience Cloud site, `internal`, or `null`.  

**userId**  
Type: String  
The ID for the context user or the keyword `me`.  

**defaultGroupEmailFrequency**  
Type: `ConnectApi.GroupEmailFrequency`
Frequency with which a user receives email. Values are:

- EachPost
- DailyDigest
- WeeklyDigest
- Never
- UseDefault

Don’t pass the value UseDefault for the defaultGroupEmailFrequency parameter because calling updateChatterSettings sets the default value.

Return Value
Type: ConnectApi.UserChatterSettings

**updateUser(communityId, userId, userInput)**
Update the About Me section for a user.

API Version
29.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.UserDetail updateUser(String communityId, String userId, ConnectApi.UserInput userInput)
```

Parameters

- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- **userId**
  Type: String
  The ID for the context user or the keyword me.

- **userInput**
  Type: ConnectApi.UserInput
  Specifies the updated information.

Return Value
Type: ConnectApi.UserDetail
ChatterUsers Test Methods

The following are the test methods for ChatterUsers. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

IN THIS SECTION:

- `setTestSearchUsers(communityId, q, result)`
  Register a ConnectApi.UserPage object to be returned when the matching ConnectApi.searchUsers method is called in a test context. Use the method with the same parameters or you receive an exception.

- `setTestSearchUsers(communityId, q, pageParam, pageSize, result)`
  Register a ConnectApi.UserPage object to be returned when the matching ConnectApi.searchUsers method is called in a test context. Use the method with the same parameters or you receive an exception.

- `setTestSearchUsers(communityId, q, searchContextId, pageParam, pageSize, result)`
  Register a ConnectApi.UserPage object to be returned when the matching ConnectApi.searchUsers method is called in a test context. Use the method with the same parameters or you receive an exception.

- `setTestSearchUsers(communityId, q, result)`
  Register a ConnectApi.UserPage object to be returned when the matching ConnectApi.searchUsers method is called in a test context. Use the method with the same parameters or you receive an exception.

**setTestSearchUsers(communityId, q, result)**

Register a ConnectApi.UserPage object to be returned when the matching ConnectApi.searchUsers method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

28.0

Signature

```java
public static Void setTestSearchUsers(String communityId, String q, ConnectApi.UserPage result)
```

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.

- `q`
  Type: `String`
  Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- `result`
  Type: `ConnectApi.UserPage`
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
- searchUsers(communityId, q)
- Testing ConnectApi Code

**setTestSearchUsers(communityId, q, pageParam, pageSize, result)**
Register a `ConnectApi.UserPage` object to be returned when the matching `ConnectApi.searchUsers` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0

Signature
```java
public static Void setTestSearchUsers(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.UserPage result)
```

Parameters
- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or `null`.

- **q**
  - Type: String
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **pageParam**
  - Type: Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

- **result**
  - Type: `ConnectApi.UserPage`
  - The object containing test data.
Return Value
Type: Void

SEE ALSO:
searchUsers(communityId, q, pageParam, pageSize)
Testing ConnectApi Code

**setTestSearchUsers(communityId, q, searchContextId, pageParam, pageSize, result)**

Register a `ConnectApi.UserPage` object to be returned when the matching `ConnectApi.searchUsers` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
28.0

Signature

```java
public static Void setTestSearchUsers(String communityId, String q, String searchContextId, Integer pageParam, Integer pageSize, ConnectApi.UserPage result)
```

Parameters

- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or null.

- **q**
  Type: `String`
  Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **searchContextId**
  Type: `String`
  A feed item ID that filters search results for feed @mentions. More useful results are listed first. When you specify this argument, you cannot query more than 500 results and you cannot use wildcards in the search term.

- **pageParam**
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

- **pageSize**
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

- **result**
  Type: `ConnectApi.UserPage`
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
searchUsers(communityId, q, searchContextId, pageParam, pageSize)

Testing ConnectApi Code

Retired ChatterUsers Methods
The following methods for ChatterUsers are retired.

IN THIS SECTION:
  deletePhoto(communityId, userId)
  Get a user's photo.
  getGroups(communityId, userId)
  Get the groups that a user is a member of.
  getGroups(communityId, userId, pageParam, pageSize)
  Get a page of groups that a user is a member of.
  getPhoto(communityId, userId)
  Get a user's photo.
  searchUserGroups(communityId, userId, q)
  Get the user's groups that match the search criteria.
  searchUserGroups(communityId, userId, q, pageParam, pageSize)
  Get a page of a user's groups that match the search criteria.
  setPhoto(communityId, userId, fileId, versionNumber)
  Set an uploaded file as a user's photo.
  setPhoto(communityId, userId, fileUpload)
  Set a file that hasn't been uploaded as the user's photo.
  setPhotoWithAttributes(communityId, userId, photo)
  Set and crop an uploaded file as a user's photo.
  setPhotoWithAttributes(communityId, userId, photo, fileUpload)
  Set and crop a file that hasn't been uploaded as a user's photo.

deletePhoto(communityId, userId)
Delete a user's photo.

API Version
28.0–34.0

Important: In version 35.0 and later, use ConnectApi.UserProfiles.deletePhoto(communityId, userId)
Signature

public static Void deletePhoto(String communityId, String userId)

Parameters

**communityId**
Type: **String**
Use the ID for an Experience Cloud site, internal, or **null**.

**userId**
Type: **String**
The ID for the context user or the keyword **me**.

Return Value
Type: Void

**getGroups(communityId, userId)**
Get the groups that a user is a member of.

API Version
28.0–44.0

⚠️ **Important:** In version 45.0 and later, use **getUserGroups(communityId, userId)**.

Available to Guest Users
32.0–44.0

Requires Chatter
Yes

Signature

public static ConnectApi.UserGroupPage getGroups(String communityId, String userId)

Parameters

**communityId**
Type: **String**
Use the ID for an Experience Cloud site, internal, or **null**.

**userId**
Type: **String**
The ID for a user.
Return Value
Type: `ConnectApi.UserGroupPage`

`getGroups(communityId, userId, pageParam, pageSize)`
Get a page of groups that a user is a member of.

API Version
28.0–44.0

⚠️ Important: In version 45.0 and later, use `getUserGroups(communityId, userId, pageParam, pageSize)`.

Available to Guest Users
32.0–44.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.UserGroupPage getGroups(String communityId, String userId,
        Integer pageParam, Integer pageSize)
```

Parameters
- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.
- `userId`
  Type: `String`
  The ID for a user.
- `pageParam`
  Type: `Integer`
  Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.
- `pageSize`
  Type: `Integer`
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.UserGroupPage`

`getPhoto(communityId, userId)`
Get a user’s photo.
API Version
28.0–34.0

⚠️ **Important:** In version 35.0 and later, use `ConnectApi.UserProfiles.getPhoto(communityId, userId)`.

Available to Guest Users
32.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.Photo getPhoto(String communityId, String userId)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **userId**
  - Type: `String`
  - The ID for a user.

Return Value

Type: `ConnectApi.Photo`

**searchUserGroups(communityId, userId, q)**

Get the user’s groups that match the search criteria.

API Version
30.0–44.0

⚠️ **Important:** In version 45.0 and later, use `searchUserGroupDetails(communityId, userId, q)`.

Available to Guest Users
32.0–44.0

Requires Chatter
Yes
public static ConnectApi.UserGroupPage searchUserGroups(String communityId, String userId, String q)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
The ID for a user.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

Return Value
Type: ConnectApi.UserGroupPage

searchUserGroups(communityId, userId, q, pageParam, pageSize)
Get a page of a user’s groups that match the search criteria.

API Version
30.0–44.0

Important: In version 45.0 and later, use searchUserGroupDetails(communityId, userId, q, pageParam, pageSize).

Available to Guest Users
32.0–44.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserGroupPage searchUserGroups(String communityId, String userId, String q, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**userId**
Type: **String**
The ID for a user.

**q**
Type: **String**
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See **Wildcards**.

**pageParam**
Type: **Integer**
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**
Type: **Integer**
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

**Return Value**
Type: **ConnectApi.UserGroupPage**

**setPhoto(communityId, userId, fileId, versionNumber)**
Set an uploaded file as a user’s photo.

**API Version**
28.0–34.0

**Important:** In version 35.0 and later, use **ConnectApi.UserProfiles.setPhoto(communityId, userId, fileId, versionNumber)**

**Requires Chatter**
Yes

**Signature**

```java
public static ConnectApi.Photo setPhoto(String communityId, String userId, String fileId, Integer versionNumber)
```

**Parameters**

**communityId**
Type: **String**
Use the ID for an Experience Cloud site, internal, or null.

**userId**
Type: **String**
The ID for the context user or the keyword me.
fileId
  Type: String
  ID of a file already uploaded. The file must be an image, and be smaller than 2 GB.

versionNumber
  Type: Integer
  Version number of the existing file. Specify either an existing version number, or null to get the latest version.

Return Value
  Type: ConnectApi.Photo

Usage
Photos are processed asynchronously and may not be visible right away.

setPhoto(communityId, userId, fileUpload)
Set a file that hasn’t been uploaded as the user’s photo.

API Version
28.0–34.0

⚠️ Important: In version 35.0 and later, use ConnectApi.UserProfiles.setPhoto(communityId, userId, fileUpload)

Requires Chatter
Yes

Signature
public static ConnectApi.Photo setPhoto(String communityId, String userId, ConnectApi.BinaryInput fileUpload)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

userId
  Type: String
  The ID for the context user or the keyword me.

fileUpload
  Type: ConnectApi.BinaryInput
  A file to use as the photo. The content type must be usable as an image.
Return Value
Type: `ConnectApi.Photo`

Usage
Photos are processed asynchronously and may not be visible right away.

**setPhotoWithAttributes(communityId, userId, photo)**
Set and crop an uploaded file as a user’s photo.

API Version
29.0–34.0

⚠️ **Important:** In version 35.0 and later, use

`ConnectApi.UserProfiles.setPhotoWithAttributes(communityId, userId, photo)`

Requires Chatter
Yes

Signature

```java
public static ConnectApi.Photo setPhotoWithAttributes(String communityId, String userId,
ConnectApi.PhotoInput photo)
```

Parameters

**communityId**
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

**userId**
Type: `String`
The ID for the context user or the keyword `me`.

**photo**
Type: `ConnectApi.PhotoInput`
A `ConnectApi.PhotoInput` object specifying the file ID, version number, and cropping parameters.

Return Value
Type: `ConnectApi.Photo`

Usage
Photos are processed asynchronously and may not be visible right away.
setPhotoWithAttributes(communityId, userId, photo, fileUpload)
Set and crop a file that hasn't been uploaded as a user's photo.

API Version
29.0–34.0

⚠️ Important: In version 35.0 and later, use
ConnectApi.UserProfiles.setPhotoWithAttributes(communityId, userId, photo, fileUpload)

Requires Chatter
Yes

Signature
public static ConnectApi_Photos.setPhotoWithAttributes(String communityId, String userId, ConnectApi_PhotoInput photo, ConnectApi_BinaryInput fileUpload)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

userId
  Type: String
  The ID for the context user or the keyword me.

photo
  Type: ConnectApi_PhotoInput
  A ConnectApi_PhotoInput object specifying the cropping parameters.

fileUpload
  Type: ConnectApi_BinaryInput
  A file to use as the photo. The content type must be usable as an image.

Return Value
Type: ConnectApi_Photo

Usage
Photos are processed asynchronously and may not be visible right away.

CommerceBuyerExperience Class
Get order delivery group, order item, and order summaries.
Namespace
ConnectApi

CommerceBuyerExperience Methods
These methods are for CommerceBuyerExperience. All methods are static.

IN THIS SECTION:
- getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId)
  Get order delivery group summaries.
- getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, pageSize)
  Get order delivery group summaries.
- getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, pageParam)
  Get a page of order delivery group summaries.
- getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, fields)
  Get order delivery group summaries with specific fields.
- getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, pageParam, fields)
  Get a page of order delivery group summaries with specific fields.
- getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, fields, pageSize)
  Get order delivery group summaries with specific fields.
- getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, fields, sortParam)
  Get a sorted list of order delivery group summaries with specific fields.
- getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, fields, pageSize, sortParam)
  Get a sorted list of order delivery group summaries with specific fields.
- getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId)
  Get order item summaries.
- getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, pageSize)
  Get order item summaries.
- getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId)
  Get order item summaries for a delivery group summary.
- getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId, pageSize)
  Get order item summaries for a delivery group summary.
- getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId, pageParam)
  Get a page of order item summaries for a delivery group summary.
- getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId, fields)
  Get order item summaries for a delivery group summary with specific fields.
- getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId, fields, pageSize)
  Get order item summaries for a delivery group summary with specific fields.
- getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId, fields, pageParam)
  Get a page of order item summaries for a delivery group summary with specific fields.
getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId, fields, sortParam)
Get a sorted list of order item summaries for a delivery group summary with specific fields.

getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId, fields, pageSize, sortParam)
Get a sorted page of order item summaries for a delivery group summary with specific fields.

getOrderSummaries(webstoreId)
Get order summaries.

getOrderSummaries(webstoreId, effectiveAccountId)
Get order summaries.

getOrderSummaries(webstoreId, effectiveAccountId, fields)
Get order summaries with specific fields.

getOrderSummaries(webstoreId, effectiveAccountId, fields, pageSize, pageToken)
Get a page of order summaries with specific fields.

getOrderSummaries(webstoreId, effectiveAccountId, fields, pageSize, pageToken, sortOrder)
Get a sorted page of order summaries with specific fields.

getOrderSummaries(webstoreId, effectiveAccountId, fields, pageSize, pageToken, sortOrder, earliestDate, latestDate)
Get a sorted page of order summaries with specific fields within a specific date range.

getOrderSummaries(webstoreId, effectiveAccountId, fields, pageSize, pageToken, sortOrder, earliestDate, latestDate, ownerScoped)
Get a sorted page of order summaries with specific fields within a specific date range and scoped to orders owned by the context user.

getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId)
Get order delivery group summaries.

API Version
S1.0

Requires Chatter
No

Signature
public static ConnectApi.OrderDeliveryGroupSummaryCollection
getOrderDeliveryGroupSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId)

Parameters
webstoreId
Type: String
ID of the webstore.
effectiveAccountId
Type: String
ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

`orderSummaryId`
Type: `String`
ID of the order summary.

Return Value
Type: `ConnectApi.OrderDeliveryGroupSummaryCollection`

`getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, pageSize)`
Get order delivery group summaries.

API Version
$1.0

Requires Chatter
No

Signature
`public static ConnectApi.OrderDeliveryGroupSummaryCollection getOrderDeliveryGroupSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId, Integer pageSize)`

Parameters
`webstoreId`
Type: `String`
ID of the webstore.

`effectiveAccountId`
Type: `String`
ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

`orderSummaryId`
Type: `String`
ID of the order summary.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.OrderDeliveryGroupSummaryCollection`
getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, pageParam)
Get a page of order delivery group summaries.

API Version
$1.0

Requires Chatter
No

Signature
public static ConnectApi.OrderDeliveryGroupSummaryCollection getOrderDeliveryGroupSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId, String pageParam)

Parameters
webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

orderSummaryId
Type: String
ID of the order summary.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

Return Value
Type: ConnectApi.OrderDeliveryGroupSummaryCollection

getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, fields)
Get order delivery group summaries with specific fields.

API Version
$1.0
Requires Chatter
No

Signature

```java
public static ConnectApi.OrderDeliveryGroupSummaryCollection
getOrderDeliveryGroupSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId, List<String> fields)
```

Parameters

- `webstoreId`: Type: `String`
  ID of the webstore.

- `effectiveAccountId`: Type: `String`
  ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

- `orderSummaryId`: Type: `String`
  ID of the order summary.

- `fields`: Type: `List<String>`
  List of up to 15 order delivery group summary or order delivery method fields to display in the UI in each item row.

Return Value

Type: `ConnectApi.OrderDeliveryGroupSummaryCollection`

getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, pageParam, fields)

Get a page of order delivery group summaries with specific fields.

API Version

51.0

Requires Chatter
No

Signature

```java
public static ConnectApi.OrderDeliveryGroupSummaryCollection
getOrderDeliveryGroupSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId, String pageParam, List<String> fields)
```
Parameters

webstoreId
  Type: String
  ID of the webstore.

effectiveAccountId
  Type: String
  ID of the account for which the request is made. If null, defaults to the account ID for the context user.

orderSummaryId
  Type: String
  ID of the order summary.

pageParam
  Type: String
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

fields
  Type: List<String>
  List of up to 15 order delivery group summary or order delivery method fields to display in the UI in each item row.

Return Value

Type: ConnectApi.OrderDeliveryGroupSummaryCollection

getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, fields, pageSize)

Get order delivery group summaries with specific fields.

API Version

51.0

Requires Chatter

No

Signature

public static ConnectApi.OrderDeliveryGroupSummaryCollection
getOrderDeliveryGroupSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId, List<String> fields, Integer pageSize)

Parameters

webstoreId
  Type: String
  ID of the webstore.
**effectiveAccountId**
Type: `String`
ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

**orderSummaryId**
Type: `String`
ID of the order summary.

**fields**
Type: `List<String>`
List of up to 15 order delivery group summary or order delivery method fields to display in the UI in each item row.

**pageSize**
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.OrderDeliveryGroupSummaryCollection`

**getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, fields, sortParam)**
Get a sorted list of order delivery group summaries with specific fields.

API Version
51.0

Requires Chatter
No

Signature
```
public static ConnectApi.OrderDeliveryGroupSummaryCollection
getOrderDeliveryGroupSummaries(String webstoreId, String effectiveAccountId, String
orderSummaryId, List<String> fields, ConnectApi.OrderDeliveryGroupSummarySort sortParam)
```

Parameters
**webstoreId**
Type: `String`
ID of the webstore.

**effectiveAccountId**
Type: `String`
ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

**orderSummaryId**
Type: `String`
ID of the order summary.

**fields**
- Type: `List<String>`
  - List of up to 15 order delivery group summary or order delivery method fields to display in the UI in each item row.

**sortParam**
- Type: `ConnectApi.OrderDeliveryGroupSummarySort`
  - Sort order for order delivery group summaries. Values are:
    - `IdAsc`—Sorts by ID in ascending alphanumeric order (A–Z, 0–9).
    - `IdDesc`—Sorts by ID in descending alphanumeric order (Z–A, 9–0).
  - If `null`, `IdAsc` is the default sort order.

**Return Value**
- Type: `ConnectApi.OrderDeliveryGroupSummaryCollection`

```
getOrderDeliveryGroupSummaries(webstoreId, effectiveAccountId, orderSummaryId, fields, pageSize, sortParam)
```

Get a sorted list of order delivery group summaries with specific fields.

**API Version**
- 51.0

**Requires Chatter**
- No

**Signature**

```
public static ConnectApi.OrderDeliveryGroupSummaryCollection
getOrderDeliveryGroupSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId, List<String> fields, Integer pageSize, ConnectApi.OrderDeliveryGroupSummarySort sortParam)
```

**Parameters**

- **webstoreId**
  - Type: `String`
  - ID of the webstore.

- **effectiveAccountId**
  - Type: `String`
  - ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

- **orderSummaryId**
  - Type: `String`
  - ID of the order summary.
**fields**
Type: `List<String>`
List of up to 15 order delivery group summary or order delivery method fields to display in the UI in each item row.

**pageSize**
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: `ConnectApi.OrderDeliveryGroupSummarySort`
Sort order for order delivery group summaries. Values are:
- `IdAsc`—Sorts by ID in ascending alphanumeric order (A–Z, 0–9).
- `IdDesc`—Sorts by ID in descending alphanumeric order (Z–A, 9–0).
If `null`, `IdAsc` is the default sort order.

Return Value
Type: `ConnectApi.OrderDeliveryGroupSummaryCollection`

**getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId)**
Get order item summaries.

API Version
51.0

Requires Chatter
No

Signature
```java
public static ConnectApi.OrderItemSummaryCollection getOrderItemSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId)
```

Parameters
- **webstoreId**
  Type: `String`
  ID of the webstore.
- **effectiveAccountId**
  Type: `String`
  ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.
- **orderSummaryId**
  Type: `String`
  ID of the order summary.
getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, pageSize)

Get order item summaries.

API Version
51.0

Requires Chatter
No

Signature
public static ConnectApi.OrderItemSummaryCollection getOrderItemSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId, Integer pageSize)

Parameters
webstoreId
   Type: String
   ID of the webstore.

effectiveAccountId
   Type: String
   ID of the account for which the request is made. If null, defaults to the account ID for the context user.

orderSummaryId
   Type: String
   ID of the order summary.

pageSize
   Type: Integer
   Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.OrderItemSummaryCollection

getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId)

Get order item summaries for a delivery group summary.

API Version
51.0
Requires Chatter
No

Signature
public static ConnectApi.OrderItemSummaryCollection getOrderItemSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId, String orderDeliveryGroupSummaryId)

Parameters

webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

orderSummaryId
Type: String
ID of the order summary.

orderDeliveryGroupSummaryId
Type: String
ID of the order delivery group summary.

Return Value
Type: ConnectApi.OrderItemSummaryCollection

getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId, pageSize)
Get order item summaries for a delivery group summary.

API Version
51.0

Requires Chatter
No

Signature
public static ConnectApi.OrderItemSummaryCollection getOrderItemSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId, String orderDeliveryGroupSummaryId, Integer pageSize)
Parameters

**webstoreId**
Type: String
ID of the webstore.

**effectiveAccountId**
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

**orderSummaryId**
Type: String
ID of the order summary.

**orderDeliveryGroupSummaryId**
Type: String
ID of the order delivery group summary.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value

Type: ConnectApi.OrderItemSummaryCollection

**getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId, pageParam)**

Get a page of order item summaries for a delivery group summary.

API Version

S1.0

Requires Chatter

No

Signature

```java
public static ConnectApi.OrderItemSummaryCollection getOrderItemSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId, String orderDeliveryGroupSummaryId, String pageParam)
```

Parameters

**webstoreId**
Type: String
ID of the webstore.
effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

orderSummaryId
Type: String
ID of the order summary.

orderDeliveryGroupSummaryId
Type: String
ID of the order delivery group summary.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

Return Value
Type: ConnectApi.OrderItemSummaryCollection

getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId, fields)
Get order item summaries for a delivery group summary with specific fields.

API Version
51.0

Requires Chatter
No

Signature
public static ConnectApi.OrderItemSummaryCollection getOrderItemSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId, String orderDeliveryGroupSummaryId, List<String> fields)

Parameters
webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.
**orderSummaryId**
- Type: String
- ID of the order summary.

**orderDeliveryGroupSummaryId**
- Type: String
- ID of the order delivery group summary.

**fields**
- Type: `List<String>`
- List of up to 15 order item summary or product fields to display in the UI in each item row.

**Return Value**
- Type: `ConnectApi.OrderItemSummaryCollection`

### getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId, fields, pageSize)

Get order item summaries for a delivery group summary with specific fields.

**API Version**
- 51.0

**Requires Chatter**
- No

**Signature**

```java
public static ConnectApi.OrderItemSummaryCollection getOrderItemSummaries(String webstoreId, String effectiveAccountId, String orderSummaryId, String orderDeliveryGroupSummaryId, List<String> fields, Integer pageSize)
```

**Parameters**

**webstoreId**
- Type: String
- ID of the webstore.

**effectiveAccountId**
- Type: String
- ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

**orderSummaryId**
- Type: String
- ID of the order summary.

**orderDeliveryGroupSummaryId**
- Type: String
ID of the order delivery group summary.

fields
Type: List<String>
List of up to 15 order item summary or product fields to display in the UI in each item row.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.OrderItemSummaryCollection

getOrderItemSummaries(webstoreId, effectiveAccountId, orderSummaryId, orderDeliveryGroupSummaryId, fields, pageParam)
Get a page of order item summaries for a delivery group summary with specific fields.

```

**Parameters**

- **webstoreId**  
  Type: String  
  ID of the webstore.

- **effectiveAccountId**  
  Type: String  
  ID of the account for which the request is made. If *null*, defaults to the account ID for the context user.

- **orderSummaryId**  
  Type: String  
  ID of the order summary.
**orderDeliveryGroupId**
Type: String
ID of the order delivery group summary.

**fields**
Type: List<String>
List of up to 15 order item summary or product fields to display in the UI in each item row.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
Type: ConnectApi.OrderItemSummarySort
Sort order for order item summaries. Values are:
- **IdAsc**—Sorts by ID in ascending alphanumeric order (A–Z, 0–9).
- **IdDesc**—Sorts by ID in descending alphanumeric order (Z–A, 9–0).
If `null`, `IdAsc` is the default sort order.

Return Value
Type: ConnectApi.OrderItemSummaryCollection

**getOrderSummaries(webstoreId)**
Get order summaries.

API Version
51.0

Requires Chatter

public static ConnectApi.OrderSummaryCollectionRepresentation getOrderSummaries(String webstoreId)
```

Parameters

**webstoreId**
Type: String
ID of the webstore.

Return Value
Type: ConnectApi.OrderSummaryCollectionRepresentation
getOrderSummaries(webstoreId, effectiveAccountId)
Get order summaries.

API Version
51.0

Requires Chatter
No

Signature
public static ConnectApi.OrderSummaryCollectionRepresentation getOrderSummaries(String webstoreId, String effectiveAccountId)

Parameters
webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

Return Value
Type: ConnectApi.OrderSummaryCollectionRepresentation

getOrderSummaries(webstoreId, effectiveAccountId, fields)
Get order summaries with specific fields.

API Version
51.0

Requires Chatter
No

Signature
public static ConnectApi.OrderSummaryCollectionRepresentation getOrderSummaries(String webstoreId, String effectiveAccountId, List<String> fields)
Parameters

webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

fields
Type: List<String>
List of up to 15 additional order summary fields to display in the UI in each item row.
These order summary fields are returned regardless of fields specified.
• createdDate
• orderSummaryId
• orderNumber
• orderedDate
• ownerId
• status
• totalAmount

Return Value
Type: ConnectApi.OrderSummaryCollectionRepresentation

getOrderSummaries(webstoreId, effectiveAccountId, fields, pageSize, pageToken)
Get a page of order summaries with specific fields.

API Version
51.0

Requires Chatter
No

Signature
public static ConnectApi.OrderSummaryCollectionRepresentation getOrderSummaries(String webstoreId, String effectiveAccountId, List<String> fields, Integer pageSize, String pageToken)

Parameters

webstoreId
Type: String
ID of the webstore.
effectiveAccountId
  Type: String
  ID of the account for which the request is made. If null, defaults to the account ID for the context user.

fields
  Type: List<String>
  List of up to 15 additional order summary fields to display in the UI in each item row.
  These order summary fields are returned regardless of fields specified.
  • createdDate
  • orderSummaryId
  • orderNumber
  • orderedDate
  • ownerId
  • status
  • totalAmount

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

pageToken
  Type: String
  Specifies the base64 encoded page token. Page tokens are returned as part of the response. If unspecified, the first page is returned.

Return Value
  Type: ConnectApi.OrderSummaryCollectionRepresentation

getOrderSummaries(webstoreId, effectiveAccountId, fields, pageSize, pageToken, sortOrder)
Get a sorted page of order summaries with specific fields.

API Version
  51.0

Requires Chatter
  No

Signature
  public static ConnectApi.OrderSummaryCollectionRepresentation getOrderSummaries(String webstoreId, String effectiveAccountId, List<String> fields, Integer pageSize, String pageToken, ConnectApi.OrderSummarySortOrder sortOrder)
Parameters

`webstoreId`
Type: `String`
ID of the webstore.

`effectiveAccountId`
Type: `String`
ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

`fields`
Type: `List<String>`
List of up to 15 additional order summary fields to display in the UI in each item row.
These order summary fields are returned regardless of fields specified.
- `createdDate`
- `orderSummaryId`
- `orderNumber`
- `orderedDate`
- `ownerId`
- `status`
- `totalAmount`

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`pageToken`
Type: `String`
Specifies the base64 encoded page token. Page tokens are returned as part of the response. If unspecified, the first page is returned.

`sortOrder`
Type: `ConnectApi.OrderSummarySortOrder`
Sort order for order summaries. Values are:
- `createdDateAsc`—Sorts by the oldest created date.
- `createdDateDesc`—Sorts by the most recent created date.
- `orderedDateAsc`—Sorts by the oldest ordered date.
- `orderedDateDesc`—Sorts by the most recent ordered date.
If unspecified, defaults to `orderedDateDesc`.
If you’re sorting by ordered date, make sure the ordered date is populated on your order summary records. A `null` value isn’t supported and results in an error.

Return Value
Type: `ConnectApi.OrderSummaryCollectionRepresentation`
getOrderSummaries(webstoreId, effectiveAccountId, fields, pageSize, pageToken, sortOrder, earliestDate, latestDate)

Get a sorted page of order summaries with specific fields within a specific date range.

API Version
$1.0

Requires Chatter
No

Signature
public static ConnectApi.OrderSummaryCollectionRepresentation getOrderSummaries(String webstoreId, String effectiveAccountId, List<String> fields, Integer pageSize, String pageToken, ConnectApi.OrderSummarySortOrder sortOrder, String earliestDate, String latestDate)

Parameters
webstoreId
Type: String
ID of the webstore.
effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.
fields
Type: List<String>
List of up to 15 additional order summary fields to display in the UI in each item row.
These order summary fields are returned regardless of fields specified.
- createdDate
- orderSummaryId
- orderNumber
- orderedDate
- ownerId
- status
- totalAmount
pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
pageToken
Type: String
Specifies the base64 encoded page token. Page tokens are returned as part of the response. If unspecified, the first page is returned.
sortOrder
Type: `ConnectApi.OrderSummarySortOrder`
Sort order for order summaries. Values are:
- `CreatedDateAsc`—Sorts by the oldest created date.
- `CreatedDateDesc`—Sorts by the most recent created date.
- `OrderedDateAsc`—Sorts by the oldest ordered date.
- `OrderedDateDesc`—Sorts by the most recent ordered date.
If unspecified, defaults to `OrderedDateDesc`.
If you’re sorting by ordered date, make sure the ordered date is populated on your order summary records. A null value isn’t supported and results in an error.

earliestDate
Type: `String`
Oldest created or ordered date, depending on the `sortOrder` value, for order summaries to return. Results include any orders on and after this date. Expected format is an ISO 8601 date string, for example, `2020-02-25T18:24:31.000Z`.

latestDate
Type: `String`
Most recent created or ordered date, depending on the `sortOrder` value, for order summaries to return. Results include any orders before this date. Expected format is an ISO 8601 date string, for example, `2020-02-25T18:24:31.000Z`.

Return Value
Type: `ConnectApi.OrderSummaryCollectionRepresentation`

`getOrderSummaries(webstoreId, effectiveAccountId, fields, pageSize, pageToken, sortOrder, earliestDate, latestDate, ownerScoped)`
Get a sorted page of order summaries with specific fields within a specific date range and scoped to orders owned by the context user.

API Version
51.0

Requires Chatter
No

Signature
```java
public static ConnectApi.OrderSummaryCollectionRepresentation getOrderSummaries(String webstoreId, String effectiveAccountId, List<String> fields, Integer pageSize, String pageToken, ConnectApi.OrderSummarySortOrder sortOrder, String earliestDate, String latestDate, Boolean ownerScoped)
```
Parameters

**webstoreId**
Type: `String`
ID of the webstore.

**effectiveAccountId**
Type: `String`
ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

**fields**
Type: `List<String>`
List of up to 15 additional order summary fields to display in the UI in each item row. These order summary fields are returned regardless of fields specified.
- `createdDate`
- `orderSummaryId`
- `orderNumber`
- `orderedDate`
- `ownerId`
- `status`
- `totalAmount`

**pageSize**
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**pageToken**
Type: `String`
Specifies the base64 encoded page token. Page tokens are returned as part of the response. If unspecified, the first page is returned.

**sortOrder**
Type: `ConnectApi.OrderSummarySortOrder`
Sort order for order summaries. Values are:
- `CreatedDateAsc`—Sorts by the oldest created date.
- `CreatedDateDesc`—Sorts by the most recent created date.
- `OrderedDateAsc`—Sorts by the oldest ordered date.
- `OrderedDateDesc`—Sorts by the most recent ordered date.
If unspecified, defaults to `OrderedDateDesc`.
If you’re sorting by ordered date, make sure the ordered date is populated on your order summary records. A `null` value isn’t supported and results in an error.

**earliestDate**
Type: `String`
Oldest created or ordered date, depending on the `sortOrder` value, for order summaries to return. Results include any orders on and after this date. Expected format is an ISO 8601 date string, for example, 2020-02-25T18:24:31.000Z.

**latestDate**
Type: `String`
Most recent created or ordered date, depending on the `sortOrder` value, for order summaries to return. Results include any orders before this date. Expected format is an ISO 8601 date string, for example, 2020-02-25T18:24:31.000Z.

**ownerScoped**
Type: Boolean
Specifies whether the results are scoped to orders owned by the context user (true) or to orders owned by and shared with the context user (false). If unspecified, defaults to true.

**Return Value**
Type: `ConnectApi.OrderSummaryCollectionRepresentation`

**CommerceCart Class**
Get, create, update, and delete carts. Get cart items, add items to carts, update and delete cart items.

**Namespace**
`ConnectApi`

**CommerceCart Methods**
These methods are for `CommerceCart`. All methods are static.

**IN THIS SECTION:**
- `addItemsToCart(webstoreId, effectiveAccountId, activeCartOrId, cartItems)`
  Add a batch of up to 100 items to a cart.
- `addItemToCart(webstoreId, effectiveAccountId, activeCartOrId, cartItemInput)`
  Add an item to a cart.
- `copyCartToWishlist(webstoreId, effectiveAccountId, activeCartOrId, cartToWishlistInput)`
  Copy the products from a cart to a wishlist.
- `createCart(webstoreId, cart)`
  Create a cart.
- `deleteCart(webstoreId, effectiveAccountId, activeCartOrId)`
  Delete a cart.
- `deleteCartItem(webstoreId, effectiveAccountId, activeCartOrId, cartItemId)`
  Delete an item from a cart.
- `getCartItems(webstoreId, effectiveAccountId, activeCartOrId)`
  Get items in a cart.
- `getCartItems(webstoreId, effectiveAccountId, activeCartOrId, pageParam)`
  Get a page of items in a cart.
- `getCartItems(webstoreId, effectiveAccountId, activeCartOrId, pageParam, sortParam)`
  Get a sorted page of items in a cart.
- `getCartItems(webstoreId, effectiveAccountId, activeCartOrId, pageParam, pageSize)`
  Get a specified size page of items in a cart.
getCartItems(webstoreId, effectiveAccountId, activeCartOrId, pageParam, pageSize, sortParam)
Get a specified size, sorted page of items in a cart.

getCartItems(webstoreId, effectiveAccountId, activeCartOrId, productFields, pageParam, pageSize, sortParam)
Get a specified size, sorted page of items filtered by product fields in a cart.

getCartSummary(webstoreId, effectiveAccountId, activeCartOrId)
Get a cart.

getOrCreateActiveCartSummary(webstoreId, effectiveAccountId, activeCartOrId)
Get a cart or create an active cart if one doesn’t exist.

setCartMessagesVisibility(webstoreId, activeCartOrId, effectiveAccountId, messageVisibility)
Set the visibility for cart messages.

updateCartItem(webstoreId, effectiveAccountId, activeCartOrId, cartItemId, cartItem)
Update an item in a cart.

addItemsToCart(webstoreId, effectiveAccountId, activeCartOrId, cartItems)
Add a batch of up to 100 items to a cart.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.BatchResult[] addItemsToCart(String webstoreId, String effectiveAccountId, String activeCartOrId, List<ConnectApi.BatchInput> cartItems)

Parameters
webstoreId
  Type: String
  ID of the webstore.

effectiveAccountId
  Type: String
  ID of the account for which the request is made. If null, defaults to the account ID for the context user.

activeCartOrId
  Type: String
  ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete.

cartItems
  Type: List<ConnectApi.BatchInput>
The list can contain up to 100 `ConnectApi.BatchInput` objects. In the `ConnectApi.BatchInput` constructor, the input object must be `ConnectApiCartItemInput`.

**Return Value**

**Type:** `ConnectApi.BatchResult[]`

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApiCartItem` object.

The returned objects correspond to each of the input objects and are returned in the same order as the input objects.

The method call fails only if an error occurs that affects the entire operation (such as a parsing failure). If an individual object causes an error, the error is embedded within the `ConnectApi.BatchResult` list.

**Usage**

Buyers with read access to carts can add, update, and delete items in carts.

This method respects buyer View Product entitlements and only users entitled to view product data can access it.

```
addItemToCart(webstoreId, effectiveAccountId, activeCartOrId, cartItemInput)
```

Add an item to a cart.

**API Version**

49.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApiCartItem addItemToCart(String webstoreId, String effectiveAccountId, String activeCartOrId, ConnectApiCartItemInput cartItemInput)
```

**Parameters**

- `webstoreId`
  - **Type:** `String`
  - ID of the webstore.

- `effectiveAccountId`
  - **Type:** `String`
  - ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

- `activeCartOrId`
  - **Type:** `String`
  - ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete.

- `cartItemInput`
  - **Type:** `ConnectApiCartItemInput`
A `ConnectApi.CartItemInput` object representing an item to add to the cart.

Return Value
Type: `ConnectApi.CartItem`

Usage
Buyers with read access to carts can add, update, and delete items in carts.
This method respects buyer View Product entitlements and only users entitled to view product data can access it.

`copyCartToWishlist(webstoreId, effectiveAccountId, activeCartOrId, cartToWishlistInput)`
Copy the products from a cart to a wishlist.

API Version
50.0

Requires Chatter
No

Signature
`public static ConnectApi.CartToWishlistResult copyCartToWishlist(String webstoreId, String effectiveAccountId, String activeCartOrId, ConnectApi.CartToWishlistInput cartToWishlistInput)`

Parameters
`webstoreId`
Type: `String`
ID of the webstore.

`effectiveAccountId`
Type: `String`
ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

`activeCartOrId`
Type: `String`
ID of the cart, active, or current. The `current` value is available in version 50.0 and later and indicates a cart with a status that isn't `Closed` or `PendingDelete`.

`cartToWishlistInput`
Type: `ConnectApi.CartToWishlistInput`
A `ConnectApi.CartToWishlistInput` object indicating the wishlist to copy products to.
Return Value
Type: `ConnectApi.CartToWishlistResult`

`createCart(webstoreId, cart)`
Create a cart.

API Version
49.0

Requires Chatter
No

Signature
`public static ConnectApi.CartSummary createCart(String webstoreId, ConnectApi.CartInput cart)`

Parameters
`webstoreId`
Type: `String`
ID of the webstore.

`cart`
Type: `ConnectApi.CartInput`
A `ConnectApi.CartInput` object representing a cart.

Return Value
Type: `ConnectApi.CartSummary`

Usage
Buyers with read access to carts can create and delete carts.

`deleteCart(webstoreId, effectiveAccountId, activeCartOrId)`
Delete a cart.

API Version
49.0

Requires Chatter
No
Signature

```
public static Void deleteCart(String webstoreId, String effectiveAccountId, String activeCartOrId)
```

Parameters

- `webstoreId`  
  **Type:** String  
  ID of the webstore.

- `effectiveAccountId`  
  **Type:** String  
  ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

- `activeCartOrId`  
  **Type:** String  
  ID of the cart, active, or current. The `current` value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete.

Return Value

**Type:** Void

Usage

Buyers with read access to carts can create and delete carts.

```
deleteCartItem(webstoreId, effectiveAccountId, activeCartOrId, cartItemId)
```

Delete an item from a cart.

API Version

49.0

Requires Chatter

No

Signature

```
public static Void deleteCartItem(String webstoreId, String effectiveAccountId, String activeCartOrId, String cartItemId)
```

Parameters

- `webstoreId`  
  **Type:** String  
  ID of the webstore.
**effectiveAccountId**
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

**activeCartOrId**
Type: String
ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete.

**cartItemId**
Type: String
ID of the cart item.

**Get Cart Items**

**getCartItems(webstoreId, effectiveAccountId, activeCartOrId)**
Get items in a cart.

**API Version**
49.0

**Requires Chatter**
No

**Signature**
`public static ConnectApiCartItemCollection getCartItems(String webstoreId, String effectiveAccountId, String activeCartOrId)`

**Parameters**

**webstoreId**
Type: String
ID of the webstore.

**effectiveAccountId**
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

**activeCartOrId**
Type: String
ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn't Closed or PendingDelete.

Return Value
Type: `ConnectApi.CartItemCollection`

**getCartItems(webstoreId, effectiveAccountId, activeCartOrId, pageParam)**
Get a page of items in a cart.

**API Version**
49.0

**Requires Chatter**
No

**Signature**
```java
public static ConnectApi.CartItemCollection getCartItems(String webstoreId, String effectiveAccountId, String activeCartOrId, String pageParam)
```

**Parameters**

`webstoreId`
Type: `String`  
ID of the webstore.

`effectiveAccountId`
Type: `String` 
ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

`activeCartOrId`
Type: `String` 
ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn't Closed or PendingDelete.

`pageParam`
Type: `String`  
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**Return Value**
Type: `ConnectApi.CartItemCollection`

**getCartItems(webstoreId, effectiveAccountId, activeCartOrId, pageParam, sortParam)**
Get a sorted page of items in a cart.
API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.CartItemCollection getCartItems(String webstoreId, String effectiveAccountId, String activeCartOrId, String pageParam, ConnectApi.CartItemSortOrder sortParam)

Parameters

webstoreId
  Type: String
  ID of the webstore.

effectiveAccountId
  Type: String
  ID of the account for which the request is made. If null, defaults to the account ID for the context user.

activeCartOrId
  Type: String
  ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete.

pageParam
  Type: String
  Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

sortParam
  Type: ConnectApi.CartItemSortOrder
  Sort order for items in a cart. Values are:
  • CreatedDateAsc—Sorts by oldest creation date.
  • CreatedDateDesc—Sorts by most recent creation date.
  • NameAsc—Sorts by name in ascending alphabetical order (A–Z).
  • NameDesc—Sorts by name in descending alphabetical order (Z–A).
  • SalesPriceAsc—Sorts from lowest to highest negotiated price.
  • SalesPriceDesc—Sorts from highest to lowest negotiated price.

  If null, the default is CreatedDateDesc.

Return Value
Type: ConnectApi.CartItemCollection
getCartItems(webstoreId, effectiveAccountId, activeCartOrId, pageParam, pageSize)
Get a specified size page of items in a cart.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.CartItemCollection getCartItems(String webstoreId, String effectiveAccountId, String activeCartOrId, String pageParam, Integer pageSize)

Parameters

webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

activeCartOrId
Type: String
ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.CartItemCollection

getCartItems(webstoreId, effectiveAccountId, activeCartOrId, pageParam, pageSize, sortParam)
Get a specified size, sorted page of items in a cart.
API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.CartItemCollection getCartItems(String webstoreId, String effectiveAccountId, String activeCartOrId, String pageParam, Integer pageSize, ConnectApi.CartItemSortOrder sortParam)

Parameters
webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

activeCartOrId
Type: String
ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete.

pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
Type: ConnectApi.CartItemSortOrder
Sort order for items in a cart. Values are:
- CreatedDateAsc—Sorts by oldest creation date.
- CreatedDateDesc—Sorts by most recent creation date.
- NameAsc—Sorts by name in ascending alphabetical order (A–Z).
- NameDesc—Sorts by name in descending alphabetical order (Z–A).
- SalesPriceAsc—Sorts from lowest to highest negotiated price.
- SalesPriceDesc—Sorts from highest to lowest negotiated price.
If null, the default is CreatedDateDesc.
Return Value
Type: ConnectApi.CartItemCollection

getCodeItems(webstoreId, effectiveAccountId, activeCartOrId, productFields, pageParam, pageSize, sortParam)
Get a specified size, sorted page of items filtered by product fields in a cart.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.CartItemCollection getCartItems(String webstoreId, String effectiveAccountId, String activeCartOrId, String productFields, String pageParam, Integer pageSize, ConnectApi.CartItemSortOrder sortParam)

Parameters
webstoreId
Type: String
ID of the webstore.
effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.
activeCartOrId
Type: String
ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete.
productFields
Type: String
Comma-separated list of up to five product fields. Results include fields that you have access to. Some product fields (such as productName and sku) are returned even when not included in the productFields parameter.
pageParam
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as currentPageToken or nextPageToken. If you pass in null, the first page is returned.
pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.
**sortParam**
Type: `ConnectApi.CartItemSortOrder`
Sort order for items in a cart. Values are:
- `CreatedDateAsc`—Sorts by oldest creation date.
- `CreatedDateDesc`—Sorts by most recent creation date.
- `NameAsc`—Sorts by name in ascending alphabetical order (A–Z).
- `NameDesc`—Sorts by name in descending alphabetical order (Z–A).
- `SalesPriceAsc`—Sorts from lowest to highest negotiated price.
- `SalesPriceDesc`—Sorts from highest to lowest negotiated price.
If `null`, the default is `CreatedDateDesc`.

Return Value
Type: `ConnectApi.CartItemCollection`

**getCartSummary(webstoreId, effectiveAccountId, activeCartOrId)**
Get a cart.

API Version
49.0

Requires Chatter
No

Signature
```
public static ConnectApi.CartSummary getCartSummary(String webstoreId, String effectiveAccountId, String activeCartOrId)
```

Parameters
**webstoreId**
Type: `String`
ID of the webstore.

**effectiveAccountId**
Type: `String`
ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

**activeCartOrId**
Type: `String`
ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t `Closed` or `PendingDelete`. If you specify `active` and there isn’t an active cart, you get an error.
Return Value
Type: `ConnectApi.CartSummary`

`getOrCreateActiveCartSummary(webstoreId, effectiveAccountId, activeCartOrId)`
Get a cart or create an active cart if one doesn’t exist.

API Version
49.0

Requires Chatter
No

Signature
```java
public static ConnectApi.CartSummary getOrCreateActiveCartSummary(String webstoreId,
                      String effectiveAccountId, String activeCartOrId)
```

Parameters
- `webstoreId`
  Type: `String`
  ID of the webstore.
- `effectiveAccountId`
  Type: `String`
  ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.
- `activeCartOrId`
  Type: `String`
  ID of the cart, active, or current. The `current` value is available in version 50.0 and later and indicates a cart with a status that isn’t `Closed` or `PendingDelete`. If you specify `active` and there isn’t an active cart, one is created.

Return Value
Type: `ConnectApi.CartSummary`

Usage
Buyers with read access to carts can create and delete carts.

`setCartMessagesVisibility(webstoreId, activeCartOrId, effectiveAccountId, messageVisibility)`
Set the visibility for cart messages.
API Version
5.0.0

Requires Chatter
No

Signature
public static ConnectApi.CartMessagesVisibilityResult setCartMessagesVisibility(String webstoreId, String activeCartOrId, String effectiveAccountId, ConnectApi.CartMessagesVisibilityInput messageVisibility)

Parameters
webstoreId
  Type: String
  ID of the webstore.
activeCartOrId
  Type: String
  ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn’t Closed or PendingDelete.
effectiveAccountId
  Type: String
  ID of the account for which the request is made. If null, defaults to the account ID for the context user.
messageVisibility
  Type: ConnectApi.CartMessagesVisibilityInput
  A ConnectApi.CartMessagesVisibilityInput object specifying the visibility setting.

Return Value
Type: ConnectApi.CartMessagesVisibilityResult

updateCartItem(webstoreId, effectiveAccountId, activeCartOrId, cartItemId, cartItem)
Update an item in a cart.

API Version
49.0

Requires Chatter
No
Signature

```java
public static ConnectApi.CartItem updateCartItem(String webstoreId, String effectiveAccountId, String activeCartOrId, String cartItemId, ConnectApi.CartItemInput cartItem)
```

Parameters

- **webstoreId**
  Type: String
  ID of the webstore.

- **effectiveAccountId**
  Type: String
  ID of the account for which the request is made. If null, defaults to the account ID for the context user.

- **activeCartOrId**
  Type: String
  ID of the cart, active, or current. The current value is available in version 50.0 and later and indicates a cart with a status that isn't Closed or PendingDelete.

- **cartItemId**
  Type: String
  ID of the cart item.

- **cartItem**
  Type: `ConnectApi.CartItemInput`
  A `ConnectApi.CartItemInput` object representing a cart item to update.

Return Value

Type: `ConnectApi.CartItem`

Usage

Buyers with read access to carts can add, update, and delete items in carts.

This method respects buyer View Product entitlements and only users entitled to view product data can access it.

**CommerceCatalog Class**

Get products, product categories, and product category paths.

**Namespace**

`ConnectApi`

**CommerceCatalog Methods**

These methods are for `CommerceCatalog`. All methods are static.
getProduct(webstoreId, productId, effectiveAccountId, fields, excludeFields, mediaGroups, excludeMedia, excludeEntitlementDetails, excludePrimaryProductCategory)
Get a product.

getProduct(webstoreId, productId, effectiveAccountId, fields, excludeFields, mediaGroups, excludeMedia, excludeEntitlementDetails, excludePrimaryProductCategory, excludeVariationInfo, excludeAttributeSetInfo)
Get a product with variation and attribute information.

getProductCategory(webstoreId, productCategoryId, effectiveAccountId, fields, excludeFields, mediaGroups, excludeMedia)
Get a product category.

getProductCategoryPath(webstoreId, productCategoryId)
Get the product category path from the root category to the current category.

getProduct(webstoreId, productId, effectiveAccountId, fields, excludeFields, mediaGroups, excludeMedia, excludeEntitlementDetails, excludePrimaryProductCategory)
Get a product.

API Version
49.0

Available to Guest Users
51.0

Requires Chatter
No

Signature
public static ConnectApi.ProductDetail getProduct(String webstoreId, String productId, String effectiveAccountId, List<String> fields, Boolean excludeFields, List<String> mediaGroups, Boolean excludeMedia, Boolean excludeEntitlementDetails, Boolean excludePrimaryProductCategory)

Parameters
webstoreId
Type: String
ID of the webstore.

productId
Type: String
ID of the product.

effectiveAccountId
Type: String
ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

**fields**
Type: `List<String>`
Comma-separated list of field names.
If this list is empty or unspecified, all fields are returned. There is no limit to the number of fields you can specify. The number of fields and number of characters in the field name may affect the URL size limit. If `excludeFields` and `fields` are specified, the `excludeFields` parameter takes precedence.

**excludeFields**
Type: `Boolean`
Specifies whether the fields are returned (`false`) or not (`true`). If unspecified, defaults to `false`.

**mediaGroups**
Type: `List<String>`
Comma-separated list of developer names of media group records.
If this list is empty or unspecified, all media groups are returned. If `excludeMedia` and `mediaGroups` are specified, the `excludeMedia` parameter takes precedence.

**excludeMedia**
Type: `Boolean`
Specifies whether the media groups and default images of the product are returned (`false`) or not (`true`). If unspecified, defaults to `false`.

**excludeEntitlementDetails**
Type: `Boolean`
Specifies whether the entitlement details of the product are returned (`false`) or not (`true`). If unspecified, defaults to `false`.

**excludePrimaryProductCategory**
Type: `Boolean`
Specifies whether the primary category path of the product is returned (`false`) or not (`true`). If unspecified, defaults to `false`.

**Return Value**
Type: `ConnectApi.ProductDetail`

**Usage**
This method respects buyer View Product entitlements and only users entitled to view product data can access it.

```
getProduct(webstoreId, productId, effectiveAccountId, fields, excludeFields, mediaGroups, excludeMedia, excludeEntitlementDetails, excludePrimaryProductCategory, excludeVariationInfo, excludeAttributeSetInfo)
```
Get a product with variation and attribute information.

**API Version**
50.0
Available to Guest Users
$1.0

Requires Chatter
No

Signature

```java
public static ConnectApi.ProductDetail getProduct(String webstoreId, String productId, 
String effectiveAccountId, List<String> fields, Boolean excludeFields, List<String> 
mediaGroups, Boolean excludeMedia, Boolean excludeEntitlementDetails, Boolean 
excludePrimaryProductCategory, Boolean excludeVariationInfo, Boolean 
excludeAttributeSetInfo)
```

Parameters

**webstoreId**
Type: String
ID of the webstore.

**productId**
Type: String
ID of the product.

**effectiveAccountId**
Type: String
ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

**fields**
Type: List<String>
Description

**excludeFields**
Type: Boolean
Comma-separated list of field names.
If this list is empty or unspecified, all fields are returned. There is no limit to the number of fields you can specify. The number of fields and number of characters in the field name may affect the URL size limit. If `excludeFields` and `fields` are specified, the `excludeFields` parameter takes precedence.

**mediaGroups**
Type: List<String>
Comma-separated list of developer names of media group records.
If this list is empty or unspecified, all media groups are returned. If `excludeMedia` and `mediaGroups` are specified, the `excludeMedia` parameter takes precedence.

**excludeMedia**
Type: Boolean
Specifies whether the media groups and default images of the product are returned (`false`) or not (`true`). If unspecified, defaults to `false`. 
excludeEntitlementDetails
    Type: Boolean
    Specifies whether the entitlement details of the product are returned (false) or not (true). If unspecified, defaults to false.

excludePrimaryProductCategory
    Type: Boolean
    Specifies whether the primary category path of the product is returned (false) or not (true). If unspecified, defaults to false.

excludeVariationInfo
    Type: Boolean
    Specifies whether the variation information for the product is returned (false) or not (true). If unspecified, defaults to false.

excludeAttributeSetInfo
    Type: Boolean
    Specifies whether the attribute set information for the product is returned (false) or not (true). If unspecified, defaults to false.

Return Value
    Type: ConnectApi.ProductDetail

Usage
    This method respects buyer View Product entitlements and only users entitled to view product data can access it.

getProductCategory(webstoreId, productCategoryId, effectiveAccountId, fields, excludeFields, mediaGroups, excludeMedia)
    Get a product category.

API Version
    49.0

Available to Guest Users
    51.0

Requires Chatter
    No

Signature
    public static ConnectApi.ProductCategoryDetail getProductCategory(String webstoreId, String productCategoryId, String effectiveAccountId, List<String> fields, Boolean excludeFields, List<String> mediaGroups, Boolean excludeMedia)

Parameters
    webstoreId
        Type: String
ID of the webstore.

**productCategoryId**
Type: **String**
ID of the product category.

**effectiveAccountId**
Type: **String**
ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

**fields**
Type: **List<String>**
Comma-separated list of field names.

If this list is empty or unspecified, all fields are returned. There is no limit to the number of fields you can specify. The number of fields and number of characters in the field name may affect the URL size limit. If `excludeFields` and `fields` are specified, the `excludeFields` parameter takes precedence.

**excludeFields**
Type: **Boolean**
Specifies whether the fields are returned (`false`) or not (`true`). If unspecified, defaults to `false`.

**mediaGroups**
Type: **List<String>**
Comma-separated list of developer names of media group records.

If this list is empty or unspecified, all media groups are returned. If `excludeMedia` and `mediaGroups` are specified, the `excludeMedia` parameter takes precedence.

**excludeMedia**
Type: **Boolean**
Specifies whether the media groups and default images of the product are returned (`false`) or not (`true`). If unspecified, defaults to `false`.

**Return Value**
Type: **ConnectApi.ProductCategoryDetail**

**getProductCategoryPath(webstoreId, productCategoryId)**
Get the product category path from the root category to the current category.

**API Version**
49.0

**Available to Guest Users**
51.0

**Requires Chatter**
No
Signature

```java
public static ConnectApi.ProductCategoryPath getProductCategoryPath(String webstoreId, String productCategoryId)
```

Parameters

**webstoreId**
- Type: `String`
- ID of the webstore.

**productCategoryId**
- Type: `String`
- ID of the product category.

Return Value

Type: `ConnectApi.ProductCategoryPath`

Usage

This method respects buyer View Product entitlements and only users entitled to view product data can access it.

**CommerceStorePricing Class**

Get product prices.

**Namespace**

`ConnectApi`

**CommerceStorePricing Methods**

These methods are for `CommerceStorePricing`. All methods are static.

IN THIS SECTION:

- `getProductPrice(webstoreId, productId, effectiveAccountId)`
  Get the list and buyer price for a product.

- `getProductPrices(webstoreId, effectiveAccountId, pricingInput)`
  Get the price for multiple products.

**getProductPrice**(webstoreId, productId, effectiveAccountId)

Get the list and buyer price for a product.

**API Version**

49.0
Available to Guest Users
$1.0

Requires Chatter
No

Signature

```java
public static ConnectApi.ProductPrice getProductPrice(String webstoreId, String productId, String effectiveAccountId)
```

Parameters

- `webstoreId`
  - Type: `String`
  - ID of the webstore.

- `productId`
  - Type: `String`
  - ID of the product.

- `effectiveAccountId`
  - Type: `String`
  - ID of the buyer account or guest buyer profile for which the request is made.

Return Value

Type: `ConnectApi.ProductPrice`

Usage

This method respects buyer entitlements and only users entitled to view product and price data can access it.

To get price information, the context store and account must have 25 or fewer price books associated with them. To reduce the number of active price books for the account within the store, you can change the active status, modify valid dates, or remove assignments of price books.

```java
getProductPrices(webstoreId, effectiveAccountId, pricingInput)
```

Get the price for multiple products.
Requires Chatter
No

Signature
public static ConnectApi.PricingResult getProductPrices(String webstoreId, String effectiveAccountId, ConnectApi.PricingInput pricingInput)

Parameters
webstoreId
   Type: String
   ID of the webstore.

effectiveAccountId
   Type: String
   ID of the buyer account or guest buyer profile for which the request is made. If null, the default value is determined from context.

pricingInput
   Type: ConnectApi.PricingInput
   A ConnectApi.PricingInput body with the list of line items to price.

Return Value
Type: ConnectApi.PricingResult

Usage
This method respects buyer entitlements and only users entitled to view product and price data can access it.
To get price information, the context store and account must have 25 or fewer price books associated with them. To reduce the number of active price books for the account within the store, you can change the active status, modify valid dates, or remove assignments of price books.

CommerceWishlist Class
Get, create, update, and delete wishlists. Add wishlists to carts. Get wishlist items, add items to wishlists, and delete wishlist items.

Namespace
ConnectApi

CommerceWishlist Methods
These methods are for CommerceWishlist. All methods are static.

IN THIS SECTION:
   addItemToWishlist(webstoreId, wishlistId, wishlistItemInput)
   Add an item to a wishlist for the context user.
addItemToWishlist(webstoreId, effectiveAccountId, wishlistId, wishlistItemInput)
Add an item to a wishlist.

addWishlistToCart(webstoreId, wishlistId)
Add a wishlist to the active cart for the context user.

addWishlistToCart(webstoreId, wishlistId, effectiveAccountId)
Add a wishlist to the active cart.

addWishlistToCartWithCartId(webstoreId, wishlistId, cartId)
Add a wishlist to a cart.

addWishlistToCartWithCartId(webstoreId, wishlistId, cartId, effectiveAccountId)
Add a wishlist to a cart.

cREATEWishlist(webstoreId, wishlistInput)
Create a wishlist for the context user.

cREATEWishlist(webstoreId, effectiveAccountId, wishlistInput)
Create a wishlist.

deleteWishlist(webstoreId, wishlistId)
Delete a wishlist for the context user.

deleteWishlist(webstoreId, effectiveAccountId, wishlistId)
Delete a wishlist.

gETWishlist(webstoreId, effectiveAccountId, wishlistId, productFields, sortItemsBy)
Get a wishlist with product fields sorted by items.

gETWishlist(webstoreId, effectiveAccountId, wishlistId, productFields, pageSize, sortItemsBy)
Get a wishlist with product fields sorted by items with a specified number of items per page.

gETWishlistItems(webstoreId, effectiveAccountId, wishlistId, productFields, pageParam, sortItemsBy)
Get a page of sorted wishlist items with product fields.

gETWishlistItems(webstoreId, effectiveAccountId, wishlistId, productFields, pageParam, pageSize, sortItemsBy)
Get a page of specified size of sorted wishlist items with product fields.

gETWishlistSummaries(webstoreId, effectiveAccountId, includeDisplayedList)
Get wishlist summaries.

gETWishlistSummaries(webstoreId, effectiveAccountId, includeDisplayedList, productFields, sortItemsBy)
Get wishlist summaries with product fields sorted by items.

gETWishlistSummaries(webstoreId, effectiveAccountId, includeDisplayedList, productFields, pageSize, sortItemsBy)
Get wishlist summaries with product fields sorted by items with a specified number of items per page.

removeWishlistItem(webstoreId, effectiveAccountId, wishlistId, wishlistItemId)
Remove an item from a wishlist.

updateWishlist(webstoreId, wishlistId, wishlistUpdateInput)
Update the name of a wishlist for the context user.

updateWishlist(webstoreId, effectiveAccountId, wishlistId, wishlistUpdateInput)
Update the name of a wishlist.
addItemToWishlist(webstoreId, wishlistId, wishlistItemInput)
Add an item to a wishlist for the context user.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.WishlistItem addItemToWishlist(String webstoreId, String wishlistId, ConnectApi.WishlistItemInput wishlistItemInput)

Parameters
webstoreId
Type: String
ID of the webstore.

wishlistId
Type: String
ID of the wishlist.

wishlistItemInput
Type: ConnectApi.WishlistItemInput
A ConnectApi.WishlistItemInput body with the item to add to the wishlist.

Return Value
Type: ConnectApi.WishlistItem

Usage
This method respects buyer View Product entitlements and only users entitled to view product data can access it.

addItemToWishlist(webstoreId, effectiveAccountId, wishlistId, wishlistItemInput)
Add an item to a wishlist.

API Version
49.0

Requires Chatter
No
public static ConnectApi.WishlistItem addItemToWishlist(String webstoreId, String effectiveAccountId, String wishlistId, ConnectApi.WishlistItemInput wishlistItemInput)

Parameters

webstoreId
Type: String
ID of the webstore.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

wishlistId
Type: String
ID of the wishlist.

wishlistItemInput
Type: ConnectApi.WishlistItemInput
A ConnectApi.WishlistItemInput body with the item to add to the wishlist.

Return Value
Type: ConnectApi.WishlistItem

Usage
This method respects buyer View Product entitlements and only users entitled to view product data can access it.

addWishlistToCart(webstoreId, wishlistId)
Add a wishlist to the active cart for the context user.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.WishlistToCartResult addWishlistToCart(String webstoreId, String wishlistId)

Parameters

webstoreId
Type: String
ID of the webstore.

**wishlistId**
Type: String
ID of the wishlist.

Return Value
Type: `ConnectApi.WishlistToCartResult`

Usage
This method respects buyer View Product entitlements and only users entitled to view product data can access it.

```java
addWishlistToCart(webstoreId, wishlistId, effectiveAccountId)
```
Add a wishlist to the active cart.

API Version
49.0

Requires Chatter
No

Signature
```java
public static ConnectApi.WishlistToCartResult addWishlistToCart(String webstoreId, String wishlistId, String effectiveAccountId)
```

Parameters

- **webstoreId**
  Type: String
  ID of the webstore.

- **wishlistId**
  Type: String
  ID of the wishlist.

- **effectiveAccountId**
  Type: String
  ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

Return Value
Type: `ConnectApi.WishlistToCartResult`
addWishlistToCartWithCartId(webstoreId, wishlistId, cartId)

Add a wishlist to a cart.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.WishlistToCartResult addWishlistToCartWithCartId(String webstoreId, String wishlistId, String cartId)

Parameters
webstoreId
   Type: String
   ID of the webstore.

wishlistId
   Type: String
   ID of the wishlist.

cartId
   Type: String
   ID of the cart. If null, wishlist items are added to the active cart.

Return Value
Type: ConnectApi.WishlistToCartResult

Usage
This method respects buyer View Product entitlements and only users entitled to view product data can access it.

addWishlistToCartWithCartId(webstoreId, wishlistId, cartId, effectiveAccountId)

Add a wishlist to a cart.

API Version
49.0
Requires Chatter
No

Signature
public static ConnectApi.WishlistToCartResult addWishlistToCartWithCartId(String webstoreId, String wishlistId, String cartId, String effectiveAccountId)

Parameters

webstoreId
Type: String
ID of the webstore.

wishlistId
Type: String
ID of the wishlist.

cartId
Type: String
ID of the cart. If null, wishlist items are added to the active cart.

effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.

Return Value
Type: ConnectApi.WishlistToCartResult

Usage
This method respects buyer View Product entitlements and only users entitled to view product data can access it.

createWishlist(webstoreId, wishlistInput)
Create a wishlist for the context user.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.Wishlist createWishlist(String webstoreId, ConnectApi.WishlistInput wishlistInput)
Parameters

`webstoreId`
- Type: `String`
- ID of the webstore.

`wishlistInput`
- Type: `ConnectApi.WishlistInput`
- A `ConnectApi.WishlistInput` body that includes the wishlist name and items.

Return Value
- Type: `ConnectApi.Wishlist`

`createWishlist(webstoreId, effectiveAccountId, wishlistInput)`
Create a wishlist.

API Version
49.0

Requires Chatter
No

Signature
```
public static ConnectApi.Wishlist createWishlist(String webstoreId, String effectiveAccountId, ConnectApi.WishlistInput wishlistInput)
```

Parameters

`webstoreId`
- Type: `String`
- ID of the webstore.

`effectiveAccountId`
- Type: `String`
- ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

`wishlistInput`
- Type: `ConnectApi.WishlistInput`
- A `ConnectApi.WishlistInput` body that includes the wishlist name and items.

Return Value
- Type: `ConnectApi.Wishlist`
**deleteWishlist(webstoreId, wishlistId)**
Delete a wishlist for the context user.

**API Version**
49.0

**Requires Chatter**
No

**Signature**
```
public static Void deleteWishlist(String webstoreId, String wishlistId)
```

**Parameters**
- **webstoreId**
  - Type: String
  - ID of the webstore.
- **wishlistId**
  - Type: String
  - ID of the wishlist.

**Return Value**
Type: Void

**deleteWishlist(webstoreId, effectiveAccountId, wishlistId)**
Delete a wishlist.

**API Version**
51.0

**Requires Chatter**
No

**Signature**
```
public static Void deleteWishlist(String webstoreId, String effectiveAccountId, String wishlistId)
```

**Parameters**
- **webstoreId**
  - Type: String
ID of the webstore.

**effectiveAccountId**
Type: *String*
ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

**wishlistId**
Type: *String*
ID of the wishlist.

Return Value
Type: *Void*

**getWishlist(webstoreId, effectiveAccountId, wishlistId, productFields, sortItemsBy)**
Get a wishlist with product fields sorted by items.

API Version
51.0

Requires Chatter
No

Signature
```
public static ConnectApi.Wishlist getWishlist(String webstoreId, String effectiveAccountId, String wishlistId, String productFields, ConnectApi.WishlistItemSortOrder sortItemsBy)
```

Parameters

**webstoreId**
Type: *String*
ID of the webstore.

**effectiveAccountId**
Type: *String*
ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

**wishlistId**
Type: *String*
ID of the wishlist.

**productFields**
Type: *String*
Comma-separated list of custom product fields. Fields aren’t case-sensitive. For example, `ProductCode` and `productcode` return the same results.
sortItemsBy
  Type: ConnectApi.WishlistItemSortOrder
  Sort order for wishlist items. Values are:
  • CreatedDateAsc—Sorts by oldest creation date.
  • CreatedDateDesc—Sorts by most recent creation date.
  The default sort order is CreatedDateDesc.

Return Value
Type: ConnectApi.Wishlist

getWishlist(webstoreId, effectiveAccountId, wishlistId, productFields, pageSize, sortItemsBy)
Get a wishlist with product fields sorted by items with a specified number of items per page.

API Version
51.0

Requires Chatter
No

Signature
public static ConnectApi.Wishlist getWishlist(String webstoreId, String effectiveAccountId, String wishlistId, String productFields, Integer pageSize, ConnectApi.WishlistItemSortOrder sortItemsBy)

Parameters
webstoreId
  Type: String
  ID of the webstore.
effectiveAccountId
  Type: String
  ID of the account for which the request is made. If null, defaults to the account ID for the context user.
wishlistId
  Type: String
  ID of the wishlist.
productFields
  Type: String
  Comma-separated list of custom product fields. Fields aren't case-sensitive. For example, ProductCode and productcode return the same results.
**pageSize**
Type: `Integer`

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortItemsBy**
Type: `ConnectApi.WishlistItemSortOrder`

Sort order for wishlist items. Values are:
- `CreatedDateAsc`—Sorts by oldest creation date.
- `CreatedDateDesc`—Sorts by most recent creation date.

The default sort order is `CreatedDateDesc`.

Return Value
Type: `ConnectApi.Wishlist`

**getWishlistItems(webstoreId, effectiveAccountId, wishlistId, productFields, pageParam, sortItemsBy)**

Get a page of sorted wishlist items with product fields.

API Version
51.0

Requires Chatter
No

Signature
```
public static ConnectApi.WishlistItemCollection getWishlistItems(String webstoreId,
String effectiveAccountId, String wishlistId, String productFields, String pageParam,
ConnectApi.WishlistItemSortOrder sortItemsBy)
```

Parameters

**webstoreId**
Type: `String`

ID of the webstore.

**effectiveAccountId**
Type: `String`

ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

**wishlistId**
Type: `String`

ID of the wishlist.

**productFields**
Type: `String`
Comma-separated list of custom product fields. Fields aren’t case-sensitive. For example, `ProductCode` and `productcode` return the same results.

**pageParam**

Type: `String`

Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**sortItemsBy**

Type: `ConnectApi.WishlistItemSortOrder`

Sort order for wishlist items. Values are:

- `CreatedDateAsc`—Sorts by oldest creation date.
- `CreatedDateDesc`—Sorts by most recent creation date.

The default sort order is `CreatedDateDesc`.

Return Value

Type: `ConnectApi.WishlistItemCollection`

getWishlistItems(webstoreId, effectiveAccountId, wishlistId, productFields, pageParam, pageSize, sortItemsBy)

Get a page of specified size of sorted wishlist items with product fields.

API Version

51.0

Requires Chatter

No

Signature

```java
public static ConnectApi.WishlistItemCollection getWishlistItems(String webstoreId, String effectiveAccountId, String wishlistId, String productFields, String pageParam, Integer pageSize, ConnectApi.WishlistItemSortOrder sortItemsBy)
```

Parameters

`webstoreId`

Type: `String`

ID of the webstore.

`effectiveAccountId`

Type: `String`

ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.

`wishlistId`

Type: `String`
ID of the wishlist.

**productFields**
Type: `String`
Comma-separated list of custom product fields. Fields aren’t case-sensitive. For example, `ProductCode` and `productcode` return the same results.

**pageParam**
Type: `String`
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 200. If you pass in `null`, the default size is 25.

**sortItemsBy**
Type: `ConnectApi.WishlistItemSortOrder`
Sort order for wishlist items. Values are:
- `createdDateAsc`—Sorts by oldest creation date.
- `createdDateDesc`—Sorts by most recent creation date.
The default sort order is `createdDateDesc`.

Return Value
Type: `ConnectApi.WishlistsSummary`

**getWishlistSummaries** *(webstoreID, effectiveAccountId, includeDisplayedList)*
Get wishlist summaries.

API Version
49.0

Requires Chatter
No

Signature
```java
public static ConnectApi.WishlistsSummary getWishlistSummaries(String webstoreId, String effectiveAccountId, Boolean includeDisplayedList)
```

Parameters
**webstoreID**
Type: `String`
ID of the webstore.
effectiveAccountId
   Type: String
   ID of the account for which the request is made. If null, defaults to the account ID for the context user.

includeDisplayedList
   Type: Boolean
   Specifies whether to include the displayed list (true) or not (false). If null, defaults to false.

Return Value
   Type: ConnectApi.WishlistsSummary

getWishlistSummaries(webstoreId, effectiveAccountId, includeDisplayedList, productFields, sortItemsBy)
Get wishlist summaries with product fields sorted by items.

API Version
   51.0

Requires Chatter
   No

Signature
   public static ConnectApi.WishlistsSummary getWishlistSummaries(String webstoreId, String effectiveAccountId, Boolean includeDisplayedList, String productFields, ConnectApi.WishlistItemSortOrder sortItemsBy)

Parameters
   webstoreId
      Type: String
      ID of the webstore.

   effectiveAccountId
      Type: String
      ID of the account for which the request is made. If null, defaults to the account ID for the context user.

   includeDisplayedList
      Type: Boolean
      Specifies whether to include the displayed list (true) or not (false).

   productFields
      Type: String
      Comma-separated list of custom product fields. Fields aren’t case-sensitive. For example, ProductCode and productcode return the same results.

      If includeDisplayedList is false, productFields is ignored.
sortItemsBy
Type: ConnectApi.WishlistItemSortOrder
Sort order for wishlist items. Values are:
• CreatedDateAsc—Sorts by oldest creation date.
• CreatedDateDesc—Sorts by most recent creation date.
The default sort order is CreatedDateDesc.
If includeDisplayedList is false, sortItemsBy is ignored.

Return Value
Type: ConnectApi.WishlistsSummary

getWishlistSummaries(webstoreId, effectiveAccountId, includeDisplayedList, productFields, pageSize, sortItemsBy)
Get wishlist summaries with product fields sorted by items with a specified number of items per page.

API Version
51.0

Requires Chatter
No

Signature
public static ConnectApi.WishlistsSummary getWishlistSummaries(String webstoreId, String effectiveAccountId, Boolean includeDisplayedList, Integer pageSize, String productFields, Integer pageSize, ConnectApi.WishlistItemSortOrder sortItemsBy)

Parameters
webstoreId
Type: String
ID of the webstore.
effectiveAccountId
Type: String
ID of the account for which the request is made. If null, defaults to the account ID for the context user.
includeDisplayedList
Type: Boolean
Specifies whether to include the displayed list (true) or not (false).
productFields
Type: String
Comma-separated list of custom product fields. Fields aren’t case-sensitive. For example, ProductCode and productcode return the same results.
If `includeDisplayedList` is `false`, `productFields` is ignored.

**pageSize**
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortItemsBy**
Type: `ConnectApi.WishlistItemSortOrder`
Sort order for wishlist items. Values are:
- `CreatedDateAsc`—Sorts by oldest creation date.
- `CreatedDateDesc`—Sorts by most recent creation date.

The default sort order is `CreatedDateDesc`.
If `includeDisplayedList` is `false`, `sortItemsBy` is ignored.

**Return Value**
Type: `ConnectApi.WishlistsSummary`

### removeWishlistItem(webstoreId, effectiveAccountId, wishlistId, wishlistItemId)
Remove an item from a wishlist.

**API Version**
49.0

**Requires Chatter**
No

**Signature**
```java
public static Void removeWishlistItem(String webstoreId, String effectiveAccountId, String wishlistId, String wishlistItemId)
```

**Parameters**
- **webstoreId**
  Type: `String`
  ID of the webstore.
- **effectiveAccountId**
  Type: `String`
  ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.
- **wishlistId**
  Type: `String`
  ID of the wishlist.
wishlistItemId
Type: String
ID of the wishlist item to remove.

Return Value
Type: Void

updateWishlist(webstoreId, wishlistId, wishlistUpdateInput)
Update the name of a wishlist for the context user.

API Version
50.0

Requires Chatter
No

Signature
public static ConnectApi.WishlistSummary updateWishlist(String webstoreId, String wishlistId, ConnectApi.WishlistUpdateInput wishlistUpdateInput)

Parameters
webstoreId
Type: String
ID of the webstore.

wishlistId
Type: String
ID of the wishlist.

wishlistUpdateInput
Type: ConnectApi.WishlistUpdateInput
A ConnectApi.WishlistUpdateInput body with the wishlist name to update.

Return Value
Type: ConnectApi.WishlistSummary

updateWishlist(webstoreId, effectiveAccountId, wishlistId, wishlistUpdateInput)
Update the name of a wishlist.

API Version
50.0
Requires Chatter
No

Signature
`public static ConnectApi.WishlistSummary updateWishlist(String webstoreId, String effectiveAccountId, String wishlistId, ConnectApi.WishlistUpdateInput wishlistUpdateInput)`

Parameters
- `webstoreId`
  - Type: `String`
  - ID of the webstore.
- `effectiveAccountId`
  - Type: `String`
  - ID of the account for which the request is made. If `null`, defaults to the account ID for the context user.
- `wishlistId`
  - Type: `String`
  - ID of the wishlist.
- `wishlistUpdateInput`
  - Type: `ConnectApi.WishlistUpdateInput`
  - A `ConnectApi.WishlistUpdateInput` body with the wishlist name to update.

Return Value
- Type: `ConnectApi.WishlistSummary`

**Communities Class**

Access general information about Experience Cloud sites in your org.

**Namespace**

`ConnectApi`

**Communities Methods**

The following are methods for `Communities`. All methods are static.

**IN THIS SECTION:**

- `getCommunities()`
  - Get a list of Experience Cloud sites that the context user has access to.
- `getCommunities(communityStatus)`
  - Get a list of Experience Cloud sites with the specified status that the context user has access to.
getCommunity(communityId)
Get information about an Experience Cloud site.

getCommunities()
Get a list of Experience Cloud sites that the context user has access to.

API Version
28.0

Requires Chatter
No

Signature
`public static ConnectApi.CommunityPage getCommunities()`

Return Value
Type: `ConnectApi.CommunityPage`

getCommunities(communityStatus)
Get a list of Experience Cloud sites with the specified status that the context user has access to.

API Version
28.0

Requires Chatter
No

Signature
`public static ConnectApi.CommunityPage getCommunities(ConnectApi.CommunityStatus communityStatus)`

Parameters
- `communityStatus`
  Type: `ConnectApi.CommunityStatus`
  `communityStatus`—Status of the Experience Cloud site. Values are:
  - Live
  - Inactive
  - UnderConstruction
getCommunity(communityId)
Get information about an Experience Cloud site.

API Version
28.0

Available to Guest Users
35.0

Requires Chatter
No

Signature
public static ConnectApi.Community getCommunity(String communityId)

Parameters
communityId
Type: String
ID of an Experience Cloud site. You can’t specify null or internal.

Return Value
Type: ConnectApi.Community

CommunityModeration Class
Access information about flagged feed items and comments in an Experience Cloud site. Add and remove flags from comments and feed items.

Namespace
ConnectApi

CommunityModeration Methods
The following are methods for CommunityModeration. All methods are static.

IN THIS SECTION:

addFlagToComment(communityId, commentId)
Add a moderation flag to a comment.
addFlagToComment(communityId, commentId, visibility)
Add a moderation flag of the specified visibility to a comment.
addFlagToComment(communityId, commentId, type)
Add a moderation flag of the specified type to a comment.
addFlagToComment(communityId, commentId, note)
Add a moderation flag with a note to a comment.
addFlagToComment(communityId, commentId, type, note)
Add a moderation flag of the specified type with a note to a comment.
addFlagToComment(communityId, commentId, type, visibility)
Add a moderation flag of the specified type and visibility to a comment.
addFlagToComment(communityId, commentId, visibility, note)
Add a moderation flag of the specified visibility with a note to a comment.
addFlagToComment(communityId, commentId, type, visibility, note)
Add a moderation flag of the specified type and visibility with a note to a comment.
addFlagToFeedElement(communityId, feedElementId)
Add a moderation flag to a feed element.
addFlagToFeedElement(communityId, feedElementId, visibility)
Add a moderation flag of the specified visibility to a feed element.
addFlagToFeedElement(communityId, feedElementId, type)
Add a moderation flag of the specified type to a feed element.
addFlagToFeedElement(communityId, feedElementId, note)
Add a moderation flag with a note to a feed element.
addFlagToFeedElement(communityId, feedElementId, type, note)
Add a moderation flag of the specified type with a note to a feed element.
addFlagToFeedElement(communityId, feedElementId, type, visibility)
Add a moderation flag of the specified type and visibility to a feed element.
addFlagToFeedElement(communityId, feedElementId, visibility, note)
Add a moderation flag of the specified visibility with a note to a feed element.
addFlagToFeedElement(communityId, feedElementId, type, visibility, note)
Add a moderation flag of the specified type and visibility with a note to a feed element.
getFlagsOnComment(communityId, commentId)
Get the moderation flags on a comment.
getFlagsOnComment(communityId, commentId, visibility)
Get the moderation flags with specified visibility on a comment.
getFlagsOnComment(communityId, commentId, pageSize, pageParam)
Get a page of moderation flags on a comment.
getFlagsOnComment(communityId, commentId, visibility, pageSize, pageParam)
Get a page of moderation flags with specified visibility on a comment.
getFlagsOnFeedElement(communityId, feedElementId)
Get the moderation flags on a feed element.
getFlagsOnFeedElement(communityId, feedElementId, visibility)
Get the moderation flags with specified visibility on a feed element.

getFlagsOnFeedElement(communityId, feedElementId, pageParam, pageSize)
Get a page of moderation flags on a feed element.

getFlagsOnFeedElement(communityId, feedElementId, visibility, pageSize, pageParam)
Get a page of moderation flags with specified visibility on a feed element.

removeFlagFromComment(communityId, commentId, userId)
Remove a moderation flag from a comment.

removeFlagFromFeedElement(communityId, feedElementId, userId)
Remove a moderation flag from a feed element.

addFlagToComment(communityId, commentId)
Add a moderation flag to a comment.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

commentId
Type: String
The ID for a comment.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To add a flag to a comment, Allow members to flag content must be selected for an Experience Cloud site.

addFlagToComment(communityId, commentId, visibility)
Add a moderation flag of the specified visibility to a comment.
API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagVisibility visibility)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

commentId
Type: String
The ID for a comment.

visibility
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types.
- ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
- SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To add a flag to a comment, Allow members to flag content must be selected for an Experience Cloud site.

addFlagToComment(communityId, commentId, type)
Add a moderation flag of the specified type to a comment.

API Version
38.0

Requires Chatter
Yes
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagType type)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

commentId
Type: String
The ID for a comment.

type
Type: ConnectApi.CommunityFlagType
Type of moderation flag.
- FlagAsInappropriate—Flag for inappropriate content.
- FlagAsSpam—Flag for spam.

If a type isn’t specified, it defaults to FlagAsInappropriate.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To add a flag to a comment, Allow members to flag content must be selected for an Experience Cloud site.

addFlagToComment(communityId, commentId, note)
Add a moderation flag with a note to a comment.

API Version
38.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, String note)
Parameters

**communityId**
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

**commentId**
Type: `String`
The ID for a comment.

**note**
Type: `String`
A note of up to 4,000 characters about the flag.

Return Value
Type: `ConnectApi.ModerationFlags`

Usage
To add a flag to a comment, Allow members to flag content must be selected for an Experience Cloud site.

```java
addFlagToComment(communityId, commentId, type, note)
```
Add a moderation flag of the specified type with a note to a comment.

API Version
38.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagType type, String note)
```

Parameters

**communityId**
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

**commentId**
Type: `String`
The ID for a comment.

**type**
Type: `ConnectApi.CommunityFlagType`
Type of moderation flag.

- FlagAsInappropriate—Flag for inappropriate content.
- FlagAsSpam—Flag for spam.

If a type isn't specified, it defaults to FlagAsInappropriate.

**note**
Type: `String`
A note of up to 4,000 characters about the flag.

Return Value
Type: `ConnectApi.ModerationFlags`

Usage
To add a flag to a comment, Allow members to flag content must be selected for an Experience Cloud site.

```java
addFlagToComment(communityId, commentId, type, visibility)
```
Add a moderation flag of the specified type and visibility to a comment.

API Version
38.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagType type, ConnectApi.CommunityFlagVisibility visibility)
```

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.

- `commentId`
  Type: `String`
  The ID for a comment.

- `type`
  Type: `ConnectApi.CommunityFlagType`
  Type of moderation flag.
  - FlagAsInappropriate—Flag for inappropriate content.
• FlagAsSpam—Flag for spam.
  If a type isn’t specified, it defaults to FlagAsInappropriate.

visibility
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types.
• ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
• SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To add a flag to a comment, Allow members to flag content must be selected for an Experience Cloud site.

addFlagToComment(communityId, commentId, visibility, note)
Add a moderation flag of the specified visibility with a note to a comment.

API Version
38.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagVisibility visibility, String note)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

commentId
Type: String
The ID for a comment.

visibility
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types.
• ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
• SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

**note**
Type: `String`
A note of up to 4,000 characters about the flag.

**Return Value**
Type: `ConnectApi.ModerationFlags`

**Usage**
To add a flag to a comment, Allow members to flag content must be selected for an Experience Cloud site.

**addFlagToComment(communityId, commentId, type, visibility, note)**
Add a moderation flag of the specified type and visibility with a note to a comment.

**API Version**
38.0

**Requires Chatter**
Yes

**Signature**

```java
public static ConnectApi.ModerationFlags addFlagToComment(String communityId, String commentId, ConnectApi.CommunityFlagType type, ConnectApi.CommunityFlagVisibility visibility, String note)
```

**Parameters**

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.

- `commentId`
  Type: `String`
  The ID for a comment.

- `type`
  Type: `ConnectApi.CommunityFlagType`
  Type of moderation flag.
  - `FlagAsInappropriate`—Flag for inappropriate content.
  - `FlagAsSpam`—Flag for spam.
  
  If a type isn’t specified, it defaults to `FlagAsInappropriate.`
visibility
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types.
- ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
- SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

note
Type: String
A note of up to 4,000 characters about the flag.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To add a flag to a comment, Allow members to flag content must be selected for an Experience Cloud site.

addFlagToFeedElement(communityId, feedElementId)
Add a moderation flag to a fed element.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

Return Value
Type: ConnectApi.ModerationCapability
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

Usage
To add a flag to a feed element, Allow members to flag content must be selected for an Experience Cloud site.

```java
addFlagToFeedElement(communityId, feedElementId, visibility)
```

Add a moderation flag of the specified visibility to a feed element.

API Version
31.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagVisibility visibility)
```

Parameters
- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.
- `feedElementId`
  Type: `String`
  ID of the feed element.
- `visibility`
  Type: `ConnectApi.CommunityFlagVisibility`
  Visibility behavior of a flag for various user types. One of these values:
  - ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
  - SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: `ConnectApi.ModerationCapability`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

Usage
To add a flag to a feed element, Allow members to flag content must be selected for an Experience Cloud site.
addFlagToFeedElement(communityId, feedElementId, type)
Add a moderation flag of the specified type to a feed element.

API Version
38.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagType type)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

type
Type: ConnectApi.CommunityFlagType
Type of moderation flag.
- FlagAsInappropriate—Flag for inappropriate content.
- FlagAsSpam—Flag for spam.
If a type isn’t specified, it defaults to FlagAsInappropriate.

Return Value
Type: ConnectApi.ModerationCapability

Usage
To add a flag to a feed element, Allow members to flag content must be selected for an Experience Cloud site.

addFlagToFeedElement(communityId, feedElementId, note)
Add a moderation flag with a note to a feed element.

API Version
38.0
Requires Chatter
Yes

Signature
```java
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, String note)
```

Parameters
- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.
- `feedElementId`
  - Type: `String`
  - ID of the feed element.
- `note`
  - Type: `String`
  - A note of up to 4,000 characters about the flag.

Return Value
Type: `ConnectApi.ModerationCapability`

Usage
To add a flag to a feed element, Allow members to flag content must be selected for an Experience Cloud site.

```java
addFlagToFeedElement(communityId, feedElementId, type, note)
```
Add a moderation flag of the specified type with a note to a feed element.

API Version
38.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagType type, String note)
```

Parameters
- `communityId`
  - Type: `String`
Use the ID for an Experience Cloud site, internal, or null.

**feedElementId**
Type: String
ID of the feed element.

**type**
Type: ConnectApi.CommunityFlagType
Type of moderation flag.
- FlagAsInappropriate—Flag for inappropriate content.
- FlagAsSpam—Flag for spam.
If a type isn’t specified, it defaults to FlagAsInappropriate.

**note**
Type: String
A note of up to 4,000 characters about the flag.

Return Value
Type: ConnectApi.ModerationCapability

Usage
To add a flag to a feed element, Allow members to flag content must be selected for an Experience Cloud site.

`addFlagToFeedElement(communityId, feedElementId, type, visibility)`
Add a moderation flag of the specified type and visibility to a feed element.

API Version
38.0

Requires Chatter
Yes

Signature
`public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagType type, ConnectApi.CommunityFlagVisibility visibility)`

Parameters
**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**feedElementId**
Type: String
ID of the feed element.

type
Type: ConnectApi.CommunityFlagType
Type of moderation flag.
• FlagAsInappropriate—Flag for inappropriate content.
• FlagAsSpam—Flag for spam.
If a type isn’t specified, it defaults to FlagAsInappropriate.

visibility
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types. One of these values:
• ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
• SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: ConnectApi.ModerationCapability

Usage
To add a flag to a feed element, Allow members to flag content must be selected for an Experience Cloud site.

addFlagToFeedElement(communityId, feedElementId, visibility, note)
Add a moderation flag of the specified visibility with a note to a feed element.

API Version
38.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagVisibility visibility, String note)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.
feedElementId
Type: String
ID of the feed element.

visibility
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types. One of these values:
- ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
- SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

note
Type: String
A note of up to 4,000 characters about the flag.

Return Value
Type: ConnectApi.ModerationCapability

Usage
To add a flag to a feed element, Allow members to flag content must be selected for an Experience Cloud site.

addFlagToFeedElement(communityId, feedElementId, type, visibility, note)
Add a moderation flag of the specified type and visibility with a note to a feed element.

API Version
38.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationCapability addFlagToFeedElement(String communityId,
String feedElementId, ConnectApi.CommunityFlagType type,
ConnectApi.CommunityFlagVisibility visibility, String note)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

type
Type: ConnectApi.CommunityFlagType
Type of moderation flag.

- **FlagAsInappropriate**—Flag for inappropriate content.
- **FlagAsSpam**—Flag for spam.

If a type isn’t specified, it defaults to **FlagAsInappropriate**.

**visibility**

Type: `ConnectApi.CommunityFlagVisibility`

Visibility behavior of a flag for various user types. One of these values:

- **ModeratorsOnly**—The flag is visible only to users with moderation permissions on the flagged element or item.
- **SelfAndModerators**—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

**note**

Type: `String`

A note of up to 4,000 characters about the flag.

Return Value

Type: `ConnectApi.ModerationCapability`

Usage

To add a flag to a feed element, Allow members to flag content must be selected for an Experience Cloud site.

**getFlagsOnComment(communityId, commentId)**

Get the moderation flags on a comment.

API Version

29.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId)
```

Parameters

- **communityId**
  
  Type: `String`
  
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- **commentId**
  
  Type: `String`
The ID for a comment.

Return Value
Type: ConnectApi.ModerationFlags

Usage
To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

getFlagsOnComment(communityId, commentId, visibility)
Get the moderation flags with specified visibility on a comment.

API Version
30.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId, ConnectApi.CommunityFlagVisibility visibility)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

commentId
Type: String
The ID for a comment.

visibility
Type: ConnectApi.CommunityFlagVisibility
Visibility behavior of a flag for various user types.
- ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
- SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: ConnectApi.ModerationFlags
Usage
To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

```
getFlagsOnComment(communityId, commentId, pageSize, pageParam)
```
Get a page of moderation flags on a comment.

API Version
40.0

Requires Chatter
Yes

Signature
```
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String
commentId, Integer pageSize, String pageParam)
```

Parameters
- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.
- `commentId`
  - Type: `String`
  - The ID for a comment.
- `pageSize`
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.
- `pageParam`
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

Return Value
```
Type: ConnectApi.ModerationFlags
```

Usage
To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

```
getFlagsOnComment(communityId, commentId, visibility, pageSize, pageParam)
```
Get a page of moderation flags with specified visibility on a comment.
Signature

```java
public static ConnectApi.ModerationFlags getFlagsOnComment(String communityId, String commentId, ConnectApi.CommunityFlagVisibility visibility, Integer pageSize, String pageParam)
```

Parameters

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **commentId**
  - Type: `String`
  - The ID for a comment.

- **visibility**
  - Type: `ConnectApi.CommunityFlagVisibility`
  - Visibility behavior of a flag for various user types.
    - `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
    - `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

- **pageSize**
  - Type: `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

- **pageParam**
  - Type: `String`
  - The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

Return Value

- Type: `ConnectApi.ModerationFlags`

Usage

To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

```java
getFlagsOnFeedElement(communityId, feedElementId)
```

Get the moderation flags on a feed element.
API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId, String feedElementId)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

feedElementId
  Type: String
  ID of the feed element.

Return Value
Type: ConnectApi.ModerationCapability
If the feed element doesn't support this capability, the return value is ConnectApi.NotFoundException.

Usage
To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

getFlagsOnFeedElement(communityId, feedElementId, visibility)
Get the moderation flags with specified visibility on a feed element.

API Version
31.0

Requires Chatter
Yes

Signature
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagVisibility visibility)
Parameters

`communityId`
Type: `String`

Use the ID for an Experience Cloud site, `internal`, or `null`.

`feedElementId`
Type: `String`

ID of the feed element.

`visibility`
Type: `ConnectApi.CommunityFlagVisibility`

Visibility behavior of a flag for various user types. One of these values:

- `ModeratorsOnly`—The flag is visible only to users with moderation permissions on the flagged element or item.
- `SelfAndModerators`—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value

Type: `ConnectApi.ModerationCapability`

If the feed element doesn’t support this capability, the return value is `ConnectApiNotFoundException`.

Usage

To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

**getFlagsOnFeedElement(communityId, feedElementId, pageParam, pageSize)**

Get a page of moderation flags on a feed element.

API Version

40.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId, String feedElementId, String pageParam, Integer pageSize)
```

Parameters

`communityId`
Type: `String`

Use the ID for an Experience Cloud site, `internal`, or `null`.

`feedElementId`
Type: `String`
ID of the feed element.

`pageParam`
  Type: String
  The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

Return Value
  Type: `ConnectApi.ModerationCapability`
  If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

Usage
  To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

`getFlagsOnFeedElement(communityId, feedElementId, visibility, pageSize, pageParam)`
Get a page of moderation flags with specified visibility on a feed element.

API Version
  40.0

Requires Chatter
  Yes

Signature
  `public static ConnectApi.ModerationCapability getFlagsOnFeedElement(String communityId, String feedElementId, ConnectApi.CommunityFlagVisibility visibility, Integer pageSize, String pageParam)`

Parameters
  `communityId`
    Type: String
    Use the ID for an Experience Cloud site, internal, or `null`.
  `feedElementId`
    Type: String
    ID of the feed element.
  `visibility`
    Type: `ConnectApi.CommunityFlagVisibility`
    Visibility behavior of a flag for various user types.
ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.

SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. The default size is 0.

`pageParam`
Type: `String`
The page token to use to view the page. Page tokens are returned as part of the response class, for example, `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

Return Value
Type: `ConnectApi.ModerationCapability`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

Usage
To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

`removeFlagFromComment(communityId, commentId, userId)`
Remove a moderation flag from a comment.

API Version
29.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ModerationFlags removeFlagFromComment(String communityId, String commentId, String userId)
```

Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

`commentId`
Type: `String`
The ID for a comment.

`userId`
Type: `String`
The ID for a user.

Return Value
Type: Void

Usage
To remove a moderation flag, the context user must have added the flag or must have the Moderate Experiences Feeds permission.

`removeFlagFromFeedElement(communityId, feedElementId, userId)`
Remove a moderation flag from a feed element.

API Version
31.0

Requires Chatter
Yes

Signature
```java
public static void removeFlagFromFeedElement(String communityId, String feedElementId, String userId)
```

Parameters
- `communityId`
  Type: String
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `feedElementId`
  Type: String
  ID of the feed element.

- `userId`
  Type: String
  The ID for a user.

Return Value
Type: `ConnectApi.ModerationCapability`
If the feed element doesn’t support this capability, the return value is `ConnectApi.NotFoundException`.

Usage
To remove a moderation flag, the context user must have added the flag or must have the Moderate Experiences Feeds permission.
Retired CommunityModeration Methods

The following methods for CommunityModeration are retired.

IN THIS SECTION:

- `addFlagToFeedItem(communityId, feedItemId)`
  Add a moderation flag to a feed item.
- `addFlagToFeedItem(communityId, feedItemId, visibility)`
  Add a moderation flag with specified visibility to a feed item.
- `getFlagsOnFeedItem(communityId, feedItemId)`
  Get the moderation flags on a feed item.
- `getFlagsOnFeedItem(communityId, feedItemId, visibility)`
  Get the moderation flags with specified visibility on a feed item.
- `removeFlagsOnFeedItem(communityId, feedItemId, userId)`
  Remove a moderation flag from a feed item.

### addFlagToFeedItem(communityId, feedItemId)

Add a moderation flag to a feed item.

**API Version**

29.0–31.0

⚠️ **Important:** In version 32.0 and later, use `addFlagToFeedElement(communityId, feedElementId)`.

Requires Chatter

Yes

**Signature**

```java
public static ConnectApi.ModerationFlags addFlagToFeedItem(String communityId, String feedItemId)
```

**Parameters**

- `communityId`
  
  **Type:** String
  
  Use the ID for an Experience Cloud site, internal, or null.

- `feedItemId`
  
  **Type:** String
  
  The ID for a feed item.

**Return Value**

**Type:** `ConnectApi.ModerationFlags`
Usage

To add a flag to a feed item, Allow members to flag content must be selected for an Experience Cloud site.

```java
addFlagToFeedItem(communityId, feedItemId, visibility)
```

Add a moderation flag with specified visibility to a feed item.

API Version

30.0–31.0

**Important:** In version 32.0 and later, use `addFlagToFeedElement(communityId, feedElementId, visibility)`.

Requires Chatter

Yes

Signature

```java
public static ConnectApi.ModerationFlags addFlagToFeedItem(String communityId, String feedItemId, ConnectApi.CommunityFlagVisibility visibility)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- `feedItemId`
  - Type: `String`
  - The ID for a feed item.

- `visibility`
  - Type: `ConnectApi.CommunityFlagVisibility`
  - Visibility behavior of a flag for various user types.
    - ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
    - SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value

- Type: `ConnectApi.ModerationFlags`

Usage

To add a flag to a feed item, Allow members to flag content must be selected for an Experience Cloud site.

```java
gerGetFlagsOnFeedItem(communityId, feedItemId)
```

Get the moderation flags on a feed item.
API Version
29.0–31.0

Important: In version 32.0 and later, use `getFlagsOnFeedElement(communityId, feedElementId)`.

Requires Chatter
Yes

Signature
`public static ConnectApi.ModerationFlags getFlagsOnFeedItem(String communityId, String feedItemId)`

Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

`feedItemId`
Type: `String`
The ID for a feed item.

Return Value
Type: `ConnectApi.ModerationFlags`

Usage
To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

`getFlagsOnFeedItem(communityId, feedItemId, visibility)`
Get the moderation flags with specified visibility on a feed item.

API Version
30.0–31.0

Important: In version 32.0 and later, use `getFlagsOnFeedElement(communityId, feedElementId, visibility)`.

Requires Chatter
Yes

Signature
`public static ConnectApi.ModerationFlags getFlagsOnFeedItem(String communityId, String feedItemId, ConnectApi.CommunityFlagVisibility visibility)`
Parameters

*communityId*
Type: String
Use the ID for an Experience Cloud site, internal, or null.

*feedItemId*
Type: String
The ID for a feed item.

*visibility*
Type: `ConnectApi.CommunityFlagVisibility`
Visibility behavior of a flag for various user types.
- ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.
- SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.

Return Value
Type: `ConnectApi.ModerationFlags`

Usage
To get moderation flags, the context user must have the Moderate Experiences Feeds permission.

**removeFlagsOnFeedItem(communityId, feedItemId, userId)**
Remove a moderation flag from a feed item.

API Version
29.0–31.0

⚠️ Important: In version 32.0 and later, use `removeFlagFromFeedElement(communityId, feedElementId, userId)`.

Requires Chatter
Yes

Signature
```java
public static ConnectApi.ModerationFlags removeFlagsOnFeedItem(String communityId, String feedItemId, String userId)
```

Parameters

*communityId*
Type: String
Use the ID for an Experience Cloud site, internal, or null.
**feedItemId**
Type: `String`  
The ID for a feed item.

**userId**
Type: `String`  
The ID for a user.

Return Value  
Type: `Void`

Usage  
To remove a moderation flag, the context user must have added the flag or must have the Moderate Experiences Feeds permission.

**ContentHub Class**
Access Files Connect repositories and their files and folders.

**Namespace**
ConnectApi

**ContentHub Methods**
The following are methods for `ContentHub`. All methods are static.
Use `ContentHub` methods to work with Files Connect repositories.

**IN THIS SECTION:**
- `addRepositoryItem(repositoryId, repositoryFolderId, file)`  
  Add a repository item.
- `addRepositoryItem(communityId, repositoryId, repositoryFolderId, file)`  
  Add a repository item in an Experience Cloud site.
- `addRepositoryItem(repositoryId, repositoryFolderId, file, fileData)`  
  Add a repository item, including the binary file.
- `addRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData)`  
  Add a repository item, including the binary file, in an Experience Cloud site.
- `getAllowedItemTypes(repositoryId, repositoryFolderId)`  
  Get the item types that the context user is allowed to create in the repository folder.
- `getAllowedItemTypes(repositoryId, repositoryFolderId, filter)`  
  Get the item types, filtered by type, that the context user is allowed to create in the repository folder.
- `getAllowedItemTypes(communityId, repositoryId, repositoryFolderId)`  
  Get the item types that the context user is allowed to create in the repository folder in an Experience Cloud site.
getAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter)
Get the item types, filtered by type, that the context user is allowed to create in the repository folder in an Experience Cloud site.

getFilePreview(repositoryId, repositoryFileId, formatType)
Get a repository file preview.

getFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)
Get a page or page range of a repository file preview.

getFilePreview(communityId, repositoryId, repositoryFileId, formatType)
Get a repository file preview in an Experience Cloud site.

getFilePreview(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)
Get a page or page range of a repository file preview in an Experience Cloud site.

ggetItemType(repositoryId, repositoryItemTypeId)
Get information about an item type associated with a repository.

ggetItemType(communityId, repositoryId, repositoryItemTypeId)
Get information about an item type associated with a repository in an Experience Cloud site.

getPreviews(repositoryId, repositoryFileId)
Get information about a repository file's supported previews.

getPreviews(communityId, repositoryId, repositoryFileId)
Get information about a repository file's supported previews in an Experience Cloud site.

getRepositories()
Get a list of repositories.

getRepositories(communityId)
Get a list of repositories in an Experience Cloud site.

getRepositories(pageParam, pageSize)
Get a page of repositories.

getRepositories(communityId, pageParam, pageSize)
Get a page of repositories in an Experience Cloud site.

getRepository(repositoryId)
Get a repository.

getRepository(communityId, repositoryId)
Get a repository in an Experience Cloud site.

getRepositoryFile(repositoryId, repositoryFileId)
Get a repository file.

getRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)
Get a repository file with or without permissions information.

getRepositoryFile(communityId, repositoryId, repositoryFileId)
Get a repository file in an Experience Cloud site.

getRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)
Get a repository file with or without permissions information in an Experience Cloud site.

getRepositoryFolder(repositoryId, repositoryFolderId)
Get a repository folder.
getRepositoryFolder(communityId, repositoryId, repositoryFolderId)
Get a repository folder in an Experience Cloud site.

getRepositoryFolderItems(repositoryId, repositoryFolderId)
Get repository folder items.

getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId)
Get repository folder items in an Experience Cloud site.

getRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize)
Get a page of repository folder items.

getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize)
Get a page of repository folder items in an Experience Cloud site.

updateRepositoryFile(repositoryId, repositoryFileId, file)
Update the name of a repository file.

updateRepositoryFile(repositoryId, repositoryFileId, file, fileData)
Update the content of a repository file.

updateRepositoryFile(communityId, repositoryId, repositoryFolderId, file)
Update the name of a repository file in an Experience Cloud site.

updateRepositoryFile(communityId, repositoryId, repositoryFolderId, file, fileData)
Update the content of a repository file in an Experience Cloud site.

addRepositoryItem(repositoryId, repositoryFolderId, file)
Add a repository item.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file)

Parameters
repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.
**file**

Type: `ConnectApi.ContentHubItemInput`

The item type ID and fields of the item type.

Return Value

Type: `ConnectApi.RepositoryFolderItem`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example creates a file without binary content (metadata only) in a Google Drive repository folder. After the file is created, we show the file’s ID, name, description, external URL, and download URL.

```java
final String gDriveRepositoryId = '0Xcxx0000000000ODGAY', gDriveFolderId = 'folder:0B01Tys1KmM3sSVJ2bj1z7GFqSws';

final ConnectApi.ContentHubItemInput newItem = new ConnectApi.ContentHubItemInput();
newItem.itemTypeId = 'document'; // see getAllowedTypes for any file item types available for creation/update
newItem.fields = new List<ConnectApi.ContentHubFieldValueInput>();

// Metadata: name field
final ConnectApi.ContentHubFieldValueInput fieldValueInput = new ConnectApi.ContentHubFieldValueInput();
fieldValueInput.name = 'name';
fieldValueInput.value = 'new folder item name.txt';
newItem.fields.add(fieldValueInput);

// Metadata: description field
final ConnectApi.ContentHubFieldValueInput fieldValueInputDesc = new ConnectApi.ContentHubFieldValueInput();
fieldValueInputDesc.name = 'description';
fieldValueInputDesc.value = 'It does describe it';
newItem.fields.add(fieldValueInputDesc);

final ConnectApi.RepositoryFolderItem newFolderItem = ConnectApi.ContentHub.addRepositoryItem(gDriveRepositoryId, gDriveFolderId, newItem);
final ConnectApi.RepositoryFileSummary newFile = newFolderItem.file;
System.debug(String.format('New file - id: %s, name: %s, description: %s\n external URL: %s, download URL: %s', new String[]{newFile.id, newFile.name, newFile.description, newFile.externalDocumentUrl, newFile.downloadUrl}));
```

SEE ALSO:

- `setTestAddRepositoryItem(repositoryId, repositoryFolderId, file, result)`
- Testing ConnectApi Code
addRepositoryItem(communityId, repositoryId, repositoryFolderId, file)
Add a repository item in an Experience Cloud site.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String communityId,
String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
repositoryId
  Type: String
  The ID of the repository.
repositoryFolderId
  Type: String
  The ID of the repository folder.
file
  Type: ConnectApi.ContentHubItemInput
  The item type ID and fields of the item type.

Return Value
Type: ConnectApi.RepositoryFolderItem

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestAddRepositoryItem(communityId, repositoryId, repositoryFolderId, file, result)
  Testing ConnectApi Code

addRepositoryItem(repositoryId, repositoryFolderId, file, fileData)
Add a repository item, including the binary file.
API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData)

Parameters
repositoryId
Type: String
The ID of the repository.
repositoryFolderId
Type: String
The ID of the repository folder.
file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.
fileData
Type: ConnectApi.BinaryInput
The binary file.

Return Value
Type: ConnectApi.RepositoryFolderItem

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example
This example creates a file with binary content and metadata in a Google Drive repository folder. After the file is created, we show the file's ID, name, description, external URL, and download URL.

```java
final String gDriveRepositoryId = '0XCxx0000000000DGA', gDriveFolderId = 'folder:0B0lTs1Km3sSVJ2b1zTGFqSWs';

final ConnectApi.ContentHubItemInput newItem = new ConnectApi.ContentHubItemInput();
newItem.itemTypeId = 'document'; //see getAllowedTypes for any file item types available for creation/update
```
newItem.fields = new List<ConnectApi.ContentHubFieldValueInput>();

//Metadata: name field
final String newFileName = 'new folder item name.txt';
final ConnectApi.ContentHubFieldValueInput fieldValueInput = new ConnectApi.ContentHubFieldValueInput();
fieldValueInput.name = 'name';
fieldValueInput.value = newFileName;
newItem.fields.add(fieldValueInput);

//Metadata: description field
final ConnectApi.ContentHubFieldValueInput fieldValueInputDesc = new ConnectApi.ContentHubFieldValueInput();
fieldValueInputDesc.name = 'description';
fieldValueInputDesc.value = 'It does describe it';
newItem.fields.add(fieldValueInputDesc);

//Binary content
final Blob newFileBlob = Blob.valueOf('awesome content for brand new file');
final String newFileMimeType = 'text/plain';
final ConnectApi.BinaryInput fileBinaryInput = new ConnectApi.BinaryInput(newFileBlob, newFileMimeType, newFileName);

final ConnectApi.RepositoryFolderItem newFolderItem = ConnectApi.ContentHub.addRepositoryItem(gDriveRepositoryId, gDriveFolderId, newItem, fileBinaryInput);
final ConnectApi.RepositoryFileSummary newFile = newFolderItem.file;
System.debug(String.format('New file - id: \'{0}\', name: \'{1}\', description: \'{2}\', external URL: \'{3}\', download URL: \'{4}\', new String[]{newFile.id, newFile.name, newFile.description, newFile.externalDocumentUrl, newFile.downloadUrl});

SEE ALSO:

setTestAddRepositoryItem(repositoryId, repositoryFolderId, file, fileData, result)
Testing ConnectApi Code

addRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData)
Add a repository item, including the binary file, in an Experience Cloud site.

API Version
39.0

Requires Chatter
No
Signature

```java
public static ConnectApi.RepositoryFolderItem addRepositoryItem(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `repositoryId`
  - Type: `String`
  - The ID of the repository.

- `repositoryFolderId`
  - Type: `String`
  - The ID of the repository folder.

- `file`
  - Type: `ConnectApi.ContentHubItemInput`
  - The item type ID and fields of the item type.

- `fileData`
  - Type: `ConnectApi.BinaryInput`
  - The binary file.

Return Value

Type: `ConnectApi.RepositoryFolderItem`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestAddRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData, result)`
  - Testing ConnectApi Code

`getAllowedItemTypes(repositoryId, repositoryFolderId)`

Get the item types that the context user is allowed to create in the repository folder.

API Version

39.0
Requires Chatter
No

Signature

```java
public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes(String repositoryId, String repositoryFolderId)
```

Parameters

- `repositoryId`  
  Type: `String`  
  The ID of the repository.

- `repositoryFolderId`  
  Type: `String`  
  The ID of the repository folder.

Return Value

Type: `ConnectApi.ContentHubAllowedItemTypeCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetAllowedItemTypes(repositoryId, repositoryFolderId, result)`

Testing ConnectApi Code

```java
getAllowedItemTypes(repositoryId, repositoryFolderId, filter)
```

Get the item types, filtered by type, that the context user is allowed to create in the repository folder.

API Version

39.0

Requires Chatter
No

Signature

```java
public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes(String repositoryId, String repositoryFolderId, ConnectApi.ConnectContentHubItemType filter)
```
Parameters

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

filter
Type: ConnectApi.ContentHubItemType
Item types. Values are:
- Any—Includes files and folders.
- FilesOnly—Includes files only.
- FoldersOnly—Includes folders only.

Return Value
Type: ConnectApi.ContentHubAllowedItemTypeCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example
This example calls getAllowedItemTypes(repositoryId, repositoryFolderId, ConnectApi.ContentHubItemType.FilesOnly) to get the first ConnectApi.ContentHubItemTypeSummary.id of a file. The context user can create allowed files in a repository folder in the external system.

```java
final ConnectApi.ContentHubAllowedItemTypeCollection allowedItemTypesColl = ConnectApi.ContentHub.getAllowedItemTypes(repositoryId, repositoryFolderId, ConnectApi.ContentHubItemType.FilesOnly);
final List<ConnectApi.ContentHubItemTypeSummary> allowedItemTypes = allowedItemTypesColl.allowedItemTypes;
string allowedFileItemTypeid = null;
if(allowedItemTypes.size() > 0){
    ConnectApi.ContentHubItemTypeSummary allowedItemTypeSummary = allowedItemTypes.get(0);
    allowedFileItemTypeid = allowedItemTypeSummary.id;
}
```

SEE ALSO:
setTestGetAllowedItemTypes(repositoryId, repositoryFolderId, filter, result)
Testing ConnectApi Code
**getAllowedItemTypes(communityId, repositoryId, repositoryFolderId)**
Get the item types that the context user is allowed to create in the repository folder in an Experience Cloud site.

**API Version**
39.0

**Requires Chatter**
No

**Signature**

```java
public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes(String communityId, String repositoryId, String repositoryFolderId)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **repositoryId**
  - Type: `String`
  - The ID of the repository.

- **repositoryFolderId**
  - Type: `String`
  - The ID of the repository folder.

**Return Value**

Type: `ConnectApi.ContentHubAllowedItemTypeCollection`

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
- `setTestGetAllowedItemTypes(communityId, repositoryId, repositoryFolderId, result)`
- Testing ConnectApi Code

**getAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter)**
Get the item types, filtered by type, that the context user is allowed to create in the repository folder in an Experience Cloud site.

**API Version**
39.0
Requires Chatter
No

Signature

```java
public static ConnectApi.ContentHubAllowedItemTypeCollection getAllowedItemTypes(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ConnectContentHubItemType filter)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `repositoryId`
  - Type: `String`
  - The ID of the repository.

- `repositoryFolderId`
  - Type: `String`
  - The ID of the repository folder.

- `filter`
  - Type: `ConnectApi.ContentHubItemType`
  - Item types. Values are:
    - `Any`—Includes files and folders.
    - `FilesOnly`—Includes files only.
    - `FoldersOnly`—Includes folders only.

Return Value

Type: `ConnectApi.ContentHubAllowedItemTypeCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter, result)`

```java
getFilePreview(repositoryId, repositoryFileId, formatType)
```

Get a repository file preview.
API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.FilePreview getFilePreview(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType)

Parameters
repositoryId
  Type: String
  The ID of the repository.
repositoryFileId
  Type: String
  The ID of the repository file.
formatType
  Type: ConnectApi.FilePreviewFormat
  Specifies the format of the file preview. Values are:
  • Jpg—Preview format is JPG.
  • Pdf—Preview format is PDF.
  • Svg—Preview format is compressed SVG.
  • Thumbnail—Preview format is 240 x 180 PNG.
  • ThumbnailBig—Preview format is 720 x 480 PNG.
  • ThumbnailTiny—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand. If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter general in the Quick Find box in Setup. Select General Settings, and then select Display alternative file previews.

Return Value
Type: ConnectApi.FilePreview

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.
Example

This example calls `getFilePreview(repositoryId, repositoryFileId, ConnectApi.FilePreviewFormat.Thumbnail)` to get the thumbnail format preview along with its respective URL and number of thumbnail renditions. For each thumbnail format, we show every rendition URL available.

```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFileId = 'document:1-zcAbaoQbo2_yNF1HccK6QJTPmOke-kHFC4TYg3rk';final ConnectApi.FilePreview filePreview = ConnectApi.ContentHub.getFilePreview(gDriveRepositoryId, gDriveFileId, ConnectApi.FilePreviewFormat.Thumbnail);System.debug(String.format('Preview - URL: \'{0}\', format: \'{1}\', nbr of renditions for this format: {2}', new String[]{filePreview.url, filePreview.format.name(),String.valueOf(filePreview.previewUrls.size())});for(ConnectApi.FilePreviewUrl filePreviewUrl : filePreview.previewUrls){
    System.debug('-----> Rendition URL: ' + filePreviewUrl.previewUrl);
}
```

SEE ALSO:

- `setTestGetFilePreview(repositoryId, repositoryFileId, formatType, result)`
- Testing ConnectApi Code

`getFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)`

Get a page or page range of a repository file preview.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.FilePreview getFilePreview(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, Integer startPageNumber, Integer endPageNumber)
```

Parameters

- `repositoryId`
  - Type: `String`
  - The ID of the repository.

- `repositoryFileId`
  - Type: `String`
  - The ID of the repository file.
**formatType**
Type: `ConnectApi.FilePreviewFormat`
Specifies the format of the file preview. Values are:
- **Jpg**—Preview format is JPG.
- **Pdf**—Preview format is PDF.
- **Svg**—Preview format is compressed SVG.
- **Thumbnail**—Preview format is 240 x 180 PNG.
- **ThumbnailBig**—Preview format is 720 x 480 PNG.
- **ThumbnailTiny**—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter `general` in the Quick Find box in Setup. Select General Settings, and then select **Display alternative file previews**.

**startPageNumber**
Type: `Integer`
The starting page number in the range of file preview URLs.

**endPageNumber**
Type: `Integer`
The ending page number in the range of file preview URLs.

**Return Value**
Type: `ConnectApi.FilePreview`

**Usage**
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**
setTestGetFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber, result)

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

- `setTestGetFilePreview(communityId, repositoryId, repositoryFileId, formatType, result)`
- Testing ConnectApi Code
**getFilePreview(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)**

Get a page or page range of a repository file preview in an Experience Cloud site.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.FilePreview getFilePreview(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, Integer startPageNumber, Integer endPageNumber)
```

Parameters

**communityId**

Type: String

Use the ID for an Experience Cloud site, internal, or null.

**repositoryId**

Type: String

The ID of the repository.

**repositoryFileId**

Type: String

The ID of the repository file.

**formatType**

Type: ConnectApi.FilePreviewFormat

Specifies the format of the file preview. Values are:

- Jpg—Preview format is JPG.
- Pdf—Preview format is PDF.
- Svg—Preview format is compressed SVG.
- Thumbnail—Preview format is 240 x 180 PNG.
- ThumbnailBig—Preview format is 720 x 480 PNG.
- ThumbnailTiny—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter general in the Quick Find box in Setup. Select General Settings, and then select Display alternative file previews.

**startPageNumber**

Type: Integer

The starting page number in the range of file preview URLs.
The ending page number in the range of file preview URLs.

Return Value
Type: `ConnectApi.FilePreview`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetFilePreview(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber, result)`

### `getItemType(repositoryId, repositoryItemTypeId)`

Get information about an item type associated with a repository.

API Version
39.0

Requires Chatter
No

Signature
```
public static ConnectApi.ContentHubItemTypeDetail getItemType(String repositoryId,
                 String repositoryItemTypeId)
```

Parameters
- `repositoryId`
  - Type: `String`
  - The ID of the repository.
- `repositoryItemTypeId`
  - Type: `String`
  - The ID of the repository item type.

Return Value
Type: `ConnectApi.ContentHubItemTypeDetail`
Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetItemType(repositoryId, repositoryItemType, result)`
- Testing ConnectApi Code

**get ITEmType(communityId, repositoryId, repositoryItemType)***
Get information about an item type associated with a repository in an Experience Cloud site.

API Version
39.0

Requires Chatter
No

Signature
```
public static ConnectApi.ContentHubItemTypeDetail getItemType(String communityId, String repositoryId, String repositoryItemType)
```

Parameters
- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- **repositoryId**
  Type: String
  The ID of the repository.

- **repositoryItemType**
  Type: String
  The ID of the repository item type.

Return Value
Type: `ConnectApi.ContentHubItemTypeDetail`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetItemType(communityId, repositoryId, repositoryItemTypeId, result)`

Testing ConnectApi Code

**getPreviews(repositoryId, repositoryFileId)**

Get information about a repository file’s supported previews.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.FilePreviewCollection getPreviews(String repositoryId, String repositoryFileId)
```

Parameters

`repositoryId`

Type: `String`

The ID of the repository.

`repositoryFileId`

Type: `String`

The ID of the repository file.

Return Value

Type: `ConnectApi.FilePreviewCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.
Example

This example gets all supported preview formats and their respective URLs and number of renditions. For each supported preview format, we show every rendition URL available.

```java
final String gDriveRepositoryId = '0XCxx000000000ODGAY', gDriveFileId = 'document:1-zcAlBaeoQbo2_yNFiHCcK6QJPmOke-kHFC4TYg3rk';
final ConnectApi.FilePreviewCollection previewsCollection = ConnectApi.ContentHub.getPreviews(gDriveRepositoryId, gDriveFileId);
for(ConnectApi.FilePreview filePreview : previewsCollection.previews){
    System.debug(String.format('Preview - URL: \'{0}\', format: \'{1}\', nbr of renditions for this format: {2}', new String[]{ filePreview.url,
    filePreview.format.name(),String.valueOf(filePreview.previewUrls.size())}));
    for(ConnectApi.FilePreviewUrl filePreviewUrl : filePreview.previewUrls){
        System.debug('-----> Rendition URL: ' + filePreviewUrl.previewUrl);
    }
}
```

SEE ALSO:

- `setTestGetPreviews(repositoryId, repositoryFileId, result)`
- Testing ConnectApi Code

**getPreviews(communityId, repositoryId, repositoryFileId)**

Get information about a repository file’s supported previews in an Experience Cloud site.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.FilePreviewCollection getPreviews(String communityId, String repositoryId, String repositoryFileId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or null.

- `repositoryId`
  - Type: `String`
  - The ID of the repository.

- `repositoryFileId`
  - Type: `String`
The ID of the repository file.

Return Value
Type: `ConnectApi.FilePreviewCollection`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetPreviews(communityId, repositoryId, repositoryFileId, result)`

Testing ConnectApi Code

**getRepositories()**
Get a list of repositories.

API Version
39.0

Requires Chatter
No

Signature
```
public static ConnectApi.ContentHubRepositoryCollection getRepositories()
```

Return Value
Type: `ConnectApi.ContentHubRepositoryCollection`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example
This example gets all repositories and gets the first SharePoint online repository found.

```java
final string sharePointOnlineProviderType = 'ContentHubSharepointOffice365';
final ConnectApi.ContentHubRepositoryCollection repositoryCollection = ConnectApi.ContentHub.getRepositories();
ConnectApi.ContentHubRepository sharePointOnlineRepository = null;
for (ConnectApi.ContentHubRepository repository : repositoryCollection.repositories){
    if(sharePointOnlineProviderType.equalsIgnoreCase(repository.providerType.type)){
        sharePointOnlineRepository = repository;
    }
}
```
TRY THIS:

break;
}
}

SEE ALSO:

setTestGetRepositories(result)
Testing ConnectApi Code

gitRepositories(communityId)
Get a list of repositories in an Experience Cloud site.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.ContentHubRepositoryCollection getRepositories(String communityId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

Return Value
Type: ConnectApi.ContentHubRepositoryCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

setTestGetRepositories(communityId, result)
Testing ConnectApi Code

gitRepositories(pageParam, pageSize)
Get a page of repositories.
API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.ContentHubRepositoryCollection getRepositories(Integer pageParam, Integer pageSize)

Parameters

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default page size is 25.

Return Value
Type: ConnectApi.ContentHubRepositoryCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRepositories(pageParam, pageSize, result)
Testing ConnectApi Code

getRepositories(communityId, pageParam, pageSize)
Get a page of repositories in an Experience Cloud site.

API Version
39.0

Requires Chatter
No
public static ConnectApi.ContentHubRepositoryCollection getRepositories(String communityId, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default page size is 25.

Return Value
Type: ConnectApi.ContentHubRepositoryCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRepositories(communityId, pageParam, pageSize, result)
Testing ConnectApi Code

getRepository (repositoryId)
Get a repository.

API Version
369.0

Requires Chatter
No

Signature
public static ConnectApi.ContentHubRepository getRepository(String repositoryId)
Parameters

repositoryId
  Type: String
  The ID of the repository.

Return Value

Type: `ConnectApi.ContentHubRepository`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

```java
final string repositoryId = '0XCxx0000000123GAA';
final ConnectApi.ContentHubRepository repository =
ConnectApi.ContentHub.getRepository(repositoryId);
```

SEE ALSO:

- `setTestGetRepository(repositoryId, result)`
- Testing ConnectApi Code

`getRepository(communityId, repositoryId)`

Get a repository in an Experience Cloud site.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.ContentHubRepository getRepository(String communityId, String repositoryId)
```

Parameters

`communityId`
  Type: String
  Use the ID for an Experience Cloud site, internal, or `null`.

`repositoryId`
  Type: String
### getRepositoryFile

**getRepositoryFile(repositoryId, repositoryFileId)**

Get a repository file.

**API Version**

39.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.RepositoryFileDetail getRepositoryFile(String repositoryId, String repositoryFileId)
```

**Parameters**

- `repositoryId`
  - Type: `String`
  - The ID of the repository.

- `repositoryFileId`
  - Type: `String`
  - The ID of the repository file.

**Return Value**

Type: `ConnectApi.RepositoryFileDetail`

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetRepository(communityId, repositoryId, result)`
- Testing ConnectApi Code
Example

```java
final String gDriveRepositoryId = '0XCxx000000000ODGAY', gDriveFileId = 'file:0B0lTys1KmM3sTmxKNjVJbWZja00';
final ConnectApi.RepositoryFileDetail file = ConnectApi.ContentHub.getRepositoryFile(gDriveRepositoryId, gDriveFileId);
System.debug(String.format('File - name: ' + file.name, size: String.valueOf(file.contentSize), external URL: file.externalDocumentUrl, download URL: file.downloadUrl));
```

SEE ALSO:

- `setTestGetRepositoryFile(repositoryId, repositoryFileId, result)`
- Testing ConnectApi Code

**getRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)**

Get a repository file with or without permissions information.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.RepositoryFileDetail getRepositoryFile(String repositoryId, String repositoryFileId, Boolean includeExternalFilePermissionsInfo)
```

Parameters

- **repositoryId**
  
  Type: `String`
  
  The ID of the repository.

- **repositoryFileId**
  
  Type: `String`
  
  The ID of the repository file.

- **includeExternalFilePermissionsInfo**
  
  Type: `Boolean`
  
  Specifies whether to include permission information, such as whether the file is shared and what are the available permission types.
  Managing external file permissions is supported for Google Drive, SharePoint Online, and OneDrive for Business.

Return Value

Type: `ConnectApi.RepositoryFileDetail`
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

```java
final String gDriveRepositoryId = '0XCxx0000000ODGAY', gDriveFileId = 'file:0B01Tys1Km3sTmzKNjVJbWZja00';

final ConnectApi.RepositoryFileDetail file = ConnectApi.ContentHub.getRepositoryFile(gDriveRepositoryId, gDriveFileId, true);
System.debug(String.format('File - name: \"{0}\", size: \"{1}\", external URL: \"{2}\", download URL: \"{3}\", new String[]{ file.name, String.valueOf(file.contentSize), file.externalDocumentUrl, file.downloadUrl});
final ConnectApi.ExternalFilePermissionInformation externalFilePermInfo = file.externalFilePermissionInformation;

//permission types
final List<ConnectApi.ContentHubPermissionType> permissionTypes = externalFilePermInfo.externalFilePermissionTypes;
for (ConnectApi.ContentHubPermissionType permissionType : permissionTypes){
    System.debug(String.format('Permission type - id: \"{0}\", label: \"{1}\", new String[]{ permissionType.id, permissionType.label});)
}

//permission groups
final List<ConnectApi.RepositoryGroupSummary> groups = externalFilePermInfo.repositoryPublicGroups;
for (ConnectApi.RepositoryGroupSummary ggroup : groups){
    System.debug(String.format('Group - id: \"{0}\", name: \"{1}\", type: \"{2}\", new String[]{ ggroup.id, ggroup.name, ggroup.type.name});
}
```

SEE ALSO:

- `setTestGetRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo, result)`
- `Testing ConnectApi Code`

`getRepositoryFile(communityId, repositoryId, repositoryFileId)`

Get a repository file in an Experience Cloud site.

API Version

39.0

Requires Chatter

No
Signature

```java
public static ConnectApi.RepositoryFileDetail getRepositoryFile(String communityId,
String repositoryId, String repositoryFileId)
```

Parameters

- `communityId`
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- `repositoryId`
  - Type: String
  - The ID of the repository.

- `repositoryFileId`
  - Type: String
  - The ID of the repository file.

Return Value

Type: `ConnectApi.RepositoryFileDetail`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetRepositoryFile(communityId, repositoryId, repositoryFileId, result)`
- Testing ConnectApi Code

```java
getRepositoryFile(communityId, repositoryId, repositoryFileId,
includeExternalFilePermissionsInfo)
```

Get a repository file with or without permissions information in an Experience Cloud site.

API Version

39.0

Requires Chatter

No

Signature

```java
public static ConnectApi.RepositoryFileDetail getRepositoryFile(String communityId,
String repositoryId, String repositoryFileId, Boolean includeExternalFilePermissionsInfo)
```
Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**repositoryId**
Type: String
The ID of the repository.

**repositoryFileId**
Type: String
The ID of the repository file.

**includeExternalFilePermissionsInfo**
Type: Boolean
Specifies whether to include permission information, such as whether the file is shared and what are the available permission types.
Managing external file permissions is supported for Google Drive, SharePoint Online, and OneDrive for Business.

Return Value
Type: `ConnectApi.RepositoryFileDetail`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo, result)`
- Testing ConnectApi Code

**getRepositoryFolder(repositoryId, repositoryFolderId)**
Get a repository folder.

API Version
39.0

Requires Chatter
No

Signature
```java
public static ConnectApi.RepositoryFolderDetail getRepositoryFolder(String repositoryId, String repositoryFolderId)
```
Parameters

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

Return Value
Type: ConnectApi.RepositoryFolderDetail

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

Example

```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFolderId =
    'folder:0B01Tys1KmM3sSVJ2bjIzTGfSw';
final ConnectApi.RepositoryFolderDetail folder =
    ConnectApi.ContentHub.getRepositoryFolder(gDriveRepositoryId, gDriveFolderId);
System.debug(String.format('Folder - name: \"\{0}\", description: \"\{1}\", external
    URL: \"\{2}\", folder items URL: \"\{3}\",
    new String[]{ folder.name, folder.description, folder.externalFolderUrl,
    folder.folderItemsUrl});
```

SEE ALSO:
setTestGetRepositoryFolder(repositoryId, repositoryFolderId, result)
Testing ConnectApi Code

getRepositoryFolder(communityId, repositoryId, repositoryFolderId)
Get a repository folder in an Experience Cloud site.

API Version
39.0

Requires Chatter
No

Signature

```java
public static ConnectApi.RepositoryFolderDetail getRepositoryFolder(String communityId,
    String repositoryId, String repositoryFolderId)
```
Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

`repositoryId`
Type: `String`
The ID of the repository.

`repositoryFolderId`
Type: `String`
The ID of the repository folder.

Return Value
Type: `ConnectApi.RepositoryFolderDetail`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetRepositoryFolder(communityId, repositoryId, repositoryFolderId, result)`
- Testing ConnectApi Code

`getRepositoryFolderItems(repositoryId, repositoryFolderId)`
Get repository folder items.

API Version
39.0

Requires Chatter
No

Signature
```
public static ConnectApi.RepositoryFolderItemsCollection getRepositoryFolderItems(String repositoryId, String repositoryFolderId)
```

Parameters

`repositoryId`
Type: `String`
The ID of the repository.
**repositoryFolderId**

Type: **String**

The ID of the repository folder.

**Return Value**

Type: **ConnectApi.RepositoryFolderItemsCollection**

**Usage**

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**Example**

This example gets the collection of items in a repository folder. For files, we show the file’s name, size, external URL, and download URL. For folders, we show the folder’s name, description, and external URL.

```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFolderId = 'folder:0B01Tys1KmM3sSVJ2bjIzTGqSWs';
final ConnectApi.RepositoryFolderItemsCollection folderItemsColl = ConnectApi.ContentHub.getRepositoryFolderItems(gDriveRepositoryId, gDriveFolderId);
final List<ConnectApi.RepositoryFolderItem> folderItems = folderItemsColl.items;
System.debug('Number of items in repository folder: ' + folderItems.size());
for(ConnectApi.RepositoryFolderItem item : folderItems){
    ConnectApi.RepositoryFileSummary fileSummary = item.file;
    if(fileSummary != null){
        System.debug(String.format('File item - name: \"{0}\", size: {1}, external URL: \"{2}\", download URL: \"{3}\"', new String[]{ fileSummary.name, String.valueOf(fileSummary.contentSize), fileSummary.externalDocumentUrl, fileSummary.downloadUrl}));
    }else{
        ConnectApi.RepositoryFolderSummary folderSummary = item.folder;
        System.debug(String.format('Folder item - name: \"{0}\", description: \"{1}\"', new String[]{ folderSummary.name, folderSummary.description}));
    }
}
```

**SEE ALSO:**

`setTestGetRepositoryFolderItems(repositoryId, repositoryFolderId, result)`

Testing ConnectApi Code

**getRepositoryFolderItems** *(communityId, repositoryId, repositoryFolderId)*

Get repository folder items in an Experience Cloud site.

**API Version**

39.0
Requires Chatter
No

Signature
```
public static ConnectApi.RepositoryFolderItemsCollection getRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.
- `repositoryId`
  - Type: `String`
  - The ID of the repository.
- `repositoryFolderId`
  - Type: `String`
  - The ID of the repository folder.

Return Value

Type: `ConnectApi.RepositoryFolderItemsCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

**getRepositoryFolderItems** *(repositoryId, repositoryFolderId, pageParam, pageSize)*

Get a page of repository folder items.

API Version

39.0

Requires Chatter
No
public static ConnectApi.RepositoryFolderItemsCollection getRepositoryFolderItems(String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize)

Parameters

repositoryId
  Type: String
  The ID of the repository.

repositoryFolderId
  Type: String
  The ID of the repository folder.

pageParam
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default page size is 25.

Return Value

Type: ConnectApi.RepositoryFolderItemsCollection

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

setTestGetRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize, result)

Testing ConnectApi Code

getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize)

Get a page of repository folder items in an Experience Cloud site.

API Version
39.0

Requires Chatter
No
public static ConnectApi.RepositoryFolderItemsCollection getRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default page size is 25.

Return Value
Type: ConnectApi.RepositoryFolderItemsCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

Testing ConnectApi Code

updateRepositoryFile(repositoryId, repositoryFileId, file)
Update the name of a repository file.

API Version
39.0
Requires Chatter
No

Signature
```
public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String repositoryId,
String repositoryFileId, ConnectApi.ContentHubItemInput file)
```

Parameters

- **repositoryId**
  - Type: `String`
  - The ID of the repository.

- **repositoryFileId**
  - Type: `String`
  - The ID of the repository file.

- **file**
  - Type: `ConnectApi.ContentHubItemInput`
  - The item type ID and fields of the item type.
  - When updating the metadata of a repository file, only the name field can be updated.

Return Value

Type: `ConnectApi.RepositoryFileDetail`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example updates the name of a file in a Google Drive repository. After the file is updated, we show the file’s ID, name, description, external URL, download URL.

```java
final String gDriveRepositoryId = '0XCxx0000000000DGAY', gDriveFolderId =
'folder:0B0lTys1KmM3sSVJ2bJzTGFqSWs', gDriveFileId =
'document:1q9OatVpcyYBK-JWzp_Phr75ulQghwFP15zhkmKrRcQ';

final ConnectApi.ContentHubItemInput updatedItem = new ConnectApi.ContentHubItemInput();
updatedItem.itemTypeId = "document"; //see getAllowedTypes for any file item types available
for creation/update
updatedItem.fields = new List<ConnectApi.ContentHubFieldValueInput>();

//Metadata: name field
final ConnectApi.ContentHubFieldValueInput fieldValueInputName = new
ConnectApi.ContentHubFieldValueInput();
fieldValueInputName.name = 'name';
fieldValueInputName.value = 'updated file name.txt';
```
updatedItem.fields.add(fieldValueInputName);

final ConnectApi.RepositoryFileDetail updatedFile = ConnectApi.ContentHub.updateRepositoryFile(gDriveRepositoryId, gDriveFileId, updatedItem);
System.debug(String.format("Updated file - id: \\
"{0}\\n", name: \\
"{1}\\n", description: \\
"{2}\\n", external URL: \\
"{3}\\n", download URL: \\
"{4}\\n", new String[]
updatedFile.id, updatedFile.name, updatedFile.description, updatedFile.externalDocumentUrl, updatedFile.downloadUrl));

SEE ALSO:
setTestUpdateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData, result)
Testing ConnectApi Code

updateRepositoryFile(repositoryId, repositoryFileId, file, fileData)
Update the content of a repository file.

API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData)

Parameters
repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.
When updating the metadata of a repository file, only the name field can be updated.

fileData
Type: ConnectApi.BinaryInput
The binary file.
Return Value

Type: `ConnectApi.RepositoryFileDetail`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Example

This example updates the content and name of a file in a Google Drive repository. After the file is updated, we show the file’s ID, name, description, external URL, and download URL.

```java
final String gDriveRepositoryId = '0XCxx00000000ODGAY', gDriveFolderId = 'folder:0B0lTys1KmM3sSVJ2bJzTGFeqSWe', gDriveFileId = 'document:1q9OatVpcyYBK-JWzp__PhR75ulQghwFP15zhkamKrRcQ';

final ConnectApi.ContentHubItemInput updatedItem = new ConnectApi.ContentHubItemInput();
updatedItem.itemTypeId = 'document'; //see getAllowedTypes for any file item types available for creation/update
updatedItem.fields = new List<ConnectApi.ContentHubFieldValueInput>(){

    final ConnectApi.ContentHubFieldValueInput fieldValueInputName = new ConnectApi.ContentHubFieldValueInput();
    fieldValueInputName.name = 'name';
    fieldValueInputName.value = 'updated file name.txt';
    updatedItem.fields.add(fieldValueInputName);

    final Blob updatedFileBlob = Blob.valueOf('even more awesome content for updated file');
    final String updatedFileMimeType = 'text/plain';
    final ConnectApi.BinaryInput fileBinaryInput = new ConnectApi.BinaryInput(updatedFileBlob, updatedFileMimeType, updatedFileName);

    final ConnectApi.RepositoryFileDetail updatedFile = ConnectApi.ContentHub.updateRepositoryFile(gDriveRepositoryId, gDriveFileId, updatedItem);
    System.debug(String.format('Updated file - id: \'{0}\\', updatedFile.id, name: \'{1}\\', description: \'{2}\\', in external URL: \'{3}\\', download URL: \'{4}\\', new String[]{
    updatedFile.id, updatedFile.name, updatedFile.description, updatedFile.externalDocumentUrl, updatedFile.downloadUrl});

SEE ALSO:

    Testing ConnectApi Code

updateRepositoryFile(communityId, repositoryId, repositoryFileId, file)

Update the name of a repository file in an Experience Cloud site.
API Version
39.0

Requires Chatter
No

Signature
public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String communityId,
                    String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
repositoryId
  Type: String
  The ID of the repository.
repositoryFileId
  Type: String
  The ID of the repository file.
file
  Type: ConnectApi.ContentHubItemInput
  The item type ID and fields of the item type.
  When updating the metadata of a repository file, only the name field can be updated.

Return Value
Type: ConnectApi.RepositoryFileDetail

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method
with the same parameters or the code throws an exception.

SEE ALSO:
    setTestUpdateRepositoryFile(repositoryId, repositoryFileId, file, fileData, result)
    Testing ConnectApi Code

updateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData)
Update the content of a repository file in an Experience Cloud site.
API Version
39.0

Requires Chatter
No

Signature

public static ConnectApi.RepositoryFileDetail updateRepositoryFile(String communityId, String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.
When updating the metadata of a repository file, only the name field can be updated.

fileData
Type: ConnectApi.BinaryInput
The binary file.

Return Value
Type: ConnectApi.RepositoryFileDetail

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestUpdateRepositoryFile(communityId, repositoryId, repositoryFileId, file, result)
Testing ConnectApi Code
ContentHub Test Methods

The following are the test methods for ContentHub. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

setTestAddRepositoryItem(repositoryId, repositoryFolderId, file, result)

Register a ConnectApi.RepositoryFolderItem object to be returned when the matching addRepositoryItem(repositoryId, repositoryFolderId, file) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestAddRepositoryItem(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.RepositoryFolderItem result)

Parameters
repositoryId
   Type: String
   The ID of the repository.
repositoryFolderId
   Type: String
   The ID of the repository folder.
file
   Type: ConnectApi.ContentHubItemInput
   The item type ID and fields of the item type.
result
   Type: ConnectApi.RepositoryFolderItem
   The object containing test data.

Return Value
Type: Void

SEE ALSO:
   addRepositoryItem(repositoryId, repositoryFolderId, file)
   Testing ConnectApi Code
**setTestAddRepositoryItem(communityId, repositoryId, repositoryFolderId, file, result)**

Register a `ConnectApi.RepositoryFolderItem` object to be returned when the matching `addRepositoryItem(communityId, repositoryId, repositoryFolderId, file)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestAddRepositoryItem(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.RepositoryFolderItem result)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **repositoryId**
  - Type: `String`
  - The ID of the repository.

- **repositoryFolderId**
  - Type: `String`
  - The ID of the repository folder.

- **file**
  - Type: `ConnectApi.ContentHubItemInput`
  - The item type ID and fields of the item type.

- **result**
  - Type: `ConnectApi.RepositoryFolderItem`
  - The object containing test data.

**Return Value**

Type: `Void`

**SEE ALSO:**

- `addRepositoryItem(communityId, repositoryId, repositoryFolderId, file)`
- Testing `ConnectApi` Code

---

**setTestAddRepositoryItem(repositoryId, repositoryFolderId, file, fileData, result)**

Register a `ConnectApi.RepositoryFolderItem` object to be returned when the matching `addRepositoryItem(repositoryId, repositoryFolderId, file, fileData)` method is called in a test context. Use the method with the same parameters or you receive an exception.
public static Void setTestAddRepositoryItem(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData, ConnectApi.RepositoryFolderItem result)

Parameters

**repositoryId**
Type: String
The ID of the repository.

**repositoryFolderId**
Type: String
The ID of the repository folder.

**file**
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.

**fileData**
Type: ConnectApi.BinaryInput
The binary file.

**result**
Type: ConnectApi.RepositoryFolderItem
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- addRepositoryItem(repositoryId, repositoryFolderId, file, fileData)
- Testing ConnectApi Code

setTestAddRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData, result)

Register a ConnectApi.RepositoryFolderItem object to be returned when the matching addRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData) method is called in a test context. Use the method with the same parameters or you receive an exception.
public static Void setTestAddRepositoryItem(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData, ConnectApi.RepositoryFolderItem result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.

fileData
Type: ConnectApi.BinaryInput
The binary file.

result
Type: ConnectApi.RepositoryFolderItem
The object containing test data.

Return Value
Type: Void

SEE ALSO:
addRepositoryItem(communityId, repositoryId, repositoryFolderId, file, fileData)
Testing ConnectApi Code

setTestGetAllowedItemTypes(repositoryId, repositoryFolderId, result)

Register a ConnectApi.ContentHubAllowedItemTypeCollection object to be returned when the matching getAllowedItemTypes(repositoryId, repositoryFolderId) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0
Signature

public static Void setTestGetAllowedItemTypes(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubAllowedItemTypeCollection result)

Parameters

repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

result
Type: ConnectApi.ContentHubAllowedItemTypeCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:

getAllowedItemTypes(repositoryId, repositoryFolderId)
Testing ConnectApi Code

setTestGetAllowedItemTypes(repositoryId, repositoryFolderId, filter, result)

Register a ConnectApi.ContentHubAllowedItemTypeCollection object to be returned when the matching getAllowedItemTypes(repositoryId, repositoryFolderId, filter) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

public static Void setTestGetAllowedItemTypes(String repositoryId, String repositoryFolderId, ConnectApi.ContentHubItemType filter, ConnectApi.ContentHubAllowedItemTypeCollection result)

Parameters

repositoryId
Type: String
The ID of the repository.
repositoryFolderId
Type: String
The ID of the repository folder.

filter
Type: ConnectApi.ContentHubItemType
Item types. Values are:
- Any—Includes files and folders.
- FilesOnly—Includes files only.
- FoldersOnly—Includes folders only.

result
Type: ConnectApi.ContentHubAllowedItemTypeCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- getAllowedItemType(communityId, repositoryId, repositoryFolderId, filter)
- Testing ConnectApi Code

setTestGetAllowedItemTypes(communityId, repositoryId, repositoryFolderId, result)
Register a ConnectApi.ContentHubAllowedItemTypeCollection object to be returned when the matching
getAllowedItemTypes(communityId, repositoryId, repositoryFolderId) method is called in a test
context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetAllowedItemTypes(String communityId, String repositoryId,
String repositoryFolderId, ConnectApi.ContentHubAllowedItemTypeCollection result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

repositoryId
Type: String
The ID of the repository.
repositoryFolderId
  Type: String
  The ID of the repository folder.

result
  Type: ConnectApi.ContentHubAllowedItemTypeCollection
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
  getAllowedItemTypes(communityId, repositoryId, repositoryFolderId)
  Testing ConnectApi Code

setTestGetAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter, result)

Register a ConnectApi.ContentHubAllowedItemTypeCollection object to be returned when the matching
getAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter) method is called
in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetAllowedItemTypes(String communityId, String repositoryId,
String repositoryFolderId, ConnectApi.ContentHubItemType filter,
ConnectApi.ContentHubAllowedItemTypeCollection result)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

repositoryId
  Type: String
  The ID of the repository.

repositoryFolderId
  Type: String
  The ID of the repository folder.

filter
  Type: ConnectApi.ContentHubItemType
Item types. Values are:

- **Any**—Includes files and folders.
- **FilesOnly**—Includes files only.
- **FoldersOnly**—Includes folders only.

**result**
Type: `ConnectApi.ContentHubAllowedItemTypeCollection`

The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getAllowedItemTypes(communityId, repositoryId, repositoryFolderId, filter)`
- Testing ConnectApi Code

**setTestGetFilePreview(repositoryId, repositoryFileId, formatType, result)**

Register a `ConnectApi.FilePreview` object to be returned when the matching `getFilePreview(repositoryId, repositoryFileId, formatType)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

```java
public static Void setTestGetFilePreview(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, ConnectApi.FilePreview result)
```

Parameters

- **repositoryId**
  Type: `String`
  The ID of the repository.

- **repositoryFileId**
  Type: `String`
  The ID of the repository file.

- **formatType**
  Type: `ConnectApi.FilePreviewFormat`
  Specifies the format of the file preview. Values are:
  - **Jpg**—Preview format is JPG.
  - **Pdf**—Preview format is PDF.
  - **Svg**—Preview format is compressed SVG.
PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter general in the Quick Find box in Setup. Select General Settings, and then select Display alternative file previews.

result
Type: ConnectApi.FilePreview
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getFilePreview(repositoryId, repositoryFileId, formatType)
Testing ConnectApi Code

setTestGetFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber, result)
Register a ConnectApi.FilePreview object to be returned when the matching getFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetFilePreview(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, Integer startPageNumber, Integer endPageNumber, ConnectApi.FilePreview result)

Parameters
repositoryId
Type: String
The ID of the repository.
repositoryFileId
Type: String
The ID of the repository file.
formatType
Type: ConnectApi.FilePreviewFormat
Specifies the format of the file preview. Values are:

- **Jpg**—Preview format is JPG.
- **Pdf**—Preview format is PDF.
- **Svg**—Preview format is compressed SVG.
- **Thumbnail**—Preview format is 240 x 180 PNG.
- **ThumbnailBig**—Preview format is 720 x 480 PNG.
- **ThumbnailTiny**—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand. If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter *general* in the Quick Find box in Setup. Select General Settings, and then select **Display alternative file previews**.

- **startPageNumber**
  Type: **Integer**
  The starting page number in the range of file preview URLs.

- **endPageNumber**
  Type: **Integer**
  The ending page number in the range of file preview URLs.

- **result**
  Type: **ConnectApi.FilePreview**
  The object containing test data.

Return Value

Type: **Void**

SEE ALSO:

- **getFilePreview(repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)**
- **Testing ConnectApi Code**

**setTestGetFilePreview(communityId, repositoryId, repositoryFileId, formatType, result)**

Register a **ConnectApi.FilePreview** object to be returned when the matching **getFilePreview(communityId, repositoryId, repositoryFileId, formatType)** method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```java
public static Void setTestGetFilePreview(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, ConnectApi.FilePreview result)
```
Parameters

**communityId**
  Type: **String**
  Use the ID for an Experience Cloud site, internal, or **null**.

**repositoryId**
  Type: **String**
  The ID of the repository.

**repositoryFileId**
  Type: **String**
  The ID of the repository file.

**formatType**
  Type: **ConnectApi.FilePreviewFormat**
  Specifies the format of the file preview. Values are:
  - **Jpg**—Preview format is JPG.
  - **Pdf**—Preview format is PDF.
  - **Svg**—Preview format is compressed SVG.
  - **Thumbnail**—Preview format is 240 x 180 PNG.
  - **ThumbnailBig**—Preview format is 720 x 480 PNG.
  - **ThumbnailTiny**—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter **general** in the Quick Find box in Setup. Select General Settings, and then select **Display alternative file previews**.

**result**
  Type: **ConnectApi.FilePreview**
  The object containing test data.

Return Value

Type: Void

SEE ALSO:

- **getFilePreview(communityId, repositoryId, repositoryFileId, formatType)**
- **Testing ConnectApi Code**

**setTestGetFilePreview(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber, result)**

Register a ConnectApi.FilePreview object to be returned when the matching **getFilePreview(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)** method is called in a test context. Use the method with the same parameters or you receive an exception.
API Version
40.0

Signature
public static Void setTestGetFilePreview(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewFormat formatType, Integer startPageNumber, Integer endPageNumber, ConnectApi.FilePreview result)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

repositoryId
  Type: String
  The ID of the repository.

repositoryFileId
  Type: String
  The ID of the repository file.

formatType
  Type: ConnectApi.FilePreviewFormat
  Specifies the format of the file preview. Values are:
  • Jpg—Preview format is JPG.
  • Pdf—Preview format is PDF.
  • Svg—Preview format is compressed SVG.
  • Thumbnail—Preview format is 240 x 180 PNG.
  • ThumbnailBig—Preview format is 720 x 480 PNG.
  • ThumbnailTiny—Preview format is 120 x 90 PNG.

PDF previews are available for files of type DOC, DOCX, PPT, PPTX, TEXT, XLS, and XLSX. SVG files are generated on demand.

If you’re concerned that feature-rich SVG previews don’t work in your org, choose alternative file previews. To use JPG file previews, enter general in the Quick Find box in Setup. Select General Settings, and then select Display alternative file previews.

startPageNumber
  Type: Integer
  The starting page number in the range of file preview URLs.

d_endPageNumber
  Type: Integer
  The ending page number in the range of file preview URLs.

result
  Type: ConnectApi.FilePreview
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
getFilePreview(communityId, repositoryId, repositoryFileId, formatType, startPageNumber, endPageNumber)
Testing ConnectApi Code

setTestGetItemType(repositoryId, repositoryItemTypeIds, result)

Register a ConnectApi.ContentHubItemTypeDetail object to be returned when the matching
getItemType(repositoryId, repositoryItemTypeIds) method is called in a test context. Use the method with the
same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetItemType(String repositoryId, String repositoryItemTypeIds, ConnectApi.ContentHubItemTypeDetail result)

Parameters
repositoryId
Type: String
The ID of the repository.
repositoryItemTypeIds
Type: String
The ID of the repository item type.
result
Type: ConnectApi.ContentHubItemTypeDetail
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getItemType(repositoryId, repositoryItemTypeIds)
Testing ConnectApi Code
**setTestGetItemType(communityId, repositoryId, repositoryItemTypeId, result)**

Register a ConnectApi.ContentHubItemTypeDetail object to be returned when the matching getItemType(communityId, repositoryId, repositoryItemTypeId) method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestGetItemType(String communityId, String repositoryId, String repositoryItemTypeId, ConnectApi.ContentHubItemTypeDetail result)
```

**Parameters**

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **repositoryId**
  - Type: String
  - The ID of the repository.

- **repositoryItemTypeId**
  - Type: String
  - The ID of the repository item type.

- **result**
  - Type: ConnectApi.ContentHubItemTypeDetail
  - The object containing test data.

**Return Value**

Type: Void

**SEE ALSO:**

- getItemType(communityId, repositoryId, repositoryItemTypeId)
- Testing ConnectApi Code

**setTestGetPreviews(repositoryId, repositoryFileId, result)**

Register a ConnectApi.FilePreviewCollection object to be returned when the matching getPreviews(repositoryId, repositoryFileId) method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0
Signature

```java
public static Void setTestGetPreviews(String repositoryId, String repositoryFileId, ConnectApi.FilePreviewCollection result)
```

Parameters

- `repositoryId`
  - Type: `String`
  - The ID of the repository.

- `repositoryFileId`
  - Type: `String`
  - The ID of the repository file.

- `result`
  - Type: `ConnectApi.FilePreviewCollection`
  - The object containing test data.

Return Value

Type: `Void`

SEE ALSO:

- `getPreviews(repositoryId, repositoryFileId)`
- Testing ConnectApi Code

### `setTestGetPreviews(communityId, repositoryId, repositoryFileId, result)`

Register a `ConnectApi.FilePreviewCollection` object to be returned when the matching `getPreviews(communityId, repositoryId, repositoryFileId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```java
public static Void setTestGetPreviews(String communityId, String repositoryId, String repositoryFileId, ConnectApi.FilePreviewCollection result)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `repositoryId`
  - Type: `String`
The ID of the repository.

(repositoryFileId
Type: String

The ID of the repository file.

result
Type: ConnectApi.FilePreviewCollection

The object containing test data.

Return Value
Type: Void

SEE ALSO:
getPreviews(communityId, repositoryId, repositoryFileId)
Testing ConnectApi Code

setTestGetRepositories(result)

Register a ConnectApi.ContentHubRepositoryCollection object to be returned when the matching getRepositories() method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

public static Void setTestGetRepositories(ConnectApi.ContentHubRepositoryCollection result)

Parameters

result
Type: ConnectApi.ContentHubRepositoryCollection

The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepositories()
Testing ConnectApi Code
**setTestGetRepositories(communityId, result)**

Register a `getRepositories(communityId)` object to be returned when the matching `ConnectApi.ContentHubRepositoryCollection` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestGetRepositories(String communityId,
ConnectApi.ContentHubRepositoryCollection result)
```

**Parameters**

**communityId**

Type: `String`

Use the ID for an Experience Cloud site, internal, or `null`.

**result**

Type: `ConnectApi.ContentHubRepositoryCollection`

The object containing test data.

**Return Value**

Type: `Void`

**SEE ALSO:**

- `getRepositories(communityId)`
- Testing ConnectApi Code

**setTestGetRepositories(pageParam, pageSize, result)**

Register a `ConnectApi.ContentHubRepositoryCollection` object to be returned when the matching `getRepositories(pageParam, pageSize)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestGetRepositories(Integer pageParam, Integer pageSize,
ConnectApi.ContentHubRepositoryCollection result)
```
Parameters

`pageParam`
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.

`result` Type: `ConnectApi.ContentHubRepositoryCollection`
The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `getRepositories(pageParam, pageSize)`
- Testing ConnectApi Code

`setTestGetRepositories(communityId, pageParam, pageSize, result)`
Register a `ConnectApi.ContentHubRepositoryCollection` object to be returned when the matching `getRepositories(communityId, pageParam, pageSize)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

```java
public static Void setTestGetRepositories(String communityId, Integer pageParam, Integer pageSize, ConnectApi.ContentHubRepositoryCollection result)
```

Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

`pageParam`
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.
result
   Type: ConnectApi.ContentHubRepositoryCollection
   The object containing test data.

Return Value
Type: Void

SEE ALSO:
   getRepositories(communityId, pageParam, pageSize)
   Testing ConnectApi Code

**setTestGetRepository(repositoryId, result)**

Register a ConnectApi.ContentHubRepository object to be returned when the matching
getRepository(repositoryId) method is called in a test context. Use the method with the same parameters or you receive
an exception.

API Version
40.0

Signature
public static Void setTestGetRepository(String repositoryId,
ConnectApi.ContentHubRepository result)

Parameters

(repositoryId
   Type: String
   The ID of the repository.
result
   Type: ConnectApi.ContentHubRepository
   The object containing test data.

Return Value
Type: Void

SEE ALSO:
   getRepository(repositoryId)
   Testing ConnectApi Code
setTestGetRepository(communityId, repositoryId, result)

Register a ConnectApi.ContentHubRepository object to be returned when the matching getRepository(communityId, repositoryId) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetRepository(String communityId, String repositoryId, ConnectApi.ContentHubRepository result)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
repositoryId
  Type: String
  The ID of the repository.
result
  Type: ConnectApi.ContentHubRepository
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepository(communityId, repositoryId)
Testing ConnectApi Code

setTestGetRepositoryFile(repositoryId, repositoryFileId, result)

Register a ConnectApi.RepositoryFileDetail object to be returned when the matching getRepositoryFile(repositoryId, repositoryFileId) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0
**Signature**

```java
public static Void setTestGetRepositoryFile(String repositoryId, String repositoryFileId, ConnectApi.RepositoryFileDetail result)
```

**Parameters**

- `repositoryId`
  - Type: String
  - The ID of the repository.

- `repositoryFileId`
  - Type: String
  - The ID of the repository file.

- `result`
  - Type: `ConnectApi.RepositoryFileDetail`
  - The object containing test data.

**Return Value**

Type: Void

**SEE ALSO:**
- `getRepositoryFile(repositoryId, repositoryFileId)`
- Testing ConnectApi Code

```java
setTestGetRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo, result)
```

Register a `ConnectApi.RepositoryFileDetail` object to be returned when the matching `getRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestGetRepositoryFile(String repositoryId, String repositoryFileId, Boolean includeExternalFilePermissionsInfo, ConnectApi.RepositoryFileDetail result)
```

**Parameters**

- `repositoryId`
  - Type: String
  - The ID of the repository.
repositoryFileId
Type: String
The ID of the repository file.

includeExternalFilePermissionsInfo
Type: Boolean
Specifies whether to include permission information, such as whether the file is shared and what are the available permission types.
Managing external file permissions is supported for Google Drive, SharePoint Online, and OneDrive for Business.

result
Type: ConnectApi.RepositoryFileDetail
The object containing test data.

Return Value
Type: Void

SEE ALSO:

getRepositoryFile(repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)
Testing ConnectApi Code

setTestGetRepositoryFile(communityId, repositoryId, repositoryFileId, result)
Register a ConnectApi.RepositoryFileDetail object to be returned when the matching getRepositoryFile (communityId, repositoryId, repositoryFileId) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature

public static Void setTestGetRepositoryFile(String communityId, String repositoryId, String repositoryFileId, ConnectApi.RepositoryFileDetail result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.
result
Type: ConnectApi.RepositoryFileDetail
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepositoryFile(communityId, repositoryId, repositoryFileId)
Testing ConnectApi Code

setTestGetRepositoryFile(communityId, repositoryId, repositoryFileId,
includeExternalFilePermissionsInfo, result)
Register a ConnectApi.RepositoryFileDetail object to be returned when the matching
getRepositoryFile(communityId, repositoryId, repositoryFileId,
includeExternalFilePermissionsInfo) method is called in a test context. Use the method with the same parameters
or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetRepositoryFile(String communityId, String repositoryId,
String repositoryFileId, Boolean includeExternalFilePermissionsInfo,
ConnectApi.RepositoryFileDetail result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.
repositoryId
Type: String
The ID of the repository.
repositoryFileId
Type: String
The ID of the repository file.
includeExternalFilePermissionsInfo
Type: Boolean
Specifies whether to include permission information, such as whether the file is shared and what are the available permission types.
Managing external file permissions is supported for Google Drive, SharePoint Online, and OneDrive for Business.
result
Type: ConnectApi.RepositoryFileDetail
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepositoryFile(communityId, repositoryId, repositoryFileId, includeExternalFilePermissionsInfo)
Testing ConnectApi Code

setTestGetRepositoryFolder(repositoryId, repositoryFolderId, result)
Register a ConnectApi.RepositoryFolderDetail object to be returned when the matching
getRepositoryFolder(repositoryId, repositoryFolderId) method is called in a test context. Use the method
with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestGetRepositoryFolder(String repositoryId, String
repositoryFolderId, ConnectApi.RepositoryFolderDetail result)

Parameters
repositoryId
Type: String
The ID of the repository.

repositoryFolderId
Type: String
The ID of the repository folder.

result
Type: ConnectApi.RepositoryFolderDetail
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRepositoryFolder(repositoryId, repositoryFolderId)
Testing ConnectApi Code
**setTestGetRepositoryFolder(communityId, repositoryId, repositoryFolderId, result)**

Register a `ConnectApi.RepositoryFolderDetail` object to be returned when the matching `getRepositoryFolder(communityId, repositoryId, repositoryFolderId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0

**Signature**

```java
public static Void setTestGetRepositoryFolder(String communityId, String repositoryId,
String repositoryFolderId, ConnectApi.RepositoryFolderDetail result)
```

**Parameters**

- `communityId`
  
  Type: `String`

  Use the ID for an Experience Cloud site, internal, or `null`.

- `repositoryId`
  
  Type: `String`

  The ID of the repository.

- `repositoryFolderId`
  
  Type: `String`

  The ID of the repository folder.

- `result`
  
  Type: `ConnectApi.RepositoryFolderDetail`

  The object containing test data.

**Return Value**

Type: Void

**SEE ALSO:**

- `getRepositoryFolder(communityId, repositoryId, repositoryFolderId)`
- Testing ConnectApi Code

**setTestGetRepositoryFolderItems(repositoryId, repositoryFolderId, result)**

Register a `ConnectApi.RepositoryFolderItemsCollection` object to be returned when the matching `getRepositoryFolderItems(repositoryId, repositoryFolderId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**

40.0
Signature

```java
public static Void setTestGetRepositoryFolderItems(String repositoryId, String repositoryFolderId, ConnectApi.RepositoryFolderItemsCollection result)
```

Parameters

- `repositoryId`
  - Type: String
  - The ID of the repository.

- `repositoryFolderId`
  - Type: String
  - The ID of the repository folder.

- `result`
  - Type: `ConnectApi.RepositoryFolderItemsCollection`
  - The object containing test data.

Return Value

- Type: Void

SEE ALSO:

- `getRepositoryFolderItems(repositoryId, repositoryFolderId)`
- Testing ConnectApi Code

### setTestGetRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, result)

Register a `ConnectApi.RepositoryFolderItemsCollection` object to be returned when the matching `getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

40.0

Signature

```java
public static Void setTestGetRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId, ConnectApi.RepositoryFolderItemsCollection result)
```

Parameters

- `communityId`
  - Type: String
  - Use the ID for an Experience Cloud site, `internal`, or `null`.
repositoryId
   Type: String
   The ID of the repository.

repositoryFolderId
   Type: String
   The ID of the repository folder.

result
   Type: ConnectApi.RepositoryFolderItemsCollection
   The object containing test data.

Return Value
Type: Void

SEE ALSO:
   getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId)
   Testing ConnectApi Code

**setTestGetRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize, result)**

Register a ConnectApi.RepositoryFolderItemsCollection object to be returned when the matching getRepositoryFolderItems(repositoryId, repositoryFolderId, pageParam, pageSize) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
```java
public static Void setTestGetRepositoryFolderItems(String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize, ConnectApi.RepositoryFolderItemsCollection result)
```

Parameters
repositoryId
   Type: String
   The ID of the repository.

repositoryFolderId
   Type: String
   The ID of the repository folder.

pageParam
   Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`
Type: `Integer`

Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default page size is 25.

`result`
Type: `ConnectApi.RepositoryFolderItemsCollection`
The object containing test data.

Return Value
Type: `Void`

SEE ALSO:
- `getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize)`
- Testing ConnectApi Code

```java
public static Void setTestGetRepositoryFolderItems(String communityId, String repositoryId, String repositoryFolderId, Integer pageParam, Integer pageSize, ConnectApi.RepositoryFolderItemsCollection result)
```

Register a `ConnectApi.RepositoryFolderItemsCollection` object to be returned when the matching `getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize)` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Parameters
- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.
- `repositoryId`
  Type: `String`
  The ID of the repository.
- `repositoryFolderId`
  Type: `String`
  The ID of the repository folder.
- `pageParam`
  Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default page size is 25.

**result**
Type: `ConnectApi.RepositoryFolderItemsCollection`
The object containing test data.

Return Value
Type: Void

**SEE ALSO:**
- `getRepositoryFolderItems(communityId, repositoryId, repositoryFolderId, pageParam, pageSize)`
- Testing ConnectApi Code

### `setTestUpdateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData, result)`

Register a `ConnectApi.RepositoryFileDetail` object to be returned when the matching `updateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData)` method is called in a test context. Use the method with the same parameters or you receive an exception.

**API Version**
40.0

**Signature**

```java
public static Void setTestUpdateRepositoryFile(String communityId, String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData, ConnectApi.RepositoryFileDetail result)
```

**Parameters**

- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- **repositoryId**
  Type: String
  The ID of the repository.

- **repositoryFileId**
  Type: String
  The ID of the repository file.

- **file**
  Type: `ConnectApi.ContentHubItemInput`
The item type ID and fields of the item type.

fileData
Type: ConnectApi.BinaryInput
The binary file.

result
Type: ConnectApi.RepositoryFileDetail
The object containing test data.

Return Value
Type: Void

SEE ALSO:
updateRepositoryFile(repositoryId, repositoryFileId, file)
Testing ConnectApi Code

setTestUpdateRepositoryFile(repositoryId, repositoryFileId, file, result)

Register a ConnectApi.RepositoryFileDetail object to be returned when the matching
updateRepositoryFile(repositoryId, repositoryFileId, file) method is called in a test context. Use the
method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestUpdateRepositoryFile(String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.RepositoryFileDetail result)

Parameters
repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.

result
Type: ConnectApi.RepositoryFileDetail
The object containing test data.

Return Value
Type: Void

SEE ALSO:
updateRepositoryFile(repositoryId, repositoryFileId, file, fileData)

Testing ConnectApi Code

setTestUpdateRepositoryFile(repositoryId, repositoryFileId, file, fileData, result)

Register a ConnectApi.RepositoryFileDetail object to be returned when the matching updateRepositoryFile(repositoryId, repositoryFileId, file, fileData) method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestUpdateRepositoryFile(String repositoryId, String repositoryFileId, ConnectApi.ContentHubItemInput file, ConnectApi.BinaryInput fileData, ConnectApi.RepositoryFileDetail result)

Parameters
repositoryId
Type: String
The ID of the repository.

repositoryFileId
Type: String
The ID of the repository file.

file
Type: ConnectApi.ContentHubItemInput
The item type ID and fields of the item type.

fileData
Type: ConnectApi.BinaryInput
The binary file.

result
Type: ConnectApi.RepositoryFileDetail
The object containing test data.
Return Value
Type: Void

SEE ALSO:
updateRepositoryFile(communityId, repositoryId, repositoryFileId, file)
Testing ConnectApi Code

setTestUpdateRepositoryFile(communityId, repositoryId, repositoryFileId, file, result)

Register a `ConnectApi.RepositoryFileDetail` object to be returned when the matching
updateRepositoryFile(communityId, repositoryId, repositoryFileId, file) method is called in a
test context. Use the method with the same parameters or you receive an exception.

API Version
40.0

Signature
public static Void setTestUpdateRepositoryFile(String communityId, String repositoryId,
String repositoryFileId, ConnectApi.ContentHubItemInput file,
ConnectApi.RepositoryFileDetail result)

Parameters

`communityId`
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

`repositoryId`
  Type: String
  The ID of the repository.

`repositoryFileId`
  Type: String
  The ID of the repository file.

`file`
  Type: `ConnectApi.ContentHubItemInput`
  The item type ID and fields of the item type.

`result`
  Type: `ConnectApi.RepositoryFileDetail`
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
updateRepositoryFile(communityId, repositoryId, repositoryFileId, file, fileData)

Testing ConnectApi Code

Datacloud Class
Purchase Data.com contact or company records, and retrieve purchase information.

Namespace
ConnectApi

Note: When your Data.com Prospector or Data.com Clean contract expires, Data.com features, objects, and fields will be removed from your org.

To support customers’ needs around compliance and to remain a leader in trust and privacy, Salesforce removed all contact data from the Data.com service on February 1, 2021.

For more information, see Data.com Prospector and Clean Retirement.

IN THIS SECTION:
Datacloud Methods

Datacloud Methods
The following are methods for Datacloud. All methods are static.

IN THIS SECTION:
getCompaniesFromOrder(orderId, pageSize, page)
Get a list of purchased company records for an order.

getCompany(companyId)
Get a company record.

getContact(contactId)
Get a contact.

getContactsFromOrder(orderId, page, pageSize)
Get a list of purchased contacts for an order.

getAddress(orderId)
Get an order.

getUsage(userId)
Get purchase usage information for a user.

postOrder(orderInput)
Purchase records that are listed in an input file.
**getCompaniesFromOrder(orderId, pageSize, page)**

Get a list of purchased company records for an order.

API Version
32.0

Requires Chatter
No

Signature
```java
public static ConnectApi.DatacloudCompanies getCompaniesFromOrder(String orderId, String pageSize, String page)
```

Parameters

**orderId**
- Type: `String`
- ID of an order.

**page**
- Type: `Integer`
- Number of the page that you want returned.

**pageSize**
- Type: `Integer`
- Number of companies to show on a page. The default `pageSize` is 25.

Return Value

Type: `ConnectApi.DatacloudCompanies`

**getCompany(companyId)**

Get a company record.

API Version
32.0

Requires Chatter
No

Signature
```java
public static ConnectApi.DatacloudCompany getCompany(String companyId)
```
Parameters

*companyId*
  
  Type: `String`

  ID of a company in the Data.com database.

Return Value

Type: `ConnectApi.DatacloudCompany`

**getContact(contactId)**

Get a contact.

API Version

32.0

Requires Chatter

No

Signature

```java
public static ConnectApi.DatacloudContact getContact(String contactId)
```

Parameters

*contactId*
  
  Type: `String`

  ID of a contact in the Data.com database.

Return Value

Type: `ConnectApi.DatacloudContact`

**getContactsFromOrder(orderId, page, pageSize)**

Get a list of purchased contacts for an order.

API Version

32.0

Requires Chatter

No
Signature

```java
public static ConnectApi.DatacloudContacts getContactsFromOrder(String orderId, String page, String pageSize)
```

Parameters

- **orderId**
  - Type: `String`
  - ID of an order.

- **page**
  - Type: `Integer`
  - Number of the page that you want returned.

- **pageSize**
  - Type: `Integer`
  - Number of contacts to show on a page. The default `pageSize` is 25.

Return Value

Type: `ConnectApi.DatacloudContacts`

---

**getOrder(orderId)**

Get an order.

API Version

32.0

Requires Chatter

No

Signature

```java
public static ConnectApi.DatacloudOrder getOrder(String orderId)
```

Parameters

- **orderId**
  - Type: `String`
  - ID of an order.

Return Value

Type: `ConnectApi.DatacloudOrder`
getUsage (userId)
Get purchase usage information for a user.

API Version
32.0

Requires Chatter
No

Signature
public static ConnectApi.DatacloudPurchaseUsage getUsage(String userId)

Parameters
userId
Type: String
ID of a user.

Return Value
Type: ConnectApi.DatacloudPurchaseUsage

postOrder (orderInput)
Purchase records that are listed in an input file.

API Version
32.0

Requires Chatter
No

Signature
public static ConnectApi.DatacloudOrder postOrder(ConnectApi.DatacloudOrderInput orderInput)

Parameters
orderInput
Type: ConnectApi.DatacloudOrderInput
A list that contains IDs for the contacts or companies that you want to see.
Return Value

Type: ConnectApi.DatacloudOrder

Example

```java
ConnectApi.DatacloudOrderInput inputOrder=new ConnectApi.DatacloudOrderInput();
List<String> ids=new List<String>();
ids.add('1234');
inputOrder.companyIds=ids;
ConnectApi.DatacloudOrder datacloudOrderRep = ConnectApi.Datacloud.postOrder(inputOrder);
```

### EmailMergeFieldService Class

Extract a list of merge fields for an object. A merge field is a field you can put in an email template, mail merge template, custom link, or formula to incorporate values from a record.

### Namespace

ConnectApi

### EmailMergeFieldService Methods

The following are methods for EmailMergeFieldService. All methods are static.

#### IN THIS SECTION:

* getMergeFields(objectApiNames)

  Extract the merge fields for a specific object.

---

**getMergeFields(objectApiNames)**

Extract the merge fields for a specific object.

**API Version**

39.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.EmailMergeFieldInfo getMergeFields(List<String> objectApiNames)
```

**Parameters**

`objectApiNames`

Type: List<String>

The API names for the objects being referenced.
ExternalEmailServices Class

Access information about integration with external email services, such as sending email within Salesforce through an external email account.

Namespace
ConnectApi

External Email Services Methods

The following are methods for ExternalEmailService. All methods are static.

IN THIS SECTION:
getUserOauthInfo(landingPage)
Get information about whether an external email service has been authorized to send email on behalf of a user.

getUserOauthInfo (landingPage)
Get information about whether an external email service has been authorized to send email on behalf of a user.

API Version
37.0

Requires Chatter
No

Signature
public static getUserOauthInfo(String landingPage)

Parameters
landingPage
Type: String
The landing page that the user starts on when they are finished with the OAuth authorization process.

Return Value
Type: ConnectApi.UserOauthInfo

SEE ALSO:
Testing ConnectApi Code
ExternalManagedAccount Class
Get externally managed accounts.

Namespace
ConnectApi

ExternalManagedAccount Methods
These methods are for ExternalManagedAccount. All methods are static.

IN THIS SECTION:
getCommunitiesExternalManagedAccounts(communityId)
Get externally managed accounts available to the context user across all Experience Cloud sites.
getExternalManagedAccounts(webstoreId)
Get externally managed accounts for a store.

getCommunitiesExternalManagedAccounts (communityId)
Get externally managed accounts available to the context user across all Experience Cloud sites.

API Version
50.0

Requires Chatter
No

Signature
public static ConnectApi.ExternalManagedAccountCollectionOutput getCommunitiesExternalManagedAccounts(String communityId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

Note: Regardless of the ID specified, this method returns externally managed accounts available to the context user across all Experience Cloud sites.

Return Value
Type: ConnectApi.ExternalManagedAccountCollectionOutput
getExternalManagedAccounts(webstoreId)

Get externally managed accounts for a store.

API Version
49.0

Requires Chatter
No

Signature
public static ConnectApi.ExternalManagedAccountCollectionOutput getExternalManagedAccounts(String webstoreId)

Parameters
webstoreId
Type: String
ID of the webstore.

Return Value
Type: ConnectApi.ExternalManagedAccountCollectionOutput

FieldService Class
Preview and create shifts from a pattern.

Namespace
ConnectApi

FieldService Methods
These methods are for FieldService. All methods are static.

IN THIS SECTION:
createShiftsFromPattern(shiftsFromPatternInput, shiftPatternId)
Create up to 2,000 shifts from a pattern.
previewShiftsFromPattern(shiftsFromPatternInput, shiftPatternId)
Preview up to 2,000 shifts from a pattern.

createShiftsFromPattern(shiftsFromPatternInput, shiftPatternId)
Create up to 2,000 shifts from a pattern.
API Version
$1.0

Requires Chatter
Yes

Signature

public static ConnectApi.ShiftsFromPattern
createShiftsFromPattern(ConnectApi.ShiftsFromPatternInput shiftsFromPatternInput, String
shiftPatternId)

Parameters

shiftsFromPatternInput
Type: ConnectApi.ShiftsFromPatternInput
A ConnectApi.ShiftsFromPatternInput object providing the pattern.

shiftPatternId
Type: String
ID of the shift pattern.

Return Value
Type: ConnectApi.ShiftsFromPattern

previewShiftsFromPattern(shiftsFromPatternInput, shiftPatternId)
Preview up to 2,000 shifts from a pattern.

API Version
$1.0

Requires Chatter
Yes

Signature

public static ConnectApi.ShiftsFromPattern
previewShiftsFromPattern(ConnectApi.ShiftsFromPatternInput shiftsFromPatternInput, String
shiftPatternId)

Parameters

shiftsFromPatternInput
Type: ConnectApi.ShiftsFromPatternInput
A ConnectApi.ShiftsFromPatternInput object providing the pattern.
shiftPatternId
   Type: String
   ID of the shift pattern.

Return Value
Type: ConnectApi.ShiftsFromPattern

FulfillmentOrder Class
Fulfill orders in Order Management.

Namespace
ConnectApi

FulfillmentOrder Methods
The following are methods for FulfillmentOrder. All methods are static.

IN THIS SECTION:
   cancelFulfillmentOrderLineItems(fulfillmentOrderId, cancelFulfillmentOrderLineItemsInput)
   Cancel FulfillmentOrderLineItems from a FulfillmentOrder. This action doesn’t cancel the associated OrderItemSummaries, so reallocate the canceled quantities to a new FulfillmentOrder.
   createFulfillmentOrders(fulfillmentOrderInput)
   Create one or more FulfillmentOrders and FulfillmentOrderLineItems for an OrderDeliveryGroupSummary, which defines a delivery method and recipient for an OrderSummary. You specify the OrderItemSummaries to allocate, which can be fulfilled from different locations. Specifying multiple fulfillment groups creates one FulfillmentOrder for each location. For each OrderItemSummary, a FulfillmentOrderLineItem is created and assigned to the corresponding FulfillmentOrder.
   createInvoice(fulfillmentOrderId, invoiceInput)
   Create an invoice for a FulfillmentOrder that doesn’t have one.
   createMultipleFulfillmentOrder(multipleFulfillmentOrderInput)
   Create multiple FulfillmentOrders in a single request.

   cancelFulfillmentOrderLineItems(fulfillmentOrderId, cancelFulfillmentOrderLineItemsInput)
   Cancel FulfillmentOrderLineItems from a FulfillmentOrder. This action doesn’t cancel the associated OrderItemSummaries, so reallocate the canceled quantities to a new FulfillmentOrder.

API Version
48.0

Requires Chatter
No
public static ConnectApi.FulfillmentOrderCancelLineItemsOutputRepresentation cancelFulfillmentOrderLineItems(String fulfillmentOrderId, ConnectApi.FulfillmentOrderLineItemsToCancelInputRepresentation cancelFulfillmentOrderLineItemsInput)

Parameters

fulfillmentOrderId
Type: String
ID of the FulfillmentOrder.

cancelFulfillmentOrderLineItemsInput
Type: ConnectApi.FulfillmentOrderLineItemsToCancelInputRepresentation
List of FulfillmentOrderLineItems to cancel.

Return Value
Type: ConnectApi.FulfillmentOrderCancelLineItemsOutputRepresentation

Example

String fulfillmentOrderId = '0a3xx0000000085AAA';
List<ConnectApi.FulfillmentOrderLineItemInputRepresentation> itemToCancelList = new List<ConnectApi.FulfillmentOrderLineItemInputRepresentation>(){
    for(FulfillmentOrderLineItem fulfillmentOrderLineItem : fulfillmentOrder.FulfillmentOrderLineItems){
        ConnectApi.FulfillmentOrderLineItemInputRepresentation itemToCancel = new ConnectApi.FulfillmentOrderLineItemInputRepresentation();
        itemToCancel.fulfillmentOrderLineItemId = fulfillmentOrderLineItem.Id;
        itemToCancel.quantity = 1;
        itemToCancelList.add(itemToCancel);
    }
}

ConnectAPI.FulfillmentOrderLineItemsToCancelInputRepresentation input = new ConnectAPI.FulfillmentOrderLineItemsToCancelInputRepresentation();
input.fulfillmentOrderLineItemsToCancel = itemToCancelList;

ConnectAPI.FulfillmentOrderCancelLineItemsOutputRepresentation result = ConnectAPI.FulfillmentOrder.cancelFulfillmentOrderLineItems(fulfillmentOrderId, input);

createFulfillmentOrders(fulfillmentOrderInput)
Create one or more FulfillmentOrders and FulfillmentOrderLineItems for an OrderDeliveryGroupSummary, which defines a delivery method and recipient for an OrderSummary. You specify the OrderItemSummaries to allocate, which can be fulfilled from different locations. Specifying multiple fulfillment groups creates one FulfillmentOrder for each location. For each OrderItemSummary, a FulfillmentOrderLineItem is created and assigned to the corresponding FulfillmentOrder.
API Version
48.0

Requires Chatter
No

Signature

public static ConnectApi.FulfillmentOrderOutputRepresentation createFulfillmentOrders(ConnectApi.FulfillmentOrderInputRepresentation fulfillmentOrderInput)

Parameters

fulfillmentOrderInput
  Type: ConnectApi.FulfillmentOrderInputRepresentation
  OrderItemSummaries to allocate, with location and delivery information.

Return Value

Type: ConnectApi.FulfillmentOrderOutputRepresentation

Example

String orderSummaryId = '1Osxx0000004CCG';
String fulfillmentType = 'warehouse';

String warehouseFromLocationId = [SELECT Id from Location WHERE LocationType='Warehouse'
LIMIT 1].Id;

ConnectApi.FulfillmentOrderInputRepresentation fulfillmentOrderInput = new
ConnectApi.FulfillmentOrderInputRepresentation();
fulfillmentOrderInput.orderSummaryId = orderSummaryId;

List<OrderDeliveryGroupSummary> orderDeliveryGroupSummaryList = [SELECT Id FROM
OrderDeliveryGroupSummary WHERE OrderSummaryId =: orderSummaryId];

for (OrderDeliveryGroupSummary orderDeliveryGroupSummary: orderDeliveryGroupSummaryList){

  fulfillmentOrderInput.orderDeliveryGroupSummaryId = orderDeliveryGroupSummary.Id;
  List<ConnectApi.FulfillmentGroupInputRepresentation> fulfillmentGroups = new
  List<ConnectApi.FulfillmentGroupInputRepresentation>();
  ConnectApi.FulfillmentGroupInputRepresentation fulfillmentGroup = new
  ConnectApi.FulfillmentGroupInputRepresentation();
  fulfillmentGroup.fulfilledFromLocationId = warehouseFromLocationId;
  fulfillmentGroup.fulfillmentType = fulfillmentType;

  List<ConnectApi.OrderItemSummaryInputRepresentation> orderItemSummaries = new
  List<ConnectApi.OrderItemSummaryInputRepresentation>();
}
List<OrderItemSummary> orderItemSummaryList = [Select Id, quantity FROM OrderItemSummary WHERE OrderSummaryId = : orderSummaryId AND OrderDeliveryGroupSummaryId =: orderDeliveryGroupSummary.Id];
for(OrderItemSummary orderItemSummary : orderItemSummaryList){
    ConnectApi.OrderItemSummaryInputRepresentation oisInputRepresentation = new ConnectApi.OrderItemSummaryInputRepresentation();
    oisInputRepresentation.orderItemSummaryId = orderItemSummary.Id;
    oisInputRepresentation.quantity = orderItemSummary.quantity;
    orderItemSummaries.add(oisInputRepresentation);
}
fulfillmentGroup.orderItemSummaries = orderItemSummaries;
fulfillmentGroups.add(fulfillmentGroup);
fulfillmentOrderInput.fulfillmentGroups = fulfillmentGroups;

ConnectApi.FulfillmentOrderOutputRepresentation result = ConnectAPI.FulfillmentOrder.createFulfillmentOrders(fulfillmentOrderInput);

createInvoice(fulfillmentOrderId, invoiceInput)
Create an invoice for a FulfillmentOrder that doesn’t have one.

API Version
48.0

Requires Chatter
No

Signature
public static ConnectApi.FulfillmentOrderInvoiceOutputRepresentation createInvoice(String fulfillmentOrderId, ConnectApi.FulfillmentOrderInvoiceInputRepresentation invoiceInput)

Parameters
fulfillmentOrderId
    Type: String
    ID of the FulfillmentOrder.

invoiceInput
    Type: ConnectApi.FulfillmentOrderInvoiceInputRepresentation
    Required input with no data.

Return Value
Type: ConnectApi.FulfillmentOrderInvoiceOutputRepresentation
Example

```java
String fulfillmentOrderId = '0a3xx0000000085AAA';
ConnectApi.FulfillmentOrderInvoiceInputRepresentation input = new
ConnectApi.FulfillmentOrderInvoiceInputRepresentation();
ConnectAPI.FulfillmentOrderInvoiceOutputRepresentation result =
ConnectApi.FulfillmentOrder.createInvoice(fulfillmentOrderId, input);
```

createMultipleFulfillmentOrder(multipleFulfillmentOrderInput)

Create multiple FulfillmentOrders in a single request.

API Version

50.0

Requires Chatter

No

Signature

```java
public static ConnectApi.MultipleFulfillmentOrderOutputRepresentation
createMultipleFulfillmentOrder(ConnectApi.MultipleFulfillmentOrderInputRepresentation
multipleFulfillmentOrderInput)
```

Parameters

multipleFulfillmentOrderInput

Type: ConnectApi.MultipleFulfillmentOrderInputRepresentation on page 2051

Wraps a list of inputs for creating fulfillment orders.

Return Value

Type: ConnectApi.MultipleFulfillmentOrderOutputRepresentation on page 2232

Knowledge Class

Access information about trending articles in Experience Cloud sites.

Namespace

ConnectApi

Knowledge Methods

The following are methods for Knowledge. All methods are static.
IN THIS SECTION:

- `getTopViewedArticlesForTopic(communityId, topicId, maxResults)`
  Get the top viewed articles for a topic.

- `getTrendingArticles(communityId, maxResults)`
  Get trending articles for an Experience Cloud site.

- `getTrendingArticlesForTopic(communityId, topicId, maxResults)`
  Get the trending articles for a topic in an Experience Cloud site.

### `getTopViewedArticlesForTopic(communityId, topicId, maxResults)`

Get the top viewed articles for a topic.

**API Version**

41.0

**Available to Guest Users**

41.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.KnowledgeArticleVersionCollection getTopViewedArticlesForTopic(String communityId, String topicId, Integer maxResults)
```

**Parameters**

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `topicId`
  Type: `String`
  ID of the topic.

- `maxResults`
  Type: `Integer`
  The maximum number of articles returned for each topic ID. Values can be from 1 to 25. The default value is 5.

**Return Value**

Type: `ConnectApi.KnowledgeArticleVersionCollection`
getTrendingArticles(communityId, maxResults)
Get trending articles for an Experience Cloud site.

API Version
36.0

Available to Guest Users
36.0

Requires Chatter
No

Signature
public static ConnectApi.KnowledgeArticleVersionCollection getTrendingArticles(String communityId, Integer maxResults)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

maxResults
Type: Integer
The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

Return Value
Type: ConnectApi.KnowledgeArticleVersionCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetTrendingArticles(communityId, maxResults, result)
Testing ConnectApi Code

getTrendingArticlesForTopic(communityId, topicId, maxResults)
Get the trending articles for a topic in an Experience Cloud site.
API Version
36.0

Available to Guest Users
36.0

Requires Chatter
No

Signature
public static ConnectApi.KnowledgeArticleVersionCollection
getTrendingArticlesForTopic(String communityId, String topicId, Integer maxResults)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

topicId
Type: String
ID of the topic.

maxResults
Type: Integer
The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

Return Value
Type: ConnectApi.KnowledgeArticleVersionCollection

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetTrendingArticlesForTopic(communityId, topicId, maxResults, result)
Testing ConnectApi Code

Knowledge Test Methods
The following are the test methods for Knowledge. All methods are static.
For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.
setTestGetTrendingArticles(communityId, maxResults, result)

Register a ConnectApi.KnowledgeVersionArticleCollection object to be returned when the matching ConnectApi.getTrendingArticles method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
36.0

Signature
public static Void setTestGetTrendingArticles(String communityId, Integer maxResults, ConnectApi.KnowledgeArticleVersionCollection result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

maxResults
Type: Integer
The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

result
Type: ConnectApi.KnowledgeArticleVersionCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getTrendingArticles(communityId, maxResults)
Testing ConnectApi Code

setTestGetTrendingArticlesForTopic(communityId, topicId, maxResults, result)

Register a ConnectApi.KnowledgeVersionArticleCollection object to be returned when the matching ConnectApi.getTrendingArticlesForTopic method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
36.0
Signature

public static Void setTestGetTrendingArticlesForTopic(String communityId, String topicId, Integer maxResults, ConnectApi.KnowledgeArticleVersionCollection result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

topicId
Type: String
ID of the topic.

maxResults
Type: Integer
The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

result
Type: ConnectApi.KnowledgeArticleVersionCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getTrendingArticlesForTopic(communityId, topicId, maxResults)
Testing ConnectApi Code

ManagedContent Class
Get managed content versions.

Namespace
ConnectApi

ManagedContent Methods
The following are methods for ManagedContent. All methods are static.

IN THIS SECTION:
getAllContent(channelId, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate)
Get all managed content versions for a channel.

getAllContent(channelId, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate, showAbsoluteUrl)
Get all managed content versions for a channel with absolute URLs.
getAllDeliveryChannels(pageParam, pageSize)
Get managed content delivery channels for the context user.

getAllManagedContent(communityId, pageParam, pageSize, language, managedContentType)
Get all managed content versions for an Experience Cloud site.

getAllManagedContent(communityId, pageParam, pageSize, language, managedContentType, showAbsoluteUrl)
Get all managed content versions for an Experience Cloud site with absolute URLs.

getContentByContentKeys(channelId, contentKeys, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate, showAbsoluteUrl)
Get managed content versions for a channel using a list of content keys.

gGetContentByIds(channelId, managedContentIds, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate)
Get managed content versions for a channel using a list of managed content IDs.

gGetContentByIds(channelId, managedContentIds, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate, showAbsoluteUrl)
Get managed content versions for a channel with absolute URLs using a list of managed content IDs.

gGetManagedContentByContentKeys(communityId, contentKeys, pageParam, pageSize, language, managedContentType, showAbsoluteUrl)
Get managed content versions for an Experience Cloud site using a list of content keys.

gGetManagedContentByTopics(communityId, topics, pageParam, pageSize, language, managedContentType)
Get managed content versions using a list of content topic names.

gGetManagedContentByTopics(communityId, topics, pageParam, pageSize, language, managedContentType, showAbsoluteUrl)
Get managed content versions with absolute URLs using a list of content topic names.

gGetManagedContentByTopicsAndContentKeys(communityId, contentKeys, topics, pageParam, pageSize, language, managedContentType, showAbsoluteUrl)
Get managed content versions using a list of content keys and content topic names.

gGetManagedContentByTopicsAndIds(communityId, managedContentIds, topics, pageParam, pageSize, language, managedContentType)
Get managed content versions using a list of managed content IDs and content topic names.

gGetManagedContentByTopicsAndIds(communityId, managedContentIds, topics, pageParam, pageSize, language, managedContentType, showAbsoluteUrl)
Get managed content versions with absolute URLs using a list of managed content IDs and content topic names.

gAllContent(channelId, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate)
Get all managed content versions for a channel.

Signature

public static ConnectApi.ManagedContentVersionCollection getAllContent(String channelId, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean includeMetadata, String startDate, String endDate)

Parameters

channelId
Type: String
ID of the channel.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in null, the default size is 25.

language
Type: String
Language locale for the managed content, for example, en_US. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

managedContentType
Type: String
The developer name of the content version.

includeMetadata
Type: Boolean
Specifies whether to include metadata in the response (true) or not (false). The default value is false.

startDate
Type: String
Publish start date in ISO 8601 format, for example, 2011-02-25T18:24:31.000Z.

endDate
Type: String
Publish end date in ISO 8601 format, for example, 2011-02-25T18:24:31.000Z.

Return Value
Type: ConnectApi.ManagedContentVersionCollection

getAllContent(channelId, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate, showAbsoluteUrl)
Get all managed content versions for a channel with absolute URLs.

API Version
50.0

Available to Guest Users
50.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedContentVersionCollection getAllContent(String channelId, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean includeMetadata, String startDate, String endDate, Boolean showAbsoluteUrl)

Parameters

channelId
Type: String
ID of the channel.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in null, the default size is 25.

language
Type: String
Language locale for the managed content, for example, en_US. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.
managedContentType
   Type: String
   The developer name of the content version.

includeMetadata
   Type: Boolean
   Specifies whether to include metadata in the response (true) or not (false). The default value is false.

startDate
   Type: String
   Publish start date in ISO 8601 format, for example, 2011-02-25T18:24:31.000Z.

date
   Type: String
   Publish end date in ISO 8601 format, for example, 2011-02-25T18:24:31.000Z.

showAbsoluteUrl
   Type: Boolean
   Specifies whether to show absolute URLs in the output class (true) or not (false). The default value is false.

Return Value
Type: ConnectApi.ManagedContentVersionCollection

No

**Signature**
```
public static ConnectApi.ManagedContentVersionCollection getContentByContentKeys(String channelId, List<String> contentKeys, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean includeMetadata, String startDate, String endDate, Boolean showAbsoluteUrl)
```

**Parameters**

*channelId*
Type: String
ID of the channel.

*contentKeys*
Type: List<String>
List of up to 50 content keys for the managed content. A content key is a universally unique identifier (UUID) such as MCA4CCV5QS2BAB5H7YRCRPTCWGZQ.
getPageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in null, the default size is 25.

language
Type: String
Language locale for the managed content, for example, en_US. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

managedContentType
Type: String
The developer name of the content version.

includeMetadata
Type: Boolean
Specifies whether to include metadata in the response (true) or not (false). The default value is false.

startDate
Type: String
Publish start date in ISO 8601 format, for example, 2011-02-25T18:24:31.000Z.

endDate
Type: String
Publish end date in ISO 8601 format, for example, 2011-02-25T18:24:31.000Z.

showAbsoluteUrl
Type: Boolean
Specifies whether to show absolute URLs in the output class (true) or not (false). The default value is false.

Return Value
Type: ConnectApi.ManagedContentVersionCollection

getContentByIds(channelId, managedContentIds, pageParam, pageSize, language, managedContentType, includeMetadata, startDate, endDate)
Get managed content versions for a channel using a list of managed content IDs.

Signature

```java
public static ConnectApi.ManagedContentVersionCollection getContentByIds(String channelId, List<String> managedContentIds, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean includeMetadata, String startDate, String endDate)
```

Parameters

- `channelId`
  - **Type:** `String`
  - ID of the channel.

- `managedContentIds`
  - **Type:** `List<String>`
  - Comma-separated list of managed content IDs.

- `pageParam`
  - **Type:** `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- `pageSize`
  - **Type:** `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in `null`, the default size is 25.

- `language`
  - **Type:** `String`
  - Language locale for the managed content, for example, `en_US`. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

- `managedContentType`
  - **Type:** `String`
  - The developer name of the content version.

- `includeMetadata`
  - **Type:** `Boolean`
  - Specifies whether to include metadata in the response (`true`) or not (`false`). The default value is `false`.

- `startDate`
  - **Type:** `String`
  - Publish start date in ISO 8601 format, for example, `2011-02-25T18:24:31.000Z`.

- `endDate`
  - **Type:** `String`
  - Publish end date in ISO 8601 format, for example, `2011-02-25T18:24:31.000Z`.
Return Value

Type: `ConnectApi.ManagedContentVersionCollection`

```java
public static ConnectApi.ManagedContentVersionCollection getContentByIds(String channelId, List<String> managedContentIds, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean includeMetadata, String startDate, String endDate, Boolean showAbsoluteUrl)
```

Get managed content versions for a channel with absolute URLs using a list of managed content IDs.

public static ConnectApi.ManagedContentVersionCollection getContentByIds(String channelId, List<String> managedContentIds, Integer pageParam, Integer pageSize, String language, String managedContentType, Boolean includeMetadata, String startDate, String endDate, Boolean showAbsoluteUrl)
```

Parameters

`channelId`

Type: `String`

ID of the channel.

`managedContentIds`

Type: `List<String>`

Comma-separated list of managed content IDs.

`pageParam`

Type: `Integer`

Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

`pageSize`

Type: `Integer`

Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in `null`, the default size is 25.

`language`

Type: `String`

Language locale for the managed content, for example, `en_US`. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.
managedContentType
Type: String
The developer name of the content version.

includeMetadata
Type: Boolean
Specifies whether to include metadata in the response (true) or not (false). The default value is false.

startDate
Type: String
Publish start date in ISO 8601 format, for example, 2011-02-25T18:24:31.000Z.

date
Type: String
Publish end date in ISO 8601 format, for example, 2011-02-25T18:24:31.000Z.

showAbsoluteUrl
Type: Boolean
Specifies whether to show absolute URLs in the output class (true) or not (false). The default value is false.

Return Value
Type: ConnectApi.ManagedContentVersionCollection

List<String> topics, Integer pageParam, Integer pageSize, String language, String
managedContentType, Boolean showAbsoluteUrl)
```

Parameters

- **communityId**
  - Type: String
  - ID of the Experience Cloud site.

- **managedContentIds**
  - Type: List<String>
  - Comma-separated list of managed content IDs.

- **topics**
  - Type: List<String>
  - Comma-separated list of up to 15 content topic names.

- **pageParam**
  - Type: Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of items per page. Valid values are from 1 through 250. For performance reasons, we recommend 25 or fewer items per page. If you pass in null, the default size is 25.

- **language**
  - Type: String
  - Language locale for the managed content, for example, en_US. If the requested translation isn’t available, the language defaults to the context user’s language. If the context user’s language isn’t available, the language defaults to the content type’s original language.

- **managedContentType**
  - Type: String
  - The developer name of the content version.

- **showAbsoluteUrl**
  - Type: Boolean
  - Specifies whether to show absolute URLs in the output class (true) or not (false). The default value is false.

Return Value

- Type: `ConnectApi.ManagedContentVersionCollection`
ManagedTopics Class
Access information about managed topics in an Experience Cloud site. Create, delete, and reorder managed topics.

Namespace
ConnectApi

ManagedTopics Methods
The following are methods for ManagedTopics. All methods are static.

IN THIS SECTION:
createManagedTopic(communityId, recordId, managedTopicType)
Create a managed topic of a specific type for an Experience Cloud site.
createManagedTopic(communityId, recordId, managedTopicType, parentId)
Create a child managed topic for an Experience Cloud site.
createManagedTopicByName(communityId, name, managedTopicType)
Create a managed topic of a specific type by name for an Experience Cloud site.
createManagedTopicByName(communityId, name, managedTopicType, parentId)
Create a child managed topic by name for an Experience Cloud site.
deleteManagedTopic(communityId, managedTopicId)
Delete a managed topic from an Experience Cloud site.
getManagedTopic(communityId, managedTopicId)
Get a managed topic in an Experience Cloud site.
getManagedTopic(communityId, managedTopicId, depth)
Get a managed topic, including its parent and children managed topics, in an Experience Cloud site.
getManagedTopics(communityId, managedTopicType)
Get managed topics of the specified type for an Experience Cloud site.
getManagedTopics(communityId, managedTopicType, depth)
Get managed topics of the specified type, including their parent and children managed topics, in an Experience Cloud site.
getManagedTopics(communityId, managedTopicType, recordIds, depth)
Get managed topics of the specified type, including their parent and children managed topics, that are associated with topics in an Experience Cloud site.
getManagedTopics(communityId, managedTopicType, pageParam, pageSize)
Get a page of managed topics.
reorderManagedTopics(communityId, managedTopicPositionCollection)
Reorder the relative positions of managed topics in an Experience Cloud site.
createManagedTopic(communityId, recordId, managedTopicType)

Create a managed topic of a specific type for an Experience Cloud site.

API Version
32.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedTopic createManagedTopic(String communityId, String recordId, ConnectApi.ManagedTopicType managedTopicType)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

recordId
Type: String
ID of the topic.

managedTopicType
Type: ConnectApi.ManagedTopicType
Specify the type of managed topic.

- Content—Topics that are associated with native content.
- Featured—Topics that are featured, for example, on the Experience Cloud site home page, but don’t provide overall navigation.
- Navigational—Topics that display in a navigational menu in the Experience Cloud site.

A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.

You can create up to 25 Featured and 5,000 Content topics. You can create up to eight levels of Navigational managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 Navigational topics.

Return Value
Type: ConnectApi.ManagedTopic

Usage
Only community managers (users with the Create and Set Up Experiences or Manage Experiences permission) can create managed topics.

createManagedTopic(communityId, recordId, managedTopicType, parentId)

Create a child managed topic for an Experience Cloud site.
API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedTopic createManagedTopic(String communityId, String recordId, ConnectApi.ManagedTopicType managedTopicType, String parentId)

Parameters

*communityId*
Type: String
Use the ID for an Experience Cloud site, internal, or null.

*recordId*
Type: String
ID of the topic.

*managedTopicType*
Type: ConnectApi.ManagedTopicType
Specify Navigational for the type of managed topic to create a child managed topic.
You can create up to 25 Featured and 5,000 Content topics. You can create up to eight levels of Navigational managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 Navigational topics.

*parentId*
Type: String
ID of the parent managed topic.
You can create up to eight levels (parent, direct children, their children, etc.) of managed topics and up to 10 children managed topics per managed topic.

Return Value
Type: ConnectApi.ManagedTopic

Usage
Only community managers (users with the Create and Set Up Experiences or Manage Experiences permission) can create managed topics.

createManagedTopicByName(communityId, name, managedTopicType)
Create a managed topic of a specific type by name for an Experience Cloud site.

API Version
32.0
public static ConnectApi.ManagedTopic createManagedTopicByName(String communityId, String name, ConnectApi.ManagedTopicType managedTopicType)

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **name**
  - Type: String
  - Name of the topic.

- **managedTopicType**
  - Type: ConnectApi.ManagedTopicType
  - Specify the type of managed topic.
    - Content—Topics that are associated with native content.
    - Featured—Topics that are featured, for example, on the Experience Cloud site home page, but don’t provide overall navigation.
    - Navigational—Topics that display in a navigational menu in the Experience Cloud site.

A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.

You can create up to 25 Featured and 5,000 Content topics. You can create up to eight levels of Navigational managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 Navigational topics.

Return Value

- **Type**: ConnectApi.ManagedTopic

Usage

Only community managers (users with the Create and Set Up Experiences or Manage Experiences permission) can create managed topics.

createManagedTopicByName(communityId, name, managedTopicType, parentId)

Create a child managed topic by name for an Experience Cloud site.
**createManagedTopicByName(communityId, name, managedTopicType, parentId)**

**Signature**

```java
public static ConnectApi.ManagedTopic createManagedTopicByName(String communityId, String name, ConnectApi.ManagedTopicType managedTopicType, String parentId)
```

**Parameters**

- **communityId**
  - **Type:** String
  - Use the ID for an Experience Cloud site, internal, or null.

- **name**
  - **Type:** String
  - Name of the topic.

- **managedTopicType**
  - **Type:** ConnectApi.ManagedTopicType
  - Specify Navigational for the type of managed topic to create a child managed topic.
  - You can create up to 25 Featured and 5,000 Content topics. You can create up to eight levels of Navigational managed topics with 25 top-level topics and 10 children topics per level for a maximum of 2,775 Navigational topics.

- **parentId**
  - **Type:** String
  - ID of the parent managed topic.
  - You can create up to eight levels (parent, direct children, their children, etc.) of managed topics and up to 10 children managed topics per managed topic.

**Return Value**

- **Type:** ConnectApi.ManagedTopic

**Usage**

Only community managers (users with the Create and Set Up Experiences or Manage Experiences permission) can create managed topics.

**deleteManagedTopic(communityId, managedTopicId)**

Delete a managed topic from an Experience Cloud site.

**API Version**

32.0

**Requires Chatter**

No

**Signature**

```java
public static deleteManagedTopic(String communityId, String managedTopicId)
```
Parameters

**communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

**managedTopicId**
  Type: String
  ID of managed topic.

Return Value
Type: Void

Usage
Only community managers (users with the Create and Set Up Experiences or Manage Experiences permission) can delete managed topics.

**getManagedTopic(communityId, managedTopicId)**
Get a managed topic in an Experience Cloud site.

API Version
32.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
```
public static ConnectApi.ManagedTopic getManagedTopic(String communityId, String managedTopicId)
```

Parameters

**communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

**managedTopicId**
  Type: String
  ID of managed topic.
Return Value
Type: `ConnectApi.ManagedTopic`

`getManagedTopic(communityId, managedTopicId, depth)`
Get a managed topic, including its parent and children managed topics, in an Experience Cloud site.

API Version
35.0

Available to Guest Users
35.0

Requires Chatter
No

Signature
```
public static ConnectApi.ManagedTopic getManagedTopic(String communityId, String
managedTopicId, Integer depth)
```

Parameters
```
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

managedTopicId
  Type: String
  ID of managed topic.

depth
  Type: Integer
  Specify an integer 1–8. If you specify 1, the children property of the ConnectApi.ManagedTopic output class is null. If you specify 2, the children property of the ConnectApi.ManagedTopic output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If depth isn't specified, it defaults to 1.
```

Return Value
Type: `ConnectApi.ManagedTopic`

`getManagedTopics(communityId)`
Get the featured and navigational managed topics for an Experience Cloud site.

To get the content topics for an Experience Cloud site, use `getManagedTopics(communityId, managedTopicType)`.
API Version
32.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

Return Value
Type: ConnectApi.ManagedTopicCollection

getManagedTopics(communityId, managedTopicType)
Get managed topics of the specified type for an Experience Cloud site.
Use the ID for an Experience Cloud site, **internal**, or **null**.

`managedTopicType`

Type: `ConnectApi.ManagedTopicType`

Type of managed topic.

- **Content**—Topics that are associated with native content.
- **Featured**—Topics that are featured, for example, on the Experience Cloud site home page, but don’t provide overall navigation.
- **Navigational**—Topics that display in a navigational menu in the Experience Cloud site.

A topic can be associated with all three managed topic types, so a topic can be a **Featured**, **Navigational**, and **Content** topic.

If you specify **Content**, up to 50 topics are returned. If you want more than 50 **Content** topics, use `getManagedTopics(communityId, managedTopicType, pageParam, pageSize)`.

**Return Value**

Type: `ConnectApi.ManagedTopicCollection`

`getManagedTopics(communityId, managedTopicType, depth)`

Get managed topics of the specified type, including their parent and children managed topics, in an Experience Cloud site.

**API Version**

35.0

**Available to Guest Users**

35.0

**Requires Chatter**

No

**Signature**

`public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId, ConnectApi.ManagedTopicType managedTopicType, Integer depth)`

**Parameters**

`communityId`

Type: `String`

Use the ID for an Experience Cloud site, **internal**, or **null**.

`managedTopicType`

Type: `ConnectApi.ManagedTopicType`

Type of managed topic.

- **Content**—Topics that are associated with native content.
• Featured—Topics that are featured, for example, on the Experience Cloud site home page, but don’t provide overall navigation.
• Navigational—Topics that display in a navigational menu in the Experience Cloud site.

A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.

depth
Type: Integer

Specify an integer 1–8. If you specify 1, the children property of the ConnectApi.ManagedTopic output class is null. If you specify 2, the children property of the ConnectApi.ManagedTopic output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If depth isn’t specified, it defaults to 1.

Return Value
Type: ConnectApi.ManagedTopicCollection

getManagedTopics(communityId, managedTopicType, recordIds, depth)

Get managed topics of the specified type, including their parent and children managed topics, that are associated with topics in an Experience Cloud site.

API Version
38.0

Available to Guest Users
38.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId, ConnectApi.ManagedTopicType managedTopicType, List<String> recordIds, Integer depth)

Parameters

communityId
Type: String

Use the ID for an Experience Cloud site, internal, or null.

managedTopicType
Type: ConnectApi.ManagedTopicType

Type of managed topic.
• Content—Topics that are associated with native content.
• Featured—Topics that are featured, for example, on the Experience Cloud site home page, but don’t provide overall navigation.
• **Navigational**—Topics that display in a navigational menu in the Experience Cloud site.

A topic can be associated with all three managed topic types, so a topic can be a **Featured**, **Navigational**, and **Content** topic.

`recordIds`

Type: `List<String>`

A list of up to 100 topic IDs associated with the managed topics.

If you list more than 10 topic IDs, you can't specify 2–8 for `depth`.

`depth`

Type: `Integer`

Specify an integer 1–8. If you specify 1, the `children` property of the `ConnectApi.ManagedTopic` output class is `null`. If you specify 2, the `children` property of the `ConnectApi.ManagedTopic` output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If `depth` isn't specified, it defaults to 1.

**Return Value**

Type: `ConnectApi.ManagedTopicCollection`

**getManagedTopics(communityId, managedTopicType, pageParam, pageSize)**

Get a page of managed topics.

**API Version**

44.0

**Available to Guest Users**

44.0

**Requires Chatter**

No

**Signature**

`public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId, ConnectApi.ManagedTopicType managedTopicType, Integer pageParam, Integer pageSize)`

**Parameters**

`communityId`

Type: `String`

Use the ID for an Experience Cloud site, `internal`, or `null`.

`managedTopicType`

Type: `ConnectApi.ManagedTopicType`

Type of managed topic.
• Content—Topics that are associated with native content.
• Featured—Topics that are featured, for example, on the Experience Cloud site home page, but don’t provide overall navigation.
• Navigational—Topics that display in a navigational menu in the Experience Cloud site.

A topic can be associated with all three managed topic types, so a topic can be a Featured, Navigational, and Content topic.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 50.

Return Value
Type: ConnectApi.ManagedTopicCollection

reorderManagedTopics(communityId, managedTopicPositionCollection)
Reorder the relative positions of managed topics in an Experience Cloud site.

API Version
32.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedTopicCollection reorderManagedTopics(String communityId, ConnectApi.ManagedTopicPositionCollectionInput managedTopicPositionCollection)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

managedTopicPositionCollection
Type: ConnectApi.ManagedTopicPositionCollectionInput
A collection of relative positions of managed topics. This collection can include only Featured and Navigational topics and doesn’t have to include all managed topics.

Return Value
Type: ConnectApi.ManagedTopicCollection
Usage

Only community managers (users with the Create and Set Up Experiences or Manage Experiences permission) can reorder managed topics.

You can reorder parent managed topics or children managed topics with the same parent. If you don’t include all managed topics in the `ConnectApi.ManagedTopicPositionCollectionInput`, the managed topics are reordered by respecting the positions indicated in the `ConnectApi.ManagedTopicPositionCollectionInput` and then by pushing down any managed topics that aren’t included in the `ConnectApi.ManagedTopicPositionCollectionInput` to the next available position.

Example

If you have these managed topics:

<table>
<thead>
<tr>
<th>Managed Topic</th>
<th>Position</th>
</tr>
</thead>
<tbody>
<tr>
<td>ManagedTopicA</td>
<td>0</td>
</tr>
<tr>
<td>ManagedTopicB</td>
<td>1</td>
</tr>
<tr>
<td>ManagedTopicC</td>
<td>2</td>
</tr>
<tr>
<td>ManagedTopicD</td>
<td>3</td>
</tr>
<tr>
<td>ManagedTopicE</td>
<td>4</td>
</tr>
</tbody>
</table>

And you reorder managed topics by including this information in `ConnectApi.ManagedTopicPositionCollectionInput`:

<table>
<thead>
<tr>
<th>Managed Topic</th>
<th>Position</th>
</tr>
</thead>
<tbody>
<tr>
<td>ManagedTopicD</td>
<td>0</td>
</tr>
<tr>
<td>ManagedTopicE</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Managed Topic</th>
<th>Position</th>
</tr>
</thead>
<tbody>
<tr>
<td>ManagedTopicD</td>
<td>0</td>
</tr>
<tr>
<td>ManagedTopicA</td>
<td>1</td>
</tr>
<tr>
<td>ManagedTopicE</td>
<td>2</td>
</tr>
<tr>
<td>ManagedTopicC</td>
<td>3</td>
</tr>
<tr>
<td>ManagedTopicB</td>
<td>4</td>
</tr>
</tbody>
</table>

Retired ManagedTopics Methods

The following methods for `ManagedTopics` are retired.
**IN THIS SECTION:**

`getManagedTopics(communityId, managedTopicType, recordId, depth)`

Get managed topics of the specified type, including their parent and children managed topics, that are associated with a given topic in an Experience Cloud site.

**getManagedTopics (communityId, managedTopicType, recordId, depth)**

Get managed topics of the specified type, including their parent and children managed topics, that are associated with a given topic in an Experience Cloud site.

**API Version**

35.0–37.0

**Important:** Inversion 38.0 and later, use `getManagedTopics (communityId, managedTopicType, recordIds, depth)`.

**Available to Guest Users**

35.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.ManagedTopicCollection getManagedTopics(String communityId, ConnectApi.ManagedTopicType managedTopicType, String recordId, Integer depth)
```

**Parameters**

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- `managedTopicType`
  - Type: `ConnectApi.ManagedTopicType`
  - Type of managed topic.
    - `Content`—Topics that are associated with native content.
    - `Featured`—Topics that are featured, for example, on the Experience Cloud site home page, but don’t provide overall navigation.
    - `Navigational`—Topics that display in a navigational menu in the Experience Cloud site.
  
  A topic can be associated with all three managed topic types, so a topic can be a `Featured`, `Navigational`, and `Content` topic.

- `recordId`
  - Type: `String`
  - ID of the topic associated with the managed topics.
**depth**
Type: `Integer`

Specify an integer 1–8. If you specify 1, the `children` property of the `ConnectApi.ManagedTopic` output class is `null`. If you specify 2, the `children` property of the `ConnectApi.ManagedTopic` output class contains the direct children managed topics, if any, of the managed topic. If you specify 3–8, you get the direct children managed topics and their children managed topics if there are any. If `depth` isn’t specified, it defaults to 1.

**Return Value**
Type: `ConnectApi.ManagedTopicCollection`

**Mentions Class**

Access information about mentions. A mention is an "@" character followed by a user or group name. When a user or group is mentioned, they receive a notification.

**Namespace**
`ConnectApi`

**Mentions Methods**
The following are methods for `Mentions`. All methods are static.

**IN THIS SECTION:**
- `getMentionCompletions(communityId, q, contextId)`
  Get the first page of possible users and groups to mention in a feed item body or comment body.
- `getMentionCompletions(communityId, q, contextId, type, pageParam, pageSize)`
  Get a page of possible mention proposals of the specified type.
- `getMentionValidations(communityId, parentId, recordIds, visibility)`
  Get information about whether the mentions are valid for the context user.

**getMentionCompletions(communityId, q, contextId)**
Get the first page of possible users and groups to mention in a feed item body or comment body.

**API Version**
29.0

**Requires Chatter**
Yes

**Signature**
```
public static ConnectApi.MentionCompletionPage getMentionCompletions (String communityId, String q, String contextId)
```
Parameters

**communityId**
- **Type:** String
  - Use the ID for an Experience Cloud site, internal, or null.

**q**
- **Type:** String
  - A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn’t require a minimum number of characters. This parameter does not support wildcards.

**contextId**
- **Type:** String
  - A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

Return Value

**Type:** ConnectApi.MentionCompletionPage

Usage

Call this method to generate a page of proposed mentions that a user can choose from when they enter characters after @ in a feed item body or a comment body.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetMentionCompletions(communityId, q, contextId, result)`
- Testing ConnectApi Code

### `getMentionCompletions(communityId, q, contextId, type, pageParam, pageSize)`

Get a page of possible mention proposals of the specified type.

API Version

29.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.Mentions getMentionCompletions (String communityId, String q, String contextId, ConnectApi.MentionCompletionType type, Integer pageParam, Integer pageSize)
```
Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

q
  Type: String
  A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn’t require a minimum number of characters. This parameter does not support wildcards.

contextId
  Type: String
  A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

type
  Type: ConnectApi.MentionCompletionType
  Type of mention completion.
  • All—All mention completions, regardless of the type of record to which the mention refers.
  • Group—Mention completions for groups.
  • User—Mention completions for users.

pageParam
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value

Type: ConnectApi.MentionCompletionPage

Usage

Call this method to generate a page of proposed mentions that a user can choose from when they enter characters after @ in a feed item body or a comment body.

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestGetMentionCompletions(communityId, q, contextId, type, pageParam, pageSize, result)
  Testing ConnectApi Code

getMentionValidations(communityId, parentId, recordIds, visibility)

Get information about whether the mentions are valid for the context user.
API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.Mentions getMentionValidations(String communityId, String parentId, List<String> recordIds, ConnectApi.FeedItemVisibilityType visibility)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

parentId
Type: String
The feed item parent ID.

recordIds
Type: List<String>
A comma separated list of IDs to be mentioned. The maximum value is 25.

visibility
Type: ConnectApi.FeedItemVisibilityType
Type of users who can see a feed item.
• AllUsers—Visibility is not limited to internal users.
• InternalUsers—Visibility is limited to internal users.

Return Value
Type: ConnectApi.MentionValidations

Usage
Call this method to check whether the record IDs returned from a call to ConnectApi.Mentions.getMentionCompletions are valid for the context user. For example, the context users can’t mention private groups they don’t belong to. If such a group were included in the list of mention validations, the ConnectApi.MentionValidations.hasErrors property would be true and the group would have a ConnectApi.MentionValidation.validationStatus of Disallowed.

Mentions Test Methods
The following are the test methods for Mentions. All methods are static.
For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.
**setTestGetMentionCompletions(communityId, q, contextId, result)**

Register a `ConnectApi.MentionCompletionPage` object to be returned when `getMentionCompletions(String, String, String)` is called in a test context.

**API Version**

29.0

**Signature**

```java
public static Void setTestGetMentionCompletions (String communityId, String q, String contextId, ConnectApi.MentionCompletionPage result)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **q**
  - Type: `String`
  - A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn’t require a minimum number of characters. This parameter does not support wildcards.

- **contextId**
  - Type: `String`
  - A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

- **result**
  - Type: `ConnectApi.MentionCompletionPage`
  - A `ConnectApi.MentionCompletionPage` object containing test data.

**Return Value**

Type: `Void`

**SEE ALSO:**
- `getMentionCompletions(communityId, q, contextId)`
- Testing ConnectApi Code

---

**setTestGetMentionCompletions(communityId, q, contextId, type, pageParam, pageSize, result)**

Register a `ConnectApi.MentionCompletionPage` object to be returned when `getMentionCompletions(String, String, String, ConnectApi.MentionCompletionType, Integer, Integer)` is called in a test context.
API Version
29.0

Signature
public static Void setTestGetMentionCompletions (String communityId, String q, String contextId, ConnectApi.MentionCompletionType type, Integer pageParam, Integer pageSize, ConnectApi.MentionCompletionPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
A search term for matching user and group names. Searching for a group requires a minimum of 2 characters. Searching for a user doesn’t require a minimum number of characters. This parameter does not support wildcards.

contextId
Type: String
A feed item ID (for a mention in a comment) or a feed subject ID (for a mention in a feed item) that narrows search results, with more useful results listed first. Use a group ID for groups that allow customers to ensure mention completion results include customers.

type
Type: ConnectApi.MentionCompletionType
Type of mention completion.
• All—All mention completions, regardless of the type of record to which the mention refers.
• Group—Mention completions for groups.
• User—Mention completions for users.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

result
Type: ConnectApi.MentionCompletionPage
A ConnectApi.MentionCompletionPage object containing test data.
Return Value
Type: Void

SEE ALSO:
getMentionCompletions(communityId, q, contextId, type, pageParam, pageSize)
Testing ConnectApi Code

Missions Class
Export and purge mission activity for users. Get a user's mission progress. Update mission activity counts for users.

Namespace
ConnectApi

Missions Methods
The following are methods for Missions. All methods are static.

IN THIS SECTION:
exportUserMissionsActivities(communityId, userId)
Export mission activity for a user.
getUserMissionsProgress(communityId, userId)
Get mission activity progress for a user.
purgeUserMissionsActivities(communityId, userId)
Start a job to purge mission activity for a user.
purgeUserMissionsActivities(communityId)
Start a job to purge mission activity for all users.
updateUserMissionActivityCount(activityType, activityCount, communityId, userId)
Update the mission activity count for a user.

exportUserMissionsActivities(communityId, userId)
Export mission activity for a user.

API Version
45.0

Requires Chatter
No
Signature

```
public static ConnectApi.UserMissionActivitiesJob exportUserMissionsActivities(String communityId, String userId)
```

Parameters

**communityId**
- Type: String
  
  Use the ID for an Experience Cloud site, internal, or null.

**userId**
- Type: String
  
  ID of the user.

Return Value

Type: **ConnectApi.UserMissionActivitiesJob**

Usage

You can export these activities with this method.

- **FeedItemAnswerAQuestion**—User answered a question.
- **FeedItemLikeSomething**—User liked a post or comment.
- **FeedItemMarkAnswerAsBest**—User marked an answer as the best answer.
- **FeedItemPostQuestion**—User posted a question.
- **FeedItemReceiveAComment**—User received a comment on a post.
- **FeedItemReceiveALike**—User received a like on a post or comment.
- **FeedItemReceiveAnAnswer**—User received an answer to a question.
- **FeedItemWriteAComment**—User commented on a post.
- **FeedItemWriteAPost**—User made a post.
- **FeedItemYourAnswerMarkedBest**—User's answer was marked as the best answer.

**getUserMissionsProgress(communityId, userId)**

Get mission activity progress for a user.
public static ConnectApi.UserMissionActivityCollection getUserMissionsProgress(String communityId, String userId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
ID of the user.

Return Value
Type: ConnectApi.UserMissionActivityCollection

purgeUserMissionsActivities(communityId, userId)
Start a job to purge mission activity for a user.

API Version
45.0

Requires Chatter
No

Signature
public static ConnectApi.UserMissionActivitiesJob purgeUserMissionsActivities(String communityId, String userId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
ID of the user.

Return Value
Type: ConnectApi.UserMissionActivitiesJob
Usage

This method purges these activities.

- **FeedItemAnswerAQuestion**—User answered a question.
- **FeedItemLikeSomething**—User liked a post or comment.
- **FeedItemMarkAnswerAsBest**—User marked an answer as the best answer.
- **FeedItemPostQuestion**—User posted a question.
- **FeedItemReceiveAComment**—User received a comment on a post.
- **FeedItemReceiveALike**—User received a like on a post or comment.
- **FeedItemReceiveAnAnswer**—User received an answer to a question.
- **FeedItemWriteAComment**—User commented on a post.
- **FeedItemWriteAPost**—User made a post.
- **FeedItemYourAnswerMarkedBest**—User's answer was marked as the best answer.

**purgeUserMissionsActivities(communityId)**

Start a job to purge mission activity for all users.

API Version

49.0

Requires Chatter

No

Signature

```
public static ConnectApi.UserMissionActivitiesJob purgeUserMissionsActivities(String communityId)
```

Parameters

- **communityId**
  Type: **String**
  Use the ID for an Experience Cloud site, internal, or null.

Return Value

Type: **ConnectApi.UserMissionActivitiesJob**
• FeedItemPostQuestion—User posted a question.
• FeedItemReceiveAComment—User received a comment on a post.
• FeedItemReceiveALike—User received a like on a post or comment.
• FeedItemReceiveAnAnswer—User received an answer to a question.
• FeedItemWriteAComment—User commented on a post.
• FeedItemWriteAPost—User made a post.
• FeedItemYourAnswerMarkedBest—User’s answer was marked as the best answer.

`updateUserMissionActivityCount(activityType, activityCount, communityId, userId)`

Update the mission activity count for a user.

API Version
45.0

Requires Chatter
No

Signature

```java
public static ConnectApi.UserMissionActivityStatus updateUserMissionActivityCount(ConnectApi.UserMissionActivityType activityType, Integer activityCount, String communityId, String userId)
```

Parameters

`activityType`
Type: `ConnectApi.UserMissionActivityType`
Type of mission activity for a user. Values are:
• FeedItemAnswerAQuestion—User answered a question.
• FeedItemLikeSomething—User liked a post or comment.
• FeedItemMarkAnswerAsBest—User marked an answer as the best answer.
• FeedItemPostQuestion—User posted a question.
• FeedItemReceiveAComment—User received a comment on a post.
• FeedItemReceiveALike—User received a like on a post or comment.
• FeedItemReceiveAnAnswer—User received an answer to a question.
• FeedItemWriteAComment—User commented on a post.
• FeedItemWriteAPost—User made a post.
• FeedItemYourAnswerMarkedBest—User’s answer was marked as the best answer.

`activityCount`
Type: `Integer`
Number of mission activities of the specified type for the user.
**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**userId**
Type: String
ID of the user.

Return Value
Type: `ConnectApi.UserMissionActivityStatus`

## NextBestAction Class
Execute recommendation strategies, get recommendations, manage recommendation reactions.

## Namespace
ConnectApi

## NextBestAction Methods
The following are methods for `NextBestAction`. All methods are static.

**IN THIS SECTION:**
- `deleteRecommendationReaction(reactionId)`
  Delete a recommendation reaction.
- `executeStrategy(strategyName, maxResults, contextRecordId)`
  Execute a strategy.
- `executeStrategy(strategyName, maxResults, contextRecordId, debugTrace)`
  Execute a strategy and request a trace.
- `executeStrategy(strategyName, strategyInput)`
  Execute a strategy using an input class.
- `getRecommendation(recommendationId)`
  Get a recommendation.
- `getRecommendationReaction(reactionId)`
  Get a recommendation reaction.
- `getRecommendationReactions(onBehalfOfId, createdById, targetId, contextRecordId, pageParam, pageSize)`
  Get recommendation reactions.
- `setRecommendationReaction(reaction)`
  Record user reactions to recommendations.

### deleteRecommendationReaction(reactionId)
Delete a recommendation reaction.
API Version
45.0

Requires Chatter
No

Signature
public static Void deleteRecommendationReaction(String reactionId)

Parameters
reactionId
  Type: String
  ID of the recommendation reaction.

Return Value
Type: Void

Usage
Users with the Manage Next Best Action Recommendations or Modify All Data permission can delete recommendation reactions.

executeStrategy(strategyName, maxResults, contextRecordId)
Execute a strategy.

API Version
45.0

Available to Guest Users
45.0

Requires Chatter
No

Signature
public static ConnectApi.NBARecommendations executeStrategy(String strategyName, Integer maxResults, String contextRecordId)

Parameters
strategyName
  Type: String
Name of the strategy.

\texttt{maxResults}

Type: \texttt{Integer}

Maximum number of results. Valid values are from 1 to 25. The default is 3.

\texttt{contextRecordId}

Type: \texttt{String}

ID of the context record. For example, if the next best action is on a case detail page, the ID of the case.

Return Value

Type: \texttt{ConnectApi.NBARecommendations}

\texttt{executeStrategy(strategyName, maxResults, contextRecordId, debugTrace)}

Execute a strategy and request a trace.

API Version

45.0

Available to Guest Users

45.0

Requires Chatter

No

Signature

\texttt{public static ConnectApi.NBARecommendations executeStrategy(String strategyName, Integer maxResults, String contextRecordId, Boolean debugTrace)}

Parameters

\texttt{strategyName}

Type: \texttt{String}

Name of the strategy.

\texttt{maxResults}

Type: \texttt{Integer}

Maximum number of results. Valid values are from 1 to 25. The default is 3.

\texttt{contextRecordId}

Type: \texttt{String}

ID of the context record. For example, if the next best action is on a case detail page, the ID of the case.

\texttt{debugTrace}

Type: \texttt{Boolean}

Specifies whether to return trace and debug information in the response (true) or not (false).
executeStrategy(strategyName, strategyInput)

Execute a strategy using an input class.

API Version
45.0

Available to Guest Users
45.0

Requires Chatter
No

Signature
public static ConnectApi.NBARecommendations executeStrategy(String strategyName, ConnectApi.NBAStrategyInput strategyInput)

Parameters
strategyName
Type: String
Name of the strategy.

strategyInput
Type: ConnectApi.NBAStrategyInput
A ConnectApi.NBAStrategyInput body.

Return Value
Type: ConnectApi.NBARecommendations

getRecommendation(recommendationId)

Get a recommendation.

API Version
45.0

Requires Chatter
No
public static ConnectApi.Recommendation getRecommendation(String recommendationId)

Parameters

recommendationId
Type: String
ID of the recommendation.

Return Value
Type: ConnectApi.Recommendation

```
getRecommendationReaction(reactionId)
```
Get a recommendation reaction.

API Version
45.0

Requires Chatter
No

Signature

public static ConnectApi.RecommendationReaction getRecommendationReaction(String reactionId)

Parameters

reactionId
Type: String
ID of the recommendation reaction.

Return Value
Type: ConnectApi.RecommendationReaction

Usage

Users with the Manage Next Best Action Recommendations or Modify All Data permission can get recommendation reactions.

```
getRecommendationReactions(onBehalfOfId, createdById, targetId, contextRecordId, pageParam, pageSize)
```
Get recommendation reactions.
API Version
45.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationReactions getRecommendationReactions(String onBehalfOfId, String createdById, String targetId, String contextRecordId, Integer pageParam, Integer pageSize)

Parameters

- **onBehalfOfId**
  - Type: String
  - Use the ID of the user who is indirectly reacting to the recommendation to filter the results.

- **createdById**
  - Type: String
  - Use the ID of the user or record that created the recommendation reaction to filter the results.

- **targetId**
  - Type: String
  - Use the ID of the target to filter the results.

- **contextRecordId**
  - Type: String
  - Use the ID of a context record to filter the results.

- **pageParam**
  - Type: Integer
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

- **pageSize**
  - Type: Integer
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.RecommendationReactions`

Usage
Users with the Manage Next Best Action Recommendations or Modify All Data permission can get recommendation reactions.

```
setRecommendationReaction(reaction)
```
Record user reactions to recommendations.
API Version
45.0

Available to Guest Users
48.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationReaction
setRecommendationReaction(ConnectApi.RecommendationReactionInput reaction)

Parameters
reaction
Type: ConnectApi.RecommendationReactionInput
A ConnectApi.RecommendationReactionInput object representing a reaction to a recommendation produced by a recommendation strategy.

Return Value
Type: ConnectApi.RecommendationReaction

OmnichannelInventoryService Class
Route orders to inventory locations in Order Management.

Namespace
ConnectApi

OmnichannelInventoryService Methods
The following are methods for OmnichannelInventoryService. All methods are static.

IN THIS SECTION:
createReservation(createReservationInputRepresentation)
Create an inventory reservation in Omnichannel Inventory.
fulfillReservation(fulfillReservationInputRepresentation)
Fulfill one or more inventory reservations.
getInventoryAvailability(inventoryAvailabilityInputRepresentation)
Retrieve inventory availability data for one or more products at one or more inventory locations or location groups.
getInventoryAvailabilityUploadStatus(uploadId)
Retrieve the status of an inventory availability upload job.

getPublishLocationStructureStatus(uploadId)
Retrieve the status of a publish location structure job.

publishLocationStructure()
Asynchronously publish information about your inventory locations and location groups to Omnichannel Inventory. The publish includes records whose IsEnabled and ShouldSyncWithOci fields are both `true`. This method returns an ID that you can use to retrieve the status of the publish job.

releaseReservation(releaseReservationInputRepresentation)
Release one or more existing inventory reservations to free up that inventory.

submitInventoryAvailabilityUpload(fileUpload)
Upload an inventory availability data file to Omnichannel Inventory.

transferReservation(transferReservationInputRepresentation)
Transfer one or more inventory reservations between locations or location groups.

createReservation(createReservationInputRepresentation)
Create an inventory reservation in Omnichannel Inventory.

API Version
5.0

Requires Chatter
No

Signature
`public static ConnectApi.OCICreateReservationOutputRepresentation createReservation(ConnectApi.OCICreateReservationInputRepresentation createReservationInputRepresentation)`

Parameters
`createReservationInputRepresentation`
Type: `ConnectApi.OCICreateReservationInputRepresentation` on page 2052
Data to reserve inventory at one or more Omnichannel Inventory locations or location groups.

Return Value
Type: `ConnectApi.OCICreateReservationOutputRepresentation` on page 2236

fulfillReservation(fulfillReservationInputRepresentation)
Fulfill one or more inventory reservations.
API Version
51.0

Requires Chatter
No

Signature
public static ConnectApi.OCIFulfillReservationOutputRepresentation
fulfillReservation(ConnectApi.OCIFulfillReservationInputRepresentation
fulfillReservationInputRepresentation)

Parameters
fulfillReservationInputRepresentation
Type: ConnectApi.OCIFulfillReservationInputRepresentation on page 2053
Wraps a list of inventory reservations to fulfill.

Return Value
Type: ConnectApi.OCIFulfillReservationOutputRepresentation on page 2236

getInventoryAvailability(inventoryAvailabilityInputRepresentation)
Retrieve inventory availability data for one or more products at one or more inventory locations or location groups.

API Version
51.0

Requires Chatter
No

Signature
public static ConnectApi.OCIGetInventoryAvailabilityOutputRepresentation
getInventoryAvailability(ConnectApi.OCIGetInventoryAvailabilityInputRepresentation
inventoryAvailabilityInputRepresentation)

Parameters
inventoryAvailabilityInputRepresentation
Type: ConnectApi.OCIGetInventoryAvailabilityInputRepresentation on page 2054
Details of a request to retrieve inventory availability.

Return Value
Type: ConnectApi.OCIGetInventoryAvailabilityOutputRepresentation on page 2237
**getInventoryAvailabilityUploadStatus (uploadId)**

Retrieve the status of an inventory availability upload job.

**Parameters**

uploadId

Type: String

The uploadId of the upload job.

**Return Value**

Type: `ConnectApi.OCIUploadInventoryAvailabilityStatusOutputRepresentation` on page 2241

**getPublishLocationStructureStatus (uploadId)**

Retrieve the status of a publish location structure job.

**Parameters**

uploadId

Type: String

The uploadId of the publish job.
Return Value
Type: ConnectApi.OCIPublishLocationStructureStatusOutputRepresentation on page 2239

**publishLocationStructure()**
Asynchronously publish information about your inventory locations and location groups to Omnichannel Inventory. The publish includes records whose IsEnabled and ShouldSyncWithOci fields are both `true`. This method returns an ID that you can use to retrieve the status of the publish job.

API Version
51.0

Requires Chatter
No

Signature
```
public static ConnectApi.OCIPublishLocationStructureOutputRepresentation
publishLocationStructure()
```

Return Value
Type: ConnectApi.OCIPublishLocationStructureOutputRepresentation on page 2238

**releaseReservation(releaseReservationInputRepresentation)**
Release one or more existing inventory reservations to free up that inventory.

API Version
51.0

Requires Chatter
No

Signature
```
public static ConnectApi.OCIReleaseReservationOutputRepresentation
releaseReservation(ConnectApi.OCIReleaseReservationInputRepresentation
releaseReservationInputRepresentation)
```

Parameters
```
releaseReservationInputRepresentation
  Type: ConnectApi.OCIReleaseReservationInputRepresentation on page 2055
  Details of one or more inventory reservations to release.
```
submitInventoryAvailabilityUpload(fileUpload)

Upload an inventory availability data file to Omnichannel Inventory.

API Version
51.0

Requires Chatter
No

Signature
public static ConnectApi.OCIUploadInventoryAvailabilityOutputRepresentation submitInventoryAvailabilityUpload(ConnectApi.BinaryInput fileUpload)

Parameters
fileUpload
Type: ConnectApi.BinaryInput on page 2021
JSON file containing inventory availability data.

Return Value
Type: ConnectApi.OCIUploadInventoryAvailabilityOutputRepresentation on page 2241

Usage
Use this JSON format for the data file:

Note: Don’t separate location and inventory record entries with commas.

```json
{
    "location":"Warehouse-A",  // location identifier
    "mode":"UPDATE"  // must be UPDATE (other operations might be available in future releases)
}
{
    "recordId":"0a87539d-f3dd-47bc-91c7-9c752e39dbe0",  // unique identifier for the inventory record
    "onHand":10,
    "sku":"12389156",
    "effectiveDate":"2020-12-08T14:05:22.790896-07:00",
    "futures":[
        {  // list of future restocks
            "quantity":1,
            "expectedDate":"2021-04-18T14:05:22.781-07:00"
        }
    ]
}
```
transferReservation(transferReservationInputRepresentation)

Transfer one or more inventory reservations between locations or location groups.
API Version
51.0

Requires Chatter
No

Signature
public static ConnectApi.OCITransferReservationOutputRepresentation transferReservation(ConnectApi.OCITransferReservationInputRepresentation transferReservationInputRepresentation)

Parameters
transferReservationInputRepresentation
  Type: ConnectApi.OCITransferReservationInputRepresentation on page 2056
  Wraps a list of inventory reservation transfers and specifies whether a single failure cancels the entire list.

Return Value
Type: ConnectApi.OCITransferReservationOutputRepresentation on page 2240

OrderPaymentSummary Class
Work with payments in Order Management.

Namespace
ConnectApi

OrderPaymentSummary Methods
The following are methods for OrderPaymentSummary. All methods are static.

IN THIS SECTION:

createOrderPaymentSummary(orderPaymentSummaryInput)
Create an OrderPaymentSummary for an OrderSummary. Specify a payment authorization or payments that share the same payment method. In an org with the multicurrency feature enabled, the OrderPaymentSummary inherits the CurrencyIsoCode value from the OrderSummary.

createOrderPaymentSummary(orderPaymentSummaryInput)
Create an OrderPaymentSummary for an OrderSummary. Specify a payment authorization or payments that share the same payment method. In an org with the multicurrency feature enabled, the OrderPaymentSummary inherits the CurrencyIsoCode value from the OrderSummary.
API Version
48.0

Requires Chatter
No

Signature
public static ConnectApi.CreateOrderPaymentSummaryOutputRepresentation
createOrderPaymentSummary(ConnectApi.CreateOrderPaymentSummaryInputRepresentation
orderPaymentSummaryInput)

Parameters
orderPaymentSummaryInput
Type: ConnectApi.CreateOrderPaymentSummaryInputRepresentation
The OrderSummary and payment authorization or payments.

Return Value
Type: ConnectApi.CreateOrderPaymentSummaryOutputRepresentation

Example
String orderSummaryId = '1Oxxx0000004CCG';
String paymentId1 = '0a3xx0000000085AAA';
String paymentId2 = '0a3xx0000000085BBB';

ConnectApi.CreateOrderPaymentSummaryInputRepresentation
orderPaymentSummaryInput = new ConnectApi.CreateOrderPaymentSummaryInputRepresentation();
orderPaymentSummaryInput.orderSummaryId = orderSummaryId;
List<String> paymentList = new List<String>();
paymentList.add(paymentId1);
paymentList.add(paymentId2);
orderPaymentSummaryInput.paymentIds = paymentList;

ConnectApi.CreateOrderPaymentSummaryOutputRepresentation
result = ConnectAPI.OrderPaymentSummary.createOrderPaymentSummary(orderPaymentSummaryInput);

OrderSummary Class
Work with orders in Order Management.

Namespace
ConnectApi
OrderSummary Methods

The following are methods for OrderSummary. All methods are static.

IN THIS SECTION:

adjustPreview(orderSummaryId, adjustInput)
Retrieve the expected results of adjusting the price of one or more OrderItemSummaries from an OrderSummary, without actually executing the adjustment. The response data contains the financial changes that would result from submitting the proposed adjustment.

adjustSubmit(orderSummaryId, adjustInput)
Adjust the price of one or more OrderItemSummaries from an OrderSummary, and create one or two corresponding change orders.

createCreditMemo(orderSummaryId, creditMemoInput)
Create a credit memo to represent the refund for one or more change orders associated with an OrderSummary.

ensureFundsAsync(orderSummaryId, ensureFundsInput)
Ensure funds for an invoice and apply them to it. If needed, capture authorized funds by sending a request to a payment provider. This method inserts a background operation into an asynchronous job queue and returns the ID of that operation so you can track its status. Payment gateway responses appear in the payment gateway log and do not affect the background operation status.

ensureRefundsAsync(orderSummaryId, ensureRefundsInput)
Ensure refunds for a credit memo or excess funds by sending a request to a payment provider. This method inserts a background operation into an asynchronous job queue and returns the ID of that operation so you can track its status. Payment gateway responses appear in the payment gateway log and do not affect the background operation status.

previewCancel(orderSummaryId, changeInput)
Retrieve the expected change order values for canceling one or more OrderItemSummaries from an OrderSummary, without actually executing the cancel.

previewReturn(orderSummaryId, changeInput)
Retrieve the expected change order values for returning one or more OrderItemSummaries from an OrderSummary, without actually executing the return.

submitCancel(orderSummaryId, changeInput)
Cancel one or more OrderItemSummaries from an OrderSummary, and create a corresponding change order.

submitReturn(orderSummaryId, changeInput)
Return one or more OrderItemSummaries from an OrderSummary, and create a corresponding change order.

adjustPreview(orderSummaryId, adjustInput)
Retrieve the expected results of adjusting the price of one or more OrderItemSummaries from an OrderSummary, without actually executing the adjustment. The response data contains the financial changes that would result from submitting the proposed adjustment.

API Version
49.0

Requires Chatter
No
Signature

```java
public static ConnectApi.AdjustOrderSummaryOutputRepresentation adjustPreview(String orderSummaryId, ConnectApi.AdjustOrderItemSummaryInputRepresentation adjustInput)
```

Parameters

- **orderSummaryId**
  - Type: String
  - ID of the OrderSummary.

- **adjustInput**
  - Type: `ConnectApi.AdjustOrderItemSummaryInputRepresentation`
  - A list of price adjustments to OrderItemSummaries that make up a price adjustment to an order.

Return Value

- Type: `ConnectApi.AdjustOrderSummaryOutputRepresentation`

SEE ALSO:

- `createCreditMemo(orderSummaryId, creditMemoInput)`
- `ensureRefundsAsync(orderSummaryId, ensureRefundsInput)`
- `adjustSubmit(orderSummaryId, adjustInput)`

**adjustSubmit(orderSummaryId, adjustInput)**

Adjust the price of one or more OrderItemSummaries from an OrderSummary, and create one or two corresponding change orders.

API Version

49.0

Requires Chatter

No

Signature

```java
public static ConnectApi.AdjustOrderSummaryOutputRepresentation adjustSubmit(String orderSummaryId, ConnectApi.AdjustOrderItemSummaryInputRepresentation adjustInput)
```

Parameters

- **orderSummaryId**
  - Type: String
  - ID of the OrderSummary.

- **adjustInput**
  - Type: `ConnectApi.AdjustOrderItemSummaryInputRepresentation`
  - A list of price adjustments to OrderItemSummaries that make up a price adjustment to an order.
Return Value
Type: `ConnectApi.AdjustOrderSummaryOutputRepresentation` on page 2099

Usage
After submitting a price adjustment, process refunds as appropriate:

- If the discount only applied to OrderItemSummaries for which payment has not been captured, it does not require a refund. This situation normally applies to OrderItemSummaries in the US that have not been fulfilled.

- If the discount applied to OrderItemSummaries that have not been fulfilled and for which payment has been captured, process a refund. In this case, pass the `totalExcessFundsAmount` from the output representation to the `ensureRefundsAsync()` on page 1842 method.

- If the discount applied to OrderItemSummaries that have been fulfilled, process a refund. Pass the `postFulfillmentChangeOrderId` from the output representation to the `createCreditMemo()` on page 1840 method, then pass the CreditMemo to the `ensureRefundsAsync()` method.

- If the discount applied to both fulfilled and unfulfilled OrderItemSummaries for which payment has been captured, process both refunds. Pass the `postFulfillmentChangeOrderId` from the output representation to the `createCreditMemo()` method, then pass the credit memo and the `totalExcessFundsAmount` from the output representation to the `ensureRefundsAsync()` method.

SEE ALSO:
- `createCreditMemo(orderSummaryId, creditMemoInput)`
- `ensureRefundsAsync(orderSummaryId, ensureRefundsInput)`
- `adjustPreview(orderSummaryId, adjustInput)`

```java
createCreditMemo(orderSummaryId, creditMemoInput)
```

Create a credit memo to represent the refund for one or more change orders associated with an OrderSummary.

API Version
48.0

Requires Chatter
No

Signature
```java
public static ConnectApi.CreateCreditMemoOutputRepresentation createCreditMemo(String orderSummaryId, ConnectApi.CreateCreditMemoInputRepresentation creditMemoInput)
```

Parameters

- `orderSummaryId` Type: `String`
  ID of the OrderSummary.
creditMemoInput
Type: ConnectApi.CreateCreditMemoInputRepresentation
The list of change order IDs.

Return Value
Type: ConnectApi.CreateCreditMemoOutputRepresentation

ensureFundsAsync(orderSummaryId, ensureFundsInput)
Ensure funds for an invoice and apply them to it. If needed, capture authorized funds by sending a request to a payment provider. This method inserts a background operation into an asynchronous job queue and returns the ID of that operation so you can track its status. Payment gateway responses appear in the payment gateway log and do not affect the background operation status.

API Version
48.0

Requires Chatter
No

Signature
public static ConnectApi.EnsureFundsAsyncOutputRepresentation ensureFundsAsync(String orderSummaryId, ConnectApi.EnsureFundsAsyncInputRepresentation ensureFundsInput)

Parameters
orderSummaryId
Type: String
ID of the OrderSummary.

ensureFundsInput
Type: ConnectApi.EnsureFundsAsyncInputRepresentation
The ID of the invoice.

Return Value
Type: ConnectApi.EnsureFundsAsyncOutputRepresentation

Usage
This method checks the OrderPaymentSummaries associated with the specified OrderSummary for funds to apply to the invoice balance as follows:

Note: If multiple OrderPaymentSummaries have the same amount, their order of selection is random.

1. Verify that the invoice balance doesn’t exceed the total amount of all the OrderPaymentSummaries.
2. If an OrderPaymentSummary exists with an amount that matches the invoice balance, use it.
3. Otherwise, if any OrderPaymentSummaries exist with an amount greater than the invoice balance, use the one with the smallest amount greater than the invoice balance.

4. Otherwise, select OrderPaymentSummaries in order from largest amount to smallest until their amounts meet or exceed the invoice balance.

5. If any selected funds are authorized, capture them.

6. Apply the selected funds to the invoice.

`ensureRefundsAsync(orderSummaryId, ensureRefundsInput)`

Ensure refunds for a credit memo or excess funds by sending a request to a payment provider. This method inserts a background operation into an asynchronous job queue and returns the ID of that operation so you can track its status. Payment gateway responses appear in the payment gateway log and do not affect the background operation status.

API Version
48.0

Requires Chatter
No

Signature
`public static ConnectApi.EnsureRefundsAsyncOutputRepresentation ensureRefundsAsync(String orderSummaryId, ConnectApi.EnsureRefundsAsyncInputRepresentation ensureRefundsInput)`

Parameters

- `orderSummaryId`
  Type: `String`
  ID of the OrderSummary.

- `ensureRefundsInput`
  Type: `ConnectApi.EnsureRefundsAsyncInputRepresentation`
  Object that wraps the ID of the credit memo and the excess funds amount.

Return Value

Type: `ConnectApi.EnsureRefundsAsyncOutputRepresentation`

`previewCancel(orderSummaryId, changeInput)`

Retrieve the expected change order values for canceling one or more OrderItemSummaries from an OrderSummary, without actually executing the cancel.

API Version
48.0
Requires Chatter
No

Signature
public static ConnectApi.PreviewCancelOutputRepresentation previewCancel(String orderSummaryId, ConnectApi.ChangeInputRepresentation changeInput)

Parameters
orderSummaryId
Type: String
ID of the OrderSummary.

changeInput
Type: ConnectApi.ChangeInputRepresentation
A list of changes to OrderItemSummaries that make up an order change, such as a cancel or return.

Return Value
Type: ConnectApi.PreviewCancelOutputRepresentation

SEE ALSO:
createCreditMemo(orderSummaryId, creditMemoInput)
ensureRefundsAsync(orderSummaryId, ensureRefundsInput)
submitCancel(orderSummaryId, changeInput)

previewReturn(orderSummaryId, changeInput)
Retrieve the expected change order values for returning one or more OrderItemSummaries from an OrderSummary, without actually executing the return.

API Version
48.0

Requires Chatter
No

Signature
public static ConnectApi.PreviewReturnOutputRepresentation previewReturn(String orderSummaryId, ConnectApi.ChangeInputRepresentation changeInput)

Parameters
orderSummaryId
Type: String
ID of the OrderSummary.

changeInput
   Type: `ConnectApi.ChangeInputRepresentation`
   A list of changes to OrderItemSummaries that make up an order change, such as a cancel or return.

Return Value
Type: `ConnectApi.PreviewReturnOutputRepresentation`

SEE ALSO:
- `createCreditMemo(orderSummaryId, creditMemoInput)`
- `ensureRefundsAsync(orderSummaryId, ensureRefundsInput)`
- `submitReturn(orderSummaryId, changeInput)`

`submitCancel(orderSummaryId, changeInput)`
Cancel one or more OrderItemSummaries from an OrderSummary, and create a corresponding change order.

API Version
48.0

Requires Chatter
No

Signature
```
public static ConnectApi.SubmitCancelOutputRepresentation submitCancel(String orderSummaryId, ConnectApi.ChangeInputRepresentation changeInput)
```

Parameters

`orderSummaryId`
   Type: `String`
   ID of the OrderSummary.

`changeInput`
   Type: `ConnectApi.ChangeInputRepresentation`
   A list of changes to OrderItemSummaries that make up an order change, such as a cancel or return.
Return Value
Type: `ConnectApi.SubmitCancelOutputRepresentation`

SEE ALSO:
- `createCreditMemo(orderSummaryId, creditMemoInput)`
- `ensureRefundsAsync(orderSummaryId, ensureRefundsInput)`
- `previewCancel(orderSummaryId, changeInput)`

```java
submitReturn(orderSummaryId, changeInput)
```

Return one or more OrderItemSummaries from an OrderSummary, and create a corresponding change order.

API Version
48.0

Requires Chatter
No

Signature
```java
public static ConnectApi.SubmitReturnOutputRepresentation submitReturn(String orderSummaryId, ConnectApi.ChangeInputRepresentation changeInput)
```

Parameters
```
orderSummaryId
  Type: String
  ID of the OrderSummary.

changeInput
  Type: ConnectApi.ChangeInputRepresentation
  A list of changes to OrderItemSummaries that make up an order change, such as a cancel or return.
```

Return Value
Type: `ConnectApi.SubmitReturnOutputRepresentation`

Usage
After submitting a return, process a refund. Pass the `changeOrderId` from the output representation to the `createCreditMemo()` method, then pass the credit memo to the `ensureRefundsAsync()` on page 1842 method.

SEE ALSO:
- `createCreditMemo(orderSummaryId, creditMemoInput)`
- `ensureRefundsAsync(orderSummaryId, ensureRefundsInput)`
- `previewReturn(orderSummaryId, changelInput)`
OrderSummaryCreation Class
Create Order Summaries in Order Management.

Namespace
ConnectApi

OrderSummaryCreation Methods
The following are methods for OrderSummaryCreation. All methods are static.

IN THIS SECTION:
createOrderSummary(orderSummaryInput)
Create an OrderSummary based on an order. That order is considered the original order for the OrderSummary. Subsequent change orders that apply to the OrderSummary are also represented as orders. You can specify whether the order is managed in Salesforce Order Management or by an external system. Most Salesforce Order Management APIs can run only on orders that it manages.

createOrderSummary(orderSummaryInput)
Create an OrderSummary based on an order. That order is considered the original order for the OrderSummary. Subsequent change orders that apply to the OrderSummary are also represented as orders. You can specify whether the order is managed in Salesforce Order Management or by an external system. Most Salesforce Order Management APIs can run only on orders that it manages.

API Version
48.0

Requires Chatter
No

Signature
public static ConnectApi.OrderSummaryOutputRepresentation createOrderSummary(ConnectApi.OrderSummaryInputRepresentation orderSummaryInput)

Parameters
orderSummaryInput
Type: ConnectApi.OrderSummaryInputRepresentation
Input object that wraps the ID of the source order.

Return Value
Type: ConnectApi.OrderSummaryOutputRepresentation
Organization Class
Access information about an org.

Namespace
ConnectApi

Organization Methods
The following are methods for Organization. All methods are static.

IN THIS SECTION:
getSettings()
Get information about the context user and the org, including which features are enabled.

getSettings()
Get information about the context user and the org, including which features are enabled.

API Version
28.0

Requires Chatter
No

Signature
public static ConnectApi. OrganizationSettings getSettings()

Return Value
Type: ConnectApi. OrganizationSettings

Payments Methods
Authorize a payment, capture an authorized payment, and refund an authorized payment.

Namespace
ConnectApi

Payments Methods
The following are methods for Payments. All methods are static.
IN THIS SECTION:

authorize(authorizePayment)
Authorize a payment.

reverseAuthorization(AuthReversalInput, authorizationId)
Reverses a payment authorization.

capture(AuthCaptureInput, authorizationId)
Capture an authorized payment.

refund(ReferencedRefundInput, paymentId)
Refund an authorized payment.

authorize(authorizePayment)
Authorize a payment.

API Version
51.0

Requires Chatter
No

Signature

global static ConnectApi.AuthorizationResponse authorize(ConnectApi.AuthorizationRequest authorizePayment)

Parameters

authorizePayment
Type: ConnectApi.AuthorizationRequest
Represents a payment authorization.

Return Value
Type: ConnectApi.AuthorizationResponse

reverseAuthorization(AuthReversalInput, authorizationId)
Reverses a payment authorization.

API Version
51.0

Requires Chatter
No
Signature

Parameters

AuthReversalInput
  Type: ConnectApi.AuthorizationReversalRequest
  Input information for the payment authorization reversal.

authorizationId
  Type: String
  The ID of the payment authorization to be reversed.

Return Value

Type: ConnectApi.AuthorizationReversalResponse

capture(AuthCaptureInput, authorizationId)

Capture an authorized payment.

To access Payments methods, you need the following permissions.

• Salesforce Order Management License
• PaymentsAPIUser user permission. This permission is available with the Salesforce Order Management License. Your Salesforce admin assigns it to your profile.

API Version

Requires Chatter
No

Signature

global static ConnectApi.CaptureResponse capture(ConnectApi.CaptureRequest AuthCaptureInput, String authorizationId)

Parameters

AuthCaptureInput
  Type: ConnectApi.CaptureRequest
  A ConnectApi.CaptureRequest object with information about the payment capture.

authorizationId
  Type: String
  ID of the payment authorization. Required.
Return Value

Type: `ConnectApi.CaptureResponse`

`refund(ReferencedRefundInput, paymentId)`
Refund an authorized payment.

To access Payments methods, you need the following permissions.

- Salesforce Order Management License
- PaymentsAPIUser user permission. This permission is available with the Salesforce Order Management License. Your Salesforce admin assigns it to your profile.

API Version
50.0

Requires Chatter
No

Signature

```
global static ConnectApi.ReferencedRefundResponse refund(ConnectApi.ReferencedRefundRequest ReferencedRefundInput, String paymentId)
```

Parameters

`ReferencedRefundInput`
Type: `ConnectApi.ReferencedRefundRequest`
A `ConnectApi.ReferencedRefundRequest` object with information about the refund.

`paymentId`
Type: `String`
ID of the payment to be refunded. Required.

Return Value

Type: `ConnectApi.ReferencedRefundResponse`

**Personalization Class**

Get assigned personalization audiences that match the user context. Create, get, update, and delete an audience. Get personalization targets that match the user context, based on the assigned audiences that include the user. Create and update targets. Get and delete a target.

**Namespace**

`ConnectApi`
Note: Personalization varies what the user can see in the browser but doesn’t secure data in any way. To prevent users accessing sensitive data, use standard Salesforce security features, such as sharing rules and permission sets.

Personalization Methods

The following are methods for Personalization. All methods are static.

IN THIS SECTION:

createAudience(communityId, audience)
Create an audience.

createTargets(communityId, target)
Create targets.

deleteAudience(communityId, audienceId)
Delete an audience.

deleteTarget(communityId, targetId)
Delete a target.

getAudience(communityId, audienceId, includeAudienceCriteria)
Get an audience.

getAudienceBatch(communityId, audienceIds)
Get audience information for a comma-separated list of audience IDs.

getAudiences(communityId, ipAddress, domain, userId, publishStatus, includeAudienceCriteria, targetTypes, recordId)
Get a list of assigned audiences that match the user context and record information.

getAudiences(communityId, ipAddress, domain, userId, publishStatus, includeAudienceCriteria, targetTypes)
Get a list of assigned audiences that match the user context.

getTarget(communityId, targetId)
Get a target.

getTargetBatch(communityId, targetIds)
Get target information for a comma-separated list of target IDs.

getTargets(communityId, ipAddress, domain, userId, publishStatus, recordId, targetTypes, includeAudience, includeAllMatchingTargetsWithinGroup, groupNames)
Get a list of targets that match the user context, based on the assigned audiences that include the user.

updateAudience(communityId, audienceId, audience)
Update an audience.

updateTargets(communityId, target)
Update targets.

createAudience(communityId, audience)
Create an audience.

API Version
48.0
Create audiences.

API Version
48.0

Requires Chatter
No

Signature
public static ConnectApi.Audience createAudience(String communityId,
ConnectApi.AudienceInput audience)

Parameters

communityId
Type: String
ID of the Experience Cloud site.

audience
Type: ConnectApi.AudienceInput
A ConnectApi.AudienceInput object that defines the audience.

Return Value
Type: ConnectApi.Audience

createTargets(communityId, target)
Create targets.

API Version
48.0

Requires Chatter
No

Signature
public static ConnectApi.TargetCollection createTargets(String communityId,
ConnectApi.TargetCollectionInput target)

Parameters

communityId
Type: String
ID of the Experience Cloud site.

target
Type: ConnectApi.TargetCollectionInput
A ConnectApi.TargetCollectionInput object that defines the targets.
deleteAudience(communityId, audienceId)
Delete an audience.

API Version
48.0

Requires Chatter
No

Signature
public static Void deleteAudience(String communityId, String audienceId)

Parameters

communityId
Type: String
ID of the Experience Cloud site.

audienceId
Type: String
ID of the audience.

Return Value
Type: Void

deleteTarget(communityId, targetId)
Delete a target.

API Version
48.0

Requires Chatter
No

Signature
public static Void deleteTarget(String communityId, String targetId)
Parameters

- **communityId**
  - Type: String
  - ID of the Experience Cloud site.

- **targetId**
  - Type: String
  - ID of the target.

Return Value

Type: Void

**getAudience(communityId, audienceId, includeAudienceCriteria)**

Get an audience.

API Version

48.0

Available to Guest Users

48.0

Requires Chatter

No

Signature

```
public static ConnectApi.Audience getAudience(String communityId, String audienceId, Boolean includeAudienceCriteria)
```

Parameters

- **communityId**
  - Type: String
  - ID of the Experience Cloud site.

- **audienceId**
  - Type: String
  - ID of the audience.

- **includeAudienceCriteria**
  - Type: Boolean
  - Specifies whether to include audience criteria (true) or not (false). If unspecified, defaults to false.
Return Value
Type: `ConnectApi.Audience`

`getAudienceBatch(communityId, audienceIds)`
Get audience information for a comma-separated list of audience IDs.

API Version
48.0

Available to Guest Users
48.0

Requires Chatter
No

Signature
`public static ConnectApi.BatchResult[] getAudienceBatch(String communityId, List<String> audienceIds)`

Parameters
`communityId`
Type: `String`
ID of the Experience Cloud site.

`audienceIds`
Type: `List<String>`
Comma-separated list of audience IDs.

Return Value
Type: `ConnectApi.BatchResult[]`

The `ConnectApi.BatchResult.getResult()` method returns a `ConnectApi.Audience` object and errors for audiences that didn't load.

`getAudiences(communityId, ipAddress, domain, userId, publishStatus, includeAudienceCriteria, targetTypes, recordId)`
Get a list of assigned audiences that match the user context and record information.

API Version
51.0
Available to Guest Users

Requires Chatter

No

Signature

```java
public static ConnectApi.AudienceCollection getAudiences(String communityId, String ipAddress, String domain, String userId, ConnectApi.PublishStatus publishStatus, Boolean includeAudienceCriteria, List<String> targetTypes, String recordId)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or `null`.

- **ipAddress**
  - Type: String
  - IP address of the user. If `null`, no audiences with location criteria are returned.

- **domain**
  - Type: String
  - Name of the user’s Salesforce custom domain. If `null`, no audiences with domain criteria are returned.

- **userId**
  - Type: String
  - ID of the user. If `null`, defaults to the ID of the context user.

- **publishStatus**
  - Type: `ConnectApi.PublishStatus`
  - Publish status of the audience. Values are:
    - Draft
    - Live
    - If `null`, defaults to Live.

- **includeAudienceCriteria**
  - Type: Boolean
  - Specifies whether to include audience criteria (`true`) or not (`false`). If unspecified, defaults to `false`.

- **targetTypes**
  - Type: `List<String>`
  - Comma-separated list of target types to filter the results. Supported values include:
    - ExperienceVariation (version 48.0 and later)
    - Custom object API names, such as `CustomObjectName__c` (version 48.0 and later)
    - NavigationLinkSet (version 49.0 and later)
    - Topic (version 49.0 and later)
• CollaborationGroup (version 49.0 and later)
• KnowledgeArticle (version 49.0 and later)
• ContentDocument (version 49.0 and later)
• ManagedContent (version 49.0 and later)
• Report (version 49.0 and later)
• Dashboard (version 49.0 and later)

If null, all target types are returned.

recordId
  Type: String
  ID of the record for field based criteria. If null, all applicable audiences with field based criteria are returned.

Return Value
  Type: ConnectApi.AudienceCollection

getAudiences(communityId, ipAddress, domain, userId, publishStatus, includeAudienceCriteria, targetTypes)

Get a list of assigned audiences that match the user context.

API Version
48.0

Available to Guest Users
48.0

Requires Chatter
No

Signature
public static ConnectApi.AudienceCollection getAudiences(String communityId, String ipAddress, String domain, String userId, ConnectApi.PublishStatus publishStatus, Boolean includeAudienceCriteria, List<String> targetTypes)

Parameters

communityId
  Type: String
  ID of the Experience Cloud site.

ipAddress
  Type: String
  IP address of the user. If null, no audiences with location criteria are returned.
domain
Type: String
Name of the user’s Salesforce custom domain. If null, no audiences with domain criteria are returned.

userId
Type: String
ID of the user. If null, defaults to the ID of the context user.

publishStatus
Type: ConnectApi.PublishStatus
Publish status of the audience. Values are:
• Draft
• Live
If null, defaults to Live.

includeAudienceCriteria
Type: Boolean
Specifies whether to include audience criteria (true) or not (false). If unspecified, defaults to false.

targetTypes
Type: List<String>
Comma-separated list of target types to filter the results. Supported values include:
• ExperienceVariation (version 48.0 and later)
• Custom object API names, such as CustomObjectName__c (version 48.0 and later)
• NavigationLinkSet (version 49.0 and later)
• Topic (version 49.0 and later)
• CollaborationGroup (version 49.0 and later)
• KnowledgeArticle (version 49.0 and later)
• ContentDocument (version 49.0 and later)
• ManagedContent (version 49.0 and later)
• Report (version 49.0 and later)
• Dashboard (version 49.0 and later)
If null, all target types are returned.

Return Value
Type: ConnectApi.AudienceCollection

getTarget(communityId, targetId)
Get a target.

API Version
48.0
Available to Guest Users
48.0

Requires Chatter
No

Signature
public static ConnectApi.Target getTarget(String communityId, String targetId)

Parameters
communityId
Type: String
ID of the Experience Cloud site.
targetId
Type: String
ID of the target.

Return Value
Type: ConnectApi.Target

getTargetBatch(communityId, targetIds)
Get target information for a comma-separated list of target IDs.

API Version
48.0

Available to Guest Users
48.0

Requires Chatter
No

Signature
public static ConnectApi.BatchResult[] getTargetBatch(String communityId, List<String> targetIds)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

targetIds
Type: List<String>
Comma-separated list of target IDs.

Return Value
Type: ConnectApi.BatchResult
The ConnectApi.BatchResult.getResult() method returns a ConnectApi.Target object and errors for targets that didn’t load.

getTargets(communityId, ipAddress, domain, userId, publishStatus, recordId, targetTypes, includeAudience, includeAllMatchingTargetsWithinGroup, groupNames)
Get a list of targets that match the user context, based on the assigned audiences that include the user.

API Version
48.0

Available to Guest Users
48.0

Requires Chatter
No

Signature
public static ConnectApi.TargetCollection getTargets(String communityId, String ipAddress, String domain, String userId, ConnectApi.PublishStatus publishStatus, String recordId, List<String> targetTypes, Boolean includeAudience, Boolean includeAllMatchingTargetsWithinGroup, List<String> groupNames)

Parameters
communityId
Type: String
ID of the Experience Cloud site.

ipAddress
Type: String
IP address of the user. If null, no audiences with location criteria are returned.

domain
Type: String
Name of the user’s Salesforce custom domain. If null, no audiences with domain criteria are returned.
userId
  Type: String
  ID of the user. If null, the default is the ID of the context user.

publishStatus
  Type: ConnectApi.PublishStatus
  Publish status of the target. Values are:
  • Draft
  • Live

recordId
  Type: String
  ID of the record, if you want to specify field based criteria in audiences.

targetTypes
  Type: List<String>
  Comma-separated list of target types to filter the results. Supported values include:
  • ExperienceVariation (version 48.0 and later)
  • Custom object API names, such as CustomObjectName__c (version 48.0 and later)
  • NavigationLinkSet (version 49.0 and later)
  • Topic (version 49.0 and later)
  • CollaborationGroup (version 49.0 and later)
  • KnowledgeArticle (version 49.0 and later)
  • ContentDocument (version 49.0 and later)
  • ManagedContent (version 49.0 and later)
  • Report (version 49.0 and later)
  • Dashboard (version 49.0 and later)
  If null, all target types are returned.

includeAudience
  Type: Boolean
  Specifies whether to include the matching audience (true) or not (false). If null, the default is false.

includeAllMatchingTargetsWithinGroup
  Type: Boolean
  Specifies whether to include all the matching targets within a target group (true) or not (false). If null, the default is false. If false, the first matching target within each group, based on priority within the group, is returned.

groupNames
  Type: List<String>
  A comma-separated list of group names. Groups bundle related target and audience pairs.

Return Value
  Type: ConnectApi.TargetCollection
updateAudience(communityId, audienceId, audience)

Update an audience.

API Version
48.0

Requires Chatter
No

Signature
public static ConnectApi.Audience updateAudience(String communityId, String audienceId, ConnectApi.AudienceInput audience)

Parameters
communityId
  Type: String
  ID of the Experience Cloud site.

audienceId
  Type: String
  ID of the audience.

audience
  Type: ConnectApi.AudienceInput
  A ConnectApi.AudienceInput object that defines the updates to the audience.

Return Value
Type: ConnectApi.Audience

updateTargets(communityId, target)

Update targets.

API Version
48.0

Requires Chatter
No

Signature
public static ConnectApi.TargetCollection updateTargets(String communityId, ConnectApi.TargetCollectionUpdateInput target)
Parameters

- **communityId**
  - Type: String
  - ID of the Experience Cloud site.

- **target**
  - Type: `ConnectApi.TargetCollectionUpdateInput`
  - A `ConnectApi.TargetCollectionUpdateInput` object that defines the updates for the targets.

Return Value

- Type: `ConnectApi.TargetCollection`

### QuestionAndAnswers Class

Access question and answers suggestions.

### Namespace

`ConnectApi`

### IN THIS SECTION: QuestionAndAnswers Methods

#### QuestionAndAnswers Methods

The following are methods for `QuestionAndAnswers`. All methods are static.

**IN THIS SECTION:**

- `getSuggestions(communityId, q, subjectId, includeArticles, maxResults)`
  - Get question and answers suggestions.
- `setTestGetSuggestions(communityId, q, subjectId, includeArticles, maxResults, result)`
  - Register a `ConnectApi.QuestionAndAnswersSuggestions` object to be returned when `getSuggestions` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.
- `updateQuestionAndAnswers(communityId, feedElementId, questionAndAnswersCapability)`
  - Choose or change the best answer for a question.

**getSuggestions(communityId, q, subjectId, includeArticles, maxResults)**

Get question and answers suggestions.

**API Version**

32.0
Requires Chatter
No

Signature
```
public static ConnectApi.QuestionAndAnswersSuggestions getSuggestions(String communityId,
String q, String subjectId, Boolean includeArticles, Integer maxResults)
```

Parameters
- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **q**
  - Type: `String`
  - Required and cannot be `null`. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

- **subjectId**
  - Type: `String`
  - Specify a subject ID to search only questions on that object. If the ID is a topic or a user, the ID is ignored.

- **includeArticles**
  - Type: `Boolean`
  - Specify `true` to include knowledge articles in the search results. To return only questions, specify `false`.

- **maxResults**
  - Type: `Integer`
  - The maximum number of results to return for each type of item. Possible values are 1–10. The default value is 5.

Return Value
- Type: `ConnectApi.QuestionAndAnswersSuggestions`

Usage
To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetSuggestions(communityId, q, subjectId, includeArticles, maxResults, result)`

**setTestGetSuggestions(communityId, q, subjectId, includeArticles, maxResults, result)**
Register a `ConnectApi.QuestionAndAnswersSuggestions` object to be returned when `getSuggestions` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.
API Version
32.0

Signature
public static Void setTestGetSuggestions(String communityId, String q, String subjectId,
Boolean includeArticles, Integer maxResults, ConnectApi.QuestionAndAnswersSuggestions
result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

q
Type: String
Required and cannot be null. Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

subjectId
Type: String
Specify a subject ID to search only questions on that object. If the ID is a topic or a user, the ID is ignored.

includeArticles
Type: Boolean
Specify true to include knowledge articles in the search results. To return only questions, specify false.

maxResults
Type: Integer
The maximum number of results to return for each type of item. Possible values are 1–10. The default value is 5.

result
Type: ConnectApi.QuestionAndAnswersSuggestions
The object containing test data.

Return Value
Type: Void

SEE ALSO:

getSuggestions(communityId, q, subjectId, includeArticles, maxResults)
Testing ConnectApi Code

updateQuestionAndAnswers(communityId, feedElementId, questionAndAnswersCapability)
Choose or change the best answer for a question.
API Version
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.QuestionAndAnswersCapability updateQuestionAndAnswers(String communityId, String feedElementId, ConnectApi.QuestionAndAnswersCapabilityInput questionAndAnswersCapability)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

feedElementId
Type: String
ID of the feed element.

questionAndAnswersCapability
Type: ConnectApi.QuestionAndAnswersCapabilityInput
Specify the best answer (comment ID) for the question.

Return Value
Type: ConnectApi.QuestionAndAnswersCapability
If the feed element doesn’t support this capability, the return value is ConnectApi.NotFoundException.

Example

ConnectApi.QuestionAndAnswersCapabilityInput qaInput = new ConnectApi.QuestionAndAnswersCapabilityInput();
qaInput.bestAnswerId = '0D7D000000001MAKAY';

ConnectApi.QuestionAndAnswersCapability qa = ConnectApi.QuestionAndAnswers.updateQuestionAndAnswers(null, '0D5D00000000ZjJ', qaInput);

Recommendations Class
Get and reject Chatter, custom, and static recommendations. Create, get, update, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

For Next Best Action recommendations, see NextBestAction Class.
Namespace

ConnectApi

Recommendations Methods

The following are methods for Recommendations. All methods are static.

IN THIS SECTION:

- **createRecommendationAudience(communityId, recommendationAudience)**
  Create an audience for a custom recommendation.

- **createRecommendationAudience(communityId, name)**
  Create an audience for a custom recommendation.

- **createRecommendationDefinition(communityId, recommendationDefinition)**
  Create a custom recommendation definition.

- **createRecommendationDefinition(communityId, name, title, actionUrl, actionUrlName, explanation)**
  Create a custom recommendation definition with the specified parameters.

- **createScheduledRecommendation(communityId, scheduledRecommendation)**
  Create a scheduled custom recommendation.

- **createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId, channel)**
  Create a scheduled custom recommendation with the specified parameters.

- **deleteRecommendationAudience(communityId, recommendationAudienceId)**
  Delete a custom recommendation audience.

- **deleteRecommendationDefinition(communityId, recommendationDefinitionId)**
  Delete a custom recommendation definition.

- **deleteRecommendationDefinitionPhoto(communityId, recommendationDefinitionId)**
  Delete a custom recommendation definition photo.

- **deleteScheduledRecommendation(communityId, scheduledRecommendationId, deleteDefinitionIfLast)**
  Delete a scheduled custom recommendation.

- **getRecommendationAudience(communityId, recommendationAudienceId)**
  Get information about a custom recommendation audience.

- **getRecommendationAudienceMembership(communityId, recommendationAudienceId)**
  Get the members of a custom recommendation audience.

- **getRecommendationAudienceMembership(communityId, recommendationAudienceId, pageParam, pageSize)**
  Get a page of custom recommendation audience members.

- **getRecommendationAudiences(communityId)**
  Get custom recommendation audiences.

- **getRecommendationAudiences(communityId, pageParam, pageSize)**
  Get a page of custom recommendation audiences.

- **getRecommendationDefinition(communityId, recommendationDefinitionId)**
  Get a custom recommendation definition.
getRecommendationDefinitionPhoto(communityId, recommendationDefinitionId)
Get a custom recommendation definition photo.

getRecommendationDefinitions(communityId)
Get custom recommendation definitions.

getRecommendationForUser(communityId, userId, action, objectId)
Get the Chatter, custom, or static recommendation for the context user for the specified action and object ID.

getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults)
Get the Chatter recommendations, such as user, group, file, article, record, and topic recommendations for the context user. Get the custom and static recommendations for the context user.

getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults)
Get the Chatter, custom, and static recommendations for the context user for the specified action.

getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults)
Get the Chatter, custom, and static recommendations for the context user for the specified action and object category.

getScheduledRecommendation(communityId, scheduledRecommendationId)
Get a scheduled custom recommendation.

getScheduledRecommendations(communityId, channel)
Get scheduled custom recommendations.

rejectRecommendationForUser(communityId, userId, action, objectId)
Reject a Chatter, custom, or static recommendation for the context user for the specified action and object ID.

rejectRecommendationForUser(communityId, userId, action, objectEnum)
Reject a static recommendation for the context user.

updateRecommendationAudience(communityId, recommendationAudienceId, recommendationAudience)
Update a custom recommendation audience.

updateRecommendationDefinition(communityId, recommendationDefinitionId, name, title, actionUrl, actionUrlName, explanation)
Update a custom recommendation definition with the specified parameters.

updateRecommendationDefinition(communityId, recommendationDefinitionId, recommendationDefinition)
Update a custom recommendation definition.

updateRecommendationDefinitionPhoto(communityId, recommendationDefinitionId, fileUpload)
Update a custom recommendation definition photo with a file that hasn’t been uploaded.

updateRecommendationDefinitionPhoto(communityId, recommendationDefinitionId, fileId, versionNumber)
Update a custom recommendation definition photo with an uploaded file.

updateRecommendationDefinitionPhotoWithAttributes(communityId, recommendationDefinitionId, photo)
Update a custom recommendation definition photo with an uploaded file that requires cropping.

updateRecommendationDefinitionPhotoWithAttributes(communityId, recommendationDefinitionId, photo, fileUpload)
Update a custom recommendation definition photo with a file that hasn’t been uploaded and requires cropping.

updateScheduledRecommendation(communityId, scheduledRecommendationId, scheduledRecommendation)
Update a scheduled custom recommendation.

updateScheduledRecommendation(communityId, scheduledRecommendationId, rank, enabled, recommendationAudienceId)
Update a scheduled custom recommendation with the specified parameters.
createRecommendationAudience(communityId, recommendationAudience)

Create an audience for a custom recommendation.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationAudience createRecommendationAudience(String communityId, ConnectApi.RecommendationAudienceInput recommendationAudience)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

recommendationAudience
Type: ConnectApi.RecommendationAudienceInput
A ConnectApi.RecommendationAudienceInput object.

Return Value
Type: ConnectApi.RecommendationAudience

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

createRecommendationAudience(communityId, name)

Create an audience for a custom recommendation.

API Version
35.0

Requires Chatter
No
Signature

```java
public static ConnectApi.RecommendationAudience createRecommendationAudience(String communityId, String name)
```

Parameters

- `communityId`  
  Type: String  
  Use the ID for an Experience Cloud site, internal, or null.

- `name`  
  Type: String  
  Name of the audience.

Return Value

Type: `ConnectApi.RecommendationAudience`

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**createRecommendationDefinition(communityId, recommendationDefinition)**

Create a custom recommendation definition.

API Version

35.0

Requires Chatter

No

Signature

```java
public static ConnectApi.RecommendationDefinition createRecommendationDefinition(String communityId, ConnectApi.RecommendationDefinitionInput recommendationDefinition)
```

Parameters

- `communityId`  
  Type: String  
  Use the ID for an Experience Cloud site, internal, or null.

- `recommendationDefinition`  
  Type: `ConnectApi.RecommendationDefinitionInput`
A `ConnectApi.RecommendationDefinitionInput` object.

Return Value
Type: `ConnectApi.RecommendationDefinition`

Usage
Recommendation definitions allow you to create custom recommendations that appear in Experience Cloud sites, encouraging users to watch videos, take training and more. Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

These recommendations appear by default on the Customer Service template. They appear on the home and question detail pages and in the feed in Salesforce mobile web. They also appear anywhere community managers add recommendations using Experience Builder in the Customer Service template.

So that users don’t see the same recommendations all the time, Salesforce periodically removes and brings back custom recommendations that haven’t been accepted or dismissed.

`createRecommendationDefinition(communityId, name, title, actionUrl, actionUrlName, explanation)`
Create a custom recommendation definition with the specified parameters.

API Version
35.0

Requires Chatter
No

Signature
`public static ConnectApi.RecommendationDefinition createRecommendationDefinition(String communityId, String name, String title, String actionUrl, String actionUrlName, String explanation)`

Parameters
`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

`name`
Type: `String`
Name of the custom recommendation definition. The name is displayed in Setup.
title
  Type: String
  Title of the custom recommendation definition.

actionUrl
  Type: String
  URL for acting on the custom recommendation, for example, the URL to join a group.

actionUrlName
  Type: String
  Text label for the action URL in the user interface, for example, “Launch.”

explanation
  Type: String
  Explanation, or body, of the custom recommendation.

Return Value
Type: ConnectApi.RecommendationDefinition

Usage
Recommendation definitions allow you to create custom recommendations that appear in Experience Cloud sites, encouraging users to watch videos, take training and more.

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

These recommendations appear by default on the Customer Service template. They appear on the home and question detail pages and in the feed in Salesforce mobile web. They also appear anywhere community managers add recommendations using Experience Builder in the Customer Service template.

So that users don’t see the same recommendations all the time, Salesforce periodically removes and brings back custom recommendations that haven’t been accepted or dismissed.

createScheduledRecommendation(communityId, scheduledRecommendation)
Create a scheduled custom recommendation.

API Version
35.0

Requires Chatter
No
public static ConnectApi.ScheduledRecommendation createScheduledRecommendation(String communityId, ConnectApi.ScheduledRecommendationInput scheduledRecommendation)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

scheduledRecommendation
  Type: ConnectApi.ScheduledRecommendationInput
  A ConnectApi.ScheduledRecommendationInput object.

Return Value
  Type: ConnectApi.ScheduledRecommendation

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId, channel)

Create a scheduled custom recommendation with the specified parameters.

API Version

36.0

Requires Chatter

No

Signature

public static ConnectApi.ScheduledRecommendation createScheduledRecommendation(String communityId, String recommendationDefinitionId, Integer rank, Boolean enabled, String recommendationAudienceId, ConnectApi.RecommendationChannel channel)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
**recommendationDefinitionId**
Type: String
ID of the custom recommendation definition.

**rank**
Type: Integer
Relative rank of the scheduled custom recommendation indicated by ascending whole numbers starting with 1.
Setting the rank is comparable to an insertion into an ordered list. The scheduled custom recommendation is inserted into the position specified by the rank. The rank of all the scheduled custom recommendations after it is pushed down. See Ranking scheduled custom recommendations example.
If the specified rank is larger than the size of the list, the scheduled custom recommendation is put at the end of the list. The rank of the scheduled custom recommendation is the size of the list, instead of the one specified.
If a rank is not specified, the scheduled custom recommendation is put at the end of the list.

**enabled**
Type: Boolean
Indicates whether scheduling is enabled. If true, the custom recommendation is enabled and appears in Experience Cloud sites. If false, custom recommendations in feeds in Salesforce mobile web aren’t removed, but no new custom recommendations appear. In Customer Service and Partner Central sites, disabled custom recommendations no longer appear.

**recommendationAudienceId**
Type: String
ID of the custom recommendation definition that this scheduled recommendation schedules.

**channel**
Type: ConnectApi.RecommendationChannel
A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:
- CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
Use these channel values; you can’t rename or create other channels.

**Return Value**
Type: ConnectApi.ScheduledRecommendation
Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**Ranking scheduled custom recommendations example**

If you have these scheduled custom recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendations</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>3</td>
</tr>
</tbody>
</table>

And you include this information in the Scheduled Custom Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>

**deleteRecommendationAudience(communityId, recommendationAudienceId)**

Delete a custom recommendation audience.

API Version
35.0

Requires Chatter
No

Signature
```
public static Void deleteRecommendationAudience(String communityId, String recommendationAudienceId)
```
Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **recommendationAudienceId**
  - Type: String
  - ID of the custom recommendation audience.

Return Value

Type: Void

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**deleteRecommendationDefinition(communityId, recommendationDefinitionId)**

Delete a custom recommendation definition.

API Version

35.0

Requires Chatter

No

Signature

```java
public static Void deleteRecommendationDefinition(String communityId, String recommendationDefinitionId)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **recommendationDefinitionId**
  - Type: String
  - ID of the custom recommendation definition.

Return Value

Type: Void
Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

deleteRecommendationDefinitionPhoto(communityId, recommendationDefinitionId)

Delete a custom recommendation definition photo.

API Version

35.0

Requires Chatter

Yes

Signature

public static Void deleteRecommendationDefinitionPhoto(String communityId, String recommendationDefinitionId)

Parameters

communityId
    Type: String
    Use the ID for an Experience Cloud site, internal, or null.

recommendationDefinitionId
    Type: String
    ID of the custom recommendation definition.

Return Value

Type: Void

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

deleteScheduledRecommendation(communityId, scheduledRecommendationId, deleteDefinitionIfLast)

Delete a scheduled custom recommendation.
Signature

```java
public static Void deleteScheduledRecommendation(String communityId, String scheduledRecommendationId, Boolean deleteDefinitionIfLast)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **scheduledRecommendationId**
  - Type: String
  - ID of the scheduled custom recommendation.

- **deleteDefinitionIfLast**
  - Type: Boolean
  - If true and if this is the last scheduled custom recommendation of a custom recommendation definition, deletes the custom recommendation definition. Default is false.

Return Value

Type: Void

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

Deleting a scheduled custom recommendation is comparable to a deletion in an ordered list. All scheduled custom recommendations after the deleted scheduled custom recommendation receive a new, higher rank automatically.

```java
getRecommendationAudience(communityId, recommendationAudienceId)
```

Get information about a custom recommendation audience.

API Version

35.0
Requires Chatter
No

Signature

```java
public static ConnectApi.RecommendationAudience getRecommendationAudience(String communityId, String recommendationAudienceId)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or `null`.

- **recommendationAudienceId**
  - Type: String
  - ID of the custom recommendation audience.

Return Value
Type: `ConnectApi.RecommendationAudience`

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**getRecommendationAudienceMembership(communityId, recommendationAudienceId)**
Get the members of a custom recommendation audience.

API Version
35.0

Requires Chatter
No

Signature

```java
public static ConnectApi.UserReferencePage getRecommendationAudienceMembership(String communityId, String recommendationAudienceId)
```

Parameters

- **communityId**
  - Type: String
Use the ID for an Experience Cloud site, internal, or null.

`recommendationAudienceId`

Type: String

ID of the custom recommendation audience.

Return Value

Type: `ConnectApi.UserReferencePage`

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

`getRecommendationAudienceMembership(communityId, recommendationAudienceId, pageParam, pageSize)`

Get a page of custom recommendation audience members.

API Version

35.0

Requires Chatter

No

Signature

```
public static ConnectApi.UserReferencePage getRecommendationAudienceMembership(String communityId, String recommendationAudienceId, Integer pageParam, Integer pageSize)
```

Parameters

`communityId`

Type: String

Use the ID for an Experience Cloud site, internal, or null.

`recommendationAudienceId`

Type: String

ID of the custom recommendation audience.

`pageParam`

Type: Integer

Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

`pageSize`

Type: Integer
Specifies the number of members per page.

Return Value
Type: `ConnectApi.UserReferencePage`

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

```java
getRecommendationAudiences(communityId)
```
Get custom recommendation audiences.

API Version
35.0

Requires Chatter
No

Signature
```java
public static ConnectApi.RecommendationAudiencePage getRecommendationAudiences(String communityId)
```

Parameters
`communityId`
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`.

Return Value
Type: `ConnectApi.RecommendationAudiencePage`

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

```java
getRecommendationAudiences(communityId, pageParam, pageSize)
```
Get a page of custom recommendation audiences.
API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationAudiencePage getRecommendationAudiences(String communityId, Integer pageParam, Integer pageSize)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of audiences per page.

Return Value
Type: ConnectApi.RecommendationAudiencePage

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

getRecommendationDefinition(communityId, recommendationDefinitionId)
Get a custom recommendation definition.

API Version
35.0

Requires Chatter
No
Signature

```java
public static ConnectApi.RecommendationDefinition getRecommendationDefinition(String communityId, String recommendationDefinitionId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- `recommendationDefinitionId`
  - Type: `String`
  - ID of the custom recommendation definition.

Return Value

Type: `ConnectApi.RecommendationDefinition`

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**getRecommendationDefinitionPhoto(communityId, recommendationDefinitionId)**

Get a custom recommendation definition photo.

API Version

35.0

Requires Chatter

Yes

Signature

```java
public static ConnectApi.Photo getRecommendationDefinitionPhoto(String communityId, String recommendationDefinitionId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.

- `recommendationDefinitionId`
  - Type: `String`
ID of the custom recommendation definition.

Return Value
Type: `ConnectApi.Photo`

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

`getRecommendationDefinitions(communityId)`
Get custom recommendation definitions.

API Version
35.0

Requires Chatter
No

Signature
`public static ConnectApi.RecommendationDefinitionPage getRecommendationDefinitions(String communityId)`

Parameters
`communityId`
  Type: `String`  
  Use the ID for an Experience Cloud site, `internal`, or `null`.

Return Value
Type: `ConnectApi.RecommendationDefinitionPage`

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

`getRecommendationForUser(communityId, userId, action, objectId)`
Get the Chatter, custom, or static recommendation for the context user for the specified action and object ID.
API Version
33.0

Requires Chatter
Yes

Signature
public static ConnectApi.RecommendationCollection getRecommendationForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
• follow—Follow a file, record, topic, or user.
• join—Join a group.
• view—View a file, group, article, record, user, custom, or static recommendation.

objectId
Type: String
Specifies the object to act on.
• If action is follow, objectId is a user ID, file ID, record ID, or topic ID (version 36.0 and later).
• If action is join, objectId is a group ID.
• If action is view, objectId is a user ID, file ID, group ID, record ID, custom recommendation ID (version 34.0 and later), the enum Today for static recommendations (version 35.0 and later), or an article ID (version 37.0 and later).

Return Value
Type: ConnectApi.RecommendationCollection
Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetRecommendationForUser(communityId, userId, action, objectId, result)`

Testing ConnectApi Code

```java
getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults)
```

Get the Chatter recommendations, such as user, group, file, article, record, and topic recommendations for the context user. Get the custom and static recommendations for the context user.

API Version

36.0

Available to Guest Users

38.0

⚠️ **Note:** Only article and file recommendations are available to guest users.

Requires Chatter

Yes

Signature

```java
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.
- `userId`
  - Type: `String`
  - The ID for the context user or the keyword `me`.
- `contextAction`
  - Type: `ConnectApi.RecommendationActionType`
  - Action that the context user just performed. Supported values are:
  - `follow`
  - `view`
Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**contextObjectId**
- **Type:** `String`
- ID of the object that the context user just performed an action on.
  - If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, record ID, or topic ID.
  - If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**channel**
- **Type:** `ConnectApi.RecommendationChannel`
- A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:
  - `CustomChannel1`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
  - `CustomChannel2`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
  - `CustomChannel3`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
  - `CustomChannel4`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
  - `CustomChannel5`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.

**maxResults**
- **Type:** `Integer`
- Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

**Return Value**
- **Type:** `ConnectApi.RecommendationCollection`

**Usage**
- If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam’s user ID for `contextObjectId`.

  This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults)

Get the Chatter, custom, and static recommendations for the context user for the specified action.

API Version

36.0

Available to Guest Users

38.0

Note: Only article and file recommendations are available to guest users.

Requires Chatter

Yes

Signature

public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults)
Parameters

- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, internal, or `null`.

- **userId**
  Type: `String`
  The ID for the context user or the keyword `me`.

- **action**
  Type: `ConnectApi.RecommendationActionType`
  Specifies the action to take on a recommendation.
  - `follow`—Follow a file, record, topic, or user.
  - `join`—Join a group.
  - `view`—View a file, group, article, record, user, custom, or static recommendation.

- **contextAction**
  Type: `ConnectApi.RecommendationActionType`
  Action that the context user just performed. Supported values are:
  - `follow`
  - `view`
  Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

- **contextObjectId**
  Type: `String`
  ID of the object that the context user just performed an action on.
  - If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, record ID, or topic ID.
  - If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).
  Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

- **channel**
  Type: `ConnectApi.RecommendationChannel`
  A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:
  - `CustomChannel1`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
  - `CustomChannel2`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
  - `CustomChannel3`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
  - `CustomChannel4`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• **CustomChannel5**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.

• **DefaultChannel**—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central Experience Builder templates. They also appear in the feed in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.

**maxResults**
Type: `Integer`

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

**Return Value**
Type: `ConnectApi.RecommendationCollection`

**Usage**
If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam’s user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Testing ConnectApi Code
getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults)

Get the Chatter, custom, and static recommendations for the context user for the specified action and object category.

API Version
36.0

Available to Guest Users
38.0

Note: Only article and file recommendations are available to guest users.

Requires Chatter
Yes

Signature
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectCategory, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
- follow—Follow a file, record, topic, or user.
- join—Join a group.
- view—View a file, group, article, record, user, custom, or static recommendation.

objectCategory
Type: String
- If action is follow, objectCategory is users, files, topics, or records.
- If action is join, objectCategory is groups.
- If action is view, objectCategory is users, files, groups, records, custom, apps, or articles (version 37.0 and later).
You can also specify a key prefix, the first three characters of the object ID, as the `objectCategory`. Valid values are:

- If `action` is `follow`, `objectCategory` is `005` (users), `069` (files), `0TO` (topics), or `001` (accounts), for example.
- If `action` is `join`, `objectCategory` is `0F9` (groups).
- If `action` is `view`, `objectCategory` is `005` (users), `069` (files), `0F9` (groups), `0RD` (custom recommendations), `T` (static recommendations), `001` (accounts), or `kA0` (articles), for example, (version 370 and later).

### contextAction

**Type:** `ConnectApi.RecommendationActionType`

Action that the context user just performed. Supported values are:
- `follow`
- `view`

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

### contextObjectId

**Type:** `String`

ID of the object that the context user just performed an action on.
- If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, record ID, or topic ID.
- If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

### channel

**Type:** `ConnectApi.RecommendationChannel`

A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:

- `CustomChannel1` — Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- `CustomChannel2` — Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel3` — Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel4` — Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel5` — Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.

### maxResults

**Type:** `Integer`  

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.
Return Value

Type: `ConnectApi.RecommendationCollection`

Usage

If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam’s user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

`setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults, result)`

Testing ConnectApi Code

`getScheduledRecommendation(communityId, scheduledRecommendationId)`

Get a scheduled custom recommendation.

API Version

35.0

Requires Chatter

No
public static ConnectApi.ScheduledRecommendation getScheduledRecommendation(String communityId, String scheduledRecommendationId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

scheduledRecommendationId
Type: String
ID of the scheduled custom recommendation.

Return Value
Type: ConnectApi.ScheduledRecommendation

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

getScheduledRecommendations(communityId, channel)
Get scheduled custom recommendations.

API Version
36.0

Requires Chatter
No

Signature
public static ConnectApi.ScheduledRecommendationPage getScheduledRecommendations(String communityId, ConnectApi.RecommendationChannel channel)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

channel
Type: ConnectApi.RecommendationChannel
A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:

- **CustomChannel1**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- **CustomChannel2**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel3**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel4**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **CustomChannel5**—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- **DefaultChannel**—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central Experience Builder templates. They also appear in the feed in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.

Return Value

Type: *ConnectApi.ScheduledRecommendationPage*

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

`rejectRecommendationForUser(communityId, userId, action, objectId)`

Reject a Chatter, custom, or static recommendation for the context user for the specified action and object ID.

API Version

33.0

Requires Chatter

Yes

Signature

```java
public static rejectRecommendationForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectId)
```

Parameters

- `communityId`
  Type: *String*
  Use the ID for an Experience Cloud site, `internal`, or `null`.  
  

userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation. Supported values are:
- follow—Follow a file, record, topic, or user.
- join—Join a group.
- view—View a file, group, article, record, user, custom, or static recommendation.

objectId
Type: String
Specifies the object to take action on.
- If action is follow, objectId is a user ID, file ID, record ID, or topic ID (version 36.0 and later).
- If action is join, objectId is a group ID.
- If action is view, objectId is a custom recommendation ID, the enum Today for static recommendations, or an article ID (version 37.0 and later).

Return Value
Type: Void

rejectRecommendationForUser(communityId, userId, action, objectEnum)
Reject a static recommendation for the context user.

API Version
34.0

Requires Chatter
Yes

Signature
public static rejectRecommendationForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, ConnectApi.RecommendedObjectType objectEnum)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
The ID for the context user or the keyword `me`.

*action*

Type: `ConnectApi.RecommendationActionType`

Specifies the action to take on a recommendation. Supported values are:

- **view**—View a static recommendation.

*objectEnum*

Type: `ConnectApi.RecommendedObjectType`

 Specifies the object type to take action on.

- **Today**—Static recommendations that don’t have an ID, for example, the Today app recommendation.

**Return Value**

Type: `Void`

**updateRecommendationAudience** *(communityId, recommendationAudienceId, recommendationAudience)*

Update a custom recommendation audience.

**API Version**

35.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.RecommendationAudience updateRecommendationAudience(String communityId, String recommendationAudienceId, ConnectApi.RecommendationAudienceInput recommendationAudience)
```

**Parameters**

*communityId*

Type: `String`

Use the ID for an Experience Cloud site, internal, or `null`.

*recommendationAudienceId*

Type: `String`

ID of the custom recommendation audience.

*recommendationAudience*

Type: `ConnectApi.RecommendationAudienceInput`

A `ConnectApi.RecommendationAudienceInput` object.
Return Value
Type: ConnectApi.RecommendationAudience

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

updateRecommendationDefinition(communityId, recommendationDefinitionId, name, title, actionUrl, actionUrlName, explanation)
Update a custom recommendation definition with the specified parameters.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationDefinition updateRecommendationDefinition(String communityId, String recommendationDefinitionId, String name, String title, String actionUrl, String actionUrlName, String explanation recommendationDefinition)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

recommendationDefinitionId
Type: String
ID of the custom recommendation definition.

name
Type: String
Name of the custom recommendation definition. The name is displayed in Setup.

title
Type: String
Title of the custom recommendation definition.

actionUrl
Type: String
URL for acting on the custom recommendation, for example, the URL to join a group.
actionUrlName
Type: String
Text label for the action URL in the user interface, for example, “Launch.”

explanation
Type: String
Explanation, or body, of the custom recommendation.

Return Value
Type: ConnectApi.RecommendationDefinition

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

updateRecommendationDefinition(communityId, recommendationDefinitionId, recommendationDefinition)
Update a custom recommendation definition.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.RecommendationDefinition updateRecommendationDefinition(String communityId, String recommendationDefinitionId, ConnectApi.RecommendationDefinitionInput recommendationDefinition)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

recommendationDefinitionId
Type: String
ID of the custom recommendation definition.

recommendationDefinition
Type: ConnectApi.RecommendationDefinitionInput
A `ConnectApi.RecommendationDefinitionInput` object containing the properties to update.

**Return Value**

**Type:** `ConnectApi.RecommendationDefinition`

**Usage**

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**updateRecommendationDefinitionPhoto(communityId, recommendationDefinitionId, fileUpload)**

Update a custom recommendation definition photo with a file that hasn’t been uploaded.

**API Version**

35.0

**Requires Chatter**

Yes

**Signature**

`public static ConnectApi.Photo updateRecommendationDefinitionPhoto(String communityId, String recommendationDefinitionId, ConnectApi.BinaryInput fileUpload)`

**Parameters**

**communityId**

**Type:** `String`

Use the ID for an Experience Cloud site, `internal`, or `null`.

**recommendationDefinitionId**

**Type:** `String`

ID of the custom recommendation definition.

**fileUpload**

**Type:** `ConnectApi.BinaryInput`

A file to use as the photo. The content type must be usable as an image.

**Return Value**

**Type:** `ConnectApi.Photo`
Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

updateRecommendationDefinitionPhoto(communityId, recommendationDefinitionId, fileId, versionNumber)
Update a custom recommendation definition photo with an uploaded file.

API Version
35.0

Requires Chatter
Yes

Signature
public static ConnectApi.Photo updateRecommendationDefinitionPhoto(String communityId, String recommendationDefinitionId, String fileId, Integer versionNumber)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

recommendationDefinitionId
Type: String
ID of the custom recommendation definition.

fileId
Type: String
ID of a file already uploaded. The file must be an image, and be smaller than 2 GB.

versionNumber
Type: Integer
Version number of the existing file. Specify either an existing version number, or null to get the latest version.

Return Value
Type: ConnectApi.Photo

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission
can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

```java
updateRecommendationDefinitionPhotoWithAttributes(communityId, recommendationDefinitionId, photo)
```

Update a custom recommendation definition photo with an uploaded file that requires cropping.

API Version
35.0

Requires Chatter
Yes

Signature
```java
public static ConnectApi.Photo updateRecommendationDefinitionPhotoWithAttributes(String communityId, String recommendationDefinitionId, ConnectApi.PhotoInput photo)
```

Parameters
- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.
- **recommendationDefinitionId**
  - Type: String
  - ID of the custom recommendation definition.
- **photo**
  - Type: `ConnectApi.PhotoInput`
  - A `ConnectApi.PhotoInput` object specifying the file ID, version number, and cropping parameters.

Return Value
Type: `ConnectApi.Photo`

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

```java
updateRecommendationDefinitionPhotoWithAttributes(communityId, recommendationDefinitionId, photo, fileUpload)
```

Update a custom recommendation definition photo with a file that hasn’t been uploaded and requires cropping.
API Version
35.0

Requires Chatter
Yes

Signature

```java
public static ConnectApi.Photo updateRecommendationDefinitionPhotoWithAttributes(String communityId, String recommendationDefinitionId, ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)
```

Parameters

- `communityId`
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.
- `recommendationDefinitionId`
  - Type: String
  - ID of the custom recommendation definition.
- `photo`
  - Type: `ConnectApi.PhotoInput`
  - A `ConnectApi.PhotoInput` object specifying the cropping parameters.
- `fileUpload`
  - Type: `ConnectApi.BinaryInput`
  - A file to use as the photo. The content type must be usable as an image.

Return Value

- Type: `ConnectApi.Photo`

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

```
updateScheduledRecommendation(communityId, scheduledRecommendationId, scheduledRecommendation)
```

Update a scheduled custom recommendation.

API Version
35.0
Requires Chatter
No

Signature
public static ConnectApi.ScheduledRecommendation updateScheduledRecommendation(String communityId, String scheduledRecommendationId, ConnectApi.ScheduledRecommendationInput scheduledRecommendation)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

scheduledRecommendationId
Type: String
ID of the scheduled custom recommendation.

scheduledRecommendation
Type: ConnectApi.ScheduledRecommendationInput
A ConnectApi.ScheduledRecommendationInput object containing the properties to update.

Return Value
Type: ConnectApi.ScheduledRecommendation

Usage
Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

Ranking scheduled custom recommendations example
If you have these scheduled custom recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendations</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>3</td>
</tr>
</tbody>
</table>

And you include this information in the Scheduled Custom Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>
updateScheduledRecommendation(communityId, scheduledRecommendationId, rank, enabled, recommendationAudienceId)

Update a scheduled custom recommendation with the specified parameters.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.ScheduledRecommendation updateScheduledRecommendation(String communityId, String scheduledRecommendationId, Integer rank, Boolean enabled, String recommendationAudienceId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

scheduledRecommendationId
Type: String
ID of the scheduled custom recommendation.

rank
Type: Integer
Relative rank of the scheduled custom recommendation indicated by ascending whole numbers starting with 1.

Setting the rank is comparable to an insertion into an ordered list. The scheduled custom recommendation is inserted into the position specified by the rank. The rank of all the scheduled custom recommendations after it is pushed down. See Ranking scheduled custom recommendations example.

If the specified rank is larger than the size of the list, the scheduled custom recommendation is put at the end of the list. The rank of the scheduled custom recommendation is the size of the list, instead of the one specified.

If a rank is not specified, the scheduled custom recommendation is put at the end of the list.
enabled

Type: `Boolean`

Indicates whether scheduling is enabled. If `true`, the custom recommendation is enabled and appears in Experience Cloud sites. If `false`, custom recommendations in feeds in Salesforce mobile web aren’t removed, but no new custom recommendations appear. In Customer Service and Partner Central sites, disabled custom recommendations no longer appear.

`recommendationAudienceId`

Type: `String`

ID of the custom recommendation definition that this scheduled recommendation schedules.

Return Value

Type: `ConnectApi.ScheduledRecommendation`

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**Ranking scheduled custom recommendations example**

If you have these scheduled custom recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendations</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>3</td>
</tr>
</tbody>
</table>

And you include this information in the Scheduled Custom Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>
**Recommendations Test Methods**

The following are the test methods for Recommendations. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

**IN THIS SECTION:**

- `setTestGetRecommendationForUser(communityId, userId, action, objectId, result)`
  Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults, result)`
  Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults, result)`
  Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults, result)`
  Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

- `setTestGetRecommendationForUser(communityId, userId, action, objectId, result)`
  Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

---

**setTestGetRecommendationForUser(communityId, userId, action, objectId, result)**

Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

**API Version**
33.0

**Requires Chatter**
Yes

**Signature**

```java
public static Void setTestGetRecommendationForUser(String communityId, String userId,
ConnectApi.RecommendationActionType action, String objectId,
ConnectApi.RecommendationCollection result)
```

**Parameters**

- `communityId`
  Type: String
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `userId`
  Type: String
  The ID for the context user or the keyword `me`.

---

1907
action
  Type: ConnectApi.RecommendationActionType
  Specifies the action to take on a recommendation.
  • follow—Follow a file, record, topic, or user.
  • join—Join a group.
  • view—View a file, group, article, record, user, custom, or static recommendation.

objectId
  Type: String
  Specifies the object to take action on.
  • If action is follow, objectId is a user ID, file ID, record ID, or topic ID (version 36.0 and later).
  • If action is join, objectId is a group ID.
  • If action is view, objectId is a user ID, file ID, group ID, record ID, custom recommendation ID, the enum Today for static recommendations, or an article ID (version 37.0 and later).

result
  Type: ConnectApi.RecommendationCollection
  The object containing test data.

Return Value
  Type: Void

SEE ALSO:
  getRecommendationForUser(communityId, userId, action, objectId)
  Testing ConnectApi Code

setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults, result)
  Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
  36.0

Requires Chatter
  Yes

Signature
  public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults, ConnectApi.RecommendationCollection result)
Parameters

**communityId**
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

**userId**
Type: `String`
The ID for the context user or the keyword `me`.

**contextAction**
Type: `ConnectApi.RecommendationActionType`
Action that the context user just performed. Supported values are:
- `follow`
- `view`

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed.
If you don’t want recommendations based on a recent action, specify `null`.

**contextObjectId**
Type: `String`
ID of the object that the context user just performed an action on.
- If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, record ID, or topic ID.
- If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed.
If you don’t want recommendations based on a recent action, specify `null`.

**channel**
Type: `ConnectApi.RecommendationChannel`
A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:
- `CustomChannel1`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- `CustomChannel2`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel3`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel4`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- `CustomChannel5`—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.

**maxResults**
Type: `Integer`
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

result
  Type: ConnectApi.RecommendationCollection
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
  getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults)
  Testing ConnectApi Code

setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults, result)

Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
36.0

Requires Chatter
Yes

Signature
public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults, ConnectApi.RecommendationCollection result)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

userId
  Type: String
  The ID for the context user or the keyword me.

action
  Type: ConnectApi.RecommendationActionType
  Specifies the action to take on a recommendation.
  • follow—Follow a file, record, topic, or user.
• join—Join a group.
• view—View a file, group, article, record, user, custom, or static recommendation.

**contextAction**
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
• follow
• view

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**contextObjectId**
Type: String
ID of the object that the context user just performed an action on.
• If `contextAction` is follow, `contextObjectId` is a user ID, file ID, record ID, or topic ID.
• If `contextAction` is view, `contextObjectId` is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**channel**
Type: ConnectApi.RecommendationChannel
A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:
• CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
• CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• DefaultChannel—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central Experience Builder templates. They also appear in the feed in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.

**maxResults**
Type: Integer
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

**result**
Type: ConnectApi.RecommendationCollection
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults)
Testing ConnectApi Code

setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults, result)

Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
36.0

Requires Chatter
Yes

Signature
public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectCategory, ConnectApi.RecommendationActionType contextAction, String contextObjectId, ConnectApi.RecommendationChannel channel, Integer maxResults, ConnectApi.RecommendationCollection result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
• follow—Follow a file, record, topic, or user.
• join—Join a group.
• view—View a file, group, article, record, user, custom, or static recommendation.

objectCategory
Type: String
If action is follow, objectCategory is users, files, records, or topics.
If action is join, objectCategory is groups.
If action is view, objectCategory is users, files, groups, records, custom, apps, or articles (version 37.0 and later).

You can also specify a key prefix, the first three characters of the object ID, as the objectCategory. Valid values are:
• If action is follow, objectCategory is 005 (users), 069 (files), 0TO (topics), or 001 (accounts), for example.
• If action is join, objectCategory is 0F9 (groups).
• If action is view, objectCategory is 005 (users), 069 (files), 0F9 (groups), 0RD (custom recommendations), T (static recommendations), 001 (accounts), or kA0 (articles), for example, (version 37.0 and later).

contextAction
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
• follow
• view

Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

contextObjectId
Type: String
ID of the object that the context user just performed an action on.
• If contextAction is follow, contextObjectId is a user ID, file ID, record ID, or topic ID.
• If contextAction is view, contextObjectId is a user ID, file ID, group ID, record ID, or article ID (version 37.0 and later).

Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

channel
Type: ConnectApi.RecommendationChannel
A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:
• CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
• CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
• DefaultChannel—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central Experience Builder templates. They also appear in the feed in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder.
**maxResults**  
**Type:** Integer  
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

**result**  
**Type:** ConnectApi.RecommendationCollection  
The object containing test data.

**Return Value**  
**Type:** Void

**SEE ALSO:**  
getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults)  
Testing ConnectApi Code

### Retired Recommendations Methods
The following methods for Recommendations are retired.

**IN THIS SECTION:**

createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId)  
Create a scheduled custom recommendation with the specified parameters.

getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults)  
Get the Chatter recommendations, such as user, group, file, and record recommendations for the context user. Get the custom and static recommendations for the context user.

getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults)  
Get the Chatter, custom, and static recommendations for the context user for the specified action.

getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults)  
Get the Chatter, custom, and static recommendations for the context user for the specified action and object category.

getScheduledRecommendations(communityId)  
Get scheduled custom recommendations.

setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults, result)  
Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults, result)  
Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults, result)  
Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.
createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId)

Create a scheduled custom recommendation with the specified parameters.

API Version
35.0 only

⚠️ Important: In version 36.0 and later, use createScheduledRecommendation(communityId, recommendationDefinitionId, rank, enabled, recommendationAudienceId, channel).

Requires Chatter
No

Signature
public static ConnectApi.ScheduledRecommendation createScheduledRecommendation(String communityId, String recommendationDefinitionId, Integer rank, Boolean enabled, String recommendationAudienceId)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

recommendationDefinitionId
  Type: String
  ID of the custom recommendation definition.

rank
  Type: Integer
  Relative rank of the scheduled custom recommendation indicated by ascending whole numbers starting with 1.
  Setting the rank is comparable to an insertion into an ordered list. The scheduled custom recommendation is inserted into the position specified by the rank. The rank of all the scheduled custom recommendations after it is pushed down. See Ranking scheduled custom recommendations example.
  If the specified rank is larger than the size of the list, the scheduled custom recommendation is put at the end of the list. The rank of the scheduled custom recommendation is the size of the list, instead of the one specified.
  If a rank is not specified, the scheduled custom recommendation is put at the end of the list.

enabled
  Type: Boolean
  Indicates whether scheduling is enabled. If true, the custom recommendation is enabled and appears in Experience Cloud sites. If false, custom recommendations in feeds in Salesforce mobile web aren't removed, but no new custom recommendations appear. In Customer Service and Partner Central sites, disabled custom recommendations no longer appear.

recommendationAudienceId
  Type: String
  ID of the custom recommendation definition that this scheduled recommendation schedules.
Return Value

Type: `ConnectApi.ScheduledRecommendation`

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

**Ranking scheduled custom recommendations example**

If you have these scheduled custom recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendations</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>3</td>
</tr>
</tbody>
</table>

And you include this information in the Scheduled Custom Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>

**getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults)**

Get the Chatter recommendations, such as user, group, file, and record recommendations for the context user. Get the custom and static recommendations for the context user.

API Version

33.0–35.0
Important: In version 36.0 and later, use `getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, channel, maxResults)`.

Requires Chatter
Yes

Signature
```
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults)
```

Parameters
- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or `null`.
- **userId**
  - Type: `String`
  - The ID for the context user or the keyword `me`.
- **contextAction**
  - Type: `ConnectApi.RecommendationActionType`
  - Action that the context user just performed. Supported values are:
    - `follow`
    - `view`
  - Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed.
  - If you don’t want recommendations based on a recent action, specify `null`.
- **contextObjectId**
  - Type: `String`
  - ID of the object that the context user just performed an action on.
    - If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, or record ID.
    - If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, or record ID.
  - Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed.
  - If you don’t want recommendations based on a recent action, specify `null`.
- **maxResults**
  - Type: `Integer`
  - Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

Return Value
- Type: `ConnectApi.RecommendationCollection`
Usage

If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam’s user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults, result)`

Testing ConnectApi Code

`getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults)`

Get the Chatter, custom, and static recommendations for the context user for the specified action.

API Version

33.0–35.0

⚠️ Important: In version 36.0 and later, use `getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, channel, maxResults)`.

Requires Chatter

Yes
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults)

Parameters

communityId
Type: String

Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String

The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType

Specifies the action to take on a recommendation.
- follow—Follow a file, record, topic, or user.
- join—Join a group.
- view—View a file, group, article, record, user, custom, or static recommendation.

contextAction
Type: ConnectApi.RecommendationActionType

Action that the context user just performed. Supported values are:
- follow
- view

Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

contextObjectId
Type: String

ID of the object that the context user just performed an action on.
- If contextAction is follow, contextObjectId is a user ID, file ID, or record ID.
- If contextAction is view, contextObjectId is a user ID, file ID, group ID, or record ID.

Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

maxResults
Type: Integer

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

Return Value
Type: ConnectApi.RecommendationCollection
Usage

If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam’s user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```
setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults, result)
```

Testing ConnectApi Code

```
getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults)
```

Get the Chatter, custom, and static recommendations for the context user for the specified action and object category.

API Version

33.0–35.0

**Important:** In version 36.0 and later, use `getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, channel, maxResults)`.

Requires Chatter

Yes
public static ConnectApi.RecommendationCollection getRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectCategory, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults)

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**userId**
Type: String
The ID for the context user or the keyword me.

**action**
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
- follow—Follow a file, record, topic, or user.
- join—Join a group.
- view—View a file, group, article, record, user, custom, or static recommendation.

**objectCategory**
Type: String
- If action is follow, objectCategory is users, files, or records.
- If action is join, objectCategory is groups.
- If action is view, objectCategory is users, files, groups, records, custom, or apps.
You can also specify a key prefix, the first three characters of the object ID, as the objectCategory. Valid values are:
- If action is follow, objectCategory is 005 (users), 069 (files), or 001 (accounts), for example.
- If action is join, objectCategory is 0F9 (groups).
- If action is view, objectCategory is 005 (users), 069 (files), 0F9 (groups), 0RD (custom recommendations), T (static recommendations), or 001 (accounts), for example.

**contextAction**
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
- follow
- view
Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

**contextObjectId**
Type: String
ID of the object that the context user just performed an action on.
- If contextAction is follow, contextObjectId is a user ID, file ID, or record ID.
• If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, or record ID. Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

`maxResults`  
Type: Integer  
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

Return Value  
Type: `ConnectApi.RecommendationCollection`

Usage  
If you want to get recommendations based on a recent action performed, such as following a user, use `contextAction` and `contextObjectId` together. For example, if you just followed Pam, you specify `follow` for `contextAction` and Pam’s user ID for `contextObjectId`.

This method only recommends users who are followed by people who follow Pam. In this example, John follows Pam so the method returns a recommendation for you to follow Suzanne since John also follows Suzanne.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:  
`setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults, result)`  
Testing `ConnectApi Code`

`getScheduledRecommendations(communityId)`  
Get scheduled custom recommendations.
API Version
35.0 only

Important: In version 36.0 and later, use `getScheduledRecommendations(communityId, channel)`.

Requires Chatter
No

Signature
```java
public static ConnectApi.ScheduledRecommendationPage getScheduledRecommendations(String communityId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

Return Value

- Type: `ConnectApi.ScheduledRecommendationPage`

Usage

Community managers can access, create, and delete audiences, definitions, and schedules for custom recommendations. (Community managers are users with the Create and Set Up Experiences or Manage Experiences permission.) Users with the Modify All Data permission can also access, create, and delete custom recommendation audiences, custom recommendation definitions, and scheduled custom recommendations.

setTestGetRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults, result)

Register a `ConnectApi.RecommendationCollection` object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
33.0–35.0

Requires Chatter
Yes

Signature
```java
public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults, ConnectApi.RecommendationCollection result)
```
Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**userId**
Type: String
The ID for the context user or the keyword me.

**contextAction**
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
- follow
- view

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

**contextObjectId**
Type: String
ID of the object that the context user just performed an action on.
- If `contextAction` is follow, `contextObjectId` is a user ID, file ID, or record ID.
- If `contextAction` is view, `contextObjectId` is a user ID, file ID, group ID, or record ID.

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

**maxResults**
Type: Integer
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

**result**
Type: ConnectApi.RecommendationCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getRecommendationsForUser(communityId, userId, contextAction, contextObjectId, maxResults)`
- Testing ConnectApi Code

**setTestGetRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults, result)**

Register a ConnectApi.RecommendationCollection object to be returned when `getRecommendationsForUser` is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.
API Version
33.0–35.0

Requires Chatter
Yes

Signature
public static Void setTestGetRecommendationsForUser(String communityId, String userId,
ConnectApi.RecommendationActionType action, ConnectApi.RecommendationActionType
contextAction, String contextObjectId, Integer maxResults,
ConnectApi.RecommendationCollection result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.
• follow—Follow a file, record, topic, or user.
• join—Join a group.
• view—View a file, group, article, record, user, custom, or static recommendation.

contextAction
Type: ConnectApi.RecommendationActionType
Action that the context user just performed. Supported values are:
• follow
• view
Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.

contextObjectId
Type: String
ID of the object that the context user just performed an action on.
• If contextAction is follow, contextObjectId is a user ID, file ID, or record ID.
• If contextAction is view, contextObjectId is a user ID, file ID, group ID, or record ID.
Use contextAction and contextObjectId together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify null.
maxResults
Type: Integer
Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

result
Type: ConnectApi.RecommendationCollection
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRecommendationsForUser(communityId, userId, action, contextAction, contextObjectId, maxResults)
Testing ConnectApi Code

setTestGetRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults, result)
Register a ConnectApi.RecommendationCollection object to be returned when getRecommendationsForUser is called with matching parameters in a test context. Use the method with the same parameters or the code throws an exception.

API Version
33.0–35.0

Requires Chatter
Yes

Signature
public static Void setTestGetRecommendationsForUser(String communityId, String userId, ConnectApi.RecommendationActionType action, String objectCategory, ConnectApi.RecommendationActionType contextAction, String contextObjectId, Integer maxResults, ConnectApi.RecommendationCollection result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
The ID for the context user or the keyword me.

action
Type: ConnectApi.RecommendationActionType
Specifies the action to take on a recommendation.

- **follow**—Follow a file, record, topic, or user.
- **join**—Join a group.
- **view**—View a file, group, article, record, user, custom, or static recommendation.

**objectCategory**

*Type: String*

- If `action` is `follow`, `objectCategory` is `users`, `files`, or `records`.
- If `action` is `join`, `objectCategory` is `groups`.
- If `action` is `view`, `objectCategory` is `users`, `files`, `groups`, `records`, `custom`, or `apps`.

You can also specify a key prefix, the first three characters of the object ID, as the `objectCategory`. Valid values are:

- If `action` is `follow`, `objectCategory` is `005` (users), `069` (files), or `001` (accounts), for example.
- If `action` is `join`, `objectCategory` is `0F9` (groups).
- If `action` is `view`, `objectCategory` is `005` (users), `069` (files), `0F9` (groups), `0RD` (custom recommendations), `T` (static recommendations), or `001` (accounts), for example.

**contextAction**

*Type: ConnectApi.RecommendationActionType*

Action that the context user just performed. Supported values are:

- **follow**
- **view**

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**contextObjectId**

*Type: String*

ID of the object that the context user just performed an action on.

- If `contextAction` is `follow`, `contextObjectId` is a user ID, file ID, or record ID.
- If `contextAction` is `view`, `contextObjectId` is a user ID, file ID, group ID, or record ID.

Use `contextAction` and `contextObjectId` together to get new recommendations based on the action just performed. If you don’t want recommendations based on a recent action, specify `null`.

**maxResults**

*Type: Integer*

Maximum number of recommendation results; default is 10. Values must be from 1 to 99.

**result**

*Type: ConnectApi.RecommendationCollection*

The object containing test data.
Return Value
Type: Void

SEE ALSO:
getRecommendationsForUser(communityId, userId, action, objectCategory, contextAction, contextObjectId, maxResults)
Testing ConnectApi Code

Records Class
Access information about record motifs, which are small icons used to distinguish record types in the Salesforce UI.

Namespace
ConnectApi

Records Methods
The following are methods for Records. All methods are static.

IN THIS SECTION:
getMotif(communityId, idOrPrefix)
Get a motif that contains the URLs for a set of small, medium, and large motif icons for a record. It can also contain a base color for the record.
getMotifBatch(communityId, idOrPrefixList)
Get a motif for a list of objects.

getMotif(communityId, idOrPrefix)
Get a motif that contains the URLs for a set of small, medium, and large motif icons for a record. It can also contain a base color for the record.

API Version
28.0

Requires Chatter
No

Signature
public static ConnectApi.Motif getMotif(String communityId, String idOrPrefix)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

**idOrPrefix**
- Type: `String`
  - An ID or key prefix.

**Return Value**
- Type: `ConnectApi.Motif`

**Usage**
Each Salesforce record type has its own set of motif icons.

```java
public static ConnectApi.BatchResult[] getMotifBatch(String communityId, List<String> idOrPrefixList)
```

**getMotifBatch(communityId, idOrPrefixList)**
Get a motif for a list of objects.

**API Version**
31.0

**Requires Chatter**
No

**Signature**
```java
public static ConnectApi.BatchResult[] getMotifBatch(String communityId, List<String> idOrPrefixList)
```

**Parameters**
- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, internal, or null.

- **idOrPrefixList**
  - Type: `List<String>`
  - A list of object IDs or prefixes.

**Return Value**
- Type: `ConnectApi.BatchResult[]`

Example

```java
String communityId = null;
List<String> prefixIds = new List<String> { '001', '01Z', '069' };

// Get info about the motifs of all records in the list.
ConnectApi.BatchResult[] batchResults = ConnectApi.Records.getMotifBatch(communityId, prefixIds);

for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the color of each motif.
        ConnectApi.Motif motif;
        if(batchResult.getResult() instanceof ConnectApi.Motif) {
            motif = (ConnectApi.Motif) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(motif.color);
    } else {
        // Operation failed. Print errors.
        System.debug('FAILURE');
        System.debug(batchResult.getErrorMessage());
    }
}
```

Routing Class

Route orders to inventory locations in Order Management.

Namespace

ConnectApi

Routing Methods

The following are methods for Routing. All methods are static.

IN THIS SECTION:

- `findRoutesWithFewestSplits(findRoutesWithFewestSplitsInputRepresentation)`
  Returns combinations of inventory locations that can fulfill an order within a specified limit of shipment splits.

- `rankAverageDistance(rankAverageDistanceInputRepresentation)`
  Calculates the average distance from sets of inventory locations to an order recipient, and ranks them. Use this method to compare the average shipping distances for different sets of locations that can fulfill an order.

- `findRoutesWithFewestSplits (findRoutesWithFewestSplitsInputRepresentation)`
  Returns combinations of inventory locations that can fulfill an order within a specified limit of shipment splits.
API Version
5.0

Requires Chatter
No

Signature

```java
public static ConnectApi.FindRoutesWithFewestSplitsOutputRepresentation
findRoutesWithFewestSplits(ConnectApi.FindRoutesWithFewestSplitsInputRepresentation
findRoutesWithFewestSplitsInputRepresentation)
```

Parameters

findRoutesWithFewestSplitsInputRepresentation
Type: `ConnectApi.FindRoutesWithFewestSplitsInputRepresentation` on page 2041
The input includes the ordered item quantities, data about available inventory, and, optionally, a maximum allowable number of shipment splits.

Return Value
Type: `ConnectApi.FindRoutesWithFewestSplitsOutputRepresentation` on page 2199

```
rankAverageDistance (rankAverageDistanceInputRepresentation)
```

Calculates the average distance from sets of inventory locations to an order recipient, and ranks them. Use this method to compare the average shipping distances for different sets of locations that can fulfill an order.

API Version
5.0

Requires Chatter
No

Signature

```java
public static ConnectApi.RankAverageDistanceOutputRepresentation
rankAverageDistance (ConnectApi.RankAverageDistanceInputRepresentation
rankAverageDistanceInputRepresentation)
```

Parameters

rankAverageDistanceInputRepresentation
Type: `ConnectApi.RankAverageDistanceInputRepresentation` on page 2061
An order recipient’s geographic location and information about sets of inventory locations that can fulfill the order.
SalesforceInbox Class
Access information about Automated Activity Capture, which is available in Einstein and Salesforce Inbox.

Namespace
ConnectApi

SalesforceInbox Methods
The following are methods for SalesforceInbox. All methods are static.

IN THIS SECTION:
shareActivity(activityId, sharingInfo)
Share emails or events with certain groups of users.

**shareActivity(activityId, sharingInfo)**
Share emails or events with certain groups of users.

API Version
39.0

Requires Chatter
No

Signature

public static ConnectApi.ActivitySharingResult shareActivity(String activityId, ConnectApi.ActivitySharingInput sharingInfo)

Parameters
activityId
Type: String
The ID of the activity.

sharingInfo
Type: ConnectApi.ActivitySharingInput
A ConnectApi.ActivitySharingInput object.

Return Value
Type: ConnectApi.ActivitySharingResult
Usage
This method is a feature of both Sales Cloud Einstein and Inbox. It lets users connect their email and calendar to Salesforce. Then, their emails and events are automatically added to related Salesforce records. Users can specify who their individual emails and events are shared with.

SmartDataDiscovery Class
Get predictions on Salesforce objects.

Use the `ConnectApi.SmartDataDiscovery.predict` method to get predictions on Salesforce objects. For more information, see Get Predictions in Apex.

SocialEngagement Class
Manage information about social accounts or fan pages for social networks.

Namespace
ConnectApi

SocialEngagement Methods
The following are methods for `SocialEngagement`. All methods are static.

IN THIS SECTION:

- `deleteSocialPost(socialPostId, socialAccountId)`
  Delete a social post from its social network.
- `followSocialPersona(socialPersonaId, socialAccountId)`
  Follow a social persona in its social network.
- `followSocialPostPersona(socialPostId, socialAccountId)`
  Follow a social persona on a social post in its social network.
- `getIntents(socialPostId)`
  Get available intents for a social post.
- `getManagedSocialAccount(id)`
  Get a managed social account that is in the org and assigned to the user.
- `getManagedSocialAccounts()`
  Gets a list of managed social accounts that are in the org and assigned to the user.
- `getManagedSocialAccounts(socialNetwork)`
  Get a list of managed social accounts that are in the org and assigned to the user.
- `getRelationship(id, socialPersonaId)`
  Get the follow relationship between a managed social account and a social persona.
- `hideSocialPost(socialPostId, socialAccountId)`
  Hide a social post in its social network.
likeSocialPost(socialPostId, socialAccountId)
Like a social post in its social network.

massApprove(massApproval)
Approve or reject the publishing of a large number of social posts.

recallApproval(socialPostId)
Recall an approval request to publish a social post.

unfollowSocialPersona(socialPersonalId, socialAccountId)
Stop following a social persona in its social network.

unfollowSocialPostPersona(socialPostId, socialAccountId)
Stop following a social persona of a social post in its social network.

unhideSocialPost(socialPostId, socialAccountId)
Unhide a social post in its social network.

unlikeSocialPost(socialPostId, socialAccountId)
Unlike a social post in its social network.

deleteSocialPost(socialPostId, socialAccountId)
Delete a social post from its social network.

⚠️ **Note:** Deleting a social post from its social network doesn’t delete the record from Salesforce.

API Version
46.0

Requires Chatter
No

Signature
public static ConnectApi.DeleteSocialPostIntent deleteSocialPost(String socialPostId, String socialAccountId)

Parameters

- **socialPostId**
  - Type: String
  - ID of the social post to delete.

- **socialAccountId**
  - Type: String
  - ID of the social account that deletes the post.

Return Value
Type: ConnectApi.DeleteSocialPostIntent
**followSocialPersona(socialPersonaId, socialAccountId)**
Follow a social persona in its social network.

**API Version**
45.0

**Requires Chatter**
No

**Signature**
```java
public static ConnectApi.FollowSocialPersonaIntent followSocialPersona(String socialPersonaId, String socialAccountId)
```

**Parameters**
- `socialPersonaId`
  - **Type:** String
  - ID of the social persona to follow.
- `socialAccountId`
  - **Type:** String
  - ID of the social account that follows the social persona.

**Return Value**
- **Type:** `ConnectApi.FollowSocialPersonaIntent`

**followSocialPostPersona(socialPostId, socialAccountId)**
Follow a social persona on a social post in its social network.

**API Version**
45.0

**Requires Chatter**
No

**Signature**
```java
public static ConnectApi.FollowSocialPersonaIntent followSocialPostPersona(String socialPostId, String socialAccountId)
```
Parameters

socialPostId
  Type: String
  ID of the social post authored by the social persona to follow.

socialAccountId
  Type: String
  ID of the social account that follows the social persona.

Return Value
Type: `ConnectApi.FollowSocialPersonaIntent`

```java
getIntents(socialPostId)
Get available intents for a social post.

API Version
45.0

Requires Chatter
No

Signature
```
public static ConnectApi.SocialPostIntents getIntents(String socialPostId)
```

Parameters

socialPostId
  Type: String
  ID of a social post.

Return Value
Type: `ConnectApi.SocialPostIntents`

```java
getManagedSocialAccount(id)
Get a managed social account that is in the org and assigned to the user.

API Version
44.0

Requires Chatter
No
public static ConnectApi.ManagedSocialAccount getManagedSocialAccount(String id)

Parameters
id
Type: String
Description: Internal SFDC ID for this managed social account.

Return Value
Type: ConnectApi.ManagedSocialAccount

getManagedSocialAccounts()
Gets a list of managed social accounts that are in the org and assigned to the user.

API Version
44.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedSocialAccounts getManagedSocialAccounts()

Return Value
Type: ConnectApi.ManagedSocialAccounts

getManagedSocialAccounts(socialNetwork)
Get a list of managed social accounts that are in the org and assigned to the user.

API Version
44.0

Requires Chatter
No

Signature
public static ConnectApi.ManagedSocialAccounts getManagedSocialAccounts(ConnectApi.SocialNetworkProvider socialNetwork)
Parameters

socialNetwork
Type: ConnectApi.SocialNetworkProvider
Description: Filters results based on the social network. Values are:
- Facebook
- GooglePlus
- Instagram
- InstagramBusiness
- KakaoTalk
- Kik
- Line
- LinkedIn
- Messenger
- Other
- Pinterest
- QQ
- Rypple
- SinaWeibo
- SMS
- Snapchat
- Telegram
- Twitter
- VKontakte
- WeChat
- WhatsApp
- YouTube

Return Value
Type: ConnectApi.ManagedSocialAccounts

getRelationship(id, socialPersonaId)
Get the follow relationship between a managed social account and a social persona.

API Version
46.0

Requires Chatter
No
public static ConnectApi.SocialAccountRelationship getRelationship(String id, String socialPersonaId)

Parameters

id
Type: String
ID of the managed social account.

socialPersonaId
Type: String
ID of the social persona.

Return Value
Type: ConnectApi.SocialAccountRelationship

hideSocialPost(socialPostId, socialAccountId)
Hide a social post in its social network.

API Version
46.0

Requires Chatter
No

Signature
public static ConnectApi.HideSocialPostIntent hideSocialPost(String socialPostId, String socialAccountId)

Parameters

socialPostId
Type: String
ID of the social post to hide.

socialAccountId
Type: String
ID of the social account that hides the post.

Return Value
Type: ConnectApi.HideSocialPostIntent
likeSocialPost(socialPostId, socialAccountId)
Like a social post in its social network.

API Version
46.0

Requires Chatter
No

Signature
public static ConnectApi.LikeSocialPostIntent likeSocialPost(String socialPostId, String socialAccountId)

Parameters
socialPostId
Type: String
ID of the social post to like.
socialAccountId
Type: String
ID of the social account that likes the post.

Return Value
Type: ConnectApi.LikeSocialPostIntent

massApprove(massApproval)
Approve or reject the publishing of a large number of social posts.

API Version
46.0

Requires Chatter
No

Signature
public static ConnectApi.SocialPostMassApprovalOutput massApprove(ConnectApi.SocialPostMassApprovalInput massApproval)
Parameters

massApproval
  Type: ConnectApi.SocialPostMassApprovalInput
  A ConnectApi.SocialPostMassApprovalInput body that includes a list of social post IDs and the action to approve or reject publishing them.

Return Value
Type: ConnectApi.SocialPostMassApprovalOutput

recallApproval(socialPostId)
Recall an approval request to publish a social post.

API Version
46.0

Requires Chatter
No

Signature
public static Void recallApproval(String socialPostId)

Parameters
socialPostId
  Type: String
  ID of the social post.

Return Value
Type: Void

unfollowSocialPersona(socialPersonaId, socialAccountId)
Stop following a social persona in its social network.

API Version
45.0

Requires Chatter
No
Signature

```
public static Void unfollowSocialPersona(String socialPersonaId, String socialAccountId)
```

Parameters

```
socialPersonaId
    Type: String
    ID of the social persona to stop following.

socialAccountId
    Type: String
    ID of the social account that stops following the social persona.
```

Return Value

Type: Void

```
unfollowSocialPostPersona(socialPostId, socialAccountId)
```

Stop following a social persona of a social post in its social network.

API Version

45.0

Requires Chatter

No

Signature

```
public static Void unfollowSocialPostPersona(String socialPostId, String socialAccountId)
```

Parameters

```
socialPostId
    Type: String
    ID of the social post authored by the social persona to stop following.

socialAccountId
    Type: String
    ID of the social account that stops following the social persona.
```

Return Value

Type: Void

```
unhideSocialPost(socialPostId, socialAccountId)
```

Unhide a social post in its social network.
API Version
46.0

Requires Chatter
No

Signature

public static Void unhideSocialPost(String socialPostId, String socialAccountId)

Parameters

socialPostId
Type: String
ID of the social post to unhide.

socialAccountId
Type: String
ID of the social account that unhides the post.

Return Value
Type: Void

unlikeSocialPost(socialPostId, socialAccountId)
Unlike a social post in its social network.

API Version
46.0

Requires Chatter
No

Signature

public static Void unlikeSocialPost(String socialPostId, String socialAccountId)

Parameters

socialPostId
Type: String
ID of the social post to unlike.

socialAccountId
Type: String
ID of the social account that unlikes the post.
Return Value
Type: Void

**Survey Class**
Send survey invitations by email.

**Namespace**
ConnectApi

**Survey Methods**
These methods are for Survey. All methods are static.

**IN THIS SECTION:**

`sendSurveyInvitationEmail(surveyID, SurveyEmailInput)`
Email survey invitations to up to 300 participants. You can email either leads, contacts, or users in your org. Either a link to launch the survey or a question can be embedded in the email invitations.

**sendSurveyInvitationEmail(surveyID, SurveyEmailInput)**
Email survey invitations to up to 300 participants. You can email either leads, contacts, or users in your org. Either a link to launch the survey or a question can be embedded in the email invitations.

API Version
50.0

Requires Chatter
No

**Signature**

```
public static ConnectApi.SurveyInvitationEmailOutput sendSurveyInvitationEmail(String surveyID, ConnectApi.SurveyInvitationEmailInput SurveyEmailInput)
```

**Parameters**

`surveyID`
Type: String
ID of the survey.

`SurveyEmailInput`
Type: ConnectApi.SurveyInvitationEmailInput
A ConnectApi.SurveyInvitationEmailInput object.
Return Value
Type: `ConnectApi.SurveyInvitationEmailOutput`

**Topics Class**
Access information about topics, such as their descriptions, the number of people talking about them, related topics, and information about groups contributing to the topic. Update a topic's name or description, merge topics, and add and remove topics from records and feed items.

**Namespace**
`ConnectApi`

**Topics Methods**
The following are methods for `Topics`. All methods are static.

**IN THIS SECTION:**
- `assignTopic(communityId, recordId, topicId)`
  Assign a topic to a record or feed item.
- `assignTopicByName(communityId, recordId, topicName)`
  Assign a topic to a record or feed item.
- `createTopic(communityId, name, description)`
  Create a topic.
- `createTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory, topicNames)`
  Create topic and article assignment rules by data category.
- `deleteTopic(communityId, topicId)`
  Delete a topic.
- `getGroupsRecentlyTalkingAboutTopic(communityId, topicId)`
  Get information about the five groups that most recently contributed to a topic.
- `getRecentlyTalkingAboutTopicsForGroup(communityId, groupId)`
  Get up to five topics most recently used in a group.
- `getRecentlyTalkingAboutTopicsForUser(communityId, userId)`
  Get up to five topics most recently used by a user.
- `getRelatedTopics(communityId, topicId)`
  Get up to five topics most closely related to a topic.
- `getTopic(communityId, topicId)`
  Get a topic.
- `getTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory)`
  Get topic and article assignment rules by data category.
- `getTopics(communityId, recordId)`
  Get the first page of topics assigned to a record or feed item.
getTopics(communityId)
Get the first page of topics for the org or Experience Cloud site.

getTopics(communityId, sortParam)
Get the first page of sorted topics for the org or community.

getTopics(communityId, pageParam, pageSize)
Get a page of topics.

getTopics(communityId, pageParam, pageSize, sortParam)
Get a page of sorted topics.

getTopics(communityId, q, sortParam)
Get the sorted topics that match the search criteria.

getTopics(communityId, q, pageParam, pageSize)
Get a page of topics that match the search criteria.

getTopics(communityId, q, pageParam, pageSize, sortParam)
Get a page of sorted topics that match the search criteria.

getTopics(communityId, q, exactMatch)
Get the topic that matches the exact, case-insensitive name.

getTopicsOrFallBackToRenamedTopics(communityId, q, exactMatch, fallBackToRenamedTopics)
Get the most recent renamed topic match, if there isn’t an exact match.

getTopicSuggestions(communityId, recordId, maxResults)
Get up to a specified number of suggested topics for a record or feed item.

getTopicSuggestions(communityId, recordId)
Get suggested topics for a record or feed item.

getTopicSuggestionsForText(communityId, text, maxResults)
Get up to a specified number of suggested topics for a string of text.

getTopicSuggestionsForText(communityId, text)
Get suggested topics for a string of text.

getTrendingTopics(communityId)
Get trending topics for the org or Experience Cloud site.

getTrendingTopics(communityId, maxResults)
Get up to a specified number of trending topics for the org or Experience Cloud site.

mergeTopics(communityId, topicId, idsToMerge)
Merge up to five secondary topics with a primary topic.

reassignTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory, topicNames)
Reassign topic and article assignment rules by data category by deleting the existing rules and creating new rules.

reassignTopicsByName(communityId, recordId, topicNames)
Reassign all the topics on a record or feed item, that is, remove all the assigned topics on a record or feed item and add topics. Optionally, provide a list of suggested topics to assign to a record or feed item to improve future topic suggestions.

unassignTopic(communityId, recordId, topicId)
Remove a topic from a record or feed item.

updateTopic(communityId, topicId, topic)
Update the description or name of a topic or merge up to five secondary topics with a primary topic.
updateTopicsForArticlesInDataCategory(communityId, dataCategoryGroup, dataCategory, articleTopicAssignmentJob)
Assign topics to articles and unassign topics from articles in a data category.

assignTopic(communityId, recordId, topicId)
Assign a topic to a record or feed item.

API Version
29.0

Requires Chatter
No

Signature
public static ConnectApi.Topic assignTopic(String communityId, String recordId, String topicId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

recordId
Type: String
The ID for a record or feed item.

topicId
Type: String
The ID for a topic.

Return Value
Type: ConnectApi.Topic

Usage
Only users with the Assign Topics permission can add existing topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

assignTopicByName(communityId, recordId, topicName)
Assign a topic to a record or feed item.

API Version
29.0
Requires Chatter
No

Signature

```java
public static ConnectApi.Topic assignTopicByName(String communityId, String recordId, String topicName)
```

Parameters

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **recordId**
  - Type: String
  - The ID of the record or feed item to which to assign the topic.

- **topicName**
  - Type: String
  - The name of a new or existing topic.

Return Value

Type: ConnectApi.Topic

Usage

Only users with the Assign Topics permission can add existing topics to records or feed items. Only users with the Create Topics permission can add new topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

`createTopic(communityId, name, description)`

Create a topic.

API Version

36.0

Requires Chatter

No

Signature

```java
public static ConnectApi.Topic createTopic(String communityId, String name, String description)
```
Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

`name`
Type: `String`
The name of the topic.

`description`
Type: `String`
The description of the topic.

Return Value
Type: `ConnectApi.Topic`

Usage
Only users with the Create Topics permission can create a topic.

`createTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory, topicNames)`
Create topic and article assignment rules by data category.

API Version
40.0

Requires Chatter
No

Signature
`public static ConnectApi.TopicPage createTopicDataCategoryRules(String communityId, String dataCategoryGroup, String dataCategory, ConnectApi.TopicNamesInput topicNames)`

Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

`dataCategoryGroup`
Type: `String`
The data category group used by articles.

`dataCategory`
Type: `String`
The data category used by articles.

topicNames
   Type: ConnectApi.TopicNamesInput
   A ConnectApi.TopicNamesInput object with the names of topics to assign to articles in a data category.

Return Value
Type: ConnectApi.TopicPage

deleteTopic(communityId, topicId)
Delete a topic.

API Version
29.0

Requires Chatter
No

Signature
public static Void deleteTopic(String communityId, String topicId)

Parameters
communityId
   Type: String,
   Use the ID for an Experience Cloud site, internal, or null.

topicId
   Type: String
   The ID for a topic.

Return Value
Type: Void

Usage
Only users with the Delete Topics or Modify All Data permission can delete topics.

Topic deletion is asynchronous. If a topic is requested before the deletion completes, the response is successful and the
isBeingDeleted property of ConnectApi.Topic is true in version 33.0 and later. If a topic is requested after the deletion
completes, the response is ConnectApi.NotFoundException.

getGroupsRecentlyTalkingAboutTopic(communityId, topicId)
Get information about the five groups that most recently contributed to a topic.
API Version
29.0

Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.ChatterGroupSummaryPage
getGroupsRecentlyTalkingAboutTopic(String communityId, String topicId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

topicId
Type: String
The ID for a topic.

Return Value
Type: ConnectApi.ChatterGroupSummaryPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetGroupsRecentlyTalkingAboutTopic(communityId, topicId, result)
Testing ConnectApi Code

getRecentlyTalkingAboutTopicsForGroup(communityId, groupId)
Get up to five topics most recently used in a group.

API Version
29.0
Available to Guest Users
32.0

Requires Chatter
Yes

Signature
public static ConnectApi.TopicPage getRecentlyTalkingAboutTopicsForGroup(String communityId, String groupId)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
groupId
  Type: String
  The ID for a group.

Return Value
Type: ConnectApi.TopicPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestGetRecentlyTalkingAboutTopicsForGroup(communityId, groupId, result)
  Testing ConnectApi Code

getRecentlyTalkingAboutTopicsForUser(communityId, userId)
Get up to five topics most recently used by a user.

API Version
29.0

Available to Guest Users
32.0
Requires Chatter
Yes

Signature

public static ConnectApi.TopicPage getRecentlyTalkingAboutTopicsForUser(String communityId, String userId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
The ID for a user.

Return Value
Type: ConnectApi.TopicPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
setTestGetRecentlyTalkingAboutTopicsForUser(communityId, userId, result)

Testing ConnectApi Code

getRelatedTopics(communityId, topicId)
Get up to five topics most closely related to a topic.
Two topics that are assigned to the same feed item at least three times are related.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No
public static ConnectApi.TopicPage getRelatedTopics(String communityId, String topicId)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

topicId
  Type: String
  The ID for a topic.

Return Value

Type: ConnectApi.TopicPage

Usage

To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestGetRelatedTopics(communityId, topicId, result)
  Testing ConnectApi Code

getTopic(communityId, topicId)
Get a topic.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
public static ConnectApi.Topic getTopic(String communityId, String topicId)
Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

topicId
Type: String
The ID for a topic.

Return Value
Type: ConnectApi.Topic

getTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory)
Get topic and article assignment rules by data category.

API Version
40.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage getTopicDataCategoryRules(String communityId, String dataCategoryGroup, String dataCategory)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

dataCategoryGroup
Type: String
The data category group used by articles.

dataCategory
Type: String
The data category used by articles.

Return Value
Type: ConnectApi.TopicPage
**getTopics(communityId, recordId)**  
Get the first page of topics assigned to a record or feed item.

API Version  
29.0

Available to Guest Users  
32.0

Requires Chatter  
No

Signature  
```java  
public static ConnectApi.TopicPage getTopics(String communityId, String recordId)  
```  

Parameters  

* **communityId**  
  Type: `String`  
  Use the ID for an Experience Cloud site, `internal`, or `null`.

* **recordId**  
  Type: `String`  
  The ID for a record or feed item.

Return Value  
Type: `ConnectApi.TopicPage`

Usage  
Administrators must enable topics for objects before users can add topics to records of that object type.

**getTopics(communityId)**  
Get the first page of topics for the org or Experience Cloud site.

API Version  
29.0

Available to Guest Users  
32.0
Requires Chatter
No

Signature
public static ConnectApi.TopicPage getTopics(String communityId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

Return Value
Type: ConnectApi.TopicPage

getTopics(communityId, sortParam)
Get the first page of sorted topics for the org or community.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage getTopics(String communityId, ConnectApi.TopicSort sortParam)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

sortParam
Type: ConnectApi.TopicSort
Values are:
- popularDesc—Sorts topics by popularity with the most popular first. This value is the default.
- alphaAsc—Sorts topics alphabetically.
Return Value
Type: ConnectApi.TopicPage

getTopics(communityId, pageParam, pageSize)
Get a page of topics.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage getTopics(String communityId, Integer pageParam, Integer pageSize)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

pageParam
Type: Integer
Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
Type: ConnectApi.TopicPage

getTopics(communityId, pageParam, pageSize, sortParam)
Get a page of sorted topics.

API Version
29.0
Available to Guest Users
32.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage getTopics(String communityId, Integer pageParam, Integer pageSize, ConnectApi.TopicSort sortParam)

Parameters
communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

pageParam
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

sortParam
  Type: ConnectApi.TopicSort
  Values are:
  • popularDesc—Sorts topics by popularity with the most popular first. This value is the default.
  • alphaAsc—Sorts topics alphabetically.

Return Value
Type: ConnectApi.TopicPage

getTopics(communityId, q, sortParam)
Get the sorted topics that match the search criteria.

API Version
29.0

Available to Guest Users
32.0
Requires Chatter
No

Signature

```java
public static ConnectApi.TopicPage getTopics(String communityId, String q,
ConnectApi.TopicSort sortParam)
```

Parameters

- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

- **q**
  Type: String
  Specifies the string to search. The string must contain at least two characters, not including wildcards.

- **sortParam**
  Type: ConnectApi.TopicSort
  Values are:
  - popularDesc—Sorts topics by popularity with the most popular first. This value is the default.
  - alphaAsc—Sorts topics alphabetically.

Return Value

Type: ConnectApi.TopicPage

```java
getTopics(communityId, q, pageParam, pageSize)
```

Get a page of topics that match the search criteria.

API Version

29.0

Available to Guest Users

32.0

Requires Chatter
No

Signature

```java
public static ConnectApi.TopicPage getTopics(String communityId, String q, Integer pageParam, Integer pageSize)
```
Parameters

**communityId**
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`.

**q**
Type: `String`
Specifies the string to search. The string must contain at least two characters, not including wildcards.

**pageParam**
Type: `Integer`
Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**
Type: `Integer`
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

Return Value
Type: `ConnectApi.TopicPage`

```java
public static ConnectApi.TopicPage getTopics(String communityId, String q, Integer pageParam, Integer pageSize, ConnectApi.TopicSort sortParam)
```

Get a page of sorted topics that match the search criteria.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No

Signature
```java
public static ConnectApi.TopicPage getTopics(String communityId, String q, Integer
pageParam, Integer pageSize, ConnectApi.TopicSort sortParam)
```

Parameters

**communityId**
Type: `String`
Use the ID for an Experience Cloud site, internal, or `null`.

**q**
Type: `String`
Specifies the string to search. The string must contain at least two characters, not including wildcards.

**pageParam**
- **Type:** `Integer`
  - Specifies the number of the page you want returned. Starts at 0. If you pass in `null` or 0, the first page is returned.

**pageSize**
- **Type:** `Integer`
  - Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

**sortParam**
- **Type:** `ConnectApi.TopicSort`
  - Values are:
    - `popularDesc`—Sorts topics by popularity with the most popular first. This value is the default.
    - `alphaAsc`—Sorts topics alphabetically.

Return Value
- **Type:** `ConnectApi.TopicPage`

**getTopics(communityId, q, exactMatch)**
- Get the topic that matches the exact, case-insensitive name.

API Version
- 33.0

Available to Guest Users
- 33.0

Requires Chatter
- No

**Signature**
- `public static ConnectApi.TopicPage getTopics(String communityId, String q, Boolean exactMatch)`

**Parameters**
- **communityId**
  - **Type:** `String`
    - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **q**
  - **Type:** `String`
    - Specifies the string to search. The string must contain at least two characters, not including wildcards.
exactMatch

Type: Boolean

Specify true to find a topic by its exact, case-insensitive name.

Return Value

Type: ConnectApi.TopicPage

getTopicsOrFallBackToRenamedTopics(communityId, q, exactMatch, fallBackToRenamedTopics)

Get the most recent renamed topic match, if there isn’t an exact match.

API Version

35.0

Available to Guest Users

35.0

Requires Chatter

No

Signature

public static ConnectApi.TopicPage getTopicsOrFallBackToRenamedTopics(String communityId, String q, Boolean exactMatch, Boolean fallBackToRenamedTopics)

Parameters

communityId

Type: String

Use the ID for an Experience Cloud site, internal, or null.

q

Type: String

Specifies the string to search. The string must contain at least two characters, not including wildcards.

exactMatch

Type: Boolean

Specify true to find a topic by its exact, case-insensitive name or to find the most recent renamed topic match if there isn’t an exact match.

fallBackToRenamedTopics

Type: Boolean

Specify true and if there isn’t an exact match, the most recent renamed topic match is returned. If there are multiple renamed topic matches, only the most recent is returned. If there are no renamed topic matches, an empty collection is returned.
Return Value  
Type: `ConnectApi.TopicPage`

**getTopicSuggestions(communityId, recordId, maxResults)**  
Get up to a specified number of suggested topics for a record or feed item.

API Version  
29.0

Requires Chatter  
No

Signature  
```java  
public static ConnectApi.TopicSuggestionPage getTopicSuggestions(String communityId,  
String recordId, Integer maxResults)  
```

Parameters  
- **communityId**  
  Type: `String`  
  Use the ID for an Experience Cloud site, internal, or `null`.

- **recordId**  
  Type: `String`  
  The ID for a record or feed item.

- **maxResults**  
  Type: `Integer`  
  Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

Return Value  
Type: `ConnectApi.TopicSuggestionPage`

Usage  
Administrators must enable topics for objects before users can see suggested topics for records of that object type.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetTopicSuggestions(communityId, recordId, maxResults, result)`
- Testing ConnectApi Code
**getTopicSuggestions(communityId, recordId)**
Get suggested topics for a record or feed item.

**API Version**
29.0

**Requires Chatter**
No

**Signature**
```
public static ConnectApi.TopicSuggestionPage getTopicSuggestions(String communityId, String recordId)
```

**Parameters**
- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.
- **recordId**
  - Type: String
  - The ID for a record or feed item.

**Return Value**
Type: `ConnectApi.TopicSuggestionPage`

**Usage**
Administrators must enable topics for objects before users can see suggested topics for records of that object type.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

**SEE ALSO:**

- Testing ConnectApi Code

**getTopicSuggestionsForText(communityId, text, maxResults)**
Get up to a specified number of suggested topics for a string of text.

**API Version**
29.0
Requires Chatter
No

Signature
public static ConnectApi.TopicSuggestionPage getTopicSuggestionsForText(String communityId, String text, Integer maxResults)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

text
  Type: String
  String of text.

maxResults
  Type: Integer
  Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

Return Value
Type: ConnectApi.TopicSuggestionPage

Usage
To test code that uses this method, use the matching set test method (prefix the method name with setTest). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
  setTestGetTopicSuggestionsForText(communityId, text, maxResults, result)
  Testing ConnectApi Code

getTopicSuggestionsForText(communityId, text)
Get suggested topics for a string of text.

API Version
29.0

Requires Chatter
No
Signature

```java
public static ConnectApi.TopicSuggestionPage getTopicSuggestionsForText(String communityId, String text)
```

Parameters

- `communityId`  
  - Type: `String`  
  - Use the ID for an Experience Cloud site, internal, or `null`.

- `text`  
  - Type: `String`  
  - String of text.

Return Value

- Type: `ConnectApi.TopicSuggestionPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

- `setTestGetTopicSuggestionsForText(communityId, text, result)`
- Testing ConnectApi Code

```
getTrendingTopics(communityId)
```

Get trending topics for the org or Experience Cloud site.

API Version

- 29.0

Available to Guest Users

- 32.0

Requires Chatter

- No

Signature

```java
public static ConnectApi.TopicPage getTrendingTopics(String communityId)
```
Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.

Return Value
Type: `ConnectApi.TopicPage`

Usage
The more frequently people add a specific topic to their posts and comments and comment on or like posts with the same topic over a short period, the more likely it is to become a trending topic. For example, if your coworkers are attending the upcoming Dreamforce conference and have started discussing it in Chatter, you might see a trending topic for Dreamforce. A trending topic is not solely based on popularity and usually relates to a one-time or infrequent event that has a spike in activity, such as a conference or a project deadline.

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- `setTestGetTrendingTopics(communityId, result)`
- Testing ConnectApi Code

`getTrendingTopics(communityId, maxResults)`
Get up to a specified number of trending topics for the org or Experience Cloud site.

API Version
29.0

Available to Guest Users
32.0

Requires Chatter
No

Signature

```java
public static ConnectApi.TopicPage getTrendingTopics(String communityId, Integer maxResults)
```

Parameters

`communityId`
Type: `String`
Use the ID for an Experience Cloud site, `internal`, or `null`.
**maxResults**  
Type: `Integer`  
Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

**Return Value**  
Type: `ConnectApi.TopicPage`

**Usage**  
The more frequently people add a specific topic to their posts and comments and comment on or like posts with the same topic over a short period, the more likely it is to become a trending topic. For example, if your coworkers are attending the upcoming Dreamforce conference and have started discussing it in Chatter, you might see a trending topic for Dreamforce. A trending topic is not solely based on popularity and usually relates to a one-time or infrequent event that has a spike in activity, such as a conference or a project deadline. To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:  
- `setTestGetTrendingTopics(communityId, maxResults, result)`  
  Testing ConnectApi Code

**mergeTopics(communityId, topicId, idsToMerge)**  
Merge up to five secondary topics with a primary topic.

**API Version**  
33.0

**Requires Chatter**  
No

**Signature**  
`public static ConnectApi.Topic mergeTopics(String communityId, String topicId, List<String> idsToMerge)`

**Parameters**  
- `communityId`  
  Type: `String`  
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `topicId`  
  Type: `String`  
  The ID for the primary topic for the merge. If this topic is a managed topic, it retains its topic type, topic images, and children topics.
**idsToMerge**

Type: `List<String>`

A list of up to five comma-separated secondary topic IDs to merge with the primary topic. If any of these secondary topics are managed topics, they lose their topic type, topic images, and children topics. Their feed items are reassigned to the primary topic.

**Return Value**

Type: `ConnectApi.Topic`

**Usage**

Only users with the Delete Topics or Modify All Data permission can merge topics.

**reassignTopicDataCategoryRules(communityId, dataCategoryGroup, dataCategory, topicNames)**

Reassign topic and article assignment rules by data category by deleting the existing rules and creating new rules.

**API Version**

40.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.TopicPage reassignTopicDataCategoryRules(String communityId, String dataCategoryGroup, String dataCategory, ConnectApi.TopicNamesInput topicNames)
```

**Parameters**

- `communityId`
  
  Type: `String`
  
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `dataCategoryGroup`
  
  Type: `String`
  
  The data category group used by articles.

- `dataCategory`
  
  Type: `String`
  
  The data category used by articles.

- `topicNames`
  
  Type: `ConnectApi.TopicNamesInput`
  
  A `ConnectApi.TopicNamesInput` object with the names of topics to reassign to articles in a data category.
Return Value
Type: `ConnectApi.TopicPage`

`reassignTopicsByName(communityId, recordId, topicNames)`
Reassign all the topics on a record or feed item, that is, remove all the assigned topics on a record or feed item and add topics. Optionally, provide a list of suggested topics to assign to a record or feed item to improve future topic suggestions.

API Version
35.0

Requires Chatter
No

Signature
```java
public static ConnectApi.TopicPage reassignTopicsByName(String communityId, String recordId, ConnectApi.TopicNamesInput topicNames)
```

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, **internal**, or **null**.

- `recordId`
  Type: `String`
  The ID of the record or feed item to which to assign the topic.

- `topicNames`
  Type: `ConnectApi.TopicNamesInput`
  A list of topics to replace the currently assigned topics. Optionally, a list of suggested topics to assign to improve future topic suggestions.

Return Value
Type: `ConnectApi.TopicPage`

Usage
Only users with the Assign Topics permission can remove topics from records or feed items and add existing topics to records or feed items. Only users with the Create Topics permission can add new topics to records or feed items. Administrators must enable topics for objects before users can add topics to records of that object type.

`unassignTopic(communityId, recordId, topicId)`
Remove a topic from a record or feed item.
API Version
29.0

Requires Chatter
No

Signature
public static Void unassignTopic(String communityId, String recordId, String topicId)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

recordId
Type: String
The ID for a record or feed item.

topicId
Type: String
The ID for a topic.

Return Value
Type: Void

Usage
Only users with the Assign Topics permission can remove topics from feed items or records. Administrators must enable topics for objects before users can add topics to records of that object type.

updateTopic(communityId, topicId, topic)
Update the description or name of a topic or merge up to five secondary topics with a primary topic.

API Version
29.0

Requires Chatter
No

Signature
public static ConnectApi.Topic updateTopic(String communityId, String topicId, ConnectApi.TopicInput topic)
Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

topicId
Type: String
The ID for a topic.

topic
Type: ConnectApi.TopicInput
A ConnectApi.TopicInput object containing the name and description of the topic or up to five comma-separated secondary topic IDs to merge with the primary topic.

Return Value
Type: ConnectApi.Topic

Usage
Only users with the Edit Topics or Modify All Data permission can update topic names and descriptions. Only users with the Delete Topics or Modify All Data permission can merge topics.

updateTopicsForArticlesInDataCategory(communityId, dataCategoryGroup, dataCategory, articleTopicAssignmentJob)
Assign topics to articles and unassign topics from articles in a data category.

API Version
40.0

Requires Chatter
No

Signature
public static ConnectApi.TopicPage updateTopicsForArticlesInDataCategory(String communityId, String dataCategoryGroup, String dataCategory, ConnectApi.ArticleTopicAssignmentJobInput articleTopicAssignmentJob)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

dataCategoryGroup
Type: String
The data category group used by articles.

dataCategory
Type: String
The data category used by articles.

articleTopicAssignmentJob
Type: ConnectApi.ArticleTopicAssignmentJobInput
A ConnectApi.ArticleTopicAssignmentJobInput object that indicates the operation to take on which topics.

Return Value
Type: ConnectApi.TopicPage

Topics Test Methods
The following are the test methods for Topics. All methods are static.
For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

setTestGetGroupsRecentlyTalkingAboutTopic(communityId, topicId, result)
Register a ConnectApi.ChatterGroupSummaryPage object to be returned when the matching ConnectApi.getGroupsRecentlyTalkingAboutTopic method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature
public static Void setTestGetGroupsRecentlyTalkingAboutTopic(String communityId, String topicId, ConnectApi.ChatterGroupSummaryPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.
topicId
Type: String
The ID for a topic.
result
Type: ConnectApi.ChatterGroupSummaryPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getGroupsRecentlyTalkingAboutTopic(communityId, topicId)
Testing ConnectApi Code

setTestGetRecentlyTalkingAboutTopicsForGroup(communityId, groupId, result)

Register a ConnectApi.TopicPage object to be returned when the matching ConnectApi.getRecentlyTalkingAboutTopicsForGroup method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature
public static Void setTestGetRecentlyTalkingAboutTopicsForGroup(String communityId, String groupId, ConnectApi.TopicPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

groupId
Type: String
The ID for a group.

result
Type: ConnectApi.TopicPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
getRecentlyTalkingAboutTopicsForGroup(communityId, groupId)
Testing ConnectApi Code
**setTestGetRecentlyTalkingAboutTopicsForUser(communityId, userId, result)**

Register a `ConnectApi.TopicPage` object to be returned when the matching `ConnectApi.getRecentlyTalkingAboutTopicsForUser` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature

```java
public static Void setTestGetRecentlyTalkingAboutTopicsForUser(String communityId, String userId, ConnectApi.TopicPage result)
```

Parameters

- `communityId`
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- `userId`
  Type: `String`
  The ID for a user.

- `result`
  Type: `ConnectApi.TopicPage`
  Specify the test topics page.

Return Value

Type: `Void`

SEE ALSO:

- `getRecentlyTalkingAboutTopicsForUser(communityId, userId)`
- `Testing ConnectApi Code`

**setTestGetRelatedTopics(communityId, topicId, result)**

Register a `ConnectApi.TopicPage` object to be returned when the matching `ConnectApi.getRelatedTopics` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature

```java
public static Void setTestGetRelatedTopics(String communityId, String topicId, ConnectApi.TopicPage result)
```
setTestGetTopicSuggestions (communityId, recordId, maxResults, result)

Register a ConnectApi.TopicSuggestionPage object to be returned when the matching ConnectApi.getTopicSuggestions method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature
public static Void setTestGetTopicSuggestions(String communityId, String recordId, Integer maxResults, ConnectApi.TopicSuggestionPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

recordId
Type: String
The ID for a record or feed item.

maxResults
Type: Integer

SEE ALSO:
getRelatedTopics(communityId, topicId)
Testing ConnectApi Code
Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

result
Type: ConnectApi.TopicSuggestionPage
Specify the test topic suggestions page.

Return Value
Type: Void

SEE ALSO:
getTopicSuggestions(communityId, recordId, maxResults)
Testing ConnectApi Code

setTestGetTopicSuggestions(communityId, recordId, result)
Register a ConnectApi.TopicSuggestionPage object to be returned when the matching
ConnectApi.getTopicSuggestions method is called in a test context. Use the method with the same parameters or you
receive an exception.

API Version
29.0

Signature
public static Void setTestGetTopicSuggestions(String communityId, String recordId,
ConnectApi.TopicSuggestionPage result)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

recordId
Type: String
The ID for a record or feed item.

result
Type: ConnectApi.TopicSuggestionPage
The object containing test data.
Return Value
Type: Void

SEE ALSO:
getTopicSuggestions(communityId, recordId)
Testing ConnectApi Code

**setTestGetTopicSuggestionsForText(communityId, text, maxResults, result)**

Register a ConnectApi.TopicSuggestionPage object to be returned when the matching ConnectApi.getTopicSuggestionsForText method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature
```java
public static Void setTestGetTopicSuggestionsForText(String communityId, String text, Integer maxResults, ConnectApi.TopicSuggestionPage result)
```

Parameters
- **communityId**
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.
- **text**
  Type: String
  String of text.
- **maxResults**
  Type: Integer
  Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.
- **result**
  Type: ConnectApi.TopicSuggestionPage
  The object containing test data.

Return Value
Type: Void

SEE ALSO:
getTopicSuggestionsForText(communityId, text, maxResults)
Testing ConnectApi Code
setTestGetTopicSuggestionsForText(communityId, text, result)

Register a ConnectApi.TopicSuggestionPage object to be returned when the matching ConnectApi.getTopicSuggestionsForText method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature
public static Void setTestGetTopicSuggestionsForText(String communityId, String text, ConnectApi.TopicSuggestionPage result)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

text
Type: String
String of text.

result
Type: ConnectApi.TopicSuggestionPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
	getTopicSuggestionsForText(communityId, text)
Testing ConnectApi Code

setTestGetTrendingTopics(communityId, result)

Register a ConnectApi.TopicPage object to be returned when the matching ConnectApi.getTrendingTopics method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature
public static Void setTestGetTrendingTopics(String communityId, ConnectApi.TopicPage result)
Parameters

`communityId`
Type: String
Use the ID for an Experience Cloud site, internal, or null.

`result`
Type: `ConnectApi.TopicPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `getTrendingTopics(communityId)`
- Testing ConnectApi Code

`setTestGetTrendingTopics(communityId, maxResults, result)`
Register a `ConnectApi.TopicPage` object to be returned when the matching `ConnectApi.getTrendingTopics` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version
29.0

Signature

```java
public static Void setTestGetTrendingTopics(String communityId, Integer maxResults, ConnectApi.TopicPage result)
```

Parameters

`communityId`
Type: String
Use the ID for an Experience Cloud site, internal, or null.

`maxResults`
Type: Integer
Maximum number of topic suggestions that get returned. The default is 5. Value must be greater than 0 and less than or equal to 25.

`result`
Type: `ConnectApi.TopicPage`
The object containing test data.
Return Value

Type: Void

SEE ALSO:
- getTrendingTopics(communityId, maxResults)
- Testing ConnectApi Code

UserProfiles Class

Access user profile data. The user profile data populates the profile page (also called the Chatter profile page). This data includes user information (such as address, manager, and phone number), some user capabilities (permissions), and a set of subtab apps, which are custom tabs on the profile page.

Namespace

ConnectApi

UserProfiles Methods

The following are methods for UserProfiles. All methods are static.

IN THIS SECTION:
- deleteBannerPhoto(communityId, userId)
  Delete a user’s banner photo.
- deletePhoto(communityId, userId)
  Delete a user’s photo.
- getBannerPhoto(communityId, userId)
  Get a user’s banner photo.
- getPhoto(communityId, userId)
  Get a user’s photo.
- getUserProfile(communityId, userId)
  Get the user profile of the context user.
- setBannerPhoto(communityId, userId, fileId, versionNumber)
  Set an uploaded file as a user’s banner photo.
- setBannerPhoto(communityId, userId, fileUpload)
  Set a file that hasn’t been uploaded as a user’s banner photo.
- setBannerPhotoWithAttributes(communityId, userId, bannerPhoto)
  Set and crop an uploaded file as a user’s banner photo.
- setBannerPhotoWithAttributes(communityId, userId, bannerPhoto, fileUpload)
  Set and crop a file that hasn’t been uploaded as a user’s banner photo.
- setPhoto(communityId, userId, fileId, versionNumber)
  Set an uploaded file as a user’s photo.
setPhoto(communityId, userId, fileUpload)
Set a file that hasn’t been uploaded as a user’s photo.

setPhotoWithAttributes(communityId, userId, photo)
Set and crop an uploaded file as a user’s photo.

setPhotoWithAttributes(communityId, userId, photo, fileUpload)
Set and crop a file that hasn’t been uploaded as a user’s photo.

deleteBannerPhoto(communityId, userId)
Delete a user’s banner photo.

API Version
36.0

Requires Chatter
No

Signature
public static Void deleteBannerPhoto(String communityId, String userId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
ID of the user.

Return Value
Type: Void

deletePhoto(communityId, userId)
Delete a user’s photo.

API Version
35.0

Requires Chatter
No
Signature

```
public static Void deletePhoto(String communityId, String userId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `userId`
  - Type: `String`
  - The ID for the context user or the keyword `me`.

Return Value

Type: `Void`

**getBannerPhoto(communityId, userId)**

Get a user's banner photo.

API Version

36.0

Requires Chatter

No

Signature

```
public static ConnectApi.BannerPhoto getBannerPhoto(String communityId, String userId)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `userId`
  - Type: `String`
  - ID of the user.

Return Value

Type: `ConnectApi.BannerPhoto`

**getPhoto(communityId, userId)**

Get a user's photo.
API Version
35.0

Available to Guest Users
35.0

Requires Chatter
No

Signature
public static ConnectApi.Photo getPhoto(String communityId, String userId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
The ID for a user.

Return Value
Type: ConnectApi.Photo

getUserProfile(communityId, userId)
Get the user profile of the context user.

API Version
29.0

Requires Chatter
Yes

Signature
public static ConnectApi.UserProfile getUserProfile(String communityId, String userId)

Parameters
communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.
**userId**
Type: **String**
The ID for a user.

Return Value
Type: **ConnectApi.UserProfile**

**setBannerPhoto(communityId, userId, fileId, versionNumber)**
Set an uploaded file as a user’s banner photo.

API Version
36.0

Requires Chatter
No

Signature
```java
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String userId, String fileId, Integer versionNumber)
```

Parameters

**communityId**
Type: **String**
Use the ID for an Experience Cloud site, **internal**, or **null**.

**userId**
Type: **String**
ID of the user.

**fileId**
Type: **String**
ID of the uploaded file to use as the user banner. The key prefix must be 069, and the image must be smaller than 8 MB.

**versionNumber**
Type: **Integer**
Version number of the file. Specify an existing version number or, to get the latest version, specify **null**.

Return Value
Type: **ConnectApi.BannerPhoto**

Usage
Photos are processed asynchronously and may not be visible right away.
setBannerPhoto(communityId, userId, fileUpload)

Set a file that hasn’t been uploaded as a user’s banner photo.

API Version
36.0

Requires Chatter
No

Signature
public static ConnectApi.BannerPhoto setBannerPhoto(String communityId, String userId, ConnectApi.BinaryInput fileUpload)

Parameters

communityId
Type: String
Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String
ID of the user.

fileUpload
Type: ConnectApi.BinaryInput
A file to use as the photo. The content type must be usable as an image.

Return Value
Type: ConnectApi.BannerPhoto

Usage
Photos are processed asynchronously and may not be visible right away.

setBannerPhotoWithAttributes(communityId, userId, bannerPhoto)

Set and crop an uploaded file as a user’s banner photo.

API Version
36.0

Requires Chatter
No
**Signature**

```
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId,
String userId, ConnectApi.BannerPhotoInput bannerPhoto)
```

**Parameters**

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

- **userId**
  - Type: String
  - ID of the user.

- **bannerPhoto**
  - Type: ConnectApi.BannerPhotoInput
  - A ConnectApi.BannerPhotoInput object that specifies the ID and version of the file, and how to crop the file.

**Return Value**

- Type: ConnectApi.BannerPhoto

**Usage**

Photos are processed asynchronously and may not be visible right away.

**setBannerPhotoWithAttributes(communityId, userId, bannerPhoto, fileUpload)**

Set and crop a file that hasn’t been uploaded as a user’s banner photo.

**API Version**

36.0

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.BannerPhoto setBannerPhotoWithAttributes(String communityId,
String userId, ConnectApi.BannerPhotoInput bannerPhoto, ConnectApi.BinaryInput fileUpload)
```

**Parameters**

- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.
**userId**
Type: String
ID of the user.

**bannerPhoto**
Type: `ConnectApi.BannerPhotoInput`
A `ConnectApi.BannerPhotoInput` object specifying the cropping parameters.

**fileUpload**
Type: `ConnectApi.BinaryInput`
A file to use as the photo. The content type must be usable as an image.

Return Value
Type: `ConnectApi.BannerPhoto`

Usage
Photos are processed asynchronously and may not be visible right away.

**setPhoto(communityId, userId, fileId, versionNumber)**
Set an uploaded file as a user’s photo.

API Version
35.0

Requires Chatter
No

Signature
```java
public static ConnectApi.Photo setPhoto(String communityId, String userId, String fileId, Integer versionNumber)
```

Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, `internal`, or `null`.

**userId**
Type: String
The ID for the context user or the keyword `me`.

**fileId**
Type: String
ID of an uploaded file. The file must be an image, and be smaller than 2 GB.
versionNumber
Type: Integer

Version number of the existing file. Specify either an existing version number, or null to get the latest version.

Return Value
Type: ConnectApi.Photo

Usage
Photos are processed asynchronously and may not be visible right away.

setPhoto(communityId, userId, fileUpload)
Set a file that hasn’t been uploaded as a user’s photo.

API Version
35.0

Requires Chatter
No

Signature
public static ConnectApi.Photo setPhoto(String communityId, String userId, ConnectApi.BinaryInput fileUpload)

Parameters

communityId
Type: String

Use the ID for an Experience Cloud site, internal, or null.

userId
Type: String

The ID for the context user or the keyword me.

fileUpload
Type: ConnectApi.BinaryInput

A file to use as the photo. The content type must be usable as an image.

Return Value
Type: ConnectApi.Photo

Usage
Photos are processed asynchronously and may not be visible right away.
**setPhotoWithAttributes(communityId, userId, photo)**

Set and crop an uploaded file as a user’s photo.

**API Version**

35.0

**Requires Chatter**

No

**Signature**

```java
public static ConnectApi.Photo setPhotoWithAttributes(String communityId, String userId,
ConnectApi.PhotoInput photo)
```

**Parameters**

- **communityId**
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- **userId**
  - Type: `String`
  - The ID for the context user or the keyword `me`.

- **photo**
  - Type: `ConnectApi.PhotoInput`
  - A `ConnectApi.PhotoInput` object specifying the file ID, version number, and cropping parameters.

**Return Value**

Type: `ConnectApi.Photo`

**Usage**

Photos are processed asynchronously and may not be visible right away.

**setPhotoWithAttributes(communityId, userId, photo, fileUpload)**

Set and crop a file that hasn’t been uploaded as a user’s photo.

**API Version**

35.0

**Requires Chatter**

No
Signature

```java
public static ConnectApi.PhotosetPhotoWithAttributes(String communityId, String userId,
ConnectApi.PhotoInput photo, ConnectApi.BinaryInput fileUpload)
```

Parameters

- `communityId`
  - Type: `String`
  - Use the ID for an Experience Cloud site, `internal`, or `null`.

- `userId`
  - Type: `String`
  - The ID for the context user or the keyword `me`.

- `photo`
  - Type: `ConnectApi.PhotoInput`
  - A `ConnectApi.PhotoInput` object specifying the cropping parameters.

- `fileUpload`
  - Type: `ConnectApi.BinaryInput`
  - A file to use as the photo. The content type must be usable as an image.

Return Value

- Type: `ConnectApi.Photo`

Usage

Photos are processed asynchronously and may not be visible right away.

Zones Class

Access information about Chatter Answers zones in your organization. Zones organize questions into logical groups, with each zone having its own focus and unique questions.

⚠️ Note: With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18.

Namespace

`ConnectApi`

Zones Methods

The following are methods for Zones. All methods are static.
IN THIS SECTION:

getZone(communityId, zoneId)
Get a zone.

gzetones(communityId)
Get a list of zones.

gzetones(communityId, pageParam, pageSize)
Get a page of zones.

searchInZone(communityId, zoneId, q, filter)
Search articles or questions in a zone.

searchInZone(communityId, zoneId, q, filter, pageParam, pageSize)
Search a page of articles or questions in a zone.

searchInZone(communityId, zoneId, q, filter, language)
Search articles or questions in a zone, and specify the language of the results.

**getZone(communityId, zoneId)**
Get a zone.

**Note:** With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18.

**API Version**
29.0

**Requires Chatter**
No

**Signature**

```java
public static ConnectApi.Zone getZone(String communityId, String zoneId)
```

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>communityId</code></td>
<td>String</td>
<td>Use the ID for an Experience Cloud site, internal, or null.</td>
</tr>
<tr>
<td><code>zoneId</code></td>
<td>String</td>
<td>The ID of a zone.</td>
</tr>
</tbody>
</table>

**Return Value**

Type: `ConnectApi.Zone`
**getZones(communityId)**

Get a list of zones.

- **Note:** With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18.

API Version
29.0

Requires Chatter
No

Signature
```java
public static ConnectApi.ZonePage getZones(String communityId)
```

Parameters
- **communityId**
  - Type: String
  - Use the ID for an Experience Cloud site, internal, or null.

Return Value
Type: `ConnectApi.ZonePage`

**getZones(communityId, pageParam, pageSize)**

Get a page of zones.

- **Note:** With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18.

API Version
29.0

Requires Chatter
No

Signature
```java
public static ConnectApi.Zone getZones(String communityId, Integer pageParam, Integer pageSize)
```
Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

pageParam
  Type: Integer
  Specifies the number of the page you want returned. Starts at 0. If you pass in null or 0, the first page is returned.

pageSize
  Type: Integer
  Specifies the number of items per page. Valid values are from 1 through 100. If you pass in null, the default size is 25.

Return Value
  Type: ConnectApi.ZonePage

searchInZone(communityId, zoneId, q, filter)
Search articles or questions in a zone.

Note: With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18.

API Version
29.0

Available to Guest Users
37.0

Requires Chatter
No

Signature
public static ConnectApi.ZoneSearchPage searchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter)

Parameters

communityId
  Type: String
  Use the ID for an Experience Cloud site, internal, or null.

zoneId
  Type: String
  The ID of a zone.
searchInZone(communityId, zoneId, q, filter, pageParam, pageSize)

Search a page of articles or questions in a zone.

Note: With the Spring '18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring '18.

API Version
29.0

Available to Guest Users
37.0

Requires Chatter
No

Signature
public static ConnectApi.ZoneSearchPage searchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, String pageParam, Integer pageSize)
Parameters

**communityId**
Type: String
Use the ID for an Experience Cloud site, internal, or **null**.

**zoneId**
Type: String
The ID of a zone.

**q**
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See **Wildcards**.

**filter**
Type: **ConnectApi.ZoneSearchResultType**
A ZoneSearchResultType enum value. One of the following:
- Article—Search results contain only articles.
- Question—Search results contain only questions.

**pageParam**
Type: String
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as **currentPageToken** or **nextPageToken**. If you pass in **null**, the first page is returned.

**pageSize**
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in **null**, the default size is 25.

Return Value
Type: **ConnectApi.ZoneSearchPage**

Usage
To test code that uses this method, use the matching set test method (prefix the method name with **setTest**). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:
- **setTestSearchInZone(communityId, zoneId, q, filter, pageParam, pageSize, result)**
- **Testing ConnectApi Code**

**searchInZone(communityId, zoneId, q, filter, language)**
Search articles or questions in a zone, and specify the language of the results.

**Note:** With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see **End of Support for Chatter Answers in Spring ’18**.
API Version
36.0

Available to Guest Users
37.0

Requires Chatter
No

Signature

```
public static ConnectApi.ZoneSearchPage searchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, String language)
```

Parameters

- **communityId**
  Type: `String`
  Use the ID for an Experience Cloud site, `internal`, or `null`.

- **zoneId**
  Type: `String`
  The ID of a zone.

- **q**
  Type: `String`
  Specifies the string to search. The search string must contain at least two characters, not including wildcards. See [Wildcards](#).

- **filter**
  Type: `ConnectApi.ZoneSearchResultType`
  - `Article`—Search results contain only articles.
  - `Question`—Search results contain only questions.

- **language**
  Type: `String`
  The language of the articles or questions. The value must be a Salesforce supported locale code.

Return Value

Type: `ConnectApi.ZoneSearchPage`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

SEE ALSO:

```
setTestSearchInZone(communityId, zoneId, q, filter, language, result)
```
Zones Test Methods

The following are the test methods for Zones. All methods are static.

For information about using these methods to test your ConnectApi code, see Testing ConnectApi Code.

**setTestSearchInZone(communityId, zoneId, q, filter, result)**

Register a ConnectApi.ZoneSearchPage object to be returned when `searchInZone(communityId, zoneId, q, filter)` is called in a test context. Use the method with the same parameters or you receive an exception.

⚠️ **Note:** With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18.

API Version
29.0

Signature

```
public static Void setTestSearchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, ConnectApi.ZoneSearchPage result)
```

Parameters

* **communityId**
  Type: String
  Use either the ID for an Experience Cloud site, `internal`, or `null`.

* **zoneId**
  Type: String
  The ID of a zone.

* **q**
  Type: String
  Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

* **filter**
  Type: ConnectApi.ZoneSearchResultType
  A ZoneSearchResultType enum value. One of the following:
  - **Article**—Search results contain only articles.
  - **Question**—Search results contain only questions.

* **result**
  Type: ConnectApi.ZoneSearchPage
  The object containing test data.
Return Value
Type: Void

SEE ALSO:
searchInZone(communityId, zoneId, q, filter)
Testing ConnectApi Code

setTestSearchInZone(communityId, zoneId, q, filter, pageParam, pageSize, result)

Register a ConnectApi.ZoneSearchPage object to be returned when searchInZone(communityId, zoneId, q, filter, pageParam, pageSize) is called in a test context. Use the method with the same parameters or you receive an exception.

Note: With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see End of Support for Chatter Answers in Spring ’18.

API Version
29.0

Signature
public static Void setTestSearchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, String pageParam, Integer pageSize, ConnectApi.ZoneSearchPage result)

Parameters
communityId
Type: String
Use either the ID for an Experience Cloud site, internal, or null.

zoneId
Type: String
The ID of a zone.

q
Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

filter
Type: ConnectApi.ZoneSearchResultType
A ZoneSearchResultType enum value. One of the following:
• Article—Search results contain only articles.
• Question—Search results contain only questions.

pageParam
Type: String

2000
Specifies the page token to be used to view a page of information. Page tokens are returned as part of the response class, such as `currentPageToken` or `nextPageToken`. If you pass in `null`, the first page is returned.

`pageSize`
Type: Integer
Specifies the number of items per page. Valid values are from 1 through 100. If you pass in `null`, the default size is 25.

`result`
Type: `ConnectApi.ZoneSearchPage`
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `searchInZone(communityId, zoneId, q, filter, pageParam, pageSize)`
- `Testing ConnectApi Code`

### setTestSearchInZone(communityId, zoneId, q, filter, language, result)

Register a `ConnectApi.ZoneSearchPage` object to be returned when `searchInZone(communityId, zoneId, q, filter, language)` is called in a test context. Use the method with the same parameters or you receive an exception.

**Note:** With the Spring ’18 release, Salesforce no longer supports Chatter Answers. Users of Chatter Answers can post, answer, comment, or view existing Chatter Answers data, but support and updates are scheduled to end. We recommend transitioning to Chatter Questions. For more information, see [End of Support for Chatter Answers in Spring ’18](#).

**API Version**
36.0

**Signature**
```java
public static Void setTestSearchInZone(String communityId, String zoneId, String q, ConnectApi.ZoneSearchResultType filter, String language, ConnectApi.ZoneSearchPage result)
```

**Parameters**

- `communityId`
  Type: String
  Use either the ID for an Experience Cloud site, `internal`, or `null`.

- `zoneId`
  Type: String
  The ID of a zone.

- `q`
  Type: String
Specifies the string to search. The search string must contain at least two characters, not including wildcards. See Wildcards.

*filter*
Type: ConnectApi.ZoneSearchResultType
- Article—Search results contain only articles.
- Question—Search results contain only questions.

*language*
Type: String
The language of the articles or questions. The value must be a Salesforce supported locale code. In an `<apex:page>`, the default value is the language of the page. Otherwise, the default value is the user’s locale.

*result*
Type: ConnectApi.ZoneSearchPage
The object containing test data.

Return Value
Type: Void

SEE ALSO:
- `searchInZone(communityId, zoneld, q, filter, language)`
- Testing ConnectApi Code

**ConnectApi Input Classes**
Some ConnectApi methods take arguments that are instances of ConnectApi input classes.
Input classes are concrete unless marked abstract in this documentation. Concrete input classes have public constructors that have no parameters.
Some methods have parameters that are typed with an abstract class. You must pass in an instance of a concrete child class for these parameters.
Most input class properties can be set. Read-only properties are noted in this documentation.

**ConnectApi.ActionLinkDefinitionInput**
The definition of an action link. An action link is a button on a feed element. Clicking an action link can take a user to a Web page, initiate a file download, or invoke an API call to Salesforce or to an external server. An action link includes a URL and an HTTP method, and can include a request body and header information, such as an OAuth token for authentication. Use action links to integrate Salesforce and third-party services into the feed so that users can take action to drive productivity and accelerate innovation.

**Usage**
You can use context variables in the *actionUrl*, *headers*, and *requestBody* properties. Use context variables to pass information about the user who executed the action link to your server-side code. Salesforce substitutes the value when the action link is executed.
These are the available context variables:
### Context Variable

<table>
<thead>
<tr>
<th>Variable</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>{!actionLinkId}</code></td>
<td>The ID of the action link the user executed.</td>
</tr>
<tr>
<td><code>{!actionLinkGroupId}</code></td>
<td>The ID of the action link group containing the action link the user executed.</td>
</tr>
<tr>
<td><code>{!communityId}</code></td>
<td>The ID of the site in which the user executed the action link. The value for your internal org is the empty key &quot;000000000000000000&quot;.</td>
</tr>
<tr>
<td><code>{!communityUrl}</code></td>
<td>The URL of the site in which the user executed the action link. The value for your internal org is empty string &quot;.&quot;.</td>
</tr>
<tr>
<td><code>{!orgId}</code></td>
<td>The ID of the org in which the user executed the action link.</td>
</tr>
<tr>
<td><code>{!userId}</code></td>
<td>The ID of the user that executed the action link.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionType</td>
<td><code>ConnectApi.ActionLinkType</code></td>
<td>Defines the type of action link. Values are:</td>
<td>Required</td>
<td>33.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Api—The action link calls a synchronous API at the action URL. Salesforce sets the status to SuccessStatus or FailedStatus based on the HTTP status code returned by your server.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ApiAsync—The action link calls an asynchronous API at the action URL. The action remains in a PendingStatus state until a third party makes a request to <code>/connect/action-links/actionLinkId</code> to set the status to SuccessStatus or FailedStatus when the asynchronous operation is complete.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Download—The action link downloads a file from the action URL.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Ui—The action link takes the user to a web page at the action URL.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Note:** Invoking ApiAsync action links from an app requires a call to
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionUrl</td>
<td>String</td>
<td>The action link URL. For example, a Ui action link URL is a Web page. A Download action link URL is a link to the file to download. Ui and Download action link URLs are provided to clients. An Api or ApiAsync action link URL is a REST resource. Api and ApiAsync action link URLs aren't provided to clients. Links to Salesforce can be relative. All other links must be absolute and start with https://.</td>
<td>Required</td>
<td>33.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Tip: To avoid issues due to upgrades or changing functionality in your API, we recommend using a versioned API for actionUrl, for example, <a href="https://www.example.com/api/v1/exampleResource">https://www.example.com/api/v1/exampleResource</a>. If your API isn't versioned, you can use the expirationDate property of the ConnectApi.ActionLinkGroupDefinitionInput class to avoid issues due to upgrades or changing functionality in your API.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>excludedUserId</td>
<td>String</td>
<td>ID of a single user to exclude from performing the action. If you specify an excludedUserId, you can't specify a userId.</td>
<td>Optional</td>
<td>33.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Can be defined in an action link template using the User Visibility and Custom User Alias fields.</td>
<td></td>
<td></td>
</tr>

<td></td>
<td></td>
</tr>
</tbody>
</table>

### SEE ALSO:

`ConnectApi.ActionLinkGroupDefinitionInput`

### ConnectApi.ActionLinkGroupDefinitionInput

The definition of an action link group. All action links must belong to a group. Action links in a group are mutually exclusive and share some properties. Define stand-alone actions in their own action group.

Action link definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionLinks</td>
<td>List&lt;ConnectApi.ActionLinkDefinitionInput&gt;</td>
<td>The action links that make up this group. Within an action link group, action links are displayed in the order listed in the actionLinks property of the ConnectApi.ActionLinkGroupDefinitionInput class. Within a feed item, action link groups are displayed in the order specified in the</td>
<td>Required to instantiate this action link group without a template. To instantiate from a template, don’t specify a value.</td>
<td>33.0</td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Required or Optional</td>
<td>Available Version</td>
</tr>
<tr>
<td>----------------</td>
<td>--------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>----------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>actionLinkGroupIds</td>
<td>property of the ConnectApi.AssociatedActions CapabilityInput class. You can create up to three action links in a Primary group and up to four in an Overflow group.</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
| category       | ConnectApi.PlatformAction.GroupCategory | Indicates the priority and relative locations of action links in an associated feed item. Values are:  
• Primary—The action link group is displayed in the body of the feed element.  
• Overflow—The action link group is displayed in the overflow menu of the feed element. | Required to instantiate this action link group without a template. To instantiate from a template, don’t specify a value. | 33.0               |
| executions Allowed | ConnectApi.ActionLink.ExecutionsAllowed | Defines the number of times an action link can be executed. Values are:  
• Once—An action link can be executed only once across all users.  
• OncePerUser—An action link can be executed only once for each user.  
• Unlimited—An action link can be executed an unlimited number of times by each user. If the action link’s actionType is Api or ApiAsync, you can’t use this value. | Required to instantiate this action link group without a template. To instantiate from a template, don’t specify a value. | 33.0               |
<p>| expirationDate | Datetime | ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z, that represents the date and time this action link group is removed from associated feed items and can no longer be executed. The expirationDate must be within one year of the creation date. If the action link group definition includes an OAuth token, it is a good idea to set the expiration date of the action link group to the same value as the expiration date of the OAuth token so that users can’t execute the action link and get an OAuth error. | Required to instantiate this action link group without a template. Optional to instantiate from a template. | 33.0               |</p>
<table>
<thead>
<tr>
<th>Property</th>

- Define an Action Link in a Template and Post with a Feed Element
- createActionLinkGroupDefinition(communityId, actionLinkGroup)

### ConnectApi.ActionLinkTemplateBindingInput

A key-value pair to fill in a binding variable value from an action link template.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>key</td>
<td>String</td>
<td>The name of the binding variable key specified in the action link template in Setup. For example, if the binding variable in the template is {!Binding.firstName}, the key is firstName</td>
<td>Required</td>
<td>33.0</td>
</tr>
</tbody>
</table>
### ConnectApi.ActivitySharingInput

Defines who a captured email or event is shared with.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>groupsToShareWith</td>
<td>List&lt;String&gt;</td>
<td>List of IDs for the groups that you share the activity with. Valid only if sharingType is MyGroups.</td>
<td>Optional</td>
<td>39.0</td>
</tr>
<tr>
<td>sharingType</td>
<td>ConnectApi.ActivitySharingType</td>
<td>Type of sharing operation. Values are:</td>
<td>Required</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>Everyone</strong>—The activity is shared with everyone.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>MyGroups</strong>—The activity is shared only with a selection of the context user’s groups.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>OnlyMe</strong>—The activity is private.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### ConnectApi.AddressRequest

Address input representation for a payment method or card payment method.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>city</td>
<td>String</td>
<td>Payment method city.</td>
<td>Optional</td>
<td>51.0</td>
</tr>
<tr>
<td>companyName</td>
<td>String</td>
<td>Payment method company name.</td>
<td>Optional</td>
<td>51.0</td>
</tr>
<tr>
<td>country</td>
<td>String</td>
<td>Payment method country.</td>
<td>Optional</td>
<td>51.0</td>
</tr>
<tr>
<td>postalCode</td>
<td>String</td>
<td>Payment method postal code.</td>
<td>Optional</td>
<td>51.0</td>
</tr>
<tr>
<td>state</td>
<td>String</td>
<td>Payment method state.</td>
<td>Optional</td>
<td>51.0</td>
</tr>
<tr>
<td>street</td>
<td>String</td>
<td>Payment method street.</td>
<td>Optional</td>
<td>51.0</td>
</tr>
</tbody>
</table>
### ConnectApi.AdjustItemInputRepresentation

A price adjustment to an OrderItemSummary. It only supports discounts, not increases.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>adjustmentType</td>
<td>String</td>
<td>Describes how the amount is calculated. It can have one of these values:</td>
<td>Required</td>
<td>49.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• AmountWithTax—Value of amount is the adjustment, including tax.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• AmountWithoutTax—Value of amount is the adjustment, not including tax. Tax is calculated on the value and added.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Percentage—Value of amount is a percentage discount. It is divided by 100, and then multiplied by the TotalPrice and TotalTaxAmount of the OrderItemSummary to determine the adjustment amount.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>amount</td>
<td>Double</td>
<td>Value used to calculate the adjustment amount, as described by the adjustmentType. It must be a negative value.</td>
<td>Required</td>
<td>49.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the adjustment.</td>
<td>Optional</td>
<td>49.0</td>
</tr>
<tr>
<td>orderItemSummaryId</td>
<td>String</td>
<td>ID of the OrderItemSummary.</td>
<td>Required</td>
<td>49.0</td>
</tr>
<tr>
<td>reason</td>
<td>String</td>
<td>Reason for the adjustment. The value must match one of the picklist values on the Reason field of the OrderItemSummaryChange object.</td>
<td>Required</td>
<td>49.0</td>
</tr>
</tbody>
</table>

### ConnectApi.AdjustOrderItemSummaryInputRepresentation

A list of price adjustments to OrderItemSummaries that make up a price adjustment to an order.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>adjustItems</td>
<td>List&lt;ConnectApi.AdjustItemInputRepresentation&gt;</td>
<td>List of price adjustments to OrderItemSummaries.</td>
<td>Required</td>
<td>49.0</td>
</tr>
</tbody>
</table>
### ConnectApi.AlternativeInput

Alternative representation for an extension on a feed element.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>text Representation</td>
<td>String</td>
<td>Text representation of the extension.</td>
<td>Required</td>
<td>40.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>Thumbnail URL for the extension.</td>
<td>Optional</td>
<td>40.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the extension.</td>
<td>Optional</td>
<td>40.0</td>
</tr>
</tbody>
</table>

### ConnectApi.AnnouncementInput

An announcement.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>body</td>
<td>ConnectApi.Message BodyInput</td>
<td>Text of the announcement.</td>
<td>Required for creating an announcement if feedItemId isn't specified Don't specify for updating an announcement.</td>
<td>31.0</td>
</tr>
<tr>
<td>expirationDate</td>
<td>Datetime</td>
<td>The Salesforce UI displays an announcement until 11:59 p.m. on this date unless another announcement is posted first. The Salesforce UI ignores the time value in the expirationDate. However, you can use the time value to create your own display logic in your own UI.</td>
<td>Required for creating an announcement Optional for updating an announcement</td>
<td>31.0</td>
</tr>
<tr>
<td>feedItemId</td>
<td>String</td>
<td>ID of an AdvancedTextPost feed item that is the body of the announcement.</td>
<td>Required for creating an announcement if body isn't specified Don't specify for updating an announcement.</td>
<td>36.0</td>
</tr>
<tr>
<td>isArchived</td>
<td>Boolean</td>
<td>Specifies whether the announcement is archived.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
</tbody>
</table>
### parentId

**Type**: String

**Description**: ID of the parent entity for the announcement, that is, a group ID when the announcement appears in a group.

**Available Version**: 36.0

**Required or Optional**: Required for creating an announcement if `feedItemId` isn’t specified. Don’t specify for updating an announcement.

### sendEmails

**Type**: Boolean

**Description**: Specifies whether the announcement is sent as an email to all group members regardless of their email setting for the group. If Chatter emails aren’t enabled for the organization, announcement emails aren’t sent. Default value is `false`.

**Available Version**: 36.0

**Required or Optional**: Optional for creating an announcement. Don’t specify for updating an announcement.

---

**SEE ALSO**: `postAnnouncement(communityId, groupId, announcement)`

### ConnectApi.ArticleTopicAssignmentJobInput

An article and topic assignment job.

**Property** | **Type** | **Description** | **Required or Optional** | **Available Version**
--- | --- | --- | --- | ---
operation | `ConnectApi.ArticleTopicJobType` | Type of operation to perform on articles and topics. Values are:
- `AssignTopicsToArticle`—Assign topics to articles in a data category.
- `UnassignTopicsFromArticle`—Unassign topics from articles in a data category. | Required | 40.0

topicNames | `ConnectApi.TopicNamesInput` | List of topic names to assign to or unassign from articles. | Required | 40.0

### ConnectApi.AssociatedActionsCapabilityInput

A list of action link groups to associate with a feed element. To associate an action link group with a feed element, the call must be made from the Apex namespace that created the action link definition. In addition, the user making the call must have created the definition or have View All Data permission.

An action link is a button on a feed element. Clicking an action link can take a user to a Web page, initiate a file download, or invoke an API call to Salesforce or to an external server. An action link includes a URL and an HTTP method, and can include a request body and
header information, such as an OAuth token for authentication. Use action links to integrate Salesforce and third-party services into the feed so that users can take action to drive productivity and accelerate innovation.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionLinkGroupIds</td>
<td>List&lt;String&gt;</td>
<td>The action link group IDs to associate with the feed element. Associate one Primary and up to 10 total action link groups to a feed item. Action link groups are returned in the order specified in this property. An action link group ID is returned from a call to \texttt{ConnectApi.ActionLinks.createCellActionLinkGroupDefinition}(communityId, actionLinkGroup).</td>
<td>Required</td>
<td>33.0</td>
</tr>
</tbody>
</table>

<td>Required</td>
<td>50.0</td>
</tr>
<tr>
<td>recipientId</td>
<td>String</td>
<td>Participant ID with whose invitation the record should be associated.</td>
<td>Required</td>
<td>50.0</td>
</tr>
</tbody>
</table>

SEE ALSO: \texttt{ConnectApi.SurveyInvitationEmailInput}

\textbf{ConnectApi.AudienceCriteriaInput}

Custom recommendation audience criteria type.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

Superclass for:

- \texttt{ConnectApi.CustomListAudienceCriteriaInput}
- \texttt{ConnectApi.NewUserAudienceCriteriaInput}
### ConnectApi Namespace

**ConnectApi.Recommendation**

**Description**

Specifies the custom recommendation audience criteria type. One of these values:
- CustomList—A custom list of users makes up the audience.
- MaxDaysInCommunity—New members make up the audience.

**Available Version**

- 36.0

**SEE ALSO:**

</tr>
<tr>
<td>amount</td>
<td>Double</td>
<td>Amount of adjustment applied to the payment authorization.</td>
<td>51.0</td>
<td></td>
</tr>
<tr>
<td>comments</td>
<td>String</td>
<td>Users can add comments to provide additional details about a record. Maximum of 1,000 characters.</td>
<td>51.0</td>
<td></td>
</tr>
<tr>
<td>effectiveDate</td>
<td>Datetime</td>
<td>Date that the adjustment takes effect on the authorization.</td>
<td>51.0</td>
<td></td>
</tr>
</tbody>
</table>

**ConnectApi.AuthorizationRequest**
Payment Authorization input consumed by Payment Authorization service.
Subclass of `ConnectApi.BaseRequest`.
### ConnectApi Namespace

#### **Property**
- **accountId**
  - **Type**: String
  - **Description**: Salesforce account that contains the payment transaction being authorized.
  - **Required or Optional**: Required
  - **Available Version**: 51.0

- **amount**
  - **Type**: Double
  - **Description**: Authorization amount.
  - **Required**: Required
  - **Available Version**: 51.0

- **comments**
  - **Type**: String
  - **Description**: Optional comments for the payment authorization.
  - **Required**: Optional
  - **Available Version**: 51.0

- **currencyIsoCode**
  - **Type**: String
  - **Description**: Three-letter ISO 4217 currency code associated with the payment group record.
  - **Required**: Required
  - **Available Version**: 51.0

- **effectiveDate**
  - **Type**: Datetime
  - **Description**: Date that the authorization will be applied to the transaction.
  - **Required**: Required
  - **Available Version**: 51.0

- **paymentGatewayId**
  - **Type**: String
  - **Description**: Payment gateway that processes the authorization.
  - **Required**: Required
  - **Available Version**: 51.0

- **paymentGroup**
  - **Type**: ConnectApi.PaymentGroupRequest
  - **Description**: Payment group for the authorization. The payload must reference either a paymentGroup or a paymentGroupId, but not both.
  - **Required**: Optional
  - **Available Version**: 51.0

- **paymentMethod**
  - **Type**: ConnectApi.AuthApiPaymentMethodRequest
  - **Description**: Payment method used in the payment gateway for the authorization transaction.
  - **Required**: Required
  - **Available Version**: 51.0

#### ConnectApi.BannerPhotoInput

**A banner photo.**

<table>
<thead>
<tr>
<th><strong>Property</strong></th>
<th><strong>Type</strong></th>
<th><strong>Description</strong></th>
<th><strong>Required or Optional</strong></th>
<th><strong>Available Version</strong></th>
</tr>
</thead>
<tbody>

<tr>
<td><strong>cropWidth</strong></td>
<td>Integer</td>
<td>Width of the crop rectangle in pixels.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td><strong>cropX</strong></td>
<td>Integer</td>
<td>X position of the crop rectangle from the left edge of the image in pixels. Top left is position (0,0).</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td><strong>cropY</strong></td>
<td>Integer</td>
<td>Y position of the crop rectangle from the top edge of the image in pixels. Top left is position (0,0).</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td><strong>fileId</strong></td>
<td>String</td>
<td>ID of an existing file. The key prefix must be 069, and the file size must be less than 8 MB.</td>
<td>Required</td>
<td>36.0</td>
</tr>
</tbody>
</table>

**Note**: Images uploaded on the Group page and on the User page.
### ConnectApi.BaseRequest

Base parameters for making a request to the payment gateway.

This class is abstract.

Subclass of `ConnectApi.AuditParamsRequest`.

Superclass of:
- `ConnectApi.AuthorizationRequest`
- `ConnectApi.AuthorizationReversalRequest`
- `ConnectApi.CaptureRequest`
- `ConnectApi.RefundRequest`

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>versionNumber</td>
<td>Integer</td>
<td>Version number of an existing file. If not provided, the latest version is used.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>additionalData</td>
<td>Map&lt;String, String&gt;</td>
<td>An optional map of additional parameters to be sent to the payment gateway.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>idempotencyKey</td>
<td>String</td>
<td>Idempotency key.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
</tbody>
</table>

### ConnectApi.BaseApiPaymentMethodRequest

Payment method API input representation.

This class is abstract.

Superclass of `ConnectApi.AuthApiPaymentMethodRequest`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>address</td>
<td>ConnectApi.AddressRequest</td>
<td>Payment method address.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>Payment method record ID. Used in payment transactions.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>saveForFuture</td>
<td>Boolean</td>
<td>Shows whether Salesforce saves the payment method for future use.</td>
<td>Required</td>
<td>51.0</td>
</tr>
</tbody>
</table>
**ConnectApi.BasePaymentMethodRequest**

Base payment method input representation.

This class is abstract.

Superclass of *ConnectApi.CardPaymentMethodRequest*.

No additional properties.

**ConnectApi.BatchInput**

Construct a set of inputs to be passed into a method at the same time.

Use this constructor when there isn’t a binary input:

```
ConnectApi.BatchInput(Object input)
```

Use this constructor to pass one binary input:

```
ConnectApi.BatchInput(Object input, ConnectApi.BinaryInput binary)
```

Use this constructor to pass multiple binary inputs:

```
ConnectApi.BatchInput(Object input, List<ConnectApi.BinaryInput> binaries)
```

The constructors takes these parameters:

<table>
<thead>
<tr>
<th>Argument</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>input</td>
<td>Object</td>
<td>An individual input object to be used in the batch operation. For example, for postFeedElementBatch(), this should be ConnectApi.FeedElementInput.</td>
<td>32.0</td>
</tr>
<tr>
<td>binary</td>
<td>ConnectApi.BinaryInput</td>
<td>A binary file to associate with the input object.</td>
<td>32.0</td>
</tr>
<tr>
<td>binaries</td>
<td>List&lt;ConnectApi.BinaryInput&gt;</td>
<td>A list of binary files to associate with the input object.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

See also:
- Post a Batch of Feed Elements
- Post a Batch of Feed Elements with a New (Binary) File

**ConnectApi.BinaryInput**

Create a ConnectApi.BinaryInput object to attach files to feed items and comments and to add repository files.

The constructor is:

```
ConnectApi.BinaryInput(blob, contentType, filename)
```

The constructor takes these arguments:
### ConnectApi.BookmarksCapabilityInput

Create or update a bookmark on a feed element.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isBookmarked</td>
<td>Boolean</td>
<td>Specifies if the feed element should be bookmarked for the user (true) or not (false).</td>
<td>No</td>
<td>32.0</td>
</tr>
<tr>
<td>ByCurrentUser</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**SEE ALSO:**

- `ConnectApi.FeedElementCapabilitiesInput`

### ConnectApi.CardPaymentMethodRequest

Card payment method input representation.

Subclass of `ConnectApi.BasePaymentMethodRequest`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>accountId</td>
<td>String</td>
<td>Salesforce account to which this payment method is linked.</td>
<td>Required</td>
<td>51.0</td>
</tr>
</tbody>
</table>
| cardCategory              | `ConnectApi.CardCategory` on page 2328 | Card processing type. Valid values are:  
  - CreditCard  
  - DebitCard | Required              | 51.0              |
<p>| cardHolderFirstName       | String                   | First name of the card holder.                                               | Required              | 51.0              |
| cardHolderLastName        | String                   | Last name of the card holder.                                                | Required              | 51.0              |
| cardHolderName            | String                   | Full name of the card holder.                                                | Required              | 51.0              |</p>
<table>
<thead>
<tr>

<td>String</td>
<td>Name of the cart. The name can have up to 250 Unicode characters. If unspecified, defaults to the generated name.</td>
<td>Optional</td>
<td>49.0</td>
</tr>
<tr>
<td>type</td>
<td>ConnectApi.CartType</td>
<td>Type of cart. Value is Cart. If unspecified, defaults to Cart.</td>
<td>Optional</td>
<td>49.0</td>
</tr>
</tbody>
</table>

**ConnectApi.CartItemInput**

An item in a cart.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>productId</td>
<td>String</td>
<td>ID of the product.</td>
<td>Required when adding an item to a cart</td>
<td>49.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>Not supported when updating a cart item</td>
<td></td>
</tr>
<tr>
<td>quantity</td>
<td>String</td>
<td>Quantity of the cart item. Use a value that can be converted to BigDecimal.</td>
<td>Required</td>
<td>49.0</td>
</tr>
<tr>
<td>type</td>
<td>ConnectApi.CartItemType</td>
<td>Type of item in a cart. Value is Product.</td>
<td>Required when adding an item to a cart</td>
<td>49.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>Not supported when updating a cart item</td>
<td></td>
</tr>
</tbody>
</table>

**ConnectApi.CartMessagesVisibilityInput**

Set the visibility for cart messages.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>visibility</td>
<td>Boolean</td>
<td>Specifies whether to set cart messages as visible (true) or not (false).</td>
<td>Required</td>
<td>50.0</td>
</tr>
</tbody>
</table>

**ConnectApi.CartToWishlistInput**

Copy products from a cart to a wishlist.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>wishlistId</td>
<td>String</td>
<td>ID of the wishlist to copy cart products to.</td>
<td>Required</td>
<td>50.0</td>
</tr>
</tbody>
</table>

**ConnectApi.CanvasCapabilityInput**

Create or update a canvas app associated with a feed element.

This class is a subclass of ConnectApi.FeedElementCapabilityInput.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>A description of the canvas app. The maximum size is 255 characters.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Required or Optional</td>
<td>Available Version</td>
</tr>
<tr>
<td>-------------------</td>
<td>---------</td>
<td>------------------------------------------------------------------------------</td>
<td>----------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>developerName</td>
<td>String</td>
<td>The API name (developer name) of the connected app.</td>
<td>Required</td>
<td>32.0</td>
</tr>
<tr>
<td>height</td>
<td>String</td>
<td>The height of the canvas app in pixels.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>namespacePrefix</td>
<td>String</td>
<td>A unique namespace prefix for the canvas app.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>parameters</td>
<td>String</td>
<td>JSON parameters passed to the canvas app.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>A thumbnail URL to a preview image. The maximum thumbnail size is 120 pixels by 120 pixels.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>A title for the canvas link.</td>
<td>Required</td>
<td>32.0</td>
</tr>
</tbody>
</table>

- ConnectApi.FeedElementCapabilitiesInput

**ConnectApi.CaptureRequest**

Payment capture input consumed by the payment capture service.

Subclass of ConnectApi.BaseRequest.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>accountId</td>
<td>String</td>
<td>ID of the account linked to the capture request.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>amount</td>
<td>Double</td>
<td>Amount captured from the previous authorization.</td>
<td>Required</td>
<td>50.0</td>
</tr>
<tr>
<td>clientContext</td>
<td>String</td>
<td>Context for payment APIs. Used for a payment caller to re-establish context.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>comments</td>
<td>String</td>
<td>Comments for the payment capture.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>effectiveDate</td>
<td>Datetime</td>
<td>Date when the payment becomes effective.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>paymentGroup</td>
<td>ConnectApi.PaymentGroupRequest</td>
<td>Details about the payment group record associated with the payment request.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
</tbody>
</table>

**ConnectApi.ChangeInputRepresentation**

A list of changes to OrderItemSummaries that make up an order change, such as a cancel or return.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>changeItems</td>
<td><code>List&lt;ConnectApi.ChangeItemInputRepresentation&gt;</code></td>
<td>List of changes to OrderItemSummaries.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- `previewCancel(orderSummaryId, changeInput)`
- `previewReturn(orderSummaryId, changeInput)`
- `submitCancel(orderSummaryId, changeInput)`
- `submitReturn(orderSummaryId, changeInput)`

**ConnectApi.ChangeItemInputRepresentation**
Change to an OrderItemSummary, such as a return or cancel. You specify whether to prorate the associated shipping charge based on the price change. The OrderItemSummary can’t be a shipping charge.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>orderItemSummaryId</td>
<td><code>String</code></td>
<td>ID of the OrderItemSummary.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>quantity</td>
<td><code>Double</code></td>
<td>Quantity to change. Use a positive value. For example, a value of 2 means “cancel or return 2 units.”</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>reason</td>
<td><code>String</code></td>
<td>Reason for the change. The value must match one of the picklist values on the Reason field of the OrderItemSummaryChange object.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>shippingReductionFlag</td>
<td><code>Boolean</code></td>
<td>Specifies whether to prorate the shipping charge.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- `ConnectApi.ChangeItemInputRepresentation`
- `previewCancel(orderSummaryId, changInput)`
- `previewReturn(orderSummaryId, changInput)`

- `submitReturn(orderSummaryId, changInput)`
## ConnectApi.ChatterGroupInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available</th>
</tr>
</thead>
<tbody>
<tr>
<td>announcement</td>
<td>String</td>
<td>The 18-character ID of an announcement. An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it's deleted or replaced by another announcement.</td>
<td>31.0</td>
</tr>
<tr>
<td>canHave ChatterGuests</td>
<td>Boolean</td>
<td>true if this group allows Chatter customers, false otherwise. After this property is set to true, it cannot be set to false.</td>
<td>29.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>The &quot;Description&quot; section of the group.</td>
<td>29.0</td>
</tr>
<tr>
<td>information</td>
<td>ConnectApi.ChatterGroupInformationInput</td>
<td>The &quot;Information&quot; section of a group. If the group is private, this section is visible only to members.</td>
<td>28.0</td>
</tr>
<tr>
<td>isArchived</td>
<td>Boolean</td>
<td>true if the group is archived, false otherwise. Defaults to false.</td>
<td>29.0</td>
</tr>
<tr>
<td>isAutoArchiveDisabled</td>
<td>Boolean</td>
<td>true if automatic archiving is turned off for the group, false otherwise. Defaults to false.</td>
<td>29.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>The name of the group.</td>
<td>29.0</td>
</tr>
<tr>
<td>owner</td>
<td>String</td>
<td>The ID of the group owner. This property is available for PATCH requests only.</td>
<td>29.0</td>
</tr>
<tr>
<td>visibility</td>
<td>ConnectApi.ChatterGroupVisibilityType</td>
<td>Group visibility type.</td>
<td>29.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• PrivateAccess—Only members of the group can see posts to this group.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• PublicAccess—All users within the Experience Cloud site can see posts to this group.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Unlisted—Reserved for future use.</td>
<td></td>
</tr>
</tbody>
</table>

## ConnectApi.ChatterStreamInput

A Chatter feed stream.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the stream, up to 1,000 characters.</td>
<td>Optional</td>
<td>39.0</td>
</tr>
</tbody>
</table>
### ConnectApi.StreamSubscriptionInput

A container for all capabilities that can be included with a stream.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the stream, up to 120 characters.</td>
<td>Required when creating a stream</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>Optional when updating a stream</td>
<td></td>
</tr>
<tr>
<td>subscriptionsToAdd</td>
<td>List&lt;ConnectApi.StreamSubscriptionInput&gt;</td>
<td>List of up to 25 entities whose feeds are included in the stream.</td>
<td>Optional</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Adding an entity that is already added results in no operation. Including the same entity in subscriptionsToAdd and subscriptionsToRemove results in no operation.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>subscriptionsToRemove</td>
<td>List&lt;ConnectApi.StreamSubscriptionInput&gt;</td>
<td>List of entities whose feeds are removed from the stream.</td>
<td>Optional when updating a stream</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Removing an entity that is already removed results in no operation. Including the same entity in subscriptionsToAdd and subscriptionsToRemove results in no operation.</td>
<td>Not supported when creating a stream</td>
<td></td>
</tr>
</tbody>
</table>

### ConnectApi.CommentCapabilitiesInput

A container for all capabilities that can be included with a comment.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>content</td>
<td>ConnectApi.ContentCapabilityInput</td>
<td>Content to attach to the comment.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>feedEntityShare</td>
<td>ConnectApi.FeedEntityShareCapabilityInput</td>
<td>Feed entity to share to the comment.</td>
<td>Optional</td>
<td>42.0</td>
</tr>
<tr>
<td>record</td>
<td>ConnectApi.RecordCapabilityInput</td>
<td>Existing knowledge article to attach to the comment.</td>
<td>Optional</td>
<td>42.0</td>
</tr>
</tbody>
</table>

SEE ALSO:  
ConnectApi.CommentInput
### ConnectApi.CommentInput

A comment.

Used to add rich comments, for example, comments that include mentions or file attachments.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>attachment</td>
<td>ConnectApi.FeedItemAttachmentInput</td>
<td>Specifies an attachment for the comment. Valid values are:</td>
<td>Optional</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ContentAttachmentInput</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• NewFileAttachmentInput</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>LinkAttachmentInput is not permitted for comments.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>Important:</strong> As of version 32.0, use the capabilities property.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>body</td>
<td>ConnectApi.MessageBodyInput</td>
<td>Description of message body. The body can contain up to 10,000 characters</td>
<td>Required</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>and 25 mentions. Because the character limit can change, clients should make a describeSObjects() call on the FeedItem or FeedComment object and look at the length of the Body or CommentBody field to determine the maximum number of allowed characters.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>To edit this property in a comment, use updateComment(communityId, commentId, comment). Editing comments is supported in version 34.0 and later.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>Rich text and inline images are supported in comment bodies in version 35.0 and later. Entity links are supported in version 43.0 and later.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>capabilities</td>
<td>ConnectApi.CommentCapabilitiesInput</td>
<td>Specifies any capabilities for the comment, such as a file attachment.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
</tbody>
</table>
### ConnectApi.ContentCapabilityInput

Attach or update a file on a comment. Use this class to attach a new file or update a file that has already been uploaded to Salesforce. This class is a subclass of `ConnectApi.FeedElementCapabilityInput`.

To attach or remove files from a feed post (instead of a comment) in version 36.0 and later, use `ConnectApi.FilesCapabilityInput`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>contentDocumentId</td>
<td>String</td>
<td>ID of the existing content.</td>
<td>Required for existing content</td>
<td>32.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the file to be uploaded.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
<tr>
<td>sharingOption</td>
<td><code>ConnectApi.FileSharingOption</code></td>
<td>Sharing option of the file. Values are:</td>
<td>Optional</td>
<td>35.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Allowed—Resharing of the file is allowed.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Restricted—Resharing of the file is restricted.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the file. This value is used as the file name for new content. For example, if the title is My Title, and the file is a .txt file, the file name is My Title.txt.</td>
<td>Required for new content</td>
<td>32.0</td>
</tr>
</tbody>
</table>

### SEE ALSO:

**ConnectApi.CustomListAudienceCriteriaInput**
Criteria for the custom list type of custom recommendation audience. Subclass of ConnectApi.AudienceCriteriaInput.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| memberOperationType       | ConnectApi.RecommendationAudienceMemberOperationType | The operation to carry out on the audience members. Values are:  
  - Add—Adds specified members to the audience.  
  - Remove—Removes specified members from the audience. | Required to update a recommendation audience  
  Don’t use or specify null to create a recommendation audience | 36.0 |
| members                   | List<String>        | A collection of user IDs.                                | Required to update a recommendation audience  
  Don’t use or specify null to create a recommendation audience | 36.0 |

**ConnectApi.DatacloudOrderInput**
Input representation for a Datacloud order to purchase contacts or companies and retrieve purchase information.
### Company and Contact IDs

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>companyIds</td>
<td>String</td>
<td>A comma-separated list of identification numbers for the companies to be purchased. You can’t include any contact IDs or your purchase fails.</td>
<td>Required to purchase companies</td>
<td>32.0</td>
</tr>
<tr>
<td>contactIds</td>
<td>String</td>
<td>A comma-separated list of identification numbers for the contacts to be purchased. You can’t include any company IDs or your purchase fails.</td>
<td>Required to purchase contacts</td>
<td>32.0</td>
</tr>
</tbody>
</table>

### User Type

- Monthly (default)
- Listpool

### SEE ALSO:
- `postOrder(orderInput)`

### ConnectApi.DirectMessageCapabilityInput

Create or update the members of a direct message.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>membersToAdd</td>
<td>List&lt;String&gt;</td>
<td>List of user IDs for members to include in the direct message.</td>
<td>Required when creating a direct message (POST) Optional when updating a direct message (PATCH)</td>
<td>39.0</td>
</tr>
<tr>
<td>membersToRemove</td>
<td>List&lt;String&gt;</td>
<td>List of user IDs for members to remove from the direct message.</td>
<td>Optional when updating a direct message (PATCH) Not supported when creating a direct message (POST)</td>
<td>40.0</td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>

<td>-------------------</td>
</tr>
<tr>
<td>subject</td>
<td>String</td>
<td>Subject of the direct message.</td>
<td>Optional when creating a direct message (POST) Not supported when updating a direct message (PATCH)</td>
<td>39.0</td>
</tr>
</tbody>
</table>

**ConnectApi.EnsureFundsAsyncInputRepresentation**

ID of an invoice to ensure funds for and apply them to.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>invoiceId</td>
<td>String</td>
<td>ID of the invoice.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**ConnectApi.EnsureRefundsAsyncInputRepresentation**

ID of a credit memo to ensure refunds for, an amount of excess funds to refund, or both. At least one is required.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>creditMemoId</td>
<td>String</td>
<td>ID of the credit memo that represents a refund amount.</td>
<td>Optional, but at least one input property is required</td>
<td>48.0</td>
</tr>
<tr>
<td>excessFundsAmount</td>
<td>Double</td>
<td>Amount of excess funds to refund.</td>
<td>Optional, but at least one input property is required</td>
<td>49.0</td>
</tr>
</tbody>
</table>

**ConnectApi.EntityLinkSegmentInput**

An entity link segment.
Subclass of `ConnectApi.MessageSegmentInput`

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>entityId</td>
<td>String</td>
<td>ID of the entity to link to.</td>
<td>Required</td>
<td>43.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Only users with access to the entity see it.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>It’s hidden for users without access.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**ConnectApi.ExtensionInput**

An extension.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>alternative</td>
<td><code>ConnectApi.AlternativeInput</code></td>
<td>Alternative representation of the extension.</td>
<td>Required</td>
<td>40.0</td>
</tr>
<tr>
<td>extensionId</td>
<td>String</td>
<td>ID of the extension.</td>
<td>Required</td>
<td>40.0</td>
</tr>
<tr>
<td>payload</td>
<td>String</td>
<td>Payload associated with the extension.</td>
<td>Required</td>
<td>40.0</td>
</tr>
<tr>
<td>payloadVersion</td>
<td>String</td>
<td>Payload version that identifies the structure</td>
<td>Optional</td>
<td>40.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>of the payload associated with the extension.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

SEE ALSO:

`ConnectApi.ExtensionsCapabilityInput`

**ConnectApi.ExtensionsCapabilityInput**

Create or update extensions associated with a feed element.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>itemsToAdd</td>
<td><code>List&lt;ConnectApi.ExtensionInput&gt;</code></td>
<td>List of extensions to associate with the feed element.</td>
<td>Required</td>
<td>40.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Optional for updating an extension</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
### ConnectApi.FeedElementCapabilitiesInput

A container for all capabilities that can be included when creating a feed element.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>itemsToRemove</td>
<td>List&lt;String&gt;</td>
<td>List of attachment IDs to remove from the feed element.</td>
<td>Optional</td>
<td>41.0</td>
</tr>
</tbody>
</table>

**Optional for updating an extension**

Don’t specify for creating an extension

<td>Describes the extensions associated with the feed element.</td>
<td>Optional</td>
<td>40.0</td>
</tr>
</tbody>
</table>
### ConnectApi.Namespace

See also: `ConnectApi.FeedElementInput` 

#### ConnectApi.FeedElementCapabilityInput

A feed element capability.

In API version 30.0 and earlier, most feed items can have comments, likes, topics, and so on. In version 31.0 and later, every feed item (and feed element) can have a unique set of capabilities. If a capability property exists on a feed element, that capability is available, even if the capability property doesn’t have a value. For example, if the `ChatterLikes` capability property exists on a feed element (with or without a value), the context user can like that feed element. If the capability property doesn’t exist, it isn’t possible to like that feed element. A capability can also contain associated data. For example, the `Moderation` capability contains data about moderation flags.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

This class is a superclass of:

- `ConnectApi.AssociatedActionsCapabilityInput`
- `ConnectApi.BookmarksCapabilityInput`
- `ConnectApi.CanvasCapabilityInput`
- `ConnectApi.ContentCapabilityInput`
- `ConnectApi.DirectMessageCapabilityInput`
- `ConnectApi.ExtensionsCapabilityInput`
- `ConnectApi.FeedEntityShareCapabilityInput`

**ConnectApi.FeedElementInput**

Feed elements are the top-level items that a feed contains. Feeds are feed element containers.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

Superclass of *ConnectApi.FeedItemInput*.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>capabilities</td>
<td>ConnectApi.FeedElementCapabilitiesInput</td>
<td>The capabilities that define auxiliary information on this feed element.</td>
<td>Optional</td>
<td>31.0</td>
</tr>
<tr>
<td>feedElementType</td>
<td>ConnectApi.FeedElementType</td>
<td>The type of feed element this input represents.</td>
<td>Required when creating a feed element</td>
<td>31.0</td>
</tr>
<tr>

<tr>
<td>------------------</td>
<td>---------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>----------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>subjectId</td>
<td>String</td>
<td>The ID of the parent this feed element is being posted to. This value can be the ID of a user, group, or record, or the string me to indicate the context user. In version 45.0 and later, you can move a feed element from one public group to another by setting this property to the ID of the new public group. You can’t include or change any other properties when moving a feed element.</td>
<td>Required</td>
<td>31.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- Post a Feed Element with a Mention
- Post a Feed Element with Existing Files
- Post a Feed Element with a New File (Binary) Attachment
- Define an Action Link and Post with a Feed Element
- Define an Action Link in a Template and Post with a Feed Element
- Share a Feed Element (in Version 39.0 and Later)
- Edit a Feed Element
- Edit a Question Title and Post
- Post a Rich-Text Feed Element with Inline Image

**ConnectApi.FeedEntityShareCapabilityInput**

Share a feed entity with a feed post or comment.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>feedEntityId</td>
<td>String</td>
<td>ID of the feed entity to share with the feed post or comment.</td>
<td>Required</td>
<td>39.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- `ConnectApi.FeedElementCapabilitiesInput`

**ConnectApi.FeedItemInput**

Used to create rich feed items, for example, feed items that include @mentions or files.

Subclass of `ConnectApi.FeedElementInput` as of version 31.0.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>attachment</td>
<td><code>ConnectApi.FeedItemAttachmentInput</code></td>
<td>Specifies the attachment for the feed item. The feed item type is inferred based on the provided attachment.</td>

<td>28.0–31.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>Important:</strong> As of API version 32.0, use the inherited <code>capabilities</code> property.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>body</td>
<td><code>ConnectApi.MessageBodyInput</code></td>
<td>Message body. The body can contain up to 10,000 characters and 25 mentions. Because the character limit can change, clients should make a <code>describeSObjects()</code> call on the FeedItem or FeedComment object and look at the length of the Body or CommentBody field to determine the maximum number of allowed characters.</td>
<td>Required unless the feed item has a link capability or a content capability.</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>If you specify <code>originalFeedElementId</code> to share a feed item, use the <code>body</code> property to add the first comment to the feed item.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>To edit this property in a feed item, use <code>updateFeedElement(communityId, feedElementId, feedElement)</code>. Editing feed posts is supported in version 34.0 and later.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>isBookmarked</td>
<td>Boolean</td>
<td>Specifies if the new feed item should be bookmarked for the user (<code>true</code>) or not (<code>false</code>).</td>
<td>Optional</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td></td>
<td><strong>Important:</strong> As of API version 32.0, use the <code>capabilities.bookmarks.isBookmarkedByCurrentUser</code> property.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>originalFeedElementId</td>
<td>String</td>
<td>To share a feed element, specify its 18-character ID.</td>
<td>Optional</td>
<td>31.0–38.0</td>
</tr>
<tr>
<td></td>
<td><strong>Important:</strong> As of API version 39.0, use the <code>capabilities.feedEntityShare.feedEntityId</code> property.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>originalFeedItemId</td>
<td>String</td>
<td>To share a feed item, specify its 18-character ID.</td>
<td>Optional</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td></td>
<td><strong>Important:</strong> In API version 32.0–38.0, use the <code>originalFeedElementId</code> property. In API version 39.0 and later, use the <code>capabilities.feedEntityShare.feedEntityId</code> property.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>visibility</td>
<td><code>ConnectApi.FeedItemVisibilityTypeEnum</code></td>
<td>Type of users who can see a feed item.</td>
<td>Optional</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>AllUsers</strong>—Visibility is not limited to internal users.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• <strong>InternalUsers</strong>—Visibility is limited to internal users.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Default values:
- For external users, the default value is **AllUsers**. External users must use this value to see their posts.
- For internal users, the default value is **InternalUsers**. Internal users can accept this value or use the value **AllUsers** to allow external users to see their posts.

If the parent of the feed item is a user, group, or direct message, the visibility of the feed item must be **AllUsers**.

### ConnectApi.FileIdInput

Attach a file that has already been uploaded or remove a file from a feed element.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>ID of a file that has already been uploaded.</td>
<td>Required</td>
<td>36.0</td>
</tr>
<tr>
<td>operationType</td>
<td>ConnectApi..OperationType</td>
<td>Operation to carry out on the file. Values are:</td>
<td>Optional</td>
<td>36.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Add—Adds the file to the feed element.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Remove—Removes the file from the feed element.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Remove operations are processed before Add operations. Adding content that is already added and removing content that is already removed result in no operation.

ConnectApi.FilesCapabilityInput

### ConnectApi.FindRoutesWithFewestSplitsInputRepresentation

Data used to calculate order fulfillment routes involving the fewest number of shipment splits.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>locationAvailableInventory</td>
<td>ConnectApi.LocationAvailabilityInputRepresentation</td>
<td>Each list element represents the available quantity of a product at an inventory location.</td>
<td>At least one element is required</td>
<td>51.0</td>
</tr>
</tbody>
</table>
### ConnectApi.FilesCapabilityInput

Attach up to 10 files that have already been uploaded or remove one or more files from a feed element.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput`.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>items</td>
<td>List&lt;ConnectApi.FileIdInput&gt;</td>
<td>List of file IDs and operations to be carried out on those files.</td>
<td>Required</td>
<td>36.0</td>
</tr>
</tbody>
</table>

SEE ALSO:  
`ConnectApi.FeedElementCapabilitiesInput`

### ConnectApi.FulfillmentGroupInputRepresentation

A list of OrderItemSummaries to be fulfilled together, and the fulfillment location that will handle them. The fulfillment type is one of the values defined for the Type field on the FulfillmentOrder object, such as “Warehouse” or “Retail Store.” The specified type is assigned to the FulfillmentOrder for this fulfillment group.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fulfilledFromLocationId</td>
<td>String</td>
<td>ID of the fulfillment location.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>fulfillmentType</td>
<td>String</td>
<td>Fulfillment type. One of the Type field values defined for FulfillmentOrders.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Required or Optional</td>
<td>Available Version</td>
</tr>
<tr>
<td>-------------------</td>
<td>-------------------------------</td>
<td>-----------------------------------------------------------------------------</td>
<td>----------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>orderItemSummaries</td>
<td>List&lt;ConnectApi.OrderItemSummaryInputRepresentation&gt;</td>
<td>List of OrderItemSummaries.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.FulfillmentOrderInputRepresentation
- createFulfillmentOrders(fulfillmentOrderInput)

### ConnectApi.FulfillmentOrderInputRepresentation

An OrderDeliveryGroupSummary that defines a delivery method and recipient, and a list of fulfillment groups to assign to FulfillmentOrders. Each fulfillment group is a set of OrderItemSummaries that match the OrderDeliveryGroupSummary and share the same fulfillment location. The method creates a FulfillmentOrder for each fulfillment group and a FulfillmentOrderLineItem for each OrderItemSummary.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fulfillmentGroups</td>
<td>List&lt;ConnectApi.FulfillmentGroupInputRepresentation&gt;</td>
<td>List of fulfillment groups that specify the OrderItemSummaries and fulfillment locations.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>orderDeliveryGroupSummaryId</td>
<td>String</td>
<td>ID of the OrderDeliveryGroupSummary.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>orderSummaryId</td>
<td>String</td>
<td>ID of the OrderSummary.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- createFulfillmentOrders(fulfillmentOrderInput)

### ConnectApi.FulfillmentOrderInvoiceInputRepresentation

Instantiate and include this object with no properties when creating an invoice. This input class has no properties.

**SEE ALSO:**
- createInvoice(fulfillmentOrderId, invoiceInput)

### ConnectApi.FulfillmentOrderLineItemInputRepresentation

A FulfillmentOrderLineItem and quantity to cancel. You can cancel less than the full quantity, in which case you reallocate the canceled quantity to a different FulfillmentOrder.
### ConnectApi.FulfillmentOrderLineItemsToCancelInputRepresentation

A list of FulfillmentOrderLineItems and quantities to cancel.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fulfillmentOrderLineItemsToCancel</td>
<td>List&lt;ConnectApi.FulfillmentOrderLineItemInputRepresentation&gt;</td>
<td>List of FulfillmentOrderLineItems and quantities.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

### ConnectApi.BaseRequest

Base parameters for making a request to the payment gateway.

This class is abstract.

Subclass of ConnectApi.AuditParamsRequest.

Superclass of:
- ConnectApi.AuthorizationRequest
- ConnectApi.AuthorizationReversalRequest
- ConnectApi.CaptureRequest
- ConnectApi.RefundRequest

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>additionalData</td>
<td>Map&lt;String, String&gt;</td>
<td>An optional map of additional parameters to be sent to the payment gateway.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>idempotencyKey</td>
<td>String</td>
<td>Idempotency key.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
</tbody>
</table>
**ConnectApi.GroupInformationInput**

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>text</td>
<td>String</td>
<td>The text in the “Information” section of a group.</td>
<td>28.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>The title of the “Information” section of a group.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:  
  ConnectApi.ChatterGroupInput

**ConnectApi.HashtagSegmentInput**

Include a hashtag in a feed item or comment.  
Subclass of ConnectApi.MessageSegmentInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>tag</td>
<td>String</td>
<td>Text of the hash tag without the # (hash tag) prefix</td>
<td>28.0</td>
</tr>
</tbody>
</table>

Note: Closing square brackets ( ]) are not supported in hash tag text. If the text contains a closing square bracket ( ]), the hash tag ends at the bracket.

SEE ALSO:  
  ConnectApi.MessageBodyInput

**ConnectApi.InlineImageSegmentInput**

An inline image segment.  
Subclass of ConnectApi.MessageSegmentInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>altText</td>
<td>String</td>
<td>Alt text for the inline image.</td>
<td>Optional</td>
<td>35.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>If not specified, the title of the inline image file is used as the alt text.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>fileId</td>
<td>String</td>
<td>ID of the inline image file.</td>
<td>Required</td>
<td>35.0</td>
</tr>
</tbody>
</table>

SEE ALSO:  
  Post a Rich-Text Feed Element with Inline Image  
  ConnectApi.MessageBodyInput
ConnectApi.InviteInput

An invitation.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>invitees</td>
<td>List&lt;String&gt;</td>
<td>List of email addresses to send the invitation to.</td>
<td>Required</td>
<td>39.0</td>
</tr>
<tr>
<td>message</td>
<td>String</td>
<td>Message to include in the invitation.</td>
<td>Optional</td>
<td>39.0</td>
</tr>
</tbody>
</table>

ConnectApi.LinkCapabilityInput

Create or update a link on a feed element.

This class is a subclass of ConnectApi.FeedElementCapabilityInput.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>Link URL. The URL can be to an external site.</td>
<td>Required</td>
<td>32.0</td>
</tr>
<tr>
<td>urlName</td>
<td>String</td>
<td>Description of the link.</td>
<td>Optional</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

ConnectApi.FeedElementCapabilitiesInput

ConnectApi.LinkSegmentInput

Include a link segment in a feed item or comment.

Subclass of ConnectApi.MessageSegmentInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>URL to be used for the link</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

ConnectApi.MessageBodyInput

ConnectApi.LocationInputRepresentation

Inventory location data used to calculate shipping distance.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>countryCode</td>
<td>String</td>
<td>The country code of the location.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>locationIdentifier</td>
<td>String</td>
<td>The identifier of the location.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Required or Optional</td>
<td>Available Version</td>
</tr>
<tr>

</tr>
<tr>
<td>externalReferenceId</td>
<td>String</td>
<td>The external reference ID of the inventory location.</td>
<td>Optional</td>
<td>51.0</td>
</tr>
<tr>
<td>quantity</td>
<td>Double</td>
<td>The available quantity of the product.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>stockKeepingUnit</td>
<td>String</td>
<td>The Stock Keeping Unit of the product.</td>
<td>Required</td>
<td>51.0</td>
</tr>
</tbody>
</table>

**ConnectApi.LocationAvailabilityInputRepresentation**

The available quantity of a product at an inventory location.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>externalReferenceId</td>
<td>String</td>
<td>The external reference ID of the inventory location.</td>
<td>Optional</td>

</tr>
<tr>
<td>quantity</td>
<td>Double</td>
<td>The available quantity of the product.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>stockKeepingUnit</td>
<td>String</td>
<td>The Stock Keeping Unit of the product.</td>
<td>Required</td>
<td>51.0</td>
</tr>
</tbody>
</table>

**ConnectApi.ManagedTopicPositionCollectionInput**

A collection of relative positions of managed topics.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>managedTopicPositions</td>
<td>List&lt;ConnectApi.ManagedTopicPositionInput&gt;</td>
<td>List of relative positions of managed topics. This list can include Featured and Navigational managed topics and doesn't need to include all managed topics. For more information about reordering managed topics, see the example in reorderManagedTopics(communityId, managedTopicPositionCollection).</td>
<td>Required</td>
<td>32.0</td>
</tr>
</tbody>
</table>

**ConnectApi.ManagedTopicPositionInput**

Relative position of a managed topic.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>managedTopicId</td>
<td>String</td>
<td>ID of existing managed topic.</td>
<td>Required</td>
<td>32.0</td>
</tr>
<tr>
<td><strong>Property</strong></td>
<td><strong>Type</strong></td>
<td><strong>Description</strong></td>
<td><strong>Required or Optional</strong></td>
<td><strong>Available Version</strong></td>
</tr>
<tr>
<td>--------------</td>
<td>----------</td>
<td>-----------------</td>
<td>-------------------------</td>
<td>----------------------</td>
</tr>
<tr>
<td>position</td>
<td>Integer</td>
<td>Relative position of the managed topic, indicated by zero-indexed, ascending whole numbers.</td>
<td>Required</td>
<td>32.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- `ConnectApi.ManagedTopicPositionCollectionInput`

### ConnectApi.MarkupBeginSegmentInput

The beginning tag for rich text markup.

Subclass of `ConnectApi.MessageSegmentInput`

<table>
<thead>
<tr>
<th><strong>Property</strong></th>
<th><strong>Type</strong></th>
<th><strong>Description</strong></th>
<th><strong>Required or Optional</strong></th>
<th><strong>Available Version</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>altText</td>
<td>String</td>
<td>Alternative text for the Hyperlink segment.</td>
<td>Optional</td>
<td>45.0</td>
</tr>
</tbody>
</table>
| markupType   | `ConnectApi.MarkupType` | Type of rich text markup.  
  - Bold—Bold tag.  
  - Hyperlink—Hyperlink anchor tag.  
  - Italic—Italic tag.  
  - ListItem—List item tag.  
  - OrderedList—Ordered list tag.  
  - Paragraph—Paragraph tag.  
  - Strikethrough—Strikethrough tag.  
  - Underline—Underline tag.  
  - UnorderedList—Unordered list tag.  
  Markup segments with a markupType of Code can include only text segments. | Required | 35.0 |
| url          | String   | URL for the Hyperlink segment. Supported hyperlink URLs start with `http://` or `https://`. | Required for Hyperlink | 45.0 |

**SEE ALSO:**
- `Post a Rich-Text Feed Element with Inline Image`
- `ConnectApi.MessageBodyInput`
ConnectApi.MarkupEndSegmentInput

The end tag for rich text markup.
Subclass of ConnectApi.MessageSegmentInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>markupType</td>
<td>ConnectApi.MarkupType</td>
<td>Type of rich text markup.</td>
<td>Required</td>
<td>35.0</td>
</tr>
</tbody>
</table>
  • Bold         |                       | Bold tag.                                        |                      |                   |

SEE ALSO:
  Post a Rich-Text Feed Element with Inline Image
  ConnectApi.MessageBodyInput

ConnectApi.MentionSegmentInput

Include an @mention of a user or group in a feed post or comment. When creating a feed post or comment, you can include up to 25 mentions.
Subclass of ConnectApi.MessageSegmentInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the user or group to mention.</td>
<td>28.0</td>
</tr>
</tbody>
</table>
  To mention a user, use either id or username. You can’t include both.
  To mention a group, you must use id.
  Groups are available in 29.0.
### Property Details

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>username</td>
<td>String</td>
<td>User name of the user to mention.</td>
<td>38.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>To mention a user, use either id or username. You can’t include both.</td>
<td></td>
</tr>
</tbody>
</table>

### ConnectApi.MessageBodyInput

Add rich messages to feed items and comments.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>messageSegments</td>
<td>List&lt;</td>
<td>List of message segments contained in the body</td>
<td>28.0</td>

<td>ConnectApi.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>MessageSegment</td>
<td>MessageBodyInput&gt;</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### ConnectApi.MessageSegmentInput

Used to add rich message segments to feed items and comments.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

Superclass for:
- ConnectApi.EntityLinkSegmentInput
- ConnectApi.HashtagSegmentInput
- ConnectApi.InlineImageSegmentInput
- ConnectApi.LinkSegmentInput
- ConnectApiMarkupBeginSegmentInput
- ConnectApiMarkupEndSegmentInput
- ConnectApi.MentionSegmentInput
- ConnectApi.TextSegmentInput

Use the [ConnectApiHelper repository on GitHub](https://github.com/ConnectApiHelper) to simplify many of the tasks accomplished with ConnectApi.MessageSegmentInput, such as posting with inline images, rich text, and mentions.
ConnectApi namespace

ConnectApi.MessageSegment

The type of message segment. Values are:

- EntityLink
- FieldChange
- FieldChangeName
- FieldChangeValue
- Hashtag
- InlineImage
- Link
- MarkupBegin
- MarkupEnd
- Mention
- MoreChanges
- ResourceLink
- Text

Available Version

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>type</td>
<td>ConnectApi.MessageSegment.Type</td>
<td>The type of message segment. Values are:</td>
<td>Required</td>
<td>23.0</td>
</tr>
</tbody>
</table>

See also:

ConnectApi.MultipleFulfillmentOrderInputRepresentation

List of inputs for creating fulfillment orders.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fulfillmentOrders</td>
<td>ConnectApi.FulfillmentOrderInputRepresentation</td>
<td>Each element contains the data to create one fulfillment order.</td>
<td>Required</td>
<td>50.0</td>
</tr>
</tbody>
</table>

ConnectApi.MuteCapabilityInput

Mute or unmute a feed element.

This class is a subclass of ConnectApi.FeedElementCapabilityInput.
### isMutedByMe

**Type:** Boolean

Indicates whether the feed element is muted for the context user. Default value is false.

**Available Version:** 35.0

**SEE ALSO:**

setIsMutedByMe(communityId, feedElementId, isMutedByMe)

### ConnectApi.NBASTrategyInput

A recommendation strategy.

### ConnectApi.NewUserAudienceCriteriaInput

Criteria for the new members type of custom recommendation audience.

Subclass of ConnectApi.AudienceCriteriaInput.

### ConnectApi.OCICreateReservationInputRepresentation

Data to reserve inventory at one or more Omnichannel Inventory locations or location groups.
### ConnectApi.OCICreateReservationSingleInputRepresentation

A quantity of a product and an Omnichannel Inventory location or location group at which to reserve it.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>locationGroupIdentifier</td>
<td>String</td>
<td>Identifier of the location group at which to reserve inventory.</td>
<td>Either locationGroupIdentifier or locationIdentifier is required, but not both</td>
<td>51.0</td>
</tr>
<tr>
<td>locationIdentifier</td>
<td>String</td>
<td>Identifier of the location at which to reserve inventory.</td>
<td>Either locationGroupIdentifier or locationIdentifier is required, but not both</td>
<td>51.0</td>
</tr>
<tr>
<td>quantity</td>
<td>Double</td>
<td>The quantity of the product to reserve.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>stockKeepingUnit</td>
<td>String</td>
<td>The SKU of the product to reserve.</td>
<td>Required</td>
<td>51.0</td>
</tr>
</tbody>
</table>

### ConnectApi.OCIFulfillReservationInputRepresentation

A list of inventory reservations to fulfill.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionRequestIds</td>
<td>String</td>
<td>A UUID that identifies the request. Use the action request IDs in response data to identify which requests succeeded or failed.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>allowPartialReservations</td>
<td>Boolean</td>
<td>When true, if the system can’t create the entire reservation, then it attempts to create a partial reservation.</td>
<td></td>
<td>51.0</td>
</tr>
<tr>
<td>createRecords</td>
<td>List</td>
<td>A list of product quantities and locations or location groups.</td>
<td>At least one element is required</td>
<td>51.0</td>
</tr>

**ConnectApi.OrderSummaryInputRepresentation**

An order from which to create an OrderSummary, and whether it is managed in Salesforce Order Management. Optionally, you can specify an OrderNumber or Status.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>Specifies an OrderNumber to assign to the order summary.</td>
<td>Optional 50.0</td>
</tr>
<tr>
<td>orderId</td>
<td>String</td>
<td>ID of the original order.</td>
<td>Required 48.0</td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Required or Optional</td>
</tr>
<tr>
<td>-----------------------</td>
<td>------------</td>
<td>-----------------------------------------------------------------------------</td>
<td>----------------------</td>
</tr>
</tbody>
</table>
| orderLifeCycleType    | String     | Specifies whether the order is managed in Salesforce Order Management or by an external system. It can have one of these values:  
• MANAGED—Managed in Salesforce Order Management.  
• UNMANAGED—Managed by an external system.  
If no value is specified, the default is MANAGED. | Optional            | 49.0               |
| status                | String     | Specifies a status to assign to the order summary. The value must match one of the picklist values on the Status field of the OrderSummary object. | Optional            | 50.0               |

SEE ALSO:  
createOrderSummary(orderSummaryInput)

**ConnectApi.PaymentGroupRequest**

Payment group input consumed by a payment group service.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>createPaymentGroup</td>
<td>Boolean</td>
<td>Specifies whether Salesforce needs to create a payment group (true) or not (false).</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>currencyIsoCode</td>
<td>String</td>
<td>Three-letter ISO 4217 currency code associated with the payment group record.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the payment group record.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>sourceObjectId</td>
<td>String</td>
<td>Source object ID of the payment group record. Supports only OrderId.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
</tbody>
</table>

**ConnectApi.PhotoInput**

Specify how to crop a photo that has already been uploaded.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available version</th>
</tr>
</thead>
<tbody>
<tr>
<td>cropSize</td>
<td>Integer</td>
<td>The length, in pixels, of any edge of the crop square.</td>
<td>29.0</td>
</tr>
<tr>
<td>cropX</td>
<td>Integer</td>
<td>The position X, in pixels, from the left edge of the image to the start of the crop square. Top left is position (0,0).</td>
<td>29.0</td>
</tr>

**ConnectApi.PinCapabilityInput**
Pin or unpin a feed element to a feed.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>entityId</td>
<td>String</td>
<td>ID of the entity to pin or unpin. In version 41.0 and later, <code>entityId</code> must</td>
<td>Required</td>
<td>41.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>be a feed item ID. In version 41.0–42.0, only one feed item can be pinned per feed. In version 43.0 and later, three feed items can be pinned per feed.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>isPinned</td>
<td>Boolean</td>
<td>Specifies whether to pin (true) or unpin (false) the entity.</td>
<td>Required</td>
<td>41.0</td>
</tr>
</tbody>
</table>

**ConnectApi.PollCapabilityInput**
Create, update, or vote on a poll on a feed element.

This class is a subclass of `ConnectApi.FeedElementCapabilityInput`. 
## ConnectApi.FeedElementCapabilitiesInput

Create or edit a question feed element or set the best answer of the existing question feed element.

### Available Version

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>choices</td>
<td>List&lt;String&gt;</td>
<td>The choices used to create a new poll. You must specify 2–10 poll choices for each poll.</td>
<td>Required</td>
<td>32.0</td>
</tr>
<tr>
<td>myChoiceId</td>
<td>String</td>
<td>ID of an existing choice on the feed poll. Used to vote on an existing poll.</td>
<td>Required</td>
<td>32.0</td>
</tr>
</tbody>
</table>

ConnectApi.RankAverageDistanceInputRepresentation

An order recipient's geographic location and information about sets of inventory locations that can fulfill the order.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>deliveryCountryCode</td>
<td>String</td>
<td>The country code of the order recipient.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>deliveryPostalCode</td>
<td>String</td>
<td>The postal code of the order recipient.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>distanceUnit</td>
<td>String</td>
<td>Specify mi or km to return average distances in miles or kilometers, respectively.</td>
<td></td>
<td>51.0</td>
</tr>
<tr>
<td>sortResult</td>
<td>String</td>
<td>Specify ASC or DESC to rank the results by average shipping distance in ascending or descending order, respectively.</td>
<td></td>
<td>51.0</td>
</tr>
<tr>
<td>targetLocations</td>
<td>List&lt;ConnectApi.TargetLocationInputRepresentation&gt; on page 2073&gt;</td>
<td>Each element is a set of inventory locations that can combine to fulfill the order.</td>
<td>At least one element is required</td>
<td>51.0</td>
</tr>
</tbody>
</table>

ConnectApi.ReadByCapabilityInput

Mark feed elements as read by the context user.

This class is a subclass of ConnectApi.FeedElementCapabilityInput.
### ConnectApi.RecipientEngagementContextInput

Context based on which the survey invitation is sent to a participant.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recipientEngagementContext</td>
<td>Map&lt;String, String&gt;</td>
<td>Map each recipient with the context based on which the survey invitation is emailed.</td>
<td>Required</td>
<td>50.0</td>
</tr>
<tr>
<td>recipientId</td>
<td>String</td>
<td>Participant ID with whom the engagement context should be associated.</td>
<td>Required</td>
<td>50.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.SurveyInvitationEmailInput

### ConnectApi.RecommendationAudienceInput

A custom recommendation audience.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>criteria</td>
<td>ConnectApi.AudienceCriteriaInput</td>
<td>The criteria for the custom recommendation audience type.</td>
<td>Optional</td>
<td>36.0</td>
</tr>
</tbody>
</table>

If not specified when creating a recommendation audience, the audience criteria type defaults to custom list.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| memberOperationType      | `ConnectApi.RecommendationAudienceMemberOperationType` | **Important:** This property is available only in version 35.0. In version 36.0 and later, use `ConnectApi.CustomListAudienceCriteriaInput`. The operation to carry out on the audience members.  
- Add—Adds specified members to the audience.  
- Remove—Removes specified members from the audience. | Required to update a recommendation audience  
Don’t use or specify `null` to create a recommendation audience | 35.0 only |
| members                  | `List<String>`                           | **Important:** This property is available only in version 35.0. In version 36.0 and later, use `ConnectApi.CustomListAudienceCriteriaInput`. A collection of user IDs. When updating an audience, you can include up to 100 members. An audience can have up to 100,000 members, and each Experience Cloud site can have up to 100 audiences. | Required to update a recommendation audience  
Don’t use or specify `null` to create a recommendation audience | 35.0 only |
| name                     | `String`                                 | The unique name of the custom recommendation audience.                      | Optional to update a recommendation audience  
Required to create a recommendation audience | 35.0 |

SEE ALSO:
`createRecommendationAudience(communityId, recommendationAudience)`

**ConnectApi.RecommendationDefinitionInput**

A custom recommendation definition.
### createRecommendationDefinition(communityId, recommendationDefinition)

#### ConnectApi.Namespace

**A reaction to a recommendation produced by a recommendation strategy.**

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionUrl</td>
<td>String</td>
<td>URL for acting on the custom recommendation, for example, the URL to join a group.</td>
<td>Required</td>
<td>35.0</td>
</tr>
<tr>
<td>actionUrlName</td>
<td>String</td>
<td>Text label for the action URL in the user interface, for example, “Launch.”</td>
<td>Required</td>
<td>35.0</td>
</tr>
<tr>
<td>explanation</td>
<td>String</td>
<td>Explanation, or body, of the custom recommendation.</td>
<td>Required</td>
<td>35.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the custom recommendation definition. The name is displayed in Setup.</td>
<td>Required</td>
<td>35.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the custom recommendation definition.</td>
<td>Optional</td>
<td>35.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

</thead>
<tbody>
<tr>
<td>accountId</td>
<td>String</td>
<td>ID of the account linked to the referenced refund request.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>amount</td>
<td>Double</td>
<td>Amount refunded.</td>
<td>Required</td>
<td>50.0</td>
</tr>
<tr>
<td>clientContext</td>
<td>String</td>
<td>Context for payment APIs. Used for a payment caller to re-establish context.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>comments</td>
<td>String</td>
<td>Optional comments for the refund.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>effectiveDate</td>
<td>Datetime</td>
<td>Date when the refund becomes effective.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>paymentGroup</td>
<td>ConnectApi.ConnectApi.PaymentGroupRequest</td>
<td>Payment group details associated with the refund request.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
</tbody>
</table>

**ConnectApi.RefundRequest**

Refund input.

This class is abstract.

Subclass of ConnectApi.BaseRequest.

No additional properties.

Superclass of ConnectApi.ReferencedRefundRequest.

**ConnectApi.RequestHeaderInput**

An HTTP request header name and value pair.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>The name of the request header.</td>
<td>Required</td>
<td>33.0</td>
</tr>
<tr>
<td>value</td>
<td>String</td>
<td>The value of the request header.</td>
<td>Required</td>
<td>33.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

Define an Action Link and Post with a Feed Element

**ConnectApi.ScheduledRecommendationInput**

A scheduled custom recommendation.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| channel  | `ConnectApi.RecommendationChannel` | A way to tie custom recommendations together. For example, display recommendations in specific places in the UI or show recommendations based on time of day or geographic locations. Values are:
- CustomChannel1—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels. For example, community managers can use Experience Builder to determine where recommendations appear.
- CustomChannel2—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel3—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel4—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- CustomChannel5—Custom recommendation channel. Not used by default. Work with your community manager to define custom channels.
- DefaultChannel—Default recommendation channel. Recommendations appear by default on the Home and Question Detail pages of Customer Service and Partner Central Experience Builder templates. They also appear in the feed in the Salesforce mobile web and anywhere community managers add recommendations using Experience Builder. Use these channel values; you can’t rename or create other channels. | Optional for creating a scheduled recommendation If not specified, defaults to `DefaultChannel`. Don’t use when updating a scheduled recommendation | 36.0               |
<p>| enabled  | <code>Boolean</code>     | Indicates whether scheduling is enabled. If <code>true</code>, the custom recommendation is enabled and appears in Experience Cloud sites. If <code>false</code>, custom recommendations | Optional             | 35.0              |</p>
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>in feeds in Salesforce mobile web aren’t removed, but no new custom recommendations appear. In Customer Service and Partner Central sites, disabled custom recommendations no longer appear.</td>
<td>Optional</td>
<td>35.0</td>
</tr>
<tr>
<td>rank</td>
<td>Integer</td>
<td>Relative rank of the scheduled custom recommendation indicated by ascending whole numbers starting with 1. Setting the rank is comparable to an insertion into an ordered list. The scheduled custom recommendation is inserted into the position specified by the <code>rank</code>. The <code>rank</code> of all the scheduled custom recommendations after it is pushed down. See Ranking scheduled custom recommendations example. If the specified <code>rank</code> is larger than the size of the list, the scheduled custom recommendation is put at the end of the list. If a <code>rank</code> is not specified, the scheduled custom recommendation is put at the end of the list.</td>
<td>Optional</td>
<td>35.0</td>
</tr>
<tr>
<td>recommendation AudienceId</td>
<td>String</td>
<td>ID of the audience for this scheduled custom recommendation. When updating a scheduled custom recommendation, specify <strong>ALL</strong> to remove the association between a custom recommendation audience and a scheduled custom recommendation.</td>
<td>Optional</td>
<td>35.0</td>
</tr>
<tr>
<td>recommendation DefinitionId</td>
<td>String</td>
<td>ID of the custom recommendation definition that this scheduled recommendation schedules. You can’t specify a recommendation DefinitionId when updating a scheduled recommendation.</td>
<td>Required to create a scheduled recommendation</td>
<td>35.0</td>
</tr>
</tbody>
</table>

2068
**Ranking scheduled custom recommendations example**

If you have these scheduled custom recommendations:

<table>
<thead>
<tr>
<th>Scheduled Recommendations</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>3</td>
</tr>
</tbody>
</table>

And you include this information in the Scheduled Custom Recommendation Input:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
</tbody>
</table>

The result is:

<table>
<thead>
<tr>
<th>Scheduled Recommendation</th>
<th>Rank</th>
</tr>
</thead>
<tbody>
<tr>
<td>ScheduledRecommendationA</td>
<td>1</td>
</tr>
<tr>
<td>ScheduledRecommendationD</td>
<td>2</td>
</tr>
<tr>
<td>ScheduledRecommendationB</td>
<td>3</td>
</tr>
<tr>
<td>ScheduledRecommendationC</td>
<td>4</td>
</tr>
</tbody>
</table>

SEE ALSO:

`createScheduledRecommendation(communityId, scheduledRecommendation)`

**ConnectApi.ShiftsFromPatternInput**

Shifts from a pattern.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>schedulingEndDate</td>
<td>String</td>
<td>Scheduling end date in YYYY-MM-DD format. Provide schedulingEndDate or schedulingOccurrences. Don’t provide both.</td>
<td>Required if schedulingOccurrences isn’t provided</td>
<td>51.0</td>
</tr>
<tr>
<td>schedulingOccurrences</td>
<td>Integer</td>
<td>Number of scheduling occurrences. Provide schedulingEndDate or schedulingOccurrences. Don’t provide both.</td>
<td>Required if schedulingEndDate isn’t provided</td>
<td>51.0</td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Required or Optional</td>
<td>Available Version</td>
</tr>
<tr>
<td>---------------------</td>
<td>------------</td>
<td>------------------------------------------------------------------------------</td>
<td>----------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>schedulingStartDate</td>
<td>String</td>
<td>Scheduling start date in YYYY-MM-DD format.</td>
<td>Required</td>
<td>51.0</td>
</tr>
<tr>
<td>serviceResourceId</td>
<td>String</td>
<td>ID of the service resource to assign shifts to.</td>
<td>Optional</td>
<td>51.0</td>
</tr>
<tr>
<td>serviceTerritoryId</td>
<td>String</td>
<td>ID of the service territory to assign shifts to.</td>
<td>Optional</td>
<td>51.0</td>
</tr>
</tbody>
</table>

**ConnectApi.SocialPostMassApproverInput**

List of social post IDs and the action to approve or reject publishing them.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isApproved</td>
<td>Boolean</td>
<td>Specifies whether to approve (<code>true</code>) or reject (<code>false</code>) publishing the social posts. If unspecified, defaults to <code>false</code>.</td>
<td>Optional</td>
<td>46.0</td>
</tr>
<tr>
<td>socialPostIdList</td>
<td>List&lt;String&gt;</td>
<td>A list of up to 200 social post IDs.</td>
<td>Required</td>
<td>46.0</td>
</tr>
</tbody>
</table>

**ConnectApi.StatusCapabilityInput**

Change the status of a feed post or comment. This class is a subclass of `ConnectApi.FeedElementCapabilityInput`. 
### feedEntityStatus

**Type:** ConnectApi.FeedEntityStatus  
**Description:** Status of the feed post or comment. Values are:

- **Draft**—The feed post isn’t published but is visible to the author and users with Modify All Data or View All Data permission. Comments can’t be drafts.
- **PendingReview**—The feed post or comment isn’t approved yet and therefore isn’t published or visible.
- **Published**—The feed post or comment is approved and visible.

Posts that have a status of PendingReview or Published can’t be changed to a status of Draft and vice versa.

**Available Version:** 37.0

### entityId

**Type:** String  
**Description:** The ID of any feed-enabled entity, such as a group, record, or user, that the context user can access. When subscribed, the entity’s feed is included in the feed stream.

**Available Version:** 39.0

#### SEE ALSO:

- ConnectApi.FeedElementCapabilitiesInput
- ConnectApi.ChatterStreamInput
- ConnectApi.SurveyInvitationEmailInput

### ConnectApi.StreamSubscriptionInput

An entity to subscribe to for a Chatter feed stream.

#### SEE ALSO:

- ConnectApi.ChatterStreamInput

### ConnectApi.SurveyInvitationEmailInput

Survey invitation email.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>allowGuest UserResponse</td>
<td>Boolean</td>
<td>Specifies whether participants who don't have a Salesforce account can respond (true) or not (false).</td>
<td>Required</td>
<td>50.0</td>
</tr>
<tr>
<td>allowParticipants AccessTheirResponse</td>
<td>Boolean</td>
<td>Specifies whether participants can see their responses (true) or not (false).</td>
<td>Required</td>
<td>50.0</td>
</tr>
<tr>
<td>associateRecords WithRecipients</td>
<td>List&lt;ConnectApi.AssociateRecordWithRecipientInput&gt;</td>
<td>Maps each recipient with another record that must be associated with the recipient’s survey invitation.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>body</td>
<td>String</td>
<td>Content of the email. Specify the email body in case you don’t specify an email template. The email body must contain one of the following merge fields: • To embed a link to launch the survey: [[SURVEY_INVITATION_URL]] • To embed a survey question: {{{SurveyQuestion.QuestionName}}} and {{{SurveyQuestion.QuestionHtmlContent}}}</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>collectAnonymous Response</td>
<td>Boolean</td>
<td>Specifies whether participants can respond anonymously (true) or not (false).</td>
<td>Required</td>
<td>50.0</td>
</tr>
<tr>
<td>communityId</td>
<td>String</td>
<td>ID of the site that's used to open the survey for users outside your org.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>emailTemplateId</td>
<td>String</td>
<td>ID of the Lightning email template that’s used to send the survey invitation. The template must contain the required merge fields that embed either the survey link or a question in the email. Only Lightning email templates are used to send survey invitations.</td>
<td>Optional</td>
<td>50.0</td>
</tr>
<tr>
<td>fromEmailAddress</td>
<td>String</td>
<td>Email ID of the user or the org-wide email address associated with the user's profile.</td>

Collection of targets to update.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>targets</td>
<td>List&lt;ConnectApi.TargetUpdateInput&gt;</td>
<td>List of targets to update.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**ConnectApi.TargetLocationInputRepresentation**

A set of inventory locations that together can fulfill an order.
<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>locations</td>
<td>List&lt;ConnectApi.LocationInputRepresentation&gt;</td>
<td>A list of locations with information about their country and postal codes.</td>
<td>Required</td>
<td>51.0</td>
</tr>
</tbody>
</table>

### ConnectApi.TargetInput

Target to create.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>audienceId</td>
<td>String</td>
<td>ID of the audience to assign to the target.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>groupName</td>
<td>String</td>
<td>Group name of the target. Groups bundle related target and audience pairs. You can have up to 2,000 groups and 500 targets per group. To determine the group name for targets of type ExperienceVariation, see Personalization Target Developer and Group Names in the Experience Cloud Developer Guide.</td>
<td>Required</td>
<td>48.0</td>
</tr>
<tr>
<td>priority</td>
<td>Integer</td>
<td>Priority of the target. Within a group, priority determines which target is returned if the user matches more than one audience.</td>
<td>Optional</td>
<td>48.0</td>
</tr>
<tr>
<td>publishStatus</td>
<td>ConnectApi.PublishStatus</td>
<td>The publish status of the target. Values are: Draft, Live. We recommend setting the publish status to Draft. If you specify Live, your changes revert after you publish the site.</td>
<td>Optional</td>
<td>48.0</td>
</tr>
<tr>
<td>targetType</td>
<td>String</td>
<td>Type of target, indicating the nature of the data being targeted. Supported values include: ExperienceVariation (version 48.0 and later), Custom object API names, such as CustomObjectName__c (version 48.0 and later), NavigationLinkSet (version 49.0 and later), Topic (version 49.0 and later), CollaborationGroup (version 49.0 and later)</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>
### Property

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
</table>

- KnowledgeArticle (version 49.0 and later)
- ContentDocument (version 49.0 and later)
- ManagedContent (version 49.0 and later)
- Report (version 49.0 and later)
- Dashboard (version 49.0 and later)

You can have up to 2,500 ExperienceVariation targets and 25,000 record targets.

| targetValue | String | Value of the target. If targetType is ExperienceVariation, targetValue is the developer name of the experience variation. If targetType is CustomObjectName __c, targetValue is the ID of the custom object. To determine the developer name for targets of type ExperienceVariation, see Personalization Target Developer and Group Names in the Experience Cloud Developer Guide. | Required | 48.0 |

**SEE ALSO:**
- ConnectApi.TargetCollectionInput

### ConnectApi.TargetUpdateInput

Target to update.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
</table>

- audienceId | String | ID of the audience to assign to the target. Required if priority isn’t specified. Otherwise, Optional | 48.0 |

- priority | Integer | Priority of the target. Within a group, priority determines which target is returned if the user matches more than one audience. Required if audienceId isn’t specified. Otherwise, Optional | 48.0 |
### ConnectApi.TargetCollectionUpdateInput

Include a text segment in a feed item or comment.

Subclass of `ConnectApi.MessageSegmentInput`

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>targetId</code></td>
<td><code>String</code></td>
<td>ID of the target to update.</td>
<td>Required</td>
<td>48.0</td>
</tr>
</tbody>
</table>

### ConnectApi.TextSegmentInput

Include a text segment in a feed item or comment.

Subclass of `ConnectApi.MessageSegmentInput`

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>text</code></td>
<td><code>String</code></td>
<td>Plain text for this segment. If hashtags or links are detected in <code>text</code>, they are included in the comment as hashtag and link segments. Mentions are not detected in <code>text</code> and are not separated out of the text. Mentions require <code>ConnectApi.MentionSegmentInput</code>.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.MentionSegmentInput`
- `ConnectApi.MessageBodyInput`

### ConnectApi.TopicInput

Update a topic's name or description or merge topics.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>description</code></td>
<td><code>String</code></td>
<td>Description of the topic</td>
<td>29.0</td>
</tr>
<tr>
<td><code>idsToMerge</code></td>
<td><code>List&lt;String&gt;</code></td>
<td>List of up to five secondary topic IDs to merge with the primary topic. If any of these secondary topics are managed topics, they lose their topic type, topic images, and children topics. Their feed items are reassigned to the primary topic.</td>
<td>33.0</td>
</tr>
</tbody>
</table>
## ConnectApi.TopicNamesInput

A list of topic names to replace currently assigned topics. Also a list of suggested topics to assign.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>topicNames</td>
<td>List&lt;String&gt;</td>
<td>A list of up to 10 topic names for a feed item or 100 topic names for a record.</td>
<td>Required</td>
<td>35.0</td>
</tr>
<tr>
<td>topicSuggestions</td>
<td>List&lt;String&gt;</td>
<td>A list of suggested topics to assign to a record or feed item to improve future topic suggestions.</td>
<td>Optional</td>
<td>37.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
*updateTopic(communityId, topicId, topic)*

## ConnectApi.TopicsCapabilityInput

Assign topics to a feed element.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>contextTopicName</td>
<td>String</td>
<td>Name of the parent topic in the site to which the feed element belongs.</td>
<td>Optional</td>
<td>38.0</td>
</tr>
<tr>
<td>topics</td>
<td>List&lt;String&gt;</td>
<td>List of topics to assign to the feed element.</td>
<td>Required</td>
<td>38.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
*ConnectApi.FeedElementCapabilitiesInput*

## ConnectApi.UpDownVoteCapabilityInput

Upvote or downvote a feed element or a comment.
### ConnectApi.UserInput

Update a user’s About Me information.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>aboutMe</td>
<td>String</td>
<td>The <code>aboutMe</code> property of a <a href="#">ConnectApi.UserDetail output object</a>. This property populates the About Me section of the user profile, which is visible to all members of an Experience Cloud site or org.</td>
<td>Required</td>
<td>29.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `updateUser(communityId, userId, userInput)`

### ConnectApi.WishlistInput

Wishlist to create.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the wishlist.</td>
<td>Required</td>
<td>49.0</td>
</tr>
<tr>
<td>products</td>
<td>List&lt;String&gt;</td>
<td>List of products to add to the wishlist.</td>
<td>Optional</td>
<td>49.0</td>
</tr>
</tbody>
</table>

### ConnectApi.WishlistItemInput

Item to update or add to a wishlist.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>productId</td>
<td>String</td>
<td>ID of the product to update or add to the wishlist.</td>
<td>Required</td>
<td>49.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.WishlistInput`
ConnectApi.WishlistUpdateInput
Wishlist name to update.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Required or Optional</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>Wishlist name to update.</td>

<td>50.0</td>
</tr>
</tbody>
</table>

Retired ConnectApi Input Classes
These ConnectApi input classes are retired.

IN THIS SECTION:
- ConnectApi.CanvasAttachmentInput
  Used to attach a canvas app to a feed item.
- ConnectApi.ContentAttachmentInput
  Used to attach existing content to a comment or feed item.
- ConnectApi.FeedItemAttachmentInput
  Used to attach a file to a feed item.
- ConnectApi.LinkAttachmentInput
  Add links to a feed item.
- ConnectApi.NewFileAttachmentInput
  Attach a new file to a feed item.
- ConnectApi.PollAttachmentInput
  Attach a poll to a feed item.

ConnectApi.CanvasAttachmentInput
Used to attach a canvas app to a feed item.

⚠️ Important: This class isn’t available in version 32.0 and later. In version 32.0 and later, use ConnectApi.CanvasCapabilityInput.

Subclass of ConnectApi.FeedItemAttachmentInput.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Optional. The description of the canvas app.</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>developerName</td>
<td>String</td>
<td>The developer name (API name) of the canvas app</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>height</td>
<td>String</td>
<td>Optional. The height of the canvas app in pixels. Default height is 200</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>pixels.</td>
<td></td>
</tr>
<tr>
<td>namespacePrefix</td>
<td>String</td>
<td>Optional. The namespace prefix of the Developer Edition organization in</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>which the canvas app was created.</td>
<td></td>
</tr>
<tr>
<td>Property</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>--------------------</td>
<td>---------</td>
<td>------------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>parameters</td>
<td>String</td>
<td>Optional. Parameters passed to the canvas app in JSON format. Example:</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>Optional. A URL to a thumbnail image for the canvas app. Maximum dimensions</td>
<td>29.0–31.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>The title of the link used to call the canvas app.</td>
<td>29.0–31.0</td>
</tr>
</tbody>
</table>

**ConnectApi.ContentAttachmentInput**

Used to attach existing content to a comment or feed item.

*Important:* This class isn’t available in version 32.0 and later. In version 32.0 and later, use ConnectApi.ContentCapabilityInput.

Subclass of ConnectApi.FeedItemAttachmentInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>contentDocumentId</td>
<td>String</td>
<td>ID of the existing content.</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

**ConnectApi.FeedItemAttachmentInput**

Used to attach a file to a feed item.

*Important:* This class isn’t available in version 32.0 and later. In version 32.0 and later, use ConnectApi.FeedElementCapabilityInput.

This class is abstract and has no public constructor. You can make an instance only of a subclass.

Superclass for:
- ConnectApi.CanvasAttachmentInput
- ConnectApi.ContentAttachmentInput
- ConnectApi.LinkAttachmentInput
- ConnectApi.NewFileAttachmentInput
- ConnectApi.PollAttachmentInput

**ConnectApi.LinkAttachmentInput**

Add links to a feed item.

*Important:* This class isn’t available in version 32.0 and later. In version 32.0 and later, use ConnectApi.LinkCapabilityInput.

Subclass of ConnectApi.FeedItemAttachmentInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>URL to be used for the link</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>urlName</td>
<td>String</td>
<td>Title of the link</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>
ConnectApi.NewFileAttachmentInput

Attach a new file to a feed item.

⚠️ Important: This class isn’t available in version 32.0 and later. In version 32.0 and later, use ConnectApi.ContentCapabilityInput.

The actual binary file, that is the attachment, is provided as part of the BinaryInput in the method that takes this attachment input, such as postFeedItem or postComment.

Subclass of ConnectApi.FeedItemAttachmentInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the file to be uploaded.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>The title of the file. This value is required and is also used as the file name. For example, if the title is My Title, and the file is a .txt file, the file name is My Title.txt.</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

ConnectApi.PollAttachmentInput

Attach a poll to a feed item.

⚠️ Important: This class isn’t available in version 32.0 and later. In version 32.0 and later, use ConnectApi.PollCapabilityInput.

Subclass of ConnectApi.FeedItemAttachmentInput

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>pollChoices</td>
<td>List&lt;String&gt;</td>
<td>The text labels for the poll items. Polls must contain between 2 to 10 poll choices.</td>
<td>28.0–31.0</td>
</tr>
</tbody>
</table>

ConnectApi Output Classes

Most ConnectApi methods return instances of ConnectApi output classes.

All properties are read-only, except for instances of output classes created within test code.

All output classes are concrete unless marked abstract in this documentation.

All concrete output classes have no-argument constructors that you can invoke only from test code. See Testing ConnectApi Code.

ConnectApi.AbstractCartItem

A cart item.

This class is abstract.

Superclass of:

- ConnectApi.CartItem
- ConnectApi.CartItemWithoutPrice

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>cartId</td>
<td>String</td>
<td>ID of the cart.</td>
<td>49.0</td>
</tr>
</tbody>
</table>
### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>cartItemId</td>
<td>String</td>
<td>ID of the item.</td>
<td>49.0</td>
</tr>
<tr>
<td>messagesSummary</td>
<td>ConnectApi.CartMessagesSummary</td>
<td>Messages summary for the item.</td>
<td>49.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the item.</td>
<td></td>
</tr>
<tr>
<td>productDetails</td>
<td>ConnectApi.CartItemProduct</td>
<td>Summary of the product details.</td>
<td>49.0</td>
</tr>
<tr>
<td>productId</td>
<td>String</td>
<td>ID of the product.</td>
<td>49.0</td>
</tr>
<tr>
<td>quantity</td>
<td>String</td>
<td>Quantity of the item.</td>
<td>49.0</td>
</tr>
<tr>
<td>type</td>
<td>ConnectApi.CartItemType</td>
<td>Type of item in a cart. Values are:</td>
<td>49.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• DeliveryCharge</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Product</td>
<td></td>
</tr>
</tbody>
</table>

### ConnectApi.AbstractContentHubItemType

An item type associated with a repository folder.

This class is abstract.

Superclass of:
- ConnectApi.ContentHubItemTypeDetail
- ConnectApi.ContentHubItemTypeSummary

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>contentStreamSupport</td>
<td>ConnectApi.ContentHubStreamSupport</td>
<td>Support for content streaming. Values are:</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ContentStreamAllowed</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ContentStreamNotAllowed</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ContentStreamRequired</td>
<td></td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the item type.</td>
<td>39.0</td>
</tr>
<tr>
<td>displayName</td>
<td>String</td>
<td>Display name of the item type.</td>
<td>39.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the item type.</td>
<td>39.0</td>
</tr>
<tr>
<td>isVersionable</td>
<td>Boolean</td>
<td>Indicates whether the item type can have versions.</td>
<td>39.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the detailed information of the item type.</td>
<td>39.0</td>
</tr>
</tbody>
</table>
ConnectApi.AbstractDirectoryEntrySummary

A directory entry with summary information.

This class is abstract.

Superclass of:

• ConnectApi.RepositoryGroupSummary
• ConnectApi.RepositoryUserSummary

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>domain</td>
<td>String</td>
<td>Domain of the directory entry.</td>
<td>39.0</td>
</tr>
<tr>
<td>email</td>
<td>String</td>
<td>Email of the directory entry.</td>
<td>39.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the directory entry.</td>
<td>39.0</td>
</tr>
<tr>
<td>type</td>
<td>ConnectApi.ContentHubDirectoryEntryType</td>
<td>Type of directory entry. Values are:</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• GroupEntry</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• UserEntry</td>
<td></td>
</tr>
</tbody>
</table>

ConnectApi.AbstractExtensionInformation

Extension information.

This class is abstract.

Superclass of ConnectApi.LightningExtensionInformation

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>extensionInformationType</td>
<td>ConnectApi.ExtensionInformationType</td>
<td>Information type of the extension. Values are:</td>
<td>40.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Lightning</td>
<td></td>
</tr>
</tbody>
</table>

ConnectApi.AbstractGatewayCommonResponse

Payment gateway response fields commonly used in payment services.

This class is abstract.

Superclass of ConnectApi.AbstractGatewayResponse

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>gatewayAvsCode</td>
<td>String</td>
<td>Used to verify the address mapped to a payment method when the payments</td>
<td>50.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>platform requests tokenization from the payment gateway.</td>
<td></td>
</tr>
<tr>
<td>gatewayDate</td>
<td>Datetime</td>
<td>Date when the notification occurred. Some gateways don’t send this value.</td>
<td>50.0</td>
</tr>
</tbody>
</table>
### Available Version Description Type Property Name

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>gatewayMessage</td>
<td>String</td>
<td>Error messages that the gateway returned for the notification request. Maximum length of 255 characters.</td>
<td>50.0</td>
</tr>
<tr>
<td>gatewayResultCode</td>
<td>String</td>
<td>Gateway-specific result code. You can map the result code to a Salesforce-specific result code. Maximum length of 64 characters.</td>
<td>50.0</td>
</tr>
<tr>
<td>gatewayResultCodeDescription</td>
<td>String</td>
<td>A description of the gateway-specific result code that a payment gateway returned. Maximum length of 1,000 characters.</td>
<td>50.0</td>
</tr>
<tr>
<td>salesforceResultCode</td>
<td>String</td>
<td>The Salesforce result code for the gateway result code.</td>
<td>50.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.AbstractGatewayResponse

Payment gateway response fields used in sale, authorization, and capture services.

This class is abstract.

Subclass of `ConnectApi.AbstractGatewayCommonResponse`.

Super class of:
- `ConnectApi.AuthReversalGatewayResponse` on page 2108
- `ConnectApi.AuthorizationGatewayResponse`
- `ConnectApi.AuthorizationReversalResponse`
- `ConnectApi.CaptureGatewayResponse`
- `ConnectApi.RefundGatewayResponse`

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>gatewayReferenceDetails</td>
<td>String</td>
<td>Provides information about the gateway communication.</td>
<td>50.0</td>
</tr>
<tr>
<td>gatewayReferenceNumber</td>
<td>String</td>
<td>Unique transaction ID created by the payment gateway.</td>
<td>50.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.AbstractMessageBody

This class is abstract.

Superclass of:
- `ConnectApi.FeedBody`
- `ConnectApi.MessageBody`

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isRichText</td>
<td>Boolean</td>
<td>Indicates whether the body is rich text.</td>
<td>35.0</td>
</tr>
</tbody>
</table>
### ConnectApi.AbstractNBAAction

A recommended action of recommendation strategy.

This class is abstract.

Superclass of `ConnectApi.NBAFlowAction`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>parameters</code></td>
<td>List&lt;ConnectApi.NBAActionParameter&gt;</td>
<td>List of parameters to pass to the action.</td>
<td>45.0</td>
</tr>
</tbody>
</table>
| `type`        | ConnectApi.NBAActionType | Type of action. Values are:  
• Flow—Automated process tool with multiple subtypes. | 45.0 |

SEE ALSO:  
*ConnectApi.NBARecommendation*

### ConnectApi.AbstractNBATarget

A recommendation target of a recommendation strategy.

This class is abstract.

Superclass of `ConnectApi.NBANativeRecommendation`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| `type`        | ConnectApi.NBATargetType | Type of target. Values are:  
• Recommendation | 45.0 |

SEE ALSO:  
*ConnectApi.NBARecommendation*

### ConnectApi.AbstractRecommendation

A Chatter, custom, or static recommendation.
This class is abstract.

Superclass of:
- `ConnectApi.EntityRecommendation`
- `ConnectApi.NonEntityRecommendation`

`ConnectApi.NonEntityRecommendation` isn't used in version 34.0 and later. In version 34.0 and later, `ConnectApi.EntityRecommendation` is used for all recommendations.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>explanation</td>
<td><code>ConnectApi.RecommendationExplanation</code></td>
<td>The Chatter, custom, or static recommendation explanation.</td>
<td>32.0</td>
</tr>
<tr>
<td>platformActionGroup</td>
<td><code>ConnectApi.PlatformActionGroup</code></td>
<td>A platform action group instance with state appropriate for the context user.</td>
<td>34.0</td>
</tr>
<tr>
<td>recommendationType</td>
<td><code>ConnectApi.RecommendationType</code></td>
<td>Specifies the type of record being recommended.</td>
<td>32.0</td>
</tr>
<tr>
<td>url</td>
<td><code>String</code></td>
<td>URL for the Chatter, custom, or static recommendation.</td>
<td>34.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- `ConnectApi.RecommendationsCapability`
- `ConnectApi.RecommendationCollection`

### `ConnectApi.AbstractRecommendationExplanation`

Explanation for a Chatter recommendation.

This class is abstract.

Superclass of `ConnectApi.RecommendationExplanation`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>summary</td>
<td><code>String</code></td>
<td>Summary explanation for the Chatter recommendation.</td>
<td>32.0</td>
</tr>
<tr>
<td>type</td>
<td><code>ConnectApi.RecommendationExplanationType</code></td>
<td>Indicates the reason for the Chatter recommendation.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

- `ArticleHasRelatedContent`—Articles with related content to a context article.
- `ArticleViewedTogether`—Articles often viewed together with the article that the context user just viewed.
- `ArticleViewedTogetherWithViewers`—Articles often viewed together with other records that the context user views.
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>Custom</td>
<td>Custom recommendations.</td>
<td></td>
</tr>
<tr>
<td>FilePopular</td>
<td>Files with many followers or views.</td>
<td></td>
</tr>
<tr>
<td>FileViewedTogether</td>
<td>Files often viewed at the same time as other files that the context user views.</td>
<td></td>
</tr>
<tr>
<td>FollowedTogetherWithFollowees</td>
<td>Users often followed together with other records that the context user follows.</td>
<td></td>
</tr>
<tr>
<td>GroupMembersFollowed</td>
<td>Groups with members that the context user follows.</td>
<td></td>
</tr>
<tr>
<td>GroupNew</td>
<td>Recently created groups.</td>
<td></td>
</tr>
<tr>
<td>GroupPopular</td>
<td>Groups with many active members.</td>
<td></td>
</tr>
<tr>
<td>ItemViewedTogether</td>
<td>Records often viewed at the same time as other records that the context user views.</td>
<td></td>
</tr>
<tr>
<td>PopularApp</td>
<td>Applications that are popular.</td>
<td></td>
</tr>
<tr>
<td>RecordOwned</td>
<td>Records that the context user owns.</td>
<td></td>
</tr>
<tr>
<td>RecordParentOfFollowed</td>
<td>Parent records of records that the context user follows.</td>
<td></td>
</tr>
<tr>
<td>RecordViewed</td>
<td>Records that the context user recently viewed.</td>
<td></td>
</tr>
<tr>
<td>TopicFollowedTogether</td>
<td>Topics often followed together with the record that the context user just followed.</td>
<td></td>
</tr>
<tr>
<td>TopicFollowedTogetherWithFollowees</td>
<td>Topics often followed together with other records that the context user follows.</td>
<td></td>
</tr>
<tr>
<td>TopicPopularFollowed</td>
<td>Topics with many followers.</td>
<td></td>
</tr>
<tr>
<td>TopicPopularLiked</td>
<td>Topics on posts that have many likes.</td>
<td></td>
</tr>
<tr>
<td>UserDirectReport</td>
<td>Users who report to the context user.</td>
<td></td>
</tr>
<tr>
<td>UserFollowedTogether</td>
<td>Users often followed together with the record that the context user just followed.</td>
<td></td>
</tr>
<tr>
<td>UserFollowsSameUsers</td>
<td>Users who follow the same users as the context user.</td>
<td></td>
</tr>
<tr>
<td>UserManager</td>
<td>The context user's manager.</td>
<td></td>
</tr>
</tbody>
</table>
### ConnectApi.AbstractRecordField

A field on a record.

This class is abstract.

**Superclass of:**
- `ConnectApi.BlankRecordField`
- `ConnectApi.LabeledRecordField`

Message segments in a feed item are typed as `ConnectApi.MessageSegment`. Feed item capabilities are typed as `ConnectApi.FeedItemCapability`. Record fields are typed as `ConnectApi.AbstractRecordField`. These classes are all abstract and have several concrete subclasses. At runtime you can use `instanceof` to check the concrete types of these objects and then safely proceed with the corresponding downcast. When you downcast, you must have a default case that handles unknown subclasses.

**Important:** The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.
### Available Version

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>type</td>
<td>String</td>
<td>The type of the field. One of these values:</td>
<td>29.0</td>

**SEE ALSO:**

[ConnectApi.RecordViewSection](#)

### ConnectApi(AbstractRecordView)

A view of any record in the org, including a custom object record. This object is used if a specialized object, such as User or ChatterGroup, is not available for the record type.

This class is abstract.

Subclass of [ConnectApi.ActorWithId](#)

Superclass of:

- [ConnectApi.RecordSummary](#)
- [ConnectApi.RecordView](#)

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>The localized name of the record.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

### ConnectApi(AbstractRepositoryFile)

A repository file.
This class is abstract.
Subclass of ConnectApi.AbstractRepositoryItem.
Superclass of:
- ConnectApi.RepositoryFileDetail
- ConnectApi.RepositoryFileSummary

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>checkinComment</td>
<td>String</td>
<td>Checkin comment of the file.</td>
<td>39.0</td>

<td>The URL to the item.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

ConnectApi.AbstractUserMissionActivity

User activity associated with missions.

This class is abstract.

Superclass of:
- ConnectApi.UserMission
- ConnectApi.UserMissionActivity
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>activityCount</td>
<td>Integer</td>
<td>Number of mission activities of the specified type for the user.</td>
<td>45.0</td>
</tr>
<tr>
<td>activityType</td>
<td>String</td>
<td>Type of mission activity for a user. Values are:</td>
<td>45.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• FeedItemAnswerAQuestion—User answered a question.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• FeedItemLikeSomething—User liked a post or comment.</td>
<td></td>

<td>• FeedItemWriteAComment—User commented on a post.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• FeedItemWriteAPost—User made a post.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• FeedItemYourAnswerMarkedBest—User’s answer was marked as the best answer.</td>
<td></td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.UserMissionActivityCollection

**ConnectApi.ActionLinkDefinition**

The definition of an action link. Action link definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionUrl</td>
<td>String</td>
<td>The action link URL. For example, a Ui action link URL is a Web page. A Download action link URL is a link to the file to download. Ui and Download action link URLs are provided to clients. An Api or ApiAsync action link URL is a REST resource. Api and ApiAsync action link URLs aren't provided to clients. Links to Salesforce can be relative. All other links must be absolute and start with https://.</td>
<td>33.0</td>
</tr>
<tr>
<td>Property Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>--------------</td>
<td>-----------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>createdDate</td>
<td>Datetime</td>
<td>An ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z.</td>
<td>33.0</td>
</tr>
<tr>
<td>excludedUserId</td>
<td>String</td>
<td>ID of a single user to exclude from performing the action. If you specify an excludedUserId, you can't specify a userId.</td>
<td>33.0</td>
</tr>
<tr>
<td>groupDefault</td>
<td>Boolean</td>
<td>true if this action is the default action link in the action link group; false otherwise. There can be only one default action link per action link group. The default action link gets distinct styling in the Salesforce UI.</td>
<td>33.0</td>
</tr>
<tr>
<td>headers</td>
<td>List&lt;ConnectApi.RequestHeader&gt;</td>
<td>The request headers for the Api and ApiAsync action link types.</td>
<td>33.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>The 18-character ID for the action link definition.</td>
<td>33.0</td>
</tr>
<tr>
<td>label</td>
<td>String</td>
<td>A custom label to display on the action link button. A label value can be set only in an action link template. Action links have four statuses: NewStatus, PendingStatus, SuccessStatus, and FailedStatus. These strings are appended to the label for each status: • label • label Pending • label Success • label Failed For example, if the value of label is “See Example,” the values of the four action link states are: See Example, See Example Pending, See Example Success, and See Example Failed. An action link can use either label or labelKey to generate label names, it can't use both. If label has a value, the value of labelKey is None. If labelKey has a value other than None, the value of label is null.</td>
<td>34.0</td>
</tr>
<tr>
<td>labelKey</td>
<td>String</td>
<td>Key for the set of labels to show in the user interface. A set includes labels for these states: NewStatus, PendingStatus, SuccessStatus, FailedStatus. For example, if you use the Approve key, you get these labels: Approve, Pending, Approved, Failed. For a complete list of label keys, see Action Links Labels.</td>

<td>- HttpPost—Returns HTTP 201 on success or HTTP 204 if the response body or output class is empty. Exceptions are the batch posting resources and methods, which return HTTP 200 on success.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- HttpPut—Return HTTP 200 on success or HTTP 204 if the response body or output class is empty.</td>
<td></td>
</tr>
<tr>
<td>modifiedDate</td>
<td>Datetime</td>
<td>An ISO 8601 format date string, for example, 2011-02-25T18:24:31.000Z.</td>
<td>33.0</td>
</tr>
<tr>
<td>requestBody</td>
<td>String</td>
<td>The request body for Api and ApiAsync action link types.</td>
<td>33.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Note: Escape quotation mark characters in the requestBody value.</td>
<td></td>
</tr>
<tr>
<td>requires</td>
<td>Boolean</td>
<td>true to require the user to confirm the action; false otherwise.</td>
<td>33.0</td>
</tr>
<tr>
<td>Confirmation</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>templateId</td>
<td>String</td>
<td>The ID of the action link template from which to instantiate this action link. If the action link isn’t associated with a template, the value is null.</td>
<td>33.0</td>
</tr>
<tr>
<td>type</td>
<td>ConnectApi.ActionLinkType</td>
<td>Defines the type of action link. Values are:</td>
<td>33.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Api—The action link calls a synchronous API at the action URL. Salesforce sets the status to SuccessfulStatus or FailedStatus based on the HTTP status code returned by your server.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- ApiAsync—The action link calls an asynchronous API at the action URL. The action remains in a PendingStatus state until a third party makes a request to /connect/action-links/actionLinkId to set the status to SuccessfulStatus or</td>
<td></td>
</tr>
</tbody>
</table>
Available Version | Description | Type | Property Name
--- | --- | --- | ---
FailedStatus when the asynchronous operation is complete. |  |  |
- **Download**—The action link downloads a file from the action URL.  
- **Ui**—The action link takes the user to a web page at the action URL.  

**Note:** Invoking `ApiAsync` action links from an app requires a call to set the status. However, there isn’t currently a way to set the status of an action link using Apex. To set the status, use Connect REST API. See the Action Link resource in the *Connect REST API Developer Guide* for more information.

- **userId** | String | The ID of the user who can execute the action. If not specified or null, any user can execute the action. If you specify a `userId`, you can’t specify an `excludedUserId`. | 33.0

**SEE ALSO:**  
*ConnectApi.ActionLinkGroupDefinition*

**ConnectApi.ActionLinkDiagnosticInfo**

Any diagnostic information that may exist for an executed action link. Diagnostic info is provided only for users who can access the action link.

- **property name** | **type** | **description** | **available version**
--- | --- | --- | ---
**diagnosticInfo** | String | Any diagnostic information returned when an action link is executed. Diagnostic information is provided only for users who can access the action link. | 33.0

- **url** | String | The URL for this action link diagnostic information. | 33.0

**ConnectApi.ActionLinkGroupDefinition**

The definition of an action link group. Information in the action link group definition can be sensitive to a third party (for example, OAuth bearer token headers). For this reason, only calls made from the Apex namespace that created the action link group definition can read, modify, or delete the definition. In addition, the user making the call must have created the definition or have View All Data permission.

- **property name** | **type** | **description** | **available version**
--- | --- | --- | ---
**actionLinks** | List<ConnectApi.ActionLinkDefinition> | A collection of action link definitions that make up the action link group. Within an action link group, action links are displayed in the order listed in the | 33.0
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionLinks</td>
<td>actionLinks</td>
<td>property of the ConnectApi.ActionLinkGroupDefinitionInput class. Within a feed item, action link groups are displayed in the order specified in the actionLinkGroupIds property of the ConnectApi.AssociatedActionsCapabilityInput class.</td>
<td>33.0</td>
</tr>
</tbody>
</table>
| category          | ConnectApi.PlatformActionGroupCategory | Indicates the priority and location of the action links. Values are:  
- Primary— The action link group is displayed in the body of the feed element.  
- Overflow— The action link group is displayed in the overflow menu of the feed element. | 33.0              |
| createdDate       | Datetime             | ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z.                                                                                                                                                  | 33.0              |
| executionsAllowed | ConnectApi.ActionLinkExecutionsAllowed | Defines the number of times an action link can be executed. Values are:  
- Once— An action link can be executed only once across all users.  
- OncePerUser— An action link can be executed only once for each user.  
- Unlimited— An action link can be executed an unlimited number of times by each user. If the action link’s actionType is Api or ApiAsync, you can’t use this value. | 33.0              |
| expirationDate    | Datetime             | ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z, that represents the date and time this action group expires and can no longer be executed. If the value is null, there isn’t an expiration date. | 33.0              |
| id                | String               | 18-character ID of the action link group definition.                                                                                                                                                           | 33.0              |
| modifiedDate      | Datetime             | ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z.                                                                                                                                                  | 33.0              |
| templateId        | String               | The ID of the action link group template from which to instantiate this action link group, or null if this group isn’t associated with a template.                                                            | 33.0              |
| url               | String               | The URL for this action link group definition.                                                                                                                                                                | 33.0              |
ConnectApi.ActivitySharingResult

The results of sharing a captured email or event.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>success</td>
<td>Boolean</td>
<td>Whether the share operation succeeded or not.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

ConnectApi.Actor

Actor.

This class is abstract.

Superclass of:
- ConnectApi.ActorWithId
- ConnectApi.RecommendedObject
- ConnectApi.UnauthenticatedUser

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the actor, such as the group name.</td>
<td>28.0</td>
</tr>
<tr>
<td>type</td>
<td>String</td>
<td>One of the following: file, group, recommendedObject (version 34.0 and later), unauthenticateduser, user, record type name—the name of the record type, such as myCustomObject__c or Account</td>
<td>28.0</td>
</tr>
</tbody>
</table>

- `ConnectApi.UserDetail`

### ConnectApi.AdjustOrderSummaryOutputRepresentation

Output representation of the financial changes for an adjust items action. For a preview action, these values are the expected output. For a submit action, these values are the actual output.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>changeBalances</td>
<td><code>ConnectApi.\_ChangeItemOutputRepresentation</code> on page 2123</td>
<td>Expected (for preview) or actual (for submit) financial values for the price adjustment action. Most of the values match the change order values. If two change orders are returned, then these values combine them. The sign of a value in this output is the opposite of the corresponding value on a change order record. For example, a discount is a positive value in <code>changeBalances</code> and a negative value on a change order record.</td>
<td>49.0</td>
</tr>
<tr>
<td>orderSummaryId</td>
<td>String</td>
<td>ID of the OrderSummary.</td>
<td>49.0</td>
</tr>
<tr>
<td>postFulfillmentChangeOrderId</td>
<td>String</td>
<td>ID of the change Order that holds the financial changes applicable to order products that have been fulfilled. For an adjustPreview call, this value is always null.</td>
<td>49.0</td>
</tr>
<tr>
<td>preFulfillmentChangeOrderId</td>
<td>String</td>
<td>ID of the change Order that holds the financial changes applicable to order products that have not been fulfilled. For an adjustPreview call, this value is always null.</td>
<td>49.0</td>
</tr>
</tbody>
</table>

### ConnectApi.Alternative

Alternative representation for an extension on a feed element.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>textRepresentation</td>
<td>String</td>
<td>Text representation of the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>Thumbnail URL for the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the extension.</td>
<td>40.0</td>
</tr>
</tbody>
</table>
**ConnectApi.Announcement**

An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it's deleted or replaced by another announcement.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>expirationDate</td>
<td>Datetime</td>
<td>The Salesforce UI displays an announcement until 11:59 p.m. on this date unless another announcement is posted first. The Salesforce UI ignores the time value in the expirationDate. However, you can use the time value to create your own display logic in your own UI.</td>
<td>31.0</td>
</tr>
<tr>
<td>feedElement</td>
<td>ConnectApi.FeedElement</td>
<td>The feed element that contains the body of the announcement and its associated comments, likes, and so on.</td>
<td>31.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>18-character ID of the announcement.</td>
<td>31.0</td>
</tr>
<tr>
<td>isArchived</td>
<td>Boolean</td>
<td>Specifies whether the announcement is archived.</td>
<td>36.0</td>
</tr>
<tr>
<td>sendEmails</td>
<td>Boolean</td>
<td>Specifies whether the announcement is sent as an email to all group members.</td>
<td>36.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The URL to the announcement.</td>
<td>33.0</td>
</tr>
</tbody>
</table>

**ConnectApi.AnnouncementPage**

A collection of announcements.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>announcements</td>
<td>List&lt;ConnectApi.Announcement&gt;</td>
<td>A collection of ConnectApi.Announcement objects.</td>
<td>31.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the current page.</td>
<td>31.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the next page, or null if there isn't a next page.</td>
<td>31.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the previous page, or null if there isn't a previous page.</td>
<td>31.0</td>
</tr>
</tbody>
</table>

**ConnectApi.ApprovalCapability**

If a feed element has this capability, it includes information about an approval.

Subclass of ConnectApi.FeedElementCapability.
### Property Name

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>The work item ID. The work item ID is null if there isn't a pending work item associated with the approval record.</td>
<td>32.0</td>
</tr>
<tr>
<td>postTemplateFields</td>
<td>List&lt;ConnectApi.ApprovalPostTemplateField&gt;</td>
<td>The details of the approval post template field.</td>
<td>32.0</td>
</tr>
<tr>
<td>processInstanceId</td>
<td>String</td>
<td>The process instance step ID. The associated record represents one step in an approval process.</td>
<td>32.0</td>
</tr>
<tr>
<td>status</td>
<td>ConnectApi.WorkflowProcessStatus</td>
<td>The status of the approval.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.FeedElementCapabilities

### ConnectApi.ApprovalIntent

Approval intent for a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isRecallable</td>
<td>Boolean</td>
<td>Specifies whether the social post can be recalled (true) or not (false).</td>
<td>45.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

ConnectApi(ArticleItem)

Article item in question and answers suggestions.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>Id of the article.</td>
<td>32.0</td>
</tr>
<tr>
<td>rating</td>
<td>Double</td>
<td>The rating of the article.</td>
<td>32.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the article.</td>
<td>32.0</td>
</tr>
<tr>
<td>urlLink</td>
<td>String</td>
<td>Link URL of the article.</td>
<td>32.0</td>
</tr>
<tr>
<td>viewCount</td>
<td>Integer</td>
<td>Number of votes given to the article.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

ConnectApi(ArticleSummary)

A knowledge article summary.

Subclass of ConnectApi.ActorWithId

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>articleType</td>
<td>String</td>
<td>Type of the knowledge article.</td>
<td>37.0</td>
</tr>
<tr>
<td>knowledgeArticleVersionId</td>
<td>String</td>
<td>ID of the knowledge article version.</td>
<td>39.0</td>
</tr>
<tr>
<td>lastPublishedDate</td>
<td>Datetime</td>
<td>Last published date of the knowledge article.</td>
<td>37.0</td>
</tr>
<tr>
<td>rating</td>
<td>Double</td>
<td>The rating of the article.</td>
<td>37.0</td>
</tr>
<tr>
<td>summary</td>
<td>String</td>
<td>Summary of the knowledge article contents.</td>
<td>37.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the knowledge article.</td>
<td>37.0</td>
</tr>
<tr>
<td>urlName</td>
<td>String</td>
<td>URL name of the knowledge article.</td>
<td>37.0</td>
</tr>
<tr>
<td>viewCount</td>
<td>Integer</td>
<td>Number of times the knowledge article has been viewed.</td>
<td>38.0</td>
</tr>
</tbody>
</table>

ConnectApi(AssociatedActionsCapability)

If a feed element has this capability, it has platform actions associated with it.
### ConnectApi.Audience

A personalization audience.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>criteria</td>
<td>List&lt;ConnectApi.AudienceCriteriaDetail&gt;</td>
<td>Criteria details for the audience.</td>
<td>48.0</td>
</tr>
<tr>
<td>customFormula</td>
<td>String</td>
<td>Custom formula for the audience criteria. For example, (1 AND 2) OR 3.</td>
<td>48.0</td>
</tr>
<tr>
<td>formulaFilterType</td>
<td>ConnectApi.FormulaFilterType</td>
<td>Formula filter type for the personalization audience. Values are:</td>
<td>48.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• AllCriteriaMatch—All audience criteria are true (AND operation).</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• AnyCriterionMatches—Any audience criterion is true (OR operation).</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• CustomLogicMatches—Audience criteria match the custom formula (for example, (1 AND 2) OR 3).</td>
<td></td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the audience.</td>
<td>48.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the audience.</td>
<td>48.0</td>
</tr>
<tr>
<td>targets</td>
<td>List&lt;ConnectApi.AudienceTargetAssignment&gt;</td>
<td>Target assignments for the audience.</td>
<td>48.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to this audience.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

ConnectApi.AudienceCollection
ConnectApi.AudienceCollection

Collection of personalization audiences.

</tr>
</tbody>
</table>

ConnectApi.AudienceCriteria

Custom recommendation audience criteria.

This class is abstract.

This class is a superclass of:
- ConnectApi.CustomListAudienceCriteria
- ConnectApi.NewUserAudienceCriteria

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
</table>
| type          | ConnectApi.RecommendationAudienceCriteriaType | Specifies the custom recommendation audience criteria type. One of these values:  
- CustomList—A custom list of users makes up the audience.  
- MaxDaysInCommunity—New members make up the audience. | 36.0 |

SEE ALSO:
- ConnectApi.RecommendationAudience

ConnectApi.AudienceCriteriaDetail

Personalization audience criteria.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>criterion</td>
<td>List&lt;ConnectApi.AudienceCriterionDetail&gt;</td>
<td>List of mappings of audience criteria fields and values.</td>
<td>48.0</td>
</tr>
<tr>
<td>criterionNumber</td>
<td>Integer</td>
<td>Number associated with the audience criterion in a formula. For example, (1 AND 2) OR 3. If unspecified, criteria are assigned numbers in the order that they're added.</td>
<td>48.0</td>
</tr>
</tbody>
</table>
| criterionOperator | ConnectApi.AudienceCriteriaOperator | Operator used in the personalization audience criterion. Values are:  
- Contains | 48.0 |
### ConnectApi.Namespace

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>criterionType</td>
<td>ConnectApi. AudienceCriteria.Type</td>
<td>Type of personalization audience criterion. Values are:</td>
<td>48.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Default—Audience has no criteria.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Domain—Audience criterion is based on domain.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• FieldBased—Audience criterion is based on object fields.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• GeoLocation—Audience criterion is based on location.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Permission—Audience criterion is based on standard or custom permissions.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Profile—Audience criterion is based on profile.</td>
<td></td>
</tr>
</tbody>
</table>

### ConnectApi.AudienceCriterionDetail

Audience criterion information.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>

### ConnectApi.AvailableLocationOutputRepresentation
A set of inventory locations that can combine to fulfill an order.
### Property Name | Type | Description | Available Version
--- | --- | --- | ---
locations | List<String> | A list of inventory locations. | 51.0

**ConnectApi.AverageDistanceResultOutputRepresentation**

Wraps inventory location shipping distance calculation results.

### Property Name | Type | Description | Available Version
--- | --- | --- | ---
distanceCalculation | ConnectApi.DistanceCalculationOutputRepresentation | Results of the shipping distance calculations. | 51.0

**ConnectApi.PaymentAuthAdjustmentResponse**

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>accountId</td>
<td>String</td>
<td>ID of the account containing the payment authorization being adjusted.</td>
<td>51.0</td>
</tr>
<tr>
<td>amount</td>
<td>Double</td>
<td>Amount of the payment authorization adjustment.</td>
<td>51.0</td>
</tr>
<tr>
<td>currencyIsoCode</td>
<td>String</td>
<td>Three-letter ISO 4217 currency code associated with the payment authorization adjustment.</td>
<td>51.0</td>
</tr>
<tr>
<td>effectiveDate</td>
<td>Datetime</td>
<td>Date when the authorization adjustment becomes effective.</td>
<td>51.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the PaymentAuthAdjustment record.</td>
<td>51.0</td>
</tr>
<tr>
<td>paymentAuthAdjustmentNumber</td>
<td>String</td>
<td>System-defined reference number.</td>
<td>51.0</td>
</tr>
<tr>
<td>requestDate</td>
<td>Datetime</td>
<td>Date when the authorization adjustment transaction occurred.</td>
<td>51.0</td>
</tr>
</tbody>
</table>
| status | String | Status of the payment authorization adjustment. Possible values are:  
- Canceled: The payment authorization reversal has been canceled. The parent authorization has returned to its pre-reversal balance.  
- Draft: The payment authorization reversal can be edited before applying it against the parent authorization.  
- Processed: The payment authorization reversal has been finalized.  Users can change the status as follows:  
- Draft to Processed  
- Processed to Canceled | 51.0 |
### Available Version

## ConnectApi Namespace

### Apex Developer Guide

**Available Version** | **Description** | **Property Name** | **Type**
---|---|---|---
51.0 | Gateway response representation for the payment authorization. | gatewayResponse | ConnectApi. AuthorizationGateway Response
51.0 | Payment authorization representation. | paymentAuthorization | ConnectApi. PaymentAuthorization Response
51.0 | Gateway log list representation for the payment authorization. | paymentGatewayLogs | List<ConnectApi. GatewayLogResponse>
51.0 | Payment group representation for the payment authorization. | paymentGroup | ConnectApi. PaymentGroupResponse
51.0 | Payment method representation for the payment authorization. | paymentMethod | ConnectApi. PaymentMethodResponse

**ConnectApi.BannerCapability**

If a feed element has this capability, it has a banner motif and style.

Subclass of ConnectApi.FeedElementCapability.

**Available Version** | **Description** | **Property Name** | **Type**
---|---|---|---
31.0 | A banner motif. | motif | ConnectApi. Motif
31.0 | Decorates a feed item with a color and set of icons. Possible value:
• Announcement—An announcement displays in a designated location in the Salesforce UI until 11:59 p.m. on its expiration date, unless it's deleted or replaced by another announcement. | style | ConnectApi. BannerStyle

SEE ALSO:
ConnectApi.FeedElementCapabilities

**ConnectApi.BannerPhoto**

A banner photo.

**Available Version** | **Description** | **Property Name** | **Type**
---|---|---|---
36.0 | URL to the banner photo in a large format. This URL is available only to authenticated users. | bannerPhotoUrl | String
36.0 | 18-character version ID of the banner photo. | bannerPhotoVersionId | String
### ConnectApi.BaseManagedSocialAccount

Base information describing a managed social account or fan page of a social network.

This class is abstract.

Superclass of `ConnectApi.ManagedSocialAccount`

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>

#### uniqueName
- **Type**: String
- **Description**: Unique name used for distinguishing same name fan pages; acts like a user name for a fan page.
- **Available Version**: 44.0

#### username
- **Type**: String
- **Description**: Unique user name or handle for this account on the social network.
- **Available Version**: 44.0

---

**ConnectApi.BaseOutputRepresentation**

Base Order Management output class.

This class is abstract.

Superclass of:
- `ConnectApi.AdjustOrderSummaryOutputRepresentation`
- `ConnectApi.CreateCreditMemoOutputRepresentation`
- `ConnectApi.CreateOrderPaymentSummaryOutputRepresentation`
- `ConnectApi.EnsureFundsAsyncOutputRepresentation`
- `ConnectApi.EnsureRefundsAsyncOutputRepresentation`
- `ConnectApi.FindRoutesWithFewestSplitsOutputRepresentation`
- `ConnectApi.FulfillmentGroupOutputRepresentation`
- `ConnectApi.FulfillmentOrderCancelLineItemsOutputRepresentation`
- `ConnectApi.FulfillmentOrderInvoiceOutputRepresentation`
- `ConnectApi.FulfillmentOrderOutputRepresentation`
- `ConnectApi.MultipleFulfillmentOrderOutputRepresentation`
- `ConnectApi.OrderSummaryOutputRepresentation`
- `ConnectApi.PreviewCancelOutputRepresentation`
- `ConnectApi.PreviewReturnOutputRepresentation`
- `ConnectApi.RankAverageDistanceOutputRepresentation`
- `ConnectApi.SubmitCancelOutputRepresentation`
- `ConnectApi.SubmitReturnOutputRepresentation`
**ConnectApi.BatchResult**

The result of an operation returned by a batch method.

**Namespace**

ConnectApi

**Usage**

Calls to batch methods return a list of BatchResult objects. Each element in the BatchResult list corresponds to the strings in the list parameter passed to the batch method. The first element in the BatchResult list matches the first string passed in the list parameter, the second element corresponds with the second string, and so on. If only one string is passed, the BatchResult list contains a single element.

**Example**

The following example shows how to obtain and iterate through the returned ConnectApi.BatchResult objects. The code adds two group IDs to a list. One of group IDs is incorrect, which causes a failure when the code calls the batch method. After it calls the batch method, it iterates through the results to determine whether the operation was successful or not for each group ID in the list. The code writes the ID of every group that was processed successfully to the debug log. The code writes an error message for every failed group.

This example generates one successful operation and one failure.

```java
List<String> myList = new List<String>();
// Add one correct group ID.
myList.add('0F9D00000000oOT');
// Add one incorrect group ID.
myList.add('0F9D00000000izf');

ConnectApi.BatchResult[] batchResults = ConnectApi.ChatterGroups.getGroupBatch(null, myList);

// Iterate through each returned result.
for (ConnectApi.BatchResult batchResult : batchResults) {
    if (batchResult.isSuccess()) {
        // Operation was successful.
        // Print the group ID.
        ConnectApi.ChatterGroupSummary groupSummary;
        if(batchResult.getResult() instanceof ConnectApi.ChatterGroupSummary) {
            groupSummary = (ConnectApi.ChatterGroupSummary) batchResult.getResult();
        }
        System.debug('SUCCESS');
        System.debug(groupSummary.id);
    }
}
```
else {
    // Operation failed. Print errors.
    System.debug('FAILURE');
    System.debug(batchResult.getErrorMessage());
}

IN THIS SECTION:

BatchResult Methods

BatchResult Methods
The following are instance methods for BatchResult.

IN THIS SECTION:

getError()
If an error occurred, returns a ConnectApi.ConnectApiException object providing the error code and description.

ErrorMessage()
Returns a String that contains an error message.

getErrorTypeName()
Returns a String that contains the name of the error type.

getResult()
Returns an object that contains the results of the batch operation. The object is typed according to the batch method. For example, if you call getMembershipBatch(), a successful call to BatchResult getResult() returns a ConnectApi.GroupMembership object.

isSuccess()
Returns a Boolean that is set to true if the batch operation was successful for this object, false otherwise.

ggetError()
If an error occurred, returns a ConnectApi.ConnectApiException object providing the error code and description.

Signature

public ConnectApi.ConnectApiException getError()

Return Value

Type: ConnectApi.ConnectApiException

ggetErrorMessage()
Returns a String that contains an error message.

Signature

public String getErrorMessage()
Return Value
Type: String

Usage
The error message doesn’t make a round trip through a Visualforce view state, because exceptions can’t be serialized.

generateTypeName()
Returns a String that contains the name of the error type.

Signature
public String getErrorTypeName()

Return Value
Type: String

getResult()
Returns an object that contains the results of the batch operation. The object is typed according to the batch method. For example, if you call getMembershipBatch(), a successful call to BatchResult getResult() returns a ConnectApi.GroupMembership object.

Signature
public Object getResult()

Return Value
Type: Object

isSuccess()
Returns a Boolean that is set to true if the batch operation was successful for this object, false otherwise.

Signature
public Boolean isSuccess()

Return Value
Type: Boolean

ConnectApi.BlankRecordField
A record field displayed as a place holder in a grid of fields.
Subclass of ConnectApi.AbstractRecordField
ConnectApi.BookmarksCapability

If a feed element has this capability, the context user can bookmark it.
Subclass of ConnectApi.FeedElementCapability.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isBookmarked</td>
<td>Boolean</td>
<td>Indicates whether the feed element has been bookmarked by the context user (true) or not (false).</td>
<td>32.0</td>
</tr>
<tr>
<td>ByCurrentUser</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.FeedElementCapabilities

ConnectApi.BookmarkSummary

Summary of a bookmark.
Subclass of ConnectApi.UserFeedEntityActivitySummary
No additional properties.

ConnectApi.BundleCapability

If a feed element has this capability, it has a container of feed elements called a bundle.
This class is abstract.
Subclass of ConnectApi.FeedElementCapability.
Superclass of:
• ConnectApi.GenericBundleCapability
• ConnectApi.TrackedChangeBundleCapability

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>bundleType</td>
<td>ConnectApi.BundleType</td>
<td>Defines this feed element’s bundle type. The bundle type determines what additional information appears in the bundle.</td>
<td>31.0</td>
</tr>
<tr>
<td>page</td>
<td>ConnectApi.FeedElementPage</td>
<td>A collection of feed elements.</td>
<td>31.0</td>
</tr>
<tr>
<td>totalElements</td>
<td>Integer</td>
<td>The total number of feed elements that this bundle aggregates.</td>
<td>31.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
ConnectApi.FeedElementCapabilities
ConnectApi.CallCollaborationCapability

If a feed element has this capability, it has a recording comment.

Subclass of ConnectApi.FeedElementCapability.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>commentEndTime</td>
<td>Integer</td>
<td>End time of the comment on the media player, in seconds.</td>
<td>51.0</td>
</tr>
<tr>
<td>commentStartTime</td>
<td>Integer</td>
<td>Start time of the comment on the media player, in seconds.</td>
<td>51.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

ConnectApi.FeedElementCapabilities

ConnectApi.CandidateAnswersStatus

The status of candidate answers on a feed element.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>hasCandidateAnswers</td>
<td>Boolean</td>
<td>Indicates whether candidate answers are available for a question.</td>
<td>41.0</td>
</tr>
<tr>
<td>hasCandidateAnswersPublished</td>
<td>Boolean</td>
<td>Indicates whether any candidate answers are published.</td>
<td>41.0</td>
</tr>
<tr>
<td>hasCandidateAnswersRated</td>
<td>Boolean</td>
<td>Indicates whether any candidate answers are rated.</td>
<td>41.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

ConnectApi.QuestionAndAnswersCapability

ConnectApi.CanvasCapability

If a feed element has this capability, it renders a canvas app.

Subclass of ConnectApi.FeedElementCapability.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>A description of the canvas app. The maximum size is 255 characters.</td>
<td>32.0</td>
</tr>
<tr>
<td>developerName</td>
<td>String</td>
<td>The API name (developer name) of the connected app.</td>
<td>32.0</td>
</tr>
<tr>
<td>height</td>
<td>String</td>
<td>The height of the canvas app in pixels.</td>
<td>32.0</td>
</tr>
<tr>
<td>icon</td>
<td>ConnectApi.Icon</td>
<td>The icon for the canvas app.</td>
<td>32.0</td>
</tr>
</tbody>
</table>
### ConnectApi Namespace

#### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>namespacePrefix</td>
<td>String</td>
<td>A unique namespace prefix for the canvas app.</td>
<td>32.0</td>
</tr>
<tr>
<td>parameters</td>
<td>String</td>
<td>JSON parameters passed to the canvas app.</td>
<td>32.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>A thumbnail URL to a preview image. The maximum thumbnail size is 120 pixels by 120 pixels.</td>
<td>32.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>A title for the canvas link.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

  Capture output.

#### Property Names

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>error</td>
<td>ConnectApi.ErrorResponse on page 2165</td>
<td>Error response representation for an authorization capture.</td>
<td>50.0</td>
</tr>
<tr>
<td>gatewayResponse</td>
<td>ConnectApi.CaptureGatewayResponse</td>
<td>Gateway log response containing details about gateway logs created during the process of the capture request.</td>
<td>50.0</td>
</tr>
<tr>
<td>payment</td>
<td>ConnectApi.PaymentResponse</td>
<td>Payment response object for the capture request. Contains the information related to a payment object created during request processing.</td>
<td>50.0</td>
</tr>
<tr>
<td>paymentGatewayLogs</td>
<td>List&lt;ConnectApi.GatewayLogResponse&gt;</td>
<td>Gateway log collection for an authorization capture.</td>
<td>50.0</td>
</tr>
<tr>
<td>paymentGroup</td>
<td>ConnectApi.PaymentGroupResponse</td>
<td>Payment group associated with the capture request.</td>
<td>50.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.CartItem

An item in a cart.
Subclass of ConnectApi.AbstractCartItem
## Available Version Description Type Property Name

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>

<td>Total amount for the item.</td>
<td>49.0</td>
</tr>
<tr>
<td>totalListPrice</td>
<td>String</td>
<td>Total list price for the item.</td>
<td>49.0</td>
</tr>
<tr>
<td>totalPrice</td>
<td>String</td>
<td>Total price for the item including adjustments but excluding taxes.</td>
<td>49.0</td>
</tr>
<tr>
<td>totalTax</td>
<td>String</td>
<td>Total tax for the item.</td>
<td>49.0</td>
</tr>
<tr>
<td>unitAdjustedPrice</td>
<td>String</td>
<td>Unit price, including adjustments, for the item. This value is informational only and isn't used in pricing calculations.</td>
<td>50.0</td>
</tr>
<tr>
<td>unitAdjustment</td>
<td>String</td>
<td>Adjustments made to the unit price for the item. This value is informational only and isn't used in pricing calculations.</td>
<td>50.0</td>
</tr>
</tbody>
</table>

### ConnectApi.CartItemCollection

Cart item collection.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>cartItems</td>
<td>List&lt;ConnectApi.</td>
<td>Collection of cart item results.</td>
<td>49.0</td>
</tr>
<tr>
<td>cartSummary</td>
<td>CartItemResult&gt;</td>
<td></td>
<td></td>
</tr>

<tr>
<td>cartSummary</td>
<td>CartSummary</td>
<td></td>
<td></td>
</tr>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>49.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the current page.</td>
<td>49.0</td>
</tr>
<tr>
<td>hasErrors</td>
<td>Boolean</td>
<td>Specifies whether at least one of the results contains an error.</td>
<td>49.0</td>
</tr>
<tr>
<td>nextPageToken</td>
<td>String</td>
<td>Token identifying the next page, or null if there isn't a next page.</td>
<td>49.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the next page, or null if there isn't a next page.</td>
<td>49.0</td>
</tr>
<tr>
<td>previousPageToken</td>
<td>String</td>
<td>Token identifying the previous page, or null if there isn't a previous page.</td>
<td>49.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the previous page, or null if there isn't a previous page.</td>
<td>49.0</td>
</tr>
</tbody>
</table>
ConnectApi.CartItemProduct

Product summary for a cart item.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fields</td>
<td>Map&lt;String, String&gt;</td>

</tr>
<tr>
<td>message</td>
<td>String</td>
<td>Message when the request isn’t successful.</td>
<td>49.0</td>
</tr>
<tr>
<td>status</td>
<td>String</td>
<td>Status for the request.</td>
<td>49.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.CartItemCollection
- ConnectApi.WishlistToCartResult

ConnectApi.CartItemWithoutPrice

An item without price information in a cart.
Subclass of ConnectApi.AbstractCartItem
No additional properties.
**ConnectApi.CartMessage**

Cart message.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>message</td>
<td>String</td>
<td>Cart message.</td>
<td>49.0</td>
</tr>
<tr>
<td>messageId</td>
<td>String</td>
<td>ID of the object supplying the message.</td>
<td>49.0</td>
</tr>
<tr>
<td>relatedEntityId</td>
<td>String</td>
<td>ID of the entity, for example, cart, cart item, or cart tax, associated with the message.</td>
<td>49.0</td>
</tr>
<tr>
<td>severity</td>
<td>ConnectApi.</td>
<td>Severity of cart message. Values are:</td>
<td>49.0</td>
</tr>
<tr>
<td></td>
<td>CartMessageSeverity</td>

<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Info</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Warning</td>
<td></td>
<td></td>
</tr>
<tr>
<td>type</td>
<td>String</td>
<td>Type of message. Standard values include Inventory, Taxes, Pricing, Shipping, Entitlement, SystemError, and Other.</td>
<td>49.0</td>
</tr>
<tr>
<td>visible</td>
<td>Boolean</td>
<td>Specifies whether the message is visible (true) or dismissed (false).</td>
<td>49.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

*ConnectApi.CartMessagesSummary*

**ConnectApi.CartMessagesSummary**

Cart messages summary.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>errorCount</td>
<td>Integer</td>
<td>In ConnectApi.CartItemResult, the count of messages with the Error severity level.</td>
<td>49.0</td>
</tr>
<tr>
<td>hasErrors</td>
<td>Boolean</td>
<td>Specifies whether there are messages related to the entity (true) or not (false).</td>
<td>49.0</td>
</tr>
<tr>
<td>limitedMessages</td>
<td>List&lt;ConnectApi.</td>
<td>In ConnectApi.CartItemResult, a limited list of messages related to the cart item. In ConnectApi.CartSummary, each message can be related to the cart or to another cart-related entity.</td>
<td>49.0</td>
</tr>
<tr>
<td>relatedEntityId</td>
<td>String</td>
<td>In ConnectApi.CartItemResult, the ID of the related cart item. In ConnectApi.CartSummary, each message can be related to the cart or to another cart-related entity.</td>
<td>49.0</td>
</tr>
</tbody>
</table>
### ConnectApi.CartItemResult

In `ConnectApi.CartItemResult`, either `null` if the cart item has no errors or `1` if the cart item has errors. In `ConnectApi.CartSummary`, the total number of product line items that contain errors.

**Property Name** | **Type** | **Description** | **Available Version**
---|---|---|---
`totalLineItemsWithErrors` | `Integer` | In `ConnectApi.CartItemResult`, either `null` if the cart item has no errors or `1` if the cart item has errors. In `ConnectApi.CartSummary`, the total number of product line items that contain errors. | 50.0

### ConnectApi.CartMessagesVisibilityResult

Result of setting the visibility for cart messages.

**Property Name** | **Type** | **Description** | **Available Version**
---|---|---|---
`visibility` | `Boolean` | Specifies whether cart messages are set to visible (`true`) or not (`false`). | 50.0

### ConnectApi.CartProductAttribute

Product attribute for a cart item.

**Property Name** | **Type** | **Description** | **Available Version**
---|---|---|---
`label` | `String` | Label or display name of the attribute. | 50.0
`sequence` | `Integer` | Sequence of the attribute within the attribute set. | 50.0
`value` | `String` | Display value of the attribute. | 50.0

### ConnectApi.CartSummary

A cart summary.

**Property Name** | **Type** | **Description** | **Available Version**
---|---|---|---
`accountId` | `String` | ID of the account for the cart. | 49.0
`cartId` | `String` | ID of the cart. | 49.0
`currencyIsoCode` | `String` | Three-letter ISO 4217 currency code associated with the cart. | 49.0
`grandTotalAmount` | `String` | Grand total amount including shipping and tax for items in the cart, in the currency of the cart. | 49.0

ConnectApi.FeedElementCapabilities

ConnectApi.ChangeItemOutputRepresentation

The financial changes resulting from a change to one or more OrderItemSummaries. Most of the values represent the deltas of the values on the associated OrderSummary. The sign of each value is the opposite of the corresponding value on a change order record. For example, a discount is a positive value here and a negative value on a change order record.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>grandTotalAmount</td>
<td>Double</td>
<td>Change to the GrandTotalAmount field.</td>
<td>48.0</td>
</tr>
<tr>
<td>totalAdjDeliveryAmtWithTax</td>
<td>Double</td>
<td>Change to the TotalAdjDeliveryAmtWithTax field.</td>
<td>49.0</td>
</tr>
<tr>
<td>totalAdjDistAmountWithTax</td>
<td>Double</td>
<td>Change to the TotalAdjDistAmountWithTax field.</td>
<td>49.0</td>
</tr>
<tr>
<td>totalAdjProductAmtWithTax</td>
<td>Double</td>
<td>Change to the TotalAdjProductAmtWithTax field.</td>
<td>49.0</td>
</tr>
<tr>
<td>totalAdjustedDeliveryAmount</td>
<td>Double</td>
<td>Change to the TotalAdjustedDeliveryAmount field.</td>
<td>48.0</td>
</tr>
<tr>
<td>totalAdjustedDeliveryTaxAmount</td>
<td>Double</td>
<td>Change to the TotalAdjustedDeliveryTaxAmount field.</td>
<td>48.0</td>
</tr>
</tbody>
</table>
### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>totalAdjustedProductAmount</td>
<td>Double</td>
<td>Change to the TotalAdjustedProductAmount field.</td>
<td>48.0</td>

</tr>
<tr>
<td>totalAmount</td>
<td>Double</td>
<td>Change to the TotalAmount field.</td>
<td>48.0</td>
</tr>
<tr>
<td>totalExcessFundsAmount</td>
<td>Double</td>
<td>Amount of excess funds available on the OrderPaymentSummaries related to the OrderSummary. It is equal to the captured amount that is owed as a refund but is not associated with an invoice or credit memo. Excess funds normally occur when order items are canceled before fulfillment but after payment has been captured. This situation is not common in the US, where funds are normally authorized but not captured until the fulfillment process begins. This value includes all current excess funds related to the OrderSummary, not only the funds related to the current change.</td>
<td>48.0</td>
</tr>
<tr>
<td>totalRefundableAmount</td>
<td>Double</td>
<td>Total amount available to be refunded. It is the sum of the excess funds and any outstanding change order grand total amounts that apply to post-fulfillment changes. This value includes all current refundable amounts related to the OrderSummary, not only the amount related to the current change.</td>
<td>48.0</td>
</tr>
<tr>
<td>totalTaxAmount</td>
<td>Double</td>
<td>Change to the TotalTaxAmount field.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

<td>String</td>
<td>Value from the Info URL field of the connected app used for authentication.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.Comment
- ConnectApi.FeedItem
**ConnectApi.CloseCapability**

If a feed element has this capability, users with permission can close it.

Users can't edit (specifically the feed item body or title), comment on, or delete a closed feed element. If the closed feed element is a poll, users can't vote on it. Users can't edit (specifically the comment body) or delete a comment on a closed feed element or select or remove it as best answer.

Admins and moderators can edit and delete closed feed elements and comments on closed feed elements. Admins and moderators can select or remove the best answer status on comments on closed feed elements.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>

### ConnectApi.CommentCapabilities

A set of capabilities on a comment.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>comments</td>
<td>ConnectApi. CommentsCapability</td>
<td>If a comment has this capability, it has threaded comments.</td>
<td>44.0</td>
</tr>
<tr>
<td>content</td>
<td>ConnectApi. ContentCapability</td>
<td>If a comment has this capability, it has a file attachment. Most ConnectApi.ContentCapability properties are null if the content has been deleted from the feed element or if the access has changed to private.</td>
<td>32.0</td>
</tr>
<tr>
<td>edit</td>
<td>ConnectApi. EditCapability</td>
<td>If a comment has this capability, users who have permission can edit it.</td>
<td>34.0</td>
</tr>
<tr>
<td>feedEntityShare</td>
<td>ConnectApi. FeedEntity ShareCapability</td>
<td>If a comment has this capability, a feed entity is shared with it.</td>
<td>42.0</td>
</tr>
<tr>
<td>record</td>
<td>ConnectApi. RecordCapability</td>
<td>If a comment has this capability, it has a record attachment.</td>
<td>42.0</td>
</tr>
<tr>
<td>status</td>
<td>ConnectApi. StatusCapability</td>
<td>If a comment has this capability, it has a status that determines its visibility.</td>
<td>38.0</td>
</tr>
<tr>
<td>upDownVote</td>
<td>ConnectApi. UpDownVoteCapability</td>
<td>If a comment has this capability, users can upvote or downvote it.</td>
<td>41.0</td>
</tr>
<tr>
<td>verified</td>
<td>ConnectApi. VerifiedCapability</td>
<td>If a comment has this capability, users with permission can mark it as verified or unverified.</td>
<td>41.0</td>
</tr>
</tbody>
</table>

SEE ALSO:  
ConnectApi.FilesCapability

**ConnectApi.ContentCapability**

If a comment has this capability, it has a file attachment.  
Subclass of ConnectApi.FeedElementCapability.  
For files attached to a feed post (instead of a comment) in version 36.0 and later, use ConnectApi.FilesCapability.  
If content is deleted from a feed element after it’s posted or if the access to the content is changed to private, the ConnectApi.ContentCapability exists, however most of its properties are null.

</tr>
<tr>
<td>members</td>
<td><code>ConnectApi.UserReferencePage</code></td>
<td>Members of the custom recommendation audience.</td>
<td>36.0</td>
</tr>
</tbody>
</table>

**ConnectApi.DashboardComponentSnapshot**

Represents both dashboard component snapshots and alerts you receive when a dashboard component value crosses a threshold.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>componentId</td>
<td>String</td>
<td>18-character ID of the dashboard component.</td>
<td>32.0</td>
</tr>
<tr>
<td>componentName</td>
<td>String</td>
<td>The dashboard component name.</td>
<td>32.0</td>
</tr>
<tr>
<td>dashboardBodyText</td>
<td>String</td>
<td>Display this text next to the actor in the feed element. Use this text in place of the default body text.</td>
<td>32.0</td>
</tr>
<tr>
<td>dashboardId</td>
<td>String</td>
<td>18-character ID of the dashboard.</td>
<td>32.0</td>
</tr>
<tr>
<td>dashboardName</td>
<td>String</td>
<td>The name of the dashboard.</td>
<td>32.0</td>
</tr>
<tr>
<td>Property Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>----------------------</td>
<td>-----------------------</td>
<td>-----------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>fullSizeImageUrl</td>
<td>String</td>
<td>The source URL to retrieve the full-size image of a snapshot. Access this URL with OAuth credentials.</td>
<td>32.0</td>
</tr>
<tr>
<td>lastRefreshDate</td>
<td>Datetime</td>
<td>ISO 8601 date specifying when this dashboard component was last refreshed.</td>
<td>32.0</td>
</tr>
<tr>
<td>lastRefresh</td>
<td>String</td>
<td>Display text for the last refresh date, for example, “Last Refreshed on October 31, 2013.”</td>
<td>32.0</td>
</tr>
<tr>
<td>DateDisplayText</td>
<td>String</td>
<td>The running user of the dashboard at the time the snapshot was posted. This value may be null. Each dashboard has a running user, whose security settings determine which data to display in a dashboard.</td>
<td>32.0</td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>The source URL to retrieve the thumbnail image of a snapshot. Access this URL with OAuth credentials.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

<tr>
<td>url</td>
<td>String</td>
<td>GET request URL for this order.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

### ConnectApi.DatacloudPurchaseUsage

Information about Data.com point usage for monthly and list pool users.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>listpoolCreditsAvailable</td>
<td>Integer</td>
<td>The points or credits that are available in a pool of credits for your organization. This pool of credits can be used by any List Pool User in your organization.</td>
<td>32.0</td>
</tr>
<tr>
<td>listpoolCreditsUsed</td>
<td>Integer</td>
<td>The points or credits that have been used from a pool of credits that are used by List Pool Users to purchase records.</td>
<td>32.0</td>
</tr>
<tr>
<td>monthlyCreditsAvailable</td>
<td>Integer</td>
<td>The total credits that are assigned to a Monthly User. Unused credits expire at the end of each month.</td>
<td>32.0</td>
</tr>
<tr>
<td>monthlyCreditsUsed</td>
<td>Integer</td>
<td>The credits that are used by a Monthly User for the current month.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

### ConnectApi.DateRecordField

A record field containing a date.

Subclass of ConnectApi.LabeledRecordField

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>dateValue</td>
<td>Datetime</td>
<td>A date that a machine can read.</td>
<td>29.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Ignore the trailing 00:00:00.000Z characters.</td>
<td></td>
</tr>
</tbody>
</table>
ConnectApi.DeleteIntent

Delete intent for a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>managedSocialAccount</td>
<td>ConnectApi. ManagedSocialAccount</td>
<td>Managed social account that deletes the social post.</td>

ConnectApi.DeleteSocialPostIntent

Delete intent for the social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>socialAccountId</td>
<td>String</td>
<td>ID of the social account that deletes the social post.</td>
<td>46.0</td>
</tr>
<tr>
<td>socialPostId</td>
<td>String</td>
<td>ID of the social post to delete.</td>
<td>46.0</td>
</tr>
</tbody>
</table>

ConnectApi.DigestJob

Represents a successfully enqueued API digest job request.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>period</td>
<td>ConnectApi. DigestPeriod</td>
<td>Time period that's included in a Chatter email digest. Values are:</td>
<td>37.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• DailyDigest—The email includes up to the 50 latest posts from the previous day.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• WeeklyDigest—The email includes up to the 50 latest posts from the previous week.</td>
<td></td>
</tr>
</tbody>
</table>
**ConnectApi.DirectMessageCapability**

If a feed element has this capability, it’s a direct message.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>memberChanges</td>
<td>ConnectApi. DirectMessage MemberActivityPage</td>
<td>Member activities of the direct message, with the most recent activity first.</td>
<td>40.0</td>
</tr>
<tr>
<td>members</td>
<td>ConnectApi. DirectMessage MemberPage</td>
<td>Members included in the direct message.</td>
<td>39.0</td>
</tr>
<tr>
<td>originalMembers</td>
<td>ConnectApi. DirectMessage MemberPage</td>
<td>Original members of the direct message.</td>
<td>40.0</td>
</tr>
<tr>
<td>subject</td>
<td>String</td>
<td>Subject of the direct message.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

*ConnectApi.FeedElementCapabilities*

</tr>
<tr>
<td>actor</td>
<td>ConnectApi. UserSummary</td>
<td>User who changed the direct message membership.</td>
<td>40.0</td>
</tr>
<tr>
<td>membersAdded</td>
<td>ConnectApi. DirectMessage MemberPage</td>
<td>Members added to the direct message as part of the activity.</td>
<td>40.0</td>
</tr>
<tr>
<td>membersRemoved</td>
<td>ConnectApi. DirectMessage MemberPage</td>
<td>Members removed from the direct message as part of the activity.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

*ConnectApi.DirectMessageMemberActivityPage*

**ConnectApi.DirectMessageMemberActivityPage**

A page of direct message member activities.
A collection of direct message members.

**Property Name** | **Type** | **Description** | **Available Version**
--- | --- | --- | ---
currentPageToken | String | Page token to access the current page of direct message members. | 39.0
currentPageUrl | String | URL to the current page of direct message members. | 39.0
nextPageToken | String | Page token to access the next page of direct message members. | 39.0
nextPageUrl | String | URL to the next page of direct message members. | 39.0
users | List<ConnectApi.UserSummary> | Collection of direct message members. | 39.0

**ConnectApi.DistanceCalculationOutputRepresentation**

Shipping distance data for a set of inventory locations.

**Property Name** | **Type** | **Description** | **Available Version**
--- | --- | --- | ---
averageDistance | Double | The average distance from the locations to the order recipient. | 51.0
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>locations</td>
<td>List&lt;ConnectApi.LocationOutputRepresentation&gt;</td>
<td>The list of locations and their distances to the order recipient.</td>

</tr>
<tr>
<td>rank</td>
<td>Integer</td>
<td>This result’s rank among all results by average distance to the order recipient.</td>
<td>51.0</td>
</tr>
</tbody>
</table>

**ConnectApi.DownVoteSummary**

Summary of a downvote.

Subclass of `ConnectApi.UserFeedEntityActivitySummary`

No additional properties.

**ConnectApi.EditCapability**

If a feed element or comment has this capability, users who have permission can edit it.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isEditRestricted</td>
<td>Boolean</td>
<td>Specifies whether editing this feed element or comment is restricted. If true, the context user can't edit this feed element or comment. If false, the context user may or may not have permission to edit this feed element or comment. To determine if the context user can edit a feed element or comment, use the <code>isFeedElementEditableByMe(communityId, feedElementId)</code> or <code>isCommentEditableByMe(communityId, commentId)</code> method.</td>
<td>34.0</td>
</tr>
<tr>
<td>isEditableByMeUrl</td>
<td>String</td>
<td>The URL to check if the context user is able to edit this feed element or comment.</td>
<td>34.0</td>
</tr>
<tr>
<td>lastEditedBy</td>
<td>ConnectApi.Actor</td>
<td>Who last edited this feed element or comment.</td>
<td>34.0</td>
</tr>
<tr>
<td>lastEditedDate</td>
<td>Datetime</td>
<td>The most recent edit date of this feed element or comment.</td>
<td>34.0</td>
</tr>
<tr>
<td>latestRevision</td>
<td>Integer</td>
<td>The most recent revision of this feed element or comment.</td>
<td>34.0</td>
</tr>
<tr>
<td>relativeLastEditedDate</td>
<td>String</td>
<td>Relative last edited date, for example, “2h ago.”</td>
<td>34.0</td>
</tr>
</tbody>
</table>

### ConnectApi.EnhancedLinkCapability

If a feed element has this capability, it has a link that may contain supplemental information like an icon, a title, and a description. Subclass of [ConnectApi.FeedElementCapability](#).
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>A description with a 500 character limit.</td>
<td>32.0</td>
</tr>
<tr>
<td>icon</td>
<td>ConnectApi.Icon</td>
<td>A icon</td>
<td>32.0</td>
</tr>
<tr>
<td>linkRecordId</td>
<td>String</td>
<td>A ID associated with the link if the link URL refers to a Salesforce record.</td>
<td>32.0</td>
</tr>
<tr>
<td>linkUrl</td>
<td>String</td>
<td>A link URL to a detail page if available content can’t display inline.</td>
<td>32.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>A title to a detail page.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
  - ConnectApi.FeedElementCapabilities

### ConnectApi.EnsureFundsAsyncOutputRepresentation

ID of the background operation.

Subclass of ConnectApi.BaseOutputRepresentation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>background OperationId</td>
<td>String</td>
<td>ID of the background operation.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

### ConnectApi.EnsureRefundsAsyncOutputRepresentation

ID of the background operation.

Subclass of ConnectApi.BaseOutputRepresentation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>background OperationId</td>
<td>String</td>
<td>ID of the background operation.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

### ConnectApi.EntityLabel

An entity’s label.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>label</td>
<td>String</td>
<td>Localized singular label of the entity.</td>
<td>40.0</td>
</tr>
</tbody>
</table>
### ConnectApi.EntityLinkSegment

Entity link segment.

Subclass of `ConnectApi.MessageSegment`

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>motif</td>
<td><code>ConnectApi.Motif</code> Class</td>
<td>A set of small, medium, and large icons that indicate whether the entity is a file, group, record, or user. The motif can also contain the object's base color.</td>
<td>28.0</td>
</tr>
<tr>
<td>reference</td>
<td><code>ConnectApi.Reference</code></td>
<td>A reference to the link object if applicable, otherwise, null.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

### ConnectApi.EntityRecommendation

A Chatter, custom, or static recommendation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actOnUrl</td>
<td>String</td>
<td>For user, file, group, topic, and record entity types, use this Connect REST URL with a POST request to take action on the recommendation. For <code>ConnectApi.RecommendedObject</code> entity types, such as custom recommendations, use the actionUrl property of the <code>ConnectApi.PlatformAction</code> to take action on the recommendation.</td>
<td>32.0</td>
</tr>
</tbody>
</table>
| action        | `ConnectApi.Recommendation ActionType` | Specifies the action to take on a recommendation.  
• follow—Follow a file, record, topic, or user.  
• join—Join a group.  
• view—View a file, group, article, record, user, custom, or static recommendation. | 32.0              |
| entity        | `ConnectApi.Actor`       | The entity with which the receiver is recommended to take action.                                                                                                                                     | 32.0              |
ConnectApi.ErrorResponse

Base error response.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>errorCode</td>
<td>String</td>
<td>Error code.</td>
<td>48.0</td>
</tr>
<tr>
<td>message</td>
<td>String</td>
<td>More error detail, if available.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.BaseOutputRepresentation

ConnectApi.Extension

An extension.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>alternative Representation</td>
<td>ConnectApi. Alternative</td>
<td>Alternative representation of the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>attachmentId</td>
<td>String</td>
<td>Attachment ID of the extension.</td>
<td>41.0</td>
</tr>
<tr>
<td>extensionId</td>
<td>String</td>
<td>ID of the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>payload</td>
<td>String</td>
<td>Payload associated with the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>payloadVersion</td>
<td>String</td>
<td>Payload version that identifies the structure of the payload associated with the extension.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.ExtensionsCapability

ConnectApi.ExtensionDefinition

An extension’s definition.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>canAccess</td>
<td>Boolean</td>
<td>Indicates whether users can access the extension when it’s associated with a feed element.</td>
<td>40.0</td>
</tr>
<tr>
<td>canCreate</td>
<td>Boolean</td>
<td>Indicates whether users can create a feed element with the extension in the org.</td>
<td>40.0</td>
</tr>
<tr>
<td>createdDate</td>
<td>Datetime</td>
<td>Date when the extension was created.</td>
<td>40.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>iconUrl</td>
<td>String</td>
<td>URL to the icon for the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the extension.</td>
<td>40.0</td>
</tr>
</tbody>
</table>
### ConnectApi Namespace

**ConnectApi.ExtensionsCapability**

If a feed element has this capability, it has one or more extension attachments.

Subclass of `ConnectApi.FeedElementCapability`.

### ConnectApi.ExtensionDefinitions

A collection of extension definitions.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>40.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the current page.</td>
<td>40.0</td>
</tr>
<tr>
<td>extensionDefinitions</td>
<td>List&lt;ExtensionDefinition&gt;</td>
<td>Collection of extension definitions.</td>
<td>40.0</td>
</tr>
<tr>
<td>nextPageToken</td>
<td>String</td>
<td>Token identifying the next page, or <code>null</code> if there isn't a next page.</td>
<td>40.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the next page, or <code>null</code> if there isn't a next page.</td>
<td>40.0</td>
</tr>
<tr>
<td>total</td>
<td>Integer</td>
<td>Total number of extensions returned.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

### ConnectApi Namespace

**ConnectApi.**

- **AbstractExtensionInformation**
  - Collection of extension information.
  - Type: `List<AbstractExtensionInformation>`

- **isEnabled**
  - Indicates whether the extension is enabled in the site.
  - Type: `Boolean`

- **isEnabledInLightningPublisher**
  - Indicates whether the extension is enabled in the Lightning publisher.
  - Type: `Boolean`

- **name**
  - Name of the extension.
  - Type: `String`

- **position**
  - Position in which the extension is displayed in the publisher.
  - Type: `Integer`

**SEE ALSO:**
- `ConnectApi.ExtensionDefinitions`

---

**Notes:**

- Available Version: 40.0
- Type: `ConnectApi.Namespace`
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>

</table>

**SEE ALSO:**
ConnectApi.FeedElementCapabilities

**ConnectApi.ExternalFilePermissionInformation**

External file permission information.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>external FilePermission Types</td>
<td>List&lt;ConnectApi.ContentHub.PermissionType&gt;</td>
<td>Available permission types for the parent folder of the external file, or null for non-external files or when includeExternalFilePermissionsInfo is false.</td>
<td>39.0</td>
</tr>
<tr>
<td>external FilePermissions Failure</td>
<td>Boolean</td>
<td>true if the retrieval of external file information failed or if includeExternalFilePermissionsInfo is false; false otherwise.</td>
<td>39.0</td>
</tr>
<tr>
<td>external FilePermissions InfoFailureReason</td>
<td>String</td>
<td>Explanation of the failure if a failure occurred and includeExternalFilePermissionsInfo is true; null otherwise.</td>
<td>39.0</td>
</tr>
</tbody>
</table>
| external FileSharing Status   | ConnectApi.ContentHub.ExternalItem.SharingType | Sharing status for the external file. Values are:
- DomainSharing—File is shared with the domain.
- PrivateSharing—File is private or shared only with individuals.
- PublicSharing—File is publicly shared.
Value is null for non-external files or when includeExternalFilePermissionsInfo is false. | 39.0              |
| repository PublicGroups       | List<ConnectApi.RepositoryGroupSummary>         | Available public groups in the external repository or null for non-external files or when includeExternalFilePermissionsInfo is false. | 39.0              |

**SEE ALSO:**
ConnectApi.AbstractRepositoryFile
**ConnectApi.ExternalManagedAccountCollectionOutput**

Collection of externally managed accounts.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>externalManagedAccounts</td>
<td>List&lt;ConnectApi.ExternalManagedAccountOutput&gt;</td>
<td>Collection of externally managed accounts.</td>
<td>49.0</td>
</tr>
<tr>
<td>totalExternalManagedAccounts</td>
<td>Integer</td>
<td>Total number of externally managed accounts.</td>
<td>49.0</td>
</tr>
</tbody>
</table>

**ConnectApi.ExternalManagedAccountOutput**

Externally managed account.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>accountId</td>
<td>String</td>
<td>ID of the account managed by another account.</td>
<td>49.0</td>
</tr>
<tr>
<td>externalManagedAccountId</td>
<td>String</td>
<td>ID of the external managed account record.</td>
<td>49.0</td>
</tr>
</tbody>
</table>

<td>String</td>
<td>Connect REST API resource URL for the feed items of a specific feed.</td>
<td>30.0–31.0</td>
</tr>
<tr>
<td>feedType</td>
<td>ConnectApi.FeedTypeEnum</td>
<td>The feed type. One of these values:</td>
<td>30.0</td>
</tr>
<tr>
<td></td>
<td>Bookmarks</td>
<td>Contains all feed items saved as bookmarks by the context user.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Company</td>
<td>Contains all feed items except feed items of type TrackedChange. To see the feed item, the user must have sharing access to its parent.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>DirectMessageModeration</td>
<td>Contains all direct messages that are flagged for moderation. The Direct Message Moderation feed is available only to users with Moderate Experiences Chatter Messages permissions.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>DirectMessages</td>
<td>Contains all feed items of the context user's direct messages.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Draft</td>
<td>Contains all the feed items that the context user drafted.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Files</td>
<td>Contains all feed items that contain files posted by people or groups that the context user follows.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Filter</td>
<td>Contains the news feed filtered to contain feed items whose parent is a specified object type.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Groups</td>
<td>Contains all feed items from all groups the context user either owns or is a member of.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Home</td>
<td>Contains all feed items associated with any managed topic in an Experience Cloud site.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Landing</td>
<td>Contains all feed items that best drive user engagement when the feed is requested. Allows clients to avoid an empty feed when there aren't many personalized feed items.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Moderation</td>
<td>Contains all feed items that are flagged for moderation, except direct messages. The moderation feed is available only to users with Moderate Experiences Feeds permissions.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Mute</td>
<td>Contains all feed items that the context user muted.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>News</td>
<td>Contains all updates for people the context user follows, groups the user is a member of, and files and records the user is following. Contains all updates for records whose parent is the context user.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>PendingReview</td>
<td>Contains all feed items and comments that are pending review.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>People</td>
<td>Contains all feed items posted by all people the context user follows.</td>
<td></td>
</tr>
</tbody>
</table>
### Description

- **Record**—Contains all feed items whose parent is a specified record, which could be a group, user, object, file, or any other standard or custom object. When the record is a group, the feed also contains feed items that mention the group. When the record is a user, the feed contains only feed items on that user. You can get another user's record feed.

- **Streams**—Contains all feed items for any combination of up to 25 feed-enabled entities that the context user subscribes to in a stream. Examples of feed-enabled entities include people, groups, and records.

- **To**—Contains all feed items with mentions of the context user. Contains feed items the context user commented on and feed items created by the context user that are commented on.

- **Topics**—Contains all feed items that include the specified topic.

- **UserProfile**—Contains feed items created when a user changes records that can be tracked in a feed. Contains feed items whose parent is the user and feed items that @mention the user. This feed is different than the news feed, which returns more feed items, including group updates. You can get another user's user profile feed.

### Properties

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>feedUrl</td>
<td>String</td>
<td>Connect REST API resource URL for a specific feed</td>

SEE ALSO:
- ConnectApi.FeedElement
- ConnectApi.FeedItemSummary

**ConnectApi.FeedElementCapability**

A feed element capability, which defines the characteristics of a feed element.

In API version 30.0 and earlier, most feed items can have comments, likes, topics, and so on. In version 31.0 and later, every feed item (and feed element) can have a unique set of **capabilities**. If a capability property exists on a feed element, that capability is available, even if the capability property doesn’t have a value. For example, if the ChatterLikes capability property exists on a feed element (with or without a value), the context user can like that feed element. If the capability property doesn’t exist, it isn’t possible to like that feed element. A capability can also contain associated data. For example, the **Moderation** capability contains data about moderation flags.

This class is abstract.

This class is a superclass of:
- ConnectApi.AssociatedActionsCapability
- ConnectApi.ApprovalCapability
- ConnectApi.BannerCapability
- ConnectApi.BookmarksCapability
- ConnectApi.BundleCapability
- ConnectApi.CallCollaborationCapability
- ConnectApi.CanvasCapability
- ConnectApi.CaseCommentCapability
- ConnectApi.ChatterLikesCapability
- ConnectApi.CloseCapability
- ConnectApi.CommentsCapability
- ConnectApi.ContentCapability

This class doesn’t have any properties.

**ConnectApi.FeedElementPage**

A paged collection of `ConnectApi.FeedElement` objects.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>31.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the current page.</td>
<td>31.0</td>
</tr>
<tr>
<td>elements</td>
<td>List&lt;ConnectApi.FeedElement&gt;</td>
<td>Collection of feed elements.</td>
<td>31.0</td>
</tr>
<tr>
<td>isModifiedToken</td>
<td>String</td>
<td>An opaque polling token to use in the <code>since</code> parameter of the <code>ChatterFeeds.isModified</code> method. The token describes when the feed was last modified.</td>
<td>31.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>Important:</strong> This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.</td>
<td></td>
</tr>
<tr>
<td>isModifiedUrl</td>
<td>String</td>
<td>A Connect REST API URL with a <code>since</code> request parameter that contains an opaque token that describes when the feed was last modified. Returns <code>null</code> if the feed isn’t a news feed. Use this URL to poll a news feed for updates.</td>
<td>31.0</td>
</tr>
</tbody>
</table>
### Important:

This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>

### `ConnectApi.FeedEnabledEntity`

An entity that can have feeds associated with it.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>The 18-character ID of the record.</td>
<td>39.0</td>
</tr>
<tr>
<td>motif</td>
<td><code>ConnectApi.Motif</code></td>
<td>Small, medium, and large icons indicating the record’s type.</td>
<td>39.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>The localized name of the record.</td>
<td>39.0</td>
</tr>
<tr>
<td>type</td>
<td>String</td>
<td>The type of the record.</td>
<td>39.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the record.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

- `ConnectApi.ChatterStream`

### `ConnectApi.FeedEntityIsEditable`

Indicates if the context user can edit a feed element or comment.
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>areAttachmentsEditableByMe</td>
<td>Boolean</td>
<td>true if the context user can add and remove attachments on the feed element or comment, false otherwise.</td>
<td>36.0</td>
</tr>
<tr>
<td>feedEntityUrl</td>
<td>String</td>
<td>URL of the feed element or comment.</td>
<td>34.0</td>
</tr>
<tr>
<td>isEditableByMe</td>
<td>Boolean</td>
<td>true if the context user can edit the feed element or comment, false otherwise.</td>
<td>34.0</td>
</tr>
</tbody>
</table>

**ConnectApi.FeedEntityNotAvailableSummary**

A summary when the feed entity isn’t available.
Subclass of `ConnectApi.FeedEntitySummary`.
No additional properties.

**ConnectApi.FeedEntityReadSummary**

Summary of the feed post or comment that was read.
Subclass of `ConnectApi.UserFeedEntityActivitySummary`.
No additional properties.

**ConnectApi.FeedEntityShareCapability**

If a feed element or comment has this capability, a feed entity is shared with it.
Subclass of `ConnectApi.FeedElementCapability`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>feedEntity</td>
<td>ConnectApi.FeedEntitySummary</td>
<td>The summary of the feed entity that is shared with the feed element or comment.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- `ConnectApi.FeedElementCapabilities`

**ConnectApi.FeedEntitySummary**

The summary of a feed entity that is shared with a feed element.
This class is abstract.
Superclass of:
- `ConnectApi.FeedItemSummary`
- `ConnectApi.FeedEntityNotAvailableSummary`
### ConnectApi Namespace

**ConnectApi.Actor**

- **actor**: Entity that created the feed entity.

**ConnectApi.FeedBody**

- **body**: Information about the feed entity.

**Datetime**

- **createdDate**: ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z, when the entity was created.

**ConnectApi.FeedElementType**

- **feedElementType**: Type of feed entity.
  - **Bundle**: A container of feed elements. A bundle also has a body made up of message segments that can always be gracefully degraded to text-only values.
  - **FeedItem**: A feed item has a single parent and is scoped to one Experience Cloud site or across all Experience Cloud sites. A feed item can have capabilities such as bookmarks, canvas, content, comment, link, poll. Feed items have a body made up of message segments that can always be gracefully degraded to text-only values.
  - **Recommendation**: A recommendation is a feed element with a recommendations capability. A recommendation suggests records to follow, groups to join, or applications that are helpful to the context user.

**String**

- **id**: 18-character ID of the feed entity.

**Boolean**

- **isEntityAvailable**: Specifies whether the entity is available. If false, either the user doesn’t have access to the entity or the entity was deleted.

**ConnectApi.ActorWithId**

- **parent**: Parent of the feed entity.

**String**

- **relativeCreatedDate**: Relative created date, for example, “2h ago.”

- **url**: URL to the feed entity.

### ConnectApi.FeedFavorite

Feed favorite.
**Name**  | **Type**  | **Description**  | **Available Version**  
---|---|---|---
community  | ConnectApi.Reference  | Information about the Experience Cloud site that contains the favorite.  | 28.0  
createdBy  | ConnectApi.User Summary  | Favorite’s creator.  | 28.0  
feedUrl  | String  | Connect REST API URL identifying the feed item for this favorite.  | 28.0  
id  | String  | Favorite’s 18-character ID.  | 28.0  
lastViewDate  | Datetime  | ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z.  | 28.0  
name  | String  | Favorite’s name.  | 28.0  
searchText  | String  | If the favorite is from a search, contains the search text, otherwise, an empty string.  | 28.0  
target  | ConnectApi.Reference  | A reference to the topic if applicable, null otherwise.  | 28.0  
type  | ConnectApi.FeedFavoriteTypeEnum  | An empty string or one of the following values:  | 28.0  
|  |  | • ListView  |  
|  |  | • Search  |  
|  |  | • Topic  |  
url  | String  | Connect REST API URL to this favorite.  | 28.0  
user  | ConnectApi.User Summary  | Information about the user who saved this favorite.  | 28.0  

**SEE ALSO:**
  - ConnectApi.FeedDirectory
  - ConnectApi.FeedFavorites

**ConnectApi.FeedFavorites**

Feed favorites.

**Name**  | **Type**  | **Description**  | **Available Version**  
---|---|---|---
favorites  | List<ConnectApi.FeedFavorite>  | Complete list of favorites.  | 28.0  
total  | Integer  | Total number of favorites.  | 28.0

**ConnectApi.FeedItem**

Subclass of ConnectApi.FeedElement Class as of 31.0.
<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actor</td>
<td>ConnectApi.Actor</td>
<td>The entity that created the feed item.</td>
<td>28.0</td>

<td>String</td>
<td>URL of the photo associated with the feed item</td>
<td>28.0</td>
</tr>
<tr>
<td>preamble</td>
<td>ConnectApi.MessageBody</td>
<td>A collection of message segments, including the unformatted text of the message that you can use as the title of a feed item. Message segments include name, link, and motif icon information for the actor that created the feed item.</td>
<td>28.0–30.0</td>
</tr>
<tr>
<td>topics</td>
<td>ConnectApi.FeedItemTopicPage</td>
<td>Topics for this feed item.</td>
<td>28.0–31.0</td>
</tr>
<tr>
<td>type</td>
<td>ConnectApi.FeedItemType</td>
<td>Type of feed item.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**Important:** For API versions 29.0 and 30.0, use the `ConnectApi.FeedItem.preamble.text` property as the default case to render text. For API versions 31.0 and later, use the `ConnectApi.FeedElement.header.text` property as the default case to render text.

As of version 31.0, use the inherited `capabilities.topics.items` property.

One of these values:

- **ActivityEvent**—Feed item generated in Case Feed when an event or task associated with a parent record with a feed enabled is created or updated.
- **AdvancedTextPost**—A feed item with advanced text formatting, such as a group announcement post.
- **ApprovalPost**—Feed item with an approval capability. Approvers can act on the feed item parent.
- **AttachArticleEvent**—Feed item generated when an article is attached to a case in Case Feed.
- **BasicTemplateFeedItem**—Feed item with an enhanced link capability.
<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CallLogPost</td>
<td>Feed item generated when a call log is saved to a case in Case Feed.</td>
<td></td>
</tr>
<tr>
<td>CanvasPost</td>
<td>Feed item generated by a canvas app in the publisher or from Connect REST API or Connect in Apex. The post itself is a link to a canvas app.</td>
<td></td>
</tr>
<tr>
<td>CaseCommentPost</td>
<td>Feed item generated when a case comment is saved in Case Feed.</td>
<td></td>
</tr>
<tr>
<td>ChangeStatusPost</td>
<td>Feed item generated when the status of a case is changed in Case Feed.</td>
<td></td>
</tr>
<tr>
<td>ChatTranscriptionPost</td>
<td>Feed item generated in Case Feed when a Live Agent chat transcript is saved to a case.</td>
<td></td>
</tr>
<tr>
<td>CollaborationGroupCreated</td>
<td>Feed item generated when a new public group is created. Contains a link to the new group.</td>
<td></td>
</tr>
<tr>
<td>CollaborationGroupUnarchived</td>
<td>Deprecated. Feed item generated when an archived group is activated.</td>
<td></td>
</tr>
<tr>
<td>ContentPost</td>
<td>Feed item with a content capability.</td>
<td></td>
</tr>
<tr>
<td>CreateRecordEvent</td>
<td>Feed item that describes a record created in the publisher.</td>
<td></td>
</tr>
<tr>
<td>DashboardComponentAlert</td>
<td>Feed item with a dashboard alert.</td>
<td></td>
</tr>
<tr>
<td>DashboardComponentSnapshot</td>
<td>Feed item with a dashboard component snapshot capability.</td>
<td></td>
</tr>
<tr>
<td>EmailMessageEvent</td>
<td>Feed item generated when an email is sent from a case in Case Feed.</td>
<td></td>
</tr>
<tr>
<td>FacebookPost</td>
<td>Deprecated. Feed item generated when a Facebook post is created from a case in Case Feed.</td>
<td></td>
</tr>
<tr>
<td>LinkPost</td>
<td>Feed item with a link capability.</td>
<td></td>
</tr>
<tr>
<td>MilestoneEvent</td>
<td>Feed item generated when a case milestone is either completed or reaches a violation status. Contains a link to the case milestone.</td>
<td></td>
</tr>
<tr>
<td>PollPost</td>
<td>Feed item with a poll capability. Viewers of the feed item are allowed to vote on the options in the poll.</td>

</tbody>
</table>

**ConnectApi.FeedItemSummary**

A feed item summary.

Subclass of ConnectApi.FeedEntitySummary.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>capabilities</td>
<td>ConnectApi.FeedElementCapabilities</td>
<td>Container for all capabilities that can be included with a feed item.</td>
</tr>
<tr>
<td>header</td>
<td>ConnectApi.MessageBody</td>
<td>Title of the post. This property contains renderable plain text for all the message segments. If a client doesn't know how to render a feed element type, it should render this text.</td>
</tr>
</tbody>
</table>
### ConnectApi Namespace

#### `FeedModifiedInfo`

**Important:** This feature is available through a Feed Polling pilot program. This pilot program is closed and not accepting new participants.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isModified</td>
<td>Boolean</td>
<td><code>true</code> if the news feed has been modified since the last time it was polled; <code>false</code> otherwise. Returns <code>null</code> if the feed is not a news feed.</td>
<td>28.0</td>
</tr>
<tr>
<td>isModifiedToken</td>
<td>String</td>
<td>An opaque polling token to use in the <code>since</code> parameter of the <code>ChatterFeeds.isModified</code> method. The token describes when the feed was last modified.</td>
<td>28.0</td>
</tr>
<tr>
<td>nextPollUrl</td>
<td>String</td>
<td>A Connect REST API URL with a <code>since</code> request parameter that contains an opaque token that describes when the feed was last modified. Returns <code>null</code> if the feed isn't a news feed. Use this URL to poll a news feed for updates.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

#### `FeedPollChoice`

Feed poll choice.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>Poll choice ID.</td>
<td>28.0</td>
</tr>
<tr>
<td>Name</td>
<td>Type</td>
<td>Description</td>
<td>Available Version</td>
</tr>
<tr>
<td>--------------------</td>
<td>----------</td>
<td>------------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>position</td>
<td>Integer</td>
<td>The location in the poll where this poll choice exists. The first poll choice starts at 1.</td>
<td>28.0</td>
</tr>
<tr>
<td>text</td>
<td>String</td>
<td>Label text associated with the poll choice.</td>
<td>28.0</td>
</tr>
<tr>
<td>voteCount</td>
<td>Integer</td>
<td>Total number of votes for this poll choice.</td>
<td>28.0</td>
</tr>
<tr>
<td>voteCountRatio</td>
<td>Double</td>
<td>The ratio of total number of votes for this poll choice to all votes cast in the poll. Multiply the ratio by 100 to get the percentage of votes cast for this poll choice.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- [ConnectApi.PollCapability](#)

**ConnectApi.FeedPostSummary**

Summary of the post.

Subclass of [ConnectApi.UserActivitySummary](#).

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>feedItemId</td>
<td>String</td>
<td>ID of the post.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

**ConnectApi.FeedReadSummary**

Summary of the feed that was read.

Subclass of [ConnectApi.UserActivitySummary](#).

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>containerId</td>
<td>String</td>
<td>ID of the parent of the feed.</td>
<td>42.0</td>
</tr>
<tr>
<td>feedType</td>
<td>ConnectApi.FeedType</td>
<td>Type of feed.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

- **Bookmarks**—Contains all feed items saved as bookmarks by the context user.
- **Company**—Contains all feed items except feed items of type `TrackedChange`. To see the feed item, the user must have sharing access to its parent.
- **DirectMessageModeration**—Contains all direct messages that are flagged for moderation. The Direct Message Moderation feed is available only to users with Moderate Experiences Chatter Messages permissions.
- **DirectMessages**—Contains all feed items of the context user’s direct messages.
Available Version | Description | Type
---|---|---
Draft | Contains all the feed items that the context user drafted. | Draft
Files | Contains all feed items that contain files posted by people or groups that the context user follows. | Files
Filter | Contains the news feed filtered to contain feed items whose parent is a specified object type. | Filter
Groups | Contains all feed items from all groups the context user either owns or is a member of. | Groups
Home | Contains all feed items associated with any managed topic in an Experience Cloud site. | Home
Landing | Contains all feed items that best drive user engagement when the feed is requested. Allows clients to avoid an empty feed when there aren’t many personalized feed items. | Landing
Moderation | Contains all feed items that are flagged for moderation, except direct messages. The moderation feed is available only to users with Moderate Experiences Feeds permissions. | Moderation
Mute | Contains all feed items that the context user muted. | Mute
News | Contains all updates for people the context user follows, groups the user is a member of, and files and records the user is following. Contains all updates for records whose parent is the context user. | News
PendingReview | Contains all feed items and comments that are pending review. | PendingReview
People | Contains all feed items posted by all people the context user follows. | People
Record | Contains all feed items whose parent is a specified record, which could be a group, user, object, file, or any other standard or custom object. When the record is a group, the feed also contains feed items that mention the group. When the record is a user, the feed contains only feed items on that user. You can get another user’s record feed. | Record
Streams | Contains all feed items for any combination of up to 25 feed-enabled entities that the context user subscribes to in a stream. | Streams
Examples of feed-enabled entities include people, groups, and records,

- **To**—Contains all feed items with mentions of the context user. Contains feed items the context user commented on and feed items created by the context user that are commented on.
- **Topics**—Contains all feed items that include the specified topic.
- **UserProfile**—Contains feed items created when a user changes records that can be tracked in a feed. Contains feed items whose parent is the user and feed items that @mention the user. This feed is different than the news feed, which returns more feed items, including group updates. You can get another user’s user profile feed.

### ConnectApi.FieldChangeSegment
Field change segment.
Subclass of `ConnectApi.ComplexSegment`.
No additional properties.

SEE ALSO:
- `ConnectApi.MoreChangesSegment`

### ConnectApi.FieldChangeNameSegment
Field change name segment.
Subclass of `ConnectApi.MessageSegment`.
No additional properties.

### ConnectApi.FieldChangeValueSegment
Field change value segment.
Subclass of `ConnectApi.MessageSegment`.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>

</tr>
</tbody>
</table>

**ConnectApi.FileAsset**

An asset file.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>baseAssetUrl</td>
<td>String</td>
<td>Base download URL of the asset.</td>
<td>45.0</td>
</tr>
</tbody>
</table>
### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>baseUnauthenticated AssetUrl</td>
<td>String</td>
<td>Base download URL of the asset for unauthenticated users if isVisibleByExternalUsers is true, otherwise null.</td>
<td>45.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the asset.</td>
<td>45.0</td>
</tr>
<tr>
<td>isVisibleByExternalUsers</td>
<td>Boolean</td>
<td>Indicates whether unauthenticated users can see the asset file (true) or not (false).</td>
<td>45.0</td>
</tr>
<tr>
<td>masterLabel</td>
<td>String</td>
<td>Master label of the asset.</td>
<td>45.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Unique name of the asset.</td>
<td>45.0</td>
</tr>
<tr>
<td>namespacePrefix</td>
<td>String</td>
<td>Namespace prefix of the package containing the asset.</td>
<td>45.0</td>
</tr>
<tr>
<td>type</td>
<td>String</td>
<td>Type of asset.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.FilePreviewCollection

ConnectApi.FilePreviewCollection

A collection of file previews.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fileId</td>
<td>String</td>
<td>ID of the file.</td>
<td>39.0</td>
</tr>
<tr>
<td>previews</td>
<td>List&lt;ConnectApi.FilePreview&gt;</td>
<td>Previews supported for the file.</td>
<td>39.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the current page of file previews.</td>
<td>39.0</td>
</tr>
<tr>
<td>versionNumber</td>
<td>String</td>
<td>Version number of the file.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.InlineImageSegment

ConnectApi.FilePreviewUrl

A URL to a file preview.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>pageNumber</td>
<td>Integer</td>
<td>Preview page number starting from zero, or null for PDF files.</td>
<td>39.0</td>
</tr>

ConnectApi.FilesCapability

If a feed element has this capability, it has one or more file attachments.
Subclass of ConnectApi.FeedElementCapability.
**ConnectApi.FileSummary**

A file summary.
Subclass of `ConnectApi.File`.
No additional properties.

**ConnectApi.FindRoutesWithFewestSplitsOutputRepresentation**

A list of inventory location combinations that can fulfill an order without exceeding the maximum number of shipments.
Subclass of `ConnectApi.BaseOutputRepresentation`.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>targetLocations</td>
<td><code>List&lt;ConnectApi.AvailableLocationOutputRepresentation&gt;</code></td>
<td>Each element of the list is a set of inventory locations that together can fulfill the order being routed.</td>
<td>51.0</td>
</tr>
</tbody>
</table>

**ConnectApi.FollowerPage**

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td><code>String</code></td>
<td>Connect REST API URL identifying the current page.</td>
<td>28.0</td>
</tr>
<tr>
<td>followers</td>
<td><code>List&lt;ConnectApi.Subscription&gt;</code></td>
<td>List of subscriptions.</td>
<td>28.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td><code>String</code></td>
<td>Connect REST API URL identifying the next page, or <code>null</code> if there isn’t a next page.</td>
<td>28.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td><code>String</code></td>
<td>Connect REST API URL identifying the previous page, or <code>null</code> if there isn’t a previous page.</td>
<td>28.0</td>
</tr>
<tr>
<td>total</td>
<td><code>Integer</code></td>
<td>Total number of followers across all pages.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**ConnectApi.FollowingCounts**

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>people</td>
<td><code>Integer</code></td>
<td>Number of people user is following.</td>

### ConnectApi.FollowIntents

A list of follow intents for a social persona.

| Property Name     | Type                                             | Description                                      | Available Version |
|-------------------|                                                 |                                                |                  |
| follows           | List<ConnectApi.FollowSocialPersonaIntent>       | List of follow intents for the social persona.  | 45.0              |

**SEE ALSO:**
- [ConnectApi.SocialPostIntents](#)

### ConnectApi.FollowSocialPersonaIntent

Follow intent on a social persona.
### ConnectApi Namespace

#### ConnectApiManagedSocialAccount

A managed social account that follows the social persona.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>managedSocialAccount</td>
<td><code>ConnectApiManagedSocialAccount</code></td>
<td>Managed social account that follows the social persona.</td>
<td>45.0</td>
</tr>
<tr>
<td>socialPersonaId</td>
<td><code>String</code></td>
<td>ID of the social persona to follow.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- [ConnectApi.FollowIntents](#)

#### ConnectApiFormulaScope

Formula scope for a target.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>contextValues</td>
<td><code>Map&lt;String, String&gt;</code></td>
<td>Map of context values for the scope.</td>
<td>50.0</td>
</tr>
<tr>
<td>fields</td>
<td><code>List&lt;String&gt;</code></td>
<td>List of fields of the scope.</td>
<td>50.0</td>
</tr>
<tr>
<td>formula</td>
<td><code>String</code></td>
<td>Formula of the scope.</td>
<td>50.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- [ConnectApi.Target](#)

#### ConnectApiFulfillmentGroupOutputRepresentation

Information about one FulfillmentOrder from a create multiple fulfillment orders request. If the FulfillmentOrder was created, then its ID is returned. If it failed, then data from the inputs is returned and can be used in another creation attempt.

Subclass of ConnectApi.BaseOutputRepresentation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fulfilledFromLocationId</td>
<td><code>String</code></td>
<td>(Creation failed) The input FulfilledFromLocationId.</td>
<td>50.0</td>
</tr>
<tr>
<td>fulfillmentOrderId</td>
<td><code>String</code></td>
<td>The FulfillmentOrderId from the successfully created FulfillmentOrder.</td>
<td>50.0</td>
</tr>
<tr>
<td>fulfillmentType</td>
<td><code>String</code></td>
<td>(Creation failed) The input FulfillmentType.</td>
<td>50.0</td>
</tr>
<tr>
<td>orderDeliveryGroupSummaryId</td>
<td><code>String</code></td>
<td>(Creation failed) The input OrderDeliveryGroupSummaryId.</td>
<td>50.0</td>
</tr>
<tr>
<td>orderItemSummaries</td>
<td><code>List&lt;ConnectApi.OrderItemSummaryOutputRepresentation&gt;</code></td>
<td>(Creation failed) The input list of OrderItemSummaries.</td>
<td>50.0</td>
</tr>
<tr>
<td>orderSummaryId</td>
<td><code>String</code></td>
<td>(Creation failed) The input OrderSummaryId.</td>
<td>50.0</td>
</tr>
<tr>
<td>referenceId</td>
<td><code>String</code></td>
<td>The referenceId from the FulfillmentGroup input representation.</td>
<td>50.0</td>
</tr>
</tbody>
</table>
ConnectApi.FulfillmentOrderCancelLineItemsOutputRepresentation
Wraps the base output.
Subclass of ConnectApi.BaseOutputRepresentation.
No additional properties.

ConnectApi.FulfillmentOrderInvoiceOutputRepresentation
ID of the created invoice.
Subclass of ConnectApi.BaseOutputRepresentation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>invoiceId</td>
<td>String</td>
<td>ID of the created invoice.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

ConnectApi.FulfillmentOrderOutputRepresentation
A list of IDs of the created FulfillmentOrders.
Subclass of ConnectApi.BaseOutputRepresentation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>fulfillmentOrderIds</td>
<td>List&lt;String&gt;</td>
<td>A list of IDs of created Fulfillment Orders.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

ConnectApi.GatewayLogResponse
Gateway log output.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>createdDate</td>
<td>Datetime</td>
<td>Date when the gateway log was created.</td>
<td>50.0</td>
</tr>
<tr>
<td>gatewayResultCode</td>
<td>String</td>
<td>Result codes that show the status of a transaction as it is passed to the financial institution and then returned to the client.</td>
<td>50.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the gateway log record.</td>
<td>50.0</td>
</tr>
<tr>
<td>interactionStatus</td>
<td>String</td>
<td>Gateway interaction status. It can be SUCCESS, FAILED, or TIMEOUT.</td>
<td>50.0</td>
</tr>
</tbody>
</table>

ConnectApi.GenericBundleCapability
If a feed element has this capability, the feed element has a group of other feed elements condensed into one feed element. This group is called a bundle.
Subclass of ConnectApi.BundleCapability.
**ConnectApi.GenericFeedElement**

A concrete implementation of the abstract `ConnectApi.FeedElement` class.

Subclass of `ConnectApi.FeedElement`

**ConnectApi.GlobalInfluence**

Chatter influence.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description________________________________________________________________________</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>percentile</td>
<td>String</td>
<td>Percentile value for the user’s influence rank within the org or Experience Cloud site</td>
<td>28.0</td>
</tr>
<tr>
<td>rank</td>
<td>Integer</td>
<td>Number indicating the user’s influence rank, relative to all other users within the org or Experience Cloud site</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

*ConnectApi.UserDetail*

**ConnectApi.GroupChatterSettings**

A user’s Chatter settings for a specific group.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>emailFrequency</td>
<td>ConnectApi.GroupEmailFrequencyEnum</td>
<td>The frequency with which a group member receives email from a group.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**ConnectApi.GroupInformation**

Describes the Information section of the group. If the group is private, this section is visible only to members.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>text</td>
<td>String</td>
<td>The text of the “Information” section of the group.</td>
<td>28.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>The title of the “Information” section of the group.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

*ConnectApi.ChatterGroupDetail*

**ConnectApi.GroupMember**

Member of a group.
<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>User’s 18-character ID.</td>
<td>28.0</td>
</tr>
<tr>
<td>lastFeed</td>
<td>Datetime</td>
<td>The date and time at which the group member last accessed the group feed.</td>
<td>31.0</td>
</tr>
<tr>
<td>role</td>
<td>ConnectApi.GroupMembership.TypeEnum</td>
<td>Type of membership the user has with the group.</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• GroupOwner</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• GroupManager</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• NotAMember</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• NotAMemberPrivateRequested</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• StandardMember</td>
<td></td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>Connect REST API URL to this membership.</td>
<td>28.0</td>
</tr>
<tr>
<td>user</td>
<td>ConnectApi.UserSummary</td>
<td>Information about the user who is subscribed to this group.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

ConnectApi.GroupMemberPage

ConnectApi.GroupMemberPage
Page of group members.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the current page.</td>
<td>28.0</td>
</tr>
<tr>
<td>members</td>
<td>List&lt;ConnectApi.GroupMember&gt;</td>
<td>List of group members.</td>
<td>28.0</td>
</tr>
<tr>
<td>myMembership</td>
<td>ConnectApi.Reference</td>
<td>If the context user is a member of this group, returns information about that membership, otherwise, null.</td>
<td>28.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the next page, or null if there isn’t a next page.</td>
<td>28.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the previous page, or null if there isn’t a previous page.</td>
<td>28.0</td>
</tr>
<tr>
<td>totalMemberCount</td>
<td>Integer</td>
<td>Total number of group members across all pages.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

ConnectApi.GroupMembershipRequest
Request to become a group member.
### ConnectApi.GroupMembershipRequest

Information about group membership requests.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>createdDate</td>
<td>Datetime</td>
<td>ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z.</td>
<td>28.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID for the group membership request object.</td>
<td>28.0</td>
</tr>
<tr>
<td>lastUpdateDate</td>
<td>Datetime</td>
<td>ISO 8601 date string, for example, 2011-02-25T18:24:31.000Z.</td>
<td>28.0</td>
</tr>
<tr>
<td>requestedGroup</td>
<td>ConnectApi. Reference</td>
<td>Information about the group the context user is requesting to join.</td>
<td>28.0</td>
</tr>
<tr>
<td>responseMessage</td>
<td>String</td>
<td>A message for the user if their membership request is declined. The value</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>of this property is used only when the value of the status property is</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>Declined. The maximum length is 756 characters.</td>
<td></td>
</tr>
<tr>
<td>status</td>
<td>ConnectApi. GroupMembershipRequestStatus Enum</td>
<td>Status of a request to join a private group. Values are:</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Accepted</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Declined</td>
<td></td>
</tr>
<tr>

<td></td>
<td>• Pending</td>
<td></td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL of the group membership request object.</td>
<td>28.0</td>
</tr>
<tr>
<td>user</td>
<td>ConnectApi.User Summary</td>
<td>Information about the user requesting membership in a group.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

### ConnectApi.GroupMembershipRequests

Requests to become group members.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>requests</td>
<td>List&lt;ConnectApi.GroupMembershipRequest&gt;</td>
<td>Information about group membership requests.</td>
<td>28.0</td>
</tr>
<tr>
<td>total</td>
<td>Integer</td>
<td>The total number of requests.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

### ConnectApi.GroupRecord

A record associated with a group.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>Record’s 18-character ID.</td>
<td>33.0</td>
</tr>
</tbody>
</table>
### Available Version Description Type Property

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>record</td>
<td><code>ConnectApi.ActorWithId</code></td>
<td>Information about the record associated with the group.</td>
<td>33.0</td>
</tr>
<tr>
<td>url</td>
<td><code>String</code></td>
<td>Record URL.</td>
<td>33.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**

`ConnectApi.GroupRecordPage`

### ConnectApi.GroupRecordPage

A paginated list of `ConnectApi.GroupRecord` objects.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td><code>String</code></td>
<td>Connect REST API URL identifying the current page.</td>
<td>33.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td><code>String</code></td>
<td>Connect REST API URL identifying the next page, or <code>null</code> if there isn’t a next page.</td>
<td>33.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td><code>String</code></td>
<td>Connect REST API URL identifying the previous page, or <code>null</code> if there isn’t a previous page.</td>
<td>33.0</td>
</tr>
<tr>
<td>records</td>
<td><code>List&lt;ConnectApi.GroupRecord&gt;</code></td>
<td>List of records on the current page.</td>
<td>33.0</td>
</tr>
<tr>
<td>totalRecordCount</td>
<td><code>Integer</code></td>
<td>Total number of records associated with the group.</td>
<td>33.0</td>
</tr>
</tbody>
</table>

### ConnectApi.HashtagSegment

Subclass of `ConnectApi.MessageSegment`.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>tag</td>
<td><code>String</code></td>
<td>Text of the topic without the hash symbol (#).</td>
<td>28.0</td>
</tr>
<tr>
<td>topicUrl</td>
<td><code>String</code></td>
<td>Connect REST API Topics resource that searches for the topic:</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td><code>/services/data/v51.0/chatter/topics?exactMatch=true&amp;q=topic</code></td>
<td></td>
</tr>
<tr>
<td>url</td>
<td><code>String</code></td>
<td>Connect REST API Feed Items resource URL that searches for the topic in all feed items in an organization:</td>
<td>28.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td><code>/services/data/v51.0/chatter/feed-items?q=topic</code></td>
<td></td>
</tr>
</tbody>
</table>
ConnectApi.HideSocialPostIntent

Hide intent for a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isHidden</td>
<td>Boolean</td>
<td>Specifies whether the managed social account hid the social post (true) or not (false).</td>
<td>45.0</td>
</tr>
<tr>
<td>managedSocialAccount</td>
<td>ConnectApi.ManagedSocialAccount</td>
<td>Managed social account that hides the social post.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
  - ConnectApi.SocialPostIntents

ConnectApi.Icon

Icon.

<table>
<thead>
<tr>
<th>Property</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>height</td>
<td>Integer</td>
<td>The height of the icon in pixels.</td>
<td>28.0</td>
</tr>
<tr>
<td>width</td>
<td>Integer</td>
<td>The width of the icon in pixels.</td>
<td>28.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>The URL of the icon. This URL is available to unauthenticated users. This URL does not expire.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
  - ConnectApi.CanvasCapability
  - ConnectApi.EnhancedLinkCapability

ConnectApi.InlineImageSegment

An inline image in the feed body.
Subclass of ConnectApi.MessageSegment

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>altText</td>
<td>String</td>
<td>Alt text for the inline image.</td>
<td>35.0</td>
</tr>
<tr>
<td>contentSize</td>
<td>Integer</td>
<td>Size of the file in bytes.</td>
<td>35.0</td>
</tr>
<tr>
<td>fileExtension</td>
<td>String</td>
<td>Extension of the file, such as gif.</td>
<td>37.0</td>
</tr>
<tr>
<td>thumbnails</td>
<td>ConnectApi.FilePreviewCollection</td>
<td>Information about the available thumbnails for the image.</td>
<td>35.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the latest version of the inline image.</td>
<td>35.0</td>
</tr>
</tbody>
</table>
ConnectApi.InteractionsCapability

If a feed element has this capability, it has information about user interactions.

Subclass of ConnectApi.FeedElementCapability.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>count</td>
<td>Long</td>
<td>The number of individual views, likes, and comments on a feed post.</td>
<td>37.0</td>
</tr>
</tbody>
</table>

**Note:** This count appears in the UI under the feed post as the number of views, for example, “5 views.”

ConnectApi.Invitation

An invitation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>email</td>
<td>String</td>
<td>Email address of the user.</td>
<td>39.0</td>
</tr>
<tr>
<td>status</td>
<td>ConnectApi.GroupViral</td>
<td>Specifies the status of an invitation to join a group. Values are:</td>
<td>39.0</td>
</tr>
<tr>
<td></td>
<td>InvitationsStatus</td>
<td>- ActedUponUser—The user was added to the group. An email was sent asking</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>the user to visit the group.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Invited—An email was sent asking the user to sign up for the org.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- MaxedOutUsers—The group has the maximum allowed members.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- MultipleError—The user wasn’t invited due to multiple errors.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- NoActionNeededUser—The user is already a member of the group.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- NotVisibleToExternalInviter—The user is not accessible to the user sending</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>the invitation.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- Unhandled—The user couldn’t be added to the group for an unknown reason.</td>
<td></td>
</tr>
</tbody>
</table>
### ConnectApi.Invitations

A collection of invitations.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>invitations</td>
<td>List&lt;ConnectApi.Invitation&gt;</td>
<td>Collection of invitations.</td>
<td>39.0</td>
</tr>
</tbody>
</table>

### ConnectApi.KnowledgeArticleVersion

A knowledge article version.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>articleType</td>
<td>String</td>
<td>Type of the knowledge article.</td>
<td>36.0</td>
</tr>
<tr>
<td>id</td>
<td>String</td>
<td>ID of the knowledge article version.</td>
<td>36.0</td>
</tr>
<tr>
<td>knowledgeArticleId</td>
<td>String</td>
<td>ID of the corresponding knowledge article.</td>
<td>36.0</td>
</tr>
<tr>
<td>lastPublishedDate</td>
<td>Datetime</td>
<td>Last published date of the knowledge article.</td>
<td>36.0</td>
</tr>
<tr>
<td>summary</td>
<td>String</td>
<td>Summary of the knowledge article contents.</td>
<td>36.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the knowledge article.</td>
<td>36.0</td>
</tr>
<tr>
<td>urlName</td>
<td>String</td>
<td>URL name of the knowledge article.</td>
<td>36.0</td>
</tr>
</tbody>
</table>

### ConnectApi.KnowledgeArticleVersionCollection

A collection of knowledge article versions.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>items</td>
<td>List&lt;ConnectApi.KnowledgeArticleVersion&gt;</td>
<td>A collection of knowledge article versions.</td>
<td>36.0</td>
</tr>
</tbody>
</table>
ConnectApi.LabeledRecordField

This class is abstract.

Subclass of ConnectApi.AbstractRecordField.

Superclass of:
- ConnectApi.CompoundRecordField
- ConnectApi.CurrencyRecordField
- ConnectApi.DateRecordField
- ConnectApi.PercentRecordField
- ConnectApi.PicklistRecordField
- ConnectApi.RecordField
- ConnectApi.ReferenceRecordField
- ConnectApi.ReferenceWithDateRecordField

A record field containing a label and a text value.

**Important:** The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>label</td>
<td>String</td>
<td>A localized string describing the record field.</td>
<td>29.0</td>
</tr>
<tr>
<td>text</td>
<td>String</td>
<td>The text value of the record field. All record fields have a text value. To ensure that all clients can consume new content, inspect the record field’s <code>type</code> property. If it isn’t recognized, render the text value as the default case.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

ConnectApi.LightningExtensionInformation

Lightning extension information.

Subclass of ConnectApi.AbstractExtensionInformation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>compositionComponent</td>
<td>String</td>
<td>Component to use in compose state.</td>
<td>40.0</td>
</tr>
<tr>
<td>headerTextLabel</td>
<td>String</td>
<td>Label for the extension’s header.</td>
<td>40.0</td>
</tr>
<tr>
<td>hoverTextLabel</td>
<td>String</td>
<td>Label for hovering over the extension.</td>
<td>40.0</td>
</tr>
<tr>
<td>renderComponent</td>
<td>String</td>
<td>Component to use in render or preview state.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.ExtensionDefinition

ConnectApi.LikeIntent

Like intent for a social post.
### Available Version

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>isLiked</td>
<td>Boolean</td>
<td>Specifies whether the managed social account liked the social post (true) or not (false).</td>
<td>45.0</td>
</tr>
<tr>
<td>managedSocialAccount</td>
<td>ConnectApi. ManagedSocialAccount</td>
<td>Managed social account that likes the social post.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.LikeIntents

### ConnectApi.LikeIntents

List of like intents for a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>likes</td>
<td>List&lt;ConnectApi. LikeIntent&gt;</td>
<td>List of like intents for the social post.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

**SEE ALSO:**
- ConnectApi.SocialPostIntents

### ConnectApi.LikeSocialPostIntent

Like intent on a social post.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>socialAccountId</td>
<td>String</td>
<td>ID of the social account that likes the social post.</td>
<td>46.0</td>
</tr>
<tr>
<td>socialPostId</td>
<td>String</td>
<td>ID of the social post to like.</td>
<td>46.0</td>
</tr>
</tbody>
</table>

### ConnectApi.LikeSummary

Summary of a like.

Subclass of ConnectApi.UserFeedEntityActivitySummary

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>likeId</td>
<td>String</td>
<td>ID of the like.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

### ConnectApi.LinkCapability

If a feed element has this capability, it has a link.

Subclass of ConnectApi.FeedElementCapability.
## ConnectApi.LinkMetadata

Metadata for a link.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the link.</td>
<td>42.0</td>
</tr>
<tr>
<td>frameSource</td>
<td>String</td>
<td>HTML required to display the resource.</td>
<td>42.0</td>
</tr>
<tr>
<td>height</td>
<td>Integer</td>
<td>Height required to display the HTML.</td>
<td>42.0</td>
</tr>
<tr>
<td>originalUrl</td>
<td>String</td>
<td>Original URL that was used to request the metadata.</td>
<td>42.0</td>
</tr>
<tr>
<td>providerUrl</td>
<td>String</td>
<td>URL of the provider that the information is retrieved from.</td>
<td>42.0</td>
</tr>
</tbody>
</table>
| source        | ConnectApi.LinkMetadataSource | Source of the link metadata. Values are:  
- None—Link metadata wasn’t retrieved.  
- SfEdc—Salesforce is the source. | 42.0              |
| thumbnailUrl  | String              | Thumbnail of the resource.                                                  | 42.0              |
| title         | String              | Title of the link.                                                         | 42.0              |
| type          | ConnectApi.LinkMetadataType | Type of link that the metadata represents. Values are:  
- Error—Link metadata couldn’t be retrieved.  
- Link—Represents a link.  
- None—Link metadata wasn’t retrieved because the link isn’t an allowed domain.  
- Photo—Represents a photo.  
- Rich—Represents rich content, typically HTML content.  
- Unknown—Link metadata was retrieved, but the type is unknown.  
- Video—Represents a video. | 42.0              |
| url           | String              | URL of the image to display, if one is available.                          | 42.0              |
### Available Version Description Type Property Name

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>width</td>
<td>Integer</td>
<td>Width required to display the HTML.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

SEE ALSO:

[ConnectApi.LinkMetadataCollection](#)

**ConnectApi.LinkMetadataCollection**

Collection of link metadata.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>

</thead>
<tbody>
<tr>
<td>linkMetadataList</td>
<td>List&lt;ConnectApi.LinkMetadata&gt;</td>
<td>List of metadata for links.</td>
<td>42.0</td>
</tr>
</tbody>
</table>

**ConnectApi.LinkSegment**

Link segment.

Subclass of [ConnectApi.MessageSegment](#).

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>The link URL.</td>
<td>28.0</td>
</tr>
</tbody>
</table>

**ConnectApi.LocationOutputRepresentation**

An inventory location’s distance to an order recipient.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>distance</td>
<td>Double</td>
<td>The distance from the location to the order recipient.</td>
<td>51.0</td>
</tr>
<tr>
<td>locationIdentifier</td>
<td>String</td>
<td>The location identifier.</td>
<td>51.0</td>
</tr>
</tbody>
</table>

**ConnectApi.MaintenanceInfo**

Information about the upcoming scheduled maintenance for the organization.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>String</td>
<td>Description of the maintenance.</td>
<td>34.0</td>
</tr>
<tr>
<td>maintenanceTitle</td>
<td>String</td>
<td>Title of the maintenance.</td>
<td>34.0</td>
</tr>
<tr>
<td>maintenanceType</td>
<td>ConnectApi.MaintenanceType</td>
<td>Type of maintenance. Values are:</td>
<td>34.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Downtime—Downtime maintenance.</td>
<td></td>

**ConnectApi.ManagedContentAssociations**

Content topics associated with managed content.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>topics</td>
<td>List&lt;ConnectApi.TopicSummary&gt;</td>
<td>A collection of topics associated with the managed content.</td>
<td>47.0</td>
</tr>
</tbody>
</table>

SEE ALSO:
- ConnectApi.ManagedContentVersion

**ConnectApi.ManagedContentChannel**

Managed content channel.
### ConnectApi.ManagedContentChannelCollection

Collection of managed content channels.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>channels</td>
<td>List&lt;ConnectApi.ManagedContentChannel&gt;</td>
<td>List of managed content channels.</td>
<td>48.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the current page.</td>
<td>48.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the next page, or null if there isn't a next page.</td>
<td>48.0</td>
</tr>
<tr>
<td>previousPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the previous page, or null if there isn't a previous page.</td>
<td>48.0</td>
</tr>
<tr>
<td>totalChannels</td>
<td>Integer</td>
<td>Total number of managed content channels.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ManagedContentDateAndTimeNodeValue

Managed content node of date and time type.

Subclass of ConnectApi.ManagedContentNodeValue
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>dateTimeValue</td>
<td>Datetime</td>
<td>UTC date and time value of the managed content node.</td>
<td>48.0</td>
</tr>
<tr>
<td>timeZone</td>
<td>String</td>
<td>Time zone in which the date and time is authored.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**ConnectApi.ManagedContentDateNodeValue**

Managed content node of date type.

Subclass of `ConnectApi.ManagedContentNodeValue`

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>value</td>
<td>Datetime</td>
<td>Date value of the managed content node.</td>
<td>48.0</td>
</tr>
</tbody>
</table>

**ConnectApi.ManagedContentMediaNodeValue**

Managed content node of media type.

Subclass of `ConnectApi.ManagedContentNodeValue`

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>altText</td>
<td>String</td>
<td>Alternative text for the managed content node.</td>
<td>47.0</td>
</tr>
<tr>
<td>altUrl</td>
<td>String</td>
<td>Alternative URL for the managed content node.</td>
<td>47.0–48.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>In version 49.0 and later, this information is returned in the <code>thumbnailUrl</code> property.</td>
<td></td>
</tr>
<tr>
<td>contentKey</td>
<td>String</td>
<td>Content key of the managed content.</td>
<td>51.0</td>
</tr>
<tr>
<td>fileName</td>
<td>String</td>
<td>File name of the managed content node.</td>
<td>48.0</td>
</tr>
<tr>
<td>mediaType</td>
<td>ConnectApi.ManagedContentMediaType</td>
<td>Type of managed content media. Value is Image.</td>
<td>47.0</td>
</tr>
<tr>
<td>mimeType</td>
<td>String</td>
<td>MIME type of the managed content node.</td>
<td>47.0</td>
</tr>
<tr>
<td>resourceUrl</td>
<td>String</td>
<td>Resource URL of the image.</td>
<td>48.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>In version 48.0, the resource URL is available if referencing asset files and is <code>null</code> if referencing media. In version 49.0 and later, the resource URL is available if referencing asset files or media.</td>
<td></td>
</tr>
<tr>
<td>thumbnailUrl</td>
<td>String</td>
<td>URL to the thumbnail of the media.</td>
<td>49.0</td>
</tr>
<tr>
<td>title</td>
<td>String</td>
<td>Title of the managed content node.</td>
<td>47.0</td>
</tr>
<tr>
<td>unauthenticatedUrl</td>
<td>String</td>
<td>Unauthenticated URL of the image or <code>null</code> if the image isn’t visible to external users.</td>
<td>48.0</td>
</tr>
</tbody>
</table>
### ConnectApi.ManagedContentMediaSourceNodeValue

Source of managed content media.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>URL of the image.</td>
<td>47.0</td>
</tr>
<tr>
<td>fileName</td>
<td>String</td>
<td>File name of the media source.</td>
<td>49.0</td>
</tr>
<tr>
<td>isExternal</td>
<td>Boolean</td>
<td>Specifies whether the media source is referenced via an external URL (true) or uploaded (false).</td>
<td>49.0</td>
</tr>
<tr>
<td>mediaType</td>
<td>ConnectApi.ManagedContentMediaType</td>
<td>Type of managed content media. Values are: Document, Image</td>
<td>49.0</td>
</tr>
<tr>
<td>mimeType</td>
<td>String</td>
<td>MIME type of the media source.</td>
<td>49.0</td>
</tr>
<tr>
<td>referenceId</td>
<td>String</td>
<td>Reference ID of the uploaded media source.</td>
<td>49.0</td>
</tr>
<tr>
<td>resourceUrl</td>
<td>String</td>
<td>Resource URL of the media source.</td>
<td>49.0</td>
</tr>
<tr>
<td>unauthenticatedUrl</td>
<td>String</td>
<td>URL to the media source for unauthenticated users, or null if the media source isn’t available to external users.</td>
<td>49.0</td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL to the media source for authenticated users.</td>
<td>49.0</td>
</tr>
</tbody>
</table>

### ConnectApi.ManagedContentNodeType

Managed content node type.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>label</td>
<td>String</td>
<td>Label of the managed content node type.</td>
<td>47.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Developer name of the managed content node type.</td>
<td>47.0</td>
</tr>
</tbody>
</table>
Property Name | Type | Description | Available Version
--- | --- | --- | ---
nodeType | `ConnectApi.ManagedContentNodeTypeEnum` | Type of managed content node. Values are:  
- Date  
- DateTime  
- Media  
- MediaSource  
- MultilineText  
- NameField  
- RichText  
- Text  
- Url | 47.0

</table>
### ConnectApi Namespace

#### ConnectApi.ManagedTopicCollection

A collection of managed topics.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>url</td>
<td>String</td>
<td>Connect REST API URL to the managed topic.</td>
<td>32.0</td>
</tr>
</tbody>
</table>

#### ConnectApi.MarkupBeginSegment

The beginning of rich text markup.

Subclass of ConnectApi.MessageSegment

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>altText</td>
<td>String</td>
<td>Alternative text for the segment, if available.</td>
<td>45.0</td>
</tr>
<tr>
<td>htmlTag</td>
<td>String</td>
<td>The HTML tag for this markup.</td>
<td>35.0</td>
</tr>
<tr>
<td>markupType</td>
<td>ConnectApi.MarkupType</td>
<td>Type of rich text markup.</td>
<td>35.0</td>

<td></td>
<td></td>
<td>• Code—Code tag.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Hyperlink—Hyperlink anchor tag.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Italic—Italic tag.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ListItem—List item tag.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• OrderedList—Ordered list tag.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Paragraph—Paragraph tag.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Strikethrough—Strikethrough tag.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Underline—Underline tag.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• UnorderedList—Unordered list tag.</td>
<td></td>
</tr>
<tr>
<td>url</td>
<td>String</td>
<td>URL for the segment, if available.</td>
<td>45.0</td>
</tr>
</tbody>
</table>
ConnectApiMarkupEndSegment
The end of rich text markup.
Subclass of ConnectApi.MessageSegment

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>htmlTag</td>
<td>String</td>
<td>The HTML tag for this markup.</td>

  ConnectApiMediaReferenceCapability

ConnectApiMediaReferenceCapability
If a feed element has this capability, it has one or more media references.
Subclass of ConnectApiFeedElementCapability.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>media</td>
<td>List&lt;ConnectApiMediaReference&gt;</td>
<td>Collection of media references.</td>
<td>41.0</td>
</tr>
</tbody>
</table>
**ConnectApi.MentionCompletion**

Information about a record that could be used to @mention a user or group.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>additionalLabel</td>
<td>String</td>
<td>An additional label (if one exists) for the record represented by this completion, for example, &quot;(Customer)&quot; or &quot;(Acme Corporation)&quot;.</td>
<td>29.0</td>
</tr>
<tr>
<td>description</td>
<td>String</td>
<td>A description of the record represented by this completion.</td>
<td>29.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>The name of the record represented by this completion. The name is localized, if possible.</td>
<td>29.0</td>
</tr>
<tr>
<td>outOfOffice</td>
<td>ConnectApi.OutOfOffice</td>
<td>If the record represented by this completion is a user, an additional out-of-office message, if one exists, for the user.</td>
<td>40.0</td>
</tr>
<tr>
<td>photoUrl</td>
<td>String</td>
<td>A URL to the photo or icon of the record represented by this completion.</td>
<td>29.0</td>
</tr>
<tr>
<td>recordId</td>
<td>String</td>
<td>The ID of the record represented by this completion.</td>
<td>29.0</td>
</tr>
<tr>
<td>userType</td>
<td>ConnectApi.UserTypeEnum</td>
<td>If the record represented by this completion is a user, this value is the user type associated with that user; otherwise the value is null. One of these values:</td>
<td>30.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ChatterGuest — User is an external user in a private group.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ChatterOnly — User is a Chatter Free customer.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Guest — User is unauthenticated.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Internal — User is a standard org member.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Portal — User is an external user in an Experience Cloud site.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• System — User is Chatter Expert or a system user.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Undefined — User is a user type that is a custom object.</td>
<td></td>
</tr>
</tbody>
</table>

**SEE ALSO:**

[ConnectApi.MentionCompletionPage](#)

**ConnectApi.MentionCompletionPage**

A paginated list of Mention Completion response bodies.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the current page.</td>
<td>29.0</td>
</tr>
<tr>
<td>mentionCompletions</td>
<td>List&lt;ConnectApi.MentionCompletion&gt;</td>
<td>A list of mention completion proposals. Use these proposals to build a feed post body.</td>
<td>29.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the next page, or null if there isn’t a next page.</td>
<td>29.0</td>
</tr>
</tbody>
</table>
### ConnectApi.MentionSegment

Mention segment.

Subclass of `ConnectApi.MessageSegment`.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>accessible</td>
<td>Boolean</td>
<td>Specifies whether the mentioned user or group can see the post in which they are mentioned (true) or not (false).</td>
<td>28.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>Name of the mentioned user or group.</td>
<td>28.0</td>
</tr>
<tr>
<td>record</td>
<td><code>ConnectApi.ActorWithId</code></td>
<td>Information about the mentioned user.</td>
<td>29.0</td>
</tr>
</tbody>
</table>
| user      | `ConnectApi.User Summary`     | Information about the mentioned user. **Important:** In versions 29.0 and later, use the `record` property. | 28.0 only

In versions before 29.0, if the mention is not a user, the mention is in a `ConnectApi.TextSegment` object.

### ConnectApi.MentionValidation

Information about whether a proposed mention is valid for the context user.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>recordId</td>
<td>String</td>
<td>The ID of the mentioned record.</td>
<td>29.0</td>
</tr>
</tbody>
</table>
### ConnectApi.MentionValidation

Information about whether a set of mentions is valid for the context user.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>hasErrors</td>
<td>Boolean</td>
<td>Indicates whether at least one of the proposed mentions has an error (true), or not (false). For example, context users can’t mention private groups they don’t belong to. If such a group is included in the list of mention validations, hasErrors is true and the group has a validationStatus of Disallowed in its mention validation.</td>
<td>29.0</td>
</tr>
<tr>
<td>mentionValidations</td>
<td>List&lt;ConnectApi. MentionValidation&gt;</td>
<td>A list of mention validation information in the same order as the provided record IDs.</td>
<td>29.0</td>
</tr>
</tbody>
</table>

### ConnectApi.MessageBody

Message body.

Subclass of ConnectApi.AbstractMessageBody
No additional properties.

SEE ALSO:
- ConnectApi.ChatterLikesCapability
- ConnectApi.ChatterMessage
- ConnectApi.Comment
- ConnectApi.FeedElement
- ConnectApi.FeedItemSummary

**ConnectApi.MessageSegment**

Message segment.

This class is abstract.

Superclass of:
- ConnectApi.ComplexSegment
- ConnectApi.EntityLinkSegment
- ConnectApi.FieldChangeSegment
- ConnectApi.FieldChangeNameSegment
- ConnectApi.FieldChangeValueSegment
- ConnectApi.HashtagSegment
- ConnectApi.InlineImageSegment
- ConnectApi.LinkSegment
- ConnectApi.MarkupBeginSegment
- ConnectApi.MarkupEndSegment
- ConnectApi.MentionSegment
- ConnectApi.MoreChangesSegment
- ConnectApi.ResourceLinkSegment
- ConnectApi.TextSegment

Message segments in a feed item are typed as `ConnectApi.MessageSegment`. Feed item capabilities are typed as `ConnectApi.FeedItemCapability`. Record fields are typed as `ConnectApi.AbstractRecordField`. These classes are all abstract and have several concrete subclasses. At runtime you can use `instanceof` to check the concrete types of these objects and then safely proceed with the corresponding downcast. When you downcast, you must have a default case that handles unknown subclasses.

⚠️ **Important**: The composition of a feed may change between releases. Your code should always be prepared to handle instances of unknown subclasses.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>text</td>
<td>String</td>
<td>Text-only rendition of this segment. If a client encounters an unknown message segment type, it can render this value.</td>
<td>28.0</td>
</tr>
</tbody>
</table>
### ConnectApi Namespace

#### Available Version

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>

<td>ConnectApi. CommunityFlagType</td>
<td>Type of moderation flag. Values are:</td>
<td>40.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• FlagAsInappropriate—Flag for inappropriate content.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• FlagAsSpam—Flag for spam.</td>
<td></td>
</tr>
<tr>
<td>note</td>
<td>String</td>
<td>Note from user who flagged the item.</td>
<td>40.0</td>
</tr>
<tr>
<td>visibility</td>
<td>ConnectApi. CommunityFlagVisibility</td>
<td>Visibility behavior of a flag for various user types. Values are:</td>
<td>40.0</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• ModeratorsOnly—The flag is visible only to users with moderation permissions on the flagged element or item.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>• SelfAndModerators—The flag is visible to the creator of the flag and to users with moderation permissions on the flagged element or item.</td>
<td></td>
</tr>
</tbody>
</table>

SEE ALSO:  
ConnectApi.ModerationFlagsCollection

**ConnectApi.ModerationFlags**

Information about the moderation flags on a feed item, comment, or file.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>flagCount</td>
<td>Integer</td>
<td>Number of moderation flags on this feed item, comment, or file. If the context user is not a moderator, the property is null.</td>
<td>29.0</td>
</tr>
</tbody>
</table>
| flagCountByReason | Map<ConnectApi. CommunityFlagReasonType, Integer> | Number of moderation flags categorized by reason. Values for ConnectApi.CommunityFlagReasonType are:  
• FlaggedByRule—Moderation rule flagged the item.  
• FlaggedBySystem—Einstein flagged the item.  
• FlaggedByUserAsInappropriate—User flagged the item as inappropriate.  
• FlaggedByUserAsSpam—User flagged the item as spam. | 40.0              |
| flaggedByMe     | Boolean                  | true if the context user flagged the feed item, comment, or file for moderation; false otherwise. | 29.0              |
**ConnectApi.ModerationFlagsCollection**

A collection of flags on a feed item, comment, or file.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>currentPageToken</td>
<td>String</td>
<td>Token identifying the current page.</td>
<td>40.0</td>
</tr>
<tr>
<td>currentPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the current page.</td>
<td>40.0</td>
</tr>
<tr>
<td>flags</td>
<td>List&lt;ConnectApi.ModerationFlagItemDetail&gt;</td>
<td>List of flag details.</td>
<td>40.0</td>
</tr>
<tr>
<td>nextPageToken</td>
<td>String</td>
<td>Token identifying the next page, or null if there isn’t a next page.</td>
<td>40.0</td>
</tr>
<tr>
<td>nextPageUrl</td>
<td>String</td>
<td>Connect REST API URL identifying the next page, or null if there isn’t a next page.</td>
<td>40.0</td>
</tr>
<tr>
<td>pageSize</td>
<td>Integer</td>
<td>Number of items per page.</td>
<td>40.0</td>
</tr>
</tbody>
</table>

**ConnectApi.MoreChangesSegment**

In feed items with a large number of tracked changes, the message is formatted as: “changed A, B, and made X more changes.” The MoreChangesSegment contains the “X more changes.”

Subclass of ConnectApi.MessageSegment.
The motif properties contain URLs for small, medium, and large icons that indicate the Salesforce record type. Common record types are files, users, and groups, but all record types have a set of motif icons. Custom object records use their tab style icon. All icons are available to unauthenticated users so that, for example, you can display the motif icons in an email. The motif can also contain the record type's base color.

The motif images are icons, not user uploaded images or photos. For example, every user has the same set of motif icons.

Custom object records use their tab style icon, for example, the following custom object uses the "boat" tab style:

```json
"motif": {
  "color": "8C004C",
  "largeIconUrl": "/img/icon/custom51_100/boat64.png",
  "mediumIconUrl": "/img/icon/custom51_100/boat32.png",
  "smallIconUrl": "/img/icon/custom51_100/boat16.png",
  "svgIconUrl": null
},
```

Users use the following icons:

```json
"motif": {
  "color": "1797C0",
  "largeIconUrl": "/img/icon/profile64.png",
  "mediumIconUrl": "/img/icon/profile32.png",
  "smallIconUrl": "/img/icon/profile16.png",
  "svgIconUrl": null
},
```

Groups use the following icons:

```json
"motif": {
  "color": "1797C0",
  "largeIconUrl": "/img/icon/groups64.png",
  "mediumIconUrl": "/img/icon/groups32.png",
  "smallIconUrl": "/img/icon/groups16.png",
  "svgIconUrl": null
},
```

Files use the following icons:

```json
"motif": {
  "color": "1797C0",
  "largeIconUrl": "/img/content/content64.png",
  "mediumIconUrl": "/img/content/content32.png",
  "smallIconUrl": "/img/icon/files16.png",
  "svgIconUrl": null
},
```

Note: To view the icons in the previous examples, preface the URL with `https://instance_name`. For example, `https://instance_name/img/icon/profile64.png`.

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>color</td>
<td>String</td>
<td>A hex value representing the base color of the record type, or null.</td>
<td>29.0</td>
</tr>

<td>trace</td>
<td>ConnectApi.StrategyTrace</td>
<td>Trace information for the recommendation strategy execution, if requested.</td>
<td>45.0</td>
</tr>
</tbody>
</table>

## ConnectApi.NewUserAudienceCriteria

Criteria for the new members type of custom recommendation audience.

Subclass of ConnectApi.AudienceCriteria.
## Property Name: maxDaysInCommunity
- **Type:** Double
- **Description:** The maximum number of days since a user became a site member.
- **Available Version:** 36.0

### ConnectApi.OauthProviderInfo

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>authorizationUrl</td>
<td>String</td>
<td>The URL used for authorization.</td>
<td>37.0</td>
</tr>
<tr>
<td>name</td>
<td>String</td>
<td>The name of the OAuth service provider.</td>
<td>37.0</td>
</tr>
</tbody>
</table>

<td>Error code, if any.</td>
<td>51.0</td>
</tr>
<tr>
<td>message</td>
<td></td>
<td>Details of the error, if available.</td>
<td>51.0</td>
</tr>
</tbody>
</table>

### ConnectApi.OCIFulfillReservationOutputRepresentation

Response to a request to fulfill one or more inventory reservations.
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>errors</td>
<td>List&lt;ConnectApi.OCIFulfillReservationErrorOutputRepresentation&gt;</td>
<td>Responses for the individual reservations in the fulfillment request.</td>
<td>51.0</td>
</tr>
<tr>
<td>success</td>
<td>Boolean</td>
<td>Indicates whether the request was successful.</td>
<td>51.0</td>
</tr>
</tbody>
</table>

**ConnectApi.OCIFulfillReservationSingleOutputRepresentation**

Details of a single fulfilled reservation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>actionRequestId</td>
<td>String</td>
<td>The UUID that identifies the original fulfill reservation request.</td>
<td>51.0</td>
</tr>
<tr>
<td>externalRefId</td>
<td>String</td>
<td>The external reference ID of the location that fulfilled the reservation.</td>
<td>51.0</td>
</tr>
<tr>
<td>locationIdentifier</td>
<td>String</td>
<td>The identifier of the location that fulfilled the reservation.</td>
<td>51.0</td>
</tr>
<tr>
<td>quantity</td>
<td>Double</td>
<td>The fulfilled quantity.</td>
<td>51.0</td>
</tr>
<tr>
<td>stockKeepingUnit</td>
<td>String</td>
<td>The SKU of the fulfilled product.</td>
<td>51.0</td>
</tr>
</tbody>
</table>

**ConnectApi.OCIFutureInventoryOutputRepresentation**

An expected future inventory restock.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>expectedDate</td>
<td>Datetime</td>
<td>Date when the future inventory is expected.</td>
<td>51.0</td>
</tr>
<tr>
<td>quantity</td>
<td>Double</td>
<td>Quantity of the future inventory.</td>
<td>51.0</td>
</tr>
</tbody>
</table>

**ConnectApi.OCIGetInventoryAvailabilityOutputRepresentation**

Response to a request for inventory availability data.

Subclass of ConnectApi.OCIBaseOutputRepresentation.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>locationGroups</td>
<td>List&lt;ConnectApi.OCILocationGroupAvailabilityOutputRepresentation&gt;</td>
<td>A list of inventory availability data for individual location groups.</td>

<td>List&lt;ConnectApi.OCILocationAvailabilityOutputRepresentation&gt;</td>
<td>A list of inventory availability data for individual locations.</td>
<td>51.0</td>
</tr>
</tbody>
</table>
### ConnectApi.OCIInventoryRecordOutputRepresentation

Inventory availability data for a product.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>availableToFulfill</td>
<td>Double</td>
<td>The Available To Fulfill quantity.</td>
<td>51.0</td>
</tr>
<tr>
<td>availableToOrder</td>
<td>Double</td>
<td>The Available To Order quantity.</td>
<td>51.0</td>
</tr>
<tr>
<td>effectiveDate</td>
<td>Datetime</td>
<td>The effective date of the inventory.</td>
<td>51.0</td>
</tr>
<tr>
<td>futures</td>
<td>List&lt;ConnectApi.OCIFutureInventoryOutputRepresentation&gt;</td>
<td>A list of any expected future inventory restocks.</td>
<td>51.0</td>
</tr>
<tr>
<td>onHand</td>
<td>Double</td>
<td>The On Hand quantity.</td>
<td>51.0</td>
</tr>
<tr>
<td>reserved</td>
<td>Double</td>
<td>The Reserved quantity.</td>
<td>51.0</td>
</tr>
<tr>
<td>safetyStockCount</td>
<td>Double</td>
<td>The Safety Stock Count.</td>
<td>51.0</td>
</tr>
<tr>
<td>stockKeepingUnit</td>
<td>String</td>
<td>The SKU of the product.</td>
<td>51.0</td>
</tr>
</tbody>
</table>

### ConnectApi.OCILocationAvailabilityOutputRepresentation

A set of inventory availability data for one inventory location.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>inventoryRecords</td>
<td>List&lt;ConnectApi.OCIInventoryRecordOutputRepresentation&gt;</td>
<td>A list of availability data for individual products at this location.</td>
<td>51.0</td>
</tr>
<tr>
<td>locationIdentifier</td>
<td>String</td>
<td>The identifier of the location.</td>
<td>51.0</td>
</tr>
</tbody>
</table>

### ConnectApi.OCILocationGroupAvailabilityOutputRepresentation

A set of inventory availability data for one inventory location group.

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>inventoryRecords</td>
<td>List&lt;ConnectApi.OCIInventoryRecordOutputRepresentation&gt;</td>
<td>A list of availability data for individual products. The data combines the quantities for all locations belonging to this location group.</td>
<td>51.0</td>
</tr>
<tr>
<td>locationGroupIdentifier</td>
<td>String</td>
<td>The identifier of the location group.</td>
<td>51.0</td>
</tr>
</tbody>
</table>

### ConnectApi.OCIPublishLocationStructureOutputRepresentation

Response to a publish location structure request.

Subclass of ConnectApi.OCIBaseOutputRepresentation.
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Type</th>
<th>Description</th>
<th>Available Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>uploadId</td>
<td>String</td>
