IsAutomatic	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Determines whether the promotion is automatic or manual. If the promotion is automatic, it automatically applies to eligible carts without the buyer doing anything. If the promotion is manual, the buyer has to apply a coupon to redeem the promotion. The default value is 'false'.</p>
IsCommercePromotion	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates if the promotion is a B2B Commerce promotion (true) or not (false). The default value is 'false'.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field	Details
	<p>Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Name of the promotion.</p>
Objective	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Additional information, if any, about the purpose of the promotion.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the user who created the promotion. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
PriorityNumber	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Priority for the promotion. The priority determines which promotions apply first. The lower the number, the higher the priority. If you don't enter a priority number, or if two applied promotions have the same priority, the system uses a Salesforce ID number to choose which to apply first.</p>

Field	Details
QualifierCriteria	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description If a promotion has multiple qualifiers, this field determines whether all qualifiers must be met or whether any must be met for the promotion to apply.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • All • Any <p>The default value is 'All'.</p>
StartDateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Date and time when the promotion begins.</p>
TermsAndConditions	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Terms and conditions the buyer accepts before applying the promotion.</p>

PromotionMarketSegment

Represents a market segment within B2B Commerce that promotions can be assigned to. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The PromotionMarketSegment object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The name of the promotion segment.</p>
PromotionId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the promotion that you want to associate with your promotion segment. This is a relationship field.</p> <p>Relationship Name Promotion</p>

Field	Details
	<p>Relationship Type Lookup</p> <p>Refers To Promotion</p>
PromotionSegmentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the promotion segment that you want to associate with. This is a relationship field.</p> <p>Relationship Name PromotionSegment</p> <p>Relationship Type Lookup</p> <p>Refers To PromotionSegment</p>

PromotionQualifier

Represents the product, product category, or order that you want to target with your promotion qualifier in B2B Commerce. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The PromotionQualifier object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
CurrencyIsoCode	<p>Type picklist</p>

Field	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.</p>
MinimumAmount	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The minimum dollar amount that a buyer must purchase to qualify for the promotion.</p>
MinimumQuantity	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The minimum quantity that a buyer must purchase to qualify for the promotion.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description Name of the promotion qualifier.</p>

Field	Details
PromotionId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the promotion that you want to associate with your promotion qualifier. This is a relationship field.</p> <p>Relationship Name Promotion</p> <p>Relationship Type Lookup</p> <p>Refers To Promotion</p>
QualifierId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the qualifier. This is a polymorphic relationship field.</p> <p>Relationship Name Qualifier</p> <p>Relationship Type Lookup</p> <p>Refers To Product2, ProductCategory</p>
QualifierType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The type of qualifier you want to add to the promotion. <code>Product</code> applies the qualifier to a single product, <code>ProductCategory</code> to a predetermined group of products, and <code>TransactionTotal</code> to the entire order. Possible values are:</p> <ul style="list-style-type: none"> • <code>Product</code> • <code>ProductCategory</code> • <code>TransactionTotal</code>

PromotionSegment

Represents a promotion segment, which you can assign to different stores or buyer groups, allowing them to access the promotion. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The PromotionSegment object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p>Type string</p>

Field	Details
	<p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Name of the promotion segment.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the user who created this promotion segment. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>

PromotionSegmentBuyerGroup

Represents a promotion segment, associated with a buyer group, and used for B2B Commerce. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The PromotionSegmentBuyerGroup object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
BuyerGroupId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the Buyer Group that you want to include in your market segment. This is a relationship field.</p> <p>Relationship Name BuyerGroup</p> <p>Relationship Type Lookup</p> <p>Refers To BuyerGroup</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The name of the promotion segment.</p>

Field	Details
PromotionSegmentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the promotion segment you want to associate with your buyer group. This is a relationship field.</p> <p>Relationship Name PromotionSegment</p> <p>Relationship Type Lookup</p> <p>Refers To PromotionSegment</p>

PromotionSegmentSalesStore

Represents a promotion segment, associated with a store, and used for B2B Commerce. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The PromotionSegmentSalesStore object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p>

Field	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The name of the promotion segment.</p>
PromotionSegmentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the promotion segment you want to associate with your store. This is a relationship field.</p> <p>Relationship Name PromotionSegment</p> <p>Relationship Type Lookup</p> <p>Refers To PromotionSegment</p>
SalesStoreId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p>

Field	Details
	<p>Description The ID of the store you want to include in your promotion segment. This is a relationship field.</p> <p>Relationship Name SalesStore</p> <p>Relationship Type Lookup</p> <p>Refers To WebStore</p>

PromotionTarget

Represents the product, product category, or order that you want to target with your promotion in B2B Commerce. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The PromotionTarget object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
AdjustmentAmount	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The promotion discount expressed as an amount, not as a percentage.</p>
AdjustmentPercent	<p>Type percent</p> <p>Properties Create, Filter, Nillable, Sort, Update</p>

Field	Details
	<p>Description The percentage discount of the promotion. Valid values include numbers from 1-100.</p>
AdjustmentType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The type of adjustment discount applied to the product or group of products. Possible values are:</p> <ul style="list-style-type: none"> • <code>FixedAmountOffLineItemTotal</code>—Fixed amount off of the total of all line items. • <code>FixedAmountOffUnitPrice</code>—Fixed amount off of the unit price. • <code>PercentageDiscount</code>—Percentage discount.
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p>Type string</p>

Field	Details
	<p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The name of the promotion target.</p>
PromotionId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the promotion that you want to reference. This is a relationship field.</p> <p>Relationship Name Promotion</p> <p>Relationship Type Lookup</p> <p>Refers To Promotion</p>
TargetId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the product or product category that you want to target. This is a polymorphic relationship field.</p> <p>Relationship Name Target</p> <p>Relationship Type Lookup</p> <p>Refers To Product2, ProductCategory</p>
TargetType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The target of the promotion. <code>Product</code> applies the promotion to a single product, <code>ProductCategory</code> to a predetermined group of products, and <code>Transaction</code> to the entire order.</p>

Field	Details
	Possible values are: <ul style="list-style-type: none"> • Product • ProductCategory • Transaction

Prompt

Represents record details about an in-app guidance prompt or walkthrough. Available in API version 46.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Use prompts and walkthroughs to display announcements, training, or news to users within the app. Choose to add an action button or link that links to a URL of your choice. Track views, action button clicks, and walkthrough completions.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Admins have access to add or edit prompts and walkthroughs. For non-admin users, assign the Manage Prompts user permission. Everyone can see the In-App Guidance setup page. To show more than three walkthroughs to users, use the View Walkthroughs user permission, which is part of the Walkthroughs permission set license. The Sales Enablement (myTrailhead) subscription includes this feature. For pricing details, contact your Salesforce account executive. Note the restrictions on user visibility of the walkthroughs you create in the Packaging Prompts and Walkthroughs section.

Packaging Prompts and Walkthroughs

See [Creating Managed Packages](#) in Salesforce Help for more information.

See [Considerations for Prompts in Lightning Experience](#) in Salesforce Help for more information about installing and managing prompt packages and about editing and cloning prompts installed from packages.

If the package includes a custom profile that isn't part of a Salesforce org, the in-app guidance is installed, but it doesn't include those custom items. For example, an org installs a prompt with several custom profiles not included in their org. The prompts are installed without those custom profiles.

If the package includes a custom permission that isn't a part of your Salesforce org, the installation fails.

If the package includes a standard app that isn't part of a Salesforce org, the in-app guidance is installed, but it's not usable.

Unmanaged packages must contain a namespace prefix. For more information, see [Register a Namespace Prefix](#) and [What happens to my namespace prefix when I install a package?](#) in Salesforce Help.

For walkthrough packages:

- If a managed or unmanaged package includes walkthroughs for standard apps, walkthroughs are installed. However, production orgs can have only three active walkthroughs at a time without subscribing to Sales Enablement (myTrailhead).

- If a security-reviewed, first-generation managed package includes walkthroughs with at least one step on a page within a custom app, users can see the walkthroughs without a subscription to Sales Enablement (myTrailhead).

When orgs install in-app guidance from packages, the in-app guidance will retain publish state as indicated by the `IsPublished` field. For example, if the package prompt is active, it will also be active when installed by the org.

Fields

Field	Details
<code>DeveloperName</code>	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p>
<code>Language</code>	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Indicates the language used in the org where the in-app guidance was created.</p>
<code>MasterLabel</code>	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The label. Maximum of 80 characters.</p>
<code>NamespacePrefix</code>	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. In orgs that aren't Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.

PromptAction

Represents how the user interacted with the in-app guidance prompt or walkthrough. Available in API version 46.0 and later.

Use prompts and walkthroughs to display announcements, training, or news to users within the app. Choose to add an action button or link that links to a URL of your choice. Track views, action button clicks, and walkthrough completions.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Admins have access to add or edit prompts and walkthroughs. For non-admin users, assign the Manage Prompts user permission. Everyone can see the In-App Guidance setup page. To show more than three walkthroughs to users, use the View Walkthroughs user permission, which is part of the Walkthroughs permission set license. The Sales Enablement (myTrailhead) subscription includes this feature. For pricing details, contact your Salesforce account executive. Note the restrictions on user visibility of the walkthroughs you create in the Packaging Prompts and Walkthroughs section.

Fields

Field	Details
<code>LastDisplayDate</code>	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Create, Filter, Nillable, Sort, Update</p>

Field	Details
	<p>Description Indicates the date the in-app guidance was last displayed to the user.</p>
LastResult	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Indicates the last user interaction. Valid values are:</p> <ul style="list-style-type: none"> • CustomAction • Dismiss • Error • Finish—(walkthroughs only) • NoAction • NotSeen • Snooze
LastResultDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Indicates the date the in-app guidance was last interacted with.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Name of the in-app guidance.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description ID of the owner. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p>

Field	Details
	<p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
PromptVersionId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description ID of the PromptVersion object. This is a relationship field.</p> <p>Relationship Name PromptVersion</p> <p>Relationship Type Lookup</p> <p>Refers To PromptVersion</p>
SnoozeUntil	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The timestamp for when the user's snooze request expires. The user won't see the prompt again until they navigate to the page after the snooze time expires.</p>
StepCount	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Indicates the total number of steps in the walkthrough. Available in API version 49.0 and later.</p>
StepNumber	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description</p> <p>Indicates the number of the last step the user viewed or interacted with in a walkthrough. Maximum value is 10. Available in API version 49.0 and later.</p>
TimesActionTaken	<p>Type</p> <p>int</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Number of times that the user took action on the in-app guidance.</p>
TimesDismissed	<p>Type</p> <p>int</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Number of times that the user dismissed the in-app guidance.</p>
TimesDisplayed	<p>Type</p> <p>int</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Number of times that the in-app guidance was displayed to the user.</p>
TimesSnoozed	<p>Type</p> <p>int</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The total number of times the user snoozes the prompt.</p>
UserId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort, Update</p> <p>Description</p> <p>ID of the user.</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>User</p>

Field	Details
	<p>Relationship Type Lookup</p> <p>Refers To User</p>

Associated Objects

This object has the following associated objects. They are available in API version 46.0 and later.

[PromptActionOwnerSharingRule](#)

Sharing rules are available for the object.

[PromptActionShare](#)

Sharing is available for the object.

PromptError

Represents the error or warning associated with the PromptAction. Available in API version 52.0 and later.

Use prompts and walkthroughs to display announcements, training, or news to users within the app. Choose to add an action button or link that links to a URL of your choice. Track views, action button clicks, and walkthrough completions.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Admins have access to add or edit prompts and walkthroughs. For non-admin users, assign the Manage Prompts user permission.

Everyone can see the In-App Guidance setup page. To show more than three walkthroughs to users, use the View Walkthroughs user permission, which is part of the Walkthroughs permission set license. The Sales Enablement (myTrailhead) subscription includes this feature. For pricing details, contact your Salesforce account executive. Note the restrictions on user visibility of the walkthroughs you create in the Packaging Prompts and Walkthroughs section.

Fields

Field	Details
<code>IsError</code>	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field	Details
	<p>Description Indicates if the in-app guidance had an error <code>true</code> or a warning <code>false</code>. The default is <code>false</code>.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Name of the PromptError record.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description ID of the User or Group.</p>
PromptActionId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description ID of the PromptAction that the PromptError is related to.</p>
StepNumber	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Indicates the step number that the user encountered an error or warning in a walkthrough.</p>
Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Indicates the type of error or warning. Possible values are:</p> <ul style="list-style-type: none"> • <code>NoAccessToApp</code>—A step on this walkthrough is on an app that some of your users don't have access to. • <code>NoAccessToPage</code>—A step on the walkthrough is on a page that some of your users don't have access to.

Field	Details
	<ul style="list-style-type: none"> <code>ReferenceElementNotFound</code>—The target element has moved or is no longer on your page. Targeted prompts attached to unavailable elements convert to floating prompts. Check your access to the element, or enter targeting mode and reassign the targeted prompt. <code>Unavailable</code>—Users tried to open this walkthrough using its URL, but it's inactive or the users aren't licensed to see it. To make it accessible to users, check its settings or activate it.

Associated Objects

This object has the following associated objects. They are available in API version 52.0 and later.

PromptErrorOwnerSharingRule

Sharing rules are available for the object.

PromptErrorShare

Sharing is available for the object.

PromptActionOwnerSharingRule

Represents a rule which determines `PromptAction` sharing access for the owners. Available in API version 46.0 and later.

Use prompts and walkthroughs to display announcements, training, or news to users within the app. Choose to add an action button or link that links to a URL of your choice. Track views, action button clicks, and walkthrough completions.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Admins have access to add or edit prompts and walkthroughs. For non-admin users, assign the Manage Prompts user permission. Everyone can see the In-App Guidance setup page. To show more than three walkthroughs to users, use the View Walkthroughs user permission, which is part of the Walkthroughs permission set license. The Sales Enablement (myTrailhead) subscription includes this feature. For pricing details, contact your Salesforce account executive. Note the restrictions on user visibility of the walkthroughs you create in the Packaging Prompts and Walkthroughs section.

Fields

Field	Details
<code>AccessLevel</code>	Type picklist

Field	Details
	<p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Indicates the access level of users for in-app guidance. Valid values are <code>Read</code> and <code>Edit</code>.</p>
Description	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Description of the in-app guidance. Maximum of 255 characters.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p>
GroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the group whose <code>PromptAction</code> are shared.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Name of the in-app guidance.</p>

Field	Details
UserOrGroupID	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the user or group with whom <code>PromptAction</code> access is shared.</p>

PromptActionShare

Represents a sharing entry on a prompt action record. Available in API version 46.0 and later.

Use prompts and walkthroughs to display announcements, training, or news to users within the app. Choose to add an action button or link that links to a URL of your choice. Track views, action button clicks, and walkthrough completions.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Admins have access to add or edit prompts and walkthroughs. For non-admin users, assign the Manage Prompts user permission. Everyone can see the In-App Guidance setup page. To show more than three walkthroughs to users, use the View Walkthroughs user permission, which is part of the Walkthroughs permission set license. The Sales Enablement (myTrailhead) subscription includes this feature. For pricing details, contact your Salesforce account executive. Note the restrictions on user visibility of the walkthroughs you create in the Packaging Prompts and Walkthroughs section.

Fields

Field	Details
AccessLevel	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Indicates the access level of users for in-app guidance. Valid values are <code>Read</code>, <code>Edit</code>, and <code>All</code>.</p>
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p>

Field	Details
	<p>Description ID of the parent.</p>
RowCause	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Reason that this sharing entry exists. You can only write to this field when its value is either omitted or set to <code>Manual</code> (default). There are many possible values, including:</p> <ul style="list-style-type: none"> • <code>Rule</code>—The User or Group has access via a sharing rule. • <code>GuestRule</code>—The User or Group has access via a guest user sharing rule. • <code>Manual</code>—The User or Group has access because a User with “All” access manually shared the prompt action with them. • <code>Owner</code>—The User is the owner of the prompt action.
UserOrGroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the User or Group.</p>

PromptLocalization

Represents the translated value of a label for record details about in-app guidance when the Translation Workbench is enabled for your org. Available in API version 48.0 and later.

Use prompts and walkthroughs to display announcements, training, or news to users within the app. Choose to add an action button or link that links to a URL of your choice. Track views, action button clicks, and walkthrough completions.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Admins have access to add or edit prompts and walkthroughs. For non-admin users, assign the Manage Prompts user permission. Everyone can see the In-App Guidance setup page. To show more than three walkthroughs to users, use the View Walkthroughs user permission, which is part of the Walkthroughs permission set license. The Sales Enablement (myTrailhead) subscription includes this

feature. For pricing details, contact your Salesforce account executive. Note the restrictions on user visibility of the walkthroughs you create in the Packaging Prompts and Walkthroughs section.

Packaging Prompts and Walkthroughs

See [Creating Managed Packages](#) in Salesforce Help for more information.

See [Considerations for Prompts in Lightning Experience](#) in Salesforce Help for more information about installing and managing prompt packages and about editing and cloning prompts installed from packages.

If the package includes a custom profile that isn't part of a Salesforce org, the in-app guidance is installed, but it doesn't include those custom items. For example, an org installs a prompt with several custom profiles not included in their org. The prompts are installed without those custom profiles.

If the package includes a custom permission that isn't a part of your Salesforce org, the installation fails.

If the package includes a standard app that isn't part of a Salesforce org, the in-app guidance is installed, but it's not usable.

Unmanaged packages must contain a namespace prefix. For more information, see [Register a Namespace Prefix](#) and [What happens to my namespace prefix when I install a package?](#) in Salesforce Help.

For walkthrough packages:

- If a managed or unmanaged package includes walkthroughs for standard apps, walkthroughs are installed. However, production orgs can have only three active walkthroughs at a time without subscribing to Sales Enablement (myTrailhead).
- If a security-reviewed, first-generation managed package includes walkthroughs with at least one step on a page within a custom app, users can see the walkthroughs without a subscription to Sales Enablement (myTrailhead).

When orgs install in-app guidance from packages, the in-app guidance will retain publish state as indicated by the `IsPublished` field. For example, if the package prompt is active, it will also be active when installed by the org.

Fields

Field	Details
Language	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description Indicates the language used in the org where the in-app guidance was created.</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation.</p>

Field	Details
	<p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. In orgs that aren't Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the in-app guidance.</p>
Value	<p>Type textarea</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The actual translated record details for the in-app guidance.</p>

PromptVersion

Represents an in-app guidance prompt or walkthrough. Available in API version 46.0 and later.

Use prompts and walkthroughs to display announcements, training, or news to users within the app. Choose to add an action button or link that links to a URL of your choice. Track views, action button clicks, and walkthrough completions.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Admins have access to add or edit prompts and walkthroughs. For non-admin users, assign the Manage Prompts user permission.

Everyone can see the In-App Guidance setup page. To show more than three walkthroughs to users, use the View Walkthroughs user permission, which is part of the Walkthroughs permission set license. The Sales Enablement (myTrailhead) subscription includes this

feature. For pricing details, contact your Salesforce account executive. Note the restrictions on user visibility of the walkthroughs you create in the Packaging Prompts and Walkthroughs section.

Packaging Prompts and Walkthroughs

See [Creating Managed Packages](#) in Salesforce Help for more information.

See [Considerations for Prompts in Lightning Experience](#) in Salesforce Help for more information about installing and managing prompt packages and about editing and cloning prompts installed from packages.

If the package includes a custom profile that isn't part of a Salesforce org, the in-app guidance is installed, but it doesn't include those custom items. For example, an org installs a prompt with several custom profiles not included in their org. The prompts are installed without those custom profiles.

If the package includes a custom permission that isn't a part of your Salesforce org, the installation fails.

If the package includes a standard app that isn't part of a Salesforce org, the in-app guidance is installed, but it's not usable.

Unmanaged packages must contain a namespace prefix. For more information, see [Register a Namespace Prefix](#) and [What happens to my namespace prefix when I install a package?](#) in Salesforce Help.

For walkthrough packages:

- If a managed or unmanaged package includes walkthroughs for standard apps, walkthroughs are installed. However, production orgs can have only three active walkthroughs at a time without subscribing to Sales Enablement (myTrailhead).
- If a security-reviewed, first-generation managed package includes walkthroughs with at least one step on a page within a custom app, users can see the walkthroughs without a subscription to Sales Enablement (myTrailhead).

When orgs install in-app guidance from packages, the in-app guidance will retain publish state as indicated by the `IsPublished` field. For example, if the package prompt is active, it will also be active when installed by the org.

Fields

Field	Details
<code>ActionButtonLabel</code>	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Label for the action button. Maximum of 25 characters. For walkthroughs, this field can only be specified on the last step.</p>
<code>ActionButtonLink</code>	<p>Type url</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description URL for the action button. Maximum of 1,000 characters. You can't use the <code>GROUP BY</code> option in a SOQL query for this field. For walkthroughs, this field can only be specified on the last step.</p>

Field	Details
Body	<p>Type textarea</p> <p>Properties Create, Update</p> <p>Description Body content. For floating prompts, there's a maximum of 240 characters. For docked prompts, there's a maximum of 4000 characters. However, docked prompts use a rich text editor, so the maximum refers to the HTML markup, not the readable text.</p>
DelayDays	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Number of days between occurrences. For walkthroughs, this field can only be specified on the first step.</p>
Description	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Description of the in-app guidance. Maximum of 255 characters.</p>
DismissButtonLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Label for the dismiss button of a floating prompt. Maximum of 15 characters.</p>
DisplayPosition	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Indicates the position of the floating prompt on the page. Valid values are:</p> <ul style="list-style-type: none">• TopLeft• TopCenter• TopRight• MiddleLeft

Field	Details
	<ul style="list-style-type: none"> • MiddleCenter • MiddleRight • BottomLeft • BottomCenter • BottomRight
DisplayType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Indicates the type of prompt. Valid values are:</p> <ul style="list-style-type: none"> • DockedComposer—the docked prompt • FloatingPanel—the floating prompt • Targeted—the targeted prompt. Available in API version 52.0 and later.
ElementRelativePosition	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Indicates the location of the prompt relative to the element. This field is available in API version 52.0 and later. Valid values are:</p> <ul style="list-style-type: none"> • BottomCenter • BottomLeft • BottomRight • LeftBottom • LeftCenter • LeftTop • RightBottom • RightCenter • RightTop • TopCenter • TopLeft • TopRight
EndDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description</p> <p>Indicates the date to stop showing the in-app guidance. For walkthroughs, this field can only be specified on the first step.</p>
Header	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Label for the header of the docked prompt. This is the label contained in the window's browser bar. Maximum of 36 characters.</p>
ImageAltText	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Indicates the alt text of an image. Required if <code>ImageLocation</code> or <code>ImageID</code> is specified.</p>
ImageId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The ID of the ContentAsset that holds the image. Required if <code>ImageLocation</code> or <code>ImageAltText</code> is specified.</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>Image</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>ContentAsset</p>
ImageLocation	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description</p> <p>Indicates the location of the image in relation to the body text. Required if <code>ImageID</code> or <code>ImageAltText</code> is specified. Valid values are:</p>

Field	Details
	<ul style="list-style-type: none"> • Top • Bottom • Right—for floating prompts only • Left—for floating prompts only
IndexWithIsPublished	<p>Type string</p> <p>Properties Filter, idLookup, Nillable, Sort</p> <p>Description Used by Salesforce for efficient querying.</p>
IndexWithoutIsPublished	<p>Type string</p> <p>Properties Filter, idLookup, Nillable, Sort</p> <p>Description Used by Salesforce for efficient querying.</p>
IsPublished	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates if the in-app guidance is active <code>yes</code> or not <code>no</code>.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The label. Maximum of 80 characters.</p>
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the in-app guidance. This is a relationship field.</p>

Field	Details
	<p>Relationship Name Parent</p> <p>Relationship Type Lookup</p> <p>Refers To Prompt</p>
PublishedByUserId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the user who activated the in-app guidance. If the in-app guidance is part of a package, this is the user who installed the package. This is a relationship field.</p> <p>Relationship Name PublishedByUser</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
PublishedDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Indicates the date the in-app guidance was activated. If the in-app guidance is part of a package, this is the date when the package was installed. For walkthroughs, this field can only be specified on the first step.</p>
ReferenceElementContext	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Used by Salesforce to identify the element that the targeted prompt is associated with. This field is available in API version 52.0 and later.</p>
ShouldDisplayActionButton	<p>Type boolean</p>

Field	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates if an action button or link is included in the in-app guidance <code>yes</code> or not <code>no</code>.</p>
ShouldIgnoreGlobalDelay	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates if the prompt ignores the global time delay between in-app guidance and instead shows on page load <code>yes</code> or not <code>no</code>. The default is <code>no</code>.</p>
StartDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Indicates the date to start showing. For walkthroughs, this field can only be specified on the first step.</p>
StepNumber	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Indicates the number of the last step the user viewed or interacted with in a walkthrough. Maximum value is 10.</p>
TargetAppDeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The app's developer name where the in-app guidance appears. Deprecated in API version 51.0.</p>
TargetAppNamespacePrefix	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description</p> <p>The app's namespace prefix where the in-app guidance appears. Must match the target app's <code>NamespacePrefix</code> in the org that the package is being installed into. Maximum of 15 characters. Deprecated in API version of 51.0.</p>
TargetPageKey1	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Required. Used by Salesforce to identify the page location along with <code>TargetPageKey2</code>, <code>TargetPageKey3</code>, <code>TargetPageKey4</code>, and <code>TargetPageType</code>.</p>
TargetPageKey1Ref	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description</p> <p>Used by Salesforce to identify the prompt's page location along with <code>TargetPageKey2</code>, <code>TargetPageKey3</code>, <code>TargetPageKey4</code>, and <code>TargetPageType</code>.</p>
TargetPageKey2	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Used by Salesforce to identify the prompt's page location along with <code>TargetPageKey1</code>, <code>TargetPageKey3</code>, <code>TargetPageKey4</code>, and <code>TargetPageType</code>.</p>
TargetPageKey3	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Used by Salesforce to identify the prompt's page location along with <code>TargetPageKey1</code>, <code>TargetPageKey2</code>, <code>TargetPageKey4</code>, and <code>TargetPageType</code>.</p>
TargetPageKey4	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description</p> <p>Used by Salesforce to identify the page location along with <code>TargetPageKey1</code>, <code>TargetPageKey2</code>, <code>TargetPageKey3</code>, and <code>TargetPageType</code>. This field is available in API version 53.0 and later.</p>
<code>TargetPageType</code>	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The type of page where the in-app guidance appears.</p>
<code>TargetRecordType</code>	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Used by Salesforce to determine if in-app guidance is specific to a record type. This field is available in API version 52.0 and later.</p> <p>Relationship Name</p> <p>TargetRecordType</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>RecordType</p>
<code>ThemeColor</code>	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description</p> <p>Indicates which custom theme color is applied to in-app guidance. Required if <code>ThemeSaturation</code> is specified. Specify on the first step of the walkthrough to apply to the entire walkthrough. Valid values are:</p> <ul style="list-style-type: none"> • <code>Theme1</code>—derived from the current brand color • <code>Theme2</code>—derived from the current page background color • <code>Theme3</code>—derived from the current global header color • <code>Theme4</code>—derived from the current app theme color
<code>ThemeSaturation</code>	<p>Type</p> <p>picklist</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Indicates which color value, or saturation, is applied to in-app guidance that has a custom theme color applied. Required if <code>ThemeColor</code> is specified. Specify on the first step of the walkthrough to apply to the entire walkthrough. Valid values are:</p> <ul style="list-style-type: none"> • <code>Dark</code> • <code>Light</code>
<code>TimesToDisplay</code>	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Maximum number of times to display the in-app guidance (that is, the number of occurrences). Salesforce detects if the user interacts with (or ignores) the in-app guidance to determine if we should show the in-app guidance again or cancel scheduled recurrences. This may run counter to the number of occurrences scheduled. Maximum value of 30. For walkthroughs, this field can only be specified on the first step.</p>
<code>Title</code>	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The label for the title of the in-app guidance. Maximum of 36 characters.</p>
<code>UserAccess</code>	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Indicates which permissions can see the in-app guidance. Valid values are:</p> <ul style="list-style-type: none"> • <code>Everyone</code>—there are no restrictions on who can see • <code>SpecificPermissions</code>—only users with all the specific user permissions specified can see the in-app guidance
<code>UserProfileAccess</code>	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

Field	Details
	<p>Description</p> <p>Indicates which profiles can see the in-app guidance. Valid values are:</p> <ul style="list-style-type: none"> • <code>Everyone</code>—there are no permission restrictions on who can see • <code>SpecificProfiles</code>—users with any of the specific user profiles specified can see the in-app guidance
VersionNumber	<p>Type</p> <p>int</p> <p>Properties</p> <p>Create, Filter, Group, Sort, Update</p> <p>Description</p> <p>The number remains 1 since multiple versions aren't saved in the org.</p>
VideoLink	<p>Type</p> <p>url</p> <p>Properties</p> <p>Create, Filter, Nillable, Sort, Update</p> <p>Description</p> <p>URL for the video in a docked prompt. Maximum of 1,000 characters. You can only specify this field or the <code>ImageId</code> field, not both.</p> <p>To find the embed code for a video, follow the instructions from the video host website. Usually the steps can be found by searching for the name of the website and "embed video." For example, here's what the embed code looks like for YouTube:</p> <pre><iframe width="560" height="315" src="https://www.youtube.com/embed/di6iwHhrH6s" frameborder="0" allow="accelerometer; autoplay; encrypted-media; gyroscope; picture-in-picture" allowfullscreen></iframe></pre> <p>Then, you would enter the URL found in the <code>src</code> attribute. For the example used, enter <code>https://www.youtube.com/embed/di6iwHhrH6s</code>.</p>

PromptVersionLocalization

Represents the translated value of a label for-app guidance when the Translation Workbench is enabled for your org. Available in API version 48.0 and later.

Use prompts and walkthroughs to display announcements, training, or news to users within the app. Choose to add an action button or link that links to a URL of your choice. Track views, action button clicks, and walkthrough completions.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Admins have access to add or edit prompts and walkthroughs. For non-admin users, assign the Manage Prompts user permission. Everyone can see the In-App Guidance setup page. To show more than three walkthroughs to users, use the View Walkthroughs user permission, which is part of the Walkthroughs permission set license. The Sales Enablement (myTrailhead) subscription includes this feature. For pricing details, contact your Salesforce account executive. Note the restrictions on user visibility of the walkthroughs you create in the Packaging Prompts and Walkthroughs section.

Packaging Prompts and Walkthroughs

See [Creating Managed Packages](#) in Salesforce Help for more information.

See [Considerations for Prompts in Lightning Experience](#) in Salesforce Help for more information about installing and managing prompt packages and about editing and cloning prompts installed from packages.

If the package includes a custom profile that isn't part of a Salesforce org, the in-app guidance is installed, but it doesn't include those custom items. For example, an org installs a prompt with several custom profiles not included in their org. The prompts are installed without those custom profiles.

If the package includes a custom permission that isn't a part of your Salesforce org, the installation fails.

If the package includes a standard app that isn't part of a Salesforce org, the in-app guidance is installed, but it's not usable.

Unmanaged packages must contain a namespace prefix. For more information, see [Register a Namespace Prefix](#) and [What happens to my namespace prefix when I install a package?](#) in Salesforce Help.

For walkthrough packages:

- If a managed or unmanaged package includes walkthroughs for standard apps, walkthroughs are installed. However, production orgs can have only three active walkthroughs at a time without subscribing to Sales Enablement (myTrailhead).
- If a security-reviewed, first-generation managed package includes walkthroughs with at least one step on a page within a custom app, users can see the walkthroughs without a subscription to Sales Enablement (myTrailhead).

When orgs install in-app guidance from packages, the in-app guidance will retain publish state as indicated by the `IsPublished` field. For example, if the package prompt is active, it will also be active when installed by the org.

Fields

Field	Details
Language	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description Indicates the language used in the org where the in-app guidance was created.</p>

Field	Details
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. In orgs that aren't Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.

Value	<p>Type textarea</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The actual translated label of the in-app guidance.</p>

PushTopic

Represents a query that is the basis for notifying Streaming API clients of changes to records in an org. This object is available in API version 21.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- This object is available only if Streaming API is enabled for your org.
- Users with the Create permission can create this record.
- To receive notifications, users must have read access on both the object in the PushTopic query and the PushTopic itself.

Fields

Field	Details
ApiVersion	<p>Type double</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description Required. API version to use for executing the query specified in <code>Query</code>. It must be an API version greater than 20.0. If your query applies to a custom object from a package, this value must match the package's <code>ApiVersion</code>. Example value:</p>
Description	<p>Type string</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Description of the PushTopic. Limit: 400 characters</p>
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the record currently counts towards the organization's allocation.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. Descriptive name of the PushTopic, such as <code>MyNewCases</code> or <code>TeamUpdatedContacts</code>. Limit: 25 characters. This value identifies the channel and must be unique.</p>

Field	Details
NotifyForFields	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Specifies which fields are evaluated to generate a notification. Possible values are:</p> <ul style="list-style-type: none"> • All • Referenced (default) • Select • Where
NotifyForOperationCreate	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description <code>true</code> if a create operation should generate a notification, otherwise, <code>false</code>. Defaults to <code>true</code>. This field is available in API version 29.0 and later.</p>
NotifyForOperationDelete	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description <code>true</code> if a delete operation should generate a notification, otherwise, <code>false</code>. Defaults to <code>true</code>. Clients must connect using the <code>cometd/29.0</code> (or later) Streaming API endpoint to receive delete and undelete event notifications. This field is available in API version 29.0 and later.</p>
NotifyForOperationUndelete	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description <code>true</code> if an undelete operation should generate a notification, otherwise, <code>false</code>. Defaults to <code>true</code>. Clients must connect using the <code>cometd/29.0</code> (or later) Streaming API endpoint to receive delete and undelete event notifications. This field is available in API version 29.0 and later.</p>
NotifyForOperationUpdate	<p>Type boolean</p>

Field	Details
	<p>Properties Create, Filter, Update</p> <p>Description <code>true</code> if an update operation should generate a notification, otherwise, <code>false</code>. Defaults to <code>true</code>. This field is available in API version 29.0 and later.</p>
NotifyForOperations	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description Specifies which record events may generate a notification. In API version 29.0 and later, this field is read-only, and doesn't contain information about delete and undelete events. Use <code>NotifyForOperationCreate</code>, <code>NotifyForOperationDelete</code>, <code>NotifyForOperationUndelete</code> and <code>NotifyForOperationUpdate</code> to specify which record events should generate a notification. Possible values are:</p> <ul style="list-style-type: none"> • All (default) • Create • Extended • Update <p>A value of <code>Extended</code> means that neither create or update operations are set to generate events.</p>
Query	<p>Type string</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description Required. The SOQL query statement that determines which record changes trigger events to be sent to the channel. Limit: 1,300 characters</p>

Usage

The `PushTopic` defines when notifications are generated in the channel. Determine which fields to configure by checking out these links in the *Streaming API Developer Guide*.

- [PushTopic Queries](#)
- [Events](#)

- [Notifications](#)

[Streaming API Developer Guide](#)

QueueRoutingConfig

Represents the settings that determine how work items are routed to agents. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `retrieve()`, `update()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
CapacityPercentage	<p>Type percent</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The percentage of an agent's capacity for work items that's consumed by a specific type of work item from this service channel.</p> <p>For example, you might give phone calls a capacity percentage of <code>100</code>. If an agent receives a phone call, the agent won't receive new work items until the call ends, because at that point the agent's capacity will have reached 100%.</p> <p>This field is available in API version 33.0 and later.</p>
CapacityWeight	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The amount of an agent's capacity for work items that's consumed by a work item from this service channel.</p>

Field	Details
	<p>For example, if an agent has a capacity of 6, and cases are assigned a capacity weight of 2, an agent can be assigned up to 3 cases before the agent is at capacity and can't receive new work items.</p> <p>This field is available in API version 33.0 and later.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance slows down while Salesforce generates one for each record.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
DropAdditionalSkillsTimeout	<p>Type int</p> <p>Properties Create, Filter, Group Nillable, Sort, Update</p> <p>Description The number of seconds to wait before a skill marked as Additional Skill is dropped from Omni-Channel routing. The case is then routed to the best-matched agent even if they don't have all the skills.</p>
IsAttributeBased	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether this routing is attribute-based. Available in API version 45.0 and later.</p>
Language	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

Field	Details
	<p>Description The language of the presence status.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The label of the presence status.</p>
OverflowAssigneeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the user or queue that's set as the Overflow Assignee.</p>
PushTimeout	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The number of seconds set for push timeout. 0 is returned when push timeout isn't enabled. Available in API version 36.0 and later.</p>
RoutingModel	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The routing type that determines how work items are routed (pushed) to agents. Possible values are <code>Least Active</code> and <code>Most Available</code>.</p>
RoutingPriority	<p>Type int</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The priority in which work items from the service channels that are related to this routing configuration are routed to agents. Work items from routing configurations that have lower priority values (for example, <code>0</code>) are routed to agents first.</p>

Field	Details
ServiceChannelId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the service channel that's associated with this configuration. This field is available in API version 32.0 and earlier.</p>

Question

Represents a question in a zone that users can view and reply to.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available if the Answers permission and AnswersEnabled preference or PortalFeed permission and PortalFeedEnabled preference are enabled in your org.

Fields

Field	Details
BestReplyId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the reply that has been identified as the best answer to the question. Use the user interface to identify the best answer for a question.</p>
BestReplySelectedById	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the user who selected the best answer to the question.</p>

Field	Details
	<p>This field is available in API version 24.0 and later. In API version 24.0 through version 29.0, you must update this field using the UI. In API version 30.0 and later, you can update this field using the API.</p>
Body	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Description of the question.</p>
CommunityId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The zone ID associated with the question. After you create a question, you can't change the zone ID associated with that question.</p>
CreatorFullPhotoUrl	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description URL of the user's profile photo from the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.</p>
CreatorName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Name of the user who posted the question or reply. Only the first name of internal users (agents) appears to portal users in the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.</p>
CreatorSmallPhotoUrl	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>URL of the user's thumbnail photo from the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.</p>
HasSingleFieldForContent	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Indicates whether the content of a Chatter Answers question is:</p> <ul style="list-style-type: none"> • Included in only one field: <code>Title</code> if the content is unformatted and less than 255 characters; or <code>Body</code> if the content is formatted or more than 255 characters (<code>true</code>) • Included in two fields: <code>Title</code> and <code>Body</code> (<code>false</code>) <p>This field also determines if content displays in one or two fields in Chatter Answers question feeds.</p> <p>This field is available in API version 25.0 and later.</p>
LastReferencedDate	<p>Type</p> <p>date</p> <p>Properties</p> <p>Filter, Nillable, Sort, Update</p> <p>Description</p> <p>The timestamp for when the current user last viewed a record related to this record.</p>
LastReplyDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The date and time the last reply (child Reply object) was posted.</p>
LastReplyId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>Read only. The ID of the last reply (child Reply object) posted to the question.</p>
LastViewedDate	<p>Type</p> <p>date</p>

Field	Details
	<p>Properties Filter, Nillable, Sort, Update</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
<code>MostReportAbusesOnReply</code>	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The most number of user-reported abuses on a Reply associated with the question. This field is available in API version 24.0 and later.</p>
<code>NumReplies</code>	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of replies (child Reply object) that users have submitted for the question.</p>
<code>NumReportAbuses</code>	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Represents the number of user-reported abuses on the question. This field is available in API version 24.0 and later.</p>
<code>NumSubscriptions</code>	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Represents the number of users following the question. This field is available in API version 24.0 and later.</p>
<code>Origin</code>	<p>Type picklist</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The source of the question, such as <code>Chatter Answers</code>. This field is available in API version 24.0 and later.</p>
Title	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The descriptive title of the question.</p>
UpVotes	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The total number of up votes for the question.</p>
VoteScore	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The internal score of the question, used to sort questions and articles on the Popular tab in the application user interface. The internal algorithm that determines the score gives older votes less weight than newer votes, simulating exponential decay. The score itself doesn't display in the application user interface.</p> <p> Note: Unlike other fields of type double, you can't use a SOQL aggregate function with this field.</p>

Usage

Use this object to track questions in a zone.

QuestionDataCategorySelection

A data category selection represents a data category that classifies a question.

This object can be used to associate a question with a data category from a data category group or to query the categorization for a question.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

To create, read or update data category selection, you must have create, read or update permission on the categorized question. Users who can update question can also delete its category selection. Users who can create questions can only select categories visible to their role.

Fields

Field Name	Details
DataCategoryGroupName	<p>Type DataCategoryGroupReference</p> <p>Properties Create</p> <p>Description Unique name of the data category group which has a category associated with the question.</p>
DataCategoryName	<p>Type DataCategoryGroupReference</p> <p>Properties Create</p> <p>Description Unique name of the data category associated with the question.</p>
ParentId	<p>Type reference</p> <p>Properties Create, Filter</p> <p>Description ID of the question associated with the data category selection.</p>

Usage

Every question can be categorized in a data category. You can use the QuestionDataCategorySelection object to query and manage question categorization. Client applications can create categorization for a question. They can also delete, query, and retrieve question categorization.

 **Warning:** Even though the API lets you select more than one category for QuestionDataCategorySelection, the Answers tab only supports one data category selection for questions. Selecting multiple categories through QuestionDataCategorySelection may result in unexpected behavior in the Answers tab, such as losing your multiple selections. You should only select one data category when using QuestionDataCategorySelection.

Sample Code—Java

In the following example, the `selectCategory` method adds a category to a question data category selection. The `retrieveCategorySelections` method returns all the categories from a question data category selection.

```
public void selectCategory(ID parentId, String categoryGroupName, String categoryName) {
    try {
        QuestionDataCategorySelection categorySelection = new
QuestionDataCategorySelection();

        categorySelection.setParentId(parentId);
        categorySelection.setDataCategoryGroupName(categoryGroupName);
        categorySelection.setDataCategoryName(categoryName);
        binding.create(new SObject[]{categorySelection});
    } catch (RemoteException e) {
        System.out.println("An unexpected error has occurred." + e.getMessage());
    }
}

public String[] retrieveCategorySelections(String parentId) {
    QueryResult qr = null;

    try {
        qr = binding.query("SELECT DataCategoryName FROM QuestionDataCategorySelection
WHERE Id = '" + parentId + "'");
    } catch (RemoteException e) {
        System.out.println("An unexpected error has occurred." + e.getMessage());
    }

    String[] categoryNames = new String[qr.getRecords().length];
    for (int index = 0; index < qr.getRecords().length; index++) {
        categoryNames[index] =
((QuestionDataCategorySelection)qr.getRecords()[index]).getDataCategoryName();
    }

    return categoryNames;
}
```

Salesforce Knowledge uses a similar object for article data category selection. See [Article Type__DataCategorySelection](#) for SOQL examples using this object.

SEE ALSO:

[Article Type__DataCategorySelection](#)

QuestionReportAbuse

Represents a user-reported abuse on a Question in a Chatter Answers zone. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The name of the Question from which the user reported abuse.</p>
QuestionId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the Question from which the user reported abuse.</p>
Reason	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The reason the user reported abuse on the Question, such as <code>Spam</code>, <code>Hateful</code>, or <code>Inappropriate</code>.</p>

Usage

Use this object to track user-reported abuse on questions created in a Chatter Answers zone.

QuestionSubscription

Represents a subscription for a user following a Question. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
CommunityId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Required. ID of the zone associated with the Question the user is following. This field can't be updated.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, Sort</p> <p>Description The name of the question subscription.</p>
QuestionCreatedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Required. Creation date of the Question which the user is following. This field can't be updated.</p>
QuestionId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. ID of the Question which the user is following. This field can't be updated.</p>
SubscriberId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p>

Field	Details
	<p>Description</p> <p>Required. ID of the User who is following the Question. This field can't be updated.</p>

Usage

Things to consider when following a Question:

- A user can only follow questions that they have permission to view.
- Administrators and users with the “Modify All Data” permission can configure other users to follow questions that the other user has read access to.
- Administrators and users with the “Modify All Data” permission can configure users to stop following questions.

Queries on QuestionSubscription:

- Users with the “Read” permission on Question can see which questions other users are following.
- A query must include a LIMIT clause and the limit can't exceed 1,000.
- A query using a WHERE clause can only filter by fields on Question.

QueueSubject

Represents the mapping between a queue Group and the sObject types associated with the queue, including custom objects.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

A queue is a Group whose `Type` is `Queue`. To create a Group, you must have the Manage Users permission.

Fields

Field	Details
QueueId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>The ID of a queue.</p> <p>This is a relationship field.</p>

Field	Details
	<p>Relationship Name Queue</p> <p>Relationship Type Lookup</p> <p>Refers To Group</p>
SubjectType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description A list of object types that can be associated with the queue specified by the <code>QueueId</code>.</p>

Usage

Use this object to associate a queue with the sObject that can be associated with the queue, including custom objects.

Warning: You can't update or insert more than 18 queues at once when using the Bulk API.

SEE ALSO:

[Object Basics](#)

QuickText

This object stores a snippet of text that allows users to send a quick response to a customer. Use quick text to create greetings, answers to common questions, short notes, and more. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
Category	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p>Description A customizable picklist that can be used to group multiple related quick text records together</p>
Channel	<p>Type multipicklist</p> <p>Properties Create, Defaulted on create, Filter, Nillable, Update</p> <p>Description A multi-select picklist that can be used to specify where specific quick text messages are available, such as in Chat or in the Email publisher in Case Feed.</p>
FolderId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Returns the ID of the folder that contains the quick text. Available in API version 44.0 and later. This is a relationship field.</p> <p>Relationship Name Folder</p> <p>Relationship Type Lookup</p> <p>Refers To Folder</p>
FolderName	<p>Type string</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Name of the folder that contains the quick text. Available in API version 44.0 and later.</p>
IsInsertable	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>If <code>true</code>, the quick text is available in the channels selected in the <code>Channel</code> field. If <code>false</code>, the quick text is not available. The label in the UI is Include in selected channels. By default:</p> <ul style="list-style-type: none"> This field is set to <code>true</code> on quick text records created from the Quick Text page or via the API. This field is set to <code>false</code> on quick text records created during the Einstein Reply Recommendations reply publishing process.
<code>LastReferencedDate</code>	<p>Type</p> <p>datetime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
<code>LastViewedDate</code>	<p>Type</p> <p>datetime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>
<code>Message</code>	<p>Type</p> <p>textarea</p> <p>Properties</p> <p>Create, Filter (unavailable in API version 25.0 and later), Sort (unavailable in API version 25.0 and later), Update</p> <p>Description</p> <p>The content of the quick text record</p>
<code>Name</code>	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter (unavailable in API version 25.0 and later), Group, idLookup, Sort (unavailable in API version 25.0 and later), Update</p> <p>Description</p> <p>A descriptive label for the quick text record</p>

Field Name	Details
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description ID of the User or Queue that owns the quick text record This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
ShouldPredictInRr	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description (Used with Einstein Reply Recommendations.) Indicates whether the quick text can be recommended to agents in the Einstein Replies console component. The label in the UI is Include in reply recommendations. By default:</p> <ul style="list-style-type: none"> • This field is set to <code>false</code> on quick text records created from the Quick Text page or via the API. • This field is set to <code>true</code> on quick text records created during the Einstein Reply Recommendations reply publishing process.
SourceEntityId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description (Used with Einstein Reply Recommendations.) The corresponding ReplyText record that the quick text record was created from. This field is not available in the UI. This is a relationship field.</p> <p>Relationship Name SourceEntity</p> <p>Relationship Type Lookup</p>

Field Name	Details
	<p>Refers To ReplyText</p>
SourceType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description (Used with Einstein Reply Recommendations.) Indicates how the text was composed. This field is not available in the UI.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • EINSTEIN_GENERATED—Text was generated by Einstein Reply Recommendations • USER_EDITED—Text was generated by Einstein Reply Recommendations, and then edited by a user • USER_GENERATED—User wrote the text

Usage

Use this object to create and manage the quick text messages available to users. You can categorize multiple quick text records into groups using the Category field. The Category field can also be a parent to multiple custom-dependent Picklist fields to create a hierarchical structure of categories.

QuickText is also used in Einstein Reply Recommendations, a feature that recommends stock replies for support agents to use in chats in the Lightning Service Console. During setup, Einstein Reply Recommendations scans past chats to generate a list of commonly used replies. Each generated reply is a ReplyText record. The admin then publishes, or converts, the replies to quick text, creating a corresponding QuickText record for each reply. Therefore, certain QuickText fields are used only on quick text records that originated as a ReplyText record.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

QuickTextChangeEvent (API version 48.0)

Change events are available for the object.

QuickTextHistory

History is available for tracked fields of the object.

QuickTextOwnerSharingRule

Sharing rules are available for the object.

QuickTextShare

Sharing is available for the object.

QuickTextUsage

Represents the usage of quick text on a record, including which quick text was used, who used it, and how they used it. This object is available in API version 47.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

This object is always read-only.

Fields

Field	Details
AppContext	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Context in which the quick text was used. Possible values are:</p> <ul style="list-style-type: none"> • Aloha—Salesforce Classic • Lightning—Lightning Experience • Unknown
Channel	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The channel in which the quick text was used. Possible values are:</p> <ul style="list-style-type: none"> • Email • Event • Generic • Internal • Knowledge • Live Agent • Messaging • Phone • Portal

Field	Details
	<ul style="list-style-type: none"> • Social • Task
FolderId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the folder containing the quick text at the time it was used. This is a relationship field.</p> <p>Relationship Name Folder</p> <p>Relationship Type Lookup</p> <p>Refers To Folder</p>
LaunchSource	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description How the user started the quick text. Possible values are:</p> <ul style="list-style-type: none"> • Floater • Keyboard shortcut • Macro • Toolbar
LoggedTime	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The time when the quick text was used.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description Name of the quick text.</p>

Field	Details
OwnerId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the group or user that owns the quick text. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
QuickTextID	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the quick text. This is a relationship field.</p> <p>Relationship Name QuickText</p> <p>Relationship Type Lookup</p> <p>Refers To QuickText</p>
UserId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the user that used the quick text. This is a relationship field.</p> <p>Relationship Name User</p> <p>Relationship Type Lookup</p>

Field	Details
	Refers To User

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[QuickTextUsageOwnerSharingRule](#)

Sharing rules are available for the object.

[QuickTextUsageShare](#)

Sharing is available for the object.

Quote

The Quote object represents a quote, which is a record showing proposed prices for products and services. Available in API version 18.0 and later.

Quotes can be created from and synced with opportunities, and emailed as PDFs to customers

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
<code>AccountId</code>	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the account that's associated with the quote.</p>
<code>AdditionalAddress</code>	<p>Type address</p> <p>Properties Filter, Nillable</p> <p>Description Compound form of the additional address. Read-only. See Address Compound Fields for details on compound address fields.</p>

Field	Details
AdditionalCity	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description City for the quote's additional address. Up to 40 characters allowed.</p>
AdditionalCountry	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Country for the quote's additional address. Up to 80 characters allowed.</p>
AdditionalCountryCode	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ISO country code for the quote's additional address.</p>
AdditionalLatitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with <code>AdditionalLongitude</code> to specify the precise geolocation of an additional address. Acceptable values are numbers between -90 and 90 with up to 15 decimal places.</p>
AdditionalLongitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with <code>AdditionalLatitude</code> to specify the precise geolocation of an additional address. Acceptable values are numbers between -180 and 180 with up to 15 decimal places.</p>
AdditionalName	<p>Type string</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description Name associated with the quote's additional address. Limited: 255 characters.</p>
AdditionalPostalCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Postal Code for the quote's additional address.</p>
AdditionalState	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description State for the quote's additional address. Up to 80 characters allowed.</p>
AdditionalStateCode	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ISO state code for the quote's additional address.</p>
AdditionalStreet	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Group, Sort, Update</p> <p>Description Street name for the quote's additional address.</p>
BillingAddress	<p>Type address</p> <p>Properties Filter, Nillable</p> <p>Description Compound form of the billing address. Read-only. See Address Compound Fields for details on compound address fields.</p>

Field	Details
BillingCity	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description City for the quote's billing address. Up to 40 characters allowed.</p>
BillingCountry	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Country for the quote's billing address. Up to 80 characters allowed.</p>
BillingCountryCode	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ISO country code for the quote's billing address.</p>
BillingLatitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with <code>BillingLongitude</code> to specify the precise geolocation of a billing address. Acceptable values are numbers between -90 and 90 with up to 15 decimal places.</p>
BillingLongitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with <code>BillingLatitude</code> to specify the precise geolocation of a billing address. Acceptable values are numbers between -180 and 180 with up to 15 decimal places.</p>
BillingName	<p>Type string</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description Entity that the quote is billed to.</p>
BillingPostalCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Postal Code for the quote's billing address.</p>
BillingState	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description State for the quote's billing address. Up to 80 characters allowed.</p>
BillingStateCode	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ISO state code for the quote's billing address.</p>
BillingStreet	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Street name for the quote's billing address.</p>
CanCreateQuoteLineItems	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Group</p> <p>Description This field is not used.</p>
ContactId	<p>Type reference</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the contact that's associated with the quote.</p>
ContractId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the contract that's associated with the quote.</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Restricted picklist</p> <p>Description Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. If the organization has multicurrency and a <code>Pricebook2Id</code> specified on the quote, then the currency value of this field must match the currency of the <code>PricebookEntry</code> objects that are associated with any quote line items it has. This value is copied from the related Opportunity and can't be changed.</p>
Description	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description Text description of the quote. Limit: 32,000 characters.</p>
Discount	<p>Type percent</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Difference between the sum of the <code>QuoteLineItem</code> record's <code>Subtotal</code> and the sum of the <code>QuoteLineItem</code> record's <code>Discount</code> totals. Expressed as a percentage.</p>
Email	<p>Type email</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description The email address of the contact who's associated with the quote.</p>
ExpirationDate	<p>Type date</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description The date when this quote is no longer valid.</p>
Fax	<p>Type phone</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description The fax number for the contact who's associated with the quote.</p>
GrandTotal	<p>Type currency</p> <p>Properties Filter, Nillable</p> <p>Description The total price of the quote plus shipping and taxes.</p>
IsSyncing	<p>Type boolean</p> <p>Properties Defaulted on create, Filter</p> <p>Description Indicates whether the quote is syncing with an opportunity.</p>
LastReferencedDate	<p>Type date</p> <p>Properties Filter, Nillable, Sort, Update</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>

Field	Details
LastViewedDate	<p>Type date</p> <p>Properties Filter, Nillable, Sort, Update</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>
LineItemCount	<p>Type int</p> <p>Properties Filter, Nillable</p> <p>Description The number of line items on the quote.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, idLookup, Update</p> <p>Description Required. Name for the quote. Limit: 225 characters.</p>
OpportunityId	<p>Type reference</p> <p>Properties Create, Filter</p> <p>Description ID for the opportunity associated with the quote.</p>
Phone	<p>Type phone</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description The phone number of the contact who's associated with the quote.</p>
Pricebook2Id	<p>Type reference</p> <p>Properties Create, Filter, Nillable, Update</p>

Field	Details
	<p>Description ID of the price book associated with the quote.</p>
QuoteNumber	<p>Type string</p> <p>Properties Defaulted on create, Filter</p> <p>Description A system-generated number that identifies the quote.</p>
QuoteToAddress	<p>Type address</p> <p>Properties Filter, Nillable</p> <p>Description Compound form of the quote to address. Read-only. See Address Compound Fields for details on compound address fields.</p>
QuoteToCity	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description City for the address to send the quote to for approval, such as a third party-agency representing a buyer. Up to 40 characters allowed.</p>
QuoteToCountry	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Country for the address to send the quote to for approval. Up to 80 characters allowed.</p>
QuoteToLatitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with <code>QuoteToLongitude</code> to specify the precise geolocation of a quote to address. Acceptable values are numbers between -90 and 90 with up to 15 decimal places.</p>

Field	Details
QuoteToLongitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with <code>QuoteToLatitude</code> to specify the precise geolocation of a quote to address. Acceptable values are numbers between -180 and 180 with up to 15 decimal places.</p>
QuoteToName	<p>Type string</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description The name of the entity (such as a person or business) that the quote is sent to for approval. Limit: 255 characters.</p>
QuoteToPostalCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Postal code for the address to send the quote to for approval.</p>
QuoteToState	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description State for the address to send the quote to for approval. Up to 80 characters allowed.</p>
QuoteToStreet	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Street name for the address to send the quote to for approval.</p>
RecordTypeID	<p>Type reference</p>

Field	Details
	<p>Properties Create, Filter, Nillable, Update</p> <p>Description ID of the record type assigned to the object.</p>
ShippingAddress	<p>Type address</p> <p>Properties Filter, Nillable</p> <p>Description Compound form of the shipping address. Read-only. See Address Compound Fields for details on compound address fields.</p>
ShippingCity	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description City for the quote's shipping address. Up to 40 characters allowed.</p>
ShippingCountry	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Country for the quote's shipping address. Up to 80 characters allowed.</p>
ShippingCountryCode	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ISO country code for the quote's shipping address.</p>
ShippingHandling	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description The total shipping and handling costs for the quote.</p>

Field	Details
ShippingLatitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with <code>ShippingLongitude</code> to specify the precise geolocation of a shipping address. Acceptable values are numbers between -90 and 90 with up to 15 decimal places.</p>
ShippingLongitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with <code>ShippingLatitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between -180 and 180 with up to 15 decimal places.</p>
ShippingName	<p>Type string</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description The name of the entity (such as a person or business) that the quote is sent to for approval.</p>
ShippingPostalCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Postal code for the quote's shipping address.</p>
ShippingState	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description State for the quote's shipping address. Up to 80 characters allowed.</p>
ShippingStateCode	<p>Type picklist</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ISO state code for the quote's shipping address.</p>
ShippingStreet	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Street name for the quote's shipping address.</p>
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Nillable, Update</p> <p>Description The status of the quote. The standard options are:</p> <ul style="list-style-type: none"> • —None— • Draft • Needs Review • In Review • Approved • Rejected • Presented • Accepted • Denied
Subtotal	<p>Type currency</p> <p>Properties Filter, Nillable</p> <p>Description The sum of sales price multiplied by quantity for line items, not including the discount.</p>
Tax	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Update</p>

Field	Details
	<p>Description</p> <p>The total taxes for the quote.</p>
TotalPrice	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Filter, Nillable</p> <p>Description</p> <p>The total of the quote line items after discounts and before taxes and shipping.</p>

Usage

Use Quote to manage proposed product prices for customers. To update a Quote, your client application needs "Edit" permission.

- Client applications can create, update, delete, and query Attachment records associated with a quote via the API.
- You can sync a quote and its parent Opportunity.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

QuoteChangeEvent (API version 44.0)

Change events are available for the object.

QuoteFeed (API version 39.0)

Feed tracking is available for the object.

QuoteOwnerSharingRule (API version 41.0)

Sharing rules are available for the object.

QuoteShare (API version 41.0)

Sharing is available for the object.

SEE ALSO:

[QuoteLineItem](#)

[QuoteDocument](#)

[Opportunity](#)

QuoteDocument

Represents a quote in document format. Available in API version 18.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

Fields

Field	Details
ContentVersionDocumentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID for the document's version.</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Restricted picklist</p> <p>Description Available only for organizations with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. If the organization has multicurrency and a <code>Pricebook2Id</code> specified on the quote, then the currency value of this field must match the currency of the <code>PricebookEntry</code> objects that are associated with any quote line items it has.</p>
Discount	<p>Type percent</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The discount for the quote used in the document.</p>
Document	<p>Type base64</p> <p>Properties Create, Nillable</p> <p>Description The binary data of the document stored in the <code>QuoteDocument</code> object.</p>
GrandTotal	<p>Type currency</p>

Field	Details
	<p>Properties Filter, Nillable, Sort</p> <p>Description Grand total for the quote used in the document.</p>
Name	<p>Type string</p> <p>Properties Filter, idLookup, Sort</p> <p>Description Name of the quote document.</p>
QuoteId	<p>Type reference</p> <p>Properties Create, Filter, GroupSort</p> <p>Description ID for the quote used for the document.</p>

Usage

Use the QuoteDocument object to store a document that can be used to present the quote information to the customer.

SEE ALSO:

[Quote](#)

[QuoteLineItem](#)

QuoteLineItem

The QuoteLineItem object represents a quote line item, which is a member of the list of Product2 products associated with a Quote, along with other information about those line items on that quote. Available in API version 18.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The user must have “Edit” permissions on Quote records in order to create or update quote line items on a quote. The user must have “Edit” permissions on Quote records to delete a quote line item.

Fields

Field	Details
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description Available only for organizations enabled for multiples currencies. Contains the ISO code for any currency allowed by the organization. If the organization has multicurrency and a Pricebook2 is specified on the quote (the <code>Pricebook2Id</code> field is not blank), then the currency value of this field must match the currency of the PricebookEntry objects for any associated quote line items. This value is copied from the related Quote and can't be changed.</p>
Description	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Text description of the line item. Limit: 225 characters.</p>
Discount	<p>Type percent</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Editable number from 0 to 100.</p>
Division	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description A logical segment of your organization's data. For example, if your company is organized into different business units, you could create a division for each business unit, such as "North America," "Healthcare," or "Consulting." Available only if the organization has the Division permission enabled.</p>
HasQuantitySchedule	<p>Type boolean</p>

Field	Details
	<p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Read-only. Indicates whether the opportunity line item that the quote line item is synced with has a quantity schedule.</p>
HasRevenueSchedule	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Read-only. Indicates whether the opportunity line item that the quote line item is synced with has a revenue schedule. If this object has a revenue schedule, the <code>GrandTotal</code> and <code>TotalPrice</code> fields can't be updated. In addition, the <code>Quantity</code> field can't be updated if this object has a quantity schedule. The system ignores any attempt to update this field. The update isn't rejected but the updated value is ignored.</p>
HasSchedule	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Read-only. Indicates whether the line item uses schedules.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The most recent date on which a user referenced this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The most recent date on which a user viewed this record.</p>
LineNumber	<p>Type string</p>

Field	Details
	<p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description Read-only. Automatically generated number identifying the quote line item. In the form of QL-XXXXX.</p>
ListPrice	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Read-only. Corresponds to the <code>UnitPrice</code> on the <code>PricebookEntry</code> that is associated with this line item, which can be in the standard price book or a custom price book. A client application can use this information to show whether the unit price (or sales price) of the line item differs from the price book entry list price.</p>
OpportunityLineItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description ID of the related opportunity line item. This field is populated by the API during creation of the quote line item. Not editable. Available in API version 40.0 and later.</p>
PricebookEntryId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Required. ID of the associated <code>PricebookEntry</code>. Exists only for orgs with Products enabled. In API 38.0 and earlier, if <code>Product2Id</code> is populated with <code>PricebookEntryId</code> data, you receive an error message. In API 39.0 and later, <code>Product2Id</code> is made null, and <code>PricebookEntryId</code> is populated with the <code>PricebookEntryId</code> data.</p>
Product2Id	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Required. ID of the <code>Product2</code> associated with this <code>QuoteLineItem</code>. In API 38.0 and earlier, if <code>Product2Id</code> is populated with <code>PricebookEntryId</code> data, you receive an error message. In API 39.0 and later, <code>Product2Id</code> is made null, and <code>PricebookEntryId</code> is populated with the <code>PricebookEntryId</code> data.</p>

Field	Details
Quantity	<p>Type double</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The number of units for the line item.</p>
QuoteId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Required. ID of the associated Quote.</p>
ServiceDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Date when the product revenue will be recognized and the product quantity will be shipped.</p>
SortOrder	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The value of where the line item is in the sorted order, such as 1, 2, and so on. The SortOrder value determines the order in which a quote line item displays in the Quote Line Items related list and the Quote PDF. Client applications can use this to match the sort order in Salesforce. This field is only available in API versions 21.0 and greater.</p>
Subtotal	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The line item's <code>Quantity</code> multiplied by the <code>UnitPrice</code>.</p>
TotalPrice	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>Read-only. Calculated by applying the <code>Discount</code> to the <code>Subtotal</code>. This field is nillable, but you can't set both <code>TotalPrice</code> and <code>UnitPrice</code> to null in the same update. To insert the <code>TotalPrice</code> for a quote line item via the API (given only a unit price and the quantity), calculate this field as the unit price multiplied by the quantity. This field is read-only if the quote line item has a revenue schedule.</p>
<code>UnitPrice</code>	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Create, Filter, Sort, Update</p> <p>Description</p> <p>The price per unit for the quote line item.</p>

Usage

A Quote record can have QuoteLineItem records only if the Quote has a Pricebook2. A QuoteLineItem must correspond to a Product2 that is listed in the quote's Pricebook2.

-  **Note:** If the multicurrency option has been enabled, the `CurrencyIsoCode` field is present. It can't be modified, it is always set to the value of the `CurrencyIsoCode` of the parent Quote.

Effects on Quotes

Quotes that have associated QuoteLineItem objects are affected in the following ways:

- Creating a QuoteLineItem increments the Quote value by the `TotalPrice` of the QuoteLineItem.
- When you create or update a QuoteLineItem, the API verifies that the line item corresponds to a PricebookEntry in the Pricebook2 that is associated with the quote.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

QuoteLineItemChangeEvent (API version 44.0)

Change events are available for the object.

SEE ALSO:

- [Quote](#)
- [QuoteDocument](#)
- [Opportunity](#)

RecentFieldChange

Use this virtual object to see how an opportunity has changed in the past seven days. Learn the previous value of a field, who made the change, and when the change was made. This object is available in API version 52.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To use `RecentFieldChange`, set up historical trend reporting for opportunities in your org. You must also have the Pipeline Inspection user permission and the Pipeline Inspection setting enabled.

Fields

Field	Details
ChangeDate	<p>Type dateTime</p> <p>Properties</p> <p>Description The date and time that the specified field was changed.</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description The ISO code for the currency value. Must be one of the valid alphabetic, three-letter currency ISO codes defined by the ISO 4217 standard, such as USD, GBP, or JPY. The default value is 'USD'.</p>
FieldName	<p>Type string</p> <p>Properties Filter, Group</p> <p>Description The name of the opportunity field that you want the previous value of. Possible values are:</p> <ul style="list-style-type: none"> • Amount • CloseDate • StageName • ForecastCategory

Field	Details
	<ul style="list-style-type: none"> • NextStep
ParentId	<p>Type reference</p> <p>Properties Filter, Group</p> <p>Description The ID of the opportunity that you want the change history for. This is a relationship field.</p> <p>Relationship Name Parent</p> <p>Relationship Type Lookup</p> <p>Refers To Opportunity</p>
PreviousCurrencyValue	<p>Type currency</p> <p>Properties Nillable</p> <p>Description The previous value of a currency field on an opportunity.</p>
PreviousDateOnlyValue	<p>Type date</p> <p>Properties Group, Nillable</p> <p>Description The previous value of a date field on an opportunity.</p>
PreviousTextValue	<p>Type string</p> <p>Properties Group, Nillable</p> <p>Description The previous value of a text field on an opportunity.</p>
ValueChangedById	<p>Type reference</p> <p>Properties Group</p>

Field	Details
	<p>Description The ID of the user who changed the specified field's value during the specified time period. This is a relationship field.</p> <p>Relationship Name ValueChangedBy</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>

Usage

One recentFieldChange record is returned for each field that was changed in the past seven days. The supported fields are Amount, Close Date, Forecast Category, Next Step, and Stage Name. Only the most recent previous value is returned.

 **Example:** To see the most recent previous amount for an opportunity, use the following query. Replace 006R0000XXXXXXXXXX with the ID of the opportunity.

```
select PreviousTextValue from RecentFieldChange where ParentId = '006R0000003JkHBIA0'
and FieldName = 'StageName'
```

If the sales rep didn't change the opportunity stage name in the past seven days, no values are returned. If the sales rep changed the opportunity amount several times in the past seven days, only the most recent previous value is returned.

 **Example:** To see the most recent previous amount, close date, forecast category, next step, and stage name for an opportunity, use the following query. Replace 006R0000XXXXXXXXXX with the ID of the opportunity.

```
select PreviousTextValue, PreviousCurrencyValue, PreviousDateOnlyValue from
RecentFieldChange where ParentId = '006R0000XXXXXXXXXX' and FieldName IN ('StageName',
'Amount', 'CloseDate')
```

If the opportunity amount, close date, forecast category, next step, and stage name didn't change in the past seven days, no values are returned.

RecentlyViewed

Represents records or list views that the current user has recently viewed or referenced (by viewing a related record). List views are available in API version 29.0 and later.

Supported Calls

query(), update() update()

Special Usage Rules

The RecentlyViewed object does not support the Event, Task, Report, KnowledgeArticle, and Article objects.

The RecentlyViewed object supports only certain objects, and supports list views only for those supported objects. Supported objects have the fields `LastReferencedDate` and `LastViewedDate`.

Fields

Field	Details
Alias	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The alias on the record.</p>
Email	<p>Type email</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The email address on the record.</p>
FirstName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The first name on the record. If the recently viewed record is a user, the value is the user's first name.</p>
Id	<p>Type ID</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description The ID of the recently viewed record or list view.</p>
IsActive	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p>

Field	Details
	<p>Description</p> <p>Indicates whether the recently viewed record is an active user (<code>true</code>) or not (<code>false</code>). This field contains a value only if the recently viewed record is a user.</p>
LastName	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The last name on the record.</p>
LastReferencedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort, Update</p> <p>Description</p> <p>The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort, Update</p> <p>Description</p> <p>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The name on the recently viewed record or list view. If the recently viewed record is a user, contact, or lead, the value is a concatenation of the <code>firstname</code> and <code>lastname</code> field values.</p>
NetworkId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>ID of the Experience Cloud site that this group is part of. This field is available only if digital experiences is enabled in your org.</p> <p>You can add a <code>NetworkId</code> only when creating a group. You can't change or add a <code>NetworkId</code> for an existing group. This field is available in API version 27.0 and later.</p>
Phone	<p>Type</p> <p>phone</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The phone number on the record.</p>
ProfileId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>If the recently viewed record is a user, this value is the user's profile ID.</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>Profile</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>Profile</p>
Title	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>If the recently viewed record is a user, this value is the title of the user; for example CFO or CEO.</p>
Type	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Filter, Group, Nillable, Restricted, picklistSort</p>

Field	Details
	<p>Description</p> <p>The object type for this recently viewed record or list view. Valid values include any standard or custom objects that RecentlyViewed supports.</p>
UserRoleId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The ID of the user role associated with this object.</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>UserRole</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>UserRole</p>

Usage

This object provides a heterogeneous list of different object types. The list consists of recently viewed records, records that were recently referenced (a related record was viewed), or recently viewed list views. A record is considered viewed when the user sees the record details, but not when the user sees the record in a list with other records. Use this object to programmatically construct a list of recently viewed items specific to the current user. For example, use this object on a custom user interface or for search auto-complete options. You can also retrieve a filtered list of records by object type (`Type`). The RecentlyViewed data is periodically truncated down to 200 records and 200 list views per object. RecentlyViewed data is retained for 90 days, after which it is removed on a periodic basis.

Use this query in your code to retrieve a list of all the records and list views that were recently viewed. The results are ordered from most to least recent.

```
SELECT Id, Name
FROM RecentlyViewed
WHERE LastViewedDate !=null
ORDER BY LastViewedDate DESC
```

Use this query to retrieve data that was either viewed or referenced, but only for a limited set of objects.

```
SELECT Id, Name
FROM RecentlyViewed
WHERE Type IN ('Account', 'Contact', 'Plan__c')
ORDER BY LastViewedDate DESC
```

This query retrieves a list of all recently viewed contacts with contact-specific fields, such as the contact's account name, and the custom website field. Records are ordered from most to least recent.

```
SELECT Account.Name, Title, Email, Phone, Website__c
FROM Contact
```

```
WHERE LastViewedDate != NULL
ORDER BY LastViewedDate DESC
```

Recommendation

Represents the recommendations surfaced as offers and actions for Einstein Next Best Action. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

You must have the Modify All Data or Manage Next Best Action Recommendations user permission to create and edit recommendations.

Fields

Field	Details
AcceptanceLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Label that appears as the accept option on the surfaced recommendation. Maximum size is 80 characters.</p>
ActionReference	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Flow referenced for this recommendation. Label is Action.</p>
Description	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Text description of the recommendation. Maximum size is 255 characters.</p>

Field	Details
ImageId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Image referenced by this recommendation. Label is Image. This is a relationship field.</p> <p>Relationship Name Image</p> <p>Relationship Type Lookup</p> <p>Refers To ContentAsset</p>
IsActionActive	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the flow referenced in the Action field is active (true) or not (false). Read only.</p>
LastReferencedDate	<p>Type datetime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time when the recommendation was last referenced.</p>
LastViewedDate	<p>Type datetime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time when the recommendation was last viewed.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p>

Field	Details
	<p>Description</p> <p>The name of the recommendation. Maximum size is 80 characters.</p>
NetworkId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>ID of the Experience Cloud site associated with the recommendation (if applicable).</p>
RejectionLabel	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Label that appears as the reject option on the surfaced recommendation. Maximum size is 80 characters.</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

RecommendationChangeEvent (API version 48.0)

Change events are available for the object.

RecordAction

Represents a relationship between a record and an action, such as a flow. Create a RecordAction for every action that you want to associate with a particular record. Available in API version 42.0 and later.

 **Note:** Access to the RecordAction object is determined by a user's access to the associated parent record.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
ActionDefinition	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Required in Lightning Flow for Service implementations that use version 44.0 or later of the API. The API name of the action to associate with the record; for example, the API name of a flow. Use this field rather than FlowDefinition. To distinguish a quick action from a flow with the same API name, we prepend "QuickAction" to the API name of every quick action.</p>
ActionType	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Required in Lightning Flow for Service implementations that use version 46.0 or later of the API. The type of action. Possible values are:</p> <ul style="list-style-type: none"> • Flow (default) • QuickAction <p>For versions of the API prior to version 46.0, this field is set to Flow.</p>
FlowDefinition	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Optional in Lightning Flow for Service implementations using version 42.0 or 43.0 of the API. An upgrade to Winter '19 or later, which uses API version 44.0 or later, copies FlowDefinition to ActionDefinition. For versions 42.0 and 43.0, this field is the API name of the flow that's associated with the record.</p>
FlowInterviewId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Optional. The flow interview ID of the paused or completed flow. This field can't be set in Process Builder. This is a relationship field.</p>

Field	Details
	<p>Relationship Name FlowInterview</p> <p>Relationship Type Lookup</p> <p>Refers To FlowInterview</p>
IsMandatory	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Optional. Specifies whether the action is mandatory. The default value is false.</p> <p> Note: At runtime, we show a reminder when the user closes a mandatory flow without completing it. We don't show the reminder for quick actions.</p>
IsUiRemoveHidden	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Optional. Specifies whether the ability to remove the action is hidden in the UI. The default value is false. If true, the UI hides the ability to remove the action. However, actions can still be deleted using the API.</p>
Order	<p>Type int</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. The order of the action among all actions associated with this record.</p>
Pinned	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Required. Specifies whether the action is pinned to the top or bottom of the component. If an action is pinned, users see the Remove option in the UI unless <code>IsUiRemoveHidden</code> is set to true. Possible values are:</p> <ul style="list-style-type: none"> • None (default)

Field	Details
	<ul style="list-style-type: none"> • Top • Bottom
RecordId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. Record associated with the action. In version 46.0 and above, we support most object types. To learn about supported objects, see the Lightning Flow for Service Developer's Guide.</p> <p>This is a relationship field.</p> <p>Relationship Name Record</p> <p>Relationship Type Lookup</p> <p>Refers To Account, Address, Asset, AssetRelationship, AssignedResource, AssociatedLocation, Campaign, CampaignMember, CarePreauth, CarePreauthItem, Case, ChangeRequest, CollaborationGroup, Contact, ContactRequest, Contract, CoverageBenefit, CoverageBenefitItem, EnhancedLetterhead, Incident, Lead, Location, MemberPlan, OperatingHours, Opportunity, Order, PlanBenefit, PlanBenefitItem, Problem, Pricebook2, PricebookEntry, Product2, ProductItem, ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, PurchaserPlan, PurchaserPlanAssn, RebateMemberAggregateItem, ResourceAbsence, ResourcePreference, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, Shipment, SkillRequirement, SocialPersona, SocialPost, TimeSlot, User, Visit, VoiceCall, WorkOrder, WorkOrderLineItem, WorkType, WorkTypeGroup</p> <p>ChangeRequest, Incident, Problem are available in API version 53.0 and later.</p> <p>RebateMemberAggregateItem is available in API version 54.0 and later.</p>
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Required. The current state of the action. Possible values are:</p> <ul style="list-style-type: none"> • New (default) • Paused • Complete • Started

Field	Details
	<ul style="list-style-type: none"> <code>Unlinked</code>—The action was unlinked because the flow was paused and the current record for the flow interview changed. <p>Paused and unlinked statuses do not apply to quick actions. This field can't be set in Process Builder.</p>

Usage

The RecordAction object works with the Actions & Recommendations component in Lightning Experience. Although this junction object can be used to create relationships between records and actions in Salesforce Classic, those relationships can't be displayed in Salesforce Classic.

 **Note:** API version 44.0 added a field, ActionDefinition, so that a RecordAction in future releases can support other types of actions in addition to flows. API version 44.0 and later maintain the FlowDefinition field to support processes that reference this field in earlier API versions. Upgrading an org to Winter '19 or later, which uses API version 44.0 or later, copies the FlowDefinition field to the ActionDefinition field. FlowDefinition will be deprecated in a future release, so use ActionDefinition instead.

When an action is deleted that's referenced in an ActionDefinition or FlowDefinition, the RecordAction object is deleted. RecordAction objects are also deleted when the associated parent record is deleted, or when a flow is paused and the current record context has changed. When an action is completed, the associated RecordAction object is also deleted.

Deleted RecordActions are removed from the list when the page is refreshed.

For more information about the Actions & Recommendations component and how it works with RecordActions, see the [Lightning Flow for Service Developer Guide](#).

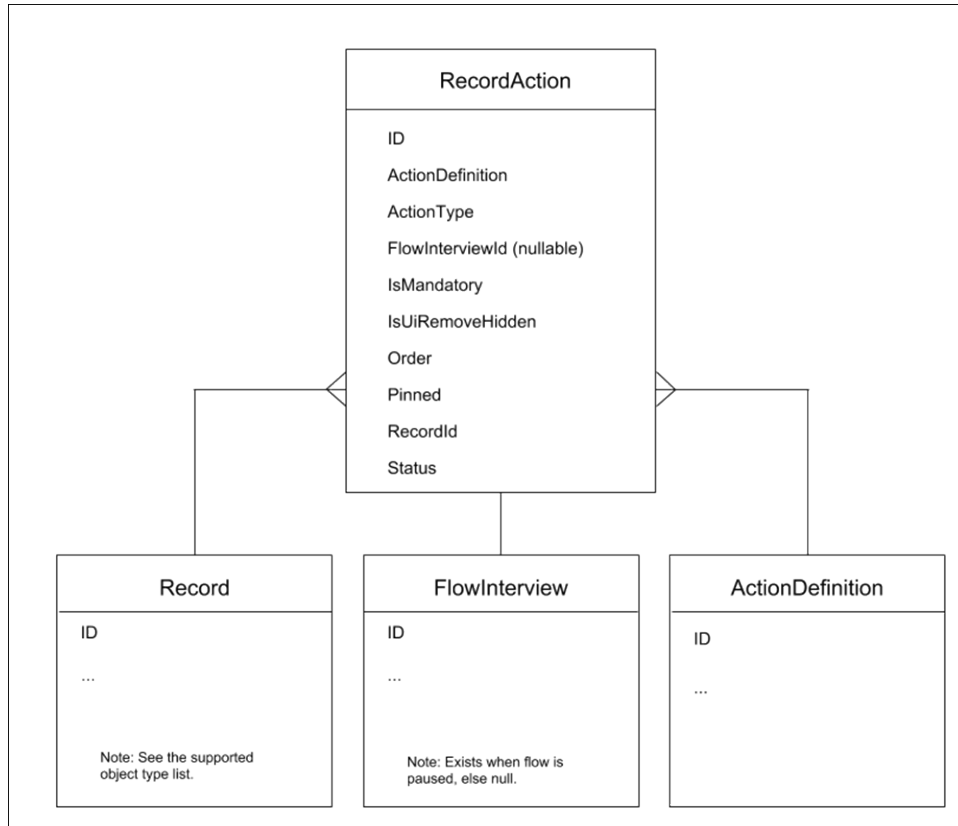

Java Example

Here's an example of how to associate flows to a record using the RecordAction object.

```
public void associateNewCustomerFlowWithAccount(Account a) {
    try {
        RecordAction newRecordAction = new RecordAction();
        newRecordAction.setRecordId(a.getId());
        newRecordAction.setActionDefinition("New_Customer_Flow");
        newRecordAction.setOrder(1);

        SaveResult[] results = connection
            .create(new SObject[] { newRecordAction });
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

Data Model

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[RecordActionHistory](#)

History is available for tracked fields of the object.

RecordActionHistory

Represents the lifecycle of a RecordAction as it goes through different states. Available in API version 44.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

This object is always read-only.

Fields

Field	Details
ActionDefinitionApiName	<p>Type string</p> <p>Description Required. The API name of the action associated with the record. To distinguish a quick action from a flow with the same API name, we prepend "QuickAction" to the API name of every quick action.</p>
ActionDefinitionLabel	<p>Type string</p> <p>Description Required. The label of the action that took place.</p>
ActionType	<p>Type picklist</p> <p>Properties Defaulted on create, Restricted picklist</p> <p>Description Required. The type of action associated with the record. Possible values are:</p> <ul style="list-style-type: none">• Flow (default)• QuickAction
IsMandatory	<p>Type boolean</p> <p>Properties Defaulted on create</p> <p>Description Optional. Specifies whether the action is mandatory. The default value is false.</p>
LoggedTime	<p>Type dateTime</p> <p>Properties Filter, Sort</p> <p>Description Required. The timestamp when the state change occurred.</p>
ParentRecordId	<p>Type reference</p> <p>Properties Filter, Sort</p>

Field	Details
	<p>Description Required. The parent record for the associated action. This is a relationship field.</p> <p>Relationship Name ParentRecord</p> <p>Relationship Type Lookup</p> <p>Refers To Account, Address, Asset, AssetRelationship, AssociatedLocation, Case, ChangeRequest, CollaborationGroup, Contact, ContactRequest, Contract, EnhancedLetterhead, Incident, Lead, Location, OperatingHours, Opportunity, Order, Pricebook2, PricebookEntry, Problem, Product2, ProductItem, ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, RebateMemberAggregateItem, ResourceAbsence, Scorecard, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, Shipment, SkillRequirement, SocialPersona, SocialPost, TimeSlot, User, Visit, VoiceCall, WorkType ChangeRequest, Incident, Problem are available in API version 53.0 and later. RebateMemberAggregateItem is available in API version 54.0 and later.</p>
Pinned	<p>Type picklist</p> <p>Properties Defaulted on create, Nillable, Restricted picklist</p> <p>Description Optional. Specifies whether the action is pinned to the top or bottom, or unpinned. Possible values are:</p> <ul style="list-style-type: none"> • None • Top • Bottom
RecordActionId	<p>Type string</p> <p>Properties Filter, Sort</p> <p>Description Required. The ID of the RecordAction.</p>
State	<p>Type picklist</p> <p>Properties Defaulted on create, Restricted picklist</p>

Field	Details
	<p>Description</p> <p>Required. The state of the action. A state change triggers the logging of a history event. Possible values are:</p> <ul style="list-style-type: none"> Started (default) Paused Resumed Completed Unlinked—The action was unlinked because the flow was paused and the current record for the flow interview changed.
UserId	<p>Type</p> <p>reference</p> <p>Description</p> <p>Required. The user that conducted the action.</p> <p>This is a polymorphic relationship field.</p> <p>Relationship Name</p> <p>User</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>User</p>

Usage

The RecordActionHistory object represents the lifecycle of an action on a record as it goes through different states.

The RecordActionHistory object is a big object. For this reason, when you use synchronous SOQL, SOAP, REST, Bulk, or Apex APIs to read this object, queries must follow a specific pattern or they fail. Queries must match one of these patterns and use fields in this precise order when more than one field is used.

- ParentRecordId
- ParentRecordId, LoggedTime (DESC)
- ParentRecordId, LoggedTime (DESC), RecordActionId

For example, this SOQL query follows the ParentRecordId, LoggedTime (DESC) pattern.

```
SELECT ActionDefinitionApiName, User, State FROM RecordActionHistory WHERE
    ParentRecordId = {CaseId} ORDER BY ParentRecordId, LoggedTime DESC
```

Asynchronous SOQL queries do not need to follow a pattern, and can query any field.

Apex triggers cannot reference big object records. Use SOQL queries if you want to query RecordActionHistory records in Apex.

For more information about the Actions & Recommendations component and how it works with RecordActions, see the [Lightning Flow for Service Developer Guide](#). Learn more about big objects and how to query them in the [Query Big Objects](#) module on Trailhead.

Java Example

Here's a Java example of how to query a RecordActionHistory object.

```
public void queryHBPOs(String parentRecordId) {
    try {
        SimpleDateFormat format = new SimpleDateFormat("yyyy-MM-dd");

        // query for the RecordActionHistory associated with ParentRecord
        QueryResult queryResults = connection.query("SELECT ActionDefinitionApiName,
        LoggedTime, State " +
        "FROM RecordActionHistory WHERE ParentRecordId = '" + parentRecordId + "' LIMIT
        50");
        if (queryResults.getSize() > 0) {
            for (int i=0;i<queryResults.getRecords().length;i++) {
                // cast the SObject to a strongly-typed RecordActionHistory
                RecordActionHistory raa = (RecordActionHistory)queryResults.getRecords()[i];
                System.out.println("ActionDefinitionApiName: " + raa.getActionDefinitionApiName()
                + " - LoggedTime: "+ format.format(raa.getLoggedTime().getTime()) + " - State: " +
                raa.getState());
            }
        }
    } catch (Exception e) {
        e.printStackTrace();
    }
}
```

RecordsetFilterCriteria

Represents a set of filters that can be used to match service appointments or assets based on your criteria fields. For example, you can create recordset filter criteria so that only service appointments that satisfy the filter criteria are matched to the filtered shifts, and likewise only maintenance work rules that satisfy your criteria are matched to assets. This object is available in API version 50.0 and later. Assets and maintenance work rules are available in API version 52.0 and later.

Supported Calls

create(), delete(), describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve(), search(), undelete(), update(), upsert()

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
Description	Type textarea

Field	Details
	<p>Properties Create, Nillable, Update</p> <p>Description The description of the recordset filter criteria.</p>
FilteredObject	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The object used to define the filter criteria. Available in API version 52.0 or later. Possible values are:</p> <ul style="list-style-type: none"> • Asset • ServiceAppointment
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the recordset filter criteria is associated with shifts or maintenance work rules (<code>true</code>) or not (<code>false</code>).</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the recordset filter criteria was last referenced.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the recordset filter criteria was last viewed.</p>
LogicalOperator	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

Field	Details
	<p>Description</p> <p>Defines the logic to evaluate multiple recordset filter criteria rules. Available in API version 53.0 and later.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • AND • OR
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, idLookup, Sort, Update</p> <p>Description</p> <p>The name of the recordset filter criteria.</p>
OwnerId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>The owner of the recordset filter criteria.</p>
SourceObject	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description</p> <p>The source object that the filtered criteria are applied to. Shifts and maintenance work rules are available in API version 52.0 and later. Appointment bundle objects are available in API version 53.0 and later.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • <code>ApptBundleAggrPolicy</code>—Appointment Bundle Aggregation Policy • <code>ApptBundleConfig</code>—Appointment Bundle Config • <code>Shift</code> • <code>MaintenanceWorkRule</code>

Usage

Let's say an employee is open to working a 9 am to 5 pm shift on a Sunday but only for emergency appointments. In this case, the `SourceObject` is `Shift` and the `FilteredObject` is `ServiceAppointment`. The service appointments available for that shift are filtered for emergency appointments using the `RecordsetFilterCriteriaRule` object.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

RecordsetFilterCriteriaFeed

Feed tracking is available for the object.

RecordsetFilterCriteriaHistory

History is available for tracked fields of the object.

RecordsetFilterCriteriaOwnerSharingRule

Sharing rules are available for the object.

RecordsetFilterCriteriaShare

Sharing is available for the object.

RecordsetFilterCriteriaRule

Represents a rule using fields from the designated source object to create filters on the filtered, or target, object. RecordsetFilterCriteriaRule is associated with the RecordsetFilterCriteria object. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
CriteriaField	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The field the filter rule is applied to. Asset fields are available in API version 52.0 and later. Possible values are derived from the source object's standard and custom fields. Possible standard source objects are <code>Asset</code> and <code>ServiceAppointment</code>. The format is, for example, <code>Asset.AccountId</code> or <code>ServiceAppointment.AccountId</code>. All standard and custom fields are allowed except those with these field types:</p> <ul style="list-style-type: none"> • <code>encryptedstring</code> • <code>multipicklist</code> • <code>textarea</code>

Field	Details
	<ul style="list-style-type: none"> url
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the recordset filter criteria rule was last referenced.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the recordset filter criteria rule was last viewed.</p>
Operator	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The relational operator between <code>CriteriaField</code> and <code>Value</code>. Available in API version 52.0 or later.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> Equals—Default GreaterOrEqual GreaterThan LessOrEqual LessThan
RecordsetFilterCriteriaId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the RecordsetFilterCriteria record to associate this rule with.</p>
RecordsetFilterCriteriaRuleNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p>

Field	Details
	<p>Description</p> <p>The automatically assigned number of the recordset filter criteria rule.</p>
Value	<p>Type</p> <p>textarea</p> <p>Properties</p> <p>Create, Nillable, Update</p> <p>Description</p> <p>The expected value of <code>CriteriaField</code> applied to the filter rule.</p>

Usage

If you want to create a filter rule for service appointments with a dispatched status, set `CriteriaField` to `ServiceAppointment.Status` and `Value` to `Dispatched`. Then add the ID from a `RecordsetFilterCriteria` record to `RecordsetFilterCriteriaId` to associate this rule with a filter criteria for shifts.

RecordType

Represents a record type.

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

! **Important:** Don't use record types as an access control mechanism. Profile assignment governs create and edit access for an object but doesn't govern read access. For example, a user assigned to a profile that isn't enabled for a particular record type can't create records with that record type, but can access records associated with that record type. Users with access to an object can read all record type information for that object. We strongly recommend against storing sensitive information in the record type description, name, or label. Instead, store sensitive information in a separate object or fields to which you've applied appropriate access controls.

Field	Details
<code>BusinessProcessId</code>	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Required for Opportunity and Lead record types in API version 17.0 and later. ID of an associated <code>BusinessProcess</code>.</p>

Field	Details
Description	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description A description of this record. Limit: 255 characters.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is Record Type Name.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p>
IsActive	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether this record is active (<code>true</code>) or not (<code>false</code>). Only active record types can be applied to records. Label is Active.</p>
IsPersonType	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether this record has been designated as a person account (<code>true</code>) or not (<code>false</code>). Visible only if the organization has the person account feature enabled.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p>

Field	Details
	<p>Description Required. Label of the record type in the user interface. Limit: 80 characters. Label is Record Type Label.</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
SubjectType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description Object to which this record type applies, including custom objects.</p>

Usage

Use this object to offer different BusinessProcess records and subsets of picklist values to different users based on their Profile. Your client application can describe or query RecordType records.

Client applications can create or update values in `RecordTypeId` on these objects, specifying a valid record type ID associated with these objects.

 **Note:** You can't create or update the `RecordTypeId` field on the CampaignMember records. Set the CampaignMember record type using the `CampaignMemberRecordTypeId` field on Campaign.

A client application can retrieve the list of valid record type IDs for a given object by querying the RecordType.

[Record Type Objects](#)

RecordTypeLocalization

Represents the translated value of a label for a record type when the Translation Workbench is enabled for your organization.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- Your organization must be using Professional, Enterprise, Developer, Unlimited, or Performance Edition and be enabled for the Translation Workbench.
- To view this object, you must have the “View Setup and Configuration” permission.

Fields

Field	Details
Language	<p>Type string</p> <p>Properties Create, Filter, Nillable, Restricted picklist</p> <p>Description The language for this translated label.</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Nillable</p> <p>Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> • In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed

Field	Details
	<p>package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.</p> <ul style="list-style-type: none"> In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Nillable</p> <p>Description The ID of the RecordType associated with the label that is being translated.</p>
Value	<p>Type string</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description The actual translated label for the record type. Label is Translation.</p>

Usage

Use this object to translate the labels of your record types into other supported languages.

RecordVisibility (Pilot)

Represents the visibility attributes that determine a record's read access. This object is read only and is available in API version 46.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

To access this object, you need a Tableau CRM license or to contact Salesforce to participate in the pilot program. You must also have the "View All Data" or "Enable RecordVisibility API" user permission.

 **Note:** We provide the RecordVisibility object to selected customers through a pilot program that requires agreement to specific terms and conditions. To be nominated to participate in the program, contact Salesforce. Pilot programs are subject to change, and we can't guarantee acceptance. The RecordVisibility object isn't generally available unless or until Salesforce announces its general availability in documentation or in press releases or public statements. We can't guarantee general availability within any

particular time frame or at all. Make your purchase decisions only on the basis of generally available products and features. You can provide feedback and suggestions for the RecordVisibility object in the group in the [Trailblazer Community](#).

Fields

Field Name	Details
RecordId	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The ID of the record.</p>
VisibilityAttribute	<p>Type string</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The visibility attributes that determine the read access of a given record. For example, a user ID, parent record ID, or group ID. The output of visibility attributes is in JSON format and must be deserialized.</p>

Usage

Use this object to query the attributes that determine the visibility of one or more records. You can't create, delete, or update any records using this object.

Up to 200 record IDs can be queried. You can include an `ORDER BY` clause for any field that is being selected in the query.

This sample query returns the visibility attributes for the indicated record.

```
SELECT RecordId, VisibilityAttribute
FROM RecordVisibility
WHERE RecordId=[single ID]      // or Record IN [list of IDs]
```

The `RecordId` and `VisibilityAttribute` fields must be a part of the fields that are being selected despite `RecordId` being used in the filter criteria as well.

`RecordVisibility` is a foreign key on the records. This query returns the visibility attributes for Account records:

```
SELECT Id, Name, RecordVisibility.VisibilityAttribute
FROM Account
```

You can't filter `RecordId` fields when using `RecordVisibility` as a lookup or foreign key.

You can use `RecordVisibilityContext` to filter `WITH` clauses in queries. For more information, see [WITH filteringExpression](#) in the *SOQL and SOSL Reference*.

RedirectWhitelistUrl

Represents a trusted URL that users can navigate to without being shown a warning message. This object is available in API version 48.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Only authenticated internal and external users with the View Setup and Configuration permission can access this object, and only users with the Customize Application permission can edit it.

Fields

Field	Details
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The unique name of the custom help section in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. The label corresponds to section title in the user interface. Limit: 80 characters.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
Language	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Language of the label. Possible values are:</p>

Field	Details
	<p>field's value is the namespace prefix of the Developer Edition org of the package developer.</p> <ul style="list-style-type: none"> In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
<code>Url</code>	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The trusted URL.</p>

Refund

Represents a refund made against a payment. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Payments entities, your org must have a Salesforce Order Management license with the Payment Platform org permission activated.

Fields

Field	Details
<code>AccountId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The customer account containing the payment that this refund targets. This is a relationship field.</p> <p>Relationship Name Account</p>

Field	Details
	<p>Relationship Type Lookup</p> <p>Refers To Account</p>
Amount	<p>Type currency</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description Total amount of this refund.</p>
Balance	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Remaining balance following refund line applications. Equal to the Amount field – the Net Applied field.</p>
CancellationDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date that the refund was canceled. This is a required parameter for void services.</p>
CancellationEffectiveDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date that the cancellation of this refund takes effect.</p>
CancellationGatewayDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date when the cancellation transaction was processed in the payment gateway.</p>

Field	Details
CancellationGatewayRefNumber	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Unique ID for the cancellation transaction. Generated by the payment gateway.</p>
CancellationGatewayResultCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Gateway-specific result code for the cancellation transaction. Generated by the payment gateway. Must be mapped to a Salesforce-specific result code.</p>
CancellationSfResultCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Salesforce-specific result code that can map to one or more gateway result codes. We recommend configuring the payment gateway adapter layer to map gateway result codes to the appropriate Salesforce result code.</p>
ClientContext	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description Contains caller context for payment APIs. Useful for re-establishing context during an asynchronous payment transaction.</p>
Comments	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Users can add comments to provide additional details about a record. Maximum of 1000 characters.</p>
CurrencyIsoCode	<p>Type picklist</p>

Field	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Three-letter ISO 4217 currency code associated with the payment group record.</p>
Date	<p>Type dateTime</p> <p>Properties Create, Defaulted on create, Filter, Nillable, Sort, Update</p> <p>Description The date and time that this refund was created.</p>
EffectiveDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Defines the date and time when the refund application becomes effective.</p>
Email	<p>Type email</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Fraud parameter.</p>
GatewayDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date that a successful gateway communication caused the creation of this refund.</p>
GatewayRefNumber	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Unique transaction ID created by the payment gateway.</p>
GatewayResultCode	<p>Type string</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Gateway-specific result code. Must be mapped to a Salesforce-specific result code.</p>
GatewayResultCodeDescription	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Description of the GatewayResultCode. Useful for providing additional context as to why the gateway returned a specific result code.</p>
ImpactAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Shows the refund's financial impact against the customer's accounts receivable. Equals the refund's Amount field if the refund amount is valid. Equals 0 when the refund amount is void. Has a null value when the refund is canceled.</p>
IpAddress	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Fraud parameter.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field	Details
	<p>Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>
MacAddress	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Fraud parameter.</p>
NetApplied	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Equals the Total Applied field – the Total Unapplied field.</p>
OrderPaymentSummaryId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Order payment summary record that shows the balances of each authorization, capture, and refund made against an order.</p>
PaymentGatewayId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The payment gateway used to process this refund. This is a relationship field.</p> <p>Relationship Name PaymentGateway</p> <p>Relationship Type Lookup</p> <p>Refers To PaymentGateway</p>

Field	Details
PaymentGroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The payment group for the payment being refunded. This is a relationship field.</p> <p>Relationship Name PaymentGroup</p> <p>Relationship Type Lookup</p> <p>Refers To PaymentGroup</p>
PaymentMethodId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The payment method used to create the payment being refunded. This is a relationship field.</p> <p>Relationship Name PaymentMethod</p> <p>Relationship Type Lookup</p> <p>Refers To PaymentMethod</p>
Phone	<p>Type phone</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Fraud parameter.</p>
ProcessingMode	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description Defines whether the payment has been made outside of the payment platform.</p>

Field	Details
	<p>Possible values are:</p> <ul style="list-style-type: none"> • <code>External</code>: Transactions happened outside of the Salesforce payments platform. • <code>Salesforce</code>: Salesforce made and recorded an external call to the payment gateway.
<code>RefundNumber</code>	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description System-created unique ID for this refund.</p>
<code>SfResultCode</code>	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Salesforce-specific result code that can map to one or more gateway result codes. We recommend configuring the payment gateway adapter layer to map gateway result codes to the appropriate Salesforce result code.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • <code>Decline</code>: The gateway call failed, but it may still work if the transaction is attempted again. For example, the customer had insufficient funds or briefly lost their connection. • <code>Indeterminate</code>: The gateway didn't respond to the call. This response usually happens when Salesforce times out while waiting for a response from the gateway. • <code>PermanentFail</code>: The gateway call failed and won't work even if tried again. Gateway calls fail permanently for one of two reasons: <ul style="list-style-type: none"> – <code>Hard Decline</code>: The customer's payment account has been closed or terminated. – <code>Fraud</code>: The gateway recognized the payment or payment method as known fraud. • <code>RequiresReview</code>: The customer bank requires more information before completing the payment. • <code>Success</code>: The gateway call succeeded. • <code>SystemError</code>: Salesforce ended the payment request before receiving a response. For example, Salesforce lost credentials or access to its server. Salesforce ends payment calls if it doesn't receive a response from the gateway within two minutes. • <code>ValidationError</code>: Customer payment data was incorrect, such as a misspelling in the credit card address or an incorrect CVV.
<code>Status</code>	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p>

Field	Details
	<p>Description</p> <p>Defines the state of this refund.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • <code>Canceled</code>: This refund has been voided and can no longer be allocated. • <code>Draft</code>: The refund can be edited before posting it and allocating it to a target. • <code>Processed</code>: This refund has been finalized and can be allocated against a target. <p>Users can manually change the Status field's values as follows:</p> <ul style="list-style-type: none"> • Draft to Processed • Processed to Canceled • Draft to Canceled
TotalApplied	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The sum of Amount fields across all of this refund's applied refund lines.</p>
TotalUnapplied	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The sum of Amount fields across all of this refund's unapplied refund lines.</p>
Type	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description</p> <p>Defines how this refund is used.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • <code>NonReferenced</code>: Standalone refund not linked to any payment. • <code>Referenced</code>: Refund made against a payment.

RefundLinePayment

A refund line that has been applied to a payment. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access Commerce Payments entities, your org must have a Salesforce Order Management license with the Payment Platform org permission activated.

Fields

Field	Details
Amount	<p>Type currency</p> <p>Properties Create, Filter, Sort</p> <p>Description The total amount applied to or unapplied from a payment by the refund line.</p>
AppliedDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description The date that the refund was applied to the linked payment.</p>
AssociatedAccountId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The account for the payment that received the refund. This is a relationship field.</p> <p>Relationship Name AssociatedAccount</p> <p>Relationship Type Lookup</p> <p>Refers To Account</p>
AssociatedRefundLinePaymentId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The refundLine that was unapplied. Populated only when RefundLinePayment's Type has a value of Unapplied.</p> <p>This is a relationship field.</p> <p>Relationship Name AssociatedRefundLinePayment</p> <p>Relationship Type Lookup</p> <p>Refers To RefundLinePayment</p>
Comments	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Users can add comments to provide additional information on the refund line payment.</p>
Date	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description By default, the day the refund line payment record was created. Users can also enter a different date.</p>
EffectiveDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description Defines the date and time when the refund line application or unapplication becomes effective.</p>
EffectiveImpactAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>Shows how this payment refund line impacts a customer's accounts receivable. This value is positive when RefundLinePayment's Type field is Applied, and negative when RefundLinePayment's Type is Unapplied. If there's an unapplied line related to this record, EffectivImpactAmount has a value of 0.</p> <p> Note: EffectivImpactAmount evaluates only the applied and unapplied line pair. Therefore, the effective impact amount could be different for different lines within the same refund.</p>
HasBeenUnapplied	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Restricted picklist, Sort</p> <p>Description</p> <p>Shows whether this refund line has been unapplied.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> No

Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p>

Field	Details
	<p>Description</p> <p>Defines whether this line represents a refund that's been applied or unapplied from a payment.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Applied
UnappliedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Create, Filter, Nillable, Sort</p> <p>Description</p> <p>The date that this refund line was unapplied from a payment.</p>

Usage

When you're ready to apply a refund's balance to a payment, create a refund line (`RefundLinePayment`). The refund line represents the balance taken from the payment and applied toward the invoice. You can apply a refund's balance when you create the refund record or afterward. The refund line must have the same currency as the parent refund.

A refund has an amount, which represents the total amount taken from the refund, and a balance, which represents the remaining amount after the refund line has been applied to a payment. A refund's amount can't be less than the sum of all of its refund line amounts. You can apply any portion of a refund's balance to a payment.

You can apply a refund to transactions on the same account or to different transactions across different

accounts.

RegisteredExternalService

Represents a registered external service used for checkout integrations by data integrators. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

The RegisteredExternalService object is available only if the B2B Commerce on Lightning Experience license is enabled.

Fields

Field	Details
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
ExternalServiceProviderId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of an Apex class that implements one of the following interfaces:</p> <ul style="list-style-type: none"> • sfdc_checkout.CartInventoryValidation • sfdc_checkout.CartPriceCalculations • sfdc_checkout.CartShippingCharges • sfdc_checkout.CartTaxCalculations
ExternalServiceProviderType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The types of external service providers. Possible values are:</p> <ul style="list-style-type: none"> • Inventory • Price • Promotions (this value is available in API version 53.0 and later)

Field	Details
	<ul style="list-style-type: none"> • Shipment • Tax
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The master label for the registered external service.</p>

RemoteKeyCalloutEvent

The documentation has moved to [RemoteKeyCalloutEvent](#) in the *Platform Events Developer Guide*.

Reply

Represents a reply that a user has submitted to a question in an answers zone.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Body	<p>Type textarea</p> <p>Properties Create, Update</p> <p>Description Body of this reply.</p>
CommunityId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	Description The zone ID associated with the question and its reply. This field is available in API version 27.0 and later.
CreatorFullPhotoUrl	Type string Properties Filter, Group, Nillable, Sort Description URL of the user's profile photo from the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.
CreatorName	Type string Properties Filter, Group, Nillable, Sort Description Name of the user who posted the question or reply. Only the first name of internal users (agents) appears to portal users in the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.
CreatorSmallPhotoUrl	Type string Properties Filter, Group, Nillable, Sort Description URL of the user's thumbnail photo from the feed. Chatter Answers must be enabled to view this field. This field is available in API version 26.0 and later.
DownVotes	Type int Properties Filter, Group, Nillable, Sort Description The total number of down votes for a reply.
Name	Type string Properties Filter, Group, idLookup, Sort

Field	Details
	<p>Description</p> <p>When creating a Reply, the Name field is automatically populated with a truncated, plain text version of the Reply Body field.</p>
NumReportAbuses	<p>Type</p> <p>int</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>Represents the number of reported abuses on the reply by users.</p> <p>This field is available in API version 24.0 and later.</p>
QuestionId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>ID of the Question to which this reply was made.</p>
UpVotes	<p>Type</p> <p>int</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The total number of up votes for a reply.</p>
VoteTotal	<p>Type</p> <p>double</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The total number of all votes for a reply, including up and down votes.</p>

Usage

Use this object to track replies to a Question.

ReplyReportAbuse

Represents a user-reported abuse on a Reply in a Chatter Answers zone. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The name of the Reply from which the user reported abuse.</p>
Reason	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The reason the user reported abuse on the Reply, such as <code>Spam</code>, <code>Hateful</code>, or <code>Inappropriate</code>.</p>
ReplyId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the Reply from which the user reported abuse.</p>

Usage

Use this object to track user-reported abuse on replies created in a Chatter Answers zone.

ReplyText

A text reply generated by Einstein Reply Recommendations that is based on closed chat transcripts. Admins review replies and publish them to quick text, editing them as needed. Einstein recommends relevant published replies to support agents in the Lightning Service Console, and agents can insert replies into chats or messaging sessions. This object is available in API version 49.0 and later.

 **Important:** Because the replies generated by Einstein are taken from closed chats with your customers, they may contain customer data. You can edit replies before they are recommended to agents.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Fields

Field	Details
Language	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The language used in the reply. This field is available in API version 51.0 and later. Possible values are languages supported in Einstein Reply Recommendations.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description Eight-digit auto-generated number identifying the reply.</p>
RawTextMessage	<p>Type textarea</p> <p>Properties</p> <p>Description The text of the reply.</p>
Source	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description Indicates who last modified the reply. Possible values are:</p> <ul style="list-style-type: none"> • <code>EINSTEIN_GENERATED</code>—Reply was generated by Einstein and has not been edited. • <code>USER_EDITED</code>—Reply was generated by Einstein and then edited by a user. • <code>USER_GENERATED</code>—This value is not currently in use.
Status	<p>Type picklist</p>

Field	Details
	<p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The status of the reply.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • NEW—Einstein has generated the reply and it hasn't yet been published. • PUBLISHED—The reply has been published to quick text. When the reply recommendation model is activated, the reply can be recommended to support agents. • PUBLISH_FAILED— An attempt to publish the reply to quick text failed. Publishing failure can be due to validation errors, access errors, or corrupted files. To hide the reply from the list of generated replies, delete it.

Usage

To get started with Einstein Reply Recommendations, create a predictive model that analyzes closed chats for frequently used text snippets. When the model is ready, Einstein generates a list of these snippets as ReplyText records for you to review and publish, or convert, to quick text. ReplyText records appear on the Einstein Reply Recommendations Setup page.

You can select one or more replies to publish at a time. If you publish a single reply, you can edit the reply text during publishing. If you publish multiple replies at once, you can edit each reply's text on the quick text page after publishing is complete. Replies aren't recommended to support agents until you activate your reply recommendation model.

When a reply is published, a corresponding [QuickText](#) record is created. During publishing, select a quick text folder to add the replies to and make sure that agents have access to the folder. To edit a reply after it is published, edit the related quick text record.

Einstein generates the list of replies only once, when your model finishes building. It's not possible to generate a new list.

Copyright

Rights of ALBERT EINSTEIN are used with permission of The Hebrew University of Jerusalem. Represented exclusively by Greenlight.

Report

Represents a report, a set of data that meets certain criteria, displayed in an organized way. Access is read-only. This object is available in API version 20.0 and later.

Supported Calls

`describeObjects()`, `query()`, `retrieve()`, `search()`

Fields

Field	Details
Description	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The description of the report. Limit: 255 characters.</p>
DeveloperName	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is Report Unique Name.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p>
FolderName	<p>Type string</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Name of the folder that contains the report. Available in API version 35.0 and later.</p>
Format	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description Required. Indicates the format of the report. This field is available in API version 29.0 and later. Can have one of these values:</p> <ul style="list-style-type: none"> • Tabular for reports in that format. In the application, the label is <code>Tabular</code>. • Summary for reports in that format. In the application, the label is <code>Summary</code>. • Matrix for reports in that format. In the application, the label is <code>Matrix</code>.

Field	Details
	<ul style="list-style-type: none"> • Multiblock for reports in joined format. In the application, the label is <code>Joined</code>.
IsDeleted	<p>Type boolean</p> <p>Properties Defaulted on create, Filter</p> <p>Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.</p>
LastReferencedDate	<p>Type datetime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastRunDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Returns the date the report was last run. Label is Last Run.</p>
LastViewedDate	<p>Type datetime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description Required. The report label used in the user interface.</p>

Field	Details
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. <p>This field can't be accessed unless the logged-in user has the Customize Application permission.</p>
OwnerId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the folder that contains the report. There are 2 special folders:</p> <ul style="list-style-type: none"> Private, where the ID is the user ID Public, where the ID is the org ID <p>This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Folder, Organization, User</p>

Supported Query Scopes

Use these scopes to help specify the data your SOQL query returns.

allPrivate

Records saved in all users' private folders.

Requires the user permission "Manage All Private Reports and Dashboards" and [Enhanced Analytics Folder Sharing](#). If your organization was created after the Summer '13 release, you already have Enhanced Analytics Folder Sharing. Available in API version 36.0 and later.

created

Records created by the user running the query.

everything

All records except records saved in other users' private folders.

mine

Records saved in the private folder of the user running the query.

organizationOwned

Records saved in Unfiled Public Reports. In Lightning Experience, the Unfiled Public Reports folder is called Public Reports.

Usage

Use the report object to get report metadata. Query, search, or retrieve specific metadata on reports. Report object fields are read-only.

Example: Reports with "Sales" in Their Name

This SOQL query returns reports that contain the name "Sales" and lists their developer names, format, ID, and report name.

```
SELECT DeveloperName, Format, Id, Name FROM Report WHERE Name LIKE '%Sales%'
```

Example: Reports in an Inactive User's Private Folder

This SOQL query returns reports saved in a specific user's private folder.

```
SELECT Id FROM Report USING SCOPE allPrivate WHERE OwnerId = '005A0000000Bc2deFG'
```

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ReportFeed

Feed tracking is available for the object.

SEE ALSO:

[ReportTag](#)

[Dashboard](#)

ReportTag

Associates a word or short phrase with a Report. This object is available in API version 20.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
ItemId	<p>Type reference</p> <p>Properties Create, Filter</p> <p>Description ID of the tagged item.</p>
Name	<p>Type string</p> <p>Properties Create, Filter</p> <p>Description Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.</p>
TagDefinitionId	<p>Type reference</p> <p>Properties Filter</p> <p>Description ID of the parent TagDefinition object that owns the tag.</p>
Type	<p>Type picklist</p> <p>Properties Create, Filter, Restricted picklist</p> <p>Description Defines the visibility of a tag.</p> <p>Valid values:</p> <ul style="list-style-type: none"> • <code>Public</code>—The tag can be viewed and manipulated by all users in an organization. • <code>Personal</code>—The tag can be viewed or manipulated only by a user with a matching <code>OwnerId</code>.

Usage

ReportTag stores the relationship between its parent TagDefinition and the Report being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

[Report](#)

ReputationLevel

Represents a reputation level defined for an Experience Cloud site. This object is available in API version 32.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

This object is available only if digital experiences is enabled in your org. Only users with permissions to create or manage an Experience Cloud site can view the ReputationPointsRule records.

Fields

Field Name	Details
Label	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The label for the reputation level.</p>
LevelNumber	<p>Type int</p> <p>Properties Filter, Group, Sort</p> <p>Description The rank of the reputation level.</p>
ParentId	<p>Type reference</p>

Field Name	Details
	<p>Properties Filter, Group, Sort</p> <p>Description The ID of the parent Experience Cloud site the reputation level applies to.</p>
Threshold	<p>Type double</p> <p>Properties Filter, Sort</p> <p>Description The lower limit of reputation points associated with this reputation level. The maximum number of reputation points a user can accrue is 999,999,999,999,999.</p>

ReputationLevelLocalization

Represents the translated value of a reputation level. Reputation level localization only applies for reputation levels in Experience Cloud sites. This object is available in API version 35.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This object is available only if digital experiences is enabled in your org and reputation is enabled in your Experience Cloud site.

Fields

Field Name	Details
Language	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The language the reputation level is translated into. The picklist contains the following fully-supported languages:</p> <ul style="list-style-type: none"> Chinese (Simplified): zh_CN Chinese (Traditional): zh_TW

Field Name

Details

- Danish: `da`
- Dutch: `n1_NL`
- English: `en_US`
- Finnish: `fi`
- French: `fr`
- German: `de`
- Italian: `it`
- Japanese: `ja`
- Korean: `ko`
- Norwegian: `no`
- Portuguese (Brazil): `pt_BR`
- Russian: `ru`
- Spanish: `es`
- Spanish (Mexico): `es_MX` Spanish (Mexico) defaults to Spanish for customer-defined translations.
- Swedish: `sv`
- Thai: `th` The Salesforce user interface is fully translated to Thai, but Help is in English.

NamespacePrefix

Type

string

Properties

Filter, Group, Nillable, Sort

Description

The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the **`namespacePrefix__componentName`** notation.

The namespace prefix can have one of the following values.

- In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.
- In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.

ParentId

Type

reference

Field Name	Details
	<p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the reputation level this translated value applies to.</p>
Value	<p>Type string</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The translated text for the reputation level. Label is Translation Text.</p>

ReputationPointsRule

Represents the reputation point rules for an Experience Cloud site. Each rule specifies an action that members can earn points from and the points associated with those actions in a particular site. This object is available in API version 32.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

This object is available only if digital experiences is enabled in your org. Only users with permissions to create or manage an Experience Cloud site can view the ReputationPointsRule records.

Fields

Field Name	Details
ParentId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the parent Experience Cloud site that the point rule applies to.</p>
Points	<p>Type int</p>

Field Name	Details
	<p>Properties Filter, Group, Sort</p> <p>Description The reputation points associated with the member action this rule is for. The maximum value this field can contain is 999,999.</p>
Type	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The member action associated with this rule, limited to one of these actions:</p> <ul style="list-style-type: none"> • Write a post (<code>FeedItemWriteAPost</code>) • Write a comment (<code>FeedItemWriteAComment</code>) • Receive a comment (<code>FeedItemReceiveAComment</code>) • Like something (<code>FeedItemLikeSomething</code>) • Receive a like (<code>FeedItemReceiveALike</code>) • Share a post (<code>FeedItemShareAPost</code>) • Someone shares your post (<code>FeedItemSomeoneSharesYourPost</code>) • Mention someone (<code>FeedItemMentionSomeone</code>) • Receive a mention (<code>FeedItemReceiveAMention</code>) • Ask a question (<code>FeedItemPostQuestion</code>) • Answer a question (<code>FeedItemAnswerAQuestion</code>) • Receive an answer (<code>FeedItemReceiveAnAnswer</code>) • Mark an answer as best (<code>FeedItemMarkAnswerAsBest</code>) • Someone marks your answer as best (<code>FeedItemYourAnswerMarkedBest</code>) • Endorse someone for knowledge on a topic (<code>EndorseSomeoneForKnowledgeOnATopic</code>) • Someone endorses you for knowledge on a topic (<code>EndorsedForKnowledgeOnATopic</code>) • Upload a profile picture (<code>ProfilePhotoUpload</code>) This action is available in API version 45.0 and later.

ResourceAbsence

Represents a time period in which a service resource is unavailable to work in Field Service and Lightning Scheduler. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
AbsenceNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description (Read only) An auto-generated number identifying the absence.</p>
Address	<p>Type address</p> <p>Properties Filter</p> <p>Description The compound form of the address associated with the absence.</p>
City	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The city of the address associated with the absence. Maximum length is 40 characters.</p>
Country	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The country of the address associated with the absence. Maximum length is 80 characters.</p>

Field Name	Details
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The description of the absence.</p>
End	<p>Type dateTime</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The date and time when the absence ends.</p>
GeocodeAccuracy	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The level of accuracy of a location's geographical coordinates compared with its physical address. Usually provided by a geocoding service based on the address's latitude and longitude coordinates.</p> <p> Note: This field is available in the API only.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the resource absence was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the resource absence was last viewed.</p>
Latitude	<p>Type double</p>

Field Name	Details
	<p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with <code>Longitude</code> to specify the precise geolocation of the address associated with the absence. Acceptable values are numbers between <code>-90</code> and <code>90</code> with up to 15 decimal places.</p> <p> Note: This field is available in the API only.</p>
Longitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with <code>Latitude</code> to specify the precise geolocation of the address associated with the absence. Acceptable values are numbers between <code>-180</code> and <code>180</code> with up to 15 decimal places.</p> <p> Note: This field is available in the API only.</p>
Postal Code	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The postal code of the address associated with the absence. Maximum length is 20 characters.</p>
ResourceId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The absent service resource. This is a relationship field.</p> <p>Relationship Name Resource</p> <p>Relationship Type Lookup</p> <p>Refers To ServiceResource</p>

Field Name	Details
Start	<p>Type dateTime</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The date and time when the absence begins.</p>
State	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The state of the address associated with the absence. Maximum length is 80 characters.</p>
Street	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The street number and name of the address associated with the absence.</p>
Type	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The type of absence: <i>Meeting, Training, Medical, or Vacation</i>. The default value is <i>vacation</i>. You can add custom values if needed, but the name <i>Break</i> is reserved for the managed package.</p>

Usage

Resource absences you define periods of time when a service resource is unavailable to work. Unless you're using the Field Service managed package, service resources can still be assigned to appointments that conflict with their absences.

 **Tip:** Create a trigger that sends an approval request to a supervisor when a service resource creates an absence.

If you're not using the Field Service managed package, a calendar view isn't available for individual service resources.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ResourceAbsenceChangeEvent (API version 48.0)

Change events are available for the object.

ResourceAbsenceFeed

Feed tracking is available for the object.

ResourceAbsenceHistory

History is available for tracked fields of the object.

ResourcePreference

Represents an account's preference for a specified service resource on field service work.

Resource preferences indicate which service resources should be assigned to field service work. You can designate service resources as preferred, required, or excluded on specific accounts or work orders. Work orders inherit their associated account's resource preferences.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the resource preference was last modified.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the resource preference was last viewed.</p>

Field Name	Details
PreferenceType	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Resource preference type. Values include:</p> <ul style="list-style-type: none"> • Preferred: Indicates that the customer would like their field service work assigned to the resource • Required: Indicates that the resource must be assigned to the customer's field service work • Excluded: Indicates that the customer does not want their field service work assigned to the resource <p>Resource preferences serve more as a suggestion than a requirement. You can still assign a service appointment to any resource regardless of the related work order's resource preferences.</p>
RelatedRecordId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The work order or account with the resource preference. This is a polymorphic relationship field.</p> <p>Relationship Name RelatedRecord</p> <p>Relationship Type Lookup</p> <p>Refers To Account, WorkOrder</p>
ResourcePreferenceNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, Sort</p> <p>Description An auto-generated number identifying the resource preference.</p>
ServiceResourceId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ResourcePreferenceFeed

Feed tracking is available for the object.

ResourcePreferenceHistory

History is available for tracked fields of the object.

ReturnOrder

Represents the return or repair of inventory or products in Field Service, or the return of order products in Order Management. This object is available in API version 42.0 and later.

Return orders are available in Lightning Experience, Salesforce Classic, the Salesforce mobile app, the Field Service mobile app for Android and iOS, and communities built using Salesforce Tabs + Visualforce.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service or Order Management must be enabled. If return orders are enabled by a Salesforce Order Management license, they must be created with a Status corresponding to the Status Category Activated. The default Statuses corresponding to Activated are Submitted and Approved.

Usage

You can use return orders to track customer returns, customer repairs, or the return of inventory from a technician's van stock to a warehouse or supplier. Customers can initiate a return from a community, or agents can create return orders in response to a customer call or technician request.

Return orders are composed of return order line items, which allow you to add details about the items being returned. To represent the returned items, each line item must list one or more of the following: product, product item, asset, product request line item, and order product. Return orders can be associated with a product request, case, account, contact, and order if needed. This versatility lets you use return orders to track a wide range of return scenarios.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ReturnOrderChangeEvent (API version 48.0)

Change events are available for the object.

ReturnOrderFeed

Feed tracking is available for the object.

ReturnOrderHistory

History is available for tracked fields of the object.

ReturnOrderOwnerSharingRule

Sharing rules are available for the object.

ReturnOrderShare

Sharing is available for the object.

ReturnOrderItemAdjustment

Represents a price adjustment on a return order line item. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Order Management must be enabled.

Field Name	Details
	<p>Refers To ProductRequestLineItem</p>
ProductServiceCampaignId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The product service campaign associated with the return order line item.</p>
ProductServiceCampaignItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The product service campaign item associated with the return order line item.</p>
QuantityExpected	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The quantity of items expected to be returned. This field is available in API version 50.0 and later.</p>
QuantityReceived	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The actual quantity of items received for return. This field is available in API version 50.0 and later.</p>
QuantityRejected	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The quantity of items rejected for return. This field is available in API version 50.0 and later.</p>

Field Name	Details
QuantityReturned	<p>Type double</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The quantity of items being returned. If multiple types of products are being returned, track each product in a different return order line item.</p>
QuantityUnitOfMeasure	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Units of the returned items; for example, kilograms or liters. Quantity Unit of Measure picklist values are inherited from the Quantity Unit of Measure field on products.</p>
ReasonForRejection	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description Reason for rejecting returned items on this return order line item. Possible values are:</p> <ul style="list-style-type: none"> • Damaged Item • Expired Warranty • Missing Item or Part • Wrong Item <p>This field is available in API version 50.0 and later.</p>
ReasonForReturn	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description The reason the items are being returned. Available values are:</p> <ul style="list-style-type: none"> • Damaged • Defective • Duplicate Order • Wrong Item

Field Name	Details
	<ul style="list-style-type: none"> • Wrong Quantity • Not Satisfied • Outdated • Other
RepaymentMethod	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description The method by which the customer or owner will be reimbursed for the items being returned. Available values are:</p> <ul style="list-style-type: none"> • Replace—The items will be replaced • Refund—The items will be returned and the owner will be refunded • Credit—The items will be returned and the owner will receive credit for them • Return—The items will be returned to the owner (for example, following their repair)
ReturnOrderId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The return order that the return order line item belongs to. This is a relationship field.</p> <p>Relationship Name ReturnOrder</p> <p>Relationship Type Lookup</p> <p>Refers To ReturnOrder</p>
ReturnOrderLineNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description (Read only) Auto-generated number that identifies the return order line item.</p>

Field Name	Details
SourceLocationId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The items' location at the start of the return or repair. For example, if the return order tracks the return of products from a technician's service vehicle to a warehouse, the service vehicle is the source location.</p> <p>This is a relationship field.</p> <p>Relationship Name SourceLocation</p> <p>Relationship Type Lookup</p> <p>Refers To Location</p>
TotalAdjustmentAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total of all price adjustments applied to the return order line item.</p> <p>This is a calculated field.</p> <p>This field is available in API version 50.0 and later.</p>
TotalAdjustmentAmountWithTax	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total amount of the price adjustments applied to the return order line item, inclusive of tax. This amount is equal to TotalAdjustmentAmount + TotalAdjustmentTaxAmount.</p> <p>This is a calculated field.</p> <p>This field is available in API version 50.0 and later.</p>
TotalAdjustmentTaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>Tax on the TotalAdjustmentAmount.</p> <p>This is a calculated field.</p> <p>This field is available in API version 50.0 and later.</p>
TotalAmount	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>Total, including adjustments and tax, of the return order line item.</p> <p>This is a calculated field.</p> <p>This field is available in API version 50.0 and later.</p>
TotalLineAmount	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Nillable, Sort, Update</p> <p>Description</p> <p>Total, not including adjustments or tax, of the return order line item.</p> <p>This field is available in API version 50.0 and later.</p>
TotalLineAmountWithTax	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>Total price of the return order line item, inclusive of tax. This amount is equal to TotalLineAmount + TotalLineTaxAmount.</p> <p>This is a calculated field.</p> <p>This field is available in API version 50.0 and later.</p>
TotalLineTaxAmount	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>Tax on the TotalLineAmount.</p> <p>This is a calculated field.</p> <p>This field is available in API version 50.0 and later.</p>

Field Name	Details
TotalPrice	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total, including adjustments but not tax, of the return order line item. Equal to UnitPrice times Quantity. This is a calculated field.</p>
TotalTaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Tax on the TotalAmount. This is a calculated field. This field is available in API version 50.0 and later.</p>
Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Type of the return order line item. Matches the type of the associated order item summary. Delivery Charge indicates that the return order line item represents a delivery charge. Order Product indicates that it represents any other type of product, service, or charge. Each type corresponds to one type code. Possible values are:</p> <ul style="list-style-type: none"> • Delivery Charge • Order Product <p>This field is available in API version 50.0 and later.</p>
TypeCode	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Type code of the return order line item. Matches the type code of the associated order item summary. Processing depends on this value. Charge indicates that the return order line item represents a delivery charge. Product indicates that it</p>

Field Name	Details
	<p>represents an other type of product, service, or charge. Each type category corresponds to one or more types.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Charge • Product <p>This field is available in API version 50.0 and later.</p>
UnitPrice	<p>Type currency</p> <p>Properties Create, Defaulted on create, Filter, Nillable, Sort, Update</p> <p>Description Unit price of the return order line item. This field is available in API version 50.0 and later.</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ReturnOrderLineItemChangeEvent (API version 48.0)

Change events are available for the object.

ReturnOrderLineItemFeed

Feed tracking is available for the object.

ReturnOrderLineItemHistory

History is available for tracked fields of the object.

ReturnOrderOwnerSharingRule

Represents the rules for sharing a return order with user records other than the owner or anyone above the owner in the role hierarchy. This object is available in API version 42.0 and later.

 **Note:** To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
Description	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description A description of the sharing rule. Maximum size is 1000 characters.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to Rule Name in the user interface.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p>
GroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID representing the source group. A return order owned by a User in the source Group triggers the rule to give access.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p>

Field	Details
	<p>Description</p> <p>Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to Label on the user interface.</p>
ServiceResourceAccessLevel	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description</p> <p>A value that represents the type of access granted to the target Group, or UserRole. The possible values are:</p> <ul style="list-style-type: none"> • Read • Edit • All
UserOrGroupId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>The ID representing the User or Group being granted access.</p>

RuleTerritory2Association

Represents a record-assignment rule and its association to an object, such as Account. Available only if Enterprise Territory Management has been enabled for your organization.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only standard users can access this object. If a territory model is in `Active` state, any standard user can view that model, including its territories and assignment rules. For territories in an active model, any standard user can view assigned records and assigned users subject to your organization's sharing settings. Users cannot view territory models in other states (such as `Planning` or `Archived`).

Fields

Field Name	Details
IsInherited	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Indicates whether the rule is an <i>inherited</i> rule (<code>true</code>) or a <i>local</i> rule (<code>false</code>). Rule inheritance flows from the parent territory where the rule is created to the rule's descendent territories (if any) in the territory model hierarchy. A local rule is created within a single territory and affects that territory only.</p>
RuleId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the rule.</p>
Territory2Id	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the territory where the rule was created.</p>

SalesAIScoreCycle

Represents the cycle type and ID used to score records. This object is available in API version 47.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

To see score cycle information, users need a Sales Cloud Einstein license with the View Scoring Model Factors permission enabled. The permission isn't enabled by default. As of the Spring '20 release, Pardot and High Velocity Sales users no longer have access to this object.

Fields

Field	Details
CycleType	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The cycle used to create scores on opportunity records can be one of two types.</p> <ul style="list-style-type: none"> • <code>OpportunityScoreModeling</code>—Provides model factors, which Sales Cloud Einstein uses to build a scoring model. • <code>OpportunityScoreScoring</code>—Provides scores and key factors to individual records, which are based on Sales Cloud Einstein’s scoring model. <p> Note: When the value <code>OpportunityScoreModeling</code> is returned, use the Sales AI Score Model Factor object to get information about the model factors.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The ID of the cycle. Currently, the name is a system-generated unique value.</p>

SalesAIScoreModelFactor

Represents the factors that Sales Cloud Einstein uses to build a scoring model. Scoring models are used by features, such as Opportunity Scoring, to score individual records. This object is available in API version 47.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

To see model factor information, users need a Sales Cloud Einstein license with the “View Scoring Model Factors” permission enabled. The permission isn’t enabled by default. As of the Spring ‘20 release, Pardot and High Velocity Sales users no longer have access to this object.

Fields

Field	Details
Factor	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description A factor that contributes to a scoring model. For example, a factor could indicate that an amount increase has a positive effect on an opportunity score (AmountIncreasePositive). Or, it could indicate that a change to the close date has a negative effect on an opportunity score (CloseDateChangeNegative).</p>
FactorSummaryOrgLanguage	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Describes the factor in English. For example, the factor field value AmountChangePositive is summarized as "Amount change has positive effect".</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The ID of the model factor. Currently, the name is a system-generated value.</p>
OperatorType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The operator used to analyze field values. For example, the factor HighSuccessLeadSource uses the Lead Source field as the primary source field. When building the scoring model, Einstein uses the Equals operator to determine <code>PrimarySourceFieldValue = Internet</code>. The other supported operator is <code>IsNull</code>.</p>
PrimarySourceFieldName	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p>

Field	Details
	<p>Description</p> <p>The name of the primary field used in the model factor. For example, the factor HighSuccessIndustry uses the account's Industry as the primary field.</p>
PrimarySourceFieldValue	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>Information used to retrieve the PrimarySourceFieldValueText, such as a record ID or value.</p>
PrimarySourceFieldValueText	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The value of the primary source field used in the model factor. For example, the factor HighSuccessIndustry uses the account's Industry as the primary field, and the value of the Industry field is manufacturing.</p> <p> Note: This field's value is retrieved from the PrimarySourceFieldValue field. If the PrimarySourceFieldValue field is a record ID, then PrimarySourceFieldValueText returns the name of the record. If OperatorType returns isNull, then PrimarySourceFieldValue returns true and PrimarySourceFieldValueText returns null.</p>
SalesAiScoreCycleId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Group, Sort</p> <p>Description</p> <p>The ID of the score cycle used to generate model factors. Each score cycle can have multiple model factors associated to it.</p>
ScoreCorrelation	<p>Type</p> <p>double</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The strength between a model factor and a score. If score correlation value is closer to +1, it's more likely that the model factor contributing toward a high score. If score correlation value is closer to -1, it's more likely that the model factor is contributing toward a low score.</p>

Field	Details
SecondarySourceFieldName	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The name of the secondary field used in the model factor. For example, the factor HighAmountActivity uses Task as the primary field and Event as the secondary field. Not all model factors use a secondary source field.</p>
SecondarySourceFieldValue	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Information used to retrieve the SecondarySourceFieldValueText, such as a record ID or value. Not all model factors use a secondary source field. This field is available in API version 50.0 and later.</p>
SecondarySourceFieldValueText	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description When the model factor is based on two source fields, this field represents the value of the secondary source field. For example, the factor HighSuccessMultipleSameFieldValue might use the opportunity's related product as the primary field and pricebook as the secondary field. The product and pricebook names are indicated by the PrimarySourceFieldValueText and SecondarySourceFieldValueText, respectively. Not all model factors use a secondary source field. This field is available in API version 50.0 and later.</p> <p> Note: This field's value is retrieved from the SecondarySourceFieldValue field. If the SecondarySourceFieldValue field is a record ID, then SecondarySourceFieldValueText returns the name of the record. If OperatorType returns isNull, then SecondarySourceFieldValue returns true and SecondarySourceFieldValueText returns null.</p>
Status	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description Determines whether the model factor is active or inactive.</p>

Usage

Use the SalesAIScoreModelFactor object to run a query that retrieves the latest highest influencing model factors.

```
SELECT Id, Factor, ScoreCorrelation, FactorSummaryOrgLanguage
FROM SalesAIScoreModelFactor
WHERE Status='Active' and SalesAIScoreCycle.CycleType='OpportunityScoreModeling'
ORDER BY ScoreCorrelation desc
```

SalesChannel

Represents the origin of an order. For example, a web storefront, physical store, marketplace, or mobile app. If you integrate Salesforce Order Management with Salesforce B2C Commerce, set up a SalesChannel corresponding to each Site in your B2C Commerce implementation. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is only available in Salesforce Order Management orgs.

Fields

Field	Details
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Description of the SalesChannel.</p>
ExternalChannelNumber	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description External system identifier for the SalesChannel.</p>
LastReferencedDate	<p>Type dateTime</p>

Field	Details
	<p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. A null value can mean that this record has only been referenced (LastReferencedDate) and not viewed.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the user who currently owns this SalesChannel. Default value is the user logged in to the API to perform the create.</p>
SalesChannelName	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Name of the SalesChannel.</p>
Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Type of the SalesChannel. Each Type corresponds to one Type Category. You can customize the Type picklist to represent your business processes, but the Type Category picklist is fixed because some order processing is based on those values. If you customize the Type picklist, include at least one value for each Type Category. This field is available in API version 53.0 and later.</p> <p>Default values are:</p> <ul style="list-style-type: none"> • B2B • B2C • Other

Field	Details
TypeCategory	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Type Category of the SalesChannel. Each Type Category corresponds to one or more Types. This field isn't visible in the UI. This field is available in API version 53.0 and later.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • B2B • B2C • Other

SEE ALSO:

[Order](#)

[OrderSummary](#)

SalesStoreCatalog

Represents the catalog associated with a store. This object is available in API version 49.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

You must have the B2B Commerce license and a CMS workspace to access a store.

Fields

Field	Details
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description The default value is USD. Possible values are:</p> <ul style="list-style-type: none"> • USD—U.S. Dollar

Field	Details
ImplementorType	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The type of implementor. WebStoreCatalog is the only available implementor type for SalesStoreCatalog.</p>
ProductCatalogId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID that references the product catalog.</p>
SalesStoreId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID that references the store.</p>

SalesWorkQueueSettings

Represents settings used to customize work queue options for third-party scoring. Third-party scoring enables custom number fields on person accounts, contacts, and leads. You must be a High Velocity Sales customer to update this object. Previously, you could only use the Einstein Intelligence Score for third-party scoring. Available starting in Version 47.0.

 **Note:** This object can't be packaged.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
FeatureName	<p>Type string</p>

Field	Details
	<p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description A value that represents the name of the work queue settings. To use custom number fields in the work queue, the value must be entered as <code>ThirdPartyScore</code>.</p>
TargetEntity	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The related record object of the custom number field. Acceptable SObjects include PersonAccount, Contact, and Lead.</p>
TargetField	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description A value that represents the DeveloperName of the custom number field related to the TargetEntity. Custom fields must have a custom number data type.</p> <ul style="list-style-type: none"> To use Einstein Intelligence Score for lead scoring, enter <code>ScoreIntelligence.Score</code> for the DeveloperName. To remove custom number fields from the work queue, enter <code>None</code>.

SamlSsoConfig

Represents a SAML Single Sign-On configuration. This object is available in API version 32.0 and later.

Single sign-on is a process that allows network users to access all authorized network resources without having to log in separately to each resource. Single sign-on allows you to validate usernames and passwords against your corporate user database or other client application rather than having separate user passwords managed by Salesforce.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only users with the View Setup and Configuration permission or both the Customize Application and Modify All Data permissions can access this object.

Fields

Field Name	Details
AttributeFormat	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description For SAML 2.0 only and when <code>identityLocation</code> is set to <code>Attribute</code>. Possible values include <code>unspecified</code>, <code>emailAddress</code>, or <code>persistent</code>. All legal values can be found in the “Name Identifier Format Identifiers” section of the Assertions and Protocols SAML 2.0 specification.</p>
AttributeName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The name of the identity provider’s application. Get this name value from your identity provider.</p>
Audience	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The Issuer, also called the “Entity ID.” The value is a URL that uniquely identifies the SAML identity provider.</p>
DeveloperName	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object’s name in a managed package, and the changes are reflected in a subscriber’s organization.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>

Field Name	Details
ErrorUrl	<p>Type string</p> <p>Properties Filter, Nillable, Sort</p> <p>Description When there's an error during login, specify the URL of the page where users are directed. It must be publicly accessible, such as a public site Visualforce page. The URL can be absolute or relative.</p>
ExecutionUserID	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The user that runs the Apex handler class. The user must have the "Manage Users" permission. A user is required if you specify a SAML JIT handler class. This is a relationship field.</p> <p>Relationship Name ExecutionUser</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
IdentityLocation	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The location in the assertion where a user is identified. Valid values are:</p> <ul style="list-style-type: none"> • <code>SubjectNameId</code>—The identity is in the <code><Subject></code> statement of the assertion. • <code>Attribute</code>—The identity is specified in an <code><AttributeValue></code>, located in the <code><Attribute></code> of the assertion.
IdentityMapping	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p>

Field Name	Details
	<p>Description</p> <p>The identifier that the service provider uses for the user during Just-in-Time user provisioning. Valid values are:</p> <ul style="list-style-type: none"> • <code>Username</code>—The user’s Salesforce username. • <code>FederationId</code>—The federation ID from the user object; the identifier that’s used by the service provider for the user. • <code>UserId</code>—The user ID from the user’s Salesforce organization.
Issuer	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, idLookup, Group, Sort</p> <p>Description</p> <p>Also called the “Entity ID.” The value is a URL that uniquely identifies the SAML identity provider.</p>
Language	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Filter, Group, Restricted picklist, Sort</p> <p>Description</p> <p>The language for the organization.</p>
LoginUrl	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>For SAML 2.0 only: The URL where Salesforce sends a SAML request to start the login sequence.</p>
LogoutUrl	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>For SAML 2.0 only: The URL to direct users to where they click the Logout link. The default is <code>https://salesforce.com</code>.</p>
MasterLabel	<p>Type</p> <p>string</p>

Field Name	Details
	<p>Properties Filter, Group, Sort</p> <p>Description The text that's used to identify the Visualforce page in the Setup area of Salesforce.</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
OptionsSpInitBinding	<p>Type boolean</p> <p>Properties Filter</p> <p>Description The service provider initiated request binding, either HTTP Redirect (<code>true</code>) or HTTP POST (<code>false</code>).</p>
OptionsUseConfigRequestMethod	<p>Type boolean</p> <p>Properties Filter</p> <p>Description If <code>true</code>, applies the selected Request Signature Method (RSM) during single logout. If <code>false</code>, the default RSM (RSA-SHA1) is applied.</p>
OptionsUserProvisioning	<p>Type boolean</p>

Field Name	Details
	<p>Properties Filter</p> <p>Description If <code>true</code>, Just-in-Time user provisioning is enabled, which creates users on the fly the first time that they try to log in. Specify <code>Federation ID</code> for the <code>identityMapping</code> value to use this feature.</p>
<code>RequestSignatureMethod</code>	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The method that's used to sign the SAML request. Valid values are:</p> <ul style="list-style-type: none"> • <code>RSA-SHA1</code> • <code>RSA-SHA256</code>
<code>SamLJitHandlerId</code>	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The name of an existing Apex class that implements the <code>Auth.SamLJitHandler</code> interface. This is a relationship field.</p> <p>Relationship Name <code>SamLJitHandler</code></p> <p>Relationship Type Lookup</p> <p>Refers To <code>ApexClass</code></p>
<code>SingleLogoutBinding</code>	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Determines where to put the <code>LogoutRequest</code> or <code>LogoutResponse</code> in the SAML request during single logout (SLO). The value is base64 encoded. Valid values are:</p> <ul style="list-style-type: none"> • <code>RedirectBinding</code> — Sent in the query string, deflated.

Field Name	Details
	<ul style="list-style-type: none"> PostBinding — Sent in the POST body, not deflated.
SingleLogoutUrl	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The SAML single logout endpoint. This URL is the endpoint where Salesforce sends LogoutRequests (when Salesforce initiates a logout), or LogoutResponses (when the identity provider initiates a logout).</p>
ValidationCert	<p>Type string</p> <p>Properties Filter, Sort</p> <p>Description The certificate that's used to validate the request. Get this certificate value from your identity provider.</p>
Version	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The SAML version. Valid values are:</p> <ul style="list-style-type: none"> SAML1_1 SAML2_2

SchedulingAdherenceDetail

Represents the breakdown of daily shift adherence data by agent status. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The org requires a Workforce Engagement license, and both Workforce Engagement and Omni-Channel must be enabled. The user requires the Workforce Engagement Planner or Workforce Engagement Admin permission set.

Fields

Field	Details
IsShrinkage	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates if the linked status is considered as shrinkage time (<code>true</code>) or not (<code>false</code>). Shrinkage time is time, such as breaks, when an agent doesn't receive work. The default value is <code>false</code>.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description A number that identifies this detail record.</p>
SchedulingAdherenceSummaryId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the Scheduling Adherence Summary. This is a relationship field.</p> <p>Relationship Name SchedulingAdherenceSummary</p> <p>Relationship Type Lookup</p> <p>Refers To SchedulingAdherenceSummary</p>
StatusId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the agent status represented by this detail record. This is a relationship field.</p> <p>Relationship Name Status</p>

Field	Details
	<p>Relationship Type Lookup</p> <p>Refers To ServicePresenceStatus</p>
StatusName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The name of the agent status represented by this detail record.</p>
TotalStatusMinutes	<p>Type int</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Total minutes that the agent was present with this status.</p>

SchedulingAdherenceSummary

Represents daily shift adherence data for a service resource in a service territory and job profile on a specific date. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The org requires a Workforce Engagement license, and both Workforce Engagement and Omni-Channel must be enabled. The user requires the Workforce Engagement Planner or Workforce Engagement Admin permission set.

Fields

Field	Details
AdherencePercentage	<p>Type double</p>

Field	Details
	<p>Properties Filter, Sort</p> <p>Description Percentage of time that the agent was present during the scheduled shift time. This is a calculated field.</p> <p>Formula</p> <pre>AdherencePercentage = TotalAdherenceMinutes / TotalScheduledMinutes</pre>
ConformancePercentage	<p>Type double</p> <p>Properties Filter, Sort</p> <p>Description Percentage of time when the agent was present versus the duration of scheduled shifts. The time that the agent is present can extend beyond the scheduled shift. This is a calculated field.</p> <p>Formula</p> <pre>ConformancePercentage = TotalPresenceMinutes / TotalScheduledMinutes</pre>
Date	<p>Type date</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Date for which the adherence data is calculated.</p>
JobProfileId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the job profile. This is a relationship field.</p> <p>Relationship Name JobProfile</p> <p>Relationship Type Lookup</p>

Field	Details
	<p>Refers To JobProfile</p>
JobProfileName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The name of the job profile.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description A number that identifies this summary record.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The user who owns the schedule adherence summary. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
ServiceResourceId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the service resource. This is a relationship field.</p> <p>Relationship Name ServiceResource</p>

Field	Details
	<p>Relationship Type Lookup</p> <p>Refers To ServiceResource</p>
ServiceResourceName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The name of the service resource.</p>
ServiceTerritoryId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the service territory. This is a relationship field.</p> <p>Relationship Name ServiceTerritory</p> <p>Relationship Type Lookup</p> <p>Refers To ServiceTerritory</p>
ServiceTerritoryName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The name of the service territory.</p>
TotalAdherenceMinutes	<p>Type int</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Total minutes that the agent was present during a shift.</p>

Field	Details
TotalInteractionMinutes	<p>Type int</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Total minutes that the agent was actively receiving work.</p>
TotalPresenceMinutes	<p>Type int</p> <p>Properties Filter, Group, Sort</p> <p>Description Total minutes of agent presence time. This is a calculated field.</p> <p>Formula</p> <pre>TotalPresenceMinutes = TotalInteractionMinutes + TotalShrinkageMinutes</pre>
TotalScheduledMinutes	<p>Type int</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Total minutes of scheduled shift time for the agent.</p>
TotalShrinkageMinutes	<p>Type int</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Total minutes that the agent was present but not receiving work, such as break times.</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[SchedulingAdherenceSummaryOwnerSharingRule](#) on page 3961

Sharing rules are available for the object.

[SchedulingAdherenceSummaryShare](#) on page 3967

Sharing is available for the object.

SchedulingConstraint

Represents the scheduling constraints of each service resource. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

The org requires the Workforce Engagement license. To view records, user requires the Workforce Engagement Agent permission set. To create, edit, or delete records, the user requires the Workforce Engagement Planner permission set.

Fields

Field	Details
<code>LastReferencedDate</code>	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the scheduling constraint was last modified. Its label in the user interface is Last Modified Date.</p>
<code>LastViewedDate</code>	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the scheduling constraint was last viewed.</p>
<code>MaxNonstandardShiftsPerMonth</code>	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The maximum number of non-standard shifts assigned to an agent in a month. This field is available in API version 54.0 and later.</p>
<code>MaxShiftsPerDay</code>	<p>Type int</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The maximum number of shifts an agent can have in a day.</p>
MaxShiftsPerMonth	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The maximum number of shifts an agent can have in a month.</p>
MaxShiftsPerWeek	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The maximum number of shifts an agent can have in a week.</p>
MaxWorkingHoursPerDay	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The maximum number of hours an agent can have in a day.</p>
MaxWorkingHoursPerMonth	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The maximum number of hours an agent can have in a month.</p>
MaxWorkingHoursPerWeek	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The maximum number of hours an agent can have in a week.</p>
Name	<p>Type string</p>

Field	Details
	<p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The scheduling constraint record name.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The owner of the scheduling constraint. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[SchedulingConstraintOwnerSharingRule](#) on page 3961

Sharing rules are available for the object.

[SchedulingConstraintShare](#) on page 3967

Sharing is available for the object.

SchedulingObjective

Represents business goals that the scheduling tools consider. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

The org must have the Workforce Engagement license. To view, create, edit, and delete records, the user needs to have the Workforce Engagement Planner permission set.

Fields

Field	Details
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The scheduling objective description.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The developer name of the record.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
Language	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Possible values are the supported languages for Workforce Engagement.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The scheduling objective name.</p>
SchedulingCategory	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The record that the scheduling objective applies to. Possible values are:</p> <ul style="list-style-type: none"> • A—Appointment • B—Shift

Field	Details
SchedulingObjectiveType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The type of scheduling objective. Possible values are:</p> <ul style="list-style-type: none"> • <code>Agent Preference</code>—Scheduling tools consider agents' service resource preferences. • <code>Balance Non Standard Shifts</code>—Scheduling tools balance the number of shifts across available agents within a time period. • <code>Balance Shifts</code>—Scheduling tools balance the number of non-standard shifts across available agents within a time period.

SchedulingRule

Represents scheduling rules that are hard constraints in the scheduling logic engine. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

The org must have the Workforce Engagement license. To view, create, edit, and delete records, the user needs to have the Workforce Engagement Planner permission set.

Fields

Field	Details
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The scheduling rule description.</p>
DeveloperName	<p>Type string</p>

Field	Details
	<p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The developer name value of the record.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
Language	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The language of the scheduling rule.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The scheduling rule name.</p>
SchedulingCategory	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description Shifts. Possible values are:</p> <ul style="list-style-type: none"> • A—Appointment • B—Shift
SchedulingRuleType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The scheduling rule type. Possible values are:</p> <ul style="list-style-type: none"> • A—Active Resources • B—Match Skills

Field	Details
	<ul style="list-style-type: none"> • C—Availability • LimitNonstandardShifts—Specifies a rule type that limits how many non-standard shifts can be assigned to each agent. This type is available in API version 54.0 and later. • M—Match Territory • Q—Match Queues • R—Rest Time • W—Work Limit

SchedulingRuleParameter

Represents scheduling rule parameters associated with a scheduling rule. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

The org must have the Workforce Engagement license. To view, create, edit, or delete records, the user needs to have the Workforce Engagement Planner permission set.

Fields

Field	Details
<code>SchedulingParameterKey</code>	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The scheduling rule parameter name. Possible values are:</p> <ul style="list-style-type: none"> • C—Constraint Field Name • L—Limit Type • R—Resolution • T—Time Resolution • W—Work Unit

Field	Details
SchedulingRuleId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The scheduling rule ID. This is a relationship field.</p> <p>Relationship Name SchedulingRule</p> <p>Relationship Type Lookup</p> <p>Refers To SchedulingRule</p>
Value	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The scheduling rule parameter value.</p>

Scontrol

A custom s-control, which is custom content that is hosted by the system but executed by the client application.

Important: Visualforce pages supersede s-controls. Organizations that haven't previously used s-controls can't create them. Existing s-controls are unaffected, and can still be edited. We recommend that you move your s-controls to Visualforce. We continue to support the Scontrol object.

Represents a custom s-control, which is custom content that the system hosts, but client applications execute. An s-control can contain any type of content that you can display or run in a Web browser.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- Your organization must be using Enterprise, Developer, or Unlimited Edition and be enabled for custom s-controls.
- Customer Portal users can't access this object.

Fields

Field	Details
Binary	<p>Type base64</p> <p>Properties Create, Nillable, Update</p> <p>Description Binary content of this custom s-control, such as an ActiveX control or a Java archive. Can be specified when created, but not when updated. Limit: 5 MB.</p>
BodyLength	<p>Type int</p> <p>Properties Filter, Group, Sort</p> <p>Description The length of the custom s-control. Label is Binary Length.</p>
ContentSource	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Specifies the source of the s-control content, either custom HTML, a snippet (s-controls that are included in other s-controls), or a URL.</p>
Description	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Description of the custom s-control.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With</p>

Field	Details
	<p>this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Label is S-Control Name.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p>
EncodingKey	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Picklist of character set encodings, including ISO-08859-1, UTF-8, EUC, JIS, Shift-JIS, Korean (ks_c_5601-1987), Simplified Chinese (GB2312), and Traditional Chinese (Big5).</p>
Filename	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description An uploaded object to display when the custom s-control is added to a custom link. Can be a Java applet, an ActiveX control, or any other type of desired content.</p>
HtmlWrapper	<p>Type textarea</p> <p>Properties Create, Update</p> <p>Description Required. HTML page that will be delivered when the user views this custom s-control. This HTML page can be the entire content of the custom s-control, or it can reference the binary. Limit: 1,048,576 characters. Label is HTML Body.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. Name of this custom s-control. Label is Label.</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
SupportsCaching	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Indicates whether the s-control supports caching (<code>true</code>) or not (<code>false</code>).</p>

Usage

Use custom s-controls to manage custom content that extends application functionality. All users can view custom s-controls, but the "Customize Application" permission is required to create or update custom s-controls.

SEE ALSO:

[Object Basics](#)

ScontrolLocalization

The translated value of the field label for an s-control.

 **Important:** Visualforce pages supersede s-controls. Organizations that haven't previously used s-controls can't create them. Existing s-controls are unaffected, and can still be edited.

When the Translation Workbench is enabled for your organization, provides the translation of the field label of an s-control.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- Your organization must be using Professional, Enterprise, Developer, or Unlimited Edition and be enabled for the Translation Workbench.
- To view this object, you must have the “View Setup and Configuration” permission.

Fields

Field	Details
LanguageLocaleKey	<p>Type picklist</p> <p>Properties Create, Filter, Nillable, Restricted picklist</p> <p>Description This field is available in API version 16.0 and earlier. It is the same as the <code>Language</code> field.</p>
Language	<p>Type picklist</p> <p>Properties Create, Filter, Nillable, Restricted picklist</p> <p>Description This field is available in API version 17.0 and later. The combined language and locale ISO code, which controls the language for labels displayed in an application. This picklist contains the following fully-supported languages:</p> <ul style="list-style-type: none"> • Chinese (Simplified): zh_CN • Chinese (Traditional): zh_TW • Danish: da • Dutch: nl_NL • English: en_US • Finnish: fi • French: fr • German: de • Italian: it • Japanese: ja • Korean: ko • Norwegian: no • Portuguese (Brazil): pt_BR

Field**Details**

- Russian: ru
- Spanish: es
- Spanish (Mexico): es_MX Spanish (Mexico) defaults to Spanish for customer-defined translations.
- Swedish: sv
- Thai: th The Salesforce user interface is fully translated to Thai, but Help is in English.

The following end-user only languages are available.

NamespacePrefix	<p>Type string</p>

Field	Details
	<p>Properties Filter, Nillable</p> <p>Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
<code>ScontrolId</code>	<p>Type reference</p> <p>Properties Create, Filter, Nillable</p> <p>Description The ID of the Scontrol that is being translated.</p>
<code>Value</code>	<p>Type string</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description The actual translated field label of the s-control. Label is Translation.</p>

Usage

Use this object to translate your s-controls into a supported language. Users with the Translation Workbench enabled can view s-control translations, but either the "Customize Application" or "Manage Translation" permission is required to create or update s-control translations.

Scorecard

Use scorecards to measure partner performance and establish benchmarks for channel programs within Experience Cloud. Display any report summary results that your channel account manager or executive team wants to see. This object is available in API version 40.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Description	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The description of the scorecard.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p>

Field	Details
	<p>Description</p> <p>The name of the scorecard visible to end users.</p>
OwnerId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>The ID of the user who owns the scorecard.</p> <p>This is a polymorphic relationship field.</p> <p>Relationship Name</p> <p>Owner</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>Group, User</p>

Usage

The Scorecard object is used in tandem with the ScorecardMetric and ScorecardAssociation objects.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ScorecardOwnerSharingRule on page 3961](#)

Sharing rules are available for the object.

[ScorecardShare on page 3967](#)

Sharing is available for the object.

ScorecardAssociation

Represents a connection between a specific scorecard and the associated account, channel program, or channel program level. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The name of the Scorecard Association.</p>
ScorecardId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the scorecard that the association is related to. Several metrics can be tied to a single scorecard. This is a relationship field.</p> <p>Relationship Name Scorecard</p> <p>Relationship Type Lookup</p> <p>Refers To Scorecard</p>

Field	Details
TargetEntityId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The associated object that a specific scorecard is associated with. This is a polymorphic relationship field.</p> <p>Relationship Name TargetEntity</p> <p>Relationship Type Lookup</p> <p>Refers To Account, ChannelProgram, ChannelProgramLevel</p>

ScorecardMetric

Stores information about a Salesforce report that is run and summarized to get a single value. The stored value is added as a metric to the related Scorecard object. This object is available in API version 40.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Category	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description Groups metrics together. It comes with a predefined set of dropdown list entries and can be extended to address vendor's needs each category is user-generated and can be localized through translation workbench. Possible values are:</p> <ul style="list-style-type: none"> • Adoption • Field Enablement • Marketing

Field	Details
	<ul style="list-style-type: none"> Sales Support <p>The default value is 'Sales'.</p>
Description	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The description of the metric that appears on a scorecard.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the metric that appears on a scorecard.</p>
ReportId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the report that is run and summarized to return a single value. This is a relationship field.</p> <p>Relationship Name Report</p> <p>Relationship Type Lookup</p> <p>Refers To Report</p>
ScorecardId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the scorecard that the metric is related to. Several metrics can be tied to a single scorecard. This is a relationship field.</p>

Field	Details
	<p>Relationship Name Scorecard</p> <p>Relationship Type Lookup</p> <p>Refers To Scorecard</p>

ScratchOrgInfo

Represents a scratch org and its audit log. Use this object to create a scratch org and keep a log of its creation and deletion. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
AdminEmail	<p>Type email</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The email address of the scratch org's Administration user. The read-only <code>SignupEmail</code> field is populated with this value. If you don't provide a value for <code>AdminEmail</code>, the field is left blank and the <code>SignupEmail</code> is populated with the email address of the org user who is creating this object.</p>
AuthCode	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description A one-time authorization code that can be exchanged for an OAuth access token and refresh token using standard Salesforce APIs. It's used with <code>ConnectedAppCallbackUrl</code> and <code>ConnectedAppConsumerKey</code>, when the specified connected app hasn't been configured with an X.509 certificate. This field is read-only.</p>

Field Name	Details
ConnectedAppCallbackUrl	<p>Type textarea</p> <p>Properties Create</p> <p>Description When used with <code>ConnectedAppConsumerKey</code>, specifies a connected app that is approved automatically during the scratch org creation.</p>
ConnectedAppConsumerKey	<p>Type string</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description When used with <code>ConnectedAppCallbackUrl</code>, specifies a connected app that is approved automatically during the scratch org creation.</p>
Country	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The two-character, upper-case ISO-3166 country code. You can find a full list of these codes at several sites, such as: www.iso.ch/iso/en/prods-services/iso3166ma/02iso-3166-code-lists/list-en1.html. The language of the scratch org is auto-determined based on the value of this field. If you do not specify a value, this field defaults to the Dev Hub's country code.</p>
DeletedBy	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The user who requested that the scratch org be deleted. This field is read-only.</p>
DeletedDate	<p>Type date</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The date when the <code>DeletedBy</code> user requested that the scratch org be deleted. This field is read-only.</p>

Field Name	Details
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description A free-form text field for you to enter a description of this scratch org.</p>
DurationDays	<p>Type int</p> <p>Properties Create, Filter, Nillable, Group, Sort</p> <p>Description Number of days after which the scratch org expires. Valid values are 1–30. The default is 7.</p>
Edition	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The org edition of this scratch org. Valid values are Group, Developer, Enterprise, and Professional.</p>
ErrorCode	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The error code if the scratch org creation isn't successful. This field is read-only.</p>
ExpirationDate	<p>Type date</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Date when the scratch org expires. This field is read-only.</p>
Features	<p>Type textarea</p> <p>Properties Create, Nillable</p>

Field Name	Details
	<p>Description</p> <p>A semi-colon delimited list of the features enabled in this scratch org, such as MultiCurrency. See the <i>Salesforce DX Developer Guide</i> for the full list of valid features.</p>
HasSampleData	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Specifies whether the scratch org contains sample data. If set to <code>true</code>, the sample data is similar to the data in a Salesforce free trial org.</p>
Language	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description</p> <p>The language of the scratch org being created. Specify the language using a language code listed under "Supported Languages" in Salesforce Help. For example, use <code>zh_CN</code> for simplified Chinese. The value you select overrides the language set by locale.</p> <p>If you don't specify a value, the language is based on the <code>Country</code> used during scratch org creation. If you don't specify a value for <code>Country</code>, the value defaults to the Dev Hub's country.</p>
LastLoginDate	<p>Type</p> <p>date</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The date of the last user login to the scratch org. This field is read-only.</p>
LastReferencedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The date this scratch org was last referenced. This field is read-only.</p>
LastViewedDate	<p>Type</p> <p>dateTime</p>

Field Name	Details
	<p>Properties Filter, Nillable, Sort</p> <p>Description The date this scratch org was last viewed. This field is read-only.</p>
LoginUrl	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description A URL that logs you in to the scratch org. This field is read-only.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, Sort</p> <p>Description The auto-generated ID of this scratch org. This field is read-only.</p>
Namespace	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The namespace you want to associate with this scratch org. The value of this field corresponds to the <code>NamespacePrefix</code> field of the <code>NamespaceRegistry</code> object that describes your namespace.</p>
OrgName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The name of the scratch org.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the user who created this scratch org.</p>

Field Name	Details
Release	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The release of the scratch org. During Salesforce's major release transitions, this field allows you to select the Salesforce release version, based on the version of your Dev Hub. This field is available in API version 46.0 and later. Valid values are:</p> <ul style="list-style-type: none"> • Current • Preview • Previous <p>See Select the Salesforce Release for a Scratch Org for more information.</p>
ScratchOrg	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The org ID of the scratch org. This field is read-only.</p>
SignupCountry	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The country code of the scratch org. This field is populated with the value of the <code>COUNTRY</code> field. If you didn't provide a value for <code>COUNTRY</code>, it's the country code of the Dev Hub. This field is read-only.</p>
SignupEmail	<p>Type email</p> <p>Properties Filter, Group, Sort</p> <p>Description The email address of the scratch org's Administration user. This field is populated with the value of the <code>AdminEmail</code> field. If you didn't provide a value for <code>AdminEmail</code>, it's the email address of your user in the Dev Hub. This field is read-only.</p>
SignupInstance	<p>Type string</p>

Field Name	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description The Salesforce instance on which this scratch org resides. This field is read-only.</p>
SignupLanguage	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The language of the scratch org. This field is populated with the value of the <code>Language</code> field. If you didn't provide a value for <code>Language</code>, it's the language of the Dev Hub. This field is read-only.</p>
SignupTrialDays	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of days between the scratch org's creation and expiration. This field is read-only.</p>
SignupUsername	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The username of the Administration user of this scratch org. This field is populated with the value of the <code>Username</code> field. If you didn't provide a value for <code>Username</code>, the value of this field is auto-generated. This field is read-only.</p>
SourceOrg	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ID of the org whose shape (features, settings, limits, and licenses) information is used for creating scratch orgs.</p>
Status	<p>Type picklist</p>

Field Name	Details
	<p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description The status of the scratch org, such as active, expired, or deleted. This field is read-only.</p>
Username	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The username of the Administration user of this scratch org.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[ScratchOrgInfoFeed](#)

Feed tracking is available for the object.

[ScratchOrgInfoHistory](#)

History is available for tracked fields of the object.

[ScratchOrgInfoOwnerSharingRule](#)

Sharing rules are available for the object.

[ScratchOrgInfoShare](#)

Sharing is available for the object.

SEE ALSO:

[ActiveScratchOrg](#)

[Salesforce DX Developer Guide](#)

SearchPromotionRule

Represents a promoted search term, which is one or more keywords that you associate with a Salesforce Knowledge article. When a user's search query includes these keywords, the associated article is returned first in search results. This object is available in API version 31.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

A user must have the “Manage Promoted Search Terms” permission.

Fields

Field Name	Details
PromotedEntityId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the KnowledgeArticleVersion that the promoted search term is associated with. The article must be in published status.</p>
Query	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The text of the promoted search term. Maximum length: 100 characters. You can associate the same promoted search term with multiple articles. If the user’s search matches the promoted term, all associated articles are promoted in search results, ordered by relevancy. For best results, create promoted search terms selectively and limit the number of articles that are promoted per term.</p>

Usage

Use this object to optimize article search results in Salesforce Knowledge.

SecurityCustomBaseline

Provides the ability to read, create, and delete user-defined custom security baselines, which define an org’s security standards. This object is available in API version 39.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

You must have the “View Health Check” permission to read a custom baseline, and the “Manage Health Check” permission to create, edit, or delete one.

Fields

Field Name	Details
Baseline	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The definition of an org's security settings standards.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance may slow while Salesforce generates one for each record.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
IsDefault	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Sets the baseline as the default in Security Health Check.</p>
Language	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The language of the presence status.</p>
MasterLabel	<p>Type string</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Label for the category node.</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The namespace prefix associated with the package.</p>

SelfServiceUser

Represents a Contact who has been enabled to use your organization's Self-Service portal, where he or she can obtain online support.

Note: Starting with Spring '12, the Self-Service portal isn't available for new Salesforce orgs. Existing orgs continue to have access to the Self-Service portal.

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
ContactId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Required. All Self-Service users must be associated with a Contact. The contact's email should match the Self-Service user email. The contact must have a value in the <code>AccountId</code> field or an error occurs.</p>

Field	Details
Email	<p>Type email</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. Make this the same as the email address for the Contact associated with this SelfServiceUser. Password resets and other system communication will be sent to this email address.</p>
FirstName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description First name of the Self-Service user.</p>
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the Self-Service user is allowed to log in to the Self-Service portal (<code>true</code>) or not (<code>false</code>). Note that there is no way to delete a Self-Service user. They can only be marked as inactive.</p>
IsDeleted	<p>Type boolean</p> <p>Properties Defaulted on create, Filter</p> <p>Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.</p>
LanguageLocaleKey	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Required. This is a restricted picklist field. It is the primary language for the user. All on-screen text in the Self-Service portal is displayed in this language.</p>

Field	Details
LastLoginDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time when the Self-Service user last logged in.</p>
LastName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. Last name of the Self-Service user.</p>
LocaleSidKey	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Required. This is a restricted picklist field. The value of this field affects the formatting and parsing of values, especially numeric values, in the Self-Service portal. Values are two-letter codes that indicate language and sometimes language and country. The codes are based on ISO standards.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description Concatenation of <code>FirstName</code> and <code>LastName</code>. Limited to 203 characters, including whitespaces.</p>
SuperUser	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether this Self-Service user is a super user with additional access on his or her company's Self-Service portal (<code>true</code>) or not (<code>false</code>).</p>
TimeZoneSidKey	<p>Type picklist</p>

Field	Details
	<p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Required. This is a restricted picklist field. The time zone of a affects the offset used when displaying or entering times in the Self-Service portal.</p>
Username	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. This contains the name that a Self-Service user enters to log into the Self-Service portal. Value must be unique in your organization. If you try to create or update a user with a duplicate value, the operation is rejected and an error is returned.</p>

Usage

For security reasons, you can't query Self-Service user passwords via the API or the user interface. However, the API allows you to set and reset Self-Service user passwords using the `setPassword()` and `resetPassword()` calls.

SelfServiceUser records created from the API don't cause a notification email to be sent. If you want to notify the user, you must send them an email after creating the user.

[User](#)

Seller

Represents the seller role of an individual with respect to a particular company or organization. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ActiveFromDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The date when the seller's role became active.</p>
ActiveToDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The date when the seller's role is no longer active.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (LastReferencedDate) and not viewed.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Required. Name of this seller.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field	Details
	<p>Description The ID of the account owner associated with this seller. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
PartyId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Required. Represents the record based on the Individual object you want to associate the seller with. This is a relationship field.</p> <p>Relationship Name Party</p> <p>Relationship Type Lookup</p> <p>Refers To Individual</p>
SalesAmount	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The total revenue amount gained from this seller.</p>
SellerTier	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The tier at which this seller is ranked. Possible values are:</p> <ul style="list-style-type: none"> • Bronze

Field	Details
	<ul style="list-style-type: none"> • Gold • Silver
SellerType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The type of sales this seller specializes in. Possible values are:</p> <ul style="list-style-type: none"> • Distributor • Reseller • SalesPartner • Wholesaler

ServiceAppointment

Represents an appointment to complete work for a customer in Field Service and Lightning Scheduler. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
AccountId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p>Description (Read only) The account associated with the appointment. If the parent record is a work order or work order line item, this field's value is inherited from the parent. Otherwise, it remains blank.</p> <p>This is a relationship field.</p> <p>Relationship Name Account</p> <p>Relationship Type Lookup</p> <p>Refers To Account</p>
ActualDuration	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The number of minutes that it took the resource to complete the appointment after arriving at the address. When values are first added to the <code>Actual Start</code> and <code>Actual End</code> fields, the <code>Actual Duration</code> is automatically populated to list the difference between the <code>Actual Start</code> and <code>Actual End</code>. If the <code>Actual Start</code> and <code>Actual End</code> fields are subsequently updated, the <code>Actual Duration</code> field doesn't re-update, but you can manually update it.</p>
ActualEndTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The actual date and time the appointment ended.</p>
ActualStartTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The actual date and time the appointment started.</p>
Address	<p>Type address</p>

Field Name	Details
	<p>Properties Filter</p> <p>Description The address where the appointment is taking place. The address is inherited from the parent record if the parent record is a work order or work order line item.</p>
AppointmentNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description An auto-assigned number that identifies the appointment.</p>
ArrivalWindowEndTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The end of the window of time in which the technician is scheduled to arrive at the site. This window is typically larger than the Scheduled Start and End window to allow time for delays and scheduling changes. You may choose to share the Arrival Window Start and End with the customer, but keep the Scheduled Start and End internal-only.</p>
ArrivalWindowStartTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The beginning of the window of time in which the technician is scheduled to arrive at the site. This window is typically larger than the Scheduled Start and End window to allow time for delays and scheduling changes. You may choose to share the Arrival Window Start and End with the customer, but keep the Scheduled Start and End internal-only.</p>
BundlePolicyId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Reference to the bundle policy associated with this service appointment. This is a relationship field.</p>

Field Name	Details
	<p>Relationship Name BundlePolicy</p> <p>Relationship Type Lookup</p> <p>Refers To ApptBundlePolicy</p>
City	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The city where the appointment is completed. Maximum length is 40 characters.</p>
ContactId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The contact associated with the parent record. If needed, you can manually update the service appointment contact. This is a relationship field.</p> <p>Relationship Name Contact</p> <p>Relationship Type Lookup</p> <p>Refers To Contact</p>
Country	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The country where the work order is completed. Maximum length is 80 characters.</p>
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p>

Field Name	Details
	<p>Description The description of the appointment.</p>
DueDate	<p>Type dateTime</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The date by which the appointment must be completed. Earliest Start Permitted and Due Date typically reflect terms in the customer's service-level agreement.</p>
Duration	<p>Type double</p> <p>Properties Create, Nillable, Filter, Sort, Update</p> <p>Description The estimated length of the appointment. If the parent record is work order or work order line item, the appointment inherits its parent's duration, but it can be manually updated. The duration is in minutes or hours based on the value selected in the <code>Duration Type</code> field.</p>
DurationType	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The unit of the Duration: Minutes or Hours.</p>
EarliestStartTime	<p>Type dateTime</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The date after which the appointment must be completed. Earliest Start Permitted and Due Date typically reflect terms in the customer's service-level agreement.</p>
GeocodeAccuracy	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>The level of accuracy of a location's geographical coordinates compared with its physical address. Usually provided by a geocoding service based on the address's latitude and longitude coordinates.</p> <p> Note: This field is available in the API only.</p>
IsAnonymousBooking	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Indicates whether a service resource was automatically assigned to the appointment. The default value is false.</p> <p>This field is available in API version 49.0 and later.</p>
IsBundle	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Indicates if this service appointment is a bundle service appointment. The default value is false.</p> <p>This field is available in API version 54.0 and later.</p>
IsBundleMember	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Indicates if this service appointment is a bundle member service appointment. The default value is false.</p> <p>This field is available in API version 54.0 and later.</p>
IsManuallyBundled	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Indicates if this bundle was created manually. The default value is false.</p> <p>This field is available in API version 54.0 and later.</p>

Field Name	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the service appointment was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the service appointment was last viewed.</p>
Latitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with <code>Longitude</code> to specify the precise geolocation of the address where the service appointments is completed. Acceptable values are numbers between -90 and 90 with up to 15 decimal places.</p> <p> Note: This field is available in the API only.</p>
Longitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with <code>Latitude</code> to specify the precise geolocation of the address where the service appointment is completed. Acceptable values are numbers between -180 and 180 with up to 15 decimal places.</p> <p> Note: This field is available in the API only.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p>Description The owner of the service appointment. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
ParentRecordId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The parent record associated with the appointment. The parent record can't be updated after the service appointment is created. This is a polymorphic relationship field.</p> <p>Relationship Name ParentRecord</p> <p>Relationship Type Lookup</p> <p>Refers To Account, Asset, Lead, Opportunity, WorkOrder, WorkOrderLineItem</p>
ParentRecordStatusCategory	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description (Read only) The <code>Status Category</code> of the parent record. If the parent record is a work order or work order line item, this field is populated; otherwise, it remains blank.</p>
ParentRecordType	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description (Read only) The type of parent record: Account, Asset, Lead, Opportunity, Work Order, or Work Order Line Item.</p>

Field Name	Details
PostalCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The postal code where the work order is completed. Maximum length is 20 characters.</p>
RelatedBundleId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The bundle that this service appointment is a member of. This is a relationship field.</p> <p>Relationship Name RelatedBundle</p> <p>Relationship Type Lookup</p> <p>Refers To ServiceAppointment</p>
SchedEndTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The time at which the appointment is scheduled to end. If you are using the Field Service managed package with the scheduling optimizer, this field is populated once the appointment is assigned to a resource. <code>Scheduled End - Scheduled Start = Estimated Duration</code>.</p>
SchedStartTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The time at which the appointment is scheduled to start. If you are using the Field Service managed package with the scheduling optimizer, this field is populated once the appointment is assigned to a resource.</p>

Field Name	Details
ServiceTerritoryId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The service territory associated with the appointment. If the parent record is a work order or work order line item, the appointment inherits its parent's service territory. This is a relationship field.</p> <p>Relationship Name ServiceTerritory</p> <p>Relationship Type Lookup</p> <p>Refers To ServiceTerritory</p>
State	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The state where the service appointment is completed. Maximum length is 80 characters.</p>
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description The status of the appointment. The picklist includes the following values, which can be customized:</p> <ul style="list-style-type: none"> • None—Default value. • Scheduled—Appointment has been assigned to a service resource. • Dispatched—Assigned service resource has been notified about their assignment. • In Progress—Work has begun. • Completed—Work is complete. • Cannot Complete—Work could not be completed. • Canceled—Work is canceled, typically before any work began

Field Name	Details
StatusCategory	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The category that each <code>Status</code> value falls into. The <code>Status Category</code> field's values are identical to the default <code>Status</code> values.</p> <p>If you create custom <code>Status</code> values, you must indicate which category it belongs to. For example, if you create a <code>Customer Absent</code> value, you may decide that it belongs in the <code>Cannot Complete</code> category. To learn which processes reference <code>StatusCategory</code>, see How are Status Categories Used?</p>
Street	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The street number and name where the service appointment is completed.</p>
Subject	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description A short phrase describing the appointment.</p>
WorkTypeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The work type associated with the service appointment. The work type is inherited from the appointment's parent record if the parent is a work order or work order line item.</p> <p> Note: If Lightning Scheduler is also in use, this field is editable. However, users see an error if they update it to list a different work type than the parent record's work type.</p> <p>This is a relationship field.</p> <p>Relationship Name WorkType</p>

Field Name	Details
	<p>Relationship Type Lookup</p> <p>Refers To WorkType</p>

Usage

Service appointments always have a parent record, which can be a work order, work order line item, opportunity, account, or asset. The type of parent record tells you about the nature of the service appointment:

- Service appointments on *work orders* and *work order line items* offer a more detailed view of the work being performed. While work orders and work order line items let you enter general information about a task, service appointments are where you add the details about scheduling and ownership.
- Service appointments on *assets* represent work being performed on the asset.
- Service appointments on *accounts* represent work being performed for the account.
- Service appointments on *opportunities* represent work that is related to the opportunity.
- Service appointments on *leads* represent work that is related to lead—for example, a site visit to pursue a promising lead.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ServiceAppointmentChangeEvent (API version 48.0)

Change events are available for the object.

ServiceAppointmentFeed

Feed tracking is available for the object.

ServiceAppointmentHistory

History is available for tracked fields of the object.

ServiceAppointmentOwnerSharingRule

Sharing rules are available for the object.

ServiceAppointmentShare

Sharing is available for the object.

ServiceAppointmentStatus

Represents a possible status of a service appointment in field service.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
ApiName	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The API name of the status value.</p>
IsDefault	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates that the status value is the default status on service appointments. Only one status value can be the default.</p>
MasterLabel	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The label for the picklist value that appears in the UI.</p>
SortOrder	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The value's position in the drop-down list of values in the UI.</p>
StatusCode	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The status category that the value corresponds to. The Status Category field has seven values which are identical to the default Status values.</p>

Usage

The Status field on service appointments comes with the following values:

- None—Default value.
- Scheduled—Appointment has been assigned to a service resource.
- Dispatched—Assigned service resource has been notified about their assignment.
- In Progress—Work has begun.
- Completed—Work is complete.
- Cannot Complete—Work could not be completed.
- Canceled—Work is canceled, typically before any work began

The ServiceAppointmentStatus object corresponds to the Status field. Adding a value to the Status field—for example, Waiting—creates a service appointment status record, and vice versa.

 **Note:** Service appointments also come with a StatusCategory field whose values are identical to the default Status values. If you create custom Status values, you must indicate which category it belongs to. For example, if you create a *Customer Absent* value, you may decide that it belongs in the *Cannot Complete* category. To learn which processes reference StatusCategory, see [How are Status Categories Used?](#)

ServiceChannel

Represents a channel of work items that are received from your organization—for example, cases, chats, or leads. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
AfterConvoWorkMaxTime	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The maximum number of seconds (from 36 to 3600) that an agent has to complete closing tasks after a conversation with a customer ends. Available only for service channels of type</p>

Field	Details
	Voice. The label in the UI is Max Time (seconds) . This field is available in API version 52.0 and later.
CapacityModel	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, RestrictedPicklist, Sort, Update</p> <p>Description The method that determines when an agent's capacity for a work item is released. With the Status-Based capacity routing model, work remains assigned and applied to an agent's capacity until the work is completed or reassigned to a different agent. In contrast, the tab-based capacity model releases an agent's capacity when a work tab is closed in the service console. Possible values are StatusBased and TabBased.</p>
CapacityPercentage	<p>Type percent</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description The percentage of an agent's capacity for work items that's consumed by a specific type of work item from this service channel. For example, you might give phone calls a capacity percentage of 100. If an agent receives a phone call, the agent won't receive new work items until the call ends, because at that point the agent's capacity will have reached 100%. This field is available in API version 32.0 and earlier. For later API versions, you can set the capacity percentage of work items on the QueueRoutingConfig object. The CapacityPercentage field was removed in API version 33.0.</p>
CapacityWeight	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description The amount of an agent's capacity for work items that's consumed by a work item from this service channel. For example, if an agent has a capacity of 6, and cases are assigned a capacity weight of 2, an agent can be assigned up to 3 cases before the agent is at capacity and can't receive new work items. This field is available in API version 32.0 and earlier. For later API versions, you can set the capacity weight of work items on the QueueRoutingConfig object. The CapacityWeight field was removed in API version 33.0.</p>

Field	Details
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p>
DoesCheckCapOnOwnerChange	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description In the Status-Based capacity routing model, when work is reassigned to a specific agent, you can choose to override the capacity check and keep the work assigned to the agent. The default value is false.</p>
DoesCheckCapOnStatusChange	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description In the Status-Based capacity routing model, when work is reopened, you can choose to override the capacity check and keep the work assigned to a specific agent. The default value is false.</p>
DoesMinimizeWidgetOnAccept	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Automatically minimizes the Omni-Channel widget when an agent accepts work. The default value is false.</p>
HasAfterConvoWorkTimer	<p>Type boolean</p>

Field	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description If true, After Conversation Work (ACW) time can be configured for the channel. Available only for service channels of type Voice. The label in the UI is Give agents wrap-up time after conversations. The default value is false. This field is available in API version 52.0 and later.</p>
Language	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The language of the service channel.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The label of the service channel.</p>
RelatedEntity	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The type of object that's associated with this service channel. This field is unique within your organization.</p>
SecRoutingPriorityField	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The name of the standard field or the id of the custom field that is used for secondary routing priority. This field is unique within your organization.</p>
StatusField	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

Field	Details
	<p>Description</p> <p>The picklist field that you use to track work status in the Status-Based capacity routing model. Use ServiceChannelStatusField to specify the values that indicate completed and in-progress work-item status.</p>

ServiceChannelFieldPriority

Represents a secondary routing priority field-value mapping. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

Fields

Field	Details
Priority	<p>Type</p> <p>int</p> <p>Properties</p> <p>Create, Filter, Group, Sort, Update</p> <p>Description</p> <p>The priority number assigned to the mapped field value.</p>
ServiceChannelId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>The ID of the service channel.</p>
Value	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Sort, Update</p> <p>Description</p> <p>The value of the SecRoutingPriorityField field defined in parent ServiceChannel.</p>

ServiceChannelStatus

Represents the status that's associated with a specific service channel. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
<code>ServiceChannelId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the service channel.</p>
<code>ServicePresenceStatusId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ID of the presence status that's associated with the service channel that's specified by the <code>ServicePresenceChannelId</code>.</p>

ServiceChannelStatusField

Represents the values that you use to indicate completed and in-progress work item status for the status field in the Status-Based Capacity routing model. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, [Omni-Channel](#) and Status-Based Capacity Model must be enabled.

Fields

Field	Details
ServiceChannelId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the service channel.</p>
Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description For the field that you use to track work status, specifies whether the values are for completed or in-progress work.</p>
Value	<p>Type string</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Specifies the values that you use to indicate completed and in-progress work status.</p>

ServiceContract

Represents a customer support contract (business agreement). This object is available in API version 18.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AccountId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the account associated with the service contract.</p>
ActivationDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The initial day the service contract went into effect (whereas <code>StartDate</code> may include a renewal date).</p>
ApprovalStatus	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description Approval status of the service contract.</p>
BillingAddress (beta)	<p>Type address</p> <p>Properties Filter, Nillable</p> <p>Description The compound form of the billing address. Read-only. See Address Compound Fields for details on compound address fields.</p>
BillingCity	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Details for the billing address. Maximum size is 40 characters.</p>
BillingCountry	<p>Type string</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description Details for the billing address. Maximum size is 40 characters.</p>
BillingCountryCode	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ISO country code for the service contract's billing address.</p>
BillingLatitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with <code>BillingLongitude</code> to specify the precise geolocation of a billing address. Acceptable values are numbers between -90 and 90 with up to 15 decimal places.</p>
BillingLongitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with <code>BillingLatitude</code> to specify the precise geolocation of a billing address. Acceptable values are numbers between -180 and 180 with up to 15 decimal places.</p>
BillingPostalCode	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Details for the billing address. Maximum size is 20 characters.</p>
BillingState	<p>Type string</p> <p>Properties Group, Sort, Filter, Nillable</p> <p>Description Details for the billing address. Maximum size is 20 characters.</p>

Field	Details
BillingStateCode	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ISO state code for the service contract's billing address.</p>
BillingStreet	<p>Type textarea</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Street address for the billing address.</p>
ContactId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Required. ID of the Contact associated with the service contract. Must be a valid ID.</p>
ContractNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, Sort</p> <p>Description Unique number automatically assigned to the service contract.</p>
Description	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description Description of the service contract.</p>
Discount	<p>Type percent</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The last day the service contract is in effect.</p>

Field	Details
EndDate	<p>Type date</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The last day the service contract is in effect.</p>
GrandTotal	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total price of the service contract plus shipping and taxes.</p>
IsDeleted	<p>Type boolean</p> <p>Properties Defaulted on create, Filter</p> <p>Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.</p>
LastReferencedDate	<p>Type date</p> <p>Properties Filter, Nillable, Sort, Update</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type date</p> <p>Properties Filter, Nillable, Sort, Update</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>
LineItemCount	<p>Type int</p>

Field	Details
	<p>Properties Filter, Nillable, Group, Sort</p> <p>Description Number of ContractLineItem records associated with the service contract.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Name of the service contract.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the user who currently owns the service contract.</p>
ParentServiceContractId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The service contract's parent service contract, if it has one.</p>
Pricebook2Id	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the Pricebook2 associated with the service contract. Must be a valid ID.</p>
RootServiceContractId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description (Read only) The top-level service contract in a service contract hierarchy. Depending on where a service contract lies in the hierarchy, its root could be the same as its parent.</p>

Field	Details
ShippingAddress (beta)	<p>Type address</p> <p>Properties Filter, Nillable</p> <p>Description The compound form of the shipping address. Read-only. See Address Compound Fields for details on compound address fields.</p>
ShippingCity	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Details of the shipping address. Maximum size is 40 characters.</p>
ShippingCountry	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Details of the shipping address. Country maximum size is 40 characters.</p>
ShippingCountryCode	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ISO country code for the service contract's shipping address.</p>
ShippingLatitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with <code>ShippingLongitude</code> to specify the precise geolocation of a shipping address. Acceptable values are numbers between -90 and 90 with up to 15 decimal places.</p>
ShippingLongitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p>

Field	Details
	<p>Description Used with <code>ShippingLatitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between -180 and 180 with up to 15 decimal places.</p>
<code>ShippingPostalCode</code>	<p>Type string</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description Details of the shipping address. Postal code maximum size is 20 characters.</p>
<code>ShippingState</code>	<p>Type string</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description Details of the shipping address. State maximum size is 20 characters.</p>
<code>ShippingStateCode</code>	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ISO state code for the service contract's shipping address.</p>
<code>ShippingStreet</code>	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description The street address of the shipping address. Maximum of 255 characters.</p>
<code>SpecialTerms</code>	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Any terms specifically agreed to and tracked in the service contract.</p>
<code>StartDate</code>	<p>Type date</p>

Field	Details
	<p>Properties Create, Filter, Nillable, Update</p> <p>Description The first day the service contract is in effect.</p>
Status	<p>Type picklist</p> <p>Properties Filter, Nillable</p> <p>Description The status of the service contract, such as Inactive.</p>
Subtotal	<p>Type currency</p> <p>Properties Filter, Nillable</p> <p>Description Total of the service contract line items (products) before discounts, taxes, and shipping are applied.</p>
Tax	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description Total taxes for the service contract.</p>
Term	<p>Type int</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description Number of months that the service contract is valid.</p>
TotalPrice	<p>Type currency</p> <p>Properties Filter, Nillable</p> <p>Description Total of the contract line items (products) after discounts and before taxes and shipping.</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ServiceContractChangeEvent (API version 44.0)

Change events are available for the object.

ServiceContractFeed (API version 23.0)

Feed tracking is available for the object.

ServiceContractHistory

History is available for tracked fields of the object.

ServiceContractOwnerSharingRule

Sharing rules are available for the object.

ServiceContractShare

Sharing is available for the object.

SEE ALSO:

[ServiceContractOwnerSharingRule](#)

ServiceContractOwnerSharingRule

Represents the rules for sharing a ServiceContract (customer service agreement) with users other than the owner. This object is available in API version 18.0 and later.

 **Note:** To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
AccessLevel	<p>Type picklist</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description A value that represents the type of sharing allowed. The possible values are:</p> <ul style="list-style-type: none"> • Read • Edit

Field Name	Details
Description	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description A description of the sharing rule. Maximum size is 1000 characters. This field is available in API version 29.0 and later.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to Rule Name in the user interface.</p> <p>This field is available in API version 24.0 and later.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p>
GroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort,</p> <p>Description The ID representing the source group. Service contracts owned by users in the source group trigger the rule to give access.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to Label in the user interface.</p>

Field Name	Details
UserorGroupId	<p>Type reference</p> <p>Properties Create, Filter</p> <p>Description The ID representing the target user or group. Target users or groups are given access.</p>

Usage

Use this object to manage the sharing rules for a service contract. General sharing and territory management-related sharing use this object.

SEE ALSO:

[ServiceContract](#)

[Metadata API Developer Guide: SharingRules](#)

ServiceCrew

Represents a group of service resources who can be assigned to service appointments as a unit.

A service crew is a group of service resources whose combined skills and experience make them a good fit to work together on appointments. For example, a wellhead repair crew might include a hydrologist, a mechanical engineer, and an electrician.

Service appointments can only be assigned to service resources. To assign a service crew to service appointments, you must create a service resource with a resource type of Crew that represents the crew, then use the resource for assignment purposes.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
CrewSize	<p>Type int</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The number of members on the crew. This field is manual, so it doesn't auto-update when you add or remove members.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the service crew was last modified. Its label in the user interface is Last Modified Date.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the service crew was last viewed.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The name of the service crew. For example, Repair Crew.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The crew owner. By default, the owner is the person who created the service crew.</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ServiceCrewChangeEvent (API version 48.0)

Change events are available for the object.

ServiceCrewFeed

Feed tracking is available for the object.

ServiceCrewHistory

History is available for tracked fields of the object.

ServiceCrewOwnerSharingRule

Sharing rules are available for the object.

ServiceCrewShare

Sharing is available for the object.

ServiceCrewMember

Represents a technician service resource that belongs to a service crew.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
EndDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The last day that the service resource belongs to the crew. You can use this field to track employment dates for contractors.</p>
IsLeader	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates that the member is the crew leader.</p>

Field Name	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the service crew member was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the service crew member was last viewed.</p>
ServiceCrewId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The crew that the service resource belongs to.</p>
ServiceCrewMemberNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, Sort</p> <p>Description An auto-generated number identifying the service crew member.</p>
ServiceResourceId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The service resource that belongs to the crew. Only service resources whose resource type is Technician can be added to service crews.</p>
StartDate	<p>Type dateTime</p> <p>Properties Create, Filter, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>Required. The day the service resource joins the crew. Service resources can belong to multiple crews as long as their start and end dates don't overlap.</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ServiceCrewMemberChangeEvent (API version 48.0)

Change events are available for the object.

ServiceCrewMemberFeed

Feed tracking is available for the object.

ServiceCrewMemberHistory

History is available for tracked fields of the object.

ServiceCrewOwnerSharingRule

Represents the rules for sharing a service crew with user records other than the owner or anyone above the owner in the role hierarchy.

 **Note:** To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
Description	<p>Type</p> <p>textarea</p> <p>Properties</p> <p>Create, Filter, Nillable, Sort, Update</p> <p>Description</p> <p>A description of the sharing rule. Maximum size is 1000 characters.</p>

Field	Details
DeveloperName	<p>Type string</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to Rule Name in the user interface.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p>
GroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID representing the source group. A service crew owned by a User in the source Group triggers the rule to give access.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to Label on the user interface.</p>
ServiceResourceAccessLevel	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description A value that represents the type of access granted to the target Group, or UserRole. The possible values are:</p> <ul style="list-style-type: none"> • Read • Edit • All

Field	Details
UserOrGroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID representing the User or Group being granted access.</p>

ServicePresenceStatus

Represents a presence status that can be assigned to a service channel. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `query()`, `update()`, `retrieve()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

As of Spring '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>

Field	Details
Language	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The language of the presence status.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The label of the presence status.</p>

ServiceReport

Represents a report that summarizes a work order, work order line item, or service appointment.

The fields that appear on a service report are determined by its service report template. Service reports can be signed by the customer and shared as a PDF.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
ContentVersionDocumentId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the service report version, used for storage.</p>

Field Name	Details
DocumentBody	<p>Type base64</p> <p>Properties Create, Nillable</p> <p>Description The report output.</p>
DocumentContentType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The type of data used for the report output: application/pdf.</p>
DocumentLength	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The length of the report output.</p>
DocumentName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The name of the report output, always set to Service Report.</p>
IsSigned	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the service report contains one or more signatures.</p> <p> Tip: Add this field to the Service Reports related list on work orders, work order line items, and service appointments.</p>
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p>

Field Name	Details
	<p>Description</p> <p>The ID of the service appointment, work order, or work order line item that the service report summarizes. For example, if you click Create Service Report on a service appointment, this field lists the service appointment's record ID.</p>
ServiceReportLanguage	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Restricted picklist</p> <p>Description</p> <p>The language used for the service report. The language is selected in the <code>ServiceReportLanguage</code> field on the associated work order. If the work order doesn't specify a service report language, the report is translated in the default language in Salesforce of the person generating the report.</p>
ServiceReportNumber	<p>Type</p> <p>string</p> <p>Properties</p> <p>Autonumber, Defaulted on create, Filter, Sort</p> <p>Description</p> <p>An auto-generated number identifying the service report.</p>
Template	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The service report template used to generate the service report.</p> <p> Note: If the person creating the service report doesn't have access to certain objects or fields that are included in the service report template, those fields aren't visible in the report they create.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[ServiceReportHistory](#)

History is available for tracked fields of the object.

ServiceReportLayout

Represents a service report template in field service.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Field Service must be enabled. All users with Field Service Standard user permission can view the ServiceReportLayout object via the API.

Fields

Field Name	Details
DeveloperName	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The developer name of the service report template.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
Language	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The language that the service report template uses.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date the service report template was last viewed.</p>
MasterLabel	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The name of the service report template. For example, Maintenance Report Template.</p>

ServiceResource

Represents a service technician or service crew in field service in Field Service and Lightning Scheduler. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The description of the resource.</p>
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description When selected, this option means that the resource can be assigned to work orders. For service tracking purposes, resources can't be deleted, so deactivating a resource is the best way to send them into retirement.</p> <p>Deactivating a user doesn't deactivate the related service resource. You can't create a service resource that is linked to an inactive user.</p>
IsCapacityBased	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Capacity-based resources are limited to a certain number of hours or appointments in a specified time period.</p>

Field Name**Details**

Tip: The Capacities related list shows a resource's capacity.

IsOptimizationCapable

Type

boolean

Properties

Create, Defaulted on create, Filter, Group, Sort, Update

Description

This field is reserved for Field Service and the managed package. Create a custom field instead of using this field to indicate whether optimization should use a service resource.

LastKnownLatitude

Type

double

Properties

Create, Filter, Nillable, Sort, Update

Description

The latitude of the last known location.

LastKnownLongitude

Type

double

Properties

Create, Filter, Nillable, Sort, Update

Description

The longitude of the last known location.

LastKnownLocation

Type

location

Properties

Nillable

Description

The service resource's last known location. You can configure this field to display data collected from a custom mobile app. This field is not visible in the user interface, but you can expose it on service resource page layouts or set up field tracking to be able to view a resource's location history.

LastKnownLocationDate

Type

dateTime

Properties

Filter, Nillable, Sort, Update

Description

The date and time of the last known location.

Field Name	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the service resource was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the service resource was last viewed.</p>
LocationId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Nillable, Update</p> <p>Description The location associated with the service resource. For example, a service vehicle driven by the service resource. This is a relationship field.</p> <p>Relationship Name Location</p> <p>Relationship Type Lookup</p> <p>Refers To Location</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The resource's name. You'll likely want this to be the name or title of the associated user or service crew.</p>
OwnerId	<p>Type reference</p>

Field Name	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The owner of the service resource. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
RelatedRecordId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Nillable, Update</p> <p>Description The associated user. Its label in the UI is <code>User</code>. If the service resource represents a service crew rather than a user, leave the <code>User</code> field blank and select the related crew in the <code>ServiceCrewId</code> field. This is a relationship field.</p> <p>Relationship Name RelatedRecord</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
ResourceType	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Indicates whether the resource is a Technician (T), Dispatcher (D), Crew (C), Asset (S), Agent (A), or Planner (P). The default value is Technician (T). Resources who are dispatchers can't be capacity-based or included in scheduling optimization. Only users with the Field Service Dispatcher permission set license can be dispatchers. You can't add additional resource types.</p>
ServiceCrewId	<p>Type reference</p>

Field Name**Details****Properties**

Create, Filter, Group, Sort, Nillable, Update

Description

The associated service crew. If the service resource represents a crew, select the crew.

Note: This field is hidden for all users by default. To use it, update its field-level security settings in Setup and add it to your service resource page layouts.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ServiceResourceChangeEvent (API version 48.0)

Change events are available for the object.

ServiceResourceFeed

Feed tracking is available for the object.

ServiceResourceHistory

History is available for tracked fields of the object.

ServiceResourceOwnerSharingRule

Sharing rules are available for the object.

ServiceResourceShare

Sharing is available for the object.

ServiceResourceCapacity

Represents the maximum number of scheduled hours or number of service appointments that a capacity-based service resource can complete within a specific time period. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
CapacityInHours	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The number of hours that the resource can work per time period. You must fill out this field, the <code>CapacityInWorkItems</code> field, or both.</p>
CapacityInWorkItems	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The total number of service appointments that the resource can complete per time period. You must fill out this field, the <code>CapacityInHours</code> field, or both.</p>
CapacityNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description (Read only) An auto-generated number identifying the capacity record.</p>
EndDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The date the capacity ends; for example, the end date of a contract.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p>

Field Name	Details
	<p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
ServiceResourceId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The associated service resource. You can set multiple capacities for a resource as long as their start and end dates do not overlap.</p>
StartDate	<p>Type date</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The date the capacity goes into effect.</p>
TimePeriod	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Days, Hours, or Months. For example, if a resource can work 80 hours per month, the capacity's <code>Time Period</code> would be <code>Month</code> and <code>Hours per Time Period</code> would be <code>80</code>.</p>

Usage

Service resources who are capacity-based can only work a certain number of hours or complete a certain number of service appointments within a specified time period. Contractors tend to be capacity-based. To indicate that a service resource is capacity-based, select **Capacity-Based** on the service resource record, then create a capacity record for the service resource.

You must fill out at least one of these fields: `CapacityInWorkItems` and `CapacityInHours`. If you're using the Field Service managed package and would like to measure capacity both in hours and in number of work items, enter a value for both. The resource is considered to reach their capacity based on whichever term is met first—hours or number of work items.

 **Important:** If you aren't using the Field Service managed package, capacity serves more as a suggestion than a rule. Resources can still be as scheduled beyond their capacity, and you aren't notified when a resource exceeds their capacity.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ServiceResourceCapacityFeed

Feed tracking is available for the object.

ServiceResourceCapacityHistory

History is available for tracked fields of the object.

ServiceResourceCapacityHistory

Represents the history of changes made to tracked fields on a service resource capacity record. This object is available in API version 38.0 and later.

Supported Calls

`getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

Field Service must be enabled in your organization, and field tracking for service resource capacity fields must be configured.

Fields

Field Name	Details
<code>DataType</code>	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Data type of the field that was changed.</p>
<code>Field</code>	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The name of the field that was changed.</p>
<code>NewValue</code>	<p>Type anyType</p>

Field Name	Details
	<p>Properties Nillable, Sort</p> <p>Description The new value of the field that was changed.</p>
OldValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The value of the field before it was changed.</p>
ServiceResourceCapacityId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the service resource capacity being tracked. The history is displayed on the detail page for this record.</p>

ServiceResourceOwnerSharingRule

Represents the rules for sharing a service resource with user records other than the owner or anyone above the owner in the role hierarchy. This object is available in API version 38.0 and later.

 **Note:** To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
Description	<p>Type textarea</p>

Field	Details
	<p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description A description of the sharing rule. Maximum size is 1000 characters.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to Rule Name in the user interface.</p> <p> Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance slows down while Salesforce generates one for each record.</p>
GroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID representing the source group. A service resource owned by a User in the source Group triggers the rule to give access.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to Label on the user interface.</p>
ServiceResourceAccessLevel	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p>

Field	Details
	<p>Description</p> <p>A value that represents the type of access granted to the target Group, or UserRole. The possible values are:</p> <ul style="list-style-type: none"> • Read • Edit • All
UserOrGroupId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>The ID representing the User or Group being granted access.</p>

ServiceResourcePreference

Represents the service resource scheduling preferences that are considered as a business objective in the scheduling logic engine. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

The org must have the Workforce Engagement license. To view, create, edit, and delete records, the user must have the Workforce Engagement Agent or Workforce Engagement Planner permission set.

Fields

Field	Details
EndDate	<p>Type</p> <p>date</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The end date period that this preference is effective.</p>

Field	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the service resource preference was last modified. Its label in the user interface is Last Modified Date.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the service resource preference was last viewed.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The service resource preference record name.</p>
OperatingHoursId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The operating hours associated with the service resource preference. This is a relationship field.</p> <p>Relationship Name OperatingHours</p> <p>Relationship Type Lookup</p> <p>Refers To OperatingHours</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field	Details
	<p>Description The owner of the service resource preference. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
ServiceResourceId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The service resource associated with the service resource preference. This is a relationship field.</p> <p>Relationship Name ServiceResource</p> <p>Relationship Type Lookup</p> <p>Refers To ServiceResource</p>
StartDate	<p>Type date</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The start date period that this preference is effective.</p>

ServiceResourceSkill

Represents a skill that a service resource possesses in Field Service and Lightning Scheduler. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
EffectiveEndDate	<p>Type datetime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date when the skill expires. For example, if a service resource needs to be re-certified after six months, the end date would be the date their certification expires.</p>
EffectiveStartDate	<p>Type datetime</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The date when the service resource gains the skill. For example, if the skill represents a certification, the start date would be the date of certification.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the resource skill was last modified. Its label in the user interface is Last Modified Date.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the resource skill was last viewed.</p>
ServiceResourceId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p>

Field Name	Details
	<p>Description The service resource who possesses the skill. This is a relationship field.</p> <p>Relationship Name ServiceResource</p> <p>Relationship Type Lookup</p> <p>Refers To ServiceResource</p>
SkillId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The skill the service resource possesses. This is a relationship field.</p> <p>Relationship Name Skill</p> <p>Relationship Type Lookup</p> <p>Refers To Skill</p>
SkillLevel	<p>Type double</p> <p>Properties Create, Defaulted on create, Filter, Nillable, Sort, Update</p> <p>Description The service resource's skill level. Skill level can range from zero to 99.99.</p>
SkillNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description An auto-generated number identifying the resource skill assignment.</p>

Usage

You can assign skills to all service resources in your org to indicate their certifications and areas of expertise, and specify each resource's skill level from 0 to 99.99. For example, you can assign Maria the "Welding" skill, level 50.

If you intend to use the skills feature, determine which skills you want to track and how skill level should be determined. For example, you may want the skill level to reflect years of experience, certification levels, or license classes.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[ServiceResourceSkillFeed](#)

Feed tracking is available for the object.

[ServiceResourceSkillHistory](#)

History is available for tracked fields of the object.

ServiceSetupProvisioning

Represents a task completed by the Service Setup Assistant. This object is available in API version 52.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

ServiceSetupProvisioning is accessible only if the Service Setup Assistant is turned on. Users need the Customize Application permission to access it.

Fields

Field	Details
JobName	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The name of a group of tasks completed by the Service Setup Assistant.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p>

Field	Details
	<p>Description An automatically generated ID.</p>
Status	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The status of the task being completed by the Service Setup Assistant. Possible values are:</p> <ul style="list-style-type: none"> Completed—The task completed successfully. ExistingSetup—The task couldn't be completed due to conflicting configurations. FailedFatalError—The task couldn't be completed. InProgress—The task is in progress. PRE_CONDITION_NOT_MET—The task couldn't be completed because one or more prerequisites weren't met.
TaskContext	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description The description of the changes included in the task.</p>
TaskName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The name of the task.</p>

ServiceTerritory

Represents a geographic or functional region in which field service work can be performed in Field Service and Lightning Scheduler. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
Address	<p>Type address</p> <p>Properties Filter</p> <p>Description An address to associate with the territory. You may want to list the address of the territory's headquarters.</p>
City	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The city of the associated address. Maximum length is 40 characters.</p>
Country	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The country to associate with the territory. Maximum length is 80 characters.</p>
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The description of the territory.</p>
GeocodeAccuracy	<p>Type picklist</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The level of accuracy of a location's geographical coordinates compared with its physical address. Usually provided by a geocoding service based on the address's latitude and longitude coordinates.</p> <p> Note: This field is available in the API only.</p>
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the service territory is meant to be used. If a territory is inactive, you can't add members to it or link it to work orders, work order line items, or service appointments.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the territory was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the territory was last viewed.</p>
Latitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with <code>Longitude</code> to specify the precise geolocation of the address associated with the territory. Acceptable values are numbers between <code>-90</code> and <code>90</code> with up to 15 decimal places.</p> <p> Note: This field is available in the API only.</p>

Field Name	Details
Longitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with <code>Latitude</code> to specify the precise geolocation of the address associated with the territory. Acceptable values are numbers between -180 and 180 with up to 15 decimal places.</p> <p> Note: This field is available in the API only.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the territory.</p>
OperatingHoursId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The territory's operating hours, which indicate when service appointments within the territory can occur. Service resources who are members of a territory automatically inherit the territory's operating hours unless different hours are specified on the resource record.</p> <p>This is a relationship field.</p> <p>Relationship Name OperatingHours</p> <p>Relationship Type Lookup</p> <p>Refers To OperatingHours</p>
ParentTerritoryId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
PostalCode	<p>Description The territory's parent service territory, if it has one. For example, a <i>Northern California</i> territory can have a <i>State of California</i> territory as its parent. A service territory hierarchy can contain up to 10,000 territories.</p> <p>This is a relationship field.</p> <p>Relationship Name ParentTerritory</p> <p>Relationship Type Lookup</p> <p>Refers To ServiceTerritory</p>
State	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The postal code of the address associated with the territory. Maximum length is 20 characters.</p>
Street	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The state of the address associated with the territory. Maximum length is 80 characters.</p>
TopLevelTerritoryId	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The street number and name of the address associated with the territory.</p>
	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p>Description (Read only) The top-level territory in a hierarchy of service territories. Depending on where a territory lies in the hierarchy, its top-level territory might be the same as its parent.</p> <p>This is a relationship field.</p> <p>Relationship Name TopLevelTerritory</p> <p>Relationship Type Lookup</p> <p>Refers To ServiceTerritory</p>
TypicalInTerritoryTravelTime	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Estimated number of minutes needed to travel from one location to another within the service territory. You can use this field in Apex customization.</p>

Usage

If you want to use service territories, determine which territories you need to create. Depending on how your business works, you may decide to create territories based on cities or counties, or on functional categories such as sales versus service. If you plan to build out a hierarchy of service territories, create the highest-level territories first.

For example, you can create a hierarchy of territories to represent the areas where your team works in California. Include a top-level territory named *California*, three child territories named *Northern California*, *Central California*, and *Southern California*, and a series of third-level territories corresponding to California counties. Assign service resources to each county territory to indicate who is available to work in that county.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ServiceTerritoryChangeEvent](#) (API version 48.0)

Change events are available for the object.

[ServiceTerritoryFeed](#)

Feed tracking is available for the object.

[ServiceTerritoryHistory](#)

History is available for tracked fields of the object.

ServiceTerritoryOwnerSharingRule

Sharing rules are available for the object.

ServiceTerritoryShare

Sharing is available for the object.

ServiceTerritoryLocation

Represents a location associated with a particular service territory in field service.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
LocationId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The location that is associated with the service territory.</p>
ServiceTerritoryId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The associated service territory.</p>
ServiceTerritoryLocationNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, Sort</p> <p>Description (Read only) Auto-generated number identifying the service territory location.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ServiceTerritoryLocationFeed

Feed tracking is available for the object.

ServiceTerritoryLocationHistory

History is available for tracked fields of the object.

ServiceTerritoryMember

Represents a service resource who can be assigned to service appointments in a service territory in Field Service and Lightning Scheduler. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
Address	<p>Type address</p> <p>Properties Filter</p> <p>Description The member's address. You may want to list the related service resource's address in this field.</p>
City	<p>Type string</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description The city of the member's address. Maximum length is 40 characters.</p>
Country	<p>Type string</p>

Field Name	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description The country of the member's address. Maximum length is 80 characters.</p>
EffectiveEndDate	<p>Type datetime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date when the service resource is no longer a member of the territory. If the resource will be working in the territory for the foreseeable future, leave this field blank. This field is mainly useful for indicating when a temporary relocation ends.</p>
EffectiveStartDate	<p>Type datetime</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The date when the service resource becomes a member of the service territory.</p>
GeocodeAccuracy	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The level of accuracy of a location's geographical coordinates compared with its physical address. Acceptable values are numbers between -180 and 180 with up to 15 decimal places.</p> <p> Note: This field is available in the API only.</p>
MemberNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description (Read only) An auto-generated number identifying the service territory member.</p>
OperatingHoursId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Nillable, Update</p> <p>Description The operating hours assigned to the service territory member. If no operating hours are specified, the member is assumed to use their parent service territory's operating hours. If a member needs special operating hours, create them in Setup</p>

Field Name	Details
	<p>and select them in the <code>Operating Hours</code> lookup field on the member's detail page.</p> <p>This is a relationship field.</p> <p>Relationship Name OperatingHours</p> <p>Relationship Type Lookup</p> <p>Refers To OperatingHours</p>
PostalCode	<p>Type string</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description The postal code of the member's address. Maximum length is 20 characters.</p>
ServiceResourceId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The service resource assigned to the service territory. This is a relationship field.</p> <p>Relationship Name ServiceResource</p> <p>Relationship Type Lookup</p> <p>Refers To ServiceResource</p>
ServiceTerritoryId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The service territory that the service resource is assigned to. This is a relationship field.</p> <p>Relationship Name ServiceTerritory</p>

Field Name	Details
	<p>Relationship Type Lookup</p> <p>Refers To ServiceTerritory</p>
State	<p>Type string</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description The state of the member's address. Maximum length is 80 characters.</p>
Street	<p>Type textarea</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description The street number and name of the member's address.</p>
TerritoryType	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Primary, Secondary, or Relocation.</p> <ul style="list-style-type: none"> The primary territory is typically the territory where the resource works most often—for example, near their home base. Service resources can only have one primary territory. Secondary territories are territories where the resource can be assigned to appointments if needed. Service resources can have multiple secondary territories. Relocation territories represent temporary moves for service resources. If you're using the Field Service managed packages with the scheduling optimizer, resources with relocation territories are always assigned to services within their relocation territories during the specified relocation dates; if they don't have a relocation territory, the primary territories are favored over the secondary. <p>For example, a service resource might have the following territories:</p> <ul style="list-style-type: none"> Primary territory: <i>West Chicago</i> Secondary territories: <ul style="list-style-type: none"> – <i>East Chicago</i>

Field Name**Details**

- *South Chicago*

- Relocation territory: *Manhattan*, for a three-month period
-

Usage

If you delete a service territory with members, the service resources who were members no longer have any connection to the territory.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ServiceTerritoryMemberChangeEvent (API version 48.0)

Change events are available for the object.

ServiceTerritoryMemberFeed

Feed tracking is available for the object.

ServiceTerritoryMemberHistory

History is available for tracked fields of the object.

ServiceTerritoryWorkType

Represents the relationship between a ServiceTerritory object and a WorkType object for Salesforce Scheduler appointments. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field**Details**`LastReferencedDate`**Type**

dateTime

Properties

Filter, Nillable, Sort

Description

The date and time that the current user last viewed a record related to this object.

`LastViewedDate`**Type**

dateTime

Field	Details
	<p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this object.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The name of this service territory-work type relationship.</p>
ServiceTerritoryId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the service territory that's related to the work type indicated in the <code>WorkTypeId</code> field. This is a relationship field.</p> <p>Relationship Name ServiceTerritory</p> <p>Relationship Type Lookup</p> <p>Refers To ServiceTerritory</p>
WorkTypeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the work type that's related to the service territory indicated in the <code>ServiceTerritoryId</code> field. This is a relationship field.</p> <p>Relationship Name WorkType</p> <p>Relationship Type Lookup</p> <p>Refers To WorkType</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ServiceTerritoryWorkTypeFeed

Feed tracking is available for the object.

ServiceTerritoryWorkTypeHistory

History is available for tracked fields of the object.

SessionPermSetActivation

The SessionPermSetActivation object represents a permission set assignment activated during an individual user session. When a SessionPermSetActivation object is inserted into a permission set, an activation event fires, allowing the permission settings to apply to the user's specific session. This object is available in API versions 37.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`

 **Note:** If you include session-based permission sets in a permission set group, the permissions in them do not require session-based activation for users assigned to the group.

Special Access Rules

As of Summer '20 and later, only users who have one of these permissions can access this object:

- View Setup and Configuration
- Manage Session Permission Set Activations

Fields

Field Name	Details
<code>AuthSessionId</code>	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The session ID related to this permission set assignment for its duration. This is a relationship field.</p> <p>Relationship Name AuthSession</p> <p>Relationship Type Lookup</p> <p>Refers To AuthSession</p>

Field Name	Details
Description	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The session details, such as device used and browser.</p>
PermissionSetGroupId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The permission set group ID related to this permission set group assignment and user for its duration. This field is available in API version 53.0 and later. This is a relationship field.</p> <p>Relationship Name PermissionSetGroup</p> <p>Relationship Type Lookup</p> <p>Refers To PermissionSetGroup</p>
PermissionSetId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The permission set ID related to this permission set assignment and user for its duration. This is a relationship field.</p> <p>Relationship Name PermissionSet</p> <p>Relationship Type Lookup</p> <p>Refers To PermissionSet</p>
UserId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p>

Field Name	Details
	<p>Description</p> <p>The user ID of the user to whom this permission set assignment applies for its duration.</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>User</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>User</p>

Usage

Use SessionPermSetActivation to create a permission set available only for a specified session's duration. For example, create permission sets that provide access to specific applications only during authenticated sessions.

In the following Apex example, an identified session is activated after session information is submitted via a button. Successful activation results in a confirmation message displayed to the user.

```
public class SessionPermSetActivationController {
    // id of the session permission set to be activated
    private final String sessionPermSetId = 'OPSxx0000004rJ';
    private final String sessionId;

    public SessionPermSetActivationController() {
        Map<String, String> sessionManagement = Auth.SessionManagement.getCurrentSession();

        sessionId = sessionManagement.get('SessionId');
    }

    public PageReference activate() {
        // activate the permission set
        SessionPermSetActivation activation = new SessionPermSetActivation();
        activation.AuthSessionId = sessionId;
        activation.PermissionSetId = sessionPermSetId;
        activation.Description = 'created by SessionPermSetActivationController';

        insert activation;
        return null;
    }

    public boolean getActivated() {
        Integer alreadyActivated = [SELECT count()
                                   FROM SessionPermSetActivation
                                   WHERE AuthSessionId = :sessionId
                                   And PermissionSetId = :sessionPermSetId LIMIT
1];
    }
}
```

```

        return alreadyActivated > 0;
    }
}

<apex:page controller="SessionPermSetActivationController">
    <apex:outputPanel rendered="{!!Activated}">
        <h3>Activate Session Permission Set</h3>
        <br />
        <apex:form >
            <apex:commandButton action="{!activate}" value="Activate"
id="activateButton"/>
        </apex:form>
    </apex:outputPanel>
    <apex:outputPanel rendered="{!!Activated}">
        <h3>Session Permission Set is already active.</h3>
    </apex:outputPanel>
</apex:page>

```

SetupAuditTrail

Represents changes you or other admins made in your org's Setup area for at least the last 180 days. This object is available in API version 15.0 and later.

 **Note:** SetupAuditTrail is not a supported standard controller. Using SetupAuditTrail as a standard controller in a Visualforce page results in an error.

Supported Calls

query(), retrieve()

 **Note:** Aggregate queries aren't supported on this object. For example, `SELECT count() FROM SetupAuditTrail` works but `SELECT count(Id) FROM SetupAuditTrail` fails.

Fields

Field	Details
Action	<p>Type string</p> <p>Properties Filter, Sort</p> <p>Description The category of the change made in Setup. For example, a value of <code>PermSetCreate</code> indicates that an administrator created a permission set. The <code>Display</code> field contains more specific information.</p>

Field	Details
CreatedByContext	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The context under which the Setup change was made. For example, if Einstein uses cloud-to-cloud services to make a change in Setup, the value of this field is <i>Einstein</i>. This field is available in API version 48.0 and later.</p>
CreatedByIssuer	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Reserved for future use.</p>
DelegateUser	<p>Type string</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The Login-As user who executed the action in Setup. If a Login-As user didn't perform the action, this field is blank. This field is available in API version 35.0 and later.</p>
Display	<p>Type string</p> <p>Properties Nillable, Sort</p> <p>Description The full description of changes made in Setup. For example, if the <code>Action</code> field has a value of <code>PermSetCreate</code>, the <code>Display</code> field has a value like "Created permission set MAD: with user license Salesforce."</p>
Section	<p>Type string</p> <p>Properties Nillable, Sort</p> <p>Description The section in the Setup menu where the action occurred. For example, Manage Users or Company Profile.</p>

 **Note:** You can use SOQL joins to get the information you need more quickly. For example, running `SELECT CreatedBy.Name FROM SetupAuditTrail LIMIT 10` returns the first and last names of the last 10 people to make changes in Setup.

SetupEntityAccess

Represents the enabled setup entity access settings (such as for Apex classes) for the parent PermissionSet. This object is available in API version 25.0 and later.

To grant users access to an entity, associate the appropriate SetupEntityAccess record with a PermissionSet that's assigned to a user.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only users with "View Setup and Configuration" permission can access this object.

Fields

Field Name	Details
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the entity's parent PermissionSet. This is a relationship field.</p> <p>Relationship Name Parent</p> <p>Relationship Type Lookup</p> <p>Refers To PermissionSet</p>
SetupEntityId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the entity for which access is enabled, such as an Apex class or Visualforce page.</p>

Field Name	Details
SetupEntityType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The type of setup entity for which access is enabled. Valid values are:</p> <ul style="list-style-type: none"> • <code>ApexClass</code> for Apex classes • <code>ApexPage</code> for Visualforce pages • In API version 28.0 and later, <code>ConnectedApplication</code> for OAuth connected apps • In API version 31.0 and later, <code>CustomPermission</code> for custom permissions • In API version 28.0 and later, <code>ServiceProvider</code> for service providers • In API version 28.0 and later, <code>TabSet</code> for apps • In API version 48.0 and later, <code>CustomEntityDefinition</code> for Custom Settings and Custom Metadata Types

Usage

Because SetupEntityAccess is a child of the PermissionSet object, the usage is similar to other PermissionSet child objects like FieldPermissions and ObjectPermissions.

For example, the following code returns all permission sets that grant access to any setup entities for which access is enabled:

```
SELECT Id, ParentId, Parent.Name, SetupEntityId
FROM SetupEntityAccess
```

The following code returns permission sets that grant access only to Apex classes:

```
SELECT Id, ParentId, Parent.Name, SetupEntityId
FROM SetupEntityAccess
WHERE SetupEntityType='ApexClass'
```

The following code returns permission sets that grant access to any setup entities, and are not owned by a profile:

```
SELECT Id, ParentId, Parent.Name, SetupEntityId
FROM SetupEntityAccess
WHERE ParentId
IN (SELECT Id
    FROM PermissionSet
    WHERE isOwnedByProfile = false)
```

You may want to return only those permission sets that have access to a specific setup entity. To do this, query the parent object. For example, this code returns all permission sets that grant access to the `helloWorld` Apex class:

```
SELECT Id, Name,
    (SELECT Id, Parent.Name, Parent.Profile.Name
     FROM SetupEntityAccessItems)
```

```
FROM ApexClass
WHERE Name = 'helloWorld'
```

While it's possible to return permission sets that have access to a `ConnectedApplication`, `ServiceProvider`, or `TabSet` by `SetupEntityId`, it's not possible to return permission sets that have access to these `SetupEntityType` fields by any other `AppMenuItem` attribute, such as `Name` or `Description`. For example, to find out if a user has access to the Recruiting app, you'd run two queries. First, query to get the `AppMenuItem` ID:

```
SELECT Id, Name, Label
FROM AppMenuItem
WHERE Name = 'Recruiting'
```

Let's say the previous query returned the `AppMenuItem` ID `02uD0000000GIiMIAW`. Using this ID, you can now run a query to find out if a user has access to the Recruiting app:

```
SELECT Id, SetupEntityId, SetupEntityType
FROM SetupEntityAccess
WHERE ParentId
IN
  (SELECT PermissionSetId
   FROM PermissionSetAssignment
   WHERE AssigneeId = '005D0000001QOzF')
AND (SetupEntityId = '02uD0000000GIiMIAW')
```

ShapeRepresentation

Contains information about the shape of an org. The shape of an org includes features, settings, licenses, and limits information. You can easily create scratch orgs based on a source org's shape. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Description	Type string

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description A free-form text field for you to enter a description of this org shape. This field has a maximum length of 255 characters.</p>
Edition	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description The org edition of this org shape. Valid entries are Developer, Enterprise, Group, or Professional. This field is read-only.</p>
Features	<p>Type textarea</p> <p>Properties Nillable, Update</p> <p>Description Add-on features present in the org referred to by this org shape. This field is read-only.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Date when the org shape was last referenced. This field is read-only.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Date when the org shape was last viewed. This field is read-only.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The alias for the org shape.</p>

Field	Details
Settings	<p>Type textarea</p> <p>Properties Nillable, Update</p> <p>Description Settings of the org referred to by this org shape. This field is read-only.</p>
Status	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description Status of this org shape. You can use an org shape when it's Active. This field is read-only. Possible values are:</p> <ul style="list-style-type: none"> • Active • Error • InProgress • Inactive • New

SharingRecordCollection

Represents a collection of records. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Record collections are limited to 100 items and 100 members for each record collection.

Fields

Field	Details
Description	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	Description The description of the record collection.
GroupId	Type reference Properties Filter, Group, Nillable, Sort Description The group ID of the record collection.
LastAdded	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when an item was last added to the record collection.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.
Name	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The name of the record collection.

Field	Details
NumberOfRecords	<p>Type int</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description The number of records in the record collection. The limit is 100.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the record collection owner.</p>

SharingRecordCollectionItem

Represents a single record in a collection of records. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Record collections are limited to 100 items for each record collection.

Fields

Field	Details
CollectionId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the related record collection.</p>
Description	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description The description of the record collection item.</p>
ItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ID of the record collection item.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the record collection item.</p>

SharingRecordCollectionMember

Represents a user with access to a collection of records. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Record collections are limited to 100 members for each record collection.

Fields

Field	Details
CollectionId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the related record collection.</p>
UserOrGroupId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ID of the user or group with access to the record collection.</p>

Shift

Represents a shift for service resource scheduling. Available in API versions 46.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `upsert()`

Special Access Rules

Field Service must be enabled. Users must have Field Service permission.

Fields

Field	Details
BackgroundColor	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Sets a background color when shifts are displayed in the UI. Use a 3- or 6-digit hexadecimal format, for example #FF00FF. Available in API version 54.0 and later.</p>
EndTime	<p>Type dateTime</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The date and time that the shift ends.</p>
IsNonStandard	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field	Details
	<p>Description</p> <p>Indicates whether the shift is nonstandard, such as overtime or on-call shifts.</p> <p>The default value is false. Available in API version 54.0 and later.</p>
JobProfileId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The job profile associated with the shift. Available in API versions 47.0 and later.</p>
Label	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The label that a shift is given.</p>
LastReferencedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The date and time when the current user last viewed a related record.</p>
LastViewedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The date and time when the current user last viewed this record.</p>
OwnerId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>The owner of the shift.</p> <p>This is a polymorphic relationship field.</p> <p>Relationship Name</p> <p>Owner</p>

Field	Details
	<p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
RecordsetFilterCriteriaId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the recordset filter criteria selected for the shift. Available in API version 49.0 and later. This is a relationship field.</p> <p>Relationship Name RecordsetFilterCriteria</p> <p>Relationship Type Lookup</p> <p>Refers To RecordsetFilterCriteria</p>
ServiceResourceId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the service resource the shift belongs to. Available in API versions 47.0 and later. This is a relationship field.</p> <p>Relationship Name ServiceResource</p> <p>Relationship Type Lookup</p> <p>Refers To ServiceResource</p>
ServiceTerritoryId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the service territory the shift belongs to. Available in API versions 47.0 and later. This is a relationship field.</p>

Field	Details
	<p>Relationship Name ServiceTerritory</p> <p>Relationship Type Lookup</p> <p>Refers To ServiceTerritory</p>
ShiftNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The number automatically given to the shift upon creation.</p>
ShiftTemplateId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The shift template ID, if the shift was created from a shift template. Available in API version 53.0 and later. This is a relationship field.</p> <p>Relationship Name ShiftTemplate</p> <p>Relationship Type Lookup</p> <p>Refers To ShiftTemplate</p>
StartTime	<p>Type dateTime</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The date and time that the shift starts.</p>
Status	<p>Type picklist</p> <p>Properties Create, Filter, Group, Sort, Update</p>

Field	Details
	<p>Description</p> <p>Describes the status of the shift. Users can create custom values. Default values are:</p> <ul style="list-style-type: none"> • Tentative • Published • Confirmed
StatusCategory	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description</p> <p>Describes the status of the shift using static values. This field is derived from <code>Status</code> using the mapping defined in setup.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Tentative • Published • Confirmed
TimeSlotType	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description</p> <p>Type of time slot for the shift. The same setup values as the <code>TimeSlot</code> field in the <code>OperatingHours</code> object.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Normal (default value) • Extended

Usage

Scheduling and dispatching service resources using shift data is not supported in API version 46.0, and is a pilot feature in API version 47.0.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

ShiftFeed

Feed tracking is available for the object.

ShiftHistory

History is available for tracked fields of the object.

ShiftOwnerSharingRule

Sharing rules are available for the object.

ShiftShare

Sharing is available for the object.

ShiftHistory

Represents the history of changes made to tracked fields on a time sheet. Available in API versions 46.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

Field Service must be enabled in your organization, and field tracking for shift fields must be configured.

Fields

Field	Details
<code>DataType</code>	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Data type of the field that was changed.</p>
<code>Field</code>	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The name of the field that was changed.</p>
<code>NewValue</code>	<p>Type anyType</p> <p>Properties Nillable, Sort</p>

Field	Details
	<p>Description The new value of the field that was changed.</p>
OldValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The value of the field before it was changed.</p>
ShiftId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the shift being tracked. The history is displayed on the detail page for this record. This is a relationship field.</p> <p>Relationship Name Shift</p> <p>Relationship Type Lookup</p> <p>Refers To Shift</p>

Usage

Scheduling and dispatching service resources using shift data is not supported in API version 46.0.

ShiftOwnerSharingRule

Represents the rules for sharing a shift with user records other than the owner or anyone above the owner in the role hierarchy. Available in API versions 46.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Field Service must be enabled.

 **Note:** To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

Fields

Field	Details
Description	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description A description of the sharing rule. Maximum size is 1000 characters.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to Rule Name in the user interface.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p>
GroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID representing the source group. A time sheet owned by a User in the source Group triggers the rule to give access.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p>

Field	Details
	<p>Description</p> <p>Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to Label on the user interface.</p>
ServiceResourceAccessLevel	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description</p> <p>A value that represents the type of access granted to the target Group, or UserRole. The possible values are:</p> <ul style="list-style-type: none"> • Read • Edit • All
UserOrGroupId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>The ID representing the User or Group being granted access.</p>

Usage

Scheduling and dispatching service resources using shift data is not supported in API version 46.0.

ShiftPattern

Represents a pattern of templates for creating shifts. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled. Users must have Field Service permission.

Fields

Field	Details
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description A short description of the shift pattern to help users identify the pattern.</p>
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates that the shift pattern can be used to create shifts. The default value is 'false'.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date that the shift pattern was last used.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date that the shift pattern was last viewed.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description A short, descriptive name of the shift pattern.</p>
OwnerId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the owner of the shift pattern. Default is the user who creates the shift pattern. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
PatternLength	<p>Type int</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The duration in days of the shift pattern.</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ShiftPatternFeed](#) on page 3944

Feed tracking is available for the object.

[ShiftPatternHistory](#) on page 3956

History is available for tracked fields of the object.

[ShiftPatternShare](#) on page 3967

Sharing is available for the object.

SEE ALSO:

[ShiftPatternEntry](#)

[Shift Patterns](#)

ShiftPatternEntry

ShiftPatternEntry links a shift template to a shift pattern. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled. Users must have Field Service permission.

Fields

Field	Details
DayOrder	<p>Type int</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description DayOrder links the shift template to the specific day within the shift pattern duration that the template. For example, if the DayOrder is 2 then a shift from the associated template is created on the second day of the pattern.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date that the shift pattern entry was last used.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date that the shift pattern entry was last viewed.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description An auto-generated reference number for the shift pattern entry.</p>

Field	Details
ShiftPatternId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the shift pattern that the shift pattern entry is linked to. This is a relationship field.</p> <p>Relationship Name ShiftPattern</p> <p>Relationship Type Lookup</p> <p>Refers To ShiftPattern</p>
ShiftTemplateId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the shift template that's used to create shifts for this shift pattern entry. This is a relationship field.</p> <p>Relationship Name ShiftTemplate</p> <p>Relationship Type Lookup</p> <p>Refers To ShiftTemplate</p>

SEE ALSO:

[ShiftPattern](#)

ShiftShare

Represents a sharing entry on a field service shift. Available in API versions 46.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
AccessLevel	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Level of access that the user or group has to the shift. The possible values are:</p> <ul style="list-style-type: none"> • Read • Edit • All (This value isn't valid for create or update calls.) <p>Set to an access level that is at least equal to the organization's default shift access level.</p>
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The shift associated with the sharing entry. This is a relationship field.</p> <p>Relationship Name Parent</p> <p>Relationship Type Lookup</p> <p>Refers To Shift</p>
RowCause	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The reason why this sharing entry exists. You can write to this field only when its value is omitted or set to Manual (default). Valid values include:</p> <ul style="list-style-type: none"> • Manual—The User or Group has access because a user with "All" access manually shared the shift record. • Owner—The User is the owner of the shift.

Field	Details
	<ul style="list-style-type: none"> <code>Rule</code>—The User or Group has access via a shift sharing rule. <code>GuestRule</code>—The User or Group has access via a shift guest user sharing rule.
<code>UserOrGroupId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description (Read only) ID of the user or group that has access to the shift record. This is a polymorphic relationship field.</p> <p>Relationship Name UserOrGroup</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>

Usage

Scheduling and dispatching service resources using shift data is not supported in API version 46.0.

ShiftStatus

Represents a shift, such as Tentative, Published, or Confirmed. Available in API versions 46.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
<code>ApiName</code>	<p>Type string</p>

Field	Details
	<p>Properties Filter, Group, idLookup, Sort</p> <p>Description Uniquely identifies a picklist value so it can be retrieved without using an ID or master label.</p>
IsDefault	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether this is the default shift status value (<code>true</code>) or not (<code>false</code>) in the picklist. Only one value can be the default value.</p>
MasterLabel	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Master label for this shift status value. This display value is the internal label that does not get translated. Limit: 255 characters.</p>
SortOrder	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Number used to sort this value in the shift status picklist. These numbers are not guaranteed to be sequential, as some previous shift status values might have been deleted.</p>
StatusCode	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Describes the status of the shift using static values. Possible values are:</p> <ul style="list-style-type: none"> • Tentative • Published • Confirmed

Usage

Scheduling and dispatching service resources using shift data is not supported in API version 46.0.

ShiftTemplate

Represents a template for creating shifts. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

Field Service or Workforce Engagement must be enabled. For Field Service, users must have Field Service permission. For Workforce Engagement, to create a shift and apply a template, the user needs to have a Workforce Engagement Planner permission set.

Fields

Field	Details
BackgroundColor	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Sets a background color when shifts are displayed in the UI. Use a 3- or 6-digit hexadecimal format, for example #FF00FF. Available in API version 54.0 and later.</p>
Description	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Additional information about the shift like number of breaks or activities.</p>
Duration	<p>Type double</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description How long the shift lasts. The unit of measurement for this field is determined by <code>ShiftTemplateDurationType</code>.</p>

Field	Details
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the shift is active or inactive.</p>
IsNonStandard	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the shift is nonstandard, such as overtime or on-call shifts. The default value is false. Available in API version 54.0 and later.</p>
JobProfileId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The Job Profile record. This field is optional. This is a relationship field.</p> <p>Relationship Name JobProfile</p> <p>Relationship Type Lookup</p> <p>Refers To JobProfile</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the shift template was last modified. Its label in the user interface is Last Modified Date.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field	Details
	<p>Description The date when the shift template was last viewed.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The shift template record name.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The owner of the shift template. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
RecordsetFilterCriteriaId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the recordset filter criteria selected for the shift template. Available in API version 53.0 and later. This is a relationship field.</p> <p>Relationship Name RecordsetFilterCriteria</p> <p>Relationship Type Lookup</p> <p>Refers To RecordsetFilterCriteria</p>
ShiftTemplateDurationType	<p>Type picklist</p>

Field	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The unit of measurement for the shift template duration.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • H—Hours • M—Minutes <p>The default value is H.</p>
StartTime	<p>Type time</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The time of day when the shift starts.</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[ShiftTemplateOwnerSharingRule](#) on page 3961

Sharing rules are available for the object.

[ShiftTemplateShare](#) on page 3967

Sharing is available for the object.

[ShiftTemplateChangeEvent](#) on page 3972

Change Data Capture events are available for the object. Available in API version 54.0 and later.

Shipment

Represents the transport of inventory in field service or a shipment of order items in Order Management.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

At least one of these features must be enabled:

- Order Management

- Field Service
- B2B Commerce
- Health Cloud Visit Inventory
- Consumer Goods Cloud Retail Execution

Fields

Field Name	Details
ActualDeliveryDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Date the product was delivered.</p>
DeliveredToId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The person or entity the product was delivered to. This is a polymorphic relationship field.</p> <p>Relationship Name DeliveredTo</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
DeliveryMethodId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The delivery method used for the shipment. This field is available in API version 51.0 and later.</p>
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p>

Field Name	Details
	<p>Description Details not recorded in the provided fields</p>
DestinationLocationId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The place the product is to be delivered. This is a relationship field.</p> <p>Relationship Name DestinationLocation</p> <p>Relationship Type Lookup</p> <p>Refers To Location</p>
ExpectedDeliveryDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Date the product is expected to be delivered.</p>
FulfillmentOrderId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The fulfillment order that the shipment belongs to. This field is available in API version 51.0 and later.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>

Field Name	Details
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>
OrderSummaryId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The order summary associated with the shipment. This field is available in API version 51.0 and later.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The owner of the shipment. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
Provider	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The company or person making the transfer.</p>
ReturnOrderId	<p>Type reference</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description For a return Shipment, the associated ReturnOrder. This field is available in API version 53.0 and later.</p>
ShipFromAddress	<p>Type address</p> <p>Properties Filter, Nillable</p> <p>Description The place the product is coming from.</p>
ShipFromCity	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The city of the address where the shipment originates.</p>
ShipFromCountry	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The country of the address where the shipment originates.</p>
ShipFromGeocodeAccuracy	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Accuracy level of the geocode for the address where the shipment originates. See Compound Field Considerations and Limitations for details on geolocation compound fields.</p> <p> Note: This field is available in the API only.</p>
ShipFromLatitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>Used with Longitude to specify the precise geolocation of the address where the shipment originates. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields.</p> <p> Note: This field is available in the API only.</p>
ShipFromLongitude	<p>Type</p> <p>double</p> <p>Properties</p> <p>Create, Filter, Nillable, Sort, Update</p> <p>Description</p> <p>Used with Latitude to specify the precise geolocation of the address where the shipment originates. Acceptable values are numbers between –180 and 180 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields.</p> <p> Note: This field is available in the API only.</p>
ShipFromPostalCode	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The postal code of the address where the shipment originates.</p>
ShipFromState	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The state of the address where the shipment originates.</p>
ShipFromStreet	<p>Type</p> <p>textarea</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The street of the address where the shipment originates.</p>
ShipToAddress	<p>Type</p> <p>address</p>

Field Name	Details
	<p>Properties Filter, Nillable</p> <p>Description The physical address where the shipment is delivered.</p>
ShipToCity	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The city of the address where the shipment is delivered.</p>
ShipToCountry	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The country of the address where the shipment is delivered.</p>
ShipToGeocodeAccuracy	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Accuracy level of the geocode for the address where the shipment is delivered. See Compound Field Considerations and Limitations for details on geolocation compound fields.</p> <p> Note: This field is available in the API only.</p>
ShipToLatitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with Longitude to specify the precise geolocation of the address where the shipment is delivered. Acceptable values are numbers between –90 and 90 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields.</p> <p> Note: This field is available in the API only.</p>

Field Name	Details
ShipToLongitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with Latitude to specify the precise geolocation of the address where the shipment is delivered. Acceptable values are numbers between -180 and 180 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields.</p> <p> Note: This field is available in the API only.</p>
ShipToName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The shipment recipient.</p>
ShipToPostalCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The postal code of the address where the shipment is delivered.</p>
ShipToState	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The state of the address where the shipment is delivered.</p>
ShipToStreet	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The street of the address where the shipment is delivered.</p>
ShipmentNumber	<p>Type string</p>

Field Name	Details
	<p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description An auto-generated number identifying the shipment.</p>
SourceLocationId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The field service location where the shipment originates. This is a relationship field.</p> <p>Relationship Name SourceLocation</p> <p>Relationship Type Lookup</p> <p>Refers To Location</p>
Status	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The status of the shipment. The picklist includes the following values, which can be customized:</p> <ul style="list-style-type: none"> • <i>Shipped</i>—The product is in transit. • <i>Delivered</i>—The product is at the source location.
TotalItemsQuantity	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The total quantity of items included in the shipment. This value is calculated as the sum of the quantities of the shipment items in the shipment. This field is available in API version 51.0 and later.</p>
TrackingNumber	<p>Type string</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Tracking number for the shipment.</p>
TrackingUrl	<p>Type url</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description URL of website used for tracking the shipment.</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

ShipmentChangeEvent (API version 48.0)

Change events are available for the object.

ShipmentFeed

Feed tracking is available for the object.

ShipmentHistory

History is available for tracked fields of the object.

ShipmentOwnerSharingRule

Sharing rules are available for the object.

ShipmentShare

Sharing is available for the object.

SEE ALSO:

[ShipmentItem](#)

ShipmentItem

Represents an order item included in a shipment. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

At least one of these features must be enabled:

- Order Management
- Field Service
- B2B Commerce
- Health Cloud Visit Inventory
- Consumer Goods Cloud Retail Execution

Fields

Field	Details
Description	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Description of the shipment item.</p>
ExpectedDeliveryDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Expected delivery date of the shipment that contains the shipment item.</p>
FulfillmentOrderLineItemId	<p>Type reference</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The FulfillmentOrderLineItem (fulfillment order product) corresponding to the shipment item.</p>
OrderItemSummaryId	<p>Type reference</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The OrderItemSummary (order product summary) corresponding to the shipment item.</p>

Field	Details
Product2Id	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The product represented by the shipment item. This is a relationship field.</p> <p>Relationship Name Product2</p> <p>Relationship Type Lookup</p> <p>Refers To Product2</p>
Quantity	<p>Type double</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The quantity of products represented by the shipment item.</p>
ReturnOrderLineItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description For a return ShipmentItem, the associated ReturnOrderLineItem. This field is available in API version 53.0 and later.</p>
ShipmentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description (Master-Detail) The shipment that contains the shipment item. This is a relationship field.</p> <p>Relationship Name Shipment</p> <p>Relationship Type Lookup</p>

Field	Details
	Refers To Shipment
ShipmentItemNumber	Type string Properties Autonumber, Defaulted on create, Filter, idLookup, Sort Description An auto-generated number identifying the shipment item.
TrackingNumber	Type string Properties Filter, Group, Nillable, Sort Description The tracking number of the shipment that contains the shipment item.
TrackingUrl	Type url Properties Filter, Group, Nillable, Sort Description The tracking URL of the shipment that contains the shipment item.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[ShipmentItemFeed](#)

Feed tracking is available for the object.

SignupRequest

Represents a request for a new sign-up. This object is available in API version 27.0 and later.

 **Note:** You're limited to 20 sign-ups per day. To make additional sign-ups, log a support case in the [Salesforce Partner Community](#). For product, specify **Platform**. For topic, specify **AppExchange & Managed Packages**.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

Fields

Field Name	Details
AuthCode	<p>Type string</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description A one-time authorization code that can be exchanged for an OAuth access token and refresh token using standard Salesforce APIs. It's used with <code>ConnectedAppCallbackUrl</code> and <code>ConnectedAppConsumerKey</code> when the specified connected app hasn't been configured with an X.509 certificate. The system provides this read-only field after the sign-up request has been processed. This field is available in API version 29.0 and later.</p>
Company	<p>Type string</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The name of the company requesting the trial sign-up.</p>
ConnectedAppCallbackUrl	<p>Type string</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description When used with <code>ConnectedAppConsumerKey</code>, specifies a connected app that's approved automatically during the sign-up creation. This field is available in API version 28.0 and later.</p>
ConnectedAppConsumerKey	<p>Type string</p> <p>Properties Create, Filter, Group, Sort</p>

Field Name	Details
	<p>Description</p> <p>When used with <code>ConnectedAppCallbackUrl</code>, specifies a connected app that's approved automatically during the sign-up creation. This field is available in API version 28.0 and later.</p>
Country	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>The default value is the country of the requesting org. To override the default, enter the two-character, uppercase ISO-3166 country code (Alpha-2 code). A complete list of the codes is located at https://www.iso.org/obp/ui/#search. The language of the trial org is auto-determined based on the value of this field.</p>
CreatedOrgId	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The 15-character org ID of the trial org created. The system provides this read-only field after the sign-up request has been processed.</p>
CreatedOrgInstance	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The server instance of the new trial org, for example, "na8." This field is available in API version 29.0 and later.</p>
Edition	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description</p> <p>The Salesforce template that is used to create the trial org. Possible values are <code>Partner Group</code>, <code>Professional</code>, <code>Partner Professional</code>, <code>Sales Enterprise</code>, <code>Professional TSO</code>, <code>Enterprise</code>, <code>Partner Enterprise</code>, <code>Service Professional</code>, <code>Enterprise TSO</code>, <code>Developer</code>, and <code>Partner Developer</code>. This field is available in API version 35.0 and later.</p>
ErrorCode	<p>Type</p> <p>string</p>

Field Name	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description The error code if the sign-up request isn't successful. The system provides this read-only field for support purposes.</p>
FirstName	<p>Type string</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description The first name of the admin user for the trial sign-up.</p>
LastName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The last name of the admin user for the trial sign-up.</p>
PreferredLanguage	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The language of the trial org being created. Specify the language using a language code listed under Fully Supported Languages in Supported Languages in Salesforce Help. For example, use <code>zh_CN</code> for simplified Chinese. The value you select overrides the language set by the locale. If you specify an invalid language, the org defaults to the default language of the country. Likewise, if you specify a language that isn't supported by the Salesforce edition associated with your trial template, the trial org defaults to the default language of the country. This field is available in API version 35.0 and later.</p>
ResolvedTemplateId	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Populated during the sign-up request and for internal use by Salesforce. This field is available in API version 35.0 and later.</p>
ShouldConnectToEnvHub	<p>Type boolean</p>

Field Name	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Sort</p> <p>Description When set to <code>true</code>, the trial org is connected to the Environment Hub. The sign-up must take place in the hub main org or a spoke org. This field is available in API version 35.0 and later.</p>
SignupEmail	<p>Type email</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The email address of the admin user for the trial sign-up.</p>
SignupSource	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description A user-specified description of the trial sign-up, up to 60 characters. This field is available in API version 36.0 and later.</p>
Status	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The status of the request. Possible values are <code>New</code>, <code>In Progress</code>, <code>Error</code>, or <code>Success</code>. The default is <code>New</code>.</p>
Subdomain	<p>Type string</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The My Domain name for the new trial org used in the org's login and application URLs. In Developer Edition orgs, your name must contain at least 3 characters and no more than 27 characters. In all other editions, it must be at least 3 characters and no more than 34 characters. It can include letters, numbers, and hyphens, but you can't start the name with a hyphen.</p> <p>If you don't choose a My Domain during sign-up, Salesforce assigns one for you based on your company name. If you don't like the one we set, you can change it.</p> <p>For details, see My Domain in Salesforce Help.</p>

Field Name	Details
SuppressSignupEmails	<p>Type boolean</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description When set to <code>true</code>, no sign-up emails are sent when the trial org is created. This field is used for the Proxy Signup feature and is available in API version 29.0 and later.</p>
TemplateId	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The 15-character ID of the Trialforce template that is the basis for the trial sign-up. Salesforce must approve the template. If you don't specify an edition, a template ID is required.</p>
TrialDays	<p>Type anyType</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort</p> <p>Description The duration of the trial sign-up in days. Must be equal to or less than the trial days for the approved Trialforce template. If not provided, it defaults to the trial duration specified for the Trialforce template.</p>
TrialSourceOrgId	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The 15-character org ID of the Trialforce Source Organization (TSO) from which the Trialforce template was created.</p>
Username	<p>Type string</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The username of the admin user for the trial sign-up. It must follow the address convention specified in RFC822: www.w3.org/Protocols/rfc822/#z10.</p>

Usage

The Java class uses REST API to create a SignupRequest object. It authenticates to the Salesforce Management Organization (TMO) and then posts a request to the SignupRequest object.

Here are the variables to specify in this example.

- SERVER—The name of the host server for the TMO, for example, *yourInstance.salesforce.com*.
- USERNAME—The admin username for the TMO.
- PASSWORD—The concatenation of the admin password and the security token for the TMO. To get an email with the security token, from your personal settings in Salesforce, select **Reset My Security Token** and click **Reset Security Token**.
- CLIENT_ID—From Setup in Salesforce, in the Quick Find box, enter *Apps*, and then select **Apps**. Under Connected Apps, click **New**. Enter values for the required fields (Callback URL is required, but you can initially set it to any valid URL because it's not used). Grant full access for the OAuth scopes in the Selected OAuth Scopes selector, and click **Save**. Then copy the value of Consumer Key and use it for this variable.
- CLIENT_SECRET—On the same page, click **Click to reveal**. Then copy the value of Consumer Secret and use it for this variable.

```
public class IsvSignupDriver {
    private static final String SERVER = server_name:port;
    private static final String USERNAME = tmo_username;
    private static final String PASSWORD = tmo_passwordsecurity_token;
    private static final String CLIENT_ID = consumer_key;
    private static final String CLIENT_SECRET = consumer_secret;

    private static SignupRequestInfo signupRequest = null;

    public static String createSignupRequest (SignupRequestInfo sr)
        throws JSONException, IOException {
        JSONObject createResponse = null;
        signupRequest = sr;
        JSONObject loginResponse = login(SERVER, USERNAME, PASSWORD);
        String instanceUrl = loginResponse.getString("instance_url");
        String accessToken = loginResponse.getString("access_token");
        createResponse = create(instanceUrl, accessToken);
        System.out.println("Created SignupRequest object: " + createResponse + "\n");
        return createResponse.toString();
    }

    /* Authenticates to the TMO using the required credentials */

    private static JSONObject login(String server, String username, String password)
        throws ClientProtocolException, IOException, JSONException {
        String authEndPoint = server + "/services/oauth2/token";
        HttpClient httpClient = new DefaultHttpClient();
        try {
            HttpPost post = new HttpPost(authEndPoint);

            List<NameValuePair> params = new ArrayList<NameValuePair>();
            params.add(new BasicNameValuePair("grant_type", "password"));
            params.add(new BasicNameValuePair("client_id", CLIENT_ID));
            params.add(new BasicNameValuePair("client_secret", CLIENT_SECRET));
            params.add(new BasicNameValuePair("username", username));
            params.add(new BasicNameValuePair("password", password));
        }
    }
}
```

```

        post.setEntity(new UrlEncodedFormEntity(params, Consts.UTF_8));

        BasicResponseHandler handler = new BasicResponseHandler();
        String response = httpClient.execute(post, handler);
        return new JSONObject(response);
    } finally {
        httpClient.getConnectionManager().shutdown();
    }
}
/* Posts a request to the SignupRequest object */

private static JSONObject create(String instanceUrl, String accessToken)
throws ClientProtocolException, IOException, JSONException {
    HttpClient httpClient = new DefaultHttpClient();
    try {
        HttpPost post = new HttpPost(instanceUrl +
            "/services/data/v27.0/objects/SignupRequest/");
        post.setHeader("Authorization", "Bearer " + accessToken);
        post.setHeader("Content-Type", "application/json");

        JSONObject requestBody = new JSONObject();
        requestBody.put("TemplateId", signupRequest.getTemplateID());
        requestBody.put("SignupEmail", signupRequest.getEmail());
        requestBody.put("username", signupRequest.getUsername());
        requestBody.put("Country", "US");
        requestBody.put("Company", signupRequest.getCompanyName());
        requestBody.put("lastName", signupRequest.getLastName());

        StringEntity entity = new StringEntity(requestBody.toString());
        post.setEntity(entity);
        BasicResponseHandler handler = new BasicResponseHandler();
        String response = httpClient.execute(post, handler);
        return new JSONObject(response);
    } finally {
        httpClient.getConnectionManager().shutdown();
    }
}
}

```

Error Codes

If the sign-up fails, the system generates an error code that can help you identify the cause. This table shows the most important error codes.

Error Code	Description
C-1007	Duplicate username.
C-1015	Error while establishing the new org's My Domain (subdomain) settings. Contact Salesforce support for assistance.
C-1016	Error while configuring the OAuth connected app for Proxy Signup. Verify that your connected app has a valid consumer key, callback URL, and unexpired certificate (if applicable).

Error Code	Description
C-1018	Invalid subdomain value provided during sign-up.
C-1019	Subdomain in use. Choose a new subdomain value.
C-1020	Template not found. Either the template doesn't exist or it was deleted.
C-1033	Template is the wrong version.
C-9999	Generic fatal error. Contact Salesforce Customer Support for assistance.
S-1006	Invalid email address (not in a proper email address format).
S-1014	Invalid or missing parameters during the sign-up process. Possible solutions include: <ul style="list-style-type: none"> • Indicate a valid callback URL. • If indicated, be sure to provide both a Consumer Key and callback URL.
S-1018	Invalid My Domain (subdomain) name. Select a name that doesn't: <ul style="list-style-type: none"> • Contain double hyphens • End in a hyphen • Include restricted words • Exceed 40 characters (33 for Developer Edition)
S-1019	My Domain (subdomain) already in use.
S-1026	Invalid namespace. A namespace must begin with a letter, can't contain consecutive underscores, can't be a restricted or reserved namespace, and must be 15 characters or fewer.
T-0001	Template ID not valid (not in the format OTTxxxxxxxxxxxx).
T-0002	Template not found. Either the template doesn't exist or it was deleted.
T-0003	Template not approved for use by Salesforce. Contact Salesforce Customer Support for assistance.
T-0004	The Trialforce Source Organization (TSO) for the template doesn't exist or has expired.

Associated Objects

This object has the following associated objects. Unless noted, they're available in the same API version as this object.

[SignupRequestFeed](#)

Feed tracking is available for the object.

[SignupRequestHistory](#)

History is available for tracked fields of the object.

[SignupRequestOwnerSharingRule](#)

Sharing rules are available for the object.

[SignupRequestShare](#)

Sharing is available for the object.

Site

Represents a public website that is integrated with an org. This object is available in API version 16.0 and later.

To access this object, Salesforce Sites, Sites, or Site.com must be enabled for your organization.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

- Customer Portal users can't access this object.
- To view this object, you must have the "View Setup and Configuration" permission.

Fields

Field	Description
AdminId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The site administrator designated as the contact for the site. This user receives site-related communications from site visitors and from Salesforce. This is a relationship field.</p> <p>Relationship Name Admin</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
AnalyticsTrackingCode	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The tracking code associated with your site. This code can be used by services like Google Analytics to track page request data for your site.</p>
ArchiveStatus	<p>Type picklist</p>

Field	Description
	<p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The archived status of a site. Possible values are:</p> <ul style="list-style-type: none"> • NotArchived • TemporarilyArchived
ArchivedById	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The user that archived the site.</p> <p>Relationship Name: ArchivedBy</p> <p>Relationship Type: Lookup</p> <p>Refers To: User</p>
ArchivedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Date and time when the site was archived.</p>
ClickjackProtectionLevel	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description Sets the clickjack protection level. The options are:</p> <ul style="list-style-type: none"> • AllowAllFraming—Allow framing by any page (no protection) • SameOriginOnly—Allow framing by the same origin only (recommended) • NoFraming—Don't allow framing by any page (most protection) <p>This field is available in API version 30.0 and later.</p>
DailyBandwidthLimit	<p>Type int</p>

Field	Description
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description The rolling 24-hour daily bandwidth limit for the sites in your organization.</p>
DailyBandwidthUsed	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The current rolling 24-hour daily bandwidth usage for the sites in your organization.</p>
DailyRequestTimeLimit	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The rolling 24-hour daily service request time limit for the sites in your organization. Service request time is calculated as the total server time in minutes required to generate pages for the site.</p>
DailyRequestTimeUsed	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The current rolling 24-hour daily service request time for the sites in your organization.</p>
Description	<p>Type textarea</p> <p>Properties Filter, Nillable, Sort</p> <p>Description An optional description of the site.</p>
GuestRecordDefaultOwnerId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Description
	<p>Description A user in the Salesforce org that is the default owner of records created by unauthenticated (guest) users.</p> <p>This is a relationship field.</p> <p>Relationship Name GuestRecordDefaultOwner</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
GuestUserId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The site or Experience Cloud sites specific user that anonymous, unauthenticated users run as when interacting with the site.</p> <p>This is a relationship field.</p> <p>Relationship Name GuestUser</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
MasterLabel	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The name of the site as it appears in the user interface.</p>
MonthlyPageViewsEntitlement	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of page views allowed for the current calendar month for the sites in your organization.</p>

Field	Description
Name	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The name used when referencing the site in the API.</p>
OptionsAllowGuestPaymentsApi	<p>Type boolean</p> <p>Properties Filter</p> <p>Description Indicates whether unauthenticated guest users can access the Payments API (<code>true</code>) or not (<code>false</code>). The default is <code>false</code>. This field is available in API version 49.0 and later.</p>
OptionsAllowGuestSupportApi	<p>Type boolean</p> <p>Properties Filter</p> <p>Description The option to enable unauthenticated users to access the Support API.</p>
OptionsAllowHomePage	<p>Type boolean</p> <p>Properties Filter</p> <p>Description The option to enable the standard page associated with the Home tab (<code>/home/home.jsp</code>).</p>
OptionsAllowStandardAnswersPages	<p>Type boolean</p> <p>Properties Filter</p> <p>Description The option to enable standard pages associated with an answers Experience Cloud site. If you want to use default Answers pages (such as AnswersHome), enable these pages.</p>
OptionsAllowStandardIdeasPages	<p>Type boolean</p>

Field	Description
	<p>Properties Filter</p> <p>Description The option to enable standard pages associated with an Ideas Experience Cloud site. If you want to use default Ideas pages (such as IdeasHome), enable these pages.</p>
OptionsAllowStandardLookups	<p>Type boolean</p> <p>Properties Filter</p> <p>Description The option to enable the standard lookup pages. These are the popup windows associated with lookup fields on Visualforce pages.</p>
OptionsAllowStandardPortalPages	<p>Type boolean</p> <p>Properties Filter</p> <p>Description The option to enable authenticated users to access the standard Salesforce pages.</p>
OptionsAllowStandardSearch	<p>Type boolean</p> <p>Properties Filter</p> <p>Description The option to enable the standard search pages. To allow public users to perform standard searches, enable these pages.</p>
OptionsBrowserXssProtection	<p>Type boolean</p> <p>Properties Filter</p> <p>Description The option to enable the browser's cross-site scripting protection.</p>
OptionsCachePublicVfPagesInProxies	<p>Type boolean</p> <p>Properties Filter</p>

Field	Description
	<p>Description</p> <p>Indicates whether proxy servers cache this site's publicly available pages only for unauthenticated guest users (<code>true</code>) or not (<code>false</code>). When this field is <code>false</code>, this site's cache-enabled Visualforce pages are cached in the web browser for both authenticated and unauthenticated users. The default is <code>true</code>. See Configure Site Caching in Salesforce Help for more information.</p> <p>This field is available in API version 52.0 and later.</p>
OptionsContentSniffingProtection	<p>Type boolean</p> <p>Properties Filter</p> <p>Description The option to enable content-sniffing protection.</p>
OptionsCookieConsent	<p>Type boolean</p> <p>Properties Filter</p> <p>Description Indicates whether only required Salesforce-supplied cookies are allowed within the site (<code>true</code>) or all cookies types are allowed: required, functional, and advertising (<code>false</code>). The default is <code>false</code>. This field is available in API version 52.0 and later.</p>
OptionsCspUpgradeInsecureRequests	<p>Type boolean</p> <p>Properties Filter</p> <p>Description This field is removed in API version 52.0 and later. In API version 51.0 and earlier, the value in the field is ignored.</p>
OptionsEnableFeeds	<p>Type boolean</p> <p>Properties Filter</p> <p>Description The option that displays the Syndication Feeds related list, where you can create and manage syndication feeds for users on your public sites. This field is visible only if you have the feature enabled for your organization.</p>

Field	Description
OptionsHasStoredPathPrefix	<p>Type boolean</p> <p>Properties Filter</p> <p>Description Indicates whether this Experience Cloud site has a customized <code>urlPathPrefix</code> (<code>true</code>) or instead uses the Experience Cloud site's <code>urlPathPrefix</code> plus <code>/s</code> (<code>false</code>). The default is <code>false</code>. In other sites, this field has no effect. This field is available in API version 50.0 and later.</p>
OptionsRedirectToCustomDomain	<p>Type boolean</p> <p>Properties Filter</p> <p>Description Indicates whether requests to this site's system-managed URLs are redirected to the HTTPS custom domain serving this site (<code>true</code>) or not (<code>false</code>). System-managed site URLs end in <code>*.force.com</code>, <code>*.my.salesforce-sites.com</code>, or <code>*.my.site.com</code>. In Experience Cloud sites, the default is <code>false</code>. In Salesforce Sites, the default is <code>true</code>.</p> <p>If multiple custom domains serve this site and this field is set to true, requests are routed to the site's primary custom URL only if it's an HTTPS custom domain. Otherwise, requests are redirected to the first HTTPS custom domain associated with this site, in alphanumeric order. If no HTTPS custom domain serves this site, this option has no effect.</p> <p>This field is available in API version 52.0 and later.</p>
OptionsReferrerPolicyOriginWhenCrossOrigin	<p>Type boolean</p> <p>Properties Filter</p> <p>Description The option to enable referrer policy (origin-when-cross-origin).</p>
OptionsRequireHttps	<p>Type boolean</p> <p>Properties Filter</p> <p>Description This field is removed in API version 52.0 and later. In API version 51.0 and earlier, the value in the field is ignored.</p>

Field	Description
SiteType	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description Identifies whether the site is a Visualforce (Salesforce Sites) or a Site.com site. <code>SiteType</code> is available in API version 21.0 and later. In API version 26.0 and later, if Experience Cloud sites are enabled for your Salesforce org, the site could also be a Network Visualforce or Network Site.com site.</p>
Status	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The status for the site. For example, <code>Active</code> or <code>In Maintenance</code>.</p>
Subdomain	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The subdomain that you registered for your site when you enabled Salesforce Sites or Experience Cloud sites. For example, if your domain is <code>mycompany.force.com</code>, then <code>mycompany</code> is the subdomain.</p> <p> Note: If enhanced domains are enabled, your site URL is different and uses your My Domain name as the subdomain. For details, see My Domain URL Formats in Salesforce Help.</p> <p>If you enabled Salesforce Sites or Digital Experiences after you enabled enhanced domains, this field returns a null value. If you enabled Salesforce Sites or Digital Experiences before you enabled enhanced domains, this field returns this site's previous subdomain.</p>
TopLevelDomain	<p>Type url</p> <p>Properties Filter, Nillable</p> <p>Description The optional branded custom Web address that you registered with a third-party domain name registrar. The custom Web address acts as an alias to your Salesforce address.</p>

Field	Description
	Beginning with API version 21.0, <code>TopLevelDomain</code> is no longer available. Instead, use the Domain and DomainSite objects.
<code>UrlPathPrefix</code>	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The unique Salesforce URL that the public uses to access this site.</p>

Usage

Use this read-only object to query or retrieve information on your Salesforce site.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

SiteFeed

Feed tracking is available for the object.

SiteHistory

History is available for tracked fields of the object.

SiteDetail

Represents the details of a Salesforce site or Experience Cloud site. Available in API Version 38.0 and later.

Supported SOAP Calls

`describeSObjects()`, `query()`

Supported REST HTTP Methods

GET

Fields

Field	Details
<code>DurableId</code>	<p>Type string</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the Site object.</p>
IsRegistrationEnabled	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the site allows users to sign up.</p>
SecureUrl	<p>Type url</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The URL of the website.</p>

 **Note:** SiteDetail fields are exposed in SOAP API version 45.0 and later. You can use Tooling API to query for SiteDetail fields in guest user mode in API version 44.0 and earlier. In API version 45.0 and later, use SOAP API to get this data in guest user mode. SiteDetail is still exposed in Tooling API to User Profiles with the ViewSetup permission.

SiteDomain

SiteDomain is a read-only object, and a one-to-many replacement for the Site.TopLevelDomain field. This object is available in API version 21.0, and has been deprecated as of API version 26.0. In API version 26.0 and later, use the [Domain](#) and [DomainSite](#) objects instead.

To access this object, Salesforce Sites, Sites, or Site.com must be enabled for your organization.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

- Customer Portal users can't access this object.
- To view this object, you must have the "View Setup and Configuration" permission.

Fields

Field	Description
Domain	<p>Type url</p> <p>Properties Filter, Sort</p> <p>Description The branded custom Web address within the global namespace identified by this domain's type. In the Domain Name System (DNS) global namespace, this field is the custom Web address that you registered with a third-party domain name registrar. The custom Web address can be used to access the site of this domain.</p>
SiteId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the associated Site.</p>
DomainType	<p>Type picklist</p> <p>Properties Filter, Group, Sort, Nillable</p> <p>Description The global namespace that this custom Web address belongs to. This value is set to DNS for custom Web addresses in the global DNS. This field is available in version 24.0 of the API.</p>

Usage

Use this read-only object to query the custom Web addresses that are associated with each website in your organization.

SiteHistory

Represents the history of changes to the values in the fields of a site. This object is generally available in API version 18.0 and later.

To access this object, Salesforce Sites must be enabled for your organization.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

- Customer Portal users can't access this object.
- To view this object, you must have the “View Setup and Configuration” permission.

Fields

Field	Details
DataType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Data type of the field that was changed.</p>
Field	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The name of the field that was changed.</p>
NewValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The new value of the field that was changed.</p>
OldValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The last value of the field before it was changed.</p>
SiteId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p>

Field	Details
	<p>Description The ID of the associated Site. This is a relationship field.</p> <p>Relationship Name Site</p> <p>Relationship Type Lookup</p> <p>Refers To Site</p>

SiteframeWhitelistUrl

Represents a list of external domains that you allow to frame your Salesforce site or Experience Cloud site pages. This object is available in API version 44.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- Customer Portal users can't access this object.
- To view this object, you must have the "View Setup and Configuration" permission.

Fields

Field Name	Details
SiteId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the site to include in the inline frame. This is a relationship field.</p> <p>Relationship Name Site</p>

Field Name	Details
	<p>Relationship Type Lookup</p> <p>Refers To Site</p>
Url	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The domain allowed to frame your Salesforce site or Experience Cloud site page. Accepts these formats: example, example.com, *example.com, and https://example.com.</p>

Skill

Represents a category or group that Chat users or field service resources can be assigned to. This object is available in API version 24.0 and later.

 **Note:** For information about WDC skills on a user's profile, see the [ProfileSkill](#) topic.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The description of the skill.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p>
Language	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The language of the skill.</p>
LastViewedDate	<p>Type datetime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed the skill.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the skill.</p>

Usage

Chat

Use this object to assign Chat users to groups based on their abilities. The skills associated with a LiveChatButton determine which agents receive chat requests that come in through that button.

Field Service

Use this object to track certifications and areas of expertise in your workforce. After you create a skill, you can:

- Assign it to a service resource via the Skills related list on the resource's detail page. When you assign a skill to a service resource, you can specify their skill level and the duration of the skill.
- Add it as a required skill via the Skill Requirements related list on any work type, work order, or work order line item. When you add a required skill to a work record, you can specify the skill level.

SkillLevelDefinition

Represents a skill which can be acquired by completing Sales Enablement (myTrailhead) modules. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The org must have a Workforce Engagement license and a Sales Enablement (myTrailhead) license. User must have at least one Workforce Engagement permission set assigned to them: Workforce Engagement Analyst, Workforce Engagement Planner, Workforce Engagement Agent.

Fields

Field	Details
Description	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Describes the mapping.</p>
IsAutoApproved	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Whether this mapping auto-approves. The default value is 'false'.</p>
LearningContent	<p>Type string</p> <p>Properties Filter, Nillable</p>

Field	Details
	<p>Description The titles of the Trailhead modules associated to this mapping.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The user who owns the Skill Level Definition. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
SkillId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The skill that this mapping is for. This is a relationship field.</p> <p>Relationship Name Skill</p> <p>Relationship Type Lookup</p> <p>Refers To Skill</p>
SkillLevel	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The level to assign for the skill.</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[SkillLevelDefinitionOwnerSharingRule](#) on page 3961

Sharing rules are available for the object.

[SkillLevelDefinitionShare](#) on page 3967

Sharing is available for the object.

SkillLevelProgress

Represents training progress for a given user. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The org must have a Workforce Engagement license and a Sales Enablement (myTrailhead) license. User must have at least one Workforce Engagement permission set assigned to them: Workforce Engagement Analyst, Workforce Engagement Planner, Workforce Engagement Agent.

Fields

Field	Details
CompletedCount	<p>Type int</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Number of modules that have been completed towards this Skill Mapping.</p>
CompletedDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date when this progress was completed.</p>
OwnerId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The owner of skill level progress. This is a relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
ServiceResourceId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The Service Resource that will be granted a service resource skill when the progress is complete. This is a relationship field.</p> <p>Relationship Name ServiceResource</p> <p>Relationship Type Lookup</p> <p>Refers To ServiceResource</p>
SkillLevelDefinitionId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The corresponding skill mapping for this progress. This is a relationship field.</p> <p>Relationship Name SkillLevelDefinition</p> <p>Relationship Type Lookup</p> <p>Refers To SkillLevelDefinition</p>

Field	Details
SkillMasterLabel	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The master label of the Skill associated with the associated SkillLevelDefinition.</p>
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Represents the status of the progress. Possible values are:</p> <ul style="list-style-type: none"> • A—Approved • R—Review • S—Started <p>The default value is 'S'.</p>
TotalCount	<p>Type int</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The total number of modules that need to be completed.</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[SkillLevelProgressOwnerSharingRule](#) on page 3961

Sharing rules are available for the object.

[SkillLevelProgressShare](#) on page 3967

Sharing is available for the object.

SkillProfile

Represents a join between Skill and Profile. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `update()`, `retrieve()`

Fields

Field Name	Details
ProfileId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ID of the profile.</p>
SkillId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the skill.</p>

Usage

Use this object to assign specific skills to specific profiles.

SkillRequirement

Represents a skill that is required to complete a particular task in Field Service and Lightning Scheduler. Skill requirements can be added to work types, work orders, and work order line items in Field Service and Lightning Scheduler. This object is available in API version 38.0 and later. You also can add skill requirements to work items in Omni-Channel skills-based routing using API version 42.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

If you want to use SkillRequirement for Field Service use cases, then Field Service must be enabled.

If you want to use SkillRequirement only for Omni-Channel skills-based routing use cases, then you don't need Field Service to be enabled.

Fields

Field Name	Details
IsAdditionalSkill	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates that a skill is additional. After a designated timeout period, a skill marked as additional is dropped from Omni-Channel routing. The case is then routed to the best-matched agent even if they don't have all the skills.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (<code>LastReferencedDate</code>) and not viewed.</p>
RelatedRecordId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The record that the skill is required for. The related record can be a work order, work order line item, work type, or pending service routing record. This is a polymorphic relationship field.</p> <p>Relationship Name RelatedRecord</p> <p>Relationship Type Lookup</p> <p>Refers To WorkOrder, WorkOrderLineItem, WorkType</p>

Field Name	Details
SkillId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The skill that is required. This is a relationship field.</p> <p>Relationship Name Skill</p> <p>Relationship Type Lookup</p> <p>Refers To Skill</p>
SkillLevel	<p>Type double</p> <p>Properties Create, Defaulted on create, Filter, Nillable, Sort, Update</p> <p>Description The level of the skill required. Skill levels can range from zero to 99.99. Depending on your business needs, you might want the skill level to reflect years of experience, certification levels, or license classes.</p>
SkillNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description An auto-generated number identifying the skill requirement.</p>
SkillPriority	<p>Type int</p> <p>Properties Aggregatable, Create, Filter, Group, Nillable, Sort, Update</p> <p>Description For additional skills, specify the order in which skills are dropped if after the specified timeout no agent with that skill is available. Higher priority-value skills are dropped first. Lower priority-value skills, for example 0, are dropped last. Skills with the same priority value are dropped as a group. You can set skill priority using skills-based routing rules or Apex code.</p>

Usage

Skill requirements help dispatchers assign work orders to service resources with the proper expertise. You can still assign a work order, work order line item, or related service appointment to a service resource that does *not* possess the specified skills, so skill requirements serve more as a suggestion than a rule.

 **Note:** If you're using the Field Service managed package, use matching rules to ensure that appointments are only assigned to service resources who possess the skills listed on the parent work order.

If many of your work orders require the same skills, add skill requirements to work types to save time and keep your processes consistent. When you add a skill requirement to a work type, work orders and work order line items that use that type automatically inherit the skill requirement. For example, if all annual maintenance visits for your Classic Refrigerator product require a Refrigerator Maintenance skill level of at least 50, add that skill requirement to the Annual Maintenance Visit work type. When you create a work order for a customer's annual fridge maintenance, applying that work type adds the skill requirement as well.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[SkillRequirementFeed](#)

Feed tracking is available for the object.

[SkillRequirementHistory](#)

History is available for tracked fields of the object.

SkillUser

Represents a join between Skill and User. This object is available in API version 24.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `update()`, `query()`, `retrieve()`

Fields

Field Name	Details
SkillId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the skill.</p>
UserId	<p>Type reference</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ID of the user.</p>

Usage

Use this object to assign specific skills to specific users.

SlaProcess

Represents an entitlement process associated with an Entitlement. This object is available in API version 19.0 and later.

An entitlement process is a timeline that includes all the steps (MilestoneType records) that your support team must complete to resolve cases. Each process includes the logic necessary to determine how to enforce the correct service level for your customers.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `search()`, `describeLayout()`

Special Access Rules

As of Summer '20 and later, only Salesforce admin users, users with access to the Case, Entitlement, or Work Order objects, and users with the View Setup and Configuration permission can access this object.

Fields

Field	Details
BusinessHoursId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Required. ID of the BusinessHours associated with the entitlement. Must be a valid business hours ID.</p>
Description	<p>Type textarea</p> <p>Properties Filter, Nillable</p>

Field	Details
	<p>Description A description of the entitlement process.</p>
IsActive	<p>Type boolean</p> <p>Properties Defaulted on create, Filter</p> <p>Description Indicates whether the entitlement process is active (<code>true</code>) or not (<code>false</code>).</p>
IsVersionDefault	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the entitlement process is the default version (<code>true</code>) or not (<code>false</code>). This field is available in API version 28.0 and later in organizations that have entitlement versioning enabled.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the SlaProcess was last viewed.</p>
Name	<p>Type string</p> <p>Properties Filter, idLookup</p> <p>Description The name of the entitlement process.</p>
NameNorm	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The read-only value for the unique name of the entitlement process or the entitlement process version. If entitlement versioning is enabled, this value is automatically</p>

Field	Details
	<p>generated for each version of an entitlement process in this form: <i>process name+_v + x</i>, where <i>x</i> is the version number (for example, "gold_support_v2").</p> <p>If entitlement versioning isn't enabled, this value is the same as Name.</p> <p>This field is available in API version 28.0 and later.</p>
SObjectType	<p>Type picklist</p> <p>Properties Restricted picklist, Filter, Group, Sort</p> <p>Description The type of records that the entitlement process can run on. Its values are:</p> <ul style="list-style-type: none"> • <i>Case</i> • <i>Work Order</i> <p>An entitlement process runs only on records that match its type. For example, a Case entitlement process that's applied to an entitlement runs only on cases associated with the entitlement, not on work orders. As a best practice, therefore, manage customers' work orders and cases on separate entitlements.</p> <p>The field label in the user interface is Entitlement Process Type.</p>
StartDateField	<p>Type picklist</p> <p>Properties Filter, Restricted picklist</p> <p>Description The criteria for cases to enter the entitlement process. Cases can enter the process based on:</p> <ul style="list-style-type: none"> • The creation date on a case • A custom date/time field on a case
VersionMaster	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Identifies the sequence of versions to which this entitlement process belongs. This field's contents can be any value as long as it is identical among all versions of the entitlement process.</p> <p>This field is available in API version 28.0 and later in organizations that have entitlement versioning enabled.</p>

Field	Details
VersionNotes	<p>Type textarea</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The description of the entitlement process version. This field is available in API version 28.0 and later in organizations that have entitlement versioning enabled.</p>
VersionNumber	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The version number of the entitlement process. Must be 1 or greater. This field is available in API version 28.0 and later in organizations that have entitlement versioning enabled.</p>

Usage

Use this object to query entitlement processes on entitlements.

[CaseMilestone](#)

Snippet

Represents a snippet, which is a container for rich text that can be reused across Pardot emails and email templates. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Snippets are available in Pardot accounts with the Sales, CRM, or Service permission set license.

Fields

Field	Details
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The description of the snippet. Limited to 32 KB.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. This field value is unique to your org and is required for a Snippet to be resolved in marketing content. Label is API Name.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Required. The name of the snippet.</p>
Type	<p>Type picklist</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The type of content a snippet includes. Allowable values are: Date, Image, Link, Text. This field is for organizational purposes.</p>
Value	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The body content of a snippet. This field can contain plain or rich text. The value of a snippet is resolved when a marketing email is sent. The field does not support emojis, HTML, or image files.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

SnippetFeed

Feed tracking is available for the object.

SnippetAssignment

Represents a relationship between a snippet and a campaign. Assignments are required to use snippet content in Pardot emails and email templates. A snippet can be assigned to more than one campaign. This object is available in API version 47.0 and later.

Supported Calls

create(), delete(), describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve()

Special Access Rules

Snippets are available in Pardot accounts with the Sales, CRM, or Service permission set license.

Fields

Field	Details
ParentId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the parent object</p>
SnippetId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the related snippet record</p>

SocialPersona

Represents a snapshot of a contact's profile on a social network such as Facebook or Twitter. This object is available in API version 22.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
AreWeFollowing	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Specifies whether a Salesforce social account is following the social persona or not.</p>
AuthorLabels	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Comma-separated list of author type tags.</p>

Field Name	Details
AvatarUrl	<p>Type string</p> <p>Properties Nillable</p> <p>Description Retrieves the user's social network avatar. It's a read-only field and you can't specify or update its value.</p>
Bio	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Biography of the social persona.</p>
ExternalId	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the social persona on the social network.</p>
ExternalPictureURL	<p>Type url</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description URL to the picture of the social persona on the social network.</p>
Followers	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Number of followers that the social persona has.</p>
Following	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p>Description Number of people that the social persona is following.</p>
InfluencerScore	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Radian6 score describing the influence of the social persona. No longer used.</p>
IsBlacklisted	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Specifies whether the social persona is blacklisted or not.</p>
IsDefault	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Specifies whether the social persona supplies the default avatar image that's displayed on the contact or account.</p>
IsFollowingUs	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Specifies whether the social persona is following a Salesforce social account or not.</p>
IsVerified	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Specifies whether the social persona is verified or not.</p>
LastReferencedDate	<p>Type dateTime</p>

Field Name	Details
	<p>Properties Filter, Nillable, Sort</p> <p>Description Date and time when the social persona was last referenced.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Date and time when the social persona was last viewed.</p>
ListedCount	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Radian6 field. No longer used.</p>
MediaProvider	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Social network of the social persona.</p>
MediaType	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Social network type of the social persona.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Name of the social persona.</p>
NumberOfFriends	<p>Type int</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Number of friends that the social persona has.</p>
NumberOfTweets	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Number of tweets made by the social persona.</p>
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description ID of the contact parent record for the social persona. This is a polymorphic relationship field.</p> <p>Relationship Name Parent</p> <p>Relationship Type Lookup</p> <p>Refers To Account, Contact, Lead, SocialPost</p>
ProfileType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Type of profile. Values are:</p> <ul style="list-style-type: none"> • Person • Page
ProfileUrl	<p>Type url</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description URL for the profile.</p>

Field Name	Details
Provider	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Social network, such as Facebook or Twitter, of the social persona.</p>
R6SourceId	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the social persona in Social Studio.</p>
RealName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Real name of the social persona.</p>
SourceApp	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description Salesforce product that created the social persona.</p>
TopicType	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Type of topic, such as keyword or managed.</p>

Usage

The fields on a SocialPersona object don't provide real-time data. They provide a snapshot of information from the last time Salesforce collected a post from the social persona. Many of the Radian6-related fields are no longer accurate or used.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[SocialPersonaHistory](#) (API version 26.0)

History is available for tracked fields of the object.

SocialPost

Represents a snapshot of a post on a social network such as a Facebook or Twitter. This object is available in API version 23.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
AnalyzerScore	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Score set on the social post in Social Studio.</p>
AssignedTo	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description User in Social Studio that the social post is assigned to.</p>
AttachmentType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Type of the first attachment on the social post. Values are:</p> <ul style="list-style-type: none"> • APPLICATION • AUDIO • IMAGE • LINK

Field Name	Details
	<ul style="list-style-type: none"> • TEXT • UNKNOWN • VIDEO
AttachmentUrl	<p>Type url</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description URL for the first attachment on the social post.</p>
Classification	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Classification for the social post, such as inquiry or customer case.</p>
CommentCount	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Number of comments on the social post.</p>
Content	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Body of the social post.</p>
DeletedById	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description If the social post is deleted, ID of the person who deleted the social post. This is a relationship field.</p> <p>Relationship Name DeletedBy</p>

Field Name	Details
	<p>Relationship Type Lookup</p> <p>Refers To User</p>
EngagementLevel	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Engagement level of the social post, such as reviewed or resolved.</p>
ExternalPostId	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the social post in its social network.</p>
Handle	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Handle of the person who posted the social post.</p>
HarvestDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Date and time when Social Studio collected the social post.</p>
Headline	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Headline of the social post.</p>
HiddenById	<p>Type reference</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description If the social post is hidden, ID of the person who hid it. This is a relationship field.</p> <p>Relationship Name HiddenBy</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
InboundLinkCount	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Number of links on the inbound social post.</p>
IsOutbound	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort</p> <p>Description Specifies whether the social post is outbound or not.</p>
KeywordGroupName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Radian6 field that is no longer used.</p>
Language	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Language of the social post.</p>

Field Name	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Date when the social post was last referenced.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Date when the social post was last viewed.</p>
LikedBy	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the managed social account in the social network that liked the social post.</p>
LikesAndVotes	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Radian6 number of likes and votes on the social post.</p>
MediaProvider	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Social network of the social post.</p>
MediaType	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Type of social network of the social post.</p>

Field Name	Details
MessageType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Type of message. Values are:</p> <ul style="list-style-type: none"> • <code>Comment</code>—Facebook comment • <code>Direct</code>—Twitter direct message • <code>Post</code>—Facebook post • <code>Private</code>—Facebook private message • <code>Reply</code>—Twitter or Facebook reply • <code>Retweet</code>—Twitter retweet • <code>Tweet</code>—Twitter tweet
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Name of the social post.</p>
Notes	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Notes added by Social Hub actions for the social post.</p>
OutboundSocialAccountId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description ID of the social account used for outbound social posts. This is a relationship field.</p> <p>Relationship Name OutboundSocialAccount</p> <p>Relationship Type Lookup</p>

Field Name	Details
	<p>Refers To ExternalSocialAccount</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description ID of the owner of the social post. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the parent record of the social post, for example, the ID of a case. This is a relationship field.</p> <p>Relationship Name Parent</p> <p>Relationship Type Lookup</p> <p>Refers To Case</p>
PersonaId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the social persona who made the post. This is a relationship field.</p> <p>Relationship Name Persona</p>

Field Name	Details
	<p>Relationship Type Lookup</p> <p>Refers To SocialPersona</p>
PostPriority	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Priority of the social post set in Social Studio.</p>
PostTags	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Comma-separated list of tags on the social post.</p>
PostUrl	<p>Type url</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description URL for the social post.</p>
Posted	<p>Type dateTime</p> <p>Properties Create, Defaulted on create, Filter, Sort, Update</p> <p>Description Date and time when the social post was made.</p>
Provider	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Social network of the social post.</p>
R6PostId	<p>Type string</p>

Field Name	Details
	<p>Properties Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p>Description Unique ID of the post in Social Studio.</p>
R6SourceId	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the author in Social Studio.</p>
R6TopicId	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID for either the topic profile or the managed account in Social Studio.</p>
Recipient	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the recipient of the social post in Social Studio.</p>
RecipientType	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Type of the recipient of the social post, such as a person.</p>
ReplyToId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description Dynamically generated from replyToExternalPostId in Social Studio. This is a relationship field.</p>

Field Name	Details
	<p>Relationship Name ReplyTo</p> <p>Relationship Type Lookup</p> <p>Refers To SocialPost</p>
ResponseContextExternalId	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description External ID, such as a conversation ID, author ID, or post ID, for the item you're responding to.</p>
ReviewScale	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Review scale for the social post.</p>
ReviewScore	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Review score for the social post.</p>
ReviewedStatus	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Status of the social post review.</p>
Sentiment	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

Field Name	Details
	<p>Description Sentiment of the social post. Values are:</p> <ul style="list-style-type: none"> Negative Neutral Positive SomewhatNegative SomewhatPositive
Shares	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Number of times the social post has been shared.</p>
SourceTags	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Comma-separated list of author type tags.</p>
SpamRating	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Spam rating of the social post. Values are:</p> <ul style="list-style-type: none"> NotSpam Spam
Status	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Status of the social post. Values are:</p> <ul style="list-style-type: none"> DELETED FAILED HIDDEN

Field Name	Details
	<ul style="list-style-type: none"> PENDING PENDING_APPROVAL RECALL_APPROVAL REJECTED_APPROVAL REPLIED SENT UNKNOWN
StatusMessage	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Status message for the social post.</p>
ThreadSize	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Radian6 field. No longer used.</p>
TopicProfileName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Name of the topic profile for the social post in Social Studio.</p>
TopicType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Type of topic. Values are:</p> <ul style="list-style-type: none"> Keyword Managed
TruncatedContent	<p>Type string</p>

Field Name	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description Truncated content of the social post.</p>
UniqueCommentors	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Number of unique people who commented on the social post.</p>
ViewCount	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Number of times the social post was viewed.</p>
WhoId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Polymorphic ID of a person such as a lead or a contact. This is a polymorphic relationship field.</p> <p>Relationship Name Who</p> <p>Relationship Type Lookup</p> <p>Refers To Account, Contact, Lead</p>

Usage

The fields on a SocialPost object don't provide real-time data. They provide a snapshot of information from the last time Salesforce collected the post from the social network. Many of the Radian6-related fields are no longer accurate or used.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

SocialPostChangeEvent (API version 48.0)

Change events are available for the object.

SocialPostFeed (API version 26.0)

Feed tracking is available for the object.

SocialPostHistory (API version 26.0)

History is available for tracked fields of the object.

SocialPostOwnerSharingRule

Sharing rules are available for the object.

SocialPostShare

Sharing is available for the object.

Solution

Represents a detailed description of a customer issue and the resolution of that issue.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
IsDeleted	<p>Type boolean</p> <p>Properties Defaulted on create, Filter</p> <p>Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.</p>
IsHtml	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the Solution is an HTML solution (<code>true</code>) or not (<code>false</code>).</p>

Field	Details
IsOutOfDate	<p>Type boolean</p> <p>Properties Defaulted on create, Filter</p> <p>Description Read-only field that indicates whether a solution master has been updated since the translated version was created (<code>true</code>) or not (<code>false</code>). Note that this field does not appear in the page layout of master solutions.</p>
IsPublished	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the Solution has been published (<code>true</code>) or not (<code>false</code>). A solution's published state does not affect how it can be used, or whether you can query, update, or delete it. Label is Public.</p> <p> Note: Prior to Spring '14, the label was Visible in Self-Service Portal.</p>
IsPublishedInPublicKb	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the Solution has been published as a Public Solution (<code>true</code>) or not (<code>false</code>). Label is Visible in Public Knowledge Base.</p> <p>This field only applies to solutions, not articles in the public knowledge base.</p>
IsReviewed	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the Solution has been reviewed (<code>true</code>) or not (<code>false</code>). This flag can only be set indirectly via the <code>Status</code> picklist. Each predefined <code>Status</code> value implies an <code>IsReviewed</code> value. Label is Reviewed.</p>
LastReferencedDate	<p>Type datetime</p> <p>Properties Filter, Nillable, Sort</p>

Field	Details
	<p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type datetime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description ID of the User who owns the Solution. This is a relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
ParentId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Update</p> <p>Description ID of the master solution, if this is the translation of a master solution.</p>
RecordTypeId	<p>Type reference</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description ID of the RecordType to which the Solution is associated.</p>

Field	Details
SolutionLanguage	<p>Type picklist</p> <p>Properties Create, Filter, Restricted picklist, Update</p> <p>Description The language that the solution is written in, such as <code>French</code> or <code>Chinese (Traditional)</code>.</p>
SolutionName	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Required. If a client application creates a new Solution and a value for this field is unspecified, a hyphen (-), the default value for this field, is used. Limit: 255 characters. Label is Title.</p>
SolutionNote	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The details of the Solution record. Limit: 32,000 characters. Label is Solution Details.</p> <p> Note: If you have HTML Solutions enabled, any HTML tags used in this field are verified before the object is created or updated. If invalid HTML is entered, an error is thrown. Any JavaScript used in this field is removed before the object is created or updated.</p>
SolutionNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, Sort</p> <p>Description An identifying number that is assigned automatically when a solution is created. It can't be set directly, and it can't be modified.</p>
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Required. The status of the solution. Directly controls the <code>IsReviewed</code> value. To obtain the status values in the picklist, a client application can query the <code>SolutionStatus</code>.</p>

Field	Details
TimesUsed	<p>Type int</p> <p>Properties Filter, Group, Sort</p> <p>Description Number of times this solution has been used. Label is Num Related Case.</p>

Usage

Use this object to manage your organization's solutions. Client applications can create, update, delete, and query Attachment records associated with a solution.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

SolutionFeed (API version 18.0)

Feed tracking is available for the object.

SolutionHistory

History is available for tracked fields of the object.

SEE ALSO:

[CategoryData](#)

[CategoryNode](#)

SolutionStatus

Represents the status of a Solution, such as Draft, Reviewed, and so on.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
ApiName	<p>Type string</p>

Field	Details
	<p>Properties Filter, Group, idLookup, Sort</p> <p>Description Uniquely identifies a picklist value so it can be retrieved without using an id or primary label.</p>
IsDefault	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether this is the default solution status value (<code>true</code>) or not (<code>false</code>) in the picklist. Only one value can be the default value.</p>
IsReviewed	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether this solution status value represents a reviewed Solution (<code>true</code>) or not (<code>false</code>). Multiple solution status values can represent a reviewed Solution.</p>
MasterLabel	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Label for this solution status value. This display value is the internal label that does not get translated.</p>
SortOrder	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Number used to sort this value in the solution status picklist. These numbers are not guaranteed to be sequential, as some previous solution status values might have been deleted.</p>

Usage

This object represents a value in the solution status picklist. The solution status picklist provides additional information about the status of a Solution, such as whether a given status value represents a reviewed or unreviewed solution. Your client application can query this

object to retrieve the set of values in the solution status picklist, and then use that information while processing Solution objects to determine more information about a given solution. For example, the application could test whether a given case has been reviewed or not based on its `Status` value and the value of the `IsReviewed` property in the associated `SolutionStatus` record.

SEE ALSO:

[Solution](#)

SolutionTag

Associates a word or short phrase with a Solution.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
<code>ItemId</code>	<p>Type reference</p> <p>Properties Create, Filter</p> <p>Description ID of the tagged item.</p>
<code>Name</code>	<p>Type string</p> <p>Properties Create, Filter</p> <p>Description Name of the tag. If this value does not already exist, a new <code>TagDefinition</code> is created and becomes the parent of this <code>Tag</code> object. Otherwise, a <code>TagDefinition</code> with the same name becomes the parent of this <code>Tag</code> object. Parent relationships are created automatically.</p>
<code>TagDefinitionId</code>	<p>Type reference</p> <p>Properties Filter</p> <p>Description ID of the parent <code>TagDefinition</code> object that owns the tag.</p>

Field Name	Details
Type	<p>Type picklist</p> <p>Properties Create, Filter, Restricted picklist</p> <p>Description Defines the visibility of a tag. Valid values:</p> <ul style="list-style-type: none"> • <code>Public</code>—The tag can be viewed and manipulated by all users in an organization. • <code>Personal</code>—The tag can be viewed or manipulated only by a user with a matching <code>OwnerId</code>.

Usage

SolutionTag stores the relationship between its parent TagDefinition and the Solution being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

SOSDeployment

Represents the general settings for deploying SOS video call capability in a native mobile application. This object is available in API version 34.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the</p>

Field Name	Details
	<p>object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
Language	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The language of the deployment.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The name of the deployment.</p>
OptionsIsBackwardFacingCameraEnabled	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Determines whether customers can use the backwards-facing camera on their mobile devices to talk to SOS agents.</p>
OptionsIsEnabled	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Determines whether the deployment is enabled for customers to request new SOS video calls.</p>
OptionsIsVoiceOnlyMode	<p>Type boolean</p>

Field Name	Details
	<p>Properties Create, Filter, Update</p> <p>Description Determines whether video functionality is disabled for customers, making it so customers can only talk to SOS agents using only audio.</p>
QueueId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the queue that's associated with the SOS deployment.</p>

Usage

Use this object to query and manage SOS deployments.

SOSSession

This object is automatically created for each SOS session and stores information about the session. This object is available in API versions 34.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
AppVersion	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The version of the customer's mobile application in which SOS is implemented.</p>
CaseId	<p>Type reference</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the case that's associated with the SOS session.</p>
ContactId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the contact that's associated with the SOS session.</p>
DeploymentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the SOS deployment that the SOS session originated from.</p>
EndTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The time that the SOS session ended.</p>
IpAddress	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description To protect the customer's privacy, this field is now blank.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time that the session record was last referenced by a user.</p>
LastViewedDate	<p>Type dateTime</p>

Field Name	Details
	<p>Properties Filter, Nillable, Sort</p> <p>Description The date and time that the session record was last viewed.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, Sort</p> <p>Description The name of the session.</p>
OpentokSession	<p>Type encryptedstring</p> <p>Properties Create, Nillable, Update</p> <p>Description The ID of the OpenTok session that's associated with the SOS video call.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the session record's owner.</p>
SessionDuration	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The amount of time that the SOS session lasted.</p>
SessionRecordingUrl	<p>Type url</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The URL where the SOS session recording is stored.</p>
SosVersion	<p>Type string</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The version of SOS that was used in your organization's mobile application when this session occurred.</p>
StartTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The time that the SOS session began.</p>
SystemInfo	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Information about the customer's mobile device from which the SOS call originated, such as the device's operating system.</p>
WaitDuration	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The amount of time the customer waited before an agent accepted the SOS session and the call began.</p>

Usage

Use this object to query and manage SOS session records.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[SOSSessionFeed](#)

Feed tracking is available for the object.

[SOSSessionHistory](#)

History is available for tracked fields of the object.

SOSSessionOwnerSharingRule

Sharing rules are available for the object.

SOSSessionShare

Sharing is available for the object.

SOSSessionActivity

Captures information about specific events that occur during an SOS video call, such as when an SOS call begins or ends. This object is available in API version 34.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
ActivityTime	<p>Type dateTime</p> <p>Properties Create, Filter, Sort</p> <p>Description The time at which the activity occurred.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, idLookup, Filter, Sort</p> <p>Description The name of the activity.</p>
SessionId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the SOS session that's associated with the event.</p>
Type	<p>Type picklist</p>

Field Name**Details****Properties**

Create, Filter, Group, Restricted picklist, Sort

Description

The kind of activity that occurred.

Usage

Use this object to query and manage SOS session activities.

Stamp

Represents a User Specialty. This object is available in API version 39.0 and later.

Create User Specialty labels. Specialties can be any term you want, up to 50 characters, including spaces and underscores.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field**Description**

Description

Type

string

Properties

Filter, Group, Nillable, Sort

Description

Use this field to describe what the user specialty means and how it applies to a user. You have a 255 character maximum including spaces and underscores.

MasterLabel

Type

string

Properties

Filter, Group, Sort

Description

The User Specialty label that appears under the user's profile picture. You can create any label you want as long as it's within the 50 character maximum, including spaces and underscores.

ParentId

Type

reference

Field	Description
	<p>Properties Filter, Group, Sort</p> <p>Description The id of the org or network. This is a relationship field.</p> <p>Relationship Name Parent</p> <p>Relationship Type Lookup</p> <p>Refers To Organization</p>

StampAssignment

Represents assignment of a User Specialty to a user. This object is available in API version 39.0 and later.

Assign a User Specialty to users. This label appears beneath their profile photo.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
StampId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The unique id generated when creating a user specialty. This is a relationship field.</p> <p>Relationship Name Stamp</p> <p>Relationship Type Lookup</p> <p>Refers To Stamp</p>

Field	Details
SubjectId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The id for the user getting the User Specialty label. This is a relationship field.</p> <p>Relationship Name Subject</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>

StaticResource

Represents a static resource that can be used in Visualforce markup.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Fields

Field	Details
Body	<p>Type base64</p> <p>Properties Create, Nillable, Update</p> <p>Description Required. Encoded file data.</p>
BodyLength	<p>Type int</p> <p>Properties Filter, Group, Sort</p> <p>Description Size of the file (in bytes).</p>

Field	Details
CacheControl	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The sharing policy for the static resource when cached. The cache control can have one of the following values:</p> <ul style="list-style-type: none"> • <i>Private</i> specifies that the static resource data cached on the Salesforce server shouldn't be shared with other users. The static resource is stored in cache only for the current user's session. • <i>Public</i> specifies that the static resource data cached on the Salesforce server be shared with other users in your organization for faster load times. For API users, the resource is accessible to all internet traffic.
ContentType	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Type of content. Label is Mime Type. Limit: 120 characters.</p>
Description	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Text description of the static resource. Limit: 255 characters.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Required. Name of the static resource.</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none">• In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.• In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. <p>This field can't be accessed unless the logged-in user has the Customize Application permission.</p>

Usage

Use static resources to upload content that you can reference in Visualforce markup, including archives (such as .zip and .jar files), images, stylesheets, JavaScript, and other files. Using a static resource is preferable to uploading a file to the Documents tab because:

- You can package a collection of related files into a directory hierarchy and upload that hierarchy as a .zip or .jar archive.
- You can reference a static resource in page markup by name using the `$Resource` global variable instead of hard-coding document IDs.

Encoded Data

The API sends and receives the binary file data encoded as a base64 data type. Prior to creating a record, clients must encode the binary file data as base64. Upon receiving an API response, clients must decode the base64 data to binary (this conversion is usually handled for you by the SOAP client).

Maximum Static Resource Size

You can create or update static resources to a maximum size of 5 MB. An organization can have up to 250 MB of static resources, total.

SEE ALSO:

[ApexComponent](#)

[ApexPage](#)

[Developer Guide: Visualforce Developer Guide](#)

StoreIntegratedService

Represents an association between an integration and a store. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The StoreIntegratedService object is available only if the B2B Commerce on Lightning Experience license is enabled.

Fields

Field	Details
Integration	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Required. The integration ID. Possible values are:</p> <ul style="list-style-type: none"> • If the integration is a RegisteredExternalService: <ul style="list-style-type: none"> – The ID of the RegisteredExternalService OR – [ServiceProviderType]__[DeveloperName] <ul style="list-style-type: none"> • ServiceProviderType: Price, Inventory, Tax, or Shipment • DeveloperName of RegisteredExternalService • If the integration is a PaymentGateway: <ul style="list-style-type: none"> – The ID of the PaymentGateway • If the integration is a Flow: <ul style="list-style-type: none"> – [ServiceProviderType]__[NamespacePrefix]__[ApiName] – If NamespacePrefix is null, it's [ServiceProviderType]__[ApiName] <ul style="list-style-type: none"> • ServiceProviderType: Flow • ApiName and NamespacePrefix of FlowDefinitionView • If the integration is the Salesforce Standard pricing: <ul style="list-style-type: none"> – [ServiceProviderType]__B2B_STOREFRONT__StandardPricing <ul style="list-style-type: none"> • ServiceProviderType: Price

Field	Details
ServiceProviderType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Required. The type of integration service provider. Possible values are:</p> <ul style="list-style-type: none"> • Flow • Inventory • Payment • Price • Promotions (this value is available in API version 53.0 and later) • Shipment • Tax
StoreId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. The unique ID for the store.</p>

StreamingChannel

Represents a channel that is the basis for notifying listeners of generic Streaming API events. This object is available in API version 29.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

- This object is available only if Streaming API is enabled for your org.
- Users with the Create permission can create this record.
- You can create a permission set and grant users read and create access to all streaming channels in the org. This access isn't for a specific channel, like with user sharing.
- You can apply user sharing to StreamingChannel. You can restrict access to receiving or sending events on a channel by sharing channels with specific users or groups. Channels shared with public read-only or read-write access send events only to clients

subscribed to the channel that also are using a user session associated with the set of shared users or groups. Only users with read-write access to a shared channel can generate events on the channel, or modify the actual StreamingChannel record.

Fields

Field	Details
Description	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Description of the StreamingChannel. Limit: 255 characters.</p> <p>Label: Description</p>
IsDynamic	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description true if the channel gets dynamically created on subscribe if necessary, false otherwise.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p>

Field	Details
	<p>Description Required. Descriptive name of the streaming channel. Limit: 80 characters, alphanumeric and “_”, “/” characters only. Must start with “/u”. This value identifies the channel and must be unique.</p> <p>Label: Streaming Channel Name</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the owner of the streaming channel.</p> <p>Label: Owner Name</p> <p>This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>

Dynamic Streaming Channel

Streaming API generic streaming supports dynamic streaming channel creation, which creates a StreamingChannel when a client first subscribes to the channel. To enable dynamic streaming channels in your org, from Setup, enter *User Interface* in the Quick Find box, then select **User Interface**. Enable **Enable Dynamic Streaming Channel Creation**. You can also enable dynamic channel creation in Metadata API using EventSettings.

Salesforce Surveys Object Model

Learn about how Salesforce Surveys objects relate to one another in Salesforce.

Survey

Represents a survey.

Supported Calls

describeLayout(), describeSObjects(), getDeleted(), getUpdated(), query(), retrieve(), search()

Fields

Field Name	Details
ActiveVersionID	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p>Description The ID of the survey version currently activated.</p>
Description	<p>Type string</p> <p>Properties Nillable</p> <p>Description The description of the survey. This field isn't visible in the UI.</p>
DeveloperName	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The survey's unique API name.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time that the current user last viewed a record related to the survey.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed the survey.</p>
LatestVersionId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the most recent version of this survey.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, Sort</p>

Field Name	Details
	<p>Description</p> <p>The name of the survey that appears in the UI. This field is read-only from API version 50.0.</p>
NamespacePrefix	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> • In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
OwnerId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Group, Sort</p> <p>Description</p> <p>The ID of the user who created the survey.</p>
SurveyType	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>Type of the survey.</p>
TotalVersionsCount	<p>Type</p> <p>int</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>The number of versions of the survey.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[SurveyFeed \(API version 42.0\)](#)

Feed tracking is available for the object.

[SurveyOwnerSharingRule](#)

Sharing rules are available for the object.

[SurveyShare](#)

Sharing is available for the object.

SurveyEmailBranding

Represents the configuration settings for invitation emails sent to survey participants for a particular survey.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only users with the View Setup and Configuration permission can access this object.

Fields

Field Name	Details
Body	<p>Type</p> <p>textarea</p> <p>Properties</p> <p>Create, Update</p> <p>Description</p> <p>The body text of the invitation email.</p>
DeveloperName	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>The unique API name of the email branding configuration.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
FooterImageId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The ID of the content asset that appears in the footer of the invitation email.</p>
FromEmailAddress	<p>Type</p> <p>email</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The email address that appears in the “From” field when the invitation is sent to participants.</p>
HeaderImageId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The ID of the content asset that appears in the header of the invitation email.</p>
Language	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description</p> <p>The language of the emails. Available languages include:</p> <ul style="list-style-type: none"> • Chinese (Simplified) • Chinese (Traditional) • Danish • Dutch • English • Finnish • French

Field Name	Details
	<ul style="list-style-type: none"> • German • Italian • Japanese • Korean • Norwegian • Portuguese (Brazilian) • Russian • Spanish • Spanish (Mexican) • Swedish • Thai
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The label for these email configuration settings.</p>
Subject	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The subject of the invitation email.</p>

SurveyEngagementContext

Represents the context based on which a survey invitation was sent or a survey response was received. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ContextType	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Context type based on which the survey invitation was sent or the response was received.</p>
ContextValue	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Context based on which the survey invitation was sent or the response was received.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Name of the record.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description ID of the record's owner.</p>
SurveyInvitationId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description ID of the survey invitation.</p>
SurveyResponseId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description ID of the survey response.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[SurveyEngagementContextShare](#)

Sharing is available for the object.

SurveyInvitation

Represents the invitation sent to a participant to complete the survey.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
CommunityId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ID of the Experience Cloud site that you want to send the survey to.</p>
ContactId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the contact who received the invitation. This field is available in API v49.0 and later.</p>
EmailBrandingId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p>

Field Name	Details
	Description The ID of the survey email branding object that's associated with this invitation.
InvitationLink	Type url Properties Filter, Group, Nillable, Sort Description The URL to the survey that is sent to participants. To query on this field, you need access to the associated Survey record.
InviteExpiryDateTime	Type dateTime Properties Create, Filter, Nillable, Sort, Update Description The date and time that the survey invitation expires.
IsDefault	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Determines whether this is the default survey invitation to use when the survey is sent to participants.
LastReferencedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed a record related to this survey invitation.
LastViewedDate	Type dateTime Properties Filter, Nillable, Sort Description The timestamp for when the current user last viewed this survey invitation.

Field Name	Details
LeadId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the lead who received the invitation. This field is available in API v49.0 and later.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the survey invitation that appears in the UI.</p>
OptionsAllowGuestUserResponse	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Determines whether participants who don't have a Salesforce account can complete the survey.</p>
OptionsAllowParticipantAccessTheirResponse	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Determines whether participants can access a copy of their responses after they complete the survey.</p>
OptionsCollectAnonymousResponse	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Determines whether participants can complete the survey anonymously.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p>Description ID of the user who created the survey invitation.</p>
ParticipantId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description ID of the participant if the participant is a Salesforce contact, user, or lead.</p>
ResponseStatus	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The status of a participant's response to the survey that's associated with the survey invitation. Possible values include:</p> <ul style="list-style-type: none"> • NotStarted — For an invitation with a <code>ParticipantID</code>, it means that the recipient hasn't opened the survey. For an invitation without the <code>ParticipantID</code>, it means that none of the recipients have opened the survey. • Started — For an invitation with a <code>ParticipantID</code>, it means that the recipient opened the survey. For an invitation without the <code>ParticipantID</code>, it means that the survey has been opened by at least one recipient. • Paused — For an invitation with a <code>ParticipantID</code>, it means that the recipient has paused the survey. For an invitation without the <code>ParticipantID</code>, it means that the survey has been paused by any one of the recipients. Paused isn't available for invitations in which either <code>OptionsAllowParticipantAccessTheirResponse</code> or <code>OptionsCollectAnonymousResponse</code> is true. • Completed — For an invitation with a <code>ParticipantID</code>, it means that the recipient has submitted the survey. For an invitation without the <code>ParticipantID</code>, it means that the invitation has been submitted by at least one recipient.
SurveyId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the survey that's sent in the invitation.</p>

Field Name	Details
UUID	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description A unique user ID that's added to a survey invitation generated for a contact, lead, or user.</p>
UserId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the user who received the invitation. This field is available in API v49.0 and later.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[SurveyInvitationOwnerSharingRule](#)

Sharing rules are available for the object.

[SurveyInvitationShare](#)

Sharing is available for the object.

SurveyPage

Represents a page, such as the title page or a question page, in a survey.

Supported Calls

`getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
DeveloperName	<p>Type string</p> <p>Properties Filter, Group, Sort</p>

Field	Details
	<p>Description</p> <p>The unique API name of this SurveyPage object.</p>
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, idLookup, Sort</p> <p>Description</p> <p>The name of the survey page that appears in the UI.</p>
SurveyVersionId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Group, Sort</p> <p>Description</p> <p>The version of the survey that the page belongs to.</p>

SurveyQuestion

Represents a question in a survey.

Supported Calls

`describeLayout()` `describeSObjects()` `getDeleted()` `getUpdated()` `query()` `retrieve()`

Fields

Field	Details
DeveloperName	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Sort</p> <p>Description</p> <p>The API name of the SurveyQuestion. The API name must be unique within a particular version of the survey.</p>
IsDeprecated	<p>Type</p> <p>boolean</p>

Field	Details
	<p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the question was deleted from the survey.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description Up to the first 250 characters of the label for the question.</p>
QuestionName	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description The label for the question.</p>
QuestionType	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The type of question. Possible values include:</p> <ul style="list-style-type: none"> • Boolean—This value is available in API v49.0 and later. • CSAT • Currency • Date • DateTime • Image • FreeText • MultipleChoice • MultiSelectPicklist • NPS • Number • Picklist • RadioButton • StackRank • Rating

Field	Details
	<ul style="list-style-type: none"> • <code>ShortText</code>—This value is available in API v49.0 and later. • <code>Slider</code> • <code>Toggle</code>
<code>SurveyPageId</code>	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description Lookup to the <code>SurveyPage</code> that contains the question.</p>
<code>SurveyVersionId</code>	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the <code>SurveyVersion</code> that the question belongs to.</p>
<code>ValidationType</code>	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The validations available for the short-text question. Possible values include:</p> <ul style="list-style-type: none"> • Custom - Cu • Number - Nu

SurveyQuestionChoice

Represents an answer choice that a participant can select for a survey question.

Supported Calls

`describeLayout()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
DeveloperName	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The unique API name of the SurveyQuestionChoice object.</p>
IsDeprecated	<p>Type boolean</p> <p>Properties Defaulted on create, Filter , Group, Sort</p> <p>Description Indicates whether a question choice was deleted from the survey.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description A label for the question choice that appears in the UI.</p>
QuestionId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the SurveyQuestion object that this choice belongs to.</p>
SurveyVersionId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The version of the survey that this question choice belongs to.</p>

SurveyQuestionResponse

Represents a participant's answer to a specific question.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
ChoiceValue	<p>Type textarea</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Response provided by a participant for the following question types:</p> <ul style="list-style-type: none"> • Multiple choice • Picklist • Radio • Ranking
Datatype	<p>Type</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The data type of the question response. Possible values are:</p> <ul style="list-style-type: none"> • Boolean This value is available in API v49.0 and later. • Date • Double • Int • Number • String
DateTimeValue	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Response provided by a participant for a question of the type date time.</p>

Field	Details
DateValue	<p>Type date</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Response provided by a participant for a question of the type date.</p>
InvitationId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the SurveyInvitation that was sent to the survey participant.</p>
IsTrueOrFalse	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Response provided by a participant for a question type which has only two possible values: True and False.</p>
NumberValue	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Response provided by a participant for the following question types:</p> <ul style="list-style-type: none">• Net Promoter Score (NPS)• Rating• Score• Slider
QuestionChoiceId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of SurveyQuestionChoice that a participant chose in response to a question.</p>

Field	Details
QuestionId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the SurveyQuestion that a participant provided an answer for.</p>
Rank	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Rank provided by a participant for an answer choice for the ranking question type.</p>
ResponseId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the SurveyResponse that is the parent of this SurveyQuestionResponse.</p>
ResponseShortText	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description Up to the first 250 characters of the response provided by a participant for a text type question.</p>
ResponseValue	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description Response provided by a participant for a question.</p>
SurveyVersionId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the SurveyVersion that the response belongs to.</p>

SurveyQuestionScore

Represents the aggregate of responses for the following question types: date, multiple choice, picklist, radio, ranking, rating, scoring, slider, and [Net Promoter Score® \(NPS®\)](#).

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
CumulativeScore	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Sum of the responses provided by all the participants for a question of the following types: rating, scoring, and slider. For a question of the type ranking, sum of the weights provided by all the participants for each item.</p> <p> Note: This field is only applicable for the overall score type.</p>
DateResponse	<p>Type date</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The date selected by one or more participants for a question of the type date.</p> <p> Note: This field is only applicable for the individual score type.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description For an overall score type record:</p> <ul style="list-style-type: none"> Name of a question. Name of an item in a question of the type ranking. <p>For an individual score type record:</p> <ul style="list-style-type: none"> Name of an item in a question of the type ranking.

Field	Details
	<ul style="list-style-type: none"> Name of a question of the type date. Response provided by one or more participants for questions of the following types: picklist, multiple choice, rating, ranking, score, slider, NPS.
QuestionChoiceId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Unique identifier of the answer choice selected by one or more participants. For an individual score type record, this field is applicable for questions of the following types: picklist, radio, multi choice, ranking and rating. For an overall score type record, this field is applicable for questions of the type ranking.</p>
QuestionDeveloperName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The API name of the question for which response is recorded. The API name must be unique within a particular version of the survey.</p>
QuestionId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Unique identifier of the question for which response is recorded.</p>
QuestionName	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description Name of the question for which response is recorded.</p>
QuestionSkippedCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Number of participants who didn't respond to the question.</p>

Field	Details
	<p> Note: This field is only applicable for the overall score type.</p>
ResponseCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description For an overall score type record, number of participants who responded to the question. For an individual score type record, number of participants who selected a particular answer choice.</p>
ResponseValue	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Answer choice selected by one or more participants for a question of the following types: rating, slider, score, NPS. Rank provided by the participant for an item in a question of the type ranking.</p> <p> Note: This field is only applicable for the individual score type.</p>
Score	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description For an individual score type record, percentage of participants who selected a particular answer choice.</p> <p> Note: For questions of the type ranking, the percentage of participants who have provided the same rank to an item.</p> <p>For overall score type record:</p> <ul style="list-style-type: none"> • Average score of questions of the following question types: rating, scoring, and slider. • Score of an NPS type question. • Average weight provided by all participants for each item in question of the type ranking. • Number of participants who responded to the question for the following question types: date, radio, multi choice, and picklist.
ScoreType	<p>Type picklist</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Type of the score calculated for a record. Possible values are:</p> <ul style="list-style-type: none"> • Individual • Overall
SurveyId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description Unique identifier of the survey that contains the question for which scores are calculated.</p>
SurveyInvitationId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Unique identifier of the survey invitation for which scores are calculated.</p>
SurveyVersionId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description Unique identifier of the survey version for which scores are calculated.</p>

SurveyResponse

Represents information about a participant's response to a survey, such as the status of the response, the participant's location, and when the survey was completed.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`

Fields

Field Name	Details
CompletionDateTime	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time that the participant completed the survey.</p>
DataMapperExecutionStatus	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Status of all the survey data maps after a response is received. LastReferencedDate

Type

dateTime

Properties

Filter, Nillable, Sort

Field Name	Details
	<p>Description The date and time that another Salesforce object last referenced this SurveyResponse object.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time that someone last viewed this SurveyResponse object.</p>
Latitude	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The latitude of the participant's location.</p>
Location	<p>Type location</p> <p>Properties Nillable</p> <p>Description The latitude and longitude coordinates of the participant's location.</p>
Longitude	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The longitude of the participant's location.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The name of the participant.</p>
Status	<p>Type picklist</p>

Field Name	Details
	<p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The status of the survey. Possible values include:</p> <ul style="list-style-type: none"> • NotStarted — The participant hasn't opened the survey. • Started — The participant has opened the survey. • Paused — The participant has paused the survey. Paused isn't available for invitations in which either <code>OptionsAllowParticipantAccessTheirResponse</code> or <code>OptionsCollectAnonymousResponse</code> is true. • Completed — The participant has completed the survey.
SubmitterId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the Salesforce user or contact who completed the survey.</p>
SurveyId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the survey that the participant completed.</p>
SurveyVersionId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the version of the survey that the participant completed.</p>

SurveySubject

Represents a relationship between a survey and another object, such as an account or a case.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the SurveySubject record was last referenced by another object.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed the SurveySubject record.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the SurveySubject record.</p>
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Unique identifier of the SurveyInvitation object or SurveyResponse object that is associated with this survey-object relationship.</p>
SubjectEntityType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p>

Field Name**Details****Description**

Object that the survey is associated with. Possible values include:

- *Account*
- *Asset*
- *BusinessMilestone*
- *Campaign*
- *CareProgram*
- *Case*
- *Claim*
- *ClaimParticipant*
- *Contact*
- *Event*
- *IndividualApplication*
- *InsurancePolicy*
- *InsurancePolicyParticipant*
- *Lead*
- *LiveChatTranscript*
- *LoyaltyProgram*
- *LoyaltyProgramPartner*

- *Solution*
- *Task*
- *TransactionJournal*
- *User*
- *Visit*
- *VolunteerProject*
- *WorkOrder*
- Custom Objects

Field Name	Details
SubjectId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the object that's associated with the survey.</p>
SurveyId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description Unique identifier of the survey that's associated with the record that's represented by SubjectId.</p>
SurveyInvitationId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Unique identifier of the survey invitation that's associated with another object.</p>
SurveyResponseId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Unique identifier of the survey response that's associated with another object.</p>

SurveyVersion

Represents a version of a survey.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`

Fields

Field Name	Details
BrandingSetId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the branding set associated with the survey version.</p>
Description	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description The description of this survey version.</p>
IsTemplate	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the survey version is a template. Template surveys are automatically shared with all users in your Salesforce org.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time that the current user last viewed a record related to the survey version.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed the survey version.</p>
Name	<p>Type string</p>

Field Name	Details
	<p>Properties</p> <ul style="list-style-type: none"> Filter, Group, Sort Filter, Group, Sort Filter, Group, idLookup, Sort <p>Description</p> <p>The name of the survey that appears in the UI.</p>

SurveyVersion	<p>Type</p> <p>int</p> <p>Properties</p> <ul style="list-style-type: none"> Filter, Group, Sort <p>Description</p> <p>The version number of the survey.</p>

SurveyVersionAddlInfo

Represents additional information about a survey version. This information defines the default settings of a survey version. This object is available in API version 49.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field	Details
EmailSender	<p>Type textarea</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The organization-wide email address used to send a survey invitation.</p>
EmailTemplateId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the email template that's used to send an automated survey invitation.</p>
EngagementContextMetadata	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The custom metadata created to get the engagement context from the participants.</p>
InvitationSharingRole	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Indicates the users that share edit access to a survey invitation. Possible values are:</p> <ul style="list-style-type: none"> • <code>InvitationRecordCreator</code>— Owner of the record that's associated with a survey invitation. • <code>SurveyOwner</code>
Language	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Language used to create the survey. Possible values are:</p>

SvcCatalogRequest

Represents a request made by a user using the Service Catalog. Catalog builders use this object to report on Service Catalog activity. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The Employee Productivity Starter or the Employee Productivity Plus add-on license is required to access this object.

Fields

Field	Details
CatalogItemDescription	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Description for the catalog item.</p>
CatalogItemName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Name of the catalog item.</p>
ClosedDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date and time when the request was closed. This field is automatically populated when <code>IsClosed</code> is 'true'.</p>
IsClosed	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field	Details
	<p>Description</p> <p>Indicates whether the request has been resolved. This field is automatically checked when <code>ClosedDate</code> is populated.</p> <p>The default value is 'false'.</p>
<code>ItemFlowVersion</code>	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>Version for the item flow.</p> <p>This is a calculated field.</p>

This is a relationship field.</p> <p>Relationship Name SvcCatalogItemDefinition</p> <p>Relationship Type Lookup</p> <p>Refers To SvcCatalogItemDef</p>

SvcCatalogReqRelatedItem

Represents an item related to a Service Catalog Request. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The Employee Productivity Starter or the Employee Productivity Plus add-on license is required to access this object.

Fields

Field	Details
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the related item.</p>
RelatedExternalId	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Text containing an ID from any external system.</p>
RelatedInternalRecordId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The Salesforce record related to this request. This reference must be for an object that has the following characteristics.</p> <ul style="list-style-type: none"> • It's a standard object. • It must allow custom fields. • It's referencable (that is, it can be the target of a lookup). • It can be the target of a custom lookup field. • It contains a Name field.

Field	Details
	<ul style="list-style-type: none"> It isn't dependent on a junction object. It isn't a virtual object or a setup object. <p>This is a polymorphic relationship field.</p> <p>Relationship Name RelatedInternalRecord</p> <p>Relationship Type Lookup</p> <p>Refers To Account, Address, Asset, AssociatedLocation, AuthorizationForm, AuthorizationFormConsent, AuthorizationFormDataUse, AuthorizationFormText, BusinessBrand, Case, CommSubscription, CommSubscriptionChannelType, CommSubscriptionConsent, CommSubscriptionTiming, Contact, ContactPointAddress, ContactPointConsent, ContactPointEmail, ContactPointPhone, ContactPointTypeConsent, Contract, ContractLineItem, Customer, DataUseLegalBasis, DataUsePurpose, Employee, EngagementChannelType, Entitlement, Idea, Individual, InternalOrganizationUnit, Lead, Location, MessagingEndUser, Opportunity, Order, OrderItem, PartyConsent, Pricebook2, ProcessException, Product2, ProfileSkill, ProfileSkillEndorsement, ProfileSkillUser, QuickText, Recommendation, Seller, ServiceContract, SocialPersona, SocialPost, Solution, SurveyInvitation, SurveySubject, UserProvisioningRequest, VoiceCall</p>

TabDefinition

Represents a custom tab. Returns only the tabs that the current user has access to. This object is available in API version 43.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `search()`

Fields

Field Name	Details
DurableId	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Unique identifier for the tab. Always retrieve this value before using it, because the value isn't guaranteed to stay the same from one release to the next. Simplify queries by using this field instead of making multiple queries.</p>
IsAvailableInAloha	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the tab is available in Salesforce Classic.</p>
IsAvailableInDesktop	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the tab is available on desktop.</p>
IsAvailableInLightning	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the tab is available in Lightning Experience.</p>
IsAvailableInMobile	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the tab is available in the Salesforce mobile app.</p>

Field Name	Details
IsCustom	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the tab is a custom tab created by admins in the org.</p>
Label	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The localized label corresponding to the <code>MasterLabel</code> field in the Tooling API object.</p>
MobileUrl	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The URL that can be used to launch this tab in the Salesforce mobile app.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The developer name of the tab.</p>
SubjectName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The name of the sObject corresponding to the tab.</p>
Url	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field Name**Details****Description**

The URL that can be used to launch this tab on desktop.

TagDefinition

Defines the attributes of child Tag objects.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

Fields

Field**Detail**

Name

Type

string

Properties

Filter, Nillable, Update

Description

Identifies the tag word or phrase.

Type

Type

picklist

Properties

Filter, Nillable, Restricted picklist

Description

Defines the visibility of a tag. Possible value are:

- **Public:** The tag can be viewed and manipulated between all users in an organization.
- **Personal:** The tag can be viewed or manipulated only by a user with a matching `OwnerId`.

Usage

When you create a tag for a record, an association is created with to a corresponding TagDefinition:

- If the value in the tag's `Name` field is new, a new `TagDefinition` record is automatically created and becomes the parent of the tag.
- If the value in the tag's `Name` field already exists in a `TagDefinition`, that `TagDefinition` automatically becomes the parent of the tag.

Each `TagDefinition` record has a one-to-many relationship with its child tag records.

The following standard objects represent tags for records:

- `AccountTag`
- `AssetTag`
- `CampaignTag`
- `CaseTag`
- `ContactTag`
- `ContractTag`
- `DocumentTag`
- `EventTag`
- `LeadTag`
- `NoteTag`
- `OpportunityTag`
- `SolutionTag`
- `TaskTag`

Custom objects may also be tagged. Tags for custom objects are identified by a suffix of two underscores immediately followed by the word `tag`. For example, a custom object named `Meeting` has a corresponding tag named `Meeting__tag` in that organization's WSDL. `Meeting__tag` is only valid for `Meeting` objects.

`TagDefinition` is useful for mass operations on any tag record. For instance, if you want to rename existing tags, you can search for the appropriate `TagDefinition` object, update it, and the child tag's `Name` values are also changed. The following Java example replaces all `WC` tags with the phrase `West Coast`:

```
public void tagDefinitionSample() {
    String soqlQuery = "SELECT Id, Name FROM TagDefinition " +
        "WHERE Name = 'WC'";
    QueryResult qResult = null;
    try {
        qResult = connection.query(soqlQuery);
        TagDefinition tagDef = (TagDefinition) qResult.getRecords()[0];
        tagDef.setName("West Coast");
        connection.update(new SObject[] {tagDef});
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

When a tag is deleted, its parent `TagDefinition` will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a `TagDefinition` sends it to the Recycle Bin, along with any associated tag entries.

Task

Represents a business activity such as making a phone call or other to-do items. In the user interface, `Task` and `Event` records are collectively referred to as activities.

 **Note:** Task fields related to calls are exclusive to Salesforce CRM Call Center. Also, `query()`, `delete()`, and `update()` aren't allowed with tasks related to more than one contact in API versions 23.0 and earlier.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Field Type
<code>AccountId</code>	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Represents the ID of the related Account. The <code>AccountId</code> is determined as follows.</p> <p>If the value of <code>whatId</code> is any of the following objects, then Salesforce uses that object's <code>AccountId</code>.</p> <ul style="list-style-type: none"> Account Opportunity Contract Custom object that is a child of Account <p>If the value of the <code>whatId</code> field is any other object, and the value of the <code>whoId</code> field is a Contact object, then Salesforce uses that contact's <code>AccountId</code>. (If your organization uses Shared Activities, then Salesforce uses the <code>AccountId</code> of the primary contact.)</p> <p>Otherwise, Salesforce sets the value of the <code>AccountId</code> field to <code>null</code>.</p> <p>For information on IDs, see ID Field Type.</p> <p>This is a relationship field.</p> <p>Relationship Name Account</p> <p>Relationship Type Lookup</p> <p>Refers To Account</p>
<code>ActivityDate</code>	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Field Type
	<p>Description</p> <p>Represents the due date of the task. This field has a timestamp that is always set to midnight in the Coordinated Universal Time (UTC) time zone. The timestamp is not relevant; do not attempt to alter it to accommodate time zone differences. Label is Due Date.</p> <p> Note: This field can't be set or updated for a recurring task (<code>IsRecurrence</code> is <code>true</code>).</p>
CallDisposition	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Represents the result of a given call, for example, "we'll call back," or "call unsuccessful." Limit is 255 characters.</p> <p>Not subject to field-level security, available for any user in an organization with Salesforce CRM Call Center.</p>
CallDurationInSeconds	<p>Type</p> <p>int</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Duration of the call in seconds.</p> <p>Not subject to field-level security, available for any user in an organization with Salesforce CRM Call Center.</p>
CallObject	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Name of a call center. Limit is 255 characters.</p> <p>Not subject to field-level security, available for any user in an organization with Salesforce CRM Call Center.</p>
CallType	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

Field	Field Type
	<p>Description</p> <p>The type of call being answered: Inbound, Internal, or Outbound.</p>
CompletedDateTime	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time the task was saved with a Closed status.</p> <ul style="list-style-type: none"> For insert, if the task is saved with a Closed status the field is set. If the task is saved with an Open status the field is set to NULL. For update, if the task is saved with a new Closed status, the field is reset. If the task is saved with a new non-closed status, the field is reset to NULL. If the task is saved with the same closed status (that is, unchanged) there is no change to the field. <p> Note: The status is a dynamic enum. If the Closed mapping is changed it won't cause an update of existing tasks. Only new insert/update operations are affected.</p>
ConnectionReceivedId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce.</p>
ConnectionSentId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections.</p>
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p>

Field	Field Type
	<p>Description Contains a text description of the task.</p>
IsArchived	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the event has been archived.</p>
IsClosed	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the task has been completed (<code>true</code>) or not (<code>false</code>). Is only set indirectly via the <code>Status</code> picklist. Label is Closed.</p>
IsHighPriority	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates a high-priority task. This field is derived from the <code>Priority</code> field.</p>
IsRecurrence	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the task is scheduled to repeat itself (<code>true</code>) or only occurs once (<code>false</code>). This field is read-only on update, but not on create. If this field value is <code>true</code>, then <code>RecurrenceStartDateOnly</code>, <code>RecurrenceEndDateOnly</code>, <code>RecurrenceType</code>, and any recurrence fields associated with the given recurrence type must be populated. See Recurring Tasks.</p>
IsReminderSet	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether a popup reminder has been set for the task (<code>true</code>) or not (<code>false</code>).</p>

Field	Field Type
IsVisibleInSelfService	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether a task associated with an object can be viewed in the Customer Portal (<code>true</code>) or not (<code>false</code>). If your organization has digital experiences enabled, tasks marked <code>IsVisibleInSelfService</code> are visible to any external user in the Experience Cloud site, as long as the user has access to the record the task was created on.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description ID of the User or Group who owns the record. Label is Assigned To ID. This field accepts Groups of type Queue only. In the user interface, Group IDs correspond with the queue's list view names. To create or update tasks assigned to Group, use v48.0 or later. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
Priority	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Required. Indicates the importance or urgency of a task, such as high or low.</p>
RecurrenceActivityId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Field Type
	<p>Description Read-only. Not required on create. ID of the main record of the recurring task. Subsequent occurrences have the same value in this field.</p>
RecurrenceDayOfMonth	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The day of the month in which the task repeats.</p>
RecurrenceDayOfWeekMask	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The day or days of the week on which the task repeats. This field contains a bitmask. The values are as follows:</p> <ul style="list-style-type: none"> • Sunday = 1 • Monday = 2 • Tuesday = 4 • Wednesday = 8 • Thursday = 16 • Friday = 32 • Saturday = 64 <p>Multiple days are represented as the sum of their numerical values. For example, Tuesday and Thursday = 4 + 16 = 20.</p>
RecurrenceEndDateOnly	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The last date on which the task repeats. This field has a timestamp that is always set to midnight in the Coordinated Universal Time (UTC) time zone. The timestamp is not relevant; do not attempt to alter it to accommodate time zone differences.</p>
RecurrenceInstance	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

Field	Field Type
	<p>Description</p> <p>The frequency of the recurring task.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • First—1st • Fourth—4th • Last—last • Second—2nd • Third—3rd
RecurrenceInterval	<p>Type</p> <p>int</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The interval between recurring tasks.</p>
RecurrenceMonthOfYear	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description</p> <p>The month of the year in which the task repeats.</p>
RecurrenceRegeneratedType	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description</p> <p>Represents what triggers a repeating task to repeat. Add this field to a page layout together with the <code>RecurrenceInterval</code> field, which determines the number of days between the triggering date (due date or close date) and the due date of the next repeating task in the series.</p> <p>Label is Repeat This Task. This field has the following picklist values:</p> <ul style="list-style-type: none"> • None: The task doesn't repeat. • After due date: The next repeating task will be due the specified number of days after the current task's due date. • After the task is closed: The next repeating task will be due the specified number of days after the current task is closed. • (Task closed): This task, now closed, was opened as part of a repeating series.

Field	Field Type
	<p> Note: When tasks in a series are set to repeat after their due date, Salesforce doesn't create recurrences that would have been due in the past. Instead, Salesforce keeps adding the interval until a repeated task has a due date in the future.</p> <p>For example, suppose that someone sets a task to repeat three days after it's due. But, that person doesn't complete the task (mark it Closed) until five days after it's due. Instead of creating a task that's already overdue, Salesforce gives the new task a due date of tomorrow. This due date is equivalent to 6 days after the due date; two intervals of three days each.</p> <p>If that person completes the repeating task (marks it Closed) before the due date, the next task is still due three days after the due date.</p>
RecurrenceStartDateOnly	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The date when the recurring task begins. Must be a date and time before <code>RecurrenceEndDateOnly</code>.</p>
RecurrenceTimeZoneSidKey	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The time zone associated with the recurring task. For example, "UTC-8:00" for Pacific Standard Time.</p>
RecurrenceType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Indicates how often the task repeats. For example, daily, weekly, or every nth month (where "nth" is defined in <code>RecurrenceInstance</code>).</p>
ReminderDateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Represents the time when the reminder is scheduled to fire, if <code>IsReminderSet</code> is set to <code>true</code>. If <code>IsReminderSet</code> is set to <code>false</code>, then the user may have deselected the</p>

Field	Field Type
	reminder checkbox in the Salesforce user interface, or the reminder has already fired at the time indicated by the value.
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Required. The status of the task, such as In Progress or Completed. Each predefined <code>Status</code> field implies a value for the <code>IsClosed</code> flag. To obtain picklist values, query the <code>TaskStatus</code> object.</p> <p> Note: This field can't be updated for recurring tasks (<code>IsRecurrence</code> is <code>true</code>).</p>
Subject	<p>Type combobox</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The subject line of the task, such as "Call" or "Send Quote." Limit: 255 characters.</p>
TaskSubtype	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Provides standard subtypes to facilitate creating and searching for specific task subtypes. This field isn't updateable.</p> <p>TaskSubtype values:</p> <ul style="list-style-type: none"> • Task • Email • List Email • Cadence • Call <p> Note: The <code>Cadence</code> subtype is an internal value used by High Velocity Sales, and can't be set manually.</p>
TaskWhoIds	<p>Type JunctionIdList</p> <p>Properties Create, Update</p>

Field	Field Type
	<p>Description</p> <p>A string array of contact or lead IDs related to this task. This <code>JunctionIdList</code> field is linked to the <code>TaskWhoRelations</code> child relationship. <code>TaskWhoIds</code> is only available when the shared activities setting is enabled. The first contact or lead ID in the list becomes the primary <code>WhoId</code> if you don't specify a primary <code>WhoId</code>. If you set the <code>EventWhoIds</code> field to null, all entries in the list are deleted and the value of <code>WhoId</code> is added as the first entry.</p> <p> Warning: Adding a <code>JunctionIdList</code> field name to the <code>fieldsToNull</code> property deletes all related junction records. This action can't be undone.</p>
Type	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The type of task, such as Call or Meeting.</p>
WhatCount	<p>Type</p> <p>int</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>Available to organizations that have Shared Activities enabled. Count of related <code>TaskRelations</code> pertaining to <code>WhatId</code>. Count of the <code>WhatId</code> must be 1 or less.</p>
WhatId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The <code>WhatId</code> represents nonhuman objects such as accounts, opportunities, campaigns, cases, or custom objects. <code>WhatIds</code> are polymorphic. Polymorphic means a <code>WhatId</code> is equivalent to the ID of a related object. The label is <code>Related To ID</code>.</p> <p>This is a polymorphic relationship field.</p> <p>Relationship Name</p> <p>What</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>Account, Accreditation, AssessmentIndicatorDefinition, AssessmentTask, AssessmentTaskContentDocument, AssessmentTaskDefinition, AssessmentTaskOrder, Asset, AssetRelationship, AssignedResource, Award, BoardCertification, BusinessLicense,</p>

Field	Field Type
	BusinessMilestone, BusinessProfile, Campaign, CareBarrier, CareBarrierDeterminant, CareBarrierType, CareDeterminant, CareDeterminantType, CareDiagnosis, CareInterventionType, CareMetricTarget, CareObservation, CareObservationComponent, CarePgmProvHealthcareProvider, CarePreauth, CarePreauthItem, CareProgram, CareProgramCampaign, CareProgramEligibilityRule, CareProgramEnrollee, CareProgramEnrolleeProduct, CareProgramEnrollmentCard, CareProgramGoal, CareProgramProduct, CareProgramProvider, CareProgramTeamMember, CareProviderAdverseAction, CareProviderFacilitySpecialty, CareProviderSearchableField, CareRegisteredDevice, CareRequest, CareRequestDrug, CareRequestExtension, CareRequestItem, CareSpecialty, CareSpecialtyTaxonomy, CareTaxonomy, Case, CommSubscriptionConsent, ContactEncounter, ContactEncounterParticipant, ContactRequest, Contract, CoverageBenefit, CoverageBenefitItem, CreditMemo, DelegatedAccount, DocumentChecklistItem, EnrollmentEligibilityCriteria, HealthcareFacility, HealthcareFacilityNetwork, HealthcarePayerNetwork, HealthcarePractitionerFacility, HealthcareProvider, HealthcareProviderNpi, HealthcareProviderSpecialty, HealthcareProviderTaxonomy, IdentityDocument, Image, IndividualApplication, Invoice, ListEmail, Location, MemberPlan, Opportunity, Order, OtherComponentTask, PartyConsent, PersonLifeEvent, PlanBenefit, PlanBenefitItem, ProcessException, Product2, ProductItem, ProductRequest, ProductRequestLineItem, ProductTransfer, PurchaserPlan, ReceivedDocument, ResourceAbsence, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, Shift, Shipment, ShipmentItem, Solution, Visit, VisitedParty, VolunteerProject, WorkOrder, WorkOrderLineItem
WhoCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Available to organizations that have Shared Activities enabled. Count of related TaskRelations pertaining to WhoId.</p>
WhoId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The Whold represents a human such as a lead or a contact. Wholds are polymorphic. Polymorphic means a Whold is equivalent to a contact's ID or a lead's ID. The label is Name ID. If Shared Activities is enabled, the value of this field is the ID of the related lead or primary contact. If you add, update, or remove the Whold field, you might encounter problems with triggers, workflows, and data validation rules that are associated with the record. The label is Name ID.</p>

Field	Field Type
	Beginning in API version 37.0, if the contact or lead ID in the <code>whoId</code> field is not in the <code>TaskWhoIds</code> list, no error occurs and the ID is added to the <code>TaskWhoIds</code> as the primary <code>whoId</code> . If <code>whoId</code> is set to null, an arbitrary ID from the existing <code>TaskWhoIds</code> list is promoted to the primary position.
	This is a polymorphic relationship field.
	Relationship Name Who
	Relationship Type Lookup
	Refers To Contact, Lead

Usage

Recurring Tasks

- Recurring tasks are available in API version 16.0 and later.
- After a task is created, it can't be changed from recurring to nonrecurring or vice versa.
- When a user creates a series of recurring tasks, Salesforce creates a main record and subsequent occurrences. For the main record, `IsRecurrence` is set to `true` and other fields that define the recurrence pattern are populated. The ID of the main record of the recurring task is saved in the subsequent occurrences, in the `RecurrenceActivityId` field.
- When you delete a recurring task series through the API, all open and closed task occurrences in the series are removed. However, when you delete a recurring task series through the user interface, only open tasks occurrences (`IsClosed` is `false`) in the series are removed.
- If `IsRecurrence` is `true`, then `RecurrenceStartDateOnly`, `RecurrenceEndDateOnly`, `RecurrenceType`, and any properties associated with the given recurrence type (see the following table) must be populated.
- When you change the `RecurrenceStartDateOnly` field or the recurrence pattern, all open tasks occurrences in the series are deleted and new open task occurrences are created based on the new recurrence pattern. The following fields determine the recurrence pattern: `RecurrenceType`, `RecurrenceTimeZoneSidKey`, `RecurrenceInterval`, `RecurrenceDayOfWeekMask`, `RecurrenceDayOfMonth`, `RecurrenceInstance`, and `RecurrenceMonthOfYear`.
- When you change the value of `RecurrenceEndDateOnly` to an earlier date (for example, from January 20th to January 10th), all open task occurrences in the series with the `ActivityDate` value greater than the new end date value are deleted. Other open and closed task occurrences in the series are not affected.
- When you change the value of `RecurrenceEndDateOnly` to a later date (for example, from January 10th to January 20th), new task occurrences are created up to the new end date. Existing open and closed tasks in the series are not affected.

This table describes the usage of recurrence fields for Salesforce Classic recurring events. Each recurrence type must have all of its properties set. All unused properties must be set to null.

RecurrenceType Value	Properties	Example Pattern
<code>RecursDaily</code>	<code>RecurrenceInterval</code>	Every second day
<code>RecursEveryWeekday</code>	<code>RecurrenceDayOfWeekMask</code>	Every weekday - can't be Saturday or Sunday

RecurrenceType Value	Properties	Example Pattern
RecursMonthly	RecurrenceDayOfMonth RecurrenceInterval	Every second month, on the third day of the month
RecursMonthlyNth	RecurrenceInterval RecurrenceInstance RecurrenceDayOfWeekMask	Every second month, on the last Friday of the month
RecursWeekly	RecurrenceInterval RecurrenceDayOfWeekMask	Every three weeks on Wednesday and Friday
RecursYearly	RecurrenceDayOfMonth RecurrenceMonthOfYear	Every March on the 26th day of the month
RecursYearlyNth	RecurrenceDayOfWeekMask RecurrenceInstance RecurrenceMonthOfYear	The first Saturday in every October

JunctionIdList

The `JunctionIdList` field is now implemented in the Event and Task objects. With a single API call, it's easy to create many-to-many relationships between the Event or Task object with contacts, leads, or users.

To create a Task with related Contacts without `JunctionIdList`, you first have to create the task, then use the returned task ID to create the `TaskRelation` records. If the `TaskRelation` save call fails, error handling is your responsibility because the task has already been committed to the database.

```
public void createTasksOld(Contact[] contacts) {
    Task task = new Task();
    task.setSubject("New Task");
    SaveResult[] results = null;
    try {
        results = connection.create(new Task[] {
            task
        });
        if (results[0].isSuccess()) {
            TaskRelation[] relations = new TaskRelation[contacts.size()];
            for (int i = 0; i < contacts.length; i++) {
                relations[i] = new TaskRelation();
                relations[i].setTaskId(results[0].getID());
                relations[i].setRelationId(contacts[i].getID());
            }
            results = connection.create(relations);
        }
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

To create a task using `JunctionIdList`, IDs are pulled from the related contacts and both the task and the `TaskRelation` records are created in one API call. If the `TaskRelation` fails, the task is rolled back because it's all done in a single API call.

```
public void createTaskNew(Contact[] contacts) {
    String[] contactIds = new String[contacts.size()];
    for (int i = 0; i < contacts.size(); i++) {
        contactIds[i] = contacts[i].getID();
    }
}
```

```
}
Task task = new Task();
task.setSubject("New Task");
task.setTaskWhoIds(contactIds);
SaveResult[] results = null;
try {
    results = connection.create(new Task[] {
        task
    });
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
}
```

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

TaskChangeEvent (API version 44.0)

Change events are available for the object.

TaskFeed (API version 20.0)

Feed tracking is available for the object.

SEE ALSO:

[Object Basics](#)

TaskPriority

Represents the importance or urgency of a Task, such as High, Normal, or Low.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Customer and Partner Portal users can't access this object.

Fields

Field	Details
ApiName	Type string

Field	Details
	<p>Properties Filter, Group, idLookup, Sort</p> <p>Description Uniquely identifies a picklist value so it can be retrieved without using an id or master label.</p>
IsDefault	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether this is the default task priority value (<code>true</code>) or not (<code>false</code>) in the picklist. Only one value in the picklist can be the default value.</p>
IsHighPriority	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether this task priority value represents a high priority Task (<code>true</code>) or not (<code>false</code>). Multiple task priority values can represent a high-priority Task.</p>
MasterLabel	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Master label for this task priority value. This display value is the internal label that does not get translated. Limit: 255 characters.</p>
SortOrder	<p>Type int</p> <p>Properties Filter, Nillable, Group, Sort</p> <p>Description Number used to sort this value in the task priority picklist. These numbers are not guaranteed to be sequential, as some previous task priority values might have been deleted.</p>

Usage

This object represents a value in the task priority picklist. The task priority picklist provides additional information about the importance of a Task, such as whether a given priority value represents a high priority. Your client application can query on this object to retrieve the set of values in the task priority picklist, and then use that information while processing Task objects to determine more information

about a given task. For example, the application could test whether a given Task is high priority based on its `Priority` value and the value of the `IsHighPriority` in the associated TaskPriority object.

SEE ALSO:

[Object Basics](#)

TaskRelation

Represents the relationship between a task and a lead, contacts, and other objects related to the task. If Shared Activities is enabled, this object doesn't support triggers, workflow, or data validation rules. This object is available in API version 24.0 and later.

TaskRelation is only available if you've enabled Shared Activities in your organization.

TaskRelation allows the following relationships:

- A task can be related to one lead or up to 50 contacts.
- A task can also be related to one account, asset, campaign, case, contract, opportunity, product, solution, or custom object.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `queryAll()`, `retrieve()`

Fields

Field Name	Details
AccountId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Indicates the Account ID of the relation. For information on IDs, see ID Field Type.</p>
IsDeleted	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether a task has been deleted; label is Deleted. When a TaskRelation record is deleted, it isn't moved to the Recycle Bin and can't be undeleted, unless the record was cascade-deleted when the parent object was deleted. Don't use the <code>IsDeleted</code> field to detect deleted records in SOQL queries or <code>queryAll()</code> calls on directly deleted relation records. Instead, use the call <code>getDeleted()</code>.</p>

Field Name	Details
IsWhat	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the relation is an Account, Opportunity, Campaign, Case, other standard object, or a custom object. Value is <code>false</code> if <code>RelationId</code> is a contact or lead and <code>true</code> otherwise.</p>
RelationId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Indicates the <code>WhatId</code> or <code>WhoId</code> in the relationship. For more information, see Task. For information on IDs, see ID Field Type.</p>
TaskId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Represents the ID of the associated Task. For information on IDs, see ID Field Type.</p>

Usage

See contacts associated with a task

```
public void queryWhosOfTaskSample() {
    String soqlQuery = "SELECT Id, Subject, (SELECT RelationId, Relation.Name, IsWhat
from TaskRelations WHERE isWhat = false) FROM Task WHERE Id = '00T x0000005OKEN'";
    QueryResult qResult = null;
    try {
        qResult = connection.query(soqlQuery);
        TaskRelation relation1 =
(TaskRelation)qResult.getRecords()[0].getTaskRelations().getRecords()[0];
    }catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[TaskRelationChangeEvent](#) (API version 44.0)

Change events are available for the object.

SEE ALSO:

[Task](#)

[TaskWhoRelation](#)

TaskStatus

Represents the status of a Task, such as Not Started, Completed, or Closed.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Customer Portal users can't access this object.

Fields

Field	Details
<code>ApiName</code>	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description Uniquely identifies a picklist value so it can be retrieved without using an id or master label.</p>
<code>IsClosed</code>	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether this task status value represents a closed Task (<code>true</code>) or not (<code>false</code>). Multiple task status values can represent a closed Task.</p>
<code>IsDefault</code>	<p>Type boolean</p>

Field	Details
	<p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether this is the default task status value (<code>true</code>) or not (<code>false</code>) in the picklist.</p>
MasterLabel	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Master label for this task status value. This display value is the internal label that does not get translated. Limit: 255 characters.</p>
SortOrder	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Number used to sort this value in the task status picklist. These numbers are not guaranteed to be sequential, as some previous task status values might have been deleted.</p>

Usage

This object represents a value in the task status picklist. The task status picklist provides additional information about the status of a Task, such as whether a given status value represents an open or closed task. Your client application can query this object to retrieve the set of values in the task status picklist, and then use that information while processing Task records to determine more information about a given task. For example, the application could test whether a given task is open or closed based on the Task `STATUS` value and the value of the `IsClosed` property in the associated TaskStatus record.

SEE ALSO:

[Object Basics](#)

TaskTag

Associates a word or short phrase with a Task.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
ItemId	<p>Type reference</p> <p>Properties Create, Filter</p> <p>Description ID of the tagged item.</p>
Name	<p>Type string</p> <p>Properties Create, Filter</p> <p>Description Name of the tag. If this value does not already exist, a new TagDefinition is created and becomes the parent of this Tag object. Otherwise, a TagDefinition with the same name becomes the parent of this Tag object. Parent relationships are created automatically.</p>
TagDefinitionId	<p>Type reference</p> <p>Properties Filter</p> <p>Description ID of the parent TagDefinition object that owns the tag.</p>
Type	<p>Type picklist</p> <p>Properties Create, Filter, Restricted picklist</p> <p>Description Defines the visibility of a tag.</p> <p>Valid values:</p> <ul style="list-style-type: none"> • <code>Public</code>—The tag can be viewed and manipulated by all users in an organization. • <code>Personal</code>—The tag can be viewed or manipulated only by a user with a matching <code>OwnerId</code>.

Usage

TaskTag stores the relationship between its parent TagDefinition and the Task being tagged. Tag objects act as metadata, allowing users to describe and organize their data.

When a tag is deleted, its parent TagDefinition will also be deleted if the name is not being used; otherwise, the parent remains. Deleting a TagDefinition sends it to the Recycle Bin, along with any associated tag entries.

TaskWhoRelation

Represents the relationship between a task and a lead or contacts. This object is available in API version 29.0 and later.

This derived object is a filtered version of the [TaskRelation](#) on page 3421 object; that is, IsParent is `true` and IsWhat is `false`. It doesn't represent relationships to accounts, opportunities, or other objects.

TaskWhoRelation allows a variable number of relationships: one lead or up to 50 contacts. Available only if you've enabled Shared Activities for your organization.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
RelationId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Indicates the ID of the contacts or lead related to the task.</p>
TaskId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Indicates the ID of the task.</p>
Type	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Indicates whether the person related to the task is a lead or contact.</p>

Usage

Apex example that queries contacts associated with a task

```
public void queryWhosOfTaskSample() {
    String soqlQuery = "SELECT Id, Subject, (SELECT RelationId, Relation.Name, IsWhat
from TaskWhoRelations) FROM Task WHERE Id = '00Tx0000005OKEN'";
    QueryResult qResult = null;
    try {
        qResult = connection.query(soqlQuery);
        TaskWhoRelation relation1 =
(TaskWhoRelation)qResult.getRecords()[0].getTaskWhoRelations().getRecords()[0];
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

[Task](#)

[TaskRelation](#)

TenantSecret

This object stores an encrypted organization-specific key fragment that is used with the master secret to produce organization-specific data encryption keys. This object is available in API version 34.0 and later.

[other]: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

You can rotate tenant secrets of the `Data` type once every four hours in a sandbox org or every 24 hours in production orgs. You can rotate tenant secrets of the `SearchIndex` type once every seven days.

Note: This information is about Shield Platform Encryption and not Classic Encryption.

Supported Calls

`create()`, `query()`, `retrieve()`, `update()`

Fields

Field Name	Details
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The description of the tenant secret.</p>

Field Name	Details
KeyDerivationMode	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The key derivation mode applied to customer-supplied key material. Modes are:</p> <p>PBKDF2 The customer-supplied key material is used by the Shield KMS to create a derived data encryption key.</p> <p>NONE The customer-supplied key material is used by the Shield KMS as the final data encryption key to directly encrypt and decrypt data.</p> <p>Available in API version 43.0 and later.</p>
RemoteKeyCertificate	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The name of the certificate whose public key is used to encrypt the <code>SecretValue</code> during a remote key callout.</p> <p>Available in API version 45.0 and later.</p>
RemoteKeyIdentifier	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description A unique key identifier for key material fetched from a remote key service.</p> <p>Available in API version 45.0 and later.</p>
RemoteKeyServiceID	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The named credential used to fetch remote key material from a remote key service.</p> <p>Available in API version 45.0 and later.</p>

Field Name	Details
SecretValue	<p>Type base64</p> <p>Properties Create, Nillable, Update</p> <p>Description The encrypted 256-bit secret value encoded in base64.</p>
SecretValueCertificate	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The certificate needed to upload a customer-supplied tenant secret. Each certificate has a unique name.</p>
SecretValueHash	<p>Type base64</p> <p>Properties Create</p> <p>Description The matching tenant secret hash for an uploaded customer-supplied tenant secret.</p>
Source	<p>Type picklist</p> <p>Properties Create, Default on create, Filter, Group, Restricted picklist, Sort</p> <p>Description The source of the encryption key material. Values are:</p> <p>HSM A Salesforce-generated tenant secret.</p> <p>Uploaded A customer-supplied tenant secret or data encryption key.</p> <p>Remote A tenant secret or data encryption key fetched from a key service outside of Salesforce. Available in API version 44.0 and later.</p> <p> Note: Tenant secrets with a <code>Source</code> value of Remote are listed as Fetched on the Key Management page in Setup.</p> <p>Available in API version 43.0 and later.</p>

Field Name	Details
Status	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The status of the tenant secret. Values are:</p> <p>Active Can be used to encrypt and decrypt new or existing data.</p> <p>Archived Can't encrypt new data. Can be used to decrypt data previously encrypted with this key when it was active.</p> <p>Destroyed Can't encrypt or decrypt data. Data encrypted with this key when it was active can no longer be decrypted. Files and attachments encrypted with this key can no longer be downloaded.</p> <p>You can update the <code>Status</code> field through the API in versions 44.0 or later.</p>
Type	<p>Type picklist</p> <p>Properties Create, Default on create, Filter, Group, Restricted picklist, Sort</p> <p>Description The type of tenant secret. The <code>Type</code> field is available in API version 39.0 and later. The following values appear in the <code>Type</code> picklist:</p> <ul style="list-style-type: none"> • Data—data stored in the Salesforce database. Includes data in encrypted fields, files, and attachments but not search index files. Tenant secrets created in API version 34.0 and later default to the <code>Data</code> type. • SearchIndex—search index files (available in API version 39.0 and later). • Analytics—Tableau CRM data (available in API version 39.0 and later). • DeterministicData—data stored in the Salesforce database. Includes data in encrypted fields, files, and attachments, but not search index files (available in API version 39.0 and later). • EventBus—Change Data Capture event data (available in API version 43.0 and later). Change Data Capture is part of a pilot.
Version	<p>Type int</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The version number of this secret. The version number is unique within your org.</p>

Usage

Use this object to create or update an org-specific tenant secret or customer-supplied key material.

Example 1: Build an automated tenant secret creation and activation solution similar to the following.

1. Start by creating an Apex class to create the tenant secret. Specify the value of the tenant secret to encrypt data of a particular type.

```
global class CreateNewSecret implements Schedulable {
    global void execute(SchedulableContext SC) {
        TenantSecret secret = new TenantSecret ();
        secret.description = 'Created new secret from scheduled job';
        secret.type= 'SearchIndex';
        insert secret;
    }
}
```

 **Note:** Type is available in API version 39.0 and later. Type is optional; all tenant secrets default to the Data type.

2. Schedule the Apex class to run at the specified interval.

This Apex code only needs to be run a single time to schedule the job. This code runs the job every 90 days.

```
CreateNewSecret secret = new CreateNewSecret();
String schedule = '0 0 0 1 JAN,APR,JUL,OCT ?';
String jobID = system.schedule('Automated secret creation and activation', schedule,
secret);
```

3. Validate that the job is scheduled.
4. Validate that tenant secrets are created after the job is run.

Example 2: Upload a customer-supplied tenant secret or customer-supplied data encryption key.

1. Create a certificate that's compatible with customer-supplied key material. See [Generate a BYOK-Compatible Certificate](#) in Salesforce Help.
2. Then upload your matching key material and key material hash. Include the unique name of the compatible certificate. The key material is uploaded in encrypted form.

```
TenantSecret secret = new TenantSecret ();
secret.description = 'New uploaded secret';
secret.type= 'Data';
secret.SecretValue = ...
EncodingUtil.base64Decode('...');;
secret.SecretValueCertificate = ...;
secret.SecretValueHash = ...
EncodingUtil.base64Decode('...');
insert secret;
```

You can use this [script to generate a customer-supplied tenant secret](#) and tenant secret hash.

3. Validate that the key material is uploaded.

Example 3: Opt out of key derivation on a key-by-key basis when you upload key material. When you upload your key material, specify 'Source':Uploaded and 'KeyDerivationMode': 'NONE', and set non-null values for the SecretValueCertificate, SecretValue, and SecretValueHash.

Example 4: Import a tenant secret of the `Data` type.

```
TenantSecret secret = [SELECT Id FROM TenantSecret WHERE Type = 'Data' AND Version = 2];
secret.SecretValue = "<previously_exported_secret_as_a_String>";
update secret;
```

Example 5: Export a tenant secret by writing the `secret.SecretValue` to a file. Here's an example that uses a tenant secret of the `SearchIndex` type.

```
TenantSecret secret = [SELECT SecretValue FROM TenantSecret WHERE Type = 'TenantSecret'
AND Version = 2];
secret.SecretValue = ...;
update secret;
```

Example 6: Destroy a tenant secret of the `Data` type.

Warning: Your tenant secret is unique to your organization and to the specific data to which it applies. When you destroy a tenant secret, related data isn't accessible unless you previously exported the key and then import the key back into Salesforce.

```
TenantSecret secret = [SELECT Id FROM TenantSecret WHERE Type = 'Data' AND Version = 2];
secret.SecretValue = NULL;
secret.Status = Destroyed;
update secret;
```

Example 7: Change the `Status` of a tenant secret from `Archived` to `Destroyed`. Include the `SecretValue` and new tenant secret `Status`.

```
TenantSecret secret = [SELECT Id FROM TenantSecret WHERE Type = 'Data' AND Version = 2];
secret.Status = Destroyed;
update secret;
```

Cache-Only Key Service customers can change the `Status` of cache-only key tenant secrets. For example, reactivate a cache-only key by changing its `Status` from `Destroyed` to `Active`.

Example 8: Create a callout connection that fetches a cache-only key tenant secret from a key service outside of Salesforce.

1. Make sure that your org has at least one active `Data` in Salesforce key, either Salesforce-generated or customer-supplied. Then turn on `Allow Cache-Only Keys with BYOK` from the `Advanced Settings` page in Setup.
2. Create a certificate that's compatible with customer-supplied key material. See [Generate a BYOK-Compatible Certificate](#) in Salesforce Help.
3. [Create and assemble your key material.](#)
4. Create a named credential to serve as your authenticated callout mechanism. You can define your named credential through Setup or [directly with Apex](#). Specify a BYOK-compatible certificate and an HTTPS endpoint.
5. Configure the connection to your remote key service. This connection uses named credential and its associated certificate to fetch a specified cache-only key tenant secret.

```
remote_params = { 'Source': 'Remote',
'RemoteKeyIdentifier': ...,
'RemoteKeyServiceId': ...,
'RemoteKeyCertificate': ...}

sf.TenantSecret.create(remote_params)
```

TenantSecurityApiAnomaly

Stores detected anomalies in how users typically make API calls. For more information, see [Threat Detection](#). This object is available to Security Center subscribers in API version 53.0 and later.

 **Note:** Threat Detection is available only for Event Monitoring subscribers.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Read only

Fields

Field	Details
<code>DetailIdentifier</code>	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The ID of the individual detail record. This field is unique within your org.</p>
<code>EventDate</code>	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The time when the anomaly was reported. For example, 2020-01-20T19:12:26.965Z. The most granular setting is milliseconds.</p>
<code>EventIdentifier</code>	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The unique ID of the event, which is shared with the corresponding storage object.</p>
<code>EventName</code>	<p>Type string</p>

Field	Details
	<p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The name of the event, which is Api Anomaly.</p>
MetricIdentifier	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the type of metric that was counted.</p>
MetricsType	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The type of data collected.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The name of the metric for the data collected.</p>
Operation	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The API call that generated the event. For example, Query.</p>
QueriedEntities	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description The type of entities associated with the event.</p>
RequestIdentifier	<p>Type string</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description The unique ID of a single transaction. A transaction can contain one or more events.</p>
RowsProcessed	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total row count for the current operation.</p>
Score	<p>Type double</p> <p>Properties Filter, idLookup, Nillable, Sort</p> <p>Description A number from 0 through 100 that represents the anomaly score for the API execution or export tracked by this event. The anomaly score shows how the current API activity differs from the user's typical activity. A low score indicates that the user's current API activity is similar to the usual activity, and a high score indicates that it's different.</p>
SecurityEventData	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description The set of features about the API activity that triggered this anomaly event. See the Threat Detection documentation for the possible features. For example, a user typically downloads 10 accounts at a time but then deviates from that pattern and downloads 1,000 accounts. This event is triggered, and the contributing features are captured in this field. Potential features include row count, column count, average row size, day of week, and the browser's user agent used for the report activity. The data captured also shows how much as a percentage that the feature contributed to triggering this anomaly event. The data is in JSON format.</p>
Summary	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description A text summary of the API anomaly that caused this event.</p>

Field	Details
Tenant	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The ID of the tenant that was targeted in the event.</p>
TenantName	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The name of the tenant that was targeted in the event.</p>
Uri	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The URI of the page that's receiving the request. For example: /home/home.jsp.</p>
UserAgent	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description UserAgent used in the HTTP request, post-processed by the server.</p>
UserIdentifier	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The origin user's unique ID.</p>
Username	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>The origin username in the format of user@company.com at the time that the event was created.</p>

TenantSecurityConnectedApp

Stores the details for a connected object that was added to or removed from a Security Center tenant. This object is available to Security Center subscribers in API version 53.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Read only

Fields

Field	Details
Action	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, idLookup, Nillable, Sort</p> <p>Description</p> <p>The action taken on the connected app within a tenant.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • ADDED • REMOVED • UPDATED
ActionBy	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The user who performed the action on the connected app.</p>

Field	Details
ActionDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date that the action was taken.</p>
AppName	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The name of the connected app.</p>
AuthorizedBy	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The user who authorized the connected app to be installed.</p>
AuthorizedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date that the connected app was authorized for installation.</p>
DetailIdentifier	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The ID of the individual detail record.</p>
LastUsedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The last date that the connected app was used for authentication.</p>

Field	Details
MetricIdentifier	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the type of metric that was counted.</p>
MetricsType	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The type of data being collected.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The name of the metric for which data is being collected.</p>
Publisher	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Represents if the relevant tenant is the original publisher of the connected app for all connected tenants in the org.</p>
Scope	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The scope or scopes assigned to the connected app. A scope defines the type of protected resource that the connected app can access.</p>
Tenant	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p>

Field	Details
	<p>Description The ID of the relevant tenant.</p>
TenantName	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The name of the tenant that the connected app is connected to.</p>
Version	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The current version of the connected app.</p>

TenantSecurityCredentialStuffing

Stores when a user successfully logs in to Salesforce during an identified credential stuffing attack. For more information, see [Threat Detection](#). This object is available to Security Center subscribers in API version 53.0 and later.

 **Note:** Threat Detection is available only for Event Monitoring subscribers.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Read only

Fields

Field	Details
AcceptLanguage	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	Description List of HTTP headers that specify the natural language, such as English, that the client understands.
DetailIdentifier	Type string Properties Filter, Group, idLookup, Sort Description The ID of the individual detail record. This field is unique within your org.
EventDate	Type dateTime Properties Filter, Nillable, Sort Description The date when the hijacking event was reported. For example, 2020-01-20T19:12:26.965Z. Milliseconds are the most granular setting.
EventIdentifier	Type string Properties Filter, Group, idLookup, Nillable, Sort Description The unique ID of the event.
EventName	Type string Properties Filter, Group, idLookup, Nillable, Sort Description The name of the event, which is Credential Stuffing.
LoginType	Type string Properties Filter, Group, Nillable, Sort Description The type of login used to access the session. For the list of possible values, see the LoginType field of LoginHistory in the Object Reference.

Field	Details
LoginUrl	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The URL of the login page. For example, <code>login.salesforce.com</code>.</p>
MetricIdentifier	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the type of metric that was counted.</p>
MetricsType	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The type of data collected.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The name of the metric for the data collected.</p>
Score	<p>Type double</p> <p>Properties Filter, idLookup, Nillable, Sort</p> <p>Description Indicates that a user successfully logged in to Salesforce during an identified credential stuffing attack. The value of this field is always 1.</p>
Summary	<p>Type textarea</p> <p>Properties Nillable</p>

Field	Details
	Description A summary of the threat that caused this event to be created.
Tenant	Type string Properties Filter, Group, idLookup, Sort Description The ID of the tenant that was targeted in the event.
TenantName	Type string Properties Filter, Group, idLookup, Nillable, Sort Description The name of the tenant that was targeted in the event.
UserAgent	Type textarea Properties Nillable Description UserAgent used in the HTTP request, post-processed by the server.
UserIdentifier	Type string Properties Filter, Group, Nillable, Sort Description The origin user's unique ID.
Username	Type string Properties Filter, Group, idLookup, Nillable, Sort Description The origin username in the format of user@company.com at the time the event was created.

TenantSecurityHealthCheckBaselineTrend

Stores metric details related to Health Check baseline settings. The Health Check detail page in Security Center displays scores and settings for all your tenants in one place. Use this object to get details about which metrics are collected and for which tenants, and changes made to the Health Check baseline. This object is available to Security Center subscribers in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Read only

Fields

Field	Details
Action	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p>Description The type of action. For example, added, updated, or removed.</p>
ActionBy	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The user or admin that made the change.</p>
ActionDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date and time of the change.</p>
ApiName	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Nillable, Sort, Update</p>

Field	Details
	Description The name of the metric used by the API and managed packages.
BaselineDescription	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description For custom baselines, the name of the custom baseline file.
BaselineIdentifier	Type string Properties Create, Filter, Group, Nillable, Sort, Update Description The ID of the baseline.
BaselineName	Type string Properties Create, Filter, Group, idLookup, Nillable, Sort, Update Description The name of the baseline.
DetailIdentifier	Type string Properties Create, Filter, Group, idLookup, Sort, Update Description The ID of the individual detail record. This field is unique across all tenants.
IsDefault	Type boolean Properties Create, Defaulted on create, Filter, Group, Sort, Update Description Whether the baseline is default or custom. The default is <code>false</code> .
MetricIdentifier	Type string Properties Create, Filter, Group, Sort, Update

Field	Details
	<p>Description The ID of the type of metric collected.</p>
MetricsType	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The type of data collected. For example, SecurityHealthCheckBaselineMetric.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the metric for the data collected.</p>
Tenant	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The ID of the tenant that was scored by the Security Health Check.</p>
TenantName	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p>Description The name of the tenant that was scored by the Security Health Check.</p>

TenantSecurityHealthCheckDetail

Stores the details of Health Check scores for a connected tenant. The Health Check detail page in Security Center displays scores and settings for all your tenants in one place. Use this object to get settings and risks per tenant on a selected date. This object is available to Security Center subscribers in API version 53.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Read only

Fields

Field	Details
HealthCheckSettingIdentifier	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The ID of the Health Check setting. This field is unique within your org.</p>
HealthCheckTrendKey	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the Health Check trend related to the Health Check detail records.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The name of the tenant that was scored.</p>
OrgValue	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The org's value for the security setting.</p>
RiskType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The level of risk of the org's security setting value. Possible values are:</p>

Field	Details
	<ul style="list-style-type: none"> • HIGH_RISK • MEDIUM_RISK • MEETS_STANDARD
Setting	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The name of the security setting. For example, Minimum Password Length.</p>
SettingGroup	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The name of the security setting group in Setup that this setting is in. For example, Password Policies.</p>
SettingRiskCategory	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The level of risk of the org's security settings. Possible values are:</p> <ul style="list-style-type: none"> • HIGH_RISK • INFORMATIONAL • LOW_RISK • MEDIUM_RISK
StandardValue	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The recommended standard value for the security setting.</p>
Tenant	<p>Type string</p>

Field	Details
	<p>Properties Filter, Group, Sort</p> <p>Description The ID of the tenant that was scored.</p>

TenantSecurityHealthCheckTrend

Stores the history of Security Health Check scores for a connected tenant within Security Center. Health Check in Security Center displays Health Check scores and the average risk settings for all your tenants in one place. This object belongs to the parent tenant and stores Health Check data pushed from child tenants. This object is available for Security Center subscribers in API version 53.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Read only

Fields

Field	Details
Baseline	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The definition of an org's security settings standards.</p>
HighRisk	<p>Type int</p> <p>Properties Filter, Group, Sort</p> <p>Description Indicates that fields with this picklist value contain data highly sensitive to your company.</p>
Informational	<p>Type int</p> <p>Properties Filter, Group, Sort</p>

Field	Details
	<p>Description Indicates that fields with this picklist value contain data that isn't sensitive for your company.</p>
LowRisk	<p>Type int</p> <p>Properties Filter, Group, Sort</p> <p>Description Indicates that fields with this picklist value contain data with low sensitivity for your company.</p>
MediumRisk	<p>Type int</p> <p>Properties Filter, Group, Sort</p> <p>Description Indicates that fields with this picklist value contain data with moderate sensitivity for your company.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The name of the tenant that was scored.</p>
ProcessedTime	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The time when the Health Check score was calculated.</p>
Score	<p>Type double</p> <p>Properties Filter, Sort</p> <p>Description The summary score that shows how your org measures against a security baseline.</p>
ScoreDelta	<p>Type double</p>

Field	Details
	<p>Properties Filter, Nillable, Sort</p> <p>Description The percentage amount that the Health Check score changed.</p>
Tenant	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the tenant that was scored.</p>
TenantOriginalIdentifier	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The ID of the Health Check Trend record for a tenant. This field is unique within your org.</p>

TenantSecurityLogin

Stores the login details of a single user to a tenant, grouped by date and type. You can query this object to find out how many times the user logged in to a specific tenant using a specific login type (for example, username/password or SSO). This object is available to Security Center subscribers in API version 53.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Fields

Field	Details
DetailIdentifier	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p>

Field	Details
	<p>Description The ID of the individual detail record. This field is unique within your org.</p>
LastLoginDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The last time the user logged in.</p>
LoginCount	<p>Type int</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The number of times the user has logged in to the tenant.</p>
MetricIdentifier	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the type of metric that was counted.</p>
MetricsType	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The type of data collected. The supported metric types are:</p> <ul style="list-style-type: none"> • LOGIN_PWLESS • LOGIN_PWLESS2FA • LOGIN_UNPW • LOGIN_UNPW2FA • LOGIN_SSO • LOGIN_SSO2FA • LOGIN_OAUTH • LOGIN_OAUTH2FA

Field	Details
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The name of the metric for which data is being collected.</p>
Tenant	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The ID of the tenant that was scored.</p>
TenantName	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The name of the tenant that was scored.</p>
UserEmail	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The email address of the user.</p>
Username	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The user's org username.</p>

TenantSecurityMobilePolicyTrend

Stores metrics related to changes in mobile security policies across all tenants in Security Center. This object is available to Security Center subscribers in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Read only

Fields

Field	Details
Action	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p>Description The change made to the mobile security policy. For example, a new policy was added, updated, or removed.</p>
ActionBy	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The user who made the change.</p>
ActionDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date and time of the mobile security policy change.</p>
DetailIdentifier	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The ID of the individual detail record. This field is unique across all tenants.</p>
EffectiveDate	<p>Type dateTime</p>

Field	Details
	<p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date a mobile security policy is enforced.</p>
IsEnabled	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description A value indicating whether the mobile security policy is enabled. The default is <code>false</code>, which means policies are disabled.</p>
MetricIdentifier	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The foreign key of the metric.</p>
MetricsType	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The type of mobile security policy data collected.</p>
MobilePlatform	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p>Description The mobile operating system of the mobile security policy.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the metric for which data is collected.</p>

Field	Details
PolicyType	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p>Description The type of mobile security policy. For example, Block Calendar.</p>
RuleValue	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p>Description The value of the security notification rule.</p>
RuleValueType	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The type of rule value. For example, boolean or text.</p>
SeverityLevel	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p>Description The severity level of the security threat. For example, CRITICAL.</p>
Tenant	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The ID of the tenant.</p>
TenantName	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p>Description The name of the tenant.</p>

TenantSecurityMonitorMetric

Stores the daily count and daily count change for a metric within Security Center. This object is available to Security Center subscribers in API version 53.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Read only

Fields

Field	Details
ChangeCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description How much the relevant metric changed.</p>
Count	<p>Type int</p> <p>Properties Filter, Group, Sort</p> <p>Description The current metric count.</p>
EndProcessTime	<p>Type dateTime</p> <p>Properties Filter, Sort</p> <p>Description The date and time that the metric count process ended.</p>
MetricIdentifier	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p>

Field	Details
	<p>Description The ID of the type of metric counted. This field is unique within your organization.</p>
MetricsType	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The type of data collected.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The name of the tenant.</p>
PreviousMetricIdentifier	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The previous ID of the type of metric that was counted. This field is unique within your organization.</p>
StartProcessTime	<p>Type dateTime</p> <p>Properties Filter, Sort</p> <p>Description The date and time that the metric count process started.</p>
Tenant	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The ID of the tenant that was scored.</p>

TenantSecurityNotification

Stores information about notifications that were triggered in Security Center as a function of the Alerts feature. For more information, see [Create Alerts for Security Changes](#). This object is available to Security Center subscribers in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Read only

Fields

Field	Details
MetricCount	<p>Type int</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The metric count that triggered the notification.</p>
MetricIdentifier	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The ID of the type of metric that was counted.</p>
MetricsType	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The metric for which the notification was sent.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p>

Field	Details
	<p>Description The name of the triggered notification rule.</p>
NotificationDate	<p>Type dateTime</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The date and time that the notification was sent.</p>
NotificationType	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The type of notification sent. For example, a Chatter feed or push notification.</p>
Operator	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p>Description The quantity of metrics used to measure.</p>
RecipientEmails	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The email addresses of the recipients who receive security notifications.</p>
RuleName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The name of the notification rule.</p>
Tenant	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p>

Field	Details
	<p>Description The ID of the tenant for which the notification was triggered.</p>
TenantName	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The org name of the tenant for which the notification was triggered.</p>
Threshold	<p>Type int</p> <p>Properties Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p>Description The threshold value that triggered the notification.</p>
TriggerType	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The type of trigger that set off the notification. For example, a security change was made.</p>

TenantSecurityNotificationRule

Stores an alert configured in the Security Center Alerts feature to notify recipients of changes made to security settings. For more information, see [Create Alerts for Security Changes](#). This object is available to Security Center subscribers in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Fields

Field	Details
MetricsType	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p>Description The type of data being collected.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the metric for which data is being collected.</p>
NotificationRuleIdentifier	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The ID of the alert that was triggered. This field is unique within your organization.</p>
NotificationType	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p>Description The type of notification used for the alert. The options are:</p> <ul style="list-style-type: none">• Email• In-App
Operator	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The operator for the change that triggered the alert. For example, greater than.</p>
RecipientEmails	<p>Type textarea</p>

Field	Details
	<p>Properties Create, Nillable, Update</p> <p>Description The email addresses for the recipients of the alert details.</p>
RuleName	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the custom alert that triggered the notification. This field is unique within your organization.</p>
Status	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p>Description The status of the alert setting. The options are:</p> <ul style="list-style-type: none">• Active• Draft• Inactive
Threshold	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The threshold value that triggered the alert.</p>
TriggerType	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The type of trigger used for the alert. The values are:</p> <ul style="list-style-type: none">• Always• On Change
Version	<p>Type int</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The version number of the custom alert.</p>

TenantSecurityPackage

Stores details about managed and unmanaged packages that are added, updated, or removed from a tenant in Security Center. Use this object to identify whether new packages are installed, upgraded, or uninstalled from your connected tenants. This object is available to Security Center subscribers in API version 53.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Read only

Fields

Field	Details
Action	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The action taken on a package within a tenant. The options are:</p> <ul style="list-style-type: none"> • Added • Removed
ActionDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date the action was taken.</p>

Field	Details
AppExchangeReady	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Indicates whether the package has passed AppExchange review.</p>
DetailIdentifier	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The ID of the individual detail record. This field is unique within your org.</p>
MetricIdentifier	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the type of metric that was counted.</p>
MetricsType	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The type of data being collected.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The name of the metric for which data is being collected.</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The namespace prefix associated with the package.</p>

Field	Details
PackageName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The name of the package being added to or removed from the tenant.</p>
Publisher	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The name of the publisher that created the package.</p>
ReleaseStatus	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The release status of the package. The options are:</p> <ul style="list-style-type: none">• Beta• Released
Tenant	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The ID of the tenant that the package was added to or removed from.</p>
TenantName	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The name of the tenant that the package was added to or removed from.</p>
Version	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>The current version of the package.</p>

TenantSecurityPolicy

Stores security policies created and deployed in Security Center. For more information, see [Define and Deploy Security Policies \(Beta\)](#). This object is available to Security Center subscribers in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
DeploymentDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Create, Filter, Sort, Update</p> <p>Description</p> <p>The date the deployment was triggered.</p>
DeploymentStatus	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, idLookup, Sort, Update</p> <p>Description</p> <p>The status of the deployment. For example, Not Deployed, Processing, Deployed, or Failed.</p>
Description	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The description of the deployment status.</p>

Field	Details
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the deployment.</p>
PolicyIdentifier	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the TenantSecurityPolicy entity.</p>
StatusDate	<p>Type dateTime</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The date that the status of the deployment was provided.</p>
Tenant	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The ID of the tenant for which the policy was deployed.</p>

TenantSecurityPolicySelectedTenant

Stores the list of tenants selected for a Security Center policy. For more information, see [Define and Deploy Security Policies \(Beta\)](#). This object is available to Security Center subscribers in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Read, Write

Fields

Field	Details
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the policy for the selected tenant.</p>
PolicyIdentifier	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the security policy.</p>
Tenant	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The ID of the tenant.</p>

TenantSecurityReportAnomaly

Stores anomalies in how users run or export reports, including unsaved reports, as detected by Threat Detection. For more information, see [Threat Detection](#). This object is available to Security Center subscribers in API version 53.0 and later.

 **Note:** Threat Detection is available only for Event Monitoring subscribers.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Read only

Fields

Field	Details
DetailIdentifier	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The ID of the detail record. This field is unique within your org.</p>
EventDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the hijacking event was reported. For example, 2020-01-20T19:12:26.965Z. The most granular setting is milliseconds.</p>
EventIdentifier	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The unique ID of the event.</p>
EventName	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The name of the event, which is Report Anomaly.</p>
MetricIdentifier	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the type of metric that was counted.</p>
MetricsType	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p>

Field	Details
	<p>Description The type of data being collected.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The name of the metric for which data is being collected.</p>
Report	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID for the report for which this anomaly event was detected. If the anomaly resulted from a user executing an unsaved report, the value of this field is null.</p>
Score	<p>Type double</p> <p>Properties Filter, idLookup, Nillable, Sort</p> <p>Description A number from 0 through 100 that represents the anomaly score for the report execution or export tracked by this event. The anomaly score indicates how the user's current report activity differs from their typical activity. A low score indicates that the current report activity is similar to the user's usual activity. A high score indicates that it's different.</p>
SecurityEventData	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description The set of features about the report activity that triggered this anomaly event. See the Threat Detection documentation for the possible features. For example, a user typically downloads 10 accounts at a time, but then deviates from that pattern and downloads 1,000 accounts. This event is triggered, and the contributing features are captured in this field. Potential features include row count, column count, average row size, day of week, and the browser's user agent used for the report activity. The data captured also shows as a percentage how much a particular feature contributed to this anomaly event. The data is in JSON format.</p>
Summary	<p>Type textarea</p>

Field	Details
	<p>Properties Nillable</p> <p>Description A text summary of the report anomaly that caused this event.</p>
Tenant	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The ID of the tenant that was targeted in the event.</p>
TenantName	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The name of the tenant that was targeted in the event.</p>
UserIdentifier	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The origin user's unique ID.</p>
Username	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The origin username in the format of user@company.com at the time the event was created.</p>

TenantSecuritySessionHijacking

Stores information about session hijacking events as detected by Threat Detection within connected tenants in Security Center. For more information, see [Threat Detection](#). This object is available for Security Center subscribers in API version 53.0 and later.

 **Note:** Threat Detection is available only for Event Monitoring subscribers.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Read only

Fields

Field	Details
CurrentIp	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The IP address of the observed fingerprint that deviates from the previous fingerprint. The difference between the current and previous values is one indicator that a session hijacking attack has occurred. If the IP address didn't contribute to the observed fingerprint deviation, the value of this field is the same as the <code>PreviousIp</code> field.</p>
CurrentPlatform	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The platform of the observed fingerprint that deviates from the previous fingerprint. The difference between the current and previous values is one indicator that a session hijacking attack has occurred. If the platform didn't contribute to the observed fingerprint deviation, the value of this field is the same as the <code>PreviousPlatform</code> field.</p>
CurrentScreen	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The screen of the observed fingerprint that deviates from the previous fingerprint. The difference between the current and previous values is one indicator that a session hijacking attack has occurred. If the screen didn't contribute to the observed fingerprint deviation, the value of this field is the same as the <code>PreviousScreen</code> field.</p>
CurrentUserAgent	<p>Type textarea</p>

Field	Details
	<p>Properties Nillable</p> <p>Description The user agent of the observed fingerprint that deviates from the previous fingerprint. The difference between the current and previous values is one indicator that a session hijacking attack has occurred. If the user agent didn't contribute to the observed fingerprint deviation, the value of this field is the same as the <code>PreviousUserAgent</code> field.</p>
CurrentWindow	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The browser window of the observed fingerprint that deviates from the previous fingerprint. The difference between the current and previous values is one indicator that a session hijacking attack has occurred. If the window didn't contribute to the observed fingerprint deviation, the value of this field is the same as the <code>PreviousWindow</code> field.</p>
DetailIdentifier	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The ID of the individual detail record. This field is unique within your org.</p>
EventDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the hijacking event was reported. For example, 2020-01-20T19:12:26.965Z. The most granular setting is milliseconds.</p>
EventIdentifier	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The unique ID of the event.</p>
EventName	<p>Type string</p>

Field	Details
	<p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The name of the event, which is Session Hijacking.</p>
MetricIdentifier	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the type of metric that was counted.</p>
MetricsType	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The type of data being collected.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The name of the metric for which data is being collected.</p>
PreviousIp	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The IP address of the previous fingerprint. The difference between the current and previous values is one indicator that a session hijacking attack has occurred. See the <code>CurrentIp</code> field for the newly observed IP address.</p>
PreviousPlatform	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>The platform of the previous fingerprint. The difference between the current and previous values is one indicator that a session hijacking attack has occurred. See the <code>CurrentPlatform</code> field for the newly observed platform.</p>
PreviousScreen	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The screen of the previous fingerprint. The difference between the current and previous values is one indicator that a session hijacking attack has occurred. See the <code>CurrentScreen</code> field for the newly observed screen.</p>
PreviousUserAgent	<p>Type</p> <p>textarea</p> <p>Properties</p> <p>Nillable</p> <p>Description</p> <p>The user agent of the previous fingerprint. The difference between the current and previous values is one indicator that a session hijacking attack has occurred. See the <code>CurrentUserAgent</code> field for the newly observed user agent.</p>
PreviousWindow	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The browser window of the previous fingerprint. The difference between the current and previous values is one indicator that a session hijacking attack has occurred. See the <code>CurrentWindow</code> field for the newly observed window.</p>
Score	<p>Type</p> <p>double</p> <p>Properties</p> <p>Filter, idLookup, Nillable, Sort</p> <p>Description</p> <p>Specifies how much the new fingerprint deviates from the previous one. The score is from 6.0 through 21.0. The event exposes five field pairs (such as <code>CurrentIp</code> and <code>PreviousIp</code>) to view the before and after data for browser features that contributed to this anomaly. See the <code>SecurityEventData</code> field for all contributing features in JSON format. A large deviation score (6.0 or more) between two intra-session fingerprints indicates</p>

Field	Details
	that two different browsers are active in the same session. The presence of two active browsers usually means that session hijacking has occurred.
SecurityEventData	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description The set of browser fingerprint features that triggered this event. See the Threat Detection documentation for the possible features. For example, a user's current browser fingerprint diverges from the previously known fingerprint. If Salesforce concludes the user's session was hijacked, it fires this event, and the contributing features are captured in this field in JSON format. Each feature describes a browser fingerprint property, such as the browser user agent, window, or platform. The data includes the current and previous values for each feature.</p>
Summary	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description A text summary of the threat that caused this event. The summary lists the browser fingerprint features that most contributed to the threat detection, along with their contribution to the total score.</p>
Tenant	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The ID of the tenant that was targeted in the event.</p>
TenantName	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The name of the tenant that was targeted in the event.</p>
UserIdentifier	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>The origin user's unique ID.</p>
Username	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, idLookup, Nillable, Sort</p> <p>Description</p> <p>The origin username in the format of user@company.com at the time that the event was created.</p>

TenantSecurityUserActivity

Stores details related to how a user interacts with a tenant. Use this object to determine whether to reevaluate a user's access to your org for security purposes. You can check whether a user has never logged in, hasn't been active for 90 days, has a frozen account, or isn't using multi-factor authentication. This object is available to Security Center subscribers in API version 53.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Read only

Fields

Field	Details
DetailIdentifier	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, idLookup, Sort</p> <p>Description</p> <p>The ID of the individual detail record. This field is unique within your org.</p>
LastLoginDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p>

Field	Details
	Description The last time the user logged in.
MetricIdentifier	Type string Properties Filter, Group, Sort Description The ID of the type of metric that was counted.
MetricsType	Type picklist Properties Filter, Group, Restricted picklist, Sort Description The type of data being collected.
Name	Type string Properties Filter, Group, idLookup, Sort Description The name of the metric for which data is being collected.
Tenant	Type string Properties Filter, Group, idLookup, Sort Description The ID of the tenant.
TenantName	Type string Properties Filter, Group, idLookup, Nillable, Sort Description The name of the tenant where the user activity happened.
UserCreatedDate	Type dateTime Properties Filter, Nillable, Sort

Field	Details
	Description The date that the user was created.
UserEmail	Type string Properties Filter, Group, idLookup, Nillable, Sort Description The email address of the user.
UserLicense	Type string Properties Filter, Group, Nillable, Sort Description The license assigned to the user.
Username	Type string Properties Filter, Group, idLookup, Nillable, Sort Description The user's org username.

TenantSecurityUserPerm

Stores information on permissions assigned to a user. Use this object to see which tenants a user is assigned to. This object is available to Security Center subscribers in API version 53.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Read only

Fields

Field	Details
Action	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The action taken regarding the user's permission. The options are:</p> <ul style="list-style-type: none">• Added• Removed
ActionBy	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description This field is reserved for future use.</p>
ActionDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date that the permission action was taken.</p>
Context	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The name of the profile or permission set assigned to the user.</p>
ContextType	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Indicates the method through which the permission was granted. The options are:</p> <ul style="list-style-type: none">• Permission Set• Profile

Field	Details
DetailIdentifier	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The ID of the individual detail record. This field is unique within your org.</p>
MetricIdentifier	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the type of metric that was counted.</p>
MetricsType	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The type of metric that the assigned permission represents.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The name of the metric for which data is being collected.</p>
Tenant	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The ID of the tenant where the user permission was applied.</p>
TenantName	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The name of the connected tenant where the user permission was applied.</p>

Field	Details
UserEmail	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The user's email address.</p>
UserLicense	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The license assigned to the user.</p>
Username	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The user's org username.</p>

Territory

Represents a flexible collection of accounts and users where the users have at least read access to the accounts, regardless of who owns the accounts. Only available if territory management has been enabled for your organization.

 **Note:** The original territory management feature is now unavailable. For more information, see [The Original Territory Management Module Will Be Retired in the Summer '21 Release](#). The information in this topic applies to the original territory management feature only, and not to Enterprise Territory Management.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only standard and partner users can access this object, and only users with the Manage Territories permission can edit this object.

Fields

Field	Details
AccountAccessLevel	<p>Type picklist</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Account access level granted to users assigned to this territory.</p>
CaseAccessLevel	<p>Type picklist</p> <p>Properties Create, Filter, Nillable, Group, Sort, Update</p> <p>Description Case access level granted to users assigned to this territory.</p>
ContactAccessLevel	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description A value that represents the type of access granted to the target Group, UserRole, or User for any associated contacts. The possible values are:</p> <ul style="list-style-type: none"> • None • Read • Edit <p> Note: When DefaultContactAccess is set to “Controlled by Parent,” you can’t create or update this field.</p>
Description	<p>Type string</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description A description of the territory that is 1,000 characters or less.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field	Details
	<p>Description</p> <p>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to Territory Name in the user interface.</p> <p>This field is available in API version 24.0 and later.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p>
ForecastUserId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the Forecast Manager, who is the user to whom forecasts from this territory's child territories roll up.</p>
MayForecastManagerShare	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the forecast manager can manually share their own forecast.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description A name for the territory. Limit is 80 characters. Corresponds to Label on the user interface.</p>
OpportunityAccessLevel	<p>Type picklist</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Opportunity access level granted to users assigned to this territory.</p>

Field	Details
ParentTerritoryID	<p>Type reference</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description Territory immediately above this territory in the territory hierarchy. Label is Parent Territory ID.</p>
RestrictOppTransfer	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Update</p> <p>Description Indicates whether the opportunities associated with this territory are kept within the bounds of this territory and this territory's children when account assignment rules are run (<code>true</code>), or if opportunities associated with this territory can be assigned to other nodes of the territory hierarchy when account assignment rules are run (<code>false</code>). Label is Confine Opportunity Assignment.</p>

Usage

Use the Territory object to query your organization's territory hierarchy. Use it to obtain valid territory IDs when querying or modifying records associated with territories.

SEE ALSO:

- [AccountTerritoryAssignmentRuleItem](#)
- [UserTerritory](#)

Territory2

Represents a sales territory. Available only if Enterprise Territory Management has been enabled for your organization.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only standard and partner users can access this object. If a territory model is in `Active` state, any standard or partner user can view that model, including its territories and assignment rules. For territories in an active model, any standard or

partner user can view assigned records and assigned users subject to your org's sharing settings. Users cannot view territory models in other states (such as `Planning` or `Archived`).

Fields

Field Name	Details
<code>AccountAccessLevel</code>	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Represents the default account record access levels for users that are assigned to the territory. Values are:</p> <ul style="list-style-type: none"> • Read Only • Read/Write • Owner
<code>CaseAccessLevel</code>	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Represents the default case record access levels for users that are assigned to the territory. Values are:</p> <ul style="list-style-type: none"> • Private • Read Only • Read/Write
<code>ContactAccessLevel</code>	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description Represents the default contact record access levels for users that are assigned to the territory. Values are:</p> <ul style="list-style-type: none"> • Private • Read Only • Read/Write
<code>Description</code>	<p>Type string</p>

Field Name	Details
	<p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The description of the territory. The field label in the user interface is <code>Territory Description</code>.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. The field label in the user interface is <code>Territory Name</code>.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p>
ForecastUserId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description Unique identifier of a territory's forecast manager. To select a <code>ForecastUserId</code>, select someone in the list of users assigned to the territory.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The name of the territory. The field label in the user interface is <code>Territory Label</code>.</p>
OpportunityAccessLevel	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>Represents the default opportunity record access levels for users that are assigned to the territory. Values are:</p> <ul style="list-style-type: none"> • Private • Read Only • Read/Write
ParentTerritory2Id	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The ID of the territory's parent territory (if any). If the territory has no parent territory, this value is <code>null</code>.</p>
Territory2ModelId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>The ID of the territory model that the territory belongs to.</p>
Territory2TypeId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort, Update</p> <p>Description</p> <p>The ID of the territory type that the territory belongs to.</p>

Territory2AlignmentLog

Represents the start and end status of a territory assignment rule run job. This object is available in API version 54.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

Available only if Enterprise Territory Management has been enabled for your Salesforce org.

Only standard and partner users can access this object. If a territory model is in `Active` state, any standard or partner user can view that model, including its territories and assignment rules. For territories in an active model, any standard or partner user can view assigned records and assigned users subject to your org's sharing settings. Users can't view territory models in other states (such as `Planning` or `Archived`).

Fields

Field	Details
EndTime	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time when the assignment rule run job finished.</p>
Filter	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description Criteria to filter the rule jobs. For example, {RULE_LAST_MOD_DATE_FORM=2021-08-31, RULE_LAST_MOD_DATE_TO=2021-09-15}.</p>
RunAsId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the Salesforce user who started the assignment rule run job. This is a relationship field.</p> <p>Relationship Name RunAs</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
StartTime	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field	Details
	<p>Description The date and time when the user started the assignment rule run job.</p>
Status	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The status of the assignment rule run job.</p>
Territory2Id	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the territory for which the assignment rule run was performed. If the assignment rule run was for the territory model, this value is null. This is a relationship field.</p> <p>Relationship Name Territory2</p> <p>Relationship Type Lookup</p> <p>Refers To Territory2</p>
Territory2ModelId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the territory model for which the assignment rule run was performed. This is a relationship field.</p> <p>Relationship Name Territory2Model</p> <p>Relationship Type Lookup</p> <p>Refers To Territory2Model</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

Territory2AlignmentLogChangeEvent

Change events are available for the object.

Territory2Model

Represents a territory model. Available only if Enterprise Territory Management has been enabled for your organization.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only standard and partner users can access this object. If a territory model is in `Active` state, any standard or partner user can view that model, including its territories and assignment rules. For territories in an active model, any standard or partner user can view assigned records and assigned users subject to your org's sharing settings. Users cannot view territory models in other states (such as `Planning` or `Archived`).

Fields

Field Name	Details
ActivatedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the territory model was activated.</p>
DeactivatedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the territory model was archived.</p>
Description	<p>Type textarea</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The description of the territory model.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. The field label in the user interface is <code>Territory Model Name</code>.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p>
LastOppTerrAssignEndDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Read-only. The date when the opportunity territory assignment filter was last run. Used for Filter-Based Opportunity Territory Assignment (Pilot in Spring '15 / API version 33).</p>
LastRunRulesEndDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the last rules run was completed.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The territory model name. The field label in the user interface is <code>Label</code>.</p>

Field Name	Details
State	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The state of the territory model. Values are: Planning, Activating, Activation Failed, Active, Archiving, Archiving Failed, Archived, Deleting, and Deletion Failed.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[Territory2ModelFeed](#)

Feed tracking is available for the object.

[Territory2ModelHistory](#)

History is available for tracked fields of the object.

Territory2ModelHistory

Represents the history of changes to the values in the fields on a territory model. Available only if Enterprise Territory Management has been enabled for your organization.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Fields

Field Name	Details
Data Type	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Data type of the field that was changed.</p>
Field	<p>Type picklist</p>

Field Name	Details
	<p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The name of the field whose value was changed.</p>
NewValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The new value of the changed field.</p>
OldValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The previous value of the changed field.</p>
Territory2ModelId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the territory model whose history is tracked.</p>

Usage

This object is automatically generated whenever any field value changes on a territory model record. Use this object to identify those changes.

Territory2ObjectExclusion

Represents the objects that aren't included in territory assignment rule runs, even when they meet assignment rule criteria. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Available only if Enterprise Territory Management has been enabled for your organization.

Only standard and partner users can access this object. If a territory model is in `Active` state, any standard or partner user can view that model, including its territories and assignment rules. For territories in an active model, any standard or partner user can view assigned records and assigned users subject to your org's sharing settings. Users can't view territory models in other states (such as `Planning` or `Archived`).

Fields

Field	Details
Note	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>
ObjectId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the Account object to exclude from the territory assignment rule. This is a polymorphic relationship field.</p> <p>Relationship Name Object</p> <p>Relationship Type Lookup</p> <p>Refers To Account</p>
Territory2Id	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the territory to exclude from the territory model assignment rule. This is a relationship field.</p> <p>Relationship Name Territory2</p> <p>Relationship Type Lookup</p>

Field	Details
	Refers To Territory2

Territory2Type

Represents a category for territories (Territory2). Every Territory2 must have a Territory2Type. Available only if Enterprise Territory Management has been enabled for your organization.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only standard and partner users can access this object.

Fields

Field Name	Details
Description	Type textarea
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description The description of the territory type.
DeveloperName	Type string
	Properties Create, Filter, Group, Sort, Update
	Description Required. The unique name of the object in the API. This name can contain only underscores and alphanumeric characters and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. The field label in the user interface is <code>Territory Type Name</code> .

Field Name	Details
	<p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
Language	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The language of the label in the user interface.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required The user interface label for the territory type.</p>
Priority	<p>Type int</p> <p>Properties Create, Filter, Group, SortUpdate</p> <p>Description Required. Used for Filter-Based Opportunity Territory Assignment (Pilot in Spring '15 / API version 33). Lets you specify a priority for a territory type. For opportunity assignments, the filter examines all territories assigned to the account that the opportunity is assigned to. The account-assigned territory whose territory type priority is highest is then assigned to the opportunity. The <code>priority</code> field value on each territory type must be unique. Further, if there are multiple territories with the same territory type (and therefore the same priority) assigned to the account, no territory is assigned to the opportunity.</p>

TestSuiteMembership

Associates an Apex class with an ApexTestSuite. This object is available in API version 36.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

The `enableApexTestReqViewSetup` field on the `ApexSettings` metadata type controls the activation of the critical update “Require View Setup permission to access Apex test data”. In API version 49.0 and later, when the field is set to `true`, users must have the View Setup and Configuration permission to access this object.

Fields

Field Name	Description
<code>ApexClassId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The Apex class whose tests are to be executed. This is a relationship field.</p> <p>Relationship Name <code>ApexClass</code></p> <p>Relationship Type Lookup</p> <p>Refers To <code>ApexClass</code></p>
<code>ApexTestSuiteId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The test suite to which the Apex class is assigned. This is a relationship field.</p> <p>Relationship Name <code>ApexTestSuite</code></p> <p>Relationship Type Lookup</p> <p>Refers To <code>ApexTestSuite</code></p>

Usage

Insert a `TestSuiteMembership` object using an API call to associate an Apex class with an `ApexTestSuite` object. (`ApexTestSuite` and `TestSuiteMembership` aren't editable through Apex DML.) To remove the class from the test suite, delete the `TestSuiteMembership` object. If you delete an Apex test class or test suite, all `TestSuiteMembership` objects that contain that class or suite are deleted.

The following SOQL query returns the membership object that relates this Apex class to this test suite.

```
SELECT Id FROM TestSuiteMembership WHERE ApexClassId = '01pD0000000Fhy9IAC'
      AND ApexTestSuiteId = '05FD00000004CDBMA2'
```

SEE ALSO:

[ApexTestSuite](#)

ThirdPartyAccountLink

Represents the list of external users who authenticated using an authentication provider. This object is available in API version 32.0 and later.

A list of third-party account links is generated when users of an organization authenticate using an external authentication provider. Use this object to list and revoke a given user's social sign-on connections (such as Facebook[®]).

Supported Calls

`describeSObjects()`, `query()`

Fields

Field Name	Details
<code>Handle</code>	<p>Type string</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The username in the third-party system.</p>
<code>IsNotSsoUsable</code>	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Sort</p> <p>Description Support for single sign-on. If <code>true</code>, the link can't be used for a single sign-on flow. It's only available OAuth access and refresh tokens.</p>

Field Name	Details
Provider	<p>Type string</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The third-party account provider name.</p>
RemoteIdentifier	<p>Type string</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The unique ID for the user in the third-party system.</p>
SsoProvider	<p>Type AuthProvider</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The foreign key to the AuthProvider on page 629 of the third-party system.</p>
SsoProviderId	<p>Type reference</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The ID associated with the <code>SsoProvider</code> value. This is a relationship field.</p> <p>Relationship Name SsoProvider</p> <p>Relationship Type Lookup</p> <p>Refers To AuthProvider</p>
SsoProviderName	<p>Type string</p> <p>Properties Filter, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>The name associated with the AuthProvider of the third-party system, in case the user has no access to the provider foreign key (the <code>SsoProvider</code> value).</p>
<code>ThirdPartyAccountLinkKey</code>	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>A concatenated string including the organization ID, the <code>SsoProviderId</code> value, the <code>SsoProvider</code> value, and the <code>RemoteIdentifier</code> value.</p>
<code>UserId</code>	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The Salesforce user associated with this third-party account link.</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>User</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>User</p>

Usage

Admins (with the Manage Users permission) querying this object can see all the links for all users in the organization. Without the Manage Users permission, users can only retrieve their own links. Users sometimes don't have access to the `SsoProvider` value (the foreign key). In this case, use the `SsoProviderName` to render the name of the provider for the associated link.

Use the Apex method `Auth.AuthToken.revokeAccess()` to revoke a link.

To make the `ThirdPartyAccountLink` standard object writable for Salesforce admins, contact Salesforce Customer Support. With this feature, you can easily add or delete third-party account links using the API, but you can't update existing account links.

In API version 34.0 and later, this object was enhanced to help manage high instance counts. A `query()` call returns up to 500 rows. A `queryMore()` call returns 500 more, up to 2500 total. No more records are returned after 2500. To make sure that you don't miss any records, issue a `COUNT()` query in a `SELECT` clause for `ThirdPartyAccountLink`. This query gives you the total number of records. If there are more than 2500 records, divide your query by filtering on fields, like `UserId`, to return subsets of less than 2500 records.

ThreatDetectionFeedback

Represents feedback provided by a user about a Threat Detection event that occurred in your org. The feedback specifies whether the event was malicious, suspicious, not a threat, or unknown. Each ThreatDetectionFeedback object is associated with one of these Threat Detection storage events: ApiAnomalyEventStore, CredentialStuffingEventStore, ReportAnomalyEventStore, or SessionHijackingEventStore. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `update()`, `upsert()`

Fields

Field	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Response	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Describes the severity of the threat. Possible values are:</p> <ul style="list-style-type: none"> • Malicious • Not a Threat • Suspicious • Unknown

Field	Details
ThreatDetectionEventId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Reference to the unique ID of one of these associated Threat Detection storage events:</p> <ul style="list-style-type: none"> • ApiAnomalyEventStore • CredentialStuffingEventStore • ReportAnomalyEventStore • SessionHijackingEventStore <p>For example, 0£jRM000000005p.</p> <p>This is a polymorphic relationship field.</p> <p>Relationship Name ThreatDetectionEvent</p> <p>Relationship Type Lookup</p> <p>Refers To ApiAnomalyEventStore, CredentialStuffingEventStore, ReportAnomalyEventStore, SessionHijackingEventStore</p>
ThreatDetectionFeedbackNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description Auto-generated number used as the unique name for this object.</p>
UserId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The origin user's unique ID. For example, 00500000000123.</p> <p>This is a polymorphic relationship field.</p> <p>Relationship Name User</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>

Field	Details
Username	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The origin username in the format of <code>user@company.com</code> at the time the object was created.</p>

Associated Object

This object has the following associated object. It's available in the same API version as this object.

ThreatDetectionFeedbackFeed

Feed tracking is available for the object.

SEE ALSO:

[Salesforce Help: Threat Detection](#)

TimeSheet

Represents a schedule of a service resource's time in field service. This object is available in API v47.0 and later.

Time sheets are composed of time sheet entries, which typically track individual tasks like travel or asset repair.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

Field Name	Details
	<p>Description Available only if the multicurrency feature is enabled. Contains the ISO code for any currency allowed by the organization. The label in the user interface is <code>Currency ISO Code</code>.</p>
EndDate	<p>Type date</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The last day the time sheet covers.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The owner of the time sheet.</p>
ServiceResourceId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The service resource whose time is being tracked with the time sheet.</p>

Field Name	Details
StartDate	<p>Type date</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The first day the time sheet covers.</p>
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description The status of the time sheet. The picklist includes the following values, which can be customized:</p> <ul style="list-style-type: none">• New• Submitted• Approved
TimeSheetEntryCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description (Read Only) The number of related time sheet entries.</p>
TimeSheetNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description An auto-generated number identifying the time sheet.</p>
TotalDurationInHours	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Represents the sum total of the duration field of all the time sheet entries related to the time sheet object in hours.</p>

Field Name	Details
TotalDurationInMinutes	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Represents the sum total of the duration field of all the time sheet entries related to the time sheet object in minutes.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

TimeSheetChangeEvent (API version 48.0)

Change events are available for the object.

TimeSheetFeed

Feed tracking is available for the object.

TimeSheetHistory

History is available for tracked fields of the object.

TimeSheetOwnerSharingRule

Sharing rules are available for the object.

TimeSheetShare

Sharing is available for the object.

TimeSheetEntry

Represents a span of time that a service resource spends on a field service task. This object is available in API version 47.0 and later.

Time sheets are composed of time sheet entries. Time sheet entries typically track individual tasks like travel or asset repair.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Available only if the multicurrency feature is enabled. Contains the ISO code for any currency allowed by the organization. The label in the user interface is <code>Currency ISO Code</code>.</p> <p>Time sheet entries inherit their time sheet's currency code. Updates to a time sheet's currency code aren't reflected in existing time sheet entries' currency code.</p>
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Notes on how the time was spent. For example, "This service took longer than normal because the machine was jammed."</p>
DurationInMinutes	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Minutes recorded on the time sheet entry.</p>
EndTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date and time the activity finished.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.</p>
LocationTimeZone	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description</p> <p>Time zone of the location where the activity occurred.</p> <p>This field is available in API version 50.0 and later.</p>
StartTime	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Create, Filter, Nillable, Sort, Update</p> <p>Description</p> <p>The date and time the activity began.</p>
Status	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The status of the time sheet entry. The picklist includes the following values, which can be customized:</p> <ul style="list-style-type: none"> • New • Submitted • Approved
Subject	<p>Type</p> <p>string</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Activity performed; for example, repair, lunch, or travel.</p>
TimeSheetEntryNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, Sort</p> <p>Description An auto-generated number identifying the time sheet entry.</p>
TimeSheetId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The time sheet associated with the time sheet entry.</p>
Type	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description The type of work performed. The picklist includes the following values, which can be customized:</p> <ul style="list-style-type: none"> • Direct • Indirect
WorkOrderId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The work order related to the time sheet entry. Work orders are searchable by their content.</p>
WorkOrderLineItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>The work order line item related to the time sheet entry. Work order line items are searchable by their content.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[TimeSheetEntryChangeEvent \(API version 48.0\)](#)

Change events are available for the object.

[TimeSheetEntryFeed](#)

Feed tracking is available for the object.

[TimeSheetEntryHistory](#)

History is available for tracked fields of the object.

TimeSlot

Represents a period of time on a specified day of the week during which field service work can be performed in Field Service and Lightning Scheduler. Operating hours consist of one or more time slots. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
DayOfWeek	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description</p> <p>The day of the week when the time slot takes place.</p>
EndTime	<p>Type</p> <p>time</p> <p>Properties</p> <p>Create, Filter, Sort, Update</p> <p>Description</p> <p>The time when the time slot ends.</p>

Field Name	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, this record might only have been referenced (LastReferencedDate) and not viewed.</p>
MaxAppointments	<p>Type int</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description Maximum number of appointments for a single time slot. Available in API version 47.0 and later.</p>
OperatingHoursId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The operating hours that the time slot belongs to. An operating hours' time slots appear in the Operating Hours related list. This is a relationship field.</p> <p>Relationship Name OperatingHours</p> <p>Relationship Type Lookup</p> <p>Refers To OperatingHours</p>
StartTime	<p>Type time</p>

Field Name	Details
	<p>Properties Create, Filter, Sort, Update</p> <p>Description The time when the time slot starts.</p>
TimeSlotNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The name of the time slot. The name is auto-populated to a day and time format—for example, <code>Monday 9:00 AM - 10:00 PM</code>—but you can manually update it if you wish.</p>
Type	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The type of time slot. Possible values are <i>Normal</i> and <i>Extended</i>. You may choose to use <i>Extended</i> to represent overtime shifts.</p>
WorkTypeGroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Work type group assigned to the time slot. Available in API version 47.0 and later. This is a relationship field.</p> <p>Relationship Name WorkTypeGroup</p> <p>Relationship Type Lookup</p> <p>Refers To WorkTypeGroup</p>

Usage

Operating hours are composed of time slots, which indicate the hours of operation for a particular day. After you create operating hours, create time slots for each day. For example, if the operating hours should be 8 AM to 5 PM Monday through Friday, create five time slots,

one per day. To reflect breaks such as lunch hours, create multiple time slots in a day: for example, *Monday 8:00 AM – 12:00 PM* and *Monday 1:00 PM – 5:00 PM*.

 **Tip:** Time slots don't come with any built-in rules, but you can create Apex triggers that limit time slot settings in your org. For example, you may want to restrict the start and end times on time slots to half-hour increments, or to prohibit end times later than 8 PM.

TimeSlotHistory

Represents the history of changes made to tracked fields on a time slot. This object is available in API version 38.0 and later.

Supported Calls

`getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

Field Service must be enabled in your organization, and field tracking for time slot fields must be configured.

Fields

Field Name	Details
Field	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The name of the field that was changed.</p>
NewValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The new value of the field that was changed.</p>
OldValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The value of the field before it was changed.</p>

Field Name	Details
TimeSlotId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the time slot being tracked. The history is displayed on the detail page for this record.</p>

Topic

Represents a topic on a Chatter post or record. This object is available in API version 28.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Fields

Field Name	Details
Description	<p>Type string</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Description of the topic.</p>
ManagedTopicType	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Type of managed topic. Values are:</p> <ul style="list-style-type: none"> • Content • Featured • Navigational <p>This field is available in API version 44.0 and later.</p>
Name	<p>Type string</p>

Field Name	Details
	<p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p> Note: You can change only the spacing and capitalization of a topic name with the update property.</p> <p>Description Name of the topic.</p>
NetworkId	<p>Type reference</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description Identifier of the Experience Cloud site to which the topic belongs. This field is available only if digital experiences is enabled in your org.</p>
TalkingAbout	<p>Type int</p> <p>Properties Filter, Group, Sort</p> <p>Description Number of people talking about the topic over the last two months, based on factors such as topic additions and comments on posts with the topic.</p>

Usage

Use this object to query a specific topic or to get a list of all topics, even those used solely in private groups and on records, and the number of people talking about them.

Use this object to create, edit, or delete topics. To create a topic, you must have the Create Topics permission. To edit a topic, you must have the Edit Topics permission. To delete a topic, you must have the Delete Topics or Modify All Data permission.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

TopicFeed (API version 29.0)

Feed tracking is available for the object.

TopicAssignment

Represents the assignment of a topic to a specific feed item, record, or file. This object is available in API version 28.0 and later.

Administrators must enable topics for objects before users can add topics to records of that object type. Topics for most objects are available in API version 30.0 and later. Topics for ContentDocument are available in API version 37.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `delete()`, `getDeleted()`, `getUpdate()`, `query()`, `retrieve()`

Fields

Field Name	Details
<code>EntityId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Identifier of the feed item, record, or file. This is a polymorphic relationship field.</p> <p>Relationship Name Entity</p> <p>Relationship Type Lookup</p> <p>Refers To Account, Asset, Campaign, Case, Contact, ContentDocument, Contract, Event, FeedItem, Lead, Opportunity, Order, ProductItem, ProductItemTransaction, ProductRequest, ProductRequestLineItem, ProductRequired, ProductTransfer, ResourceAbsence, ResourcePreference, ReturnOrder, ReturnOrderLineItem, ServiceAppointment, ServiceResource, ServiceResourceSkill, ServiceTerritory, ServiceTerritoryMember, Shift, Shipment, Solution, Task, WorkOrder, WorkOrderLineItem</p>
<code>EntityKeyPrefix</code>	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The first three digits of the <code>EntityID</code> field, which identify the object type (account, opportunity, etc). This read-only field is available in API version 32.0 and later. Interface label is "Record Key Prefix," which appears only in reports.</p>
<code>EntityType</code>	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>The standard name for the object type (account, opportunity, etc). This read-only field is available in API version 33.0 and later.</p> <p> Note: Querying topic assignments for the ManagedContentVersion entity type isn't supported.</p> <p>Interface label is "Object Type," which appears only in reports.</p> <p> Tip: In most cases, you should use this field rather than <code>EntityKeyPrefix</code>, which exists primarily to support older reports.</p>
NetworkId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>Identifier of the community to which the TopicAssignment belongs. This field is available only if digital experiences is enabled in your org.</p>
TopicId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>Identifier of the topic.</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>Topic</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>Topic</p>

Usage

Use this object to query the assignments of topics to feed items, records, or files. To assign or remove topics, you must have the "Assign Topics" permission.

In SOQL `SELECT` syntax, this object supports nested semi-joins, allowing queries on Knowledge articles assigned to specific topics. For example:

```
SELECT parentId FROM KnowledgeArticleViewStat
    WHERE parentId in (SELECT KnowledgeArticleId FROM KnowledgeArticleVersion
```

```
WHERE publishStatus = 'Online' AND language = 'en_US'
AND Id in (select EntityId from TopicAssignment where TopicId = '0T0xx0000000xxx'))
```

No SOQL limit if logged-in user has "View All Data" permission. If not, do one of the following:

- Specify a LIMIT clause of 1,100 records or fewer.
- Filter on `Id` or `Entity` when using a WHERE clause with "=".

SEE ALSO:

[Topic](#)

[FeedItem](#)

TopicLocalization

Represents the translated version of a topic name. Topic localization applies only to navigational and featured topics in Experience Cloud sites. This object is available in API version 33.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Users with the Translation Workbench enabled can view topic translations, but the Customize Application, Manage Translation, or Manage Categories permission is required to create or update them.

Fields

Field Name	Details
Language	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The combined language and locale ISO code, which controls the language for labels displayed in an application. (The values in this field are not related to the default locale selection.)</p> <p>This picklist contains the following fully-supported languages:</p> <ul style="list-style-type: none"> • Chinese (Simplified): zh_CN • Chinese (Traditional): zh_TW • Danish: da • Dutch: nl_NL

Field Name	Details
	<ul style="list-style-type: none"> • Urdu: ur • Welsh: cy • Xhosa: xh • Zulu: zu
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the namespacePrefix__componentName notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> • In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID that identifies the topic. After a TopicLocalization record is created, this ID can't be modified.</p>
Value	<p>Type string</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The translated text for the topic name. Label is Topic Name Translation.</p>

TopicUserEvent

Represents an action (such as comment, post, like, or share) made by a user on a topic. This object is available in API version 42.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Only users with the Modify All Data permission can view and delete these data.

Fields

Field	Details
ActionEnum	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The action taken by a user on a topic. The possible values are:</p> <ul style="list-style-type: none"> • LIKE • COMMENT • POST • ASSIGN • SHARE • FAVORITE • UNFAVORITE • AT_MENTION • BANG_MENTION • COMMENT_LIKE • USER_ENDORSEMENT • SKILL_PEER_ENDORSEMENT • SKILL_SELF_ENDORSEMENT • BEST_ANSWER
NetworkId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description ID of the Experience Cloud site where the action was performed.</p>
TopicId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description Identifier of the topic.</p>
UserId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description Unique Salesforce user ID.</p>

Usage

Use the TopicUserEvent object to delete topic-related activities by Experience Cloud site users who would like all their topic-related activities to be removed from a site.

TransactionSecurityPolicy

Represents a transaction security policy definition.

This object is available in API version 42.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
ActionConfig	<p>Type textarea</p> <p>Properties Create, Update</p>

Field	Details
	<p>Description</p> <p>Describes the action to take when the matching Transaction Security policy is triggered. Also indicates the type of notifications selected and the ID of the intended recipient. The recipient must be active and assigned the Modify All Data and View Setup user permissions. Multiple actions can be taken. The actions available depend on the Event Type field.</p>
ApexPolicyId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Represents the Apex <code>TxnSecurity.PolicyCondition</code> or <code>TxnSecurity.EventCondition</code> interface for this policy.</p>
BlockMessage	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Nillable, Sort, Update</p> <p>Description</p> <p>The custom message sent to a user when a policy blocks their action. Used in Real-Time Event Monitoring only. Maximum of 1000 characters. This field is null when the default message option is selected in the UI. Available only when <code>EventName</code> is set to <code>ApiEvent</code>, <code>ListViewEvent</code>, <code>BulkApiResponseEventStore</code>, or <code>ReportEvent</code>. Available in API version 49.0 and later.</p> <p>Include org- or policy-specific information in your custom message, such as the name of the responsible administrator or the business unit. Be careful about what you include. Too much information on how the policy was designed. can aid a malicious user.</p> <p>Two-factor authentication (2FA) isn't supported in Lightning Experience, so events like <code>ListView</code> and <code>ReportEvent</code> are upgraded to Block in Lightning.</p> <p>Custom messages aren't translatable.</p>
CustomEmailContent	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Nillable, Sort, Update</p> <p>Description</p> <p>The administrator-created custom email content sent when a policy is triggered. Used in Real-Time Event Monitoring only. Maximum of 1333 characters. This field is null when the Custom Email Content setting is selected in the UI but no message content is entered. This field is available in API version 54.0 and later.</p> <p>Custom messages aren't translatable.</p>

Field	Details
Description	<p>Type string</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The description entered for this policy.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The API, or program name, for this policy.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
EventName	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Used in Real-Time Event Monitoring only. Indicates the name of the event the policy monitors. Valid values are:</p> <ul style="list-style-type: none"> • <code>ApiEvent</code>—Tracks these user-initiated read-only API calls: <code>query()</code>, <code>queryMore()</code>, and <code>count()</code>. Captures API requests through SOAP API, REST API, and Bulk API for the Enterprise and Partner WSDLs. Tooling API calls and API calls originating from a Salesforce mobile app aren't captured. • <code>ApiAnomalyEventStore</code>—Tracks anomalies in how users make API calls. <code>ApiAnomalyEventStore</code> is an object that stores the event data of <code>ApiAnomalyEvent</code>. This object is available in API version 50.0 and later. • <code>BulkApiResponseEventStore</code>—Tracks when a user downloads the results of a Bulk API request. <code>BulkApiResponseEventStore</code> is a big object that stores the event data of <code>BulkApiResponseEvent</code>. This object is available in API version 50.0 and later. • <code>CredentialStuffingEventStore</code>—Tracks when a user successfully logs into Salesforce during an identified credential stuffing attack. Credential stuffing refers to large-scale automated login requests using stolen user credentials. This value is available in API 49.0 and later. • <code>ListviewEvent</code>—Tracks when users access data with list views using Lightning Experience, Salesforce Classic, or the API. It doesn't track list views of Setup entities. • <code>LoginEvent</code>—<code>LoginEvent</code> tracks the login activity of users who log in to Salesforce.

Field	Details
	<ul style="list-style-type: none"> • <code>PermissionSetEventStore</code> (beta)—Tracks changes to permission sets and permission set groups. • <code>ReportAnomalyEventStore</code>—Tracks anomalies in how users run or export reports, including unsaved reports. This value is available in API 49.0 and later. • <code>ReportEvent</code>—Tracks when reports are run in your org. • <code>SessionHijackingEventStore</code>—Tracks when unauthorized users gain ownership of a Salesforce user's session with a stolen session identifier. To detect such an event, Salesforce evaluates how significantly a user's current browser fingerprint diverges from the previously known fingerprint using a probabilistically inferred significance of change. This value is available in API 49.0 and later.
<code>EventType</code>	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Used in Legacy Transaction Security only. Indicates the type of event the policy monitors. Valid values are:</p> <ul style="list-style-type: none"> • <code>AccessResource</code>—Notifies you when the selected resource has been accessed. • <code>AuditTrail</code>—Reserved for future use. • <code>DataExport</code>—Notifies you when any API query is made, such as from the Data Loader API client, or when a Report export occurs. • <code>Entity</code>—Notifies you on use of an object type such as an authentication provider or chatter post. • <code>Login</code>—Notifies you when a user logs in.
<code>ExecutionUserId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Used in Legacy Transaction Security only. The ID of an active user who is assigned the Modify All Data and View Setup user permissions.</p>
<code>MasterLabel</code>	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The policy's name.</p>

Field	Details
	<p> Important: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The namespace prefix associated with this object. Each Developer Edition organization that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation.</p> <p>The namespace prefix can have one of the following values:</p> <ul style="list-style-type: none"> • In Developer Edition organizations, the namespace prefix is set to the namespace prefix of the organization for all objects that support it. There is an exception if an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition organization of the package developer. • In organizations that are not Developer Edition organizations, <code>NamespacePrefix</code> is only set for objects that are part of an installed managed package. There is no namespace prefix for all other objects.
ResourceName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Used in Legacy Transaction Security only. A resource used to narrow down the conditions under which the policy triggers. For example, with a <code>DataExport</code> event, you can select a resource <code>Lead</code> to specifically monitor export activity occurring on your <code>Lead</code> entities. The resources available depend on the <code>EventType</code> field.</p>
State	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Indicates whether the policy is active. Valid values are:</p> <ul style="list-style-type: none"> • Disabled • Enabled

Field	Details
Type	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The type of validation that the policy uses. The valid values are:</p> <ul style="list-style-type: none"> • <code>CustomApexPolicy</code>— Created with Apex editor. • <code>CustomConditionBuilderPolicy</code>— Created with Condition Builder

Translation

The Translation object represents the languages enabled for translation in your Salesforce org. This object is available in API version 47.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- Your organization must be using Enterprise, Performance, Unlimited, or Developer edition.
- To view this object, you must have the “View Setup and Configuration” permission.
- To use the `create()`, `update()`, and `upsert()` calls, Translation Workbench must be enabled in your org.
- To manage translations, Translation Workbench must be enabled in your org. Specify translators for each language through the Translation Language Settings Setup page.

Fields

Field	Details
CanManage	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the language is available for translation (<code>true</code>) or not (<code>false</code>). Specify translators for each language through the Translation Language Setup page.</p>

Field	Details
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the translated values for this language display to users (<code>true</code>) or not (<code>false</code>).</p>
Language	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The language code. See the Salesforce Help for a full list of languages and their codes.</p>

SEE ALSO:

[Supported Languages](#)

TwoFactorInfo

Stores a user's secret for multi-factor operations. Use this object when customizing multi-factor authentication in your organization. (Note that multi-factor authentication was formerly called two-factor authentication.) This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

You need the Manage Multi-Factor Authentication in API permission to create or update this object.

Fields

Field Name	Details
SharedKey	<p>Type string</p> <p>Properties Create, Group, Sort, Update</p>

Field Name**Details****Description**

This field is never read-enabled, though it is write-enabled. A request for this value always returns null. The value must be a base32-encoded string of a 20-byte secret.

You can use the Apex method

`Auth.SessionManagement.getQrCode()` to get a value to write to this field.

Note: If you write a secret to this field, in API version 37.0 and later the user gets an email notification that a new identity verification method was added to the user's account.

Type**Type**

picklist

Properties

Create, Filter, Group, Restricted picklist, Sort, Update

Description

The multi-factor method.

- TOTP—The time-based one-time password.

UserId**Type**

reference

Properties

Create, Filter, Group, Nillable, Sort, Update

Description

The ID for the user who's associated with the authentication secret.

TwoFactorMethodsInfo

Stores information about which identity verification methods a user has registered. This object is available in API version 37.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Special Access Rules

You need the Manage Multi-Factor Authentication in API permission to access this object. (Note that multi-factor authentication was formerly called two-factor authentication.)

Fields

Field Name	Details
ExternalId	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description A unique system-generated numerical identifier for the user.</p>
HasBuiltInAuthenticator	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description If <code>true</code>, the user has registered a built-in authenticator on their device, such as Touch ID or Windows Hello. The user can verify their identity by using the built-in authenticator. This field is available in API version 53.0 and later.</p>
HasSalesforceAuthenticator	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description If <code>true</code>, the user has connected the Salesforce Authenticator mobile app. The user can verify identity by approving a notification sent to the app. If the user sets a trusted location in the app, Salesforce Authenticator verifies automatically when the user is in the trusted location.</p>
HasTempCode	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description If <code>true</code>, the user has a temporary verification code generated by a Salesforce admin or user with Manage Multi-Factor Authentication in User Interface permission.</p>
HasTotp	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p>

Field Name	Details
	<p>Description</p> <p>If <code>true</code>, the user has connected an authenticator app that generates verification codes, also known as time-based one-time passwords (TOTP). The user can verify identity by entering a code generated by the app.</p>
HasU2F	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>If <code>true</code>, the user has registered a U2F security key. The user can verify identity by inserting the security key into a USB port to generate credentials.</p>
HasUserVerifiedEmailAddress	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>If <code>true</code>, the user has self-registered and verified an email address.</p> <p>This parameter is available in API version 43 and later.</p>
HasUserVerifiedMobileNumber	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>If <code>true</code>, the user has self-registered and verified a mobile phone number. Salesforce can text a verification code to the user at that number.</p> <p>This parameter is available in API version 43 and later.</p>
HasVerifiedMobileNumber	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>If <code>true</code>, the user has a mobile phone number that was added by an administrator or self-registered by the user. Salesforce can text a verification code to the user at that number.</p>
UserId	<p>Type</p> <p>reference</p>

Field Name	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the user who's associated with the identity verification methods.</p>

TwoFactorTempCode

Stores information about a user's temporary verification code for confirming their identity when logging in. This object is available in API version 37.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

You need the Manage Multi-Factor Authentication in API permission to access this object. (Note that multi-factor authentication was formerly called two-factor authentication.)

Fields

Field Name	Details
Expiration	<p>Type dateTime</p> <p>Properties Filter, Sort</p> <p>Description The date and time when the temporary verification code expires. The code expires in 1 to 24 hours after it's generated. Salesforce admins and non-admin users with the Manage Multi-Factor Authentication in User Interface permission set the expiration time when generating the code.</p>
Identifier	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The unique identifier for the temporary code. This is a required field that can take any value.</p>

Field Name	Details
TempCode	<p>Type encryptedstring</p> <p>Description A request for this value always returns <code>null</code>.</p>
UserId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID for the user who's associated with the temporary verification code.</p>

UiFormulaCriterion

Represents a filter that helps define component visibility on a Lightning page. This object is available in API version 47.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
LeftHandSide	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description Represents the field that the filter is based on. For example, <code>AMOUNT</code>.</p>
OperatorId	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Represents the filter operator. Valid values are:</p> <ul style="list-style-type: none"> • <code>CONTAINS</code> • <code>EQUAL</code> • <code>GE</code>—greater than or equal

Field	Details
	<ul style="list-style-type: none"> • GT—greater than • LE—less than or equal • LT—less than • NE—not equal <p>This is a relationship field.</p> <p>Relationship Name Operator</p> <p>Relationship Type Lookup</p> <p>Refers To null</p>
ParentKeyPrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Represents the three-digit prefix of the parent ID.</p>
RightHandSide	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Represents the value used to evaluate the component's visibility. For example, 1000000.</p>
RuleId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description Represents the formula rule ID. This is a relationship field.</p> <p>Relationship Name Rule</p> <p>Relationship Type Lookup</p> <p>Refers To UiFormulaRule</p>

UiFormulaRule

Represents a set of one or more filters that define the conditions under which a component displays on a Lightning page. This object is available in API version 47.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
AssociatedElementId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Represents a parent component that UiFormulaRule is associated with, such as PromptVersion. This is a relationship field.</p> <p>Relationship Name AssociatedElement</p> <p>Relationship Type Lookup</p> <p>Refers To PromptVersion</p>
BooleanFilter	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Represents the filter logic applied to UiFormulaRule. References the UI formula rule stored by UiFormulaCriterion based on the sortIndex, such as ((1 && 3) 2).</p>
DeveloperName	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description Represents the API name of the UiFormulaRule.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>

Field	Details
Formula	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description Represents the formula source string of UiFormulaRule.</p>
Language	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description Represents the language of the UiFormulaRule.</p>
MasterLabel	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description Required. Represents the label of the UiFormulaRule.</p>
ParentKeyPrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Represents the three-digit prefix for AssociatedElementId.</p>

UndecidedEventRelation

Represents event participants (invitees or attendees) with the status `Not Responded` for a given event. This object is available in API versions 29.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
EventId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Indicates the ID of the event. This is a relationship field.</p> <p>Relationship Name Event</p> <p>Relationship Type Lookup</p> <p>Refers To Event</p>
RelationId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Indicates the ID of the invitee. This is a polymorphic relationship field.</p> <p>Relationship Name Relation</p> <p>Relationship Type Lookup</p> <p>Refers To Calendar, Contact, Lead, User</p>
RespondedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description This field is always null.</p>
Response	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>Indicates the content of the response field. Label is <code>Comment</code>.</p>
Type	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>Indicates whether the invitee is a user, lead or contact, or resource.</p>

Usage

Query invitees who have not responded to an invitation to an event

```
SELECT eventId, type, response FROM UndecidedEventRelation WHERE
eventId='00UTD000000ZH5LA'
```

SEE ALSO:

[AcceptedEventRelation](#)

[DeclinedEventRelation](#)

User

Represents a user in your organization.

Supported Calls

`create()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

- To create or update a User record, you must have the Manage Internal Users permission. If the user is a Customer Portal user, you must have the Manage Customer Users permission. If the user is a partner portal user, you must have the Manage External Users permission. But the `describeSObjects` call always returns `createable` as `true`.
- If digital experiences is enabled, to create or update external users for Customer Portal, partner portal, or Experience Cloud sites, you must also have the Manage External Users permission.
- Information in hidden fields in a user's profile isn't searchable by external users (with a portal profile) in an Experience Cloud site. For example, if a user in a site has a hidden email address and an external user searches for it, the user record isn't returned in the search results. Hidden field values also aren't returned when external users perform searches on nonhidden fields. So if an external user searches for a user's name (can't be hidden), any hidden field values associated with the user record such as a hidden email address aren't returned in the search results.

But internal users belonging to the same Experience Cloud site can search for and view hidden field values in search results.

- When requested by portal users, queries that look up to the User object, such as `owner.name` or `owner.email` sometimes don't return values when the portal user making the request doesn't have Read access to the User record being queried.

The behavior depends on the number of domains associated with the lookup field. If the object can look up to more than one domain, `owner.name` returns a value, but other detail fields don't. For example, Case owner can look up to the User or Queue objects. In this case, portal users can see only the value of `owner.name`. Other User detail fields, such as `owner.email` or `owner.phone` don't return a value.

If the object can look up to only a single domain, such as Account owner, then no detail fields return values, including `owner.name`.

- To change ownership of a record by updating its `OwnerId` field, you must have both the Transfer Record permission and Read access to the User record of the new record owner.
- To view the `NumberOfFailedLogins` field, you must have the Manage User permission.

Fields

Field	Details
AboutMe	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Information about the user, such as areas of interest or skills. This field is available even if Chatter is disabled.</p>
AccountId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the Account associated with a Customer Portal user. This field is null for Salesforce users. This is a relationship field.</p> <p>Relationship Name Account</p> <p>Relationship Type Lookup</p> <p>Refers To Account</p>
Address (beta)	<p>Type address</p>

Field	Details
	<p>Properties Filter, Nillable</p> <p>Description The compound form of the address. Read-only. See Address Compound Fields for details on compound address fields.</p>
Alias	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. The user's alias. For example, jsmith.</p>
BadgeText	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The Experience Cloud site role, displayed on the user profile page just below the user name.</p>
BannerPhotoUrl	<p>Type url</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The URL for the user's banner photo. This field is available in API version 36.0 and later.</p>
CallCenterId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description If Salesforce CRM Call Center is enabled, represents the call center that this user is assigned to.</p>
City	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description The city associated with the user. Up to 40 characters allowed.</p>
CommunityNickname	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Name used to identify this user in the Experience Cloud site.</p>
CompanyName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The name of the user's company.</p>
ContactId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the Contact associated with this account. The contact must have a value in the <code>AccountId</code> field or an error occurs. This is a relationship field.</p> <p>Relationship Name Contact</p> <p>Relationship Type Lookup</p> <p>Refers To Contact</p>
Country	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The country associated with the user. Up to 80 characters allowed.</p>
CountryCode	<p>Type picklist</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ISO country code associated with the user.</p>
CurrentStatus	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Text that describes what the user is working on.</p> <p> Note: If you update this field, the API automatically adds a post of type <code>UserStatus</code> on the user's profile in Chatter.</p> <p>This field is deprecated in API version 25.0. To achieve similar behavior, post to the user directly by creating a <code>FeedItem</code> with the user's <code>ParentId</code>.</p>
DefaultCurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The user's default currency setting for new records. For example, if a user in France sets <code>DefaultCurrencyIsoCode</code> to euros, then that's their default currency.</p> <p>Only applicable for organizations that use multiple currencies.</p>
DefaultDivision	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description This record's default division. Only applicable if divisions are enabled.</p>
DefaultGroupNotificationFrequency	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p>

Field	Details
	<p>Description</p> <p>Required. The default frequency for sending the user's Chatter group email notifications when the user joins groups. The valid values are:</p> <ul style="list-style-type: none"> • P—Email on every post • D—Daily digests • w—Weekly digests • N—Never <p>The default value is N. For Professional, Enterprise, Unlimited, and Developer Edition organizations that existed before API version 22.0, the default value remains D.</p> <p>This field is available in API version 21.0 and later.</p>
DelegatedApproverId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Id of the user who is a delegated approver for this user.</p>
Department	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The company department associated with the user.</p>
DigestFrequency	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description</p> <p>Required. The send frequency of the user's Chatter personal email digest. The valid values are:</p> <ul style="list-style-type: none"> • D = Daily • w = Weekly • N = Never <p>The default value is D.</p>
Division	<p>Type</p> <p>string</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The division associated with this user, similar to Department, and unrelated to <code>DefaultDivision</code>.</p>
Email	<p>Type email</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Required. The user's email address.</p>
EmailEncodingKey	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Required. The email encoding for the user, such as <code>ISO-8859-1</code> or <code>UTF-8</code>.</p>
EmailPreferencesAutoBcc	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Determines whether the user receives copies of sent emails. This option applies only if compliance BCC emails aren't enabled.</p>
EmployeeNumber	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The user's employee number.</p>
Extension	<p>Type phone</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The user's phone extension number.</p>

Field	Details
Fax	<p>Type phone</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The user's fax number.</p>
FederationIdentifier	<p>Type string</p> <p>Properties Create, Filter, idLookup, Nillable, Sort, Update</p> <p>Description Indicates the value that must be listed in the <code>subject</code> element of a Security Assertion Markup Language (SAML) <i>IDP certificate</i> to authenticate the user for a client application using single sign-on. This value must be specified if the <code>SAML User ID Type</code> is <code>Assertion</code> contains Federation ID from the User record. Otherwise, this field can't be edited.</p>
FirstName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The user's first name.</p>
ForecastEnabled	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the user is enabled as a forecast manager (<code>true</code>) or not (<code>false</code>). Forecast managers see forecast rollups from users below them in the forecast hierarchy.</p>
FullPhotoUrl	<p>Type url</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The URL for the user's profile photo. This field is available even if Chatter is disabled.</p>

Field**Details**

The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo is uploaded, the URL returned for an older photo isn't guaranteed to return a photo. Query this field for the URL of the most recent photo.

This field is available in API version 20.0 and later.

GeocodeAccuracy

Type

picklist

Properties

Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Description

The level of accuracy of a location's geographical coordinates compared with its physical address. A geocoding service typically provides this value based on the address's latitude and longitude coordinates.

IndividualId

Type

reference

Properties

Create, Filter, Group, Nillable, Sort, Update

Description

ID of the data privacy record associated with this user. This field is available if Data Protection and Privacy is enabled.

This is a relationship field.

Relationship Name

Individual

Relationship Type

Lookup

Refers To

Individual

IsActive

Type

boolean

Properties

Create, Defaulted on create, Filter, Group, Sort, Update

Description

Indicates whether the user has access to log in (`true`) or not (`false`). You can modify a User's active status from the user interface or via the API.

IsPartner

Type

boolean

Field	Details
	<p>Properties Defaulted on create, Filter</p> <p>Description Indicates whether the user is a partner who has access to the partner portal (<code>true</code>) or not (<code>false</code>). This field isn't available for release 9.0 and later. Instead, use <code>UserType</code> with the value <code>Partner</code> or <code>Power Partner</code>.</p>
<p><code>IsPortalEnabled</code></p>	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether an active, external, user has access to Experience Cloud sites or portals (<code>true</code>) or not (<code>false</code>).</p> <p>This field is only available if one of these conditions is true:</p> <ul style="list-style-type: none"> Digital experiences is enabled and you have community or portal user licenses Portals are enabled <p> Note: Users with External Identity licenses can access Experience Cloud sites even if the flag is false.</p>
<p><code>IsPortalSelfRegistered</code></p>	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the user is a Customer Portal user who self-registered for your organization's Customer Portal (<code>true</code>) or not (<code>false</code>). This field isn't available for release 9.0 and earlier.</p>
<p><code>IsPrmSuperUser</code></p>	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Available for partner portal users only. Indicates whether the user has super user access in the partner portal (<code>true</code>) or not (<code>false</code>).</p> <p>This field is available in API version 24.0 and later.</p> <p> Note: This field isn't automatically enabled. Contact Salesforce to enable this field.</p>

Field	Details
IsProfilePhotoActive	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether a user has a profile photo (<code>true</code>) or not (<code>false</code>). This field is available in API version 36.0 and later.</p>
JigsawImportLimitOverride	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The Data.com user's monthly addition limit. The value must be between zero and the organization's monthly addition limit. Label is Data.com Monthly Addition Limit. This field is available in API version 27.0 and later.</p>
LanguageLocaleKey	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Required. The user's language, such as French or Chinese (Traditional). Label is Language.</p> <p> Note: In API version 47.0 and later, when using the DescribeObjectResult API to return PicklistEntry values from this picklist, the <code>active</code> value indicates whether the language is in the user's Displayed Languages (<code>true</code>) or the user's Available Languages (<code>false</code>). All other languages aren't in the returned <code>active</code> value array.</p> <p>In API version 46.0 and earlier, the PicklistEntry <code>active</code> values indicate whether the language is in either the user's Displayed Languages or Available Languages lists (<code>true</code>) or not in either list (<code>false</code>).</p>
LastLoginDate	<p>Type dateTime</p> <p>Properties Filter, Sort, Nillable</p>

Field	Details
	<p>Description</p> <p>The date and time when the user last successfully logged in. This value is updated if 60 seconds elapses since the user's last login.</p>
LastName	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Required. The user's last name.</p>
LastReferencedDate	<p>Type</p> <p>datetime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type</p> <p>datetime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) but not viewed.</p>
Latitude	<p>Type</p> <p>double</p> <p>Properties</p> <p>Create, Filter, Nillable, Sort, Update</p> <p>Description</p> <p>Used with <code>Longitude</code> to specify the geolocation of an address. Acceptable values are numbers between -90 and 90 up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations.</p>
LocaleSidKey	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Restricted picklist, Sort, Update</p>

Field**Details****Description**

Required. This field is a restricted picklist field. The value of the field affects formatting and parsing of values, especially numeric values, in the user interface. It doesn't affect the API.

The field values are named according to the language, and the country if necessary, using two-letter ISO codes. The set of names is based on the ISO standard. You can also manually set a user's locale in the user interface, and then use that value for inserting or updating other users via the API.

Longitude

Type

double

Properties

Create, Filter, Nillable, Sort, Update

Description

Used with `Latitude` to specify the geolocation of an address. Acceptable values are numbers between -180 and 180 up to 15 decimal places. For details on geolocation compound fields, see [Compound Field Considerations and Limitations](#).

Manager

Type

picklist

Properties

Create, Filter, Restricted picklist, Update

Description

User lookup field used to select the user's manager. This field establishes a hierarchical relationship, preventing you from selecting a user that directly or indirectly reports to themselves.

ManagerId

Type

reference

Properties

Create, Filter, Group, Nillable, Sort, Update

Description

The Id of the user who manages this user.

This is a relationship field.

Relationship Name

Manager

Relationship Type

Lookup

Refers To

User

Field	Details
MediumBannerPhotoUrl	<p>Type url</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The URL for the medium-sized user profile banner photo.</p>
MiddleName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The user's middle name. Maximum size is 40 characters. To enable this field, contact Salesforce Customer Support .</p>
MobilePhone	<p>Type phone</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The user's mobile device number.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description Concatenation of <code>FirstName</code> and <code>LastName</code>. Limited to 203 characters, including whitespaces.</p>
NumberOfFailedLogins	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of failed login attempts for the user's account. When the maximum number of failed login attempts is reached, the counter resets and the user's account is locked. If there's a successful login before the maximum number of failed login attempts is reached, the counter resets and the user's account remains unlocked.</p>

Field	Details
OfflineTrialExpirationDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time when the user's Connect Offline trial expires.</p>
Phone	<p>Type phone</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The user's phone number.</p>
PortalRole	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The role of the user in the Customer Portal (either Executive, Manager, User, or PersonAccount). Prior to API version 16.0, if you set this field to null, the system automatically included a portal role. In API version 16.0 and above, when you set this field to null, a portal role is not automatically created. When this field is null and a <code>ContactId</code> is provided, the user is assigned to the User role. The Update property is available in API version 43.0 and later. The field is available if Customer Portal is enabled OR digital experiences is enabled and Experience Cloud sites have available partner portal, Customer Portal, or High-Volume Portal User licenses.</p>
PostalCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The user's postal or ZIP code. Label is Zip/Postal Code.</p>
ProfileId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p>

Field	Details
ReceivesAdminInfoEmails	<p>Description Required. ID of the user's Profile. Use this value to cache metadata based on profile. In earlier releases, this was <code>RoleId</code>.</p> <p>This is a relationship field.</p> <p>Relationship Name Profile</p> <p>Relationship Type Lookup</p> <p>Refers To Profile</p>
ReceivesInfoEmails	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the user receives email for administrators from Salesforce (<code>true</code>) or not (<code>false</code>).</p>
SenderEmail	<p>Type email</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The email address used as the From address when the user sends emails. This address is the same value shown in Setup on the My Email Settings page.</p>
SenderName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description</p> <p>The name used as the email sender when the user sends emails. This name is the same value shown in Setup on the My Email Settings page.</p>
Signature	<p>Type</p> <p>textarea</p> <p>Properties</p> <p>Create, Filter, Nillable, Sort, Update</p> <p>Description</p> <p>The signature text added to emails. This text is the same value shown in Setup on the My Email Settings page.</p>
SmallBannerPhotoUrl	<p>Type</p> <p>url</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The URL for the small user profile banner photo.</p>
SmallPhotoUrl	<p>Type</p> <p>url</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The URL for a thumbnail of the user's profile photo. This field is available even if Chatter is disabled.</p> <p>The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo is uploaded, the URL returned for an older photo isn't guaranteed to return a photo. Query this field for the URL of the most recent photo.</p> <p>This field is available in API version 20.0 and later.</p>
State	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The state associated with the User. Up to 80 characters allowed.</p>
StateCode	<p>Type</p> <p>picklist</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ISO state code associated with the user.</p>
Street	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The street address associated with the User.</p>
Suffix	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The user's name suffix. Maximum size is 40 characters. To enable this field, contact Salesforce Customer Support.</p>
TimeZoneSidKey	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Required. This field is a restricted picklist field. A User time zone affects the offset used when displaying or entering times in the user interface. But the API doesn't use a User time zone when querying or setting values.</p> <p>Values for this field are named using region and key city, according to ISO standards. You can also manually set one User time zone in the user interface, and then use that value for creating or updating other User records via the API.</p>
Title	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The user's business title, such as Vice President.</p>

Field	Details
Username	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Required. Contains the name that a user enters to log in to the API or the user interface. The value for this field must be in the form of an email address, using all lowercase characters. It must also be unique across all organizations. If you try to create or update a User with a duplicate value for this field, the operation is rejected.</p> <p>Each inserted User also counts as a license. Every organization has a maximum number of licenses. If you attempt to exceed the maximum number of licenses by inserting User records, the create request is rejected.</p>
UserPermissionsCallCenterAutoLogin	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Required if Salesforce CRM Call Center is enabled. Indicates whether the user is enabled to use the auto login feature of the call center (<code>true</code>) or not (<code>false</code>).</p>
UserPermissionsChatterAnswersUser	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Indicates whether the portal user is enabled to use the Chatter Answers feature (<code>true</code>) or not (<code>false</code>). This field defaults to <code>false</code> when a Customer Portal user is created from the API.</p>
UserPermissionsInteractionUser	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Indicates whether the user can run flows or not. Label is Flow User.</p>
UserPermissionsJigsawProspectingUser	<p>Type boolean</p>

Field	Details
	<p>Properties Create, Filter, Update</p> <p>Description Indicates whether the user is allocated one Data.com user license (<code>true</code>) or not (<code>false</code>). The Data.com user license lets the user add Data.com contact and lead records to Salesforce in supported editions. Label is Data.com User.</p>
UserPermissionsKnowledgeUser	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Indicates whether the user is enabled to use Salesforce Knowledge (<code>true</code>) or not (<code>false</code>). Label is Knowledge User.</p>
UserPermissionsLiveAgentUser	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Indicates whether the user is enabled to use Chat (<code>true</code>) or not (<code>false</code>). Label is Live Agent User.</p>
UserPermissionsMarketingUser	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Required. Indicates whether the user is enabled to manage campaigns in the user interface (<code>true</code>) or not (<code>false</code>). Label is Marketing User.</p>
UserPermissionsOfflineUser	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Required. Indicates whether the user is enabled to use Offline Edition (<code>true</code>) or not (<code>false</code>). Label is Offline User.</p>
UserPermissionsSFContentUser	<p>Type boolean</p>

Field	Details
	<p>Properties Create, Filter, Update</p> <p>Description Indicates whether the user is allocated one Salesforce CRM Content User License (<code>true</code>) or not (<code>false</code>). Label is Salesforce CRM Content User. The Salesforce CRM Content User license grants the user access to the Salesforce CRM Content application.</p>
UserPermissionsSiteforceContributorUser	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Indicates whether the user is allocated one Site.com Contributor feature license (<code>true</code>) or not (<code>false</code>). Label is Site.com Contributor User. The Site.com Contributor feature license grants the user access to the Site.com application. Users with a Contributor license can use Site.com Studio to edit site content only.</p>
UserPermissionsSiteforcePublisherUser	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Indicates whether the user is allocated one Site.com Publisher feature license (<code>true</code>) or not (<code>false</code>). Label is Site.com Publisher User. The Site.com Publisher feature license grants the user access to the Site.com application. Users with a Publisher license can build and style websites, control the layout and functionality of pages and page elements, and add and edit content.</p>
UserPermissionsSupportUser	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description When <code>true</code>, the user can use the Salesforce console.</p>
UserPermissionsWirelessUser	<p>Type boolean</p> <p>Properties Create, Filter, Update</p>

Field	Details
	<p>Description Required if the Wireless permission is enabled. Indicates whether the user is enabled to use Wireless Edition (<code>true</code>) or not (<code>false</code>). Label is Wireless User.</p> <p> Note: As of November 2005, Salesforce Wireless Edition is no longer available for purchase. You can continue to use Wireless Edition through the end of your existing contract term if you are:</p> <ul style="list-style-type: none"> • A Professional Edition customer and purchased Wireless Edition before November 7, 2005. • An Enterprise Edition customer who signed or renewed their Salesforce contract before November 7, 2005.
UserPermissionsWorkDotComUserFeature	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Indicates whether the WDC feature is enabled for the user (<code>true</code>) or not (<code>false</code>).</p>
UserPreferencesActivityRemindersPopup	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description When <code>true</code>, a reminder window automatically opens when an activity reminder is due. Corresponds to the <code>Trigger alert when reminder comes due</code> checkbox at the Reminders page in the personal settings in the user interface.</p>
UserPreferencesApexPagesDeveloperMode	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description When <code>true</code>, indicates that the user has enabled developer mode for editing Visualforce pages and controllers.</p>
UserPreferencesContentEmailAsAndWhen	<p>Type boolean</p> <p>Properties Create, Filter, Update</p>

Field	Details
	<p>Description</p> <p>When <code>false</code>, a user with Salesforce CRM Content subscriptions receives a once-daily email summary if activity occurs on the subscribed content, libraries, tags, or authors. To receive email, the <code>UserPreferencesContentNoEmail</code> field must also be <code>false</code>.</p> <p>The default value is <code>false</code>.</p> <p> Note: This field is only visible when Salesforce CRM Content is enabled.</p>
<code>UserPreferencesContentNoEmail</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Filter, Update</p> <p>Description</p> <p>When <code>false</code>, a user with Salesforce CRM Content subscriptions receives email notifications if activity occurs on the subscribed content, libraries, tags, or authors. To receive real-time email alerts, set this field to <code>false</code> and set the <code>UserPreferencesContentEmailAsAndWhen</code> field to <code>true</code>.</p> <p>The default value is <code>false</code>.</p> <p> Note: This field is only visible when Salesforce CRM Content is enabled.</p>
<code>UserPreferencesEnableAutoSubForFeeds</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Filter, Update</p> <p>Description</p> <p>When <code>true</code>, the user automatically subscribes to feeds for any objects that the user creates. The user receives these emails when someone requests or offers feedback, shares feedback with the user, or reminds the user to answer a feedback request.</p> <p>This field isn't visible as of API version 54.0.</p>
<code>UserPreferencesDisCommentAfterLikeEmail</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Filter, Update</p> <p>Description</p> <p>When <code>false</code>, the user automatically receives email every time someone comments on a post that the user liked. This field is available in API version 24.0 and later.</p>
<code>UserPreferencesDisMentionsCommentEmail</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Filter, Update</p> <p>Description</p> <p>When <code>false</code>, the user automatically receives email every time the user is mentioned in comments. This field is available in API version 24.0 and later.</p>

Field	Details
UserPreferencesDisableMessageEmail	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description When <code>false</code>, the user automatically receives email for Chatter messages sent to the user. This field is available in API version 24.0 and later.</p>
UserPreferencesDisableRewardEmail	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description When <code>false</code>, the user automatically receives emails related to WDC rewards. The user receives these emails when someone gives a reward to the user.</p>
UserPreferencesDisableWorkEmail	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description When <code>false</code>, the user receives emails related to WDC feedback, goals, and coaching. The user must also sign up for individual emails listed on the WDC email settings page. When <code>true</code>, the user doesn't receive any emails related to WDC feedback, goals, or coaching even if they're signed up for individual emails.</p>
UserPreferencesDisProfPostCommentEmail	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description When <code>false</code>, the user automatically receives email every time someone comments on posts on the user's profile. This field is available in API version 24.0 and later.</p>
UserPreferencesEventRemindersCheckboxDefault	<p>Type boolean</p> <p>Properties Create, Filter, Update</p>

Field	Details
	<p>Description</p> <p>When <code>true</code>, a reminder popup is automatically set on the user's events. Corresponds to the <code>By default, set reminder on Events to...</code> checkbox on the Reminders page in the user interface. This field is related to <code>UserPreference</code> and customizing activity reminders.</p>
<code>UserPreferencesHideBiggerPhotoCallout</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Filter, Update</p> <p>Description</p> <p>When <code>true</code>, users can choose to hide the callout text below the large profile photo.</p>
<code>UserPreferencesHideChatterOnboardingSplash</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Filter, Update</p> <p>Description</p> <p>When <code>true</code>, the initial Chatter onboarding prompts don't appear.</p>
<code>UserPreferencesHideCSNDesktopTask</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Filter, Update</p> <p>Description</p> <p>When <code>true</code>, the Chatter recommendations panel never displays the recommendation to install Chatter Desktop. This field is available in API version 26.0 and later.</p>
<code>UserPreferencesHideCSNGetChatterMobileTask</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Filter, Update</p> <p>Description</p> <p>When <code>true</code>, the Chatter recommendations panel never displays the recommendation to install Chatter Mobile. This field is available in API version 26.0 and later.</p>
<code>UserPreferencesHideEndUserOnboardingAssistantModal</code>	<p>Type</p> <p>boolean</p>

Field	Details
	<p>Properties Create, Filter, Update</p> <p>Description Reserved for future use.</p>
UserPreferencesHideLightningMigrationModal	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Reserved for future use.</p>
UserPreferencesHideSecondChatterOnboardingSplash	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description When <code>true</code>, the secondary Chatter onboarding prompts don't appear.</p>
UserPreferencesHideS1BrowserUI	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Controls the interface that the user sees when logging in to Salesforce from a supported mobile browser. If <code>false</code>, the user is automatically redirected to the Salesforce mobile web. If <code>true</code>, the user sees the full Salesforce site. The default value is <code>false</code>. Label is Salesforce User. This field is available in API version 29.0 or later.</p>
UserPreferencesHideSfxWelcomeMat	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Controls whether a user sees the Lightning Experience new user message. That message welcomes users to the new interface and provides step-by-step instructions that describe how to return to Salesforce Classic.</p>
UserPreferencesJigsawListUser	<p>Type boolean</p>

Field	Details
	<p>Properties Create, Filter, Update</p> <p>Description When <code>true</code>, the user is a Data.com List user so shares record additions from a pool. <code>UserPermissionsJigsawProspectingUser</code> must also be set to <code>true</code>. Label is Data.com List User. This field is available in API version 27.0 and later.</p>
UserPreferencesLightningExperiencePreferred	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description When <code>true</code>, redirects the user to the Lightning Experience interface. Label is Switch to Lightning Experience. This field is available in API version 35.0 and later.</p>
UserPreferencesNativeEmailClient	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Use this field to set a default email preference for the user's native email client. This field is available in API version 47.0 and later. The default value is <code>false</code>, corresponding to the Salesforce docked email composer.</p>
UserPreferencesOptOutOfTouch	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description This field is deprecated in API version 29.0. When <code>false</code>, the user automatically accesses the Salesforce Touch app when logging in to Salesforce from an iPad. If <code>true</code>, automatic access to the Salesforce Touch app is turned off and the user's iPad is directed to the full Salesforce site instead. The default value is <code>false</code>.</p> <p> Note: Salesforce Touch must be enabled before this field is visible.</p>
UserPreferencesPathAssistantCollapsed	<p>Type boolean</p>

Field	Details
	<p>Properties Create, Filter, Update</p> <p>Description When <code>true</code>, Sales Path appears collapsed or hidden to the user. This field is available in API version 35.0 and later.</p>
UserPreferencesProcessAssistantCollapsed	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description When <code>true</code>, Sales Path appears collapsed or hidden to the user. This field is available in API versions 33.0 and 34.0 only. In API versions 35.0 and later, use <code>UserPreferencesPathAssistantCollapsed</code>.</p>
UserPreferencesReceiveNoNotificationsAsApprover	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Controls email notifications from the approval process for <i>approvers</i>.</p> <ul style="list-style-type: none"> • If <code>true</code>, emails are <i>disabled</i>. • If <code>false</code>, emails are <i>enabled</i>. <p>The default value is <code>false</code>.</p> <p> Note: The Receive Approval Request Emails setting in the UI controls this field and the <code>UserPreferencesReceiveNotificationsAsDelegatedApprover</code> field.</p> <ul style="list-style-type: none"> • Setting: If I'm an approver or delegated approver Result: <ul style="list-style-type: none"> – <code>UserPreferencesReceiveNoNotificationsAsApprover = false</code> – <code>UserPreferencesReceiveNotificationsAsDelegatedApprover = true</code> • Setting: Only if I'm an approver Result: <ul style="list-style-type: none"> – <code>UserPreferencesReceiveNoNotificationsAsApprover = false</code> – <code>UserPreferencesReceiveNotificationsAsDelegatedApprover = false</code>

Field	Details
	<ul style="list-style-type: none"> Setting: Only if I'm a delegated approver Result: <ul style="list-style-type: none"> UserPreferencesReceiveNoNotificationsAsApprover = true UserPreferencesReceiveNotificationsAsDelegatedApprover = true Setting: Never Result: <ul style="list-style-type: none"> UserPreferencesReceiveNoNotificationsAsApprover = true UserPreferencesReceiveNotificationsAsDelegatedApprover = false
UserPreferencesReceiveNotificationsAsDelegatedApprover	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Controls email notifications from the approval process for <i>delegated approvers</i>.</p> <ul style="list-style-type: none"> If <code>true</code>, emails are <i>enabled</i>. If <code>false</code>, emails are <i>disabled</i>. <p>The default value is <code>false</code>.</p> <p> Note: The Receive Approval Request Emails setting in the UI controls this field and the <code>UserPreferencesReceiveNoNotificationsAsApprover</code> field.</p> <ul style="list-style-type: none"> Setting: If I'm an approver or delegated approver Result: <ul style="list-style-type: none"> UserPreferencesReceiveNoNotificationsAsApprover = false UserPreferencesReceiveNotificationsAsDelegatedApprover = true Setting: Only if I'm an approver Result: <ul style="list-style-type: none"> UserPreferencesReceiveNoNotificationsAsApprover = false UserPreferencesReceiveNotificationsAsDelegatedApprover = false

Field	Details
	<ul style="list-style-type: none"> Setting: Only if I'm a delegated approver Result: <ul style="list-style-type: none"> UserPreferencesReceiveNoNotificationsAsApprover = true UserPreferencesReceiveNotificationsAsDelegatedApprover = true Setting: Never Result: <ul style="list-style-type: none"> UserPreferencesReceiveNoNotificationsAsApprover = true UserPreferencesReceiveNotificationsAsDelegatedApprover = false
UserPreferencesReminderSoundOff	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description When <code>true</code>, a sound automatically plays when an activity reminder is due. Corresponds to the <code>Play a reminder sound</code> checkbox on the Reminders page in the user interface.</p>
UserPreferencesShowCityToExternalUsers	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Indicates the visibility of the city field in the user's contact information. City is visible only to internal members of the user's organization when:</p> <ul style="list-style-type: none"> This field is <code>false</code>. This field is available in API version 26.0 and later.</p>

Field	Details
UserPreferencesShowCityToGuestUsers	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Indicates the visibility of the city field in the user's contact information. When <code>true</code>, city is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site. When <code>false</code>, this field returns the value <code>#N/A</code>.</p> <p>When <code>true</code>, this field overrides the value <code>false</code> in <code>UserPreferencesShowCityToExternalUsers</code>, making the user's city visible to external members.</p> <p>The default value is <code>false</code>. This field is available in API version 28.0 and later.</p>
UserPreferencesShowCountryToExternalUsers	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Indicates the visibility of the country field in the user's contact information. Country is visible only to internal members of the user's organization when:</p> <ul style="list-style-type: none"> This field is <code>false</code>. When <code>false</code>, this field returns the value <code>#N/A</code>. <p>Country is visible to external members in an Experience Cloud site when:</p> <ul style="list-style-type: none"> This field is <code>true</code>, or This field is <code>false</code> but <code>UserPreferencesShowCountryToGuestUsers</code> is <code>true</code>, which overrides this field's value. <p>External users are users with Community, Customer Portal, or partner portal licenses.</p> <p>The default value is <code>false</code>. This field is available in API version 26.0 and later.</p>
UserPreferencesShowCountryToGuestUsers	<p>Type boolean</p> <p>Properties Create, Filter, Update</p>

Field

Details

Description

Indicates the visibility of the country field in the user's contact information. When `true`, country is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site. When `false`, this field returns the value `#N/A`.

When `true`, this field overrides the value `false` in `UserPreferencesShowCountryToExternalUsers`, making the user's country visible to external members.

The default value is `false`. This field is available in API version 28.0 and later.

`UserPreferencesShowEmailToExternalUsers`

Type

boolean

Properties

Create, Filter, Update

Description

Indicates the visibility of the email address field in the user's contact information. Email address is visible only to internal members of the user's organization when this field is `false`. Email address is visible to external members in an Experience Cloud site when this field is `true`. External users are users with Community, Customer Portal, or partner portal licenses.

When `false`, this field returns the value `#N/A`. The default value is `false`. This field is available in API version 26.0 and later.

`UserPreferencesShowEmailToGuestUsers`

Type

boolean

Properties

Create, Filter, Update

Description

Indicates the visibility of the email address field in the user's contact information. When `true`, the email address is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site.

When `true`, this field overrides the value `false` in `UserPreferencesShowEmailToExternalUsers`, making the user's email address visible to guests.

When `false`, this field returns the value `#N/A`. The default value is `false`. This field is available in API version 34.0 and later.

Field	Details
UserPreferencesShowFaxToExternalUsers	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Indicates the visibility of the fax number field in the user's contact information. Fax number is visible only to internal members of the user's organization when this field is <code>false</code>. Fax number is visible to external members in an Experience Cloud site when this field is <code>true</code>. External users are users with Community, Customer Portal, or partner portal licenses.</p> <p>When <code>false</code>, this field returns the value #N/A. The default value is <code>false</code>. This field is available in API version 26.0 and later.</p>
UserPreferencesShowFaxToGuestUsers	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Indicates the visibility of the fax number field in the user's contact information. When <code>true</code>, the fax number field is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site.</p> <p>When <code>true</code>, this field overrides the value <code>false</code> in <code>UserPreferencesShowFaxToExternalUsers</code>, making the user's fax number visible to guests.</p> <p>When <code>false</code>, this field returns the value #N/A. The default value is <code>false</code>. This field is available in API version 34.0 and later.</p>
UserPreferencesShowManagerToExternalUsers	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Indicates the visibility of the manager field in the user's contact information. Manager is visible only to internal members of the user's organization when this field is <code>false</code>. Manager is visible to external members in an Experience Cloud site when this field is <code>true</code>. External users are users with Community, Customer Portal, or partner portal licenses.</p> <p>When <code>false</code>, this field returns the value #N/A. The default value is <code>false</code>. This field is available in API version 26.0 and later.</p>

Field	Details
UserPreferencesShowManagerToGuestUsers	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Indicates the visibility of the manager field in the user's contact information. When <code>true</code>, the manager field is visible to guest users. This field is available in API version 26.0 and later.</p>
<p><code>UserPreferencesShowPostalCodeToGuestUsers</code></p>	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Indicates the visibility of the postal or ZIP code field in the user's contact information. When <code>true</code>, postal code is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site. When <code>false</code>, this field returns the value <code>#N/A</code>.</p> <p>When <code>true</code>, this field overrides the value <code>false</code> in <code>UserPreferencesShowPostalCodeToExternalUsers</code>, making the user's postal code visible to external members.</p> <p>The default value is <code>false</code>. This field is available in API version 28.0 and later.</p>
<p><code>UserPreferencesShowProfilePicToGuestUsers</code></p>	<p>Type boolean</p>

Field	Details
	<p>Properties Create, Filter, Update</p> <p>Description Indicates the visibility of the user's profile photo. When <code>true</code>, the photo is visible to guest users in an Experience Cloud site. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site.</p> <p>When <code>false</code>, this field returns the stock photo. The default value is <code>false</code>. This field is available in API version 28.0 and later.</p>
UserPreferencesShowStateToExternalUsers	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Indicates the visibility of the state field in the user's contact information. State is visible only to internal members of the user's organization when:</p> <ul style="list-style-type: none"> This field is <code>false</code>. When <code>false</code>, this field returns the value <code>#N/A</code>. <p>State is visible to external members in an Experience Cloud site when:</p> <ul style="list-style-type: none"> This field is <code>true</code>, or This field is <code>false</code> but <code>UserPreferencesShowStateToGuestUsers</code> is <code>true</code>, which overrides this field's value. <p>External users are users with Community, Customer Portal, or partner portal licenses.</p> <p>When <code>false</code>, this field returns the value <code>#N/A</code>. The default value is <code>false</code>. This field is available in API version 26.0 and later.</p>
UserPreferencesShowStateToGuestUsers	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Indicates the visibility of the state field in the user's contact information. When <code>true</code>, state is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site. When <code>false</code>, this field returns the value <code>#N/A</code>.</p>

Field	Details
	<p>When <code>true</code>, this field overrides the value <code>false</code> in <code>UserPreferencesShowStateToExternalUsers</code>, making the user's state visible to external members.</p> <p>The default value is <code>false</code>. This field is available in API version 28.0 and later.</p>
<code>UserPreferencesShowStreetAddressToExternalUsers</code>	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Indicates the visibility of the street address field in the user's contact information. The address is visible only to internal members of the user's organization when this field is <code>false</code>. The address is visible to external members in an Experience Cloud site when this field is <code>true</code>. External users are users with Community, Customer Portal, or partner portal licenses.</p> <p>When <code>false</code>, this field returns the value <code>#N/A</code>. The default value is <code>false</code>. This field is available in API version 26.0 and later.</p>
<code>UserPreferencesShowStreetAddressToGuestUsers</code>	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Indicates the visibility of the street address field in the user's contact information. When <code>true</code>, the street address field is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site.</p> <p>When <code>true</code>, this field overrides the value <code>false</code> in <code>UserPreferencesShowStreetAddressToExternalUsers</code>, making the user's street address visible to guests.</p> <p>When <code>false</code>, this field returns the value <code>#N/A</code>. The default value is <code>false</code>. This field is available in API version 34.0 and later.</p>
<code>UserPreferencesShowTitleToExternalUsers</code>	<p>Type boolean</p> <p>Properties Create, Filter, Update</p>

Field

Details

Description

Indicates the visibility of the business title field in the user's contact information. Title is visible only to internal members of the user's organization when:

- This field is `false`. When `false`, this field returns the value `#N/A`.

Title is visible to external members in an Experience Cloud site when:

- This field is `true`, or
- This field is `false` but `UserPreferencesShowTitleToGuestUsers` is `true`, which overrides this field's value.

External users are users with Community, Customer Portal, or partner portal licenses.

The default value is `true`. This field is available in API version 26.0 and later.

`UserPreferencesShowTitleToGuestUsers`

Type

boolean

Properties

Create, Filter, Update

Description

Indicates the visibility of the business title field in the user's contact information. When `true`, title is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site. When `false`, this field returns the value `#N/A`.

When `true`, this field overrides the value `false` in `UserPreferencesShowTitleToExternalUsers`, making the user's title visible to external members.

The default value is `false`. This field is available in API version 28.0 and later.

`UserPreferencesShowWorkPhoneToExternalUsers`

Type

boolean

Properties

Create, Filter, Update

Description

Indicates the visibility of the work phone number field in the user's contact information. The number is visible only to internal members of the user's organization when this field is `false`. The number is visible to external members in an Experience Cloud site when this field is

Field	Details
	<p><code>true</code>. External users are users with Community, Customer Portal, or partner portal licenses.</p> <p>When <code>false</code>, this field returns the value #N/A. The default value is <code>false</code>. This field is available in API version 26.0 and later.</p>
<code>UserPreferencesShowWorkPhoneToGuestUsers</code>	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Indicates the visibility of the work phone field in the user's contact information. When <code>true</code>, the work phone field is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site.</p> <p>When <code>true</code>, this field overrides the value <code>false</code> in <code>UserPreferencesShowWorkPhoneToExternalUsers</code>, making the user's work phone visible to guests.</p> <p>When <code>false</code>, this field returns the value #N/A. The default value is <code>false</code>. This field is available in API version 34.0 and later.</p>
<code>UserPreferencesSortFeedByComment</code>	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description Specifies the data value used in sorting a user's feed. When <code>true</code>, the feed is sorted by most recent comment activity. When <code>false</code>, the feed is sorted by post date.</p>
<code>UserPreferencesSuppressEventSFXReminders</code>	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description When <code>true</code>, event reminders don't appear. Corresponds to the Show event reminders in Lightning Experience checkbox on the Activity Reminders page in the user interface. This field is related to UserPreference and customizing activity reminders.</p>
<code>UserPreferencesSuppressTaskSFXReminders</code>	<p>Type boolean</p>

Field	Details
	<p>Properties Create, Filter, Update</p> <p>Description When <code>true</code>, task reminders don't appear. Corresponds to the Show task reminders in Lightning Experience checkbox on the Activity Reminders page in the user interface. This field is related to UserPreference and customizing activity reminders.</p>
UserPreferencesTaskRemindersCheckboxDefault	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description When <code>true</code>, a reminder popup is automatically set on the user's tasks. Corresponds to the <i>By default, set reminder on Tasks to...</i> checkbox on the Reminders page in the user interface. This field is related to UserPreference and customizing activity reminders.</p>
UserPreferencesUserDebugModePref	<p>Type boolean</p> <p>Properties Create, Filter, Update</p> <p>Description When <code>true</code>, the Lightning Component framework executes in debug mode for the user. Corresponds to the <code>Debug Mode</code> checkbox on the Advanced User Details page of personal settings in the user interface.</p>
UserRoleId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the user's UserRole. Label is Role ID. This is a relationship field.</p> <p>Relationship Name UserRole</p> <p>Relationship Type Lookup</p> <p>Refers To UserRole</p>

Field**Details**

UserType

Type

picklist

Properties

Filter, Group, Nillable, Sort, Restricted picklist

Description

The category of user license. Each `UserType` is associated with one or more `UserLicense` records. Each `UserLicense` is associated with one or more profiles. In API version 10.0 and later, valid values include:

- Standard: user license. This user type also includes Salesforce Platform and Salesforce Platform One user licenses. Label is **Standard**.
- PowerPartner: User whose access is limited because they're a partner and typically access the application through a partner portal or Experience Cloud site. Label is **Partner**.
- CSPLitePortal: user whose access is limited because they're an org's customer and access the application through a Customer Portal or Experience Cloud site. Label is **High Volume Portal**.
- CustomerSuccess: user whose access is limited because they're an org's customer and access the application through a Customer Portal. Label is **Customer Portal User**.
- PowerCustomerSuccess: user whose access is limited because they're an org's customer and access the application through a Customer Portal. Label is **Customer Portal Manager**.
Users with this license type can view and edit data they directly own or data owned by or shared with users below them in the Customer Portal role hierarchy.
- CsnOnly: user whose access to the application is limited to Chatter. This user type includes Chatter Free and Chatter moderator users. Label is **Chatter Free**.
- Guest: user whose access is limited because they're an unauthenticated user without login credentials. Label is **Guest**.

WirelessEmail

Type

email

Properties

Create, Filter, Group, Nillable, Sort, Update

Description

Wireless email address associated with this user. For use with Salesforce Wireless Edition. This field is available only if the Wireless and Email permissions are enabled for your organization.

Field

Details

Note: As of November 2005, Salesforce Wireless Edition is no longer available for purchase. You can continue to use Wireless Edition through the end of your existing contract term if you are:

- A Professional Edition customer and purchased Wireless Edition before November 7, 2005.
- An Enterprise Edition customer who signed or renewed their Salesforce contract before November 7, 2005.

Usage

Use this object to query information about users and to provision and modify users in your organization. Unlike other objects, the records in the User table represent actual users—not data owned by users. Any user can query or describe User records.

For example, the following SOQL code finds users with a particular user role.

```
SELECT Id, Username
FROM User
WHERE UserRoleId='00ED0000000xicT'
```

Each portal user is associated with a portal account. A portal account can have a maximum of three portal roles (Executive, Manager, and User). You can select the default number of roles to be created from the user interface. The role hierarchy is maintained when you insert and delete portal roles, and roles are created bottom-up. Deleting the User role causes the Manager role to be renamed to User role. Deleting both the Executive and User roles causes the Manager role to be renamed to User role. Before deleting a role, you must assign users under that role to another role.

Deactivate Users

You can't delete a user in the user interface or the API. You can deactivate a user in the user interface; and you can deactivate or disable a Customer Portal or partner portal user in the user interface or the API. Because users can never be deleted, we recommend that you exercise caution when creating them.

Be aware of the expected behaviors when deactivating users. See [Considerations for Deactivating Users](#). The user interface provides options to auto-remove a user from teams, but the removal isn't supported in API.

If you deactivate a user, any EntitySubscription where the user is associated with the ParentId or SubscriberId field, meaning all subscriptions both to and from the user, are soft deleted. If the user is reactivated, the subscriptions are restored. However, if you deactivate multiple users at once and these users follow each other, their subscriptions are hard deleted. In this case, the user-to-user EntitySubscription is deleted twice (double deleted). Such subscriptions can't be restored upon user reactivation.

Passwords

For security reasons, you can't query User passwords via the API or the user interface. But the API allows you to set and reset User passwords using the `setPassword()` and `resetPassword()` calls. The password lockout status and the ability to reset the User locked-out status isn't available via the API. Check and reset the User password lockout status using the user interface.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

UserChangeEvent (API version 44.0)

Change events are available for the object.

UserFeed (API version 18.0)

Feed tracking is available for the object.

UserShare

Sharing is available for the object.

SEE ALSO:

[SOAP API Developer Guide: Frequently-Occurring Fields](#)

[UserRole](#)

[UserLicense](#)

UserAccountTeamMember

Represents a User on the default account team of another User.

See also OpportunityTeamMember, which represents a User on the opportunity team of an Opportunity

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Customer Portal and Chatter Free users can't access this object.

Fields

Field	Details
<code>AccountAccessLevel</code>	<p>Type picklist</p> <p>Properties Create, Filter, Restricted picklist, Update</p> <p>Description Required. For Account records that the user has added to his or her default account team, the level of access the account team member has. . The possible values are:</p> <ul style="list-style-type: none"> • Read • Edit

Field	Details
	<p>This field must be set to an access level that is higher than the organization's default access level for accounts.</p>
CaseAccessLevel	<p>Type picklist</p> <p>Properties Create, Filter, Restricted picklist, Update</p> <p>Description Required. Level of access that the account team member has to Case records related to the account. The possible values are:</p> <ul style="list-style-type: none"> • None • Read • Edit <p>This field must be set to an access level that is higher than the organization's default access level for cases.</p>
ContactAccessLevel	<p>Type picklist</p> <p>Properties Create, Filter, Restricted picklist, Update</p> <p>Description Required. ForContact records related to the account, the level of access that the account team member has. The possible values are:</p> <ul style="list-style-type: none"> • None • Read • Edit <p>This field must be set to an access level that is higher than the organization's default access level for contacts.</p> <p> Note: When DefaultContactAccess is set to Controlled by Parent, you can't create or update this field.</p>
OpportunityAccessLevel	<p>Type picklist</p> <p>Properties Create, Filter, Restricted picklist, Update</p> <p>Description Required. Level of access that the team member has to Opportunity records related to the account. The possible values are:</p> <ul style="list-style-type: none"> • None • Read • Edit

Field	Details
	This field must be set to an access level that is higher than the organization's default access level for opportunities.
OwnerId	<p>Type reference</p> <p>Properties Create, Filter</p> <p>Description Required. ID of the User who owns the default account team.</p>
TeamMemberRole	<p>Type picklist</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description Role that the team member has on opportunities for which the user has added his or her default account team. The valid values are set by the organization's administrator in the Account Team Roles picklist. Label is Team Role.</p>
UserId	<p>Type reference</p> <p>Properties Create, Filter</p> <p>Description Required. ID of the User who is a member of the default account team. This field cannot be updated.</p>

Usage

This object is available only in organizations that have enabled the account teams functionality, which can be done using the user interface.

If you attempt to create a record that matches an existing record, the create call updates any modified fields and returns the existing record.

You can set up a User record so the default account team includes the others who typically work with them on accounts.

UserAppInfo

Stores the last Lightning app logged in to. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
<code>AppDefinitionId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the last Lightning app that the user logged in to. This field is available in API version 43.0 and later. This is a relationship field.</p> <p>Relationship Name AppDefinition</p> <p>Relationship Type Lookup</p> <p>Refers To AppDefinition</p>
<code>FormFactor</code>	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The relative size of the app as displayed. Values are:</p> <ul style="list-style-type: none"> • Small—suitable for a small device like a mobile phone • Medium—suitable for a tablet • Large—suitable for a large display device, like a monitor <p>It's possible to have three versions of the app as the one last logged in to, where each version has a different form factor.</p>
<code>UserId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the user that used this app.</p>

Field Name	Details
	This is a relationship field.
	Relationship Name User
	Relationship Type Lookup
	Refers To User

UserAppMenuCustomization

Represents an individual user's settings for items in the app menu or App Launcher. This object is available in API version 35.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
ApplicationId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The 15-character ID for the application associated with the menu item. This is a relationship field.</p> <p>Relationship Name Application</p> <p>Relationship Type Lookup</p> <p>Refers To ConnectedApplication</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>The ID of the user for these specific settings.</p> <p>This is a polymorphic relationship field.</p> <p>Relationship Name</p> <p>Owner</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>Group, User</p>
SortOrder	<p>Type</p> <p>int</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The index value that controls where this item appears in the menu. For example, a menu item with a sort order value of 5 will appear between items with sort order values of 3 and 9.</p>

Usage

See the AppMenuItem object for the organization-wide default settings. This object contains the fields representing any changes the user made to the menu.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[UserAppMenuCustomizationOwnerSharingRule](#)

Sharing rules are available for the object.

[UserAppMenuCustomizationShare](#)

Sharing is available for the object.

UserAppMenuItem

Represents the organization-wide settings for items in the app menu or App Launcher that the requesting user has access to in Setup. This object is available in API version 35.0 and later.

Supported Calls

`describeLayout()`, `describeSObjects()`, `query()`, `search()`

Fields

Field Name	Details
AppMenuItemId	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The 15-character ID for the menu item.</p>
ApplicationId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The 15-character ID for the application associated with the menu item.</p>
Description	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description A description of this menu item.</p>
IconUrl	<p>Type url</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The icon for the menu item's application.</p>
InfoUrl	<p>Type url</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The URL for more information about the application.</p>
IsUsingAdminAuthorization	<p>Type boolean</p>

Field Name	Details
	<p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description If <code>true</code>, the app is pre-authorized for certain users by the administrator.</p>
IsVisible	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description If <code>true</code>, the app is visible to the user.</p>
Label	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The app's name.</p>
LogoUrl	<p>Type url</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The logo for the menu item's application. The default is the initials of the <code>Label</code> value.</p>
MobileStartUrl	<p>Type url</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The location mobile users are directed to after they've authenticated. This is only used with connected apps.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>The API name of the item.</p>
SortOrder	<p>Type</p> <p>int</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The index value that controls where this item appears in the menu. For example, a menu item with a sort order value of 5 will appear between items with sort order values of 3 and 9.</p>
StartUrl	<p>Type</p> <p>url</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The location users are directed to after they've authenticated. For a connected app, this is the location specified by the <code>StartUrl</code>. Otherwise it's the application's default start page.</p>
Type	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description</p> <p>The type of application represented by this item. The types are:</p> <ul style="list-style-type: none"> • ConnectedApplication • Network • ServiceProvider • TabSet
UserSortOrder	<p>Type</p> <p>int</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The index value that represents where the user set this item in the menu (or App Launcher). For example, an item with a sort order value of 5 will appear between items with sort order values of 3 and 9.</p>

Field Name	Details
	<p>This value is separate from SortOrder so you can create logic incorporating both values. For example, if you want the user-sorted items to appear first, followed by the organization order for the rest, use:</p> <pre>SELECT ApplicationId,SortOrder,UserSortOrder FROM AppMenuItem order by userSortOrder NULLS LAST, sortOrder NULLS LAST</pre>

Usage

See the AppMenuItem object for the organization-wide default settings This object contains the fields the requesting user has permission to see.

UserAuthCertificate

Represents a user authentication certificate in your org. A user certificate is a unique PEM-encoded X.509 digital certificate to authenticate individual users to your org. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

This object is only available in orgs with `Let users authenticate with a certificate` enabled in Identity Verification. Only users with the Manage Internal Users permission can access this object.

Fields

Field	Details
CertificateChain	<p>Type base64</p> <p>Properties Create, Update</p> <p>Description The uploaded PEM files can contain a single certificate or up to 10 certificates in a certificate chain. Uploaded PEM files can't be larger than 1 MB.</p>
CertificateChainLength	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description</p> <p>The auto-generated length of the certificate or certificate chain in the uploaded PEM file.</p>
DeveloperName	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Sort, Update</p> <p>Description</p> <p>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, Salesforce generates one for each record, which slows performance.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
ExpirationDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Sort</p> <p>Description</p> <p>The expiration date of the uploaded certificate.</p>
Fingerprint	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, idLookup, Sort</p> <p>Description</p> <p>The unique fingerprint of the uploaded certificate.</p>
Language	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description</p> <p>The language in which to display the certificate.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • da (Danish) • de (German) • en_US (English)

Field	Details
	<ul style="list-style-type: none"> • es (Spanish) • es_MX (Spanish - Mexico) • fi (Finnish) • fr (French) • it (Italian) • ja (Japanese) • ko (Korean) • nl_NL (Dutch) • no (Norwegian) • pt_BR (Portuguese - Brazil) • ru (Russian) • sv (Swedish) • th (Thai) • zh_CN (Chinese - Simplified) • zh_TW (Chinese - Traditional)
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description A descriptive name for the certificate.</p>
SerialNumber	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The serial number of the uploaded certificate.</p>
UserID	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The user associated with the certificate.</p>

UserConfigTransferButton

Represents the association between a Chat configuration and a live chat button. This association allows users associated with a specific configuration to transfer chats to a button queue.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

Fields

Field Name	Details
<code>LiveChatButtonId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ID of the live chat button that agents can transfer chats to.</p>
<code>LiveChatUserConfigId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the Chat configuration; agents associated with this configuration can transfer chats to the chat button indicated by the <code>LiveChatButtonId</code>.</p>

UserConfigTransferSkill

Represents the association between a Chat configuration and a skill. This association allows users associated with a specific configuration to transfer chats to agents who have that skill.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
LiveChatUserConfigId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the Chat configuration; agents associated with this configuration can transfer chats to the chat button indicated by the <code>LiveChatButtonId</code>.</p>
SkillId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ID of the skill group that agents can transfer chats to.</p>

UserCustomBadge

Represents a custom badge for a user. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
BadgeType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The type of badge. Valid values are:</p> <ul style="list-style-type: none"> • Customer • Partner • Employee

Field Name	Details
CustomText	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Custom text for the badge.</p>
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the Experience Cloud site or org that the badge is in.</p>

UserCustomBadgeLocalization

Represents the translated version of a custom badge for a user. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Special Access Rules

- Translation Workbench must be enabled for your org.
- Users with the “Customize Application” or “Manage Translation” permission can create or update UserCustomBadge translations.

Fields

Field Name	Details
Language	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The language the UserCustomBadge is translated into. This picklist contains these fully supported languages.</p> <ul style="list-style-type: none"> • Chinese (Simplified): zh_CN • Chinese (Traditional): zh_TW

Field Name

Details

- Danish: `da`
- Dutch: `n1_NL`
- English: `en_US`
- Finnish: `fi`
- French: `fr`
- German: `de`
- Italian: `it`
- Japanese: `ja`
- Korean: `ko`
- Norwegian: `no`
- Portuguese (Brazil): `pt_BR`
- Russian: `ru`
- Spanish: `es`
- Spanish (Mexico): `es_MX` Spanish (Mexico) defaults to Spanish for customer-defined translations.
- Swedish: `sv`
- Thai: `th` The Salesforce user interface is fully translated to Thai, but Help is in English.

NamespacePrefix

Type

string

Properties

Filter, Group, Nillable, Sort

Description

The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the ***namespacePrefix__componentName*** notation.

The namespace prefix can have one of the following values.

- In Developer Edition orgs, `NamespacePrefix` is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer.
- In orgs that are not Developer Edition orgs, `NamespacePrefix` is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.

ParentId

Type

reference

Field Name	Details
	<p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the UserCustomBadge.</p>
Value	<p>Type string</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The translated text for the UserCustomBadge. Label is Translation Text.</p>

UserDailyMetric

Represents the daily engagement metrics for a user. This object is available in API version 52.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

High Velocity Sales must be enabled.

Fields

Field	Details
AllCallsCallBackLater	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of calls in the day for this user with the call result Call Back Later.</p>
AllCallsLeftVoicemail	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description The number of calls in the day for this user with the call result Left Voicemail.</p>
AllCallsMeaningfulConnect	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of calls in the day for this user with the call result Meaningful Connect.</p>
AllCallsNotInterested	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of calls in the day for this user with the call result Not Interested.</p>

AllEmailsDeliveredCount	<p>Type int</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of successfully delivered emails for this user in the day. This is a calculated field.</p>
AllEmailsHardBouncedCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of hard bounced emails for this user in the day.</p>
AllEmailsOutOfOfficeCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of emails that triggered an out of office reply for this user in the day.</p>
AllEmailsSentCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of emails sent by this user in the day. This is a calculated field.</p>
AllEmailsSoftBouncedCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of emails soft bounced for this user in the day.</p>
AllEmailsTrackedSentCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of emails sent by this user with engagement tracking enabled in the day.</p>

Field	Details
AllEmailsUntrackedSentCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of emails sent by this user without engagement tracking enabled in the day.</p>
AllTotalCallsCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The total number of calls by this user with all call results in the day. This is a calculated field.</p>
DailyCutOffTimeStamp	<p>Type dateTime</p> <p>Properties Filter, Sort</p> <p>Description The time of day when each 24 hour metrics period starts and ends.</p>
Date	<p>Type date</p> <p>Properties Filter, Group, Sort</p> <p>Description The date on which the engagement occurred.</p>
DateInt	<p>Type int</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The date on which the engagement occurred, in yyyyymmdd format.</p>
IsLocked	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p>

Field	Details
	<p>Description</p> <p>Indicates whether the daily metric record is locked or not.</p> <p>The default value is 'false'.</p>
MayEdit	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Indicates whether the daily metric record can be edited or not.</p> <p>The default value is 'false'.</p>
UniqueEmailsLinkClickedCount	<p>Type</p> <p>int</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The number of unique recipients who clicked a link in an email sent by the user on the day.</p>
UniqueEmailsOpenedCount	<p>Type</p> <p>int</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The number of unique recipients who opened an email sent by the user on the day.</p>
UniqueEmailsRepliedCount	<p>Type</p> <p>int</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The number of unique recipients who replied to an email sent by the user on the day.</p>
UserId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Group, Sort</p> <p>Description</p> <p>The ID of the related user.</p> <p>This is a relationship field.</p>

Field	Details
	Relationship Name User
	Relationship Type Lookup
	Refers To User

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[UserDailyMetricOwnerSharingRule](#)

Sharing rules are available for the object.

[UserDailyMetricShare](#) on page 3967

Sharing is available for the object.

UserDailyMetricOwnerSharingRule

Represents the rules for sharing the user daily metric with users other than the owner.

 **Note:** To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

High Velocity Sales must be enabled.

Fields

Field	Details
AccessLevel	Type picklist
	Properties Create, Filter, Group, Restricted picklist, Sort, Update

Field	Details
	<p>Description</p> <p>Determines the level of access users have to records. Values are:</p> <ul style="list-style-type: none"> • Read (read only) • Edit (read/write)
Description	<p>Type</p> <p>textarea</p> <p>Properties</p> <p>Create, Filter, Nillable, Sort, Update</p> <p>Description</p> <p>Description of the sharing rule. Maximum length is 1000 characters.</p>
DeveloperName	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance slows down while Salesforce generates one for each record.</p>
GroupId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>ID of the source group. Records that are owned by users in the source group trigger the rule to give access.</p>
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, idLookup, Sort, Update</p> <p>Description</p> <p>Label of the sharing rule as it appears in the UI. Maximum length is 80 characters.</p>

Field	Details
UserOrGroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the user or group that you are granting access to.</p>

Usage

Use this object to manage the sharing rules for cases. General sharing and territory management-related sharing use this object.

UserDevice

Represents information unique to a device. Available in API version 43.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

You must have View Devices enabled to see devices.

Fields

Field Name	Details
BrowserType	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The browser used for login.</p>
DeviceNativeUId	<p>Type string</p>

Field Name	Details
	<p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description A unique string used to identify a mobile device.</p>
DeviceType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The device used to log in to Salesforce. The picklist options are:</p> <ul style="list-style-type: none"> • Desktop • Tablet • iPad • iPhone • Phone • Unknown
IsVerified	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Reserved for future use.</p>
LastLoginHistoryId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The most recent LoginHistory associated with the device.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description This field is system-generated and can't be changed.</p>
PlatformType	<p>Type picklist</p>

Field Name	Details
	<p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The operating system of the device. The picklist options are:</p> <ul style="list-style-type: none"> • iOS • Android • OSX • Linux • Phone • Windows • AppleApp • Blackberry • Other
PlatformVersion	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The version of the operating system running on the device.</p>
Status	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The activity status of the device. The picklist options are:</p> <ul style="list-style-type: none"> • Approved • Pending Approval • Revoked
UserId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the user.</p>
UserLastSeen	<p>Type dateTime</p>

Field Name	Details
	<p>Properties Filter, Nillable, Sort</p> <p>Description The date and time of the user's last access.</p>
UserProvidedDeviceIdentifier	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description An identifier for the user's device such as the International Mobile Equipment Identity (IMEI) number or the device serial number.</p> <p> Note: This field isn't automatically populated. The developer must provide values.</p>

UserDeviceApplication

Represents information on applications installed on a device that is accessing Salesforce. Available in API version 43.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

You must have View Devices enabled to see devices.

Fields

Field Name	Details
ApplicationType	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The type of application used to log in to Salesforce.</p>
Name	<p>Type string</p>

Field Name	Details
	<p>Properties Filter, Group, idLookup, Sort</p> <p>Description This field is system-generated and cannot be changed.</p>
Status	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The activity status of the device application. The picklist options are:</p> <ul style="list-style-type: none"> • Approved • Pending Approval • Revoked
UserDeviceId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The unique identifier used to identify a device when tracking events. UserDeviceId is a generated value that's created when the mobile app is initially run after installation.</p>
UserId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the user.</p>

UserDeviceHistory

Represents tracking information on the UserDevice sObject. This object is available in API version 50.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Fields

Field

DataType

Details

Type

picklist

Properties

Filter, Group, Nillable, Restricted picklist, Sort

Description

The type of data that has changed.

Possible values are:

- Address
- AnyType
- AutoNumber
- Base64
- BitVector
- Boolean
- Content
- Currency
- DataCategoryGroupReference
- DateOnly
- DateTime
- Division
- Double
- DynamicEnum
- Email
- EncryptedBase64
- EncryptedText
- EntityId
- EnumOrId
- ExternalId
- Fax
- File
- HtmlMultiLineText
- HtmlStringPlusClob
- InetAddress
- Json
- Location
- MultiEnum
- MultiLineText

Field	Details
	<ul style="list-style-type: none"> • Namespace • Percent • PersonName • Phone • Raw • RecordType • SfdcEncryptedText • SimpleNamespace • StringPlusClob • Switchable_PersonName • Text • TimeOnly • Url • YearQuarter

Field	Details
	<ul style="list-style-type: none"> • <code>individualMerged</code>—Individual Merged • <code>locked</code>—Record locked. • <code>ownerAccepted</code>—Owner (Accepted) • <code>ownerAssignment</code>—Owner (Assignment) • <code>unlocked</code>—Record unlocked.
<code>NewValue</code>	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The value after a change has occurred.</p>
<code>OldValue</code>	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The value before a change has occurred.</p>
<code>UserDeviceId</code>	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the UserDevice object.</p>

UserEmailCalendarSync

Represents the user assignments of an Einstein Activity Capture configuration. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `describeSObjects()`, `query()`, `update()`, `upsert()`

Special Access Rules

To access this object, enable Einstein Activity Capture in your org.

Fields

Field	Details
ConfigurationId	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the Einstein Activity Capture configuration. The configuration is created in Salesforce Setup. After the configuration is created, the autogenerated ID is visible on the Configurations tab. From Setup, in the Quick Find box, enter <i>Einstein Activity Capture</i>, and then select Settings. Click the Configurations tab.</p>
UserId	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the user. Only Einstein Activity users can be added to a configuration.</p>

Usage

Use UserEmailCalendarSync to add and remove users to an Einstein Activity Capture configuration.

This example adds two users to an Einstein Activity Capture configuration.

```
// Create a list of UserEmailCalendarSync records
List<UserEmailCalendarSync> usersToAdd = new ArrayList<>();

// Populate the UserEmailCalendarSync record with the ID of
// the user, and with the ID of the Activity Capture configuration you are adding them to
UserEmailCalendarSync user1 = new UserEmailCalendarSync(ConfigurationId = '0063xxxxxxxxxx',
    UserId = '005xxxxxxxxxxxxx');

UserEmailCalendarSync user2= new UserEmailCalendarSync(ConfigurationId = '0063xxxxxxxxxx',
    UserId = '005xxxxxxxxxxxxx');
```

```
// add the UserEmailCalendarSync users to your list
usersToAdd.add(user1);
usersToAdd.add(user2);
```

```
// Insert the list of UserEmailCalendarSync into the database
Database.SaveResult[] results = Database.insertImmediate(usersToAdd);
```

This example removes a user from an Einstein Activity Capture configuration.

To remove a user, call `UserEmailCalendarSync()`, passing in null for `ConfigurationId`.

```
UserEmailCalendarSync user2Remove= new
UserEmailCalendarSync(ConfigId = "", UserId ='005xxxxxxxxxxxxx');
Database.SaveResult results =Database.insertImmediate(user2Remove);
```

UserEmailPreferredPerson

Represents a mapping for a user's preferred record for an email address when multiple records match an email field. This object is available in API version 44.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
Email	<p>Type email</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Required. The unique email the mapping applies to. This field is unique for each user.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description Read-only. Auto-generated field.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Required. The userId that owns the record. Each record is only accessible to the owner.</p>

Field	Details
	<p>This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
PersonRecordId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. The recordId of a contact, lead, or user that represents the preferred record for the email address. Use cascade delete for contact and lead, and delete if the personId is a deactivated user record.</p> <p>This is a polymorphic relationship field.</p> <p>Relationship Name PersonRecord</p> <p>Relationship Type Lookup</p> <p>Refers To Contact, Lead, User</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[UserEmailPreferredPersonShare](#)

Sharing is available for the object.

UserEmailPreferredPersonShare

Represents a sharing entry on a UserEmailPreferredPerson object. Sharing is not customizable for UserEmailPreferredPerson records. This object is available in API version 44.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field	Details
AccessLevel	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Required. The level of access allowed. Values can be:</p> <ul style="list-style-type: none"> • All • Edit • Read
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort,</p> <p>Description Id of the parent record, if any. This is a relationship field.</p> <p>Relationship Name Parent</p> <p>Relationship Type Lookup</p> <p>Refers To UserEmailPreferredPerson</p>
RowCause	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort,</p> <p>Description Required. Reason that the sharing entry exists. Valid values can include:</p> <ul style="list-style-type: none"> • Manual—The User or Group has access because a user with All access manually shared the record with them. • Owner—The User is the owner of the record or is in a role above the record owner in the role hierarchy.
UserOrGroupId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Filter, Group, Sort,</p> <p>Description Required. ID of the user or group that has been given access to the <code>UserEmailPreferredPerson</code> record. The <code>UserOrGroupID</code> is polymorphic. The label is <code>User/Group Id</code>.</p> <p>This is a polymorphic relationship field.</p> <p>Relationship Name UserOrGroup</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>

UserLicense

Represents a user license in your organization. A user license entitles a user to specific functionality and determines the profiles and permission sets available to the user.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Fields

Field	Details
<code>LicenseDefinitionKey</code>	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description A string that uniquely identifies a particular user license. Label is <code>License Def. ID</code>. Values are:</p> <ul style="list-style-type: none"> AUL: corresponds to the Salesforce Platform user license AUL1: corresponds to the Salesforce Platform One user license AUL_LIGHT corresponds to the Salesforce Platform Light user license FDC_ONE corresponds to the Lightning Platform - One App user license FDC_SUB corresponds to the Lightning Platform App Subscription user license

Field	Details
	<p>Overage_Platform_Portal_User corresponds to the Overage Authenticated Website user license</p> <p>PID_STRATEGIC_PRM: corresponds to the Gold Partner user license</p> <p>PID_CHATTER corresponds to the Chatter Only user license</p> <p>PID_CONTENT corresponds to the Content Only user license</p> <p>PID_Customer_Portal_Basic: corresponds to the Customer Portal Manager Standard user license and the Customer Portal User license</p> <p>PID_Customer_Portal_Standard: corresponds to the Customer Portal Manager Custom user license</p> <p>PID_FDC_FREE corresponds to the Lightning Platform Free user license</p> <p>PID_IDEAS corresponds to the Ideas Only user license</p> <p>PID_Ideas_Only_Portal corresponds to the Ideas Only Portal user license</p> <p>PID_Ideas_Only_Site corresponds to the Ideas Only Site user license</p> <p>PID_KNOWLEDGE corresponds to the Knowledge Only user license</p> <p>PID_Customer_Community corresponds to the Customer Community license.</p> <p>PID_Customer_Community_Login corresponds to the Customer Community Login license.</p> <p>PID_Partner_Community corresponds to the Partner Community license.</p> <p>PID_Partner_Community_Login corresponds to the Partner Community Login license.</p> <p>PID_Limited_Customer_Portal_Basic: corresponds to the Limited Customer Portal Manager Standard user license</p> <p>PID_Limited_Customer_Portal_Standard: corresponds to the Limited Customer Portal Manager Custom user license</p> <p>PID_Overage_Customer_Portal_Basic: corresponds to the Overage Customer Portal Manager Standard user license</p> <p>PID_Overage_High Volume Customer Portal corresponds to the Overage High Volume Customer Portal user license</p> <p>Platform_Portal_User: corresponds to the Authenticated Website user license</p> <p>POWER_PRM: corresponds to the Partner user license</p> <p>POWER_SSP: corresponds to the Customer Portal Manager user license</p> <p>SFDC: corresponds to the Full CRM user license</p>
MasterLabel	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The user license label.</p>

Field	Details
	This field is available in API version 32.0 and later.
MonthlyLoginsEntitlement	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The maximum number of customer or partner portal logins allowed per month. A <code>null</code> value in this field means the user license is charged according to the number of users rather than the number of logins.</p> <p>This field is available in API version 20.0 and later.</p>
MonthlyLoginsUsed	<p>Type int</p> <p>Properties Group, Nillable, Sort</p> <p>Description The number of successful logins for all users associated with a customer or partner portal user license. This field has a non-<code>null</code> value if <code>MonthlyLoginsEntitlement</code> has a non-<code>null</code> value.</p> <p>This field is available in API version 20.0 and later.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The internal name of the user license.</p> <p> Note: Your organization may also include custom user licenses.</p>
Status	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The current status of the user license. Valid values for this field are <code>Active</code> and <code>Disabled</code>.</p> <p>This field is available in API version 32.0 and later.</p>
TotalLicenses	<p>Type int</p>

Field	Details
	<p>Properties Filter, Group, Sort</p> <p>Description The number of user licenses in the organization. This field is available in API version 32.0 and later.</p>
UsedLicenses	<p>Type int</p> <p>Properties Filter, Group, Sort</p> <p>Description The number of user licenses that are assigned to active users in the organization. This field is available in API version 32.0 and later.</p>
UsedLicensesLastUpdated	<p>Type dateTime</p> <p>Properties aggregate, Filter, Sort</p> <p>Description The timestamp of the query. If your license count exceeds your org's allotted threshold, the count timestamp reflects the previous day, otherwise the timestamp reflects the current day and time. This field is available in API version 41.0 and later.</p>

Usage

Users with the "View Setup and Configuration" permission can use the UserLicense object to view the set of currently defined user licenses in your organization.

The UserLicense object is currently used by bulk user creation to determine the user license to which each profile and permission set belongs. For example, if you use the API to create portal users and you want to know which profile belongs to each portal user license, you can query this object for each profile and check the `LicenseDefinitionKey` to identify the associated user license.

SEE ALSO:

[Profile](#)

UserListView

Represents the customizations a user made to a list view. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Name	Details
LastViewedChart	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The last chart a user viewed.</p>
ListViewId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the list view. This is a relationship field.</p> <p>Relationship Name ListView</p> <p>Relationship Type Lookup</p> <p>Refers To ListView</p>
SubjectType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The API name of the sObject for the user list view.</p>
UserId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the user. This is a relationship field.</p>

Name	Details
	Relationship Name User
	Relationship Type Lookup
	Refers To User

UserListViewCriterion

Represents the criterion for a user's customized list view. The criterion consists of the filters or sort order a user added to a list view for the Salesforce Mobile app. This object is available in API version 32.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Name	Details
ColumnName	Type string
	Properties Create, Filter, Group, Sort, Update
	Description The name of the column in the user list view.
Operation	Type picklist
	Properties Create, Filter, Group, Restricted picklist, Sort, Update
	Description The criteria to apply, such as "equals" or "starts with."
SortOrder	Type int
	Properties Create, Filter, Group, Sort, Update

Name	Details
	<p>Description</p> <p>The order in which the list view is evaluated compared to other <code>UserListViewCriterion</code> objects for the given <code>UserListView</code>.</p>
UserListViewId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>The ID of the user list view.</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>UserListView</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>UserListView</p>
Value	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The field values used to filter the list view. For example, a value of <code>94105</code> if the Field is <code>Billing Zip/Postal Code</code> shows only rows that have a billing ZIP code of 94105.</p>

UserLogin

Represents the settings that affect a user's ability to log into an organization. To access this object, you need the `UserPermissions.ManageUsers` permission. This object is available in API version 29.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`, `update()`

Fields

Field Name	Details
IsFrozen	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort, Update</p> <p>Description If <code>true</code>, the user account associated with this object is frozen.</p>
IsPasswordLocked	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort, Update</p> <p>Description If <code>true</code>, the user account associated with this object is locked because of too many login failures. From the API, you can set this field to <code>false</code>, but not <code>true</code>.</p>
UserId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the associated user account. This field can't be updated.</p>

Usage

To query for all frozen users in your organization:

```
SELECT Id, UserId
FROM UserLogin
WHERE IsFrozen = true
```

UserMembershipSharingRule

Represents the rules for sharing user records from a source group to a target group. A user record contains details about a user. Users who are members of the source group can be shared with members of the target group. The source and target groups can be based on roles, portal roles, public groups, or territories. This object is available in API version 26.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Special Access Rules

As of Spring '20 and later, only users with the View Setup and Configuration permission can access this object, and only users with the Manage Sharing permission can edit this object.

Fields

Field	Details
Description	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description A description of the sharing rule. Maximum size is 1000 characters. This field is available in API version 29.0 and later.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to Rule Name in the user interface.</p> <p> Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance slows down while Salesforce generates one for each record.</p>
GroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID representing the source group.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p>

Field	Details
	<p>Description</p> <p>Label of the sharing rule as it appears in the user interface. Limited to 80 characters. Corresponds to Label on the user interface.</p>
UserAccessLevel	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description</p> <p>A value that represents the type of sharing being allowed. The possible values are:</p> <ul style="list-style-type: none"> • Read • Edit
UserOrGroupId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>The ID representing the target group being given access.</p>

Usage

Use this object to manage sharing rules for user records. Source and target groups can include internal users, portal users, Chatter or Chatter External users.

UserMonthlyMetric

Represents the monthly engagement metrics for a user. This object is available in API version 52.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

High Velocity Sales must be enabled.

Fields

Field	Details
AllCallsCallBackLater	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of calls in the month for this user with the call result Call Back Later.</p>
AllCallsLeftVoicemail	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of calls in the month for this user with the call result Left Voicemail.</p>
AllCallsMeaningfulConnect	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of calls in the month for this user with the call result Meaningful Connect.</p>
AllCallsNotInterested	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of calls in the month for this user with the call result Not Interested.</p>
AllCallsUncategorized	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of calls in the month for this user with no call result specified.</p>
AllCallsUnqualified	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description The number of calls in the month for this user with the call result Unqualified.</p>
AllEmailsBouncedCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The total of hard and soft bounced emails sent by this user in the month. This is a calculated field.</p>
AllEmailsDeliveredCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of successfully delivered emails sent by this user in the month. This is a calculated field.</p>
AllEmailsHardBouncedCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of hard bounced emails sent by this user in the month.</p>
AllEmailsLinkClickedCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of emails containing a link clicked by the recipient sent by this user in the month.</p>
AllEmailsOpenedCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of emails opened by the recipient sent by this user in the month.</p>

Field	Details
AllEmailsOutOfOfficeCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of emails that triggered an out of office reply sent by this user in the month.</p>
AllEmailsRepliedCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of emails replied to for this user in the month.</p>
AllEmailsSentCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of emails sent by this user in the month. This is a calculated field.</p>
AllEmailsSoftBouncedCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of emails sent by this user that soft bounced in the month.</p>
AllEmailsTrackedSentCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of emails sent by this user with engagement tracking enabled in the month.</p>
AllEmailsUntrackedSentCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description The number of emails sent by this user without engagement tracking enabled in the month.</p>
AllTotalCallsCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The total number of calls with all call results for this user in the month. This is a calculated field.</p>
IsLocked	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the monthly metric record is locked or not. The default value is <code>false</code>.</p>
MayEdit	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the monthly metric record can be edited or not. The default value is <code>false</code>.</p>
Month	<p>Type date</p> <p>Properties Filter, Group, Sort</p> <p>Description The month in which the engagement occurred.</p>
MonthInt	<p>Type int</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The month in which the engagement occurred, in yyyyymm format.</p>

Field	Details
UniqueEmailsLinkClickedCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of unique recipients who clicked a link in an email sent by this user in the month.</p>
UniqueEmailsOpenedCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of unique recipients who opened an email sent by this user in the month.</p>
UniqueEmailsRepliedCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of unique recipients who replied to an email sent by this user in the month.</p>
UserId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the related user. This is a relationship field.</p> <p>Relationship Name User</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[UserMonthlyMetricOwnerSharingRule](#)

Sharing rules are available for the object.

UserMonthlyMetricShare on page 3967

Sharing is available for the object.

UserMonthlyMetricOwnerSharingRule

Represents the rules for sharing the user monthly metric with users other than the owner.

 **Note:** To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

High Velocity Sales must be enabled.

Fields

Field	Details
AccessLevel	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Determines the level of access users have to records. Values are:</p> <ul style="list-style-type: none"> • Read (read only) • Edit (read/write)
Description	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Description of the sharing rule. Maximum length is 1000 characters.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description</p> <p>The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> Note: When creating large sets of data, always specify a unique <code>DeveloperName</code> for each record. If no <code>DeveloperName</code> is specified, performance slows down while Salesforce generates one for each record.</p>
GroupId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>ID of the source group. Records that are owned by users in the source group trigger the rule to give access.</p>
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, idLookup, Sort, Update</p> <p>Description</p> <p>Label of the sharing rule as it appears in the UI. Maximum length is 80 characters.</p>
UserOrGroupId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>ID of the user or group that you are granting access to.</p>

Usage

Use this object to manage the sharing rules for cases. General sharing and territory management-related sharing use this object.

[UserMonthlyMetric](#)

[Metadata API Developer Guide: SharingRules](#)

UserPackageLicense

Represents a license for an installed managed package, assigned to a specific user. This object is available in API version 31.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`

Fields

Field Name	Details
PackageLicenseId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The 18-character Globally Unique ID (GUID) that identifies the package license This is a relationship field.</p> <p>Relationship Name PackageLicense</p> <p>Relationship Type Lookup</p> <p>Refers To PackageLicense</p>
UserId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The User ID of the user licensed to use this package</p>

Usage

Use this object, in conjunction with PackageLicense, to provide users access to a managed package installed in your organization.

UserPermissionAccess

Represents the permissions accessibility for a current user. Available in API version 41.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
<code>LastCacheUpdate</code>	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The last modified date and time of either the user info or org info, whichever is later.</p>
<code>Permissions<PermissionName></code>	<p>Type boolean</p> <p>Properties Filter</p> <p>Description The name of the permission, such as <code>PermissionsActivateContract</code> or <code>PermissionsAuthorApex</code> and whether it's available to the user (<code>true</code>) or not (<code>false</code>).</p>

Usage

API users without `PermissionsViewSetup` can use this object to check if their own sessions have access to a feature.

SEE ALSO:

[Profile](#)

[PermissionSet](#)

UserPrioritizedRecord

Represents records that Pipeline Inspection users flag as important for tracking in pipeline views and filters. This object is available in API version 53.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To use UserPrioritizedRecord, enable the Pipeline Inspection user permission and the Pipeline Inspection setting.

Fields

Field	Details
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description ID of the user who marked this record as important. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
TargetId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The Id of the target object that is marked as important. Supported objects include:</p> <ul style="list-style-type: none"> • Opportunity <p>This is a polymorphic relationship field.</p> <p>Relationship Name Target</p> <p>Relationship Type Lookup</p> <p>Refers To Opportunity</p>
TargetKeyPrefix	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The key prefix of the target object that is marked as important.</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[UserPrioritizedRecordOwnerSharingRule](#) on page 3961

Sharing rules are available for the object.

[UserPrioritizedRecordShare](#) on page 3967

Sharing is available for the object.

UserPreference

Represents a functional preference for a specific user in your organization.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Customer Portal users can't access this object.

Only users with the View All Data or Manage Users permission can access UserPreference records of other users but all users can access their own UserPreference record.

 **Note:** This behavior does not affect other types of user access such as Create or Edit.

Fields

Field	Details
Preference	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The name of the user preference. Supported values are:</p> <ul style="list-style-type: none"> • 57 (Event Reminder Default Lead Time) • 58 (Task Reminder Default Time) • 91 (Prevent Logs on Load) • 92 (Autocomplete Apex After Key Press) • 93 (Visualforce Viewstate Inspector) • 94 (Forecasting Displayed Type) • 96 (Editor Theme) • 97 (Editor Font Size)

Field	Details
	<ul style="list-style-type: none"> • 98 (Pinned Folders) • 99 (Enable Query Plan) • 100 (Enable New Open Dialog) • 101 (Email Transport Type) • 102 (Pinned Wave Folders) • 108 (Density) <p>Event Reminder Default Lead Time and Task Reminder Default Time are related to these fields on the User object:</p> <ul style="list-style-type: none"> • <code>UserPreferencesEventRemindersCheckboxDefault</code> • <code>UserPreferencesTaskRemindersCheckboxDefault</code> • <code>UserPreferencesSuppressEventSFXReminders</code> • <code>UserPreferencesSuppressTaskSFXReminders</code> <p>Enable New Open Dialog is reserved for future use.</p> <p>When creating SOQL queries, <code>tolabel</code> is required to return accurate results. For example, <code>select Id, tolabel(Preference), Value, UserId from UserPreference.</code></p> <p>108 (Density) is available in API v44.0 and later.</p>
UserId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the user associated with this role. The corresponding field label is User ID. Admin users can create and edit preferences for other users. Standard users can delete their own preferences only. For a standard user, the value of the <code>UserId</code> field must be their own <code>UserId</code>.</p>
Value	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The value of the user preference. For <code>Event Reminder Default Lead Time</code>, the values are increasing intervals of time from 0 minutes to 2 days. For <code>Task Reminder Default Time</code>, the values are half-hours from 12:00 AM to 11:30 PM. To view the respective sets of values, access the Reminders in your personal settings in the online application.</p>

Usage

Use this object to query the set of currently configured user preferences in your organization. In your client application, you can query the User object to obtain valid User IDs to access the UserPreference object.

All users can invoke the supported calls with this object. Standard users can invoke these calls, but only on their own preferences.

UserProfile

Represents a Chatter user profile.

Note: This object has been deprecated as of API version 32.0. Use the [User](#) object to query information about a user in API version 32.0 and later.

Supported Calls

`describeLayout()`, `query()`, `retrieve()`

Special Access Rules

- Information in hidden fields in a user's profile isn't searchable by external users (with a portal profile) in an Experience Cloud site. For example, if a user in a site has a hidden email address and an external user searches for it, the user record isn't returned in the search results. Hidden field values also aren't returned when external users perform searches on nonhidden fields. So if an external user searches for a user's name (can't be hidden), any hidden field values associated with the user record such as a hidden email address aren't returned in the search results.

internal users belonging to the same Experience Cloud site can search for and view hidden field values in search results.

- Any fields that have been restricted in visibility will be returned empty, whether or not they are, and will not be removed from the field listing.

Fields

Field	Details
AboutMe	<p>Type textarea</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Information about the user, such as areas of interest or skills.</p>
Address (beta)	<p>Type address</p> <p>Properties Filter, Nillable</p>

Field	Details
	Description The compound form of the address. Read-only. See Address Compound Fields for details on compound address fields.
City	Type string Properties Filter, Group, Nillable, Sort Description The city associated with the user profile.
CompanyName	Type string Properties Filter, Group, Nillable, Sort Description The company associated with the user profile.
Country	Type string Properties Filter, Group, Nillable, Sort Description The country associated with the user profile.
Email	Type email Properties Filter, Group, idLookup, Sort Description The email address associated with the user profile.
Fax	Type phone Properties Filter, Group, Nillable, Sort Description The fax number associated with the user profile.
FirstName	Type string

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description The user's first name.</p>
FullPhotoUrl	<p>Type url</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The URL for the user's profile photo if Chatter is enabled. The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo is uploaded, the URL returned for an older photo isn't guaranteed to return a photo. Query this field for the URL of the most recent photo.</p>
IsActive	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the user has access to log in (<code>true</code>) or not (<code>false</code>). You can modify a User's active status from the user interface or via the API.</p>
IsBadged	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the user is visually badged (<code>true</code>) or not (<code>false</code>). Users of the same Chatter user type (internal, external) are badged. Different user types are not badged.</p>
LastName	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The user's last name.</p>

Field	Details
Latitude (beta)	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Used with <code>Longitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between <code>-90</code> and <code>90</code> up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations.</p>
Longitude (beta)	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Used with <code>Latitude</code> to specify the precise geolocation of an address. Acceptable values are numbers between <code>-180</code> and <code>180</code> up to 15 decimal places. For details on geolocation compound fields, see Compound Field Considerations and Limitations.</p>
ManagerId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the user who manages this user.</p>
MobilePhone	<p>Type phone</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The user's mobile or cellular phone number.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description Concatenation of <code>FirstName</code> and <code>LastName</code>.</p>

Field	Details
Phone	<p>Type phone</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The user's phone number.</p>
PostalCode	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The user's postal or ZIP code. Label is Zip/Postal Code.</p>
SmallPhotoUrl	<p>Type url</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The URL for a thumbnail of the user's profile photo if Chatter is enabled. The URL is updated every time a photo is uploaded and reflects the most recent photo. If a newer photo is uploaded, the URL returned for an older photo isn't guaranteed to return a photo. Query this field for the URL of the most recent photo.</p>
State	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The state associated with the user profile.</p>
Street	<p>Type textarea</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The street address associated with the user profile.</p>
Title	<p>Type string</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description The user's business title, such as "Vice President."</p>
UserPreferencesActivityRemindersPopup	<p>Type boolean</p> <p>Properties Filter</p> <p>Description When <code>true</code>, a reminder window automatically opens when an activity reminder is due. Corresponds to the <code>Trigger alert when reminder comes due</code> checkbox at the Reminders page in the personal settings in the user interface.</p>
UserPreferencesApexPagesDeveloperMode	<p>Type boolean</p> <p>Properties Filter</p> <p>Description When <code>true</code>, indicates that the user has enabled developer mode for editing Visualforce pages and controllers.</p>
UserPreferencesDisableAllFeedsEmail	<p>Type boolean</p> <p>Properties Filter</p> <p>Description When <code>false</code>, the user automatically receives email for all updates to Chatter feeds, based on the types of feed emails and digests the user has enabled.</p>
UserPreferencesDisableBookmarkEmail	<p>Type boolean</p> <p>Properties Filter</p> <p>Description When <code>false</code>, the user automatically receives email every time someone comments on a Chatter feed item after the user has bookmarked it.</p>

Field	Details
UserPreferencesDisableChangeCommentEmail	<p>Type boolean</p> <p>Properties Filter</p> <p>Description When <code>false</code>, the user automatically receives email every time someone comments on a change the user has made, such as an update to their profile.</p>
UserPreferencesDisableEndorsementEmail	<p>Type boolean</p> <p>Properties Filter</p> <p>Description When <code>false</code>, the member automatically receives email every time someone endorses them for a topic.</p>
UserPreferencesDisableFeedbackEmail	<p>Type boolean</p> <p>Properties Filter</p> <p>Description When <code>false</code>, the user automatically receives emails related to WDC feedback. This includes when someone requests or offers feedback, shares feedback with the user, or reminds the user to answer a feedback request.</p>
UserPreferencesDisableFileShareNotificationsForApi	<p>Type boolean</p> <p>Properties Filter</p> <p>Description When <code>false</code>, email notifications are sent from the person who shared the file to the users that the file is shared with.</p>
UserPreferencesDisableFollowersEmail	<p>Type boolean</p> <p>Properties Filter</p> <p>Description When <code>false</code>, the user automatically receives email every time someone starts following the user in Chatter.</p>

Field	Details
<code>UserPreferencesDisableLaterCommentEmail</code>	<p>Type boolean</p> <p>Properties Filter</p> <p>Description When <code>false</code>, the user automatically receives email every time someone comments on a feed item after the user has commented on the feed item.</p>
<code>UserPreferencesDisableLikeEmail</code>	<p>Type boolean</p> <p>Properties Filter</p> <p>Description When <code>false</code>, the user automatically receives email every time someone likes their post or comment.</p>
<code>UserPreferencesDisableMentionsPostEmail</code>	<p>Type boolean</p> <p>Properties Filter</p> <p>Description When <code>false</code>, the user automatically receives email every time they're mentioned in posts.</p>
<code>UserPreferencesDisableMessageEmail</code>	<p>Type boolean</p> <p>Properties Filter</p> <p>Description When <code>false</code>, the user automatically receives email for Chatter messages sent to the user.</p>
<code>UserPreferencesDisableProfilePostEmail</code>	<p>Type boolean</p> <p>Properties Filter</p> <p>Description When <code>false</code>, the user automatically receives email every time someone posts to the user's profile.</p>

Field	Details
UserPreferencesDisableRewardEmail	<p>Type boolean</p> <p>Properties Filter</p> <p>Description When <code>false</code>, the user automatically receives emails related to WDC rewards. This includes when someone someone gives a reward to the user.</p>
UserPreferencesDisableSharePostEmail	<p>Type boolean</p> <p>Properties Filter</p> <p>Description When <code>false</code>, the user automatically receives email every time their post is shared.</p>
UserPreferencesDisableWorkEmail	<p>Type boolean</p> <p>Properties Filter</p> <p>Description When <code>false</code>, the user receives emails related to WDC feedback, goals, and coaching. The user must also sign up for individual emails listed on the WDC email settings page. When <code>true</code>, the user will not receive any emails related to WDC feedback, goals, or coaching even if they are signed up for individual emails.</p>
UserPreferencesDisCommentAfterLikeEmail	<p>Type boolean</p> <p>Properties Filter</p> <p>Description When <code>false</code>, the user automatically receives email every time someone comments on a post that the user liked.</p>
UserPreferencesDisMentionsCommentEmail	<p>Type boolean</p> <p>Properties Filter</p>

Field	Details
	<p>Description</p> <p>When <code>false</code>, the user automatically receives email every time the user is mentioned in comments.</p>
<code>UserPreferencesDisProfPostCommentEmail</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter</p> <p>Description</p> <p>When <code>false</code>, the user automatically receives email every time someone comments on posts on the user's profile.</p>
<code>UserPreferencesEnableAutoSubForFeeds</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter</p> <p>Description</p> <p>When <code>true</code>, the user automatically subscribes to feeds for any objects that the user creates.</p>
<code>UserPreferencesEventRemindersCheckboxDefault</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter</p> <p>Description</p> <p>When <code>true</code>, a reminder popup is automatically set on the user's events. Corresponds to the <code>By default, set reminder on Events to...</code> checkbox on the Reminders page in the user interface. This field is related to UserPreference and customizing activity reminders.</p>
<code>UserPreferencesHideChatterOnboardingSplash</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter</p> <p>Description</p> <p>When <code>true</code>, the initial Chatter onboarding prompts do not appear.</p>
<code>UserPreferencesHideCSNDesktopTask</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter</p>

Field	Details
	<p>Description</p> <p>When <code>true</code>, the Chatter recommendations panel never displays the recommendation to install Chatter Desktop.</p>
<code>UserPreferencesHideCSNGetChatterMobileTask</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter</p> <p>Description</p> <p>When <code>true</code>, the Chatter recommendations panel never displays the recommendation to install Chatter Mobile.</p>
<code>UserPreferencesHideS1BrowserUI</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter</p> <p>Description</p> <p>Controls the interface that the user sees when logging in to Salesforce from a supported mobile browser. If <code>false</code>, the user is automatically redirected to the Salesforce mobile web. If <code>true</code>, the user sees the full Salesforce site. The default value is <code>false</code>. Label is Salesforce User.</p> <p>This field is available in API version 29.0 or later.</p>
<code>UserPreferencesHideSecondChatterOnboardingSplash</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter</p> <p>Description</p> <p>When <code>true</code>, the secondary Chatter onboarding prompts do not appear.</p>
<code>UserPreferencesReminderSoundOff</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Filter</p> <p>Description</p> <p>When <code>true</code>, a sound automatically plays when an activity reminder is due. Corresponds to the <code>Play a reminder sound</code> checkbox on the Reminders page in the user interface.</p>

Field	Details
UserPreferencesShowCityToExternalUsers	<p>Type boolean</p> <p>Properties Filter</p> <p>Description Indicates the visibility of the city field in the user's contact information. City is visible only to internal members of the user's organization when:</p> <ul style="list-style-type: none"> This field is <code>false</code>. When <code>false</code>, this field returns the value <code>#N/A</code>. <p>City is visible to external members in an Experience Cloud site when:</p> <ul style="list-style-type: none"> This field is <code>true</code>, or This field is <code>false</code> but <code>UserPreferencesShowCityToGuestUsers</code> is <code>true</code>, which overrides this field's value. <p>External users are users with Community, Customer Portal, or partner portal licenses.</p> <p>The default value is <code>false</code>. This field is available in API version 26.0 and later.</p>
UserPreferencesShowCityToGuestUsers	<p>Type boolean</p> <p>Properties Filter</p> <p>Description Indicates the visibility of the city field in the user's contact information. When <code>true</code>, city is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site. When <code>false</code>, this field returns the value <code>#N/A</code>.</p> <p>When <code>true</code>, this field overrides the value <code>false</code> in <code>UserPreferencesShowCityToExternalUsers</code>, making the user's city visible to external members.</p> <p>The default value is <code>false</code>. UserPreferencesShowCountryToExternalUsers	<p>Type boolean</p> <p>Properties Filter</p>

Field

Details

Description

Indicates the visibility of the country field in the user's contact information. Country is visible only to internal members of the user's organization when:

- This field is `false`. When `false`, this field returns the value `#N/A`.

Country is visible to external members in an Experience Cloud site when:

- This field is `true`, or
- This field is `false` but `UserPreferencesShowCountryToGuestUsers` is `true`, which overrides this field's value.

External users are users with Community, Customer Portal, or partner portal licenses.

The default value is `false`. This field is available in API version 26.0 and later.

`UserPreferencesShowCountryToGuestUsers`

Type

boolean

Properties

Filter

Description

Indicates the visibility of the country field in the user's contact information. When `true`, country is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site. When `false`, this field returns the value `#N/A`.

When `true`, this field overrides the value `false` in `UserPreferencesShowCountryToExternalUsers`, making the user's country visible to external members.

The default value is `false`. This field is available in API version 28.0 and later.

`UserPreferencesShowEmailToExternalUsers`

Type

boolean

Properties

Filter

Description

Indicates the visibility of the email address field in the user's contact information. Email address is visible only to internal members of the user's organization when this field is `false`. Email address is visible to external members in an Experience Cloud site when this field is

Field	Details
	<p><code>true</code>. External users are users with Community, Customer Portal, or partner portal licenses.</p> <p>When <code>false</code>, this field returns the value <code>#N/A</code>. The default value is <code>false</code>. This field is available in API version 26.0 and later.</p>
UserPreferencesShowFaxToExternalUsers	<p>Type boolean</p> <p>Properties Filter</p> <p>Description Indicates the visibility of the fax number field in the user's contact information. Fax number is visible only to internal members of the user's organization when this field is <code>false</code>. UserPreferencesShowStateToGuestUsers	<p>Type boolean</p> <p>Properties Filter</p> <p>Description Indicates the visibility of the state field in the user's contact information. When <code>true</code>, state is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in</p>

Field**Details**

Experience Cloud sites, via the Guest User license associated with each site. When `false`, this field returns the value `#N/A`.

When `true`, this field overrides the value `false` in `UserPreferencesShowStateToExternalUsers`, making the user's state visible to external members.

The default value is `false`. This field is available in API version 28.0 and later.

`UserPreferencesShowStreetAddressToExternalUsers`

Type

boolean

Properties

Filter

Description

Indicates the visibility of the street address field in the user's contact information. The address is visible only to internal members of the user's organization when this field is `false`. The address is visible to external members in an Experience Cloud site when this field is `true`. External users are users with Community, Customer Portal, or partner portal licenses.

When `false`, this field returns the value `#N/A`. The default value is `false`. This field is available in API version 26.0 and later.

`UserPreferencesShowTitleToExternalUsers`

Type

boolean

Properties

Filter

Description

Indicates the visibility of the business title field in the user's contact information. Title is visible only to internal members of the user's organization when:

- This field is `false`. When `false`, this field returns the value `#N/A`.

Title is visible to external members in an Experience Cloud site when:

- This field is `true`, or
- This field is `false` but `UserPreferencesShowTitleToGuestUsers` is `true`, which overrides this field's value.

External users are users with Community, Customer Portal, or partner portal licenses.

The default value is `true`. This field is available in API version 26.0 and later.

Field	Details
UserPreferencesShowTitleToGuestUsers	<p>Type boolean</p> <p>Properties Filter</p> <p>Description Indicates the visibility of the business title field in the user's contact information. When <code>true</code>, title is visible to guest users. Guest users can access public Site.com and Salesforce sites, and public pages in Experience Cloud sites, via the Guest User license associated with each site. When <code>false</code>, this field returns the value <code>#N/A</code>.</p> <p>When <code>true</code>, this field overrides the value <code>false</code> in <code>UserPreferencesShowTitleToExternalUsers</code>, making the user's title visible to external members.</p> <p>The default value is <code>false</code>. This field is available in API version 28.0 and later.</p>
UserPreferencesShowWorkPhoneToExternalUsers	<p>Type boolean</p> <p>Properties Filter</p> <p>Description Indicates the visibility of the work phone number field in the user's contact information. The number is visible only to internal members of the user's organization when this field is <code>false</code>. The number is visible to external members in an Experience Cloud site when this field is <code>true</code>. External users are users with Community, Customer Portal, or partner portal licenses.</p> <p>When <code>false</code>, this field returns the value <code>#N/A</code>. The default value is <code>false</code>. This field is available in API version 26.0 and later.</p>
UserPreferencesTaskRemindersCheckboxDefault	<p>Type boolean</p> <p>Properties Filter</p> <p>Description When <code>true</code>, a reminder popup is automatically set on the user's tasks. Corresponds to the <code>By default, set reminder on Tasks to...</code> checkbox on the Reminders page in the user interface. This field is related to UserPreference and customizing activity reminders.</p>

Usage

Use this object to query Chatter—related information about the user. While the User object contains all the information about a user and is historically tied to user management, UserProfile is a read-only entity that contains the information that is relevant in a Chatter context.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

UserProfileFeed (API version 18.0–26.0)

Feed tracking is available for the object.

UserProvAccount

Represents information that links a Salesforce user account with an account in a third-party (target) system, such as Google, for users of connected apps with Salesforce user provisioning enabled. This object is available in API version 33.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ConnectedAppId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The 15 character application ID. This is a relationship field.</p> <p>Relationship Name ConnectedApp</p> <p>Relationship Type Lookup</p> <p>Refers To ConnectedApplication</p>
DeletedDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p>

Field	Details
	<p>Description The date and time when the associated user account in the target system was deleted. This value is automatically updated during the provisioning and reconciling processes.</p>
ExternalEmail	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The email address as stored in the target system for the associated user account.</p>
ExternalFirstName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The first name as stored in the target system for the associated user account.</p>
ExternalLastName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The last name as stored in the target system for the associated user account.</p>
ExternalUserId	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p>Description The unique identifier for the user as stored in the target system.</p>
ExternalUsername	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The username as stored in the target system for the associated user account.</p>
IsKnownLink	<p>Type boolean</p>

Field	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Setting the <code>IsKnownLink</code> value to <code>true</code> implies the administrator or another user is managing the relationship between the Salesforce user account and the third-party user account, manually. This field helps Salesforce coordinate updates between the <code>UserProvAccountStaging</code> object and the <code>UserProvAccount</code> object while committing staged accounts. Typically, for a matching user account (the same <code>ExternalUserId</code> for both objects), Salesforce copies the values from the <code>UserProvAccountStaging</code> object to the <code>UserProvAccount</code> object.</p> <p>However, if Salesforce encounters a <code>UserProvAccountStaging</code> object with a matching <code>ExternalUserId</code> but different <code>LinkState</code> and <code>SalesforceUserId</code> values during this process, Salesforce checks the <code>UserProvAccount</code> <code>IsKnownLink</code> value. If the <code>IsKnownLink</code> value is <code>true</code>, Salesforce doesn't copy the <code>LinkState</code> and <code>SalesforceUserId</code> values from the <code>UserProvAccountStaging</code> object to the <code>UserProvAccount</code> object (all other values are copied).</p> <p>The default is <code>false</code>, meaning Salesforce manages the account relationship.</p>
LinkState	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The state of the current connection between the user account in the Salesforce organization and the associated user account in the target system. The valid values are:</p> <ul style="list-style-type: none"> • <code>linked</code>— changes to the account in the Salesforce organization are queued to be updated for the associated user account in the target system. • <code>duplicate</code>— an associated account in the target system exists. • <code>orphaned</code>—no associated account exists in the target system. • <code>ignored</code>— changes to the account in the Salesforce organization have no effect on the associated user account in the target system.
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The unique name for this object.</p>
OwnerId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Namepointing, Sort, Update</p> <p>Description The user ID of the owner of this object—typically a Salesforce administrator.</p>
SalesforceUserId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The user ID for the user account in the Salesforce organization that is associated with the user account in the target system. This is a relationship field.</p> <p>Relationship Name SalesforceUser</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
Status	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The status of the account in the target system. The valid values are:</p> <ul style="list-style-type: none"> • Active • Deactivated • Deleted

UserProvAccountStaging

Temporarily stores user account information while a user completes the User Provisioning Wizard. This information that is stored in the UserProvAccount object when you click the button to collect and analyze accounts on the target system.

User provisioning links a Salesforce user account with an account in a third-party (target) system. To configure user provisioning, you use a User Provisioning Wizard that guides you through the setup process. As you enter values about account details in the wizard, these values are stored in this object until you click the button to collect and analyze accounts on the target system. The general user provisioning configuration details are stored in the UserProvisioningConfig object.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details

Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description</p> <p>The unique name for this object.</p>
OwnerId	<p>Type</p> <p>reference</p>

Field Name	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The user ID of the owner of this object—typically a Salesforce administrator.</p>
SalesforceUserId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The user ID for the user account in the Salesforce organization that is associated with the user account in the target system. This is a relationship field.</p> <p>Relationship Name SalesforceUser</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
Status	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The status of the account in the target system. The valid values are:</p> <ul style="list-style-type: none"> • Active • Deactivated • Deleted

Usage

When committing fields from a `UserProvAccountStaging` to a `UserProvAccount` object, Salesforce looks up the `UserProvAccount` record where `UserProvAccountStaging.ExternalUserId = UserProvAccount.ExternalUserId`.

- If an `ExternalUserId` doesn't match an existing account, Salesforce creates a `UserProvAccount` record based on the `UserProvAccountStaging` record.
- If an `ExternalUserId` matches, then Salesforce checks the `UserProvAccount.IsKnownLink` value, and does the following.
 - If `UserProvAccount.IsKnownLink = true`, Salesforce copies the `UserProvAccountStaging` values to the `UserProvAccount` object, except for the `ExternalUserId` and `LinkState` values.

- If `UserProvAccount.IsKnownLink = false`, Salesforce copies all of the `UserProvAccountStaging` values to the `UserProvAccount` object.

UserProvMockTarget

Represents an entity for testing user data before committing the data to a third-party system for user provisioning.

During the user provisioning process, user account information is sent to a third-party system to create, update or delete a user account on that system. While configuring user provisioning for your organization using a flow or Apex action, you can use this object to confirm the associated flow or Apex code is sending the desired data. After confirming the correct fields and values, you can update the flow or Apex action to send the data to the target system.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
<code>ExternalEmail</code>	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The email address as stored in the target system for the associated user account.</p>
<code>ExternalFirstName</code>	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The first name as stored in the target system for the associated user account.</p>
<code>ExternalLastName</code>	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The last name as stored in the target system for the associated user account.</p>

Field Name	Details
ExternalUserId	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p>Description The unique identifier for the user as stored in the target system.</p>
ExternalUsername	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The username as stored in the target system for the associated user account.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The unique name for this object.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The user ID of the owner of this object—typically a Salesforce administrator.</p>

UserProvisioningConfig

Represents information for a flow to use during a user provisioning request process, such as the attributes for an update. This object is available in API version 34.0 and later.

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Field Name	Details
ApprovalRequired	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Denotes whether approvals are required for provisioning users for the associated connected app. If the value is null, no approval is required.</p>
ConnectedAppId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The 18-digit application ID for the connected app. This is a relationship field.</p> <p>Relationship Name ConnectedApp</p> <p>Relationship Type Lookup</p> <p>Refers To ConnectedApplication</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package, and the changes are reflected in a subscriber's organization.</p> <p> Note: Only users with View DeveloperName OR View Setup and Configuration permission can view, group, sort, and filter this field.</p>
Enabled	<p>Type boolean</p>

Field Name	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether user provisioning is enabled for the associated connected app (<code>true</code>) or not (<code>false</code>).</p>
EnabledOperations	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Lists the operations, as comma-separated values, that create a UserProvisioningRequest object for the associated connected app. Allowed values are:</p> <ul style="list-style-type: none"> • Create • Update • EnableAndDisable (activation and deactivation) • SuspendAndRestore (freeze and unfreeze)
Language	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The two- to five-character code that represents the language and locale ISO. This code controls the language for labels displayed in an application.</p>
LastReconDateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date and time when user accounts were last reconciled between Salesforce and the target system.</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>The primary label for this object. This value is the internal label that doesn't get translated.</p>
NamedCredentialId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Salesforce ID of the named credential that's used for a request. The named credential identifies the third-party system and the third-party authentication settings. This is a relationship field.</p> <p>Relationship Name NamedCredential</p> <p>Relationship Type Lookup</p> <p>Refers To NamedCredential</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation. The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> • In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. • In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix.
Notes	<p>Type textarea</p>

Field Name	Details
	<p>Properties Create, Nillable, Update</p> <p>Description A utility field for administrators to add any additional information about the configuration. This field is for internal reference only, and is not used by any process.</p>
OnUpdateAttributes	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Lists the user attributes, as comma-separated values, that generate a UserProvisioningRequest object during an update.</p>
ReconFilter	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description When collecting and analyzing users on a third-party system, the plug-in uses this filter to limit the scope of the collection.</p>
UserAccountMapping	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Stores the attributes used to link the Salesforce user to the account on the third-party system, in JSON format. For example:</p> <pre style="border: 1px solid #ccc; padding: 5px;">{"linkingSalesforceUserAttribute": "Username", "linkingTargetUserAttribute": "Email"}</pre>

UserProvisioningLog

Represents messages generated during the process of provisioning users for third-party applications. This object is available in API version 33.0 and later.

Some messages for this object are generated automatically by Salesforce, and others are created by the developers of the user provisioning plugin. Developers can use this object to log messages from the flow associated with the user provisioning process or the Apex plugin that calls the target system. Administrators can use this object as a log of all user provisioning activity and as a troubleshooting tool if desired behavior is missing. This object is available as a custom report type.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Details	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The value of this field depends on the log entry. For example, if the target system returns an error, the error message may be recorded in this field.</p>
ExternalUserId	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p>Description The unique identifier for the user in the target system.</p>
ExternalUsername	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The username set in the target system for the associated user account.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The unique name for this object.</p>
OwnerId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Salesforce ID of the Group or User who owns this object.</p>
Status	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The status of the user provisioning request. Based on the context of the log, it can contain different values, such as an HttpStatusCode.</p>
UserId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Salesforce ID of the user making the request. This is a relationship field.</p> <p>Relationship Name User</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
UserProvisioningRequestId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description A unique identifier for the user provisioning request. This is a relationship field.</p> <p>Relationship Name UserProvisioningRequest</p> <p>Relationship Type Lookup</p> <p>Refers To UserProvisioningRequest</p>

UserProvisioningRequest

Represents an individual provisioning request to create, update, or delete a single user account in a third-party service system (or another Salesforce organization). This object is available in API version 33.0 and later.

A UserProvisioningRequest (UPR) record is created for each provisioning action for each user, and for each connected app available to the user. For example, if a user has two connected apps, and a provisioning request is sent to two different services to create an account for the user, Salesforce creates two UPR objects. Provisioning actions include creating, updating, or deleting a user account.

Supported Calls

`create()`, `delete()`,
`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
AppName	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p>Description The unique name of the connected app associated with the service provider.</p>
ApprovalStatus	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The status of the approval for the current request. If the user provisioning setup for the connected app does not have an approval process enabled, the status is <code>Not Required</code>. If an approval process is enabled, supported values are:</p> <ul style="list-style-type: none"> • <code>Required</code>— An approval process is enabled in the user provisioning setup for the associated connected app, but there is no response to the request yet. • <code>Not Required</code>— An approval process is not enabled in the user provisioning setup for the associated connected app. • <code>Approved</code> • <code>Denied</code>
ConnectedAppId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description</p> <p>The 18-digit application ID for the connected app.</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>ConnectedApp</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>ConnectedApplication</p>
ExternalUserId	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p>Description</p> <p>The unique identifier for the user in the target system.</p>
ManagerId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Salesforce ID of the user who manages the user specified in the <code>SalesforceUserId</code> field. If an approval process is configured for the user provisioning request, this value allows the manager to approve the request. Available in API version 34.0 and later.</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>Manager</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>User</p>
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description</p> <p>The unique name for this object.</p>

Field	Details
Operation	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The Apex method called by the trigger associated with the provisioning request (typically a change to the User object). Supported values are:</p> <ul style="list-style-type: none"> • Create • Read • Update • Deactivate • Activate • Freeze • Unfreeze • Reconcile • Linking <p>For example, when the User object field <code>isActive</code> is set to <code>false</code>, the UPR object <code>Operation</code> field value is set to <code>Deactivate</code>.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Salesforce ID of the Group or User who owns this object. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
ParentID	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description When a retry event is created, the failed UPR is cloned and resubmitted. This field contains a lookup to the failed UPR that was cloned to create the current record.</p>

Field	Details
	<p>This is a relationship field.</p> <p>Relationship Name Parent</p> <p>Relationship Type Lookup</p> <p>Refers To UserProvisioningRequest</p>
Retry Count	<p>Type int</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Number of retry attempts performed on a UPR. Retry Count enables custom business logic such as "Retry 5 times then stop and notify your admin."</p>
SalesforceUserId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Salesforce ID of the user making the request. This is a relationship field.</p> <p>Relationship Name SalesforceUser</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
ScheduleDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description When to send this request to the service provider.</p> <p> Note: Scheduling is not implemented yet. Currently, provisioning changes are queued immediately to be sent to the service provider.</p>
State	<p>Type picklist</p>

Field	Details
	<p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Status of this request. Supported values are:</p> <ul style="list-style-type: none"> • New • Requested • Completed • Failed • Collecting • Collected • Analyzing • Analyzed • Committing • Retried • Manually Completed <p>The State goes from New to Requested to Completed or Failed, unless a reconciliation process is occurring. For details about the reconciliation process State value changes, see Usage.</p> <p>The State goes from Failed to Retried or Manually Completed when troubleshooting UPR failures. For details about handling failures, see State Values for Managing Provisioning Failures.</p>
UserProvAccountId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID value of the associated UserProvAccount object. This is a relationship field.</p> <p>Relationship Name UserProvAccount</p> <p>Relationship Type Lookup</p> <p>Refers To UserProvAccount</p>
UserProvConfigId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description</p> <p>The ID value of the associated UserProvisioningConfig object. Available in API version 34.0 and later.</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>UserProvConfig</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>UserProvisioningConfig</p>

Usage

The `State` value changes during a reconciliation process (`Operation = Reconcile`) to gather and compare users on the third-party system to Salesforce users. Typically, when a UPR entry is first created, it has a `State` value of `New`. When a collection process is triggered, the `State` transitions to `Collecting` until that process is finished and the `State` is `Collected`. When an analyze process is triggered, the `State` transitions to `Analyzing` until that process is finished and the `State` is `Analyzed`. If a process commits the request, the `State` then transitions to `Committing`, and the properties move from the `UserProvAccountStaging` object to the `UserProvAccount` object. When those properties are saved in the `UserProvAccount` object, the `State` transitions to `Completed`.

However, the `State` does not necessarily start at `New`. For example, `UserProvAccountStaging` entries can be inserted programmatically. If a process is initiated that triggers linking these rows to accounts on the third-party service, a UPR entry could start with the `Analyzing` `State`.

Also, the `State` cannot go backwards from an active task. For example, a successful `Analyzing` `State` must progress to `Analyzed`; unless the active process fails, and then the `State` must change to `Failed`. Certain `State` transitions cannot be made programmatically and must be triggered by Salesforce.

The following table shows the `State` transitions that can occur for each `State` value. Each row corresponds to a current `State` value and each column corresponds to a new `State` after a potential transition.

-  — the transition to this value is not allowed.
-  — the transition to this value is allowed.
-  — only Salesforce can transition the `State` to this value.

	New	Requested	Collecting	Collected	Analyzing	Analyzed	Committing	Completed	Failed	Retried	Manually Completed
New											
Requested											
Collecting											
Collected											
Analyzing											

	New	Requested	Collecting	Collected	Analyzing	Analyzed	Committing	Completed	Failed	Retried	Manually Completed
Analyzed	✘	✘	✘	✘	✘	✓	✓	✓	✓	✘	✘
Committing	✘	✘	✘	✘	✘		✓			✘	✘
Completed	✘	✘	✘	✘	✘	✘	✘	✓	✘	✘	✘
Failed	✘	✘	✘	✘	✘	✘	✘	✘	✓	✓	✓
Retried	✘	✘	✘	✘	✘	✘	✘	✘	✘	✘	✘
Manually Completed	✘	✘	✘	✘	✘	✘	✘	✘	✘	✘	✘

State Values for Managing Provisioning Failures

The `state` value changes to `Failed` for several reasons, such as network outages, session timeouts, permissions issues, and record locks. The `Failed` state can transition to either `Retried` or `Manually Completed` to indicate what action was taken to address the failure. Actions can include correcting the root cause of the failure and requesting that the provisioning engine retry the UPR. Or, it can be completing the action against the target manually. Each UPR is an independent transaction and it's possible the retry causes a failure with a different root cause. So it's hard to distinguish failed events that you addressed from the ones that require more action.

If you tried to correct the cause of the failure and requested the provisioning engine to retry the UPR, you can mark the failed UPR `Retried`. Or, if the action against the target was completed manually, you can mark it `Manually Completed`.

When a retry event is created, the failed UPR is cloned, and resubmitted. The `ParentID` field contains a lookup to the failed UPR to use to clone the new UPR. The `Retry Count` field contains the number of retry attempts that were performed on a UPR. With the `Retry Count` field, you can add custom business logic like "Retry 5 times then stop and notify your admin."

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[UserProvisioningRequestOwnerSharingRule](#) (API version 34.0)

Sharing rules are available for the object.

[UserProvisioningRequestShare](#) (API version 34.0)

Sharing is available for the object.

UserRecordAccess

Represents a user's access to a set of records. This object is read only and is available in API version 24.0 and later.

Supported Calls

`describeSObjects()`, `query()`

Fields

Field	Details
HasAllAccess	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether a user can share the record.</p>
HasDeleteAccess	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether a user has delete access to the record (<code>true</code>) or not (<code>false</code>).</p>
HasEditAccess	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether a user has edit access to the record (<code>true</code>) or not (<code>false</code>).</p>
HasTransferAccess	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether a user has transfer access to the record (<code>true</code>) or not (<code>false</code>).</p>
HasReadAccess	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether a user has read access to the record (<code>true</code>) or not (<code>false</code>).</p>
MaxAccessLevel	<p>Type picklist</p> <p>Properties Group, Nillable, Restricted picklist, Sort</p>

Field	Details
	<p>Description</p> <p>Indicates a user's maximum level of access to a record.</p> <p>Valid values are:</p> <ul style="list-style-type: none"> • None • Read • Edit • Delete • Transfer • All
RecordId	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Filter, Group, Restricted picklist, Sort</p> <p>Description</p> <p>ID of the record.</p>
UserId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Group</p> <p>Description</p> <p>ID of the user.</p>

Usage

Use this object to query a user's access to records. You can only query records of objects listed on the Sharing Settings Setup page. You can't create, delete, or update any records using this object.

Up to 200 record IDs can be queried. You can include an `ORDER BY` clause for any field that is being selected in the query.

The following sample query returns the records, whether the queried user has read and transfer access to each record, and the user's maximum access level to each record.

```
SELECT RecordId, HasReadAccess, HasTransferAccess, MaxAccessLevel
FROM UserRecordAccess
WHERE UserId = [single ID]
AND RecordId = [single ID] //or Record IN [list of IDs]
```

The following query returns the records to which a queried user has read access.

```
SELECT RecordId
FROM UserRecordAccess
WHERE UserId = [single ID]
```

```
AND RecordId = [single ID] //or Record IN [list of IDs]
AND HasReadAccess = true
```

Using API version 30.0 and later, UserRecordAccess is a foreign key on the records. You can't filter by or provide the `UserId` or `RecordId` fields when using this object as a lookup or foreign key. The previous sample queries can be run as:

```
SELECT Id, Name, UserRecordAccess.HasReadAccess, UserRecordAccess.HasTransferAccess,
UserRecordAccess.MaxAccessLevel
FROM Account
```

```
SELECT Id, Name, UserRecordAccess.HasReadAccess
FROM Account
```

SOQL restrictions:

- When the running user is querying a user's access to a set of records, records that the running user does not have read access to are filtered out of the results.
- When filtering by `UserId` and `RecordId` only, you must use `SELECT RecordId` and optionally one or more of the access level fields: `HasReadAccess`, `HasEditAccess`, `HasDeleteAccess`, `HasTransferAccess`, and `HasAllAccess`. You may include `MaxAccessLevel`.
- When filtering by `UserId`, `RecordId`, and an access level field, you must use `SELECT RecordId` only.

UserRole

Represents a user role in your organization.

 **Note:** This object was called "Role" in previous versions of the API documentation.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only users with the View Roles and Role Hierarchy permission can access this object, and only users with the Manage Roles permission can edit this object.

Fields

Field	Details
<code>CaseAccessForAccountOwner</code>	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The case access level for the account owner.</p>

Field	Details
ContactAccessForAccountOwner	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The contact access level for the account owner.</p> <p> Note: When DefaultContactAccess is set to Controlled by Parent, you can't create or update this field.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization. Corresponds to Role Name in the user interface.</p> <p>This field is available in API version 24.0 and later.</p> <p> Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance slows down while Salesforce generates one for each record.</p>
ForecastUserId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the forecast manager associated with this role. Label is User ID.</p>
IsPartner	<p>Type boolean</p> <p>Properties Defaulted on create, Filter</p>

Field	Details
	<p>Description</p> <p>Indicates whether the user role is a partner who has access to the partner portal (<code>true</code>) or not (<code>false</code>). This field is not available for release 9.0 and later. Instead, use <code>PortalType</code> with the value <code>Partner</code>.</p>
<code>MayForecastManagerShare</code>	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Indicates whether the forecast manager can manually share their own forecast.</p>
<code>Name</code>	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, idLookup, Sort, Update</p> <p>Description</p> <p>Required. Name of the role. Corresponds to Label on the user interface.</p>
<code>OpportunityAccessForAccountOwner</code>	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description</p> <p>Required. The opportunity access level for the account owner. Note that you can't set a user role with an opportunity access less than that specified in organization-wide defaults.</p>
<code>ParentRoleId</code>	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The ID of the parent role.</p>
<code>PortalAccountId</code>	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The ID of the role's associated portal account. This field is read-only.</p>

Field	Details
PortalAccountOwnerId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the role's associated portal account's owner. This field is read-only.</p>
PortalRole	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The portal role: Executive, Manager, User, or PersonAccount.</p>
PortalType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description This value indicates the type of portal for the role:</p> <ul style="list-style-type: none"> • None: Salesforce application role. • CustomerPortal: Customer portal role. • Partner: partner portal role. The field <code>IsPartner</code> used in release 8.0 will map to this value. <p>This field replaces <code>IsPartner</code> beginning with release 9.0.</p>
RollupDescription	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Description of the forecast rollup. Label is Description.</p>

Usage

Use this object to query the set of currently configured user roles in your organization. Use it in your client application to obtain valid UserRole IDs to use when querying or modifying a User record.

Users with the View Roles and Role Hierarchy permission can query or describe this object. If your client application logs in with the "Manage Users" permission, it can query, create, update, or delete UserRole records.

 **Note:** You can't update any field for a portal role.

For example, the following code finds all roles that are not assigned to any users.

```
SELECT Id, Name, DeveloperName
FROM UserRole
WHERE Id NOT IN (SELECT UserRoleId
                 FROM User
                 WHERE UserRoleId != '0000000000000000')
```

SEE ALSO:

[Object Basics](#)

UserServicePresence

Represents a presence user's real-time presence status. This object is available in API version 32.0 and later.

Supported Calls

`delete()`, `query()`, `getDeleted()`, `getUpdated()`, `retrieve()`, `undelete()`

Special Access Rules

To access this object, [Omni-Channel](#) must be enabled.

Fields

Field	Details
ConfiguredCapacity	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The user's total configured capacity.</p>
IsAway	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the user's status is <i>Away</i>.</p>
Name	<p>Type string</p>

Field	Details
	<p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description An automatically generated ID number that identifies the record.</p>
OwnerId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the owner of the <code>UserServicePresence</code> entity. For external routing, allows the entity to be used in the Streaming API to listen to events whenever a <code>UserServicePresence</code> record is created, modified, or deleted.</p>
ServicePresenceStatusId	<p>Type reference</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The ID of the presence status that's associated with the presence user that's specified by the <code>UserId</code>.</p>
UserId	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the Omni-Channel user.</p>

Usage

Apex triggers aren't supported with `UserServicePresence`.

Sharing rules aren't supported with `UserServicePresence` even if the `OwnerId` field is enabled.

In API version 41.0 or later, `UserServicePresence` records can be deleted programmatically. The "Customize Application" permission is required.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[UserServicePresenceOwnerSharingRule](#)

Sharing rules are available for the object.

UserServicePresenceShare

Sharing is available for the object.

UserShare

Represents a sharing entry on a user record. This object is available in API version 26.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only standard users or users with the Customize Application permission can access this object.

Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field	Details
IsActive	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Read-only. Indicates whether the User has access to log in (<code>true</code>) or not (<code>false</code>). You can modify a User's active status from the user interface or via the API.</p>
RowCause	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Reason that this sharing entry exists. You can only write to this field when its value is either omitted or set to <code>Manual</code> (default). You can create a value for this field in API versions 32.0 and later with the correct organization-wide sharing settings. Possible values include:</p> <ul style="list-style-type: none"> <code>Manual</code>—The User or Group has access to the user record because a User with "All" access manually shared the User with them. <code>Rule</code>—The User or Group has access to the user record via a User sharing rule. <code>GuestRule</code>—The User or Group has access via a User guest user sharing rule.

Field	Details
<p><code>UserAccessLevel</code></p>	<ul style="list-style-type: none"> • <code>LpuImplicit</code>—The User has access to records owned by high-volume Experience Cloud site users via a share group. <p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Level of access that the User or Group has to the specified user. The specified user is denoted by the <code>UserId</code>. The possible values are:</p> <ul style="list-style-type: none"> • Read • Edit <p>This field must be set to an access level that is at least equal to the organization's default <code>UserAccessLevel</code>.</p> <p><code>UserAccessLevel</code> can be updated only if <code>RowCause</code> is set to <code>Manual Sharing</code>.</p>
<p><code>UserId</code></p>	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the User being shared. This is a relationship field.</p> <p>Relationship Name User</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
<p><code>UserOrGroupId</code></p>	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the User or Group that has been given access to the User. This field can't be updated. This is a polymorphic relationship field.</p> <p>Relationship Name UserOrGroup</p>

Field	Details
	<p>Relationship Type Lookup</p> <p>Refers To Group, User</p>

Usage

This object allows you to determine which users and groups can view or edit User records owned by other users.

UserTeamMember

Represents a single User on the default opportunity team of another User.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- This object is available only in organizations that have enabled the team selling functionality.
- Customer Portal users can't access this object.

Fields

Field	Details
OpportunityAccessLevel	<p>Type picklist</p> <p>Properties Create, Filter, Restricted picklist, Update</p> <p>Description Required. Level of access that the team member has to opportunities for which the user has added his or her default opportunity team. The possible values are:</p> <ul style="list-style-type: none"> • Read • Edit <p>This field must be set to an access level that is higher than the organization's default access level for opportunities.</p>
OwnerId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Filter</p> <p>Description Required. ID of the User who owns the default opportunity team. This field can't be updated.</p>
TeamMemberRole	<p>Type picklist</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description Role that the team member has on opportunities for which the User has added his or her default opportunity team. The valid values are set by the organization's administrator in the Opportunity Team Roles picklist. Label is Team Role.</p>
UserId	<p>Type reference</p> <p>Properties Create, Filter</p> <p>Description Required. ID of the User who is a member of the default opportunity team. This field can't be updated.</p>

Usage

If you attempt to create a record that matches an existing record, the create request updates any modified fields and returns the existing record.

Users can set up their default opportunity team to include other users that typically work with them on opportunities.

SEE ALSO:

[OpportunityTeamMember](#)

UserTerritory

Represents a User who has been assigned to a Territory.

 **Note:** The original territory management feature is now unavailable. For more information, see [The Original Territory Management Module Will Be Retired in the Summer '21 Release](#). The information in this topic applies to the original territory management feature only, and not to Enterprise Territory Management.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

- Only available if territory management has been enabled for your organization.
- As of Spring '20 and later, only users with the View Setup and Configuration permission can access this object, and only users with the Manage Territories permission can edit this object.

Fields

Field	Details
IsActive	<p>Type boolean</p> <p>Properties Defaulted on create, Filter</p> <p>Description Indicates whether the user is active in the given territory (<code>true</code>), or inactive in the given territory (<code>false</code>):</p> <ul style="list-style-type: none"> • Users who are active in a territory are explicitly assigned to the territory and can have open opportunities, closed opportunities, or no opportunities associated with that territory. • Users who are inactive in a territory are not explicitly assigned to the territory, but own an open or closed opportunity that is associated with the territory. For example, a user may have been transferred out of a territory, but still own opportunities in his or her old territory. <p>Until a user is deleted from a territory (not simply removed from the territory), the record is not returned in a <code>getDeleted()</code> call.</p>
IsDeleted	<p>Type boolean</p> <p>Properties Defaulted on create, Filter</p> <p>Description Indicates whether the object has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.</p>
TerritoryId	<p>Type reference</p> <p>Properties Create, Filter</p> <p>Description ID of the Territory to which the user has been assigned. This field is required when creating a record in API version 20.0 and later.</p>

Field	Details
UserId	<p>Type reference</p> <p>Properties Create, Filter</p> <p>Description ID of the user. This field is required when creating a record.</p>

Usage

If a user is inactive in a territory, and the opportunities they own that are associated with the territory are all closed, the user is not returned in the Territories related list on the User page in Setup. Regardless of whether the user is inactive or the opportunities are closed, the user is returned in the Quotas related list.

SEE ALSO:

[Territory](#)

[AccountTerritoryAssignmentRule](#)

[AccountTerritoryAssignmentRuleItem](#)

UserTerritory2Association

Represents an association (by assignment) between a territory and a user record. Available only if Enterprise Territory Management has been enabled for your organization.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Summer '20 and later, only standard and partner users can access this object. If a territory model is in `Active` state, any standard or partner user can view that model, including its territories and assignment rules. For territories in an active model, any standard or partner user can view assigned records and assigned users subject to your org's sharing settings. Users cannot view territory models in other states (such as `Planning` or `Archived`).

Fields

Field Name	Details
IsActive	<p>Type boolean</p>

Field Name	Details
	<p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the user is active (<code>true</code>) or inactive (<code>false</code>) in the given territory.</p>
RoleInTerritory2	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The role of the user in a territory. Possible values are: Owner, Administrator, Sales Rep. Label is <code>Role in Territory</code>.</p>
Territory2Id	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the territory that the user is assigned to.</p>
UserId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the user who is assigned to the territory.</p>

UserWorkList

Represents a list of work items in the My Feed tab for High Velocity Sales users.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Whether the work list is active or not.</p>
ListType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The type of list, such as a call or email.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the work list.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The owner of the list.</p>

UserWorkListItem

Represents an individual work item in the My Feed tab for High Velocity Sales users.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
PriorityOrder	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The order of the item in the list.</p>
RelatedRecordId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the related record.</p>
UserWorkListId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the related work list.</p>

VendorCallCenterStatusMap

Stores a mapping between a call center vendor agent status and a Salesforce presence status for an associated call center. This object is available in API version 54.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

To access this object, Omni-Channel and Service Cloud Voice must be enabled.

Fields

Field	Details
CallCenterId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Reference to a call center. This is a relationship field.</p> <p>Relationship Name CallCenter</p> <p>Relationship Type Lookup</p> <p>Refers To CallCenter</p>
ExternalStatus	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Status value to set for the call center vendor agent.</p>
ServicePresenceStatusId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Reference to a presence status that can be assigned to a service channel. This is a relationship field.</p> <p>Relationship Name ServicePresenceStatus</p> <p>Relationship Type Lookup</p> <p>Refers To ServicePresenceStatus</p>

VerificationHistory

Represents the past six months of your org users' attempts to verify their identity. This object is available in API version 36.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

Only users with Manage Users permission can access this object.

Fields

Field Name	Details
Activity	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The action the user attempted that requires identity verification. The label is User Activity. Available values are:</p> <ul style="list-style-type: none"> • <code>AccessReports</code>—The user attempted to access reports or dashboards. • <code>Apex</code>—The user attempted to access a Salesforce resource with a verification Apex method. • <code>ChangeEmail</code>—The user attempted to change an email address. • <code>ConnectSms</code>—The user attempted to connect a phone number. • <code>ConnectToopher</code>—The user attempted to connect Salesforce Authenticator. • <code>ConnectTotp</code>—The user attempted to connect a one-time password generator. • <code>ConnectU2F</code>—The user attempted to register a U2F security key. • <code>ConnectWebAuth</code>—The user attempted to register a built-in authenticator. • <code>ConnectedApp</code>—The user attempted to access a connected app. • <code>EnableLL</code>—The user attempted to enroll in Lightning Login. • <code>ExportPrintReports</code>—The user attempted to export or print reports or dashboards. • <code>ExtraVerification</code>—Reserved for future use. • <code>ListView</code>—The user attempted to access a list view.

Field Name	Details
	<ul style="list-style-type: none"> • <code>Login</code>—The user attempted to log in. • <code>Registration</code>—Reserved for future use. • <code>TempCode</code>—The user attempted to generate a temporary verification code.
<code>EventGroup</code>	<p>Type int</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the verification attempt. Verification can involve several attempts and use different verification methods. For example, in a user's session, a user enters an invalid verification code (first attempt). The user then enters the correct code and successfully verifies identity (second attempt). Both attempts are part of a single verification and, therefore, have the same ID. The label is Verification Attempt.</p>
<code>LoginGeoId</code>	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The 18-character ID for the record of the geographic location of the user for a successful or unsuccessful identity verification attempt. Due to the nature of geolocation technology, the accuracy of geolocation fields (for example, country, city, postal code) can vary. This is a relationship field.</p> <p>Relationship Name LoginGeo</p> <p>Relationship Type Lookup</p> <p>Refers To LoginGeo</p>
<code>LoginHistoryId</code>	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID for the record of the user's successful or unsuccessful login attempt. This is a relationship field.</p> <p>Relationship Name LoginHistory</p>

Field Name	Details
	<p>Relationship Type Lookup</p> <p>Refers To LoginHistory</p>
Policy	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The identity verification security policy or setting. The label is Triggered By. Available values are:</p> <ul style="list-style-type: none"> • CustomApex—Identity verification made by a verification Apex method. • DeviceActivation—Identity verification required for users logging in from an unrecognized device or new IP address. This verification is part of Salesforce’s risk-based authentication. • EnableLightningLogin—Identity verification required for users enrolling in Lightning Login. This verification is triggered when the user attempts to enroll. Users are eligible to enroll if they have the Lightning Login User user permission and the org has enabled Allow Lightning Login in Session Settings. • ExtraVerification—Reserved for future use. • HighAssurance—High assurance session required for resource access. This verification is triggered when the user tries to access a resource, such as a connected app, report, or dashboard, that requires a high-assurance session level. • LightningLogin—Identity verification required for internal users logging in via Lightning Login. This verification is triggered when the enrolled user attempts to log in. Users are eligible to log in if they have the Lightning Login User user permission and have successfully enrolled in Lightning Login. Also, from Session Settings in Setup, Allow Lightning Login must be enabled. • PageAccess—Identity verification required for users attempting to perform an action, such as changing an email address or adding a verification method for multi-factor authentication (MFA). • PasswordlessLogin—Identity verification required for customers attempting to log in to an Experience Cloud site that is set up for passwordless login. The admin controls which registered verification methods can be used, for example, email, SMS, Salesforce Authenticator, or TOTP. • ProfilePolicy—Session security level required at login. This verification is triggered by the Session security level required at login setting on the user’s profile. • TwoFactorAuthentication—Multi-factor authentication (formerly called two-factor authentication) required at login. This verification is triggered

Field Name	Details
Remarks	<p>by the Multi-Factor Authentication for User Interface Logins user permission assigned to a custom profile. Or the user permission is included in a permission set that is assigned to a user.</p> <p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The text the user sees on the page or in Salesforce Authenticator when prompted to verify identity. For example, if identity verification is required for a user's login, the user sees "You're trying to Log In to Salesforce." In this case, the Remarks value is "Log In to Salesforce." But if the Activity value is Apex, the Remarks value is a custom description passed by an Apex method. If the user is verifying identity using Salesforce Authenticator, the custom description also appears in the app. If the custom description isn't specified, the value is the name of the Apex method. The label is Activity Message.</p>
ResourceId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description If the <code>Activity</code> value is <code>ConnectedApp</code>, the <code>ResourceId</code> value is the ID of the connected app. The label is Connected App ID. This is a relationship field.</p> <p>Relationship Name Resource</p> <p>Relationship Type Lookup</p> <p>Refers To ConnectedApplication</p>
SourceIp	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The IP address of the machine from which the user attempted the action that requires identity verification. For example, the IP address of the machine from where the user tried to log in or access reports. If it's a non-login action that required verification, the IP address can be different from the address from where the user logged in. This address can be an IPv4 or IPv6 address.</p>

Field Name	Details
Status	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The status of the identity verification attempt. Available values are:</p> <ul style="list-style-type: none"> • AutomatedSuccess—Salesforce Authenticator approved the request for access because the request came from a trusted location. After users enable location services in Salesforce Authenticator, they can designate trusted locations. When a user trusts a location for a particular activity, such as logging in from a recognized device, that activity is approved from the trusted location for as long as the location is trusted. • Denied—The user denied the approval request in the authenticator app, such as Salesforce Authenticator. • FailedGeneralError—An error caused by something other than an invalid verification code, too many verification attempts, or authenticator app connectivity. • FailedInvalidCode—The user entered an invalid verification code. • FailedInvalidPassword—The user entered an invalid password. • FailedPasswordLockout—The user attempted to enter a password too many times. • FailedTooManyAttempts—The user attempted to verify identity too many times. For example, the user entered an invalid verification code repeatedly. • Initiated—Salesforce initiated identity verification but hasn't yet challenged the user. • InProgress—Salesforce challenged the user to verify identity and is waiting for the user to respond or for Salesforce Authenticator to send an automated response. • RecoverableError—Salesforce can't reach the authenticator app to verify identity, but it continues to retry. • ReportedDenied—The user denied the approval request in the authenticator app, such as Salesforce Authenticator, and also flagged the approval request to report to an administrator. • Succeeded—The user's identity was verified.
UserId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the user verifying identity.</p>

Field Name	Details
	<p>This is a relationship field.</p> <p>Relationship Name User</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
VerificationMethod	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The method by which the user attempted to verify identity in the verification event. The label is Method. Available values are:</p> <ul style="list-style-type: none"> • BuiltInAuthenticator—A built-in authenticator set up on the user’s device, such as Touch ID or Windows Hello, generated the required credentials. This value is available in API version 53.0 and later. • Email—Salesforce sent an email with a verification code to the address associated with the user’s account. • EnableLL—Salesforce Authenticator sent a notification to the user’s mobile device to enroll in Lightning Login. This value is available in API version 38.0 and later. • LL—Salesforce Authenticator sent a notification to the user’s mobile device to approve login via Lightning Login. This value is available in API version 38.0 and later. • SalesforceAuthenticator—Salesforce Authenticator sent a notification to the user’s mobile device to verify account activity. • Sms—Salesforce sent a text message with a verification code to the user’s mobile device. SMS messaging requires a Salesforce add-on license for Identity Verification Credits. • TempCode—A Salesforce admin or a user with the Manage Multi-Factor Authentication in User Interface permission generated a temporary verification code for the user. This value is available in API version 37.0 and later. • Totp—An authenticator app generated a time-based, one-time password (TOTP) on the user’s mobile device. • U2F—A U2F security key generated required credentials for the user. This value is available in API version 38.0 and later.
VerificationTime	<p>Type dateTime</p>

Field Name	Details
	<p>Properties Filter, Sort</p> <p>Description The date and time of the identity verification attempt, for example, 7/19/2025, 3:19:13 PM PDT. The time zone is based on GMT. The label is Time.</p>

Usage

Here are two examples of the types of API queries you can perform.

Query	String
Show verification history for a user's login record	<pre>SELECT Activity, EventGroup, Policy, Remarks, Status, UserId, VerificationMethod, VerificationTime FROM VerificationHistory WHERE LoginHistoryId = '0YaD000#####'</pre>
Get detailed geographic location information for a user's verification attempt	<pre>SELECT City, CountryIso, Latitude, Longitude, PostalCode FROM LoginGeo WHERE LoginGeoId = '0LE#####'</pre>

VisualforceAccessMetrics

Represents summary statistics for Visualforce pages.

Supported Calls

`count()`, `describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, to access VisualforceAccessMetrics, users must have the Customize Application permission.

Fields

Field	Details
ApexPageId	<p>Type reference</p> <p>Properties Aggregate, Filter, Group, Sort</p>

Field	Details
	<p>Description The ID of the Visualforce page. This is a relationship field.</p> <p>Relationship Name ApexPage</p> <p>Relationship Type Lookup</p> <p>Refers To ApexPage</p>
ProfileId	<p>Type reference</p> <p>Properties Aggregate, Filter, Group, Nillable, Sort</p> <p>Description The ID of the user who viewed the Visualforce page. This is a relationship field.</p> <p>Relationship Name Profile</p> <p>Relationship Type Lookup</p> <p>Refers To Profile</p>
DailyPageViewCount	<p>Type int</p> <p>Properties Aggregate, Filter, Group, Nillable, Sort</p> <p>Description The number of views received by the specified Visualforce page.</p>
MetricsDate	<p>Type date</p> <p>Properties Aggregate, Filter, Group, Sort</p> <p>Description The date the metrics are queried.</p>
LogDate	<p>Type date</p>

Field	Details
	<p>Properties Aggregate, Filter, Group, Nillable, Sort</p> <p>Description The most recent page access date.</p>

Usage

Use this object to query information on the Visualforce pages in your org.

```
SELECT ApexPageId, DailyPageViewCount, Id, ProfileId, MetricsDate, LogDate FROM VisualforceAccessMetrics
```

VideoCall

Represents a video call.

One `VideoCall` record can be related to several `VideoCallRecording` records — for example, a video call can have several video recordings and a transcript. As well, one video call record can be associated with several video call participant records.

This object is available in API version 51.0 and later.

Supported Calls

`delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`

Fields

Field	Details
Description	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description Description of the video call. Typically, the sales rep enters the description.</p>
DurationInSeconds	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The video call duration in seconds.</p>

Field	Details
EndTime	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Time the video call ended, in universal time coordinated (UTC).</p>
EventId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the event record associated with this video call. Reserved for future use. This is a relationship field.</p> <p>Relationship Name Event</p> <p>Relationship Type Lookup</p> <p>Refers To Event</p>
ExternalId	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The ID of the video call, sent by the video call provider.</p>
HostId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the user who hosted the meeting. This is a relationship field.</p> <p>Relationship Name Host</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>

Field	Details
IntelligenceScore	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The Einstein Intelligence score for the video call. Video calls with higher scores are likely to contain more relevant information. For example, video calls where product names and competitor names are mentioned tend to have a higher score.</p>
IsCallCoachingIncluded	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether Einstein Conversation Insights is available for this org and this user (<code>true</code>) or not (<code>false</code>).</p>
IsRecorded	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the video call was recorded (<code>true</code>) or not (<code>false</code>).</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is <code>null</code>, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>

Field	Details
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The name of the video call. Typically entered by the sales rep.</p>
OwnerId	<p>Type reference</p> <p>Properties Filter, Group, Sort, Update</p> <p>Description The ID of the user who created the video call. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
RelatedRecordId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the account or opportunity related to this video call. This is a polymorphic relationship field.</p> <p>Relationship Name RelatedRecord</p> <p>Relationship Type Lookup</p> <p>Refers To Account, Opportunity</p>
StartDateTime	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time that the video call started, in universal time coordinated (UTC).</p>

Field	Details
VendorMeetingKey	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The vendor's ID for this video call.</p>
VendorMeetingUuid	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The vendor's unique identifier for this video call.</p>
VendorName	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The name of the vendor providing the video call software. Possible values are:</p> <ul style="list-style-type: none"> • ZOOM

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

VideoCallChangeEvent (API version 51.0)

Change events are available for the object.

SEE ALSO:

[VideoCallParticipant](#)

[VideoCallRecording](#)

VideoCallParticipant

Represents a participant in a video call.

Participant information can come from the video call provider (for example, Zoom), or Salesforce.

This object is available in API version 51.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`

Fields

Field	Details
Email	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The email address of the participant, from the video call provider.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is <code>null</code>, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The participant's name or phone number. This information is provided by the video call provider.</p>
RelatedPersonId	<p>Type reference</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description The Salesforce ID of the user, lead, or contact record for this participant. This is a polymorphic relationship field.</p> <p>Relationship Name RelatedPerson</p> <p>Relationship Type Lookup</p> <p>Refers To Contact, Lead, User</p>
VideoCallId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the video call record. This is a relationship field.</p> <p>Relationship Name VideoCall</p> <p>Relationship Type Lookup</p> <p>Refers To VideoCall</p>

SEE ALSO:

[VideoCall](#)[VideoCallRecording](#)

VideoCallRecording

Represents a recording from a video call, such as a video recording, a voice recording, or a transcript.

Video call recordings aren't saved in Salesforce.

This object is available in API version 51.0 and later.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`

Fields

Field	Details
<code>DurationInSeconds</code>	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The video call duration in seconds, not the recording duration.</p>
<code>EndDateTime</code>	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Time the call ended, in universal time coordinated (UTC).</p>
<code>ExternalRecordingKey</code>	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The ID of the video call recording, from the recording provider. For example, the Zoom ID of the recording. This value is unique.</p>
<code>FileSizeInByte</code>	<p>Type long</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The size of the video call recording, in bytes.</p>
<code>FileType</code>	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The file type of the video call recording.</p>

Field	Details
	<p>Possible values are:</p> <ul style="list-style-type: none"> • MP4—Video file • M4A—Audio-only file • TIMELINE—Time stamp file in JSON format. • TRANSCRIPT—Transcription files in VTT format. • CHAT—Text file containing chat messages from the video call. • CC—File containing closed captions of the video call recording. File is in VTT format.
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.</p>
Name	<p>Type string</p> <p>Properties Filter, Group, idLookup, Nillable, Sort</p> <p>Description The name of the video call recording, entered by the sales rep.</p>
StartDateTime	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The start time of the video call recording.</p>
VideoCallRecordId	<p>Type reference</p>

Field	Details
	<p>Properties Filter, Group, Sort</p> <p>Description ID of the VideoCall record (the parent record). This is a relationship field.</p> <p>Relationship Name VideoCallRecord</p> <p>Relationship Type Lookup</p> <p>Refers To VideoCall</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[VideoCallRecordingChangeEvent](#) (API version 51.0)

Change events are available for the object.

SEE ALSO:

[VideoCallParticipant](#)

[VideoCall](#)

VoiceCall

Represents a call in Service Cloud Voice or Sales Dialer.

To manage VoiceCall records when using Service Cloud Voice, see the [Telephony Integration REST API](#).

The fields in the VoiceCall object apply to the Sales Dialer and Service Cloud Voice features unless otherwise stated in the field description. For example, if a field applies to just one feature or is applied differently by feature, this is stated in the field description.

Supported Calls

`describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`

Fields

Field Name	Details
ActivityId	<p>Type reference</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The unique ID of the activity record. Available in API version 48.0 and later. This is a relationship field.</p> <p>Relationship Name Activity</p> <p>Relationship Type Lookup</p> <p>Refers To Task</p>
CallAcceptDateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description If Service Cloud Voice is enabled, this field represents the date and time (in UTC) when the call was accepted by an agent. Available in API version 48.0 and later.</p>
CallCenterId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description If Service Cloud Voice is enabled, this field represents the unique ID of the call center (CallCenter Id) where the activity took place. Available in API version 48.0 and later. This is a relationship field.</p>
CallConnectDateTime	<p>Type datetime</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description For Sales Dialer, this field represents the date and time (in UTC) when the call was connected.</p>
CallDisposition	<p>Type string</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The status of the phone call. For Sales Dialer, possible values are:</p> <ul style="list-style-type: none"> • <code>in progress</code> • <code>busy</code> • <code>failed</code> <p>For Service Cloud Voice, possible values are:</p> <ul style="list-style-type: none"> • <code>new</code>—The voice call record has been created. • <code>in-progress</code>—The call has been accepted (or, for outbound messages, initiated) by an agent. • <code>completed</code>—The call has ended. This includes calls that are transferred. (If a call is transferred, another voice call record is created to track the state of the transferred call.) If After Conversation Work (ACW) is enabled, that work begins after the call has completed.
CallDurationInSeconds	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The total duration (in seconds) of the call.</p>
CallEndDateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Sort</p> <p>Description The date and time (in UTC) when the call ended.</p>
CallerId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description For Service Cloud Voice, this field represents the unique ID of the participant who initiated the call. If “Match Callers to End User Records” is enabled in Lightning Experience, the value will be null and the <code>EndUserId</code> field is used instead to determine the end user associated with this voice call. Available in API version 48.0 and later.</p>

Field Name	Details
	<p>This is a relationship field.</p> <p>Relationship Name Caller</p> <p>Relationship Type Lookup</p> <p>Refer To ConversationParticipant</p>
CallerIdType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description For Sales Dialer, this field represents the number displayed for outbound calls. Possible values are:</p> <ul style="list-style-type: none"> • VendorLine—User. • CompanyNumber—Company. • LocalPresence—Local Presence. • CustomCallerId—Custom Caller ID. <p>Available in API version 41.0 and later.</p>
CallQueuedDateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description If Service Cloud Voice is enabled, this field represents the date and time (in UTC) when the call was added to a queue to be routed to an agent. Available in API version 48.0 and later.</p>
CallRecordingId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description For Service Cloud Voice, this field represents the unique ID of the call recording for the voice call. Available in API version 41.0 and later.</p> <p>This is a relationship field.</p> <p>Relationship Name CallRecording</p>

Field Name	Details
	<p>Relationship Type Lookup</p> <p>Refers To VoiceCallRecording</p>
CallResolution	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The resolution outcome of the call. The default value is 'Resolved', meaning the call has been resolved. Available in API version 48.0 and later.</p>
CallStartDateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Sort</p> <p>Description The date and time (UTC) when the call started.</p>
CallType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The types of call. For Sales Dialer, possible values are:</p> <ul style="list-style-type: none"> • Bridge • Coach • Inbound • Internal • Outbound <p>For Service Cloud Voice, possible values are:</p> <ul style="list-style-type: none"> • Callback • Inbound • Outbound • Transfer
CoachingDurationInSeconds	<p>Type int</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description For Sales Dialer, this field represents the total duration (in seconds) of the coaching session. This field only appears if call coaching is enabled. Available in API version 41.0 and later.</p>
ConferenceKey	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description For Sales Dialer, this field represents the related conference key. This field is only available if call monitoring is enabled. Available in API version 41.0 and later.</p>
ConversationId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description If Service Cloud Voice is enabled, this field represents the unique ID of the conversation. This field is only available if call monitoring is enabled. Available in API version 48.0 and later. This is a relationship field.</p> <p>Relationship Name Conversation</p> <p>Relationship Type Lookup</p> <p>Refers To Conversation</p>
CurrencyCode	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description For Sales Dialer, this field represents the ISO currency code used to bill the call.</p>
CustomerHoldDuration	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>If Service Cloud Voice is enabled, this field represents the total duration (in seconds) of all the holds that occurred during the voice call. Available in API version 49.0 and later.</p>
Description	<p>Type</p> <p>textarea</p> <p>Properties</p> <p>Create, Nillable, Update</p> <p>Description</p> <p>If Service Cloud Voice is enabled, this field represents a text field where the agent can enter a summary of the call. Available in API version 48.0 and later.</p>
EndUserId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>For Service Cloud Voice, if "Match Callers to End User Records" is enabled in Lightning Experience, this field represents the unique ID of the messaging end user (MessagingEndUser Id) associated with this voice call. Available in API version 53.0 and later.</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>EndUser</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>MessagingEndUser</p>
FromPhoneNumber	<p>Type</p> <p>phone</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>The phone number of the user who initiated the call.</p>
IsRecorded	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort</p>

Field Name	Details
	<p>Description</p> <p>Indicates whether a Voice Call Recording record was created ('true') or not ('false') for this voice call. The default value is 'false'. Available in API version 44.0 and later.</p>
LastReferencedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The date and time (in UTC) when the current user last viewed a record related to this voice call.</p>
LastViewedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The date and time (in UTC) when the current user last viewed this voice call. If this record was only referenced (LastReferencedDate), this value will be null.</p>
LongestHoldDuration	<p>Type</p> <p>int</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>If Service Cloud Voice is enabled, this field represents the longest hold duration (in seconds) that occurred during the call. Available in API version 49.0 and later.</p>
MediaProviderId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The unique ID of the related media provider. Available in API version 49.0 and later.</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>MediaProvider</p> <p>Relationship Type</p> <p>Lookup</p>

Field Name	Details
	<p>Refers To CallCoachingMediaProvider</p>
NextCallId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description If Service Cloud Voice is enabled, this field represents the unique ID of the next call if the call was transferred to another agent. If a transfer or callback didn't occur, this value will be null. Available in API version 48.0 and later.</p> <p>This is a relationship field.</p> <p>Relationship Name NextCall</p> <p>Relationship Type Lookup</p> <p>Refers To VoiceCall</p>
NumberOfHolds	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description If Service Cloud Voice is enabled, this field represents the number of times the customer was put on hold. Available in API version 49.0 and later.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The unique ID of the user who owns the phone number.</p> <p>This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>

Field Name	Details
PreviousCallId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description If Service Cloud Voice is enabled, this field represents the unique ID of the previous call if the call was transferred from another agent. If a transfer or callback didn't occur, this value will be null. Available in API version 48.0 and later.</p> <p>This is a relationship field.</p> <p>Relationship Name PreviousCall</p> <p>Relationship Type Lookup</p> <p>Refers To VoiceCall</p>
Price	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description For Sales Dialer, this field represents the cost of the phone call.</p>
QualityScore	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description If Service Cloud Voice is enabled, this field represents the value of the Mean Opinion Score (MOS) that measures voice call quality. This algorithm is based on packet loss percentage, average latency, and average jitter. Available in API version 53.0 and later.</p>
QueueName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description If Service Cloud Voice is enabled, this field represents the name of the agent queue. Available in API version 49.0 and later.</p>

Field Name	Details
RecipientId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description For Service Cloud Voice, this field represents the unique ID of the participant who received the call. If “Match Callers to End User Records” is enabled in Lightning Experience, this value will be null and the EndUserId field is used instead to determine the end user associated with this voice call.</p> <p>This is a relationship field.</p> <p>Relationship Name Recipient</p> <p>Relationship Type Lookup</p> <p>Refers To ConversationParticipant</p>
RelatedRecordId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The unique ID of the related record.</p> <p>This is a polymorphic relationship field.</p> <p>Relationship Name RelatedRecord</p> <p>Relationship Type Lookup</p> <p>Refers To Account, Case, Contact, Lead, Opportunity</p>
SourceType	<p>Type picklist</p> <p>Properties Create, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The general purpose of the call. The value is determined by the permission sets assigned to the voice call owner. A call’s source type controls which insights are applied during analysis by Einstein Conversation Insights.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Sales

Field Name	Details
	<ul style="list-style-type: none"> • Service <p>Available in API version 52.0 and later.</p>
ToPhoneNumber	<p>Type phone</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The recipient of the phone call. For inbound, transfer, and callback calls, this value is the agent's number. For outbound calls, this value is the customer's number.</p>
UserId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The unique ID of the Salesforce user who initiates an outbound call or accepts an inbound call. If no one takes the call, this value defaults to null. This is a relationship field.</p> <p>Relationship Name User</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
VendorCallKey	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, idLookup, Sort</p> <p>Description The unique ID of the child leg of the call that's provided by the Sales Dialer vendor or Service Cloud Voice telephony provider.</p>
VendorParentCallKey	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description For Sales Dialer, this field represents the unique ID of the parent leg of the call that's provided by the Dialer vendor.</p>

Field Name	Details
VendorType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description For Sales Dialer, this field represents the type of Dialer vendor. For Service Cloud Voice, this field is always set to 'ContactCenter'. Available in API version 41.0 and later.</p>
VoiceVendorLineId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description For Sales Dialer, this field represents the unique ID of the associated Dialer vendor line. This is a relationship field.</p> <p>Relationship Name VoiceVendorLine</p> <p>Relationship Type Lookup</p> <p>Refers To VoiceVendorLine</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

VoiceCallChangeEvent (Available in API version 48.0 and later)

Change events are available for the object.

VoiceCallFeed (Available in API version 50.0 and later.)

Feed tracking is available for the object.

VoiceCallOwnerSharingRule

Sharing rules are available for the object.

VoiceCallShare

Sharing is available for the object.

VoiceCallList

Represents a prioritized list of numbers to call.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Whether the call list is active or not.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the call list.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the call list owner.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[VoiceCallListOwnerSharingRule](#)

Sharing rules are available for the object.

[VoiceCallListShare](#)

Sharing is available for the object.

VoiceCallListItem

Represents a single phone number in a prioritized call list.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
CallListId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the related call list.</p>
Ordinal	<p>Type int</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The order of the item in the overall call list.</p>
RelatedRecordId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the related record.</p>
State	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>Whether the call list item is not called, called, or skipped.</p>

VoiceCallQualityFeedback

Represents feedback given by a Sales Dialer user about the quality of a VoiceCall.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Fields

Field Name	Details
FeedbackText	<p>Type</p> <p>textarea</p> <p>Properties</p> <p>Nillable</p> <p>Description</p> <p>The detailed feedback about a call left by a user.</p>
FeedbackType	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The feedback category (Call could not connect, Audio lagged, etc.) selected by a user.</p>
OwnerId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Group, Sort</p> <p>Description</p> <p>The ID of the user leaving the feedback.</p>
VoiceCallId	<p>Type</p> <p>reference</p>

Field Name	Details
	<p>Properties Filter, Group, Sort</p> <p>Description The ID of the related VoiceCall.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[VoiceCallQualityFeedbackOwnerSharingRule](#)

Sharing rules are available for the object.

[VoiceCallQualityFeedbackShare](#)

Sharing is available for the object.

VoiceCallRecording

Represents a call recording in Service Cloud Voice and Sales Dialer. Call recordings for Service Cloud Voice with Amazon Connect and for Service Cloud Voice with Partner Telephony from Amazon Connect are stored in S3 buckets on your Amazon Web Services (AWS) account and can be accessed via AWS. Call recordings for Sales Dialer are saved as files in Salesforce.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
<code>DurationInSeconds</code>	<p>Type int</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The total recording duration in seconds.</p>
<code>IntelligenceScore</code>	<p>Type int</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The intelligence score of the recording.</p>
IsConsented	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Whether the call recording was indicated as consented or not.</p>
MediaContentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the related media content, a ContentDocument. The record counts toward your org's file storage quota. This is a relationship field.</p> <p>Relationship Name MediaContent</p> <p>Relationship Type Lookup</p> <p>Refers To ContentDocument</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the call recording file.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the owner of the call recording. This is a polymorphic relationship field.</p>

Field Name	Details
	<p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
UploadDateTime	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The time and date that the recording was uploaded.</p>
VoiceCallId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description Required. The ID of the related phone call. The property <code>nillable</code> has been removed in API version 50.0 and later. This is a relationship field.</p> <p>Relationship Name VoiceCall</p> <p>Relationship Type Lookup</p> <p>Refers To VoiceCall</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

VoiceCallRecordingChangeEvent (API version 48.0)

Change events are available for the object.

VoiceCallRecordingOwnerSharingRule

Sharing rules are available for the object. Removed in API version 50.0 and later.

VoiceCallRecordingShare

Sharing is available for the object. Removed in API version 50.0 and later.

VoiceCoaching

Represents a call that is using call monitoring.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
<code>OwnerId</code>	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the manager monitoring the call.</p>
<code>RelatedRecordId</code>	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the call list owner.</p>
<code>TraineeId</code>	<p>Type reference</p> <p>Properties Filter, Group, Sort, Unique</p> <p>Description The ID of the call list owner.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[VoiceCoachingOwnerSharingRule](#)

Sharing rules are available for the object.

VoiceCoachingShare

Sharing is available for the object.

VoiceLocalPresenceNumber

Represents a phone number with the same area code as the person who's being called.

Supported Calls

`query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
CountryCode	Type string Properties Filter, Group, idLookup, Sort Description The country code of the phone number.
LastUsedDate	Type dateTime Properties Filter, Nillable, Sort Description The date the phone number was last used.
PhoneNumber	Type phone Properties Filter, Group, Sort Description The local presence phone number.
Prefix	Type reference

Field Name	Details
	<p>Properties Filter, Group, Sort</p> <p>Description The area code of the phone number.</p>

VoiceMailContent

Represents a voicemail message left by a caller to the context user.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
<code>DurationInSeconds</code>	<p>Type int</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The duration of the voicemail message in seconds.</p>
<code>FirstHeardDateTime</code>	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The time and date when the user first listened to the voicemail message.</p>
<code>MediaContentId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>The ID of the related media content, a ContentDocument. The record counts toward your org's file storage quota.</p>
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description</p> <p>The name of the voicemail message.</p>
OwnerId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>The ID of the owner of the voicemail message.</p>
VoiceCallId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The ID of the related Dialer call.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[VoiceMailContentOwnerSharingRule](#)

Sharing rules are available for the object.

[VoiceMailContentShare](#)

Sharing is available for the object.

VoiceMailGreeting

Represents a custom greeting message that plays upon reaching a user's voicemail. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
DurationInSeconds	<p>Type int</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The duration of the voicemail greeting message in seconds.</p>
IsDefault	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Whether the greeting is the user's default greeting (<code>true</code>) or not (<code>false</code>).</p>
MediaContentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description ID of the related content document.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the voicemail greeting message.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description ID of the voicemail greeting message owner.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

VoiceMailGreetingOwnerSharingRule

Sharing rules are available for the object.

VoiceMailGreetingShare

Sharing is available for the object.

VoiceMailMessage

Represents a prerecorded voicemail message.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
<code>DurationInSeconds</code>	<p>Type int</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The duration of a prerecorded voicemail message in seconds.</p>
<code>IsDefault</code>	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Specifies whether the message is the context user's default voicemail drop message.</p>
<code>MediaContentId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p>Description The ID of the file.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the prerecorded voicemail message.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The owner of the prerecorded voicemail message.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[VoiceMailMessageOwnerSharingRule](#)

Sharing rules are available for the object.

[VoiceMailMessageShare](#)

Sharing is available for the object.

VoiceUserLine

Represents a user's forwarding phone number.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
IsCustomCallerId	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the number is a custom caller ID (<code>true</code>) or not (<code>false</code>).</p>
IsVerified	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Reserved for future use.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort</p> <p>Description The name of the phone number.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the user who owns the phone number.</p>
PhoneNumber	<p>Type phone</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The user's phone number.</p>
UserId	<p>Type reference</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the user using the phone number.</p>
VendorVerifiedCallerIdKey	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Nillable, Sort, Update</p> <p>Description The ID for a custom phone number provided by the Sales Dialer service provider.</p>
VoiceVendorInfoId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the related Sales Dialer service provider.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[VoiceUserLineOwnerSharingRule](#)

Sharing rules are available for the object.

[VoiceUserLineShare](#)

Sharing is available for the object.

VoiceUserPreferences

Represents the number the user displays when making outbound calls. This object is available in API version 41.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
CallerIdType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The number displayed for outbound calls. The possible values are:</p> <ul style="list-style-type: none"> • VendorLine • CompanyNumber • LocalPresence • CustomCallerId
DeskPhoneNumber	<p>Type phone</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description A separate phone number users can utilize as part of a call bridge.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description ID of the phone number owner.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[VoiceUserPreferencesOwnerSharingRule](#)

Sharing rules are available for the object.

[VoiceUserPreferencesShare](#)

Sharing is available for the object.

VoiceVendorInfo

Represents information about the Service Cloud Voice or Sales Dialer provider's vendor.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
<code>CorporateNumber</code>	<p>Type phone</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The standard number that users can choose to display when making outgoing calls.</p>
<code>IsActive</code>	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Specifies whether the vendor is active or not.</p>
<code>LocalPresenceDefaultNumber</code>	<p>Type phone</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The default routing number that's available for incoming local presence calls.</p>
<code>TenantConfigVersion</code>	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The version of the Service Cloud Voice tenant configuration. Available in API version 51.0 and later.</p>
<code>VendorAccountKey</code>	<p>Type string</p>

Field Name	Details
	<p>Properties Filter, Group, idLookup, Sort</p> <p>Description The account key of the vendor.</p>
VendorProviderName	<p>Type string</p> <p>Properties Filter, Group, Sort</p> <p>Description The name of the vendor.</p>
VendorType	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The type of vendor.</p>

VoiceVendorLine

Represents a user's phone number reserved with the vendor.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

As of Spring '20 and later, only your Salesforce org's internal users can access this object.

Fields

Field Name	Details
CallUsageInSecondsLastMonth	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p>Description An org's total call usage last month in seconds.</p>
OwnerId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the user who owns the phone number. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
PhoneNumber	<p>Type phone</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The unique vendor phone number.</p>
ShouldRecord	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Reserved for future use.</p>
Status	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Specifies whether the number is currently active or released.</p>
UserId	<p>Type reference</p>

Field Name	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the user using the phone number. This is a relationship field.</p> <p>Relationship Name User</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
VoiceVendorInfoId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the Dialer vendor. This is a relationship field.</p> <p>Relationship Name VoiceVendorInfo</p> <p>Relationship Type Lookup</p> <p>Refers To VoiceVendorInfo</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[VoiceVendorLineOwnerSharingRule](#)

Sharing rules are available for the object.

[VoiceVendorLineShare](#)

Sharing is available for the object.

Vote

Represents a vote that a user has made on an Idea or a Reply.

Note: In API version 16.0 and earlier, SOQL queries on the Vote object only return votes for the Idea object. Starting in API version 17.0, SOQL queries return votes for both Idea and Reply.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

As of Summer '20 and later, only authenticated internal and external users can access this object.

Fields

Field	Details
<code>IsDeleted</code>	<p>Type boolean</p> <p>Properties Defaulted on create, Filter</p> <p>Description Indicates whether the object has been moved to the Recycle Bin (true) or not (false). Label is Deleted.</p>
<code>LastModifiedById</code>	<p>Type reference</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description ID of the user most recently associated with this vote.</p>
<code>LastModifiedDate</code>	<p>Type dateTime</p> <p>Properties Defaulted on create, Filter, Sort</p> <p>Description The datetime when this vote was last modified.</p>
<code>ParentId</code>	<p>Type reference</p> <p>Properties Group, Sort, Create, Filter</p> <p>Description ID of the Idea or Reply associated with this vote. This is a polymorphic relationship field.</p> <p>Relationship Name Parent</p>

Field	Details
	<p>Relationship Type Lookup</p> <p>Refers To Idea, IdeaComment, Solution</p>
Type	<p>Type picklist</p> <p>Properties Group, Sort, Create, Filter, Restricted picklist, Update</p> <p>Description Picklist that indicates the type of vote. The value <code>Up</code> indicates that the vote is a user's positive endorsement of the associated idea or reply. The value <code>Down</code> indicates that the vote is a user's negative endorsement of the associated idea or reply.</p>

 **Note:** If you are importing Vote data into Salesforce and need to set the value for an audit field, such as `CreatedDate`, contact Salesforce. Audit fields are automatically updated during API operations unless you request to set these fields yourself..

Usage

In version 12.0 and later, use this object to track the votes that users made on ideas. For more information on ideas, see “Understand and Work with Ideas” in the Salesforce online help.

In version 17.0 and later, you must filter using the following syntax when querying this object in a SOQL query: `ParentId = single ID`, `Parent.Type = single Type`, `Id = single ID`, or `Id IN (list of IDs)`. See Comparison Operators in the [Salesforce SOQL and SOSL Reference Guide](#) for a sample query.

A SOQL query must filter using one of the following Parent or Id clauses.

- `ParentId = [single ID]`
- `Parent.Type = [single type]`
- `Id = [single ID]`
- `Id IN = [list of IDs]`

[IdeaComment](#)

WarrantyTerm

Represents warranty terms defining the labor, parts, and expenses covered, along with any exchange options, provided to rectify issues with products. This object is available in API version 50.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
Code	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description A code or other identifier associated with this warranty term.</p>
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Description of the warranty term.</p>
EffectiveStartDate	<p>Type picklist</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Date on which the warranty term became available for use. Possible values are:</p> <ul style="list-style-type: none"> • <code>InstallDate</code> • <code>ManufactureDate</code> • <code>PurchaseDate</code>
ExchangeType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The type of exchange offered. Possible values are:</p> <ul style="list-style-type: none"> • <code>AdvanceExchange</code> • <code>Loaner</code>

Field	Details
	<ul style="list-style-type: none"> ReturnExchange
Exclusions	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Description of any exclusions.</p>
ExpensesCovered	<p>Type percent</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The percentage of expenses covered.</p>
ExpensesCoveredDuration	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The duration for which expenses are covered.</p>
ExpensesCoveredUnitOfTime	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The unit in which expenses covered duration is measured. Possible values are:</p> <ul style="list-style-type: none"> Days Months Weeks Years
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Defines whether the warranty term is active.</p>

Field	Details
IsTransferable	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Defines whether the warranty can be transferred to a new owner.</p>
LaborCovered	<p>Type percent</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The percentage of labor covered.</p>
LaborCoveredDuration	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The duration for which labor is covered.</p>
LaborCoveredUnitOfTime	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The unit in which labor covered duration is measured. Possible values are:</p> <ul style="list-style-type: none"> • Days • Months • Weeks • Years
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the warranty term was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>

Field	Details
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the warranty term was last viewed.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The warranty term's assigned owner.</p>
PartsCovered	<p>Type percent</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The percentage of parts covered.</p>
PartsCoveredDuration	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The duration for which parts are covered.</p>
PartsCoveredUnitOfTime	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The unit in which parts covered duration is measured. Possible values are:</p> <ul style="list-style-type: none">• Days• Months• Weeks• Years

Field	Details
Pricebook2Id	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the price book item associated with this warranty term.</p>
WarrantyDuration	<p>Type int</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The duration of the warranty offered by this term.</p>
WarrantyTermName	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the warranty term.</p>
WarrantyType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The type of warranty. Possible values are:</p> <ul style="list-style-type: none">• Repair• Standard• Supplier
WarrantyUnitOfTime	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The unit in which the warranty duration is measured. Possible values are:</p> <ul style="list-style-type: none">• Days

Field	Details
	<ul style="list-style-type: none"> • Months • Weeks • Years

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

WarrantyTermChangeEvent

Change events are available for the object.

WaveAutoInstallRequest

Provides access the concrete object that represents a Tableau CRM auto install request. The auto install request tracks the progress of Tableau CRM applications created from Tableau CRM templates by the automated process user. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Tableau CRM must be enabled in your org. A user must have the Auto Install permission enabled.

Fields

Field	Details
Configuration	<p>Type textarea</p> <p>Properties Create, Nillable</p> <p>Description Tableau CRM application configuration for the auto install request.</p>
FailedReason	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p>

Field	Details
	<p>Description</p> <p>If the Tableau CRM application fails to complete successfully, this value is the reason why the failure occurred. Values can be <code>OrganizationIncompatible</code>, <code>RetriesExhausted</code>, <code>RequestCancelled</code>, <code>AppCreateFailure</code>, <code>AppUpdateFailure</code>, <code>AppConstructionFailure</code>, <code>WaveDisabled</code>, <code>CancelFailed</code>, <code>DeleteFailed</code>, <code>DependencyFailure</code>, <code>DependencyCancelled</code>, <code>FailedToEnqueue</code>, and <code>FailedOther</code></p>
FolderId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The ID of the Tableau CRM application created by the auto install request.</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>Folder</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>Folder</p>
IsLocked	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Indicates if the auto install request is locked or not.</p>
MayEdit	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Defaulted on create, Filter, Group, Sort</p> <p>Description</p> <p>Indicates if the auto install request can be edited or not</p>
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, idLookup, Sort, Update</p> <p>Description</p> <p>The name of the auto install request, provided at creation by the user.</p>

Field	Details
RequestLog	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description A log of the auto install progress and completion results.</p>
RequestStatus	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The status of the auto install request. Values can be <code>New</code>, <code>Enqueued</code>, <code>Cancelled</code>, <code>In Progress</code>, <code>AppInProgress</code>, <code>Failed</code>, and <code>Success</code>.</p>
RequestType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description The type of auto install request. Values can be <code>WaveEnable</code>, <code>OrgCompatibilityCheck</code>, <code>WaveAppCreate</code>, <code>WaveAppUpdate</code>, <code>WaveAppDelete</code>, and <code>StartDataflow</code>.</p>
TemplateApiName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The API name of the Tableau CRM template to create the Tableau CRM app from.</p>
TemplateVersion	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The version of the Tableau CRM template to create the Tableau CRM app from.</p>

Usage

Use this object to query and create auto install requests for Tableau CRM applications in your org. This object is useful to troubleshoot issues with templated applications that are created by the automated process user.

WebCart

Represents an online shopping cart in a store built with B2B Commerce on Lightning, with total amounts for products, shipping and handling, and taxes. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The WebCart object is available only if the B2B Commerce on Lightning Experience license is enabled.

Fields

Field	Details
AccountId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description ID of the account that owns this <code>webCart</code>. In API version 51.0 and later, if the <code>webCart</code> was created through Guest Browsing, this is the ID of the <code>GuestBuyerProfile</code>.</p>
BillingAddress	<p>Type address</p> <p>Properties Filter, Nillable</p> <p>Description The mailing address to which this <code>webCart</code> is billed.</p>
BillingCity	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The city of the billing address.</p>

Field	Details
BillingCountry	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The country of the billing address.</p>
BillingGeocodeAccuracy	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The accuracy rating of the geocode for the billing address. Possible values are:</p> <ul style="list-style-type: none"> • Address • Block • City • County • ExtendedZip • NearAddress • Neighborhood • State • Street • Unknown • Zip
BillingLatitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The latitude of the geocode for the billing address.</p>
BillingLongitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The longitude of the geocode for the billing address.</p>

Field	Details
BillingPostalCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The postal code for the billing address.</p>
BillingState	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The state of the billing address.</p>
BillingStreet	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The street of the billing address. Enter up to 255 characters.</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The ISO code for the currency that's specified on the buyer's account. Default value is USD. Possible values are:</p> <ul style="list-style-type: none"> • EUR—Euro • USD—U.S. Dollar <p> Note: Although this field is Nillable, if you want to use Commerce Webstore Cart Promotions with multi-currency enabled, this field is required.</p>
GrandTotalAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Sum of all cart items' TotalAmount, or WebCart TotalAmount plus WebCart TotalTaxAmount.</p>

Field	Details
GuestEmailAddress	<p>Type email</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The email address of a guest buyer. This field is available in API version 52.0 and later.</p>
GuestFirstName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The first name of a guest buyer. This field is available in API version 52.0 and later.</p>
GuestLastName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The last name (or surname) of a guest buyer. This field is available in API version 52.0 and later.</p>
GuestPhoneNumber	<p>Type phone</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The phone number of a guest buyer. This field is available in API version 52.0 and later.</p>
GuestSecondName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The second name of a guest buyer. This field is available in API version 52.0 and later.</p>
IsRepricingNeeded	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field	Details
	<p>Description Whether the cart has changed since the last repricing. The default value is false.</p>
IsSecondary	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Whether the cart is a secondary cart or a primary cart. This field is available in API version 52.0 and later.</p>
LastRepricingDate	<p>Type datetime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Date when the last repricing was done.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of this <code>webCart</code> record. <code>Name</code> can be up to 255 characters.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the owner of this <code>webCart</code>.</p>
PaymentGroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the <code>webCart</code> payment group.</p>
PaymentMethodId	<p>Type reference</p>

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The method of payment for this webCart.</p>
PoNumber	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The purchase order number. Enter up to 80 characters.</p>
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The status of this webCart. Possible values are:</p> <ul style="list-style-type: none"> • Active • Checkout • Closed • PendingDelete • Processing
TaxLocaleType	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The type of tax locale. Possible values are:</p> <ul style="list-style-type: none"> • Net • Gross <p>This field is available in API version 52.0 and later.</p>
TotalAdjustmentAmount	<p>Type currency</p> <p>Properties Defaulted on create, Filter, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>A calculated field that reflects the total of all adjustments to the cart subtotal. Adjustments include various types of discounts.</p>
TotalAmount	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The sum of all cart items' <code>TotalPrice</code>, or <code>TotalProductAmount</code> plus <code>TotalChargeAmount</code>.</p> <p> Note: Although this field is Nillable, if you want to use Commerce Webstore Cart Promotions, this field is required and must have a value greater than or equal to zero (0).</p>
TotalAmountAfterAllAdjustments	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The sum of all cart items after all price adjustments are applied. Adjustments include various types of discounts. This field is available in API version 52.0 and later.</p>
TotalChargeAmount	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Defaulted on create, Filter, Nillable, Sort</p> <p>Description</p> <p>The sum of all cart items' <code>TotalPrice</code> for cart items of the type <code>Charge</code>.</p>
TotalChargeTaxAmount	<p>Type</p> <p>currency</p> <p>Properties</p> <p>Defaulted on create, Filter, Nillable, Sort</p> <p>Description</p> <p>The sum of all the cart items' <code>TotalTaxAmount</code> for cart items of the type <code>Charge</code>.</p>
TotalLineItemsWithErrors	<p>Type</p> <p>int</p> <p>Properties</p> <p>Defaulted on create, Filter, Nillable, Sort</p>

Field	Details
	<p>Description A calculated field that shows the total number of cart line items of type <code>Product</code> with errors. This field is available in API version 50.0 and later.</p>
<code>TotalListAmount</code>	<p>Type currency</p> <p>Properties Defaulted on create, Filter, Nillable, Sort</p> <p>Description Sum of all the cart items' <code>TotalListPrice</code>.</p>
<code>TotalProductAmount</code>	<p>Type currency</p> <p>Properties Defaulted on create, Filter, Nillable, Sort</p> <p>Description The sum of all the cart items' <code>TotalPrice</code> for cart items of the type <code>Product</code>.</p>
<code>TotalProductCount</code>	<p>Type double</p> <p>Properties Defaulted on create, Filter, Nillable, Sort</p> <p>Description A count of all the products in the <code>WebCart</code>.</p>
<code>TotalProductTaxAmount</code>	<p>Type currency</p> <p>Properties Defaulted on create, Filter, Nillable, Sort</p> <p>Description The sum of all the cart items' <code>TotalTaxAmount</code> for the <code>CartItem</code> type <code>Product</code>.</p>
<code>TotalPromoAdjustmentAmount</code>	<p>Type currency</p> <p>Properties Defaulted on create, Filter, Nillable, Sort</p> <p>Description The total of all item discounts related to product promotions. This field is available in API version 52.0 and later.</p>
<code>TotalPromoAdjustmentTaxAmount</code>	<p>Type currency</p>

Field	Details
	<p>Properties Defaulted on create, Filter, Nillable, Sort</p> <p>Description The total tax adjustment for all item discounts related to product promotions. This field is available in API version 52.0 and later.</p>
TotalTaxAmount	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The sum of all cart items' TotalTaxAmount, or TotalProductTaxAmount plus TotalDeliveryTaxAmount.</p>
Type	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The webCart type. Default value is Cart. Possible values are:</p> <ul style="list-style-type: none"> • Cart
UniqueProductCount	<p>Type int</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Sort</p> <p>Description The count of unique product SKUs in the webCart.</p>
WebStoreId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The store ID related to this webCart.</p>

Usage Notes

- In a B2B Commerce for Lightning store, customers who created custom components for adding items to carts noticed that, after adding items, the cart badge didn't refresh. A hard refresh causes the value to properly update.

Associated Objects

This object has the following associated objects. Unless it's noted, associated objects are available in the same API version as this object.

WebCartHistory

History is available for tracked fields of the object.

WebCartOwnerSharingRule

Sharing rules are available for the object.

WebCartShare

Sharing is available for the object.

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The `WebCartAdjustmentGroup` object is available only if the B2B Commerce license is enabled.

Fields

Field	Details
<code>AdjustmentSource</code>	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Price adjustment type. Possible values are:</p> <ul style="list-style-type: none"> • <code>Discretionary</code> • <code>Promotion</code> • <code>System</code>

Field	Details
AdjustmentTargetType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Target for the price adjustment (the cart itself or individual items). Possible values are:</p> <ul style="list-style-type: none"> • Cart • Item
AdjustmentType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Indicates if the price adjustment is applied as percentage or an absolute amount. Possible values are:</p> <ul style="list-style-type: none"> • AdjustmentAmount • AdjustmentPercentage
AdjustmentValue	<p>Type double</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description Numeric value of the adjustment (for example, 10 if the price adjustment is either 10% off or \$10 off).</p>
CartId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the cart to which the price adjustment belongs. This is a relationship field.</p> <p>Relationship Name Cart</p> <p>Relationship Type Lookup</p>

Field	Details
	<p>Refers To WebCart</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The ISO code for the currency that's specified on the buyer's account. Default value is USD. Possible values are:</p> <ul style="list-style-type: none"> • EUR—Euro • USD—U.S. Dollar
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Description of the adjustment group.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Name of the adjustment group.</p>
PriceAdjustmentCauseId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description ID of entity that caused this adjustment (for example, a promotion ID). This is a relationship field.</p> <p>Relationship Name PriceAdjustmentCause</p> <p>Relationship Type Lookup</p> <p>Refers To Promotion</p>

Field	Details
Priority	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description If there are multiple price adjustments, sequence in which the price adjustments are applied.</p>
TaxAmount	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Tax on the total adjusted price.</p>
TotalAmount	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Total price after adjustments.</p>
TotalAmountWithTax	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Total adjusted price plus tax.</p>

WebCartHistory

WebCartHistory represents the history of changes to the values in the fields of the `WebCart` object.

For specific version information, see the documentation for `WebCart`.

Supported Calls

`describeSObjects()`, `query`, `replicate`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

For specific special access rules, if any, see the documentation for `WebCart`.

Fields

Field Name	Details
DataType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Data type of the field that was changed.</p>
Field	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description Name of the field that was changed.</p>
NewValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description New value of the field that was changed.</p>
OldValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description Old value of the field that was changed.</p>
WebCartId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The unique ID of the <code>WebCart</code>.</p>

WebLink

Represents a custom link to a URL or Scontrol.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `update()`, `upsert()`

Special Access Rules

- To create a custom link, the client application must be logged in with the “Customize Application” permission.
- Customer Portal users can’t access this object.

Fields

Field Name	Details
Availability	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description</p>
Description	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Description of the custom link. Limit is 1,000 characters.</p>
DisplayType	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Type of display: button, link, or mass-action button.</p>
EncodingKey	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p>

Field Name	Details
	<p>Description Required. Encoding of parameters on the URL link.</p>
HasMenubar	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the popup window shows a menu bar (<code>true</code>) or not (<code>false</code>).</p>
HasScrollbars	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the popup window shows scroll bars (<code>true</code>) or not (<code>false</code>).</p>
HasToolbar	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the popup window shows browser toolbars (<code>true</code>) or not (<code>false</code>). Toolbars normally contain navigation buttons like Back, Forward, and Print.</p>
Height	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Height of the popup in pixels.</p>
IsProtected	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the object is protected (<code>true</code>) or not (<code>false</code>). Protected components that have been installed in other organizations can't be linked to or referenced by components created in the subscriber organization. A developer can easily delete a protected component contained in a managed package in a</p>

Field Name	Details
	<p>future release of the package without worrying about failing installations. However, once a component is marked as unprotected and is released globally, the developer can't delete it.</p>
IsResizable	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether users are allowed to resize the popup window (<code>true</code>) or not (<code>false</code>).</p>
LinkType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Required. Type of link (S-control or URL).</p>
MasterLabel	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Master label for the link. Limit is 240 characters. This display value is the internal label that is not translated.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Required. Name to display on page.</p>
NamespacePrefix	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15</p>

Field Name	Details
	<p>characters. You can refer to a component in a managed package by using the <i>namespacePrefix__componentName</i> notation.</p> <p>The namespace prefix can have one of the following values.</p> <ul style="list-style-type: none"> In Developer Edition orgs, <code>NamespacePrefix</code> is set to the namespace prefix of the org for all objects that support it, unless an object is in an installed managed package. In that case, the object has the namespace prefix of the installed managed package. This field's value is the namespace prefix of the Developer Edition org of the package developer. In orgs that are not Developer Edition orgs, <code>NamespacePrefix</code> is set only for objects that are part of an installed managed package. All other objects have no namespace prefix. <p>This field can't be accessed unless the logged-in user has the Customize Application permission.</p>
OpenType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Required. How the custom link opens when clicked in a browser—NewWindow, Sidebar, or NoSidebar.</p>
PageOrObjectType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort</p> <p>Description Required. For standard objects, the name of the page on which to display the custom link. For custom objects, the name of the object.</p>
Position	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Location on the screen where the popup should open—TopLeft, FullScreen, or None.</p>
RequireRowSelection	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p>Description Indicates whether the custom link requires a row selection (<code>true</code>) or not (<code>false</code>).</p>
ScontrolId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description ID of the custom s-control object (Scontrol) to link to. Can include fields as tokens within the custom s-control object. Label is Custom S-Control ID.</p>
ShowsLocation	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the popup window shows the browser's address bar containing the URL (<code>true</code>) or not (<code>false</code>).</p>
ShowsStatus	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Show the status bar at the bottom of the browser.</p>
Url	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Required. URL of the page to link to. Can include fields as tokens within the URL. Limit: 1,024 KB.</p>
Width	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Width of the popup in pixels.</p>

Usage

Use this object to programmatically manage custom links, which allow client applications to integrate data with external URLs, an organization's intranet, or other back-end office systems. A custom link can point to:

- An external URL, such as `www.google.com` or your company's intranet.
- A custom s-control, such as a Java applet or Active-X control.

Custom links can include fields as tokens within the URL or custom s-control.

SEE ALSO:

[Scontrol](#)

WebLinkLocalization

Represents the translated value of the field label for a custom link to a URL or s-control when the Translation Workbench is enabled for your organization.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

- Your organization must be using Professional, Enterprise, Developer, Unlimited, or Performance Edition and be enabled for the Translation Workbench.
- To view this object, you must have the "View Setup and Configuration" permission.

Fields

Field	Details
LanguageLocaleKey	<p>Type picklist</p> <p>Properties Create, Filter, Nillable, Restricted picklist</p> <p>Description This field is available in API version 16.0 and earlier. It is the same as the <code>Language</code> field.</p>
Language	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p>

Field**Details****Description**

This field is available in API version 17.0 and later. The combined language and locale ISO code, which controls the language for labels displayed in an application.

This picklist contains the following fully-supported languages:

- Chinese (Simplified): zh_CN
- Chinese (Traditional): zh_TW
- Danish: da
- Dutch: nl_NL
- English: en_US
- Finnish: fi
- French: fr
- German: de
- Italian: it
- Japanese: ja
- Korean: ko
- Norwegian: no
- Portuguese (Brazil): pt_BR
- Russian: ru
- Spanish: es
- Spanish (Mexico): es_MX Spanish (Mexico) defaults to Spanish for customer-defined translations.
- Swedish: sv
- Thai: th The Salesforce user interface is fully translated to Thai, but Help is in English.

The following end-user only languages are available.

- Arabic: ar
- Bulgarian: bg
- Croatian: hr
- Czech: cs
- English (UK): en_GB
- Greek: el
- Hebrew: iw
- Hungarian: hu
- Indonesian: in
- Polish: pl
- Portuguese (European): pt_PT
- Romanian: ro
- Slovak: sk

Field**Details**

- Slovenian: `sl`
- Turkish: `tr`
- Ukrainian: `uk`
- Vietnamese: `vi`

The following platform languages are available for organizations that use Salesforce exclusively as a platform.

- Albanian: `sq`
- Afrikaans: `af`
- Amharic: `am`
- Arabic (Algeria): `ar_DZ`
- Arabic (Bahrain): `ar_BH`
- Arabic (Egypt): `ar_EG`
- Arabic (Iraq): `ar_IQ`
- Arabic (Jordan): `ar_JO`
- Arabic (Kuwait): `ar_KW`
- Arabic (Lebanon): `ar_LB`
- Arabic (Libya): `ar_LY`
- Arabic (Morocco): `ar_MA`
- Arabic (Oman): `ar_OM`
- Arabic (Qatar): `ar_QA`
- Arabic (Saudi Arabia): `ar_SA`
- Arabic (Sudan): `ar_SD`
- Arabic (Syria): `ar_SY`

WebStore

Represents a B2B Commerce store. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

You must have the B2B Commerce license to create a store.

Fields

Field	Details
CheckoutTimeToLive	<p>Type int</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description</p> <p>Amount of time in minutes that a B2B checkout stays active and doesn't expire. If you use a <code>Null</code> value, your checkout never expires. If you use a <code>0</code> value, checkout is disabled. This field is available in API version 50.0 and later.</p>
<code>CheckoutValidAfterDate</code>	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Create, Filter, Nillable, Sort, Update</p> <p>Description</p> <p>A time stamp in the default server timezone (GMT). All B2B checkouts that start before this date are considered expired. A <code>Null</code> value means that all checkouts are valid. Example format: 2020-07-14T14:27:00.000Z. This field is available in API version 50.0 and later.</p>
<code>CurrencyIsoCode</code>	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description</p> <p>The default value is <code>USD</code>. Possible values are:</p> <ul style="list-style-type: none"> • <code>USD</code>—U.S. Dollar

ProductCatalogId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the catalog, containing products.</p>

Field	Details
SalesStoreId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the store that the catalog is associated with. This field is unique within your org.</p>

Associated Objects

WebStoreCatalogHistory

History is available for tracked fields of the object.

WebStorePricebook

Represents a store price book used in Lightning B2B Commerce. This object is available in API version 48.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

This object is available only if the B2B Commerce on Lightning Experience license is enabled.

Fields

Field	Details
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Determines whether the WebStorePricebook is active (<code>true</code>) or not (<code>false</code>). Default value is <code>false</code>.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field	Details
	<p>Description The timestamp for when the current user last viewed a record related to this record.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this record. If this value is null, it's possible that this record was referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The name of the store price book record.</p>
Pricebook2Id	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the price book assigned to the store.</p>
WebStoreId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the store assigned to the price book.</p>

Usage

Use the `WebStorePricebook` object to assign price books to a store. When you assign a price book to a web store, any buyer who has access to the store can price products from the assigned price books. When a store or buyer has multiple price book assignments, including prices to the same product, the price is determined by the pricing strategy of the store.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

WebStorePricebookFeed

Feed tracking is available for this object.

Wishlist

Represents a buyer-created list of [WishlistItems](#) in a store that's built with B2B Commerce on Lightning. Available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The Wishlist object is available only if the B2B Commerce on Lightning Experience license is enabled.

Fields

Field	Details
<code>AccountId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the account that owns the <code>Wishlist</code>.</p>
<code>CurrencyIsoCode</code>	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The ISO code for the currency that's specified on the buyer's account. Default value is <code>USD</code>. Possible values are:</p> <ul style="list-style-type: none"> • <code>USD</code>—U.S. Dollar
<code>Name</code>	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of this <code>Wishlist</code> record. <code>Name</code> can be up to 255 characters.</p>

Field	Details
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the user or group that owns the <code>wishlist</code>.</p>
WebstoreId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the <code>WebStore</code> related to this <code>wishlist</code>.</p>
WishlistProductCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The count of <code>wishlistItems</code> on this <code>wishlist</code>. <code>WishlistProductCount</code> is a calculated field.</p>

Associated Objects

This object has the following associated objects. Unless it's noted, associated objects are available in the same API version as this object.

[WishlistOwnerSharingRule](#) on page 3961

Sharing rules are available for the object.

[WishlistShare](#) on page 3967

Sharing is available for the object.

Usage Notes

- Wishlists aren't included in any searches.

SEE ALSO:

[WishlistItem](#)

WishlistItem

Represents an item on a `wishlist` in a store built with B2B Commerce for Lightning. Available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The `WishlistItem` object is available only if the B2B Commerce for Lightning license is enabled.

Fields

Field	Details
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The ISO code for the currency that's specified on the buyer's account. Default value is USD. Possible values are:</p> <ul style="list-style-type: none"> • USD—U.S. Dollar
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of this <code>WishlistItem</code> record. <code>Name</code> can be up to 255 characters.</p>
Product2Id	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the product that is represented by the <code>WishlistItem</code>.</p>
WishlistId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p>

Field	Details
	<p>Description</p> <p>The ID of the parent <code>wishlist</code> of this <code>WishlistItem</code>.</p>

SEE ALSO:

[Wishlist](#)

WorkAccess

Used to grant or restrict user access to give badge definitions. Each badge definition record must have one `WorkAccess` record.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Additional Considerations and Related Objects

`WorkAccess` is not available through Schema Builder and is not customizable. A `WorkAccess` record is **required** for users to **Give** `BadgeDefinitions`. If a `WorkAccess` record is not created, `BadgeDefinitions` will not be available to users.

The sharing of `WorkAccess` records is through `WorkAccessShare`. For each `WorkBadgeDefinition` record, you must create both a `WorkAccess` record (per `WorkBadgeDefinition`) and `WorkAccessShare` records for sharing to users or groups.

Fields

Field Name	Details
<code>AccessType</code>	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description</p> <p>Define the type of Access given to user ("Give").</p>
<code>OwnerId</code>	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Salesforce unique ID for owner of Access record.</p> <p>This is a polymorphic relationship field.</p>

Field Name	Details
	<p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Salesforce unique ID for BadgeDefinition record associated with this Access record. This is a relationship field.</p> <p>Relationship Name Parent</p> <p>Relationship Type Lookup</p> <p>Refers To WorkBadgeDefinition</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[WorkAccessOwnerSharingRule](#)

Sharing rules are available for the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

[WorkAccessShare](#)

Sharing is available for the object.

WorkAccessShare

Used to control Givers of WorkBadgeDefinition records.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Additional Considerations and Related Objects

Related to [WorkAccess Object](#). WorkAccess is the parent of WorkAccessShare.

Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field Name	Details
AccessLevel	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description CRUD Access Level (picklist values: Read Only, Read/Write, Owner).</p>
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID for WorkAccess record. This is a relationship field.</p> <p>Relationship Name Parent</p> <p>Relationship Type Lookup</p> <p>Refers To WorkAccess</p>
RowCause	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Reason that this sharing entry exists. You can create a value for this field in API versions 32.0 and later with the correct organization-wide sharing settings. Values can include:</p> <ul style="list-style-type: none"> • Manual—The User or Group has access because a user with “All” access manually shared the WorkAccess with them. • Owner—The User is the owner of the WorkAccess or is in a role above the WorkAccess owner in the role hierarchy.

Field Name	Details
UserOrGroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description User or Group ID for WorkAccess. This is a polymorphic relationship field.</p> <p>Relationship Name UserOrGroup</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>

WorkBadge

Represents information about who the badge was given to and which badge was given. A WorkBadge record is created for each recipient of a WorkBadgeDefinition.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Additional Considerations and Related Objects

WorkBadge is a lookup to WorkThanks. Each WorkBadge record must derive a SourceId from WorkThanks. There can be multiple WorkBadge records tied to a single WorkThanks record.

Fields

Field Name	Details
DefinitionId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Required. Salesforce unique ID for the given WorkBadgeDefinition record given. This is a relationship field.</p>

Field Name	Details
	<p>Relationship Name Definition</p> <p>Relationship Type Lookup</p> <p>Refers To WorkBadgeDefinition</p>
Description	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description The description of the WorkBadgeDefinition.</p>
GiverId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the badge giver. Can't be the same as RecipientId. This is a relationship field.</p> <p>Relationship Name Giver</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
ImageUrl	<p>Type url</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The URL of the badge image.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>The time stamp that indicates when the current user last viewed a record that is related to this WorkBadge.</p>
LastViewedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The time stamp that indicates when the current user last viewed this WorkBadge. If this value is null, this record might have been only referenced (LastReferencedDate) and not viewed.</p>
Message	<p>Type</p> <p>textarea</p> <p>Properties</p> <p>Nillable</p> <p>Description</p> <p>The message accompanying the thanks badge.</p>
NetworkId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The ID of the community that this WorkBadge is associated with. This field is available only if digital experiences is enabled in your org.</p>
RecipientId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p> <p>Description</p> <p>Required. Salesforce unique ID for User who is the Recipient of Badge. Can't be the same as GiverId</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>Recipient</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>User</p>

Field Name	Details
RewardId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Salesforce unique ID for Reward given with badge (if Reward Badge)</p>
SourceId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Salesforce unique ID for Thanks record referenced to this badge. This is a relationship field.</p> <p>Relationship Name Source</p> <p>Relationship Type Lookup</p> <p>Refers To WorkThanks</p>

WorkBadgeDefinition

Represents the attributes of a badge including the badge name, description, and image. Each WorkBadge record must have a lookup to a WorkBadgeDefinition since badge attributes (like badge name) are derived from the WorkBadgeDefinition object.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Additional Considerations and Related Objects

WorkBadgeDefinition has a field called `ImageUrl` that references a DocumentID. This is a required field for creating a Badge.

To grant "giver" access to a WorkBadgeDefinition, you must also create the [WorkAccess](#) (and the related WorkAccessShare records).

Each WorkBadgeDefinition has an `ImageUrl` field that must be populated with a DocumentID of the Document record containing the badge image.

Fields

Field Name	Details
Description	<p>Type textarea</p> <p>Properties Create, Update</p> <p>Description Required. Limit: 4000 characters. The description of the badge and what it means to receive this badge.</p>
GivenBadgeCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of badges given per user or across all users.</p> <p> Note: This field can't be added in a list view or referenced in a formula field.</p>
ImageUrl	<p>Type url</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. This is the badge image that will be displayed in the UI. Use DocumentID or ImageURL.</p>
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Represents whether a WorkBadgeDefinition is active and available in the UI and API.</p>
IsCompanyWide	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Represents a special class of badges known as Company Badges. Company badges are visible to the entire company and visible in specific list view filters.</p>

Field Name	Details
	<p> Note: If this field is selected, everyone within the user's network will be able to give the badge automatically. If this field is not selected, people with sharing must be added to the badge's access list in order to give the badge.</p>
<code>IsLimitPerUser</code>	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the badge limit is per user (<code>true</code>) or across all users (<code>false</code>). The default value is <code>false</code>.</p>
<code>IsRewardBadge</code>	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the badge is a reward badge (<code>true</code>) or not (<code>false</code>).</p>
<code>LastReferencedDate</code>	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The time stamp that indicates when the current user last viewed a record that is related to this WorkBadgeDefinition.</p>
<code>LastViewedDate</code>	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The time stamp that indicates when the current user last viewed this WorkBadgeDefinition. If this value is null, this record might have been only referenced (<code>LastReferencedDate</code>) and not viewed.</p>
<code>LimitNumber</code>	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p>Description The badge limit per user or across all users.</p>
LimitStartDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The start date of the badge limit. The date can be reset to the current date.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Required. Name of the Badge. Label: Badge Title.</p>
NetworkId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the community that this WorkBadgeDefinition is associated with. This field is available only if digital experiences is enabled in your org.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Salesforce User ID for User who is the Owner of the WorkBadgeDefinition record (usually the creator of the record) This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>

Field Name	Details
RewardFundId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Salesforce unique ID for the WorkRewardFund that is associated with this WorkBadgeDefinition. WorkBadgeDefinition records with a RewardFundID indicate a Reward Badge.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

WorkBadgeDefinitionFeed

Feed tracking is available for the object.

WorkBadgeDefinitionHistory

History is available for tracked fields of the object.

WorkBadgeDefinitionOwnerSharingRule

Sharing rules are available for the object.

WorkBadgeDefinitionShare

Sharing is available for the object.

WorkCoaching

Represents a single coaching relationship between two users. One of the users is defined as the coach and the other is defined as a coachee. WorkCoaching is feed-enabled so there is a private feed available to the coach and coachee.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
CoachId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description [Required] The coach in this 1:1 coaching relationship.</p>

Field Name	Details
CoachedId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description [Required] The user being coached in this 1:1 coaching relationship.</p>
IsInactive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the coaching relationship is <i>Inactive</i> (<code>true</code>) or not (<code>false</code>).</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The time stamp that indicates when the current user last viewed a record that is related to this coaching relationship.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The time stamp that indicates when the current user last viewed this coaching relationship. If this value is null, this record might have been only referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description [Required] The record's name. Max length is 255 characters.</p>
OwnerId	<p>Type reference</p>

Field Name	Details
	Properties Create, Defaulted on create, Filter, Group, Sort, Update
	Description ID of the contact who owns the WorkCoaching record.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

WorkCoachingFeed

Feed tracking is available for the object.

WorkCoachingHistory

History is available for tracked fields of the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

WorkCoachingOwnerSharingRule

Sharing rules are available for the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

WorkCoachingShare

Sharing is available for the object.

WorkDemographic

Represents the field values used to specify slices in the workload forecasting and capacity planning. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

The org must have the Workforce Engagement license. To view, create, edit, or delete records, the user must have the Workforce Engagement Analyst permission set.

Fields

Field	Details
Channel	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The channel value.</p>
CustomWorkType	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Custom dimension value that the user can define other than the channel, region, and skill dimensions.</p>
GroupIdentifier	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The group or queue associated to a slice when creating an Omni-based workload.</p>
JobProfileId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The foreign key to the JobProfile object. This is a relationship field.</p> <p>Relationship Name JobProfile</p> <p>Relationship Type Lookup</p> <p>Refers To JobProfile</p>
Region	<p>Type string</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description The region value.</p>
ServiceChannelId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The foreign key to the ServiceChannel object. This is a relationship field.</p> <p>Relationship Name ServiceChannel</p> <p>Relationship Type Lookup</p> <p>Refers To ServiceChannel</p>
ServiceTerritoryId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The foreign key to the ServiceTerritory object. This is a relationship field.</p> <p>Relationship Name ServiceTerritory</p> <p>Relationship Type Lookup</p> <p>Refers To ServiceTerritory</p>
SkillSet	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The skill value.</p>

WorkFeedback

Represents the answer to a question that a person was asked via a feedback request. Also used to store offered feedback without linking it to a particular question.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Additional Considerations and Related Objects

- Ownership is transferred to the requester on submit for certain types (ad-hoc feedback).
- The record is read-only after the request that it's linked to is set to Submitted.
- You can't link a feedback object to a request unless you are the recipient.
- The question that the feedback is linked to must be part of the same question set that the request is linked to.

Fields

Field Name	Details
Feedback	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Contains either the free-form text of the answer, or the choice selected by the user. Max length is 65536.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The name of the WorkFeedback record.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description ID of the owner of the WorkFeedback record.</p>

Field Name	Details
QuestionId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The question this answer applies to. When this feedback is linked to a request of an unsolicited type, the question ID is null.</p>
RequestId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the request this response belongs to, in case of offered feedback.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[WorkFeedbackHistory](#)

History is available for tracked fields of the object.

[WorkFeedbackOwnerSharingRule](#)

Sharing rules are available for the object.

[WorkFeedbackShare](#)

Sharing is available for the object.

WorkFeedbackQuestion

Represents a free-form text type or multiple choice question within a set of questions.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
Choices	<p>Type textarea</p>

Field Name	Details
	<p>Properties Create, Nillable, Update</p> <p>Description New-line separated list of valid choices for multiple choice questions. Maximum length is 1000 characters.</p>
Detail	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Detailed instructions on how to answer the question.</p>
IsConfidentialAnswer	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Answers to questions marked confidential will not be shared with the subject of the review. This field applies only to performance summaries.</p>
IsOptional	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description If this option is selected, the question is optional and isn't required to be answered. This field applies only to performance summaries.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description A short description of the question, which can be used as a header for reports and Calibration.</p>
Number	<p>Type int</p> <p>Properties Create, Filter, Group, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>The order of the question that is displayed within the question set, such as question number three in a question set that has five questions.</p>
OwnerId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>ID of the owner of the WorkFeedbackQuestion.</p>
QuestionSetId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort, Update</p> <p>Description</p> <p>The question set this question is a part of.</p>
Text	<p>Type</p> <p>textarea</p> <p>Properties</p> <p>Create, Update</p> <p>Description</p> <p>The body of the question. Max length is 16384 characters.</p>
Type	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description</p> <p>Allows for either a free-form text answer or a multiple choice question defined by new-line separate choices in the 'Choices' field. Valid picklist values are:</p> <ul style="list-style-type: none"> • MultipleChoice • FreeText • Rating

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[WorkFeedbackQuestionHistory](#)

History is available for tracked fields of the object.

WorkFeedbackQuestionOwnerSharingRule

Sharing rules are available for the object.

WorkFeedbackQuestionShare

Sharing is available for the object.

WorkFeedbackQuestionSet

Represents a set of questions being asked. The question set is used to link all the individual requests where different recipients were asked the same set of questions on the same subject.

In the WDC performance application, a question set defines the type of summaries and their due dates that will accompany the deployment of a specific performance summary cycle.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
DueDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The date that this specific question set is expected to be submitted by the recipient. This field applies only to performance summaries.</p>
FeedbackType	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The description of the collection of questions that are written in context to the type of recipient answering them, relative to the subject of the summary. This field applies only to performance summaries.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>The name of the question set. Maximum length is 225 characters.</p>
OwnerId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>ID of the owner of the WorkFeedbackQuestionSet.</p>
PerformanceCycleId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>If a question set is associated to a performance summary cycle, then that cycle ID is referenced in this field. This field applies only to performance summaries.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[WorkFeedbackQuestionSetHistory](#)

History is available for tracked fields of the object.

[WorkFeedbackQuestionSetOwnerSharingRule](#)

Sharing rules are available for the object.

[WorkFeedbackQuestionSetShare](#)

Sharing is available for the object.

WorkFeedbackRequest

Represents a single feedback request on a subject or topic (question) to a single recipient in the feedback application. In the case of offered feedback, WorkFeedbackRequest represents feedback that is offered about a subject. In the performance application, WorkFeedbackRequest represents a request for feedback on a set of questions from a question set, on a subject—for the recipient to complete and submit.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Additional Considerations and Related Objects

- After a request's state is changed to Submitted, fields can't be changed, except for LastSharedDate and IsUnreadByOwner.
- If LastRemindDate is updated, a reminder notification will be sent to the request's recipient (only possible when request is in Draft state).
- When a new request is created, a notification is sent to the recipient.
- When a recipient of a request submits their feedback (Draft->Submitted), a notification will be sent to requester (except for offered feedback).
- Requester cannot modify the subject of the question set after a request is created.
- For offered feedback (to user, to manager, or both), the person who is offering feedback is both the creator of WorkFeedbackRequest as well as the recipient.

Fields

Field Name	Details
AdHocFeedback	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description The content of the feedback.</p>
AdHocQuestion	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description The content of the feedback question.</p>
Description	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The description of the WorkFeedbackRequest.</p>
FeedbackRequestState	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The current state of the feedback request. Allowed picklist values are:</p>

Field Name	Details
FeedbackType	<ul style="list-style-type: none"> • Draft • Submitted • Declined <hr/> <p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description Specifies the type of request. Picklist values that are used for performance summaries:</p> <ul style="list-style-type: none"> • Unspecified • Peer Summary • Self Summary • Manager Summary • Skip Level Summary <p>Picklist values that are used for feedback:</p> <ul style="list-style-type: none"> • Personal • Unsolicited to User • Unsolicited to Manager • Unsolicited to User and Manager • On Topic <p>The type of the feedback determines the sharing and visibility rules that are applied to answers.</p>
IsDeployed	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description If <code>true</code>, the feedback is part of a deployed performance summary cycle.</p>
IsShareWithSubject	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description If <code>true</code>, the feedback is shared with the summary subject.</p>

Field Name	Details
IsUnreadByOwner	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description If <code>true</code>, the submitted request has not been seen by the requester.</p>
IsUnsolicited	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description If <code>true</code>, the feedback request is unsolicited feedback offered to another user.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The time stamp that indicates when the current user last viewed a record that is related to this WorkFeedbackRequest.</p>
LastRemindDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The last time a reminder was sent to the recipient of this draft request.</p>
LastSharedDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The last time this request was shared with another user or group.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>The time stamp that indicates when the current user last viewed this WorkFeedbackRequest. If this value is null, this record might have been only referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, idLookup, Sort, Update</p> <p>Description</p> <p>The name of the WorkFeedbackRequest.</p>
OwnerId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>ID of the owner of the WorkFeedbackRequest.</p>
PerformanceCycleId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Used by performance summaries to link to a summary cycle. This field applies only to performance summaries.</p>
QuestionSetId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort</p> <p>Description</p> <p>Question set associated with the current request.</p>
RecipientId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>User asked to provide feedback on the subject.</p>

Field Name	Details
RelatedObjectId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description Specifies a record in the system that this feedback request is related to. Used by ad-hoc feedback to gather feedback in the context of an opportunity or WDC goal.</p> <p>Used by performance summaries to link to a summary cycle.</p>
SharingScope	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The users that see the feedback. <code>SharingScope</code> can have the following values:</p> <ul style="list-style-type: none">• Nobody• Subject• Manager• SubjectAndManager
SubjectId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The ID of the user that this request (or offer) is about.</p>
SubmitFeedbackToId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the person this performance summary feedback request (and its respective answers) is shared with. It's also the ID of the person who owns the requested subject's manager summary request. This field applies only to performance summaries.</p>
SubmittedDate	<p>Type dateTime</p>

Field Name	Details
	<p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The last time (in case it was reopened by admin) this request was submitted by the recipient. This field applies only to performance summaries.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

WorkFeedbackRequestFeed

Feed tracking is available for the object.

WorkFeedbackRequestHistory

History is available for tracked fields of the object.

WorkFeedbackRequestOwnerSharingRule

Sharing rules are available for the object.

WorkFeedbackRequestShare

Sharing is available for the object.

WorkforceCapacity

Represents the time series for actual or forecasted workforce allocation. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The org must have the Workforce Engagement license. To view, create, edit, and delete records, the user needs to have the Workforce Engagement Analyst permission set.

Fields

Field	Details
Description	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description Additional information about the planning.</p>
EndTime	<p>Type dateTime</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The end date and time of the planning.</p>
IsOmni	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Derived from isOmni field on Workload object. Indicates that the workload is Omni-based. If workload is null, the field value defaults to <code>false</code>. The default value is <code>false</code>.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the planning.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The owner of the record. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>

Field	Details
PlanType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The type of capacity plan. Possible values are:</p> <ul style="list-style-type: none"> • LongTerm—The plan predicts the required number of full-time employees (FTEs). • ShortTerm—The plan predicts the required number of shifts. <p>This field is available in API version 54.0 and later.</p>
StartDateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The start date and time of the planning.</p>
WorkloadId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The foreign key to the Workload object. This is a relationship field.</p> <p>Relationship Name Workload</p> <p>Relationship Type Lookup</p> <p>Refers To Workload</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[WorkforceCapacityOwnerSharingRule](#) on page 3961

Sharing rules are available for the object.

[WorkforceCapacityShare](#) on page 3967

Sharing is available for the object.

WorkforceCapacityUnit

Represents the number of resources allocated or needed for a specific set of work items at a timestamp within a specific duration. This object is available in API version 51.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The org must have the Workforce Engagement license. To view, create, edit, or delete records, the user must have the Workforce Engagement Analyst permission set.

Fields

Field	Details
AssignedTotalCount	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description The number of shifts assigned at specific time period.</p>
AvailableTotalCount	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description The total number of shifts scheduled at a specific time period.</p>
Capacity	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort</p> <p>Description Staffing prediction for a capacity plan. This field is available in API version 54.0 and later.</p>
DateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Sort, Update</p>

Field	Details
	<p>Description The timestamp of the data point.</p>
IsOmni	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Derived from the isOmni field on WorkforceCapacity. Indicates that the workload is Omni-based. The default value is 'false'.</p>
IsShiftTemplateNonStandard	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the shift template that's used at a specific time period is a non-standard shift. This field is available in API version 53.0 and later. The default value is <code>false</code>.</p>
JobProfileName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The derived field from the WorkDemographic SkillSet field.</p>
MaxCount	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The max number of resources allocated or needed at a specific time period.</p>
MeasureUnit	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The time interval (in minutes) used in capacity plans.</p>

Field	Details
	<p>Possible values are:</p> <ul style="list-style-type: none"> • 43200—Monthly for long-term capacity plans. This value is available in API version 54.0 and later. • 10080—Weekly • 1440—Daily • 60—Hourly • 30—30 minutes. Reserved for future use. • 15—15 minutes. Reserved for future use. <p>The default value is '1440'.</p>
OriginalTotalCount	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort</p> <p>Description The original total number of resources allocated or needed at specific time period calculated from the planning process.</p>
ResourceGap	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Represents the resource gap between the available and required resources.</p>
ServiceTerritoryName	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The derived field from the WorkDemographic Region field.</p>
ShiftTemplateDuration	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The duration of the shift template that's used at a specific time period. This field is available in API version 53.0 and later.</p>

Field	Details
ShiftTemplateDurationType	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Indicates whether the duration of the shift template that's used at a specific time period is in minutes or hours. This field is available in API version 53.0 and later.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • H—Hours • M—Minutes <p>The default value is H.</p>
ShiftTemplateId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the shift template that's used at a specific time period. This field is available in API version 53.0 and later.</p> <p>This is a relationship field.</p> <p>Relationship Name ShiftTemplate</p> <p>Relationship Type Lookup</p> <p>Refers To ShiftTemplate</p>
ShiftTemplateJobProfile	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The job profile that relates to the shift template that's used at a specific time period. This field is available in API version 53.0 and later.</p>
ShiftTemplateName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	<p>Description</p> <p>Name of the shift template that's used at a specific time period. This field is available in API version 53.0 and later.</p>
ShiftTemplateStartTime	<p>Type</p> <p>time</p> <p>Properties</p> <p>Create, Filter, Nillable, Sort, Update</p> <p>Description</p> <p>The start time of the shift template that's used at a specific time period. This field is available in API version 53.0 and later.</p>
TotalCount	<p>Type</p> <p>int</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The total number of resources allocated or needed at specific time period. It represents the updated count after the adjustment. This value is the same as <code>OriginalTotalCount</code> if no adjustments were made.</p> <p>This is a calculated field.</p>
WorkDemographicId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort, Update</p> <p>Description</p> <p>The foreign key to WorkDemographic object.</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>WorkDemographic</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>WorkDemographic</p>
WorkforceCapacityId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Sort</p>

Field	Details
	<p>Description The foreign key to WorkCapacity object. This is a relationship field.</p> <p>Relationship Name WorkforceCapacity</p> <p>Relationship Type Lookup</p> <p>Refers To WorkforceCapacity</p>

WorkGoal

Represents the components of a goal, such as its description and associated metrics. This object has been deprecated as of API version 35.0. Use the [Goal](#) object to query information about WDC goals.

Note: The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
ActualValue	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The actual value of the WorkGoal metric. Applicable only to WorkGoal objects of Type: Metric.</p>
ActualValueExternalUrl	<p>Type url</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Contains a URL that references WDC data synchronization for the actual value of a metric. Applicable only to WorkGoal objects of <code>Type: Metric</code>.</p>
CompletionDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The completion date of the goal.</p> <p> Note: Field-level security limits access to only administrators and owners by default, and only they can complete a goal.</p>
Description	<p>Type textarea (max length 4000)</p> <p>Properties Create, Nillable, Update</p> <p>Description The description of the goal.</p>
DueDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The date the WorkGoal object is due (optional). Applicable only to WorkGoal objects of <code>Type: Metric</code>.</p>
FlaggedAs	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The progress of the WorkGoal object. Applicable only to WorkGoal objects of <code>Type: Metric</code>.</p> <p>Possible values:</p> <ul style="list-style-type: none"> • On Track: Progress on the metric is on track. • Behind: Progress on the metric is behind schedule. • Postponed: The metric is postponed.

Field Name	Details
	<ul style="list-style-type: none"> Critical: Progress on the metric is critical.
ImageUrl	<p>Type url</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The URL for the goal image. The image must be stored in Documents and set as externally available. Applicable only to WorkGoal objects of <code>Type: Goal</code>.</p>
InitialValue	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The initial value of the WorkGoal metric. Applicable only to WorkGoal objects of <code>Type: Metric</code> and <code>MetricType: Progress</code> or <code>Percent</code>.</p>
IsKeyCompanyGoal	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Used to indicate if the goal is a key company goal. Used for the Company Goal Showcase. Applicable only to WorkGoal objects of <code>Type: Goal</code>.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The time stamp that indicates when the current user last viewed a record that is related to this goal.</p>
LastSyncDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The time stamp that indicates when the actual value was last synced with the associated metrics report.</p>

Field Name	Details
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The time stamp that indicates when the current user last viewed this goal.</p>
MetricType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The type of metric that is represented. (See values in the following list). Applies only to WorkGoal objects of <code>Type: Metric</code>.</p> <p>Possible values:</p> <ul style="list-style-type: none"> • Progress: ActualValue / TargetValue as a percentage • Percent: the metric as a percentage only • YesNo: the completed / not completed metric as a milestone • Absolute: Deprecated
MetricTypeDataSource	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Specifies how the metric (ActualValue and CurrentValue) is updated. Applies only to WorkGoal objects of <code>Type: Goal</code> and <code>Metric</code>.</p> <p>Possible values:</p> <ul style="list-style-type: none"> • Manual: indicates that the actual and target value of the metric is updated manually by the user • Rollup: indicates that the actual and target value of a goal is rolled up automatically by WDC Goals • DataSyncActualOnly: indicates that the actual value of the metric is linked to a Salesforce report
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the WorkGoal object. (Maximum length is 255.)</p>

Field Name	Details
OverallStatus	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The overall calculated status of the WorkGoal based on <code>FlaggedAs</code> and <code>CompletionDate</code>.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description ID of the user who owns the WorkGoal.</p>
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Specifies the structural parent of the WorkGoal. For example, a goal that has a metric is represented by a WorkGoal of <code>Type Metric</code>, which has a parent of WorkGoal of <code>Type Goal</code>.</p> <p> Note: The root and the parent must be set to the parent goal for any child metrics.</p>
Progress	<p>Type percent</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Read Only. The overall progress of the WorkGoal.</p>
RootId	<p>Type reference to a WorkGoal object</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Specifies the structural root of the WorkGoal. For example, a goal that has a metric is represented by a WorkGoal of <code>Type Metric</code>, which has a root of WorkGoal of <code>Type Goal</code>.</p>

Field Name	Details
State	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The state of the WorkGoal object. Applies only to WorkGoal objects of <code>Type: Metric</code>.</p> <p>Possible values:</p> <ul style="list-style-type: none"> • Draft: the draft state for the WorkGoal • Published: published state for the WorkGoal • Archived: archived state for the WorkGoal (for example, goals that no longer apply)
TargetValue	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The target value of the WorkGoal. Applies only to WorkGoal objects of <code>Type: Metric</code>.</p>
Type	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The type of the WorkGoal object, used to differentiate between the components of a goal. (This field is used to represent components of a goal such as its description and associated metrics.)</p> <p>Possible values:</p> <ul style="list-style-type: none"> • Goal: a goal • Metric: a metric (typically associated with goals) • Objective: an objective • KeyResult: a key result (typically associated with objectives) • V2Mom: a V2MOM (pilot feature) • Vision: a vision (pilot feature — typically associated with V2MOM) • Value: a value (pilot feature - typically associated with V2MOM) • Method: a method (pilot feature - typically associated with V2MOM) • Obstacle: an obstacle (pilot feature - typically associated with V2MOM) • Measure: a measure (pilot feature - typically associated with a method)

Field Name	Details
	 Note: Administrators can rename goals and metrics to objectives and key results, respectively. If this preference is enabled, use the <code>Type</code> Objective or KeyResult. Otherwise, use the default <code>Type</code> Goal or KeyResult.
Weight	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The weight of the goal or metric. The sum of the weights should equal 100%.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

WorkGoalFeed (API version 35.0)

Feed tracking is available for the object.

WorkGoalHistory

History is available for tracked fields of the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

WorkGoalOwnerSharingRule

Sharing rules are available for the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

WorkGoalShare

Sharing is available for the object.

WorkGoalCollaborator

Represents collaborators on a WorkGoal object. This doesn't include WorkGoal followers, which is handled by Chatter Feed Follow functionality. This object has been deprecated as of API version 35.0. Use the [Goal](#) object to query information about WDC goals.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
InvitationDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The date that a user was invited to become a collaborator (null if the user was not invited).</p>
State	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Indicates the state of the collaborating user. Whether the user has not responded, joined, or declined collaboration. The possible values are:</p> <ul style="list-style-type: none"> • PendingResponse: a user who was invited to collaborate but hasn't joined or declined • Joined: a user who is collaborating on a goal (joined/commit) • Declined: a user who declined to collaborate on a goal
UserId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The collaborating user.</p>
WorkGoalId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The WorkGoal object that this collaborator is a part of.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[WorkGoalCollaboratorHistory](#)

History is available for tracked fields of the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

WorkGoalCollaboratorHistory

Represents the history of changes to the values in the fields in a WorkGoalCollaborator object. Access is read-only.

Note: This object has been deprecated as of API version 35.0. Use the [Goal](#) object to query information about WDC goals in API version 35.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Fields

Field Name	Details
<code>DataType</code>	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Data type of the field that was changed.</p>
<code>Field</code>	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description Name of the standard or custom field.</p>
<code>NewValue</code>	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description New value of the modified field.</p>
<code>OldValue</code>	<p>Type anyType</p>

Field Name	Details
	<p>Properties Nillable, Sort</p> <p>Description Previous value of the modified field.</p>
WorkGoalCollaboratorId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the WorkGoalCollaborator object that is associated with this history entry.</p>

WorkGoalHistory

Represents the history of changes to the values in the fields of a WorkGoal. Access is read-only. This object has been deprecated as of API version 35.0. Use the GoalHistory object to query historical information for WDC goals.

Note: The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Fields

Field Name	Details
Field	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The name of the field that was changed.</p>
NewValue	<p>Type Any Type</p> <p>Properties Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>The new value of the field that was changed.</p>
OldValue	<p>Type</p> <p>Any Type</p> <p>Properties</p> <p>Nullable, Sort</p> <p>Description</p> <p>The latest value of the field before it was changed.</p>
WorkGoalId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Group, Sort</p> <p>Description</p> <p>ID of the Goal. Label is Goal ID.</p>

WorkGoalLink

Represents the relationship between two goals (many to many relationship). This object has been deprecated as of API version 35.0. Use the [GoalLink](#) object to query information about the relationship between two WDC goals.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
IsActive	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>Whether the WorkGoalLink is active (<code>true</code>) or not (<code>false</code>)</p>
LinkType	<p>Type</p> <p>picklist</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The type of link</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The auto-generated name of the goal link</p>
SourceGoalId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the source WorkGoal object</p>
TargetGoalId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The ID of the target WorkGoal object</p>

WorkGoalShare

Represents a sharing entry on a WorkGoal object. This object has been deprecated as of API version 35.0. Use the GoalShare object to query information about sharing for WDC goals.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

The properties available for some fields depend on the default organization-wide sharing settings. The properties listed are true for the default settings of such fields.

Field Name	Details
AccessLevel	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The user's or group's level of access to the goal. The possible values are:</p> <ul style="list-style-type: none"> • Read • Edit • All: This value is not valid when you create, update, or delete records <p>This field must be set to an access level that is higher than the organization's default access level for goals.</p>
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the WorkGoal object that is associated with this sharing entry.</p>
RowCause	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description Reason that this sharing entry exists. Read-only. You can create a value for this field in API versions 32.0 and later with the correct organization-wide sharing settings.</p> <p>Valid values include:</p> <ul style="list-style-type: none"> • Owner—The User is the owner of the WorkGoal or is in a user role above the WorkGoal owner in the role hierarchy. • Manual—The User or Group has access, because a user with "All" access manually shared the WorkGoal with the user or group. • Rule—The User or Group has access via a WorkGoal sharing rule. • GuestRule—The User or Group has access via a WorkGoal guest user sharing rule.
UserOrGroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p>

Field Name	Details
	<p>Description</p> <p>ID of the user or group that was given access to the goal. This field can't be updated.</p>

Workload

Represents the time series for work item volume and average handling time from aggregation and forecasting processes. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The org must have the Workforce Engagement license. To view, create, edit, or delete records, the user needs to have Workforce Engagement Analyst permission set.

Fields

Field	Details
Description	<p>Type</p> <p>textarea</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>Additional information about the workload</p>
EndDateTime	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Create, Filter, Sort</p> <p>Description</p> <p>The end date and time of the time series represented by the Workload object.</p>
IsOmni	<p>Type</p> <p>boolean</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort</p>

Field	Details
	<p>Description Indicates that the workload is Omni-based. The default value is 'false'.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The workload name.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The owner of the workload. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
StartDateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Sort</p> <p>Description The start date and time of the time series represented by the Workload object.</p>
WorkloadType	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The type of the workload. Possible values are:</p> <ul style="list-style-type: none"> • F—Forecasted

Field	Details
	<ul style="list-style-type: none"> • H—Historical <p>The default value is 'H'.</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[WorkloadOwnerSharingRule on page 3961](#)

Sharing rules are available for the object.

[WorkloadShare on page 3967](#)

Sharing is available for the object.

WorkloadUnit

Represents the number of work items and average handle time in a specific time interval. This object is available in API version 49.0 and later.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

The org must have a Workforce Engagement license. To view, create, edit, and delete records, the user must have the Workforce Engagement Analyst permission set.

Fields

Field	Details
AverageHandleTime	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The average handle time at a specific period of time.</p>
Channel	<p>Type string</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description The channel value.</p>
CustomWorkType	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The derived field of WorkDemographic.CustomWorkType for the custom dimension value.</p>
DateTime	<p>Type dateTime</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The timestamp of the single data point in the time series of the workload.</p>
IsOmni	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Derived from isOmni field in workload. Indicates that the workload is Omni-based The default value is 'false'.</p>
MeasureUnit	<p>Type string</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The time interval (in minutes) used in the workload. Possible values are:</p> <ul style="list-style-type: none"> • 43200—Monthly. Reserved for future use. • 10080—Weekly • 1440—Daily • 60—Hourly • 30—30 minutes. Reserved for future use. • 15—15 minutes. Reserved for future use.

Field	Details
	The default value is '1440'.
Region	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The derived field from WorkDemographic.Region for the region value.</p>
SkillSet	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The derived field from WorkDemographic.SkillSet for the skill value.</p>
TotalCount	<p>Type int</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The total number work items at a specific period of time.</p>
WorkDemographicId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The foreign key to the WorkDemographic object. This is a relationship field.</p> <p>Relationship Name WorkDemographic</p> <p>Relationship Type Lookup</p> <p>Refers To WorkDemographic</p>
WorkloadId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p>

Field	Details
	<p>Description The foreign key to the Workload object. This is a relationship field.</p> <p>Relationship Name Workload</p> <p>Relationship Type Lookup</p> <p>Refers To Workload</p>
WorkloadType	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The derived field from Workload.WorkloadType to indicate the type of workload, for example, a history or forecast workload. Possible values are:</p> <ul style="list-style-type: none"> • F—Forecasted • H—Historical <p>The default value is 'H'.</p>

WorkOrder

Represents field service work to be performed for a customer. This object is available in API version 36.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Work orders or Field Service must be enabled.

Fields

Field Name	Details
AccountId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The account associated with the work order. This is a relationship field.</p> <p>Relationship Name Account</p> <p>Relationship Type Lookup</p> <p>Refers To Account</p>
Address	<p>Type address</p> <p>Properties Filter, Nillable</p> <p>Description The compound form of the address where the work order is completed.</p>
AssetId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The asset associated with the work order. This is a relationship field.</p> <p>Relationship Name Asset</p> <p>Relationship Type Lookup</p> <p>Refers To Asset</p>
AssetWarrantyId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p>Description The asset warranty term associated with the work order. This field is available in API version 50.0 and above.</p>
BusinessHoursId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The business hours associated with the work order. This is a relationship field.</p> <p>Relationship Name BusinessHours</p> <p>Relationship Type Lookup</p> <p>Refers To BusinessHours</p>
CaseId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The case associated with the work order. This is a relationship field.</p> <p>Relationship Name Case</p> <p>Relationship Type Lookup</p> <p>Refers To Case</p>
City	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The city where the work order is completed. Maximum length is 40 characters.</p>
ContactId	<p>Type reference</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The contact associated with the work order. This is a relationship field.</p> <p>Relationship Name Contact</p> <p>Relationship Type Lookup</p> <p>Refers To Contact</p>
Country	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The country where the work order is completed. Maximum length is 80 characters.</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. The label in the user interface is <code>Currency ISO Code</code>.</p>
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The description of the work order. Try to include the steps needed to change the work order's status to Completed.</p>
Discount	<p>Type percent</p> <p>Properties Filter, Nillable, Sort</p>

Field Name	Details
	<p>Description Read only. The weighted average of the discounts on all line items in the work order. It can be any positive number up to 100.</p>
Duration	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The estimated time required to complete the work order. Specify the duration unit in the <code>Duration Type</code> field.</p> <p> Note: Work order duration and work order line item duration are independent of each other. If you want work order duration to automatically show the sum of the work order line items' duration, replace the <code>Duration</code> field on work orders with a custom roll-up summary field.</p>
DurationInMinutes	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The estimated duration in minutes. For internal use only.</p>
DurationType	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The unit of the duration: Minutes or Hours.</p>
EndDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date when the work order is completed. This field is blank unless you set up an Apex trigger or quick action to populate it. For example, you can create a quick action that sets the <code>EndDate</code> to 365 days after the <code>StartDate</code>.</p>
EntitlementId	<p>Type reference</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The entitlement associated with the work order.</p>
GeocodeAccuracy	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description Accuracy level of the geocode for the address. See Compound Field Considerations and Limitations for details on geolocation compound fields.</p> <p> Note: This field is available in the API only.</p>
GrandTotal	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Read only. The total price of the work order with tax added.</p>
IsClosed	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the work order is closed (<code>true</code>) or open (<code>false</code>).</p> <p> Tip: Use this field to report on closed versus open work orders.</p>
IsGeneratedFromMaintenancePlan	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description (Read Only) Indicates that the work order was generated from a maintenance plan (<code>true</code>), rather than manually created (<code>false</code>).</p> <p> Note: This option is deselected for work orders that were generated from maintenance plans before Summer '18.</p>

Field Name	Details
IsStopped	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether a milestone is paused (<code>true</code>) or counting down (<code>false</code>). This field is available only if Enable stopped time and actual elapsed time is selected on the Entitlement Settings page.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the work order was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the work order was last viewed.</p>
Latitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with Longitude to specify the precise geolocation of the address where the work order is completed. Acceptable values are numbers between <code>-90</code> and <code>90</code> with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields.</p> <p> Note: This field is available in the API only.</p>
LineItemCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>The number of work order line items in the work order. Its label in the user interface is <code>Line Items</code>.</p>
LocationId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The location associated with the work order. For example, a work site.</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>Location</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>Location</p>
Longitude	<p>Type</p> <p>double</p> <p>Properties</p> <p>Create, Filter, Nillable, Sort, Update</p> <p>Description</p> <p>Used with Latitude to specify the precise geolocation of the address where the work order is completed. Acceptable values are numbers between -180 and 180 with up to 15 decimal places. See Compound Field Considerations and Limitations for details on geolocation compound fields.</p> <p> Note: This field is available in the API only.</p>
MaintenancePlanId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Sort, Update</p> <p>Description</p> <p>The maintenance plan associated with the work order. When the work order is auto-generated from a maintenance plan, this field automatically lists the related plan.</p>
MaintenanceWorkRuleId	<p>Type</p> <p>reference</p>

Field Name	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the maintenance work rule that generated this work order. This field is available in API version 50.0 and above.</p>
MilestoneStatus	<p>Type string</p> <p>Properties Group, Nillable, Sort</p> <p>Description Indicates the status of a milestone. This field is visible if an entitlement process is applied to a work order.</p>
MinimumCrewSize	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The minimum crew size allowed for a crew assigned to the work order. If you're not using the Field Service managed package, this field serves as a suggestion rather than a rule. If you are using the managed package, the scheduling optimizer counts the number of service crew members on a service crew to determine whether it fits a work order's minimum crew size requirement.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The work order's assigned owner. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
ParentWorkOrderId	<p>Type reference</p>

Field Name**Details****Properties**

Create, Filter, Group, Nillable, Sort, Update

Description

The work order's parent work order, if it has one.

Tip: Create a custom report to view a work order's child work orders.

This is a relationship field.

Relationship Name

ParentWorkOrder

Relationship Type

Lookup

Refers To

WorkOrder

PostalCode

Type

string

Properties

Create, Filter, Group, Nillable, Sort, Update

Description

The postal code where the work order is completed. Maximum length is 20 characters.

Pricebook2Id

Type

reference

Properties

Create, Filter, Group, Nillable, Sort, Update

Description

The price book associated with the work order. Adding a price book to the work order lets you assign different price book entries to the work order's line items. This is only available if Product2 is enabled.

This is a relationship field.

Pricebook2

Priority

Type

picklist

Field Name	Details
	<p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description The priority of the work order. The picklist includes the following values, which can be customized:</p> <ul style="list-style-type: none"> • Low • Medium • High • Critical
ProductServiceCampaignId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The product service campaign associated with the work order.</p>
ProductServiceCampaignItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The product service campaign item associated with the work order.</p>
RecommendedCrewSize	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The recommended number of people on the service crew assigned to the work order. For example, you might have a Minimum Crew Size of 2 and a Recommended Crew Size of 3.</p>
ReturnOrderId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The return order associated with the work order.</p>

Field Name	Details
ReturnOrderLineItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The return order line item associated with the work order.</p>
RootWorkOrderId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description (Read only) The top-level work order in a work order hierarchy. Depending on where a work order lies in the hierarchy, its root could be the same as its parent.</p> <p> Note: View a work order's child work order in the Child Work Orders related list.</p> <p>This is a relationship field.</p> <p>Relationship Name RootWorkOrder</p> <p>Relationship Type Lookup</p> <p>Refers To WorkOrder</p>
ServiceAppointmentCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of service appointments on the work order.</p>
ServiceContractId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The service contract associated with the work order.</p>
ServiceReportLanguage	<p>Type picklist</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The language used for all service reports and service report previews created for the work order, its service appointments, and its work order line items and their service appointments. If the field is blank, service reports are generated in the default language in Salesforce of the person creating the report.</p> <p>To appear as an option in the ServiceReportLanguage field, a language must be set up in Translation Workbench or be one of Salesforce's 18 fully supported languages. Rich text fields and service report section names aren't translated.</p>
ServiceReportTemplateId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The service report template that the work order uses. If you don't specify a service report template on a work order, it uses the service report template listed on its work type. If the work type doesn't list a template or no work type is specified, the work order uses the default service report template.</p>
ServiceTerritoryId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The service territory where the work order is taking place. This is a relationship field.</p> <p>Relationship Name ServiceTerritory</p> <p>Relationship Type Lookup</p> <p>Refers To ServiceTerritory</p>
SlaExitDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The time that the work order exits the entitlement process.</p>

Field Name	Details
SlaStartDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The time that the work order enters the entitlement process. You can update or reset the time if you have “Edit” permission on work orders.</p>
StartDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date when the work order goes into effect. This field is blank unless you set up an Apex trigger or quick action to populate it. For example, you can create a quick action that sets the StartDate to the date when the Status changes to In Progress.</p>
State	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The state where the work order is completed. Maximum length is 80 characters.</p>
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description The status of the work order. The picklist includes the following values, which can be customized:</p> <ul style="list-style-type: none"> • New—Work order was created, but there hasn't yet been any activity. • In Progress—Work has begun. • On Hold—Work is paused. • Completed—Work is complete. • Cannot Complete—Work could not be completed. • Closed—All work and associated activity is complete. • Canceled—Work is canceled, typically before any work began. <p>Changing a work order's status does not affect the status of its work order line items or associated service appointments.</p>

Field Name	Details
StatusCategory	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The category that each <code>Status</code> value falls into. The <code>Status Category</code> field has eight default values: seven values which are identical to the default <code>Status</code> values, and a <code>None</code> value for statuses without a status category.</p> <p>If you create custom <code>Status</code> values, you must indicate which category it belongs to. For example, if you create a <i>Waiting for Response</i> value, you may decide that it belongs in the <i>On Hold</i> category. To learn which processes reference <code>StatusCategory</code>, see How are Status Categories Used?</p>
StopStartDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Indicates when the milestone was paused. The label in the user interface is <code>Stopped Since</code>.</p>
Street	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The street number and name where the work order is completed.</p>
Subject	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The subject of the work order. Try to describe the nature and purpose of the job to be completed. For example, "Annual On-Site Well Maintenance." Maximum length is 255 characters.</p>
Subtotal	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p>

Field Name	Details
	<p>Description Read only. The total of the work order line items' subtotals before discounts and taxes are applied.</p>
SuggestedMaintenanceDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The suggested date that the work order is completed. When the work order is auto-generated from a maintenance plan, this field is automatically populated based on the maintenance plan's settings.</p>
Tax	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The total tax on the work order. You can enter a number with or without the currency symbol and use up to two decimal places. For example, in a work order whose total price is \$100, enter \$10 to apply a 10% tax.</p>
TotalPrice	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Read only. The total of the work order line items' prices. This value has discounts applied but not tax.</p>
WorkOrderNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description An eight-digit, auto-generated number that identifies the work order.</p>
WorkTypeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field Name	Details
	<p>Description</p> <p>The work type associated with the work order. When a work type is selected, the work order automatically inherits the work type's <code>Duration</code>, <code>Duration Type</code>, and required skills.</p> <p>This is a relationship field.</p> <p>Relationship Name</p> <p>WorkType</p> <p>Relationship Type</p> <p>Lookup</p> <p>Refers To</p> <p>WorkType</p>

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

WorkOrderChangeEvent (API version 48.0)

Change events are available for the object.

WorkOrderFeed

Feed tracking is available for the object.

WorkOrderHistory

History is available for tracked fields of the object.

WorkOrderOwnerSharingRule

Sharing rules are available for the object.

WorkOrderShare

Sharing is available for the object.

WorkOrderHistory

Represents the history of changes made to tracked fields on a work order. This object is available in API version 36.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

Work orders or Field Service must be enabled in your organization, and field tracking for work order fields must be configured.

Fields

Field Name	Details
DataType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Data type of the field that was changed.</p>
Field	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The name of the field that was changed.</p>
NewValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The new value of the field that was changed.</p>
OldValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The value of the field before it was changed.</p>
WorkOrderId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the work order being tracked. The history is displayed on the detail page for this record. This is a relationship field.</p> <p>Relationship Name WorkOrder</p>

Field Name	Details
	<p>Relationship Type Lookup</p> <p>Refers To WorkOrder</p>

WorkOrderLineItem

Represents a subtask on a work order in field service. This object is available in API version 36.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Work orders or Field Service must be enabled.

Fields

Field Name	Details
Address	<p>Type address</p> <p>Properties Filter, Nillable</p> <p>Description The compound form of the address where the line item is completed.</p>
AssetId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The asset associated with the work order line item. The asset is not automatically inherited from the parent work order. This is a relationship field.</p> <p>Relationship Name Asset</p>

Field Name	Details
	<p>Relationship Type Lookup</p> <p>Refers To Asset</p>
AssetWarrantyId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The asset warranty term associated with the work order line item. This field is available in API version 50.0 and above.</p>
City	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The city where the line item is completed. Maximum length is 40 characters.</p>
Country	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The country where the line item is completed. Maximum length is 80 characters.</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Restricted picklist, Sort</p> <p>Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization. The label in the user interface is <code>Currency ISO Code</code>.</p>
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p>

Field Name	Details
	<p>Description The description of the work order line item. Try to describe the steps needed to mark the line item Completed.</p>
Discount	<p>Type percent</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The percent discount to apply to the line item. You can enter a number with or without the percent symbol, and you can use up to two decimal places.</p>
Duration	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The estimated time required to complete the line item. Specify the duration unit in the <code>Duration Type</code> field.</p> <p> Note: Work order duration and work order line item duration are independent of each other. If you want work order duration to automatically show the sum of the work order line items' duration, replace the Duration field on work orders with a custom roll-up summary field.</p>
DurationInMinutes	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The estimated duration in minutes. For internal use only.</p>
DurationType	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The unit of the duration: Minutes or Hours.</p>
EndDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p>

Field Name**Details****Description**

The date on which the line item is completed. This field is blank unless you set up an Apex trigger or quick action to populate it. For example, you can create a quick action that sets the EndDate to 365 days after the StartDate.

GeocodeAccuracy

Type

picklist

Properties

Create, Filter, Group, Nillable, Restricted picklist, Sort, Update

Description

The level of accuracy of a location's geographical coordinates compared with its physical address. Usually provided by a geocoding service based on the address's latitude and longitude coordinates.

Note: This field is available in the API only.

Possible values are:

- Address
- Block
- City
- County
- ExtendedZip
- NearAddress
- Neighborhood
- State
- Street
- Unknown
- Zip

IsClosed

Type

boolean

Properties

Defaulted on create, Filter, Group, Sort

Description

Indicates whether the line item has been closed. Changing the line item's status to Closed causes this checkbox to be selected in the user interface (sets IsClosed to true).

Tip: Use this field to report on closed versus open work order line items.

IsGeneratedFromMaintenancePlan

Type

boolean

Field Name	Details
	<p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Identifies whether the work order line item is generated from a maintenance plan.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the line item was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the line item was last viewed.</p>
Latitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with <code>Longitude</code> to specify the precise geolocation of the address where the line item is completed. Acceptable values are numbers between <code>-90</code> and <code>90</code> with up to 15 decimal places.</p> <p> Note: This field is available in the API only.</p>
LineItemNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description An auto-generated number that identifies the work order line item. Each work order's line items start at 1.</p>
ListPrice	<p>Type currency</p>

Field Name	Details
	<p>Properties Filter, Nillable, Sort</p> <p>Description The price of the line item (product) as listed in its corresponding price book entry. If a price book entry isn't specified, the list price defaults to zero.</p>
LocationId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description A location associated with the work order line item. For example, a work site. This is a relationship field.</p> <p>Relationship Name Location</p> <p>Relationship Type Lookup</p> <p>Refers To Location</p>
Longitude	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Used with <code>Latitude</code> to specify the precise geolocation of the address where the line item is completed. Acceptable values are numbers between -180 and 180 with up to 15 decimal places.</p> <p> Note: This field is available in the API only.</p>
MaintenancePlanId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The maintenance plan associated with the work order line item.</p>
MaintenanceWorkRuleId	<p>Type reference</p>

Field Name	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the maintenance work rule that generated this line item. This field is available in API version 50.0 and above.</p>
MinimumCrewSize	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The minimum crew size allowed for a crew assigned to the line item. If you're not using the Field Service managed package, this field serves as a suggestion rather than a rule. If you are using the managed package, the scheduling optimizer counts the number of service crew members on a service crew to determine whether it fits a work order line item's minimum crew size requirement.</p>
OrderId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The order associated with the line item. For example, you may need to order replacement parts before you can complete the line item. This is a relationship field.</p> <p>Relationship Name Order</p> <p>Relationship Type Lookup</p> <p>Refers To Order</p>
ParentWorkOrderLineItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The line item's parent work order line item, if it has one.</p> <p> Tip: Create a custom report to view a line item's child line items.</p> <p>This is a relationship field.</p>

Field Name	Details
	<p>Relationship Name ParentWorkOrderLineItem</p> <p>Relationship Type Lookup</p> <p>Refers To WorkOrderLineItem</p>
PostalCode	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The postal code where the line item is completed. Maximum length is 20 characters.</p>
PricebookEntryId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The price book entry (product) associated with the line item. The label in the user interface is <code>Product</code>. This field's lookup search only returns products that are included in the work order's price book.</p> <p>This is a relationship field.</p> <p>Relationship Name PricebookEntry</p> <p>Relationship Type Lookup</p> <p>Refers To PricebookEntry</p>
Priority	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description The priority of the line item. The picklist includes the following values, which can be customized:</p> <ul style="list-style-type: none"> • Low • Medium • High

Field Name	Details
	<ul style="list-style-type: none"> Critical
Product2Id	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description (Read only) The product associated with the price book entry. This field is not available in the user interface. For best results, use the <code>PricebookEntryId</code> field in any custom code or layouts. This is a relationship field.</p> <p>Relationship Name Product2</p> <p>Relationship Type Lookup</p> <p>Refers To Product2</p>
ProductServiceCampaignId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The product service campaign associated with the work order line item.</p>
ProductServiceCampaignItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The product service campaign item associated with the work order line item.</p>
Quantity	<p>Type double</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Number of units of the line item included in the associated work order.</p>
RecommendedCrewSize	<p>Type int</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The recommended number of people on the service crew assigned to the line item. For example, you might have a Minimum Crew Size of 2 and a Recommended Crew Size of 3.</p>
ReturnOrderId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The return order associated with the work order line item.</p>
ReturnOrderLineItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The return order line item associated with the work order line item.</p>
RootWorkOrderLineItemId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description (Read only) The top-level line item in a work order line item hierarchy. Depending on where a line item lies in the hierarchy, its root could be the same as its parent.</p> <p> Note: View a line item's child line items in the Child Work Order Line Items related list.</p> <p>This is a relationship field.</p> <p>Relationship Name RootWorkOrderLineItem</p> <p>Relationship Type Lookup</p> <p>Refers To WorkOrderLineItem</p>
ServiceAppointmentCount	<p>Type int</p>

Field Name	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description The number of service appointments on the work order line item.</p>
ServiceReportTemplateId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The service report template that the line item uses. If you don't specify a service report template on a work order line item, it uses the service report template listed on its work type. If the work type doesn't list a template or no work type is specified, the line item uses the default service report template.</p>
ServiceTerritoryId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The service territory where the line item is completed. This is a relationship field.</p> <p>Relationship Name ServiceTerritory</p> <p>Relationship Type Lookup</p> <p>Refers To ServiceTerritory</p>
StartDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date on which the line item goes into effect. This field is blank unless you set up an Apex trigger or quick action to populate it. For example, you can create a quick action that sets the StartDate to the date when the Status changes to In Progress.</p>
State	<p>Type string</p>

Field Name	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The state where the line item is completed. Maximum length is 80 characters.</p>
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description The status of the line item. The picklist includes the following values, which can be customized:</p> <ul style="list-style-type: none"> • New—Line item was created, but there hasn't yet been any activity. • In Progress—Work has begun. • On Hold—Work is paused. • Completed—Work is complete. • Cannot Complete—Work could not be completed. • Closed—All work and associated activity is complete. • Canceled—Work is canceled, typically before any work began.
StatusCategory	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The category that each <code>Status</code> value falls into. The <code>Status Category</code> field has eight default values: seven values which are identical to the default <code>Status</code> values, and a <code>None</code> value for statuses without a status category.</p> <p>If you create custom <code>Status</code> values, you must indicate which category it belongs to. For example, if you create a <i>Waiting for Response</i> value, you may decide that it belongs in the <i>On Hold</i> category. To learn which processes reference <code>StatusCategory</code>, see How are Status Categories Used?</p>
Street	<p>Type textarea</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The street number and name where the line item is completed.</p>

Field Name	Details
Subject	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description A word or phrase describing the line item.</p>
Subtotal	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description (Read only) The line item's unit price multiplied by the quantity.</p>
SuggestedMaintenanceDate	<p>Type date</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Date when maintenance work is planned.</p>
TotalPrice	<p>Type currency</p> <p>Properties Filter, Nillable, Sort</p> <p>Description Read only. The line item's subtotal with discounts applied.</p>
UnitPrice	<p>Type currency</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Initially, the unit price for a work order line item is the line item's list price from the price book, but you can change it.</p>
WorkOrderId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p>

Field Name	Details
	<p>Description The line item's parent work order. Because work order line items must be associated with a work order, this is a required field.</p> <p>This is a relationship field.</p> <p>Relationship Name WorkOrder</p> <p>Relationship Type Lookup</p> <p>Refers To WorkOrder</p>
WorkTypeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The work type associated with the line item. When a work type is selected, the line item automatically inherits the work type's <code>Duration</code>, <code>Duration Type</code>, and required skills.</p> <p>This is a relationship field.</p> <p>Relationship Name WorkType</p> <p>Relationship Type Lookup</p> <p>Refers To WorkType</p>

Usage

A work order line item is a child record of a work order. It represents a specific subtask on a work order.

For example, suppose a customer purchased a truck from you. The truck is represented as an asset in your Salesforce org. After some time, the truck needs both headlight bulbs replaced. Here's one way that you can use work orders and work order line items to track the repair.

1. Create a work order named "Replace Headlight Bulbs" from the asset record detail page.
2. Add three work order line items to the work order: "Replace Left Headlight Bulb," "Replace Right Headlight Bulb," and "Test Headlights."
3. Assign the work order to a technician via a queue.
4. As the technician completes each line item, he or she marks the item `Completed`.
5. When all the line items are complete, the technician marks the work order `Completed`.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

[WorkOrderLineItemChangeEvent](#) (API version 48.0)

Change events are available for the object.

[WorkOrderLineItemFeed](#)

Feed tracking is available for the object.

[WorkOrderLineItemHistory](#)

History is available for tracked fields of the object.

WorkOrderLineItemHistory

Represents the history of changes made to tracked fields on a work order line item. This object is available in API version 36.0 and later.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

Work orders or Field Service must be enabled in your organization, and field tracking for work order line item fields must be configured.

Fields

Field Name	Details
DataType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Data type of the field that was changed.</p>
Field	<p>Type picklist</p> <p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description The name of the field that was changed.</p>

Field Name	Details
NewValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The new value of the field that was changed.</p>
OldValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description The value of the field before it was changed.</p>
WorkOrderLineItemId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the work order line item being tracked. The history is displayed on the detail page for this record. This is a relationship field.</p> <p>Relationship Name WorkOrderLineItem</p> <p>Relationship Type Lookup</p> <p>Refers To WorkOrderLineItem</p>

WorkOrderLineItemStatus

Represents a possible status of a work order line item in field service.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
ApiName	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description The API name of the status value.</p>
IsDefault	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates that the status value is the default status on work orders. Only one status value can be the default.</p>
MasterLabel	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The label for the picklist value that appears in the UI.</p>
SortOrder	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The value's position in the drop-down list of values in the UI.</p>
StatusCode	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The status category that the value corresponds to. The Status Category field has seven values which are identical to the default Status values.</p>

Usage

The Status field on work order line items comes with the following values:

- New—Line item was created, but there hasn't yet been any activity.
- In Progress—Work has begun.
- On Hold—Work is paused.
- Completed—Work is complete.
- Cannot Complete—Work could not be completed.
- Closed—All work and associated activity is complete.
- Canceled—Work is canceled, typically before any work began.

The WorkOrderLineItemStatus object corresponds to the Status field. Adding a value to the Status field—for example, Canceled By Customer—creates a work order line item status record, and vice versa.

 **Note:** Work order line items also come with a StatusCategory field whose values are identical to the default Status values. If you create custom Status values, you must indicate which category it belongs to. For example, if you create a *Customer Absent* value, you may decide that it belongs in the *Cannot Complete* category. To learn which processes reference StatusCategory, see [How are Status Categories Used?](#)

WorkOrderShare

Represents a sharing entry on a work order. This object is available in API version 36.0 and later.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

Work orders or Field Service must be enabled in your organization. External users can't access this object.

Fields

Field Name	Details
AccessLevel	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Level of access that the user or group has to the work order. The possible values are:</p> <ul style="list-style-type: none"> • <i>Read</i> • <i>Edit</i>

Field Name	Details
	<ul style="list-style-type: none"> • <code>All</code> (This value isn't valid for create or update calls.) <p>Set to an access level that is at least equal to the organization's default work order access level.</p>
ParentId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The work order associated with the sharing entry. This is a relationship field.</p> <p>Relationship Name Parent</p> <p>Relationship Type Lookup</p> <p>Refers To WorkOrder</p>
RowCause	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The reason why this sharing entry exists. You can write to this field only when its value is omitted or set to <code>Manual</code> (default). Valid values include:</p> <ul style="list-style-type: none"> • <code>Manual</code>—The User or Group has access because a user with "All" access manually shared the work order. • <code>Owner</code>—The User is the owner of the work order. • <code>Rule</code>—The User or Group has access via a work order sharing rule. • <code>GuestRule</code>—The User or Group has access via a work order guest user sharing rule. • <code>LpuImplicit</code>—The User has access to records owned by high-volume Experience Cloud site users via a share group.
UserOrGroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description (Read Only) ID of the user or group that has access to the work order. This is a polymorphic relationship field.</p>

Field Name	Details
	Relationship Name UserOrGroup
	Relationship Type Lookup
	Refers To Group, User

WorkOrderStatus

Represents a possible status of a work order in field service.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
ApiName	Type string
	Properties Filter, Group, idLookup, Sort
	Description The API name of the status value.
IsDefault	Type boolean
	Properties Defaulted on create, Filter, Group, Sort
	Description Indicates that the status value is the default status on work orders. Only one status value can be the default.
MasterLabel	Type string

Field Name	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description The label for the picklist value that appears in the UI.</p>
SortOrder	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The value's position in the drop-down list of values in the UI.</p>
StatusCode	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The status category that the value corresponds to. The Status Category field has seven values which are identical to the default Status values.</p>

Usage

The Status field on work orders comes with the following values:

- New—Work order was created, but there hasn't yet been any activity.
- In Progress—Work has begun.
- On Hold—Work is paused.
- Completed—Work is complete.
- Cannot Complete—Work could not be completed.
- Closed—All work and associated activity is complete.
- Canceled—Work is canceled, typically before any work began.

The WorkOrderStatus object corresponds to the Status field. Adding a value to the Status field—for example, Canceled By Customer—creates a work order status record, and vice versa.

 **Note:** Work orders also come with a StatusCategory field whose values are identical to the default Status values. If you create custom Status values, you must indicate which category it belongs to. For example, if you create a *Customer Absent* value, you may decide that it belongs in the *Cannot Complete* category. To learn which processes reference StatusCategory, see [How are Status Categories Used?](#)

WorkPerformanceCycle

Represents feedback that is gathered to assess the performance of a specific set of employees.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
ActivityFrom	<p>Type date</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The date that you want to start filtering the WDC objects to help requesters create accurate summaries. The start of the evaluation period.</p>
ActivityTo	<p>Type date</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description The date that you want to stop filtering the WDC objects to help requesters create accurate summaries. The end of the evaluation period.</p>
CurrentTask	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The current task that the performance summary cycle is engaged in, including deploying and sharing.</p>
LastManagerRequestsSharedDate	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date when all manager requests are set to be shared.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field Name	Details
	<p>Description</p> <p>The time stamp that indicates when the current user last viewed a record that is related to this WorkPerformanceCycle.</p>
LastViewedDate	<p>Type</p> <p>dateTime</p> <p>Properties</p> <p>Filter, Nillable, Sort</p> <p>Description</p> <p>The time stamp that indicates when the current user last viewed this WorkPerformanceCycle. If this value is null, this record might have been only referenced (LastReferencedDate) and not viewed.</p>
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, idLookup, Sort, Update</p> <p>Description</p> <p>The name of the performance summary cycle that employees will participate in. This name is created by the administrator and is visible on all respective notifications and in the UI.</p>
OwnerId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>ID of the owner of the WorkPerformanceCycle.</p>
State	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description</p> <p>The state that the performance summary cycle is in. Available pick list values:</p> <ul style="list-style-type: none"> • Setup: The summary is in draft. • In Progress: The summary is deployed and people are answering the questions that were created. • Finished: The summary is no longer in progress. • Error: The summary encountered an error.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

WorkPerformanceCycleFeed

Feed tracking is available for the object.

WorkPerformanceCycleHistory

History is available for tracked fields of the object.

WorkPerformanceCycleOwnerSharingRule

Sharing rules are available for the object.

WorkPerformanceCycleShare

Sharing is available for the object.

WorkPlan

Represents a work plan for a work order or work order line item. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The description of the work plan.</p>
ExecutionOrder	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The order in which plan is executed. Only positive values or null are supported.</p>

Field	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the work plan.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the user who created the work plan.</p>
WorkOrderId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. The ID of the work order.</p>
WorkOrderLineItemId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field	Details
	Description The ID of the work order line item.

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

WorkPlanFeed

Feed tracking is available for the object.

WorkPlanHistory

History is available for tracked fields of the object.

WorkPlanOwnerSharingRule

Sharing rules are available for the object.

WorkPlanShare

Sharing is available for the object.

WorkPlanSelectionRule

Represents a rule that selects a work plan for a work order or work order line item. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
AssetId	Type reference
	Properties Create, Filter, Group, Nillable, Sort, Update
	Description The ID of the asset.
Description	Type string

Field	Details
	<p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The description of the selection rule.</p>
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Controls whether this selection rule is active (<code>true</code>) or not (<code>false</code>). Default is <code>false</code>. Label is Active.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>
LocationId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the location.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p>

Field	Details
	<p>Description The ID of the owner.</p>
Product2Id	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the product. Label is Product.</p>
ServiceTerritoryId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the service territory.</p>
WorkPlanSelectionRuleNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The auto-generated number of the work plan selection rule, for example, WPSR-0001.</p>
WorkPlanTemplateId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. The ID of the work plan template.</p>
WorkTypeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the work type.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

WorkPlanSelectionRuleFeed

Feed tracking is available for the object.

WorkPlanSelectionRuleHistory

History is available for tracked fields of the object.

WorkPlanSelectionRuleOwnerSharingRule

Sharing rules are available for the object.

WorkPlanSelectionRuleShare

Sharing is available for the object.

WorkPlanTemplate

Represents a template for a work plan. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The description of the work plan template.</p>
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Controls whether the specific template is available for application (<code>true</code>) or not (<code>false</code>). Default is <code>false</code>. Label is Active.</p>
LastReferencedDate	<p>Type dateTime</p>

Field	Details
	<p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (LastReferencedDate) but not viewed it.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The user-defined name of the work plan template.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the owner who created the work plan template.</p>
RelativeExecutionOrder	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The relative execution order for sorting the work plan when it is applied to the work order or work order line item. Only positive integers are supported.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

WorkPlanTemplateFeed

Feed tracking is available for the object.

WorkPlanTemplateHistory

History is available for tracked fields of the object.

WorkPlanTemplateOwnerSharingRule

Sharing rules are available for the object.

WorkPlanTemplateShare

Sharing is available for the object.

WorkPlanTemplateEntry

Represents an object that associates a work step template with a work plan template. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
<code>ExecutionOrder</code>	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The sequence number of when this entry is executed. Only positive values are supported.</p>
<code>LastReferencedDate</code>	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>

Field	Details
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>
WorkPlanTemplateEntryNumber	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description The auto-generated number of the work plan template entry, for example, WPTE-0001.</p>
WorkPlanTemplateId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Required. The ID of the work plan template.</p>
WorkStepTemplateId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Required. The ID of the work step template.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[WorkPlanTemplateEntryFeed](#)

Feed tracking is available for the object.

[WorkPlanTemplateEntryHistory](#)

History is available for tracked fields of the object.

WorkReward

Used to store reward codes tied to a Reward Fund. Reward Funds must have at least one WorkReward record.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

You must have the Reward permission enabled in order to use the Rewards feature, including WorkRewardFund and WorkReward.

Additional Considerations and Related Objects

WorkReward is a lookup to WorkRewardFund. WorkRewardFund must have at least one WorkReward record to be available for use. Each WorkBadge record with a `RewardId` indicates a reward badge given to a Recipient.

Fields

Field Name	Details
Code	<p>Type string</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Represents a single reward code tied to a RewardFundId.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Represents the User ID of Owner of WorkReward record</p>
RecipientId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description Salesforce User ID for User associated with this WorkReward record.</p>
RedemptionDisclaimer	<p>Type textarea</p> <p>Properties Nillable</p>

Field Name	Details
	<p>Description The disclaimer information about the WorkReward.</p>
RedemptionInfo	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description The instructions for redeeming the WorkReward.</p>
RedemptionUrl	<p>Type textarea</p> <p>Properties Nillable</p> <p>Description The URL for redeeming the WorkReward.</p>
RewardFundId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Salesforce unique ID for WorkRewardFund record that is associated with WorkReward record.</p>
RewardFundTypeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Salesforce unique ID of the WorkRewardFundType associated with the WorkReward.</p>
Value	<p>Type double</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The value of the WorkReward.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

WorkRewardHistory

History is available for tracked fields of the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

WorkRewardOwnerSharingRule

Sharing rules are available for the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

WorkRewardShare

Sharing is available for the object.

WorkRewardFund

Represents a Reward Fund and describes the Reward Fund attributes.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

To use the Rewards feature, including WorkRewardFund and WorkReward, you must have the Reward permission enabled. To create Rewards, the user must have Create on WorkRewardFund, which is not a standard permission.

Additional Considerations and Related Objects

WorkReward is a lookup to WorkRewardFund. WorkRewardFund must have at least one WorkReward record available. Each WorkBadgeDefinition with a RewardFundId is a "Reward Badge."

Fields

Field Name	Details
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether the WorkRewardFund is active (<code>true</code>) or not (<code>false</code>).</p>

Field Name	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The time stamp that indicates when the current user last viewed a record that is related to this WorkRewardFund.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The time stamp that indicates when the current user last viewed this WorkRewardFund. If this value is null, this record might have been only referenced (LastReferencedDate) and not viewed.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Required. Name of the Reward Fund.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Salesforce unique ID of User who is the Owner of the WorkRewardFund record.</p>
RewardFundTypeId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort, Update</p> <p>Description Salesforce unique ID of the WorkRewardFundType that is associated with the WorkRewardFund.</p>
TotalCodeCount	<p>Type int</p>

Field Name	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description Total reward codes that are available in the WorkRewardFund. Derived from WorkReward records that are associated with the WorkRewardFund.</p>
Type	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description RewardType of the WorkRewardFund. Default is Amazon.com.</p>
UsedCodeCount	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Total reward codes that are used in the WorkRewardFund. Derived from the total assigned WorkReward records that are associated with the WorkRewardFund.</p>
Value	<p>Type currency</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description Value of each of the reward codes in the WorkRewardFund.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[WorkRewardFundFeed](#)

Feed tracking is available for the object.

[WorkRewardFundHistory](#)

History is available for tracked fields of the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

[WorkRewardFundOwnerSharingRule](#)

Sharing rules are available for the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

WorkRewardFundShare

Sharing is available for the object.

WorkRewardFundType

Represents the type of WorkRewardFund object.

 **Note:** The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field Name	Details
CreditSystem	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The credit system that is used by the WorkRewardFundType object (gift codes or points). If points are selected, the reward message will not consider the CurrencyCode field.</p>
CurrencyCode	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The currency code of the WorkRewardFundType</p>
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Whether the WorkRewardFundType is active and available in the UI</p>
IsPredefined	<p>Type boolean</p>

Field Name	Details
	<p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Whether the WorkRewardFundType is predefined (<code>true</code>) or not (<code>false</code>)</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The time stamp that indicates when the current user last viewed a record that is related to this WorkRewardFundType.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The time stamp that indicates when the current user last viewed this WorkRewardFundType. If this value is null, this record might have been only referenced (<code>LastReferencedDate</code>) and not viewed.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the WorkRewardFundType</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the WorkRewardFundType owner</p>
RedemptionDisclaimer	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The redemption disclaimer text for the WorkRewardFundType</p>

Field Name	Details
RedemptionInfo	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description Redemption text for the WorkRewardFundType</p>
RedemptionUrl	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The URL that's linked to the redemption</p>
UploadCodeColumn	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The column where the reward code is contained in the CSV file. The upload uses the second value by default.</p>
UploadValueColumn	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The column where the reward value is contained in the CSV file. The upload uses the third column by default.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[WorkRewardFundTypeFeed](#)

Feed tracking is available for the object.

[WorkRewardFundTypeHistory](#)

History is available for tracked fields of the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

[WorkRewardFundTypeOwnerSharingRule](#)

Sharing rules are available for the object.

The original WDC feature is unavailable as of Spring '22. This object isn't available as of API version 54.0. For more information, see [Phased WDC \(legacy Work.com\) Feature Retirement](#).

WorkRewardFundTypeShare

Sharing is available for the object.

WorkStep

Represents a work step in a work plan. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
ActionDefinition	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p> <p>Description The platform action that the work step executes. The possible values are the names of the flow and quick actions configured in your org.</p>
ActionType	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The type of platform action that the work step is associated with. Possible values are:</p> <ul style="list-style-type: none"> Flow QuickAction
Description	<p>Type textarea</p>

Field	Details
	<p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The description of the work step.</p>
EndTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date and time the work step ends. The value has to be greater than or equal to <code>StartTime</code>.</p>
ExecutionOrder	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The order in which the work step is executed. Only positive integer values or null are supported.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last accessed this record, a record related to this record, or a list view.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p>

Field	Details
	<p>Description Required. The user-defined name of the work step.</p>
PausedFlowInterviewId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The auto-populated ID of the flow interview paused by a user.</p>
StartTime	<p>Type dateTime</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description The date and time the work step starts.</p>
Status	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Nillable, Sort, Update</p> <p>Description The customizable status of the work order. Every status must be mapped to a status category but there can be status categories not mapped to a status. Possible values are:</p> <ul style="list-style-type: none"> • Completed • In Progress • New • Not Applicable • Paused
StatusCategory	<p>Type picklist</p> <p>Properties Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The category that each status value belongs to. Each default status category is mapped to the corresponding default status. If you create a custom status, you must indicate which status category it belongs to. To learn which processes reference StatusCategory, see How are Status Categories Used?. Possible values are:</p>

Field	Details
	<ul style="list-style-type: none"> Completed InProgress New NotApplicable Paused
WorkOrderId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description The ID of the work order.</p>
WorkOrderLineItemId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the work order line item.</p>
WorkPlanExecutionOrder	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the plan execution order.</p>
WorkPlanId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the work plan.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[WorkStepFeed](#)

Feed tracking is available for the object.

[WorkStepHistory](#)

History is available for tracked fields of the object.

WorkStepStatus

Represents a picklist for a status category on a work step. This object is available in API version 52.0 and later.

Supported Calls

`describeSObjects()`, `query()`, `retrieve()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
ApiName	<p>Type string</p> <p>Properties Filter, Group, idLookup, Sort</p> <p>Description Required. The name of the work step status.</p>
IsDefault	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Controls whether this status is the default value of the picklist of the corresponding status category (<code>true</code>) or not (<code>false</code>). Default is <code>false</code>.</p>
MasterLabel	<p>Type string</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Required. The label of the work step status.</p>
SortOrder	<p>Type int</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>Required. The order in which the work step statuses are displayed in the status category's picklist.</p>
StatusCode	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Required. Defaulted on create, Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description</p> <p>The status category that this status belongs to.</p> <p>Possible values are:</p> <ul style="list-style-type: none"> • Completed • InProgress • New • NotApplicable • Paused

WorkStepTemplate

Represents a template for a work step. This object is available in API version 52.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field	Details
ActionDefinition	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Create, Filter, Group, Nillable, Restricted picklist, Sort, Update</p>

	<p>Description</p> <p>The timestamp when the current user last viewed this record or list view. If this value is null, the user might have only accessed this record or list view (<code>LastReferencedDate</code>) but not viewed it.</p>
Name	<p>Type</p> <p>string</p> <p>Properties</p> <p>Create, Filter, Group, idLookup, Sort, Update</p> <p>Description</p> <p>The user-defined name of the work step template.</p>
OwnerId	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description</p> <p>The ID of the owner who created the work step template.</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[WorkStepTemplateFeed](#)

Feed tracking is available for the object.

[WorkStepTemplateHistory](#)

History is available for tracked fields of the object.

[WorkStepTemplateOwnerSharingRule](#)

Sharing rules are available for the object.

[WorkStepTemplateShare](#)

Sharing is available for the object.

WorkThanks

Represents the source and message of a thanks post.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `undelete()`, `update()`, `upsert()`

Additional Considerations and Related Objects

WorkBadge is a lookup to WorkThanks. Each WorkBadge record must derive a SourceId from WorkThanks.

Fields

Field Name	Details
FeedItemId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description ID of the FeedItem related to the thanks badge. This is a relationship field.</p> <p>Relationship Name FeedItem</p> <p>Relationship Type Lookup</p> <p>Refers To FeedItem</p>
GiverId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description Salesforce user ID for the giver of the Thanks record. This is a relationship field.</p> <p>Relationship Name Giver</p> <p>Relationship Type Lookup</p> <p>Refers To User</p>
Message	<p>Type textarea</p> <p>Properties Create</p> <p>Description Required. Message associated with the Thanks record.</p>

Field Name	Details
NetworkId	<p>Type reference</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The ID of the community that this WorkThanks is associated with. This field is available only if digital experiences is enabled in your org.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Salesforce user ID for the owner of the badge record (typically the same user as the giver of the record). This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[WorkThanksOwnerSharingRule](#)

Sharing rules are available for the object.

[WorkThanksShare](#)

Sharing is available for the object.

WorkType

Represents a type of work to be performed in Field Service and Lightning Scheduler. Work types are templates that can be applied to work order or work order line items. This object is available in API version 38.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Special Access Rules

Field Service must be enabled.

Fields

Field Name	Details
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description The description of the work type. Try to add details about the task or tasks that this work type represents.</p>
DurationType	<p>Type picklist</p> <p>Properties Create, Filter, Group, Defaulted on create, Restricted picklist, Sort, Update</p> <p>Description The unit of the <code>Estimated Duration</code>: Minutes or Hours.</p>
EstimatedDuration	<p>Type double</p> <p>Properties Create, Filter, Sort, Update</p> <p>Description The estimated length of the work. The estimated duration is in minutes or hours based on the value selected in the <code>Duration Type</code> field.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date when the work type was last modified. Its label in the user interface is <code>Last Modified Date</code>.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p>

Field Name	Details
	<p>Description The date when the work type was last viewed by the current user.</p>
MinimumCrewSize	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The minimum crew size allowed for a crew assigned to the work. Work orders and work order line items inherit their work type's minimum crew size.</p> <p>If you're not using the Field Service managed package, this field serves as a suggestion rather than a rule. If you are using the managed package, the scheduling optimizer counts the number of service crew members on a service crew to determine whether it fits the minimum crew size requirement.</p>
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of the work type. Try to use a name that helps users quickly understand the type of work orders that can be created from the work type. For example, "Annual Refrigerator Maintenance" or "Valve Replacement."</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The work type's owner.</p> <p>This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>
RecommendedCrewSize	<p>Type int</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p>

Field Name**Details****Description**

The recommended number of people on the service crew assigned to the work. For example, you might have a Minimum Crew Size of 2 and a Recommended Crew Size of 3. Work orders and work order line items inherit their work type's recommended crew size.

ServiceReportTemplateId

Type

reference

Properties

Create, Filter, Group, Nillable, Sort, Update

Description

The service report template associated with the work type. When users create service reports from a work order or work order line item that uses this work type, the reports will use this template.

ShouldAutoCreateSvcAppt

Type

boolean

Properties

Create, Filter, Group, Defaulted on create, Sort, Update

Description

Select this option to have a service appointment automatically created on work orders and work order line items that use the work type.

 **Note:**

- By default, the Due Date on auto-created service appointments is seven days after the created date. Admins can adjust this offset from the Field Service Settings page in Setup.
- If a work type with the Auto-Create Service Appointment option selected is added to an existing work order or work order line item, a service appointment is only created for the work order or work order line item if it doesn't yet have one.
- If someone updates an existing work type by selecting the Auto-Create Service Appointment option, service appointments aren't created on work orders and work order line items that were already using the work type.

Usage

Adding a work type to a work order or work order line item causes the record to inherit the work type's duration values and required skills and products.

 Note:

- If needed, you can update the duration values and required skills and products on a work order or work order line item after they're inherited from the work type.
- If a work order or work order line item already has required skills or products, associating it with a work type doesn't cause it to inherit the work type's requirements.
- Customizations to required skills or products, such as validation rules or Apex triggers, are not carried over from work types to work orders and work order line items.

Associated Objects

This object has the following associated objects. If the API version isn't specified, they're available in the same API versions as this object. Otherwise, they're available in the specified API version and later.

WorkTypeChangeEvent (API version 48.0)

Change events are available for the object.

WorkTypeFeed

Feed tracking is available for the object.

WorkTypeHistory

History is available for tracked fields of the object.

WorkTypeOwnerSharingRule

Sharing rules are available for the object.

WorkTypeShare

Sharing is available for the object.

WorkTypeGroup

Represents a grouping of work types used to categorize types of appointments available in Lightning Scheduler, or to define scheduling limits in Field Service. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
<code>AdditionalInformation</code>	<p>Type multipicklist</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description Additional information about the types of appointments this work type group represents.</p>

Field	Details
Description	<p>Type textarea</p> <p>Properties Create, Nillable, Update</p> <p>Description A description of this work type group.</p>
GroupType	<p>Type picklist</p> <p>Properties Create, Defaulted on create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The category of this work type group. Possible values are:</p> <ul style="list-style-type: none"> • <code>Capacity</code>—A group of work types used to define a work capacity limit in Field Service. • <code>Default</code>—A non-capacity group of work types used in Lightning Scheduler.
IsActive	<p>Type boolean</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description Indicates whether this work type group can be used for appointment scheduling or work capacity limits. A work type can belong to only one active work type group of type Capacity.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time that the current user last viewed a record related to this object.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this object.</p>
Name	<p>Type string</p>

Field	Details
	<p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description The name of this work type group.</p>
OwnerId	<p>Type reference</p> <p>Properties Create, Defaulted on create, Filter, Group, Sort, Update</p> <p>Description The ID of the user who created this record. This is a polymorphic relationship field.</p> <p>Relationship Name Owner</p> <p>Relationship Type Lookup</p> <p>Refers To Group, User</p>

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[WorkTypeGroupFeed](#)

Feed tracking is available for the object.

[WorkTypeGroupHistory](#)

History is available for tracked fields of the object.

[WorkTypeGroupOwnerSharingRule](#)

Sharing rules are available for the object.

[WorkTypeGroupShare](#)

Sharing is available for the object.

WorkTypeGroupMember

Represents the relationship between a work type and the work type group it belongs to. This object is available in API version 45.0 and later.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
LastReferencedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The date and time that the current user last viewed a record related to this object.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Filter, Nillable, Sort</p> <p>Description The timestamp for when the current user last viewed this object.</p>
Name	<p>Type string</p> <p>Properties Autonumber, Defaulted on create, Filter, idLookup, Sort</p> <p>Description Autogenerated number identifying the work type group membership. It uses the format #####.</p>
WorkTypeGroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description The ID of the work type group that this record belongs to. This is a relationship field.</p> <p>Relationship Name WorkTypeGroup</p> <p>Relationship Type Lookup</p> <p>Refers To WorkTypeGroup</p>
WorkTypeId	<p>Type reference</p>

Field	Details
	Properties Create, Filter, Group, Sort
	Description The ID of the work type that this record corresponds to. This is a relationship field.
	Relationship Name WorkType
	Relationship Type Lookup
	Refers To WorkType

Associated Objects

This object has the following associated objects. Unless noted, they are available in the same API version as this object.

[WorkTypeGroupMemberFeed](#)

Feed tracking is available for the object.

[WorkTypeGroupMemberHistory](#)

History is available for tracked fields of the object.

CHAPTER 9 Custom Objects

This section provides details on custom objects, entities that support custom objects, and their standard fields.

When you create or enable features for a custom object, Salesforce creates entities to support your custom object. For example, when you enable sharing rules for a custom object, Salesforce creates a *MyObjectName__Share* object.

To verify the complete list of fields for an object or entity, you can use a describe call from the API, or inspect with an appropriate tool, for example, inspecting the WSDL or using a schema viewer.

[Custom Metadata Type__mdt](#)

Represents a custom metadata record. This object is available in API version 34.0 and later.

[Custom Object__c](#)

Represents a custom object.

[Custom Object__Feed](#)

Represents the feed, specifically posts and feed-tracked changes, on a custom object.

Custom Metadata Type__mdt

Represents a custom metadata record. This object is available in API version 34.0 and later.

 **[other]:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

The object name is a variable with the syntax *Custom Metadata Type__mdt*, where *Custom Metadata Type* is the `ObjectName` for the custom metadata type associated with the custom metadata record. For example, *PicklistUsage__mdt* represents a custom metadata record based on the `PicklistUsage` custom metadata type.

Supported Calls

`describeSObjects()`, `describeLayout()`, `query()`, `retrieve()`

Fields

Field	Details
<i>Custom Field__c</i>	Type Any Type Properties Filter, Group, Nillable, Sort

Field	Details
	<p>Description A custom field on the record.</p>
DeveloperName	<p>Type string</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p>
isProtected	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description When a custom metadata type's records are released in a managed package, access to them is limited in specific ways.</p> <ul style="list-style-type: none"> • Code that's in the same managed package as custom metadata records can read the records. • Code that's in the same managed package as custom metadata types can read the records that belong to that type. • Code that's in a managed package that doesn't contain either the type or the protected record can't read the protected records. • Code that the subscriber creates and code that's in an unmanaged package can't read the protected records. • The developer can modify protected records only with a package upgrade. The subscriber can't read or modify protected records. The developer name of a protected record can't be changed after release. <p>Records that are hidden by these access rules are also unavailable to REST, SOAP, SOQL, and Setup.</p>
Label	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>The custom metadata record label. This label value is always the same as the <code>MasterLabel</code> value.</p>
Language	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, restrictedPicklist, Sort</p> <p>Description</p> <p>The language of the custom metadata record. This value is always the default language of the developing organization.</p>
MasterLabel	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Sort</p> <p>Description</p> <p>The primary label for the custom metadata record.</p>
NamespacePrefix	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>The namespace prefix that is associated with this object. Each Developer Edition org that creates a managed package has a unique namespace prefix. Limit: 15 characters. You can refer to a component in a managed package by using the <code>namespacePrefix__componentName</code> notation.</p>
QualifiedApiName	<p>Type</p> <p>string</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>A concatenation of the namespace prefix and developer name. The format is <code>NamespacePrefix__DeveloperName</code>.</p>

Custom Object__C

Represents a custom object.

The custom object name is a variable with the syntax `Custom_Object__c`, where `Custom_Object` is the object's Name associated with the record, followed by two underscores and `c`. For example, a custom object labeled "Issue" in the Salesforce user interface is `Issue__c` in that organization's WSDL.

System fields and properties behave the same on custom objects as they do on standard objects, unless otherwise noted in the following details.

Supported Calls

`create()`, `delete()`, `describeLayout()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Field	Details
ConnectionReceivedId	<p>Type reference</p> <p>Properties Filter, Nillable</p> <p>Description ID of the PartnerNetworkConnection that shared this record with your organization. This field is available if you enabled Salesforce to Salesforce.</p>
ConnectionSentId	<p>Type reference</p> <p>Properties Filter, Nillable</p> <p>Description ID of the PartnerNetworkConnection that you shared this record with. This field is available if you enabled Salesforce to Salesforce. This field is supported using API versions earlier than 15.0. In all other API versions, this field's value is null. You can use the new PartnerNetworkRecordConnection object to forward records to connections.</p>
CreatedById	<p>Type reference</p> <p>Properties Aggregatable, Defaulted on create, Filter, Group, Sort</p> <p>Description ID of the User who created this record.</p>
CreatedDate	<p>Type dateTime</p> <p>Properties Aggregatable, Defaulted on create, Filter, Sort</p>

Field	Details
	<p>Description Date and time when this record was created.</p>
CurrencyIsoCode	<p>Type picklist</p> <p>Properties Defaulted on createFilter, Group, Restricted picklist, Sort</p> <p>Description Available only for orgs with the multicurrency feature enabled. Contains the ISO code for any currency allowed by the organization.</p>
Id	<p>Type Id</p> <p>Properties Aggregatable, Defaulted on create, Filter, Group, idLookup, Sort</p> <p>Description Globally unique string that identifies a record. For information on IDs, see ID Field Type.</p>
IsDeleted	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the record has been moved to the Recycle Bin (<code>true</code>) or not (<code>false</code>). Label is Deleted.</p>
LastActivityDate	<p>Type dateTime</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description Value is one of the following, whichever is the most recent:</p> <ul style="list-style-type: none"> • Due date of the most recent event logged against the object. • Due date of the most recently closed task associated with the object.
LastModifiedDate	<p>Type dateTime</p> <p>Properties Aggregatable, Defaulted on create, Filter, Sort</p> <p>Description Date and time when a user last modified this record.</p>

Field	Details
LastModifiedById	<p>Type reference</p> <p>Properties Aggregatable, Defaulted on create, Filter, Group, Sort</p> <p>Description ID of the User who last updated this object.</p>
LastReferencedDate	<p>Type dateTime</p> <p>Properties Aggregatable, Filter, Sort, Nillable</p> <p>Description The timestamp for when the current user last viewed a record related to this object.</p>
LastViewedDate	<p>Type dateTime</p> <p>Properties Aggregatable, Filter, Sort, Nillable</p> <p>Description The timestamp for when the current user last viewed this object. If this value is null, this object might only have been referenced (LastReferencedDate) and not viewed.</p>
Name	<p>Type string</p> <p>Properties Aggregatable, Create, Defaulted on create, Filter, Group, idLookup, Sort, Update</p> <p>Description Label is Object Name. Name of the object. Maximum size is 80 characters. When the object is created using an API <code>update ()</code> call, and the Name field is null, Salesforce sets the value to the record ID. When the object is created using an API <code>create ()</code> call, Salesforce sets the initial value to the record ID. You can't set the Name field to null.</p>
RecordTypeId	<p>Type reference</p> <p>Properties Create, Filter, Nillable, Update</p> <p>Description ID of the record type assigned to this object. Create at least one record type before this field appears for custom or standard objects.</p>
SystemModStamp	<p>Type dateTime</p>

Field	Details
	<p>Properties Aggregatable, Defaulted on create, Filter, Sort</p> <p>Description Date and time when a user or automated process (such as a trigger) last modified this record. In this context, "trigger" refers to Salesforce code that runs to implement standard functionality, and not an Apex trigger.</p>
OwnerId	<p>Type reference</p> <p>Properties Aggregatable, Create, Defaulted on create, Filter, Group, Namepointing, Sort, Update</p> <p>Description The ID of the user who currently owns this object. Default value is the user logged in to the API to perform the <code>create()</code> call.</p>

- [API Field Properties](#)

Custom Object__Feed

Represents the feed, specifically posts and feed-tracked changes, on a custom object.

A custom object feed shows posts and changes to the object's tracked fields. The object name is variable and uses *Custom Object__Feed* syntax, where *Custom Object* is the name of the custom object. For example, *Textile__Feed* represents a feed on the custom object *Textile__c*.

Supported Calls

`delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

In the internal org, users can delete all feed items they created. This rule varies in Experience Cloud sites where threaded discussions and delete-blocking are enabled. Site members can delete all feed items they created, provided the feed items don't have content nested under them—like a comment, answer, or reply. Where the feed item has nested content, only feed moderators and users with the Modify All Data permission can delete threads.

To delete feed items they didn't create, users must have one of these permissions:

- Modify All Data
- Modify All on the parent object, like *Textile__c*.
- Moderate Chatter

 **Note:** Users with the Moderate Chatter permission can delete only the feed items and comments they can see.

Only users with this permission can delete items in unlisted groups.

Fields

Field	Details
BestCommentId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the comment marked as best answer on a question post. This field is available in API version 44.0 and later.</p>
Body	<p>Type textarea</p> <p>Properties Nillable, Sort</p> <p>Description The body of the post. Required when <code>Type</code> is <code>TextPost</code>. Optional when <code>Type</code> is <code>ContentPost</code> or <code>LinkPost</code>.</p>
CommentCount	<p>Type int</p> <p>Properties Filter, Group, Sort</p> <p>Description The number of comments associated with this feed item.</p> <p> Tip: In a feed that supports pre-moderation, <code>CommentCount</code> isn't updated until a comment is published. For example, say that you comment on a post that already has one published comment and your comment triggers moderation. Now there are two comments on the post, but the count says there's only one. In a moderated feed, comments aren't counted until approved by an admin or someone with <code>Can Approve Feed Post and Comment</code> or <code>Modify All Data</code>.</p> <p>Feed moderation has implications on how you retrieve feed comments. In a moderated feed, rather than retrieving comments by looping through <code>CommentCount</code>, go through pagination until the end of comments is returned.</p>
ConnectionId	<p>Type reference</p>

Field	Details
	<p>Properties Filter, Group, Nillable, Sort</p> <p>Description When a PartnerNetworkConnection modifies a record that is tracked, the <code>CreatedBy</code> field contains the ID of the system administrator. The <code>ConnectionId</code> contains the ID of the PartnerNetworkConnection. Available if Salesforce to Salesforce is enabled for your org.</p>
ContentData	<p>Type base64</p> <p>Properties Nillable</p> <p>Description Available in API version 36.0 and earlier only. Required if <code>Type</code> is <code>ContentPost</code>. Encoded file data in any format, and can't be 0 bytes. Setting this field automatically sets <code>Type</code> to <code>ContentPost</code>.</p>
ContentDescription	<p>Type textarea</p> <p>Properties Nillable, Sort</p> <p>Description Available in API version 36.0 and earlier only. The description of the file specified in <code>ContentData</code>.</p>
ContentFileName	<p>Type string</p> <p>Properties Group, Nillable, Sort</p> <p>Description Available in API version 36.0 and earlier only. This field is required if <code>Type</code> is <code>ContentPost</code>. The name of the file uploaded to the feed. Setting <code>ContentFileName</code> automatically sets <code>Type</code> to <code>ContentPost</code>.</p>
ContentSize	<p>Type int</p> <p>Properties Group, Nillable, Sort</p> <p>Description Available in API version 36.0 and earlier only. The size of the file (in bytes) uploaded to the feed. This field is read-only and is automatically determined during insert.</p>

Field	Details
	<ul style="list-style-type: none"> • <code><code></code> • <code><i></code> • <code><u></code> • <code><s></code> • <code></code> • <code></code> • <code></code> • <code></code> <p>The <code></code> tag is accessible only through the API and must reference files in Salesforce similar to this example: <code></code></p> <p> Note: In API version 35.0 and later, the system replaces special characters in rich text with escaped HTML. In API version 34.0 and prior, all rich text appears as a plain-text representation.</p>
LikeCount	<p>Type int</p> <p>Properties Filter, Group, Sort</p> <p>Description The number of likes associated with this feed item.</p>
LinkUrl	<p>Type url</p> <p>Properties Nillable, Sort</p> <p>Description The URL of a <code>LinkPost</code>.</p>
NetworkScope	<p>Type picklist</p> <p>Properties Group, Nillable, Restricted picklist, Sort</p> <p>Description Specifies whether this feed item is available in the default Experience Cloud site, a specific Experience Cloud site, or all sites. This field is available in API version 26.0 and later, if digital experiences is enabled for your org.</p> <p><code>NetworkScope</code> can have the following values:</p> <ul style="list-style-type: none"> • <code>NetworkId</code>—The ID of the Experience Cloud site in which the <code>FeedItem</code> is available. If left empty, the feed item is only available in the default Experience Cloud site. • <code>AllNetworks</code>—The feed item is available in all Experience Cloud sites.

Field	Details
	<p>Note the following exceptions for <code>NetworkScope</code>:</p> <ul style="list-style-type: none"> • Only feed items with a Group or User parent can set a <code>NetworkId</code> or a null value for <code>NetworkScope</code>. • For feed items with a record parent, users can set <code>NetworkScope</code> only to <code>AllNetworks</code>. • You can't filter a feed item on the <code>NetworkScope</code> field.
ParentId	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the custom object record that is tracked in the feed. The feed is displayed on the detail page for this record.</p>
RelatedRecordId	<p>Type reference</p> <p>Properties Group, Nillable, Sort</p> <p>Description ID of the ContentVersion object associated with a <code>ContentPost</code>. This field is null for all posts except <code>ContentPost</code>.</p>
Title	<p>Type string</p> <p>Properties Group, Nillable, Sort</p> <p>Description The title of the feed item. When the <code>Type</code> is <code>LinkPost</code>, the <code>LinkUrl</code> is the URL and this field is the link name.</p>
Type	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description The type of feed item:</p> <ul style="list-style-type: none"> • <code>ActivityEvent</code>—indirectly generated event when a user or the API adds a Task associated with a feed-enabled parent record (excluding email tasks on cases). Also occurs when a user or the API adds or updates a Task or Event associated with a case record (excluding email and call logging).

Field	Details
	<p>For a recurring Task with CaseFeed disabled, one event is generated for the series only. For a recurring Task with CaseFeed enabled, events are generated for the series and each occurrence.</p> <ul style="list-style-type: none"> • <code>AdvancedTextPost</code>—created when a user posts a group announcement and, in Lightning Experience as of API version 39.0 and later, when a user shares a post. • <code>AnnouncementPost</code>—Not used. • <code>ApprovalPost</code>—generated when a user submits an approval. • <code>BasicTemplateFeedItem</code>—Not used. • <code>CanvasPost</code>—a post made by a canvas app posted on a feed. • <code>CollaborationGroupCreated</code>—generated when a user creates a public group. • <code>CollaborationGroupUnarchived</code>—Not used. • <code>ContentPost</code>—a post with an attached file. • <code>CreatedRecordEvent</code>—generated when a user creates a record from the publisher. • <code>DashboardComponentAlert</code>—generated when a dashboard metric or gauge exceeds a user-defined threshold. • <code>DashboardComponentSnapshot</code>—created when a user posts a dashboard snapshot on a feed. • <code>LinkPost</code>—a post with an attached URL. • <code>PollPost</code>—a poll posted on a feed. • <code>ProfileSkillPost</code>—generated when a skill is added to a user’s Chatter profile. • <code>QuestionPost</code>—generated when a user posts a question. • <code>ReplyPost</code>—generated when Chatter Answers posts a reply. • <code>RypplePost</code>—generated when a user creates a Thanks badge in WDC. • <code>TextPost</code>—a direct text entry on a feed. • <code>TrackedChange</code>—a change or group of changes to a tracked field. • <code>UserStatus</code>—automatically generated when a user adds a post. Deprecated. <p>The following values appear in the <code>Type</code> picklist for all feed objects but apply only to CaseFeed:</p> <ul style="list-style-type: none"> • <code>CaseCommentPost</code>—generated event when a user adds a case comment for a case object • <code>EmailMessageEvent</code>—generated event when an email related to a case object is sent or received • <code>CallLogPost</code>—generated event when a user logs a call for a case through the user interface. CTI calls also generate this event. • <code>ChangeStatusPost</code>—generated event when a user changes the status of a case • <code>AttachArticleEvent</code>—generated event when a user attaches an article to a case <p> Note: If you set <code>Type</code> to <code>ContentPost</code>, also specify <code>ContentData</code> and <code>ContentFileName</code>.</p>

Field	Details
Visibility	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Specifies whether this feed item is available to all users or internal users only. This field is available in API version 26.0 and later, if digital experiences is enabled for your org.</p> <p>Visibility can have the following values:</p> <ul style="list-style-type: none"> • AllUsers—The feed item is available to all users who have permission to see the feed item. • InternalUsers—The feed item is available to internal users only. <p>Note the following exceptions for Visibility:</p> <ul style="list-style-type: none"> • For record posts, Visibility is set to InternalUsers for all internal users by default. • External users can set Visibility only to AllUsers. • On user and group posts, only internal users can set Visibility to InternalUsers.

Usage

A feed for a custom object is automatically created when a user enables feed tracking for the custom object. Use feeds to track changes to the custom objects they serve. For example, `Textile__Feed` tracks changes to a `Textile__c` object. Use feed objects to retrieve the content of feed fields, such as type of feed or feed ID.

Note the following SOQL restrictions. No SOQL limit if logged-in user has View All Data permission. If not, specify a `LIMIT` clause of 1,000 records or fewer. SOQL `ORDER BY` on fields using relationships is not available. Use `ORDER BY` on fields on the root object in the SOQL query.

What About *StandardObjectName*Feed Objects?

Similar to custom objects, standard objects can have associated feed objects. For a list of *StandardObjectName*Feed objects, see [StandardObjectNameFeed](#).

CHAPTER 10 Associated Objects (Feed, History, OwnerSharingRule, Share, and ChangeEvent Objects)

This section provides a list of objects associated to standard objects and their standard fields.

Some fields may not be listed for some objects. To see the system fields for each object, see [System Fields](#).

To verify the complete list of fields for an object, use a describe call from the API or inspect with an appropriate tool. For example, inspect the WSDL or use a schema viewer.

[StandardObjectNameFeed](#)

StandardObjectNameFeed is the model for all feed objects associated with standard objects. These objects represent the posts and feed-tracked changes of a standard object.

[StandardObjectNameHistory](#)

StandardObjectNameHistory is the model for all history objects associated with standard objects. These objects represent the history of changes to the values in the fields of a standard object.

[StandardObjectNameOwnerSharingRule](#)

StandardObjectNameOwnerSharingRule is the model for all owner sharing rule objects associated with standard objects. These objects represent a rule for sharing a standard object with users other than the owner.

[StandardObjectNameShare](#)

StandardObjectNameShare is the model for all share objects associated with standard objects. These objects represent a sharing entry on the standard object.

[StandardObjectNameChangeEvent](#)

A *ChangeEvent* object is available for each object that supports Change Data Capture. You can subscribe to a stream of change events using Change Data Capture to receive data tied to record changes in Salesforce. Changes include record creation, updates to an existing record, deletion of a record, and undeletion of a record. A change event isn't a Salesforce object—it doesn't support CRUD operations or queries. It's included in the object reference so you can discover which Salesforce objects support change events.

StandardObjectNameFeed

StandardObjectNameFeed is the model for all feed objects associated with standard objects. These objects represent the posts and feed-tracked changes of a standard object.

The object name is variable and uses *StandardObjectNameFeed* syntax. For example, *AccountFeed* represents the posts and feed-tracked changes on an account record. We list the available associated feed objects at the end of this topic. For specific version information, see the documentation for the standard object.

Supported Calls

`delete()`, `describeObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

Special Access Rules

In the internal org, users can delete all feed items they created. This rule varies in Experience Cloud sites where threaded discussions and delete-blocking are enabled. Site members can delete all feed items they created, provided the feed items don't have content nested under them—like a comment, answer, or reply. Where the feed item has nested content, only feed moderators and users with the Modify All Data permission can delete threads.

To delete feed items they didn't create, users must have one of these permissions:

- Modify All Data
- Modify All on the parent object, like Account for AccountFeed
- Moderate Chatter

Note: Users with the Moderate Chatter permission can delete only the feed items and comments they can see.

Only users with this permission can delete items in unlisted groups.

For more special access rules, if any, see the documentation for the standard object. For example, for AccountFeed, see the special access rules for Account.

Fields

Field	Details
BestCommentId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description The ID of the comment marked as best answer on a question post. This field is available in API version 44.0 and later.</p>
Body	<p>Type textarea</p> <p>Properties Nillable, Sort</p> <p>Description The body of the post. Required when <code>Type</code> is <code>TextPost</code>. Optional when <code>Type</code> is <code>ContentPost</code> or <code>LinkPost</code>.</p>
CommentCount	<p>Type int</p> <p>Properties Filter, Group, Sort</p>

Field	Details
	<p>Description</p> <p>The number of comments associated with this feed item.</p> <p> Tip: In a feed that supports pre-moderation, <code>CommentCount</code> isn't updated until a comment is published. For example, say that you comment on a post that already has one published comment and your comment triggers moderation. Now there are two comments on the post, but the count says there's only one. In a moderated feed, comments aren't counted until approved by an admin or someone with <code>Can Approve Feed Post and Comment</code> or <code>Modify All Data</code>.</p> <p>Feed moderation has implications on how you retrieve feed comments. In a moderated feed, rather than retrieving comments by looping through <code>CommentCount</code>, go through pagination until the end of comments is returned.</p>
<code>ConnectionId</code>	<p>Type</p> <p>reference</p> <p>Properties</p> <p>Filter, Group, Nillable, Sort</p> <p>Description</p> <p>When a <code>PartnerNetworkConnection</code> modifies a record that is tracked, the <code>CreatedBy</code> field contains the ID of the system administrator. The <code>ConnectionId</code> contains the ID of the <code>PartnerNetworkConnection</code>. Available if Salesforce to Salesforce is enabled for your organization.</p>
<code>ContentData</code>	<p>Type</p> <p>base64</p> <p>Properties</p> <p>Nillable</p> <p>Description</p> <p>Available in API version 36.0 and earlier only. Required if <code>Type</code> is <code>ContentPost</code>. Encoded file data in any format, and can't be 0 bytes. Setting this field automatically sets <code>Type</code> to <code>ContentPost</code>.</p>
<code>ContentDescription</code>	<p>Type</p> <p>textarea</p> <p>Properties</p> <p>Nillable, Sort</p> <p>Description</p> <p>Available in API version 36.0 and earlier only. The description of the file specified in <code>ContentData</code>.</p>
<code>ContentFileName</code>	<p>Type</p> <p>string</p>

Field	Details
	<p>Properties Group, Nillable, Sort</p> <p>Description Available in API version 36.0 and earlier only. This field is required if <code>Type</code> is <code>ContentPost</code>. The name of the file uploaded to the feed. Setting <code>ContentFileName</code> automatically sets <code>Type</code> to <code>ContentPost</code>.</p>
ContentSize	<p>Type int</p> <p>Properties Group, Nillable, Sort</p> <p>Description Available in API version 36.0 and earlier only. The size of the file (in bytes) uploaded to the feed. This field is read-only and is automatically determined during insert.</p>
ContentType	<p>Type string</p> <p>Properties Group, Nillable, Sort</p> <p>Description Available in API version 36.0 and earlier only. The MIME type of the file uploaded to the feed. This field is read-only and is automatically determined during insert.</p>
FeedPostId	<p>Type reference</p> <p>Properties Filter, Group, Nillable, Sort</p> <p>Description This field was removed in API version 22.0, and is available in earlier versions for backward compatibility only. ID of the associated FeedPost. A FeedPost represents the following types of changes in a feed item: changes to tracked fields, text posts, link posts, and content posts.</p>
InsertedById	<p>Type reference</p> <p>Properties Group, Nillable, Sort</p> <p>Description ID of the user who added this item to the feed. For example, if an application migrates posts and comments from another application into a feed, the <code>InsertedBy</code> value is set to the ID of the context user.</p>

Field	Details
isRichText	<p>Type boolean</p> <p>Properties Defaulted on create, Filter, Group, Sort</p> <p>Description Indicates whether the feed item <code>Body</code> contains rich text. If you post a rich text feed comment using SOAP API, set <code>IsRichText</code> to <code>true</code> and escape HTML entities from the body. Otherwise, the post is rendered as plain text.</p> <p>Rich text supports the following HTML tags:</p> <ul style="list-style-type: none"> • <code><p></code> •  Tip: Though the <code>
</code> tag isn't supported, you can use <code><p>&nbspsp;</p></code> to create lines. • <code><a></code> • <code></code> • <code><code></code> • <code><i></code> • <code><u></code> • <code><s></code> • <code></code> • <code></code> • <code></code> • <code></code> <p>The <code></code> tag is accessible only through the API and must reference files in Salesforce similar to this example: <code></code></p> <p> Note: In API version 35.0 and later, the system replaces special characters in rich text with escaped HTML. In API version 34.0 and prior, all rich text appears as a plain-text representation.</p>
LikeCount	<p>Type int</p> <p>Properties Filter, Group, Sort</p> <p>Description The number of likes associated with this feed item.</p>
LinkUrl	<p>Type url</p> <p>Properties Nillable, Sort</p>

Field	Details
	<p>Description The URL of a <code>LinkPost</code>.</p>
<code>NetworkScope</code>	<p>Type picklist</p> <p>Properties Group, Nillable, Restricted picklist, Sort</p> <p>Description Specifies whether this feed item is available in the default Experience Cloud site, a specific Experience Cloud site, or all sites. This field is available in API version 26.0 and later, if digital experiences is enabled for your org.</p> <p><code>NetworkScope</code> can have the following values:</p> <ul style="list-style-type: none"> <code>NetworkId</code>—The ID of the Experience Cloud site in which the <code>FeedItem</code> is available. If left empty, the feed item is only available in the default Experience Cloud site. <code>AllNetworks</code>—The feed item is available in all Experience Cloud sites. <p>Note the following exceptions for <code>NetworkScope</code>:</p> <ul style="list-style-type: none"> Only feed items with a <code>Group</code> or <code>User</code> parent can set a <code>NetworkId</code> or a null value for <code>NetworkScope</code>. For feed items with a record parent, users can set <code>NetworkScope</code> only to <code>AllNetworks</code>. You can't filter a feed item on the <code>NetworkScope</code> field.
<code>ParentId</code>	<p>Type reference</p> <p>Properties Filter, Group, Sort</p> <p>Description ID of the record that is tracked in the feed. The detail page for the record displays the feed.</p>
<code>RelatedRecordId</code>	<p>Type reference</p> <p>Properties Group, Nillable, Sort</p> <p>Description ID of the <code>ContentVersion</code> record associated with a <code>ContentPost</code>. This field is null for all posts except <code>ContentPost</code>.</p>
<code>Title</code>	<p>Type string</p> <p>Properties Group, Nillable, Sort</p>

Field	Details
	<p>Description</p> <p>The title of the feed item. When the <code>Type</code> is <code>LinkPost</code>, the <code>LinkUrl</code> is the URL and this field is the link name.</p>
<p>Type</p>	<p>Type</p> <p>picklist</p> <p>Properties</p> <p>Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description</p> <p>The type of feed item:</p> <ul style="list-style-type: none"> • <code>ActivityEvent</code>—indirectly generated event when a user or the API adds a Task associated with a feed-enabled parent record (excluding email tasks on cases). Also occurs when a user or the API adds or updates a Task or Event associated with a case record (excluding email and call logging). For a recurring Task with <code>CaseFeed</code> disabled, one event is generated for the series only. For a recurring Task with <code>CaseFeed</code> enabled, events are generated for the series and each occurrence. • <code>AdvancedTextPost</code>—created when a user posts a group announcement and, in Lightning Experience as of API version 39.0 and later, when a user shares a post. • <code>AnnouncementPost</code>—Not used. • <code>ApprovalPost</code>—generated when a user submits an approval. • <code>BasicTemplateFeedItem</code>—Not used. • <code>CanvasPost</code>—a post made by a canvas app posted on a feed. • <code>CollaborationGroupCreated</code>—generated when a user creates a public group. • <code>CollaborationGroupUnarchived</code>—Not used. • <code>ContentPost</code>—a post with an attached file. • <code>CreatedRecordEvent</code>—generated when a user creates a record from the publisher. • <code>DashboardComponentAlert</code>—generated when a dashboard metric or gauge exceeds a user-defined threshold. • <code>DashboardComponentSnapshot</code>—created when a user posts a dashboard snapshot on a feed. • <code>LinkPost</code>—a post with an attached URL. • <code>PollPost</code>—a poll posted on a feed. • <code>ProfileSkillPost</code>—generated when a skill is added to a user’s Chatter profile. • <code>QuestionPost</code>—generated when a user posts a question. • <code>ReplyPost</code>—generated when Chatter Answers posts a reply. • <code>RypplePost</code>—generated when a user creates a Thanks badge in WDC. • <code>TextPost</code>—a direct text entry on a feed. • <code>TrackedChange</code>—a change or group of changes to a tracked field. • <code>UserStatus</code>—automatically generated when a user adds a post. Deprecated.

Field	Details
	<p>The following values appear in the <code>Type</code> picklist for all feed objects but apply only to <code>CaseFeed</code>:</p> <ul style="list-style-type: none"> • <code>CaseCommentPost</code>—generated event when a user adds a case comment for a case object • <code>EmailMessageEvent</code>—generated event when an email related to a case object is sent or received • <code>CallLogPost</code>—generated event when a user logs a call for a case through the user interface. CTI calls also generate this event. • <code>ChangeStatusPost</code>—generated event when a user changes the status of a case • <code>AttachArticleEvent</code>—generated event when a user attaches an article to a case <p> Note: If you set <code>Type</code> to <code>ContentPost</code>, also specify <code>ContentData</code> and <code>ContentFileName</code>.</p>

<p><code>Visibility</code></p>	<p>Type picklist</p> <p>Properties Filter, Group, Nillable, Restricted picklist, Sort</p> <p>Description Specifies whether this feed item is available to all users or internal users only. This field is available in API version 26.0 and later, if digital experiences is enabled for your organization. <code>Visibility</code> can have the following values:</p> <ul style="list-style-type: none"> • <code>AllUsers</code>—The feed item is available to all users who have permission to see the feed item. • <code>InternalUsers</code>—The feed item is available to internal users only. <p>Note the following exceptions for <code>Visibility</code>:</p> <ul style="list-style-type: none"> • For record posts, <code>Visibility</code> is set to <code>InternalUsers</code> for all internal users by default. • External users can set <code>Visibility</code> only to <code>AllUsers</code>. • On user and group posts, only internal users can set <code>Visibility</code> to <code>InternalUsers</code>.
--------------------------------	--

Usage

A feed for an object is automatically created when a user enables feed tracking for the object. Use feeds to track changes to records. For example, `AccountFeed` tracks changes to an account record. Use feed objects to retrieve the content of feed fields, such as type of feed or feed ID.

- `NewsFeed` and `UserProfileFeed` are available in API version 18.0 through API version 26.0. In API version 27.0 and later, `NewsFeed` and `UserProfileFeed` are no longer available in SOAP API. Use Connect REST API to access `NewsFeed` and `UserProfileFeed`.

Use the `NewsFeed` object to query and retrieve lead feed items associated with a converted lead record.

- For `NewsFeed` and `UserProfileFeed`, users who do not have the View All Data permission have the following limitations when querying records: Must specify a `LIMIT` clause and the limit must be less than or equal to 1000. Can include a `WHERE` clause that references object fields, but can't include references to fields in related objects. For example, you can filter by `CreatedDate` or `ParentId`, but not by `Parent.Name`. Can include an `ORDER BY` clause that references object fields, but can't include references to fields in related objects. For example, `ORDER BY CreatedDate` or `ParentId`, but not by `Parent.Name`. To query for the most recent feed items, `ORDER BY CreatedDate DESC, Id DESC`.

Note the following SOQL restrictions. No SOQL limit if logged-in user has View All Data permission. If not, specify a `LIMIT` clause of 1,000 records or fewer. SOQL `ORDER BY` on fields using relationships is not available. Use `ORDER BY` on fields on the root object in the SOQL query.

- The name `Article Type__Feed` is variable, where `Article Type` is the object name for the article type associated with the article. For example, `Offer__Feed` represents a feed on an article of type `Offer`.
- Field Service must be enabled in your organization for `ServiceAppointmentFeed`, `ServiceCrewFeed`, `ServiceMemberFeed`, `ServiceResourceCapacityFeed`, `ServiceResourceFeed`, `ServiceResourceSkillFeed`, `ServiceTerritoryFeed`, `ServiceTerritoryMemberFeed`, and `SkillRequirementFeed`.
- For `WorkOrderFeed`, Work Orders or Field Service must be enabled in your organization.
- On `UserFeed`, if you use the `FeedComment` object to comment on a user record, the user can delete the comment. For example, if John Smith adds a comment to the feed on Sasha Jones' user record, Sasha can delete the comment.

Objects That Follow This Model

These objects follow the standard pattern for associated feed objects.

- `AccountFeed`
- `AccountRelationshipFeed`
- `ActiveScratchOrgFeed`
- `AssetFeed`
- `AssetDowntimePeriodFeed`

Objects That Don't Follow This Model

[Custom object feed objects](#) and `Article_Type__Feed` (API 20.0) use a different naming syntax, but they have the same supported calls and fields.

StandardObjectNameHistory

StandardObjectNameHistory is the model for all history objects associated with standard objects. These objects represent the history of changes to the values in the fields of a standard object.

The object name is variable and uses *StandardObjectNameHistory* syntax. For example, `AccountHistory` represents the history of changes to the values of an account record's fields. We list the available associated history objects at the end of this topic. For specific version information, see the documentation for the standard object.

Supported Calls

`describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`

You can also enable `delete()` in API version 42.0 and later. See [Enable delete of Field History and Field History Archive](#).

Special Access Rules

For specific special access rules, if any, see the documentation for the standard object. For example, for `AccountHistory`, see the special access rules for `Account`.

Fields

Field Name	Details
<i>StandardObjectNameId</i>	Type reference Properties Filter, Group, Sort Description ID of the standard object.
<code>DataType</code>	Type picklist Properties Filter, Group, Nillable, Restricted picklist, Sort Description Data type of the field that was changed.
<code>Field</code>	Type picklist

Field Name	Details
	<p>Properties Filter, Group, Restricted picklist, Sort</p> <p>Description Name of the field that was changed.</p>
NewValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description New value of the field that was changed.</p>
OldValue	<p>Type anyType</p> <p>Properties Nillable, Sort</p> <p>Description Old value of the field that was changed.</p>

Objects That Don't Follow This Model

These objects *don't* follow the standard pattern for associated history objects. They are documented separately.

- [KnowledgeArticleVersionHistory](#)
- [OpportunityHistory](#)
- [ProcessInstanceHistory](#)
- [RecordActionHistory](#)
- [WebCartHistory](#)

StandardObjectNameOwnerSharingRule

StandardObjectNameOwnerSharingRule is the model for all owner sharing rule objects associated with standard objects. These objects represent a rule for sharing a standard object with users other than the owner.

The object name is variable and uses *StandardObjectNameOwnerSharingRule* syntax. For example, *ChannelProgramOwnerSharingRule* is a rule for sharing a channel program with users other than the channel program owner. We list the available associated owner sharing rule objects at the end of this topic. For specific version information, see the standard object documentation.

- ✔ **Note:** To enable access to this object for your org, contact Salesforce customer support. However, we recommend that you instead use Metadata API to programmatically update owner sharing rules because it triggers automatic sharing rule recalculation. The [SharingRules](#) Metadata API type is enabled for all orgs.

Supported Calls

`create()`, `delete()`, `describeSObjects()`, `getDeleted()`, `getUpdated()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

For specific special access rules, if any, see the documentation for the standard object. For example, for *ChannelProgramOwnerSharingRule*, see the special access rules for *ChannelProgram*.

Fields

Field Name	Details
AccessLevel	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description Determines the level of access users have to records. Values are:</p> <ul style="list-style-type: none">• Read (read only)• Edit (read/write)
Description	<p>Type textarea</p> <p>Properties Create, Filter, Nillable, Sort, Update</p> <p>Description Description of the sharing rule. Maximum length is 1000 characters.</p>
DeveloperName	<p>Type string</p> <p>Properties Create, Filter, Group, Nillable, Sort, Update</p> <p>Description The unique name of the object in the API. This name can contain only underscores and alphanumeric characters, and must be unique in your org. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. In managed packages, this field prevents naming conflicts on package installations. With this field, a developer can change the object's name in a managed package and the changes are reflected in a subscriber's organization.</p> <p> Note: When creating large sets of data, always specify a unique DeveloperName for each record. If no DeveloperName is specified, performance may slow while Salesforce generates one for each record.</p>
GroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the source group. Records that are owned by users in the source group trigger the rule to give access.</p>

Field Name	Details
Name	<p>Type string</p> <p>Properties Create, Filter, Group, idLookup, Sort, Update</p> <p>Description Label of the sharing rule as it appears in the UI. Maximum length is 80 characters.</p>
UserOrGroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the user or group that you are granting access to.</p>

Objects That Follow This Model

These objects follow the standard pattern for associated owner sharing rule objects.

- AccountBrandOwnerSharingRule
- AccountRelationshipOwnerSharingRule
- ActiveScratchOrgOwnerSharingRule
- AgentWorkOwnerSharingRule
- AuthorizationFormConsentOwnerSharingRule
- AuthorizationFormDataUseOwnerSharingRule
- AuthorizationFormOwnerSharingRule
- BusinessBrandOwnerSharingRule
- ChannelProgramLevelOwnerSharingRule
- ChannelProgramMemberOwnerSharingRule
- ChannelProgramOwnerSharingRule
- CommerceEntitlementPolicyOwnerSharingRule
- CommissionScheduleOwnerSharingRule
- CommSubscriptionChannelTypeOwnerSharingRule
- CommSubscriptionConsentOwnerSharingRule
- CommSubscriptionOwnerSharingRule
- ContactPointConsentOwnerSharingRule
- ContactPointEmailOwnerSharingRule
- ContactPointPhoneOwnerSharingRule
- ContactPointTypeConsentOwnerSharingRule
- ContactRequestOwnerSharingRule
- CrisisOwnerSharingRule

Associated Objects (Feed, History, OwnerSharingRule, Share, and ChangeEvent Objects)

- [UserMonthlyMetricOwnerSharingRule](#) on page 3640

StandardObjectNameShare

StandardObjectNameShare is the model for all share objects associated with standard objects. These objects represent a sharing entry on the standard object.

The object name is variable and uses *StandardObjectNameShare* syntax. For example, *AccountBrandShare* is a sharing entry on an account brand. We list the available associated share objects at the end of this topic. For specific version information, see the standard object documentation.

Supported Calls

`create()`, `delete()`, `describeObjects()`, `query()`, `retrieve()`, `update()`, `upsert()`

Special Access Rules

For specific special access rules, if any, see the documentation for the standard object. For example, for *AccountBrandShare*, see the special access rules for *AccountBrand*.

Fields

Field Name	Details
<code>AccessLevel</code>	<p>Type picklist</p> <p>Properties Create, Filter, Group, Restricted picklist, Sort, Update</p> <p>Description The level of access allowed. Values are:</p> <ul style="list-style-type: none">• <code>All</code> (owner)• <code>Edit</code> (read/write)• <code>Read</code> (read only)
<code>ParentId</code>	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the parent record.</p>
<code>RowCause</code>	<p>Type picklist</p> <p>Properties Create, Filter, Group, Nillable, Restricted picklist, Sort</p>

Field Name	Details
	<p>Description Reason that the sharing entry exists.</p>
UserOrGroupId	<p>Type reference</p> <p>Properties Create, Filter, Group, Sort</p> <p>Description ID of the user or group that has been given access to the object.</p>

Objects That Don't Follow This Model

These objects *don't* follow the standard pattern for associated history objects. They are documented separately.

- [AccountShare](#)
- [AssetShare](#)
- [CampaignShare](#)
- [CaseShare](#)
- [ContactShare](#)
- [IndividualShare](#)
- [LeadShare](#)
- [OpportunityShare](#)
- [UserShare](#)

StandardObjectNameChangeEvent

A ChangeEvent object is available for each object that supports Change Data Capture. You can subscribe to a stream of change events using Change Data Capture to receive data tied to record changes in Salesforce. Changes include record creation, updates to an existing record, deletion of a record, and undeletion of a record. A change event isn't a Salesforce object—it doesn't support CRUD operations or queries. It's included in the object reference so you can discover which Salesforce objects support change events.

Supported Calls

`describeSObjects()`

Special Access Rules

- Not all objects may be available in your org. Some objects require specific feature settings and permissions to be enabled.
- For more special access rules, if any, see the documentation for the standard object. For example, for AccountChangeEvent, see the special access rules for Account.

Change Event Support

Change events are available for all custom objects and a subset of standard objects. Change events aren't supported for objects that correspond to custom settings. For more information about standard object support, see [Objects That Follow This Model](#).

Change Event Name

The name of a change event is based on the name of the corresponding object for which it captures the changes.

Standard Object Change Event Name

```
<Standard_Object_Name>ChangeEvent
```

Example: `AccountChangeEvent`

Custom Object Change Event Name

```
<Custom_Object_Name>__ChangeEvent
```

Example: `MyCustomObject__ChangeEvent`

Change Event Fields

The fields that a change event can include correspond to the fields on the associated parent Salesforce object, with a few exceptions. For example, AccountChangeEvent fields correspond to the fields on Account.

The fields that a change event doesn't include are:

- The `IsDeleted` system field.
- The `SystemModStamp` system field.
- Any field whose value isn't on the record and is derived from another record or from a formula, except roll-up summary fields, which are included. Examples are formula fields. Examples of fields with derived values include `LastActivityDate` and `PhotoUrl`.

Each change event also contains header fields. The header fields are included inside the `ChangeEventHeader` field. They contain information about the event, such as whether the change was an update or delete and the name of the object, like `Account`.

In addition to the event payload, the event schema ID is included in the `schema` field. Also included is the event-specific field, `replayId`, which is used for retrieving past events.

Event Message Example

The following example is an event message in JSON format for a new account record creation.

```
{
  "schema": "IeRuaY6cbI_HsV8Rv1Mc5g",
  "payload": {
    "ChangeEventHeader": {
      "entityName": "Account",
      "recordIds": [
        "<record_ID>"
      ],
      "changeType": "CREATE",
      "changeOrigin": "com/salesforce/api/soap/51.0;client=SfdcInternalAPI/",
      "transactionKey": "0002343d-9d90-e395-ed20-cf416ba652ad",
      "sequenceNumber": 1,
      "commitTimestamp": 1612912679000,
      "commitNumber": 10716283339728,
      "commitUser": "<User_ID>"
    },
    "Name": "Acme",
    "Description": "Everyone is talking about the cloud. But what does it mean?",
    "OwnerId": "<Owner_ID>",
    "CreatedDate": "2021-02-09T23:17:59Z",
    "CreatedBy": "<User_ID>",
    "LastModifiedDate": "2021-02-09T23:17:59Z",
    "LastModifiedBy": "<User_ID>"
  },
  "event": {
    "replayId": 6
  }
}
```

API Version and Schema

When you subscribe to change events, the subscription uses the latest API version and the event messages received reflect the latest field definitions. For more information, see [API Version and Event Schema](#) in the *Change Data Capture Developer Guide*.

Usage

For more information about Change Data Capture, see [Change Data Capture Developer Guide](#).

Objects That Follow This Model

The following objects have associated `ChangeEvent` objects that follow this model.

- Account (including Person Account)
- AccountContactRole
- ActionCadence
- ActionCadenceStep
- ActionCadenceStepTracker
- ActionCadenceTracker
- Asset
- AssetWarranty

- VoiceCall
- VoiceCallRecording
- WarrantyTerm
- WorkOrder
- WorkOrderLineItem
- WorkType

CHAPTER 11 Apex-Related Calls

In this chapter ...

- [compileAndTest\(\)](#)
- [compileClasses\(\)](#)
- [compileTriggers\(\)](#)
- [executeAnonymous\(\)](#)
- [runTests\(\)](#)

The following table lists supported calls in the API in alphabetical order, and provides a brief description for each. Click a call name to see syntax, usage, and more information for that call.

Note: For a list of core calls, see [Core Calls](#), for a list of describe calls, see [Describe Calls](#), and for a list of utility calls, see [Utility Calls](#).

Call	Description
compileAndTest()	Compile and test your Apex in a single call.
compileClasses()	Compile your Apex in Developer Edition or sandbox organizations.
compileTriggers()	Compile your Apex triggers in Developer Edition or sandbox organizations.
executeAnonymous()	Execute a block of Apex.
runTests()	Run your Apex unit tests.

compileAndTest()

Compile and test your Apex in a single call.

Syntax

```
CompileAndTestResult[] = compileAndTest(CompileAndTestRequest request);
```

Usage

Use this call to both compile and test the Apex you specify with a single call. Production organizations (not a Developer Edition or Sandbox Edition) must use this call instead of [compileClasses\(\)](#) or [compileTriggers\(\)](#).

This call supports the [DebuggingHeader](#) on page 4230 and the [SessionHeader](#) on page 4244.

All specified tests must pass, otherwise data is not saved to the database. If this call is invoked in a production organization, the [RunTestsRequest](#) property of the [CompileAndTestRequest](#) is ignored, and all unit tests defined in the organization are run and must pass.

Sample Code—Java

Note that the following example sets `checkOnly` to `true` so that this class is compiled and tested, but the classes are not saved to the database.

```
{
    CompileAndTestRequest request;
    CompileAndTestResult result = null;

    String triggerBody = "trigger t1 on Account (before insert){ " +
        "    for(Account a:Trigger.new){ " +
        "        a.description = 't1_UPDATE';}" +
        "    }";

    String testClassBody = "@isTest private class TestT1{" +
        "    // Test for the trigger" +
        "    public static testmethod void test1(){ " +
        "        Account a = new Account(name='TEST');" +
        "        insert(a);" +
        "        a = [select id,description from Account where id=:a.id];" +
        "        System.assert(a.description.contains('t1_UPDATE'));" +
        "    }" +
        "    // Test for the class" +
        "    public static testmethod void test2(){ " +
        "        String s = Cl.method1();" +
        "        System.assert(s=='HELLO'));" +
        "    }" +
        "    }";

    String classBody = "public class Cl{" +
        "    public static String s ='HELLO';" +
        "    public static String method1(){ " +
```

```

        "        return(s);" +
        "    }" +
        "};";

request = new CompileAndTestRequest();

request.setClasses(new String[]{classBody, testClassBody});
request.setTriggers(new String[]{triggerBody});
request.setCheckOnly(true);

try {
    result = apexBinding.compileAndTest(request);
} catch (RemoteException e) {
    System.out.println("An unexpected error occurred: " + e.getMessage());
}
assert (result.isSuccess());
}

```

Arguments

Name	Type	Description
request	CompileAndTestRequest	A request that includes the Apex and the values for any fields that need to be set for this request.

Response

[CompileAndTestResult](#)

CompileAndTestRequest

The `compileAndTest()` call contains this object, a request with information about the Apex to be compiled.

A `CompileAndTestRequest` object has the following properties:

Name	Type	Description
checkOnly	boolean	If set to <code>true</code> , the Apex classes and triggers submitted are not saved to your organization, whether or not the code successfully compiles and unit tests pass.
classes	string	Content of the class or classes to be compiled.
deleteClasses	string	Name of the class or classes to be deleted.
deleteTriggers	string	Name of the trigger or triggers to be deleted.
runTestsRequest	RunTestsRequest	Specifies information about the Apex to be tested. If this request is sent in a production organization, this property is ignored and all unit tests are run for your entire organization.
triggers	string	Content of the trigger or triggers to be compiled.

Note the following about this object:

- This object contains the [RunTestsRequest](#) property. If the request is run in a production organization, the property is ignored and all tests are run.
- If any errors occur during compile, delete, testing, or if the goal of 75% code coverage is missed, no classes or triggers are saved to your organization. This is the same requirement as Salesforce AppExchange package testing.
- All triggers must have code coverage. If a trigger has no code coverage, no classes or triggers are saved to your organization.

CompileAndTestResult

The [compileAndTest \(\)](#) call returns information about the compile and unit test run of the specified Apex, including whether it succeeded or failed.

A `CompileAndTestResult` object has the following properties:

Name	Type	Description
<code>classes</code>	CompileClassResult	Information about the success or failure of the compileAndTest () call if classes were being compiled.
<code>deleteClasses</code>	DeleteApexResult	Information about the success or failure of the compileAndTest () call if classes were being deleted.
<code>deleteTriggers</code>	DeleteApexResult	Information about the success or failure of the compileAndTest () call if triggers were being deleted.
<code>runTestsResult</code>	RunTestsResult	Information about the success or failure of the Apex unit tests, if any were specified.
<code>success</code>	boolean	If <code>true</code> , all of the classes, triggers, and unit tests specified ran successfully. If any class, trigger, or unit test failed, the value is <code>false</code> , and details are reported in the corresponding result object: <ul style="list-style-type: none"> • CompileClassResult • CompileTriggerResult • DeleteApexResult • RunTestsResult
<code>triggers</code>	CompileTriggerResult	Information about the success or failure of the compileAndTest () call if triggers were being compiled.

CompileClassResult

This object is returned as part of a [compileAndTest \(\)](#) or [compileClasses \(\)](#) call. It contains information about whether or not the compile and run of the specified Apex was successful.

A `CompileClassResult` object has the following properties:

Name	Type	Description
<code>bodyCrc</code>	int	The CRC (cyclic redundancy check) of the class or trigger file.

Name	Type	Description
column	int	The column number where an error occurred, if one did.
id	ID	An ID is created for each compiled class. The ID is unique within an organization.
line	int	The line number where an error occurred, if one did.
name	string	The name of the class.
problem	string	The description of the problem if an error occurred.
success	boolean	If <code>true</code> , the class or classes compiled successfully. If <code>false</code> , problems are specified in other properties of this object.

CompileTriggerResult

This object is returned as part of a `compileAndTest()` or `compileTriggers()` call. It contains information about whether or not the compile and run of the specified Apex was successful.

A `CompileTriggerResult` object has the following properties:

Name	Type	Description
bodyCrc	int	The CRC (cyclic redundancy check) of the trigger file.
column	int	The column where an error occurred, if one did.
id	ID	An ID is created for each compiled trigger. The ID is unique within an organization.
line	int	The line number where an error occurred, if one did.
name	string	The name of the trigger.
problem	string	The description of the problem if an error occurred.
success	boolean	If <code>true</code> , all the specified triggers compiled and ran successfully. If the compilation or execution of any trigger fails, the value is <code>false</code> .

DeleteApexResult

This object is returned when the `compileAndTest()` call returns information about the deletion of a class or trigger.

A `DeleteApexResult` object has the following properties:

Name	Type	Description
id	ID	ID of the deleted trigger or class. The ID is unique within an organization.
problem	string	The description of the problem if an error occurred.
success	boolean	If <code>true</code> , all the specified classes or triggers were deleted successfully. If any class or trigger is not deleted, the value is <code>false</code> .

compileClasses()

Compile your Apex in Developer Edition or sandbox organizations.

Syntax

```
CompileClassResult[] = compileClasses(string[] classList);
```

Usage

Use this call to compile Apex classes in Developer Edition or sandbox organizations. Production organizations must use [compileAndTest\(\)](#).

This call supports the [DebuggingHeader](#) on page 4230 and the [SessionHeader](#) on page 4244.

Sample Code—Java

```
public void compileClassesSample() {
    String p1 = "public class p1 {\n"
        + "public static Integer var1 = 0;\n"
        + "public static void methodA() {\n"
        + " var1 = 1;\n" + "}\n"
        + "public static void methodB() {\n"
        + " p2.MethodA();\n" + "}\n"
        + "}";
    String p2 = "public class p2 {\n"
        + "public static Integer var1 = 0;\n"
        + "public static void methodA() {\n"
        + " var1 = 1;\n" + "}\n"
        + "public static void methodB() {\n"
        + " p1.MethodA();\n" + "}\n"
        + "}";
    CompileClassResult[] r = new CompileClassResult[0];
    try {
        r = apexBinding.compileClasses(new String[]{p1, p2});
    } catch (RemoteException e) {
        System.out.println("An unexpected error occurred: "
            + e.getMessage());
    }
    if (!r[0].isSuccess()) {
        System.out.println("Couldn't compile class p1 because: "
            + r[0].getProblem());
    }
    if (!r[1].isSuccess()) {
        System.out.println("Couldn't compile class p2 because: "
            + r[1].getProblem());
    }
}
```

Arguments

Name	Type	Description
scripts	string	A request that includes the Apex classes and the values for any fields that need to be set for this request.

Response

[CompileClassResult](#)

compileTriggers()

Compile your Apex triggers in Developer Edition or sandbox organizations.

Syntax

```
CompileTriggerResult[] = compileTriggers(string[] triggerList);
```

Usage

Use this call to compile the specified Apex triggers in your Developer Edition or sandbox organization. Production organizations must use [compileAndTest\(\)](#).

This call supports the [DebuggingHeader](#) on page 4230 and the [SessionHeader](#) on page 4244.

Arguments

Name	Type	Description
scripts	string	A request that includes the Apex trigger or triggers and the values for any fields that need to be set for this request.

Response

[CompileTriggerResult](#)

executeAnonymous()

Executes a block of Apex.

Syntax

```
ExecuteAnonymousResult[] = binding.executeAnonymous(string apexcode);
```

Usage

Use this call to execute an anonymous block of Apex. This call can be executed from AJAX.

This call supports the API [DebuggingHeader](#) on page 4230 and [SessionHeader](#) on page 4244.

If a component in a package with restricted API access issues this call, the request is blocked.

Apex classes and triggers saved (compiled) using API version 15.0 and higher produce a runtime error if you assign a String value that is too long for the field.

Arguments

Name	Type	Description
apexcode	string	A block of Apex.

Response

[ExecuteAnonymousResult](#)[]

ExecuteAnonymousResult

The `executeanonymous ()` call returns information about whether or not the compile and run of the code was successful.

An `ExecuteAnonymousResult` object has the following properties:

Name	Type	Description
column	int	If <code>compiled</code> is False, this field contains the column number of the point where the compile failed.
compileProblem	string	If <code>compiled</code> is False, this field contains a description of the problem that caused the compile to fail.
compiled	boolean	If True, the code was successfully compiled. If False, the <code>column</code> , <code>line</code> , and <code>compileProblem</code> fields are not null.
exceptionMessage	string	If <code>success</code> is False, this field contains the exception message for the failure.
exceptionStackTrace	string	If <code>success</code> is False, this field contains the stack trace for the failure.
line	int	If <code>compiled</code> is False, this field contains the line number of the point where the compile failed.
success	boolean	If True, the code was successfully executed. If False, the <code>exceptionMessage</code> and <code>exceptionStackTrace</code> values are not null.

runTests ()

Run your Apex unit tests.

Syntax

```
RunTestsResult[] = binding.runTests(RunTestsRequest request);
```

Usage

To facilitate the development of robust, error-free code, Apex supports the creation and execution of *unit tests*. Unit tests are class methods that verify whether a particular piece of code is working properly. Unit test methods take no arguments, commit no data to the database, and send no emails. Such methods are flagged with the `@isTest` annotation in the method definition. Unit test methods must be defined in test classes, that is, classes annotated with `@isTest`. Use this call to run your Apex unit tests.

This call supports the [DebuggingHeader](#) on page 4230 and the [SessionHeader](#) on page 4244.

Sample Code—Java

```
public void runTestsSample() {
    String sessionId = "sessionId goes here";
    String url = "url goes here";
    // Set the Apex stub with session ID received from logging in with the partner API
    _SessionHeader sh = new _SessionHeader();
    apexBinding.setHeader(
        new ApexServiceLocator().getServiceName().getNamespaceURI(),
        "SessionHeader", sh);
    // Set the URL received from logging in with the partner API to the Apex stub
    apexBinding._setProperty(ApexBindingStub.ENDPOINT_ADDRESS_PROPERTY, url);

    // Set the debugging header
    _DebuggingHeader dh = new _DebuggingHeader();
    dh.setDebugLevel(LogType.Profiling);
    apexBinding.setHeader(
        new ApexServiceLocator().getServiceName().getNamespaceURI(),
        "DebuggingHeader", dh);

    long start = System.currentTimeMillis();
    RunTestsRequest rtr = new RunTestsRequest();
    rtr.setAllTests(true);
    RunTestsResult res = null;
    try {
        res = apexBinding.runTests(rtr);
    } catch (RemoteException e) {
        System.out.println("An unexpected error occurred: " + e.getMessage());
    }

    System.out.println("Number of tests: " + res.getNumTestsRun());
    System.out.println("Number of failures: " + res.getNumFailures());
    if (res.getNumFailures() > 0) {
        for (RunTestFailure rtf : res.getFailures()) {
            System.out.println("Failure: " + (rtf.getNamespace() ==
                null ? "" : rtf.getNamespace() + ".")
                + rtf.getName() + "." + rtf.getMethodName() + ": "
                + rtf.getMessage() + "\n" + rtf.getStackTrace());
        }
    }
}
```

```

}
if (res.getCodeCoverage() != null) {
    for (CodeCoverageResult ccr : res.getCodeCoverage()) {
        System.out.println("Code coverage for " + ccr.getType() +
            (ccr.getNamespace() == null ? "" : ccr.getNamespace() + ".")
            + ccr.getName() + ": "
            + ccr.getNumLocationsNotCovered()
            + " locations not covered out of "
            + ccr.getNumLocations());

        if (ccr.getNumLocationsNotCovered() > 0) {
            for (CodeLocation cl : ccr.getLocationsNotCovered())
                System.out.println("\tLine " + cl.getLine());
        }
    }
}
System.out.println("Finished in " +
    (System.currentTimeMillis() - start) + "ms");
}

```

Arguments

Name	Type	Description
request	RunTestsRequest	A request that includes the Apex unit tests and the values for any fields that need to be set for this request.

Response

[RunTestsResult](#)

RunTestsRequest

Specifies information about the Apex code to be tested. `RunTestsRequest` is part of `CompileAndTestRequest`, which is the request passed to the `compileAndTest()` call. This object is also passed to the Tooling SOAP API call `runTests()`. You can specify the same or different classes to be tested and compiled. Since triggers cannot be tested directly, they are not included in this object. Instead, you must specify a class that calls the trigger.

If the request is sent to a production organization, this request is ignored and all unit tests defined for your organization are run.

The `RunTestsRequest` object has the following properties:

Name	Type	Description
<code>allTests</code>	boolean	If <code>allTests</code> is true, all unit tests defined for your organization are run.
<code>classes</code>	string[]	An array of one or more objects.
<code>namespace</code>	string	If specified, the namespace that contains the unit tests to be run. Do not use this property if you specify <code>allTests</code> as true. Also, if you execute <code>compileAndTest()</code>

Name	Type	Description
		in a production organization, this property is ignored, and all unit tests defined for the organization are run.
<code>maxFailedTests</code>	<code>int</code>	A mandatory parameter for the Tooling SOAP API call <code>runTests()</code> . To allow all tests in a run to execute, set <code>maxFailedTests</code> to <code>-1</code> . To stop the test run from executing new tests after a given number of tests fail, set <code>maxFailedTests</code> to an integer value from <code>0</code> to <code>1,000,000</code> . This integer value sets the maximum allowable test failures. A value of <code>0</code> causes the test run to stop if any failure occurs. A value of <code>1</code> causes the test run to stop on the second failure, and so on.
<code>packages</code>	<code>string[]</code>	Do not use after version 10.0. For earlier, unsupported releases, the content of the package to be tested.
<code>skipCodeCoverage</code>	<code>boolean</code>	Indicates whether to opt out of collecting code coverage information during Apex test runs. Available in API version 43.0 and later.
<code>tests</code>	TestsNode[]	A mandatory parameter for the Tooling SOAP API call <code>runTests()</code> . Specifies individual test methods in an Apex test class. To specify classes or suites instead of a <code>TestsNode[]</code> , set <code>tests</code> to <code>null</code> . Although this property accepts an array, the array can contain only one entry.

TestsNode

Specifies individual test methods in an Apex test class.

Name	Type	Description
<code>classId</code>	<code>string</code>	<p>Description</p> <p>The ID of the Apex class that contains the test methods you want to run.</p> <p><code>classId</code> or <code>className</code> is required.</p> <p>Supported Methods</p> <ul style="list-style-type: none"> <code>getClassId()</code> <code>setClassId(new String "<your class ID>")</code>
<code>className</code>	<code>string</code>	<p>Description</p> <p>The name of the Apex class that contains the test methods you want to run.</p> <p>To run tests from a managed package, include the package's namespace using dot notation.</p> <p><code>classId</code> or <code>className</code> is required.</p> <p>Supported Methods</p> <ul style="list-style-type: none"> <code>getClassName()</code> <code>setClassName(new String "YourClassName")</code>

Name	Type	Description
testMethods	string[]	<p>Description</p> <p>The test methods you want to run.</p> <p>Required.</p> <p>Supported Methods</p> <ul style="list-style-type: none"> • <code>getTestMethods()</code> • <code>setTestMethods(new String[] { "testMethod1", "testMethod2" })</code>

RunTestsResult

Contains information about the execution of unit tests, including whether unit tests were completed successfully, code coverage results, and failures.

A RunTestsResult object has the following properties:

Name	Type	Description
apexLogId	string	The ID of an ApexLog object that is created at the end of a test run. The ApexLog object is created if there is an active trace flag on the user running an Apex test, or on a class or trigger being executed. This field is available in API version 35.0 and later.
codeCoverage	CodeCoverageResult []	An array of one or more CodeCoverageResult objects that contains the details of the code coverage for the specified unit tests.
codeCoverageWarnings	CodeCoverageWarning []	An array of one or more code coverage warnings for the test run. The results include both the total number of lines that could have been executed, as well as the number, line, and column positions of code that was not executed.
failures	RunTestFailure []	An array of one or more RunTestFailure objects that contain information about the unit test failures, if there are any.
flowCoverage	FlowCoverageResult on page 3991[]	An array of results from test runs that executed flows. This field is available in API version 44.0 and later.
flowCoverageWarnings	FlowCoverageWarning on page 3991[]	An array of warnings generated by test runs that executed flows. This field is available in API version 44.0 and later.
numFailures	int	The number of failures for the unit tests.
numTestsRun	int	The number of unit tests that were run.

Name	Type	Description
successes	RunTestSuccess []	An array of one or more RunTestSuccess objects that contain information about successes, if there are any.
totalTime	double	The total cumulative time spent running tests, in milliseconds. This can be helpful for performance monitoring.

CodeCoverageResult

The [RunTestsResult](#) object contains this object. It contains information about whether or not the compile of the specified Apex and run of the unit tests was successful.

A [CodeCoverageResult](#) object has the following properties:

Name	Type	Description
dmlInfo	CodeLocation []	For each class or trigger tested, for each portion of code tested, this property contains the DML statement locations, the number of times the code was executed, and the total cumulative time spent in these calls. This can be helpful for performance monitoring.
id	ID	The ID of the CodeLocation . The ID is unique within an organization.
locationsNotCovered	CodeLocation []	For each class or trigger tested, if any code is not covered, the line and column of the code not tested, and the number of times the code was executed.
methodInfo	CodeLocation []	For each class or trigger tested, the method invocation locations, the number of times the code was executed, and the total cumulative time spent in these calls. This can be helpful for performance monitoring.
name	string	The name of the class or trigger covered.
namespace	string	The namespace that contained the unit tests, if one is specified.
numLocations	int	The total number of code locations.
soqlInfo	CodeLocation []	For each class or trigger tested, the location of SOQL statements in the code, the number of times this code was executed, and the total cumulative time spent in these calls. This can be helpful for performance monitoring.
soslInfo	CodeLocation []	For each class tested, the location of SOSL statements in the code, the number of times this code was executed, and the total cumulative time spent in these calls. This can be helpful for performance monitoring.
type	string	Do not use. In early, unsupported releases, used to specify class or package.

CodeCoverageWarning

The [RunTestsResult](#) object contains this object. It contains information about the Apex class which generated warnings.

This object has the following properties:

Name	Type	Description
id	ID	The ID of the class which generated warnings.
message	string	The message of the warning generated.
name	string	The name of the class that generated a warning. If the warning applies to the overall code coverage, this value is null.
namespace	string	The namespace that contains the class, if one was specified.

RunTestFailure

The [RunTestsResult](#) object returns information about failures during the unit test run.

This object has the following properties:

Name	Type	Description
id	ID	The ID of the class which generated failures.
message	string	The failure message.
methodName	string	The name of the method that failed.
name	string	The name of the class that failed.
namespace	string	The namespace that contained the class, if one was specified.
seeAllData	boolean	Indicates whether the test method has access to organization data (true) or not (false). This field is available in API version 33.0 and later.
stackTrace	string	The stack trace for the failure.
time	double	The time spent running tests for this failed operation, in milliseconds. This can be helpful for performance monitoring.
type	string	Do not use. In early, unsupported releases, used to specify class or package.

FlowCoverageResult

This object contains information about the flow version and the number of elements executed by the test run. This object is available in API version 44.0 and later.

Name	Type	Description
elementsNotCovered	string	List of elements in the flow version that weren't executed by the test run.
flowId	string	The ID of the flow version. The ID is unique within an org.
flowName	string	The name of the flow that was executed by the test run.
flowNamespace	string	The namespace that contains the flow, if one is specified.
numElements	int	The total number of elements in the flow version.
numElementsNotCovered	int	The number of elements in the flow version that weren't executed by the test run
processType	FlowProcessType (enumeration of type string)	The process type of the flow version.

FlowCoverageWarning

This object contains information about the flow version that generated warnings. This object is available in API version 44.0 and later.

Name	Type	Description
flowId	string	The ID of the flow version that generated the warning.
flowName	string	The name of the flow that generated the warning. If the warning applies to the overall test coverage of flows within your org, this value is null.
flowNamespace	string	The namespace that contains the flow, if one was specified.
message	string	The message of the warning that was generated.

RunTestSuccess

The [RunTestsResult](#) object returns information about successes during the unit test run.

This object has the following properties:

Name	Type	Description
id	ID	The ID of the class which generated the success.
methodName	string	The name of the method that succeeded.
name	string	The name of the class that succeeded.

Name	Type	Description
namespace	string	The namespace that contained the class, if one was specified.
seeAllData	boolean	Indicates whether the test method has access to organization data (<code>true</code>) or not (<code>false</code>). This field is available in API version 33.0 and later.
time	double	The time spent running tests for this operation. This can be helpful for performance monitoring.

CodeLocation

The [RunTestsResult](#) object contains this object in a number of fields.

This object has the following properties:

Name	Type	Description
column	int	The column location of the Apex tested.
line	int	The line location of the Apex tested.
numExecutions	int	The number of times the Apex was executed in the test run.
time	double	The total cumulative time spent at this location. This can be helpful for performance monitoring.

CHAPTER 12 Core Calls

The following table lists supported calls in the API in alphabetical order, and provides a brief description for each. Click a call name to see syntax, usage, and more information for that call.

 **Note:** For a list of Apex-related calls, see [Apex-Related Calls](#), for a list of describe calls, see [Describe Calls](#), and for a list of utility calls, see [Utility Calls](#).

Call	Description
convertLead()	Converts a Lead into an Account , Contact , or (optionally) an Opportunity .
create()	Adds one or more new individual objects to your organization's data.
delete()	Deletes one or more individual objects from your organization's data.
deleteByExample()	Deletes objects from your organization's data using an sObject as a template for what to delete. All data in a big object matching the values in the sObject templates are deleted.
emptyRecycleBin()	Delete records from the recycle bin immediately.
executeListView()	Executes a list view's SOQL query to retrieve data, labels, and actions from a list view.
findDuplicates()	Performs rule-based searches for duplicate records. The input is an array of sObject , each of which specifies the values to search for and the type of object that supplies the duplicate rules. The output identifies the detected duplicates for each object that supplies the duplicate rules. <code>findDuplicates()</code> applies the rules to the values to do the search. The output identifies the detected duplicates for each sObject.
findDuplicatesByIds()	Performs rule-based searches for duplicate records. The input is an array of IDs, each of which specifies the records for which to search for duplicates. The output identifies the detected duplicates for each object that supplies the duplicate rules. <code>findDuplicatesByIds()</code> applies the rules to the record IDs to do the search. The output identifies the detected duplicates for each ID.
getDeleted()	Retrieves the IDs of individual objects of the specified object that have been deleted since the specified time. For information on IDs, see ID Field Type .
getUpdated()	Retrieves the IDs of individual objects of the specified object that have been updated since the specified time. For information on IDs, see ID Field Type .
invalidateSessions()	Ends one or more sessions specified by <code>sessionId</code> .
login()	Logs in to the login server and starts a client session.

Call	Description
<code>logout()</code>	Ends the session of the logged-in user.
<code>merge()</code>	Merges records of the same object type.
<code>performQuickActions()</code>	Executes quick actions of type create or update.
<code>process()</code>	Submits an array of approval process instances for approval, or processes an array of approval process instances to be approved, rejected, or removed.
<code>query()</code>	Executes a query against the specified object and returns data that matches the specified criteria.
<code>queryAll()</code>	Same as <code>query()</code> , but includes deleted and archived items.
<code>queryMore()</code>	Retrieves the next batch of objects from a query.
<code>retrieve()</code>	Retrieves one or more objects based on the specified object IDs.
<code>search()</code>	Executes a text search in your organization's data.
<code>undelete()</code>	Undelete records identified with <code>queryAll()</code> .
<code>update()</code>	Updates one or more existing objects in your organization's data.
<code>upsert()</code>	Creates new objects and updates existing objects; matches on a custom field to determine the presence of existing objects.

Samples

The samples in this section are based on the enterprise WSDL file. They assume that you have already imported the WSDL file and created a connection. To learn how to do so, see the [Quick Start](#) tutorial.

convertLead()

Converts a [Lead](#) into an [Account](#), [Contact](#), or (optionally) an [Opportunity](#).

Syntax

```
LeadConvertResult[] = connection.convertLead(leadConverts LeadConvert[]);
```

Usage

Use `convertLead()` to convert a [Lead](#) into an [Account](#) and [Contact](#), and (optionally) an [Opportunity](#). If appropriate for your business, you can also use `convertLead()` to convert a lead to an account and a person account instead of a contact. To convert a [Lead](#), your client application must be logged in with the "Convert Leads" permission and the "Edit" permission on leads, as well as "Create" and "Edit" on the [Account](#), [Contact](#), and [Opportunity](#) objects.

This call provides an easy way to convert the information in a qualified lead to a new or updated account, contact, and opportunity. Your organization can set its own guidelines for determining when a lead is qualified. Typically, a lead can be converted when it becomes a real opportunity that you want to forecast.

If data is merged into existing account, contact, and opportunity objects, then only empty fields in the target object are overwritten—existing data (including IDs) aren't overwritten. The only exception is if your client application sets `overwriteLeadSource` to `true`. In this case, the `LeadSource` field in the target [Contact](#) object will be overwritten with the contents of the `LeadSource` field in the source [Lead](#) object.

When converting leads, consider the following rules and guidelines:

Field Mappings

The system automatically maps standard lead fields to standard account, contact, and opportunity fields. For custom lead fields, your Salesforce administrator can specify how they map to custom account, contact, and opportunity fields.

Record Types

If the organization uses record types, the default record type of the new owner is assigned to records created during lead conversion. For more information about record types, see [Salesforce Help](#).

Picklist Values

The system assigns the default picklist values for the account, contact, and opportunity when mapping any standard lead picklist fields that are blank. If your organization uses record types, blank values are replaced with the default picklist values of the new record owner.

String Values

Starting with API version 15.0, if you specify a value for a field that contains a string, and the value is too big for the field, the call fails and an error is returned. In previous versions of the API the value was truncated and the call succeeded. If you wish to keep the old behavior with versions 15.0 and later, use the [AllowFieldTruncationHeader](#) SOAP header.

Errors

If any of the leads fail to convert as part of a bulk operation, the lead conversion is retried for each lead individually.

Automatic Subscriptions for Chatter Feeds

When you convert a lead into a new account, contact, and opportunity, the lead owner is unsubscribed from the lead record's Chatter feed. The lead owner, the owner of the generated records, and users that were subscribed to the lead aren't automatically subscribed to the generated records, unless they have automatic subscriptions enabled in their Chatter feed settings. They must have automatic subscriptions enabled to see changes to the account, contact, and opportunity records in their news feed.

A user can subscribe to a record or to another user. Changes to the record and updates from the users are displayed in the Chatter feed on the user's home page, which is a useful way to stay up-to-date with other users and with changes made to records in Salesforce. Feeds are available in API version 18.0 and later.

Basic Steps for Converting Leads

Converting leads involves the following basic steps:

1. The client application determines the IDs of any lead(s) to be converted.
2. Optionally, the client application determines the IDs of any account(s) to merge the lead into. The client application can use SOSL or SOQL to search for accounts that match the lead name, as in the following example:

```
select id, name from account where name='CompanyNameOfLeadBeingMerged'
```

3. Optionally, the client application determines the IDs of contact(s) to merge the lead into. The client application can use SOSL or SOQL to search for contacts that match the lead contact name, as in the following example:

```
select id, name from contact where firstName='FirstName' and lastName='LastName' and
accountId = '001...'
```

4. Optionally, the client application determines whether opportunities should be created from the lead, or the ID of an opportunity to merge the lead into. The client application can use SOSL or SOQL to search for contacts that match the lead contact name, as in the following example:

```
select id, name from opportunity where name='OpportunityNameOfOpportunityBeingMerged'
```

5. The client application queries the LeadStatus table to obtain the possible converted status options (

```
SELECT Id, MasterLabel FROM LeadStatus WHERE IsConverted=true
```

), and then selects a value for the Converted Status.

6. The client application calls `convertLead()`.
7. The client application iterates through the returned result and examines each `LeadConvertResult` object to determine whether conversion succeeded for each lead.
8. As an optional best practice, the client application creates tasks in which the `WhoId` is the `ContactId` and, if an opportunity is created, the `WhatId` is the `OpportunityId`.
9. Optionally, when converting leads owned by a queue, the owner must be specified. This is because accounts and contacts cannot be owned by a queue. Even if you are specifying an existing account or contact, you must still specify an owner.

Sample Code—Java

This sample shows how to convert leads. It creates two leads and converts them. Next, it iterates through the lead conversion results and writes the IDs of the account, contact, and opportunity created for each lead.

```
public String[] convertLeadRecords() {
    String[] result = new String[4];
    try {

        // Create two leads to convert
        Lead[] leads = new Lead[2];
        Lead lead = new Lead();
        lead.setLastName("Mallard");
        lead.setFirstName("Jay");
        lead.setCompany("Wingo Ducks");
        lead.setPhone("(707) 555-0328");
        leads[0] = lead;
```

```

lead = new Lead();
lead.setLastName("Platypus");
lead.setFirstName("Ogden");
lead.setCompany("Denio Water Co.");
lead.setPhone("(775) 555-1245");
leads[1] = lead;
SaveResult[] saveResults = connection.create(leads);

// Create a LeadConvert array to be used
// in the convertLead() call
LeadConvert[] leadsToConvert = new LeadConvert[saveResults.length];

for (int i = 0; i < saveResults.length; ++i) {
    if (saveResults[i].isSuccess()) {
        System.out
            .println("Created new Lead: " + saveResults[i].getId());
        leadsToConvert[i] = new LeadConvert();
        leadsToConvert[i].setConvertedStatus("Closed - Converted");
        leadsToConvert[i].setLeadId(saveResults[i].getId());
        result[0] = saveResults[i].getId();
    } else {
        System.out.println("\nError creating new Lead: "
            + saveResults[i].getErrors()[0].getMessage());
    }
}
// Convert the leads and iterate through the results
LeadConvertResult[] lcResults = connection.convertLead(leadsToConvert);
for (int j = 0; j < lcResults.length; ++j) {
    if (lcResults[j].isSuccess()) {
        System.out.println("Lead converted successfully!");
        System.out.println("Account ID: " + lcResults[j].getAccountId());
        System.out.println("Contact ID: " + lcResults[j].getContactId());
        System.out.println("Opportunity ID: "
            + lcResults[j].getOpportunityId());
    } else {
        System.out.println("\nError converting new Lead: "
            + lcResults[j].getErrors()[0].getMessage());
    }
}
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
return result;
}

```

Sample Code—C#

This sample shows how to convert leads. It creates two leads and converts them. Next, it iterates through the lead conversion results and writes the IDs of the account, contact, and opportunity created for each lead.

```

public String[] convertLeadRecords()
{
    String[] result = new String[4];

```

```
try
{
    // Create two leads to convert
    Lead[] leads = new Lead[2];
    Lead lead = new Lead();
    lead.LastName = "Mallard";
    lead.FirstName = "Jay";
    lead.Company = "Wingo Ducks";
    lead.Phone = "(707) 555-0328";
    leads[0] = lead;
    lead = new Lead();
    lead.LastName = "Platypus";
    lead.FirstName = "Ogden";
    lead.Company = "Denio Water Co.";
    lead.Phone = "(775) 555-1245";
    leads[1] = lead;
    SaveResult[] saveResults = binding.create(leads);

    // Create a LeadConvert array to be used
    // in the convertLead() call
    LeadConvert[] leadsToConvert =
        new LeadConvert[saveResults.Length]; ;
    for (int i = 0; i < saveResults.Length; ++i)
    {
        if (saveResults[i].success)
        {
            Console.WriteLine("Created new Lead: " +
                saveResults[i].id);
            leadsToConvert[i] = new LeadConvert();
            leadsToConvert[i].convertedStatus = "Closed - Converted";
            leadsToConvert[i].leadId = saveResults[i].id;
            result[0] = saveResults[i].id;
        }
        else
        {
            Console.WriteLine("\nError creating new Lead: " +
                saveResults[i].errors[0].message);
        }
    }
}
// Convert the leads and iterate through the results
LeadConvertResult[] lcResults =
    binding.convertLead(leadsToConvert);
for (int j = 0; j < lcResults.Length; ++j)
{
    if (lcResults[j].success)
    {
        Console.WriteLine("Lead converted successfully!");
        Console.WriteLine("Account ID: " +
            lcResults[j].accountId);
        Console.WriteLine("Contact ID: " +
            lcResults[j].contactId);
        Console.WriteLine("Opportunity ID: " +
            lcResults[j].opportunityId);
    }
}
```

```

        else
        {
            Console.WriteLine("\nError converting new Lead: " +
                lcResults[j].errors[0].message);
        }
    }
}
catch (SoapException e)
{
    Console.WriteLine("An unexpected error has occurred: " +
        e.Message + "\n" + e.StackTrace);
}
return result;
}

```

LeadConvert Arguments

This call accepts an array of LeadConvert objects (100 maximum). A LeadConvert object contains the following properties.

Name	Type	Description
accountId	ID	ID of the Account into which the lead will be merged. Required only when updating an existing account, including person accounts. If no <code>accountId</code> is specified, then the API creates a new account. To create a new account, the client application must be logged in with sufficient access rights. To merge a lead into an existing account, the client application must be logged in with read/write access to the specified account. The account name and other existing data are not overwritten. For information on IDs, see ID Field Type .
contactId	ID	ID of the Contact into which the lead will be merged (this contact must be associated with the specified <code>accountId</code> , and an <code>accountId</code> must be specified). Required only when updating an existing contact.  Important: If you're converting a lead into a person account , do not specify the <code>contactId</code> or an error will result. Specify only the <code>accountId</code> of the person account. If no <code>contactId</code> is specified, then the API creates a contact that is implicitly associated with the Account . To create a new contact, the client application must be logged in with sufficient access rights. To merge a lead into an existing contact, the client application must be logged in with read/write access to the specified contact. The contact name and other existing data aren't overwritten (unless <code>overwriteLeadSource</code> is set to <code>true</code> , in which case only the <code>LeadSource</code> field is overwritten).
convertedStatus	string	Valid LeadStatus value for a converted lead. Required. To obtain the list of possible values, the client application queries the LeadStatus object. For example: <pre>SELECT Id, MasterLabel FROM LeadStatus WHERE IsConverted=true</pre>

Name	Type	Description
doNotCreateOpportunity	boolean	Specifies whether to create an Opportunity during lead conversion (<code>false</code> , the default) or not (<code>true</code>). Set this flag to <code>true</code> only if you don't want to create an opportunity from the lead. An opportunity is created by default.
leadId	ID	ID of the Lead to convert. Required. For information on IDs, see ID Field Type .
opportunityId	ID	The ID of an existing opportunity to relate to the lead. The <code>opportunityId</code> and <code>opportunityName</code> arguments are mutually exclusive. Specifying a value for both results in an error. If <code>doNotCreateOpportunity</code> argument is <code>true</code> , then no Opportunity is created and this field must be left blank; otherwise, an error is returned.
opportunityName	string	Name of the opportunity to create. If no name is specified, then this value defaults to the company name of the lead. The maximum length of this field is 80 characters. The <code>opportunityId</code> and <code>opportunityName</code> arguments are mutually exclusive. Specifying a value for both results in an error. If <code>doNotCreateOpportunity</code> argument is <code>true</code> , then no Opportunity is created and this field must be left blank; otherwise, an error is returned.
overwriteLeadSource	boolean	Specifies whether to overwrite the <code>LeadSource</code> field on the target Contact object with the contents of the <code>LeadSource</code> field in the source Lead object (<code>true</code>), or not (<code>false</code> , the default). To set this field to <code>true</code> , the client application must specify a <code>contactId</code> for the target contact.
ownerId	ID	Specifies the ID of the person to own any newly created account, contact, and opportunity. If the client application doesn't specify this value, then the owner of the new object will be the owner of the lead. Not applicable when merging with existing objects—if an <code>ownerId</code> is specified, the API doesn't overwrite the <code>ownerId</code> field in an existing account or contact. For information on IDs, see ID Field Type .
relatedPersonAccountId	ID	When converting a lead to a business account and a person account instead of a contact, specifies the ID of the <i>existing</i> person account to convert the lead to.
relatedPersonAccountRecord	Entity	When converting a lead to a business account and a person account instead of a contact, specifies the entity record of the <i>new</i> person account to convert the lead to.
sendNotificationEmail	boolean	Specifies whether to send a notification email to the owner specified in the <code>ownerId</code> (<code>true</code>) or not (<code>false</code> , the default).

[API Call Basics](#)

LeadConvertResult

This call returns an array of `LeadConvertResult` objects. Each element in the `LeadConvertResult` array corresponds to the `LeadConvert[]` array passed as the `leadConverts` parameter in the `convertLead()` call. For example, the object returned in the first index in the `LeadConvertResult` array matches the object specified in the first index of the `LeadConvert[]` array. A `LeadConvertResult` object has the following properties:

Name	Type	Description
<code>accountId</code>	ID	ID of the new Account (if a new account was specified) or the ID of the account specified when <code>convertLead()</code> was invoked.
<code>contactId</code>	ID	ID of the new Contact (if a new contact was specified) or the ID of the contact specified when <code>convertLead()</code> was invoked. For information on IDs, see ID Field Type .
<code>leadId</code>	ID	ID of the converted Lead . For information on IDs, see ID Field Type .
<code>opportunityId</code>	ID	ID of the new or existing Opportunity , if one was created or related to the lead when <code>convertLead()</code> was invoked. For information on IDs, see ID Field Type .
<code>relatedPersonAccountId</code>	ID	ID of the new or existing related Person Account , if one was created or related to the lead when <code>convertLead()</code> was invoked. For information on IDs, see ID Field Type .
<code>success</code>	boolean	Indicates whether the <code>convertLead()</code> call succeeded (<code>true</code>) or not (<code>false</code>) for this object.
<code>errors</code>	Error[]	If an error occurred during the <code>create()</code> call, an array of one or more Error objects providing the error code and description.

create()

[other]: Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Adds one or more new records to your organization's data.

Syntax

```
SaveResult[] = connection.create(sObject[] sObjects);
```

Usage

Use `create()` to add one or more records, such as an [Account](#) or [Contact](#) record, to your organization's information. The `create()` call is analogous to the INSERT statement in SQL.

When creating objects, consider the following rules and guidelines.

Permissions

Your client application must be logged in with sufficient access rights to create records within the specified object. For more information, see [Factors that Affect Data Access](#).

Special Handling

Certain objects—and certain fields within those objects—require special handling or permissions. For example, you might also need permissions to access the object's parent object. Before you attempt to `create()` a record for a particular object, be sure to read its description in the [Standard Objects](#).

Createable Fields

Only objects where `createable` is `true` can be created via the `create()` call. To determine whether a given object can be created, your client application can invoke the `describeSObjects()` [describeSObjects\(\)](#) call on the object and inspect its `createable` property.

Automatically Maintained Fields

The API generates unique values for ID fields automatically. For `create()`, you cannot explicitly specify an ID value in the `sObject`. The `saveResult[]` object contains the ID of each record that was successfully created. For information on IDs, see [ID Field Type](#).

The API populates certain fields automatically, such as `CreatedDate`, `CreatedById`, `LastModifiedDate`, `LastModifiedById`, and `SystemModstamp`. You cannot explicitly specify these values.

Required Fields

For required fields that do not have a preconfigured default value, you must supply a value. For more information, see [Required Fields](#).

Default Values

For some objects, some fields have a default value, such as `OwnerId`. If you do not specify a value for such fields, the API populates the fields with the default value. For example, if you do not override `OwnerId`, then the API populates this field with the user ID associated with the user as whom your client application is logged in.

- For required fields that do not have a preconfigured default value, you must supply a value.
- For all other fields in the object, if you do not explicitly specify a value, then its value is `null` (`VT_EMPTY`).

Referential Integrity

Your client application must conform to the rules of referential integrity. For example, if you are creating a record for an object that is the child of a parent object, you must supply the foreign key information that links the child to the parent. For example, when creating a [CaseComment](#), you must supply the valid case ID for the parent [Case](#), and that parent Case must exist in the database.

Valid Data Values

You must supply values that are valid for the field's data type, such as integers (not alphabetic characters) for integer fields. In your client application, follow the data formatting rules specified for your programming language and development tool (your development tool will handle the appropriate mapping of data types in SOAP messages).

String Values

When storing values in string fields, the API trims any leading and trailing whitespace. For example, if the value of a name field is entered as " ABC Company ", then the value is stored in the database as "ABC Company".

Starting with API version 15.0, if you specify a value for a field that contains a string, and the value is too big for the field, the call fails and an error is returned. In previous versions of the API the value was truncated and the call succeeded. If you wish to keep the old behavior with versions 15.0 and later, use the [AllowFieldTruncationHeader](#) SOAP header.

Assignment Rules

When creating new [Account](#) (accounts fire Territory Management assignment rules), [Case](#), or [Lead](#) records, your client application can set options in the [AssignmentRuleHeader](#) to have the case or lead automatically assigned to one or more users based on assignment rules configured in the Salesforce user interface.

Maximum Number of Records Created

Your client application can add up to 200 records in a single `create()` call. If a create request exceeds 200 records, then the entire operation fails.

Rollback on Error

The [AllOrNoneHeader](#) header allows you to roll back all changes unless all records are processed successfully. This header is available in API version 20.0 and later. Allows a call to roll back all changes unless all records are processed successfully.

Automatic Subscriptions for Chatter Feeds

To subscribe to records they create, users must enable the `Automatically follow records that I create` option in their personal settings. If users have automatic subscriptions enabled, they automatically follow the records they create and see changes to those records in their Chatter feed on the Home tab.

A user can subscribe to a record or to another user. Changes to the record and updates from the users are displayed in the Chatter feed on the user's home page, which is a useful way to stay up-to-date with other users and with changes made to records in Salesforce. Feeds are available in API version 18.0 and later. The `EntitySubscription` object represents a subscription of a user following a record or another user.

Disabling Feed Notifications

If you're processing a large number of records and don't want to track the changes in various feeds related to the records, use [DisableFeedTrackingHeader](#). This is especially useful for bulk changes.

Creating Records for Different Object Types

You can create records for multiple object types, including custom objects, in one call with API version 20.0 and later. For example, you could create a contact and an account in one call. You can create records for up to 10 object types in one call.

Records are saved in the same order that they are entered in the `sObjects` input array. If you are entering new records that have a parent-child relationship, the parent record must precede the child record in the `sObjects` array. For example, if you are creating a contact that references an account that is also being created in the same call, the account must have a smaller index in the `sObjects` array than the contact does. The contact references the account by using an `External ID` field.

You can't add a record that references another record of the same object type in the same call. For example, the Contact object has a `Reports To` field that is a reference to another contact. You can't create two contacts in one call if one contact uses the `Reports To` field to reference a second contact in the `sObjects` array. You can create a contact that references another contact that has been previously created.

Records for different object types are broken into multiple chunks by Salesforce. A chunk is a subset of the `sObjects` input array and each chunk contains records of one object type. Data is committed on a chunk-by-chunk basis. Any Apex triggers related to the records in a chunk are invoked once per chunk. Consider an `sObjects` input array containing the following set of records:

```
account1, account2, contact1, contact2, contact3, case1, account3, account4, contact4
```

Salesforce splits the records into five chunks:

1. `account1, account2`
2. `contact1, contact2, contact3`
3. `case1`
4. `account3, account4`
5. `contact4`

Each call can process up to 10 chunks. If the `sObjects` array contains more than 10 chunks, you must process the records in more than one call.

 **Warning:** You can't create records for multiple object types in one call if one of those types is related to a feature in the Setup area in Salesforce. The only exceptions are the following objects:

- Custom settings objects, which are similar to custom objects. For more information, see “Create Custom Settings” in the Salesforce online help.
- GroupMember
- Group
- User if the `UserRoleId` field is not being set.

create () and Foreign Keys

You can use external ID fields as a foreign key, which allows you to create a record and relate it to another existing record in a single step instead of querying the parent record ID first. To do this, set the foreign key field to an instance of the parent `sObject` that only has the external ID field specified. This external ID should match the external ID value on the parent record.

The following Java and C# examples show you how to create an opportunity and relate it to an existing account using a custom external ID field named `MyExtId__c`. Each example creates an opportunity, sets the required fields, and then sets the opportunity external ID field to the account object that has only the external ID field specified. The code then creates the opportunity. Once the opportunity is created, the account will be its parent.

Java Example

```
public void createForeignKeySample() {
    try {
        Opportunity newOpportunity = new Opportunity();
        newOpportunity.setName("OpportunityWithFK");
        newOpportunity.setStageName("Prospecting");
        Calendar dt = connection.getServerTimestamp().getTimestamp();
        dt.add(Calendar.DAY_OF_MONTH, 7);
        newOpportunity.setCloseDate(dt);

        Account parentAccountRef = new Account();
        parentAccountRef.setMyExtId__c("SAP1111111");
        newOpportunity.setAccount(parentAccountRef);

        SaveResult[] results = connection
            .create(new SObject[] { newOpportunity });
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

C# Example

```
public void createForeignKeySample()
{
    try
    {
        Opportunity newOpportunity = new Opportunity();
        newOpportunity.Name = "OpportunityWithFK";
        newOpportunity.StageName = "Prospecting";
        DateTime dt = (DateTime)binding.getServerTimestamp().timestamp;
        newOpportunity.CloseDate = dt.AddDays(7);
        newOpportunity.CloseDateSpecified = true;

        // Create the parent reference.
        // Used only for foreign key reference
        // and doesn't contain any other fields
        Account accountReference = new Account();
        accountReference.MyExtId__c = "SAP1111111";
        newOpportunity.Account = accountReference;

        // Create the account and the opportunity
        SaveResult[] results = binding.create(new sObject[] {
            newOpportunity });
    }
    catch (SoapException e)
    {
        Console.WriteLine("An unexpected error has occurred: " +
            e.Message + "\n" + e.StackTrace);
    }
}
```

```

    }
}

```

Creating Parent and Child Records in a Single Call Using Foreign Keys

You can use external ID fields as foreign keys to create parent and child records of different sObject types in a single call instead of creating the parent record first, querying its ID, and then creating the child record. To do this:

- Create the child sObject and populate its required fields, and optionally other fields.
- Create the parent reference sObject used only for setting the parent foreign key reference on the child sObject. This sObject has only the external ID field defined and no other fields set.
- Set the foreign key field of the child sObject to the parent reference sObject you just created.
- Create another parent sObject to be passed to the `create()` call. This sObject must have the required fields (and optionally other fields) set in addition to the external ID field.
- Call `create()` by passing it an array of sObjects to create. The parent sObject must precede the child sObject in the array, that is, the array index of the parent must be lower than the child's index.

The parent and child records are records related through a predefined relationship, such as a master-detail or lookup relationship. You can create related records that are up to 10 levels deep. Also, the related records created in a single call must have different sObject types. For more information, see [Creating Records for Different Object Types](#).

The following Java and C# examples show you how to create an opportunity with a parent account in the same `create()` call. Each example creates an Opportunity sObject and populates some of its fields, then creates two Account objects. The first account is only for the foreign key relationship, and the second is for the account creation and has the account fields set. Both accounts have the external ID field, `MyExtID__c`, set. Next, the sample calls `create()` by passing it an array of sObjects. The first element in the array is the parent sObject and the second is the opportunity sObject. The `create()` call creates the opportunity with its parent account in a single call. Finally, the sample checks the results of the call and writes the IDs of the created records to the console, or the first error if record creation fails.

Java Example

```

public void createForeignKeySample() {
    try {
        Opportunity newOpportunity = new Opportunity();
        newOpportunity.setName("OpportunityWithAccountInsert");
        newOpportunity.setStageName("Prospecting");
        Calendar dt = connection.getServerTimestamp().getTimestamp();
        dt.add(Calendar.DAY_OF_MONTH, 7);
        newOpportunity.setCloseDate(dt);

        // Create the parent reference.
        // Used only for foreign key reference
        // and doesn't contain any other fields.
        Account accountReference = new Account();
        accountReference.setMyExtID__c("SAP111111");
        newOpportunity.setAccount(accountReference);

        // Create the Account object to insert.
        // Same as above but has Name field.
        // Used for the create call.
        Account parentAccount = new Account();
        parentAccount.setName("Hallie");
        parentAccount.setMyExtID__c("SAP111111");
    }
}

```

```

// Create the account and the opportunity.
SaveResult[] results = connection.create(new SObject[] {
    parentAccount, newOpportunity });

// Check results.
for (int i = 0; i < results.length; i++) {
    if (results[i].isSuccess()) {
        System.out.println("Successfully created ID: "
            + results[i].getId());
    } else {
        System.out.println("Error: could not create subject "
            + "for array element " + i + ".");
        System.out.println("    The error reported was: "
            + results[i].getErrors()[0].getMessage() + "\n");
    }
}
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
}

```

C# Example

```

public void createForeignKeySample()
{
    try
    {
        Opportunity newOpportunity = new Opportunity();
        newOpportunity.Name = "OpportunityWithAccountInsert";
        newOpportunity.StageName = "Prospecting";
        DateTime dt = (DateTime)binding.getServerTimestamp().timestamp;
        newOpportunity.CloseDate = dt.AddDays(7);
        newOpportunity.CloseDateSpecified = true;

        // Create the parent reference.
        // Used only for foreign key reference
        // and doesn't contain any other fields.
        Account accountReference = new Account();
        accountReference.MyExtID__c = "SAP111111";
        newOpportunity.Account = accountReference;

        // Create the Account object to insert.
        // Same as above but has Name field.
        // Used for the create call.
        Account parentAccount = new Account();
        parentAccount.Name = "Hallie";
        parentAccount.MyExtID__c = "SAP111111";

        // Create the account and the opportunity.
        SaveResult[] results = binding.create(new sObject[] {
            parentAccount, newOpportunity });

        // Check results.
        for (int i = 0; i < results.Length; i++)
    }
}

```

```

    {
        if (results[i].success)
        {
            Console.WriteLine("Successfully created ID: "
                + results[i].id);
        }
        else
        {
            Console.WriteLine("Error: could not create subject "
                + "for array element " + i + ".");
            Console.WriteLine("    The error reported was: "
                + results[i].errors[0].message + "\n");
        }
    }
}
catch (SoapException e)
{
    Console.WriteLine("An unexpected error has occurred: " +
        e.Message + "\n" + e.StackTrace);
}
}

```

Basic Steps for Creating Records

Creating records involves the following basic steps:

1. Create an `sObject` for one or more objects. For each record, populate its fields with the data that you want to add.
2. Construct an `sObject[]` array and populate that array with the objects that you want to create.
3. Call `create()`, passing in the `sObject[]` array.
4. Process the results in the `saveResult[]` object to verify whether the records have been successfully created.

Sample Code—Java

This sample shows how to create records. It creates two `Account` objects and sets their fields. The Name of the second account isn't set so that an error occurs on creation, since Name is a required field. After making the `create()` call by passing the array containing the two accounts, the sample iterates over the results and writes the ID of the new account or an error message if the account creation fails. Finally, the sample returns an array of the new account IDs, which in this case contains only one ID.

```

public String[] createRecords() {
    // Create two accounts
    String[] result = new String[2];
    Account account1 = new Account();
    Account account2 = new Account();

    // Set some fields on the account object
    account1.setName("The Brick Hut");
    account1.setBillingStreet("403 McAdoo St");
    account1.setBillingCity("Truth or Consequences");
    account1.setBillingState("NM");
    account1.setBillingPostalCode("87901");
    account1.setBillingCountry("US");
}

```

```

// Required Name field is not being set on account2,
// so this record should fail during create.
// account2.setName("Camp One Creations");
account2.setBillingStreet("25800 Arnold Dr");
account2.setBillingCity("Sonoma");
account2.setBillingState("CA");
account2.setBillingPostalCode("95476");
account2.setBillingCountry("US");
Account[] accounts = { account1, account2 };

try {
    // Call create() to add the accounts
    SaveResult[] saveResults = connection.create(accounts);
    // Iterate through the results.
    // There should be one successful creation
    // and one failed creation.
    for (int i = 0; i < saveResults.length; i++) {
        if (saveResults[i].isSuccess()) {
            System.out.println("Successfully created Account ID: "
                + saveResults[i].getId());
            result[i] = saveResults[i].getId();
        } else {
            System.out.println("Error: could not create Account "
                + "for array element " + i + ".");
            System.out.println("    The error reported was: "
                + saveResults[i].getErrors()[0].getMessage() + "\n");
            result[i] = saveResults[i].getId();
        }
    }
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
return result;
}

```

Sample Code—C#

This sample shows how to create records. It creates two Account objects and sets their fields. The Name of the second account isn't set so that an error occurs on creation, since Name is a required field. After making the `create()` call by passing the array containing the two accounts, the sample iterates over the results and writes the ID of the new account or an error message if the account creation fails. Finally, the sample returns an array of the new account IDs, which in this case contains only one ID.

```

public String[] createRecords()
{
    // Create two accounts
    String[] result = new String[2];
    Account account1 = new Account();
    Account account2 = new Account();

    // Set some fields on the account object
    account1.Name = "The Brick Hut";
    account1.BillingStreet = "403 McAdoo St";
    account1.BillingCity = "Truth or Consequences";
}

```

```
account1.BillingState = "NM";
account1.BillingPostalCode = "87901";
account1.BillingCountry = "US";
// Required Name field is not being set on account2,
// so this record should fail during create.
// account2.Name = "Camp One Creations";
account2.BillingStreet = "25800 Arnold Dr";
account2.BillingCity = "Sonoma";
account2.BillingState = "CA";
account2.BillingPostalCode = "95476";
account2.BillingCountry = "US";
Account[] accounts = { account1, account2 };

try
{
    // Call create() to add the accounts
    SaveResult[] saveResults = binding.create(accounts);
    // Iterate through the results.
    // There should be one successful creation
    // and one failed creation.
    for (int i = 0; i < saveResults.Length; i++)
    {
        if (saveResults[i].success)
        {
            Console.WriteLine("Successfully created Account ID: " +
                saveResults[i].id);
            result[i] = saveResults[i].id;
        }
        else
        {
            Console.WriteLine("Error: could not create Account " +
                "for array element " + i + ".");
            Console.WriteLine("    The error reported was: " +
                saveResults[i].errors[0].message + "\n");
            result[i] = saveResults[i].id;
        }
    }
}
catch (SoapException e)
{
    Console.WriteLine("An unexpected error has occurred: " +
        e.Message + "\n" + e.StackTrace);
}

return result;
}
```

Arguments

Name	Type	Description
<code>sObjects</code>	<code>sObject[]</code>	Array of one or more <code>sObject</code> objects to <code>create()</code> . Limit: 200 <code>sObject</code> values.

Response

`saveResult[]`

Faults

[InvalidObjectFault](#)

[UnexpectedErrorFault](#)

SEE ALSO:

[upsert\(\)](#)

[API Call Basics](#)

SaveResult

The `create()` call returns an array of `SaveResult` objects. Each element in the `SaveResult` array corresponds to the `sObject[]` array passed as the `sObjects` parameter in the `create()` call. For example, the object returned in the first index in the `SaveResult` array matches the object specified in the first index of the `sObject[]` array. A `SaveResult` object has the following properties:

Name	Type	Description
<code>id</code>	ID	ID of the <code>sObject</code> that you attempted to <code>create()</code> . If this field contains a value, then the object was created successfully. If this field is empty, then the object was not created and the API returned error information instead.
<code>success</code>	boolean	Indicates whether the <code>create()</code> call succeeded (<code>true</code>) or not (<code>false</code>) for this object.
<code>errors</code>	<code>Error[]</code>	If an error occurred during the <code>create()</code> call, an array of one or more <code>Error</code> objects providing the error code and description. If your organization has active duplicate rules and a duplicate is detected, the <code>SaveResult</code> includes an <code>Error</code> with a data type of <code>DuplicateError</code> .

`delete()`

Deletes one or more records from your organization's data.

Syntax

```
DeleteResult[] = connection.delete(ID[] ids);
```

Usage

Use `delete()` to delete one or more existing records, such as individual accounts or contacts, in your organization's data. The `delete()` call is analogous to the `DELETE` statement in SQL.

Rules and Guidelines

When deleting objects, consider the following rules and guidelines:

- Your client application must be logged in with sufficient access rights to delete individual objects within the specified object. For more information, see [Factors that Affect Data Access](#).
- In addition, you might also need permission to access this object's parent object. For special access requirements, see the object's description in [Standard Objects](#).
- To ensure referential integrity, the `delete()` call supports cascading deletions. If you delete a parent object, you delete its children automatically, as long as each child object can be deleted. For example, if you delete a [Case](#), the API automatically deletes any [CaseComment](#), [CaseHistory](#), and [CaseSolution](#) objects associated with that case. However, if a [CaseComment](#) is not deletable or is currently being used, then the `delete()` call on the parent [Case](#) will fail.
- Certain objects cannot be deleted via the API. To delete an object via the `delete()` call, its object must be configured as deletable (`deletable` is `true`). To determine whether a given object can be deleted, your client application can invoke the `describeObjects()` call on the object and inspect its `deletable` property.
- You can't delete records for multiple object types in one call if one of those types is related to a feature in the Setup area in Salesforce. The only exceptions are the following objects:
 - Custom settings objects, which are similar to custom objects. For more information, see “Create Custom Settings” in the Salesforce online help.
 - GroupMember
 - Group
 - User

Rollback on Error

The [AllOrNoneHeader](#) header allows you to roll back all changes unless all records are processed successfully. This header is available in API version 20.0 and later. Allows a call to roll back all changes unless all records are processed successfully.

Basic Steps for Deleting Records

Deleting records involves the following basic steps:

1. Determine the ID of each record that you want to delete. For example, you might call `query()` to retrieve a set of records that you want to delete based on specific criteria.
2. Construct an `ID[]` array and populate it with the IDs of each record that you want to delete. You can specify the IDs of different types of objects in the same call. For example, you could specify the ID for an individual [Account](#) and an individual [Contact](#) in the same array. For information on IDs, see [ID Field Type](#).

3. Call `delete()`, passing in the `ID[]` array.
4. Process the results in the `DeleteResult[]` to verify whether the records have been successfully deleted.

Sample Code—Java

This sample shows how to delete records based on record IDs. The method in this sample accepts an array of IDs, which it passes to the `delete()` call and makes the call. It then parses the results and writes the IDs of the deleted records to the console or the first returned error if the deletion failed.

```
public void deleteRecords(String[] ids) {
    try {
        DeleteResult[] deleteResults = connection.delete(ids);
        for (int i = 0; i < deleteResults.length; i++) {
            DeleteResult deleteResult = deleteResults[i];
            if (deleteResult.isSuccess()) {
                System.out
                    .println("Deleted Record ID: " + deleteResult.getId());
            } else {
                // Handle the errors.
                // We just print the first error out for sample purposes.
                Error[] errors = deleteResult.getErrors();
                if (errors.length > 0) {
                    System.out.println("Error: could not delete " + "Record ID "
                        + deleteResult.getId() + ".");
                    System.out.println("    The error reported was: ("
                        + errors[0].getStatusCode() + ") "
                        + errors[0].getMessage() + "\n");
                }
            }
        }
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

Sample Code—C#

This sample shows how to delete records based on record IDs. The method in this sample accepts an array of IDs, which it passes to the `delete()` call and makes the call. It then parses the results and writes the IDs of the deleted records to the console or the first returned error if the deletion failed.

```
public void deleteRecords(String[] ids)
{
    try
    {
        DeleteResult[] deleteResults = binding.delete(ids);
        for (int i = 0; i < deleteResults.Length; i++)
        {
            DeleteResult deleteResult = deleteResults[i];
            if (deleteResult.success)
            {
                Console.WriteLine("Deleted Record ID: " + deleteResult.id);
            }
        }
    }
}
```

```
    }
    else
    {
        // Handle the errors.
        // We just print the first error out for sample purposes.
        Error[] errors = deleteResult.errors;
        if (errors.Length > 0)
        {
            Console.WriteLine("Error: could not delete " + "Record ID "
                + deleteResult.id + ".");
            Console.WriteLine("    The error reported was: ("
                + errors[0].statusCode + ") "
                + errors[0].message + "\n");
        }
    }
}
}
}
}
catch (SoapException e)
{
    Console.WriteLine("An unexpected error has occurred: " +
        e.Message + "\n" + e.StackTrace);
}
}
```

Arguments

Name	Type	Description
ids	ID[]	Array of one or more IDs associated with the objects to delete. In version 7.0 and later, you can pass a maximum of 200 object IDs to the <code>delete()</code> call. In version 6.0 and earlier, the limit is 2,000.

Response

[DeleteResult\[\]](#)

Faults

[InvalidObjectFault](#)

[UnexpectedErrorFault](#)

SEE ALSO:

[API Call Basics](#)

DeleteResult

The `delete()` call returns an array of `DeleteResult` objects. Each element in the `DeleteResult` array corresponds to the `ID[]` array passed as the `ids` parameter in the `delete()` call. For example, the object returned in the first index in the `DeleteResult` array matches the object specified in the first index of the `ID[]` array.

A `DeleteResult` object has the following properties:

Name	Type	Description
<code>id</code>	ID	ID of an sObject that you attempted to delete. For information on IDs, see ID Field Type .
<code>success</code>	boolean	Indicates whether the <code>delete()</code> call succeeded (<code>true</code>) or not (<code>false</code>) for this object.
<code>errors</code>	Error[]	If an error occurred during the <code>delete()</code> call, an array of one or more Error objects providing the error information.

`deleteByExample()`

Use `deleteByExample()` to delete big object data from your org using an `sObject` as a template for what to delete. All data in a big object matching the values in the `sObject` templates are deleted.

Syntax

```
DeleteByExampleResult[] = connection.deleteByExample(sObject[] sObjects);
```

Rules and Guidelines

When deleting data, consider the following rules and guidelines:

- Your client application must be logged in with sufficient access rights to delete individual objects within the specified object. For more information, see [Factors that Affect Data Access](#).
- You can't delete records for multiple object types in one call if one of those types is related to a feature in the Setup area in Salesforce. The only exceptions are the following objects:
 - Custom settings objects, which are similar to custom objects. For more information, see “Create Custom Settings” in the Salesforce Help.
 - GroupMember
 - Group
 - User

Basic Steps for Deleting Data

Deleting data involves the following basic steps:

1. Define an `sObject` using all the fields that make up the index of the big object.
2. Specify the values for each field.
3. Call `deleteByExample()`, passing in the `sObject` you created.

4. Process the results in the `DeleteByExampleResult []` to verify whether the records have been successfully deleted.

 **Note:** Repeating a successful `deleteByExample()` operation results in success, even if the data has already been deleted.

Sample Code—Custom Big Objects

This sample shows how to delete records in a custom big object. In this example, `Account__c`, `Game_Platform__c`, and `Play_Date__c` are part of the custom big object's index. All rows where `Account__c` is "001d000000Ky3xIAB", `Game_Platform__c` is "iOS", and `Play_Date__c` is "2017-11-28T19:13:36.000z" are deleted.

```
public static void main(String[] args) {
    try{
        //Declare an sObject that has the values to delete
        sObject[] sObjectsToDelete = new sObject[1];
        sObject[] customerBO = new sObject();
        customerBO.setType("Customer_Interaction__b");
        customerBO.setField("Account__c", "001d000000Ky3xIAB");
        customerBO.setField("Game_Platform__c", "iOS");
        customerBO.setField("Play_Date__c", "2017-11-28T19:13:36.000z");
        sObjectsToDelete[0] = customerBO;

        DeleteByExampleResult[] result = connection.deleteByExample(sObjectsToDelete);
    }
}
```

Sample Code—Field Audit Trail

This sample shows how to delete records in `FieldHistoryArchive`. All rows with the specified criteria are deleted.

```
public static void main(String[] args) {
    try{
        //Declare an sObject that has the values to delete
        sObject[] sObjectsToDelete = new sObject[2];
        sObject[] fieldHistoryArchive_1 = new sObject();
        fieldHistoryArchive_1.setType("FieldHistoryArchive");
        fieldHistoryArchive_1.setField("FieldHistoryType", "Account");
        fieldHistoryArchive_1.setField("ParentId", "001d000000Ky3xIAB");
        fieldHistoryArchive_1.setField("CreatedDate", "2017-11-28T19:13:36.000z");
        fieldHistoryArchive_1.setField("HistoryId", "017D000000ESURXIA5");
        sObjectsToDelete[0] = fieldHistoryArchive_1;

        sObject[] fieldHistoryArchive_2 = new sObject();
        fieldHistoryArchive_2.setType("FieldHistoryArchive");
        fieldHistoryArchive_2.setField("FieldHistoryType", "Account");
        fieldHistoryArchive_2.setField("ParentId", "001d000000Ky3xIAB");
        fieldHistoryArchive_2.setField("CreatedDate", "2017-11-29T19:13:36.000z");
        fieldHistoryArchive_2.setField("HistoryId", "017D000000ESURMIA5");
        sObjectsToDelete[1] = fieldHistoryArchive_2;

        DeleteByExampleResult[] result = connection.deleteByExample(sObjectsToDelete);
    }
}
```

Arguments

Name	Type	Description
sObject	sObject[]	Array of one or more sObjects to use as templates for deletion.

Response

[DeleteByExampleResult](#)[]

Faults

[InvalidSObjectFault](#)

[UnexpectedErrorFault](#)

DeleteByExampleResult

The `deleteByExample()` call returns an array of `DeleteByExampleResult` objects. Each element in the `DeleteByExampleResult` array corresponds to the `sObject[]` array passed in the `deleteByExample()` call. For example, the object returned in the first index in the `DeleteByExampleResult` array matches the `sObject` specified in the first index of the `sObject[]` array.

A `DeleteByExampleResult` object has the following properties:

Name	Type	Description
entity	sObject	Details for the <code>sObject</code> that you attempted to delete.
rowCount	long	Indicates the number of rows that were deleted.
success	boolean	Indicates whether the <code>deleteByExample()</code> call succeeded (<code>true</code>) or not (<code>false</code>) for this object.
errors	Error[]	If an error occurred during the <code>deleteByExample()</code> call, an array of one or more Error objects providing the error information.

emptyRecycleBin()

Delete records from the recycle bin immediately.

Syntax

```
EmptyRecycleBinResult[] = connection.emptyRecycleBin(ID[] ids);
```

Usage

The Recycle Bin lets you view and restore recently deleted records for 15 days before they are permanently deleted. Your org can have up to 5,000 records per license in the Recycle Bin at any one time. For example, if your org has five user licenses, 25,000 records can be stored in the Recycle Bin. If your org reaches its Recycle Bin limit, Salesforce automatically removes the oldest records, as long as they have been in the recycle bin for at least two hours.

If you know you will be adding a great number of records to the Recycle Bin and you know you won't need to `undelete()` them, you may wish to remove them before the Salesforce process deletes records. For example, you can use this call if you are loading a large number of records for testing, or if you are doing a large number of `create()` calls followed by `delete()` calls.

Rules and Guidelines

When emptying recycle bins, consider the following rules and guidelines:

- The logged in user can delete any record that he or she can query in their Recycle Bin, or the recycle bins of any subordinates. If the logged in user has Modify All Data permission, he or she can query and delete records from any Recycle Bin in the organization.
- Available in version 10.0 and later.
- Maximum number of records is 200.
- Do not include the IDs of any records that will be cascade deleted, or an error will occur.
- Once records are deleted using this call, they cannot be `undelete()`.
- After records are deleted from the Recycle Bin using this call, they can be queried using `queryAll()` for some time. Typically this time is 24 hours, but may be shorter or longer.

Sample Code—Java

This sample shows how to empty the Recycle Bin. It accepts an array containing the IDs of the records to remove from the Recycle Bin. It calls `emptyRecycleBin()` and passes it the array of IDs. Next, it iterates over the results and writes the IDs of the removed records or the first error of the failed records to the console.

```
public void emptyRecycleBin(String[] ids) {
    try {
        EmptyRecycleBinResult[] emptyRecycleBinResults = connection
            .emptyRecycleBin(ids);
        for (int i = 0; i < emptyRecycleBinResults.length; i++) {
            EmptyRecycleBinResult emptyRecycleBinResult = emptyRecycleBinResults[i];
            if (emptyRecycleBinResult.isSuccess()) {
                System.out.println("Recycled ID: "
                    + emptyRecycleBinResult.getId());
            } else {
                Error[] errors = emptyRecycleBinResult.getErrors();
                if (errors.length > 0) {
                    System.out
                        .println("Error code: " + errors[0].getStatusCode());
                    System.out
                        .println("Error message: " + errors[0].getMessage());
                }
            }
        }
    }
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
```

```

    }
}

```

Sample Code—C#

This sample shows how to empty the Recycle Bin. It accepts an array containing the IDs of the records to remove from the Recycle Bin. It calls `emptyRecycleBin()` and passes it the array of IDs. Next, it iterates over the results and writes the IDs of the removed records or the first error of the failed records to the console.

```

public void emptyRecycleBin(String[] ids)
{
    try
    {
        EmptyRecycleBinResult[] emptyRecycleBinResults =
            binding.emptyRecycleBin(ids);
        for (int i = 0; i < emptyRecycleBinResults.Length; i++)
        {
            EmptyRecycleBinResult emptyRecycleBinResult = emptyRecycleBinResults[i];
            if (emptyRecycleBinResult.success)
            {
                Console.WriteLine("Recycled ID: "
                    + emptyRecycleBinResult.id);
            }
            else
            {
                Error[] errors = emptyRecycleBinResult.errors;
                if (errors.Length > 0)
                {
                    Console.WriteLine("Error code: " + errors[0].statusCode);
                    Console.WriteLine("Error message: " + errors[0].message);
                }
            }
        }
    }
    catch (SoapException e)
    {
        Console.WriteLine("An unexpected error has occurred: " +
            e.Message + "\n" + e.StackTrace);
    }
}

```

Arguments

Name	Type	Description
ids	ID[]	Array of one or more IDs associated with the records to delete from the Recycle Bin. Maximum number of records is 200.

Response

[EmptyRecycleBinResult](#)

Faults

[InvalidSObjectFault](#)

[UnexpectedErrorFault](#)

SEE ALSO:

[delete\(\)](#)

[undelete\(\)](#)

EmptyRecycleBinResult

The `emptyRecycleBin()` call returns an array of `EmptyRecycleBinResult` objects. Each element in the array corresponds to an element in the `ID[]` array passed as the parameter in the `emptyRecycleBin()` call. For example, the object returned in the first index in the `EmptyRecycleBinResult` array matches the object specified in the first index of the `ID[]` array.

A `EmptyRecycleBinResult` object has the following properties:

Name	Type	Description
<code>id</code>	ID	ID of an sObject that you attempted to delete from the Recycle Bin. For information about IDs, see ID Field Type .
<code>isSuccess</code>	boolean	Indicates whether the call succeeded (<code>true</code>) or not (<code>false</code>) for this record.
<code>errors</code>	Error[]	If an error occurred during the call, an array of one or more Error objects providing the error information.

`executeListView()`

Executes a list view's SOQL query to retrieve data, labels, and actions from a list view.

Syntax

```
ExecuteListViewResult result = connection.executeListView(ExecuteListViewRequest request);
```

Usage

The `executeListView()` call takes an [ExecuteListViewRequest](#) object, executes the SOQL query for the list view, and returns the resulting data and presentation information in an [ExecuteListViewResult](#) object. This call is available in API version 32.0 and later.

Sample Code—Java

```
private void example(ApiProtocol protocol, AppVersion version) throws Exception {
    // Get the list results via the list view API
    EnterpriseConnection connection =
makeClient(getUserUtil().getUserWithModifyAllData(), AppVersion.VERSION_190,
            getName());
    ExecuteListViewRequest request = new ExecuteListViewRequest();
    request.setObjectType("Account");
    request.setDeveloperNameOrId(listViews[0].getId());
    request.setLimit(50000);

    com.sforce.soap.enterprise.ExecuteListViewResult result =
connection.executeListView(request);
}
```

Arguments

Name	Type	Description
request	ExecuteListViewRequest	An object that specifies the list view and the limit, offset, and ordering of the results.

Response

An [ExecuteListViewResult](#) object.

ExecuteListViewRequest

Use the `ExecuteListViewRequest` object with `executeListView()` to retrieve data, labels, and actions from a list view.

The `ExecuteListViewRequest` object has the following properties:

Name	Type	Description
developerNameOrId	string	The list view's ID or fully qualified developer name.
limit	int	The maximum number of records to return. Default: 25
offset	int	The number of records to skip. Default: 0
orderBy	ListViewOrderBy[]	The order in which to return the records.
subjectType	string	The API name of the sObject for the list view.

ExecuteListViewResult

Contains list view data that you retrieve programmatically.

To retrieve an `executeListViewResult` object, use the `executeListView()` call. The `executeListViewResult` object has the following properties:

Name	Type	Description
<code>columns</code>	<code>ListViewColumn[]</code>	An array of the columns in the list view.
<code>developerName</code>	<code>string</code>	The list view's fully qualified developer name.
<code>done</code>	<code>boolean</code>	If <code>true</code> , indicates that all records have been returned.
<code>id</code>	<code>ID</code>	The list view's ID.
<code>label</code>	<code>string</code>	The display label of the list view.
<code>records</code>	<code>ListViewRecord[]</code>	An array of records that match the list view query.
<code>size</code>	<code>int</code>	The number of records that are returned by the list view query.

ListViewColumn

Contains metadata about a single list view column.

The `ListViewColumn` object is returned by the `describeSoqlListViews()` and `executeListView()` calls. It has the following properties:

Name	Type	Description
<code>ascendingLabel</code>	<code>string</code>	The localized type-specific label for sorting the column in ascending order. For example: "A-Z" for a text field, or "Low to High" for a numeric field. Set to null if the column isn't sortable.
<code>descendingLabel</code>	<code>string</code>	The localized type-specific label for sorting the column in ascending order. For example: "Z-A" for a text field, or "High to Low" for a numeric field. Set to null if the column is not sortable.
<code>fieldNameOrPath</code>	<code>string</code>	The field name or SOQL field path for the column.
<code>hidden</code>	<code>boolean</code>	If true, specifies that the column is not displayed, and is present only to support the display of other columns or other client-side logic.
<code>label</code>	<code>string</code>	The localized display label for the column.
<code>searchable</code>	<code>boolean</code>	Whether the column is searchable.
<code>selectListItem</code>	<code>string</code>	The SOQL SELECT item for the column. The item might differ from the field name or path, due to display formatting (for example, <code>toLabel</code> for picklists).
<code>sortDirection</code>	<code>orderByDirection</code>	An enumerated value, one of the following if the column is sortable: <ul style="list-style-type: none"> • <code>ascending</code> • <code>descending</code> Set to null if the column is not sortable.
<code>sortIndex</code>	<code>int</code>	The zero-based index that indicates the column's position within a multilevel sort, or null if the records are not sorted by the column.

Name	Type	Description
sortable	boolean	Whether the column is sortable, in which case it might be referenced in the <code>ExecuteListView orderBy</code> parameter.
type	FieldType	The column data type.

ListViewRecord

Represents a single row in a list view.

The `ListViewRecord` object is a member of the `ExecuteListViewResult` object and has the following properties:

Name	Type	Description
columns	<code>ListViewRecordColumn[]</code>	The columns and their values for the record. The record data columns are returned in the same order as metadata and describe columns. For any data column that's obtained by using <code>ExecuteListViewResult.getRecords()[0].getColumns[index]</code> , the corresponding describe column can be obtained with <code>ExecuteListViewResult.getColumns[index]</code> .

ListViewRecordColumn

Represents a single cell in a row from a list view.

The `ListViewRecordColumn` object is one cell (column) of a row (`ListViewRecord`) and has the following properties:

Name	Type	Description
fieldNameOrPath	string	The field name or SOQL field path for the column.
value	string	The contents of the record for a certain column, localized if appropriate, or null if there's no value.

findDuplicates()

Performs rule-based searches for duplicate records. The input is an array of `sObject`, each of which specifies the values to search for and the type of object that supplies the duplicate rules. The output identifies the detected duplicates for each object that supplies the duplicate rules. `findDuplicates()` applies the rules to the values to do the search. The output identifies the detected duplicates for each `sObject`.

Syntax

```
FindDuplicatesResult[] duplicateResults =
    connection.findDuplicates(sObject[] inputSObjectArray);
```

Usage

Use `findDuplicates()` to apply duplicate rules associated with an object to values specified by each `sObject`. Each `sObject` also has a type that corresponds to an object.

`findDuplicates()` uses the duplicate rules for the object that has the same type as the `sObject`. For example, if the `sObject` type is `Account`, `findDuplicates()` uses the duplicate rules associated with the `Account` object.

Note:

- All the `sObject` elements in the input array must have the same type, and that type must correspond to an object type that supports duplicate rules.
- The input array is limited to 50 elements. If you exceed this limit, the SOAP call returns an [API Fault Element](#) containing the following fields:
 - `ExceptionCode`: `LIMIT_EXCEEDED`
 - `exceptionMessage`: `Configuration error: The number of records to check is greater than the permitted batch size.`

For each input `sObject`, `findDuplicates()` adds a `FindDuplicatesResult` object to the output array.

Matching is controlled by the values specified in the `sObject`. The values can include a record ID, a field map, or both. The specified values determine the behavior of `findDuplicates()`:

Record ID only

`findDuplicates()` searches the object defined by the duplicate rule for an existing record that has the same ID. Then it loads the values from that record, and searches for duplicates based on those values.

Field Map only

`findDuplicates()` loads the values from the map and searches for duplicates based on those values.

Record ID and Field Map

`findDuplicates()` searches the object defined by the duplicate rule for an existing record that has the same ID. It loads any values from that record that aren't specified in the map, and then loads values from the map. Based on the resulting union of values, `findDuplicates()` searches for duplicates.

The output of `findDuplicates()` is an array of `FindDuplicatesResult` objects with the same number of elements as the input array, and in the same order. The output objects encapsulate record IDs for duplicate records, if any. Optionally, the output objects also contain values from the duplicate records.

Each `FindDuplicatesResult` element contains a [DuplicateResult](#) object. If `findDuplicates()` doesn't find any duplicates for an `sObject`, the `duplicateRule` field in `DuplicateResult` contains the name of the duplicate rule that `findDuplicates()` applied, but the `matchResults` array is empty.

If the `includeRecordDetails` flag in [DuplicateRuleHeader](#) is set to `false`, `findDuplicates()` only returns the record IDs of the matching records. Otherwise, `findDuplicates()` returns all the fields specified in the primary `CompactLayout` associated with the target object.

Basic Steps for Using

1. Create one or more `sObject` objects with a type that corresponds to the object that has the duplicate rules you want to use.
2. In each `sObject`, specify record IDs or field maps (or both) to compare to records in the object.
3. Set [DuplicateRuleHeader](#) to control the output you want.

Sample

The following Java sample demonstrates how to search for duplicates of a Lead, using the standard Leads duplicate rule.

```

package wsc;

import com.sforce.soap.partner.*;
import com.sforce.soap.partner.Error;
import com.sforce.soap.partner.sobject.SObject;
import com.sforce.ws.ConnectionException;
import com.sforce.ws.ConnectorConfig;

public class Main {

    private static final String USERNAME = "YOUR-USERNAME";
    private static final String PASSWORD = "YOUR-PASSWORD&SECURITY-TOKEN";
    private static PartnerConnection connection = null;

    public static void main(String[] args) throws ConnectionException {

        // Create the configuration for the partner connection
        ConnectorConfig config = new ConnectorConfig();
        config.setUsername(USERNAME);
        config.setPassword(PASSWORD);

        // Initialize the connection
        connection = new PartnerConnection(config);

        SObject[] inputSObjectArray = new SObject[1];
        // Instantiate an empty Java SObject
        SObject searchCriteria = new SObject();
        // Set its type to Lead. This tells findDuplicates() to use the duplicate rules
        // for Lead
        searchCriteria.setType("Lead");
        /*
         * Set the necessary fields for matching, based on the standard matching rules for
         * Lead (Search
         * help.salesforce.com for "Standard Contact and Lead Matching Rule" to see the rules).
         */
        searchCriteria.setField("FirstName", "Marc");
        searchCriteria.setField("LastName", "Benioff");
        searchCriteria.setField("Company", "Salesforce.com Inc");
        searchCriteria.setField("Title", "CEO");
        searchCriteria.setField("Email", "ceo@salesforce.com");
        // Add the sObject to the input array
        inputSObjectArray[0] = searchCriteria;
        /*
         * By default, findDuplicates() returns only record IDs. To return additional values,
         * set the second parameter
         * to true.
         */
        connection.setDuplicateRuleHeader(
            /*
             * @param allowSave - Not Applicable for this API call

```

Arguments

Name	Type	Description
<code>sObjects</code>	Array of <code>sObject</code>	Required. A list of <code>sObject</code> objects that contain values you want to search for.

Response

An array of `FindDuplicatesResult` objects.

FindDuplicatesResult

Represents the result of a duplicate search for a single `sObject` in the input array. Because the object associated with the `sObject` can have more than one duplicate rule, `FindDuplicatesResult` contains an array of `DuplicateResult` objects.

Fields

Field Name	Field Type	Description
<code>duplicateResults</code>	Array of <code>DuplicateResult</code> objects	The result of each duplicate rule applied by <code>findDuplicates()</code> to a single <code>sObject</code> .
<code>errors</code>	Array of <code>Error</code> objects	Contains an array of errors encountered by <code>findDuplicates()</code> .
<code>success</code>	boolean	This field is set to <code>true</code> if the <code>findDuplicates()</code> doesn't encounter any errors.

Faults

[InvalidSObjectFault](#)

[UnexpectedErrorFault](#)

[InvalidFieldFault](#)

findDuplicatesByIds()

Performs rule-based searches for duplicate records. The input is an array of IDs, each of which specifies the records for which to search for duplicates. The output identifies the detected duplicates for each object that supplies the duplicate rules.

`findDuplicatesByIds()` applies the rules to the record IDs to do the search. The output identifies the detected duplicates for each ID.

Syntax

```
FindDuplicatesResult[] duplicateResults =
    connection.findDuplicatesByIds(Id[] inputIdArray);
```

Usage

Use `findDuplicatesByIds()` to apply duplicate rules associated with an object to records represented by the record IDs.

`findDuplicatesByIds()` uses the duplicate rules for the object that has the same type as the input record IDs. For example, if the record ID represents an Account, `findDuplicatesByIds()` uses the duplicate rules associated with the Account object.

Note:

- All record IDs in the input array must have the same object type, and that type must correspond to an object type that supports duplicate rules.
- The input array is limited to 50 elements. If you exceed this limit, the SOAP call returns an [API Fault Element](#) containing the following fields:
 - `ExceptionCode: LIMIT_EXCEEDED`
 - `exceptionMessage: Configuration error: The number of records to check is greater than the permitted batch size.`

For each input ID, `findDuplicatesByIds()` adds an object to the output array.

Matching is controlled by the values specified by the input record ID. The values can include a record ID only.

`findDuplicatesByIds()` searches the object defined by the duplicate rule for an existing record that has the same ID. Then it loads the values from that record, and searches for duplicates based on those values.

The output of `findDuplicatesByIds()` is an array of objects with the same number of elements as the input array, and in the same order. The output objects encapsulate record IDs for duplicate records. Optionally, the output objects also contain values from the duplicate records.

Each element contains a [DuplicateResult](#) object. If `findDuplicatesByIds()` doesn't find any duplicates for an sObject, the `duplicateRule` field in `DuplicateResult` contains the name of the duplicate rule that `findDuplicatesByIds()` applied, but the `matchResults` array is empty.

If the `includeRecordDetails` flag in [DuplicateRuleHeader](#) is set to `false`, `findDuplicatesByIds()` returns only the record IDs of the matching records. Otherwise, `findDuplicatesByIds()` returns all the fields specified in the primary CompactLayout associated with the target object.

Basic Steps for Using

1. Create one or more ID objects that correspond to the object that has the duplicate rules you want to use.
2. Specify record IDs to compare to records in the object.
3. Set `DuplicateRuleHeader` to control the output you want.

Sample

The following Java sample demonstrates how to search for duplicates of a Lead, using the standard Leads duplicate rule.

```
package wsc;

import com.sforce.soap.partner.*;
import com.sforce.soap.partner.Error;
import com.sforce.soap.partner.sobject.SObject;
import com.sforce.ws.ConnectionException;
import com.sforce.ws.ConnectorConfig;

public class Main {

    private static final String USERNAME = "YOUR-USERNAME";
    private static final String PASSWORD = "YOUR-PASSWORD&SECURITY-TOKEN";
    private static PartnerConnection connection = null;

    public static void main(String[] args) throws ConnectionException {

        // Create the configuration for the partner connection
        ConnectorConfig config = new ConnectorConfig();
        config.setUsername(USERNAME);
        config.setPassword(PASSWORD);

        // Initialize the connection
        connection = new PartnerConnection(config);

        SObject[] objectsToSearch = new SObject[2];
        String[] inputIds = new String[2];
        // Instantiate an empty Java SObject
        SObject searchCriteria = new SObject();
        // Set its type to Lead. This tells findDuplicatesByIds() to use the duplicate rules
        // for Lead
        searchCriteria.setType("Lead");
        /*
         * Set the necessary fields for matching, based on the standard matching rules for
        Lead
         * (Search help.salesforce.com for "Standard Contact and Lead Matching Rule" to see
        the
         * rules).
         */
        searchCriteria.setField("FirstName", "Marc");
        searchCriteria.setField("LastName", "Benioff");
        searchCriteria.setField("Company", "Salesforce.com Inc");
        searchCriteria.setField("Title", "CEO");
        searchCriteria.setField("Email", "ceo@salesforce.com");
        // Add the sObjects to the input array
        objectsToSearch[0] = searchCriteria;
        objectsToSearch[1] = searchCriteria;

        SaveResult[] saveResults = connection.create(objectsToSearch);

        for (int i = 0; i < saveResults.length; ++i) {
            if (saveResults[i].isSuccess()) {
```

```

        System.out.println("Successfully created ID: " + saveResults[i].getId());
        inputIds[i] = saveResults[i].getId();
    } else {
        System.out.println("Error: could not create SObject.");
        System.out.println("The error reported was: " +
            saveResults[i].getErrors()[0].getMessage() + "\n");
    }
}
/*
 * By default, findDuplicatesByIds() returns only record IDs. To return additional
values,
 * set the second parameter to true.
 */
connection.setDuplicateRuleHeader(
    /*
     * @param allowSave - Not Applicable for this API call
     */
    false,
    /* @param includeRecordDetails */
    false,
    /*
     * @param runAsCurrentUser - Not Applicable for this API call
     */
    false);

// Invoke findDuplicatesByIds() to find duplicates based on the information in the
// SObject array
FindDuplicatesResult[] callResults = connection.findDuplicatesByIds(inputIds);

// Iterate through the results
/* For each Id in the input array, get the duplicate results. There could be more
matches
 * depending on the data in the organization.
 */
for (FindDuplicatesResult findDupeResult : callResults) {
    // If errors were found for this Id, print them out
    if (!findDupeResult.isSuccess()) {
        for (Error findDupError : findDupeResult.getErrors()) {
            System.out.println("FindDuplicatesRule errors detected: " +
findDupError.getMessage());
        }
    } else {
        /*
         * Get the DuplicateResult object array for the result. Each element in the array
represents
         * the result of testing one duplicate rule for the Id. Process each DuplicateResult.
         */
        for (DuplicateResult dupeResult : findDupeResult.getDuplicateResults()) {
            System.out.println("Duplicate rule: " + dupeResult.getDuplicateRule());
            // Print out the name of the object associated with the duplicate
            // rule
            System.out.println("Source of this duplicate rule is: " +
                dupeResult.getDuplicateRuleEntityType());
        }
    }
}

```

Field Name	Field Type	Description
success	boolean	This field is set to <code>true</code> if <code>findDuplicatesByIds()</code> doesn't encounter any errors.

Faults

[InvalidObjectFault](#)

[UnexpectedErrorFault](#)

[InvalidFieldFault](#)

getDeleted()

Retrieves the list of individual records that have been deleted within the given timespan for the specified object.

Syntax

```
GetDeletedResult = connection.getDeleted(string sObjectType, dateTime startDate, dateTime
  endDate);
```

Usage

Use `getDeleted()` for data replication applications to retrieve a list of records that have been deleted from your organization's data within the specified timespan. The `getDeleted()` call retrieves a `GetDeletedResult` object that contains an array of `DeletedRecord` objects containing the ID of each deleted record and the date/time (Coordinated Universal Time (UTC) time zone) on which it was deleted. Be sure to read [Data Replication](#) before using `getDeleted()` in your client applications. (For information on IDs, see [ID Field Type](#).)

As of release 8.0, the `getDeleted()` call respects the user's sharing model.

Rules and Guidelines

When replicating deleted records, consider the following rules and guidelines:

- The specified `startDate` must chronologically precede the specified `endDate` value by more than one minute. The specified `startDate` can't be the same value as, or later than, the specified `endDate` value. Otherwise, the API returns an `INVALID_REPLICATION_DATE` error.
- Records are returned only if the user has access to them.
- Results are returned for no more than 15 days previous to the day the call is executed (or earlier if an administrator has purged the Recycle Bin). If the purge has been performed before your `getDeleted()` call is executed, an `INVALID_REPLICATION_DATE` error is returned.
- If `latestDateCovered` is less than `endDate`, the call fails, returning an `INVALID_REPLICATION_DATE` error with the value of `latestDateCovered`.
- Deleted records are written to a delete log, which `getDeleted()` accesses. A background process that runs every two hours purges records that have been in an organization's delete log for more than two hours if the number of records is above a certain

limit. Starting with the oldest records, the process purges delete log entries until the delete log is back below the limit. This is done to protect Salesforce from performance issues related to massive delete logs. The limit is calculated using this formula:

$$5000 * \text{number of licenses in the organization}$$

For example, an organization with 1,000 licenses could have up to 5,000,000 (five million) records in the delete log before any purging took place. If purging has been performed before your `getDeleted()` call is executed, an `INVALID_REPLICATION_DATE` error is returned. If you get this exception, you should do a full pull of the table.

- If you delete a large number of records, your data replication should run more frequently than every two hours to ensure all records are returned by `getDeleted()`.
- Client applications typically poll for changed data periodically. For important polling considerations, see [Polling for Changes](#).
- Records for certain objects can't be replicated via the API. To replicate a record via the `getDeleted()` call, its object must be configured as replicatable (`replicatable` is `true`). To determine whether a given object can be replicated, your client application can invoke the `describeObjects()` call on the object and inspect its `replicatable` property.
- Development tools differ in the way that they handle time data. Some development tools report the local time, while others report only the Coordinated Universal Time (UTC) time. To determine how your development tool handles time values, refer to its documentation.
- If you call `getDeleted()` for a history object, the call returns the records deleted during the given date range for all history objects, not only the history object you specified. For example, if you call `getDeleted()` for `AccountHistory`, you'll get records deleted during the given date range for `AccountHistory`, `ContactHistory`, and so on. However, `getDeleted()` calls on `OpportunityHistory` return only deleted `OpportunityHistory` records, not other associated deleted history objects.

Basic Steps for Replicating Deleted Records

You can replicate deleted records using the following basic steps for each object:

1. Optionally, determine whether the structure of the object has changed since the last replication request, as described in [Checking for Structural Changes in the Object](#).
2. Call `getDeleted()`, passing in the object and the relevant time span for deleted records.
3. In the `DeleteResult` object, iterate through the returned array of `DeletedRecord` objects containing the ID of each deleted record and the date on which it was deleted (Coordinated Universal Time (UTC) time zone).
4. Take the appropriate action on the local data to remove the deleted records or flag as deleted.
5. Optionally, save the request time span for future reference, using the value of `latestDateCovered`.

A client application likely performs other tasks associated with data replication operations. For example, if an opportunity is closed, a client application might run a new revenue report. Similarly, if a task is completed, the process might log this in another system.

Sample Code—Java

This sample calls `getDeleted()` to get all accounts that were deleted in the last 60 minutes. It then writes the ID and the deleted date of each returned account to the console.

```
public void getDeletedRecords() {
    try {
        GregorianCalendar endTime = (GregorianCalendar)
            connection.getServerTimestamp().getTimestamp();
        GregorianCalendar startTime = (GregorianCalendar) endTime.clone();
        // Subtract 60 minutes from the server time so that we have
        // a valid time frame.
```

```

startTime.add(GregorianCalendar.MINUTE, -60);
System.out.println("Checking deletes at or after: "
    + startTime.getTime().toString());

// Get records deleted during the specified time frame.
GetDeletedResult gdResult = connection.getDeleted("Account",
    startTime, endTime);

// Check the number of records contained in the results,
// to check if something was deleted in the 60 minute span.
DeletedRecord[] deletedRecords = gdResult.getDeletedRecords();
if (deletedRecords != null && deletedRecords.length > 0) {
    for (int i = 0; i < deletedRecords.length; i++) {
        DeletedRecord dr = deletedRecords[i];
        System.out.println(dr.getId() + " was deleted on "
            + dr.getDeletedDate().getTime().toString());
    }
} else {
    System.out.println("No deletions of Account records in "
        + "the last 60 minutes.");
}
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
}

```

Sample Code—C#

This sample calls `getDeleted()` to get all accounts that were deleted in the last 60 minutes. It then writes the ID and the deleted date of each returned account to the console.

```

public void getDeletedRecords()
{
    try
    {
        DateTime endTime = binding.getServerTimestamp().timestamp;
        // Subtract 60 minutes from the server time so that we have
        // a valid time frame.
        DateTime startTime = endTime.AddMinutes(-60);
        Console.WriteLine("Checking deletes at or after: "
            + startTime.ToLocalTime().ToString());

        // Get records deleted during the specified time frame.
        GetDeletedResult gdResult = binding.getDeleted("Account",
            startTime, endTime);

        // Check the number of records contained in the results,
        // to check if something was deleted in the 60 minute span.
        DeletedRecord[] deletedRecords = gdResult.deletedRecords;
        if (deletedRecords != null && deletedRecords.Length > 0)
        {
            for (int i = 0; i < deletedRecords.Length; i++)
            {

```

```

        DeletedRecord dr = deletedRecords[i];
        Console.WriteLine(dr.id + " was deleted on "
            + dr.deletedDate.ToLocalTime().ToString());
    }
}
else
{
    Console.WriteLine("No deletions of Account records in "
        + "the last 60 minutes.");
}
}
catch (SoapException e)
{
    Console.WriteLine("An unexpected error has occurred: " +
        e.Message + "\n" + e.StackTrace);
}
}
}

```

Arguments

Name	Type	Description
sObjectTypeEntityType	string	Object type. The specified value must be a valid object for your organization. See sObject .
startDate	dateTime	Starting date/time (Coordinated Universal Time (UTC)—not local— timezone) of the timespan for which to retrieve the data. The API ignores the seconds portion of the specified dateTime value (for example, 12:30:15 is interpreted as 12:30:00 UTC).
endDate	dateTime	Ending date/time (Coordinated Universal Time (UTC)—not local— timezone) of the timespan for which to retrieve the data. The API ignores the seconds portion of the specified dateTime value (for example, 12:35:15 is interpreted as 12:35:00 UTC).

Limits

When a `getDeleted()` call returns too many results, the exception `EXCEEDED_ID_LIMIT` is returned in the response. See [API Call Limits](#) for the number of records that can be returned.

Response

[GetDeletedResult](#)

Faults

[InvalidSObjectFault](#)

[UnexpectedErrorFault](#)

SEE ALSO:

[Data Replication](#)

[API Call Basics](#)

GetDeletedResult

The `getDeleted()` call returns a `GetDeletedResult` object that contains an array of `DeletedRecord` records and two properties:

Name	Type	Description
<code>earliestDateAvailable</code>	<code>dateTime</code>	For the object type of the <code>getDeleted()</code> call, the timestamp (Coordinated Universal Time (UTC)—not local—timezone) of the last physically deleted object. If this value is less than <code>endDate</code> , the call will fail, and you should resynch your data before performing another replication.
<code>deletedRecords[]</code>	<code>deletedRecords=</code>	Array of the deleted records which satisfy the start and end dates specified in the <code>getDeleted()</code> call.
<code>latestDateCovered</code>	<code>dateTime</code>	The timestamp (Coordinated Universal Time (UTC)—not local—time zone) of the last date covered in the <code>getDeleted()</code> call. If there is a value, it is less than or equal to <code>endDate</code> . A value here indicates that, for safety, you should use this value for the <code>startDate</code> of your next call to capture the changes that started after this date but did not complete before <code>endDate</code> and were, therefore, not returned in the previous call.

deletedRecords

The `GetDeletedResult` contains an array of `deletedRecords`, which contain the following properties:

Name	Type	Description
<code>deletedDate</code>	<code>dateTime</code>	Date and time (Coordinated Universal Time (UTC)—not local—timezone) when this record was deleted. This information is obtained using the <code>SystemModstamp</code> system field if available.
<code>id</code>	ID	ID of an <code>sObject</code> that has been deleted.

getUpdated()

Retrieves the list of individual records that have been updated (added or changed) within the given timespan for the specified object.

Syntax

```
GetUpdatedResult[] = connection.getUpdated(string sObjectType, dateTime startDate, dateTime
    endDate);
```

Usage

Use `getUpdated()` for data replication applications to retrieve a set of IDs for objects of the specified object that have been created or updated within the specified timespan. The `getUpdated()` call retrieves an array of `GetUpdatedResult` objects containing the ID of each created or updated object and the date/time (Coordinated Universal Time (UTC) time zone) on which it was created or updated, respectively. Be sure to read [Data Replication](#) before using `getUpdated()` in your client application.

Note: The `getUpdated()` call retrieves the IDs only for objects to which the logged-in user has access.

Rules and Guidelines

When replicating created and updated objects, consider the following rules and guidelines:

- The specified `startDate` must chronologically precede the specified `endDate` value. The specified `startDate` cannot be the same value as, or later than, the specified `endDate` value. Otherwise, the API returns an `INVALID_REPLICATION_DATE` error.
- Results are returned for no more than 30 days previous to the day the call is executed.
- Client applications typically poll for changed data periodically. For important polling considerations, see [Polling for Changes](#).
- Your client application can replicate any objects to which it has sufficient permissions. For example, to replicate all data for your organization, your client application must be logged in with “View All Data” access rights to the specified object. Similarly, the objects must be within your sharing rules. For more information, see [Factors that Affect Data Access](#).
- Certain objects cannot be replicated via the API. To replicate an object via the `getUpdated()` call, its object must be configured as replicatable (`replicatable` is `true`). To determine whether a given object can be replicated, your client application can invoke the `describeObjects()` call on the object and inspect its `replicatable` property.
- Certain objects cannot be deleted, such as [Group](#), [User](#), [Contract](#), or [Product2](#) objects. However, if instances of these objects are no longer visible in the Salesforce user interface, they may have been rendered inactive so that only users with administrative access can see them. To determine whether a missing object instance has been made inactive, your client application can call `getUpdated()` and check the object’s active flag.
- Development tools differ in the way that they handle time data. Some development tools report the local time, while others report only the Coordinated Universal Time (UTC) time. To determine how your development tool handles time values, refer to its documentation.

Basic Steps for Replicating Updated Objects

Replicating objects involves the following basic steps for each object that you want to replicate:

1. Optionally, the client application determines whether the structure of the object has changed since the last replication request, as described in [Checking for Structural Changes in the Object](#).
2. Call `getUpdated()`, passing in the object and timespan for which to retrieve data.
3. Iterate through the returned array of IDs. For each ID element in the array, call `retrieve()` to obtain the latest information you want from the associated object. Your client application must then take the appropriate action on the local data, such as inserting new rows or updating existing ones with the latest information.

- Optionally, the client application saves the request timestamp for future reference.

A client application likely performs other tasks associated with data replication operations. For example, if an opportunity were to become closed, a client application might run a new revenue report. Similarly, if a task were completed, the process might log this somehow in another system.

Sample Code—Java

This sample gets the accounts that were updated in the last 60 minutes and writes their IDs to the console.

```
public void getUpdatedRecords() {
    try {
        GregorianCalendar endTime = (GregorianCalendar) connection
            .getServerTimestamp().getTimestamp();
        GregorianCalendar startTime = (GregorianCalendar) endTime.clone();
        // Subtract 60 minutes from the server time so that we have
        // a valid time frame.
        startTime.add(GregorianCalendar.MINUTE, -60);
        System.out.println("Checking updates as of: "
            + startTime.getTime().toString());

        // Get the updated accounts within the specified time frame
        GetUpdatedResult ur = connection.getUpdated("Account", startTime,
            endTime);
        System.out.println("GetUpdateResult: " + ur.getIds().length);

        // Write the results
        if (ur.getIds() != null && ur.getIds().length > 0) {
            for (int i = 0; i < ur.getIds().length; i++) {
                System.out.println(ur.getIds()[i] + " was updated between "
                    + startTime.getTime().toString() + " and "
                    + endTime.getTime().toString());
            }
        } else {
            System.out.println("No updates to accounts in "
                + "the last 60 minutes.");
        }
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

Sample Code—C#

This sample gets the accounts that were updated in the last 60 minutes and writes their IDs to the console.

```
public void getUpdatedRecords()
{
    try
    {
        DateTime endTime = binding.getServerTimestamp().timestamp;
        // Subtract 60 minutes from the server time so that we have
        // a valid time frame.
```

```

DateTime startTime = endTime.AddMinutes(-60);
Console.WriteLine("Checking updates as of: "
    + startTime.ToLocalTime().ToString());

// Get the updated accounts within the specified time frame
GetUpdatedResult ur = binding.getUpdated("Account", startTime,
    endTime);
Console.WriteLine("GetUpdateResult: " + ur.ids.Length);

// Write the results
if (ur.ids != null && ur.ids.Length > 0)
{
    for (int i = 0; i < ur.ids.Length; i++)
    {
        Console.WriteLine(ur.ids[i] + " was updated between "
            + startTime.ToLocalTime().ToString() + " and "
            + endTime.ToLocalTime().ToString());
    }
}
else
{
    Console.WriteLine("No updates to accounts in "
        + "the last 60 minutes.");
}
}
catch (SoapException e)
{
    Console.WriteLine("An unexpected error has occurred: " +
        e.Message + "\n" + e.StackTrace);
}
}

```

Arguments

Name	Type	Description
sObjectTypeEntityType	string	Object type. The specified value must be a valid object for your organization. For a list of standard objects, see Standard Objects .
startDate	dateTime	Starting date/time (Coordinated Universal Time (UTC) time zone—not local—timezone) of the timespan for which to retrieve the data. The API ignores the seconds portion of the specified dateTime value (for example, 12:30:15 is interpreted as 12:30:00 UTC).
endDate	dateTime	Ending date/time (Coordinated Universal Time (UTC) time zone—not local—timezone) of the timespan for which to retrieve the data. The API ignores the seconds portion of the specified dateTime value (for example, 12:35:15 is interpreted as 12:35:00 UTC).

Important: There is a limit of 600,000 IDs in the result [GetUpdatedResult\[\]](#). If your `getUpdated()` call returns more than 600,000 IDs, an exception `EXCEEDED_ID_LIMIT` is returned. You can correct the error by choosing start and end dates that are closer together.

Response

[GetUpdatedResult\[\]](#)

Faults

[UnexpectedErrorFault](#)

SEE ALSO:

[Data Replication](#)

[API Call Basics](#)

GetUpdatedResult

The `getUpdated()` call returns a `GetUpdatedResult` object that contains information about each record that was inserted or updated within the given timespan. An `GetUpdatedResult` object has the following properties:

Name	Type	Description
<code>id[]</code>	ID	Array of IDs of each object that has been updated.
<code>latestDateCovered</code>	<code>dateTime</code>	The timestamp (Coordinated Universal Time (UTC)—not local—time zone) of the last date covered in the <code>getUpdated()</code> call. If there is a value, it is less than or equal to <code>endDate</code> . A value here indicates that, for safety, you should use this value for the <code>startDate</code> of your next call to capture the changes that started after this date but did not complete before the <code>endDate</code> and were, therefore, not returned in the previous call.  Note: If Salesforce executes a long-running transaction on your instance, the value in this field is the start time of that long-running transaction until it completes. This is because a long-running transaction might affect your user data (for example, batch processing).

`invalidateSessions()`

Ends one or more sessions specified by a `sessionId`.

Syntax

```
InvalidateSessionsResult = connection.invalidateSessions(string[] sessionId);
```

Usage

Use this call to end one or more sessions.

You can also use `logout ()` to end just one session, the session of the logged-in user.

Sample Code—Java

This sample invalidates a set of sessions. The method in this sample takes an array of session IDs passed in as String values. The method then calls `invalidateSessions ()` with this array and then checks the results for any errors.

```
public void invalidateSessionsSample(String[] sessionIds) {
    try {
        InvalidateSessionsResult[] results;
        results = connection.invalidateSessions(sessionIds);
        for (InvalidateSessionsResult result : results) {
            // Check results for errors
            if (!result.isSuccess()) {
                if (result.getErrors().length > 0) {
                    System.out.println("Status code: "
                        + result.getErrors()[0].getStatusCode());
                    System.out.println("Error message: "
                        + result.getErrors()[0].getMessage());
                }
            } else {
                System.out.println("Success.");
            }
        }
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

Sample Code—C#

This sample invalidates a set of sessions. The method in this sample takes an array of session IDs passed in as String values. The method then calls `invalidateSessions ()` with this array and then checks the results for any errors.

```
public void invalidateSessionsSample(string[] sessionIds)
{
    try
    {
        InvalidateSessionsResult[] results;
        results = binding.invalidateSessions(sessionIds);
        foreach (InvalidateSessionsResult result in results)
        {
            // Check results for errors
            if (!result.success)
            {
                if (result.errors.Length > 0)
                {
                    Console.WriteLine("Status code: " +
                        result.errors[0].statusCode);
                    Console.WriteLine("Error message: " +
                        result.errors[0].message);
                }
            }
        }
    }
}
```

```

        else
        {
            Console.WriteLine("Success.");
        }
    }
}
catch (SoapException e)
{
    Console.WriteLine("An unexpected error has occurred: " +
        e.Message + "\n" + e.StackTrace);
}
}

```

Arguments

Name	Type	Description
sessionIds	string[]	One or more sessionId strings. Limit 200. You can obtain your <code>sessionId</code> from the SessionHeader .

Response

[InvalidateSessionsResult\[\]](#)

Faults

[UnexpectedErrorFault](#)

InvalidateSessionsResult

The `invalidateSessions()` call returns an array of `LogoutResult` objects. Each object has the following properties:

Name	Type	Description
success	boolean	Indicates whether the session was successfully terminated (<code>true</code>) or not (<code>false</code>).
errors	Error[]	If an error occurred during the call, an array of one or more Error objects. Each object contains an error code and description.

login ()

Logs in to the login server and starts a client session.

 **Note:** `login ()` calls count toward your login rate limit.

Syntax

```
LoginResult = connection.login(string username, string password);
```

Usage

Use the `login()` call to log in to the login server and start a client session. The client app logs in and obtains a `sessionId` and server URL before making other API calls.

When a client app invokes the `login()` call, it passes in a username and password as credentials. Upon invocation, the API authenticates the credentials. It then returns the `sessionId`, the user ID associated with the logged-in username, and a URL that points to the Lightning Platform API to use in all subsequent API calls.

Salesforce checks the IP address from which the client app is logging in and blocks logins from unknown IP addresses. If the API blocks the login, Salesforce returns a login fault. To log in, the user must add the security token at the end of the user's password. For example, if a user's password is `mypassword` and the security token is `XXXXXXXXXX`, the user enters `mypasswordXXXXXXXXXX`. Users get their security token by changing their password or resetting their security token from the Salesforce user interface. When users change their password or reset their security token, Salesforce sends a new security token to the email address on the user's Salesforce record. The security token is valid until the user resets the security token, or changes the password, or you reset the user's password. When the security token is invalid, the user must repeat the login process. To avoid another log in, add the client's IP address to the org's list of trusted IP addresses. For more information, see [Security Token](#).

After logging in, make sure that your client app performs these tasks.

- Sets the session ID in the SOAP header so that the API can validate subsequent requests for this session.
- Specifies the server URL as the target for subsequent service requests. The login server supports only login calls.

Development tools differ in the way you specify session headers and server URLs. For more information, see the documentation for your particular development tool.

 **Note:** Multiple client apps can log in using the same `username` argument. However, this approach increases your risk of getting errors due to query limits. A user can have up to 10 query cursors open at a time. If 10 `QueryLocator` cursors are open when a client application, logged in as the same user, attempts to open a new one, then the oldest of the 10 cursors is released. If the client application attempts to open the released query cursor, an error results.

The limit is 3,600 calls to `login()` per user per hour. Exceeding this limit results in a "Login Rate Exceeded" error. After reaching the hourly limit, Salesforce blocks the user from logging in. Users can try to log in again an hour after the block occurred.

Enterprise and Partner Endpoints

In API version 11.1 and earlier, client apps built with the partner WSDL can send requests to the enterprise endpoint, and enterprise WSDL apps can send requests to the partner endpoint. Beginning with version 12.0, this functionality is not supported.

Endpoint Base URLs

When specifying an endpoint for a Salesforce org, there are three options for the base URL.

1. Recommended: Your My Domain login URL, in the format `https://MyDomainName.my.salesforce.com` for production orgs and `https://MyDomainName--SandboxName.sandbox.my.salesforce.com` for sandboxes with enhanced domains enabled. If you're not using enhanced domains, your sandbox, use `https://MyDomainName--SandboxName.my.salesforce.com`, and plan to update these endpoints when you enable enhanced domains.

- The default Salesforce login URLs: `https://login.salesforce.com` for production and Developer Edition orgs and `https://test.salesforce.com` for sandboxes.

 **Note:** Admins can prevent SOAP API logins from the default Salesforce login URLs via a My Domain setting.

All examples use the recommended My Domain login URL format for a production org. To specify an endpoint for a sandbox or to use the default Salesforce login URLs, modify the example as needed.

To understand the benefits of using your My Domain login URL versus the default Salesforce login URL, see [Log In to Salesforce with Code](#) in Salesforce Help.

Login When Using a Proxy

If you log in to Salesforce via a proxy, set the proxy host and port number on the instance of the `ConnectorConfig` class that you use to log in. If you must authenticate on the proxy, set the username and password.

```
ConnectorConfig config = new ConnectorConfig();
config.setUsername(userId);
config.setPassword(pwd);
config.setAuthEndpoint(authEndPoint);
config.setProxy(proxyHost, proxyPort);
// Set the username and password if your proxy must be authenticated
config.setProxyUsername(proxyUsername);
config.setProxyPassword(proxyPassword);
try {
    EnterpriseConnection connection = new EnterpriseConnection(config);
    // etc.
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
```

Session Expiration

Client apps aren't required to explicitly log out to end a session. Sessions expire automatically after a predetermined length of inactivity. The default is two hours. If you make an API call, the inactivity timer is reset to zero. To change the session expiration (timeout) value, from Setup, enter *Session Settings* in the Quick Find box, and select **Session Settings**.

Active Self-Service Users Authentication

 **Note:** Starting with Spring '12, the Self-Service portal isn't available for new Salesforce orgs. Existing orgs continue to have access to the Self-Service portal.

To authenticate active self-service users, use `LoginScopeHeader` to specify the `Organization` ID against which self-service users are authenticated. A self-service user must exist and be active before being authenticated (see [SelfServiceUser](#)).

Customer Experience Cloud Site User Authentication

To authenticate an active Experience Cloud site user who has the API Enabled permission, use `LoginScopeHeader` to specify the `Organization` ID of the org with Experience Cloud sites. Site users must exist, be active, and belong to the Experience Cloud site before being authenticated.

When specifying an endpoint that authenticates an Experience Cloud site user, the base URL is different in orgs without enhanced domains enabled.

- If enhanced domains are enabled, the base URL format is `https://MyDomainName.my.site.com` for a production org and `https://MyDomainName--SandboxName.sandbox.my.site.com` for a sandbox org.
- If enhanced domains aren't enabled, the base URL format is `https://ExperienceCloudSitesSubdomain.force.com` for a production org and `SandboxName-CommunitySubdomainName.InstanceName.force.com` for a sandbox org.

All examples for Experience Cloud Site User Authorization use the base URL format for a production org with enhanced domains enabled. To specify an endpoint for a sandbox org, or if you haven't yet enabled enhanced domains, update the base URL.

Example Endpoints

Client apps can send login requests to these endpoints (using valid values for the authentication endpoint).

Enterprise WSDL:

- `String authEndPoint = "https://MyDomainName.my.salesforce.com/services/Soap/c/version/"`
- `String authEndPoint = "https://MyDomainName.my.site.com/path-prefix/services/Soap/c/version/"`

Partner WSDL:

- `String authEndPoint = "https://MyDomainName.my.salesforce.com/services/Soap/u/version/"`
- `String authEndPoint = "https://MyDomainName.my.site.com/path-prefix/services/Soap/u/version/"`

Logout

Salesforce recommends that you always call `logout()` to end a session when it's no longer needed. This call ends any child sessions. To provide the most protection, log out the user instead of waiting for the session to expire.

Sample Code—Java

This sample logs a user in with the specified username, password, and authentication endpoint URL. The sample writes user and session information to the console after a successful login. Before running this sample, replace the values for username, password, and authentication endpoint with valid values.

To learn how to generate and import the web service WSDL needed to make API calls, see [Step 2: Generate or Obtain the Web Service WSDL](#) in the Quick Start.

```
public boolean loginSample() {
    boolean success = false;
    String username = "username";
    String password = "password";
    String authEndPoint = "https://MyDomainName.my.salesforce.com/services/Soap/c/24.0/";

    try {
        ConnectorConfig config = new ConnectorConfig();
        config.setUsername(username);
    }
}
```

```

config.setPassword(password);

System.out.println("AuthEndPoint: " + authEndPoint);
config.setAuthEndpoint(authEndPoint);

connection = new EnterpriseConnection(config);

// Print user and session info
GetUserInfoResult userInfo = connection.getUserInfo();
System.out.println("UserID: " + userInfo.getUserId());
System.out.println("User Full Name: " + userInfo.getUserFullName());
System.out.println("User Email: " + userInfo.getUserEmail());
System.out.println();
System.out.println("SessionID: " + config.getSessionId());
System.out.println("Auth End Point: " + config.getAuthEndpoint());
System.out
    .println("Service End Point: " + config.getServiceEndpoint());
System.out.println();

success = true;
} catch (ConnectionException ce) {
    ce.printStackTrace();
}

return success;
}

```

Sample Code—C#

This sample logs a user in using the specified username and password. The result of the login call contains the service endpoint URL, which is the virtual server instance that is servicing your org, and a unique session ID. The sample sets these returned values on the binding. It sets the binding URL to the returned service endpoint. It also sets the session ID on the session header that is used on all API calls. Next, the sample writes user and session information to the console after a successful login. Before running this sample, replace the values for username and password with valid values.

To learn how to generate and import the web service WSDL needed to make API calls, see [Step 2: Generate or Obtain the Web Service WSDL](#) in the Quick Start.

```

public bool loginSample()
{
    Boolean success = false;
    string username = "username";
    string password = "password";

    // Create a service object
    binding = new SforceService();

    LoginResult lr;
    try
    {
        Console.WriteLine("\nLogging in...\n");
        lr = binding.login(username, password);
    }
}

```

```

/**
 * The login results contain the endpoint of the virtual server instance
 * that is servicing your org. Set the URL of the binding
 * to this endpoint.
 */
// Save old authentication end point URL
String authEndPoint = binding.Url;
// Set returned service endpoint URL
binding.Url = lr.serverUrl;

/** Get the session ID from the login result and set it for the
 * session header that will be used for all subsequent calls.
 */
binding.SessionHeaderValue = new SessionHeader();
binding.SessionHeaderValue.sessionId = lr.sessionId;

// Print user and session info
GetUserInfoResult userInfo = lr.userInfo;
Console.WriteLine("UserID: " + userInfo.userId);
Console.WriteLine("User Full Name: " +
    userInfo.userFullName);
Console.WriteLine("User Email: " +
    userInfo.userEmail);
Console.WriteLine();
Console.WriteLine("SessionID: " +
    lr.sessionId);
Console.WriteLine("Auth End Point: " +
    authEndPoint);
Console.WriteLine("Service End Point: " +
    lr.serverUrl);
Console.WriteLine();

// Return true to indicate that we are logged in, pointed
// at the right URL and have our security token in place.
success = true;
}
catch (SoapException e)
{
    Console.WriteLine("An unexpected error has occurred: " +
        e.Message + "\n" + e.StackTrace);
}
return success;
}

```

Arguments

Name	Type	Description
username	string	Login username.
password	string	Login password associated with the specified username.

The login request size is limited to 10 KB.

Response

[LoginResult](#)

Faults

[LoginFault](#)

[UnexpectedErrorFault](#)

SEE ALSO:

[API Call Basics](#)

LoginResult

The `login()` call returns a `LoginResult` object, which has the following properties:

Name	Type	Description
<code>metadataServerUrl</code>	string	URL of the endpoint that will process subsequent metadata API calls. Your client application needs to set the endpoint.
<code>passwordExpired</code>	boolean	Indicates whether the password used during the login attempt is expired (<code>true</code>) or not (<code>false</code>). If the password has expired, then the API returns a valid <code>sessionId</code> , but the only allowable operation is the <code>setPassword()</code> call.
<code>serverUrl</code>	string	URL of the endpoint that will process subsequent API calls. Your client application needs to set the endpoint.
<code>sessionId</code>	string	Unique ID associated with this session. Your client application needs to set this value in the session header.
<code>userId</code>	ID	ID of the user associated with the specified username and password.
<code>userInfo</code>	<code>getUserInfoResult</code>	User information fields. For a list of these fields, see getUserInfoResult .

logout()

Ends the session of the logged-in user.

Syntax

```
connection.logout();
```

Usage

This call ends the session for the logged-in user issuing the call. No arguments are needed.

To end one or more sessions started by someone other than the logged-in user, see [invalidateSessions\(\)](#).

Sample Code—Java

This sample calls `logout()` to log the current user out and writes a message to the console.

```
public void logoutSample() {
    try {
        connection.logout();
        System.out.println("Logged out.");
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

Sample Code—C#

This sample calls `logout()` to log the current user out and writes a message to the console.

```
public void logoutSample()
{
    try
    {
        binding.logout();
        Console.WriteLine("Logged out.");
    }
    catch (SoapException e)
    {
        Console.WriteLine("An unexpected error has occurred: " +
            e.Message + "\n" + e.StackTrace);
    }
}
```

Arguments

This call uses no arguments. It ends the session for the logged-in user issuing the call, so no arguments are needed. The logged-in user is identified by the `sessionId` specified in the [SessionHeader](#) for this call.

Response

Void is returned. Because failure of the call means that the session has already been logged out, no results are needed. Any unexpected error, such as system unavailability, throws an error that should be handled by your client application.

Faults

[UnexpectedErrorFault](#)

merge ()

! **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

Combines up to 3 records of the same type into 1 record. The input is an array of `MergeRequest` elements, each of which specifies the records to combine. The output is a `MergeResult` object that contains information about the result of the merge.

Syntax

```
MergeResult [] = connection.merge (MergeRequest [] mergeRequests);
```

Usage

Use `merge ()` to combine records of the same object type into one of the records, known as the *main record*. `merge ()` deletes the other records, known as the *victim records*. If a victim record has related records, `merge ()` makes the main record the new parent of the related records.

Rules and Guidelines

Values from non-main records

Before you call `merge ()`, decide if you want field values in the non-main records to supersede the main record values. If you do, set the field names and values in the record identified by the `masterRecord` of the `MergeRequest`.

Contacts, Leads, and Data Privacy Records

When you merge contacts or leads that have corresponding data privacy records based on the Individual object, `merge ()` determines the correct data privacy record to associate with the main record.

- If you selected the option to retain the most recently updated data privacy record for merging leads and contacts, `merge ()` selects the most recently updated data privacy record.
- Otherwise, `merge ()` selects the data privacy record already associated with the main record.

Successive merges

Because `merge ()` handles each `MergeResult` element in the input argument as a separate transaction, you can successively merge several records into the same main record.

To perform successive merges, call `merge ()` with an array of `MergeResult` elements. For each `MergeResult` element, set:

- `masterRecord` to the main record ID.
- Each element in the `recordToMergeIds` array to the ID of a record you want to combine into the main record.

Deleted records

Use `queryAll ()` to view records that have been deleted during a merge.

List merged records

To find all records that have been merged since a given point in time, call `queryAll ()` with a SELECT statement. For example:

```
SELECT Id FROM Contact WHERE isDeleted=true and masterRecordId != null  
AND SystemModstamp > 2006-01-01T23:01:01+01:00
```

Supported Object Types

The supported object types are [Lead](#), [Contact](#), [Account](#), [Person Account](#), and [Individual](#). You can only merge objects of the same type. For example, leads can be merged only with leads.

Account Hierarchies

When you merge accounts that are part of an account hierarchy, `merge()` tries to set the victims' child records as children of the main record. If this action causes a cyclical relationship, `merge()` returns an error.

Contacts Reports To relationships

When you merge contacts that have a value for the `ReportsToId` field, `merge()` tries to add the victims' `ReportsToId` value to the main record. If this action causes a cyclical relationship, `merge()` reports an error.

Contacts and portal users

When you want to merge a contact victim record that has an associated portal user, set `AdditionalInformationMap` for victim record's `MergeRequest` element. You can only merge 1 victim with a portal user into the main record. In Salesforce Classic, you can't merge person accounts that are enabled to use a Customer Portal.

Considerations

The following limits apply to any merge request:

- Up to 200 merge requests can be made in a single SOAP call.
- Up to three records can be merged in a single request, including the main record. This limit is the same as the limit enforced by the Salesforce user interface. To merge more than 3 records, do a successive merge.
- External ID fields cannot be used with `merge()`.
- If you selected the option to retain the most recently updated data privacy record for merging leads and contacts, but the caller does not have CRUD permission for the selected data privacy record, the merge process selects the data privacy record already associated with the main record.

Redundant relationships

You can't merge accounts or person accounts that are related to the same contact. Remove redundant account-contact relationships before you try to merge accounts.

 **Note:** Starting with API version 15.0, if you specify a value for a field that contains a string, and the value is too big for the field, the call fails and an error is returned. In previous versions of the API the value was truncated and the call succeeded. If you wish to keep the old behavior with versions 15.0 and later, use the [AllowFieldTruncationHeader](#) SOAP header.

Sample Code—Java

This sample merges a victim account with a main account. It creates 2 accounts and attaches a note to the victim. After the merge, the code prints the ID of the victim account and the number of child records updated. In this example, the number of updated records is one, because the note of the merged account is moved to the main account.

```
public Boolean mergeRecords() {
    Boolean success = false;
    // Array to hold the results
    String[] accountIds = new String[2];
    try {
        // Create two accounts to merge
        Account[] accounts = new Account[2];
        Account masterAccount = new Account();
        masterAccount.setName("MasterAccount");
        masterAccount.setDescription("The Account record to merge with.");
        accounts[0] = masterAccount;
```

```

Account accountToMerge = new Account();
accountToMerge.setName("AccountToMerge");
accountToMerge
    .setDescription("The Account record that will be merged.");
accounts[1] = accountToMerge;
SaveResult[] saveResults = connection.create(accounts);

if (saveResults.length > 0) {
    for (int i = 0; i < saveResults.length; i++) {
        if (saveResults[i].isSuccess()) {
            accountIds[i] = saveResults[i].getId();
            System.out.println("Created Account ID: "
                + accountIds[i]);
        } else {
            // If any account is not created,
            // print the error returned and exit
            System.out
                .println("An error occurred while creating account."
                    + " Error message: "
                    + saveResults[i].getErrors()[0].getMessage());
            return success;
        }
    }
}

// Set the Ids of the accounts
masterAccount.setId(accountIds[0]);
accountToMerge.setId(accountIds[1]);

// Attach a note to the account to be merged with the master,
// which will get re-parented after the merge
Note note = new Note();
System.out.println("Attaching note to record " +
    accountIds[1]);
note.setParentId(accountIds[1]);
note.setTitle("Merged Notes");
note.setBody("This note will be moved to the "
    + "MasterAccount during merge");
SaveResult[] sRes = connection.create(new SObject[] { note });
if (sRes[0].isSuccess()) {
    System.out.println("Created Note record.");
} else {
    Error[] errors = sRes[0].getErrors();
    System.out.println("Could not create Note record: "
        + errors[0].getMessage());
}

// Perform the merge
MergeRequest mReq = new MergeRequest();
masterAccount.setDescription("Was merged");
mReq.setMasterRecord(masterAccount);
mReq.setRecordToMergeIds(new String[] { saveResults[1].getId() });
MergeResult mRes = connection.merge(new MergeRequest[] { mReq })[0];

```

```

if (mRes.isSuccess())
{
    System.out.println("Merge successful.");
    // Write the IDs of merged records
    for(String mergedId : mRes.getMergedRecordIds()) {
        System.out.println("Merged Record ID: " + mergedId);
    }
    // Write the updated child records. (In this case the note.)
    System.out.println(
        "Child records updated: " + mRes.getUpdatedRelatedIds().length);
    success = true;
} else {
    System.out.println("Failed to merge records. Error message: " +
        mRes.getErrors()[0].getMessage());
}
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
return success;
}

```

Sample Code—C#

This sample merges a victim account with a main account. It creates 2 accounts and attaches a note to the victim. After the merge, the code prints the ID of the victim account and the number of child records updated. In this example, the number of updated records is one, because the note of the merged account is moved to the main account.

```

public Boolean mergeRecords()
{
    Boolean success = false;
    // Array to hold the results
    String[] accountIds = new String[2];
    try
    {
        // Create two accounts to merge
        Account[] accounts = new Account[2];
        Account masterAccount = new Account();
        masterAccount.Name = "MasterAccount";
        masterAccount.Description = "The Account record to merge with.";
        accounts[0] = masterAccount;
        Account accountToMerge = new Account();
        accountToMerge.Name = "AccountToMerge";
        accountToMerge
            .Description = "The Account record that will be merged.";
        accounts[1] = accountToMerge;
        SaveResult[] saveResults = binding.create(accounts);

        if (saveResults.Length > 0)
        {
            for (int i = 0; i < saveResults.Length; i++)
            {
                if (saveResults[i].success)

```

```
    {
        accountIds[i] = saveResults[i].id;
        Console.WriteLine("Created Account ID: "
            + accountIds[i]);
    }
    else
    {
        // If any account is not created,
        // print the error returned and exit
        Console.WriteLine("An error occurred while creating account."
            + " Error message: "
            + saveResults[i].errors[0].message);
        return success;
    }
}
}

// Set the Ids of the accounts
masterAccount.Id = accountIds[0];
accountToMerge.Id = accountIds[1];

// Attach a note to the account to be merged with the master,
// which will get re-parented after the merge
Note note = new Note();
Console.WriteLine("Attaching note to record " +
    accountIds[1]);
note.ParentId = accountIds[1];
note.Title = "Merged Notes";
note.Body = "This note will be moved to the "
    + "MasterAccount during merge";
SaveResult[] sRes = binding.create(new sObject[] { note });
if (sRes[0].success)
{
    Console.WriteLine("Created Note record.");
}
else
{
    Error[] errors = sRes[0].errors;
    Console.WriteLine("Could not create Note record: "
        + errors[0].message);
}

// Perform the merge
MergeRequest mReq = new MergeRequest();
masterAccount.Description = "Was merged";
mReq.masterRecord = masterAccount;
mReq.recordToMergeIds = new String[] { saveResults[1].id };

MergeResult mRes = binding.merge(new MergeRequest[] { mReq })[0];

if (mRes.success)
{
    Console.WriteLine("Merge successful.");
    // Write the IDs of merged records
```

```

    foreach (String mergedId in mRes.mergedRecordIds)
    {
        Console.WriteLine("Merged Record ID: " + mergedId);
    }
    // Write the updated child records. (In this case the note.)
    Console.WriteLine(
        "Child records updated: " + mRes.updatedRelatedIds.Length);
    success = true;
}
else
{
    Console.WriteLine("Failed to merge records. Error message: " +
        mRes.errors[0].message);
}
}
catch (SoapException e)
{
    Console.WriteLine("An unexpected error has occurred: " +
        e.Message + "\n" + e.StackTrace);
}
return success;
}

```

Arguments

This call accepts an array of MergeRequest objects. A MergeRequest object contains the following properties.

Name	Type	Description
masterRecord	sObject	Required. Must provide the ID of the object that other records will be merged into. Optionally, provide the fields to be updated and their values.
recordToMergeIds	ID[]	Required. Minimum of one, maximum of two. The other record or records to be merged into the main record.
AdditionalInformationMap	map	A field-value map. <ul style="list-style-type: none"> • Merge a portal user ID: <ul style="list-style-type: none"> - name: PortalUserId - value: ID of the portal user • In all other merge cases, set to null.

Response

[MergeResult\[\]](#)

Faults

[InvalidSObjectFault](#)

[UnexpectedErrorFault](#)[InvalidIdFault](#)

SEE ALSO:

[API Call Basics](#)

MergeResult

The `merge()` call returns a `MergeResult` object, which has the following properties:

Name	Type	Description
<code>errors</code>	<code>Error[]</code>	If an error occurred during the <code>merge()</code> call, an array of one or more Error objects providing the error code and description.
<code>id</code>	<code>ID</code>	ID of the primary record, the record into which the other records were merged.
<code>mergedRecordIds</code>	<code>ID[]</code>	ID of the records that were merged into the primary record. If successful, the values match <code>mergeRequest.recordToMergeIds</code> .
<code>success</code>	<code>boolean</code>	Indicates whether the merge was successful (<code>true</code>) or not (<code>false</code>).
<code>updatedRelatedIds</code>	<code>ID[]</code>	ID of all related records that were moved (reparented) as a result of the merge, and that are viewable by the user sending the merge call.

performQuickActions()

Executes quick actions of type create or update.

Syntax

```
PerformQuickActionResult[] = connection.performQuickActions(PerformQuickActionRequest
PerformQuickActionRequest[]);
```

Usage

Use the `performQuickActions()` call to perform a specific quick action. Returns an array of `PerformQuickActionResult` objects.

-  **Note:** In API version 46.0 and later, the `apiName` for a global quick action can include the prefix `Global.` in a `performQuickActions()` request body. The request body also accepts global quick action API names without the prefix.
-  **Note:** If you're accessing the API using a custom community URL and you use the `performQuickActions()` call to create a group, the group is only available within that community.
-  **Note:** The `OutgoingEmail` entity can be created only via calls from the `performQuickAction` API.

Sample—Java

This sample uses a quick action to create a new contact.

```
public void example() throws Exception {

    PerformQuickActionRequest req = new PerformQuickActionRequest();

    Contact con = new Contact();
    con.setLastName("Smith");

    req.setQuickActionName("Account.QuickCreateContact");
    req.setParentId("001D000000JSaHa");
    /* For version 29.0 and greater, use setContextId */
    req.setRecords(new SObject[] { con }); //you can only save one record here
    PerformQuickActionResult[] pResult =
        conn.performQuickActions(new PerformQuickActionRequest[] { req });
    for(PerformQuickActionResult pr : pResult) {
        assert pr.getSuccess();
        assert pr.getCreated();
        assert pr.getErrors().length == 0;
        System.out.println("Id of the record created: " + pr.getIds()[0]);
        System.out.println("Id of the feeditem for action performed: " +
            pr.getFeedItemIds()[0]);
    }
}
```

Arguments

Name	Type	Description
quickActions	PerformQuickActionRequest	The action request to perform.

PerformQuickActionRequest

Name	Type	Description
parentOrContextId	ID	<ul style="list-style-type: none"> In API version 28.0, <code>parentId</code> is the ID of the sObject on which to create a record for the request. In API version 29.0 and greater, <code>contextId</code> is the ID of the context on which to create a record for the request.
quickActionName	string	The parent or context sObject and action name—for example, <code>Opportunity.QuickCreateOpp</code> .
records	SObject[]	The record to be created. Only one record can be saved at a time.

Response

[PerformQuickActionResult](#)

PerformQuickActionResult

The [performQuickActions\(\)](#) call returns an array of [PerformQuickActionResult](#) objects.

Name	Type	Description
<code>created</code>	boolean	If <code>true</code> , the record was created successfully and if <code>false</code> , no record was created.
<code>errors</code>	Error[]	If an error occurred during the call, an array of one or more Error objects providing the error information.
<code>feedItemIds</code>	ID[]	Returns an array of unique identifiers of a feed item in the form of a string with IDs; in partner portals, a type with an ID is returned.
<code>ids</code>	ID[]	An array of IDs.
<code>success</code>	boolean	If <code>true</code> , the action executed successfully and if <code>false</code> , the action failed.
<code>successMessage</code>	string	Returns the message that displays to the user upon successful completion of the action.

`process()`

Submits an array of approval process instances for approval, or processes an array of approval process instances to be approved, rejected, or removed. For more information, see “Set Up an Approval Process” in the Salesforce Help.

Syntax

```
ProcessResult = connection.process( processType processRequest[] )
```

`processType` can be either [ProcessSubmitRequest](#) or [ProcessWorkitemRequest](#)

Usage

Use the `process()` call to perform either of the following two tasks:

- Submit an array of objects to the approval process. Objects cannot already be in an approval process when submitted. Use the [ProcessSubmitRequest](#) signature.
- Process an object that has been submitted to the approval process by performing an approval action (Approve or Reject). Use the [ProcessWorkitemRequest](#) signature.

Requests are processed and a [ProcessResult](#) is returned with the same process instances as sent in the request.

The failure of a particular record will not cause failure of the entire request.

 **Note:** Because you can fire Apex triggers with this call, you may be updating fields that contain strings.

Starting with API version 15.0, if you specify a value for a field that contains a string, and the value is too big for the field, the call fails and an error is returned. In previous versions of the API the value was truncated and the call succeeded. If you wish to keep the old behavior with versions 15.0 and later, use the [AllowFieldTruncationHeader](#) SOAP header.

Sample Code—Java

This sample accepts the ID of the sObject to process the approval for and an array containing the IDs of the next approvers. It creates a process approval request and submits it for approval. Finally, it parses the results of the `process()` call.

```
public void processRecords(String id, String[] approverIds) {
    ProcessSubmitRequest request = new ProcessSubmitRequest();
    request.setComments("A comment about this approval.");
    request.setObjectId(id);
    request.setNextApproverIds(approverIds);
    try {
        ProcessResult[] processResults = connection
            .process(new ProcessSubmitRequest[] { request });
        for (ProcessResult processResult : processResults) {
            if (processResult.isSuccess()) {
                System.out.println("Approval submitted for: " + id + ":");
                for (int i = 0; i < approverIds.length; i++) {
                    System.out
                        .println("\tBy: " + approverIds[i] + " successful.");
                }
                System.out.println("Process Instance Status: "
                    + processResult.getInstanceStatus());
            } else {
                System.out.println("Approval submitted for: " + id
                    + ", approverIds: " + approverIds.toString() + " FAILED.");
                System.out.println("Error: "
                    + processResult.getErrors().toString());
            }
        }
    }
    catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

Sample Code—C#

This sample accepts the ID of the sObject to process the approval for and an array containing the IDs of the next approvers. It creates a process approval request and submits it for approval. Finally, it parses the results of the `process()` call.

```
public void processRecords(String id, String[] approverIds)
{
    ProcessSubmitRequest request = new ProcessSubmitRequest();
    request.comments = "A comment about this approval.";
    request.objectId = id;
    request.nextApproverIds = approverIds;
    try
    {
```

```

ProcessResult[] processResults = binding.process(
    new ProcessSubmitRequest[] { request });
foreach (ProcessResult processResult in processResults)
{
    if (processResult.success)
    {
        Console.WriteLine("Approval submitted for: " + id + ":");
        for (int i = 0; i < approverIds.Length; i++)
        {
            Console.WriteLine("\tBy: " + approverIds[i] + " successful.");
        }
        Console.WriteLine("Process Instance Status: "
            + processResult.instanceStatus);
    }
    else
    {
        Console.WriteLine("Approval submitted for: " + id
            + ", approverIds: " + approverIds.ToString() + " FAILED.");
        Console.WriteLine("Error: "
            + processResult.errors.ToString());
    }
}
}
catch (SoapException e)
{
    Console.WriteLine("An unexpected error has occurred: " +
        e.Message + "\n" + e.StackTrace);
}
}

```

ProcessSubmitRequest Arguments

Name	Type	Description
comments	string	Text that you want to accompany the submission. Don't reference merge fields or formula expressions. Submission comments appear in the approval history for the specified record. This text also appears in the initial approval request email if the template uses the <code>{!ApprovalRequest.Comments}</code> merge field.
nextApproverIds	ID	If the process requires specification of the next approval, the ID of the user to be assigned the next request.
objectId	ID	The record to submit for approval.
processDefinitionNameOrId	string	The unique name or ID of the specific approval process to which you want the record to be submitted. The process must have the same object type as the record you specified in <code>objectId</code> . Required if <code>skipEntryCriteria</code> is <code>true</code> .

Name	Type	Description
skipEntryCriteria	boolean	If <i>true</i> , the record isn't evaluated against the entry criteria set on the process that is defined in <code>processDefinitionNameOrId</code> .
submitterId	ID	The ID for the user who submitted the record for approval. The user receives notifications about responses to the approval request. The user must be one of the allowed submitters for the process.

ProcessWorkitemRequest Arguments

Name	Type	Description
action	string	For processing an item after being submitted for approval, a string representing the kind of action to take: Approve, Reject, or Remove. Only system administrators can specify Remove. If the Allow submitters to recall approval requests option is selected for the approval process, the submitter can also specify Remove.
comments	string	Text that you want to accompany the submission. Don't reference merge fields or formula expressions. Submission comments appear in the approval history for the specified record. This text also appears in the initial approval request email if the template uses the <code>{!ApprovalRequest.Comments}</code> merge field.
nextApproverIds	ID	If the process requires specification of the next approval, the ID of the user to be assigned the next request.
workitemId	ID	The ID of the ProcessInstanceWorkitem that is being approved, rejected, or removed.

Response

[NO_APPLICABLE_PROCESS](#)

SEE ALSO:

[API Call Basics](#)

ProcessResult

The `process()` call returns a `ProcessResult` object, which has the following properties, depending on the type of call (submit for approval or process object already submitted to for approval):

Name	Type	Description
actorIds	ID	IDs of the users who are currently assigned to this approval step.
entityId	ID	The object being processed.
errors	Error[]	The set of errors returned if the request failed.
instanceId	ID	The ID of the ProcessInstance associated with the object submitted for processing.
instanceStatus	string	The status of the current process instance (not an individual object but the entire process instance). The valid values are "Approved," "Rejected," "Removed," or "Pending."
newWorkItemIds	ID[]	Case-insensitive IDs that point to ProcessInstanceWorkitem items (the set of pending approval requests).
success	boolean	true if processing or approval completed successfully.

query ()

Executes a query against the specified object and returns data that matches the specified criteria.

Syntax

```
QueryResult = connection.query(string queryString);
```

Usage

Use the `query ()` call to retrieve data from an object. When a client application invokes the `query ()` call, it passes in a query expression that specifies the object to query, the fields to retrieve, and any conditions that determine whether a given object qualifies. For an extensive discussion about the syntax and rules used for queries, see the [Salesforce SOQL and SOSL Reference Guide](#).

Upon invocation, the API executes the query against the specified object, caches the results of the query on the API, and returns a query response object to the client application. The client application can then use methods on the query response object to iterate through rows in the query response and retrieve information.

Your client application must be logged in with sufficient access rights to query individual objects within the specified object and to query the fields in the specified field list. For more information, see [Factors that Affect Data Access](#).

Certain objects cannot be queried via the API. To query an object via the `query ()` call, its object must be configured as queryable. To determine whether an object can be queried, your client application can invoke the `describeObjects ()` call on the object and inspect its `queryable` property.

Tip: If you use the enterprise WSDL, you should not use `describe` to populate a select list. For example, if a system administrator adds a field to the sObject after you consume it, the `describe` call will pull down the field but your toolkit won't know how to serialize it, and your integration may fail.

You can use `queryAll ()` to query on all [Task](#) and [Event](#) records, archived or not. You can also filter on the `isArchived` field to find only the archived objects. You cannot use `query ()`, it automatically filters out all records where `isArchived` is set to `true`. You can insert, update, or delete archived records.

The query result object contains up to 500 rows of data by default. If the query results exceed 500 rows, then the client application uses the `queryMore()` call and a server-side cursor to retrieve additional rows in 500-row chunks. You can increase the default size up to 2,000 in the `QueryOptions` header. For more details see [Change the Batch Size in Queries](#) in the *SOQL and SOSL Reference*.

Queries that take longer than two minutes to process will be timed out. For timed out queries, the API returns an API fault element of `InvalidQueryLocatorFault`. If a timeout occurs, refactor your query to return or scan a smaller amount of data.

When querying for fields of type Base64 (see [base64](#)), the query response object returns only one record at a time. You cannot alter this by changing the batch size of the `query()` call.

 **Note:** For multicurrency organizations, special handling is required when querying currency fields containing values in different currencies. For example, if a client application is querying `PricebookEntry` objects based on values in the `UnitPrice` field, and if the `UnitPrice` amounts are expressed in different currencies, then the query logic must handle this case correctly. For example, if the query is trying to retrieve the product codes of all products with a unit price greater than or equal to \$10 USD, the query expression might look something like this:

```
SELECT Product2Id,ProductCode,UnitPrice FROM PricebookEntry
WHERE (UnitPrice >= 10 and CurrencyIsoCode='USD')
OR (UnitPrice >= 5.47 and CurrencyIsoCode='GBP')
OR (UnitPrice >= 8.19 and CurrencyIsoCode='EUR')
```

Sample Code—Java

This sample executes a query that fetches the first names and last names of all contacts. It calls `query()` with the query string to get the first batch of records. It then calls `queryMore()` in a loop to get subsequent batches of records until no records are returned. It writes the first and last names of the contacts queried to the console.

```
public void queryRecords() {
    QueryResult qResult = null;
    try {
        String soqlQuery = "SELECT FirstName, LastName FROM Contact";
        qResult = connection.query(soqlQuery);
        boolean done = false;
        if (qResult.getSize() > 0) {
            System.out.println("Logged-in user can see a total of "
                + qResult.getSize() + " contact records.");
            while (!done) {
                SObject[] records = qResult.getRecords();
                for (int i = 0; i < records.length; ++i) {
                    Contact con = (Contact) records[i];
                    String fName = con.getFirstName();
                    String lName = con.getLastName();
                    if (fName == null) {
                        System.out.println("Contact " + (i + 1) + ": " + lName);
                    } else {
                        System.out.println("Contact " + (i + 1) + ": " + fName
                            + " " + lName);
                    }
                }
            }
            if (qResult.isDone()) {
                done = true;
            } else {
                qResult = connection.queryMore(qResult.getQueryLocator());
            }
        }
    }
}
```

```

    }
} else {
    System.out.println("No records found.");
}
System.out.println("\nQuery successfully executed.");
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
}
}

```

Sample Code—C#

This sample executes a query that fetches the first names and last names of all contacts. It calls `query()` with the query string to get the first batch of records. It then calls `queryMore()` in a loop to get subsequent batches of records until no records are returned. It writes the first and last names of the contacts queried to the console.

```

public void queryRecords()
{
    QueryResult qResult = null;
    try
    {
        String soqlQuery = "SELECT FirstName, LastName FROM Contact";
        qResult = binding.query(soqlQuery);
        Boolean done = false;
        if (qResult.size > 0)
        {
            Console.WriteLine("Logged-in user can see a total of "
                + qResult.size + " contact records.");
            while (!done)
            {
                sObject[] records = qResult.records;
                for (int i = 0; i < records.Length; ++i)
                {
                    Contact con = (Contact)records[i];
                    String fName = con.FirstName;
                    String lName = con.LastName;
                    if (fName == null)
                    {
                        Console.WriteLine("Contact " + (i + 1) + ": " + lName);
                    }
                    else
                    {
                        Console.WriteLine("Contact " + (i + 1) + ": " + fName
                            + " " + lName);
                    }
                }
            }
            if (qResult.done)
            {
                done = true;
            }
            else
            {
                qResult = binding.queryMore(qResult.queryLocator);
            }
        }
    }
}

```

```

        }
    }
}
else
{
    Console.WriteLine("No records found.");
}
Console.WriteLine("\nQuery succesfully executed.");
}
catch (SoapException e)
{
    Console.WriteLine("An unexpected error has occurred: " +
        e.Message + "\n" + e.StackTrace);
}
}
}

```

QueryResult

The `query()` call returns a `QueryResult` object, which has the following properties:

Name	Type	Description
queryLocator	QueryLocator	A specialized string, similar to ID. Used in queryMore() for retrieving subsequent sets of objects from the query results, if applicable. Represents a server-side cursor. Each user can have up to ten query cursors open at a time.
done	boolean	Indicates whether additional rows need to be retrieved from the query results (<code>false</code>) using queryMore() , or not (<code>true</code>). Your client application can use this value as a loop condition while iterating through the query results.
records	sObject[]	Array of sObjects representing individual objects of the specified object and containing data defined in the field list specified in the queryString . For information on queries that use a <code>GROUP BY</code> clause, see AggregateResult .
size	int	Your client application can use this value to determine whether the query retrieved any rows (<code>size > 0</code>) or not (<code>size = 0</code>). Total number of rows retrieved in the query.

AggregateResult

This object contains the results returned by a [query\(\)](#) if the query contains an aggregate function, such as `MAX()`. `AggregateResult` is an [sObject](#), but unlike other `sObject` objects such as `Contact`, it is read-only and it is only used for query results.

The [QueryResult](#) object has a `records` field that is an array of `sObject` records matching your query. For example, the following query returns an array of `Contact` records in the `records` field.

```
SELECT Id, LastName
FROM Contact
WHERE FirstName = 'Bob'
```

When a SOQL query contains an aggregate function, the results are a set of aggregated data instead of an array of records for a standard object, such as `Contact`. Therefore, the `records` field returns an array of `AggregateResult` records.

For more information on aggregate functions, see "Aggregate Functions" in the [Salesforce SOQL and SOSL Reference Guide](#).

Fields

Each `AggregateResult` object contains a separate field for each of the items in the `SELECT` list. For the enterprise WSDL, retrieve the result for each item by calling `getField()` on an `AggregateResult` object when using WSC client framework. For the partner WSDL, retrieve the result for each item by calling `getField()` on an `sObject` object.

See [Sample Code—Java](#) and [Sample Code—C#](#) for examples that work with the enterprise WSDL.

Sample Code—Java

```
public void queryAggregateResult() {
    try {
        String groupByQuery = "SELECT Account.Name n, " +
            "MAX(Amount) max, MIN(Amount) min " +
            "FROM Opportunity GROUP BY Account.Name";
        QueryResult qr = connection.query(groupByQuery);
        if (qr.getSize() > 0) {
            System.out.println("Query returned " +
                qr.getRecords().length + " results."
            );
        }
    }
}
```

```

);
for (SObject sObj : qr.getRecords()) {
    AggregateResult result = (AggregateResult) sObj;
    System.out.println("aggResult.Account.Name: " +
        result.getField("n")
    );
    System.out.println("aggResult.max: " +
        result.getField("max")
    );
    System.out.println("aggResult.min: " +
        result.getField("min")
    );
    System.out.println();
}
} else {
    System.out.println("No results found.");
}
System.out.println("\nQuery successfully executed.");
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
}
}

```

Sample Code—C#

```

private void testAggregateResult()
{
    try
    {
        QueryResult qr = null;

        binding.QueryOptionsValue = new QueryOptions();

        String sqlStr = "SELECT Name, " +
            "MAX(Amount), " +
            "MIN(Amount) " +
            "FROM Opportunity " +
            "GROUP BY Name";

        qr = binding.query(sqlStr);

        if (qr.size > 0)
        {
            for (int i = 0; i < qr.records.Length; i++)
            {

                sforce.AggregateResult ar = (AggregateResult)qr.records[i];

                foreach (XmlElement e in ar.Any)
                    Console.WriteLine(
                        "{0} - {1}",
                        e.LocalName,

```

```

                e.InnerText
            );
        }
    }
    else
    {
        Console.WriteLine("No records found");
    }
    Console.WriteLine("Query successfully executed.");
}
catch (Exception ex)
{
    Console.WriteLine(
        "\nFailed to execute query successfully." +
        "error message was: \n" +
        ex.Message
    );
}
}
}

```

QueryLocator

In the [QueryResult](#) object returned by the `query()` call, `queryLocator` contains a value that you use in the subsequent `queryMore()` call. Note the following guidelines:

- Use a given `queryLocator` value only one time. When you pass it in a `queryMore()` call, the API returns a new `queryLocator` in the [QueryResult](#).
- `QueryLocator` objects expire automatically after 15 minutes of inactivity.
- A user can have up to 10 query cursors open at a time. If 10 `QueryLocator` cursors are open when a client application, logged in as the same user, attempts to open a new one, then the oldest of the 10 cursors is released. If the client application attempts to open the released query cursor, an error results.

 **Note:** Cursor limits for different Lightning Platform features are tracked separately. For example, you can have 10 SOAP API query cursors, 10 Metadata API cursors, and 50 Apex query cursors open at the same time.

A `QueryLocator` represents a server-side cursor.

queryAll()

 **[other]:** Where possible, we changed noninclusive terms to align with our company value of Equality. We maintained certain terms to avoid any effect on customer implementations.

Retrieves data from specified objects, whether or not they have been deleted.

Syntax

```
QueryResult = connection.queryAll(string queryString);
```

Usage

Use `queryAll` to identify the records that have been deleted because of a merge or delete. `queryAll` has read-only access to the field `isDeleted`; otherwise it is the same as `query()`.

To find records that have been deleted (in preparation for undeleting them with the `undelete()` call), specify `isDeleted = true` in the query string, and for merged records, request the `masterRecord`. For example:

```
SELECT id, isDeleted, masterRecordId FROM Account WHERE masterRecordId='100000000000Abc'
```

You can use `queryAll()` to query on all `Task` and `Event` records, archived or not. You can also filter on the `isArchived` field to find only the archived objects. You cannot use `query()` as it automatically filters out all records where `isArchived` is set to `true`. You can update or delete archived records, though you cannot update the `isArchived` field. If you use the API to insert activities that meet the criteria listed below, the activities will be archived during the next run of the archival background process.

Because Salesforce doesn't track changes to external data, `queryAll()` behaves the same as `query()` for external objects.

For additional information about using `queryAll`, see `query()`.

Sample Code—Java

This sample performs a query to get all the accounts, whether they're deleted or not. It sets a custom batch size of 250 records. It fetches all batches of records by calling `queryAll()` the first time and then `queryMore()`. The names and the value of the `isDeleted` fields of all returned accounts are written to the console.

```
public void queryAllRecords() {
    // Setting custom batch size
    connection.setQueryOptions(250);

    try {
        String soqlQuery = "SELECT Name, IsDeleted FROM Account";
        QueryResult qr = connection.queryAll(soqlQuery);
        boolean done = false;
        if (qr.getSize() > 0) {
            System.out.println("Logged-in user can see a total of "
                + qr.getSize()
                + " contact records (including deleted records).");
            while (!done) {
                SObject[] records = qr.getRecords();
                for (int i = 0; i < records.length; i++) {
                    Account account = (Account) records[i];
                    boolean isDel = account.getIsDeleted();
                    System.out.println("Account " + (i + 1) + ": "
                        + account.getName() + " isDeleted = "
                        + account.getIsDeleted());
                }
                if (qr.isDone()) {
                    done = true;
                } else {
                    qr = connection.queryMore(qr.getQueryLocator());
                }
            }
        } else {
            System.out.println("No records found.");
        }
    }
}
```

```

    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}

```

Sample Code—C#

This sample performs a query to get all the accounts, whether they're deleted or not. It sets a custom batch size of 250 records. It fetches all batches of records by calling `queryAll()` the first time and then `queryMore()`. The names and the value of the `isDeleted` fields of all returned accounts are written to the console.

```

public void queryAllRecords()
{
    // Setting custom batch size
    QueryOptions qo = new QueryOptions();
    qo.batchSize = 250;
    qo.batchSizeSpecified = true;
    binding.QueryOptionsValue = qo;

    try
    {
        String sqlQuery = "SELECT Name, IsDeleted FROM Account";
        QueryResult qr = binding.queryAll(sqlQuery);
        Boolean done = false;
        if (qr.size > 0)
        {
            Console.WriteLine("Logged-in user can see a total of "
                + qr.size
                + " contact records (including deleted records).");
            while (!done)
            {
                sObject[] records = qr.records;
                for (int i = 0; i < records.Length; i++)
                {
                    Account account = (Account)records[i];
                    Boolean isDel = (Boolean)account.IsDeleted;
                    Console.WriteLine("Account " + (i + 1) + ": "
                        + account.Name + " isDeleted = "
                        + account.IsDeleted);
                }
                if (qr.done)
                {
                    done = true;
                }
                else
                {
                    qr = binding.queryMore(qr.queryLocator);
                }
            }
        }
        else
        {
            Console.WriteLine("No records found.");
        }
    }
}

```

```

    }
}
catch (SoapException e)
{
    Console.WriteLine("An unexpected error has occurred: " +
        e.Message + "\n" + e.StackTrace);
}
}

```

Arguments

Name	Type	Description
queryString	string	Query string that specifies the object to query, the fields to return, and any conditions for including a specific object in the query. For more information, see the Salesforce SOQL and SOSL Reference Guide .

Response

Faults

[MalformedQueryFault](#)

[InvalidObjectFault](#)

[InvalidFieldFault](#)

[UnexpectedErrorFault](#)

SEE ALSO:

[API Call Basics](#)

[queryMore\(\)](#)

queryMore ()

Retrieves the next batch of objects from a [query \(\)](#).

Syntax

```
QueryResult = connection.queryMore( QueryLocator QueryLocator);
```

Usage

Use this call to process [query \(\)](#) calls that retrieve a large number of records (by default, more than 500) in the result set. The [query \(\)](#) call retrieves the first 500 records and creates a server-side cursor that is represented in the [queryLocator](#) object. The [queryMore \(\)](#)

call processes subsequent records in up to 500-record chunks, resets the server-side cursor, and returns a newly generated [QueryLocator](#). To iterate through records in the result set, you generally call `queryMore()` repeatedly until all records in the result set have been processed (the `Done` flag is `true`). You can change the maximum number of records returned to up to 2,000. See [Change the Batch Size in Queries](#) in the [Salesforce SOQL and SOSL Reference Guide](#) for more information.

You can't use `queryMore()` if a query includes a `GROUP BY` clause. See [GROUP BY](#) and `queryMore()` in the [Salesforce SOQL and SOSL Reference Guide](#) for more information.

 **Note:** A `queryMore()` call on a parent object invalidates all child cursors in the previous result set. If you need the results from the child, you must use `queryMore()` on those results before using `queryMore()` on the parent results.

When querying external objects, Salesforce Connect accesses the external data in real time via Web service callouts. Each `queryMore()` call results in a Web service callout. The batch boundaries and page sizes depend on your adapter and how you set up the external data source.

We recommend the following:

- When possible, avoid paging by filtering your queries of external objects to return fewer rows than the batch size, which by default is 500 rows. Remember, obtaining each batch requires a `queryMore()` call, which results in a Web service callout.
- If the external data frequently changes, avoid using `queryMore()` calls. If the external data is modified between `queryMore()` calls, you can get an unexpected `QueryResult`.

If the primary or “driving” object for a `SELECT` statement is an external object, `queryMore()` supports only that primary object and doesn't support subqueries.

By default, the OData 2.0 and 4.0 adapters for Salesforce Connect use client-driven paging. With client-driven paging, OData adapters convert each `queryMore()` call into an OData query that uses the `$skip` and `$top` system query options to specify the batch boundary and page size. These options are similar to using `LIMIT` and `OFFSET` clauses to page through a result set. If you enable server-driven paging on an external data source, Salesforce ignores the requested page sizes, including the default `queryMore()` batch size of 500 rows. The pages returned by the external system determine the batches, but each page can't exceed 2,000 rows.

Sample Code—Java

This sample executes a query that fetches the first names and last names of all contacts. It calls `query()` with the query string to get the first batch of records. It then calls `queryMore()` in a loop to get subsequent batches of records until no records are returned. It writes the first and last names of the contacts queried to the console.

```
public void queryRecords() {
    QueryResult qResult = null;
    try {
        String soqlQuery = "SELECT FirstName, LastName FROM Contact";
        qResult = connection.query(soqlQuery);
        boolean done = false;
        if (qResult.getSize() > 0) {
            System.out.println("Logged-in user can see a total of "
                + qResult.getSize() + " contact records.");
            while (!done) {
                SObject[] records = qResult.getRecords();
                for (int i = 0; i < records.length; ++i) {
                    Contact con = (Contact) records[i];
                    String fName = con.getFirstName();
                    String lName = con.getLastName();
                    if (fName == null) {
                        System.out.println("Contact " + (i + 1) + ": " + lName);
                    } else {
```

```

        System.out.println("Contact " + (i + 1) + ": " + fName
            + " " + lName);
    }
}
if (qResult.isDone()) {
    done = true;
} else {
    qResult = connection.queryMore(qResult.getQueryLocator());
}
}
} else {
    System.out.println("No records found.");
}
System.out.println("\nQuery succesfully executed.");
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
}
}

```

Sample Code—C#

This sample executes a query that fetches the first names and last names of all contacts. It calls `query()` with the query string to get the first batch of records. It then calls `queryMore()` in a loop to get subsequent batches of records until no records are returned. It writes the first and last names of the contacts queried to the console.

```

public void queryRecords()
{
    QueryResult qResult = null;
    try
    {
        String soqlQuery = "SELECT FirstName, LastName FROM Contact";
        qResult = binding.query(soqlQuery);
        Boolean done = false;
        if (qResult.size > 0)
        {
            Console.WriteLine("Logged-in user can see a total of "
                + qResult.size + " contact records.");
            while (!done)
            {
                sObject[] records = qResult.records;
                for (int i = 0; i < records.Length; ++i)
                {
                    Contact con = (Contact)records[i];
                    String fName = con.FirstName;
                    String lName = con.LastName;
                    if (fName == null)
                    {
                        Console.WriteLine("Contact " + (i + 1) + ": " + lName);
                    }
                    else
                    {
                        Console.WriteLine("Contact " + (i + 1) + ": " + fName
                            + " " + lName);
                    }
                }
            }
        }
    }
}

```

```
        }
    }
    if (qResult.done)
    {
        done = true;
    }
    else
    {
        qResult = binding.queryMore(qResult.queryLocator);
    }
}
}
else
{
    Console.WriteLine("No records found.");
}
Console.WriteLine("\nQuery succesfully executed.");
}
catch (SoapException e)
{
    Console.WriteLine("An unexpected error has occurred: " +
        e.Message + "\n" + e.StackTrace);
}
}
```

Arguments

Name	Type	Description
queryLocator	QueryLocator	Represents the server-side cursor that tracks the current processing location in the query result set.

Response

[QueryResult](#)

Faults

[InvalidQueryLocatorFault](#)

[UnexpectedErrorFault](#)

SEE ALSO:

[query\(\)](#)

[API Call Basics](#)

[Change the Batch Size in Queries](#)

QueryResult

The `queryMore ()` call returns a `QueryResult` object, which has the following properties:

Name	Type	Description
<code>queryLocator</code>	<code>QueryLocator</code>	A specialized string, similar to ID. Used in the subsequent <code>queryMore ()</code> call for retrieving sets of objects from the query results, if applicable.
<code>done</code>	boolean	Indicates whether additional rows need to be retrieved from the query results (<code>false</code>) using another <code>queryMore ()</code> call, or not (<code>true</code>). Your client application can use this value as a loop condition while iterating through the query results.
<code>records</code>	<code>sObject[]</code>	Array of <code>sObjects</code> representing individual objects of the specified object and containing data defined in the field list specified in the <code>queryString</code> .
<code>size</code>	int	Total number of rows retrieved in the query. Your client application can use this value to determine whether the query retrieved any rows (<code>size != 0</code>) or not (<code>size = 0</code>). When querying external objects, the system may not know the number of rows that are retrieved from the external data source. If this situation occurs, <code>size = -1</code> .

 **Note:** A `queryMore ()` call on a parent object invalidates all child cursors in the previous result set. If you need the results from the child, you must use `queryMore ()` on those results before using `queryMore ()` on the parent results.

QueryLocator

In the `QueryResult` object returned by the `queryMore ()` call, `queryLocator` contains a value that you will use in the subsequent `queryMore ()` call. Note the following guidelines for using this value:

- Use a `queryLocator` only once. When you pass it in a `queryMore ()` call, the API returns a new `queryLocator` in the `QueryResult`.
- The `queryLocator` value expires automatically after 15 minutes of inactivity.
- A user can have up to ten query cursors open at a time. If ten `QueryLocator` cursors are opened when a client application with the same logged-in user attempts to open a new cursor, then the oldest of the ten cursors is released.
- You can't use a custom metadata query as a `queryLocator`.

A `QueryLocator` represents a server-side cursor.

 **Note:** A `queryMore ()` call on a parent object invalidates all child cursors in the previous result set. If you need the results from the child, you must use `queryMore ()` on those results before using `queryMore ()` on the parent results.

retrieve ()

Retrieves one or more records based on the specified IDs.

Syntax

```
sObject[] result = connection.retrieve(string fieldList, string sObjectType, ID ids[]);
```

Usage

Use the `retrieve()` call to retrieve individual records from an object. The client application passes the list of fields to retrieve, the object, and an array of record IDs to retrieve. The `retrieve()` call does not return records that have been deleted.

In general, you use `retrieve()` when you know in advance the IDs of the records to retrieve. Use `query()` instead to obtain records when you do not know the IDs or when you want to specify other selection criteria.

Client applications can use `retrieve()` to perform a client-side join. For example, a client application can run a `query()` to obtain a set of [Opportunity](#) records, iterate through the returned opportunity records, obtain the `accountId` for each opportunity, and then call `retrieve()` to obtain [Account](#) information for those `accountIds`.

Records for certain objects cannot be retrieved via the API. To retrieve a record via the `retrieve()` call, its object must be configured as retrieveable (`retrieveable` is `true`). To determine whether an object can be retrieved, your client application can invoke the [describeSObjects\(\)](#) call on the object and inspect its `retrieveable` property.

Your client application must be logged in with sufficient access rights to retrieve records within the specified object and to retrieve the fields in the specified field list. For more information, see [Factors that Affect Data Access](#).

Sample Code—Java

This sample retrieves the Id, Name, and Website of the specified Account records. It writes the fields of the retrieved records to the console.

```
public void retrieveRecords(String[] ids) {
    try {
        SObject[] sObjects = connection.retrieve("ID, Name, Website",
            "Account", ids);
        // Verify that some objects were returned.
        // Even though we began with valid object IDs,
        // someone else might have deleted them in the meantime.
        if (sObjects != null) {
            for (int i = 0; i < sObjects.length; i++) {
                // Cast the SObject into an Account object
                Account retrievedAccount = (Account) sObjects[i];
                if (retrievedAccount != null) {
                    System.out.println("Account ID: " + retrievedAccount.getId());
                    System.out.println("Account Name: " + retrievedAccount.getName());
                    System.out.println("Account Website: "
                        + retrievedAccount.getWebsite());
                }
            }
        }
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

Sample Code—C#

This sample retrieves the Id, Name, and Website of the specified Account records. It writes the fields of the retrieved records to the console.

```
public void retrieveRecords(String[] ids)
{
    try
    {
        sObject[] sObjects = binding.retrieve("ID, Name, Website",
            "Account", ids);
        // Verify that some objects were returned.
        // Even though we began with valid object IDs,
        // someone else might have deleted them in the meantime.
        if (sObjects != null)
        {
            for (int i = 0; i < sObjects.Length; i++)
            {
                // Cast the SObject into an Account object
                Account retrievedAccount = (Account)sObjects[i];
                if (retrievedAccount != null)
                {
                    Console.WriteLine("Account ID: " + retrievedAccount.Id);
                    Console.WriteLine("Account Name: " + retrievedAccount.Name);
                    Console.WriteLine("Account Website: "
                        + retrievedAccount.Website);
                }
            }
        }
    }
    catch (SoapException e)
    {
        Console.WriteLine("An unexpected error has occurred: " +
            e.Message + "\n" + e.StackTrace);
    }
}
```

Arguments

Name	Type	Description
fieldList	string	List of one or more fields in the specified object, separated by commas. You must specify valid field names and must have read-level permissions to each specified field. The fieldList defines the ordering of fields in the result .
sObjectType	string	Object from which to retrieve data. The specified value must be a valid object for your organization. For a complete list of objects, see Standard Objects .
ids	ID[]	Array of one or more IDs of the objects to retrieve. You can pass a maximum of 2000 object IDs to the <code>retrieve()</code> call. For information on IDs, see ID Field Type .

Response

Name	Type	Description
result	sObject[]	Array of one or more sObjects representing individual records of the specified object. The number of sObject returned in the array matches the number of IDs passed into the <code>retrieve()</code> call. If you do not have access to an object or if a passed ID is invalid, the array returns <code>null</code> for that object. For information on IDs, see ID Field Type .

[UnexpectedErrorFault](#)

SEE ALSO:

[API Call Basics](#)

search ()

Executes a text search in your organization's data.

Syntax

```
SearchResult = connection.search(String searchString);
```

Usage

Use [search\(\)](#) to search for records based on a search string. The search call supports searching custom objects. For an extensive discussion about the syntax and rules used for text searches, see the [Salesforce SOQL and SOSL Reference Guide](#).

Certain objects cannot be searched via the API, such as [Attachment](#) objects. To search an object via the `search()` call, the object must be configured as searchable (`isSearchable` is `true`). To determine whether an object can be searched, your client application can invoke the [describeObjects\(\)](#) call on the object and inspect its `searchable` property.

Sample Code—Java

This sample makes the `search()` call by passing it a SOSL query, which returns contacts, leads, and accounts whose phone fields contain a specified value. Next, it gets the sObject records from the results and stores the records in arrays depending on the record type. Finally, it writes the fields of the returned contacts, leads, and accounts to the console.

```
public void searchSample() {
    try {
        // Perform the search using the SOSL query.
        SearchResult sr = connection.search(
            "FIND {4159017000} IN Phone FIELDS RETURNING "
```

```
+ "Contact(Id, Phone, FirstName, LastName), "  
+ "Lead(Id, Phone, FirstName, LastName), "  
+ "Account(Id, Phone, Name)");  
  
// Get the records from the search results.  
SearchRecord[] records = sr.getSearchRecords();  
  
ArrayList<Contact> contacts = new ArrayList<Contact>();  
ArrayList<Lead> leads = new ArrayList<Lead>();  
ArrayList<Account> accounts = new ArrayList<Account>();  
  
// For each record returned, find out if it's a  
// contact, lead, or account and add it to the  
// appropriate array, then write the records  
// to the console.  
if (records.length > 0) {  
    for (int i = 0; i < records.length; i++) {  
        SObject record = records[i].getRecord();  
        if (record instanceof Contact) {  
            contacts.add((Contact) record);  
        } else if (record instanceof Lead) {  
            leads.add((Lead) record);  
        } else if (record instanceof Account) {  
            accounts.add((Account) record);  
        }  
    }  
}  
  
System.out.println("Found " + contacts.size() + " contacts.");  
for (Contact c : contacts) {  
    System.out.println(c.getId() + ", " + c.getFirstName() + ", "  
+ c.getLastName() + ", " + c.getPhone());  
}  
System.out.println("Found " + leads.size() + " leads.");  
for (Lead d : leads) {  
    System.out.println(d.getId() + ", " + d.getFirstName() + ", "  
+ d.getLastName() + ", " + d.getPhone());  
}  
System.out.println("Found " + accounts.size() + " accounts.");  
for (Account a : accounts) {  
    System.out.println(a.getId() + ", " + a.getName() + ", "  
+ a.getPhone());  
}  
} else {  
    System.out.println("No records were found for the search.");  
}  
} catch (Exception ce) {  
    ce.printStackTrace();  
}  
}
```

Sample Code—C#

This sample makes the `search()` call by passing it a SOSL query, which returns contacts, leads, and accounts whose phone fields contain a specified value. Next, it gets the sObject records from the results and stores the records in arrays depending on the record type. Finally, it writes the fields of the returned contacts, leads, and accounts to the console.

```
public void searchSample()
{
    try
    {
        // Perform the search using the SOSL query.
        SearchResult sr = binding.search(
            "FIND {4159017000} IN Phone FIELDS RETURNING "
            + "Contact(Id, Phone, FirstName, LastName), "
            + "Lead(Id, Phone, FirstName, LastName), "
            + "Account(Id, Phone, Name)");

        // Get the records from the search results.
        SearchRecord[] records = sr.searchRecords;

        List<Contact> contacts = new List<Contact>();
        List<Lead> leads = new List<Lead>();
        List<Account> accounts = new List<Account>();

        // For each record returned, find out if it's a
        // contact, lead, or account and add it to the
        // appropriate array, then write the records
        // to the console.
        if (records.Length > 0)
        {
            for (int i = 0; i < records.Length; i++)
            {
                sObject record = records[i].record;
                if (record is Contact)
                {
                    contacts.Add((Contact)record);
                }
                else if (record is Lead)
                {
                    leads.Add((Lead)record);
                }
                else if (record is Account)
                {
                    accounts.Add((Account)record);
                }
            }

            Console.WriteLine("Found " + contacts.Count + " contacts.");
            foreach (Contact c in contacts)
            {
                Console.WriteLine(c.Id + ", " +
                    c.FirstName + ", " +
                    c.LastName + ", " +
                    c.Phone);
            }
        }
    }
}
```

```

    }
    Console.WriteLine("Found " + leads.Count + " leads.");
    foreach (Lead d in leads)
    {
        Console.WriteLine(d.Id + ", " +
            d.FirstName + ", " +
            d.LastName + ", " +
            d.Phone);
    }
    Console.WriteLine("Found " + accounts.Count + " accounts.");
    foreach (Account a in accounts)
    {
        Console.WriteLine(a.Id + ", " +
            a.Name + ", " +
            a.Phone);
    }
}
else
{
    Console.WriteLine("No records were found for the search.");
}
}
catch (SoapException e)
{
    Console.WriteLine("An unexpected error has occurred: " +
        e.Message + "\n" + e.StackTrace);
}
}

```

Arguments

Name	Type	Description
search	string	Search string that specifies the text expression to search for, the scope of fields to search, the list of objects and fields to retrieve, and the maximum number of records to return. For more information, see the Salesforce SOQL and SOSL Reference Guide .

SearchResult

The `search()` call returns a `SearchResult` object, which has the following properties.

Name	Type	Description
<code>queryId</code>	string	Unique identifier for the SOSL search.
<code>searchRecords</code>	SearchRecord[]	Array of <code>SearchRecord</code> objects, each of which contains an sObject .
<code>searchResultsMetadata</code>	SearchResultsMetadata	Metadata for <code>SearchRecords</code> .

SearchRecord

Represents an individual record returned from a search.

Name	Type	Description
<code>record</code>	sObject	The individual record returned by the search.
<code>searchRecordMetadata</code>	SearchRecordMetadata	Metadata for <code>searchRecords</code> .
<code>snippet</code>	SearchSnippet	On the search results page, shows terms that match the search string, highlighted within the surrounding text.

SearchRecordMetadata

Metadata for search results at the record level.

Name	Type	Description
<code>searchPromoted</code>	boolean	Indicates that an article has been promoted in search results. Admins define promoted search terms by adding promoted terms to knowledge articles. Users who search for these keywords see the article first in search results. Available in API version 42.0 and later.
<code>spellCorrected</code>	boolean	Indicates that a record matches a spell-corrected search term. Appears in the response only when true.

SearchSnippet

Excerpts shown on search results pages for article, case, feed, and idea searches.

Name	Type	Description
text	string	The excerpt that contains the match for the search term.
wholeFields	WholeFields	The list of highlighted fields.

WholeFields

Contains the complete text of each field that contains highlighting for terms that match the search query. The highlighted terms are surrounded by <mark> tags.

Name	Type	Description
name	string	The name of the highlighted field.
value	string	The highlighted text.

SearchResultsMetadata

Global metadata for the search result.

Name	Type	Description
entityMetadata	EntitySearchMetadata	Search results metadata at the object level.

EntitySearchMetadata

Metadata for search results at the object level.

Name	Type	Description
fieldMetadata	FieldLevelSearchMetadata	Metadata for search results at the field level.
searchPromotedMetadata	EntitySearchPromotionMetadata	Metadata for search term promotion at the object level. Available in API version 42.0 and later.
spellCorrectionMetadata	EntitySpellCorrectionMetadata	Metadata for spelling correction at the object level.
entityName	string	Identifies the object.

FieldLevelSearchMetadata

Metadata for search results at the field level.

Name	Type	Description
name	string	The field name.
label	string	The field label.
type	string	The field type.

EntitySearchPromotionMetadata

Metadata for search term promotion at the object level. Appears in the response only when at least one article for an object is a promoted result. Available in API version 42.0 and later.

Name	Type	Description
<code>promotedResultCount</code>	<code>int</code>	Count of promoted article results at the object level.

EntitySpellCorrectionMetadata

Metadata for spelling correction at the object level. Appears in the response only when at least one record for an object matches a spell-corrected search term.

Name	Type	Description
<code>correctedQuery</code>	<code>string</code>	The spell-corrected search term.
<code>hasNonCorrectedResults</code>	<code>boolean</code>	If <code>true</code> , indicates that the user has access to at least one record that matches a search term that wasn't spell-corrected. Each object sometimes returns a different value.

SEE ALSO:

[WITH SNIPPET](#)

[WITH SPELL_CORRECTION](#)

undelete ()

Undeletes records from the Recycle Bin.

Syntax

```
UndeleteResult[] = connection.undelete(ID[] ids );
```

Usage

Use this call to restore any deleted record that is undeletable. Undeletable records include those in the Recycle Bin. Records can be put in the Recycle Bin as the result of a [merge \(\)](#) or [delete \(\)](#) call. You can identify deleted records, including records deleted as the result of a merge, using the [queryAll \(\)](#) call.

You should verify that a record can be undeleted before attempting to delete it. Some records cannot be undeleted, for example, [Account](#) records can be undeleted, but not [AccountTeamMember](#) records. To verify that a record can be undeleted, check that the value of the [undeletable](#) flag in the [DescribeSObjectResult](#) for that object is set to `true`.

Since a delete call cascade-deletes child records, an undelete call will undelete the cascade-deleted records. For example, deleting an account will delete all the contacts associated with that account.

You can undelete records that were deleted as the result of a merge, but the child objects will have been re-parented, which cannot be undone.

 **Note:** Starting with API version 15.0, if you specify a value for a field that contains a string, and the value is too big for the field, the call fails and an error is returned. In previous versions of the API the value was truncated and the call succeeded. If you wish to keep the old behavior with versions 15.0 and later, use the [AllowFieldTruncationHeader](#) SOAP header.

This call supports the [AllOrNoneHeader](#), [AllowFieldTruncationHeader](#), and [CallOptions](#) headers.

Rollback on Error

The [AllOrNoneHeader](#) header allows you to roll back all changes unless all records are processed successfully. This header is available in API version 20.0 and later. Allows a call to roll back all changes unless all records are processed successfully.

Sample Code—Java

This sample calls `queryAll()` to get the last five deleted accounts. It then passes the IDs of these accounts to `undelete()`, which restores these accounts. Finally, it checks the results of the call and writes the IDs of the restored accounts or any errors to the console.

```
public void undeleteRecords() {
    try {
        // Get the accounts that were last deleted
        // (up to 5 accounts)
        QueryResult qResult = connection
            .queryAll("SELECT Id, SystemModstamp FROM "
                + "Account WHERE IsDeleted=true "
                + "ORDER BY SystemModstamp DESC LIMIT 5");

        String[] Ids = new String[qResult.getSize()];
        // Get the IDs of the deleted records
        for (int i = 0; i < qResult.getSize(); i++) {
            Ids[i] = qResult.getRecords()[i].getId();
        }

        // Restore the records
        UndeleteResult[] undeleteResults = connection.undelete(Ids);

        // Check the results
        for (UndeleteResult result : undeleteResults) {
            if (result.isSuccess()) {
                System.out.println("Undeleted Account ID: " + result.getId());
            } else {
                if (result.getErrors().length > 0) {
                    System.out.println("Error message: "
                        + result.getErrors()[0].getMessage());
                }
            }
        }
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

Sample Code—C#

This sample calls `queryAll()` to get the last five deleted accounts. It then passes the IDs of these accounts to `undelete()`, which restores these accounts. Finally, it checks the results of the call and writes the IDs of the restored accounts or any errors to the console.

```
public void undeleteRecords()
{
    try
    {
        // Get the accounts that were last deleted
        // (up to 5 accounts)
        QueryResult qResult = binding.queryAll(
            "SELECT Id, SystemModstamp FROM " +
            "Account WHERE IsDeleted=true " +
            "ORDER BY SystemModstamp DESC LIMIT 5");

        String[] Ids = new String[qResult.size];
        // Get the IDs of the deleted records
        for (int i = 0; i < qResult.size; i++)
        {
            Ids[i] = qResult.records[i].Id;
        }

        // Restore the records
        UndeleteResult[] undeleteResults = binding.undelete(Ids);

        // Check the results
        foreach (UndeleteResult result in undeleteResults)
        {
            if (result.success)
            {
                Console.WriteLine("Undeleted Account ID: " +
                    result.id);
            }
            else
            {
                if (result.errors.Length > 0)
                {
                    Console.WriteLine("Error message: " +
                        result.errors[0].message);
                }
            }
        }
    }
    catch (SoapException e)
    {
        Console.WriteLine("An unexpected error has occurred: " +
            e.Message + "\n" + e.StackTrace);
    }
}
```

Arguments

Name	Type	Description
<code>ids</code>	<code>ID[]</code>	IDs of the records to be restored.

Response

[UndeleteResult](#)

Faults

[UnexpectedErrorFault](#)

SEE ALSO:

[delete\(\)](#)

UndeleteResult

The `undelete()` call returns an `undeleteResult` object with the following properties:

Name	Type	Description
<code>id</code>	<code>ID</code>	ID of the record being undeleted.
<code>success</code>	<code>boolean</code>	Indicates whether the undelete was successful (<code>true</code>) or not (<code>false</code>).
<code>errors</code>	<code>Error[]</code>	If an error occurred during the <code>undelete()</code> call, an array of one or more <code>Error</code> objects providing the error code and description.

`update()`

Updates one or more existing records in your organization's data.

Syntax

```
SaveResult[] = connection.update(sObject[] sObjects);
```

Usage

Use this call to update one or more existing records, such as accounts or contacts, in your organization's data. The `update()` call is analogous to the `UPDATE` statement in SQL.

Permissions

Your client application must be logged in with sufficient access rights to `update()` records objects for the specified object, as well as individual fields inside that object. For more information, see [Factors that Affect Data Access](#).

Special Handling

Certain objects—and certain fields within those objects—require special handling or permissions. For example, you might also need permissions to access an object's parent object. Before you attempt to update a record for a particular object, be sure to read its description in the [Standard Objects](#) and in the Salesforce online help.

Updateable Objects

Certain records cannot be updated via the API. To update a record via the `update()` call, its object must be configured as updateable (`updateable` is `true`). To determine whether an object can be updated, your client application can invoke the `describeSObjects()` call on the object and inspect its `updateable` property.

Required Fields

When updating required fields, you must supply a value—you cannot set the value to `null`. For more information, see [Required Fields](#).

ID Fields

Fields whose names contain "Id" are either that object's primary key (see [ID Field Type](#)) or a foreign key (see [Reference Field Type](#)). Client applications cannot update primary keys, but they can update foreign keys. For example, a client application can update the `OwnerId` of an [Account](#), because `OwnerId` is a foreign key that refers to the user who owns the account record. Use `describeSObjects()` to confirm whether the field can be updated.

This call checks a batch for duplicate `Id` values, and if there are duplicates, the first 12 are processed. For additional duplicate `Id` values, the [SaveResult](#) for those entries is marked with an error similar to the following:

```
Maximum number of duplicate updates in one batch (12 allowed).
```

Automatically Updated Fields

The API updates certain fields automatically, such as `LastModifiedDate`, `LastModifiedById`, and `SystemModstamp`. You cannot explicitly specify these values in your `update()` call.

Resetting Values to null

To reset a field value to `null`, you add the field name to the `fieldsToNull` array in the `sObject`. You cannot set required fields (`nillable` is `false`) to `null`.

Valid Field Values

You must supply values that are valid for the field's data type, such as integers (not alphabetic characters) for integer fields. In your client application, follow the data formatting rules specified for your programming language and development tool (your development tool will handle the appropriate mapping of data types in SOAP messages).

String Values

When storing values in string fields, the API trims any leading and trailing white space. For example, if the value of a name field is entered as " ABC Company ", then the value is stored in the database as "ABC Company".

Starting with API version 15.0, if you specify a value for a field that contains a string, and the value is too big for the field, the call fails and an error is returned. In previous versions of the API the value was truncated and the call succeeded. If you wish to keep the old behavior with versions 15.0 and later, use the [AllowFieldTruncationHeader](#) SOAP header.

Assignment Rules

When updating Case or Lead objects, your client application can set [AssignmentRuleHeader](#) options to have the case or lead automatically assigned to one or more users based on assignment rules configured in the Salesforce user interface. For more information, see [Case](#) or [Lead](#).

Maximum Number of Objects Updated

Your client application can change up to 200 records in a single `update()` call. If an update request exceeds 200 records, the entire operation fails.

Rollback on Error

The [AllOrNoneHeader](#) header allows you to roll back all changes unless all records are processed successfully. This header is available in API version 20.0 and later. Allows a call to roll back all changes unless all records are processed successfully.

Automatic Subscriptions for Chatter Feeds

To subscribe to records they create, users must enable the `Automatically follow records that I create` option in their personal settings. If users have automatic subscriptions enabled, they automatically follow the records they create and see changes to those records in their Chatter feed on the Home tab.

When you update the owner of a record, the new owner is not automatically subscribed to the record, unless the new owner has automatic subscriptions for records enabled in his or her Chatter feed settings. The previous owner is not automatically unsubscribed. If the new owner has automatic subscriptions for records enabled, the new and previous owners both see any changes to the record in their news feed.

A user can subscribe to a record or to another user. Changes to the record and updates from the users are displayed in the Chatter feed on the user's home page, which is a useful way to stay up-to-date with other users and with changes made to records in Salesforce. Feeds are available in API version 18.0 and later.

Updating Records for Different Object Types

You can update records for multiple object types, including custom objects, in one call with API version 20.0 and later. For example, you could update a contact and an account in one call. You can update records for up to 10 objects types in one call.

Records are saved in the same order that they are entered in the `sObjects` input array.

Records for different object types are broken into multiple chunks by Salesforce. A chunk is a subset of the `sObjects` input array and each chunk contains records of one object type. Data is committed on a chunk-by-chunk basis. Any Apex triggers related to the records in a chunk are invoked once per chunk. Consider an `sObjects` input array containing the following set of records:

```
account1, account2, contact1, contact2, contact3, case1, account3, account4, contact4
```

Salesforce splits the records into five chunks:

1. `account1, account2`
2. `contact1, contact2, contact3`
3. `case1`
4. `account3, account4`
5. `contact4`

Each call can process up to 10 chunks. If the `sObjects` array contains more than 10 chunks, you must process the records in more than one call.

 **Warning:** You can't update records for multiple object types in one call if one of those types is related to a feature in the Setup area in Salesforce. The only exceptions are the following objects:

- Custom settings objects, which are similar to custom objects. For more information, see “Create Custom Settings” in the Salesforce online help.
- `GroupMember`
- `Group`
- `User` if the following fields are not being updated:
 - `UserRoleId`
 - `IsActive`
 - `ForecastEnabled`
 - `IsPortalEnabled`
 - `Username`
 - `ProfileId`

update () and Foreign Keys

You can use external ID fields as a foreign key, which allows you to update a record and relate it to another existing record in a single step instead of querying the parent record ID first. To do this, set the foreign key to an instance of the parent `sObject` that has only the external ID field specified. This external ID should match the external ID value on the parent record.

The following Java and C# examples show you how to update an opportunity and relate it to an existing account using a custom external ID field named `MyExtId__c`. Each example has a method that accepts the ID of the opportunity to update. It creates an opportunity `sObject` and sets its ID field so that the object points to an existing opportunity to be updated, sets a new value for the stage name field, and then sets the external ID field to the account object. It then updates the opportunity. Once the opportunity is updated, the account becomes its parent and the state name is updated.

Java Example

```
public void updateForeignKeySample(String oppId) {
    try {
        Opportunity updateOpportunity = new Opportunity();
        // Point to an existing opportunity to update
    }
}
```

```

updateOpportunity.setId(oppId);
updateOpportunity.setStageName("Qualification");

Account parentAccountRef = new Account();
parentAccountRef.setMyExtId__c("SAP1111111");
updateOpportunity.setAccount(parentAccountRef);

SaveResult[] results = connection
    .update(new SObject[] { updateOpportunity });
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
}

```

C# Example

```

public void updateForeignKeySample(String oppId)
{
    try
    {
        Opportunity updateOpportunity = new Opportunity();
        // Point to an existing opportunity to update
        updateOpportunity.Id = oppId;
        updateOpportunity.StageName = "Prospecting";

        Account parentAccountRef = new Account();
        parentAccountRef.MyExtId__c = "SAP1111111";
        updateOpportunity.Account = parentAccountRef;

        SaveResult[] results = binding.update(
            new sObject[] { updateOpportunity });
    }
    catch (SoapException e)
    {
        Console.WriteLine("An unexpected error has occurred: " +
            e.Message + "\n" + e.StackTrace);
    }
}

```

Basic Steps for Updating Records

Use this process to update records:

1. Determine the ID of each record that you want to [update\(\)](#). For example, you might call [query\(\)](#) to retrieve a set of records (with their IDs), based on specific criteria, that you would want to update. If you know the ID of the record that you want to update, you can call [retrieve\(\)](#) instead. For information on IDs, see [ID Field Type](#).
2. Create an `sObject` for each record, and populate its fields with the data that you want to update.
3. Construct an `sObject[]` array and populate that array with the records that you want to update.
4. Call [update\(\)](#), passing in the `sObject[]` array.
5. Process the results in the [SaveResult\[\]](#) object to verify whether the records have been successfully updated.

Sample Code—Java

This sample accepts the IDs of the accounts to update. It creates two account sObjects, sets each with one of the passed IDs so that the sObject points to an existing account, and sets other fields. It then makes the update() call and verifies the results.

```
public void updateRecords(String[] ids) {
    Account[] updates = new Account[2];

    Account account1 = new Account();
    account1.setId(ids[0]);
    account1.setShippingPostalCode("89044");
    updates[0] = account1;

    Account account2 = new Account();
    account2.setId(ids[1]);
    account2.setNumberOfEmployees(1000);
    updates[1] = account2;

    // Invoke the update call and save the results
    try {
        SaveResult[] saveResults = connection.update(updates);
        for (SaveResult saveResult : saveResults) {
            if (saveResult.isSuccess()) {
                System.out.println("Successfully updated Account ID: "
                    + saveResult.getId());
            } else {
                // Handle the errors.
                // We just print the first error out for sample purposes.
                Error[] errors = saveResult.getErrors();
                if (errors.length > 0) {
                    System.out.println("Error: could not update " + "Account ID "
                        + saveResult.getId() + ".");
                    System.out.println("\tThe error reported was: ("
                        + errors[0].getStatusCode() + ") "
                        + errors[0].getMessage() + ".");
                }
            }
        }
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

Sample Code—C#

This sample accepts the IDs of the accounts to update. It creates two account sObjects, sets each with one of the passed IDs so that the sObject points to an existing account, and sets other fields. It then makes the update() call and verifies the results.

```
public void updateRecords(String[] ids)
{
    Account[] updates = new Account[2];

    Account account1 = new Account();
    account1.Id = ids[0];
```

```

account1.ShippingPostalCode = "89044";
updates[0] = account1;

Account account2 = new Account();
account2.Id = ids[1];
account2.NumberOfEmployees = 1000;
updates[1] = account2;

// Invoke the update call and save the results
try
{
    SaveResult[] saveResults = binding.update(updates);
    foreach (SaveResult saveResult in saveResults)
    {
        if (saveResult.success)
        {
            Console.WriteLine("Successfully updated Account ID: " +
                saveResult.id);
        }
        else
        {
            // Handle the errors.
            // We just print the first error out for sample purposes.
            Error[] errors = saveResult.errors;
            if (errors.Length > 0)
            {
                Console.WriteLine("Error: could not update " +
                    "Account ID " + saveResult.id + ".");
            }
            Console.WriteLine("\tThe error reported was: (" +
                errors[0].statusCode + ") " +
                errors[0].message + ".");
        }
    }
}
catch (SoapException e)
{
    Console.WriteLine("An unexpected error has occurred: " +
        e.Message + "\n" + e.StackTrace);
}
}

```

Arguments

Name	Type	Description
sObjects	sObject[]	Array of one or more records (maximum of 200) to update.

Response

[SaveResult\[\]](#)

Faults

[InvalidSObjectFault](#)

[UnexpectedErrorFault](#)

SEE ALSO:

[API Call Basics](#)

SaveResult

The `update()` call returns an array of `SaveResult` objects. Each element in the `SaveResult` array corresponds to the `sObject[]` array passed as the `sObjects` parameter in the `update()` call. For example, the object returned in the first index in the `SaveResult` array matches the object specified in the first index of the `sObject[]` array.

A `SaveResult` object has the following properties:

Name	Type	Description
<code>id</code>	ID	ID of an <code>sObject</code> that you successfully updated. If this field contains a value, then the object was updated successfully. If this field is empty, then the object was not updated and the API returned error information instead.
<code>success</code>	boolean	Indicates whether the <code>update()</code> call succeeded (<code>true</code>) or not (<code>false</code>) for this object.
<code>errors</code>	<code>Error[]</code>	If an error occurred during the <code>update()</code> call, an array of one or more <code>Error</code> objects providing the error code and description. If your organization has active duplicate rules and a duplicate is detected, the <code>SaveResult</code> includes an <code>Error</code> with a data type of <code>DuplicateError</code> .

upsert()

Creates new records and updates existing records; uses a custom field to determine the presence of existing records. In most cases, we recommend that you use `upsert()` instead of `create()` to avoid creating unwanted duplicate records (idempotent). Available in the API version 7.0 and later.

 **Note:** Starting with API version 15.0, if you specify a value for a field that contains a string, and the value is too big for the field, the call fails and an error is returned. In previous versions of the API the value was truncated and the call succeeded. If you wish to keep the old behavior with versions 15.0 and later, use the `AllowFieldTruncationHeader` SOAP header.

Syntax

```
UpsertResult[] = connection.upsert(String externalIdFieldName, sObject[] sObjects);
```

Usage

Upsert is a merging of the words insert and update. This call is available for objects if the object has an external ID field or a field with the `idLookup` field property.

On custom objects, this call uses an indexed custom field called an external ID to determine whether to create a new record or update an existing record. On standard objects, this call can use the name of any field with the `idLookup` instead of the external ID.

 **Note:** External ID fields cannot be used with `merge()`.

For more information about adding custom fields, including external ID fields, to objects, see the “Adding Fields” topic in the Salesforce online help.

Using this call can dramatically reduce how many calls you need to make, particularly when:

- You are integrating your organization’s Salesforce data with ERP (enterprise resource planning) systems such as accounting and manufacturing.
- You are importing data and want to prevent the creation of duplicate objects.

If you are upserting a record for an object that has a custom field with both the `External ID` and `Unique` attributes selected (a unique index), you do not need any special permissions, because the `Unique` attribute prevents the creation of duplicates. If you are upserting a record for an object that has the `External ID` attribute selected but not the `Unique` attribute selected, (a non-unique index) your client application must have the permission “View All Data” to execute this call.

 **Note:** Matching by external ID is case-insensitive only if the external ID field has the `Unique` attribute and the `Treat "ABC" and "abc" as duplicate values (case insensitive)` option selected. These options are selected in the Salesforce user interface during field creation. If this is the case, “ABC123” is matched with “abc123.” Before performing an operation, if you have external ID fields without the case-insensitive option selected, review your external IDs for any values that would be matched if case was not considered. If such values exist, you may want to modify them to make them unique, or select the case-sensitive option for your external ID fields. For more information about field attributes, see “Custom Field Attributes” in the Salesforce online help.

How Upsert Chooses to `update()` Or `create()`

Upsert uses the external ID to determine whether it should create a new record or update an existing one:

- If the external ID is not matched, then a new record is created.
- If the external ID is matched once, then the existing record is updated.
- If the external ID is matched multiple times, then an error is reported.
- When batch updating multiple records where the external ID is the same for two or more records in your batch call, those records will be marked as errors in the `UpsertResult` file. The records will be neither created or updated.

Rollback on Error

The `AllOrNoneHeader` header allows you to roll back all changes unless all records are processed successfully. This header is available in API version 20.0 and later. Allows a call to roll back all changes unless all records are processed successfully.

Automatic Subscriptions for Chatter Feeds

To subscribe to records they create, users must enable the `Automatically follow records that I create` option in their personal settings. If users have automatic subscriptions enabled, they automatically follow the records they create and see changes to those records in their Chatter feed on the Home tab.

When you update the owner of a record, the new owner is not automatically subscribed to the record, unless the new owner has automatic subscriptions for records enabled in his or her Chatter feed settings. The previous owner is not automatically unsubscribed. If the new owner has automatic subscriptions for records enabled, the new and previous owners both see any changes to the record in their news feed.

A user can subscribe to a record or to another user. Changes to the record and updates from the users are displayed in the Chatter feed on the user's home page, which is a useful way to stay up-to-date with other users and with changes made to records in Salesforce. Feeds are available in API version 18.0 and later.

upsert () and Foreign Keys

You can use external ID fields as a foreign key, which allows you to create or update a record and relate it to another existing record in a single step instead of querying the parent record ID first. To do this, set the foreign key to an instance of the parent sObject that has only the external ID field specified. This external ID should match the external ID value on the parent record. Unlike `create ()`, the parent record must already exist when using `upsert ()` to create or update a child record related by a foreign key.

The following Java and C# examples upsert an opportunity. In this case, the opportunity doesn't exist in the database, so the `upsert ()` call will create it. The opportunity references an existing account. Rather than specify the account ID, which would require a separate query to obtain, we specify an external ID for the account, in this example the `MyExtId__c` custom field.

Java Example

```
public void upsertForeignKeySample() {
    try {
        Opportunity newOpportunity = new Opportunity();
        newOpportunity.setName("UpsertOpportunity");
        newOpportunity.setStageName("Prospecting");
        Calendar dt = connection.getServerTimestamp().getTimestamp();
        dt.add(Calendar.DAY_OF_MONTH, 7);
        newOpportunity.setCloseDate(dt);
        newOpportunity.setMyExtId__c("UPSERTID001");

        // Parent Account record must already exist
        Account parentAccountRef = new Account();
        parentAccountRef.setMyExtId__c("SAP111111");
        newOpportunity.setAccount(parentAccountRef);

        SaveResult[] results = connection
            .upsert("MyExtId__c", new SObject[] { newOpportunity });
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

C# Example

```
public void upsertForeignKeySample()
{
    try
    {
        Opportunity newOpportunity = new Opportunity();
        newOpportunity.Name = "UpsertOpportunity";
        newOpportunity.StageName = "Prospecting";
        DateTime dt = (DateTime)binding.getServerTimestamp().timestamp;
        newOpportunity.CloseDate = dt.AddDays(7);
    }
}
```

```

newOpportunity.CloseDateSpecified = true;
newOpportunity.MyExtId__c = "UPSERTID001";

// Parent Account record must already exist
Account parentAccountRef = new Account();
parentAccountRef.MyExtId__c = "SAP111111";
newOpportunity.Account = parentAccountRef;

SaveResult[] results = binding
    .upsert("MyExtId", new sObject[] { newOpportunity });
}
catch (SoapException e)
{
    Console.WriteLine("An unexpected error has occurred: " +
        e.Message + "\n" + e.StackTrace);
}
}

```

Sample Code—Java

This sample upserts two accounts using a custom external ID field called `MyExtId__c`. The `upsert()` call matches the accounts based on the `MyExtId__c` field in order to determine whether to create or update the accounts. Before running this sample, change the `MyExtId__c` field name to an existing custom ID field name in your org.

```

public void upsertRecords() {
    SObject[] upserts = new Account[2];

    Account upsertAccount1 = new Account();
    upsertAccount1.setName("Begonia");
    upsertAccount1.setIndustry("Education");
    upsertAccount1.setMyExtId__c("1111111111");
    upserts[0] = upsertAccount1;

    Account upsertAccount2 = new Account();
    upsertAccount2 = new Account();
    upsertAccount2.setName("Bluebell");
    upsertAccount2.setIndustry("Technology");
    upsertAccount2.setMyExtId__c("2222222222");
    upserts[1] = upsertAccount2;

    try {
        // Invoke the upsert call and save the results.
        // Use External_Id custom field for matching records.
        UpsertResult[] upsertResults = connection.upsert(
            "MyExtId__c", upserts);
        for (UpsertResult result : upsertResults) {
            if (result.isSuccess()) {
                System.out.println("\nUpsert succeeded.");
                System.out.println((result.isCreated() ? "Insert" : "Update")
                    + " was performed.");
                System.out.println("Account ID: " + result.getId());
            } else {
                System.out.println("The Upsert failed because: "

```

```

        + result.getErrors()[0].getMessage());
    }
}
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
}
}

```

Sample Code—C#

This sample upserts two accounts using a custom external ID field called `MyExtId__c`. The `upsert()` call matches the accounts based on the `MyExtId__c` field in order to determine whether to create or update the accounts. Before running this sample, change the `MyExtId__c` field name to an existing custom ID field name in your org.

```

public void upsertRecords()
{
    sObject[] upserts = new Account[2];

    Account upsertAccount1 = new Account();
    upsertAccount1.Name = "Begonia";
    upsertAccount1.Industry = "Education";
    upsertAccount1.MyExtId__c = "1111111111";
    upserts[0] = upsertAccount1;

    Account upsertAccount2 = new Account();
    upsertAccount2 = new Account();
    upsertAccount2.Name = "Bluebell";
    upsertAccount2.Industry = "Technology";
    upsertAccount2.MyExtId__c = "2222222222";
    upserts[1] = upsertAccount2;

    try
    {
        // Invoke the upsert call and save the results.
        // Use External_Id custom field for matching records.
        UpsertResult[] upsertResults =
            binding.upsert("MyExtId__c", upserts);
        foreach (UpsertResult result in upsertResults)
        {
            if (result.success)
            {
                Console.WriteLine("\nUpsert succeeded.");
                Console.WriteLine(
                    (result.created ? "Insert" : "Update") +
                    " was performed.");
            };
            Console.WriteLine("Account ID: " + result.id);
        }
        else
        {
            Console.WriteLine("The Upsert failed because: " +
                result.errors[0].message);
        }
    }
}

```

```

    }
}
catch (SoapException e)
{
    Console.WriteLine("An unexpected error has occurred: " +
        e.Message + "\n" + e.StackTrace);
}
}

```

Arguments

Name	Type	Description
ExternalIDFieldName	string	Contains the name of the field on this object with the external ID field attribute for custom objects or the idLookup field property for standard objects. The <code>idLookup</code> field property is usually on a field that is the object's ID field or name field, but there are exceptions, so check for the presence of the property in the object you wish to <code>upsert()</code> .
sObjects	sObject[]	Array of one or more records (maximum of 200) to create or update. All records must have the same object type.

Response

[UpsertResult\[\]](#)

Faults

[InvalidSObjectFault](#)

[UnexpectedErrorFault](#)

SEE ALSO:

[create\(\)](#)

[API Call Basics](#)

UpsertResult

The `upsert` call returns an array of `UpsertResult` objects. Each element in the array corresponds to the `sObject[]` array passed as the `sObjects` parameter in the `upsert()` call. For example, the object returned in the first index in the `UpsertResult` array matches the object specified in the first index of the `sObject[]` array.

An `UpsertResult` object has the following properties:

Name	Type	Description
created	boolean	Indicates whether the record was created (<code>true</code>) or updated (<code>false</code>).

Name	Type	Description
errors	Error[]	If errors occurred during the call, an array Error objects, providing the error code and description, is returned.
id	ID	If the call succeeded, the field contains the ID of the record that was either updated or created. If there was an error, the field is null. For more information, see ID Field Type .
success	boolean	Indicates whether the call succeeded (<code>true</code>) or not (<code>false</code>) for this object. If your organization has active duplicate rules and a duplicate is detected, the UpsertResult includes an Error with a data type of DuplicateError .

CHAPTER 13 Describe Calls

The following table lists supported describe calls in the API in alphabetical order, and provides a brief description for each. Click a call name to see syntax, usage, and more information for that call.

 **Note:** For a list of Apex-related calls, see [Apex-Related Calls](#), for a list of core calls, see [Core Calls](#), and for a list of utility calls, see [Utility Calls](#).

Call	Description
describeAllTabs ()	Returns information about all the tabs—including Lightning page tabs—available to the logged-in user, regardless of whether the user has chosen to hide tabs in his own user interface via the All Tabs (+) tab customization feature.
describeAppMenu ()	Retrieves metadata about items either in the Salesforce mobile app navigation menu or the Salesforce drop-down app menu.
describeApprovalLayout ()	Retrieves metadata about approval layouts for the specified object type.
describeAvailableQuickActions ()	In API version 28.0, describes details about actions available for a specified parent. In API version 29.0 and greater, describes details about actions available for a specified context.
describeCompactLayouts ()	Retrieves metadata about compact layouts for the specified object type.
describeDataCategoryGroups ()	Retrieves available category groups for entities specified in the request.
describeDataCategoryGroupStructures ()	Retrieves available category groups along with their data category structure for entities specified in the request.
describeGlobal ()	Retrieves a list of available objects for your organization's data.
describeGlobalTheme ()	Returns information about both objects and themes available to the current logged-in user.
describeKnowledge ()	Retrieves the Knowledge language settings in the organization.
describeLayout ()	Retrieves metadata about page layouts for the specified object type.
describePrimaryCompactLayouts ()	Retrieves metadata about the primary compact layout for each of the specified object types.
describeQuickActions ()	Retrieves details about specified actions.
describeSearchScopeOrder ()	Retrieves an ordered list of objects in the logged-in user's default global search scope, including any pinned objects in the user's search results page.
describeSObject ()	Retrieves metadata (field list and object properties) for the specified object type. Superseded by describeSObjects () .
describeSObjects ()	An array-based version of describeSObject .
describeSoftphoneLayout ()	Describes the softPhone layout(s) created for an organization.

Call	Description
<code>describeSoqlListViews()</code>	Retrieves the SOQL query and other information about a list view.
<code>describeTabs()</code>	Returns information about the standard and custom apps available to the logged-in user, as listed in the Lightning Platform app menu at the top of the page.
<code>describeTheme()</code>	Returns information about themes available to the current logged-in user.

Samples

The samples in this section are based on the enterprise WSDL file. They assume that you have already imported the WSDL file and created a connection. To learn how to do so, see the [Quick Start](#) tutorial.

describeAllTabs()

Returns information about all the tabs—including Lightning page tabs—available to the logged-in user, regardless of whether the user has chosen to hide tabs in his own user interface via the All Tabs (+) tab customization feature.

Syntax

```
DescribeTab [] = connection.describeAllTabs();
```

Usage

Use the `describeAllTabs()` call to obtain information about all the tabs that are available to the logged-in user.

Alternately, use `describeTabs()` if you want information only about the tabs that display in the Salesforce user interface for the logged-in user.

Sample Code—Java

This sample calls `describeAllTabs()`, which returns an array of `DescribeTab` results.

```
public void describeAllTabsSample() {
    try {
        // Describe tabs
        DescribeTab[] tabs = connection.describeAllTabs();
        System.out.println("There are " + tabs.length +
            " tabs available to you.");

        // Iterate through the returned tabs
        for (int j = 0; j < tabs.length; j++) {
            DescribeTab tab = tabs[j];
            System.out.println("\tTab " + (j + 1) + ":");
            System.out.println("\t\tName: " + tab.getName());
            System.out.println("\t\tAssociated SObject" + tab.getObjectName());
            System.out.println("\t\tLabel: " + tab.getLabel());
        }
    }
}
```

```
        System.out.println("\t\tURL: " + tab.getUrl());
        DescribeColor[] tabColors = tab.getColors();
        // Iterate through tab colors as needed
        DescribeIcon[] tabIcons = tab.getIcons();
        // Iterate through tab icons as needed
    }
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
}
```

Arguments

None.

Response

[DescribeTab](#)

describeAppMenu ()

Retrieves metadata about items either in the Salesforce mobile app navigation menu or the Salesforce drop-down app menu. This call is available in API version 29.0 and later.

If you're accessing the API using a custom community URL, the `describeAppMenu ()` call retrieves the tab set associated with the community ID you specify.

Syntax

```
DescribeAppMenuResult describeResult = connection.describeAppMenu(String appMenuType,
String networkId);
```

Code Sample—Java

This code sample shows how to get the menu items from the Salesforce mobile app navigation menu.

```
public void describeAppMenu() {
    try {
        //The following two lines are equivalent
        DescribeAppMenuResult describe = connection.describeAppMenu("Salesforce1", "");
        DescribeAppMenuResult appMenu = getClient().describeAppMenu(AppMenuType.Salesforce1);

        for (DescribeAppMenuItem menuItem : appMenu.getAppMenuItems()) {

            if (menuItem.getType() == "Tab.apexPage") {

                String visualforceUrl = menuItem.getContent();
            }
        }
    }
}
```

```

        System.out.println("URL to Visualforce page: " + visualforceUrl);
    }
}
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
}

```

Arguments

Name	Type	Description
appMenuType	string	Restricts the menu data returned to the specified menu type. Valid values are: <ul style="list-style-type: none"> AppSwitcher—to retrieve the data from the Salesforce drop-down app menu Salesforce1—to retrieve the data from the Salesforce mobile app navigation menu NetworkTabs—to retrieve the data from a community tab set
networkId	ID	If the appMenuType is set to NetworkTabs, enter the ID of the community to retrieve the tab set from. If appMenuType is not NetworkTabs, this field must be null or empty.

Response

[DescribeAppMenuResult](#)

Faults

[InvalidOrNullForRestrictedPicklist](#)

DescribeAppMenuResult

The `describeAppMenu()` call returns a list of menu items contained in the specified menu type. The following types are available in API version 29.0 and later.

Name	Type	Description
appMenuItems	DescribeAppMenuItem[]	Array of one or more menu items in the selected menu type.

DescribeAppMenuItem

Each `DescribeAppMenuItem` object has these fields:

Name	Type	Description
colors	DescribeColor[]	Array of color information used for the tab associated with the menu item.
content	string	Information that helps build the menu item. Each menu item has a different type of content for this field. For example, the Salesforce app menu type could contain: <ul style="list-style-type: none"> FlexiPage—the ID of the Lightning page Visualforce tab—the URL to the page, such as <code>/apex/myApexPage</code>. Menu items of types other than these don't use this field.
icons	DescribeColor[]	Array of icon information used for the tab associated with the menu item.
label	string	The display label of the menu item.
name	string	API name of the menu item.
type	string	The type of menu item, and its subtype, if any. Possible values for the Salesforce app menu type are: <ul style="list-style-type: none"> Standard.Dashboards—Dashboards menu item Standard.Feed—Chatter feed menu item Standard.Today—the Today menu item Standard.Tasks—Tasks menu item Tab.apexPage—a Visualforce tab menu item Tab.flexipage—a Lightning page tab menu item
url	string	The Salesforce URL the menu item should point to. For the Salesforce app menu type, this field is <code>null</code> for the Dashboards, Feed, Today, Tasks, and Lightning page menu items.

describeApprovalLayout()

Retrieves metadata about approval layouts for the specified object type.

Syntax

```
DescribeApprovalLayoutResult approvalLayoutResult = connection.describeApprovalLayout(string sObjectType, string[] approvalProcessNames);
```

Usage

Use this call to retrieve information about the approval layout for a given object type. Each approval process has one approval layout.

If you supply a null value for `approvalProcessNames`, all the approval layouts for the object are returned, instead of the approval layout of each specified approval process.

Sample Code—Java

This sample shows how to get the approval layouts of an `Account` sObject. It calls `describeApprovalLayout()` with the name of the sObject type to describe. After getting the approval layouts, the sample prints the name and fields found for each approval layout.

```
public void describeApprovalLayoutSample() {
    try {
        String objectToDescribe = "Account";
        DescribeApprovalLayoutResult approvalLayoutResult =
            connection.describeApprovalLayout(objectToDescribe, null);
        System.out.print("There are " + approvalLayoutResult.getApprovalLayouts().length);
        System.out.println(" approval layouts for the " + objectToDescribe + " object.");

        // Get all the approval layouts for the sObject
        for (int i = 0; i < approvalLayoutResult.getApprovalLayouts().length; i++) {
            DescribeApprovalLayout aLayout = approvalLayoutResult.getApprovalLayouts()[i];
            System.out.println(" There is an approval layout with name: " + aLayout.getName());

            DescribeLayoutItem[] layoutItems = aLayout.getLayoutItems();
            System.out.print(" There are " + layoutItems.length);
            System.out.println(" fields in this approval layout.");
            for (int j = 0; j < layoutItems.length; j++) {
                System.out.print("This approval layout has a field with name: ");
                System.out.println(layoutItems[j].getLabel());
            }
        }
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

Arguments

Name	Type	Description
<code>sObjectType</code>	string	The specified value must be a valid object for your organization. If the object is a person account, specify <code>Account</code> , or if it is a person contact, specify <code>Contact</code> .
<code>approvalProcessNames</code>	string[]	Optional array of the approval process API names to return approval layout metadata for.

Response

[DescribeApprovalLayoutResult](#)

Faults

[InvalidSObjectFault](#)

[UnexpectedErrorFault](#)

DescribeApprovalLayoutResult

The `describeApprovalLayout ()` call returns a `DescribeApprovalLayoutResult` object containing top-level record type information about the passed-in `sObjectType`. Your client application can traverse this object to retrieve detailed metadata about the approval layout.

Name	Type	Description
<code>approvalLayouts</code>	DescribeApprovalLayout[]	List of all the approval layouts in use by the object.

DescribeApprovalLayout

Represents an individual item in the [DescribeApprovalLayout](#) list.

Name	Type	Description
<code>id</code>	ID	Unique ID of this ApprovalLayout. For information on IDs, see ID Field Type .
<code>label</code>	string	Label of the approval layout.
<code>layoutItems</code>	DescribeLayoutItem[]	Array of one or more fields assigned to the approval layout.
<code>name</code>	string	API name of the approval layout.

describeAvailableQuickActions ()

In API version 28.0, describes details about actions available for a specified parent. In API version 29.0 and greater, describes details about actions available for a specified context.

Syntax

```
DescribeAvailableQuickActionResult [] = connection.describeAvailableQuickActions(string
parentOrContextType );
```

Usage

Use `describeAvailableQuickActions ()` to get the list of actions whose parent (API version 28.0) or context (API version 29.0 and greater) entity name is supplied as well as standard and global actions. The `describeAvailableQuickActions ()` call uses the parent entity name, such as "Account", or "null" for global actions, or in API version 29.0 and greater, the context, to return an array of `DescribeAvailableQuickActionResult`.

Sample—Java

This sample retrieves and displays the available action information for the Account object.

```
public void example() throws Exception {
    DescribeAvailableQuickActionResult[] aResult =
        conn.describeAvailableQuickActions("Account");
    for(DescribeAvailableQuickActionResult ar : aResult) {
        System.out.println("Action label: " + ar.getLabel());
        System.out.println("Action name: " + ar.getName());
        System.out.println("Action type: " + ar.getType());
    }
}
```

Arguments

Name	Type	Description
parentOrContextType	string	Either a standard or custom object. <ul style="list-style-type: none"> The <code>parentType</code> applies only to API version 28.0. The <code>contextType</code> applies to API version 29.0 and greater.

Response

An array of [DescribeAvailableQuickActionResult](#) objects.

Faults

`connection.exception` errors

DescribeAvailableQuickActionResult

The `describeAvailableQuickActions()` call returns an array of `DescribeAvailableQuickActionResult` objects. In API version 28.0, each `DescribeAvailableQuickActionResult` object represents details about actions available for a specified parent. In API version 29.0 and greater, each `DescribeAvailableQuickActionResult` object represents details about actions available for a specified context.

Name	Type	Description
actionEnumOrId	string	The unique ID for the action. If the action doesn't have an ID, its API name is used. This field is available in API version 35.0 and later.
label	string	The action label.
name	string	The action name.
type	string	<ul style="list-style-type: none"> LogACall

Name	Type	Description
		<ul style="list-style-type: none"> • SocialPost • Canvas • Create • VisualforcePage • Update

describeCompactLayouts ()

Retrieves metadata about compact layouts for the specified object type.

Syntax

```
DescribeCompactLayoutsResult compactLayoutResult = connection.describeCompactLayouts(string
  sObjectType, ID[] recordTypeId);
```

Usage

Use this call to retrieve information about the compact layout for a given object type. This call returns metadata about a given compact layout, including the record type mappings. For more information about compact layouts, see the Salesforce online help.

Sample Code—Java

This sample shows how to get the compact layouts of an Account sObject. It calls `describeCompactLayouts ()` with the name of the sObject type to describe. After getting the compact layouts, the sample prints the images, fields, and action buttons found for each compact layout. Next, it prints the system default compact layout for the object, then the mapping information of record types to compact layouts.

```
public void testDescribeCompactLayoutsSample() {
    try {
        String objectToDescribe = "Account";
        DescribeCompactLayoutsResult compactLayoutResult = connection
            .describeCompactLayouts(objectToDescribe, null);
        System.out.println("There are " + compactLayoutResult.getCompactLayouts().length
            + " compact layouts for the " + objectToDescribe + " object.");

        // Get all the compact layouts for the sObject
        for (int i = 0; i < compactLayoutResult.getCompactLayouts().length; i++) {
            DescribeCompactLayout cLayout = compactLayoutResult.getCompactLayouts()[i];
            System.out.println(" There is a compact layout with name: " + cLayout.getName());

            DescribeLayoutItem[] fieldItems = cLayout.getFieldItems();
            System.out.println(" There are " + fieldItems.length + " fields in this compact
                layout.");

            // Write field items
```

```

        for (int j = 0; j < fieldItems.length; j++) {
            System.out.println(j + " This compact layout has a field with name: " +
fieldItems[j].getLabel());
        }

        DescribeLayoutItem[] imageItems = cLayout.getImageItems();
        System.out.println(" There are " + imageItems.length + " image fields in this
compact layout.");

        // Write the image items
        for (int j = 0; j < imageItems.length; j++) {
            System.out.println(j + " This compact layout has an image field with name:
" + imageItems[j].getLabel());
        }

        DescribeLayoutButton[] actions = cLayout.getActions();
        System.out.println(" There are " + actions.length + " buttons in this compact
layout.");

        // Write the action buttons
        for (int j = 0; j < actions.length; j++) {
            System.out.println(j + " This compact layout has a button with name: " +
actions[j].getLabel());
        }

        System.out.println("This object's default compact layout is: "
+ compactLayoutResult.getDefaultCompactLayoutId());

        RecordTypeCompactLayoutMapping[] mappings =
compactLayoutResult.getRecordTypeCompactLayoutMappings();
        System.out.println("There are " + mappings.length + " record type to compact
layout mapping for the "
+ objectToDescribe + " object.");
        for (int j = 0; j < mappings.length; j++) {
            System.out.println(j + " Record type " + mappings[j].getRecordTypeId()
+ " is mapped to compact layout " +
mappings[j].getCompactLayoutId());
        }
    }

} catch (ConnectionException ce) {
    ce.printStackTrace();
}
}

```

Arguments

Name	Type	Description
sObjectType	string	The specified value must be a valid object for your organization. If the object is a person account, specify Account, or if it is a person contact, specify Contact.

Name	Type	Description
<code>recordTypeId</code>	ID[]	Optional parameter that restricts the compact layout data returned to the specified record types.

Response

[DescribeCompactLayoutsResult](#)

Faults

[InvalidSObjectFault](#)

[UnexpectedErrorFault](#)

DescribeCompactLayoutsResult

The `describeCompactLayouts()` call returns a `DescribeCompactLayoutsResult` object containing top-level record type information about the passed-in `sObjectType`, as well as a mapping of record types to compact layouts. Your client application can traverse this object to retrieve detailed metadata about the compact layout.

Name	Type	Description
<code>compactLayouts</code>	DescribeCompactLayout []	List of all the compact layouts in use by the object.
<code>defaultCompactLayoutId</code>	ID	ID of the primary compact layout assigned to the object. The system default compact layout ID has a value of <code>null</code> .
<code>recordTypeCompactLayoutMappings</code>	RecordTypeCompactLayoutMapping []	Record type mapping(s) for the object. The compact layouts associated with the object may be mapped to more than one record type.

DescribeCompactLayout

Represents an individual item in the [DescribeCompactLayout](#) list.

Name	Type	Description
<code>actions</code>	DescribeLayoutButtonSection []	Array of one or more DescribeLayoutButtonSection items assigned to the compact layout. This list is set by Salesforce and is read-only.
<code>fieldItems</code>	DescribeLayoutItem []	Array of one or more fields assigned to the compact layout.
<code>id</code>	ID	Unique ID of this <code>CompactLayout</code> . For information on IDs, see ID Field Type .

Name	Type	Description
imageItems	DescribeLayoutItem[]	Array of one or more images assigned to the compact layout. This list is set by Salesforce and is read-only.
label	string	Label of the compact layout.
name	string	API name of the compact layout.
objectType	string	The name of the object to which the compact layout is assigned.

RecordTypeCompactLayoutMapping

Represents a single record type mapping in the `recordTypeCompactLayoutMappings` field in a `DescribeCompactLayoutsResult` object. This object is a map of valid `recordTypeId` to `compactLayoutId`.

Name	Type	Description
available	boolean	Indicates whether this record type is available (<code>true</code>) or not (<code>false</code>). Availability is used to display a list of available record types to the user when they are creating a new record.
compactLayoutId	ID	ID of the compact layout associated with this record type. This field has a value of <code>null</code> if the record type is associated with the system default compact layout.
compactLayoutName	string	API name of the compact layout.
recordTypeName	string	API name of the record type.
recordTypeId	ID	ID of the record type.

describeDataCategoryGroups ()

Retrieves available category groups for objects specified in the request.

Syntax

```
DescribeDataCategoryGroupResult[] = connection.describeDataCategoryGroups() (string[]
sObjectTypes);
```

Usage

Use this call to describe the available category groups for the objects specified in the request. This call can be used with the `describeDataCategoryGroupStructures ()` call to describe all the categories available for a specific object. For additional information about data categories, see “Work with Data Categories” in the Salesforce online help.

Sample Code—Java

This sample shows how to retrieve the data category groups associated with:

- Salesforce Knowledge articles
- Questions from the Answers feature

It returns the name, label and description of a category group and the name of the associated `subject` (article or question). It also returns the number of data categories in the data category group.

```
public void describeDataCategoryGroupsSample() {
    try {
        // Make the describe call for data category groups
        DescribeDataCategoryGroupResult[] results =
            connection.describeDataCategoryGroups(new String[] {
                "KnowledgeArticleVersion", "Question"});

        // Get the properties of each data category group
        for (int i = 0; i < results.length; i++) {
            System.out.println("sObject: " +
                results[i].getSubject());
            System.out.println("Group name: " +
                results[i].getName());
            System.out.println("Group label: " +
                results[i].getLabel());
            System.out.println("Group description: " +
                (results[i].getDescription()==null? "" :
                results[i].getDescription()));
            System.out.println("Number of categories: " +
                results[i].getCategoryCount());
        }
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

Sample Code—C#

This sample shows how to retrieve the data category groups associated with:

- Salesforce Knowledge articles
- Questions from the Answers feature

It returns the name, label and description of a category group and the name of the associated `subject` (article or question). It also returns the number of data categories in the data category group.

```
public void describeDataCategoryGroups() {
    try {
        // Make the describe call for data category groups
        DescribeDataCategoryGroupResult[] results =
            binding.describeDataCategoryGroups(new String[] {
                "KnowledgeArticleVersion", "Question"});

        // Get the properties of each data category group
        for (int i = 0; i < results.Length; i++) {
```

```

Console.WriteLine("sObject: " +
results[i].subject);
Console.WriteLine("Group name: " +
results[i].name);
Console.WriteLine("Group label: " +
results[i].label);
Console.WriteLine("Group description: " +
(results[i].description==null? "" :
results[i].description));
Console.WriteLine("Number of categories: " +
results[i].categoryCount);
}
} catch (SoapException e) {
Console.WriteLine("An unexpected error has occurred: " +
e.Message + "\n" + e.StackTrace);
}
}

```

Arguments

Name	Type	Description
sObjectTypes	string[]	<p>The specified value can be:</p> <ul style="list-style-type: none"> KnowledgeArticleVersion—to retrieve category groups associated with article types. Question—to retrieve category groups associated with questions. <p>For additional information about articles and questions, see "Work with Articles and Translations" in the Salesforce online help.</p>

Response

DescribeDataCategoryGroupResult

Faults

InvalidSObjectFault

UnexpectedErrorFault

DescribeDataCategoryGroupResult

The describeDataCategoryGroups() call returns a DescribeDataCategoryGroupResult object containing the list of the category groups associated with the specified objects.

Name	Type	Description
categoryCount	int	The number of visible data categories in the data category group.

Name	Type	Description
description	string	The description of the data category group.
label	string	Label for the data category group in the Salesforce user interface.
name	string	The unique name used for API access to the data category group .
subject	string	The object associated with the data category group.

describeDataCategoryGroupStructures ()

Retrieves available category groups along with their data category structure for objects specified in the request.

Syntax

```
describeDataCategoryGroupStructures() [] = connection.
    describeDataCategoryGroupStructures() (DataCategoryGroupObjectTypePair []
    pairs, boolean topCategoriesOnly)
```

Usage

Use this call to return the visible data category structure for the given object category group pairs. First use [describeDataCategoryGroups \(\)](#) to find the available category groups for the objects specified. From the returned list, choose the object category group pairs to pass as the input in [describeDataCategoryGroupStructures \(\)](#). This call returns all the visible categories and data category structure as output. For additional information about data categories and data category visibility, see “Work with Data Categories” and “Data Category Visibility” in the Salesforce online help.

Sample Code—Java

This sample shows how to use sObject and data category group pairs to retrieve data categories for each pair. It calls [describeDataCategoryGroupStructures \(\)](#) with two pairs, KnowledgeArticleVersion/Regions and Question/Regions, and iterates through the results of this call. It gets the top categories for each result, which is “All”, and then gets the first-level child categories. The sample requires that you set up a data category group called *Regions* with some child categories and associate it with a knowledge article and questions. Alternatively, you can replace the data category group name in the sample if you want to use an existing data category group in your org that has a different name.

```
public void describeDataCategoryGroupStructuresSample () {
    try {
        // Create the data category pairs
        DataCategoryGroupObjectTypePair pair1 =
        new DataCategoryGroupObjectTypePair ();
        DataCategoryGroupObjectTypePair pair2 =
        new DataCategoryGroupObjectTypePair ();
        pair1.setSubject ("KnowledgeArticleVersion");
        pair1.setDataCategoryGroupName ("Regions");
        pair2.setSubject ("Question");
```

```
pair2.setDataCategoryGroupName("Regions");

DataCategoryGroupSubjectTypePair[] pairs =
new DataCategoryGroupSubjectTypePair[] {
pair1,
pair2
};

// Get the list of top level categories using the describe call
DescribeDataCategoryGroupStructureResult[] results =
connection.describeDataCategoryGroupStructures(
pairs,
false
);

// Iterate through each result and get some properties
// including top categories and child categories
for (int i = 0; i < results.length; i++) {
DescribeDataCategoryGroupStructureResult result =
results[i];
String sObject = result.getSubject();
System.out.println("sObject: " + sObject);
System.out.println("Group name: " + result.getName());
System.out.println("Group label: " + result.getLabel());
System.out.println("Group description: " +
result.getDescription());

// Get the top-level categories
DataCategory[] topCategories = result.getTopCategories();

// Iterate through the top level categories and retrieve
// some information
for (int j = 0; j < topCategories.length; j++) {
DataCategory topCategory = topCategories[j];
System.out.println("Category name: " +
topCategory.getName());
System.out.println("Category label: " +
topCategory.getLabel());
DataCategory [] childCategories =
topCategory.getChildCategories();
System.out.println("Child categories: ");
for (int k = 0; k < childCategories.length; k++) {
System.out.println("\t" + k + ". Category name: " +
childCategories[k].getName());
System.out.println("\t" + k + ". Category label: " +
childCategories[k].getLabel());
}
}
} catch (ConnectionException ce) {
ce.printStackTrace();
}
}
```

Sample Code—C#

This sample shows how to use `sObject` and data category group pairs to retrieve data categories for each pair. It calls `describeDataCategoryGroupStructures()` with two pairs, `KnowledgeArticleVersion/Regions` and `Question/Regions`, and iterates through the results of this call. It gets the top categories for each result, which is "All", and then gets the first-level child categories. The sample requires that you set up a data category group called *Regions* with some child categories and associate it with a knowledge article and questions. Alternatively, you can replace the data category group name in the sample if you want to use an existing data category group in your org that has a different name.

```
public void describeDataCategoryGroupStructuresSample() {
    try {
        // Create the data category pairs
        DataCategoryGroupObjectTypePair pair1 =
            new DataCategoryGroupObjectTypePair();
        DataCategoryGroupObjectTypePair pair2 =
            new DataCategoryGroupObjectTypePair();
        pair1.subject = "KnowledgeArticleVersion";
        //pair1.setDataCategoryGroupName("Regions");
        pair1.dataCategoryGroupName = "KBArticleCategories";
        pair2.subject = "Question";
        //pair2.setDataCategoryGroupName("Regions");
        pair2.dataCategoryGroupName = "KBArticleCategories";

        DataCategoryGroupObjectTypePair[] pairs =
            new DataCategoryGroupObjectTypePair[] {
                pair1,
                pair2
            };

        // Get the list of top level categories using the describe call
        DescribeDataCategoryGroupStructureResult[] results =
            binding.describeDataCategoryGroupStructures(
                pairs,
                false
            );

        // Iterate through each result and get some properties
        // including top categories and child categories
        for (int i = 0; i < results.Length; i++) {
            DescribeDataCategoryGroupStructureResult result =
                results[i];
            String sObject = result.subject;
            Console.WriteLine("sObject: " + sObject);
            Console.WriteLine("Group name: " + result.name);
            Console.WriteLine("Group label: " + result.label);
            Console.WriteLine("Group description: " +
                result.description);

            // Get the top-level categories
            DataCategory[] topCategories = result.topCategories;

            // Iterate through the top level categories and retrieve
            // some information
            for (int j = 0; j < topCategories.Length; j++) {
```

```

DataCategory topCategory = topCategories[j];
Console.WriteLine("Category name: " +
topCategory.name);
Console.WriteLine("Category label: " +
topCategory.label);
DataCategory [] childCategories =
topCategory.childCategories;
Console.WriteLine("Child categories: ");
for (int k = 0; k < childCategories.Length; k++) {
Console.WriteLine("\t" + k + ". Category name: " +
childCategories[k].name);
Console.WriteLine("\t" + k + ". Category label: " +
childCategories[k].label);
}
}
}
}
}
catch (SoapException e)
{
Console.WriteLine("An unexpected error has occurred: " +
e.Message + "\n" + e.StackTrace);
}
}
}

```

Arguments

Name	Type	Description
pairs	DataCategoryGroupObjectTypePair []	Specifies a category group and an object to query. Visible data categories are retrieved for that object.
topCategoriesOnly	boolean	Indicates whether the call returns only the top (<code>true</code>) or all the categories (<code>false</code>) visible depending on the user's data category group visibility settings. For more information on data category group visibility, see Data Category Visibility in the Salesforce online help.

[DataCategoryGroupObjectTypePair](#) contains the following fields:

Name	Type	Description
dataCategoryGroupName	string	The unique name used for API access to the data category group.
subject	string	The object associated with the data category group

Response

[describeDataCategoryGroupStructures\(\)](#) []

[UnexpectedErrorFault](#)

describeDataCategoryGroupStructures ()

The `describeDataCategoryGroupStructures()` call returns an array of `DescribeDataCategoryGroupStructureResult` objects containing the category groups and categories associated with the specified objects.

Name	Type	Description
description	string	The description of the data category group.
label	string	The label for the data category group in the Salesforce user interface.
name	string	The unique name used for API access to the data category group.
subject	string	The object associated with the data category group.
topCategories	DataCategory []	A list of top level categories visible depending on the user's data category group visibility settings. For more information on data category group visibility, see "Data Category Visibility" in the Salesforce online help.

DataCategory

Name	Type	Description
childDataCategories	DataCategory []	A recursive list of visible sub categories in the data category.
label	string	The label for the data category in the Salesforce user interface.
name	string	The unique name used for API access to the data category.

describeGlobal ()

Retrieves a list of available objects for your organization's data.

Syntax

```
DescribeGlobalResult = connection.describeGlobal();
```

Usage

Use `describeGlobal()` to obtain a list of available objects for your organization. You can then iterate through this list and use `describeSObjects()` to obtain metadata about individual objects.

Your client application must be logged in with sufficient access rights to retrieve metadata about your organization's data. For more information, see [Factors that Affect Data Access](#).

Sample Code—Java

This sample shows how to perform a global describe. It then retrieves the sObjects from the global describe result and writes their names to the console.

```
public void describeGlobalSample() {
    try {
        // Make the describeGlobal() call
        DescribeGlobalResult describeGlobalResult =
            connection.describeGlobal();

        // Get the sObjects from the describe global result
        DescribeGlobalSObjectResult[] subjectResults =
            describeGlobalResult.getSObjects();

        // Write the name of each sObject to the console
        for (int i = 0; i < subjectResults.length; i++) {
            System.out.println(subjectResults[i].getName());
        }
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

Sample Code—C#

This sample shows how to perform a global describe. It then retrieves the sObjects from the global describe result and writes their names to the console.

```
public void describeGlobalSample()
{
    try
    {
        // Make the describeGlobal() call
        DescribeGlobalResult dgr = binding.describeGlobal();

        // Get the sObjects from the describe global result
        DescribeGlobalSObjectResult[] sObjResults = dgr.subjects;

        // Write the name of each sObject to the console
        for (int i = 0; i < sObjResults.Length; i++)
        {
            Console.WriteLine(sObjResults[i].name);
        }
    }
    catch (SoapException e)
    {
        Console.WriteLine("An unexpected error has occurred: " +
            e.Message + "\n" + e.StackTrace);
    }
}
```

Arguments

None.

DescribeGlobalResult

The `describeGlobal()` call returns a `DescribeGlobalResult` object, which has the following properties.

Name	Type	Description
<code>encoding</code>	<code>string</code>	Specifies how an org's data is encoded, such as UTF-8 or ISO-8859-1.
<code>maxBatchSize</code>	<code>int</code>	Maximum number of records allowed in a <code>create()</code> , <code>update()</code> , or <code>delete()</code> call.
<code>subjects</code>	DescribeGlobalSObjectResult[]	List of result objects that returns information about the available objects for your org. Available in API version 17.0 and later. This property enhances the information that was previously available in the <code>types</code> property.
<code>types</code>	<code>string[]</code>	List of available objects for your org. You iterate through this list to retrieve the object string that you pass to <code>describeSObjects()</code> . Beginning with API version 17.0, this property is no longer supported. Use the <code>name</code> property in <code>DescribeGlobalSObjectResult</code> instead.

DescribeGlobalSObjectResult

Represents the properties for one of the objects available for your org. Each object has the following properties:

Name	Type	Description
<code>activateable</code>	<code>boolean</code>	Reserved for future use.

Name	Type	Description
<code>createable</code>	boolean	Indicates whether the object can be created via the <code>create()</code> call (<code>true</code>) or not (<code>false</code>).
<code>custom</code>	boolean	Indicates whether the object is a custom object (<code>true</code>) or not (<code>false</code>).
<code>customSetting</code>	boolean	Indicates whether the object is a custom setting object (<code>true</code>) or not (<code>false</code>).
<code>dataTranslationEnabled</code>	boolean	Indicates whether data translation is enabled for the object (<code>true</code>) or not (<code>false</code>). Available in API version 49.0 and later.
<code>deepCloneable</code>	boolean	Reserved for future use.
<code>deletable</code>	boolean	Indicates whether the object can be deleted via the <code>delete()</code> call (<code>true</code>) or not (<code>false</code>).
<code>deprecatedAndHidden</code>	boolean	Reserved for future use.
<code>feedEnabled</code>	boolean	Indicates whether Chatter feeds are enabled for the object (<code>true</code>) or not (<code>false</code>). This property is available in API version 19.0 and later.
<code>isInterface</code>	boolean	Reserved for future use.
<code>keyPrefix</code>	string	<p>Three-character prefix code in the object ID. Object IDs are prefixed with three-character codes that specify the type of the object. For example, Account objects have a prefix of 001 and Opportunity objects have a prefix of 006. Note that a key prefix can sometimes be shared by multiple objects so it does not always uniquely identify an object.</p> <p>Use the value of this field to determine the object type of a parent in those cases where the child may have more than one object type as parent (polymorphic). For example, you may need to obtain the <code>keyPrefix</code> value for the parent of a Task or Event.</p>
<code>label</code>	string	Label text for a tab or field renamed in the user interface, if applicable, or the object name, if not. For example, an organization representing a medical vertical might rename <code>Account</code> to <code>Patient</code> . Tabs and fields can be renamed in the Salesforce user interface. See the Salesforce online help for more information.
<code>labelPlural</code>	string	Label text for an object that represents the plural version of an object name, for example, "Accounts."
<code>layoutable</code>	boolean	Indicates whether the object supports the <code>describeLayout()</code> call (<code>true</code>) or not (<code>false</code>).
<code>mergeable</code>	boolean	Indicates whether the object can be merged with other objects of its type (<code>true</code>) or not (<code>false</code>). <code>true</code> for leads, contacts, and accounts.
<code>mruEnabled</code>	boolean	Indicates whether Most Recently Used (MRU) list functionality is enabled for the object (<code>true</code>) or not (<code>false</code>).
<code>name</code>	string	Name of the object. This name is equivalent to an entry in the <code>types</code> list that is no longer supported, beginning with API version 17.0.

Name	Type	Description
queryable	boolean	Indicates whether the object can be queried via the <code>query()</code> call (<code>true</code>) or not (<code>false</code>).
replicateable	boolean	Indicates whether the object can be replicated via the <code>getUpdated()</code> and <code>getDeleted()</code> calls (<code>true</code>) or not (<code>false</code>).
retrieveable	boolean	Indicates whether the object can be retrieved via the <code>retrieve()</code> call (<code>true</code>) or not (<code>false</code>).
searchable	boolean	Indicates whether the object can be searched via the <code>search()</code> call (<code>true</code>) or not (<code>false</code>).
triggerable	boolean	Indicates whether the object supports Apex triggers.
undeletable	boolean	Indicates whether an object can be undeleted using the <code>undelete()</code> call (<code>true</code>) or not (<code>false</code>).
updateable	boolean	Indicates whether the object can be updated via the <code>update()</code> call (<code>true</code>) or not (<code>false</code>).

describeGlobalTheme ()

Returns information about both objects and themes available to the current logged-in user.

Syntax

```
DescribeGlobalTheme = connection.describeGlobalTheme ();
```

Usage

Use `describeGlobalTheme ()` to get both a list of available objects and theme information about those objects for your organization. `describeGlobalTheme ()` is a combination of `describeGlobal ()` and `describeTheme ()` combined into a single call.

Your client application must be logged in with sufficient access rights to retrieve theme and object information about your organization's data. For more information, see [Factors that Affect Data Access](#).

`describeGlobalTheme ()` is available in API version 29.0 and later.

Sample

This Java sample calls `describeGlobalTheme ()` and then iterates over the retrieved object and theme information.

```
public static void describeGlobalThemeExample () {
    try {
        // Get current theme and object information
        DescribeGlobalTheme globalThemeResult = connection.describeGlobalTheme ();
        DescribeGlobalResult globalResult = globalThemeResult.getGlobal ();
        DescribeThemeResult globalTheme = globalThemeResult.getTheme ();
```

```

// For the themes, get the array of theme items, one per object
DescribeThemeItem[] themeItems = globalTheme.getThemeItems();
for (int i = 0; i < themeItems.length; i++) {
    DescribeThemeItem themeItem = themeItems[i];
    System.out.println("Theme information for object " + themeItem.getName());
    // Get color and icon info for each themeItem
    DescribeColor colors[] = themeItem.getColors();
    System.out.println("    Number of colors: " + colors.length);
    int k;
    for (k = 0; k < colors.length; k++) {
        DescribeColor color = colors[k];
        System.out.println("        For Color #" + k + ":");
        System.out.println("            Web RGB Color: " + color.getColor());
        System.out.println("            Context: " + color.getContext());
        System.out.println("            Theme: " + color.getTheme());
    }
    DescribeIcon icons[] = themeItem.getIcons();
    System.out.println("    Number of icons: " + icons.length);
    for (k = 0; k < icons.length; k++) {
        DescribeIcon icon = icons[k];
        System.out.println("        For Icon #" + k + ":");
        System.out.println("            ContentType: " + icon.getContentType());
        System.out.println("            Height: " + icon.getHeight());
        System.out.println("            Theme: " + icon.getTheme());
        System.out.println("            URL: " + icon.getUrl());
        System.out.println("            Width: " + icon.getWidth());
    }
}
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
}

```

DescribeGlobalTheme

The `describeGlobalTheme()` call returns `DescribeGlobalTheme`, which contains a `DescribeThemeResult` and a `DescribeGlobalResult`.

Name	Type	Description
global	DescribeGlobalResult	Object information.
theme	DescribeThemeResult	Theme information.

describeKnowledge()

Retrieves the Knowledge language settings in the organization.

Syntax

```
KnowledgeSettings result = _connection.describeKnowledgeSettings();
```

Usage

Use this call to describe the existing Knowledge language settings, including the default Knowledge language, supported languages, and a list of Knowledge language information. You can also use `KnowledgeSettings` in the Metadata API to obtain similar information.

Sample Code—Java

This sample shows how to retrieve the Knowledge language settings. It returns the default Knowledge language, a list of Knowledge supported language, including the language code and whether it's an active Knowledge language.

```
public void describeKnowledgeSettingsSample() {
    try {

        // Make the describe call for KnowledgeSettings
        KnowledgeSettings result = connection.describeKnowledgeSettings();

        // Get the properties of KnowledgeSettings
        System.out.println("Knowledge default language: " + result.getDefaultLanguage());
        for (KnowledgeLanguageItem lang : result.getLanguages()) {
            System.out.println("Language: " + lang.getName());
            System.out.println("Active: " + lang.isActive());
        }
    } catch (ConnectionException ex) {
        ex.printStackTrace();
    }
}
```

Sample Code—C#

This sample shows how to retrieve the Knowledge language settings. It returns the default Knowledge language, a list of Knowledge supported language, including the language code and whether it's an active Knowledge language.

```
public void describeKnowledgeSettingsSample() {
    try {

        // Make the describe call for KnowledgeSettings
        KnowledgeSettings result = connection.describeKnowledgeSettings();

        // Get the properties of KnowledgeSettings
        Console.WriteLine("Knowledge default language: " + result.getDefaultLanguage());
        for (KnowledgeLanguageItem lang : result.getLanguages()) {
            Console.WriteLine("Language: " + lang.getName());
            Console.WriteLine("Active: " + lang.isActive());
        }
    } catch (SoapException ex) {
        ex.printStackTrace();
    }
}
```

Response

KnowledgeSettings

describeLayout()

Retrieves metadata about page layouts for the specified object type.

Syntax

```
DescribeLayoutResult = connection.describeLayout(string sObjectType, string layoutName,
ID recordTypeID[]);
```

Usage

Use this call to retrieve information about the layout (presentation of data to users) for a given object type. This call returns metadata about a given page layout, such as the detail page layout, the edit page layout, and the record type mappings. For additional information, see "Page Layouts" in the Salesforce online help.

Generally, user profiles have one layout associated with each object. In Enterprise, Unlimited, and Performance Editions, user profiles can have multiple layouts per object, where each layout is specific to a given record type. This call returns metadata for multiple layouts, if applicable.

Layouts can be further customized in standard objects that have defined named layouts, which are separate from the primary layout for both the profile and the record type. One example of named layouts is the UserAlt layout defined on the User object, which is consumed in the Salesforce mobile app instead of the primary User layout. New layout names can only be defined by Salesforce, but customization of named layouts is controlled by administrators in the same way as primary layouts.

If you supply a null value for `recordTypeIds`, all the layouts for that user are returned, instead of just the layouts for each specified record type. The same layout can be associated with multiple record types for the user's profile, in which case there would only be one layout returned.

 **Note:** This call is an advanced API call that is typically used only by partners who have written custom page rendering code for generating output on a specialized device (for example, on PDAs) and need to examine the layout details of an object before rendering the page output.

Use the following procedure to describe layouts:

1. To display a detail page or edit page for a record that exists, a client application first gets the `recordTypeIds` from the record, then it finds the `layoutId` associated with that `recordTypeIds` (through `recordTypeMapping`), and finally it uses that layout information to render the page.
2. To display the create version of an edit page, a client application first determines whether more than one record type is available and, if so, presents the user with a choice. Once a record type has been chosen, then the client application uses the layout information to render the page. It uses the picklist values from the `RecordTypeMapping` to display valid picklist values for picklist fields.
3. A client application can access the labels for the layout, using the `DescribeLayoutResult`.

The following restrictions apply to person account record types:

- `describeLayout()` for version 7.0 and below returns the default business account record type as the default record type even if the tab default is a person account record type. In version 8.0 and after, it will always be the tab default.
- `describeLayout()` for version 7.0 and below doesn't return any person account record types.

For more information about person account record types, see [Person Account Record Types](#).

Sample Code—Java

This sample shows how to get the layouts of an Account sObject. It calls `describeLayout()` with the name of the sObject type to describe. It doesn't specify record type IDs as a third argument, which means that layouts for all record types will be returned if record types are defined in your org for the specified sObject. After getting the layout, the sample writes the number of detail and edit sections found and their headings. Next, it iterates through each edit layout section and retrieves its components.

```
public void describeLayoutSample() {
    try {
        String objectToDescribe = "Account";
        DescribeLayoutResult dlr =
            connection.describeLayout(objectToDescribe, null, null);
        System.out.println("There are " + dlr.getLayouts().length +
            " layouts for the " + objectToDescribe + " object."
        );

        // Get all the layouts for the sObject
        for(int i = 0; i < dlr.getLayouts().length; i++) {
            DescribeLayout layout = dlr.getLayouts()[i];
            DescribeLayoutSection[] detailLayoutSectionList =
                layout.getDetailLayoutSections();
            System.out.println(" There are " +
                detailLayoutSectionList.length +
                " detail layout sections");
            DescribeLayoutSection[] editLayoutSectionList =
                layout.getEditLayoutSections();
            System.out.println(" There are " +
                editLayoutSectionList.length +
```

```

        " edit layout sections");

// Write the headings of the detail layout sections
for(int j = 0; j < detailLayoutSectionList.length; j++) {
    System.out.println(j +
        " This detail layout section has a heading of " +
        detailLayoutSectionList[j].getHeading());
}

// Write the headings of the edit layout sections
for(int x = 0; x < editLayoutSectionList.length; x++) {
    System.out.println(x +
        " This edit layout section has a heading of " +
        editLayoutSectionList[x].getHeading());
}

// For each edit layout section, get its details.
for(int k = 0; k < editLayoutSectionList.length; k++) {
    DescribeLayoutSection els =
        editLayoutSectionList[k];
    System.out.println("Edit layout section heading: " +
        els.getHeading());
    DescribeLayoutRow[] dlrList = els.getLayoutRows();
    System.out.println("This edit layout section has " +
        dlrList.length + " layout rows.");
    for(int m = 0; m < dlrList.length; m++) {
        DescribeLayoutRow lr = dlrList[m];
        System.out.println(" This row has " +
            lr.getNumItems() + " layout items.");
        DescribeLayoutItem[] dliList = lr.getLayoutItems();
        for(int n = 0; n < dliList.length; n++) {
            DescribeLayoutItem li = dliList[n];
            if ((li.getLayoutComponents() != null) &&
                (li.getLayoutComponents().length > 0)) {
                System.out.println("\tLayout item " + n +
                    ", layout component: " +
                    li.getLayoutComponents()[0].getValue());
            }
            else {
                System.out.println("\tLayout item " + n +
                    ", no layout component");
            }
        }
    }
}

// Get record type mappings
if (dlr.getRecordTypeMappings() != null) {
    System.out.println("There are " +
        dlr.getRecordTypeMappings().length +
        " record type mappings for the " +
        objectToDescribe + " object"
    );
}

```

```

    } else {
        System.out.println(
            "There are no record type mappings for the " +
            objectToDescribe + " object."
        );
    }
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
}

```

Sample Code—C#

This sample shows how to get the layouts of an Account sObject. It calls `describeLayout()` with the name of the sObject type to describe. It doesn't specify record type IDs as a third argument, which means that layouts for all record types will be returned if record types are defined in your org for the specified sObject. After getting the layout, the sample writes the number of detail and edit sections found and their headings. Next, it iterates through each edit layout section and retrieves its components.

```

public void describeLayoutSample()
{
    try
    {
        String objectToDescribe = "Account";
        DescribeLayoutResult dlr =
            binding.describeLayout(objectToDescribe, null, null);
        Console.WriteLine("There are " + dlr.layouts.Length +
            " layouts for the " + objectToDescribe + " object."
        );

        // Get all the layouts for the sObject
        for (int i = 0; i < dlr.layouts.Length; i++)
        {
            DescribeLayout layout = dlr.layouts[i];
            DescribeLayoutSection[] detailLayoutSectionList =
                layout.detailLayoutSections;
            Console.WriteLine(" There are " +
                detailLayoutSectionList.Length +
                " detail layout sections");
            DescribeLayoutSection[] editLayoutSectionList =
                layout.editLayoutSections;
            Console.WriteLine(" There are " +
                editLayoutSectionList.Length +
                " edit layout sections");

            // Write the headings of the detail layout sections
            for (int j = 0; j < detailLayoutSectionList.Length; j++)
            {
                Console.WriteLine(j +
                    " This detail layout section has a heading of " +
                    detailLayoutSectionList[j].heading);
            }

            // Write the headings of the edit layout sections

```

```

for (int x = 0; x < editLayoutSectionList.Length; x++)
{
    Console.WriteLine(x +
        " This edit layout section has a heading of " +
        editLayoutSectionList[x].heading);
}

// For each edit layout, get its details.
for (int k = 0; k < editLayoutSectionList.Length; k++)
{
    DescribeLayoutSection els =
        editLayoutSectionList[k];
    Console.WriteLine("Edit layout section heading: " +
        els.heading);
    DescribeLayoutRow[] dlrList = els.layoutRows;
    Console.WriteLine("This edit layout section has " +
        dlrList.Length + " layout rows.");
    for (int m = 0; m < dlrList.Length; m++)
    {
        DescribeLayoutRow lr = dlrList[m];
        Console.WriteLine(" This row has " +
            lr.numItems + " layout items.");
        DescribeLayoutItem[] dliList = lr.layoutItems;
        for (int n = 0; n < dliList.Length; n++)
        {
            DescribeLayoutItem li = dliList[n];

                    ", layout component: " +
                    li.layoutComponents[0].value);
            }
            else
            {
                Console.WriteLine("\tLayout item " + n +
                    ", no layout component");
            }
        }
    }
}

// Get record type mappings
if (dlr.recordTypeMappings != null)
{
    Console.WriteLine("There are " +
        dlr.recordTypeMappings.Length +
        " record type mappings for the " +
        objectToDescribe + " object");
}
else
{
    Console.WriteLine(
        "There are no record type mappings for the " +

```

```

        objectToDescribe + " object.");
    }
}
}
catch (SoapException e)
{
    Console.WriteLine("An unexpected error has occurred: " +
        e.Message + "\n" + e.StackTrace);
}
}
}

```

Arguments

Name	Type	Description
sObjectType	string	The specified value must be a valid object for your organization. If the object is a person account, specify Account, or if it is a person contact, specify Contact.
layoutName	string	The specified value must be a valid named layout for this object. Layout names are obtained from <code>namedLayoutInfos</code> in <code>DescribeSObjectResult</code> . The entity name is not valid because the primary layout is not considered "named."
recordTypeIds	ID[]	Optional parameter restricts the layout data returned to the specified record types. To retrieve the layout for the primary record type, specify the value <code>012000000000000AAA</code> for the <code>recordTypeIds</code> regardless of the object. This value is returned in the <code>recordTypeInfo</code> s for the primary record type in the <code>DescribeSObjectResult</code> . A SOQL query returns a null value, not <code>012000000000000AAA</code> . For information on IDs, see ID Field Type .

DescribeLayoutResult

The `describeLayout()` call returns a `DescribeLayoutResult` object containing top-level record type information about the passed-in `sObjectType`, as well as a mapping of record types to layouts. Your client application can traverse this object to retrieve detailed metadata about the layout.

Tip: If you have actions in the publisher enabled in your organization, you can retrieve the layout definition for a global publisher layout by using `Global` as the `sObjectType` and `null` as the `recordTypeId`.

Name	Type	Description
<code>feedView</code>	DescribeLayoutFeedView[]	Feed view related layout data for a feed-based layout. This field is null for page layouts that are not feed-based.
<code>layouts</code>	DescribeLayout[]	Layout(s) associated with the specified <code>sObjectType</code> . In general, there is a one-to-one correspondence between layouts and objects. However, in some cases, an object will have multiple layouts in the context of a given user profile.
<code>recordTypeMappings</code>	RecordTypeMapping[]	Record type mapping(s) available for the user. The objects on a user profile can have multiple record types. All record types are returned, not just those available to the calling user. This allows the client application to display a layout appropriate for a given user profile. For example, suppose User A owns a record, and this record has record type X set. If User B tries to view this record, then the client application can display the record using the layout associated with this record type for User B's profile (even if the record type is not available for the user).
<code>recordTypeSelectorRequired</code>	boolean	If <code>true</code> , a record type selector page is required; if <code>false</code> , use the default record type.

DescribeLayout

Represents a specific layout for the specified `sObjectType`. Each `DescribeLayout` is referenced by its unique layout ID and consists of two types of views (represented in this object as arrays of [DescribeLayoutSection](#)):

- **Detail view**—Read-only display of the object. In a detail layout, certain pieces of information (such as address details) might be aggregated into a single [DescribeLayoutItem](#).
- **Edit view**—Editable display of the object. In an edit layout, individual pieces of information (such as an address) will be broken up into separate fields.

An individual `DescribeLayout` consists of these fields:

Name	Type	Description
<code>buttonLayoutSection</code>	DescribeLayoutButtonSection	Standard and custom button sections associated with the specified layout.
<code>detailLayoutSections</code>	DescribeLayoutSection[]	Layout section(s) for the detail view.
<code>editLayoutSections</code>	DescribeLayoutSection[]	Layout section(s) for the edit view.

Name	Type	Description
highlightsPanelLayoutSection	DescribeLayoutSection []	Layout section(s) for the highlights panel view.
multirowEditLayoutSections	DescribeLayoutSection []	Layout section(s) for the multiline layout view. This field is available in API version 35.0 and later.
id	ID	Unique ID of this layout. For information on IDs, see ID Field Type .
quickActionList	DescribeQuickActionListResult	List of actions associated with the specified layout. This field is available in API version 28.0 and later.
relatedContent	RelatedContent	Mobile Cards section associated with the specified layout. This field is available in API version 29.0 and later.
relatedLists	RelatedList []	Related list(s) associated with the specified layout.
saveOptions	DescribeLayoutSaveOption []	List of save options for the layout.

DescribeLayoutButtonSection

Represents one of two sections of the layout containing either standard or custom buttons.

Name	Type	Description
detailButtons	DescribeLayoutButton []	Standard or custom button(s) associated with the specified button section.

DescribeLayoutButton

Represents a single standard button, custom button, or custom link in a [DescribeLayout](#).

Name	Type	Description
behavior	WebLinkWindowType	What the button or link does when clicked, such as execute JavaScript or open its content source in a new window, for example. This field is available in API version 31.0 and later.
colors	DescribeColor []	Array of color information for icons associated with this button or link. Each color is associated with a theme. This field is available in API version 32.0 and later.
content	string	The API name of the Visualforce page or s-control being delivered. This field is available in API version 31.0 and later.
contentSource	WebLinkType	The content source of the custom button or link. The <code>contentSource</code> for a standard button which hasn't been overridden is <code>null</code> . This field is available in API version 31.0 and later.

Name	Type	Description
custom	boolean	Required. Indicates whether this is a custom button or link (<code>true</code>) or not (<code>false</code>).
encoding	string	Type of encoding assigned to the URL called by the button or link. Valid values are: <ul style="list-style-type: none"> UTF-8—Unicode (UTF-8) ISO-8859-1—General US & Western Europe (ISO-8859-1, ISO-LATIN-1) Shift_JIS—Japanese (Shift-JIS) ISO-2022-JP—Japanese (JIS) EUC-JP—Japanese (EUC-JP) x-SJIS_0213—Japanese (Shift-JIS_2004) ks_c_5601-1987—Korean (ks_c_5601-1987) Big5—Traditional Chinese (Big5) GB2312—Simplified Chinese (GB2312) Big5-HKSCS—Traditional Chinese Hong Kong (Big5-HKSCS) This field is available in API version 31.0 and later.
height	int	The height (in pixels) when a button or link's <code>behavior</code> field value is set to <code>newWindow</code> , <code>sidebar</code> , or <code>noSidebar</code> . This field is available in API version 31.0 and later.
icons	DescribeIcon []	Array of icons for this button or link. Each icon is associated with a theme. This field is available in API version 29.0 and later.
label	string	Label for the button or link displayed in the Salesforce user interface.
menubar	boolean	Indicates whether the menu bar displays (<code>true</code>) or not (<code>false</code>) when a button or link's <code>behavior</code> field value is set to <code>newWindow</code> . This field is available in API version 31.0 and later.
name	string	API name of the button or link.
overridden	boolean	Required. Indicates whether a standard button has been overridden (<code>true</code>) or not (<code>false</code>). This field is available in API version 31.0 and later.
resizeable	boolean	Indicates whether the new window is resizeable (<code>true</code>) or not (<code>false</code>) when a button or link's <code>behavior</code> field value is set to <code>newWindow</code> . This field is available in API version 31.0 and later.

Name	Type	Description
<code>scrollbars</code>	boolean	Indicates whether scrollbars display (<code>true</code>) or not (<code>false</code>) when a button or link's <code>behavior</code> field value is set to <code>newWindow</code> . This field is available in API version 31.0 and later.
<code>showsLocation</code>	boolean	Indicates whether the address bar displays (<code>true</code>) or not (<code>false</code>) when a button or link's <code>behavior</code> field value is set to <code>newWindow</code> . This field is available in API version 31.0 and later.
<code>showsStatus</code>	boolean	Indicates whether the status bar displays (<code>true</code>) or not (<code>false</code>) when a button or link's <code>behavior</code> field value is set to <code>newWindow</code> . This field is available in API version 31.0 and later.
<code>toolbar</code>	boolean	Indicates whether the toolbars display (<code>true</code>) or not (<code>false</code>) when a button or link's <code>behavior</code> field value is set to <code>newWindow</code> . This field is available in API version 31.0 and later.
<code>url</code>	string	The URL called by the button or link. This field is <code>null</code> for standard buttons in a related list. This field is available in API version 31.0 and later.
<code>width</code>	int	The width (in pixels) when a button or link's <code>behavior</code> field value is set to <code>newWindow</code> . This field is available in API version 31.0 and later.
<code>windowPosition</code>	WebLinkPosition	Indicates the window position when a button or link's <code>behavior</code> field value is set to <code>newWindow</code> . This field is available in API version 31.0 and later.

DescribeLayoutComponent

Represents the smallest unit in a layout—a field or a separator. To reference a field for display, a client application uses the following notation to reference a field in the [describeSObjects\(\)](#) call: `LayoutComponent.fieldName`.

In API version 31.0 and later, `DescribeLayoutComponent` is extended with [FieldLayoutComponent](#) if both the [LayoutComponentType](#) value is `Field`, and the field being described is either the compound field `Address` or the compound field `Person Name`.

Name	Type	Description
<code>displayLines</code>	int	The number of vertical lines displayed for a field in the edit view. Applies to <code>textarea</code> and multi-select picklist fields.
<code>tabOrder</code>	int	Indicates the tab order for the item in the row.

Name	Type	Description
<code>type</code>	<code>LayoutComponentType</code>	The <code>LayoutComponentType</code> for this <code>LayoutComponent</code> .
<code>value</code>	<code>string</code>	Value of this <code>LayoutComponent</code> . The name of the field if the <code>LayoutComponentType</code> value is <code>Field</code> . The API name of the canvas app if the <code>LayoutComponentType</code> value is <code>Canvas</code> .

DescribeLayoutFeedFilter

Represents an individual feed filter option that you can use to filter the feed.

Name	Type	Description
<code>label</code>	<code>string</code>	The label of the filter.
<code>name</code>	<code>string</code>	The API name of the filter.
<code>type</code>	<code>FeedLayoutFilterType</code> enum	Standard feed filter types: <ul style="list-style-type: none"> • <code>AllUpdates</code> • <code>FeedItemType</code>

DescribeLayoutFeedView

Represents the layout of the feed view for a feed-based page layout.

Name	Type	Description
<code>feedFilters</code>	<code>DescribeLayoutFeedFilter[]</code>	Lists the feed filter options that are displayed with the feed.

DescribeLayoutItem

Represents an individual item in a `DescribeLayoutRow`. A `DescribeLayoutItem` consists of a set of components (`DescribeLayoutComponent`), each of which is either a field or a separator. For most fields on a layout, there is only one component per layout item. However, in a display-only view, the `DescribeLayoutItem` might be a composite of the individual fields (for example, an address can consist of street, city, state, country, and postal code data). On the corresponding edit view, each component of the address field would be split up into separate `DescribeLayoutItems`.

Name	Type	Description
<code>editable</code>	<code>boolean</code>	Indicates whether this <code>DescribeLayoutItem</code> can be edited (<code>true</code>) or not (<code>false</code>). This field is available in API version 30.0 and below. It was replaced by the <code>editableForNew</code> and <code>editableForUpdate</code> fields in API version 31.0.
<code>editableForNew</code>	<code>boolean</code>	Indicates whether a new <code>DescribeLayoutItem</code> can be edited when creating a new record (<code>true</code>) or not (<code>false</code>). This field is available in API version 31.0 and later.

Name	Type	Description
<code>editableForUpdate</code>	boolean	Indicates whether an existing <code>DescribeLayoutItem</code> can be edited when editing a record (<code>true</code>) or not (<code>false</code>). This field is available in API version 31.0 and later.
<code>label</code>	string	Label text for this <code>DescribeLayoutItem</code> .
<code>layoutComponents</code>	<code>DescribeLayoutComponent[]</code>	DescribeLayoutComponent for this <code>DescribeLayoutItem</code> .
<code>placeholder</code>	boolean	Indicates whether this <code>DescribeLayoutItem</code> is a placeholder (<code>true</code>) or not (<code>false</code>). If <code>true</code> , then this <code>DescribeLayoutItem</code> is blank.
<code>required</code>	boolean	Indicates whether this <code>DescribeLayoutItem</code> is required (<code>true</code>) or not (<code>false</code>). This is useful to know if, for example, you wanted to render required fields in a contrasting color (such as red).

DescribeLayoutRow

Represents a row in a [DescribeLayoutSection](#). A `DescribeLayoutRow` consists of one or more [DescribeLayoutItem](#) objects. For each `DescribeLayoutRow`, a `DescribeLayoutItem` refers either to a specific field or to an “empty” `DescribeLayoutItem` (a `DescribeLayoutItem` that contains no [DescribeLayoutComponent](#) objects). An empty `DescribeLayoutItem` can be returned when a given `DescribeLayoutRow` is sparse (for example, containing more fields on the right column than on the left column). Where there are gaps in the layout, an empty `DescribeLayoutItem` is returned as a placeholder.

Name	Type	Description
<code>layoutItems</code>	DescribeLayoutItem []	Refers to either a specific field or to an empty <code>LayoutItem</code> (a <code>LayoutItem</code> that contains no DescribeLayoutComponent objects).
<code>numItems</code>	int	Number of <code>layoutItems</code> . This information is redundant but, due to a bug in a popular SOAP toolkit, was required to avoid serialization problems.

DescribeLayoutSection

Represents a section of a [DescribeLayout](#) and consists of one or more columns and one or more rows (an array of [DescribeLayoutRow](#)).

Name	Type	Description
<code>columns</code>	int	Number of columns in this <code>DescribeLayoutSection</code> .
<code>heading</code>	string	Heading text (label) for this <code>DescribeLayoutSection</code> .
<code>layoutRows</code>	<code>DescribeLayoutRow</code> []	Array of one or more DescribeLayoutRow objects.
<code>parentLayoutId</code>	ID	The ID of the layout upon which this <code>DescribeLayoutSection</code> resides. This field is available in API version 35.0 and later.
<code>rows</code>	int	Number of rows in this <code>DescribeLayoutSection</code> .

Name	Type	Description
tabOrder	string	Indicates the tab order for the fields in the section in the edit view. Valid values are: <ul style="list-style-type: none"> LeftToRight TopToBottom This field is available in API version 31.0 and later.
useCollapsibleSection	boolean	Indicates whether this DescribeLayoutSection is a collapsible section, also known as a “twistie” (<code>true</code>), or not (<code>false</code>).
useHeading	boolean	Indicates whether to display the heading (<code>true</code>) or not (<code>false</code>).

DescribeQuickActionResult

Represents a list of actions assigned to the page layout. Available in API version 28.0 and later.

Name	Type	Description
quickActionListItems	DescribeQuickActionResult[]	Array of zero or more QuickActionListItemResult objects.

DescribeQuickActionListItemResult

Represents a QuickAction assigned to the actions list for a page layout. Available in API version 28.0 and later.

Name	Type	Description
colors	DescribeColor[]	Array of color information. Each color is associated with a theme. This field is available in API version 29.0 and later.
iconUrl	string	The URL of the icon associated with the action. This icon URL corresponds to the 32x32 icon used for the current Salesforce theme, introduced in Spring '10.
icons	DescribeIcon[]	Array of icons for this action. Each icon is associated with a theme. This field is available in API version 29.0 and later.
label	string	The label of the action.
miniIconUrl	string	The URL of the mini icon associated with the action. This icon URL corresponds to the 16x16 icon used for the current Salesforce theme, introduced in Spring '10.
quickActionName	string	The API name of the action.
targetSubjectType	string	The API name of the action's target object.
type	string	The QuickActionType of the action. Valid values are: <ul style="list-style-type: none"> Create VisualforcePage

CustomLinkComponent

When the [LayoutComponentType](#) value is `CustomLink`, this type contains information about a single custom link on the page layout.

Name	Type	Description
<code>customLink</code>	DescribeLayoutButton	A single <code>LayoutComponent</code> object of type <code>CustomLink</code> .

FieldLayoutComponent

Extends the information returned by `describeLayoutComponent`. When the [LayoutComponentType](#) value is `Field`, and the field being described is an `Address` or `Person Name` field, `FieldLayoutComponent` includes information about the field's components. When the [LayoutComponentType](#) value is `Field`, and the field being described is a compound field, such as `Address` or `Person Name`, `FieldLayoutComponent` includes information about its components.

Available in API version 31.0 and later.

Name	Type	Description
<code>components</code>	<code>describeLayoutComponent[]</code>	Array of zero or more <code>LayoutComponent</code> objects of type <code>Field</code> .
<code>fieldType</code>	FieldType	The field type.

Sample Code for Usage of FieldLayoutComponent

```
DescribeLayoutComponent layoutComponent = layoutComponents[n];
// Look for a component representing the BillingAddress field
if (layoutComponent.getType() == LayoutComponentType.Field.toString() &&
    layoutComponent.getValue().equals("BillingAddress")) {
    // Cast this component as a FieldLayoutComponent
    DescribeLayoutComponent.FieldLayoutComponent addressFieldComponent =
(FieldLayoutComponent) layoutComponent;
    // At this point you can access addressFieldComponent
    FieldLayoutComponent-specific methods such as getComponents() or
    getFieldType()
}
```

LayoutComponentType

Represents the type for a [DescribeLayoutComponent](#). Contains one of these values:

- `AnalyticsCloud`—An Tableau CRM dashboard on the page layout. Available in API version 34.0 and later.
- `Canvas`—A canvas component on the page layout. This layout component type is available in API version 31.0 and later.
- `CustomLink`—A custom link on the page layout.
- `EmptySpace`—A blank space on the page layout.
- `ExpandedLookup`—An Expanded Lookup component in the Mobile Cards section of the page layout.
- `Field`—Field name. A mapping to the [RecordTypeInfo](#) field on the [describeSObjectResult](#).
- `ReportChart`—A report chart on the page layout.

- `SControl`—Reserved for future use.
- `Separator`—Separator character, such as a semicolon (;) or slash (/).
- `VisualforcePage`—A Visualforce component on the page layout.

PicklistForRecordType

Represents a single record type picklist in a [RecordTypeMapping](#). The `picklistName` matches up with the `name` attribute of each field in the `fields` array in [describeSObjectResult](#). The `picklistValues` are the set of acceptable values for the `recordType`.

Name	Type	Description
<code>picklistName</code>	string	Name of the picklist.
<code>picklistValues</code>	PicklistEntry[]	Set of picklist values associated with the <code>recordTypeIds</code> in the RecordTypeMapping . Note: If you retrieve <code>picklistValues</code> , the PicklistEntry value is null. If you need the PicklistEntry value, get it from the PicklistEntry object obtained from the <code>Field</code> object associated with the DescribeSObjectResult .

RecordTypeMapping

Represents a single record type mapping in the `recordTypeMappings` field in a [DescribeLayoutResult](#) object. This object is a map of valid `recordTypeIds` to `layoutId`. For displaying a detail view, a client application uses this mapping to determine which layout is associated with the record type on the record. For displaying an edit view, a client application uses this mapping to determine which layout to use (and possibly to allow the user to choose between multiple record types); it will also determine the set of available picklist values.

Name	Type	Description
<code>available</code>	boolean	Indicates whether this record type is available (<code>true</code>) or not (<code>false</code>). Availability is used to display a list of available record types to the user when they are creating a new record.
<code>defaultRecordTypeMapping</code>	boolean	Indicates whether this is the default record type mapping (<code>true</code>) or not (<code>false</code>).
<code>layoutId</code>	ID	ID of the layout associated with this record type.
<code>name</code>	string	Name of this record type.
<code>picklistsForRecordType</code>	PicklistForRecordType []	Record type picklist(s) mapped to the <code>recordTypeIds</code> .
<code>recordTypeId</code>	ID	ID of this record type.

 **Note:** Some fields previously in this result have moved to [RecordTypeInfo](#) on page 4175.

RelatedContent

Represents the Mobile Cards section in a [DescribeLayout](#). Available in API version 29.0 and later.

Name	Type	Description
<code>relatedContentItems</code>	DescribeRelatedContentItem []	An array of items in the Mobile Cards section of the page layout.

DescribeRelatedContentItem

Represents an individual item in the [DescribeRelatedContentItem](#) list. Available in API version 29.0 and later.

Name	Type	Description
<code>describeLayoutItem</code>	DescribeLayoutItem	An individual layout item in the Mobile Cards section. Must be wrapped in a DescribeRelatedContentItem to be added to the Mobile Cards section.

RelatedList

Represents a single related list in a [DescribeLayoutResult](#).

Name	Type	Description
<code>buttons</code>	DescribeLayoutButton []	Buttons associated with this related list. This field is available in API version 32.0 and later.
<code>columns</code>	RelatedListColumn []	Columns associated with this related list. You can pair this value with Field to achieve a number of useful tasks, including determining whether the field is: <ul style="list-style-type: none"> • A name field, in order to present a link to the detail • Sortable, (to allow the user to include it in an <code>ORDER BY</code> clause to sort the rows by the given column • A currency field, to include the currency symbol or code
<code>custom</code>	boolean	If <code>true</code> , this related list is custom.
<code>field</code>	string	Name of the field on the related (associated) object that establishes the relationship with the associating object. For example, for the Contact related list on Account , the value is <code>ACCOUNTID</code> .
<code>label</code>	string	Label for the related list, displayed in the Salesforce user interface.
<code>limitRows</code>	int	Number of rows to display.
<code>name</code>	string	Name of the ChildRelationship in the DescribeSObjectResult for the <code>sObjectType</code> which was provided as the argument to DescribeLayout .
<code>subject</code>	string	Name of the <code>sObjectType</code> that is the row type for rows within this related list.

Name	Type	Description
sort	RelatedListSort[]	If not null, the column(s) that should be used to order the related objects.

RelatedListColumn

Represents a single field in a related list returned by DescribeLayoutResult.

Name	Type	Description
field	string	API name of the field. This value is always of the form <i>object_type.field_name</i> . For example, if name is <code>Contact.Account.Owner.Alias</code> , then this value is <code>User.Alias</code> .
fieldApiName	string	SOQL field syntax for the field in relation to the main sObject for the related list. This value is always of the form <i>object_type.field_name</i> . Unlike <code>name</code> , it doesn't return a value in the Translate Returned SOQL Results format.
format	string	Display in date or dateTime format.
label	string	Label of the field.
lookupId	string	Optional SOQL field syntax to retrieve the lookup ID value for the main related list sObject . This value may be an expression that uses SOQL relationship query dot notation. For example, if the related list <code>sObjectType</code> is <code>Case</code> and the column display value is <code>Owner.Alias</code> , then the lookup ID value would be <code>Owner.Id</code> .
name	string	SOQL field syntax for the field in relation to the main sObject for the related list. This value may be an expression that uses SOQL relationship query dot notation, or it may use the Translate Returned SOQL Results or <code>convertCurrency()</code> format. For example, if the related list <code>sObjectType</code> is <code>Case</code> , then the value might be <code>Owner.Alias</code> or it might be <code>toLabel(Case.Status)</code> .

RelatedListSort

Represents the sorting preference for objects in the related list.

Name	Type	Description
column	string	Name of the field that is used to order the related objects.
ascending	boolean	If <code>true</code> , sort order is ascending. If <code>false</code> , descending.

Although in most cases there is only one RelatedListSort in the array, for some special standard related lists, there is more than one. If there is more than one, the RelatedListSorts are ordered according to how they should be included in a corresponding SOQL query, for example:

```
ORDER BY relatedListSort[0].getColumn() DIRECTION, relatedListSort[1].getColumn() DIRECTION
```

DescribeLayoutSaveOption

Represents the save options for the layout. Save options define behavior that occurs when objects are created or modified using the given layout. For example, for Cases and Leads, a “UseDefaultAssignmentRule” save option is exposed to control whether assignment rules are applied when Cases or Leads are created or edited.

Name	Type	Description
<code>defaultValue</code>	boolean	Default value for the save option. Controls whether the save option defaults to enabled or not in the Salesforce user interface. For example, for the “UseDefaultAssignmentRule” save option, if <code>defaultValue</code> is <code>true</code> , then by default the system triggers the default assignment rules when an Account, Case, or Lead is created or edited. If <code>false</code> , then the default assignment rules aren’t applied when an Account, Case, or Lead is created or edited, unless the user enables the save option in the Salesforce user interface.
<code>isDisplayed</code>	boolean	If <code>true</code> , then the save option is displayed in the layout. If <code>false</code> , then the save option isn’t displayed in the layout.
<code>label</code>	string	Label for the save option that is displayed in the Salesforce user interface.
<code>name</code>	string	API name for the save option.
<code>restHeaderName</code>	string	The corresponding REST API header for the save option.
<code>soapHeaderName</code>	string	The corresponding SOAP API header for the save option.

WebLinkPosition

Represents the window position for a new window opened upon clicking a [DescribeLayoutButton](#). Applies only to custom buttons. Available in API version 31.0 and later. Contains one of these values:

- `fullScreen`—The new window opens in a full screen. If this option is selected, any width or height parameters set for the new window are ignored.
- `none`—No window position preference is set.
- `topLeft`—The new window opens, positioned at the top left of the screen.

WebLinkType

Represents the content being delivered by the custom button. Contains one of these values:

- javascript
- page—Visualforce page
- sControl
- url

WebLinkWindowType

Represents the behavior for a [DescribeLayoutButton](#). Applies only to custom buttons. Available in API version 31.0 and later. Contains one of these values:

- newWindow—The custom button's content opens in a new browser window.
- noSidebar—The custom button's content displays in the existing browser window without a sidebar.
- onClickJavaScript—Valid only when the [DescribeLayoutButton](#)'s `contentSource` field value is `javascript`. Clicking the button or link executes JavaScript.
- replace—The custom button's content displays in the existing browser window without a sidebar or header.
- sidebar—The custom button's content displays in the existing browser window with a sidebar.

describePrimaryCompactLayouts ()

Retrieves metadata about the primary compact layout for each of the specified object types. Information returned is limited to 100 objects.

Syntax

```
DescribeCompactLayout[] primaryCompactLayouts =
connection.describePrimaryCompactLayouts(string[] sObjectType)
```

Usage

Use this call to retrieve information about the primary compact layout for the given object types. This call returns metadata about a given primary compact layout. For more information about compact layouts, see the Salesforce Help.

Sample Code—Java

```
public void testDescribePrimaryCompactLayoutsSample() {
    try {
        String[] objectsToDescribe = new String[] {"Account", "Lead"};
        DescribeCompactLayout[] primaryCompactLayouts =
connection.describePrimaryCompactLayouts(objectsToDescribe);

        for (int i = 0; i < primaryCompactLayouts.length; i++) {
            DescribeCompactLayout cLayout = primaryCompactLayouts[i];
            System.out.println(" There is a compact layout with name: " + cLayout.getName());

            // Write the objectType
            System.out.println(" This compact layout is the primary compact layout for: " +
```

```

cLayout.getObjectType();

    DescribeLayoutItem[] fieldItems = cLayout.getFieldItems();
    System.out.println(" There are " + fieldItems.length + " fields in this compact
layout.");

    // Write field items
    for (int j = 0; j < fieldItems.length; j++) {
        System.out.println(j + " This compact layout has a field with name: " +
fieldItems[j].getLabel());
    }

    DescribeLayoutItem[] imageItems = cLayout.getImageItems();
    System.out.println(" There are " + imageItems.length + " image fields in this
compact layout.");

    // Write the image items
    for (int j = 0; j < imageItems.length; j++) {
        System.out.println(j + " This compact layout has an image field with name: " +
imageItems[j].getLabel());
    }

    DescribeLayoutButton[] actions = cLayout.getActions();
    System.out.println(" There are " + actions.length + " buttons in this compact
layout.");

    // Write the action buttons
    for (int j = 0; j < actions.length; j++) {
        System.out.println(j + " This compact layout has a button with name: " +
actions[j].getLabel());
    }
}

} catch (ConnectionException ce) {
    ce.printStackTrace();
}
}

```

Arguments

Name	Type	Description
sObjectTypes	string[]	An array of one or more objects. The specified values must be valid objects for your organization.

Response

[DescribeCompactLayout](#)

Faults

[InvalidSObjectFault](#)

[UnexpectedErrorFault](#)

describeQuickActions ()

Retrieves details about specified actions.

Syntax

```
DescribeQuickActionResult[] = connection.describeQuickActions(string[] quickActionNames);
```

Usage

Use the `describeQuickActions ()` call to retrieve details for specified actions. In API version 28.0, the `describeQuickActions ()` call takes the action name in the form of `ParentEntity.ActionName`. In API version 29.0 and greater, it takes the action name in the form of `ContextEntity.ActionName`. Returns an array of `DescribeQuickActionResult`. You might first call `describeAvailableQuickActions ()` for a list of actions available for a specified context and then use `describeQuickActions ()` to obtain details about specific actions.

 **Note:** In API version 46.0 and later, the `apiName` for a global quick action can include the prefix `Global.` in a `describeQuickActions ()` request body. The request body also accepts global quick action API names without the prefix.

Sample—Java

This sample retrieves and displays publisher action details for a create action on the Account object.

```
public void example() throws Exception {
    DescribeQuickActionResult[] result =
        conn.describeQuickActions(new String[]
            { "Account.QuickCreateContact", "Account.QuickCreateTask" });
    for(DescribeQuickActionResult r : result) {
        assert r != null;
        DescribeQuickActionDefaultValue [] describeQuickActionDefaultValues =
            r.getDefaultValues();
        for(DescribeQuickActionDefaultValue defaultValue : describeQuickActionDefaultValues)
        {
            System.out.println("Target Object Field: " + defaultValue.getField() );
            System.out.println("Target Object Field's default Value: " +
                defaultValue.getDefaultValue );
        }

        System.out.println("Action name: " + r.getName());
        System.out.println("Action label: " + r.getLabel());
        System.out.println("ParentOrContext object: " + r.getSourceObjectType());
        System.out.println("Target object: " + r.getTargetObjectType());
        System.out.println("Target object record type: " + r.getTargetRecordTypeId());
        System.out.println("Relationship field: " + r.getTargetParentField());
        System.out.println("Quick action type: " + r.getType());
        System.out.println("VF page name for custom actions: " +
            r.getVisualforcePageName());
        System.out.println("Icon name: " + r.getIconName());
        System.out.println("Icon URL: " + r.getIconUrl());
    }
}
```

```

        System.out.println("Mini icon URL: " + r.getMiniIconUrl());
        assert r.getLayout() != null;
        System.out.println("Height of VF page for custom actions: " + r.getHeight());
        System.out.println("Width of VF page for custom actions: " + r.getWidth());
    }
}

```

Arguments

Name	Type	Description
quickActions	string[]	An array of quick actions to be retrieved.

Response

[DescribeQuickActionResult](#)

DescribeQuickActionResult

The `describeQuickActions()` call returns an array of `DescribeQuickActionResult` objects. Each `DescribeQuickActionResult` object represents a quick action for a specified object.

Name	Type	Description
actionEnumOrId	string	The unique ID for the action. If the action doesn't have an ID, its API name is used. This field is available in API version 35.0 and later.
canvasApplicationName	string	The name of your Canvas application, if you use it.
colors	DescribeColor []	Array of color information. Each color is associated with a theme. This field is available in API version 29.0 and later.
defaultValues	DescribeQuickActionDefaultValue []	The action's default values.
height	int	The height in pixels of the action pane.
iconName	string	Name of icon used for the action. If a custom icon is not used, this value will not be set.
iconUrl	string	URL of icon used for the action. This icon URL corresponds to the 32x32 icon used for the current Salesforce theme, introduced in Spring '10, or the custom icon, if there is one.
icons	DescribeIcon []	Array of icons. Each icon is associated with a theme. If no custom icon was associated with the quick action and the quick action creates a specific object, the icons will correspond to the icons used for the created object. For

Name	Type	Description
		<p>example, if the quick action creates an Account, the icon array will contain the icons used for Account.</p> <p>If a custom icon was associated with the quick action, the array will contain that custom icon.</p> <p>This field is available in API version 29.0 and later. API version 32.0 and later returns different icons than in earlier API versions.</p>
label	string	Label of the action.
layout	DescribeLayoutSection	The section of the layout where the action resides.
lightningComponentBundleId	ID	<p>If <code>type</code> is <code>LightningComponent</code>, the ID of the Lightning component bundle called by the action.</p> <p>This field is available in API version 38.0 and later.</p>
lightningComponentBundleName	string	<p>If <code>type</code> is <code>LightningComponent</code>, the name of the Lightning component bundle called by the action.</p> <p>This field is available in API version 38.0 and later.</p>
miniIconUrl	string	The icon's URL. This icon URL corresponds to the 16x16 icon used for the current Salesforce theme, introduced in Spring '10, or the custom icon, if there is one.
name	string	Name of the action.
contextObjectType	string	The object used for the action. Named <code>sourceObjectType</code> in version 29.0 and earlier.
showQuickActionVfHeader	boolean	Whether or not the Visualforce quick action header and footer should be shown. If set to <code>false</code> , then both the header containing the quick action title and the footer containing the Save and Cancel buttons aren't displayed.
targetParentField	string	The parent object type of the action. Links the target object to the parent object. For example, use Account if the target object is Contact and the parent object is Account.
targetRecordTypeId	ID	The record type of the target record.
targetObjectType	string	The action's target object type.
type	string	<p>The action's type. Valid values are:</p> <ul style="list-style-type: none"> • <code>Canvas</code> • <code>Create</code> • <code>Flow</code> (This value is available as a Beta in API version 41.0 and later) • <code>LightningComponent</code> (This value is available in API version 38.0 and later.)

Name	Type	Description
		<ul style="list-style-type: none"> LogACall Post SendEmail (This value is available in API version 31.0 and later.) SocialPost Update VisualforcePage
visualforcePageName	string	If <code>type</code> is Visualforce, the page name of the associated page for the action.
visualforcePageUrl	string	If <code>type</code> is Visualforce, the URL of the associated page for the action.
width	int	If a custom action is created, this is the width in pixels of the action pane.

DescribeQuickActionDefaultValue

Represents the default values of fields to use in default layouts.

Name	Type	Description
defaultValue	string	The value of the auto-populated default action.
field	string	The field name of the action.

DescribeLayoutSection

Represents a section of a [DescribeLayout](#) and consists of one or more columns and one or more rows (an array of [DescribeLayoutRow](#)).

Name	Type	Description
columns	int	Number of columns in this DescribeLayoutSection.
heading	string	Heading text (label) for this DescribeLayoutSection.
layoutRows	DescribeLayoutRow[]	Array of one or more DescribeLayoutRow objects.
parentLayoutId	ID	The ID of the layout upon which this DescribeLayoutSection resides. This field is available in API version 35.0 and later.
rows	int	Number of rows in this DescribeLayoutSection.
tabOrder	string	Indicates the tab order for the fields in the section in the edit view. Valid values are: <ul style="list-style-type: none"> LeftToRight TopToBottom

Name	Type	Description
		This field is available in API version 31.0 and later.
<code>useCollapsibleSection</code>	boolean	Indicates whether this <code>DescribeLayoutSection</code> is a collapsible section, also known as a “twistie” (<code>true</code>), or not (<code>false</code>).
<code>useHeading</code>	boolean	Indicates whether to display the heading (<code>true</code>) or not (<code>false</code>).

DescribeLayoutRow

Represents a row in a [DescribeLayoutSection](#). A `DescribeLayoutRow` consists of one or more [DescribeLayoutItem](#) objects. For each `DescribeLayoutRow`, a `DescribeLayoutItem` refers either to a specific field or to an “empty” `DescribeLayoutItem` (a `DescribeLayoutItem` that contains no [DescribeLayoutComponent](#) objects). An empty `DescribeLayoutItem` can be returned when a given `DescribeLayoutRow` is sparse (for example, containing more fields on the right column than on the left column). Where there are gaps in the layout, an empty `DescribeLayoutItem` is returned as a placeholder.

Name	Type	Description
<code>layoutItems</code>	DescribeLayoutItem []	Refers to either a specific field or to an empty <code>LayoutItem</code> (a <code>LayoutItem</code> that contains no DescribeLayoutComponent objects).
<code>numItems</code>	int	Number of <code>layoutItems</code> . This information is redundant but, due to a bug in a popular SOAP toolkit, was required to avoid serialization problems.

DescribeLayoutItem

Represents an individual item in a [DescribeLayoutRow](#). A `DescribeLayoutItem` consists of a set of components ([DescribeLayoutComponent](#)), each of which is either a field or a separator. For most fields on a layout, there is only one component per layout item. However, in a display-only view, the `DescribeLayoutItem` might be a composite of the individual fields (for example, an address can consist of street, city, state, country, and postal code data). On the corresponding edit view, each component of the address field would be split up into separate `DescribeLayoutItems`.

Name	Type	Description
<code>editable</code>	boolean	Indicates whether this <code>DescribeLayoutItem</code> can be edited (<code>true</code>) or not (<code>false</code>). This field is available in API version 30.0 and below. It was replaced by the <code>editableForNew</code> and <code>editableForUpdate</code> fields in API version 31.0.
<code>editableForNew</code>	boolean	Indicates whether a new <code>DescribeLayoutItem</code> can be edited when creating a new record (<code>true</code>) or not (<code>false</code>). This field is available in API version 31.0 and later.
<code>editableForUpdate</code>	boolean	Indicates whether an existing <code>DescribeLayoutItem</code> can be edited when editing a record (<code>true</code>) or not (<code>false</code>). This field is available in API version 31.0 and later.

Name	Type	Description
label	string	Label text for this DescribeLayoutItem.
layoutComponents	DescribeLayoutComponent[]	DescribeLayoutComponent for this DescribeLayoutItem.
placeholder	boolean	Indicates whether this DescribeLayoutItem is a placeholder (<code>true</code>) or not (<code>false</code>). If <code>true</code> , then this DescribeLayoutItem is blank.
required	boolean	Indicates whether this DescribeLayoutItem is required (<code>true</code>) or not (<code>false</code>). This is useful to know if, for example, you wanted to render required fields in a contrasting color (such as red).

DescribeLayoutComponent

Represents the smallest unit in a layout—a field or a separator. To reference a field for display, a client application uses the following notation to reference a field in the [describeSObjects\(\)](#) call: `LayoutComponent.fieldName`.

In API version 31.0 and later, DescribeLayoutComponent is extended with FieldLayoutComponent if both the [DescribeLayoutComponent](#) value is `Field`, and the field being described is either the compound field `Address` or the compound field `Person Name`.

Name	Type	Description
displayLines	int	The number of vertical lines displayed for a field in the edit view. Applies to <code>textarea</code> and multi-select picklist fields.
tabOrder	int	Indicates the tab order for the item in the row.
type	LayoutComponentType	The LayoutComponentType for this LayoutComponent.
value	string	Value of this LayoutComponent. The name of the field if the LayoutComponentType value is <code>Field</code> . The API name of the canvas app if the LayoutComponentType value is <code>Canvas</code> .

LayoutComponentType

Represents the type for a [DescribeLayoutComponent](#). Contains one of these values:

- `AnalyticsCloud`—An Tableau CRM dashboard on the page layout. Available in API version 34.0 and later.
- `Canvas`—A canvas component on the page layout. This layout component type is available in API version 31.0 and later.
- `CustomLink`—A custom link on the page layout.
- `EmptySpace`—A blank space on the page layout.
- `ExpandedLookup`—An Expanded Lookup component in the Mobile Cards section of the page layout.
- `Field`—Field name. A mapping to the `name` field on the [describeSObjectResult](#).
- `ReportChart`—A report chart on the page layout.
- `SControl`—Reserved for future use.
- `Separator`—Separator character, such as a semicolon (;) or slash (/).
- `VisualforcePage`—A Visualforce component on the page layout.

describeSearchScopeOrder ()

Retrieves an ordered list of the objects in a user's default global search scope.

Syntax

```
DescribeSearchScopeOrderResult[] describeSearchScopeOrderResults =  
connection.describeSearchScopeOrder();
```

Usage

Use `describeSearchScopeOrder ()` to retrieve an ordered list of objects in the default global search scope of a logged-in user. Global search keeps track of which objects the user interacts with and how often and arranges the search results accordingly. Objects used most frequently appear at the top of the list. The returned list reflects the object order in the user's default search scope, including any pinned objects on the user's search results page. This call is useful if you want to implement a custom search results page using the optimized global search scope.

 **Note:** You must enable Chatter to enable global search.

Sample Code—Java

This sample shows how to retrieve the global search scope for a user and then iteratively display the name of each object in the scope.

```
public void describeSearchScopeOrderSample () {  
    try {  
        //Get the order of objects in search smart scope for the logged-in user  
        DescribeSearchScopeOrderResult[] describeSearchScopeOrderResults =  
            connection.describeSearchScopeOrder();  
        //Iterate through the results and display the name of each object  
        for (int i = 0; i < describeSearchScopeOrderResults.length; i++) {  
            System.out.println(describeSearchScopeOrderResults[i].getName());  
        }  
    }  
    catch (ConnectionException ce) {  
        ce.printStackTrace();  
    }  
}
```

Arguments

None.

Response

An array of `DescribeSearchScopeOrderResult` objects

Fault

[UnexpectedErrorFault](#)

SEE ALSO:

[API Call Basics](#)

DescribeSearchScopeOrderResult

The `describeSearchScopeOrder()` call returns an array of `DescribeSearchScopeOrderResult` objects. Each `DescribeSearchScopeOrderResult` object represents an object in the user's global search scope. The list reflects the order of the objects in the user's scope, including any pinned objects. The `DescribeSearchScopeOrderResult` object has the following properties.

Name	Type	Description
<code>keyPrefix</code>	string	Three-character prefix code in the object ID. Object IDs are prefixed with three-character codes that specify the type of the object. For example, Account objects have a prefix of 001 and Opportunity objects have a prefix of 006. Note that a key prefix can sometimes be shared by multiple objects so it does not always uniquely identify an object.
<code>name</code>	string	Name of the object. English only.

`describeSearchLayouts()`

Retrieves the search result layout configuration for one or more objects.

Syntax

```
DescribeSearchLayoutResult[] = binding.describeSearchLayouts(string sObjectType[]);
```

Usage

Use `describeSearchLayouts()` to retrieve search layout information for one or more objects. This is handy when you want to create a custom search results page with the same layout settings as in Salesforce.

Sample

This sample shows how to retrieve the search result layout information for a list of objects.

```
public void describeSearchLayoutSample(String[] sObjectTypes) {
    try {
        // Get the search layout of Account and Group
        DescribeSearchLayoutResult[] searchLayoutResults =
connection.describeSearchLayouts(sObjectTypes);
        // Iterate through the results and display the label of each column
```

```

        for (int i = 0; i < sObjectTypes.length; i += 1) {
            String sObjectType = sObjectTypes[i];
            DescribeSearchLayoutResult result = searchLayoutResults[i];
            System.out.println("Top label for search results for " + sObjectType + "
is " + result.getLabel() + " and should display " + result.getLimitRows() + " rows");
            System.out.println("Column labels for search results for " + sObjectType
+ " are: ");
            for (DescribeColumn column : result.getSearchColumns()) {
                System.out.println(column.getLabel());
            }
        }
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}

```

Arguments

Name	Type	Description
sObjectType	string[]	The list of objects you want to obtain search result layout configuration for. For example, if the object is a person account, specify Account, or if it is a person contact, specify Contact. The specified values must be valid objects in your organization. For a complete list of standard objects, see Standard Objects .

Response

[DescribeSearchLayoutResult](#)

Faults

[InvalidSObjectFault](#)

[UnexpectedErrorFault](#)

DescribeSearchLayoutResult

The [describeSearchLayouts\(\)](#) on page 4153 call returns an array of `DescribeSearchLayoutResult` objects. Each `DescribeSearchLayoutResult` object represents the search layout configuration for each object queried for. The `DescribeSearchLayoutResult` object has the following properties.

Name	Type	Description
label	string	The browser title used for the search results page.
limitRows	int	The maximum number of rows to be displayed in the first page of search results. This number can be changed by the administrator.

Name	Type	Description
searchColumns	DescribeColumn on page 4154[]	The columns associated with the search results for this object.

DescribeColumn

Represents the columns in the search layout configuration for each `DescribeSearchLayoutResult` object returned by the [describeSearchLayouts\(\)](#) on page 4153 call.

Name	Type	Description
field	string	Field reference in relation to the object it belongs to. For example, "Lead.Phone."
format	string	Field data format. For example, "date". This value can be null.
label	string	Display text for this field in the user interface. For example, "Company Phone" or just "Phone."
name	string	Field name. Use this in your SOQL query or code. For example, "Name."

describeSObject()

Describes metadata (field list and object properties) for the specified object.

 **Note:** `describeSObjects()` supersedes `describeSObject()`. Use `describeSObjects()` instead of `describeSObject()`.

Syntax

```
DescribeSObjectResult = connection.describeSObject(string sObjectType);
```

Usage

Use [describeSObject\(\)](#) to obtain metadata for a given object. You can first call [describeGlobal\(\)](#) to retrieve a list of all objects for your organization, then iterate through the list and use [describeSObject\(\)](#) to obtain metadata about individual objects.

Your client application must be logged in with sufficient access rights to retrieve metadata about your organization's data. For more information, see [Factors that Affect Data Access](#).

Sample Code—Java

This sample calls `describeSObject()` to perform describes on the Account sObject. It retrieves some properties of the sObject describe result, such as the sObject name, label, and fields. It then iterates through the fields and gets the field properties. For picklist

fields, it gets the picklist values and for reference fields, it gets the referenced object names. The sample writes the retrieved sObject and field properties to the console.

```
public void describeObjectSample() {
    try {
        // Make the describe call
        DescribeSObjectResult describeSObjectResult =
            connection.describeSObject("Account");

        // Get sObject metadata
        if (describeSObjectResult != null) {
            System.out.println("sObject name: " +
                describeSObjectResult.getName());
            if (describeSObjectResult.isCreateable())
                System.out.println("Createable");
        }

        // Get the fields
        Field[] fields = describeSObjectResult.getFields();
        System.out.println("Has " + fields.length + " fields");

        // Iterate through each field and gets its properties
        for (int i = 0; i < fields.length; i++) {
            Field field = fields[i];
            System.out.println("Field name: " + field.getName());
            System.out.println("Field label: " + field.getLabel());

            // If this is a picklist field, show the picklist values
            if (field.getType().equals(FieldType.picklist)) {
                PicklistEntry[] picklistValues =
                    field.getPicklistValues();
                if (picklistValues != null) {
                    System.out.println("Picklist values: ");
                    for (int j = 0; j < picklistValues.length; j++) {
                        if (picklistValues[j].getLabel() != null) {
                            System.out.println("\tItem: " +
                                picklistValues[j].getLabel()
                            );
                        }
                    }
                }
            }

            // If a reference field, show what it references
            if (field.getType().equals(FieldType.reference)) {
                System.out.println("Field references the " +
                    "following objects:");
                String[] referenceTos = field.getReferenceTo();
                for (int j = 0; j < referenceTos.length; j++) {
                    System.out.println("\t" + referenceTos[j]);
                }
            }
        }
    }
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
```

```

    }
}

```

Sample Code—C#

This sample calls `describeSObject()` to perform describes on the Account sObject. It retrieves some properties of the sObject describe result, such as the sObject name, label, and fields. It then iterates through the fields and gets the field properties. For picklist fields, it gets the picklist values and for reference fields, it gets the referenced object names. The sample writes the retrieved sObject and field properties to the console.

```

public void describeSObjectSample() {
    try {
        // Make the describe call
        DescribeSObjectResult describeSObjectResult =
            binding.describeSObject("Account");

        // Get sObject metadata
        if (describeSObjectResult != null) {
            Console.WriteLine("sObject name: " +
                describeSObjectResult.name);
            if (describeSObjectResult.createable)
                Console.WriteLine("Createable");
        }

        // Get the fields
        Field[] fields = describeSObjectResult.fields;
        Console.WriteLine("Has " + fields.Length + " fields");

        // Iterate through each field and gets its properties
        for (int i = 0; i < fields.Length; i++) {
            Field field = fields[i];
            Console.WriteLine("Field name: " + field.name);
            Console.WriteLine("Field label: " + field.label);

            // If this is a picklist field, show the picklist values
            if (field.type.Equals(fieldType.picklist)) {
                PicklistEntry[] picklistValues =
                    field.picklistValues;
                if (picklistValues != null) {
                    Console.WriteLine("Picklist values: ");
                    for (int j = 0; j < picklistValues.Length; j++) {
                        if (picklistValues[j].label != null) {
                            Console.WriteLine("\tItem: " +
                                picklistValues[j].label);
                        }
                    }
                }
            }
        }

        // If a reference field, show what it references
        if (field.type.Equals(fieldType.reference)) {
            Console.WriteLine("Field references the " +
                "following objects:");
            String[] referenceTos = field.referenceTo;

```

```

        for (int j = 0; j < referenceTos.Length; j++) {
            Console.WriteLine("\t" + referenceTos[j]);
        }
    }
}
}
} catch (SoapException e) {
    Console.WriteLine("An unexpected error has occurred: " +
        e.Message + "\n" + e.StackTrace);
}
}
}

```

Arguments

Name	Type	Description
sObjectType	string	Object. The specified value must be a valid object for your organization. For a complete list of objects, see Standard Objects .

Response

describeSObjectResult

The [describeSObject\(\)](#) call returns a DescribeSObjectResult object.

Note: [describeSObjects\(\)](#) supersedes [describeSObject\(\)](#). Use [describeSObjects\(\)](#) instead of [describeSObject\(\)](#).

describeObjects ()

An array-based version of [describeObject \(\)](#); describes metadata (field list and object properties) for the specified object or array of objects.

 **Note:** Use this call instead of [describeObject \(\)](#).

Syntax

```
DescribeSObjectResult [] = connection.describeSObjects(string sObjectType[] );
```

Usage

Use [describeSObjects \(\)](#) to obtain metadata for a given object or array of objects. You can first call [describeGlobal \(\)](#) to retrieve a list of all objects for your organization, then iterate through the list and use [describeSObjects \(\)](#) to obtain metadata about individual objects. The [describeSObjects \(\)](#) call is limited to a maximum of 100 objects returned.

Your client application must be logged in with sufficient access rights to retrieve metadata about your organization's data. For more information, see [Factors that Affect Data Access](#).

In organizations where person accounts are enabled, this call shows [Accounts](#) as not createable if the profile does not have access to any business account record types.

Sample Code—Java

This sample calls [describeSObjects \(\)](#) to perform describes on account, contact, and lead. It iterates through the sObject describe results, gets the properties and fields for each sObject in the result, and writes them to the console. For picklist fields, it writes the picklist values. For reference fields, it writes the referenced object names.

```
public void describeSObjectsSample ()
{
    try {
        // Call describeSObjectResults and pass it an array with
        // the names of the objects to describe.
        DescribeSObjectResult[] describeSObjectResults =
            connection.describeSObjects(
                new String[] { "account", "contact", "lead" });

        // Iterate through the list of describe sObject results
        for (int i=0;i < describeSObjectResults.length; i++)
        {
            DescribeSObjectResult desObj = describeSObjectResults[i];
            // Get the name of the sObject
            String objectName = desObj.getName();
            System.out.println("sObject name: " + objectName);

            // For each described sObject, get the fields
            Field[] fields = desObj.getFields();

            // Get some other properties
            if (desObj.getActivateable()) System.out.println("\tActivateable");
        }
    }
}
```

```

// Iterate through the fields to get properties for each field
for(int j=0;j < fields.length; j++)
{
    Field field = fields[j];
    System.out.println("\tField: " + field.getName());
    System.out.println("\t\tLabel: " + field.getLabel());
    if (field.isCustom())
        System.out.println("\t\tThis is a custom field.");
    System.out.println("\t\tType: " + field.getType());
    if (field.getLength() > 0)
        System.out.println("\t\tLength: " + field.getLength());
    if (field.getPrecision() > 0)
        System.out.println("\t\tPrecision: " + field.getPrecision());

    // Determine whether this is a picklist field
    if (field.getType() == FieldType.picklist)
    {
        // Determine whether there are picklist values
        PicklistEntry[] picklistValues = field.getPicklistValues();
        if (picklistValues != null && picklistValues[0] != null)
        {
            System.out.println("\t\tPicklist values = ");
            for (int k = 0; k < picklistValues.length; k++)
            {
                System.out.println("\t\t\tItem: " + picklistValues[k].getLabel());
            }
        }
    }

    // Determine whether this is a reference field
    if (field.getType() == FieldType.reference)
    {
        // Determine whether this field refers to another object
        String[] referenceTos = field.getReferenceTo();
        if (referenceTos != null && referenceTos[0] != null)
        {
            System.out.println("\t\tField references the following objects:");
            for (int k = 0; k < referenceTos.length; k++)
            {
                System.out.println("\t\t\t" + referenceTos[k]);
            }
        }
    }
}
} catch(ConnectionException ce) {
    ce.printStackTrace();
}
}

```

Sample Code—C#

This sample calls `describeObjects()` to perform describes on account, contact, and lead. It iterates through the `sObject` describe results, gets the properties and fields for each `sObject` in the result, and writes them to the console. For picklist fields, it writes the picklist values. For reference fields, it writes the referenced object names.

```
public void describeObjectsSample()
{
    try
    {
        // Call describeObjectResults and pass it an array with
        // the names of the objects to describe.
        DescribeSObjectResult[] describeSObjectResults =
            binding.describeObjects(
                new string[] { "account", "contact", "lead" });

        // Iterate through the list of describe sObject results
        foreach (DescribeSObjectResult describeSObjectResult in describeSObjectResults)
        {
            // Get the name of the sObject
            String objectName = describeSObjectResult.name;
            Console.WriteLine("sObject name: " + objectName);

            // For each described sObject, get the fields
            Field[] fields = describeSObjectResult.fields;

            // Get some other properties
            if (describeSObjectResult.activateable) Console.WriteLine("\tActivateable");

            // Iterate through the fields to get properties for each field
            foreach (Field field in fields)
            {
                Console.WriteLine("\tField: " + field.name);
                Console.WriteLine("\t\tLabel: " + field.label);
                if (field.custom)
                    Console.WriteLine("\t\tThis is a custom field.");
                Console.WriteLine("\t\tType: " + field.type);
                if (field.length > 0)
                    Console.WriteLine("\t\tLength: " + field.length);
                if (field.precision > 0)
                    Console.WriteLine("\t\tPrecision: " + field.precision);

                // Determine whether this is a picklist field
                if (field.type == fieldType.picklist)
                {
                    // Determine whether there are picklist values
                    PicklistEntry[] picklistValues = field.picklistValues;
                    if (picklistValues != null && picklistValues[0] != null)
                    {
                        Console.WriteLine("\t\tPicklist values = ");
                        for (int j = 0; j < picklistValues.Length; j++)
                        {
                            Console.WriteLine("\t\t\tItem: " + picklistValues[j].label);
                        }
                    }
                }
            }
        }
    }
}
```

DescribeObjectResult

 **Important:** Where possible, we changed noninclusive terms to align with our company value of Equality. Because changing terms in our code can break current implementations, we maintained this object's name.

The `describeSObjects()` call returns an array of `DescribeObjectResult` objects. Each object has the following properties:

Name	Type	Description
<code>actionOverrides</code>	ActionOverride []	An array of action overrides. Action overrides replace the URLs specified in the <code>urlDetail</code> , <code>urlEdit</code> and <code>urlNew</code> fields. This field is available in API version 32.0 and later.
<code>activateable</code>	boolean	Reserved for future use.
<code>actionOverrides</code>	ActionOverride []	An array of action overrides. Action overrides replace the URLs specified in the <code>urlDetail</code> , <code>urlEdit</code> and <code>urlNew</code> fields. This field is available in API version 32.0 and later.
<code>associateEntityType</code>	string	If the object is associated with a parent object, the type of association it has to its parent, such as <code>History</code> . Otherwise, its value is <code>null</code> . Available in API version 50.0 and later.
<code>associateParentEntity</code>	string	If the object is associated with a parent object, the parent object it's associated with. Otherwise, its value is <code>null</code> . Available in API version 50.0 and later.
<code>childRelationships</code>	ChildRelationship []	An array of child relationships, which is the name of the <code>sObject</code> that has a foreign key to the <code>sObject</code> being described.
<code>compactLayoutable</code>	boolean	Indicates that the object can be used in describeCompactLayouts() .
<code>createable</code>	boolean	Indicates whether the object can be created via the <code>create()</code> call (<code>true</code>) or not (<code>false</code>).
<code>custom</code>	boolean	Indicates whether the object is a custom object (<code>true</code>) or not (<code>false</code>).
<code>customSetting</code>	boolean	Indicates whether the object is a custom setting object (<code>true</code>) or not (<code>false</code>).
<code>dataTranslationEnabled</code>	boolean	Indicates whether data translation is enabled for the object (<code>true</code>) or not (<code>false</code>). Available in API version 49.0 and later.
<code>deepCloneable</code>	boolean	Reserved for future use.

Name	Type	Description
<code>defaultImplementation</code>	string	Reserved for future use.
<code>deletable</code>	boolean	Indicates whether the object can be deleted via the <code>delete()</code> call (<code>true</code>) or not (<code>false</code>).
<code>deprecatedAndHidden</code>	boolean	Reserved for future use.
<code>extendedBy</code>	string	Reserved for future use.
<code>extendsInterfaces</code>	string	Reserved for future use.
<code>feedEnabled</code>	boolean	Indicates whether Chatter feeds are enabled for the object (<code>true</code>) or not (<code>false</code>). This property is available in API version 19.0 and later.
<code>fields</code>	Field[]	Array of fields associated with the object. The mechanism for retrieving information from this list varies among development tools.
<code>implementedBy</code>	string	Reserved for future use.
<code>implementsInterfaces</code>	string	Reserved for future use.
<code>isInterface</code>	boolean	Reserved for future use.
<code>keyPrefix</code>	string	<p>Three-character prefix code in the object ID. Object IDs are prefixed with three-character codes that specify the type of the object. For example, Account objects have a prefix of 001 and Opportunity objects have a prefix of 006. Note that a key prefix can sometimes be shared by multiple objects so it does not always uniquely identify an object.</p> <p>Use the value of this field to determine the object type of a parent in those cases where the child may have more than one object type as parent (polymorphic). For example, you may need to obtain the <code>keyPrefix</code> value for the parent of a Task or Event.</p>
<code>label</code>	string	Label text for a tab or field renamed in the user interface, if applicable, or the object name, if not. For example, an organization representing a medical vertical might rename <code>Account</code> to <code>Patient</code> . Tabs and fields can be renamed in the Salesforce user interface. See the Salesforce online help for more information.
<code>labelPlural</code>	string	Label text for an object that represents the plural version of an object name, for example, "Accounts."
<code>layoutable</code>	boolean	Indicates whether the object supports the <code>describeLayout()</code> call (<code>true</code>) or not (<code>false</code>).
<code>mergeable</code>	boolean	Indicates whether the object can be merged with other objects of its type (<code>true</code>) or not (<code>false</code>). <code>true</code> for leads, contacts, and accounts.
<code>mruEnabled</code>	boolean	Indicates whether Most Recently Used (MRU) list functionality is enabled for the object (<code>true</code>) or not (<code>false</code>).
<code>name</code>	string	Name of the object. This is the same string that was passed in as the <code>sObjectType</code> parameter.

Name	Type	Description
namedLayoutInfos	NamedLayoutInfo[]	The specific named layouts that are available for the objects other than the default layout.
networkScopeFieldName	string	The API name of the <code>networkScopeField</code> that scopes the entity to an Experience Cloud site. For most entities, the value of this property is <code>null</code> .
queryable	boolean	Indicates whether the object can be queried via the <code>query ()</code> call (<code>true</code>) or not (<code>false</code>).
recordTypeInfos	[]	An array of the record types supported by this object. The user need not have access to all the returned record types to see them here.
replicateable	boolean	Indicates whether the object can be replicated via the <code>getUpdated ()</code> and <code>getDeleted ()</code> calls (<code>true</code>) or not (<code>false</code>).
retrieveable	boolean	Indicates whether the object can be retrieved via the <code>retrieve ()</code> call (<code>true</code>) or not (<code>false</code>).
searchable	boolean	Indicates whether the object can be searched via the <code>search ()</code> call (<code>true</code>) or not (<code>false</code>).
searchLayoutable	boolean	Indicates whether search layout information can be retrieved via the <code>describeSearchLayouts ()</code> call (<code>true</code>) or not (<code>false</code>).
supportedScopes	ScopelInfo	The list of supported scopes for the object. For example, Account might have supported scopes of "All Accounts", "My Accounts", and "My Team's Accounts".
triggerable	boolean	Indicates whether the object supports Apex triggers.
undeletable	boolean	Indicates whether an object can be undeleted using the <code>undelete ()</code> call (<code>true</code>) or not (<code>false</code>).
updateable	boolean	Indicates whether the object can be updated via the <code>update ()</code> call (<code>true</code>) or not (<code>false</code>).
urlDetail	string	URL to the read-only detail page for this object. Compare with <code>urlEdit</code> , which is read-write. Client applications can use this URL to redirect to, or access, the Salesforce user interface for standard and custom objects. To provide flexibility and allow for future enhancements, returned <code>urlDetail</code> values are dynamic. To ensure that client applications are forward compatible, it is recommended that they use this capability where possible. Note that, for objects for which a stable URL is not available, this field is returned empty.
urlEdit	string	URL to the edit page for this object. For example, the <code>urlEdit</code> field for the Account object returns <code>https://yourInstance.salesforce.com/{ID}/e</code> . Substituting the <code>{ID}</code> field for the current object ID will return the edit page for that specific account in the Salesforce user interface. Compare with <code>urlDetail</code> , which is read-only. Client applications can use this URL to redirect to, or access, the Salesforce user interface for standard and custom objects. To provide flexibility and allow for future enhancements, returned <code>urlDetail</code> values are dynamic. To ensure that client applications are

Name	Type	Description
		forward compatible, it is recommended that they use this capability where possible. Note that, for objects for which a stable URL is not available, this field is returned empty.
<code>urlNew</code>	string	URL to the new/create page for this object. Client applications can use this URL to redirect to, or access, the Salesforce user interface for standard and custom objects. To provide flexibility and allow for future enhancements, returned <code>urlNew</code> values are dynamic. To ensure that client applications are forward compatible, it is recommended that they use this capability where possible. Note that, for objects for which a stable URL is not available, this field is returned empty.

 **Note:** The properties with a Boolean value indicate whether certain API calls can be used for an object. However, other factors, such as permissions, also affect whether such operations can be performed on the object.

ActionOverride

ActionOverride provides details about an action that replaces the default action pages for an object. For example, an object could be configured to replace the new/create page with a custom page. This type is available in API version 32.0 and later.

Name	Type	Description
<code>formFactor</code>	string	Represents the environment to which the action override applies. For example, a <code>Large</code> value in this field represents the Lightning Experience desktop environment, and is valid for Lightning pages and Lightning components. A <code>Small</code> value represents the Salesforce mobile app on a phone or tablet. This field is available in API version 37.0 and later.
<code>isAvailableInTouch</code>	boolean	Indicates whether the action override is available in the Salesforce mobile app (<code>true</code>) or not (<code>false</code>).
<code>name</code>	string	The name of the action that overrides the default action. For example, if the new/create page was overridden with a custom action, the name might be "New".
<code>pageId</code>	reference	The ID of the page for the action override.
<code>url</code>	string	The URL of the item being used for the action override, such as a Visualforce page. Returns as <code>null</code> for Lightning page overrides.

ChildRelationship

The name of the sObject that has a foreign key to the sObject being described.

Name	Type	Description
<code>cascadeDelete</code>	boolean	Indicates whether the child object is deleted when the parent object is deleted (<code>true</code>) or not (<code>false</code>).
<code>childSObject</code>	string	The name of the object on which there is a foreign key back to the parent sObject.
<code>deprecatedAndHidden</code>	boolean	Reserved for future use.
<code>field</code>	string	The name of the field that has a foreign key back to the parent sObject.
<code>junctionIdListNames</code>	String[]	The names of the lists of junction IDs associated with an object. Each ID represents an object that has a relationship with the associated object. For more information on <code>JunctionIdList</code> fields, see Field Types on page 32.
<code>junctionReferenceTo</code>	String[]	A collection of object names that the polymorphic keys in the <code>junctionIdListNames</code> property can reference. You can query these object names.
<code>relationshipName</code>	string	The name of the relationship, usually the plural of the value in <code>childSObject</code> .
<code>restrictedDelete</code>	boolean	Indicates whether the parent object can't be deleted because it is referenced by a child object (<code>true</code>) or not (<code>false</code>).

Field

In the `DescribeObjectResult`, the `fields` property contains an array of `Field` objects. Each field represents a field in an API object. The array contains only the fields that the user can view, as defined by the user's field-level security settings.

Name	Type	Description
<code>autonumber</code>	boolean	Indicates whether this field is an autonumber field (<code>true</code>) or not (<code>false</code>). Analogous to a SQL <code>IDENTITY</code> type, autonumber fields are read only, non-createable text fields with a maximum length of 30 characters. Autonumber fields are read-only fields used to provide a unique ID that is independent of the internal object ID (such as a purchase order number or invoice number). Autonumber fields are configured entirely in the Salesforce user interface. The API provides access to this attribute so that client applications can determine whether a given field is an autonumber field.
<code>byteLength</code>	int	For variable-length fields (including binary fields), the maximum size of the field, in bytes.
<code>calculated</code>	boolean	Indicates whether the field is a custom formula field (<code>true</code>) or not (<code>false</code>). Note that custom formula fields are always read-only.
<code>caseSensitive</code>	boolean	Indicates whether the field is case sensitive (<code>true</code>) or not (<code>false</code>).

Name	Type	Description
controllerName	string	The name of the field that controls the values of this picklist. It only applies if <code>type</code> is <code>PICKLIST</code> or <code>MULTIPICKLIST</code> and <code>dependentPicklist</code> is <code>true</code> . The mapping of controlling field to dependent field is stored in the <code>validFor</code> attribute of each <code>PicklistEntry</code> for this picklist.
createable	boolean	Indicates whether the field can be created (<code>true</code>) or not (<code>false</code>). If <code>true</code> , then this field value can be set in a <code>create()</code> call.
custom	boolean	Indicates whether the field is a custom field (<code>true</code>) or not (<code>false</code>).
dataTranslationEnabled	boolean	Indicates whether data translation is enabled for the field (<code>true</code>) or not (<code>false</code>). Available in API version 49.0 and later.
defaultedOnCreate	boolean	Indicates whether this field is defaulted when created (<code>true</code>) or not (<code>false</code>). If <code>true</code> , then Salesforce implicitly assigns a value for this field when the object is created, even if a value for this field is not passed in on the <code>create()</code> call. For example, in the <code>Opportunity</code> object, the <code>Probability</code> field has this attribute because its value is derived from the <code>Stage</code> field. Similarly, the <code>Owner</code> has this attribute on most objects because its value is derived from the current user (if the <code>Owner</code> field is not specified).
defaultValueFormula	string	The default value specified for this field if the formula is not used. If no value has been specified, this field is not returned.
dependentPicklist	boolean	Indicates whether a picklist is a dependent picklist (<code>true</code>) where available values depend on the chosen values from a controlling field, or not (<code>false</code>). See About Dependent Picklists .
deprecatedAndHidden	boolean	Reserved for future use.
digits	int	For fields of type integer. Maximum number of digits. The API returns an error if an integer value exceeds the number of digits.
displayLocationInDecimal	boolean	Indicates how the geolocation values of a <code>Location</code> custom field appears in the user interface. If <code>true</code> , the geolocation values appear in decimal notation. If <code>false</code> , the geolocation values appear as degrees, minutes, and seconds.
encrypted	boolean	 Note: This page is about Shield Platform Encryption, not Classic Encryption. What's the difference? Indicates whether this field is encrypted. This value only appears in the results of a <code>describeObjects()</code> call when it is <code>true</code> ; otherwise, it is omitted from the results. This field is available in API version 31.0 and later.
extraTypeInfo	string	If the field is a <code>textarea</code> field type, indicates if the text area is plain text (<code>plaintextarea</code>) or rich text (<code>richtextarea</code>). If the field is a <code>url</code> field type, if this value is <code>imageurl</code> , the URL references an image file. Available on standard fields on standard objects only, for example, <code>Account.imageUrl</code> , <code>Contact.imageUrl</code> , and so on. If the field is a <code>reference</code> field type, indicates the type of external object relationship. Available on external objects only.

Name	Type	Description
		<ul style="list-style-type: none"> • <code>null</code>—lookup relationship • <code>externallookup</code>—external lookup relationship • <code>indirectlookup</code>—indirect lookup relationship
<code>filterable</code>	boolean	Indicates whether the field is filterable (<code>true</code>) or not (<code>false</code>). If <code>true</code> , then this field can be specified in the <code>WHERE</code> clause of a query string in a <code>query()</code> call.
<code>filteredLookupInfo</code>	FilteredLookupInfo	If the field is a <code>reference</code> field type with a lookup filter, <code>filteredLookupInfo</code> contains the lookup filter information for the field. If there is no lookup filter, or the filter is inactive, this field is <code>null</code> . This field is available in API version 31.0 and later.
<code>formula</code>	string	The formula specified for this field. If no formula is specified for this field, it is not returned.
<code>groupable</code>	boolean	Indicates whether the field can be included in the <code>GROUP BY</code> clause of a SOQL query (<code>true</code>) or not (<code>false</code>). See <code>GROUP BY</code> in the Salesforce SOQL and SOSL Reference Guide . Available in API version 18.0 and later.
<code>highScaleNumber</code>	boolean	Indicates whether the field stores numbers to 8 decimal places regardless of what's specified in the field details (<code>true</code>) or not (<code>false</code>). Used to handle currencies for products that cost fractions of a cent, in large quantities. If high-scale unit pricing isn't enabled in your organization, this field isn't returned. Available in API version 33.0 and later.
<code>htmlFormatted</code>	boolean	Indicates whether a field such as a hyperlink custom formula field has been formatted for HTML and should be encoded for display in HTML (<code>true</code>) or not (<code>false</code>). Also indicates whether a field is a custom formula field that has an <code>IMAGE</code> text function.
<code>idLookup</code>	boolean	Indicates whether the field can be used to specify a record in an <code>upsert()</code> call (<code>true</code>) or not (<code>false</code>).
<code>inlineHelpText</code>	string	The text that displays in the field-level help hover text for this field.  Note: This property is not returned unless at least one field on the object contains a value. When at least one field has field-level help, all fields on the object list the property with either the field-level help value or null for fields that have blank field-level help.
<code>label</code>	string	Text label that is displayed next to the field in the Salesforce user interface. This label can be localized.
<code>length</code>	int	Returns the maximum size of the field in Unicode characters (not bytes) or 255, whichever is less. The maximum value returned by the <code>getLength()</code> property is 255. Available in API version 49.0 and later.
<code>mask</code>	string	Reserved for future use.
<code>maskType</code>	string	Reserved for future use.

Name	Type	Description
name	string	Field name used in API calls, such as <code>create()</code> , <code>delete()</code> , and <code>query()</code> .
nameField	boolean	Indicates whether this field is a name field (<code>true</code>) or not (<code>false</code>). Used to identify the name field for standard objects (such as <code>AccountName</code> for an Account object) and custom objects. Limited to one per object, except where <code>FirstName</code> and <code>LastName</code> fields are used (such as in the Contact object). If a compound name is present, for example the <code>Name</code> field on a person account, <code>nameField</code> is set to <code>true</code> for that record. If no compound name is present, <code>FirstName</code> and <code>LastName</code> have this field set to <code>true</code> .
namePointing	boolean	Indicates whether the field's value is the Name of the parent of this object (<code>true</code>) or not (<code>false</code>). Used for objects whose parents may be more than one type of object, for example a task may have an account or a contact as a parent.
nillable	boolean	Indicates whether the field is nillable (<code>true</code>) or not (<code>false</code>). A nillable field can have empty content. A non-nillable field must have a value in order for the object to be created or saved.
permissionable	boolean	Indicates whether FieldPermissions can be specified for the field (<code>true</code>) or not (<code>false</code>).
picklistValues	PicklistEntry[]	Provides the list of valid values for the picklist. Specified only if <code>restrictedPicklist</code> is <code>true</code> .
polymorphicForeignKey	boolean	Indicates whether the foreign key includes multiple entity types (<code>true</code>) or not (<code>false</code>).
precision	int	For fields of type double. Maximum number of digits that can be stored, including all numbers to the left and to the right of the decimal point (but excluding the decimal point character).
relationshipName	string	The name of the relationship, if this is a master-detail relationship field.
relationshipOrder	int	The type of relationship for a master-detail relationship field. Valid values are: <ul style="list-style-type: none"> • 0 if the field is the primary relationship • 1 if the field is the secondary relationship
referenceTargetField	string	Applies only to indirect lookup relationships on external objects. Name of the custom field on the parent standard or custom object whose values are matched against the values of the child external object's indirect lookup relationship field. This matching is done to determine which records are related to each other. This field is available in API version 32.0 and later.
referenceTo	string[]	For fields that refer to other objects, this array indicates the object types of the referenced objects.
restrictedPicklist	boolean	Indicates whether the field is a restricted picklist (<code>true</code>) or not (<code>false</code>).
scale	int	For fields of type double. Number of digits to the right of the decimal point. The API silently truncates any extra digits to the right of the decimal point, but it returns a fault response if the number has too many digits to the left of the decimal point.

Name	Type	Description
searchPrefilterable	boolean	Indicates whether a foreign key can be included in prefiltering (<code>true</code>) or not (<code>false</code>) when used in a SOSL WHERE clause. <i>Prefiltering</i> means to filter by a specific field value before executing the full search query. Available in API version 40.0 and later.
soapType	SOAPType	See SOAPType for a list of allowable values.
sortable	boolean	Indicates whether a query can sort on this field (<code>true</code>) or not (<code>false</code>).
type	FieldType	See FieldType for a list of allowable values.
unique	boolean	Indicates whether the value must be unique (<code>true</code>) or not (<code>false</code>).
updateable	boolean	Indicates one of the following: <ul style="list-style-type: none"> Whether the field is updateable, (<code>true</code>) or not (<code>false</code>). If <code>true</code>, then this field value can be set in an <code>update()</code> call. If the field is in a master-detail relationship on a custom object, indicates whether the child records can be reparented to different parent records (<code>true</code>), <code>false</code> otherwise.
writeRequiresMasterRead	boolean	This field only applies to master-detail relationships. Indicates whether a user requires read sharing access (<code>true</code>) or write sharing access (<code>false</code>) to the parent record to insert, update, and delete a child record. In both cases, a user also needs Create, Edit, and Delete object permissions for the child object.

FieldType

In the `Field` object associated with `DescribeObjectResult`, the `type` field can contain one of the following strings. For more information about field types, see [Field Types](#).

type Field Value	What the Field Object Contains
string	String values.
boolean	Boolean (<code>true</code> / <code>false</code>) values.
int	Integer values.
double	Double values.
date	Date values.
datetime	Date and time values.
base64	Base64-encoded arbitrary binary data (of type <code>base64Binary</code>). Used for Attachment , Document , and Scontrol objects.
ID	Primary key field for the object. For information on IDs, see Field Types .
reference	Cross-references to a different object. Analogous to a foreign key field in SQL.
currency	Currency values.

type Field Value	What the Field Object Contains
textarea	String that is displayed as a multiline text field.
percent	Percentage values.
phone	Phone numbers. Values can include alphabetic characters. Client applications are responsible for phone number formatting.
url	URL values. Client applications should commonly display these as hyperlinks. If <code>Field.extraTypeInfo</code> is <code>imageUrl</code> , the URL references an image, and can be displayed as an image instead.
email	Email addresses.
combobox	Comboboxes, which provide a set of enumerated values and allow the user to specify a value not in the list.
picklist	Single-select picklists, which provide a set of enumerated values from which only one value can be selected.
multipicklist	Multi-select picklists, which provide a set of enumerated values from which multiple values can be selected.
anyType	Values can be any of these types: <code>string</code> , <code>picklist</code> , <code>boolean</code> , <code>int</code> , <code>double</code> , <code>percent</code> , <code>ID</code> , <code>date</code> , <code>dateTime</code> , <code>url</code> , or <code>email</code> .
location	Geolocation values, including latitude and longitude, for custom geolocation fields on custom objects.

FilteredLookupInfo

In the `Field` object associated with the `DescribeObjectResult`, the `filteredLookupInfo` field contains information about the lookup filter associated with the field.

This subtype is available in API version 31.0 and later.

Name	Type	Description
<code>controllingFields</code>	<code>string[]</code>	Array of the field's controlling fields when the lookup filter is dependent on the source object.
<code>dependent</code>	<code>boolean</code>	Indicates whether the lookup filter is dependent upon the source object (<code>true</code>) or not (<code>false</code>).
<code>optionalFilter</code>	<code>boolean</code>	Indicates whether the lookup filter is optional (<code>true</code>) or not (<code>false</code>).

SOAPType

The `DescribeObjectResult` returns the `fields` property, which contains an array of fields whose value provides information about the object being described. One of those fields, `soapType`, contains one of the following string values. All of the values preceded by `xsd:` are XML schema primitive data types. For more information about the XML schema primitive data types, see the World Wide Web Consortium's publication *XML Schema Part 2: Data Types* at: <http://www.w3.org/TR/xmlschema-2/>.

Value	Description
<code>tns:ID</code>	Unique ID associated with an sObject. For information on IDs, see Field Types .
<code>xsd:anyType</code>	Can be ID, Boolean, double, integer, string, date, or dateTime.
<code>xsd:base64Binary</code>	Base 64-encoded binary data.
<code>xsd:boolean</code>	Boolean (<code>true</code> / <code>false</code>) values.
<code>xsd:date</code>	Date values.
<code>xsd:dateTime</code>	Date/time values.
<code>xsd:double</code>	Double values.
<code>xsd:int</code>	Integer values.
<code>xsd:string</code>	Character strings.

PicklistEntry

In the `Field` object associated with the `DescribeObjectResult`, the `picklistValues` field contains an array of `PicklistEntry` properties. Each `PicklistEntry` can contain any one of the following string values. For more information, see [Field Types](#).

Name	Type	Description
<code>active</code>	boolean	Indicates whether this item must be displayed (<code>true</code>) or not (<code>false</code>) in the drop-down list for the picklist field in the user interface.
<code>validFor</code>	byte[]	A set of bits where each bit indicates a controlling value for which this <code>PicklistEntry</code> is valid. See About Dependent Picklists .
<code>defaultValue</code>	boolean	Indicates whether this item is the default item (<code>true</code>) in the picklist or not (<code>false</code>). Only one item in a picklist can be designated as the default.
<code>label</code>	string	Display name of this item in the picklist.
<code>value</code>	string	Value of this item in the picklist.

About Dependent Picklists

A dependent picklist works in conjunction with a controlling field to filter its values. The value chosen in the controlling field affects the values available in the dependent picklist.

A dependent picklist can be any custom picklist or multi-select picklist field that displays available values based on the value selected in its corresponding controlling field. A controlling field can be any standard or custom picklist (with at least one and less than 200 values) or checkbox field whose values control the available values in one or more corresponding dependent fields.

In the following example, the controlling picklist `Beverage` has two values, which relate to the values of the dependent picklist `Beverage Variety`:

Beverage	Beverage Variety
Coffee	Decaffeinated

Beverage	Beverage Variety
	Regular
Tea	Chamomile
	Earl Grey
	English Breakfast

For each `PicklistEntry` that represents a value in a dependent picklist, the `validFor` attribute contains a set of bits. Each bit indicates a controlling field value for which the `PicklistEntry` is valid. Read the bits from left to right.

For more information on dependent picklists, see the “Dependent Picklists” topic in the Salesforce online help.

Sample Java Code for Dependent Picklists

```
public void dependentPicklistSample() {
    // inner class to decode a "validFor" bitset
    class Bitset {
        byte[] data;

        public Bitset(byte[] data) {
            this.data = data == null ? new byte[0] : data;
        }

        public boolean testBit(int n) {
            return (data[n >> 3] & (0x80 >> n % 8)) != 0;
        }

        public int size() {
            return data.length * 8;
        }
    }

    try {
        DescribeSObjectResult describeSObjectResult = connection.describeSObject("Case");
        Field[] fields = describeSObjectResult.getFields();
        // create a map of all fields for later lookup
        Map fieldMap = new HashMap();
        for (int i = 0; i < fields.length; i++) {
            fieldMap.put(fields[i].getName(), fields[i]);
        }
        for (int i = 0; i < fields.length; i++) {
            // check whether this is a dependent picklist
            if (fields[i].getDependentPicklist()) {
                // get the controller by name
                Field controller = (Field)fieldMap.get(fields[i].getControllerName());
                System.out.println("Field '" + fields[i].getLabel() + "' depends on '" +
                    controller.getLabel() + "'");
                PicklistEntry[] picklistValues = fields[i].getPicklistValues();
                for (int j = 0; j < picklistValues.length; j++) {
                    // for each PicklistEntry: list all controlling values for which it is valid
                }
            }
        }
    }
}
```

```

System.out.println("Item: '" + picklistValues[j].getLabel() +
" is valid for: ");
Bitset validFor = new Bitset(picklistValues[j].getValidFor());
if (FieldType.picklist == controller.getType()) {
    // if the controller is a picklist, list all
    // controlling values for which this entry is valid
    for (int k = 0; k < validFor.size(); k++) {
        if (validFor.testBit(k)) {
            // if bit k is set, this entry is valid for the
            // for the controlling entry at index k
            System.out.println(controller.getPicklistValues()[k].getLabel());
        }
    }
} else if (FieldType._boolean == controller.getType()) {
    // the controller is a checkbox
    // if bit 1 is set this entry is valid if the controller is checked
    if (validFor.testBit(1)) {
        System.out.println(" checked");
    }
    // if bit 0 is set this entry is valid if the controller is not checked
    if (validFor.testBit(0)) {
        System.out.println(" unchecked");
    }
}
}
}
}
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
}
}

```

RecordTypeInfo

Base class for the old RecordTypeMapping object. This object contains all of the existing fields of RecordTypeMapping except layoutId and picklistForRecordType.

Name	Type	Description
available	boolean	Indicates whether this record type is available (<code>true</code>) or not (<code>false</code>). Availability is used to display a list of available record types to the user when they are creating a new record.
defaultRecordTypeMapping	boolean	Indicates whether this is the default record type mapping (<code>true</code>) or not (<code>false</code>).
developerName	string	Developer name of this record type. Available in API versions 43.0 and later.
master	boolean	Indicates whether this is the main record type (<code>true</code>) or not (<code>false</code>). The main record type is the default record type that's used when a record has no custom record type associated with it.
name	string	Name of this record type.

Name	Type	Description
recordTypeId	ID	ID of this record type.

NamedLayoutInfo

The name of the named layout for the object. Standard objects can have defined named layouts which are separate from the primary layout for both the profile and the record type. For more information on layout names, see [describeLayout\(\)](#).

Name	Type	Description
name	string	Name of this layout.

ScopeInfo

A scope for an object that can be used to filter object records. For example, Account may have a supported ScopeInfo of “mine” (with a UI label of “My accounts”) which filters only Account records for the current user.

Name	Type	Description
label	string	UI label for this scope.
name	string	Name of this scope.

describeSoftphoneLayout()

Retrieves layout information for a Salesforce CRM Call Center Softphone.

Syntax

```
DescribeSoftphoneLayoutResult[] = connection.describeSoftphoneLayout();
```

Usage

Use this call to obtain information about the layout of a Softphone. Use only in the context of Salesforce CRM Call Center; do not call directly from client programs.

Arguments

This call does not take any objects.

Response

The response is a DescribeSoftphoneLayoutResult object:

Name	Type	Description
callTypes	DescribeSoftphoneLayoutCallType[]	A set of attributes associated with each allowed call type. A call type may be Inbound, Outbound, or Internal.
id	ID	ID of layout. Note that layout objects are not exposed via the API.
name	string	Name of the call type: Inbound, Outbound, or Internal.

DescribeSoftphoneLayoutCallType

Each DescribeSoftphoneLayoutResult object contains one or more call types:

Name	Type	Description
infoFields	DescribeSoftphoneLayoutInfoField[]	A set of information field in the softphone layout.
name	string	Name of the layout.
screenPopOptions	DescribeSoftphoneScreenPopOption[]	Settings in the softphone layout that specify how to display screen pops when the details of calls match or don't match existing records. This field is available in API version 18.0 and later.
screenPopsOpenWithin	string	Setting in the softphone layout that specify whether to display screen pops in a new browser window or tab when the details of calls match or don't match existing records. This field is available in API version 18.0 and later.
sections	DescribeSoftphoneLayoutSection[]	A set of object names and the corresponding item name in the softphone layout. There is one section for each object in a call type.

DescribeSoftphoneLayoutInfoField

An information field in the softphone layout.

Name	Type	Description
name	string	The name of an information field in the softphone layout that does not correspond to a Salesforce object. For example, caller ID may be specified in an information field. Information fields hold static information about the call type.

DescribeSoftphoneLayoutSection

Each call type returned in a DescribeSoftphoneLayoutResult object contains one section for each call type. Each section contains object-item pairs:

Name	Type	Description
entityApiName	string	The name of an object in the Salesforce application that corresponds to an item displayed in the softphone layout, for example, a set of accounts or cases.
items	DescribeSoftphoneLayoutItem []	A set of softphone layout items.

DescribeSoftphoneLayoutItem

Each layout item corresponds to a record in Salesforce:

Name	Type	Description
itemApiName	string	The name of a record in the Salesforce application that corresponds to an item displayed in the softphone layout, for example, the Acme account.

DescribeSoftphoneScreenPopOption

Each call type returned in a `DescribeSoftphoneLayoutResult` object contains one `screenPopOptions` field for each call type. Each `screenPopOptions` field contains details about screen pop settings:

Name	Type	Description
matchType	string	Setting on a softphone layout to pop a screen for call details that match a single record, multiple records, or no records.
screenPopData	string	Setting on a softphone layout for a specific object or page to pop for a call's <code>matchType</code> . For example, pop a specified Visualforce page when the details of a call match a record.
screenPopType	picklist	Setting that specifies how to pop a screen for a call's <code>matchType</code> . For example, pop a detail page or don't pop any page when the details of a call match a record.

Sample Code—Java

This sample describes the soft phone layout and writes its properties to the console. It then gets the allowed call types. For each call type, it gets its information fields, layout sections, and the layout items in the layout sections. It writes these values to the console.

```
public void describeSoftphoneLayout () {
    try {
        DescribeSoftphoneLayoutResult result =
            connection.describeSoftphoneLayout ();
        System.out.println("ID of retrieved Softphone layout: " +
            result.getId());
        System.out.println("Name of retrieved Softphone layout: " +
            result.getName());
        System.out.println("\nContains following " +
            "Call Type Layouts\n");
        for (DescribeSoftphoneLayoutCallType type :
            result.getCallTypes()) {
```

```

System.out.println("Layout for " + type.getName() +
    " calls");
System.out.println("\tCall-related fields:");
for (DescribeSoftphoneLayoutInfoField field :
    type.getInfoFields()) {
    System.out.println("\t\t{" + field.getName());
}
System.out.println("\tDisplayed Objects:");
for (DescribeSoftphoneLayoutSection section :
    type.getSections()) {
    System.out.println("\t\tFor entity " +
        section.getEntityApiName() +
        " following records are displayed:");
};
for (DescribeSoftphoneLayoutItem item :
    section.getItems()) {
    System.out.println("\t\t\t" + item.getItemApiName());
}
}
}
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
}
}

```

Sample Code—C#

This sample describes the soft phone layout and writes its properties to the console. It then gets the allowed call types. For each call type, it gets its information fields, layout sections, and the layout items in the layout sections. It writes these values to the console.

```

/// Demonstrates how to retrieve the layout information
/// for a Salesforce CRM Call Center Softphone
public void DescribeSoftphoneLayoutSample()
{
    try
    {
        DescribeSoftphoneLayoutResult dsplResult = binding.describeSoftphoneLayout();

        // Display the ID and Name of the layout
        Console.WriteLine("ID of retrieved Softphone layout: {0}", dsplResult.id);
        Console.WriteLine("Name of retrieved Softphone layout: {0}", dsplResult.name);

        // Display the contents of each Call Type
        Console.WriteLine("\nContains following Call Type Layouts\n");
        foreach (DescribeSoftphoneLayoutCallType dsplCallType in dsplResult.callTypes)
        {
            Console.WriteLine("Layout for {0} calls", dsplCallType.name);

            // Display the call-related fields contained in the call type
            Console.WriteLine("\tCall-related fields:");
            foreach (DescribeSoftphoneLayoutInfoField dsplInfoField
                in dsplCallType.infoFields)
            {

```

```

        Console.WriteLine("\t\t{0}", dsplInfoField.name);
    }

    // Display the objects that are included in the layout
    Console.WriteLine("\tDisplayed Objects:");
    foreach (DescribeSoftphoneLayoutSection dsplSection
        in dsplCallType.sections)
    {
        Console.WriteLine("\t\tFor entity {0} following records are displayed:",
            dsplSection.entityApiName);
        foreach (DescribeSoftphoneLayoutItem dsplItem in dsplSection.items)
        {
            Console.WriteLine("\t\t\t{0}", dsplItem.itemApiName);
        }
    }
}
}
catch (SoapException e)
{
    Console.WriteLine(e.Message);
    Console.WriteLine(e.StackTrace);
    Console.WriteLine(e.InnerException);
}
}
}

```

describeSoqlListViews ()

Retrieves the SOQL query and other information about a list view.

Syntax

```
connection.describeSoqlListViews(DescribeSoqlListViewsRequest request);
```

Usage

Use the `describeSoqlListViews ()` call to retrieve information about a list view, including the ID, the columns, and the SOQL query. This call is useful if you want to use the SOQL that drives an existing list view in your custom application. This call is available in API version 32.0 and later.

Sample Code—Java

```

public void example() throws Exception {
    DescribeSoqlListViewsRequest request =
createDescribeSoqlListViewsRequest(listViewId, null);
    this.getClient().describeSoqlListViews(request);
}
}

```

Arguments

Name	Type	Description
request	DescribeSoqlListViewsRequest	The fully qualified name or the ID of the list view and the object with which the list view is associated.

Response

A [DescribeSoqlListViewResult](#) object that contains one or more [DescribeSoqlListView](#) objects.

Faults

[InvalidObjectFault](#)

[UnexpectedErrorFault](#)

DescribeSoqlListView

Contains information about the specified list view, including the columns, sObject type, and SOQL query.

The [DescribeSoqlListView](#) object has the following properties:

Name	Type	Description
columns	ListViewColumn[]	The columns that are returned by the list view query.
id	ID	The list view's fully qualified ID.
orderBy	ListViewOrderBy[]	A list of fields to sort results by, the sort order, and the position to which null values should be sorted.
query	string	The fully composed SOQL query for the list view.
relatedEntityId	ID	The ID of the campaign, if a campaign scope was used.
scope	string	A <code>filterScope</code> to use for limiting the results.
scopeEntityId	ID	The ID of the queue or price book, if a queue or price book scope was used.
sObjectType	string	The object with which the list view is associated.
whereCondition	SoqlWhereCondition	Filter conditions on the list view. Filter conditions provide an additional level of control over which records get shown in the list view.

DescribeSoqlListViewParams

Use the [DescribeSoqlListViewParams](#) object with [describeSoqlListViews\(\)](#) to retrieve the SOQL from a list view.

The [DescribeSoqlListViewParams](#) object has the following properties:

Name	Type	Description
developerNameOrId	string	The list view's ID or fully qualified developer name.
subjectType	string	The API name of the sObject for the list view.

DescribeSoqlListViewResult

Contains one or more `DescribeSoqlListView` objects, each of which contains information about one or more list views, including the ID, sObject type, columns, and SOQL query of each.

The `DescribeSoqlListViewResult` object has the following properties:

Name	Type	Description
describeSoqlListViews	DescribeSoqlListView[]	Information about one or more list views, including the ID, sObject type, columns, and SOQL query of each.

DescribeSoqlListViewsRequest

Use the `DescribeSoqlListViewsRequest` object with `describeSoqlListViews()` to retrieve information about a list view.

The `DescribeSoqlListViewsRequest` object has the following properties:

Name	Type	Description
listViewParams	DescribeSoqlListViewParams[]	A list of parameters that specify the list view to describe.

EDITIONS

Available in: Salesforce Classic

Available in:

ListViewColumn

Contains metadata about a single list view column.

The `ListViewColumn` object is returned by the `describeSoqlListViews()` and `executeListView()` calls. It has the following properties:

Name	Type	Description
ascendingLabel	string	The localized type-specific label for sorting the column in ascending order. For example: "A-Z" for a text field, or "Low to High" for a numeric field. Set to null if the column isn't sortable.
descendingLabel	string	The localized type-specific label for sorting the column in ascending order. For example: "Z-A" for a text field, or "High to Low" for a numeric field. Set to null if the column is not sortable.
fieldNameOrPath	string	The field name or SOQL field path for the column.
hidden	boolean	If true, specifies that the column is not displayed, and is present only to support the display of other columns or other client-side logic.
label	string	The localized display label for the column.

Name	Type	Description
searchable	boolean	Whether the column is searchable.
selectListItem	string	The SOQL SELECT item for the column. The item might differ from the field name or path, due to display formatting (for example, toLabel for picklists).
sortDirection	orderByDirection	An enumerated value, one of the following if the column is sortable: <ul style="list-style-type: none"> • ascending • descending Set to null if the column is not sortable.
sortIndex	int	The zero-based index that indicates the column's position within a multilevel sort, or null if the records are not sorted by the column.
sortable	boolean	Whether the column is sortable, in which case it might be referenced in the ExecuteListView orderBy parameter.
type	FieldType	The column data type.

ListViewOrderBy

Use the `ListViewOrderBy` object with `executeListView()` to determine the order in which records are returned from a list view.

The `ListViewOrderBy` object is returned by the `describeSoqlListViews()` call, is an optional input to the `executeListView()` call, and has the following properties:

Name	Type	Description
fieldNameOrPath	string	The field name or SOQL path of the field on which to sort the records.
nullsPosition	orderByNullsPosition	An enumerated value that determines where nulls are sorted in the results: <ul style="list-style-type: none"> • first • last
sortDirection	orderByDirection	An enumerated value that determines the sort order of the results: <ul style="list-style-type: none"> • ascending • descending

SoqlWhereCondition

Contains information about SOQL filter conditions for a list view.

Each condition listed in `SoqlWhereCondition` represents a condition expression in a SOQL WHERE clause that compares a field value to a comparison value using a condition operator. Each condition contains the following properties.

Name	Type	Description
field	string	The object field used by the filter condition.

Name	Type	Description
<code>operator</code>	<code>soqlOperator</code>	<p>The filter operation. Operations include:</p> <ul style="list-style-type: none"> <code>equals</code>—Condition is true if the field value equals the specified value. String comparisons using the equals operator are case sensitive for unique case-sensitive fields and case insensitive for all other fields. <code>excludes</code>—Condition is true for multi-select picklist fields if the selected field values are not in the list of condition values. <code>greaterThan</code>—Condition is true if the field value is greater than the specified value. <code>greaterThanOrEqualTo</code>—Condition is true if the field value is greater than or equal to the specified value. <code>in</code>—Condition is true if the field value equals any specified value in the values list. <code>includes</code>—Condition is true for multi-select picklist fields if the selected field values are in the list of condition values. <code>lessThan</code>—Condition is true if the field value is less than the specified value. <code>lessThanOrEqualTo</code>—Condition is true if the field value is less than or equal to the specified value. <code>like</code>—Condition is true if the field value matches the specified value, using character matching logic described in Comparison Operators in the <i>SOQL and SOSL Reference</i>. <code>notEquals</code>—Condition is true if the field value doesn't equal the specified value. <code>notIn</code>—Condition is true if the field value doesn't equal any specified value in the values list. <code>notLike</code>—Condition is true if the field value doesn't match the specified value using the character matching logic described in Comparison Operators in the <i>SOQL and SOSL Reference</i>. Available in API version 41.0 and later. <code>within</code>—Condition is true if the field value location is within the value distance using a location-based comparison. For more information, see Location-Based SOQL Queries in the <i>SOQL and SOSL Reference</i>.
<code>values</code>	<code>string[]</code>	A list of one or more values used to compare with the field value using the <code>operator</code> comparison logic.

Evaluating SoqlWhereConditions

In the SOAP API, Salesforce uses subclasses of `SoqlWhereCondition` to represent different categories of conditions. Use your development language's type comparison functionality (such as Java's `instanceof` operator) to determine which subclass is used for a particular instance of `SoqlWhereCondition`.

The `SoqlConditionGroup` subclass represents a group of SOQL WHERE clause conditions and uses the following properties.

Name	Type	Description
conditions	condition[]	List of filter conditions. If the list view uses filter logic, each logical filter group is represented with a conditions list.
conjunction	soqlConjunction	A conjunction operation that describes the filter logic to use for multiple conditions in a logical filter group. Values include: <ul style="list-style-type: none"> and—All conditions must be true for the overall SoqlWhereCondition. or—One of the conditions must be true for the overall SoqlWhereCondition.

The SoqlNotCondition subclass represents a special use of the `like` operator. In API version 40.0 and earlier, when evaluating a SoqlWhereCondition that was created using a `not like` operator (displayed as **does not contain** in the UI), the operator value in the condition is `like`. Salesforce also uses the SoqlNotCondition subclass of SoqlWhereCondition to represent the complete condition. The following example uses Java's `instanceof` operator to determine whether a `not like` operation is specified.

```
if (resultSoqlWhereCondition instanceof SoqlNotCondition) {
    // condition is really NOT condition
    // if operator is "like", this condition really means "not like"
    ...
}
```

In API version 41.0 and later, the `notLike` operator is used instead of SoqlNotCondition and a `like` operator. The `notLike` operator is available only for list views. You can't use it in SOQL queries used in other Salesforce features.

describeTabs ()

Returns information about the Salesforce Classic standard and custom apps available to the logged-in user, as listed in the Lightning Platform app menu at the top of the page. An app is a set of tabs that works as a unit to provide application functionality. For example, two of the standard Salesforce apps are "Sales" and "Service."

Syntax

```
describeTabSetResult [] = connection.describeTabs();
```

Usage

Use the `describeTabs ()` call to obtain information about the Salesforce Classic standard and custom apps to which the logged-in user has access. The `describeTabs ()` call returns the minimum required metadata that can be used to render apps in another user interface. Typically this call is used by partner applications to render Salesforce data in another user interface.

For each app, the call returns the app name, the URL of the logo, whether it's the currently selected application for the user, and details about the tabs included in that app.

Important: The `describeTabs ()` call returns information only about tabs that display in the Salesforce user interface for the logged-in user. If a user clicks the All Tabs (+) tab and hides some tabs from his Salesforce user interface, those user-hidden tabs aren't included in the set of tabs returned by `describeTabs ()`.

Use the `describeAllTabs ()` call to obtain information about all the tabs that are available to the logged-in user.

For each tab, the call returns the tab name, the primary `sObject` that's displayed on the tab, whether it's a custom tab, and the URL for viewing that tab. Note that the "All Tabs" tab and Lightning page tabs aren't included in the list of tabs.

Sample Code—Java

This sample calls `describeTabs()`, which returns an array of tab set results. Next, for each tab set result, which represents a Salesforce Classic app, it retrieves some of its properties and gets all the tabs for this app. It writes all retrieved properties to the console.

```
public void describeTabsSample() {
    try {
        // Describe tabs
        DescribeTabSetResult[] dtsrs = connection.describeTabs();
        System.out.println("There are " + dtsrs.length +
            " tab sets defined.");

        // For each tab set describe result, get some properties
        for (int i = 0; i < dtsrs.length; i++) {
            System.out.println("Tab Set " + (i + 1) + ":");
            DescribeTabSetResult dtsr = dtsrs[i];
            System.out.println("Label: " + dtsr.getLabel());
            System.out.println("\tLogo URL: " + dtsr.getLogoUrl());
            System.out.println("\tTab selected: " +
                dtsr.isSelected());

            // Describe the tabs for the tab set
            DescribeTab[] tabs = dtsr.getTabs();
            System.out.println("\tTabs defined: " + tabs.length);

            // Iterate through the returned tabs
            for (int j = 0; j < tabs.length; j++) {
                DescribeTab tab = tabs[j];
                System.out.println("\tTab " + (j + 1) + ":");
                System.out.println("\t\tName: " +
                    tab.getSObjectName());
                System.out.println("\t\tLabel: " + tab.getLabel());
                System.out.println("\t\tURL: " + tab.getUrl());
                DescribeColor[] tabColors = tab.getColors();
                // Iterate through tab colors as needed
                DescribeIcon[] tabIcons = tab.getIcons();
                // Iterate through tab icons as needed
            }
        }
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

Sample Code—C#

This sample calls `describeTabs()`, which returns an array of tab set results. Next, for each tab set result, which represents a Salesforce Classic app, it retrieves some of its properties and gets all the tabs for this app. It writes all retrieved properties to the console.

```
public void describeTabsSample() {
    try {
        // Describe tabs
        DescribeTabSetResult[] dtsrs = binding.describeTabs();
        Console.WriteLine("There are " + dtsrs.Length +
            " tab sets defined.");

        // For each tab set describe result, get some properties
        for (int i = 0; i < dtsrs.Length; i++) {
            Console.WriteLine("Tab Set " + (i + 1) + ":");
            DescribeTabSetResult dtsr = dtsrs[i];
            Console.WriteLine("Label: " + dtsr.label);
            Console.WriteLine("\tLogo URL: " + dtsr.logoUrl);
            Console.WriteLine("\tTab selected: " +
                dtsr.selected);

            // Describe the tabs for the tab set
            DescribeTab[] tabs = dtsr.tabs;
            Console.WriteLine("\tTabs defined: " + tabs.Length);

            // Iterate through the returned tabs
            for (int j = 0; j < tabs.Length; j++) {
                DescribeTab tab = tabs[j];
                Console.WriteLine("\tTab " + (j + 1) + ":");
                Console.WriteLine("\t\tName: " +
                    tab.subjectName);
                Console.WriteLine("\t\tLabel: " + tab.label);
                Console.WriteLine("\t\tURL: " + tab.url);
                DescribeColor[] tabColors = tab.colors;
                // Iterate through tab colors as needed
                DescribeIcon[] tabIcons = tab.icons;
                // Iterate through tab icons as needed
            }
        }
    } catch (SoapException e) {
        Console.WriteLine("An unexpected error has occurred: " +
            e.Message + "\n" + e.StackTrace);
    }
}
```

Arguments

None.

Response

[describeTabSetResult](#), [DescribeTab](#)

SEE ALSO:

[API Call Basics](#)

[Using the Partner WSDL](#)

[DescribeTab](#)

[describeTabSetResult](#)

describeTabSetResult

The `describeTabs()` call returns an array of `DescribeTabSetResult` objects for Salesforce Classic standard or custom apps and has these properties:

Name	Type	Description
<code>description</code>	string	The description for this standard or custom app.
<code>label</code>	string	The display label for this standard or custom app. This value changes when tabs are renamed in the Salesforce user interface. See the Salesforce online help for more information.
<code>logoUrl</code>	string	A fully qualified URL to the logo image associated with the standard or custom app.
<code>namespace</code>	string	If this is a custom app, and a set of tabs in the custom app was installed as part of a managed package, the value of this attribute is the developer namespace prefix that the creator of the package chose when the Developer Edition organization was enabled to allow publishing a managed package. This attribute identifies elements of a Salesforce AppExchange package.
<code>selected</code>	boolean	If <code>true</code> , then this standard or custom app is the user's currently selected app.
<code>tabs</code>	DescribeTab	An array of tabs that are displayed for the specified standard app or custom app.

DescribeColor

`DescribeColor` contains color metadata information for a tab. The `describeTabs()` call returns an array of [DescribeTabSetResult](#) values. Each `DescribeTabSetResult` contains an array of [DescribeTab](#) values, and each `DescribeTab` contains an array of `DescribeColor` values.

Each `DescribeColor` is associated with a Salesforce user interface theme. For more information on themes, see [Identifying the Salesforce Style Your Users See](#) in the Visualforce Developer's Guide.

Color information can also be retrieved via the `describeTheme()` and `describeGlobalTheme()` calls. These calls return information on colors used for each object in your organization that can use theme icons and colors.

Name	Type	Description
<code>color</code>	string	The color described in web color RGB format—for example, "00FF00".

Name	Type	Description
context	string	The color context, which determines whether the color is the main color (or primary) for the tab.
theme	string	The associated theme. Possible values include: <ul style="list-style-type: none"> • <i>theme2</i>—Theme used prior to Spring '10, called the "Salesforce Classic 2005 user interface theme" • <i>theme3</i>—Theme introduced in Spring '10, called the "Salesforce Classic 2010 user interface theme" • <i>theme4</i>—Theme introduced in Winter '14 for the mobile touchscreen version of Salesforce, and in Winter '16 for Lightning Experience • <i>custom</i>—Theme associated with a custom icon

DescribeIcon

DescribeIcon contains icon metadata information for a tab. The `describeTabs()` call returns an array of `DescribeTabSetResult` values. Each `DescribeTabSetResult` contains an array of `DescribeTab` values, and each `DescribeTab` contains an array of `DescribeIcon` values.

Icon information can also be retrieved via the `describeTheme()` and `describeGlobalTheme()` calls. These calls return information on icons used for each object in your organization that can use theme icons and colors.

Name	Type	Description
contentType	string	The tab icon's content type, for example, "image/png."
height	int	The tab icon's height in pixels. If the icon content type is an SVG type, height and width values are not used.
theme	string	The associated theme. Possible values include: <ul style="list-style-type: none"> • <i>theme2</i>—Theme used prior to Spring '10, called the "Salesforce Classic 2005 user interface theme" • <i>theme3</i>—Theme introduced in Spring '10, called the "Salesforce Classic 2010 user interface theme" • <i>theme4</i>—Theme introduced in Winter '14 for the mobile touchscreen version of Salesforce, and in Winter '16 for Lightning Experience • <i>custom</i>—Theme associated with a custom icon
url	string	The fully qualified URL for this icon.
width	string	The tab icon's width in pixels. If the icon content type is an SVG type, height and width values are not used.

DescribeTab

The `describeTabs ()` call returns a `describeTabSetResult` object, of which `DescribeTab` is a property:

Name	Type	Description
<code>colors</code>	<code>DescribeColor[]</code>	Array of color information used for a tab. This field is available in API version 29.0 and later.
<code>custom</code>	boolean	<code>true</code> if this is a custom tab, <code>false</code> if this is a standard tab.
<code>iconUrl</code>	string	The URL for the main 32x32 pixel icon for a tab. This icon appears next to the heading at the top of most pages. This icon URL corresponds to the 32x32 icon used for the Salesforce Classic 2010 user interface theme.
<code>icons</code>	<code>DescribeIcon[]</code>	Array of icon information used for a tab. This field is available in API version 29.0 and later.
<code>label</code>	string	The display label for this tab.
<code>miniIconUrl</code>	string	The URL for the 16x16 pixel icon that represents a tab. This icon appears in related lists and other locations. This icon URL corresponds to the 16x16 icon used for the current Salesforce theme, introduced in Spring '10.
<code>name</code>	string	The API name of the tab.
<code>subjectName</code>	string	The name of the <code>sObject</code> that is primarily displayed on this tab (for tabs that display a particular <code>sObject</code>). For a list of objects, see Standard Objects .
<code>url</code>	string	A fully qualified URL for viewing this tab.

SEE ALSO:

[DescribeColor](#)

[DescribeIcon](#)

describeTheme ()

Returns information about themes available to the current logged-in user.

Syntax

```
DescribeThemeResult = connection.describeTheme(string sObjectType[]);
```

Usage

Use `describeTheme ()` to get current theme information for a given array of objects. Theme information consists of colors and icons for an object in Salesforce, used for a particular theme. For example, the `Merchandise__c` object might use the "computer32" icon and a primary tab color of red for the regular Salesforce application theme, and a different set of colors and icons for the mobile touchscreen version of Salesforce.

If you pass `null` instead of an array of objects, `describeTheme ()` returns theme information for all objects in your organization that use theme colors and icons.

Your client application must be logged in with sufficient access rights to retrieve theme information about your organization's data. For more information, see [Factors that Affect Data Access](#).

`describeTheme()` is available in API version 29.0 and later.

Sample

This Java sample calls `describeTheme()` to retrieve theme information for Account and Contact, and then iterates over the retrieved theme information.

```
public static void describeThemeExample() {
    try {
        // Get current themes
        DescribeTheme themeResult = connection.describeTheme(
            new String[] { "Account", "Contact" });
        DescribeThemeItem[] themeItems = themeResult.getThemeItems();
        for (int i = 0; i < themeItems.length; i++) {
            DescribeThemeItem themeItem = themeItems[i];
            System.out.println("Theme information for object " + themeItem.getName());
            // Get color and icon info for each themeItem
            DescribeColor colors[] = themeItem.getColors();
            System.out.println("    Number of colors: " + colors.length);
            int k;
            for (k = 0; k < colors.length; k++) {
                DescribeColor color = colors[k];
                System.out.println("        For Color #" + k + ":");
                System.out.println("            Web RGB Color: " + color.getColor());
                System.out.println("            Context: " + color.getContext());
                System.out.println("            Theme: " + color.getTheme());
            }
            DescribeIcon icons[] = themeItem.getIcons();
            System.out.println("    Number of icons: " + icons.length);
            for (k = 0; k < icons.length; k++) {
                DescribeIcon icon = icons[k];
                System.out.println("        For Icon #" + k + ":");
                System.out.println("            ContentType: " + icon.getContentType());
                System.out.println("            Height: " + icon.getHeight());
                System.out.println("            Theme: " + icon.getTheme());
                System.out.println("            URL: " + icon.getUrl());
                System.out.println("            Width: " + icon.getWidth());
            }
        }
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

DescribeThemeResult

The [describeTheme \(\)](#) and [describeGlobalTheme \(\)](#) calls return [DescribeThemeResult](#), which contains an array of [DescribeThemeItem](#) values.

Name	Type	Description
themes	DescribeThemeItem []	Array of themes. Theme information is provided for each object in the organization that can use theme icons and colors.

DescribeThemeItem

The [describeTheme \(\)](#) and [describeGlobalTheme \(\)](#) calls return [DescribeThemeResult](#), which contains an array of [DescribeThemeItem](#) values. Each [DescribeThemeItem](#) contains an array of colors and icons used for themes, and the name of the object the theme information applies to.

Name	Type	Description
colors	DescribeColor []	Array of colors.
icons	DescribeIcon []	Array of icons.
name	string	Name of the object that the theme colors and icons are associated with.

CHAPTER 14 Utility Calls

This topic describes API calls that your client applications can invoke to obtain the system timestamp, user information, and change user passwords.

 **Note:** For a list of Apex-related calls, see [Apex-Related Calls](#), for a list of core calls, see [Core Calls](#), and for a list of describe calls, see [Describe Calls](#).

The following table lists the API utility calls described in this topic:

Task / Call	Description
<code>getServerTimestamp()</code>	Retrieves the current system timestamp from the API.
<code>changeOwnPassword()</code>	Allows users to change their own passwords.
<code>getUserInfo()</code>	Retrieves personal information for the user associated with the current session.
<code>match()</code>	Evaluates sObjects provided as an input for matches among Leads, using the matching rule specified in the input MatchOptions. This call can be used only with the Standard Matching Rule for Leads on Accounts.
<code>renderEmailTemplate()</code>	Replaces merge fields in text bodies of email templates with values from Salesforce records, even for polymorphic fields. The email template bodies and their corresponding <code>whoId</code> and <code>whatId</code> values are specified in the argument.
<code>resetPassword()</code>	Changes a user's password to a system-generated value.
<code>sendEmail()</code>	Immediately sends an email message.
<code>sendEmailMessage()</code>	Immediately sends up to 10 draft email messages.
<code>setPassword()</code>	Sets the specified user's password to the specified value.

Samples

The samples in this section are based on the enterprise WSDL file. They assume that you have already imported the WSDL file and created a connection. To learn how to do so, see the [Quick Start](#) tutorial.

`changeOwnPassword()`

Allows users to change their passwords from old values to new values that they specify.

Syntax

```
ChangeOwnPasswordResult changeOwnPasswordResult = connection.changeOwnPassword(string  
oldPassword, string newPassword);
```

Usage

Use `changeOwnPassword()` to allow users to change their passwords to values that they specify. For example, a client application prompts a user to specify a different password, and then invokes `changeOwnPassword()` to change the user's password. Use `setPassword()` if you want to set a different user's password to a value you specify. Use `resetPassword()` if you want to reset a target user's password with a random value generated by the API.

Sample Code—Java

This sample accepts old password and new password parameters, which it uses in the `changeOwnPassword()` call to set the new password of the user.

```
public void doChangeOwnPassword(String oldPasswd, String newPasswd) {  
    try {  
        ChangeOwnPasswordResult result = connection.changeOwnPassword(oldPasswd, newPasswd);  
  
        System.out.println("Your password was changed to "  
            + newPasswd);  
    } catch (ConnectionException ce) {  
        ce.printStackTrace();  
    }  
}
```

Sample Code—C#

This sample accepts old password and new password parameters, which it uses in the `changeOwnPassword()` call to set the new password of the user.

```
public void doChangeOwnPassword(String oldPasswd, String newPasswd)  
{  
    try  
    {  
        ChangeOwnPasswordResult result = binding.changeOwnPassword(oldPasswd, newPasswd);  
        Console.WriteLine("Your password was changed to "  
            + newPasswd);  
    }  
    catch (SoapException e)  
    {  
        Console.WriteLine("An unexpected error has occurred: " +  
            e.Message + "\n" + e.StackTrace);  
    }  
}
```

Arguments

Name	Type	Description
<code>oldPassword</code>	string	The user's previous password that is being replaced.
<code>newPassword</code>	string	The user's new password.

Response

[Utility Calls](#)

[setPassword\(\)](#)

getServerTimestamp ()

Retrieves the current system timestamp (Coordinated Universal Time (UTC) time zone) from the API.

Syntax

```
GetServerTimestampResult timestamp = connection.getServerTimestamp();
```

Usage

Use `getServerTimestamp ()` to obtain the current system timestamp from the API. You might do this if, for example, you need to use the exact timestamp for timing or data synchronization purposes. When you `create ()` or `update ()` an object, the API uses the system timestamp to update the `CreatedDate` and `LastModifiedDate` fields, respectively, in the object.

The `getServerTimestamp ()` call always returns the timestamp in Coordinated Universal Time (UTC) time zone. However, your local system might automatically display the results in your local time based on your time zone settings.

 **Note:** Development tools differ in the way that they handle time data. Some development tools report the local time, while others report only the Coordinated Universal Time (UTC) time zone. To determine how your development tool handles time values, refer to its documentation.

Sample Code—Java

This sample gets the server time and writes it to the console in the user's local time zone.

```
public void doGetServerTimestamp() {
    try {
        GetServerTimestampResult result = connection.getServerTimestamp();
        Calendar serverTime = result.getTimestamp();
        System.out.println("Server time is: "
            + serverTime.getTime().toString());
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

Sample Code—C#

This sample gets the server time and writes it to the console in the user's local time zone.

```
public void doGetServerTimestamp()
{
    try
    {
        GetServerTimestampResult result =
            binding.getServerTimestamp();
        DateTime serverTime = result.timestamp;
        Console.WriteLine("Server time is: " +
            serverTime.ToLocalTime().ToString());
    }
    catch (SoapException e)
    {
        Console.WriteLine("An unexpected error has occurred: " +
            e.Message + "\n" + e.StackTrace);
    }
}
```

Arguments

None.

Response

Fault

[UnexpectedErrorFault](#)

SEE ALSO:

[Utility Calls](#)

getServerTimestampResult

The `getServerTimestamp()` call returns a `GetServerTimestampResult` object, which has the following properties:

Name	Type	Description
timestamp	dateTime	System timestamp of the API when the <code>getServerTimestamp()</code> call was executed.

getUserInfo()

Retrieves personal information for the user associated with the current session.

Syntax

```
getUserInfoResult result = connection.getUserInfo();
```

Usage

Use `getUserInfo()` to obtain personal information about the currently logged-in user. This convenience API call retrieves and aggregates common profile information that your client application can use for display purposes, performing currency calculations, and so on.

The `getUserInfo()` call applies only to the username under which your client application has logged in. To retrieve additional personal information not found in the `getUserInfoResult` object, you can call `retrieve()` on the `User` object and pass in the `userID` returned by this call. To retrieve personal information about other users, you could call `retrieve()` (if you know their user ID) or `query()` on the `User` object.

Sample Code—Java

This sample calls `getUserInfo()` and writes information about the current user to the console.

```
public void doGetUserInfo() {
    try {
        GetUserInfoResult result = connection.getUserInfo();
        System.out.println("\nUser Information");
        System.out.println("\tFull name: " + result.getUserFullName());
        System.out.println("\tEmail: " + result.getUserEmail());
        System.out.println("\tLocale: " + result.getUserLocale());
        System.out.println("\tTimezone: " + result.getUserTimeZone());
        System.out.println("\tCurrency symbol: " + result.getCurrencySymbol());
        System.out.println("\tOrganization is multi-currency: " +
            result.isOrganizationMultiCurrency());
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

Sample Code—C#

This sample calls `getUserInfo()` and writes information about the current user to the console.

```
public void doGetUserInfo()
{
    try
    {
        GetUserInfoResult result = binding.getUserInfo();
        Console.WriteLine("\nUser Information");
        Console.WriteLine("\tFull name: " + result.userFullName);
        Console.WriteLine("\tEmail: " + result.userEmail);
        Console.WriteLine("\tLocale: " + result.userLocale);
        Console.WriteLine("\tTimezone: " + result.userTimeZone);
        Console.WriteLine("\tCurrency symbol: " + result.currencySymbol);
        Console.WriteLine("\tOrganization is multi-currency: " +
            result.organizationMultiCurrency);
    }
    catch (SoapException e)
    {
        Console.WriteLine("An unexpected error has occurred: " +
            e.Message + "\n" + e.StackTrace);
    }
}
```

Arguments

None.

[Utility Calls](#)

getUserInfoResult

The `getUserInfo()` call returns a `GetUserInfoResult` object.

Name	Type	Description
<code>accessibilityMode</code>	<code>boolean</code>	Available in API version 7.0 and later. Indicates whether user interface modifications for the visually impaired are on (<code>true</code>) or off (<code>false</code>). The modifications facilitate the use of screen readers such as JAWS.

Name	Type	Description
<code>chatterExternal</code>	boolean	Type of user license assigned to the Profile associated with the user. Indicates whether a user is part of the org or external. Available in API 40.0 and later.
<code>currencySymbol</code>	string	Currency symbol to use for displaying currency values. Applicable only when <code>organizationMultiCurrency</code> is <code>false</code> .
<code>organizationId</code>	ID	ID of the organization. Allows third-party tools to uniquely identify individual organizations in Salesforce, which is useful for retrieving billing or organization-wide setup information.
<code>organizationMultiCurrency</code>	boolean	Indicates whether the user's organization uses multiple currencies (<code>true</code>) or not (<code>false</code>).
<code>organizationName</code>	string	Name of the user's organization or company.
<code>orgDefaultCurrencyIsoCode</code>	string	Default currency ISO code. Applicable only when <code>organizationMultiCurrency</code> is <code>false</code> . When the logged-in user creates any objects that have a currency ISO code, the API uses this currency ISO code if it is not explicitly specified in the <code>create()</code> call.
<code>profileID</code>	ID	ID of the profile associated with the role currently assigned to the user.
<code>roleID</code>	ID	Role ID of the role currently assigned to the user.
<code>sessionSecondsValid</code>	int	The number of seconds before the session expires, starting from the last update time. Available in API version 21.0 and later.
<code>userDefaultCurrencyIsoCode</code>	string	Default currency ISO code. Applicable only when <code>organizationMultiCurrency</code> is <code>true</code> . When the logged-in user creates any objects that have a currency ISO code, the API uses this currency ISO code if it is not explicitly specified in the <code>create()</code> call.
<code>userEmail</code>	string	User's email address.
<code>userFullName</code>	string	User's full name.
<code>userID</code>	ID	User ID.
<code>userLanguage</code>	string	User's language, which controls the language for labels displayed in an application. String is 2-5 characters long. The first two characters are always an ISO language code, for example "fr" or "en." If the value is further qualified by country, then the string also has an underscore (<code>_</code>) and another ISO country code, for example "US" or "UK. For example, the string for the United States is "en_US", and the string for French Canadian is "fr_CA." For a list of the languages that Salesforce supports, see the Salesforce online help topic "What languages does Salesforce support?"
<code>userLocale</code>	string	User's locale, which controls the formatting of dates and choice of symbols for currency. The first two characters are always an ISO language code, for example "fr" or "en." If the value is further qualified by country, then the string also has

Name	Type	Description
		an underscore (_) and another ISO country code, for example "US" or "UK. For example, the string for the United States is "en_US", and the string for French Canadian is "fr_CA."
userName	string	User's login name.
userTimeZone	string	User's time zone.
userType	string	Type of user license assigned to the Profile associated with the user.
userUiSkin	string	Available in API version 7.0 and later. Possible values are: <ul style="list-style-type: none"> theme3—If the user is using the Salesforce Classic 2010 user interface theme, also known as the <i>Aloha</i> interface theme2—If the user is using the Salesforce Classic 2005 user interface theme theme1—If the user is using the oldest user interface theme (obsolete) In the online app, this look and feel setting is configurable from Setup by entering <i>User Interface</i> in the Quick Find box, then selecting User Interface . See User Interface Themes .

match ()

Evaluates sObjects provided as an input for matches among Leads, using the matching rule specified in the input MatchOptions. This call can be used only with the Standard Matching Rule for Leads on Accounts.

This operation is available in API versions 42.0 and later, in **Professional**, **Enterprise**, **Performance**, and **Unlimited** Editions with **Pardot Pro** or **Pardot Ultimate** Edition.

Syntax

```
MatchResult[] callResults = connection.match(SObject[] inputSObjectArray, MatchOptions matchOptions);
```

Arguments

Name	Type	Description
inputSObjectArray	Array of sObject	A list of sObjects to evaluate for matches.
matchOptions	MatchOptions	Options, such as the match rule, used during the match operation.

Response

[MatchResult](#)

MatchOptions

Represents a type to be used with a match operation. It describes options to be used during the match operation. This type can be used only with the Standard Matching Rule for Leads on Accounts.

This type is available in API versions 42.0 and later, in **Professional**, **Enterprise**, **Performance**, and **Unlimited** Editions with **Pardot Pro** or **Pardot Ultimate** Edition.

Fields

Field	Details	
Fields	string	
MatchEngine	string	           
Rule	string	              

Field	Details	
		     
SubjectType	string	     

renderEmailTemplate()

Replaces merge fields in text bodies of email templates with values from Salesforce records, even for polymorphic fields. The email template bodies and their corresponding `whoId` and `whatId` values are specified in the argument.

Syntax

```
RenderEmailTemplateResult = connection.renderEmailTemplate(RenderEmailTemplateRequest[] renderRequests);
```

Usage

The `renderEmailTemplate()` call is equivalent to rendering merge fields when sending an email with a custom template through the `sendEmail()` call.

The `renderEmailTemplate()` call can take up to 10 `RenderEmailTemplateRequest` elements in its array argument, and each `RenderEmailTemplateRequest` can contain up to 10 template bodies. Each request is independent from the other requests in the array—an error in one request doesn't affect the other requests. Similarly, an error in one template body doesn't cause an error in other text bodies within the same request.

The `renderEmailTemplate()` call substitutes a merge field with the value of either the `whatId` or `whoId` in `RenderEmailTemplateRequest`:

- If the merge field references a non-human object, it's replaced with the corresponding value of `whatId`. For example, if a merge field references an account or opportunity, the `whatId` value is substituted.
- If the merge field references a human object, it's replaced with the corresponding value of `whoId`. For example, if a merge field references a contact, lead, or user, the `whoId` value is substituted.

The `whatId` and `whoId` field values of `RenderEmailTemplateRequest` are validated for each request. If the `whatId` doesn't reference a valid what ID (a non-human object), or the `whoId` doesn't reference a valid who ID (a human object), an error is set for the request.

Sample Code—Java

In this sample, the `renderEmailTemplate()` call substitutes all contact merge fields with the value from the specified `whoId` argument. Similarly, the call substitutes the opportunity merge field (`{!Opportunity.Name}`) with the specified `whatId` value. The second template body in this sample has an incorrect merge field (`{!Contact.SNARF}`), which causes an error on the second template. However, the entire template rendering request is successful.

```
public void renderTemplates(String whoId, String whatId)
    throws ConnectionException, RemoteException, MalformedURLException {
    // Array of three template bodies.
    // The second template body generates an error.
    final String[] TEMPLATE_BODIES = new String[] {
        "This is a good template body {!Contact.Name}",
        "This is a bad template body {!Opportunity.Name} {!Contact.SNARF} ",
        "This is another good template body {!Contact.Name}";

    // Create request and add template bodies, whatId, and whoId.
    RenderEmailTemplateRequest req = new RenderEmailTemplateRequest();
    req.setTemplateBodies(TEMPLATE_BODIES);
    req.setWhatId(whatId);
    req.setWhoId(whoId);
    // An array of results is returned, one for each request.
    // We only have one request.
    RenderEmailTemplateResult[] results = connection.renderEmailTemplate(
        new RenderEmailTemplateRequest[] { req });
    if (results != null) {
        // Check results for our one and only request.
        // Check request was processed successfully, and if not, print the errors.
        if (!results[0].isSuccess()) {
            System.out.println(
                "The following errors were encountered while rendering email templates:");
            for (Error err : results[0].getErrors()) {
                System.out.println(err.getMessage());
            }
        } else {
            // Check results for each body template and print merged body
            RenderEmailTemplateBodyResult[] bodyResults = results[0].getBodyResults();
            for( Integer i=0;i<bodyResults.length;i++) {
                RenderEmailTemplateBodyResult result = bodyResults[i];
                if (result.isSuccess()) {
                    System.out.println("\nMerged body: \n" + result.getMergedBody());
                } else {
                    System.out.println("\nErrors were found for body[" + i + "]: ");
                    for (RenderEmailTemplateError err : result.getErrors()) {
                        System.out.println(err.getMessage() + " - Field name: "
                            + err.getFieldName());
                    }
                }
            }
        }
    }
}
```

Let's say you run this sample by specifying a valid contact ID for the first argument (*whoId*) and `null` for the second argument (*whatId*). The second template has one error set, for the incorrect merge field. The response looks like the following.

```
Merged body:
This is a good template body Howard Jones

Errors were found for body[1]:
Field Contact.SNARF does not exist. Check spelling. - Field name: Contact.SNARF

Merged body:
This is another good template body Howard Jones
```

RenderEmailTemplateRequest

Name	Type	Description
<code>templateBodies</code>	<code>string[]</code>	An array of text bodies that can contain merge fields, such as <code>{!Account.Phone}</code> or <code>{!Contact.Name}</code> .
<code>whatId</code>	reference	References a non-human object, such as an account, an opportunity, a campaign, a case, or a custom object. The <code>whatId</code> is polymorphic, which means that it's an ID that can refer to more than one type of object, such as a case or an opportunity.
<code>whoId</code>	reference	References a human object, such as a lead, contact, or user. The <code>whoId</code> is polymorphic, which means that it's an ID that can refer to more than one type of object.

Fault

The `renderEmailTemplate()` can return any of these API status codes.

[EMAIL_TEMPLATE_FORMULA_ERROR](#)

[EMAIL_TEMPLATE_MERGEFIELD_ACCESS_ERROR](#)

[EMAIL_TEMPLATE_MERGEFIELD_ERROR](#)

[EMAIL_TEMPLATE_MERGEFIELD_VALUE_ERROR](#)

[EMAIL_TEMPLATE_PROCESSING_ERROR](#)

RenderEmailTemplateResult

Contains status and error information for a request processed by the `renderEmailTemplate()` call, including individual results of rendered email templates.

Name	Type	Description
<code>bodyResults</code>	RenderEmailTemplateBodyResult[]	Contains status and error information for each template body that <code>renderEmailTemplate()</code> processed in a request, including merged body text of templates.

Name	Type	Description
errors	Error[]	Contains one or more errors that occurred when renderEmailTemplate() rendered a request.
success	boolean	Indicates whether a request was successfully processed (<code>true</code>) or not (<code>false</code>).

RenderEmailTemplateBodyResult

Contains status and error information for each template body that `renderEmailTemplate()` processed in a request, including merged body text of templates.

Name	Type	Description
errors	RenderEmailTemplateError []	Contains one or more errors that are associated with a template body that renderEmailTemplate() processed.
mergedBody	string	The text of the template body with the merge fields replaced with their corresponding values from Salesforce objects. The <code>whatId</code> and <code>whoId</code> fields on the request reference the Salesforce objects to use. The <code>mergedBody</code> field is populated only when the rendering of the template was successful (<code>success</code> is equal to <code>true</code>). If <code>success</code> is equal to <code>false</code> , <code>mergedBody</code> is null.
success	boolean	Indicates whether a template body was successfully rendered (<code>true</code>) or not (<code>false</code>).

RenderEmailTemplateError

An error that occurred when [renderEmailTemplate\(\)](#) processed a template body.

Name	Type	Description
fieldName	string[]	The merge field that affected the error condition.
message	string	Error message text.
offset	int	The offset in the template body text of the merge field that caused the error. The offset is calculated as the number of characters from the start of the body text. The offset is -1 if it can't be determined because of insufficient contextual information.
statusCode	StatusCode	A code that characterizes the error. The full list of status codes is available in the WSDL file for your organization (see Generating the WSDL File for Your Organization).

resetPassword()

Changes a user's password to a temporary, system-generated value.

Syntax

```
string password = connection.resetPassword(ID userID);
```

Usage

Use `resetPassword()` to request that the API change the password of a [User](#) or [SelfServiceUser](#), and return a system-generated password string of random letters and numbers. Use `setPassword()` instead if you want to set the password to a specific value.

Your client application must be logged in with sufficient access rights to change the password for the specified user. For more information, see [Factors that Affect Data Access](#).

For information on IDs, see [ID Field Type](#).

Sample Code—Java

This sample resets the password for the user specified by the `userId` parameter. It calls `resetPassword()` with this ID and gets the temporary password from the call result. It writes this temporary password to the console and returns it.

```
public String doResetPassword(String userId) {
    String result = "";
    try {
        ResetPasswordResult rpr = connection.resetPassword(userId);
        result = rpr.getPassword();
        System.out.println("The temporary password for user ID " + userId
            + " is " + result);
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
    return result;
}
```

Sample Code—C#

This sample resets the password for the user specified by the `userId` parameter. It calls `resetPassword()` with this ID and gets the temporary password from the call result. It writes this temporary password to the console and returns it.

```
public String doResetPassword(String userId)
{
    String result = "";
    try
    {
        ResetPasswordResult rpr = binding.resetPassword(userId);
        result = rpr.password;
        Console.WriteLine("The temporary password for user ID " + userId + " is " +
            result);
    }
}
```

```

catch (SoapException e)
{
    Console.WriteLine("An unexpected error has occurred: " +
        e.Message + "\n" + e.StackTrace);
}
return result;
}

```

Arguments

Name	Type	Description
userID	ID	ID of the User or SelfServiceUser whose password you want to reset. For information on IDs, see ID Field Type .

Response

Name	Type	Description
password	string	New password generated by the API. Once the user logs in with this password, they will be asked to provide a new password. This password is temporary, meaning that it cannot be reused once the user has set his or her new password.

[Utility Calls](#)

sendEmail ()

Immediately sends an email message.

Syntax

For single email messages:

```
SendEmailResult = connection.sendEmail(SingleEmailMessage emails[]);
```

For mass email messages:

```
SendEmailResult = connection.sendEmail(MassEmailMessage emails[]);
```

Usage

Use this call with Lightning Platform AppExchange applications, custom applications, or other applications outside of Salesforce to send individual and mass email. The email can include all standard email attributes (such as subject line and blind carbon copy address), use Salesforce email templates, and be in plain text or HTML format. You can use Salesforce to track the status of HTML email, including the date the email was sent, first opened, last opened, and the total number of times it was opened. (See “Tracking HTML Email” in Salesforce Help for more information.)

The email address of the logged-in user is inserted in the `From Address` field of the email header. All return email and out-of-office replies go to the logged-in user. If bounce management is enabled and `SingleEmailMessage.targetObjectId` or `MassEmailMessage.targetObjectIds` is set, bounces are processed by Salesforce automatically, and the appropriate records are updated; otherwise, they go to the logged-in user. Bounce management works for contacts and leads only.

Note:

- Single email messages sent with this call count against the sending organization's daily single email limit. When this limit is reached, `sendEmail()` calls using `SingleEmailMessage` are rejected, and the user receives a `SINGLE_EMAIL_LIMIT_EXCEEDED` error code. However, single emails sent through the application are allowed.
- Mass email messages sent with this call count against the sending organization's daily mass email limit. When this limit is reached, `sendEmail()` calls using `MassEmailMessage` are rejected, and the user receives a `MASS_MAIL_LIMIT_EXCEEDED` error code.
- Starting in API version 35.0, you can enforce or ignore the **Email Opt Out** setting for contacts or leads with the `optOutPolicy` field of `SingleEmailMessage`. The `optOutPolicy` field applies to recipients in the To, CC, and BCC lists of the email. By default and in earlier versions, `SingleEmailMessage` ignores the **Email Opt Out** setting of recipients and the email is sent to all recipients. When using `MassEmailMessage`, the **Email Opt Out** setting of the recipients is always enforced—emails aren't sent to recipients that have opted out and are sent to all other recipients.

`SingleEmailMessage` has an optional field called `OrgWideEmailAddressId`. This is an object ID to an `OrgWideEmailAddress` object. If `OrgWideEmailAddressId` is set, the `OrgWideEmailAddress.DisplayName` field is used in the email header, instead of the logged-in user's `DisplayName`. The sending email address in the header is also set to the field defined in `OrgWideEmailAddress.Address`.

Note: If both the `DisplayName` in an `OrgWideEmailAddress` and `senderDisplayName` are defined, the user receives a `DUPLICATE_SENDER_DISPLAY_NAME` error.

Sample Code—Java

This sample creates an email message and sets its fields, including the To, CC and BCC recipients, subject, and body text. It also sets a recipient to the ID of the logged-in user using the `setTargetObjectId` method, which causes the email to be sent to the email address of the specified user. The sample creates an attachment and sends the email message with the attachment. Finally, it writes a status message or an error message, if any, to the console.

```
public void doSendEmail() {
    try {
        EmailFileAttachment efa = new EmailFileAttachment();
        byte[] fileBody = new byte[1000000];
        efa.setBody(fileBody);
        efa.setFileName("attachment");
        SingleEmailMessage message = new SingleEmailMessage();
        message.setBccAddresses(new String[] {
            "someone@salesforce.com"
        });
    };
```

```

message.setCcAddresses(new String[] {
    "person1@salesforce.com", "person2@salesforce.com", "003xx00000a1b2cAAC"
});
message.setBccSender(true);
message.setEmailPriority(EmailPriority.High);
message.setReplyTo("person1@salesforce.com");
message.setSaveAsActivity(false);
message.setSubject("This is how you use the " + "sendEmail method.");
// We can also just use an id for an implicit to address
getUserInfoResult guir = connection.getUserInfo();
message.setTargetObjectId(guir.getUserId());
message.setUseSignature(true);
message.setPlainTextBody("This is the humongous body "
    + "of the message.");
EmailFileAttachment[] efas = { efa };
message.setFileAttachments(efas);
message.setToAddresses(new String[] { "person3@salesforce.com" });
SingleEmailMessage[] messages = { message };
SendEmailResult[] results = connection.sendEmail(messages);
if (results[0].isSuccess()) {
    System.out.println("The email was sent successfully.");
} else {
    System.out.println("The email failed to send: "
        + results[0].getErrors()[0].getMessage());
}
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
}

```

This example shows how to send an email with the opt-out setting enforced. Recipients are specified by their IDs. The `SendEmailOptOutPolicy.FILTER` option causes the email to be sent only to recipients that haven't opted out from email.

```

SingleEmailMessage message = new SingleEmailMessage();
// Set recipients to two contact IDs.
// Replace IDs with valid record IDs in your org.
message.setToAddresses(new String[] { "003D000000QDexS", "003D000000QDfw5" });
message.setOptOutPolicy(SendEmailOptOutPolicy.FILTER);
message.setSubject("Opt Out Test Message");
message.setPlainTextBody("This is the message body.");
SingleEmailMessage[] messages = { message };
SendEmailResult[] results = connection.sendEmail(messages);
if (results[0].isSuccess()) {
    System.out.println("The email was sent successfully.");
} else {
    System.out.println("The email failed to send: "
        + results[0].getErrors()[0].getMessage());
}
}

```

Sample Code—C#

This sample creates an email message and sets its fields, including the To, CC and BCC recipients, subject, and body text. It also sets a recipient to the ID of the logged-in user using the `setTargetObjectId` method, which causes the email to be sent to the email

address of the specified user. The sample creates an attachment and sends the email message with the attachment. Finally, it writes a status message or an error message, if any, to the console.

```
public void doSendEmail()
{
    try
    {
        EmailFileAttachment efa = new EmailFileAttachment();
        byte[] fileBody = new byte[1000000];
        efa.body = fileBody;
        efa.fileName = "attachment";
        SingleEmailMessage message = new SingleEmailMessage();
        message.setBccAddresses(new String[] {
            "someone@salesforce.com"
        });
        message.setCcAddresses(new String[] {
            "person1@salesforce.com", "person2@salesforce.com", "003xx00000a1b2cAAC"
        });
        message.bccSender = true;
        message.emailPriority = EmailPriority.High;
        message.replyTo = "person1@salesforce.com";
        message.saveAsActivity = false;
        message.subject = "This is how you use the " + "sendEmail method.";
        // We can also just use an id for an implicit to address
        GetUserInfoResult guir = binding.getUserInfo();
        message.targetObjectId = guir.userId;
        message.useSignature = true;
        message.plainTextBody = "This is the humongous body "
            + "of the message.";
        EmailFileAttachment[] efas = { efa };
        message.fileAttachments = efas;
        message.toAddresses = new String[] { "person3@salesforce.com" };
        SingleEmailMessage[] messages = { message };
        SendEmailResult[] results = binding.sendEmail(messages);
        if (results[0].success)
        {
            Console.WriteLine("The email was sent successfully.");
        }
        else
        {
            Console.WriteLine("The email failed to send: "
                + results[0].errors[0].message);
        }
    }
    catch (SoapException e)
    {
        Console.WriteLine("An unexpected error has occurred: " +
            e.Message + "\n" + e.StackTrace);
    }
}
```

This example shows how to send an email with the opt-out setting enforced. Recipients are specified by their IDs. The `SendEmailOptOutPolicy.FILTER` option causes the email to be sent only to recipients that haven't opted out from email.

```
SingleEmailMessage message = new SingleEmailMessage();
// Set recipients to two contact IDs.
// Replace IDs with valid record IDs in your org.
message.toAddresses = new String[] { "003D000000QDexS", "003D000000QDfW5" };
message.optOutPolicy = SendEmailOptOutPolicy.FILTER;
message.subject = "Opt Out Test Message";
message.plainTextBody = "This is the message body.";
SingleEmailMessage[] messages = { message };
SendEmailResult[] results = binding.sendEmail(messages);
if (results[0].success)
{
    Console.WriteLine("The email was sent successfully.");
} else {
    Console.WriteLine("The email failed to send: "
        + results[0].errors[0].message);
}
```

BaseEmail

The following table contains the arguments used in both single and mass email.

 **Note:** If templates aren't being used, all email content must be in plain text, HTML, or both.

Name	Type	Description
<code>bccSender</code>	boolean	Indicates whether the email sender receives a copy of the email that is sent. For a mass mail, the sender is only copied on the first email sent.  Note: If the BCC compliance option is set at the organization level, the user can't add BCC addresses on standard messages. The following error code is returned: <code>BCC_NOT_ALLOWED_IF_BCC_COMPLIANCE_ENABLED</code> . Contact your Salesforce representative for information on BCC compliance.
<code>saveAsActivity</code>	boolean	Optional. The default value is <code>true</code> , meaning the email is saved as an activity. This argument only applies if the recipient list is based on <code>targetObjectId</code> or <code>targetObjectIds</code> . If HTML email tracking is enabled for the organization, you can track open rates.
<code>useSignature</code>	boolean	Indicates whether the email includes an email signature if the user has one configured. The default is <code>true</code> , meaning if the user has a signature it is included in the email unless you specify <code>false</code> .
<code>emailPriority</code>	picklist	Optional. The priority of the email. <ul style="list-style-type: none"> • Highest • High • Normal • Low

Name	Type	Description
		<ul style="list-style-type: none"> Lowest <p>The default is Normal.</p>
replyTo	string	Optional. The email address that receives the message when a recipient replies. This can't be set if you're using a Visualforce email template that specifies a replyTo value.
subject	string	Optional. The email subject line. If you're using an email template and attempt to override the subject line, an error message is returned.
templateId	ID	The ID of the template to be merged to create this email.
senderDisplayName	string	Optional. The name that appears on the From line of the email. This can't be set if the object associated with a OrgWideEmailAddressId for a SingleEmailMessage has defined its DisplayName field.

SingleEmailMessage

The following table contains the arguments single email uses in addition to the base email arguments.

Name	Type	Description
bccAddresses	string[]	<p>Optional. An array of blind carbon copy (BCC) addresses or object IDs of the contacts, leads, and users you're sending the email to. This argument is allowed only when a template isn't used. The maximum size for this field is 4,000 bytes. The maximum total of toAddresses, ccAddresses, and bccAddresses per email is 150. All recipients in these three fields count against the limit for email sent using Apex or the API.</p> <p>You can specify opt-out email options with the optOutPolicy field only for those recipients who were added by their IDs.</p> <p>Email addresses are verified to ensure that they have the correct format and haven't been marked as bounced.</p> <p>If the BCC COMPLIANCE option is set at the organization level, the user can't add BCC addresses on standard messages. The following error code is returned: BCC_NOT_ALLOWED_IF_BCC_COMPLIANCE_ENABLED.</p> <p>All emails must have a recipient value in at least one of the following fields:</p> <ul style="list-style-type: none"> toAddresses ccAddresses bccAddresses targetObjectId
ccAddresses	string[]	Optional. An array of carbon copy (CC) addresses or object IDs of the contacts, leads, and users you're sending the email to. This

Name	Type	Description
		<p>argument is allowed only when a template isn't used. The maximum size for this field is 4,000 bytes. The maximum total of <code>toAddresses</code>, <code>ccAddresses</code>, and <code>bccAddresses</code> per email is 150. All recipients in these three fields count against the limit for email sent using Apex or the API.</p> <p>You can specify opt-out email options with the <code>optOutPolicy</code> field only for those recipients who were added by their IDs.</p> <p>Email addresses are verified to ensure that they have the correct format and haven't been marked as bounced.</p> <p>All emails must have a recipient value in at least one of the following fields:</p> <ul style="list-style-type: none"> • <code>toAddresses</code> • <code>ccAddresses</code> • <code>bccAddresses</code> • <code>targetObjectId</code>
<code>charset</code>	string	Optional. The character set for the email. If this value is null, the user's default value is used. Unavailable if specifying <code>templateId</code> because the template specifies the character set.
<code>documentAttachments</code>	ID[]	Deprecated. Use entityAttachments instead. Optional. An array listing the ID of each Document you want to attach to the email.
<code>entityAttachments</code>	ID[]	Optional. Array of IDs of Document , ContentVersion , or Attachment items to attach to the email. This field is available in API version 35.0 and later.
<code>fileAttachments</code>	EmailFileAttachment[]	Optional. An array listing the file names of the binary and text files you want to attach to the email. You can attach multiple files as long as the total size of all attachments doesn't exceed 20 MB.
<code>htmlBody</code>	string	Optional. The HTML version of the email, specified by the sender. The value is encoded according to the specification associated with the organization.
<code>inReplyTo</code>	string	Optional. The In-Reply-To field of the outgoing email. Identifies the emails to which this one is a reply (parent emails). Contains the parent emails' Message-IDs. See RFC2822 - Internet Message Format .
<code>optOutPolicy</code>	SendEmailOptOutPolicy (enumeration of type string)	Optional. If you add contact, lead, or person account recipients by ID instead of email address, this field determines the behavior of the <code>sendEmail()</code> call. By default, the opt-out settings for recipients added by their email addresses aren't checked and those recipients always receive the email. Possible values of the <code>SendEmailOptOutPolicy</code> enumeration are:

Name	Type	Description
		<ul style="list-style-type: none"> SEND (default)—The email is sent to all recipients. The recipients' <code>Email Opt Out</code> setting is ignored. The setting <code>Enforce email privacy settings</code> is ignored. FILTER—No email is sent to recipients that have the <code>Email Opt Out</code> option set. Emails are sent to the other recipients. The setting <code>Enforce email privacy settings</code> is ignored. REJECT—If any of the recipients have the <code>Email Opt Out</code> option set, <code>sendEmail()</code> throws an error and no email is sent. The setting <code>Enforce email privacy settings</code> is respected, as are the selections in the data privacy record based on the <code>Individual</code> object. If any of the recipients have <code>Don't Market</code>, <code>Don't Process</code>, or <code>Forget this Individual</code> selected, <code>sendEmail()</code> throws an error and no email is sent. <p> Note: The <code>Send Non-Commercial Email</code> permission isn't respected.</p> <p>This field is available in API version 35.0 and later.</p>
<code>orgWideEmailAddressId</code>	ID	Optional. The object ID of the <code>OrgWideEmailAddress</code> associated with the outgoing email. <code>OrgWideEmailAddress.DisplayName</code> can't be set if the <code>senderDisplayName</code> field is already set.
<code>plainTextBody</code>	string	Optional. The text version of the email, specified by the sender.
<code>references</code>	string	Optional. The <code>References</code> field of the outgoing email. Identifies an email thread. Contains the parent emails' <code>Message-ID</code> and <code>References</code> fields and possibly <code>In-Reply-To</code> fields. See RFC2822 - Internet Message Format .
<code>targetObjectId</code>	ID	Optional. The object ID of the contact, lead, or user the email will be sent to. The object ID you enter sets the context and ensures that merge fields in the template contain the correct data All emails must have a recipient value in at least one of the following fields: <ul style="list-style-type: none"> <code>toAddresses</code> <code>ccAddresses</code> <code>bccAddresses</code> <code>targetObjectId</code>
<code>toAddresses</code>	string[]	Optional. An array of email addresses or object IDs of the contacts, leads, or users you're sending the email to. This argument is allowed only when a template isn't used. The maximum size for this field is 4,000 bytes. The maximum total of <code>toAddresses</code> , <code>ccAddresses</code> , and <code>bccAddresses</code> per email is 150. All recipients in these three fields count against the limit for email sent using Apex or the API.

Name	Type	Description
		<p>You can specify opt-out email options with the <code>optOutPolicy</code> field only for those recipients who were added by their IDs.</p> <p>Email addresses are verified to ensure that they have the correct format and haven't been marked as bounced.</p> <p>All emails must have a recipient value in at least one of the following fields:</p> <ul style="list-style-type: none"> • <code>toAddresses</code> • <code>ccAddresses</code> • <code>bccAddresses</code> • <code>targetObjectId</code>
<code>treatBodiesAsTemplate</code>	boolean	<p>Optional. If set to <code>true</code>, the subject, plain text, and HTML text bodies of the email are treated as template data. The merge fields are resolved using the <code>renderEmailTemplate()</code> call. Default is <code>false</code>.</p> <p>This field is available in API version 35.0 and later.</p>
<code>treatTargetObjectAsRecipient</code>	boolean	<p>Optional. If set to <code>true</code>, the <code>targetObjectId</code> (a contact, lead, or user) is the recipient of the email. If set to <code>false</code>, the <code>targetObjectId</code> is supplied as the <code>whoId</code> field for template rendering but isn't a recipient of the email. The default is <code>true</code>.</p> <p>This field is available in API version 35.0 and later. In prior versions, the <code>targetObjectId</code> is always a recipient of the email.</p>
<code>whatId</code>	ID	<p>Optional. If you specify a contact for the <code>targetObjectId</code> field, you can specify a <code>whatId</code> as well. This field helps to further ensure that merge fields in the template contain the correct data. The value must be one of the following types:</p> <ul style="list-style-type: none"> • <code>Account</code> • <code>Asset</code> • <code>Campaign</code> • <code>Case</code> • <code>Contract</code> • <code>Opportunity</code> • <code>Order</code> • <code>Product</code> • <code>Solution</code> • <code>Custom</code>

MassEmailMessage

The following table contains the arguments mass email uses in addition to the base email arguments.

Name	Type	Description
<code>description</code>	string	A value used internally to identify the object in the mass email queue.
<code>targetObjectIds</code>	ID[]	An array of object IDs of the contacts, leads, or users the email will be sent to. The object IDs you enter set the context and ensure that merge fields in the template contain the correct data. The objects must be of the same type (either all contacts, all leads, or all users). You can list up to 250 IDs per email. If you specify a value for the <code>targetObjectIds</code> field, optionally specify a <code>whatId</code> as well to set the email context to a user, contact, or lead. This ensures that merge fields in the template contain the correct data.
<code>whatIds</code>	ID[]	Optional. If you specify an array of contacts for the <code>targetObjectIds</code> field, you can specify an array of <code>whatIds</code> as well. This helps to further ensure that merge fields in the template contain the correct data. The values must be one of the following types: <ul style="list-style-type: none"> • Contract • Case • Opportunity • Product If you specify <code>whatIds</code> , specify one for each <code>targetObjectId</code> ; otherwise, you receive an <code>INVALID_ID_FIELD</code> error.

EmailFileAttachment

The following table contains properties that the EmailFileAttachment uses in the SingleEmailMessage object to specify attachments passed in as part of the request, as opposed to a [Document](#) passed in using the `documentAttachments` argument.

Property	Type	Description
<code>body</code>	base64	The attachment itself.
<code>contentType</code>	string	Optional. The attachment's Content-Type.
<code>fileName</code>	string	The name of the file to attach.
<code>inline</code>	boolean	Optional. Specifies a Content-Disposition of inline (<code>true</code>) or attachment (<code>false</code>). In most cases, inline content is displayed to the user when the message is opened. Attachment content requires user action to be displayed.

Response

[SendEmailResult](#)

Fault

The following API status codes can be returned. Also, `sendEmail()` can return other errors when rendering email templates. See `renderEmailTemplate()` Faults.

`BCC_NOT_ALLOWED_IF_BCC_COMPLIANCE_ENABLED`
`BCC_SELF_NOT_ALLOWED_IF_BCC_COMPLIANCE_ENABLED`
`DUPLICATE_SENDER_DISPLAY_NAME`
`EMAIL_ADDRESS_BOUNCED`
`EMAIL_NOT_PROCESSED_DUE_TO_PRIOR_ERROR`
`EMAIL_OPTED_OUT`
`ERROR_IN_MAILER`
`INSUFFICIENT_ACCESS_ON_CROSS_REFERENCE_ENTITY`
`INVALID_CONTENT_TYPE`
`INVALID_EMAIL_ADDRESS`
`INVALID_ID_FIELD`
`INVALID_MESSAGE_ID_REFERENCE`
`INVALID_SAVE_AS_ACTIVITY_FLAG`
`LIMIT_EXCEEDED`
`MALFORMED_ID`
`MASS_MAIL_LIMIT_EXCEEDED`
`NO_MASS_MAIL_PERMISSION`
`REQUIRED_FIELD_MISSING`
`SINGLE_EMAIL_LIMIT_EXCEEDED`
`TEMPLATE_NOT_ACTIVE`
`UNVERIFIED_SENDER_ADDRESS`

SendEmailResult

The `sendEmail()` call returns a list of `SendEmailResult` objects. Each `SendEmailResult` object has the following properties:

Name	Type	Description
<code>success</code>	boolean	<p>If sending single email: Indicates whether the email was successfully accepted for delivery by the message transfer agent (<code>true</code>) or not (<code>false</code>). Even if <code>success = true</code>, it does not mean the intended recipients received the email, as it could have bounced or been blocked by a spam blocker. Also, even if the email is successfully accepted for delivery by the message transfer agent, there can still be errors in the error array related to individual addresses within the email.</p> <p>If sending mass email: Indicates whether the email was successfully added to the queue for processing (<code>true</code>) or not (<code>false</code>). Even if the email was added to the</p>

Name	Type	Description
		queue, there can still be processing errors that prevent delivery to the intended recipients.
<code>SendEmailError</code>	<code>Error[]</code>	If an error occurred during the <code>sendEmail()</code> call, a list of <code>SendEmailError</code> objects is returned. For single email, errors indicate that Salesforce wasn't able to deliver the email. For mass email, errors indicate that the email wasn't added to the queue for processing.

SendEmailError

SendEmailError can have the following attributes:

Name	Type	Description
Fields	Field[]	Reserved for future use. Array of one or more field names. Identifies which fields in the object, if any, affected the error condition.
Message	string	Error message text.
StatusCode	statusCode	A code that characterizes the error. The full list of status codes is available in the WSDL file for your organization .
TargetObjectId	ID	The object ID of the target for which the error occurred.

 **Note:** If an error occurs that prevents `sendEmail()` from sending the email to one or more targets, each `TargetObjectId` for those targets has an associated error in `SendEmailResult`. A `TargetObjectId` that does not have an associated error in `SendEmailResult` indicates the email was sent to the target. If `SendEmailResult` has an error that does not have an associated `TargetObjectId`, no email was sent.

The following is an example of how to parse through a resulting set for errors:

```
Messaging.SingleEmailMessage email = new Messaging.SingleEmailMessage();
email.setToAddresses(new String[] { 'admin@acme.com' });
email.setSubject('my subject');
email.setPlainTextBody('plain text body');
List<Messaging.SendEmailResult> results =
    Messaging.sendEmail(new Messaging.Email[] { email });
if (!results.get(0).isSuccess()) {
    System.StatusCode statusCode = results.get(0).getErrors()[0].getStatusCode();
    String errorMessage = results.get(0).getErrors()[0].getMessage();
}
```

sendEmailMessage()

Immediately sends up to 10 draft email messages.

Syntax

For Enterprise SOAP:

```
SendEmailResult[] = connection.sendEmailMessage( String[] draftEmailIds);
```

For Partner SOAP:

```
SendEmailResult[] = connection.sendEmailMessage( ID[] draftEmailIds);
```

Usage

Use this call with Lightning Platform AppExchange applications, custom applications, or other applications outside of Salesforce to send up to 10 draft email messages. The messages can include all standard email attributes (such as subject line and blind carbon copy address), use Salesforce email templates, and be in plain text or HTML format. You can use Salesforce to track the status of HTML email, including the date the email was sent, first opened, last opened, and the total number of times it was opened. (See "Tracking HTML Email" in the Salesforce online help for more information.)

The email address of the logged-in user is inserted in the `From Address` field of the email header. All return email and out-of-office replies go to the logged-in user. If bounce management is enabled and `SingleEmailMessage.targetObjectId` or `MassEmailMessage.targetObjectIds` is set, bounces are processed by Salesforce automatically, and the appropriate records are updated; otherwise, they go to the logged-in user. Bounce management works for contacts and leads only.

Note:

- Email messages sent with this call count against the sending organization's daily single email limit. When this limit is reached, `sendEmailMessage()` calls using `SingleEmailMessage` are rejected, and the user receives a `SINGLE_EMAIL_LIMIT_EXCEEDED` error code. However, single emails sent through the application are allowed.
- Mass email messages sent with this call count against the sending organization's daily mass email limit. When this limit is reached, `sendEmail()` calls using `MassEmailMessage` are rejected, and the user receives a `MASS_MAIL_LIMIT_EXCEEDED` error code.
- The `AllOrNone` header is not honored by this call. `sendEmailMessage()` returns partial success even if the `AllOrNone` header is set to `true`.

Sample Code—Java

This sample creates a case and a draft email message, and sets the message fields, including the `From`, `To`, `CC`, and `BCC` recipients, subject, and body text. It also creates an attachment and sends the email message with the attachment. Finally, it writes a status message or an error message, if any, to the console.

```
public void doSendEmail() {
    try {
        //Create a case
        Case theCase = new Case();
        theCase.setSubject("Sample Case");
        SaveResult[] saveResult = connection.create(new SObject[] { theCase });
        String caseId = saveResult[0].getId();

        //Create a draft EmailMessage
        EmailMessage message = new EmailMessage();
        message.setParentId(theCase.getId());
        message.setBccAddress("bcc@email.com");
```

```
message.setCcAddress("cc1@salesforce.com; cc2@email.com");
message.setSubject("This is how you use the sendEmailMessage method.");
message.setFromAddress("from@email.com");
message.setFromName("Sample Code");
message.setTextBody("This is the text body of the message.");
message.setStatus("5"); // "5" means Draft
message.setToAddress("to@email.com");
saveResult = connection.create(new SObject[] { message });
String emailMessageId = saveResult[0].getId();

//Create an attachment for the draft EmailMessage
Attachment att = new Attachment();
byte[] fileBody = new byte[1000000];
att.setBody(fileBody);
att.setName("attachment");
att.setParentId(emailMessageId);
connection.create(new SObject[] { att });

//Send the draft EmailMessage
SendEmailResult[] results = connection.sendEmailMessage(messages);
if (results[0].isSuccess()) {
    System.out.println("The email was sent successfully.");
} else {
    System.out.println("The email failed to send: " +
        results[0].getErrors()[0].getMessage());
}
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
```

Arguments

None.

setPassword()

Sets the specified user's password to the specified value.

Syntax

```
SetPasswordResult setPasswordResult = connection.setPassword(ID userID, string password);
```

Usage

Use `setPassword()` to change the password of a [User](#) or [SelfServiceUser](#) to a value that you specify. For example, a client application might prompt a user to specify a different password, and then invokes `setPassword()` for an admin to change the user's password. Use `resetPassword()` instead if you want to reset the password with a random value generated by the API.

This call can be used to allow users to change their own passwords, as long as their org's Password Policies setting **Allow use of setPassword() API for self-resets** is enabled. Otherwise, use `changeOwnPassword()`, which is more secure because it verifies the user's current password before allowing the change.

Your client application must be logged in with sufficient access rights to change the password for the specified user. For more information, see [Factors that Affect Data Access](#).

For information on IDs, see [ID Field Type](#).

This call can use the session ID returned in [LoginResult](#) if the password has expired. For more information, see [passwordExpired](#).

Sample Code—Java

This sample accepts user ID and password parameters, which it uses in the `setPassword()` call to set the password of the specified user.

```
public void doSetPassword(String userID, String newPasswd) {  
    try {  
        SetPasswordResult result = connection.setPassword(userID, newPasswd);  
        System.out.println("The password for user ID " + userID + " changed to "  
            + newPasswd);  
    } catch (ConnectionException ce) {  
        ce.printStackTrace();  
    }  
}
```

Sample Code—C#

This sample accepts user ID and password parameters, which it uses in the `setPassword()` call to set the password of the specified user.

```
public void doSetPassword(String userId, String newPasswd)
{
    try
    {
        SetPasswordResult result = binding.setPassword(userId, newPasswd);
        Console.WriteLine("The password for user ID " + userId + " changed to "
            + newPasswd);
    }
    catch (SoapException e)
    {
        Console.WriteLine("An unexpected error has occurred: " +
            e.Message + "\n" + e.StackTrace);
    }
}
```

Arguments

Name	Type	Description
userID	ID	ID of the User or SelfServiceUser whose password you want to reset. For information on IDs, see ID Field Type .
password	string	New password to use for the specified user.

Response

SetPasswordResult (empty)

CHAPTER 15 SOAP Headers

The API provides SOAP headers to client applications.

Header	Description
AllOrNoneHeader	Specifies whether a call rolls back all changes unless all records are processed successfully. This header is available in API version 20.0 and later.
AllowFieldTruncationHeader	Specifies the truncation behavior for some field types in API version 15.0 and later.
AssignmentRuleHeader	Specifies the assignment rule to use when creating or updating an Account , Case , or Lead .
CallOptions	Specifies the call options for an API request.
DebuggingHeader	Returns the debug log in the output header, <code>DebuggingInfo</code> , and specifies the level of detail in the debug log.
DisableFeedTrackingHeader	Specifies whether the changes made in the current call are tracked in feeds.
DuplicateRuleHeader	Determines options for using duplicate rules to detect duplicate records. Duplicate rules are part of the Duplicate Management feature.
EmailHeader	Sends an email notification when a request is processed. Provides equivalent functionality for the Salesforce user interface.
LimitInfoHeader	A response header returned from calls to SOAP API. This header returns limit information for the organization. Use this header to monitor your API limits as you make calls against the organization.
LocaleOptions	Specifies the language of the labels returned. The value must be a valid user locale (language and country), such as <code>de_DE</code> or <code>en_GB</code> . For more information on locales, see the Language field on the <code>CategoryNodeLocalization</code> object.
LoginScopeHeader	Specifies the organization ID so that you can authenticate Self-Service users for your organization using the <code>login()</code> call.
MruHeader	Indicates whether to update the list of most recently used items (<code>true</code>) or not (<code>false</code>).
OwnerChangeOptions	Specifies ownership of attachments and notes.
PackageVersionHeader	Specifies the package version for each installed managed package in API version 16.0 and later.
QueryOptions	Specifies the batch size for query results.
SessionHeader	Specifies the session ID returned from the login server after a successful <code>login()</code> .

Header	Description
UserTerritoryDeleteHeader	Specifies a user to whom open opportunities are assigned when the current owner is removed from a territory.

AllOrNoneHeader

Allows a call to roll back all changes unless all records are processed successfully.

Without the AllOrNoneHeader header, records without errors are committed, while records with errors are marked as failed in the call results. This header is available in API version 20.0 and later.

Even if the header is enabled, it's still necessary to inspect the `success` field in the call result for each record to identify records with errors. Each `success` field contains `true` or `false` indicating whether the call was processed successfully.

If there is an error associated with at least one record, the `errors` field in the call result for the record gives more information on the error. If other records in the same call have no errors, their `errors` fields indicate that they were rolled back due to other errors.

API Calls

`create()`, `delete()`, `undelete()`, `update()`, `upsert()`

Fields

Element Name	Type	Description
<code>allOrNone</code>	boolean	<p>If <code>true</code>, any failed records in a call cause all changes for the call to be rolled back. Record changes aren't committed unless all records are processed successfully.</p> <p>The default is <code>false</code>. Some records can be processed successfully while others are marked as failed in the call results.</p>

Sample Code—Java

This sample shows how to use the `AllOrNoneHeader`. It attempts to create two contacts. The second contact doesn't have all required fields set and causes a failure on creation. Next, the sample sets the `allOrNone` field to `true`, and then attempts to create the contacts. Creating one of the contacts results in an error, so the entire transaction is rolled back and no contacts are created.

```
public void allOrNoneHeaderSample() {
    try {
        // Create the first contact.
        SObject[] sObjects = new SObject[2];
        Contact contact1 = new Contact();
        contact1.setFirstName("Robin");
        contact1.setLastName("Van Persie");

        // Create the second contact. This contact doesn't
        // have a value for the required
```

```
// LastName field so the create will fail.
Contact contact2 = new Contact();
contact2.setFirstName("Ashley");
sObjects[0] = contact1;
sObjects[1] = contact2;

// Set the SOAP header to roll back the create unless
// all contacts are successfully created.
connection.setAllOrNoneHeader(true);
// Attempt to create the two contacts.
SaveResult[] sr = connection.create(sObjects);
for (int i = 0; i < sr.length; i++) {
    if (sr[i].isSuccess()) {
        System.out.println("Successfully created contact with id: " +
            sr[i].getId() + ".");
    }
    else {
        // Note the error messages as the operation was rolled back
        // due to the all or none header.
        System.out.println("Error creating contact: " +
            sr[i].getErrors()[0].getMessage());
        System.out.println("Error status code: " +
            sr[i].getErrors()[0].getStatusCode());
    }
}
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
}
```

AllowFieldTruncationHeader

Specifies that for some fields, when a string is too large, the operation fails. Without the header, strings for these fields are truncated.

The `AllowFieldTruncationHeader` header affects the following datatypes:

- anyType, if it represents one of the other datatypes in this list
- email
- encryptedstring
- multipicklist
- phone
- picklist
- string
- textarea

In API versions previous to 15.0, if a value for one of the listed fields is too large, the value is truncated.

For API version 15.0 and later, if a value is too large, the operation fails and the fault code `STRING_TOO_LONG` is returned. `AllowFieldTruncationHeader` allows you to specify that the previous behavior, truncation, be used instead of the new behavior in API versions 15.0 and later.

This header has no effect in versions 14.0 and earlier.

API Calls

[convertLead\(\)](#), [create\(\)](#), [merge\(\)](#), [process\(\)](#), [undelete\(\)](#), [update\(\)](#), and [upsert\(\)](#)

Apex: [executeanonymous \(\)](#)

Fields

Element Name	Type	Description
<code>allowFieldTruncation</code>	boolean	<p>If <code>true</code>, truncate field values that are too long, which is the behavior in API versions 14.0 and earlier.</p> <p>Default is <code>false</code>: no change in behavior. If a <code>string</code> or <code>textarea</code> value is too large, the operation fails and the fault code <code>STRING_TOO_LONG</code> is returned.</p> <p>The following list shows the field types affected by truncation and this header:</p> <ul style="list-style-type: none"> • <code>anyType</code>, if it represents one of the other datatypes in this list • <code>email</code> • <code>encryptedstring</code> • <code>multipicklist</code> • <code>phone</code> • <code>picklist</code> • <code>string</code> • <code>textarea</code>

Sample Code—Java

To create an account with a name that is too long for the `Name` field, use the `AllowFieldTruncation` header.

This sample:

1. Creates an `Account` object with a name that exceeds the field limit of 255 characters.
2. Sends the create call, which fails because of the name field length.
3. Sets the `AllowFieldTruncationHeader` to `true` and retries the account creation, which succeeds.

```
public void allowFieldTruncationSample() {
    try {
        Account account = new Account();
        // Construct a string that is 256 characters long.
        // Account.Name's limit is 255 characters.
        String accName = "";
        for (int i = 0; i < 256; i++) {
            accName += "a";
        }
        account.setName(accName);
        // Construct an array of SObjects to hold the accounts.
```

```

SObject[] sObjects = new SObject[1];
sObjects[0] = account;
// Attempt to create the account. It will fail in API version 15.0
// and above because the account name is too long.
SaveResult[] results = connection.create(sObjects);
System.out.println("The call failed because: "
    + results[0].getErrors()[0].getMessage());
// Now set the SOAP header to allow field truncation.
connection.setAllowFieldTruncationHeader(true);
// Attempt to create the account now.
results = connection.create(sObjects);
System.out.println("The call: " + results[0].isSuccess());
} catch (ConnectionException ce) {
    ce.printStackTrace();
}
}
}

```

AssignmentRuleHeader

The `AssignmentRuleHeader` must be specified in the `create()` or `update()` call of a `Case` or `Lead` for the specified assignment rule to be applied, and it must be specified in the `update()` call of an `Account` for the territory assignment rules to be applied.

API Calls

`create()`, `merge()`, `update()`, `upsert()`

Fields

Element Name	Type	Description
<code>assignmentRuleId</code>	ID	The ID of a specific assignment rule to run for the Case or Lead. The assignment rule can be active or inactive. The ID can be retrieved by querying the <code>AssignmentRule</code> object. If specified, do not specify <code>useDefaultRule</code> . This element is ignored for accounts, because all territory assignment rules are applied. If the value is not in correct ID format (15-character or 18-character Salesforce ID), the call fails and a <code>MALFORMED_ID</code> exception is returned.
<code>useDefaultRule</code>	boolean	If <code>true</code> for a Case or Lead, uses the default (active) assignment rule for a Case or Lead. If specified, do not specify an <code>assignmentRuleId</code> . If <code>true</code> for an Account, all territory assignment rules are applied, and if <code>false</code> , no territory assignment rules are applied.

Sample Code

For a code example, see [Lead](#).

SEE ALSO:

[AssignmentRule](#)

CallOptions

Specifies the options needed to work with a specific client. This header is only available for use with the [Partner WSDL](#).

API Calls

The `defaultNamespace` element supports the following calls: [create\(\)](#), [merge\(\)](#), [queryAll\(\)](#), [query\(\)](#), [queryMore\(\)](#), [retrieve\(\)](#), [search\(\)](#), [update\(\)](#), and [upsert\(\)](#).

The `client` element supports all of the above calls, plus the following: [convertLead\(\)](#), [login\(\)](#), [delete\(\)](#), [describeGlobal\(\)](#), [describeLayout\(\)](#), [describeTabs\(\)](#), [describeSObject\(\)](#), [describeSObjects\(\)](#), [getDeleted\(\)](#), [getUpdated\(\)](#), [process\(\)](#), [undelete\(\)](#), [getServerTimestamp\(\)](#), [getUserInfo\(\)](#), [setPassword\(\)](#), and [resetPassword\(\)](#).

Fields

Element Name	Type	Description
<code>client</code>	string	A string that identifies a client.
<code>defaultNamespace</code>	string	<p>A string that identifies a developer namespace prefix. Use this field to resolve field names in managed packages without having to fully specify the <code>fieldName</code> everywhere.</p> <p>For example, if the developer namespace prefix is <code>battle</code>, and you have a custom field in your package called <code>botId</code>, you can set this header, and then queries such as the following will succeed:</p> <pre>query("SELECT id, botId__c from Account");</pre> <p>In this case the actual field queried is the <code>battle__botId__c</code> field.</p> <p>Using this field allows you to write client code without having to specify the namespace prefix. Without this field specified, the full name of the field would have to be used for the query to succeed. In the example above, you would have to specify <code>battle__botId__c</code>.</p> <p>Note that if this field is set, and the query specifies the namespace as well, the response will not include the prefix. For example, if you set this header to <code>battle</code>, and issue a query like <code>query("SELECT id, battle__botId__c from Account");</code>, the response would use a <code>botId__c</code> element, not a <code>battle__botId__c</code> element.</p> <p>Describe calls ignore this header, so there will be no ambiguity between fields with namespace prefixes and customer fields of the same name without the prefix.</p>

Sample Code—C#

This sample shows how to use the `CallOptions` header. It sets a client ID and a developer namespace prefix, which is used to resolve field names in managed packages. Next, the sample logs the specified user in.

```
public void CallOptionsSample()
{
    // Web Reference to the imported Partner WSDL.
    APISamples.partner.SforceService partnerBinding;

    string username = "USERNAME";
    string password = "PASSWORD";

    // The real Client ID will be an API Token provided by Salesforce
    // to partner applications following a security review.
    // For more details, see the Security Review FAQ in the online help.
    string clientId = "SampleCaseSensitiveToken/100";

    partnerBinding = new SforceService();
    partnerBinding.CallOptionsValue = new CallOptions();
    partnerBinding.CallOptionsValue.client = clientId;

    // Optionally, if a developer namespace prefix has been registered for
    // your Developer Edition organization, it may also be specified.
    string prefix = "battle";
    partnerBinding.CallOptionsValue.defaultNamespace = prefix;

    try
    {
        APISamples.partner.LoginResult lr =
            partnerBinding.login(username, password);
    }
    catch (SoapException e)
    {
        Console.WriteLine(e.Code);
        Console.WriteLine(e.Message);
    }
}
```

DisableFeedTrackingHeader

Specifies that changes made in the current call are tracked in feeds.

Use this header if you want to process many records without tracking the changes in various feeds related to the records. This header is available if the Chatter feature is enabled for your organization.

API Calls

`convertLead()`, `create()`, `delete()`, `merge()`, `process()`, `undelete()`, `update()`, `upsert()`

Fields

Element Name	Type	Description
disableFeedTracking	boolean	If <code>true</code> , the changes made in the current call are not tracked in feeds. The default is <code>false</code> .

Sample Code—Java

This sample shows how to use the `DisableFeedTrackingHeader`. It sets this header to `true` to disable feed tracking and then creates many account records in bulk.

```
public void disableFeedTrackingHeaderSample() {
    try {
        // Insert a large number of accounts.
        SObject[] sObjects = new SObject[500];
        for (int i = 0; i < 500; i++) {
            Account a = new Account();
            a.setName("my-account-" + i);
            sObjects[i] = a;
        }
        // Set the SOAP header to disable feed tracking to avoid generating a
        // large number of feed items because of this bulk operation.
        connection.setDisableFeedTrackingHeader(true);
        // Perform the bulk create. This won't result in 500 feed items, which
        // would otherwise be generated without the DisableFeedTrackingHeader.
        SaveResult[] sr = connection.create(sObjects);
        for (int i = 0; i < sr.length; i++) {
            if (sr[i].isSuccess()) {
                System.out.println("Successfully created account with id: " +
                    sr[i].getId() + ".");
            } else {
                System.out.println("Error creating account: " +
                    sr[i].getErrors()[0].getMessage());
            }
        }
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

SEE ALSO:

[Custom Object__Feed](#)

[EntitySubscription](#)

DebuggingHeader

Return the debug log in the output header, `DebuggingInfo`, and specify the level of detail in the debug log.

 **Note:** Calls that include DebuggingHeader are limited to 1,000 in a 24-hour period. You can continue to make these calls even after reaching the total request limit for an org.

API Calls

`compileAndTest()`, `executeAnonymous()`, `runTests()`

Fields

Element Name	Type	Description
<code>categories</code>	<code>LogInfo[]</code>	Specifies the type and amount of information to be returned in the debug log.
<code>debugLevel</code>	<code>DebugLevel</code> (enumeration of type string)	<p>Deprecated. This field is provided only for backward compatibility. If you provide values for both <code>debugLevel</code> and <code>categories</code>, the <code>categories</code> value is used.</p> <p>The <code>debugLevel</code> field specifies the type of information returned in the debug log. The values are listed from the least amount of information returned to the most information returned. Valid values include:</p> <ul style="list-style-type: none"> • None • Debugonly • Db • Profiling • Callout • Detail

LogInfo

Specifies the type and amount of information to be returned in the debug log. The `categories` field takes a list of these objects. LogInfo is a mapping of `category` to `level`.

Fields

Element Name	Type	Description
<code>category</code>	<code>LogCategory</code>	<p>Specify the type of information returned in the debug log. Valid values are:</p> <ul style="list-style-type: none"> • Db • Workflow • Validation • Callout • Apex_code • Apex_profiling • Visualforce

Element Name	Type	Description
		<ul style="list-style-type: none"> • System • All
level	LogCategoryLevel	<p>Specifies the level of detail returned in the debug log.</p> <p>Valid log levels are (listed from lowest to highest):</p> <ul style="list-style-type: none"> • NONE • ERROR • WARN • INFO • DEBUG • FINE • FINER • FINEST

DuplicateRuleHeader

Determines options for using duplicate rules to detect duplicate records. Duplicate rules are part of the Duplicate Management feature.

API Calls

[create\(\)](#), [update\(\)](#), [upsert\(\)](#)

Fields

Element Name	Type	Description
allowSave	boolean	For a duplicate rule, when the Alert option is enabled, bypass alerts and save duplicate records by setting this property to <code>true</code> . Prevent duplicate records from being saved by setting this property to <code>false</code> .
includeRecordDetails	boolean	Get fields and values for records detected as duplicates by setting this property to <code>true</code> . Get only record IDs for records detected as duplicates by setting this property to <code>false</code> .
runAsCurrentUser	boolean	Make sure that sharing rules for the current user are enforced when duplicate rules run by setting this property to <code>true</code> . Use the sharing rules specified in the class for the request by setting this property to <code>false</code> . If no sharing rules are specified, Apex code runs in system context and sharing rules for the current user are not enforced.

Java Sample

This sample shows how to use the `DuplicateRuleHeader` to set options for using duplicate rules. To see the entire sample application, see [DuplicateResult](#).

```
_DuplicateRuleHeader header = new _DuplicateRuleHeader();
    header.setAllowSave(false);
    header.setIncludeRecordDetails(true);
    header.setRunAsCurrentUser(true);

    binding.setHeader(new SforceServiceLocator().getServiceName().getNamespaceURI(),
"DuplicateRuleHeader", header);
```

[DuplicateResult](#)

[DuplicateRule](#)

EmailHeader

The Salesforce user interface allows you to specify whether to send an email when these events occur:

- Create a [Case](#)
- Create a [CaseComment](#)
- Convert Case email to a [Contact](#)
- Send a New [User](#) email notification
- Make a `resetPassword()` call

In API versions 8.0 and later, you can also send an API request that sends email.

A group event is an [Event](#) for which `IsGroupEvent` is true. The [EventRelation](#) object tracks the users, leads, or contacts that are invited to a group event. Note the following behaviors for group event email sent through the API:

- Sending a group event invitation to a [User](#) respects the `triggerUserEmail` option
- Sending a group event invitation to a [Lead](#) or [Contact](#) respects the `triggerOtherEmail` option
- Email sent when updating or deleting a group event also respect `triggerUserEmail` and `triggerOtherEmail`, as appropriate

API Calls

[create\(\)](#), [delete\(\)](#), [resetPassword\(\)](#), [update\(\)](#), [upsert\(\)](#)

Fields

Element Name	Type	Description
<code>triggerAutoResponseEmail</code>	boolean	Indicates whether to trigger auto-response rules (<code>true</code>) or not (<code>false</code>), for leads and cases. In the Salesforce user interface, this email can be automatically triggered by a number of events, for example creating a case or resetting a

Element Name	Type	Description
		user password. If this value is set to <code>true</code> , when a Case is created, if there is an email address for the contact specified in ContactId , the email is sent to that address. If not, the email is sent to the address specified in SuppliedEmail .
<code>triggerOtherEmail</code>	boolean	Indicates whether to trigger email outside the organization (<code>true</code>) or not (<code>false</code>). In the Salesforce user interface, this email can be automatically triggered by creating, editing, or deleting a contact for a case.
<code>triggerUserEmail</code>	boolean	Indicates whether to trigger email that is sent to users in the organization (<code>true</code>) or not (<code>false</code>). In the Salesforce user interface, this email can be automatically triggered by a number of events; resetting a password, creating a new user, or adding comments to a case.

Sample Code—Java

This sample shows how to use the `EmailHeader`. It sets the `triggerAutoResponseEmail` email header field to `true`, which triggers an email to be sent when a case is created. Next, it creates a case. This sample assumes an auto-response rule has been set for cases, and an email address is specified in the contact referenced by [ContactId](#).

```
public void createCaseWithAutoResponse(String contactId) {
    try {
        connection.setEmailHeader(true, false, false);
        Case c = new Case();
        c.setSubject("Sample Subject");
        c.setContactId(contactId);
        SaveResult[] sr = connection.create(new SObject[] { c });
        // Parse sr array to see if case was created successfully.
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

LimitInfoHeader

A response header returned from calls to SOAP API. This header returns limit information for the organization. Use this header to monitor your API limits as you make calls against the organization.

API Calls

All calls, except for `login()`.

Fields

Element Name	Type	Description
current	string	The number of calls for the specified limit type that have already been used in the organization.
limit	string	The organization's limit for the specified limit type.
type	string	The type of limit information specified in the header. <ul style="list-style-type: none"> API REQUESTS— the daily API usage for the organization against which the call was made.

Sample Code

This example shows a response to a SOAP request for a Merchandise record. The `LimitInfoHeader` contains the API usage information for the organization.

```
<?xml version="1.0" encoding="UTF-8"?>
<soapenv:Envelope xmlns:soapenv="http://schemas.xmlsoap.org/soap/envelope/"
  xmlns="urn:partner.soap.sforce.com" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xmlns:sf="urn:subject.partner.soap.sforce.com">
  <soapenv:Header>
    <LimitInfoHeader>
      <limitInfo>
        <current>5</current>
        <limit>100000</limit>
        <type>API REQUESTS</type>
      </limitInfo>
    </soapenv:Header>
    <soapenv:Body>
      <queryResponse>
        <result xsi:type="QueryResult">
          <done>true</done>
          <queryLocator xsi:nil="true"/>
          <records xsi:type="sf:sObject">
            <sf:type>dev_ns__Merchandise__c</sf:type>
            <sf:Id>a00D0000008pQSNIA2</sf:Id>
            <sf:dev_ns__Description__c>Phone Case for iPhone
              4/4S</sf:dev_ns__Description__c>
            <sf:dev_ns__Price__c>16.99</sf:dev_ns__Price__c>
            <sf:dev_ns__Stock_Price__c>12.99</sf:dev_ns__Stock_Price__c>
            <sf:dev_ns__Total_Inventory__c>108.0</sf:dev_ns__Total_Inventory__c>
            <sf:Id>a00D0000008pQSNIA2</sf:Id>
          </records>
          <size>1</size>
        </result>
      </queryResponse>
    </soapenv:Body>
  </soapenv:Envelope>
```

LocaleOptions

Specifies the language of the labels returned.

API Calls

`describeSObject()`, `describeSObjects()`, `describeDataCategoryGroups()`,
`describeDataCategoryGroupStructures()`

Fields

Element Name	Type	Description
language	string	Specifies the language of the labels returned. The value must be a valid user locale (language and country), such as <code>de_DE</code> or <code>en_GB</code> . For more information on locales, see the Language field on the <code>CategoryNodeLocalization</code> object.

Sample Code—Java

This sample sets the `LocaleOptions` header to the locale of the logged-in user, and then performs a describe on `Account`.

```
public void localeOptionsExample() {
    try {
        connection.setLocaleOptions("en_US");
        connection.describeSObject("Account");
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

LoginScopeHeader

Specifies your organization ID so that you can authenticate Self-Service users for your organization using the existing `login()`.

Note: Starting with Spring '12, the Self-Service portal isn't available for new Salesforce orgs. Existing orgs continue to have access to the Self-Service portal.

API Calls

`login()`

Fields

Element Name	Type	Description
organizationId	ID	The ID of the organization against which you authenticate Self-Service users.
portalId	ID	Specify only if user is a Customer Portal user. The ID of the portal for this organization. The ID is available in the Salesforce user interface: <ul style="list-style-type: none"> From Setup, enter <i>Customer Portal Settings</i> in the Quick Find box, then select Customer Portal Settings Select a Customer Portal name, and on the Customer Portal detail page, the URL of the Customer Portal displays. The Portal ID is in the URL.

Sample Code—C#

This sample shows how to use the `LoginScopeHeader`. It sets the organization ID and the portal ID for a Customer Portal user. It also sets the `CallOptions` header. It then logs the specified user in.

```

/// Demonstrates how to set the LoginScopeHeader values.
public void LoginScopeHeaderSample ()
{
    // Web Reference to the imported Partner WSDL.
    APISamples.partner.SforceService partnerBinding;

    string username = "USERNAME";
    string password = "PASSWORD";

    // The real Client ID will be an API Token provided by Salesforce
    // to partner applications following a security review. For more details,
    // see the Security Review FAQ in the online help.
    string clientId = "SampleCaseSensitiveToken/100";

    partnerBinding = new SforceService();
    partnerBinding.CallOptionsValue = new CallOptions();
    partnerBinding.CallOptionsValue.client = clientId;

    // To authenticate Self-Service users, we need to set the OrganizationId
    // in the LoginScopeHeader.
    string orgId = "00ID0000OrgFoo";
    partnerBinding.LoginScopeHeaderValue = new LoginScopeHeader();
    partnerBinding.LoginScopeHeaderValue.organizationId = orgId;
    // Specify the Portal ID if the user is a Customer Portal user.
    string portalId = "00ID0000FooPtl";
    partnerBinding.LoginScopeHeaderValue.portalId = portalId;

    try
    {
        APISamples.partner.LoginResult lr =
            partnerBinding.login(username, password);
    }
}

```

```

catch (SoapException e)
{
    Console.WriteLine(e.Code);
    Console.WriteLine(e.Message);
}
}

```

MruHeader

In API version 7.0 and later, the `create()`, `update()`, and `upsert()` calls do not update the list of most recently used (MRU) items in the Recent Items section of the sidebar in the Salesforce user interface unless this header is used. Be advised that using this header to update the Recent Items list may negatively impact performance.

API Calls

`create()`, `merge()`, `query()`, `retrieve()`, `update()`, `upsert()`

Fields

Element Name	Type	Description
updateMru	boolean	<p>Indicates whether to update the list of most recently used items (<code>true</code>) or not (<code>false</code>).</p> <p>For <code>retrieve()</code>, if the result has only one row, the MRU is updated to the ID of the retrieve result.</p> <p>For <code>query()</code>, if the result has only one row and the ID field is selected, the MRU is updated to the ID of the query result.</p>

Sample Code—Java

This sample turns on the MRU list update option by setting the `MruHeader` to `true`. Next, it creates an account.

```

public void mruHeaderSample() {
    connection.setMruHeader(true);
    Account account = new Account();
    account.setName("This will be in the MRU");
    try {
        SaveResult[] sr = connection.create(new SObject[]{account});
        System.out.println("ID of account added to MRU: " +
            sr[0].getId());
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
}

```

OwnerChangeOptions

Represents actions that can be performed when a record's owner is changed. Available with these options in API version 35.0 and later.

API Calls

[update\(\)](#), [upsert\(\)](#)

Fields

Element Name	Type	Description
options	OwnerChangeOption[]	Represents a flag for a specific action performed when changing a record owner through an update or upsert call.

OwnerChangeOption Fields

Element Name	Type	Description
execute	boolean	If <code>true</code> , the action represented by the <code>type</code> field is performed. If <code>false</code> , the action represented by the <code>type</code> field is skipped.

`type`

enum of a string

Represents the action performed or skipped, according to the given value for the `execute` field, when changing a record owner during an update or upsert call. The following types can be used.

EnforceNewOwnerHasReadAccess

If `true`, the record's new owner must have at least read access on the record. Available in API version 36.0 and later.

KeepAccountTeam

If `true`, the account team is kept with the account when the account owner is changed. If `false`, the account team is deleted. Default is `false`. This action only applies to team members added by a Salesforce admin, the account owner, or someone higher in the role hierarchy. Team members added by users with group-based access are removed even if `true`. Available for accounts in API version 45.0 and later.

KeepSalesTeam

If `true`, the opportunity team is kept with the opportunity when the account owner is changed. If `false`, the opportunity team is deleted. Default is `false`. Available for opportunities in API version 45.0 and later.

KeepSalesTeamGrantCurrentOwnerReadWriteAccess

If `true`, the opportunity's previous owner retains read/write access after the owner is changed. Default is `false`. Can be `true` only when `KeepSalesTeam` is `true`. Available for opportunities in API version 44.0 and later.

Element Name	Type	Description
		<p>SendEmail</p> <p>If <code>true</code>, an email notification is sent to the new owner. Default is <code>false</code>.</p>
		<p>TransferAllOwnedCases</p> <p>If <code>true</code>, all cases (open and closed) owned by the account owner are transferred to the new owner. Default is <code>false</code>. When <code>TransferAllOwnedCases</code> is <code>true</code>, <code>TransferOwnedOpenCases</code> must also be true. Available for accounts in API version 45.0 and later.</p>
		<p>TransferArticleOwnedPublishedVersion</p> <p>If <code>true</code> and the record is a Knowledge article, the article owner's published version for the language of the current draft is transferred to the new owner, in addition to the current draft.</p>
		<p>TransferArticleOwnedArchivedVersions</p> <p>If <code>true</code> and the record is a Knowledge article, the article owner's archived versions for the language of the current draft are transferred to the new owner, in addition to the current draft.</p>
		<p>TransferArticleAllVersions</p> <p>If <code>true</code> and the record is a Knowledge article, all published and archived versions owned by anyone for the language of the current draft are transferred to the new owner, in addition to the current draft.</p>
		<p>TransferContacts</p> <p>If <code>true</code> and the record is a business account, contacts associated with the account are transferred to the new owner.</p>
		<p>TransferContracts</p> <p>If <code>true</code> and the record is an account, contracts associated with the account and owned by the account owner are transferred to the new owner.</p>
		<p>TransferNotesAndAttachments</p> <p>If <code>true</code>, the record's notes, attachments, and Google Docs are transferred to the new record owner. If <code>false</code>, the original record owner retains ownership.</p>
		<p>TransferOpenActivities</p> <p>If <code>true</code>, the record's open activities are transferred to the new owner.</p>
		<p>TransferOrders</p> <p>If <code>true</code> and the record is an account, the draft standalone orders associated with the account and draft orders associated with transferred contracts owned by the account owner are transferred to the new owner.</p>
		<p>TransferOthersOpenOpportunities</p> <p>If <code>true</code> and the record is an account, open opportunities associated with the account and not owned by the current owner are transferred to the new owner. When this option is executed, <code>TransferOwnedOpenOpportunities</code> must be set to execute. Default is <code>false</code>.</p>
		<p>TransferOwnedClosedOpportunities</p> <p>If <code>true</code> and the record is an account, closed opportunities owned by the account owner are transferred to the new owner. Default is <code>false</code>. Available for API version 45.0 and later.</p>

Element Name	Type	Description
		<p>TransferOwnedOpenCases</p> <p>If <code>true</code> and the record is an account, open cases owned by the account owner are transferred to the new owner. Default is <code>false</code>. Available for API version 45.0 and later.</p>
		<p>TransferOwnedOpenOpportunities</p> <p>If <code>true</code> and the record is an account, open opportunities associated with the account and owned by the account owner are transferred to the new owner.</p>

Usage

When changing the owners of multiple accounts, all accounts must have the same old owner and the same new owner. To change ownership of accounts with different owners, use separate API requests.

Sample Code—Java

This sample creates an account, a note, an opportunity, and task for the account. It sets the owner change options so that the note, opportunity, and task are transferred to the new owner along with the account.

```
public void ownerChangeOptionsHeaderSample() {

    // Create account. Accounts don't transfer activities, notes, or attachments by default

    Account account = new Account();
    account.setName("Account");
    com.sforce.soap.enterprise.SaveResult[] sr = connection.create(new
com.sforce.soap.enterprise.object.SObject[] { account } );
    String accountId = null;

    if(sr[0].isSuccess()) {
        System.out.println("Successfully saved the account");
        accountId = sr[0].getId();

        // Create a note, a task, and an opportunity for the account

        Note note = new Note();
        note.setTitle("Note Title");
        note.setBody("Note Body");
        note.setParentId(accountId);

        Task task = new Task();
        task.setWhatId(accountId);

        Opportunity opportunity = new Opportunity();
        opportunity.setName("Opportunity");
        opportunity.setStageName("Prospecting");
        Calendar dt = connection.getServerTimestamp().getTimestamp();
```

```

dt.add(Calendar.DAY_OF_MONTH, 7);
opportunity.setCloseDate(dt);
opportunity.setAccountId(accountId);

sr = connection.create(new com.sforce.soap.enterprise.subject.SObject[] { note,
task, opportunity } );

if(sr[0].isSuccess() ) {
    System.out.println("Successfully saved the note, task, and opportunity");

    com.sforce.soap.enterprise.QueryResult qr = connection.query("SELECT Id FROM
User WHERE FirstName = 'Jane' AND LastName = 'Doe'");
    String newOwnerId = qr.getRecords() [0].getId();
    account.setId(accountId);
    account.setOwnerId(newOwnerId);

    // Set owner change options so account's child note, task, and opportunity
transfer to new owner
    OwnerChangeOption opt1 = new OwnerChangeOption();
    opt1.setExecute(true);
    opt1.setType(OwnerChangeOptionType.TransferOwnedOpenOpportunities); // Transfer
Open opportunities owned by the account's owner

    OwnerChangeOption opt2 = new OwnerChangeOption();
    opt2.setExecute(true);
    opt2.setType(OwnerChangeOptionType.TransferOpenActivities);

    OwnerChangeOption opt3 = new OwnerChangeOption();
    opt3.setExecute(true);
    opt3.setType(OwnerChangeOptionType.TransferNotesAndAttachments);

    connection.setOwnerChangeOptions(new OwnerChangeOption[] {opt1, opt2, opt3});
    connection.update(new com.sforce.soap.enterprise.subject.SObject[] { account }
);

    // The account's note, task, and opportunity should be transferred to the new
owner.
}

} else {
    System.out.println("Account save failed: " + sr[0].getErrors().toString());
}
}

```

PackageVersionHeader

Specifies the package version for each installed managed package.

A managed package can have several versions with different content and behavior. This header allows you to specify the version used for each package referenced by your API client.

If a package version isn't specified, the API client uses the version of the package specified in Setup. From Setup, enter *API* in the **Quick Find** box, select **API**, and then click **Configure Enterprise Package Version Settings** under **Enterprise Package Version Settings**.

This header is available in API version 16.0 and later.

Associated API Calls

`convertLead()`, `create()`, `delete()`, `describeGlobal()`, `describeLayout()`, `describeSObject()`, `describeSObjects()`, `describeSoftphoneLayout()`, `describeTabs()`, `merge()`, `process()`, `query()`, `retrieve()`, `search()`, `undelete()`, `update()`, `upsert()`

Fields

Element Name	Type	Description
<code>packageVersions</code>	<code>PackageVersion[]</code>	A list of package versions for installed managed packages referenced by your API client.

PackageVersion

Specifies a version of an installed managed package. A package version is *majorNumber.minorNumber*, for example `2.1`.

Fields

Field	Type	Description
<code>majorNumber</code>	<code>int</code>	The major version number of a package version.
<code>minorNumber</code>	<code>int</code>	The minor version number of a package version.
<code>namespace</code>	<code>string</code>	The unique namespace of the managed package.

Sample Code—Java

This sample sets the package version for one installed package in the `PackageVersionHeader`. Next, it executes the code passed into this method via the `executeAnonymous` Apex method.

```
public void PackageVersionHeaderSample(String code) throws Exception
{
    _PackageVersionHeader pvh = new _PackageVersionHeader();
    PackageVersion pv = new PackageVersion();
    pv.setNamespace("installedPackageNamespaceHere");
    pv.setMajorNumber(1);
    pv.setMinorNumber(0);
    // In this case, we are only referencing one installed package.
    PackageVersion[] pvs = new PackageVersion[]{pv};
    pvh.setPackageVersions(pvs);

    apexBinding.setHeader(new SforceServiceLocator().getServiceName().getNamespaceURI(),
        "PackageVersionHeader", pvh);
}
```

```

// Execute the code passed into the method.
ExecuteAnonymousResult r = apexBinding.executeAnonymous(code);
if (r.isSuccess()) {
    System.out.println("Code executed successfully");
}
else {
    System.out.println("Exception message: " + r.getExceptionMessage());
    System.out.println("Exception stack trace: " + r.getExceptionStackTrace());
}
}

```

QueryOptions

Specifies the preferred batch size for queries. The system sometimes creates batches that are larger or smaller than the specified size to maximize performance.

Associated API Calls

[query\(\)](#), [queryMore\(\)](#), [retrieve\(\)](#)

Fields

Element Name	Type	Description
batchSize	int	<p>The batch size for the number of records returned in a <code>query()</code> or <code>queryMore()</code> call. Child objects count toward the number of records for the batch size. For example, in relationship queries, multiple child objects are returned per parent row returned.</p> <p>The default is 500; the minimum is 200, and the maximum is 2,000. There is no guarantee that the requested batch size requested is the actual batch size; changes are sometimes made to maximize performance.</p>

Sample Code

For code examples, see [Change the Batch Size in Queries in the Salesforce SOQL and SOSL Reference Guide](#).

SessionHeader

Specifies the session ID returned from the login server after a successful `login()`. This session ID is used in all subsequent calls.

In version 12.0 and later, include the API namespace in the SOAP message associated with this header. The namespace is defined in the enterprise or partner WSDL.

API Calls

All calls, including utility calls.

Fields

Element Name	Type	Description
sessionId	string	Session ID returned by the <code>login()</code> call to be used for subsequent call authentication.

Sample Code

See the examples provided for `login()`.

UserTerritoryDeleteHeader

 **Note:** The original territory management feature is now unavailable. For more information, see [The Original Territory Management Module Will Be Retired in the Summer '21 Release](#). The information in this topic applies to the original territory management feature only, and not to Enterprise Territory Management.

Specify a user to whom open opportunities are assigned when the current owner is removed from a territory. If this header is not used or the value of its element is null, the opportunities are transferred to the forecast manager in the territory above, if one exists. If one does not exist, the user being removed from the territory keeps the opportunities.

API Calls

`delete()`

Fields

Element Name	Type	Description
transferToUserId	ID	The ID of the user to whom open opportunities in that user's territory will be assigned when an opportunity's owner (user) is removed from a territory.

USING THE API WITH SALESFORCE FEATURES

CHAPTER 16 Implementation Considerations

In this chapter ...

- Choosing a User for an Integration
- Login Server URL
- Log In to the Login Server
- Typical API Call Sequence
- Salesforce Sandbox
- Multiple Instances of Salesforce Database Servers
- Content Type Requirement
- API Usage Metering
- Compression
- HTTP Persistent Connections
- HTTP Chunking
- Internationalization and Character Sets
- XML Compliance
- .NET, Non-String Fields, and the Enterprise WSDL

Before you build an integration app or other client app, consider the data management, use limits, and communication issues explained in this section.

Choosing a User for an Integration

When your client app connects to the API, it must first log in. You must specify a user to log in to Salesforce when calling `login()`. Client apps run with the permissions and sharing of the logged-in user. Use the following sections to help decide how to configure a user for your client app.

Permissions

As an org's Salesforce admin, you control which features and views are available to users by configuring profiles and permission sets and assigning users to them. To access the API to issue calls and receive the call results, a user must have the API Enabled permission. Client apps can query or update only those objects and fields to which they have access via the permissions of the logged-in user.

If the client application logs in as a user who has access to data via a sharing rule, then the API must issue an extra query to check access. To avoid this, log in as a user with the "Modify All Data" permission. This can speed up the call response time. If providing the Modify All Data permission is too permissive for a particular user, consider using the Modify All object-level permission to restrict data access on an object basis. For more information, see [Factors that Affect Data Access](#).

Limits

Salesforce limits the number of queries that a user can execute concurrently. A user can have up to 10 query cursors open at a time. If 10 `QueryLocator` cursors are open when a client application, logged in as the same user, attempts to open a new one, then the oldest of the 10 cursors is released. If the client application attempts to open the released query cursor, an error results.

Multiple client apps can log in using the same `username` argument. However, this approach increases your risk of getting errors due to query limits.

If multiple client apps are logged in with the same user, they all share the same session. If one of the client apps calls `logout()`, it invalidates the session for all the client apps. Using a different user for each client app makes it easier to avoid these limits.

 **Note:** In addition to user limits, Salesforce limits for API requests for each org. For more information, see [API Usage Metering](#).

Login Server URL

SOAP API provides a single login server. You can log in to any org from a single entry point without hard coding the instance. To access an org via the API, first authenticate the session by sending a `login()` request to the login server at one of the following URLs, depending on your choice of WSDL.

- `https://MyDomainName.my.salesforce.com/services/Soap/c/54.0` or `https://login.salesforce.com/services/Soap/c/54.0` (enterprise WSDL)
- `https://MyDomainName.my.salesforce.com/services/Soap/u/54.0` or `https://login.salesforce.com/services/Soap/u/54.0` (partner WSDL)

 **Note:** HTTPS is required. `login()` requests that use HTTP, for example, `https://login.salesforce.com/services/Soap/u/54.0`, aren't supported.

All subsequent calls to the server during the session should be made to the URL returned in the `login()` response, which points to the server instance for your org.

Log In to the Login Server

Before invoking any other calls, a client app must first invoke the `login()` call to establish a session with the login server. It then sets the returned server URL as the target server for subsequent API requests and sets the returned session ID in the SOAP header to provide server authorization for subsequent API requests. Salesforce checks the IP address from which the client app is logging in and blocks logins from unknown IP addresses. For more information, see [login\(\)](#) and [Step 4: Walk Through the Sample Code](#).

If the API blocks the login, Salesforce returns a login fault. To log in, the user must add the security token at the end of the user's password. For example, if a user's password is `mypassword` and the security token is `XXXXXXXXXX`, the user enters `mypasswordXXXXXXXXXX`. Users get their security token by changing their password or resetting their security token from the Salesforce user interface. When users change their password or reset their security token, Salesforce sends a new security token to the email address on the user's Salesforce record. The security token is valid until the user resets the security token, or changes the password, or you reset the user's password. When the security token is invalid, the user must repeat the login process. To avoid another log in, add the client's IP address to the org's list of trusted IP addresses. For more information, see [Security Token](#).

When you are logged in, you can issue API calls. For each operation, client apps submit a synchronous request to the API, await the response, and then process the results. The API commits changed data automatically.

API calls:

- [Core Calls](#)
- [Describe Calls](#)
- [Utility Calls](#)

Typical API Call Sequence

For each call, your client app typically:

1. Prepares the request by defining request parameters, if applicable.
2. Invokes the call, which passes the request with its parameters to the Lightning Platform Web Service for processing.
3. Receives the response from the API.
4. Handles the response, either by processing the returned data (for a successful invocation) or by handling the error (for a failed invocation).

Salesforce Sandbox

Professional, Enterprise, Unlimited, and Performance Edition customers have access to the Salesforce Sandbox, which is a testing environment that offers a full or partial copy of your Salesforce org's live production data. For more information, visit the Salesforce Community website at www.salesforce.com/community or see [Sandbox Types and Templates](#) in the Salesforce Help.

To access your org's sandbox via the API, use the following URLs to make login requests.

- <https://test.salesforce.com/services/Soap/c/54.0> (enterprise WSDL)
- <https://test.salesforce.com/services/Soap/u/54.0> (partner WSDL)

Multiple Instances of Salesforce Database Servers

Although orgs are generally allocated by geographic regions, an org may be on any instance.

Content Type Requirement

In the API version 7.0 and later, all requests must contain a correct content type HTTP header, for example: `Content-Type: text/xml; charset=utf-8`. Earlier versions of the API do not enforce this requirement.

API Usage Metering

To maintain optimum performance and ensure that the Lightning Platform API is available to all our customers, Salesforce balances transaction loads by imposing two types of limits:

- Concurrent API Request Limits
- Total API Request Allocations

When a call exceeds a request limit, an error is returned.

Concurrent API Request Limits

The following table lists the limits for various types of orgs for concurrent inbound requests (calls) with a duration of 20 seconds or longer.

Org Type	Limit
Developer Edition and Trial orgs	5
Production orgs and Sandboxes	25

Total API Request Allocations

The following table lists the limits for the total inbound API requests (calls) per 24-hour period for an org.

Salesforce Edition	API Calls Per License Type Per 24-Hour Period	Total Calls Per 24-Hour Period
Developer Edition	N/A	15,000
<ul style="list-style-type: none"> • Enterprise Edition • Professional Edition with API access enabled 	<ul style="list-style-type: none"> • Salesforce: 1,000 • Salesforce Platform: 1,000 • Lightning Platform - One App: 200 • Customer Community: 0 • Customer Community Login: 0 • Customer Community Plus: 200 • Customer Community Plus Login: 10 • External Identity 25,000 SKU: 70,000 • External Identity 250,000 SKU: 750,000 • External Identity 1,000,000 SKU: 4,000,000 • Partner Community: 200 	100,000 + (number of licenses x calls per license type) + purchased API Call Add-Ons

Salesforce Edition	API Calls Per License Type Per 24-Hour Period	Total Calls Per 24-Hour Period
	<ul style="list-style-type: none"> Partner Community Login: 10 Lightning Platform Starter: 200 per member for Enterprise Edition orgs Lightning Platform Plus: 1000 per member for Enterprise Edition orgs 	
<ul style="list-style-type: none"> Unlimited Edition Performance Edition 	<ul style="list-style-type: none"> Salesforce: 5,000 Salesforce Platform: 5,000 Lightning Platform - One App: 200 Customer Community: 0 Customer Community Login: 0 Customer Community Plus: 200 Customer Community Plus Login: 10 External Identity 25,000 SKU: 70,000 External Identity 250,000 SKU, 750,000 External Identity 1,000,000 SKU: 4,000,000 Partner Community: 200 Partner Community Login: 10 Lightning Platform Starter: 200 per member for Unlimited and Performance Edition orgs Lightning Platform Plus: 5,000 per member for Unlimited and Performance Edition orgs 	100,000 + (number of licenses x calls per license type) + purchased API Call Add-Ons
Sandbox	N/A	5,000,000

For Experience Cloud limits, see [Experience Cloud User Licenses](#).

 **Note:** Load, performance, and other system issues can prevent you from using your entire allocation of calls in a 24-hour period.

APIs that count toward this allocation include the Lightning Platform REST API, the Lightning Platform SOAP API, Bulk API, and Bulk API 2.0. API calls issued by certain Salesforce connected apps (for example, the Salesforce mobile app) don't count. To determine which APIs affect the allocation, see [Monitoring Your API Usage](#).

Calls that include DebuggingHeader have a separate allocation limit of 1,000 calls per 24-hour period. These calls can continue to be made after the total request limit for an org is reached.

Limits and allocations are enforced against the aggregate of all API calls made to the org in a 24-hour period. Limits and allocations are not on a per-user basis.

Monitoring Your API Usage

To better monitor your org's API usage and limits, you can use these resources:

- The API Usage section of the System Overview page in Setup.
- The API Requests, Last 24 Hours item in the Organization Detail section of the System Overview page in Setup.
- The API Request Limit per Month usage-based entitlement, which shows you your org's API calls aggregated over 30 days. This can be found on the Company Information page in Setup.
- Information returned in the `Sforce-Limit-Info` response header for REST APIs.
- Information returned in the response body (in `<type>API REQUESTS</type>`) for SOAP APIs.
- The `/limits` call in the Lightning Platform REST API.

You can configure your org so that email is sent to a designated user when the number of API requests has exceeded a specified percentage of the amount allotted. Perform this configuration from Setup by entering *API Usage Notifications* in the Quick Find box and then selecting **API Usage Notifications**.

See also the [Learn About Daily Rate Limits](#) section in the App Development Without Limits Trailhead module.

What Happens If You Reach or Exceed Your API Request Limit

If your org reaches or exceeds its daily API request limit, Salesforce still allows the operations to proceed by a certain amount, if possible. This helps avoid blocking your workflows during unexpected spikes in workloads and occasional peak periods. A hard cap is in place to safeguard platform resources and prevent API requests from exceeding the daily limit unimpeded.

 **Note:** The ability to go over your normal daily limit is always subject to restrictions to protect the overall health of the Salesforce instance that hosts your org. (You can monitor the health of your instance on [Salesforce Trust](#).)

This ability is designed to be used occasionally to help avoid interruptions in your workflow. Don't rely on it on an ongoing basis. To increase your allocation, contact your Salesforce account representative.

This ability only applies to paid orgs in active status. It does not apply to trial orgs, Developer Edition, or sandboxes.

API request activity is aggregated into 30 day periods, starting with your contract start date, and includes calls that exceed the org's entitled limit.

Increasing Total API Request Allocations

The calculation of the API request amounts based on user licenses is designed to allow sufficient capacity for your org based on your number of users. If you need a higher amount and you don't want to purchase extra user licenses or upgrade to Performance Edition, you can purchase extra API calls. For information, contact your account representative.

Before you purchase more API calls, perform due diligence of your API usage. You can optimize a client application, whether it's your own enterprise application or partner application, to use fewer API calls and still accomplish the same work. If you use a partner product, consult with the vendor to verify that the product makes optimal use of the API. A product that makes inefficient use of the API incurs unnecessary costs for your company. Use REST API [composite resources](#) to improve your application's performance by minimizing the number of round-trips between the client and server.

Example API Usage Metering Calculations

The following examples illustrate API usage metering calculations for several scenarios.

- For an Enterprise Edition org with 15 Salesforce licenses, the request limit is 115,000 requests (100,000 plus 15 licenses x 1,000 calls).

- For a Developer Edition org that made 14,500 calls at 5:00 AM Wednesday, 499 calls at 11:00 PM Wednesday, only one more call can successfully be made until 5:00 AM Thursday.

Length of Stored Third-Party Refresh and Access Tokens

Salesforce stores third-party access and refresh tokens of up to 10,000 characters in length.

Compression

The API allows the use of compression on the request and the response, using the standards defined by the HTTP 1.1 specification. This is automatically supported by some SOAP/WSDL clients, and can be manually added to others. Visit <https://developer.salesforce.com/page/Tools> for more information on particular clients.

Compression is not used unless the client specifically indicates that it supports compression. For better performance, we suggest that clients accept and support compression as defined by the HTTP 1.1 specification.

To indicate that the client supports compression, you should include the HTTP header "Accept-Encoding: gzip, deflate" or a similar heading. The API compresses the response if the client properly specifies this header. The response includes the header "Content-Encoding: deflate" or "Content-Encoding: gzip," as appropriate. You can also compress any request by including a "Content-Encoding: deflate" or "gzip" header.

Most clients are partially constrained by their network connection, even on a corporate LAN. The API allows the use of compression to improve performance. Almost all clients can benefit from response compression, and many clients may benefit from compression of requests as well. The API supports deflate and gzip compression according the HTTP 1.1 specification.

Response Compression

The API can optionally compress responses. Responses are compressed only if the client sends an Accept-Encoding header with either gzip or deflate compression specified. The API is not required to compress the response even if you have specified Accept-Encoding, but it normally does. If the API compresses the response, it also specifies a Content-Encoding header with the name of the compression algorithm used, either gzip or deflate.

Request Compression

Clients can also compress requests. The API decompresses any requests before processing. The client must send up a Content-Encoding HTTP header with the name of the appropriate compression algorithm. For more information, see:

- Content-Encoding at: www.w3.org/Protocols/rfc2616/rfc2616-sec14.html#sec14.11
- Accept-Encoding at: www.w3.org/Protocols/rfc2616/rfc2616-sec14.html#sec14.3
- Content Codings at: www.w3.org/Protocols/rfc2616/rfc2616-sec3.html#sec3.5

 **Note:** To implement request SOAP compression in a Java client with WSC (Web Service Connector), call `setCompression()` on the `Config` you use to instantiate a `Connection` object with. For an example, see [login\(\) sample](#) on page 4045 code.

HTTP Persistent Connections

Most clients achieve better performance if they use HTTP 1.1 persistent connection to reuse the socket connection for multiple requests. Persistent connections are normally handled by your SOAP/WSDL client automatically. For more details, see the HTTP 1.1 specification at:

<http://www.w3.org/Protocols/rfc2616/rfc2616-sec8.html#sec8.1>

HTTP Chunking

Clients that use HTTP 1.1 may receive chunked responses. Chunking is normally handled by your SOAP/WSDL client automatically.

Internationalization and Character Sets

The API supports either full Unicode characters or ISO-8859-1 characters. The character set depends on the Salesforce instance that your org uses. If your org logs in to `ssl.salesforce.com`, your encoding is ISO-8859-1. All other instances use UTF-8. To determine the character set, call `describeGlobal()` and inspect the `encoding` value returned in `DescribeGlobalResult`.

If your org uses ISO-8859-1 encoding, all data sent to the API must be encoded in ISO-8859-1. Characters outside the valid ISO-8859-1 range might be truncated or cause an error.

 **Note:** The API response is encoded in the character set used by your org (UTF-8 or ISO-8859-1). Either way, the encoded data is usually handled for you by the SOAP client.

XML Compliance

The API is based on XML, which requires all documents to be well formed. Part of that requirement is that certain Unicode characters are not allowed in an XML document, even in an escaped form, and that others must be encoded according to their location. Normally this is handled for you by any standard SOAP or XML client. Clients must be able to parse any normal XML escape sequence, and must not pass up invalid XML characters.

Some characters, as mentioned, are illegal even if they are escaped. The illegal characters include unpaired Unicode surrogates and a few other Unicode characters. All are seldom-used control characters that are usually not important in any data, and tend to cause problems with many programs. Although they are not allowed in XML documents, they are allowed in HTML documents and may be present in Salesforce data. The illegal characters will be stripped from any API response.

Illegal characters:

- 0xFFFFE
- 0xFFFF
- Control characters 0x0 - 0x19, except the following characters, which are legal: 0x9, 0xA, 0xD, tab, newline, and carriage return)
- 0xD800 - 0xDFFF, unless they're used to form a surrogate pair

.NET, Non-String Fields, and the Enterprise WSDL

If you use .NET with the enterprise WSDL, .NET generates a Boolean field for each non-string field. For example, if you have a date value in `MyDateField__c`, .NET generates a Boolean field called `MyDateField__cSpecified`.

The generated field value is `false` by default. If a Specified field value is `false`, then the values in the corresponding original field are not be included in the SOAP message. For example, before the values in the currency field `annualRevenue` can be included in a SOAP message generated by your client app, the value of `annualRevenueSpecified` must be set to `true`.

```
account.annualRevenue = 10000;
account.annualRevenueSpecified = true;
```

CHAPTER 17 Outbound Messaging

In this chapter ...

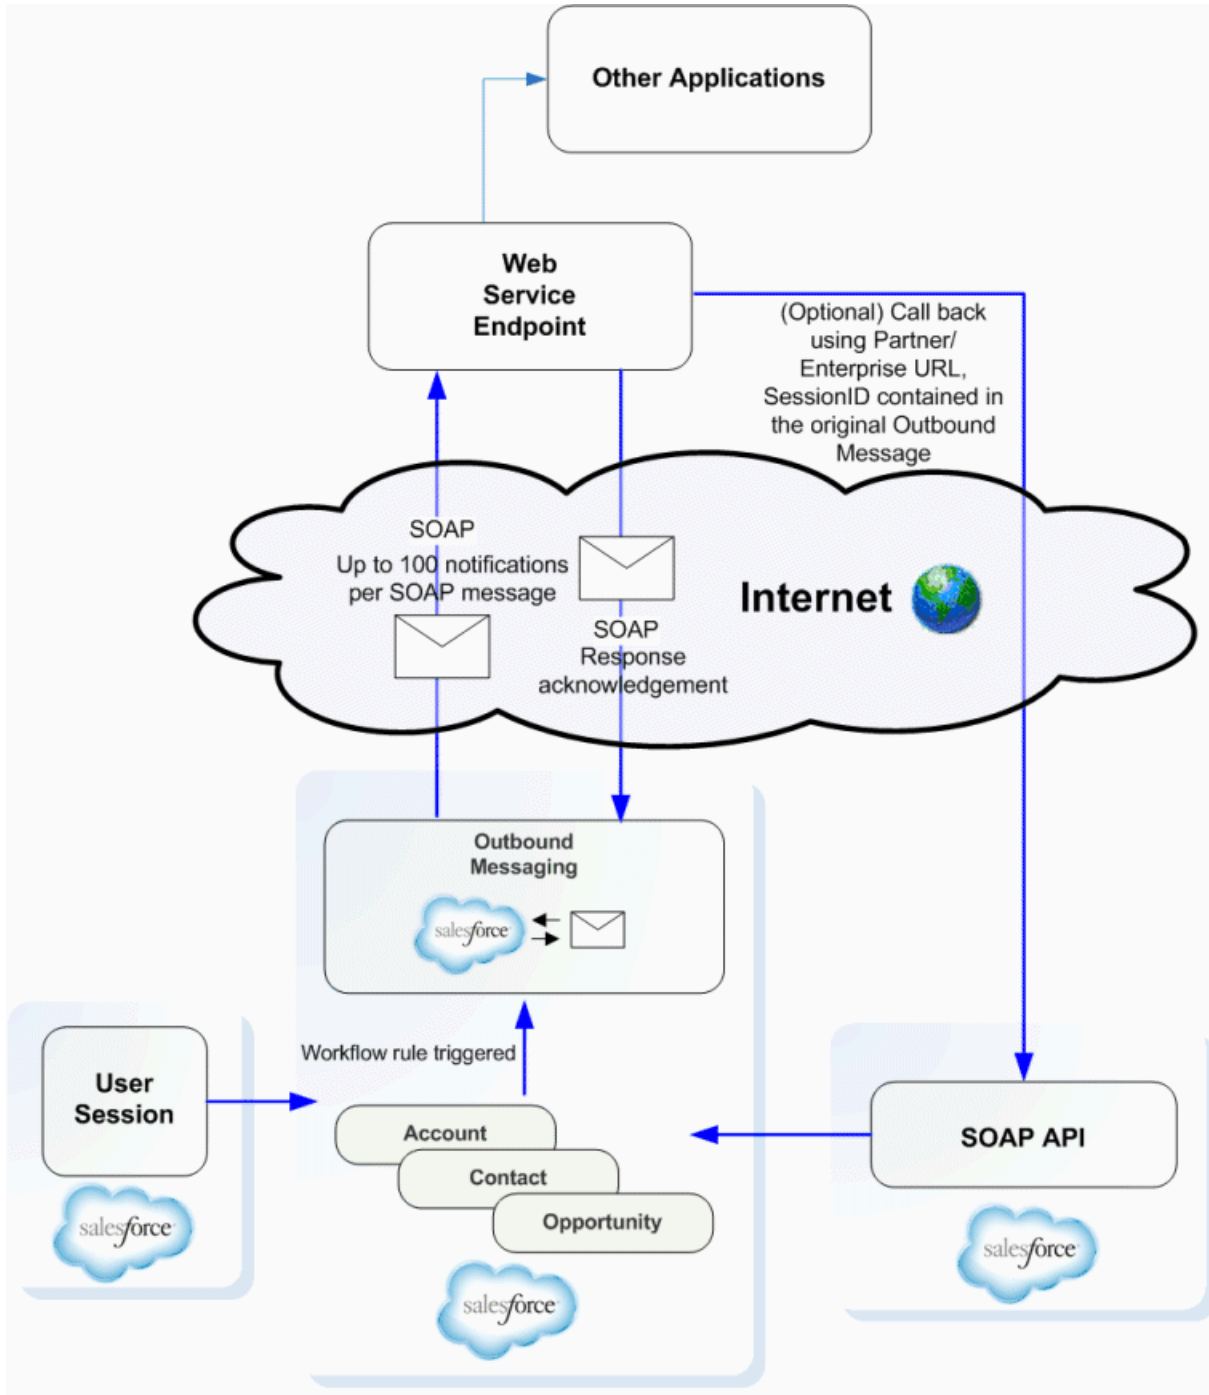

- [Understanding Outbound Messaging](#)
- [Understanding Notifications](#)
- [Setting Up Outbound Messaging](#)
- [Considerations for Security](#)
- [Understanding the Outbound Messaging WSDL](#)
- [Building a Listener](#)

Outbound messaging allows you to specify that changes to fields within Salesforce can cause messages with field values to be sent to designated external servers.

Outbound messaging is part of the workflow rule functionality in Salesforce. Workflow rules watch for specific kinds of field changes and trigger automatic Salesforce actions, such as sending email alerts, creating task records, or sending an outbound message.

Understanding Outbound Messaging

Outbound messaging uses the `notifications ()` call to send SOAP messages over HTTP(S) to a designated endpoint when triggered by a workflow rule.

After you set up outbound messaging, when a triggering event occurs, a message is sent to the specified endpoint URL. The message contains the fields specified when you created the outbound message. After the endpoint URL receives the message, it can take the information from the message and process it. To do that, you must examine the outbound messaging WSDL.

Understanding Notifications

A single SOAP message can include up to 100 notifications. Each notification contains the object ID and a reference to the associated [sObject](#) data. If the information in the object changes after the notification is queued but before it's sent, only the latest data is delivered and not the intermediate changes.

If you issue multiple discrete calls, the calls are sometimes batched together into one or more SOAP messages.

Messages are queued locally. A separate background process performs the actual sending, to preserve message reliability:

- If the endpoint is unavailable, messages stay in the queue until sent successfully, or until they're 24 hours old. After 24 hours, messages are dropped from the queue.
- If a message can't be delivered, the interval between retries increases exponentially, up to a maximum of two hours between retries.
- Messages are retried independent of their order in the queue. As a result, messages can be delivered out of order.
- You can't build an audit trail using outbound messaging. While each message is usually delivered once, it can sometimes be delivered more than once. If delivery can't be done within 24 hours, a message isn't delivered at all. Finally, if the source object changes after a notification is queued but before it's sent, the endpoint only receives the latest data, not any intermediate changes.
- Because a message can sometimes be delivered more than once, check the notification IDs in the notifications delivered to your listener client before processing.

 **Note:** Instead of polling, which was required in previous releases, you can now use outbound messaging to trigger execution logic when Salesforce raises an event. In previous versions of the API, client applications had to poll Salesforce to find out if relevant changes had occurred. Because most changes eventually trigger a workflow if a rule exists for it, you can use the workflow rule to trigger actions based on Salesforce events.

The metadata needed for outbound messaging, including the definition of the `notifications()` call, which sends the outbound SOAP message to an external service, is in a separate WSDL. The WSDL is created and available from the Salesforce user interface after a workflow rule has been associated with an outbound message. The WSDL is bound to the outbound message and contains the instructions about how to reach the endpoint service and what data is sent to it. For more information about setting up outbound messaging, see [Defining Outbound Messaging](#).

Setting Up Outbound Messaging

Before you can use outbound messaging, you must set it up via the Salesforce user interface.

- [Setting Up User Profiles](#)
- [Defining Outbound Messaging](#)
- [Downloading the Salesforce Client Certificate](#)
- [Viewing Outbound Messages](#)
- [Tracking Outbound Message Status](#)

Setting Up User Profiles

It's possible to create circular changes with outbound messaging. For example, if a user is performing integrations that trigger workflow, and the workflow actions trigger account updates, those account updates trigger new workflow, and so on. To prevent these circular changes, you can disable a user's ability to send outbound messages.

Here's another example of a circular change scenario.

1. You configure an outbound message to include a `sessionId` and specify a user in the **User to send as** field. The user doesn't have outbound messaging disabled.
2. A change in a contact record triggers an outbound message from the specified user, with the `sessionId` to your outbound message listener.
3. Your outbound message listener calls the Lightning Platform API and updates the same contact record which triggered the outbound message.
4. The update triggers an outbound message.
5. Your outbound message listener updates the record.
6. The update triggers an outbound message.
7. Your outbound message listener updates the record.

To disable outbound message notifications for a user, deselect **Send Outbound Messages** in the user's [Profile](#). We recommend specifying a single user to respond to outbound messages and disabling this user's ability to send outbound messages.

Defining Outbound Messaging

To define outbound messages, use this procedure in the Salesforce user interface:

1. From Setup, enter *Outbound Messages* in the **Quick Find** box, then select **Outbound Messages**.
2. Click **New Outbound Message**.
3. Choose the object that has the information you want included in the outbound message, and click **Next**.
4. Configure the outbound message.
 - a. Enter a name and description for this outbound message.
 - b. Enter an endpoint URL for the recipient of the message. Salesforce sends a SOAP message to this endpoint.
For security reasons, Salesforce restricts the outbound ports you can specify to one of the following:
 - 80: This port only accepts HTTP connections.
 - 443: This port only accepts HTTPS connections.
 - 1024–66535 (inclusive): These ports accept HTTP or HTTPS connections.
 - c. Select the Salesforce user to use when sending the message by specifying a username in the **User to send as** field. The chosen user controls data visibility for the message that is sent to the endpoint.
 - d. Select **Send Session ID** if you want a `sessionId` to be included in the outbound message. Include the `sessionId` in your message if you intend to make API calls back to Salesforce from your listener. The `sessionId` represents the user defined in the previous step and not the user who triggered the workflow.
 - e. Select the fields you want included in the outbound message and click **Add**.
5. Click **Save**, and review the outbound message detail page:

- The `API Version` field is automatically generated and set to the current API version when the outbound message was created. This API version is used in API calls back to Salesforce using the enterprise or partner WSDL. The `API Version` can only be modified by using the Metadata API.
- Click **Click for WSDL** to view the WSDL associated with this message.

The WSDL is bound to the outbound message and contains the instructions about how to reach the endpoint service and what data is sent to it.

 **Note:** If you don't have these options, your org doesn't have outbound messaging enabled. Contact Salesforce to enable outbound messaging for your org.

Downloading the Salesforce Client Certificate

Your application (endpoint) server's SSL/TLS can be configured to require client certificates (two-way SSL/TLS), in order to validate the identity of the Salesforce server when it takes the role of client to your server. You can download the Salesforce client certificate from the Salesforce application user interface. This certificate is the client certificate that Salesforce sends with each outbound message for authentication.

1. From Setup, enter `API` in the `Quick Find` box, then select **API**.
2. On the API WSDL page, click **Manage API Client Certificate**.
3. On the Certificate and Key Management page, in the API Client Certificate section, click the **API Client Certificate**.
4. On the Certificates page, click **Download Certificate**. The `.crt` file is saved in the download location specified in your browser.

Import the downloaded certificate into your application server, and configure your application server to request the client certificate. The application server then checks that the certificate used in the SSL/TLS handshake matches the one you downloaded.

 **Note:** Your application (endpoint) server must send any intermediate certificates in the certificate chain, and the certificate chain must be in the correct order. The correct order is:

1. Server certificate
2. Intermediate certificate that signed the server certificate if the server certificate wasn't signed directly by a root certificate
3. Intermediate certificate that signed the certificate in step 2
4. Any remaining intermediate certificates

Don't include the root certificate authority certificate. The root certificate isn't sent by your server. Salesforce already has its own list of trusted certificates on file, and a certificate in the chain must be signed by one of those root certificate authority certificates.

Viewing Outbound Messages

To view existing outbound messages, from Setup, enter `Outbound Messages` in the `Quick Find` box, then select **Outbound Messages** in the Salesforce user interface.

- Click **New Outbound Message** to define a new outbound message.
- Click **View Message Delivery Status** to track the status of an outbound message.
- Select an existing outbound message to view details about it or view workflow rules and approval processes that use it.
- Click **Edit** to make changes to an existing outbound message.
- Click **Del** to delete an outbound message.

Tracking Outbound Message Status

To track the status of an outbound message, from Setup, enter *Outbound Messages* in the **Quick Find** box, select **Outbound Messages**, and then click **View Message Delivery Status**. You can perform several tasks on this page.

- View the status of your outbound messages, including the total number of attempted deliveries.
- View the action that triggered the outbound message by clicking any workflow or approval process action ID.
- Click **Retry** to change the **Next Attempt** date to now. This action causes the message delivery to be immediately retried.
- Click **Del** to permanently remove the outbound message from the queue.

Considerations for Security

To use outbound messaging, ensure that no third party can send messages to the endpoint while pretending to be from Salesforce:

- Lock down the client application's listener to accept requests only from Salesforce IP ranges. While this action guarantees that the message came from Salesforce, it doesn't guarantee that another customer isn't pointing to your endpoint and sending messages. For an up-to-date list of Salesforce IP ranges, see <https://help.salesforce.com/articleView?id=000321501&type=1&mode=1>
- Use SSL/TLS. Using SSL/TLS provides confidentiality while data is transported across the internet. Without it, a malicious third party can eavesdrop on your data. This issue is especially important if you pass data with privacy requirements and you pass a `sessionId` with the message. Also, we authenticate the certificate presented on connection, ensure that it is from a valid Certificate Authority, and check that the domain in the certificate matches the one Salesforce is trying to connect. This validation prevents us from communicating with the wrong endpoint.
- When you select **Send Session ID**, only HTTPS is supported for the endpoint URL to ensure secure transmission of the session ID. For managed and unmanaged packages created before Spring '19 with this option but without an HTTPS endpoint, subscribers can still install them. Starting in Spring '19, you can't create packages with insecure outbound message options.
- The `sessionId` included in the outbound message is scoped only for API requests and doesn't apply to UI requests.
- If the configuration of your application (endpoint) server's SSL/TLS allows, validate the identity of the Salesforce server when it takes the role of a client to your server, using the Salesforce client certificate. For instructions to download the certificate, see [Downloading the Salesforce Client Certificate](#).
- The organization `Id` is included in each message. For more information about the `Id` field type, see [ID Field Type](#). In your client application, validate that messages contain your organization `Id`.

Understanding the Outbound Messaging WSDL

The rest of this topic examines relevant sections of the outbound messaging WSDL. Your WSDL can differ, depending on the choices you made when you set up outbound messaging for a particular event on a particular object.

notifications ()

This section defines the `notifications ()` call, which creates an outbound message containing specified fields and values for a particular object or objects, and sends the values to a specified endpoint URL:

```
<schema elementFormDefault="qualified" xmlns="http://www.w3.org/2001/XMLSchema"
  targetNamespace="http://soap.sforce.com/2005/09/outbound">
  <import namespace="urn:enterprise.soap.sforce.com" />
  <import namespace="urn:subject.enterprise.soap.sforce.com" />
```

```

<element name="notifications">
  <complexType>
    <sequence>
      <element name="OrganizationId" type="ent:ID" />
      <element name="ActionId" type="ent:ID" />
      <element name="SessionId" type="xsd:string" nillable="true" />
      <element name="EnterpriseUrl" type="xsd:string" />
      <element name="PartnerUrl" type="xsd:string" />
      <element name="Notification" maxOccurs="100"
        type="tns:OpportunityNotification" />
    </sequence>
  </complexType>
</element>
</schema>

```

Use this table to understand the elements named in the notifications method definition:

Name	Type	Description
OrganizationId	ID	ID of the organization sending the message.
ActionId	string	The workflow rule (action) that triggers the message.
SessionId	string	Optional, a session ID to be used by endpoint URL client that is responding to the outbound message. It's used by the receiving code to make calls back to Salesforce.
EnterpriseURL	string	URL to use to make API calls back to Salesforce using the enterprise WSDL.
PartnerURL	string	URL to use to make API calls back to Salesforce using the partner WSDL.
Notification	Notification	Defined in the next section, contains the object datatype and its Id, for example OpportunityNotification or ContactNotification.

The Notification datatype is defined in the WSDL. In the following example, a Notification for opportunities is defined, based on the Notification entry of the `notifications()` call definition:

```

<complexType name="OpportunityNotification">
  <sequence>
    <element name="Id" type="ent:ID" />
    <element name="sObject" type="ens:Opportunity" />
  </sequence>
</complexType>

```

Each object element (in our example, opportunities) contains the subset of the fields that you selected when you [created the outbound message](#). Each message Notification also has the object ID. Use the object ID to track redelivery attempts of notifications you've already processed.

notificationsResponse

This element is the schema for sending an acknowledgment (ack) response to Salesforce.

```

<element name="notificationsResponse">
  <complexType>
    <sequence>

```

```

        <element name="Ack" type="xsd:boolean" />
    </sequence>
</complexType>
</element> //This section is the last in the types definition section.

```

You acknowledge all notifications in the message if there's more than one.

Building a Listener

After you've defined an outbound message and configured an outbound messaging endpoint, download the WSDL and create a listener:

1. Right-click **Click for WSDL** and select Save As to save the WSDL to a local directory with an appropriate file name. For example, for an outbound message that deals with leads, you could name the WSDL file `leads.wsdl`.
2. Unlike the enterprise or partner WSDLs, which describe the messages the client sends to Salesforce, this WSDL defines the messages that Salesforce sends to your client application.
3. Most Web services tools generate stub listeners for you, in much the same way as they generate a client stub for the enterprise or partner WSDL. Look for a server-side stub option.

For example, for .NET 2.0:

- a. Run `wsdl.exe /serverInterface leads.wsdl` with .NET 2.0. This command generates `NotificationServiceInterfaces.cs`, which defines the notification interface.
- b. Create a class that implements `NotificationServiceInterfaces.cs`.
- c. You implement your listener by writing a class that implements this interface. There are a number of ways to do this. One simple way is to compile the interface to a DLL first (DLLs must be in the `bin` directory in ASP.NET).

```

mkdir bin
csc /t:library /out:bin\nsi.dll NotificationServiceInterfaces.cs

```

Now write an ASMX-based Web service that implements this interface. For example, in `MyNotificationListener.asmx`:

```

<%@WebService class="MyNotificationListener" language="C#"%>
class MyNotificationListener : INotificationBinding
{
    public notificationsResponse notifications(notifications n)
    {
        notificationsResponse r = new notificationsResponse();
        r.Ack = true;
        return r;
    }
}

```

This example is a simple implementation, actual implementations are more complex.

- d. Deploy the service by creating a new virtual directory in IIS for the directory that contains the `MyNotificationListener.asmx`.
- e. You can now test that the service is deployed by viewing the service page with a browser. For example, if you create a virtual directory `salesforce`, you'd go to `http://localhost/salesforce/MyNotificationListener.asmx`.

The process for other Web service tools is similar. Consult the documentation for your Web service tool.

Your listener must meet these requirements:

- Must be reachable from the public Internet.
- For security reasons, Salesforce restricts the outbound ports you can specify to one of the following:

- 80: This port only accepts HTTP connections.
- 443: This port only accepts HTTPS connections.
- 1024–66535 (inclusive): These ports accept HTTP or HTTPS connections.
- To be valid, the common name (CN) of the certificate must match the domain name for your endpoint's server, and the certificate must be issued by a Certificate Authority trusted by Java 2 Platform, Standard Edition (J2SE) 5.0 (JDK 1.5).
- If your certificate expires, message delivery fails.
-  **Warning:** To avoid an infinite loop of outbound messages that trigger changes that trigger more outbound messages, ensure that the user who updates the objects does **not** have the “Send Outbound Messages” permission.

CHAPTER 18 Data Loading and Integration

In this chapter ...

- [Client Application Design](#)
- [Salesforce Settings](#)
- [Best Practices with Any Data Loader](#)
- [Integration and Single Sign-On](#)

If you need to load large volumes of data (hundreds of thousands to millions of records), there are a number of factors you must consider. Use the topics in this section to become familiar with issues of client application design, organization configuration, and data loader best practices.

Client Application Design

Although the Bulk API 2.0 is the best choice for loading large numbers of records, you can also use the SOAP-based API. There are many ways you can design your application to improve the speed of data loads:

- **Use persistent connections.** Opening a socket takes time, mostly when opening a socket stems from the SSL/TLS negotiation. Without SSL or TLS, the API request would not be secure. Included in the HTTP 1.1 specification is support for reusing sockets among requests (persistent connections) instead of having to re-open a socket per request as in HTTP 1.0. Whether your client supports persistent connections depends on the SOAP stack you are using. By default, .NET uses persistent connections. If you change the configuration to use the Apache http-commons libraries, your client will be compliant with the HTTP 1.1 specification and use persistent connections.

For information about HTTP 1.1, see [HTTP Persistent Connections](#) and <http://www.w3.org/Protocols/rfc2616/rfc2616-sec8.html#sec8.1>.

- **Minimize the number of requests.** There is some processing associated with each request, so to save time your client should batch as many records per request as possible. Set `batchSize` to the limit of 2,000. If that is not the most efficient batch size, the API will change it. For more information about setting batch sizes, see [QueryOptions](#).
- **Minimize the size of the requests.** Your client application should send as many records per request as possible, but it should also send as small a request as possible to reduce network transmission time. To minimize the request size, use compression on both the request and the response. Gzip is the most popular type of compression, and there are multiple posts on the community boards at the [Lightning Platform Developer Boards](#) that describe how to implement compression with different SOAP stacks. The full Gzip analysis and discussion is available at Simon Fell's blog: <http://www.pocketsoap.com/weblog/2005/12/1583.html>.
- **Do Not Design a Multi-Threaded Client Application.** Multi-threading is not allowed for a single client application using the SOAP-based API.

Salesforce Settings

Most processing takes place in the database. Setting these parameters correctly will help the database process as quickly as possible:

- **Enable or Disable the Most Recently Used (MRU) functionality.** Records marked as most recently used (MRU) are listed in the “Recent Items” section of the sidebar in the Salesforce user interface. Check that you are not enabling it for calls where it is not needed.

In API version 7.0 and above, MRU functionality is disabled by default. To enable the MRU functionality, create this header and set the `updateMru` to `true`. The following sample shows how to use MRU functionality:

```
public void mruHeaderSample() {
    connection.setMruHeader(true);
    Account account = new Account();
    account.setName("This will be in the MRU");
    try {
        SaveResult[] sr = connection.create(new SObject[]{account});
        System.out.println("ID of account added to MRU: " +
            sr[0].getId());
    } catch (ConnectionException ce) {
        ce.printStackTrace();
    }
}
```

- **Log in as a user with the “Modify All Data” permission to avoid sharing rules.** If the client application logs in as a user who has access to data via a sharing rule, then the API must issue an extra query to check access. To avoid this, log in as a user with the

“Modify All Data” permission. In general, fewer sharing rules quickens load speeds, as there are fewer operations that have to be performed when setting properties such as ownership.

Alternatively, you can set organization-wide defaults for some objects as public read/write for the duration of the load. For more information, see “Set Your Internal Organization-Wide Sharing Defaults” in the Salesforce online help.

- **Avoid workflow or assignment rules.** Anything that causes a post-operation action slows down the load. You can temporarily disable automatic rules if the loaded objects are exempt from them.
- **Avoid triggering cascading updates.** For example, if you update the owner of an account, the contacts and opportunities associated with that account may also require updates. Instead of updating a single object, the client application must access multiple objects, which slows down the load.

The Lightning Platform Data Loader is a good reference for data loading. It disables the MRU, uses HTTP/1.1 persistent connections, and applies GZIP compression on the request and response. If you are performing a data load, or are looking at a place to start when writing your own Java integration, the Lightning Platform Data Loader can serve as a fast and reliable solution. For more information about the Lightning Platform Data Loader, see: Data Loader in the Salesforce online help.

Best Practices with Any Data Loader

While this section presents a best practice process using the Lightning Platform Data Loader, the general principles apply to any client data loader:

1. Identify which data you will migrate.

You may not want or need to migrate a whole set of data—choose which objects you wish to migrate. For example, you may want to migrate only the contact information from each account, or only migrate account information from a particular division.

2. Create templates for the data.

Create one template for each object, for example in an Excel worksheet.

Identify the required fields for each object. In addition to the required fields for each standard object, there may be additional required fields such as those needed to follow business rules, or legacy ID fields. Use this guide or see the page layout definitions in the Salesforce user interface to find out which fields are required on standard objects.

You may wish to highlight the required fields in red for easier review of the data after you populate the templates.

You should also identify any ordering dependencies. Objects may have mandatory relationships, for example all accounts have an owner, and all opportunities are associated with an account. The dependencies in these relationships dictate the order of data migration. For Salesforce data, for example, you should load users first, then accounts, then opportunities.

To identify dependencies, review the related lists and lookup fields in the page layout of the given object, and IDs (foreign keys) in the database.

3. Populate the templates.

Clean your data before populating the template, and review the data in the templates.

4. Migrate the data.

Create custom fields to store legacy ID information. Optionally, give the custom field the `EXTERNAL ID` attribute so it will be indexed. This will help maintain relationships, and help you build custom reports for validation.

Load one record, check the results, then load all records.

5. Validate the data.

Use all of these techniques to validate your migration:

- Create custom reports that validate record counts and provide an overall snapshot of migration.
 - Spot check the data.
 - Review exception reports to see what data was not migrated.
6. Re-migrate or update data as needed.

Integration and Single Sign-On

Warning: To avoid getting into an unrecoverable state, do not enable single sign-on for your system administrator account. If you do, and then perform a single sign-on integration that fails, you may not be able to log in again to recover.

CHAPTER 19 Data Replication

In this chapter ...

- [API Calls for Data Replication](#)
- [Scope of Data Replication](#)
- [Data Replication Steps](#)
- [Object-Specific Requirements for Data Replication](#)
- [Polling for Changes](#)
- [Checking for Structural Changes in the Object](#)

The API supports data replication, which allows you to store and maintain an external, separate copy of your organization's pertinent Salesforce data for specialized uses, such as data warehousing, data mining, custom reporting, analytics, and integration with other applications. Data replication provides you with local control and the ability to run large or ad hoc analytical queries across the entire data set without transmitting all that data across the network.

Note: To get real-time notifications of Salesforce record changes, use Change Data Capture instead. By subscribing to a Change Data Capture channel, you receive a stream of change event messages for record changes, including insertions, updates, deletions, and undeletions. With Change Data Capture, you get broad access to data and can perform updates in your target store using transaction boundaries. Change Data Capture provides a versioned event schema and retains change events temporarily for later retrieval. For more information, see the [Change Data Capture Basics Trailhead module](#), or for a complete reference, see the [Change Data Capture Developer Guide](#).

Use the topics in this section to better understand the best practices for data replication.

API Calls for Data Replication

The API supports data replication with the following API calls:

API Call	Description
<code>getUpdated()</code>	Retrieves the list of objects that have been updated (added or changed) during the specified timespan for the specified object.
<code>getDeleted()</code>	Retrieves the list of objects that have been deleted during the specified timespan for the specified object.

Client applications can invoke these API calls to determine which objects in your organization's data have been updated or deleted during a given time period. These API calls return a set of IDs for objects that have been updated (added or changed) or deleted, as well as the timestamp (Coordinated Universal Time (UTC)—not local—timezone) indicating when they were last updated or deleted. It is the responsibility of the client application to process these results and to incorporate the required changes into the local copy of the data.

Scope of Data Replication

This feature provides a mechanism that targets data replication (one-way copying of data). It does not provide data synchronization (two-way copying of data) or data mirroring capabilities.

Data Replication Steps

The following is a typical data replication procedure for an object:

1. Optionally, determine whether the structure of the object has changed since the last replication request, as described in [Checking for Structural Changes in the Object](#).
2. Call `getUpdated()`, passing in the object and timespan for which to retrieve data.
Note that `getUpdated()` retrieves the IDs for data to which the logged in user has access. Data that is outside of the user's sharing model is not returned. The API returns the ID of every changed object that is visible to you, regardless of what change occurred in the object. For information on IDs, see [ID Field Type](#).
3. Pass in all IDs in an array. For each ID element in the array, call `retrieve()` to obtain the latest information you want from the associated object. You must then take the appropriate action on the local data, such as inserting new rows or updating existing ones with the latest information.
4. Call `getDeleted()`, passing in the object and timespan for which to retrieve data. Like `getUpdated()`, `getDeleted()` retrieves the IDs for data to which the logged-in user has access. Data that is outside of the user's sharing model is not returned. The API returns the ID of every changed object that is visible to you, regardless of what change occurred in the object, based on `SystemModstamp` field information if available. For information on IDs, see [ID Field Type](#).
5. Iterate through the returned array of IDs. Your client application must then take the appropriate action on the local data to remove (or flag as deleted) the deleted objects. If your client application cannot match rows in the local data using the retrieved object ID, then the local data rows either were deleted or were never created, in which case there is nothing to do.
6. Optionally, save the request time spans for future reference. You can do this with the `getDeleted()` `latestDateCovered` value or the `getUpdated()` `latestDateCovered` value.

Object-Specific Requirements for Data Replication

The API objects have the following requirements for data replication:

- The `getUpdated()` and `getDeleted()` calls filter the results so that the client application receives IDs for only those created or updated objects to which the logged-in user has access. For information on IDs, see [ID Field Type](#).
- Your client application can replicate any objects to which it has sufficient permissions. For example, to replicate all data for your organization, your client application must be logged in with the “View All Data” permission. For more information, see [Factors that Affect Data Access](#).
- The logged-in user must have read access to the object. For more information, see “Set Your Internal Organization-Wide Sharing Defaults” in the Salesforce online help.
- The object must be configured to be replicatable (`replicatable` is `true`). To determine whether a given object can be replicated, your application can invoke the `describeSObject()` call on the object and inspect the `replicatable` property in the `describeSObjectResult`.

Polling for Changes

Client applications typically poll for changed data periodically. Polling involves the following considerations:

- The polling frequency depends on business requirements for how quickly changes in your organization’s Salesforce data need to be reflected in the local copy. Some client applications might poll once a day to retrieve changes, while other client applications might poll every five minutes to achieve closer accuracy.
- Deleted records are written to a delete log, which `getDeleted()` accesses. A background process that runs every two hours purges records that have been in an organization’s delete log for more than two hours if the number of records is above a certain limit. Starting with the oldest records, the process purges delete log entries until the delete log is back below the limit. This is done to protect Salesforce from performance issues related to massive delete logs. The limit is calculated using this formula:

```
5000 * number of licenses in the organization
```

For example, an organization with 1,000 licenses could have up to 5,000,000 (five million) records in the delete log before any purging took place. If purging has been performed before your `getDeleted()` call is executed, an `INVALID_REPLICATION_DATE` error is returned. If you get this exception, you should do a full pull of the table.

- The API truncates the seconds portion of `dateTime` values. For example, if a client application submits a timespan between 12:30:15 and 12:35:15 (Coordinated Universal Time (UTC) time), then the API retrieves information about items that have changed between 12:30:00 and 12:35:00 (UTC), inclusive.
-  **Note:** Development tools differ in the way that they handle time data. Some development tools report the local time, while others report only the Coordinated Universal Time (UTC) time. To determine how your development tool handles time values, refer to its documentation.
- We recommend polling no more frequently than every five minutes. There are built in controls to prevent errant applications from invoking the data replication API calls too frequently.
 - Client applications should save the timespan used in previous data replication API calls so that the application knows the last time period for which data replication was successfully completed.
 - To ensure data integrity on the local copy of the data, a client application needs to capture all of the relevant changes during polling—even if it requires processing data redundantly to ensure that there are no gaps. Your client application can contain business logic to skip processing objects that have already been integrated into your local data.

- Gaps can also occur if the client application somehow fails to poll the data as expected (for example, due to a hardware crash or network connection failure). Your client application can contain business logic that determines the last successful replication and polls for the next consecutive timespan.
- If for any reason the local data is compromised, your client application might also provide business logic for rebuilding the local data from scratch.

 **Note:** You can now use [Outbound Messaging](#) to trigger actions instead of polling for them.

Checking for Structural Changes in the Object

In the API, data replication only reflects changes made to object records. It does not determine whether changes have been made to the structure of objects (for example, fields added to—or removed from—a custom object). It is the responsibility of the client application to check whether the structure of a given object has changed since the last update. Before replicating data, client applications can call `describeObjects()` on the object, and then compare the data returned in the `DescribeObjectResult` with the data returned and saved from previous `describeObjects()` invocations.

CHAPTER 20 Feature-Specific Considerations

In this chapter ...

- [Archived Activities](#)
- [Person Account Record Types](#)
- [External Objects](#)
- [Call Centers and the API](#)
- [Implementing Salesforce Integrations on Lightning Platform](#)
- [Knowledge](#)

Some Salesforce features require special consideration when accessed via the API. Use the topics in this section to learn about the special considerations for activities, person accounts, forecast override business rules, the Call Center, and creating your own apps.

Archived Activities

Salesforce archives activities (tasks and events) that are over a year old.

You can use `queryAll()` to query on all `Task` and `Event` records, archived or not. You can also filter on the `isArchived` field to find only the archived objects. You cannot use `query()` as it automatically filters out all records where `isArchived` is set to `true`. You can update or delete archived records, though you cannot update the `isArchived` field. If you use the API to insert activities that meet the criteria listed below, the activities will be archived during the next run of the archival background process.

Older `Events` and `Tasks` are archived according to the criteria listed below. In the Salesforce user interface, users can view archived activities in several locations.

- Click **View All** in the Activity History related list to open the Activity History tab. In the Activity History tab, you can sort entries and open, edit, or delete activities.
- Click **View All** in the activity timeline to open the All Activity History list. Up to 2,000 records appear, including archived records. The All Activity History list is ideal for printing.

In the API, archived activities can only be queried via `queryAll()`.

Activity archive criteria:

- Events with an `ActivityDateTime` or `ActivityDate` value greater than or equal to 365 days old
- Tasks with an `IsClosed` value of `true` and an `ActivityDate` value greater than or equal to 365 days old
- `Tasks` with an `IsClosed` value of `true`, a blank `ActivityDate` field, and a create date greater than or equal to 365 days ago

For more information, see [View Archived Activities in Salesforce Help](#).

Person Account Record Types

Beginning with API version 8.0, a new family of record types on `Account` objects is available: “person account” record types. The person account record types enable specialized business-to-consumer functionality for users who sell to or do business with individuals. For example, a doctor, hairdresser, or real estate agent whose clients are individuals. For more information about person accounts, see “Person Accounts” and “Considerations for Using Person Accounts” in the Salesforce Help.

Record types are person account record types if the `Account` field `IsPersonAccount` is set to `true`. Salesforce provides one default person account record type, `PersonAccount`, but an administrator can create additional person account record types. Conversely, record types with the `Account` field `IsPersonAccount` set to `false` are “business account” record types, which are traditional business-to-business (B2B) Salesforce accounts.

When a person account is created (or an existing business account is changed to a person account), a corresponding contact record is also created. This contact record is referred to as a “person contact.” The person contact enables the person account to function simultaneously as both an account and a contact. This record is the only contact record that can be associated directly with the person account. Also, the ID of the corresponding person contact record is stored in the `PersonContactId` field on the person account.

Review this list of facts about person account record types before working with them.

- Contact your account representative to enable the person account feature, if the feature isn’t enable yet.
- You can use a query similar to the following example to find all records with a person account record type:

```
SELECT Name, SubjectType, IsPersonType
FROM RecordType
WHERE SubjectType='Account' AND IsPersonType=True
```

- If you issue a `query()` call against an account, the results return the root object type in the `ObjectType` field. The returned value is always `Account`.
- A person contact can be modified, but cannot be created or deleted. Since these kinds of contacts do not have their own record detail page, clients must redirect users to the corresponding person account (`Account`) page. SOSL results don't include any of the contact fields enabled when `IsPersonAccount` is set to `true`. The contact `ReportsToId` field is not visible.
- If you delete the account, the contact is also deleted. You cannot directly delete the contact; you must delete the account.
- You can change the record type of an account across record type families (typically performed when migrating business accounts to person accounts, but the reverse operation is also supported). When you change the record type from a business account to a person account, the person contact is created. When you change the record type from a person account to a business account, the person fields are set to null, and the person contact becomes a regular contact with the same parent account it had before the change.

Note: You cannot change record types across record type families in the Salesforce user interface.

- If you change the record type of a business account to a person account using either `update()` or `upsert()`, you cannot make any other changes to fields in that account in the same call; if attempted, the fault `INVALID_FIELD_FOR_INSERT_UPDATE` results. However, you can change record type values from one person account record type to another, or from one business account record type to another, in the same call with other changes.
- When converting a business account to a person account, there must be a one-to-one relationship between each business account record and its corresponding contact record. Furthermore, fields common to both records such as `Owner` and `Currency` must have identical values.
- Workflow and validation formulas do not fire during a change in record types from or to person accounts.
- When you change a business account to a person account, valid records are changed and invalid records show an error in the results array.
- When you change a person account to a business account, no validation is performed.
- `describeLayout()` for version 7.0 and below returns the default business account record type as the default record type even if the tab default is a person account record type. In version 8.0 and after, it will always be the tab default.
- `describeLayout()` for version 7.0 and below doesn't return any person account record types.
- `describeSObject()` for version 7.0 and below show `Account` objects as not creatable if the profile does not have access to any business record types.
- After conversion, the new person accounts will have unique one-to-one relationships with the contact records that formed them. As is true for all person accounts, no other contacts can be associated to a person account.
- After conversion, any existing account field history information remains on the person accounts. Any existing contact field history information is retained on the contact, but is not added to the person accounts field history.

For more information about person accounts, see the Salesforce Help.

External Objects

Special behaviors and limitations apply to `queryAll()` and `queryMore()` calls on external data.

`queryAll()`

Because Salesforce doesn't track changes to external data, `queryAll()` behaves the same as `query()` for external objects.

queryMore()

It's common for Salesforce Connect queries of external data to have a large result set that's broken into smaller batches or pages. When querying external objects, Salesforce Connect accesses the external data in real time via Web service callouts. Each `queryMore()` call results in a Web service callout. The batch boundaries and page sizes depend on your adapter and how you set up the external data source.

We recommend the following:

- When possible, avoid paging by filtering your queries of external objects to return fewer rows than the batch size, which by default is 500 rows. Remember, obtaining each batch requires a `queryMore()` call, which results in a Web service callout.
- If the external data frequently changes, avoid using `queryMore()` calls. If the external data is modified between `queryMore()` calls, you can get an unexpected `QueryResult`.

If the primary or “driving” object for a `SELECT` statement is an external object, `queryMore()` supports only that primary object and doesn't support subqueries.

By default, the OData 2.0 and 4.0 adapters for Salesforce Connect use client-driven paging. With client-driven paging, OData adapters convert each `queryMore()` call into an OData query that uses the `$skip` and `$top` system query options to specify the batch boundary and page size. These options are similar to using `LIMIT` and `OFFSET` clauses to page through a result set.

If you enable server-driven paging on an external data source, Salesforce ignores the requested page sizes, including the default `queryMore()` batch size of 500 rows. The pages returned by the external system determine the batches, but each page can't exceed 2,000 rows.

Call Centers and the API

The API provides access to information about computer–telephony integration (CTI) call centers with the `describeSoftphoneLayout()` call. You must have the CTI feature enabled for your organization. Contact your account representative for assistance.

The API supports limited access to call center-related objects, including being able to create call centers, and create or modify additional numbers for the call center.

Topic	Description
CallCenter	Call Center object description, including fields and usage.
AdditionalNumber	Configuration settings that allow you to add an additional number if it cannot easily be categorized as a user, contact, lead, account, or any other object. Examples include phone queues or conference rooms.

In addition, several fields have been added to existing objects to support call centers. The following fields provide configuration settings for operation of a call center.

Object Name	Field Name	Field Type	Field Properties	Description
OpenActivity ActivityHistory Task	CallDisposition	string	Create (Task only) Filter	Represents the result of a given call, for example, “we'll call back,” or “call unsuccessful.” Limit is 255 characters.

Object Name	Field Name	Field Type	Field Properties	Description
			Nillable Update (Task only)	For the Task object, corresponds to the Salesforce user interface label Call Result . You can also create and update values for this field in Task.
OpenActivity ActivityHistory Task	CallDurationInSeconds	int	Create (Task only) Filter Nillable Update (Task only)	Duration of the call in seconds. For Task, you can also create and update values for this field.
OpenActivity ActivityHistory Task	CallObject	string	Filter Nillable Update (Task only)	Name of a call center. Limit is 255 characters. For Task, you can also create and update values for this field.
OpenActivity ActivityHistory Task	CallType	picklist	Create (Task only) Filter Nillable Restricted picklist Update	The type of call being answered: Inbound, Internal, or Outbound. For Task, you can also create and update values for this field.
User	CallCenterId	reference	Create Filter Nillable Update	The unique identifier for the call center associated with this user.
User	UserPermissionsCallCenterAutoLogin	boolean	Create Update	Indicates whether a user will be automatically logged in to a call center when logging in to the Salesforce application (<code>true</code>) or not (<code>false</code>).

Implementing Salesforce Integrations on Lightning Platform

You can implement your Salesforce integrations or other client applications, on the Lightning Platform by creating a Salesforce AppExchange app.

1. Create a [WebLink](#) that passes the user session ID and the API server URL to an external site:

```
https://www.your_tool.com/test.jsp?sessionId={!API_Session_ID}&url={!API_Partner_Server_URL_80}
```

Use `https` to ensure that your session ID cannot be detected.

2. The page pointed to in the preceding step takes the session ID and uses it to call back to the API. Use `getUserInfo()` to return the `userId` associated with the session and related information. If needed, you can also use `retrieve` on the `User` object to retrieve any additional information you need about the user.
3. Maintain a cross-reference between the `userId` or `username` and the corresponding user ID in your system, which you can do using a [WebLink](#) that is executed when the user clicks a tab, or a [WebLink](#) on the page layout.
4. Package and upload this app using the instructions in Salesforce Help topic “Prepare Your Apps for Distribution.”

Accessing Salesforce Data Using the API and OAuth

Salesforce supports OAuth 1.0.A and 2.0 for SOAP API requests.

Using an already defined connected app and the OAuth protocol, a third party can implement an OAuth authentication flow to integrate with the Salesforce API.

For detailed steps about integrating with the Salesforce API using OAuth, see [Authenticating Apps with OAuth](#) in Salesforce Help.

Partners, who wish to get an OAuth consumer Id for authentication, can contact Salesforce

Knowledge

Articles Overview

Articles capture information about your company's products and services that you want to make available in your knowledge base.

Articles in the knowledge base can be classified using data categories to make it easy for users to find the articles they need. Administrators can use data categories to control access to articles.

Knowledge Articles vs. Knowledge Article Versions

When working with articles, keep in mind that the [KnowledgeArticle](#) on page 2009 represents the parent record of all article versions. [KnowledgeArticleVersion](#) records represent each version of a given article.

Record Types vs. Article Types

The article structure is represented differently between Lightning Experience and Salesforce Classic. In Lightning Knowledge, you use the same record types available in other custom objects (see the `RecordTypeId` field on [Knowledge__kav](#)) to structure different types of articles. For example, you can use different layouts for different record types. In Salesforce Classic, you get this functionality through article types (see the `ArticleType` field on [KnowledgeArticleVersion](#)). Each unique type of article has a unique object in Salesforce Classic (for example, `FAQ__kav` for FAQ article types). Lightning Knowledge does not have a unique object for each type because it is handled using the record type.

Audience Channel

An audience, sometimes called a channel, refers to the types of users who can access an article. Salesforce Knowledge offers four channels where you can make articles available.

- **Internal App:** Salesforce users can access articles depending on their role visibility.
- **Customer:** Customers can access articles in a community, site, or customer portal. Customer users inherit the role visibility of the manager on the account. In a community, the article is only available to users with Customer Community or Customer Community Plus licenses.
- **Partner:** Partners can access articles in a community, site, or partner portal. Partner users inherit the role visibility of the manager on the account. In a community, the article is only available to users with Partner Community licenses.
- **Public Knowledge Base:** Articles can be made available to anonymous users by creating a public knowledge base. With Lightning Knowledge, most Salesforce orgs use Communities to create a knowledge base. Creating a public knowledge base for Salesforce Knowledge in Salesforce Classic requires Sites and Visualforce.

Publishing Cycle

Salesforce Knowledge Articles move through a publishing cycle from their creation to their deletion. The publishing cycle includes three different statuses: `DRAFT` is the stage when a new article is being created or an existing one is being updated. Articles with the `Online` status are draft articles that have been published and are now available to their different channels. Eventually, when a published article is at the end of its life, it can be moved to the `Archived` status or sent back to `DRAFT` to be updated in a subsequent version.

Working with Articles in the API

Articles are available through the [KnowledgeArticleVersion](#) and [KnowledgeArticle](#) objects in the API. They both represent an article but provide different capabilities.

KnowledgeArticleVersion

Every new draft article in Salesforce Knowledge has a version number. When an article is published and you want to update it, you can create a new `DRAFT` with a distinct version number. Each version has its own ID. Once the updated version is ready to be published, it replaces the former one and updates the version number. You can access the content of an article version using the `KnowledgeArticleVersion` object and filter on its `Draft` or `Online` status. For example, the following query returns the title of the `Draft` version of all the articles across all article types in United States English:

```
SELECT Title
FROM KnowledgeArticleVersion
WHERE PublishStatus='Draft'
AND language = 'en_US'
```

Articles are also auto-assigned an Article Number, which is not a unique identifier to an individual article, but an identifier to a master article and all of its available translations.

 **Note:** Both the master version (the knowledge article with `IsMasterLanguage = 1`) and the translations are `KnowledgeArticleVersion` objects.

KnowledgeArticle

Unlike `KnowledgeArticleVersion`, the ID of a `KnowledgeArticle` record is identical irrespective of the article's version (status). Where the `KnowledgeArticleVersion` object provides API access to an article's custom field values, the `KnowledgeArticle` object provides API access to an article's metadata fields.

The article record is the parent container of all versions of an article, whatever the publishing status (draft, published, archived) and the language. While `KnowledgeArticle` and `KnowledgeArticleVersion` represent any article in the knowledge base, use the concrete representation of these objects for the specific articles. In Lightning Knowledge, these concrete representations default to `Knowledge__ka`

(for the Knowledge article) and Knowledge__kav (for the Knowledge article version). In Salesforce Classic, use <Article Type>__ka and <Article Type>__kav.

The following Lightning Knowledge query returns the title for all the published FAQ articles in United States English:

```
SELECT Title
FROM Knowledge__kav
WHERE PublishStatus='online'
AND Language = 'en_US'
AND RecordTypeId = '<specify RecordTypeId for FAQ here>'
```

The following Salesforce Classic query returns the title for all the published offers in United States English:

```
SELECT Title
FROM FAQ__kav
WHERE PublishStatus='online'
AND language ='en_US'
```

Data Categories Overview

Data categories are organized by category group and let:

- Users classify and find records.
- Administrators control access to records.

Salesforce Knowledge uses data categories to classify articles and make them easier to find. For example, to classify articles by sales regions and products, create two category groups: Sales Regions, Products. The Sales Regions category group could consist of a geographical hierarchy, such as All Sales Regions as the top level and North America, Europe, and Asia at the second level. The Products group could have All Products as the top level and Phones, Computers, and Printers at the second.

Working with Data Categories in the API

The following table lists API resources for working with data categories.

Name	Type	Description
Knowledge__DataCategorySelection	Object	Gives access to article categorization in Lightning Knowledge.
Article Type__DataCategorySelection	Object	Gives access to article categorization in Knowledge for Salesforce Classic.
QuestionDataCategorySelection	Object	Gives access to question categorization.
WITH DATA CATEGORY filteringExpression	SOQL clause	Filters articles depending on their status in the publishing cycle and their data categories. For more information, see the Salesforce SOQL and SOSL Reference Guide .
WITH DATA CATEGORY DataCategorySpec	SOSL clause	Finds articles based on their categorization. For more information, see the Salesforce SOQL and SOSL Reference Guide .
describeDataCategoryGroups ()	Call	Retrieves available category groups for objects specified in the request.
describeDataCategoryGroupStructures ()	Call	Retrieves available category groups along with their data category structure for objects specified in the request.

Additional Information

To learn more about managing your knowledge base using the API, see the [Knowledge Developer Guide](#).

GLOSSARY

[A](#) | [B](#) | [C](#) | [D](#) | [E](#) | [F](#) | [G](#) | [H](#) | [I](#) | [J](#) | [K](#) | [L](#) | [M](#) | [N](#) | [O](#) | [P](#) | [Q](#) | [R](#) | [S](#) | [T](#) | [U](#) | [V](#) | [W](#) | [X](#) | [Y](#) | [Z](#)

A

AJAX Toolkit

A JavaScript wrapper around the API that allows you to execute any API call and access any object you have permission to view from within JavaScript code. For more information, see the [AJAX Toolkit Developer's Guide](#).

Anonymous Block, Apex

Apex code that does not get stored in Salesforce, but that can be compiled and executed by using the `ExecuteAnonymousResult()` API call, or the equivalent in the AJAX Toolkit.

Anti-Join

An anti-join is a subquery on another object in a `NOT IN` clause in a SOQL query. You can use anti-joins to create advanced queries. See also Semi-Join.

Apex

Apex is a strongly typed, object-oriented programming language that allows developers to execute flow and transaction control statements on the Lightning platform server in conjunction with calls to the Lightning Platform API. Using syntax that looks like Java and acts like database stored procedures, Apex enables developers to add business logic to most system events, including button clicks, related record updates, and Visualforce pages. Apex code can be initiated by Web service requests and from triggers on objects.

Apex-Managed Sharing

Enables developers to programmatically manipulate sharing to support their application's behavior. Apex-managed sharing is only available for custom objects.

App

Short for "application." A collection of components such as tabs, reports, dashboards, and Visualforce pages that address a specific business need. Salesforce provides standard apps such as Sales and Service. You can customize the standard apps to match the way you work. In addition, you can package an app and upload it to the AppExchange along with related components such as custom fields, custom tabs, and custom objects. Then, you can make the app available to other Salesforce users from the AppExchange.

AppExchange

The AppExchange is a sharing interface from Salesforce that allows you to browse and share apps and services for the Lightning Platform.

AppExchange Upgrades

Upgrading an app is the process of installing a newer version.

Application Programming Interface (API)

The interface that a computer system, library, or application provides to allow other computer programs to request services from it and exchange data.

B

Boolean Operators

You can use Boolean operators in report filters to specify the logical relationship between two values. For example, the AND operator between two values yields search results that include both values. Likewise, the OR operator between two values yields search results that include either value.

Bulk API 2.0

The REST-based Bulk API 2.0 is optimized for processing large sets of data. It allows you to query, insert, update, upsert, or delete a large number of records asynchronously by submitting a job that is processed in the background by Salesforce. See also SOAP API.

C

Callout, Apex

An Apex callout enables you to tightly integrate your Apex with an external service by making a call to an external Web service or sending a HTTP request from Apex code and then receiving the response.

Child Relationship

A relationship that has been defined on an sObject that references another sObject as the “one” side of a one-to-many relationship. For example, contacts, opportunities, and tasks have child relationships with accounts.

See also sObject.

Class, Apex

A template or blueprint from which Apex objects are created. Classes consist of other classes, user-defined methods, variables, exception types, and static initialization code. In most cases, Apex classes are modeled on their counterparts in Java.

Client App

An app that runs outside the Salesforce user interface and uses only the Lightning Platform API or Bulk API 2.0. It typically runs on a desktop or mobile device. These apps treat the platform as a data source, using the development model of whatever tool and platform for which they are designed.

Component, Visualforce

Something that can be added to a Visualforce page with a set of tags, for example, `<apex:detail>`. Visualforce includes a number of standard components, or you can create your own custom components.

Component Reference, Visualforce

A description of the standard and custom Visualforce components that are available in your organization. You can access the component library from the development footer of any Visualforce page or the [Visualforce Developer's Guide](#).

Controller, Visualforce

An Apex class that provides a Visualforce page with the data and business logic it needs to run. Visualforce pages can use the standard controllers that come by default with every standard or custom object, or they can use custom controllers.

Controlling Field

Any standard or custom picklist or checkbox field whose values control the available values in one or more corresponding dependent fields.

Custom App

See App.

Custom Field

A field that can be added in addition to the standard fields to customize Salesforce for your organization's needs.

Custom Help

Custom text administrators create to provide users with on-screen information specific to a standard field, custom field, or custom object.

Custom Links

Custom links are URLs defined by administrators to integrate your Salesforce data with external websites and back-office systems. Formerly known as Web links.

Custom Object

Custom records that allow you to store information unique to your organization.

Custom S-Control

Note: S-controls have been superseded by Visualforce pages. After March 2010 organizations that have never created s-controls, as well as new organizations, won't be allowed to create them. Existing s-controls will remain unaffected, and can still be edited.

Custom Web content for use in custom links. Custom s-controls can contain any type of content that you can display in a browser, for example a Java applet, an Active-X control, an Excel file, or a custom HTML Web form.

D

Database

An organized collection of information. The underlying architecture of the Lightning Platform includes a database where your data is stored.

Database Table

A list of information, presented with rows and columns, about the person, thing, or concept you want to track. See also Object.

Data Loader

A Lightning Platform tool used to import and export data from your Salesforce organization.

Data Manipulation Language (DML)

An Apex method or operation that inserts, updates, or deletes records.

Date Literal

A keyword in a SOQL or SOSL query that represents a relative range of time such as `last month` or `next year`.

Decimal Places

Parameter for number, currency, and percent custom fields that indicates the total number of digits you can enter to the right of a decimal point, for example, 4.98 for an entry of 2. Note that the system rounds the decimal numbers you enter, if necessary. For example, if you enter 4.986 in a field with `Decimal Places` of 2, the number rounds to 4.99. Salesforce uses the round half-up rounding algorithm. Half-way values are always rounded up. For example, 1.45 is rounded to 1.5. -1.45 is rounded to -1.5.

Delegated Authentication

A security process where an external authority is used to authenticate Lightning Platform users.

Dependent Field

Any custom picklist or multi-select picklist field that displays available values based on the value selected in its corresponding controlling field.

Developer Edition

A free, fully-functional Salesforce organization designed for developers to extend, integrate, and develop with the Lightning Platform. Developer Edition accounts are available on developer.salesforce.com.

Salesforce Developers

The Salesforce Developers website at developer.salesforce.com provides a full range of resources for platform developers, including sample code, toolkits, an online developer community, and the ability to obtain limited Lightning Platform environments.

Document Library

A place to store documents without attaching them to accounts, contacts, opportunities, or other records.

E

Email Alert

Email alerts are actions that send emails, using a specified email template, to specified recipients.

Email Template

A form email that communicates a standard message, such as a welcome letter to new employees or an acknowledgment that a customer service request has been received. Email templates can be personalized with merge fields, and can be written in text, HTML, or custom format.

 **Note:** Lightning email templates aren't packageable.

Enterprise Edition

A Salesforce edition designed for larger, more complex businesses.

Enterprise WSDL

A strongly-typed WSDL for customers who want to build an integration with their Salesforce organization only, or for partners who are using tools like Tibco or webMethods to build integrations that require strong typecasting. The downside of the Enterprise WSDL is that it only works with the schema of a single Salesforce organization because it is bound to all of the unique objects and fields that exist in that organization's data model.

Entity Relationship Diagram (ERD)

A data modeling tool that helps you organize your data into entities (or objects, as they are called in the Lightning Platform) and define the relationships between them. ERD diagrams for key Salesforce objects are published in the [SOAP API Developer's Guide](#).

F

Field

A part of an object that holds a specific piece of information, such as a text or currency value.

Field-Level Security

Settings that determine whether fields are hidden, visible, read only, or editable for users. Available in Professional, Enterprise, Unlimited, Performance, and Developer Editions.

Filter Condition/Criteria

Condition on particular fields that qualifies items to be included in a list view or report, such as "State equals California."

Foreign Key

A field whose value is the same as the primary key of another table. You can think of a foreign key as a copy of a primary key from another table. A relationship is made between two tables by matching the values of the foreign key in one table with the values of the primary key in another.

Formula Field

A type of custom field. Formula fields automatically calculate their values based on the values of merge fields, expressions, or other values.

Function

Built-in formulas that you can customize with input parameters. For example, the DATE function creates a date field type from a given year, month, and day.

G

Gregorian Year

A calendar based on a 12-month structure used throughout much of the world.

Group Edition

A product designed for small businesses and workgroups with a limited number of users.

H

HTTP Debugger

An application that can be used to identify and inspect SOAP requests that are sent from the AJAX Toolkit. They behave as proxy servers running on your local machine and allow you to inspect and author individual requests.

I

ID

See Salesforce Record ID.

Inline S-Control

Note: S-controls have been superseded by Visualforce pages. After March 2010 organizations that have never created s-controls, as well as new organizations, won't be allowed to create them. Existing s-controls will remain unaffected, and can still be edited.

An s-control that displays within a record detail page or dashboard, rather than on its own page.

Instance

The cluster of software and hardware represented as a single logical server that hosts an organization's data and runs their applications. The Lightning Platform runs on multiple instances, but data for any single organization is always stored on a single instance.

Integration User

A Salesforce user defined solely for client apps or integrations. Also referred to as the logged-in user in a SOAP API context.

ISO Code

The International Organization for Standardization country code, which represents each country by two letters.

J

Junction Object

A custom object with two master-detail relationships. Using a custom junction object, you can model a "many-to-many" relationship between two objects. For example, you create a custom object called "Bug" that relates to the standard case object such that a bug could be related to multiple cases and a case could also be related to multiple bugs.

K

No Glossary items for this entry.

L

License Management Application (LMA)

A free AppExchange app that allows you to track sales leads and accounts for every user who downloads your managed package (app) from the AppExchange.

License Management Organization (LMO)

The Salesforce organization that you use to track all the Salesforce users who install your package. A license management organization must have the License Management Application (LMA) installed. It automatically receives notification every time your package is installed or uninstalled so that you can easily notify users of upgrades. You can specify any Enterprise, Unlimited, Performance, or Developer Edition organization as your license management organization. For more information, go to [Managing Licenses for Managed Packages](#).

Lightning Platform

The Salesforce platform for building applications in the cloud. Lightning Platform combines a powerful user interface, operating system, and database to allow you to customize and deploy applications in the cloud for your entire enterprise.

List View

A list display of items (for example, accounts or contacts) based on specific criteria. Salesforce provides some predefined views.

In the Agent console, the list view is the top frame that displays a list view of records based on specific criteria. The list views you can select to display in the console are the same list views defined on the tabs of other objects. You cannot create a list view within the console.

Locale

The country or geographic region in which the user is located. The setting affects the format of date and number fields, for example, dates in the English (United States) locale display as 06/30/2000 and as 30/06/2000 in the English (United Kingdom) locale.

In Professional, Enterprise, Unlimited, Performance, and Developer Edition organizations, a user's individual `Locale` setting overrides the organization's `Default Locale` setting. In Personal and Group Editions, the organization-level locale field is called `Locale`, not `Default Locale`.

Logged-in User

In a SOAP API context, the username used to log into Salesforce. Client applications run with the permissions and sharing of the logged-in user. Also referred to as an integration user.

M

Managed Package

A collection of application components that is posted as a unit on the AppExchange and associated with a namespace and possibly a License Management Organization. To support upgrades, a package must be managed. An organization can create a single managed package that can be downloaded and installed by many different organizations. Managed packages differ from unmanaged packages by having some locked components, allowing the managed package to be upgraded later. Unmanaged packages do not include locked components and cannot be upgraded. In addition, managed packages obfuscate certain components (like Apex) on subscribing organizations to protect the intellectual property of the developer.

Manual Sharing

Record-level access rules that allow record owners to give read and edit permissions to other users who might not have access to the record any other way.

Many-to-Many Relationship

A relationship where each side of the relationship can have many children on the other side. Many-to-many relationships are implemented through the use of junction objects.

Master-Detail Relationship

A relationship between two different types of records that associates the records with each other. For example, accounts have a master-detail relationship with opportunities. This type of relationship affects record deletion, security, and makes the lookup relationship field required on the page layout.

Master Picklist

A complete list of picklist values available for a record type or business process.

Metadata

Information about the structure, appearance, and functionality of an organization and any of its parts. Lightning Platform uses XML to describe metadata.

Metadata WSDL

A WSDL for users who want to use the Lightning Platform Metadata API calls.

Multitenancy

An application model where all users and apps share a single, common infrastructure and code base.

N

Namespace

In a packaging context, a one- to 15-character alphanumeric identifier that distinguishes your package and its contents from packages of other developers on AppExchange, similar to a domain name. Salesforce automatically prepends your namespace prefix, followed by two underscores ("___"), to all unique component names in your Salesforce organization.

Native App

An app that is built exclusively with setup (metadata) configuration on Lightning Platform. Native apps do not require any external services or infrastructure.

O

Object

An object allows you to store information in your Salesforce organization. The object is the overall definition of the type of information you are storing. For example, the case object allow you to store information regarding customer inquiries. For each object, your organization will have multiple records that store the information about specific instances of that type of data. For example, you might have a case record to store the information about Joe Smith's training inquiry and another case record to store the information about Mary Johnson's configuration issue.

Object-Level Help

Custom help text that you can provide for any custom object. It displays on custom object record home (overview), detail, and edit pages, as well as list views and related lists.

Object-Level Security

Settings that allow an administrator to hide whole objects from users so that they don't know that type of data exists. Object-level security is specified with object permissions.

onClick JavaScript

JavaScript code that executes when a button or link is clicked.

One-to-Many Relationship

A relationship in which a single object is related to many other objects. For example, an account may have one or more related contacts.

Organization-Wide Defaults

Settings that allow you to specify the baseline level of data access that a user has in your organization. For example, you can set organization-wide defaults so that any user can see any record of a particular object that is enabled via their object permissions, but they need extra permissions to edit one.

Outbound Call

Any call that originates from a user to a number outside of a call center in Salesforce CRM Call Center.

Outbound Message

An outbound message sends information to a designated endpoint, like an external service. Outbound messages are configured from Setup. You must configure the external endpoint and create a listener for the messages using the SOAP API.

Overlay

An overlay displays additional information when you hover your mouse over certain user interface elements. Depending on the overlay, it will close when you move your mouse away, click outside of the overlay, or click a close button.

Owner

Individual user to which a record (for example, a contact or case) is assigned.

P

PaaS

See Platform as a Service.

Package

A group of Lightning Platform components and applications that are made available to other organizations through the AppExchange. You use packages to bundle an app along with any related components so that you can upload them to AppExchange together.

Package Dependency

This is created when one component references another component, permission, or preference that is required for the component to be valid. Components can include but are not limited to:

- Standard or custom fields
- Standard or custom objects
- Visualforce pages
- Apex code

Permissions and preferences can include but are not limited to:

- Divisions
- Multicurrency
- Record types

Package Installation

Installation incorporates the contents of a package into your Salesforce organization. A package on the AppExchange can include an app, a component, or a combination of the two. After you install a package, you may need to deploy components in the package to make it generally available to the users in your organization.

Package Publication

Publishing your package makes it publicly available on the AppExchange.

Package Version

A package version is a number that identifies the set of components uploaded in a package. The version number has the format *majorNumber.minorNumber.patchNumber* (for example, 2.1.3). The major and minor numbers increase to a chosen value during every major release. The *patchNumber* is generated and updated only for a patch release.

Unmanaged packages are not upgradeable, so each package version is simply a set of components for distribution. A package version has more significance for managed packages. Packages can exhibit different behavior for different versions. Publishers can use package versions to evolve the components in their managed packages gracefully by releasing subsequent package versions without breaking existing customer integrations using the package. See also Patch and Patch Development Organization.

Parent Account

An organization or company that an account is affiliated. By specifying a parent for an account, you can get a global view of all parent/subsidiary relationships using the **View Hierarchy** link.

Partner WSDL

A loosely-typed WSDL for customers, partners, and ISVs who want to build an integration or an AppExchange app that can work across multiple Salesforce organizations. With this WSDL, the developer is responsible for marshaling data in the correct object representation, which typically involves editing the XML. However, the developer is also freed from being dependent on any particular data model or Salesforce organization. Contrast this with the Enterprise WSDL, which is strongly typed.

Patch

A patch enables a developer to change the functionality of existing components in a managed package, while ensuring subscribing organizations that there are no visible behavior changes to the package. For example, you can add new variables or change the body of an Apex class, but you may not add, deprecate, or remove any of its methods. Patches are tracked by a *patchNumber* appended to every package version. See also Patch Development Organization and Package Version.

Patch Development Organization

The organization where patch versions are developed, maintained, and uploaded. Patch development organizations are created automatically for a developer organization when they request to create a patch. See also Patch and Package Version.

Personal Edition

Product designed for individual sales representatives and single users.

Personal Information

User information including personal contact information, quotas, personal group information, and default opportunity team.

Picklist

Selection list of options available for specific fields in a Salesforce object, for example, the `Industry` field for accounts. Users can choose a single value from a list of options rather than make an entry directly in the field. See also Master Picklist.

Picklist (Multi-Select)

Selection list of options available for specific fields in a Salesforce object. Multi-select picklists allow users to choose one or more values. Users can choose a value by double clicking on it, or choose additional values from a scrolling list by holding down the CTRL key while clicking a value and using the arrow icon to move them to the selected box.

Picklist Values

Selections displayed in drop-down lists for particular fields. Some values come predefined, and other values can be changed or defined by an administrator.

Platform as a Service (PaaS)

An environment where developers use programming tools offered by a service provider to create applications and deploy them in a cloud. The application is hosted as a service and provided to customers via the Internet. The PaaS vendor provides an API for creating and extending specialized applications. The PaaS vendor also takes responsibility for the daily maintenance, operation, and support of the deployed application and each customer's data. The service alleviates the need for programmers to install, configure,

and maintain the applications on their own hardware, software, and related IT resources. Services can be delivered using the PaaS environment to any market segment.

Platform Edition

A Salesforce edition based on Enterprise, Unlimited, or Performance Edition that does not include any of the standard Salesforce apps, such as Sales or Service & Support.

Primary Key

A relational database concept. Each table in a relational database has a field in which the data value uniquely identifies the record. This field is called the primary key. The relationship is made between two tables by matching the values of the foreign key in one table with the values of the primary key in another.

Production Organization

A Salesforce organization that has live users accessing data.

Professional Edition

A Salesforce edition designed for businesses who need full-featured CRM functionality.

Q

Queue

A holding area for items before they are processed. Salesforce uses queues in a number of different features and technologies.

Query Locator

A parameter returned from the `query()` or `queryMore()` API call that specifies the index of the last result record that was returned.

Query String Parameter

A name-value pair that's included in a URL, typically after a '?' character. For example:

```
https://yourInstance.salesforce.com/001/e?name=value
```

R

Record

A single instance of a Salesforce object. For example, "John Jones" might be the name of a contact record.

Record Name

A standard field on all Salesforce objects. Whenever a record name is displayed in a Lightning Platform application, the value is represented as a link to a detail view of the record. A record name can be either free-form text or an autonumber field. `Record Name` does not have to be a unique value.

Record Type

A record type is a field available for certain records that can include some or all of the standard and custom picklist values for that record. You can associate record types with profiles to make only the included picklist values available to users with that profile.

Record-Level Security

A method of controlling data in which you can allow a particular user to view and edit an object, but then restrict the records that the user is allowed to see.

Recycle Bin

A page that lets you view and restore deleted information. Access the Recycle Bin either by using the link in the sidebar in Salesforce Classic or from the App Launcher in Lightning Experience.

Related Object

Objects chosen by an administrator to display in the Agent console's mini view when records of a particular type are shown in the console's detail view. For example, when a case is in the detail view, an administrator can choose to display an associated account, contact, or asset in the mini view.

Relationship

A connection between two objects, used to create related lists in page layouts and detail levels in reports. Matching values in a specified field in both objects are used to link related data; for example, if one object stores data about companies and another object stores data about people, a relationship allows you to find out which people work at the company.

Relationship Query

In a SOQL context, a query that traverses the relationships between objects to identify and return results. Parent-to-child and child-to-parent syntax differs in SOQL queries.

Report Type

A *report type* defines the set of records and fields available to a report based on the relationships between a primary object and its related objects. Reports display only records that meet the criteria defined in the report type. Salesforce provides a set of pre-defined standard report types; administrators can create custom report types as well.

Role Hierarchy

A record-level security setting that defines different levels of users such that users at higher levels can view and edit information owned by or shared with users beneath them in the role hierarchy, regardless of the organization-wide sharing model settings.

Roll-Up Summary Field

A field type that automatically provides aggregate values from child records in a master-detail relationship.

Running User

Each dashboard has a *running user*, whose security settings determine which data to display in a dashboard. If the running user is a specific user, all dashboard viewers see data based on the security settings of that user—regardless of their own personal security settings. For dynamic dashboards, you can set the running user to be the logged-in user, so that each user sees the dashboard according to his or her own access level.

S

SaaS

See Software as a Service (SaaS).

S-Control

 **Note:** S-controls have been superseded by Visualforce pages. After March 2010 organizations that have never created s-controls, as well as new organizations, won't be allowed to create them. Existing s-controls will remain unaffected, and can still be edited.

Custom Web content for use in custom links. Custom s-controls can contain any type of content that you can display in a browser, for example a Java applet, an Active-X control, an Excel file, or a custom HTML Web form.

Salesforce Record ID

A unique 15- or 18-character alphanumeric string that identifies a single record in Salesforce.

Salesforce SOA (Service-Oriented Architecture)

A powerful capability of Lightning Platform that allows you to make calls to external Web services from within Apex.

Sandbox

A nearly identical copy of a Salesforce production organization for development, testing, and training. The content and size of a sandbox varies depending on the type of sandbox and the edition of the production organization associated with the sandbox.

Search Layout

The organization of fields included in search results, in lookup dialogs, and in the key lists on tab home pages.

Search Phrase

Search phrases are queries that users enter when searching on www.google.com.

Semi-Join

A semi-join is a subquery on another object in an `IN` clause in a SOQL query. You can use semi-joins to create advanced queries, such as getting all contacts for accounts that have an opportunity with a particular record type. See also Anti-Join.

Session ID

An authentication token that is returned when a user successfully logs in to Salesforce. The Session ID prevents a user from having to log in again every time they want to perform another action in Salesforce. Different from a record ID or Salesforce ID, which are terms for the unique ID of a Salesforce record.

Session Timeout

The time after login before a user is automatically logged out. Sessions expire automatically after a predetermined length of inactivity, which can be configured in Salesforce from Setup by clicking **Security Controls**. The default is 120 minutes (two hours). The inactivity timer is reset to zero if a user takes an action in the web interface or makes an API call.

Setup

A menu where administrators can customize and define organization settings and Lightning Platform apps. Depending on your organization's user interface settings, Setup may be a link in the user interface header or in the dropdown list under your name.

Sharing

Allowing other users to view or edit information you own. There are different ways to share data:

- **Sharing Model**—defines the default organization-wide access levels that users have to each other's information and whether to use the hierarchies when determining access to data.
- **Role Hierarchy**—defines different levels of users such that users at higher levels can view and edit information owned by or shared with users beneath them in the role hierarchy, regardless of the organization-wide sharing model settings.
- **Sharing Rules**—allow an administrator to specify that all information created by users within a given group or role is automatically shared to the members of another group or role.
- **Manual Sharing**—allows individual users to share records with other users or groups.
- **Apex-Managed Sharing**—enables developers to programmatically manipulate sharing to support their application's behavior. See Apex-Managed Sharing.

Sharing Model

Behavior defined by your administrator that determines default access by users to different types of records.

Sharing Rule

Type of default sharing created by administrators. Allows users in a specified group or role to have access to all information created by users within a given group or role.

Sites

Salesforce Sites enables you to create public websites and applications that are directly integrated with your Salesforce organization—without requiring users to log in with a username and password.

Snippet

 **Note:** S-controls have been superseded by Visualforce pages. After March 2010 organizations that have never created s-controls, as well as new organizations, won't be allowed to create them. Existing s-controls will remain unaffected, and can still be edited.

A type of s-control that is designed to be included in other s-controls. Similar to a helper method that is used by other methods in a piece of code, a snippet allows you to maintain a single copy of HTML or JavaScript that you can reuse in multiple s-controls.

SOAP (Simple Object Access Protocol)

A protocol that defines a uniform way of passing XML-encoded data.

SOAP API

A SOAP-based Web services application programming interface that provides access to your Salesforce organization's information.

sObject

The abstract or parent object for all objects that can be stored in the Lightning Platform.

Software as a Service (SaaS)

A delivery model where a software application is hosted as a service and provided to customers via the Internet. The SaaS vendor takes responsibility for the daily maintenance, operation, and support of the application and each customer's data. The service alleviates the need for customers to install, configure, and maintain applications with their own hardware, software, and related IT resources. Services can be delivered using the SaaS model to any market segment.

SOQL (Salesforce Object Query Language)

A query language that allows you to construct simple but powerful query strings and to specify the criteria that selects data from the Lightning Platform database.

SOSL (Salesforce Object Search Language)

A query language that allows you to perform text-based searches using the Lightning Platform API.

Standard Object

A built-in object included with the Lightning Platform. You can also build custom objects to store information that is unique to your app.

Syndication Feeds

Give users the ability to subscribe to changes within Salesforce Sites and receive updates in external news readers.

System Log

Part of the Developer Console, a separate window console that can be used for debugging code snippets. Enter the code you want to test at the bottom of the window and click Execute. The body of the System Log displays system resource information, such as how long a line took to execute or how many database calls were made. If the code did not run to completion, the console also displays debugging information.

T

Test Method

An Apex class method that verifies whether a particular piece of code is working properly. Test methods take no arguments, commit no data to the database, and can be executed by the `runTests()` system method either through the command line or in an Apex IDE, such as the Salesforce extensions for Visual Studio Code.

Translation Workbench

The Translation Workbench lets you specify languages you want to translate, assign translators to languages, create translations for customizations you've made to your Salesforce organization, and override labels and translations from managed packages. Everything from custom picklist values to custom fields can be translated so your global users can use Salesforce in their language.

Trigger

A piece of Apex that executes before or after records of a particular type are inserted, updated, or deleted from the database. Every trigger runs with a set of context variables that provide access to the records that caused the trigger to fire, and all triggers run in bulk mode—that is, they process several records at once, rather than just one record at a time.

Trigger Context Variable

Default variables that provide access to information about the trigger and the records that caused it to fire.

U

Unit Test

A unit is the smallest testable part of an application, usually a method. A unit test operates on that piece of code to make sure it works correctly. See also Test Method.

Unlimited Edition

Unlimited Edition is Salesforce's solution for maximizing your success and extending that success across the entire enterprise through the Lightning Platform.

Unmanaged Package

A package that cannot be upgraded or controlled by its developer.

URL (Uniform Resource Locator)

The global address of a website, document, or other resource on the Internet. For example, <https://salesforce.com>.

URL S-Control

Note: S-controls have been superseded by Visualforce pages. After March 2010 organizations that have never created s-controls, as well as new organizations, won't be allowed to create them. Existing s-controls will remain unaffected, and can still be edited.

An s-control that contains an external URL that hosts the HTML that should be rendered on a page. When saved this way, the HTML is hosted and run by an external website. URL s-controls are also called web controls.

V

Validation Rule

A rule that prevents a record from being saved if it does not meet the standards that are specified.

Visualforce

A simple, tag-based markup language that allows developers to easily define custom pages and components for apps built on the platform. Each tag corresponds to a coarse or fine-grained component, such as a section of a page, a related list, or a field. The components can either be controlled by the same logic that is used in standard Salesforce pages, or developers can associate their own logic with a controller written in Apex.

W

Web Control

See URL S-Control.

Web Links

See Custom Links.

Web Service

A mechanism by which two applications can easily exchange data over the Internet, even if they run on different platforms, are written in different languages, or are geographically remote from each other.

Web Services API

Term describing the original Salesforce Platform web services application programming interface (API) that provides access to your Salesforce org's information. See relevant developer guides for SOAP, REST, or Bulk APIs of interest.

WebService Method

An Apex class method or variable that external systems can use, like a mash-up with a third-party application. Web service methods must be defined in a global class.

Web Tab

A custom tab that allows your users to use external websites from within the application.

Automated Actions

Automated actions, such as email alerts, tasks, field updates, and outbound messages, can be triggered by a process, workflow rule, approval process, or milestone.

Workflow Action

A workflow action, such as an email alert, field update, outbound message, or task, fires when the conditions of a workflow rule are met.

Workflow Email Alert

A workflow action that sends an email when a workflow rule is triggered. Unlike workflow tasks, which can only be assigned to application users, workflow alerts can be sent to any user or contact, as long as they have a valid email address.

Workflow Field Update

A workflow action that changes the value of a particular field on a record when a workflow rule is triggered.

Workflow Outbound Message

A workflow action that sends data to an external Web service, such as another cloud computing application. Outbound messages are used primarily with composite apps.

Workflow Queue

A list of workflow actions that are scheduled to fire based on workflow rules that have one or more time-dependent workflow actions.

Workflow Rule

A workflow rule sets workflow actions into motion when its designated conditions are met. You can configure workflow actions to execute immediately when a record meets the conditions in your workflow rule, or set time triggers that execute the workflow actions on a specific day.

Workflow Task

A workflow action that assigns a task to an application user when a workflow rule is triggered.

Wrapper Class

A class that abstracts common functions such as logging in, managing sessions, and querying and batching records. A wrapper class makes an integration more straightforward to develop and maintain, keeps program logic in one place, and affords easy reuse across components. Examples of wrapper classes in Salesforce include the AJAX Toolkit, which is a JavaScript wrapper around the Salesforce SOAP API, wrapper classes such as `CCriticalSection` in the CTI Adapter for Salesforce CRM Call Center, or wrapper classes created as part of a client integration application that accesses Salesforce using the SOAP API.

WSC (Web Service Connector)

An XML-based Web service framework that consists of a Java implementation of a SOAP server. With WSC, developers can develop client applications in Java by using Java classes generated from Salesforce Enterprise WSDL or Partner WSDL.

WSDL (Web Services Description Language) File

An XML file that describes the format of messages you send and receive from a Web service. Your development environment's SOAP client uses the Salesforce Enterprise WSDL or Partner WSDL to communicate with Salesforce using the SOAP API.
